This point has been recognised by the I.M.F. It, however, observes that much effort will be needed, not only internationally but also nationally, to create the conditions which will render such help. "In this endeavour," it adds, "those countries which conduct their transactions in convertible currencies and which have relatively simple exchange systems, will be in a better position to cope with the financial problems arising from the urgent needs for development." This is undoubtedly true. While it will be too much to expect the underdeveloped countries to manage their economic affairs in convertible currencies, they should steadfastly endeavour to maintain a simple exchange system, with a single exchange rate.

CREDIT FACILITIES TO SMALL-SCALE INDUSTRIES

The importance of small-scale industries in the development of India's economy is now widely recognised. Yet, the progress of small-scale industries has not gained momentum. It is not the paucity of credit that stands in the way of development of these industries. More institutional credit is now available than before, but the majority of the producers still go to moneylenders or traders. This is because production standards are low and the competitive strength of small units is weak. In view of this risk element, the institutional financiers do not consider the small-scale industries as

sufficiently creditworthy. This was recognised by the seminar on finance for small-scale industries sponsored by the Reserve Bank of India at the recent four-day session held at Hyderabad.

Mr. B. Venkatappaiah, Deputy Governor of the Reserve Bank of India, who presided over the seminar, referred to this aspect of the problem in the course of his welcome address. He said: "While better financial arrangements are not a sufficient condition for the solution of the problems of small industries, there is little doubt that they are a necessary condition. There is a pressing need for the adjustments in the attitudes of the existing institutions and for the co-ordination of their policies. If the suppliers of credit take the view that not much can be done because the small industries are not creditworthy, little progress will be possible. One cannot wait until the ideal conditions for lending emerge; one has to do what can be done to render the small industries more viable and creditworthy. The risks which face the small industries can be spread and rendered bearable, if along with others, the credit institutions are willing to undertake some of them."

The seminar, therefore, recommended that the system of guarantee of loans, the essence of which was a sharing of risks, should be tried out initially in some districts or areas on an experimental basis and that a separate corporation be set up for the purpose. It was also suggested that the scheme of credit guarantee could combine some of the features of the Japanese and the U.S. schemes. As the scheme would be restricted to selected areas, the seminar was of the view that the normal machinery of loans by the State Governments to small-scale industries would remain intact for the most part.

A suggestion was offered that the hire-purchase scheme of the National Small Industries Corporation could be expanded so as to include a guarantee to commercial banks which, in turn, were prepared to offer similar facilities to their customers for the purchase of machinery. It was further suggested that the N.S.I.C. might take up the proposal to extend the principle of guarantee on raw material advances, now applicable to the State Bank of India in respect of Government orders only, to all commercial and co-operative banks making advances to small industries.

While the scheme of credit guarantee was the most important suggestion made by the seminar, a number of other suggestions were also advanced for the development of small-scale industries. They were: (1) more raw material deposits should be set up by the Government and, wherever possible, by co-operative societies; (2) branches of the N.S.I.C. should be established at suitable places to facilitate speedier disposal of cases, in respect of applications

TEXTILE EXPORTS TO INDONESIA FALL CHINA TO SUPPLY THREE MILLS ON CREDIT AMOUNTING TO RS. 15 CRORES

LAST week, we referred in these columns to the serious inroads made by Communist China in the textile market of Malaya, one of the most important buyers of Indian textiles. The competition offered by China is equally serious in Indonesia, another principal market for cotton goods produced in India. During the calendar year 1958, Indonesia bought from China cotton cloth worth 94 million rupiahs (Indonesian currency). Although this is sharply down as compared with purchases in 1957 amounting to 221 million rupiahs, it is 23.40 million rupiahs more than the imports (valued at 70.6 million rupiahs) in 1955. An increase of only 23.40 million rupiahs is, of course, not much, but it must be considered to be quite significant. For, over the period from 1955 to 1958, the value of cotton piecegoods shipped by India and Japan fell from 178.4 million rupiahs and 270.9 million rupiahs to 24.2 million rupiahs and 125.8 million rupiahs, respectively. The figures relating to 1958 are based on the actual exports during the first half of the year.

The competition from Chinese textiles in Indonesia vis-a-vis India (and also Japan) has been particularly strong in respect of bleached and dyed cloth. The table below gives the value of piecegoods supplied to Indonesia by India, China, Japan and Hong Kong:

(In million Indonesian rupiahs)				
	1958*	1957	1956	1955
Grey unbleached cloth—				
India	20.0	2.5	27.0	
China	13.4	21.8	44.4	
Japan	3.3	4.6	9.7	
Hong Kong ..	4.4	1.2	4.3	
Bleached cloth—				
India	19.2	70.0	49.3	91.1
China	27.2	67.2	57.9	9.2
Japan	32.4	259.6	176.2	155.6
Hong Kong ..	49.2	24.4	3.6	11.2
Cloth, dyed, etc.—				
India	5.0	16.5	31.6	60.3
China	53.4	132.0	100.6	17.0
Japan	93.4	126.2	214.0	105.0
Hong Kong ..	111.2	151.2	153.9	103.6
Total—				
India	24.2	108.5	83.4	178.4
China	94.0	221.0	158.5	70.6
Japan	125.8	389.1	304.8	270.9
Hong Kong ..	158.8	206.8	161.8	124.5

* Projected on the basis of actual imports in the first half of 1958.

The percentage share (by value) of China in the Indonesian textile market has gone up from 11 in 1955 to 23 in 1958 (on the basis of the actual performance in the six months ended June 1958), while that of India has fallen drastically from 27 to 6 and of Japan from 42 to 31. Hong Kong's share, of course, has risen from 19 per cent. to 39 per cent.

Notoriously Uneven

In the main items, that is, dyed and bleached cotton cloth, the progress of the Chinese product is clear. From only 26 million rupiahs in 1955, China's export in these two lines grew to 199.2 million rupiahs in 1957 and 40.3 million rupiahs in the first half of 1958. The velocity of Indonesian imports is notoriously uneven. But these figures expressed as a percentage of total supplies from the four Asian suppliers taken together (India, China, Japan and Hong Kong) are 5 in 1955, 23 in 1957 and 21 in the first half of last year. The comparable Indian percentage shows an almost exactly opposite trend—27 in 1955, 10 in 1957 and only 6 in the first half of 1958. In grey cloth, China actually lost ground and, in cotton sewing thread, there was little change, and all suppliers suffered in the declining clothing market.

The competition offered by Chinese textiles to Indian textiles in Indonesia has been acute despite the fact that the average price of Indian textiles shipped to Indonesia has dropped almost *pari passu* with the increase in the Chinese price, as the following table, setting out the average prices calculated on the basis of dividing the c.i.f. value by the declared quantities of cloth imported into Indonesia, indicates:

(In rupiahs per kilo)				
	1958 Jan.-June	1957	1956	1955
India	13.5	14.7	15.7	17.1
China	18.4	17.6	17.0	18.4
Japan	18.4	20.4	20.6	20.3
Hong Kong ..	15.4	14.7	15.7	17.1

The average price (in rupees per kilo) of Chinese bleached cotton piecegoods advanced from 15 in 1955 to 20 in the first half of 1958. In the same period, the price of Indian cloth declined from 20 to 14. Similarly, the Chinese

price of dyed cotton cloth moved up from 14.2 to 16.4, whereas the Indian price receded from 16.4 to 12.8. The fall in the average prices of Indian textiles exported to Indonesia has been brought about by the downward revision in prices effected by shippers since 1955 in the face of Chinese threat. Drawing attention to the cut in prices of Indian textiles, a report points out that, at all events, Indian exporters cannot expect to recapture their markets simply by undercutting. It observes:

"India is the victim not of a particular Chinese rivalry but of general Chinese ascendancy. Owing to the specialisation of her exports, she is, so to speak being vanquished in fields in which she does not compete. China's rice, with that of North Viet Nam, is a little cheaper than Burmese rice of similar quality. Her newsprint, cement, ferro-concrete, tyres and sewing machines are all cheaper than the Japanese products, markedly so in the case of the last two items. All these she sells packaged with her relatively dear cottons. But India has at present nothing but jute goods to offer with her textiles. Her hope must be in the products of her new steel mills, assuming that their export is to be a Government monopoly."

China's Help

Here is a clear description of the way in which China is pushing India out of the Indonesian market. It will be clear from it that no amount of export incentive will be a match to "collectivised" sales by Communist countries. Apart from selling a large quantity of cotton textiles to Indonesia, China is also actively helping it to expand its cotton mill industry. A five-member Indonesian industrial mission, according to an interesting article by Mr. Kester Stone, contributed to a recent issue of the *Far Eastern Economic Review* (published in Hong Kong), has returned to Djakarta after successful negotiations with the Peking Government for the purchase of three cotton mills with a total of about 160,000 spindles, 1,000 automatic looms and other necessary modern equipment. The aggregate cost of the mills has not yet been finalised, but the Government of China has extended a credit equivalent to 30 million U.S. dollars (about Rs. 15 crores) for the setting up of the mills. The complete delivery of the mills, which cover dyeing, printing and other processes, is expected to take four years. The mills, it is claimed, will

be capable of manufacturing dyed and printed fabrics and sarongs for home consumption, as well as various types of yarn from medium-staple cotton (say, about 1.1/16" staple length).

There are at present in Indonesia over 60 large weaving mills and 27 knitting units. The actual production performance during the first three quarters 1958 is shown below:

Weaving mills: A total of 7,907,072 kilograms (0.4536 kilogram=1 pound) of cotton yarn was consumed. The mills produced 41,389,188 metres (1 metre=1.0936 yard) of piecegoods, 1,658,948 sarongs, 1,961,610 towels and 30 shawls.

Knitting mills: Yarn consumption amounted to 1,915,457 kilograms. Production in dozens was: Singlets: 479,113; undervests: 350,368; sport-polo-shirts: 259,325.

The number of cotton spindles in existence in Indonesia is only 12,000; all these are owned by the Bank Industri Negara and other private enterprises. Under the War Reparations Agreement, Indonesia will soon receive a 30,000 spindle mill from Japan. But the country still needs at least 400,000 spindles before it can attain self-sufficiency in cotton yarn. The total domestic requirements of yarn are currently estimated at 170,000 tons per annum, as against the actual output of 20,000 tons. The gap is being covered by imports. Commenting on the gap, an official of the Indonesian Government recently said: "Now it is time for us to expand our spinning industry, in order to attain self-sufficiency. This may take ten years to accomplish, but we don't want to depend on imports of cotton yarn all the time." The spokesman revealed that Indonesia was to get U.S. \$22 million worth of raw cotton under the U.S. Agricultural Commodity Agreement. Before Indonesia could obtain enough spindles to meet the capacity, it had, he said, to send raw cotton to Hong Kong, Japan and India or Western Europe to process it into yarn. And he added: "If we have an adequate spinning industry, we can do it ourselves."

Yarn Purchases

Meanwhile, Indonesia has sent a textile expert to Hong Kong to explore the cotton yarn market and conduct a general survey, especially on the availability of yarn in future. Indonesia according to this expert, is buying cotton yarn from the Asian market in general, so long as it can get the most competitive prices. In view of the good demand for cotton yarn in Indonesia thus and considering that the prices quoted by Hong Kong are high and that most of the mills in this colony have been fully booked until the end

"WATCH YOUR NEIGHBOUR" PASTIME IN COTTON INDUSTRY REDUNDANCY PROPOSALS WIDELY WELCOMED

From A Special Correspondent

MANCHESTER, 27th July

"WATCH your neighbour" has become a very pertinent pastime in the Lancashire cotton industry since the compensation schemes for redundancy have been announced. There is a natural tendency among all traders to avoid giving away secrets at such an important stage in the development of the reorganisation proposals, but, unless a substantial proportion of the machinery now known to be in excess of current requirements is

registered for scrapping, the plan will have failed in its object. In general, comments from those who should know now incline to the belief that the proposals as outlined will receive sufficient support to make them operate satisfactorily.

Among those who favour the disposal of larger quantities of machinery beyond the minima laid down in the schemes is Mr. C. M. Heaton, Director of the Master Spinners' Federation. "There is good reason for timidity that the minimum figures will be achieved," he has stated, "but the operation may not be fully successful in the spinning section. Less than eight million spindles, or one-third of the present machinery, is now scrapped, followed by a further two or three million spindles without compensation during the re-equipment period." Commenting on the position of those firms continuing in the trade, he says: "They will have to pay heavy annual contributions to levies for machinery redundancy and for workers' compensation. Taxation will considerably reduce the net amount they receive as a redundancy grant for that part of the machinery which they themselves scrap."

A Chance Indeed

The generosity of the scheme to those depending on complete closure is emphasised. All mills not already modernised, with old structures unsuitable for modern machinery and difficult working, should seize the opportunity to set down," declares Mr. Heaton. Shareholders, either big or small, he urges, should be given estimates of whether the trading results of their company over the next few years, ignoring short-term fluctuations, are likely to result in dividends giving a better return on capital than the average return on their ordinary shares, if their money was invested elsewhere.

Among those who have lately welcomed the scheme is Sir John Hanbury-Williams, Chairman of Courtaulds Ltd., whose complex organisation is deeply involved in the proposals. Undoubtedly it is a step in the right direction," he said at the annual meeting. "In the rayon industry, we faced this problem of excess capacity some time ago when, owing to lack of demand, we were compelled to close one of our

continuous filament yarn mills and curtail production elsewhere." Further rationalisation and concentration in the interests of efficiency was aided by the merger with British Celanese; the group has stopped, and is scrapping about 2,000 looms.

Achieving some form of balance between the different levels of production and the rate of consumer demand is a problem for any industry, but, over the years, it has proved a real headache for textiles. So many variations in the provision of supplies and fluctuations in the rate of demand can interfere with an even flow of business. Concentration into fewer units and a subsequent improvement in the inter-relationship of firms dealing with the flow of goods out of the pipeline should assist in ironing out the inevitable alternations of activity and recession.

Keeping a Tally

Disclosure of intentions under the redundancy schemes can presumably come in a variety of ways, quite apart from the traditional trade gossip. Pointed questions can be, and have been, asked at shareholders' meetings which have happened to coincide with the waiting period while plans are being formulated. In some cases, "ginger groups" among the shareholders have already made their presence felt. Companies not in the public list, whose stock rarely changes hands, have been urged to clarify their position. In at least one instance, the result has been a circular advising retention of the shares, indicative of the complete closure of a group of mills controlling some 250,000 spindles.

Once this movement gathers momentum, others in a similar category may be encouraged to act accordingly, so carrying out the purpose of the scheme. The provision of incentives is of paramount importance in making certain that sufficient plant is offered for disposal and that the full quota of redundant machinery is dismantled.

For this reason, there would seem to be a good case for keeping the particular sections fully informed about the progress of each redundancy programme. The threat of unbalanced output arising from the possibility of one scheme going through and another failing to get the requisite support might be averted if those concerned are kept fully aware of the quantity of machinery registered for scrapping at regular intervals.

Scrapping Plans

Over 200 looms at the Spa Mill, Padiham, owned by Richard Haworth (Holdings) Ltd., the Manchester textile group, are to be scrapped under the Government's reorganisation scheme for the cotton industry. The mill was closed earlier this year as a direct result of duty-free imports of foreign cloth. Making this announcement at the annual meeting, Mr. Stanley

Beddow, the Chairman, said that the group also intended to submit a proportion of its spinning and weaving plant at the Salford and Hindley Green mills for disposal under the scheme. The exact proportion had not yet been finalised. A suggestion from a shareholder that the Company should consider scrapping all its 67,000 spindles and 1,600 looms in order to concentrate on merchandising had already been discussed by the Board, Mr. Beddow told the meeting. "I cannot add anything further to my statement about our contribution to the redundancy plan," he replied.

Over the last four years, the group's trading results have improved from a loss of £513,810 in 1956 to a profit of £71,899 in 1959. "It is still a case of hope and hard work," commented Mr. Beddow. "The overriding position throughout the past year was the fight to maintain volume of business, both home and export, even on constantly decreasing margins."

Output Figures

Production in the local mills during May was affected by the Whitsuntide holidays, but output of yarn was exactly the same as in the same month last year, at 15,030,000 lbs. per week. A slight increase occurred in the quantity of cotton yarn spun against small falls in the amount of yarn produced in the waste and man-made fibre sections. The volume of cloth woven showed a reduction of nearly three million yards weekly as compared with the May 1958 figure, this year's average being 37,570,000 yards per week.

Despite the improvement in trade during the past month or two, the number of operatives on the books of employers continues to decline. At the end of May, available manpower had shrunk to 201,470, a fall of almost one thousand over the month. As compared with May 1958, the latest total is more than 26,000 down, of which over 14,000 are accounted for in the weaving section alone.

Profits in Belting

Competition among suppliers of conveyor belting for the coal mining industry was the subject of outspoken comment by Mr. David D. Marshall, Deputy Chairman of Greengate and Irwell Rubber Company at the annual meeting in Manchester last week. He said:

"Many people in our industry blame the National Coal Board for the troubles in which we and others find ourselves, but I would like emphatically to contradict such suggestions. It is my firm conviction that a lot of the unprofitability in conveyor belting, which was one of the main props of this Company, has been reduced to the position of making a loss, is due to the greedy and ignorant manner in which companies have expanded and come into the trade to seek a market which was never there in size which they had wishfully imagined. All of this has resulted in the most savage and desperate price-cutting which it will take a long and weary time to improve."

Mr. Marshall commented on the continued flood of cheap products in the footwear field, imports of which, "parading under the name of Empire-produced goods," continued unchecked. The Company, he added, was endeavouring to specialise in higher-grade footwear. The waterproof garment trade was having an extremely difficult time, which was certainly not being helped by the abnormally dry spring and summer "which had been a blessing to some people." —All Rights Reserved.

WORLD COTTON STOCKS DECLINE TRADE PROSPECTS BETTER

ALTHOUGH little change in the stock position of free world cotton at the end of the 1958-59 season, just ended, was expected earlier, a slight fall in estimates of production and an increase in consumption of late has resulted in a shrinkage in stocks. Thus, whereas stocks at the end of the season were earlier estimated to aggregate 18.3 million bales (of 478 lbs.), as against 18.4 million bales at the beginning of the season, they are now estimated to have actually fallen to 17.4 million bales, comprising 9 million bales in the U.S., 4.7 million bales in the net importing countries and 3.7 million bales in other net exporting countries. This change in the statistical position, according to the International Cotton Advisory Committee, is the result of a fall in production from the earlier estimate of 29 million bales to 28.9 million bales and the increase in estimated consumption from 27.9 million bales to 28.4 million bales. The following table indicates the supply and disappearance of cotton during the three seasons ended 1958-59:

Supply and Disappearance
(In million bales of 478 lbs.)

Item	1959-60*	1958-59*	1957-58	1956-57

Total	..	10.8	12.6	14.3

* Estimated.

As will be seen from the above table, total production in the past season is estimated to have aggregated 28.9 million bales, as compared with 27.8 million bales in 1957-58. Of this, the U.S. accounted for 11.5 million bales. Production in the rest of the free world amounted to 17.4 million bales, as against 16.8 million bales in 1957-58.

Consumption

Largely as a result of the improved offtake in the U.S., aggregate free world consumption is presently placed at 28.5 million bales, despite the significant decline in consumption in Western Europe and Japan.

Consumption in the U.S. at 8.7 million bales is higher than last season's 8 million bales. In Canada, too, the improvement in the cotton textile industry is expected to have resulted in a perceptible increase in cotton consumption.

Though perhaps less obvious, there have been signs of improvement in textile business in Western Europe recently and most countries appear somewhat more optimistic concerning the future trend of cotton consumption. However, aggregate consumption during the season is estimated at only 6.8 million bales, as compared with 7.5 million bales in 1957-58.

Consumption in India has been running higher than in the previous season, but for the full season should be about equal to 1957-58. Consumption in Japan is still much lower than a year ago and a decline of 200,000 bales or more is estimated to have occurred. Nevertheless, the textile situation is improving and there is every chance that restrictions on yarn and cloth production may soon be relaxed.

Exports

Exports from the U.S. are estimated at only 2.8 million bales. Elsewhere, however, trade has been favourable and exports from many countries have shown a significant increase, as compared with the preceding season, which offsets, to some extent, the decline in prices. In the aggregate, exports outside the United States is estimated to have exceeded 8 million bales, as against 6.9 million in 1957-58—the second highest volume on record. As a result, aggregate stocks in these other exporting countries at the

end of the season are now expected to remain at about the same level as a year ago, whereas previously it was thought that there would be a further increase.

New Season

As regards the 1959-60 crop, in the U.S., the acreage allotment for Upland cotton is 17.3 million acres, of which 3.6 million are under Choice B option. More than a million acres, or 41 per cent. of the base allotments going to Choice B, are in Texas and about 450,000 acres, or 18 per cent., are in California. Of the 13.7 million acres under Choice A, about 570,000 acres will be placed in the Conservation Reserve of the Soil Bank. Moderately warm weather has prevailed during the planting season and rains have assured germination over practically the entire belt. In the South—central and coastal bend areas of Texas, however, and in the southern areas of the central belt, rainfall has been excessive and crop progress has been less than normal. In the south plains area of Texas an estimated 500,000 acres of cotton were badly damaged by storms early in June.

In Mexico, acreage cutbacks for the 1959-60 crop affect every major cotton producing area. Estimates of total acreage are not yet available but trade sources generally believe that plantings may be reduced by 25 to 30 per cent., as compared with 2.5 million acres in 1958-59. Although the decline in production may not be proportionately as great as in acreage, the general expectation is that production may well reach 1.8 million bales, as against 2.3 million during the last season.

Planting in Lower Egypt was somewhat later than last year. The area planted to Karnak has been reduced by half. Menoufi acreage is about unchanged but the acreage planted to the Giza varieties is appreciably higher. Total acreage in Upper Egypt is estimated to be lower by about 5 per cent. The weather continues to be favourable, water for irrigation has been suffi-

cient and the incidence of disease and insects is no more than normal for this time of the year.

Although it is too early to estimate the probable size of the cotton crop in the 1959-60 season, it is obvious that the cotton situation will depend, to a large extent, on consumption. If any increase in consumption were to occur, the outlook for cotton trade and prices would be much more favourable than it was in the season just ended. According to the International Cotton Advisory Committee, Washington, considering all the relevant factors, it is not difficult to foresee an aggregate free world export of as much as 12.5 million bales, as compared with 10.8 million in the 1958-59 season. An increase in total trade, together with at least the possibility of some decline in production outside the U.S., should pave the way for substantially increased exports from the U.S., without adversely affecting the trade of other countries.

HYBRID COTTON

The possibilities of introducing hybrid cotton were attempted at Surat for the first time in this country. The preliminary experiments conducted are said to have proved a success. In all these experiments the yield of the hybrids far exceeded the control Co.2, the American parent. They were superior in respect of fibre length, fibre weight and spinning value also, but as regards ginning outturn the hybrids proved to be slightly poorer than the Co.2 parent.

The Indian Central Cotton Committee financed a scheme for the production and distribution of hybrid seed in Surat area but owing to inherent difficulties with regard to the production of the seed and high cost, the response to grow hybrid seed did not turn out to be as encouraging as was expected in the early days. But there was no doubt as to the quality of the hybrid cotton and ginning outturn. Therefore, in the present context of dearth of extra long staple cotton which into India to the foreign styles being imported it was considered that the attempt might be pursued with vigour and consequently the Indian Central Cotton Committee has approved of a new scheme for the introduction of hybrid cotton on a larger scale than was attempted before.

In so far as the technological properties of the hybrid cotton are concerned, against 7/8" of pure Co.2, the hybrid cotton possessed 1-1/4" staple on an average and was adjudged suitable for spinning 70's H.S.C. In respect of ginning outturn, however, it was 2 per cent. lower than the Co.2 cotton.

INSTRUMENTATION

It's time to go modern the low-cost way... with Honeywell instrumentation.

Full use of today's instrumentation gives you the newest methods of production and process measurement, recording and controlling. And that adds up to increased production, improved quality and lowered operating costs.

Instrumentation is being put to work in practically every known industry... from steelmaking to cosmetics preparations... from processing chemicals to imprinting bottle caps.

Honeywell instrumentation can be a profitable investment for you. Call in a Blue Star representative to advise you on modern instrumentation in your plant.

OFFTAKE OF JUTE GOODS HIGHEST SINCE 1947-48 INTERNAL CONSUMPTION RISING

THE jute season (July-June) 1958-59 proved to be an encouraging period of trading for the jute industry in India. While the output of gunnies recorded a slight shrinkage from 1,056,200 tons (in 1957-58) to 1,040,500 tons, in contrast to the expansion noted in the previous year (from 1,025,200 tons produced in 1956-57), the despatches moved up substantially from 1,030,600 tons to 1,074,900 tons. With this increase, the downward trend of despatches has been reversed after a lapse of two years. Another feature is that despatches during 1958-59 were the highest since 1947-48, when they had aggregated 1,077,900 tons. What is more, they exceeded even the year's production by no less than 34,400 tons.

The following comparative table shows the trend of production and despatches of jute mills during the last five years:

Year	Production	For export	Despatches		Total
			For internal consumption		
1954-55	994.8	850.8	137.6		998.4
1955-56	1,095.0	857.2	190.0		1,047.2
1956-57	1,025.2	865.9	179.0		1,081.9
1957-58	1,056.2	832.6	198.0		1,090.6
1958-59	1,040.5	864.9	220.0		1,074.9

A breakdown of the figures of despatches shows that the offtake for both export purposes and internal consumption has improved. Despatches for export purposes have gone up from 832,600 tons in 1957-58 to 854,900 tons, thus making good, to a large extent, the successive decline noted in the previous two years from 857,200 tons in 1955-56 to 832,600 tons in 1957-58. The despatches for domestic consumption are also encouraging, such having risen from 198,000

tons to 220,000 tons. This increase of 22,000 tons is on top of a rise of 19,000 tons recorded in the previous year, thus lifting the level of internal consumption to the highest point since the Partition.

The increase in despatches for exports is mainly accounted for by hessian, the exports of which have risen from 381,000 tons in the previous year to 433,900 tons, the highest level since 1947-48 when they had touched 476,400 tons. Despatches of miscellaneous constructions also show an improvement from 28,600 tons in 1957-58 to 46,900 tons in 1958-59, a fresh record in the history of jute industry. The rise in this variety is only in consonance with the trend of its output, which has increased from 67,800 tons to 84,500 tons. Despatches of sacking have, however, fallen from 423,000 tons to 374,100 tons, the lowest level since 1953-54. On the domestic front, the bulk of the rise in despatches is accounted for by sacking, such having increased from 152,100 tons to 168,600 tons. Miscellaneous varieties have also risen from 24,600 tons to 30,500 tons, while hessian has slightly dwindled from 21,300 tons to 20,900 tons. The internal offtake of hessian, it may be noted here, has successively dropped from 25,500 tons in 1955-56.

The figures of exports to individual countries for the whole year are not yet available. The provisional data for the first ten months of the year show that the U.S., the U.K., rest of Europe, Near East, Canada and Argentina have all improved their offtake of hessian. The exports to the U.S. alone amount to 181,700 tons, representing an increase of 35,500 tons over those in the corresponding period of 1957-58. They have even exceeded the exports during the whole of 1957-58 aggregating 169,800 tons. Exports of the U.K. have gone up from 25,300

tons to 36,700 tons and those to Argentina (the second largest buyer of Indian hessian) from 51,800 tons to 54,900 tons. The African countries have been mainly responsible for the fall in the exports of sacking. These countries took only 53,600 tons, as against 87,700 tons in the corresponding 10 months of 1957-58. Exports to American countries (other than the U.S., Canada and Argentina) declined from 74,100 tons to 58,900 tons and those to Australia, the single largest buyer of Indian heavy goods, from 62,200 tons to 59,600 tons.

There is, however, no reason to feel despondent over the decline in exports of sacking. For, as the recent survey of the I.J.M.A. delegation to Australia, New Zealand and other Far Eastern countries has shown, there is good scope for enlarging our exports of heavy goods to these countries.

The burlap consumption in the U.S. also shows a promising trend. During the month of June, the U.S. burlap consumption amounted to 81.4 million yards, the highest level since October 1958. The total consumption in the first six months of 1959 amounted to 454 million yards, representing an increase of 48 million yards over that in the corresponding period of last year. The average monthly consumption in the six months to June 1959 was 75.5 million yards, as against 68 million yards for January-June 1958. Usually, the later half of the year constitutes a period of higher consumption (was 71 million yards per month in the six months to December 1958). So there is scope for still better news from the U.S.

In view of this prospect, the President of the Gunny Trades Association, Mr. H. L. Mehta urged the Government of India last week, the annual meeting of the Association, to take new and redoubled measures to promote exports of jute goods. The success of these measures, however, depends on the quality of products supplied by mills. Mr. Mehta, therefore, drew the attention of all concerned to the need for eliminating such damaging features as la

ROLE OF PUBLIC ENTERPRISE IN ECONOMIC DEVELOPMENT

IMPORTANCE OF HIGH STANDARDS OF ADMINISTRATION

By R. P. Aiyer

POST-INDEPENDENT India, with its strivings and aspirations reflected in the national plans, offers an alluring prospect to students of public enterprise to attempt studies of the national effort in various fields. To a sympathetic observer, the Indian effort at "planning for prosperity" offers a few prescriptions indicating the strength and weakness of a nation pledged to democratic institutions, attempting to lift itself by its own bootstraps. The main motive force sustaining Indian planning—as indeed the economic development in the various underdeveloped countries—is that development is taken for granted and controversies are limited only to the methods.

Are the methods adopted by the Planning and executive authorities in the country good enough? What, if any, are the weaknesses exhibited by public enterprise in carrying forward policies laid down? Is there lack of economic realism in formulating targets to be achieved? These and other questions are best understood by comparative studies so that the enthusiast for public enterprise could pause and ponder with a view to appreciating how best public enterprise—which is an integral part of planning—could be effectively harnessed to advance chosen development programmes. The problems inherent in promoting such development programmes are multifarious and these are examined in a comparative study* with special reference to the experiments at development in Mexico, Turkey and India, by Mr. A. H. Hanson, Reader in Economics at the University of Leeds.

Planning in underdeveloped countries has now come to be accepted as a "must," if the economic hopes engendered by political freedom are to be realised without serious loss of time. In this context, even the worst critic has to concede that an economy based on agriculture is unstable, and that an exclusively agricultural country with the inevitable choice of having to continue to sell primary products in exchange for manufactured goods will be condemned to remain in a position of weakness. This fact, by itself, has led to an upsurge towards industrialisation leading to economic plans reflecting nationally-oriented ambitions. Nevertheless, wisdom lies in governments of underdeveloped countries not tending to copy the mere superficial externals of Western economies. Enduring progress postulates that industrial and agricultural development march together, which in turn should be buttressed by improvement in services and administration. Otherwise, a type of "facade development" would result producing, to quote Mr. Hanson in relation to some of the Latin American countries, "grotesque situations in which a few artificially created modern factories, heavily protected and working at half-cock for a stagnant market, form isolated modern oases in a desert of rural backwardness, where peasants scratch the soil for a meagre living with techniques that have remained unchanged for hundreds of years."

Acquired Advantages

However, one need not necessarily accept that the world pattern of industry today and the consequent divisions of labour are based on "natural" advantages alone. No doubt, a nascent industry in an underdeveloped country has to contend with high costs; it cannot be otherwise when the *entrepreneur* has to grapple with a host of industrial and economic problems. But the history of industrial development in all parts of the world is one of "protection" to the infant industry, leading to promotion of acquired advantages. If one part of the world could acquire this, the other parts could as well do so. Such a process will involve "artificially created environment" where there is an assurance that relative failures do not spell absolute disaster.

Mr. Gunnar Myrdal in his classical publication *An International Economy* (1956) has given four special reasons for industrial protection in underdeveloped countries. To quote them: (i) difficulties of finding demand to match new supply, (ii) existence of surplus labour,

(iii) the large rewards of industrial investment in creating external economies and (iv) the lopsided internal price structure disfavoured industry. These difficulties place the aspiring industrial economies at a disadvantage which emphasise that "stronger and more permanent measures of State assistance" are inevitable if the nascent industries are not to go under. So the State must assume the role of a "tireless innovator."

How far can such State "innovations" go? Economic thinking by and large in underdeveloped countries has tended to view "private enterprise as fundamentally anti-social and eventually doomed to extinction by the inexorable process of history" and so is tolerated under sufferance, the degree of tolerance varying with the prevailing climate of political opinion. This accent on public enterprise continues to be the guiding policy of many of the Governments concerned notwithstanding the proclaimed views of Mr. Eugene Black, the Chairman of the International Bank for Reconstruction and Development, that "if the real benefit of industrialisation are to be obtained" Government should undertake industrial ventures "if at all, only as a last alternative and only after a full examination of other alternatives that exist." Even then, Mr. Black's view is that "in cases where a Government may go as far as to start an industrial enterprise... every effort should be made to put the venture into the hands of private capital and private management as quickly as possible." Against this primarily American official thinking an observer from the U.K.

at the Rangoon Seminar on Public Enterprise in South-East Asia (March 1954) has indicated that "while nationalisation in Great Britain can be conceived as the final stage in a long historical development of industrial organisation... in South-East Asia it is the first step—and in some countries only a temporary one—towards starting an industrial society."

Objective

With India's long traditions in craftsmanship and its nucleus of basic industries, the question of means is not so fundamental. Which agency should be called upon to shoulder a given responsibility is largely a matter of convenience, depending upon the ideology of the ruling party and given circumstances. Mr. Hanson has hazarded the view that, whatever the ultimate perspective may be, if circumstances are such that "private entrepreneurship can be effectively stimulated, then the policy of concentrating governmental effort on certain basic but unremunerative essentials" should be followed, "leaving everything else to the private entrepreneur."

Even in the best of circumstances, to sponsor an industry is hard enough. Entrepreneurial ability encompasses many elements. To mention a few, technical innovation or adaptation, business promotion, capital promotion, business management and risk bearing. These abilities are scarce in underdeveloped countries, and to add to them the industrial *entrepreneur* has, in a budding industrial economy, to reckon with other difficulties connected with political and monetary instability. One has also to contend with the tendency of the public to look down upon profit motive. No wonder then, aptly comments Mr. Hanson, "Why entrepreneurship, the catalytic agent that transforms savings into wealth, has sometimes been described as the 'missing link'." Is then underdeveloped countries indefinitely to be weighed down by elements—social, political and economic—which offer resistance? Here Mr. Hanson is prophetic when he says: "Broadly speaking, it is unusual to find that the people of an underdeveloped country possess institutions and display

In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

attitudes which are conducive to economic development... it is probable that the country would not long remain underdeveloped." How important a bearing the pattern of social relationships has on economic development has been brought out even more vividly by another thinker who observes:

"To repair and maintain, to think of tomorrow, not only of today; to educate and train one's children; to prepare oneself for new activities; to search out new contacts; to widen the horizon of individual experience; to invent, improve, to question 'the dead hand of custom,' and the heritage of the past—in all of these, and not in mechanical calculations or mechanical regimentation, lay the causes of capital accumulation. For indeed capital was but 'accumulated' in the ledgers of the counting house: in the objective world it was embedded in the general stream of changing activity, in world-wide migration in co-operant bonds of commerce and mutual confidence and in the painfully created new aptitudes of action and responsibility." (F. K. L. Hsu: *Cultural Factors*.)

Therefore, there is no easy road for economic prosperity, and there is no alternative to social engineering. "In this experimental task," says Mr. Hanson, "progress can be achieved only through trial and error." Instead, as Mr. Myrdal has stated in the publication cited earlier, we find governments grappling with problems of "how to avoid tensions rather than how to release the dormant capacities for cultural growth and development to economic and political independence of indigenous communities."

In a planned economy with a high degree of emphasis on public enterprise, a higher standard of administration is a *sine qua non*. More than efficiency it requires an effective "conscience." This has been fully appreciated in India, as evidenced by the remarks in a study on *The Administrative Personnel in India* by P. P. Rao and P. C. Suri (September 1957 issue of *Indian Journal of Public Administration*). To quote the commentators, civil servants in a democratic State, among other things need "an appreciation of democratic values, training and experience of working through democratic processes. ... Skill to invoke a sense of social purpose among officials and win the co-operation and participation of non-official elements. ..."

Resources and Priorities

The basic problem of underdeveloped countries is resource mobilisation and resource allocation. That means a rigid determination of priorities as between competing demands. In other words, fiscal policies are to be assigned the central task of wresting from the pitifully low output of the economy sufficient savings to finance economic development programmes, many a time involving agonising reappraisals. Here comes such controversial issues as to whether, at a given point of time, quick yielding projects should be proceeded with or priority should be given to capital-intensive projects involving sponsoring basic industries. No doubt, development is best conceived as a deliberate and planned rearrangement of human and material resources and so it is not always easy for a democratic State to function on "either or" choice basis. In a country like India, the success of a centrally formulated plan depends on the voluntary co-operation of various State agencies and so bottlenecks are inevitable. These bottlenecks are, however, not insurmountable, if the authorities concerned give scrupulous regard for the objective requirements of a given situation. On this aspect of the problem, Mr. Hanson's commentary bears reproduction. Cautioning the need for minimum consideration "for the exigencies of organised groups and shifting parliamentary majorities," he says: "On the part of the politicians who occupy ministerial office, it demands considerable self-denial, which may be entirely alien to the political traditions in which they have been educated. They must cease to be *prima donnas*, stop empire building. ..."

India's planning effort is regarded as a practical answer to Communism, and Mr. Hanson's tribute is: "What calls for comment and explanation is not that the success of the Indian Planning is assured, but that, such a promising beginning has been made. ..."

In all underdeveloped economies, the role of public enterprise as a pace maker has come to be accepted. With this need having been conceded, the logical outlook is to clothe the various elements with the necessary organisational shape so as to obtain the best possible efficiency. So arises problems of organisation and control. What types or organisations are best suited to make public enterprise a success? We have before us experience gained in large-scale organisations in the industrialised West. Voluminous literature is also available on the success achieved by Japanese methods

Every known type of organisation can work well if the suitable personnel to man the organisation are available, and the general view is weighted in favour of public corporation, offering as it does the right combination of commercial initiative and State regulation in that, to quote the classical phrase of the late President Roosevelt, it is "clothed with the power of Government but possessed of the initiative and flexibility of private enterprise." Departmental management is still fancied in many countries and this form of organisation has many votaries in India. A more recent innovation is a State "company" denoting an enterprise established under the Company Law of the country concerned. The contract method is ages-old, but suffers from the drawback of there being no assurance that the operations of the enterprise are in line with current conceptions of public policy.

Each form of organisation has its own advantages and disadvantages and, as far as India is concerned, the view expressed in the second Five-year Plan stands out, namely, that "more study must be made of every organisational type" and that "greater experience is needed before a clear view as to the relative advantages of different forms of organisation emerges."

Form of Control

The most debated problem in relation to public enterprise is the form of control to be exercised over it. In many cases, the law creating the agency to operate a specific public enterprise itself regulates the control mechanism, and here again success or failure depends on personal factors. The broad conception to which there is general agreement is that ministerial control is inevitable so as to ensure that public policies enunciated by the legislature are by and large followed.

There is, of course, no infallible prescription, and as Mr. Hanson has indicated, "four variables" are involved, namely: (1) the stage of economic development that the country has reached, (2) the demands made on ministerial time and energy by a particular sector of public enterprise, (3) the quality of the machinery that the Government has established or is capable

of establishing, and (4) the role that Government has assigned to public enterprise and the kind of agencies it has chosen for the development of the public sector.

Internal organisation within a specified agency can make or mar the enterprise concerned. "Functionalism," that is, decision-making by the expert associated with some aspect of the undertaking, is an issue which is raised on many occasions and it still continues to be hotly contested. In all human institutions there is no definite line to ensure success, and as Mr. Hanson has said, "our knowledge of conditions for public enterprise administration is too fragmentary and uncertain to warrant any kind of dogmatism, and the great variety of national circumstances demands the maximum flexibility."

Personnel

Shortage of skilled personnel at all levels is a common problem with all public enterprise projects. This bottleneck is more than one of "resources," as it has a bearing on social and other problems. It is in this context that the Indian plan for the creation of "Industrial Management Service" should be appreciated. Where to look for the personnel? The hope is that as the projects under public enterprise gather momentum they will throw up their own cadres, and in the meantime the recruiting field is the sector manned by corporate enterprise. A stopgap is employment of foreign personnel but from this source there cannot be many "missionaries" as distinct from the "money-maker." Even to the "missionary," the difficulties inherent to adapt himself are immense. To quote Mr. Hanson: "They do not understand the tasks they have set for themselves. ... Instead of attempting to circumvent obstacles, they run headlong up against them, and as obstacles multiply and this painful process repeats itself all but the most determined lose heart. ..."

Some of the aspects covered by Mr. Hanson's superb study offer valuable footnotes to underdeveloped countries in various stages of development. And to India, in particular, now that its study teams are formulating the outline of the crucial third Five-year Plan, the book should give an insight into the efforts necessary to make the Plan a greater success.

WORLD CHAMPIONS CHOOSE Firestone

..SO SHOULD YOU

because—in the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

Glen Roberts, winner of the Ninth Annual '500' race at Darlington, South Carolina, said that his wonderful performance was mainly due to his Firestone tyres, which had to withstand a track temperature of 121 degrees.

SNOTTIK OVERSEAS ENTERPRISES

P. O. Box 233

EBUTE — METTA — NIGERIA

Are interested to represent manufacturers and/or sole exporters of all kinds of textiles, crockeries, cutlery, iron goods, leather goods, sports goods, cement, household goods, office equipments, ornamental goods, rain equipments, grocery goods, beverage, alcoholic drinks and children's toys. We are also importers of those products as enumerated above, and free valid samples for effective showroom display should accompany all offers to us. Also looking for Commission Agents in any country to cater for our interests by negotiating on our behalf.

"Quite a striking disguise, Sitaram, but why hide your handsome features?"

"Shh! This suit, although practically new, looks so disreputable that I would get the sack if the Big Boss recognised me."

"It is incredible that you didn't think of buying BINNY'S cloth. BINNY'S Quality Control" their production, you know..."

"Quality Control? Never heard of it! What does it do?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S suitings stay smart so long."

"Brother, your words bring hope to me. Let's hurry to the nearest BINNY'S shop."

BINNY

— a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Towels -
Anticrease Suitings - Tussore - Union Fabrics - Silk Saris
Rugs - etc etc

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited
Managing Agents: Binny & Co. (Madras) Ltd.

DUNLOP VEE BELTS STRENGTHENED WITH

Rayoncord

Designed to meet the new American Standard horse power ratings.

Will stand up to rough use and shock loading.

Longer Belt Life!
Reduced Costs!
Greater Efficiency!

The Dunlop Rubber Co. (India) Ltd. Industrial Rubber Products Division

HIGH AND LOW TENSION INSULATORS WITH FITTINGS AND ALL ELECTRIC TRANSMISSION LINE MATERIALS

ORIENT TEXTILE ENGINEERS LIMITED

24, Netaji Subhas Road
CALCUTTA-1

WORLD ENERGY PATTERN OIL AND GAS GAINING GROUND OVER COAL

WORLD energy consumption is continuously in a state of expansion. In many countries, it is expanding by over 10 per cent. each year. This reflects the increasingly faster pace at which world industrialisation is taking place. In the industrially advanced countries, the average energy consumption is much higher than in the underdeveloped countries. For instance, the energy potential per industrial worker is 8 h.p. in the U.S., as compared with about 1.2 h.p. in the rest of the world. Nevertheless, efforts are being made in every part of the world to increase the pace of industrial progress which, in its turn, implies an increase in consumption of energy. An equally significant aspect of world energy consumption is that, within the overall pattern of such consumption, oil and gas are gaining greater ground at the expense of the relatively more ancient source of energy, coal.

It would, of course, be a clear exaggeration to suggest that coal will lose its place as a source of energy in the foreseeable future. But the gradual increase in the consumption of oil and gas which seems to be taking place at the expense of coal, may well come to have important consequences for coal mining and related industries. Discussing the divergent trends in the consumption of oil and coal under the provocative heading "Are oil and gas replacing coal?" the correspondent of the *Swiss Bank Corporation Bulletin* notes how, in several countries, the output of coal has declined. The correspondent presents the problem against the world background where he notes how, because of the rapid increase of the world's population, of the just claims of the less developed regions and of the insistent demand of people in the older countries for a still higher standard of living, the energy supply of the world will have to be continuously augmented at an ever-increasing rate for an indefinite period.

Output of Coal

Reviewing the steps taken in Europe to develop the traditional source of energy, namely, coal, the correspondent observes that, despite Herculean efforts made in post-war years, the output of coal in Europe is not appreciably greater now than in 1938. What is even more interesting from the point of view of the overall pattern of energy consumption is that, despite the ever-increasing demand for energy, the coal produced in Europe could not be fully consumed. Last year, the stocks of coal at the pitheads in the O.E.E.C. countries increased from 16 to 45 million tons. To cope with the resulting coal crisis, the European Coal and Steel Community in mid-April decided to reduce total production by 3½ per cent. and imports of coal by 45 per cent. But it should be clear that, inasmuch as the total consumption of energy is increasing, supplies on a large and expanding scale must have been coming from sources other than coal. This is confirmed by an analysis of market trends. For instance, it would appear that, in West Germany, the consumption of mineral oil will go up from 32.5 million tons in 1959 to nearly 40 million tons in 1965, partly at the expense of coal. It is true that sources of energy (other than coal and oil) are also being tapped. Since World War II, immense amounts of capital have been invested in W. Europe to develop water-power resources. But the sources of water-power "still economically worth exploitation are limited." In 1955, water-power accounted for about one-tenth of the total energy output of all O.E.E.C. countries. By 1975, it is expected to account for one-sixth of the total energy of W. Europe. After that, the proportion, it is stated, is certain to decrease.

Coal from the Ruhr, water-power from Austria, natural gas from France, mineral oil from the Middle East and from the Sahara, all competing fiercely with one another, will contribute to cover the energy deficit of West Europe. For at least twenty years, nuclear energy is expected to make only a minor contribution. To close the ever-widening energy deficit, West Europe has been importing more and more mineral oil since World War II. At first, the major part came from the U.S.A. Since 1945, however, the Middle East has become by far the chief source of supply. In 1937, the Middle East produced only 15.9 million tons of crude oil—little more than 5 per cent. of the world output. By 1947, the yield of this region exceeded 42 million tons and by 1951, 97 million tons. In 1958, when the world output of crude

Middle East accounted for 180 million tons. From computations made in London recently, the known reserves of mineral oil in the world at the beginning of 1959 aggregated about 37,000 million tons, the highest ever. A year earlier, the figure given was 35,700 million tons. Of these reserves, the Middle East accounts for 23,900 million tons, the U.S.A. for about 4,200 million tons, the Soviet Union 3,800 million tons and Latin America 3,000 million tons.

Crude Oil

In recent years, the production of crude oil in the Middle East has been substantially augmented, namely, from 172 million tons in 1956 to a record of 214 million tons in 1958. In Iraq alone, the increase was from 21.7 million tons in 1957 to 35.3 million tons in 1958. More increases are scheduled for 1959 in all Middle East countries, especially in Kuwait and Iraq. Tankers and pipelines are now available to transport this crude.

In the choice of the source of energy, price, of course, will be an important determining factor. Partly because of the higher cost of raising coal from deeper levels, partly because of the shortening of the working day in the mines, the trend of coal prices in Europe has been continuously upwards, whereas the trend of the price of crude oil is continuously downwards. Crude oil is in oversupply. For a considerable time past, the price of crude on the international market has been under pressure. Recently, the f.o.b. price of B.P. Near East crude was lowered by 18 cents per barrel, that is, to 5 cents a barrel lower than before the Suez crisis. Moreover, oil is more economical to handle than coal, is cleaner, easier, and cheaper to transport and has a greater heating capacity per ton than coal. One ton of crude oil yields as much heat as 1.4 ton of coal.

The output of coal in the U.S. has fallen from 493 million tons in 1957 to 400 million tons in 1958 or by 20 per cent. The U.S.S.R. has plans for changing the energy pattern from coal to oil basis. By 1965, the share of oil is to be increased from 31 per cent. to 51 per cent. and that of coal reduced from 59 per cent. to 43 per cent. This follows the general world trend. In 1934, the energy sources of the world were 65 per cent. coal, 25 per cent. oil and gas and 10 per cent. water-power, whereas, in 1959, the percentages are 42, 48 and 10 respectively. Efforts are being made in Europe and elsewhere to increase the output of oil and to tap fresh sources of oil. The Soviet Union aims at increasing the production of crude oil from the present 113.5 million tons to about 240 million tons by 1965. In its search for export markets in Western Europe, it is likely to encounter keen competition from oil from the Middle East. In addition, it will face competition from oil from the Sahara and from natural gas from Laq in Southern France. Exploitation of both these sources is still in its infancy but the prospects of their growth are promising. In 1958, the output of Sahara oil was only about 0.4 million tons. By 1965, it is expected to go up to 30 million tons. The deposits of natural gas at Laq are believed to be the largest in the world, sufficient to last for a period of 25 to 30 years. France is making efforts to supply this gas to the neighbouring parts of Italy, Switzerland and West Germany through specially laid pipelines. Because of competition of oil from these sources, the price of crude oil is expected to be under pressure. Consequently, the price difference between coal and oil is expected to widen.

FOR SALE

VALUABLE COFFEE ESTATES IN
Shevaroy—Stanmore, Brooklands and Moulvie Estates, the property of Messrs. Short Bros. (Private) Ltd. Planted area 513 acres of Arabica coffee, Reserve land 338.53 acres. Crop estimate for season, 1959-60—150/165 tons. Price Required Rs. 12 lakhs. No brokers.

For particulars and conditions of Sale apply to Messrs. King and Partridge, Solicitors, McLean Street, Madras 1.

Although it remains to be seen what effect these developments will have on the Common Market of the six countries, which are the sole producers of coal in Continental Europe, it is believed that the prospects "are not bright."

Examining the immediate prospects for the energy pattern, the correspondent expresses the view that, for the time being, the consumption of coal in West Europe will continue to exceed by far that of oil and gas, at least until the requisite pipelines for the conveyance of crude and the distribution of gas have been laid, and enough distilleries built. Meanwhile, the railways and waterways of Europe, the earnings of which come largely from the transport of coal and oil, and naturally the coal mines as well, will exert all available political influence to protect their own interests by trying to delay the construction of pipelines and oil refineries. In the long run, however, price will decide, especially in those countries outside the Common Market of Six whose industries will have to cut production costs radically to remain competitive on the world market. As regards the immediate future, nuclear energy for industrial use may be left out of account. As matters stand now, the only possible comeback conceivable for coal, according to the correspondent, would be another boom in world trade great enough to take up all the coal, oil, gas and waterpower available.

MERCHANT FLEET

Ten vessels aggregating 42,657 gross tons were added to the Indian fleet during the first half of 1959 and three vessels aggregating 6,415 gross tons were disposed of due to overage. One vessel of 567 gross tons was lost at sea. The result has been that on 30th June 1959, there were 149 vessels with a total of 683,500 gross tons in the Indian merchant fleet, showing a net increase of 6 vessels and 35,888 gross tons over the tonnage figure at the beginning of the year. The ten vessels consist of five new ones, one secondhand built in 1953 and four small vessels for operation in the short coastal services. All the new vessels are motor vessels of modern type, three built in Germany, one in Yugoslavia and one at the Hindustan Shipyard, Visakhapatnam.

Nearly 60 per cent. of the Indian tonnage, i.e. 406,587 gross tons, is engaged in the overseas trade of the country. Vessels operating in the coastal and adjacent trades total 89 of an aggregate gross tonnage of 276,913.

An age-wise analysis of the Indian tonnage shows that over 50 per cent. of the tonnage "young", that is, under ten years of age. Oneable age i.e., 20 years and over. Practically all the new vessels being added to the Indian fleet are motor vessels, the number of which was 41 of a total tonnage of 196,403 tons. Of these, 26 vessels with a total of 195,059 tons are operating in the overseas trades and 15 vessels of 31,344 tons are in the coastal trades.

Since 30th June, one secondhand vessel of 8,853 gross tons has been acquired for the Indian fleet, bringing the strength up to 150 vessels aggregating 692,353 gross tons. According to available information, about 80,000 gross tons of shipping, expected to be delivered before 1961, is under construction on order for Indian shipping companies in Indian and foreign yards. This will leave approximately 120,000 tons of shipping to be acquired, excluding replacements, to attain the second Plan target of 900,000 tons.

PANCHET HILL PROJECT

The Panchet hill dam, the biggest construction work of the Damodar Valley scheme, will be completed shortly. This dam spans the main river Damodar; the other three dams at Tilaya, Konar and Maithon have been constructed over the Damodar tributaries. The new dam will afford still greater protection against floods, irrigate 3,00,000 acres in the lower Damodar valley. The power house at Panchet, the sixth in a chain of D.V.C. power houses, is also to be completed by 19th August 1959. The addition to the D.V.C. electric grid system from it is expected to be 171 million kw. per annum. The works relating to the Panchet hill project were taken up in 1953-54, and are being completed now.

The dam is a composite earthen and concrete structure of 4½ miles in length and 134 ft. in height. The spillway is 1,218 ft. long, and the concrete crest power house is 167 ft. high. The reinforced concrete right non-spillway portion of the gravity dam. There are 19 gates, 41' x 40' in the spillway and 10 gates 10' x 25' in under-sluices. The reservoir created by the Panchet dam is 50 sq. miles in area, the maximum storage capacity being as much as 12.65 lakh acre feet of water, of which the normal storage is 3.33 lakh acre feet. The installed capacity of the Panchet power house is 40,000 kw. The total estimated cost of the dam and power house is Rs. 18.25 crores—Rs. 18.32 crores for the dam and Rs. 3.93 crores for hydro-electric plant and equipment.

It is learned from Indian Steelworks Construction Company Ltd., Calcutta (I.S.C.O.N.) that for distribution in the Durgapur Steelworks, the 30 substations over the Steelworks site and, so far, approximately 5½ miles of cables have been laid from Maithon power station through the 132 kv. door section of Durgapur thermal power station where the supply is reduced to 33 kv. before transmission to Purnabad.

NEW PRODUCTS AND PROCESSES

Safer Bottle Seals

TWO Swedish firms have simultaneously evolved some ingenious bottle-closing seals, one intended for use on bottles containing medicals or chemicals dangerous to children and the other designed for bottles containing surface-tension reducing emulsifiers or highly volatile liquids. Both present the advantages of being cheap, simple and effective for their purpose. The latter can, besides, be made pilfer-proof by an inside lining that breaks when tampered with.

The invention of the "child-proof" capsule was prompted by a medical alarm about the statistics of youngsters injured or killed by poisons. AB Astra, one of the largest manufacturers of medical products, launched in the market a safety capsule in 1956, but found that "inherent inertia" prevented people from asking for it. However, the new capsule is so cheap that the firm has started providing all its potentially dangerous products with such seals, which consist of a flexible ring equipped with two flaps round the bottle's neck and a cap that is toothed at two opposite points. Only by pressing the flaps downward while turning the lid is it possible to open the capsule, a procedure that is too difficult for a small child.

The other cap, which has been evolved by the Alka branch of Wiandere Korkfabriker, makers of bottle-washing, bottle-sealing and related equipment, has, in less than a year, become a standard cap for certain medicines in Sweden. It is all in one piece with no inside liner and is made of polythene with high specific gravity and it therefore resists knocks, blows and pressure strains and temperatures up to 120° C. The tightening is effected by linear tightening between the conically shaped inside and the bottle mouth. The cap is not chemically affected by alkalies, acids and salts, with the exception of a few very strong acids. The cap can be combined with an inside aluminium tear-off cap. This provides a maker of quality products, for instance, in the canning and food industries, with a guarantee that his product reaches the consumer unadulterated.

"Motorized Milking Cow"

The process of recombining milk from the components of water, skim milk and butter—although long known in principle—has recently won practical application on a small scale. Using a skim-milk powder specially manufactured for the purpose by Swedish Condensed and Dried Milk Company, Gothenburg, and an apparatus called Ultra-Turrax, quantities of about 60 litres can quickly be produced. The machine is sold by Axel Kistner, Stockholm, on a world-wide licence from the Swiss inventor, P. Willems. The "motorized milking cow" has solved the problem of supplying ships at sea with fresh milk. The new machine was one year ago introduced on a vessel owned by Grangesberg shipping company, Stockholm, and because of the excellent results, the company has now equipped all its vessels with "the cow". Other Swedish shipping companies are doing the same. 500 "motorised cows" are at present supplying ships all over the world with fresh milk. Whereas ordinary condensed milk during storage easily takes up extraneous flavours, because of its percentage of fat, the components of recombined milk, dry fatless skim milk and deoxidized, saltless butter can be stored any length of time without changes in taste. The large milk can, into which the complicated apparatus for recombination is inserted, contains about 60 litres. The "motorized cow" works as follows: 11 litres of water (60° C) is mixed with 1.5 kilogrammes of butter and 4 kilogrammes of condensed skim milk. After five minutes the milk concentrate is mixed with 40 litres of water, which should be as cool as possible. After five hours in a cold-storage room the milk is ready to be served, and tastes, according to all reports, just as well as if it had been produced by a live cow.

Improved Heat Resistance for Rubber

As the result of research work carried out by the British Rubber Producers' Research Association, the usage of natural rubber compounds can now be extended to include products for service at temperatures of the order of 100° C. to 125° C. The improvement in heat resistance is brought about by careful selection of curing systems, protective agents and fillers. The tests demonstrated that far longer service lives may be anticipated for many rubber components which present a proportionately smaller area for oxidative attack. The heat-resistant compounds are suitable for a very wide range of products and applications for which mixes are suggested include conveyor belts, steam hose, mountings, flexible couplings, seals, gaskets, thread, grommets, cables, lagging and sheathing, diaphragms and stoppers. The basic techniques used in compounding natural rubber for maximum life at high temperatures are stated to be: (1) The use of a "sulphurless" curing system; even very small proportions of elemental sulphur give inferior ageing. (2) The use of an antioxidant conferring high heat-resistance. (3) The use of a dihydroxybenzate as a protective agent; this is often formed in situ during vulcanisation. (4) The use in some cases of an antioxidant of the type sometimes known as a "deactivator." (5) The selection of an appropriate filler.

Lamp for Night Fishing

A new fishing aid now being introduced in Asian waters will mean bigger catches for local fishermen. This is a new underwater electric lamp, which has already been used with good effect by Italian and other Mediterranean fishermen. The lamp is much more efficient than the traditional above-surface kerosene or gas lamp commonly used to lure fish at night. The new lamp is reported to have been introduced at select spots on an experimental basis. The local

fishermen are being familiarised with the method of using this lamp. The method is quite simple. Before sunset, a large boat tows two small boats, each fitted with the lamps, to the fishing ground. The small boats are anchored at a considerable distance from each other. When fish appear, the large boat "shoots" its net around the lighted area where the fish have gathered. The main advantage of the new lamp is that it can be made easily by fishermen. Moreover, it is cheaper to run than the old type of lamp because less power is necessary.

Growth Stimulator for Livestock

A new preparation known as furazolidon has been evolved in the Institute of Organic Synthesis of the Latvian Academy of Sciences, U.S.S.R. It possesses valuable properties of a growth stimulator for livestock. It has been shown that the preparation influences the microflora of the digestive tract, facilitating the development of useful bacteria. Their activation intensifies the biosynthesis of albumen and vitamins. The research conducted by the Institute of Biology has shown that an addition of 30 to 50 milligrams of furazolidon per kilogram of fodder will result in an additional 10 per cent. increase in the weight of calves, piglets and chickens. Simultaneously, this preparation counteracts certain diseases among young animals. It is interesting to note that animals receiving furazolidon with their fodder show a marked improvement in the blood composition. The best result in livestock breeding, it is claimed, is obtained by using the new preparation together with penicillin.

Cheap Pudding Machine

Good news for rice growers from the Central Rice Research Institute, Cuttack—the Institute has invented a machine for puddling rice fields with standing water. The machine is simple in design, cheap and easy to operate. It has several

rotating blades or shears. It cuts the soil and at the same time churns it, and can easily be drawn by a pair of bullocks. Trials conducted at the Central Rice Research Institute have proved that the machine is useful for all soils except clay. About three acres can be puddled in eight hours. Puddling is an important operation before transplanting paddy seedling in the fields. To get a good puddle several ploughings have to be given if an ordinary plough is used. The new machine has to be worked only once or twice and gives better results.

Plane-crash Fire Extinguisher

The U.S. Navy has reported the discovery of a new agent that takes the heat out of fires. The Navy calls it a "revolutionary development" and says it will put out oil and gasoline fires twice as fast as the best extinguishers available currently. The new agent, called "purplis K powder," consists of flame-shielding, fire-quenching clouds of very finely powdered potassium bicarbonate. The powder, in recent tests on an oil fire similar to that started by a crashing plane, reportedly extinguished the fire in eleven seconds.

New Radiator for Leyland Vehicles

A new and improved replacement radiator for the concealed type has been designed by Leyland Motors Ltd. for the Comet ECO and ECOS range of truck and bus chassis. Embodying all the structural qualities of the radiator fitted on the new Comet CS3 range of chassis, it is easily interchanged with the existing unit on vehicles in service. The replacement radiator is a one-piece unit of the three-row Morris Stack type and carried by a special steel framework to provide extra strength and rigidity. When installed, it is mounted on rubber bushes on the frame, in crossmember and tied to the front lifting eye of the engine by a rod from the radiator frame.

H.E.H. THE NIZAM'S CHARITABLE TRUST FIFTH ANNUAL REPORT FOR THE YEAR ENDED 31ST MARCH, 1959

1. The Trust was created by His Exalted Highness the Nizam of Hyderabad on 14th June 1954, with a corpus of the face value of Rs. 4,90,00,000 (Rupees four crores and ninety lakhs) for relief of the poor, support of religious institutions, provision of medical aid, advancement of education and for any other object of public utility in India in general and particularly for people in the former State of Hyderabad.

2. During the year, the Board of Trustees comprised:

- | | |
|---------------------------------|-----------|
| (i) Nawab Zain Yar Jung Bahadur | Chairman |
| (ii) Mr. V. P. Menon | Member |
| (iii) Mr. Shavax Ardesir Lal | Member |
| Khan Bahadur C. B. Taraporevala | Secretary |

3. During the period under review six meetings of the Board of Trustees were held to consider the applications received from various public institutions and individuals, for donations, lump sum grants, medical aid, scholarships, etc.

Help to Needy

4. The Trustees received during the year a very large number of applications from poor and destitute persons, from unemployed people and poor students. The procedure employed in dealing with the applications was to obtain, where possible, the views of District Officers, and heads of hospitals and educational institutions and sift the recommendations before assessing the quantum of assistance in each case. In the absence of such recommendations the Trustees themselves caused proper investigations to be made before granting relief. The applications dealt with during the year under review are classified under the following broad categories, showing the relief or assistance granted:

- 260 poor and destitute persons and widows, who are unable to work and have, therefore, no other means of income, were granted maintenance allowances ranging from Rs. 5 to Rs. 20 per mensem.
- Special maintenance allowances ranging from Rs. 25 to Rs. 50 per mensem were paid to 18 widows and poor and destitute persons who had no other source of income.
- 422 poor and deserving students were granted scholarships ranging from Rs. 10 to Rs. 20 per mensem.
- 12 students were awarded special scholarships ranging from Rs. 25 to Rs. 100 per mensem, for higher technical studies.

In all 4,657 beneficiaries (practically all of whom belonged to Hyderabad), including those who were recipients of financial aid before drew either maintenance allowance or scholarships under the four categories referred to above, as on 31st March 1959, and the total of such payments during the period under review amounted to Rs. 6,70,660.

B. 373 patients suffering from T.B., cancer, leprosy and other diseases were granted lump sum financial aid for medical relief. The total amount of medical aid granted to such patients, during the period under report, amounted to Rs. 35,607.

C. 916 poor and deserving students (practically all of whom belonged to Hyderabad) were granted lump sum financial aid, ranging from Rs. 50 to Rs. 200, towards payment of their admission fees, examination fees and for purchase of books, instruments, etc. The total sum of such financial aid, during the year under review, amounted to Rs. 79,683.

Foreign Scholarships

5. During the year under report, foreign scholarships and lump sum grants for higher education abroad (including passage money) amounting in all to Rs. 1,16,968 were provided by the Trust. All the recipients belonged to Andhra State and care was taken to select only those who had first class degrees to their credit or exceptional merit. In all, 33 students have or are receiving financial aid from the Trust.

6. Special lump sum grants aggregating Rs. 3,17,500 were given to schools, vyayamshalas, sanatoria, sports institutions and other objects

of public utility. Most of the beneficiaries belonged to Hyderabad.

7. Recurring grants for periods ranging from one to three years were granted to various educational and technical institutions involving an expenditure of Rs. 1,07,600 per annum. Almost all these institutions are situated in Hyderabad.

8. By the Deed of Trust dated 14th June 1954, His Exalted Highness the Nizam of Hyderabad assigned to the Trustees, as stated earlier, debentures and shares of various companies of the face value of Rs. 4,90,00,000 (Rupees four crores and ninety lakhs) and the then estimated market value of approximately Rs. 5,11,00,000 (Rupees five crores and eleven lakhs). This fund was a balanced investment, that is, its assets are distributed among fixed yield securities, such as debentures, and cumulative preference shares designed to bring in a steady income and equity shares which, besides bringing income, are also capable of capital appreciation. A noteworthy feature of the investment policy followed by the Financial Adviser to His Exalted Highness the Nizam was that the investments were made not only with a view to their soundness and yield potential but also with the object of providing the means of livelihood to a large number of the teeming unemployed of the country. Most of the investments which H.E.H. had made have been in new industries or for the expansion of existing industries or for the resurrection of dormant industries, which helped the increase of employment potential. It might well be said that, but for this bold and progressive policy, a number of industries which now employ thousands of workmen would not have seen the light of day.

After the creation of the Trust, the Trustees have continued this policy, of course, with due regard to the safety of the investments, and they are glad to say that the result is doubly satisfactory in that not only have larger opportunities for employment been created, thus relieving unemployment to an appreciable extent, but the income derived from such investments is also being applied to worthy charitable objects.

Financial Results

9. As will be seen from the audited accounts, within a period of less than five years, that is, from 14th June 1954 to 31st March 1959, no less than Rs. 56,00,000 (Rupees fifty-six lakhs) have been distributed in respect of the various objects of the Trust. It is to be noted that, during the period under review, the total face value of the assets of the Trust has by judicious investment gone up from Rs. 4,90,00,000 (Rupees four crores and ninety lakhs) to Rs. 5,59,00,000 (Rupees five crores and fifty-nine lakhs), while their estimated market value has increased from Rs. 5,11,00,000 (Rupees five crores and eleven lakhs) to as much as Rs. 5,84,00,000 (Rupees five crores and eighty-four lakhs). During the same period, the income of the Trust has gone up from Rs. 7,68,921 (Rupees seven lakhs sixty-eight

thousand nine hundred and twenty-one) in 1954-55, to as much as Rs. 34,92,720 (Rupees thirty-four lakhs ninety-two thousand seven hundred and twenty) in 1958-59. When some of the industries which are still in the course of development reach full maturity, the income of the Trust in such investments is expected to rise still further.

10. Another noteworthy feature in the operation of the Trust is the exceedingly low expense ratio. In spite of the enormous number of applications for help with which the office of the Trust is being flooded and which run into several thousands, the total expenditure incurred by the Trust in 1958-59 is only about 2 per cent. of the income. So far as the Trustees are aware, no charitable trust of a like magnitude in India, or elsewhere, can claim such a low expense ratio. It will be of interest to observe that for discharging supervisory functions, the Wakf Act provides for a fee of 5 per cent. of the income and the Bombay Public Trust for 2 per cent. of the income, in addition to the expenses incurred in administering the Trusts. It may be mentioned in this connection that Mr. V. P. Menon and Mr. Shavax A. Lal have been giving their services gratis, not taking advantage of the provision made in the Trust for payment of remuneration.

11. During 1958-59, a large sum had to be spent in successfully defending certain proceedings under Act XIV of 1920, launched against the Trustees by two men whose grievance was that their applications for doles were not accepted by the Trustees! This unavoidable expenditure could have easily been devoted to the further relief of the poor and the sick.

Mischiefous Propaganda

12. The Trustees are grieved that mischiefous propaganda is carried on by certain disgruntled elements against the Trust. The system of doles is mainly to blame for this unfortunate state of affairs. While admittedly there must be thousands of genuine destitutes in Hyderabad, as elsewhere, the temptation to get something for nothing prompts hundreds of others to claim financial aid from the Trust, almost as of right, and when such aid is refused, a campaign of calumny is engineered against the Trust. Such is also the attitude adopted by certain adventurers who are keen on starting doubtful ventures with financial backing from the Trust, and when such backing is withheld they promptly start maligning the Trust. The effective answer to such propaganda is to give publicity to the audited accounts and the report of the Trustees, which the Trustees are now doing despite some expenditure which otherwise would not have been necessary. The facts and figures now revealed would, it is hoped, testify to the useful work that is being done by the Trust with the minimum expenditure.

13. The Trustees regret the order passed by the Director of Endowments to seal the books of the Trust, and otherwise paralyse its activities, which compelled the Trustees to seek redress in Court. The Trustees wish to express their grateful thanks to the Chief Minister and the Government of Andhra Pradesh for their prompt intervention in the matter and restoring the normal working of the Trust.

14. The Trustees take this opportunity to draw attention to the deplorable confusion caused by half a dozen laws supposed to govern

WORKERS' PARTICIPATION IN MANAGEMENT IN INDIA DETAILS OF AGREED SCHEME RECALLED

By Arunendu Datta-Majumdar

INT production committees, with workers' as well as employers' representatives on it, became a feature of the production drive during World War II, both in the U.K. and the U.S.A. Under the stress of "national" emergency and the sense of urgency to win the war, which labour shared in common with the employer, both parties desired to sink their differences for the time being and became more accommodating.

When the war was over, these joint production committees languished in both these countries. But the lessons of the war-time experiment in industrial truce and of giving the working man a voice in the affairs of the management, were not entirely lost. Under special encouragement but without legal compulsion, an effective joint consultation machinery, with advisory status and set up by agreement between the parties, have been brought into being in the U.K. In Canada and the Scandinavian countries (Sweden, Norway and Denmark) which follow the British pattern, the joint committees are advisory in character, though their scope is in some respects even larger.

The peculiar conditions obtaining in the U.S.A., however, did not favour any such allied development there. "In the United States, management is too strong and independent to allow labour infiltration into their ranks. On the other hand, it is so strong that it is confident of its ability to squeeze the utmost from management and is obviously not prepared to enter into any relationship with the management which might directly or indirectly compromise its power of bargaining." Even so, U.S. labour have secured through collective bargaining certain rights such as access to company's books, some voice in deciding on usual expenditures and in determining the rate of the labour force, the right to be consulted in regard to apprenticeship programmes and absorption of workers eliminated by technological changes and so on.

In some European countries such as Belgium, France and Germany, workers' participation is based on legal sanction. In France, well as in Germany, the workers have even been represented on the boards of management. Workers' participation in management is highly developed in France, though mainly in the nationalised sector of industry; "the nationalisation Acts have explicitly defined the functions and duties of the trade unions in the bodies which direct the nationalised industries and in the management of such industries." In the industries in the private sector, there is no direct participation but only a machinery for co-operation between labour and management, the method and extent of which differ from industry to industry.

In the Federal Republic of Germany, works councils were set up by legislation in the post-war period in a number of undertakings. A system of co-management by workers, providing for participation of trade union representatives on an equal footing in the managing boards, has been introduced in the coal-mining and iron and steel industries.

Indian Labour in Post-war Period

In India, the Second World War as well as the post-war period saw workers still busy in building up their organisational strength and fighting for some of the very elementary rights and privileges and amenities which had long been recognised, and became a part of the industrial scene in the more advanced countries. Although the more progressive elements among industrial employers were quick to realise the need for constantly improving the pay and amenities of the workers and for treating them as human beings, the bulk of them as yet lacked realisation, and sometimes the wherewithal, for providing a more reasonable and humane treatment for them.

The picture was thus, on the whole, one of rife and friction rather than of co-operation and consultation, the Government of the country acting as a moderating influence and curbing the highly individualistic and selfish spirit of some of the employers and also the more extreme and unrealistic attitudes of some of

the working men who have not unoften been led by non-economic ends.

It has been the aim since independence, and particularly after the launching of the first Five-year Plan, to create conditions favourable for securing workers' contentment, industrial peace and co-operation. This is regarded as necessary both as a means to rapid increase in national production and wealth and as a step in the direction of ameliorating the conditions of a weak, exploited and backward section of the community and thus raising the standard of dignity of man. The former is a means to national well-being, whereas the latter is part of national well-being itself.

Already in 1947 an important step was taken in the direction of securing industrial peace and co-operation between labour and management. It was a provision in the Industrial Disputes Act, 1947, for the setting up of works committees. The duty of works committee is to promote "measures for securing and preserving amity and good relations between employers and workmen." Among the topics discussed by the works committees are retrenchment, medical facilities, provision of rest rooms, housing facilities, water scarcity, transport facilities, ambulance car facilities, welfare fund and so on. Over a thousand undertakings in the Central sphere were required to constitute such works committees towards the end of 1958; in 701 establishments works committees were actually functioning.

Fair Deal for Labour

The chief aim during the first Plan was to give labour a fair deal in so far as it was consistent with the requirements of the other sectors of the economy. Some improvement was recorded in labour relations, and an increasing desire was in evidence for employers and workers to settle problems in industrial committees set up by the Government. Some progress was made in the implementation of social security measures under the Employees' State Insurance Act, 1948, and the Employees' Provident Funds Act, 1952; and a measure of security in case of loss of employment was provided under the Industrial Disputes (Amendment) Act, 1952. Questions of bonus and profit-sharing still remained the major bones of contention and dispute.

It was a sign of the changing times that the industrial tribunals negated the contention of some of the employers that the payment of a profit-sharing bonus was an *ex-gratia* payment to be made at the discretion of the management, and held that it was a claim in the form of a deferred wage, which fell short of a living wage and had to be satisfied out of the profits made during the year. The industrial tribunals were also taking due note of the need for security in framing awards on issues like provident fund, gratuity and so on.

It must be said to the credit of the more enlightened section among the industrial employers in India that some of them, like the Tata Iron and Steel Company, went ahead of public opinion and Governmental policy in introducing fair wages, amenities, bonus and profit-sharing schemes and welfare measures, and even experimented with worker consultation and co-operation, if not actual participation. The benefit derived in the form of long periods of industrial peace in these undertakings led the Government of India to conduct, in 1956, the first case-study of good labour-management relations in India. The result of this case-study was published in the form of a report called *Labour-Management Consultation and Co-operation in the Tata Iron and Steel Company* (Simla, 1957).

Although giving the worker a "fair deal" remains the cornerstone of labour policy of the Government in India, with the adoption of the socialist pattern of society as the national objective, the *Second Five-year Plan* reformulated the labour policy in the following terms:

"A socialist society is built up not solely on monetary incentives, but on ideas of service to society and the willingness on the part of the latter to recognise such service. It is necessary in this context that the worker should be made to feel that, in his own way, he is helping to build a progressive State. The creation of industrial democracy, therefore, is a prerequisite for the establishment of a socialist society." (Italics ours.)

About the need for labour participation in management, its aim and the broad lines it should follow, the *Second Plan* said as follows:

"For the successful implementation of the Plan, increased association of labour with management is necessary. Such a measure would help in (a) promoting increased productivity for the general benefit of the enterprise, the employees and the community,

(b) giving employees a better understanding of their role in the working of industry and of the process of production, and

(c) satisfying the workers' urge for self-expression thus leading to industrial peace, better relations and increased co-operation.

"This could be achieved by providing for councils of management consisting of representatives of management, technicians and workers. It should be the responsibility of the management to supply such a council of management a fair and correct statement of all relevant information which would enable the council to function effectively. A council of management should be entitled to discuss various matters pertaining to the establishment and to recommend steps for its better working. Matters which fall within the purview of collective bargaining should, however, be excluded from the scope of discussion in the council. To begin with, the proposal should be tried out in large establishments in organised industries. The basis of advance should be regulated and any extension of the scheme should be in the light of the experience gained."

A study group led by the Secretary, Ministry of Labour, Government of India, and consisting of representatives of workers' organisations and executives of certain Central Ministries and undertakings, was deputed in the latter half of 1956 to study the systems of worker participation in management prevailing in certain European countries such as the U.K., France, Belgium, West Germany, Sweden and Yugoslavia. The study group submitted a report in 1957.

Voluntary Basis

This report was considered in July 1957 at the fifteenth session of the Indian Labour Conference, which was attended by workers', employers' as well as Government representatives. It was decided at this Conference that labour participation in management should, for the present, be left to the volition of the employers and that, at least for a period of two years, there should be no legislation to enforce its introduction. Legislation could, however, be undertaken if after two years it was found that sufficient progress had not been made. The Conference also recommended that the scheme should initially be tried out in about 50 undertakings in both the public and private sectors. A tripartite sub-committee was appointed to advise on the exact form of the participation machinery.

A list of major industries in the private and public sectors where the scheme should first be introduced was compiled by the tripartite committee in August 1957. Private sector industries selected were: cotton textiles, jute, engineering, chemicals, tobacco, paper, sugar, cement, mines and plantations. The selected public sector industries were: railway workshops and yards, posts and telegraphs, ports, shipyards, transport workshops, mines, printing presses and electricity undertakings; and selected State Government undertakings.

The draft of an agreement to be executed by employers and trade unions while setting up a "council of management" was also approved by the tripartite committee. The object of the councils was defined as "to improve the working and living conditions of employees, increase productivity, serve as an authentic channel of communication between management and employees and create in the latter a keen sense of participation in management."

The Committee recommended that the council should be entrusted with administrative responsibilities in regard to welfare and safety measures, operation of vocational training and apprenticeship schemes, preparation of schedules of working hours, intervals and holidays, and payment of rewards for valuable suggestions received from the employees.

Criteria for Selecting Undertaking

The criteria for selecting the undertakings where the scheme should first be introduced include: (i) that the undertaking should have a well-established and strong trade union functioning; (ii) that there should be at least 500 workers in it; (iii) that the employer should be a member of one of the leading employers' organisations, in case of a private sector industry, and that the trade union should also be related to one of the central federations; and (iv) that the undertaking should have a fair record of industrial relations.

By January 1958, 30 undertakings volunteered to join the experiment. A seminar on labour- (Continued on page 243)

DIESEL FUEL INJECTION EQUIPMENT PLEA FOR EXTENSION OF PROTECTION

THE Tariff Commission held an enquiry into the question of continuance of protection to diesel fuel injection equipment industry beyond the current calendar year, on 30th July 1959. Mr. C. Ramasubban, Chairman of the Commission, while opening the enquiry, observed that the industry had made considerable progress in expanding production and that the quality of the indigenous products, barring a few exceptions, had also been found acceptable to consumers. The industry has now pleaded for protection for another three to five years on the ground, *inter alia*, that it is still at a disadvantage, as compared with foreign producers, especially in respect of prices of raw materials that have to be imported. In addition to protection, the industry has requested that arrangements should be made for adequate supplies of raw materials of requisite specifications from indigenous sources at reasonable prices.

It may be recalled that the industry first claimed protection in 1954. On the recommendation of the Tariff Commission, the Government granted shelter to the industry upto 31st December 1956, with effect from 7th September 1955, by levy of a protective duty of 60 per cent. *ad valorem* (standard) on single cylinder fuel injection pumps for stationary diesel engines and nozzle-holders with a clamping capacity upto one inch clamping diameter for nozzles (atomisers) and component parts thereof, excluding elements and delivery valves when imported separately. The preferential rate of duty on nozzle holders manufactured in the U.K. was fixed in accordance with the Indo-U.K. trade agreement. The protection granted to the industry was subsequently extended by one year upto 31st December 1957.

The second enquiry into the industry was held by the Commission in 1957 and on its recommendations, (i) the then existing rates of duty, namely, 60 per cent. *ad valorem* on single-cylinder fuel injection pumps and 60 per cent. *ad valorem* (standard) and 52½ per cent. *ad valorem* (preferential) on nozzle-holders were continued for a further period of two years ended 31st December 1959 by the Indian Tariff (Second Amendment) Act, 1957; and (ii) elements, delivery valves and nozzles were brought within the scheme of protection with effect from 25th October 1957.

Domestic Demand

At the time of the last enquiry, the annual domestic demand for both original equipment and replacement purposes was estimated at 18,900 for single-cylinder pumps, 19,400 for multi-cylinder pumps, 126,000 for nozzle-holders, 583,900 for nozzles and 420,800 each for elements and delivery valves. The Commission had then expected that the demand would go up by 15 per cent. over the following three years. The Commission has now received estimates of overall demand in the country from the Development Wing and of demand for Bosch type equipments from Motor Industries Company, Ltd. These estimates are:

	Development Wing Nos.	M.I.CO. Nos.
Single-cylinder pumps	39,000	43,000
Multi-cylinder pumps	25,000	19,600
Nozzle-holders	185,000	146,100
Nozzles	610,000	414,100
Elements	510,000	318,000
Delivery valves	N.A.	299,900

N.A. = Not available.

The domestic demand for fuel injection equipment can be assessed on the basis of sales of domestic products and imports during the past two or three years; but, barring single-cylinder fuel injection pumps, figures of imports of other components are not separately available. Sales of indigenous single-cylinder pumps and imports aggregated 25,929 in 1957 and 38,240 in 1958.

There are at present (as there were at the time of the last two enquiries) three units engaged in the manufacture of components of diesel fuel injection equipment. They are: the Motor Industries Company, Ltd. (M.I.CO.), Bangalore, Fuel Injections Ltd., Bombay and the Kulko Engineering Works Ltd., Kolhapur. Of these, the Kulko Engineering Works Ltd., manufactures fuel injection pumps and nozzle-holders for its own use. The M.I.CO. produces single-cylinder pumps, multi-cylinder pumps, nozzle-holders, nozzles, elements and delivery valves. Fuel Injections Ltd. manufactures only nozzles and elements and its production of single-cylinder pumps and nozzle-holders is reported to be in the initial stage. According to the data furnished by the manufacturers, the present combined capacities on single shift of

M.I.CO. and Fuel Injections Ltd., are 12,000 single-cylinder pumps, A and B types; 6,600 multi-cylinder pumps; 48,000 'S' type nozzle-holders; 108,000 nozzles; 78,000 elements; and 66,000 delivery valves. The present capacities for the manufacture of nozzles and elements represent an increase of about 3 per cent. over those adopted at the last enquiry, while the capacities for the manufacture of other components have remained unchanged. The aggregate production of the two units, since 1957, is given in the following table:

Product	1957 Nos.	1958 Nos.	1959 (Jan-May) Nos.
Single-cylinder pumps	17,647	31,755	17,997
Multi-cylinder pumps	5,487	4,589	N.A.
Nozzle-holders	42,000	62,724	36,067
Elements	50,169	106,454	69,828
Delivery valves	75,061	74,658	56,497
Nozzles	40,811	98,437	35,849

N.A. = Not available.

Raw Materials

The raw materials required for the manufacture of diesel fuel injection equipment are: (1) a few special types of steel, (2) low carbon steel forgings, (3) cast iron castings of special quality; and (4) free cutting bright drawn brass bars. Except for the special types of steel, which are at present imported, all the other raw materials are stated to be available within the country itself. The M.I.CO. has brought to the notice of the Commission its difficulties in obtaining adequate supplies of suitable quality castings and forgings from indigenous sources. The M.I.CO. has also pleaded for additional supply of raw materials.

As regards the quality of the indigenous equipments, Mr. Ramasubban stated:

"At the last enquiry, it was almost the unanimous view of all those who used M.I.CO.'s products that they were satisfactory. The Fuel Injections Ltd. apprehended consumers' prejudice against its products, as it had to market them under its own brand name. We understand from the Development Wing that it has not received any complaints against the quality of the indigenous products. The Indian Institute of Science, Bangalore, has observed that the domestic injection equipment is functionally good. It has, however, added that there is scope for improvement. Most of the sumers and importers have expressed satisfaction with the quality of the domestic products. A few transport organisations have, however, pointed out certain defects such as short life, improper clearance of nozzles and pitting of nozzle points. The manufacturers of fuel injection equipment claim to have introduced quality control measures to maintain and improve the quality of their products."

The following table shows the trend in imports, since 1957, of single-cylinder fuel injection pumps for diesel engines and nozzle-holders, etc., for diesel engines.

Year	Single-cylinder injection pumps		Nozzle-holders, etc.	
	Quantity (Nos.)	Value (Rs.)	Quantity (Nos.)	Value (Rs.)
1957	7,398	4,93,640	215,756	8,09,746
1958	6,770	1,47,763	28,183	3,15,175
1959 (Jan.-Feb.)	1,006	49,535	3,108	44,674

The protected categories of diesel fuel injection pumps and nozzle-holders and parts thereof are assessed to protective duty of 60 per

cent. *ad valorem* standard under item No. 75(18) of the First Schedule to the Indian Tariff Act, 1934. Nozzle-holders of U.K. manufacture are assessed to a preferential duty of 52½ per cent. *ad valorem*.

U.K. WHITE PAPER ON OUTER SEVEN

The draft plan on the Outer Seven free trade area—comprising the U.K., Austria, Denmark, Norway, Portugal, Sweden and Switzerland—approved by the Ministerial Conference of the constituent members held at Saltsjöbaden, Stockholm, on 20th and 21st July 1959, has now been published as a White Paper in London. A reference to the draft plan appeared in our last issue, vide page 171, and it was prepared before the details of the White Paper were available. The White Paper throws further light on the provisions of the draft plan. The first step towards the eventual abolition of tariffs and quantitative restrictions will commence from 1st July 1960, when the member-countries will reduce tariffs among themselves by 20 per cent. Subsequently, the tariffs will be further reduced in three successive stages, by 10 per cent. each time, at intervals of 18 months, that is, on 1st January 1962, 1st July 1963 and 1st January 1965. Thus, the member-countries will reduce tariffs among themselves by 50 per cent. in the course of five years. The remaining 50 per cent. will be eliminated in equal 10 per cent. stages on 1st January of each of the subsequent five years.

The draft plan calls upon the member-countries to consider, between 1st July 1960 and 31st December 1961, whether it will be possible to shorten the period within which the process of elimination should be completed in respect of some or all goods of some or all of the members.

While the beginning of 1960 has been fixed as the base date, the question remains whether the tariff to be selected for reduction should be the legal or the applied tariff. According to the White Paper, "a possible solution might be to adopt the applied tariff, while recognising that, for particular products, some countries may have legitimate reasons for departing from the general rule. If that solution were adopted, an integral feature of it would be the procedure for handling the exceptions."

The proposals for establishing the Outer Seven cover all aspects of trade within the area including the abolition of "drawback" and of quantitative restrictions on imports, escape clauses for countries confronted with balance-of-payments difficulties, and a scheme for determining the origin of goods within the area and rules governing competition. The White Paper confirms that there will be a separate agreement on agriculture, with fish being excluded from agriculture.

Another important aspect covered by the agreement relates to capital movements. Some of the delegates raised this issue at Stockholm and suggested that "members might be in a better position to surmount difficulties which were a consequence of the association, if they could be given freer access to the capital markets of other members." It was agreed by the various delegations that the matter, although raising difficulties, must be deferred for consideration at a later stage. Meanwhile, they all felt that the rules and procedures agreed to be sufficient.

In order to promote healthy relations with the European Economic Community, the Outer Seven countries unanimously agreed to accredit representatives to the former bloc. The seven officials who will draft the Convention will constitute the official committee to advise Governments on questions regarding other countries arising out of the establishment of Outer Seven free trade association and, in particular, to study the problem of future negotiations for a wider association, embracing all the seventeen members of the Western European Community.

Production of motor vehicles in West Germany during the first half of 1959 rose by 12.2 per cent. to 831,854 units, as compared with the first half of 1958. Of this output, 50.8 per cent. was exported, as against 48.6 per cent. of production in the corresponding six months of last year.

CENTRAL WAREHOUSING CORPORATION SECOND ANNUAL GENERAL MEETING

SPEECH OF THE CHAIRMAN, MR. B. B. GHOSH

3 contribution made by the Central Warehousing Corporation in developing warehousing facilities throughout the country was lighted by Mr. B. B. Ghosh, Chairman of Corporation, at the Second Annual General Meeting of this body held at New Delhi on 25th 1959. Mr. Ghosh said that the large variety commodities handled by the warehouses and increasing business of these houses were uraging signs. Apart from cereals, pulses, oilseeds, the warehouses, he revealed, had pted for storage items like turmeric, gur, er and pepper which required special care preservation. In particular, he stressed the l for keeping the charges at a reasonable l from the point of view of customers.

The following is the full text of Mr. Ghosh's ch at the meeting:

INTLEMAN,

"I have great pleasure in welcoming you to second annual general meeting of this poration. Unlike last year, we have met not beyond the time limit prescribed. I am py to report that both the types of audit scribed under the Act, namely, one conducted the Auditors appointed by the Government dia and the other by the Director of Comial Audit on behalf of the Comptroller and itor-General, have been completed, though report of the latter is yet to be received. I v invite you to consider the annual accounts the report of the Directors.

Share Capital

"You will notice from the annual accounts t, during the year, a total of 1,750 shares of t Corporation were purchased, of which 1,000 res were purchased by the Life Insurance poration of India and the remaining 750 res by various scheduled banks. I hope that estors who are entitled to purchase shares l show further interest in this Corporation, um happy to report that the dividend war- its for the year 1957-58 have been despatched f those for 1958-59 are expected to be paid l in the near future. Towards the close of year under review, a further 10 per cent. of re capital was called for to provide funds meeting the cost of the construction pro- umme which has been undertaken and the nd for share capital from the State Ware- ising Corporations.

"Although the Central Warehousing Cor- oration had only nine warehouses functioning ring the year, the large variety of commodi- s stored and the increasing business handled these warehouses are encouraging signs. art from cereals, pulses and oilseeds, the iewhouses have accepted for storage items like meric, gur, ginger and pepper, which require sical care for preservation. The staff looking er such stocks deserve to be congratulated. ie stocks increased from 13,000 maunds to 3,000 maunds by the end of March 1959. The ock figure has since then gone up to about 9,000 maunds. The possibility of opening cen- al warehouses at new centres, almost in every ate, is under consideration.

Warehouses Set Up

"I hope you will agree with me that the ntral Warehousing Corporation should, while tting up its own warehouses and getting ade- ate custom for them, give maximum support the programme of the State Warehousing Cor- orations. While 1958-59 was practically the st year of working of most of the State Ware- using Corporations, it is satisfactory to note at as many as 42 warehouses were actually t up during the year by the State Warehousing rporations.

"When the warehousing scheme was for- ulated and the Agricultural Produce (Develop- ent and Warehousing) Corporations Act was used, the general understanding was that ading in agricultural produce would be mostly private hands. The decision of the Govern- ent to undertake State trading in foodgrains, hich constitute the largest category of agri- lultural produce, and the policy of development co-operative societies throughout the country r handling agricultural produce have altered ie picture. In the ultimate pattern of State ading in foodgrains, the entire marketed sur- us would be routed through the co-operative annel. As these ideas are implemented, the

need of individual producers for warehousing facilities will decrease. On the other hand, the need for storage accommodation for the Central and State Governments and also for the co-operative societies will increase. In some States, the State Warehousing Corporation has already been called upon to undertake storage of grains procured by the Government. The scheme of State trading in foodgrains and the scheme of development of co-operative societies throughout the country have been undertaken very recently. In due course, the position will become clearer and the warehousing corporations will be able to go ahead with definite programmes.

Specialised Needs

"I hope you will agree that, while catering for the needs of the Governments and the co-operative societies, if necessary, the warehousing corporations should continue their main activity of providing warehousing facilities to producers of different types of agricultural produce wherever they are needed. It may be that, in course of time, many of the marketing societies, which are formed or developed, will have their own storage accommodation and the State Warehousing Corporation will provide warehousing facilities for others who need such facilities within the State concerned. The Central Warehousing Corporation will probably then have to fill in the gaps and provide specialised needs. From the national point of view, it does not really matter who caters for whom as long as the total need is met in a satisfactory manner. I venture to suggest that the Central Warehousing Corporation should not be judged by the number of central warehouses, or by the volume of business handled in the central warehouses, but by the contribution it is able to make in developing warehousing facilities throughout the country.

Reasons for Loss

"You will notice from the profit and loss account that the year has again ended in a loss. There are various reasons for this. The Corporation is still in its formative period. As more and more warehouses are set up and the volume of business increases, the financial picture is bound to change. It is also a moot point whether the entire expenditure of the headquarters organisation of the Central Warehousing Corporation, whose functions extend beyond the supervision of the work of the central warehouses alone, should be considered a legitimate charge on the business activities of the Central Warehousing Corporation. Another aspect is that the profit or loss depends on the charges recovered from the customers. At the initiation of a new scheme of this nature, the value of which may not be fully realised by many of the possible customers, it is desirable that the charges should be fairly low and in any case not too high to discourage customers. The Corporation would not be taking a long-term view, if it were to raise the charges with a view to avoiding any loss, if, in that process, the volume of business handled were to decline. At this stage, it is desirable to attract customers and one of the surest ways of doing so is to make the charges look as reasonable as possible from the point of view of the customers.

"If I may say so, the profit and loss account of the Central Warehousing Corporation is not a correct basis for judging its usefulness, particularly during its early formative years. It is much more important to assess to what extent the Corporation has been able to make people at all levels aware of the intrinsic merits of the warehousing scheme. It is a matter of satisfaction to the Central Warehousing Corporation that every State has now a State Warehousing Corporation in which the Central Warehousing Corporation is a shareholder and that a number of State warehouses have already been set up.

"There will be doubts and difficulties in front of us, but I hope that, with your active support, we shall get over the difficulties and make steady progress."

(A 1000/3)

Notices

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Company will be held at its Registered Office, 12, Mission Row, Calcutta, on the 28th day of August, 1959, at 11 a.m., to consider and if thought fit to pass with or without modification the following resolutions:—

1. As an ordinary resolution:

That this meeting approves the re-appointment of Mr. Frederick George Liversedge as a Managing Director of the Company with effect from the 1st day of October 1959 on the terms and conditions contained in an Agreement dated the 19th day of March 1959 and made between the Company of the one part and Mr. Frederick George Liversedge of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification.

2. As an ordinary resolution:

That this meeting approves the appointment of Mr. Saradindu Gupta as a Managing Director of the Company with effect from the 1st October 1958 on the terms and conditions contained in an Agreement dated the 27th day of July 1959 and made between the Company of the one part and Mr. Saradindu Gupta of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification.

By Order of the Board,

A. G. GIDLEY,
Secretary.

12, MISSION ROW,
CALCUTTA, 1st August, 1959.

Note: (I) A member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(II) An Explanatory Statement is annexed to the covering Notice issued to members of the Company.

GOVERNMENT OF INDIA MINISTRY OF RAILWAYS (Railway Board)

Requirement of Loco Tyres and Wheels—
Tender No. G.P. 18, 1959-60

THE LAST DATE OF RECEIPT OF OFFERS for items No. 1 to 25 of the above-mentioned tender which was 12 noon on 1.9.1959 has been revised as under:—

Last date of receipt ... Not later than 12 noon on 3.9.1959.

To be opened at ... 2 p.m. on 3.9.1959.

With regard to item No. 26 the date and time remain unchanged.

QURBAN SINGH,
Director, Railway Stores,
Railway Board,
New Delhi.

STRAW PRODUCTS LIMITED BHOPAL

NOTICE

THE BOARD OF DIRECTORS OF THE Company have today decided to recommend to the forthcoming Annual General Meeting the payment of dividend on the Ordinary Shares at Re. 1.25 per Share (equivalent to 12½ per cent.) free of Income-tax in respect of the accounting year ended 31st December, 1958.

The Transfer Book and the Register of Members of the Company will be closed from the 21st to 31st August, 1959, both days inclusive.

By Order of the Board,
J. K. ADAMS PRIVATE LIMITED,
Managing Agents,
H. S. SINGHANTA

RESULTS OF LAKSHMI MILLS ENCOURAGING DIVIDEND, HOWEVER, UNCHANGED—NEW UNIT GOES INTO PRODUCTION

A SUBSTANTIAL reduction in cost of raw materials consumed, which more than offset the decline in sales and a further rise in administrative expenses, has served to help the Lakshmi Mills Company, Ltd. (Managing Agents: Messrs. G. Kuppaswamy Naidu & Co., Coimbatore) earn a higher profit for the year ended 31st March 1959, as compared with the previous year. The gross profit shows a rise from Rs. 42.94 lakhs to Rs. 53.20 lakhs, thus reversing the downward trend noted in the previous two years when the profit had dropped from Rs. 67.67 lakhs for 1955-56. The net profit (after providing for managing agency commission, depreciation and taxation), too, which had declined from Rs. 20.14 lakhs in 1955-56 to Rs. 15.43 lakhs in 1957-58, has improved to Rs. 24.25 lakhs in the year under review. This is the highest level touched since 1946-49.

The benefit of the improved earnings has not, however, been passed on to the shareholders. For the dividend, which had been pruned from 20 per cent. to 12 per cent. last year, is to be repeated for the year under review. The dividend policy of the Company does not seem to be governed wholly by the profit earned. Thus, two years ago, the Directors had paid a dividend of 20 per cent. for 1956-57 on the increased capital of Rs. 105.49 lakhs raised by the issue of one-for-one rights, absorbing Rs. 21.23 lakhs, when the net profit for the year amounted to only Rs. 17.25 lakhs. They had to utilise almost the entire surplus brought in from the previous year to pay this dividend. Despite the sizable improvement in net profit for 1958-59 over that for 1956-57, the dividend is at a much lower level than that distributed two years ago. This is because of the statutory obligation to set aside 75 per cent. of the development rebate allowed on new machinery installed and worked during the year under review to a development rebate reserve in order to get the benefit of such rebate. Accordingly, the Directors have had to allocate Rs. 9 lakhs to this reserve out of the profit for 1958-59, while two years ago no such allocation was made. After making provisions for workpeople's gratuity and donations, a sum of Rs. 1.55 lakh is to be carried forward to next year, as will be noted from the following comparative table:

	(In lakhs of rupees)			
	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds	3,29.87	3,34.84	3,16.13	2,72.22
Closing stocks of finished goods and goods-in-process	6.12	6.02	8.24	4.61
Raw materials and stores consumed	2,11.95	2,28.81	2,00.41	1,69.67
Other expenses	67.78	68.77	60.04	45.97
Gross profit	52.20	42.94	60.86	67.67
Managing Agents' remuneration	3.98	3.88	4.89	5.27
Provision for depreciation	12.67	13.64	21.72	20.28*
Taxation	12.00	11.00	17.00	18.00
Net profit	24.25	15.43	17.25	20.14
To reserves	0.00	0.30	0.00	0.00
Workpeople's gratuity	0.00	0.75	1.50	0.00
Donations	1.03	0.78	1.00	1.00
Dividend	(12%)	(12%)	(12%)	(12%)
Carry forward	1.55	0.86	0.04	6.32

* Including development rebate.

During the year under review, the Company worked 59,680 spindles and 200 looms in its mills at Coimbatore (same as in the previous year) and 51,120 spindles in its branch mill at Kovilpatti. The Company's programme of expansion in the shape of a branch at Palladam has been completed. Production at this branch commenced on 1st January 1959 and at the end of the year under review 24 frames were working. Since then, another 18 frames were added and the balance of six frames was scheduled to be erected by the end of last month. The Company proposes to erect automatic looms also in its mills. Some of these looms have, in fact, been erected and are under demonstration. The erection of 100 automatic looms is expected to be completed by the end of December 1959, if the working of the looms now under demonstration proves to be satisfactory.

In pursuance of its plan of expansion, the Company made a capital expenditure of Rs. 62.41 lakhs during the year under review. This is on top of a sum of Rs. 14.15 lakhs spent in 1957-58, Rs. 54.27 lakhs in 1956-57 and Rs. 48.15 lakhs in 1955-56. Thus, during the last four years the Company has made an aggregate capital expenditure of as much as Rs. 178.98 lakhs, raising the gross value of block account from Rs. 111.87

lakhs at the end of 1954-55 to Rs. 287.35 lakhs. Part of the finance for this purpose was provided by the issue of right shares of the value of Rs. 53.50 lakhs in 1956-57. More than half of the gross block has been written off, the net value of the block as at the end of the year under review being Rs. 144.87 lakhs. The Company's investments (at cost) amount to Rs. 20.09 lakhs, of which Rs. 14 lakhs represent the paid-up value of the 35,000 shares of Rs. 100 each of the South India Viscose Ltd., subscribed to by it. The other assets aggregate Rs. 125.61 lakhs. As against these assets, the current liabilities (including secured and unsecured loans) and provisions come to Rs. 106.86 lakhs, leaving a net asset of Rs. 183.91 lakhs, represented by a paid-up capital of Rs. 106.50 lakhs and reserves and surplus aggregating Rs. 77.41 lakhs.

In addition to the higher earnings accruing from the new unit at Palladam and the installation of automatic looms, the Company will, from the current year onwards, enjoy the benefit of the lower income and super taxes and the abolition of wealth tax and excess dividend tax.

The Rs. 50 fully paid-up shares of the Company are being currently quoted at Rs. 119.50 cum-div. and the Rs. 25 fully paid-up shares at Rs. 61 cum-div. On an ex-div. basis, the yield on the two classes of shares works out to 5.28 per cent. and 5.26 per cent. per annum, free of income-tax, respectively.

SOUTH MADRAS ELECTRIC TO RAISE ADDITIONAL CAPITAL

The Directors of the South Madras Electric Supply Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers Private Ltd., Tiruchirappalli) propose to issue additional capital to the extent of Rs. 14 lakhs, representing the unissued portion of the authorised capital, subject to the sanction of the Controller of Capital Issues. The new shares of Rs. 10 each will be offered in the first instance to the existing shareholders of the Company as on the date of offer in the ratio of one share for every four held by them. The proposed issue is to finance the expansion programme of the Company, which is being handicapped for want of resources. The Company has, no doubt, sought loans from the Electricity Board and from the State and Central Governments, but it may take considerable time before they materialise. Whatever expansion work the Company was able to do during the year ended 31st March 1959 was financed out of the depreciation accruals and bank overdrafts. As the Directors feel that this position cannot continue indefinitely and as a large number of applications for extensions are awaiting sanction, the Directors have decided to issue additional capital.

Notwithstanding this handicap and the power cut in the first three months of the year ended 31st March 1959, the working results of the Company for the year are satisfactory. Sales of energy declined from 83.69 million units to 81.76 million units, but the income from sales was higher at Rs. 69.29 lakhs, as against Rs. 66.60 lakhs for 1957-58. To some extent, the larger income was due to the upward revision of the tariffs made in March 1959 on some categories of consumers, in order to compensate for the increased income-tax liability on account of the withdrawal of initial and extra depreciation allowances. There was an increase in "other income," too, and this has offset the rise in the cost of distribution. The gross profit for the year under review, therefore, shows a rise from Rs. 18.15 lakhs to Rs. 20.16 lakhs, probably a record in the history of the Company. The net profit is, however, lower at Rs. 7.25 lakhs, as compared with Rs. 8.73 lakhs for the previous year, due to the substantially larger provision of Rs. 4.50 lakhs made for taxation (the corresponding figure for 1957-58 being Rs. 1.85 lakhs), following the withdrawal of the initial and extra depreciation allowances. The provision for depreciation has also been raised from Rs. 6.77 lakhs to Rs. 7.61 lakhs.

The amendments made to the Electricity Supply Act and the increased liability for taxation have reduced the amount available for distribution to shareholders. In other words, the clear profit for the year under review is below the reasonable return, as calculated under the provisions of the Electricity Supply Act. The Directors have, therefore, been compelled to withdraw a sum of Rs. 75,000 from the general reserve in addition to the Rs. 19,000 drawn from the tariff and dividend control reserve, in order to recommend a dividend of 9 per cent. for the year under review. This represents only a fractional increase from that of 8½ per cent. paid for 1957-58.

The position in respect of power shortage is expected to be greatly alleviated by the commissioning of the new plant at the Periyar hydro-electric project and the prospect of some plants being commissioned at Kundah by the end of this year. The Company will not, however, be out of the woods yet. Happily, there were no power cuts during the summer months of the current year. The State Electricity Board has announced a revision of its tariffs to be effective from 1st October 1959. The effect of the revision will mean an increase of about 20 per cent. in the Company's cost

of energy purchase or over Rs. 4 lakhs per annum. The Company has perforce to increase its own tariffs and with this the Company hopes to be able to meet the extra burden cast on it by the revised tariff by the State Electricity Board and the increased income-tax liability.

The following comparative table shows the progress of the Company in recent years:

	(In lakhs of rupees)			
	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds of energy	69.29	66.60	55.82	53.96

FORT GLOSTER'S CABLE PROJECT MAKES GOOD PROGRESS

The Fort Gloster Industries Ltd. (Managing Agents: Messrs. Kettellwell Bullen & Co., Ltd., Calcutta) was originally known as Fort Gloster Jute Manufacturing Company, Ltd. At the end of June 1957, the Company's name was changed to its present form, following the decision to diversify its activities from the old-established business of jute goods manufacturing. A beginning was made in this direction recently when the Company embarked on a cable-making project. The Directors' report for the year ended 31st March 1959 in this venture. The technical team has been made and it has given the Company an opportunity to co-ordinate erection and production programme. Except in the rubber mill department, erection in drawing section was scheduled to be started last month and the other sections in subsequent months. The Directors add that the most modern method of producing cables in the latest continuous vulcanising machines has been chosen. By this method of production, the Company hopes to meet, to a large extent, the country's requirements of insulated cables.

The main business of the Company, however, continues to be jute goods manufacturing. During the year ended 31st March 1959, the Company earned a gross profit of Rs. 36.58 lakhs, as compared with Rs. 25.03 lakhs for the previous year. In the course of two years, the profit has nearly doubled. It must, however, be noted that the Company's income for the year under review includes for jute destroyed by fire. The net profit, however, shows a decline of Rs. 2.54 lakhs to Rs. 12.02 lakhs for taxation (other than wealth tax), while Rs. 77,182 has been set aside for wealth tax (as Rs. 8.73 lakhs for depreciation (Rs. 7.49 lakhs) and Rs. 3.30 lakhs (Rs. 1.90 lakh) for managing agency remuneration. No addition has been made to the added to it a year ago. The allocation to the development rebate reserve has been reduced from Rs. 2.70 lakhs to Rs. 1.14 lakh, while the usual debenture sinking fund has been made to the nary shares has been maintained at 20 per cent. but it is on a higher capital raised by the issue of 42,000 ordinary shares of Rs. 100 each (of which Rs. 50 per share have been called and paid-up) to the holders of the 21,000 old ordinary shares of the dividend on the old capital was doubled last year from 10 per cent. to 20 per cent. After paying the usual dividend on the 7 per cent. and 5½ per cent. preference capital, a sum of Rs. 1.94 lakh is left to be carried over.

Sales of gunnies have declined from Rs. 4.0 crores to Rs. 3.82 crores, as also consumption of raw jute from Rs. 2.33 crores to Rs. 2.25 crores while other expenses have gone up from Rs. 1.4 crore to Rs. 1.49 crore.

The following synopsis of the Company's latest balance-sheet as on 31st March 1959 gives an idea of its financial position:

(In lakhs of rupees)			
LIABILITIES	Rs.	ASSETS	Rs.
Capital	63.00	Gross block	261.26
Reserves and surplus	76.27	Less—Depreciation	159.41
Debiture Loan	15.61	Net block	101.85
Other loans	64.16	Capital works-in-progress	36.53
Other liabilities	75.69	Investments	2.12
		Stocks-in-trade and stores	105.91
		Debits, deposits and advances	44.18
		Cash	4.02
		Debiture issue expenses	0.16
	Rs. 294.73		Rs. 294.73

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 372 ex-div. per annum, free of tax.

COCHIN MALABAR ESTATE EARNS MORE DIVIDEND STEPPED UP

A RECORD gross profit of Rs. 15.93 lakhs has been earned by the Cochin Malabar Estates Ltd. (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Calicut) for the year ended 28th February 1959. This represents an increase of Rs. 4.35 lakhs over that for 1957-58 and of Rs. 2.01 lakhs over the previous high of Rs. 13.92 lakhs for 1955-56. This sizable improvement in earnings, notwithstanding a fall in output due to the sale of one of the Company's estates, is the result of a sizable reduction in cost of production and larger sales of rubber. The average price realised has also been a shade higher than in the previous year.

The net profit, at Rs. 5.68 lakhs, too, shows an increase of Rs. 1.90 lakh over the year, but it is Rs. 1.48 lakh lower than the high of Rs. 7.16 lakhs earned in 1955-56. The relatively smaller rise in net profit is accounted for by the substantially larger provision for taxation at Rs. 7.70 lakhs (as against Rs. 5.45 lakhs for 1957-58). The provision for depreciation is, however, a shade lower at Rs. 1.35 lakh. After adding the profit of Rs. 1.29 lakh on the sale of an estate and the tax refunds, the Directors have transferred Rs. 3.25 lakhs to the general reserve, as against Rs. 1.47 lakh last year. The addition to the general reserve includes the profit on the sale of the estate which will be kept as a provision for replanting expenses on other estates.

In consonance with the improved earnings, the Directors have recommended a higher dividend of 15 per cent. on the ordinary shares, raising it from 10 per cent. paid for 1957-58. It will be recalled here that, following the setback in earnings during 1956-57 the Directors had effected a cut in dividend from 25 per cent. to 15 per cent. In the following year, that is for 1957-58, they paid a dividend of 10 per cent., but this was on higher capital following the capitalisation of Rs. 8.97 lakhs from out of the general reserve, so that the total distribution was unchanged. The higher dividend for the year under review is also on this increased capital and is equivalent to 22.5 per cent. on the capital prior to the issue of bonus shares. In other words, the cut in distribution made two years ago has not been restored fully. This is because the net profit for the year under review, as was pointed earlier, is lower than that for 1955-56, as will be seen from the following comparative table:

	(In rupees)			
	For the year ended 28th February			
	1959	1958	1957	1956
Sale proceeds	47,42,957	87,70,080	37,70,068	24,58,425
Closing stocks	12,08,750	12,97,089	6,93,859	8,61,093
Expenses	62,14,115	68,92,058	24,17,770	17,37,686
Gross profit	15,93,048	11,57,902	11,51,928	13,52,512
Managing Agents' remuneration	1,20,216	86,431	82,698	48,079
Depreciation	1,24,707	1,48,340	1,18,199	1,18,123
Taxation	7,70,000	5,45,000	3,70,000	5,20,130
Net profit	5,68,125	5,78,151	5,81,051	7,16,550
Profit on sale of estate	1,29,125	—	—	—
Refund of tax	24,423	4,170	86,112	—
To reserves	8,22,000	1,47,008	3,80,000	8,00,000
Dividends—				
Ordinary	7,981	7,981	7,981	7,981
5½% tax-free preference	4,08,692	2,60,128	2,60,128	4,48,547
Carry forward	15,281	29,944	71,795	70,711
Crop harvested (in kg.)	899,559	909,522	800,484	840,546
Cost of production (cents per kg.)	254.26	280.45	354.68	308.98
Average price realised (cents per kg.)	400.50	396.08	384.68	392.22

The output of rubber has declined from 906,828 kilograms to 899,559 kilograms, consequent on the sale of the Eddivanna estate, consisting of 1,019 acres of planted rubber and some 58 acres of first class jungle, etc. While the crop for previous years included the output of this estate for the full year, that for 1958-59 included the production for one month only. Nevertheless, the crop for the year under review is higher than that harvested in any of the years preceding 1957-58. As compared with the previous year, the cost of production shows a decline of 26.19 cents per kg. to 254.26 cents; the overall costs also are lower by 24.91 cents at 288.59 cents per kg. The reduction in costs is accompanied by a small rise of 1.42 cent in the average price realised which was a high of 400.50 cents per kg. It will be interesting to note here that, despite the sizable reduction witnessed during the year under review, the cost of production for 1958-59 is still 50.33 cents higher than that for 1955-56, while the price realised is up by only 38.28 cents between these years. In other words, the margin of profit in 1958-59 was less than that in 1955-56.

The Company replanted 112.60 acres during the year under review and brought into tapping

COMPANY MEETINGS AND DIVIDENDS

CONCORD OF INDIA INSURANCE Co., Ltd. First and final dividend of 20 per cent. or Re. 1.00 per share, free of tax, for the year ended 31st December 1958.

TEZPORE TEA Co., Ltd. Annual General Meeting, Calcutta, 13th August 1959. Dividend: 12½ per cent. or Re. 1.25 per share. Transfer books remain closed from 3rd to 13th August 1959, both days inclusive.

BASMATIA TEA Co., Ltd. Annual General Meeting, Calcutta, 19th August 1959. Dividend: Rs. 2.00 per share. Transfer books remain closed from 6th to 19th August 1959, both days inclusive.

HANSQUA TEA Co., Ltd. Annual General Meeting, Calcutta, 19th August 1959. Dividend: Nil. Transfer books will remain closed from 11th to 19th August 1959, both days inclusive.

MARSHALL SONS AND Co. (INDIA) LTD. Annual General Meeting, Calcutta, 19th August 1959. Dividend: 20 per cent. or Re. 0.40 per share free of tax, payable on and after 1st September 1959. Transfer books will remain closed from 12th to 19th August 1959, both days inclusive.

COCHIN MALABAR ESTATES LTD. Annual General Meeting, Calicut, 19th August 1959. Dividend: 15 per cent. or Re. 0.45 per share (includes interim dividend of 5 per cent. or Re. 0.15 per share). Transfer books remain closed from 5th to 19th August 1959, both days inclusive.

SUTNA STONE AND LIME Co., Ltd. Annual General Meeting, Calcutta, 20th August 1959. Dividend: 17½ per cent. or Re. 1.75 per share. Transfer books will remain closed from 13th to 20th August 1959, both days inclusive.

SWASTIK TEXTILE MILLS LTD. Annual General Meeting, Bombay, 20th August 1959. Transfer books will remain closed from 14th to 20th August 1959, both days inclusive.

LAKSHMI MILLS Co., Ltd. Annual General Meeting, Coimbatore, 21st August 1959. Dividend: 12 per cent. or Re. 6.00 per ordinary share and Rs. 3.00 per 'A' ordinary share, free of income-tax. Transfer books remain closed from 7th to 21st August 1959, both days inclusive.

GROB TEA Co., Ltd. Annual General Meeting, Calcutta, 21st August 1959. Transfer books will remain closed from 11th to 21st August 1959, both days inclusive.

AURANGABAD MILLS LTD. Annual General Meeting, Bombay, 22nd August 1959. Transfer books will remain closed from 10th to 24th August 1959, both days inclusive.

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD. Annual General Meeting, Bombay, 28th August 1959. Dividend: Rs. 7.50 per share (includes interim dividend of Rs. 3.00 per share). The final dividend is payable on and after 28th August 1959. Transfer books remain closed from 4th to 26th August 1959, both days inclusive.

BAILY JUTE Co., Ltd. Annual General Meeting, Calcutta, 28th August 1959. Dividend: Rs. 10.00 per share, free of income-tax. Transfer books will remain closed from 10th to 28th August 1959, both days inclusive.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD. Annual General Meeting, Mettur Dam R.S., 29th August 1959. Dividend: 4.4 per cent. final (making a total of 8.8 per cent. for the year), free of tax. Transfer books will remain closed from 17th to 29th August 1959, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Tennur, Tiruchirappalli, 31st August 1959. Dividend: 9 per cent. or Re. 0.90 per share (includes interim dividend of 4½ per cent. or Re. 0.90 per share), free of tax. The final dividend is payable on and after 31st August 1959. Transfer books remain closed from 5th to 31st August 1959, both days inclusive.

DEHRI-RORTAS LIGHT RAILWAY Co., Ltd. Annual General Meeting, Dalmianagar, 1st September 1959. Dividend: Re. 1.70 per share. Transfer books will remain closed from 18th August to 1st September 1959, both days inclusive.

HOWRAH MILLS Co., Ltd. Annual General Meeting, Calcutta, 8th September 1959. Transfer books will remain closed from 20th August to 8th September 1959, both days inclusive.

RELIANCE JUTE MILLS Co., Ltd. Annual General Meeting, Calcutta, 8th September 1959. Transfer books will remain closed from 1st to 8th September 1959, both days inclusive.

DISHERGARR POWER SUPPLY Co., Ltd. Dividend of Rs. 7.50 per share, for the year ended 31st March 1959.

INDIA PAPER PULP Co., Ltd. Final dividend of Re. 0.50 per share, for the year ended 31st March 1959.

TRAVANCORE CHEMICAL AND MANUFACTURING Co., Ltd. Dividend of 10 per cent. or Re. 1.00 per share, for the year ended 31st March 1959. Transfer books will remain closed from 13th to 20th August 1959, both days inclusive.

RAJAPALAYAM MILLS LTD. Dividend of 6 per cent. or Rs. 6.00 per share, for the year ended 31st March 1959. Transfer books remain closed from 4th to 17th August 1959, both days inclusive.

SRI KRISHNARAJENDRA MILLS LTD. Final dividend of 4 per cent. or Re. 2.00 per share, for the year ended 31st March 1959. Transfer books will remain closed from 22nd to 29th August 1959, both days inclusive.

SYNOPSIS OF COMPANY REPORTS

Bombay Suburban Electric Supply Ltd.

The directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March 1959.

During the year 9,147 new consumers were connected to the mains, bringing the total number to 67,613 which is an increase of 15.64 per cent. over the previous year. The number of units purchased from the bulk suppliers rose by 17.99 per cent. The following table indicates, in terms of units sold, the development of the sales of energy since the year 1956-57.

Kilowatt hours sold for the year ended 31st March	Public lighting and general purposes	Power purposes	Total	Percentage increase on previous year
1957	32,858,603	38,856,173	71,714,776	18.64
1958	37,924,132	45,657,915	83,582,047	16.54
1959	44,833,025	55,035,589	99,868,614	19.48

The year under review showed progressive results. The sale of energy for lights and fans and general purposes increased by 18.22 per cent. and for motive power by 20.54 per cent. The maximum load on the Company's system was 25,500 k.w.s. as against 20,940 k.w.s. during the previous year, an increase of 21.78 per cent.

The Company's transmission and distribution systems were maintained in good order, and continued to give trouble-free service. At the close of the year there were 189 miles of high tension and 245 miles of low tension mains on the Company's system.

During the year 14 new substations were added (making a total of 208) and the transformer capacity of 9 existing substations was re-organised to ensure the most efficient use of the plant. The high tension system has been substantially strengthened and extended. The low tension network including mains, services and street lighting, has been expanded. Extensive developments are taking place in the Company's area of supply due to industrial and residential expansion.

The gross profit for the year amounts to Rs. 15,48,077 (Rs. 18,56,116) after charging depreciation amounting to Rs. 10,44,649 (Rs. 9,09,384) in accordance with the provisions of the Electricity (Supply) Act, 1948. Rs. 1,10,000 (Rs. 85,000) for wealth tax and Rs. 5,18,160 (nil) for taxes on income and profits. A credit to employees' retiring gratuities reserve of Rs. 92,064 (Rs. 89,107) has also been charged against the profits of the year.

To the profit of Rs. 15,48,077 (Rs. 18,56,116) there falls to be added Rs. 1,73,690 (Rs. 22,187) transferred from tariffs and dividends control reserve and Rs. 452 (Rs. 364) brought forward from last year, making a total of Rs. 17,22,219 (Rs. 18,78,665) including Rs. 198 being post-war refund of excess profits tax. After writing off Rs. 1,258 (Rs. 1,258) from new share capital issue expenses, Rs. 8,950 (Rs. 8,950) from promotion expenditure and providing Rs. 91,272 (Rs. 84,475) for contingencies reserve and Rs. 1,94,726 (Rs. 5,27,751) for development reserve, both in terms of the Electricity (Supply) Act, it is proposed to take Rs. 1,10,000 (Rs. 21,000) to equalisation of dividends reserve. There then remains a balance of Rs. 13,16,013 (Rs. 12,25,431). Deducting from this ad-interim dividend of Rs. 3 (Rs. 3) per share, absorbing Rs. 5,25,000 (Rs. 5,24,991) there is available Rs. 7,91,013 (Rs. 7,00,440) which it is proposed to apply as follows:—

To payment of a dividend for the half-year ended 31st March 1959, at the rate of Rs. 4.50 (Rs. 4.00) per share [making 74.77 per cent. for the year] without deduction of income-tax; absorbing Rs. 7,87,500 (Rs. 6,99,988) leaving a balance to be carried forward of Rs. 3,513 (Rs. 452).

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital	1,75,00,000	Gross block	3,66,55,333
Reserves	62,16,730	Less—Depreciation	87,53,361
Provision for taxation	11,01,461	Net block	2,79,01,972
Provision for wealth tax	99,435	Work-in-progress	5,63,430
Liabilities P. & L. a/c	83,10,079	Stores, spares and loose tools	13,95,084
	3,513	Debits, deposits and advances	21,04,272
		Investments	8,45,173
		Cash	2,47,701
		Miscellaneous expenditure	1,73,586
	Rs. 3,32,31,218		Rs. 3,32,31,218

Marshall, Sons and Co. (India) Ltd.

The directors of the above Company (Managing Agents: Marshalls (Direction) Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1958.

The profit and loss account shows a profit of Rs. 5,34,819 (Rs. 7,08,571). After adding the profit on the sale of furniture and motor vehicles amounting to Rs. 11,687 (nil) there is a total amount of Rs. 5,46,506 (Rs. 7,20,829) including Rs. 12,258 being dividend received from John Fowler (India) Private Ltd.). After providing for general depreciation Rs. 92,273 (Rs. 86,393), for development rebate reserve Rs. 2,270 (nil), for adjustments in respect of previous years Rs. 18,751 (Rs. 39,322) for payments of forfeited dividends Rs. 330 (nil) and for provision for taxation Rs. 2,75,000 (Rs. 3,50,000) the year's trading shows

a net profit of Rs. 1,57,883 (Rs. 2,44,686 after deducting Rs. 428 for loss on sale of furniture). To this is added the amount brought forward from previous year of Rs. 1,35,774 (Rs. 1,01,088) making a total of Rs. 2,93,657 (Rs. 3,45,774). The directors recommended that this amount be disposed of as follows:—

By payment of a dividend of 20 (20) per cent. free of Indian Income-tax amounting to Rs. 2,10,000 (Rs. 2,10,000) and leaving a balance of Rs. 83,657 (Rs. 1,35,774) to be carried forward.

The year under review has shown a further rise in turnover as compared with the previous financial year although the trading profit has shown considerable reduction due to the very competitive market conditions which entailed a reduction in the normal realisable margins of profit on a number of orders. The directors feel justified in again recommending that a dividend of 20 per cent. free of tax should be paid.

There has been an increase in expenditure during the year, although every endeavour has been made to keep expenses as low as possible; contributing factors have been the enhanced scales of salary and dearness allowance paid to staff based on the cost of living index, normal annual increments and higher interests on overdraft.

There has been an improvement in despatching facilities, although of necessity a large percentage of deliveries to the Tea Districts were made by air freight. In the last year's report the directors commented on the problem at ports and extra delivery charges thereby incurred, and it is gratifying to know that this position did improve during the year under review.

The restrictions in imports during the year in question were considerable but the development of local manufacture has proved to be most beneficial. Bearing in mind the policy of the Government of India the Company will continue to explore the further possibilities of indigenous production.

The directors have pressure in mentioning the continued satisfactory working of the Marshall/Britannia Agreement, and there is an improved availability of indigenous manufactured tea machinery, diesel and steam road rollers and necessary parts therefor.

The indigenous manufacture of Marshall/Baxter stonebreakers has developed satisfactorily and these machines together with the required spare parts will contribute considerably in stabilising the turnover of the Company.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	10,50,000	Gross block	17,91,604
Reserves	18,92,270	Less—Depreciation	14,09,857
Provision for taxation	7,87,389	Net block	3,81,747
Liabilities P. & L. a/c	1,48,81,871	Stock in trade	1,10,53,544
(surplus)	83,657	Stores etc.	54,905
		Debits, deposits and advances	67,62,531
		Investments	1,26,582
		Cash	3,15,878
	Rs. 1,86,95,187		Rs. 1,86,95,187

Shaw Wallace and Co., Ltd.

The directors of the above Company (Chairman: Stanley Mackay Smith, Esq., Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

The Company's profit for the year is Rs. 44,44,878 (Rs. 37,91,964). Of this provision for taxation amounts to Rs. 21,74,946 (Rs. 18,24,163) leaving a net profit after taxation of Rs. 22,69,932 (Rs. 19,67,801). To this should be added the amount brought forward from last year of Rs. 3,65,425 (Rs. 3,64,354) and adjustments in respect of previous years taxation Rs. 22,181 (nil) making a profit available for appropriation of Rs. 26,57,538 (Rs. 23,32,155). Out of this the following appropriations have been made or are recommended by the directors:—

To amount written off investments Rs. 2,00,000 (Rs. 5,00,000), to amount transferred to general reserve Rs. 7,50,000 (Rs. 4,00,000), to amount transferred to development rebate reserve Rs. 1,62,000 (nil), to payment of interim dividends on the cumulative preference shares on the 15th July 1958, 3 per cent. less income-tax Rs. 1,54,123 (Rs. 1,54,123) and on the 15th January 1959, 3 per cent. less income-tax Rs. 1,54,124 (Rs. 1,60,807). The directors now recommend a dividend of 10 (10) per cent. on the ordinary shares without any deduction of income-tax paid by the Company absorbing Rs. 7,50,000 (Rs. 7,50,000) leaving a credit balance to be carried forward to 1959 of Rs. 4,87,291 (Rs. 3,65,425 after writing off goodwill by Rs. 2,000).

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	1,50,00,000	Gross block	83,30,245
Reserves	30,30,545	Less—Depreciation	18,26,024
Provision for taxation	31,00,000	Net block	65,04,221
Liabilities P. & L. a/c	3,20,02,876	Capital work-in-progress	2,39,287
(surplus)	4,87,291	Stock in trade	1,14,68,928
		Stores, loose tools, etc.	9,92,219
		Debits, deposits and advances	1,74,30,317
		Investments	1,66,43,377
		Cash	3,42,164
	Rs. 5,36,20,513		Rs. 5,36,20,513

Murphulani (Assam) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a profit, after charging all expenses, of Rs. 2,38,115 (Rs. 2,36,256) of which taxation provision requires Rs. 1,36,000 (Rs. 1,10,000). The balance brought forward from last year was Rs. 40,086 (Rs. 39,252) making a total available for appropriation of Rs. 2,02,201 (Rs. 1,65,711) including Rs. 203 being surplus on redemption of investments. The directors have transferred to general reserve Rs. 85,000 (Rs. 50,000) and to development rebate reserve Rs. 371 (nil) leaving an available balance of Rs. 1,16,830 (Rs. 1,15,711). The directors now recommend that the following dividends be paid:—

On the preferred ordinary shares at Rs. 2.50 (Rs. 2.25) per share absorbing Rs. 50,000 (Rs. 45,000) and on the ordinary shares at Rs. 2.00 (Rs. 1.75) per share absorbing Rs. 35,000 (Rs. 30,625). The directors have forfeited unclaimed dividends in accordance with Article 158 Rs. 7,733, thus leaving a balance to be carried forward of Rs. 39,583 (Rs. 40,086).

Wealth tax is estimated to amount to Rs. 3,470 against which there is a surplus of Rs. 1,245 from provision made in previous years. Rs. 2,225 has been provided in these accounts and a similar sum has been transferred from general reserve.

A crop of 5,171 maunds was secured and sold at an average price of Rs. 2.75 per lb. This compares with a crop of 5,544 maunds in 1957, sold at an average price of Rs. 2.45 per lb.

Estimates for the current season have been framed for a crop of 5,600 maunds to cost Rs. 8,42,175; the crop will be manufactured in the new factory, which has just been completed on the site of the old factory.

In the report of the directors for the year ended 31st December 1957, members of the Company were advised that permission had been received from the Controller of Capital Issues to stand to the credit of general reserve. This having carefully considered the matter, the Board, opinion that, in view of the removal of the excess dividend tax but not of the tax on bonus issues, a bonus issue at this stage would not be in the best interests of the Company.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	3,75,000	Gross block	12,43,977
Reserves	7,81,455	Less—Depreciation	6,21,441
Provision for taxation	1,44,428	Net block	6,22,536
Provision for wealth tax	3,470	Stock of tea	3,71,280
Liabilities P. & L. a/c	5,29,741	Stores, etc.	2,66,867
(surplus)	39,583	Debits, deposits and advances	1,95,009
		Investments	2,242
		Cash	4,15,723
	Rs. 18,73,657		Rs. 18,73,657

Mim Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a profit, after charging all expenses, and crediting the amount of a claim under the hail insurance policy, of Rs. 30,079 (loss of Rs. 58,830). The debit balance brought forward from last year was Rs. 27,148 (credit of Rs. 22,459) leaving a credit balance of Rs. 2,931 (debit of Rs. 42,148). The directors have transferred to development rebate reserve Rs. 761 (nil) and have leaving a balance to be carried forward of Rs. 3,487 (nil) (debit of Rs. 27,148 after transferring Rs. 5,657 being excess tax provisions). The West Bengal Entry Tax levied during the year amounted to Rs. 7,409.

Although the results were considerably better than in the previous year, the directors regret that they have been unable to recommend the payment of a dividend.

Satisfactory prices were obtained for the 1958 teas but, owing to the heavy hail damage, that occurred early in the year and which was assessed at a total of 500 maunds made tea, crop was considerably below expectations. A crop of 1,979 of Rs. 3.93 per lb., which compares with a crop of 2,062 maunds in 1957, sold at an average price of Rs. 3.45 per lb.

Estimates for the current season have been framed for a crop of 2,500 maunds to cost Rs. 6,45,169 and although slight hail damage occurred at the garden in April this year, it is will be secured. By the 14th June 1959, 1,000 maunds had been harvested compared with 843 maunds to the same date last year.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	1,59,000	Gross block	4,97,719
Reserves	3,51,000	Less—Depreciation	2,19,852
Provision for taxation	1,087	Net block	2,77,867
Liabilities P. & L. a/c	2,03,589	Stock of tea	1,85,518
(surplus)	5,657	Stores, etc.	66,225
		Debits, deposits and advances	1,00,877
		Investments	1,097
		Cash	88,729
	Rs. 7,20,313		Rs. 7,20,313

N.B.—Figures within brackets relate to the corresponding period of the previous year.

INTER-BANK CALL RATE HARDENS

(From Our Own Correspondent)

BOMBAY, 5th August

There has been a sudden pull on the short-term money market during the last three days. The heavy sales of Intermediate Treasury Bills in the week ended 25th July, the larger borrowings through regular Treasury Bills and the movement of some funds to Calcutta, presumably to finance raw jute purchases by mills, have denuded the market of a good part of its surplus funds. There has, therefore, been a hardening of interest rates in the inter-bank call money section from 1 per cent. to 1½ per cent. among Exchange banks and from 1 per cent. to 1½ per cent. among the smaller banks. House money at seven days' notice is, however, being bid at the self-same rate of 3¼ per cent. and short-term deposits for one to six months at 3¼-4 per cent.

In contrast to the aforesaid trend, the 91-day Treasury Bill rate has registered a further, but small, setback to 2.519 per cent. per annum from 2.545 per cent. last week and 2.717 per cent. two weeks back. The response to the tenders has, however, been less encouraging than last week, the total amount offered being Rs. 4.05 crores, as against Rs. 5.35 crores last week. The amount invited in each of the weeks was Rs. 3 crores. Tenders for next week are unchanged at Rs. 3 crores. Sales of Intermediate Treasury Bills during the period 29th July to 1st August were also substantially lower at Rs. 68.25 lakhs, as compared with Rs. 7.25 crores in the corresponding period of the preceding week. These bills will be offered again from 5th to 8th August at Rs. 99.386 per cent., as against Rs. 99.391 per cent. last week.

For the second week in succession, notes in circulation have recorded a sizable contraction. In the week ended 24th July, they had shrunk by Rs. 24.74 crores and the Reserve Bank statement for the following week (ended 31st July) shows a further fall of Rs. 14.30 crores. Notes held in the Banking Department are higher by Rs. 6.07 crores so that the net decline in total notes issued is Rs. 8.23 crores. As against this, the rupee securities show a fall of Rs. 9.71 crores and rupee coin an increase of Rs. 1.48 crore. While foreign securities are unchanged at Rs. 168.01 crores, balances held abroad (in the Banking Department) are lower by Rs. 2.42 crores (at Rs. 9.82 crores). The total foreign assets now amount to Rs. 177.83 crores, representing a fall of Rs. 14.90 crores over the year. Central Government's deposits have dropped by Rs. 4.45 crores, those of other Governments by Rs. 5.87 crores and of banks by Rs. 8.85 crores. There has been no worthwhile change in loans and advances to Governments or in other loans and advances. There are no outstanding borrowings of Scheduled banks against usance bills. Investments have declined by Rs. 17.62 crores and Government Treasury Bills purchased and discounted by Rs. 2.10 crores.

The Scheduled banks' statement for the week ended 24th July 1959, closes a rise of Rs. 9.34 crores in demand deposits, in contrast to the successive fall noted in the previous two weeks. Time deposits continue to swell, the increase during the week under review being Rs. 1.85 crore. Inter-bank borrowings have gone up by Rs. 2.26 crores, while borrowings from the Reserve Bank stand reduced by Rs. 2.61 crores. Advances maintain their downward trend, with a further decline of Rs. 12.17 crores. Bills purchased and discounted are, however, slightly higher by Rs. 59 lakhs. Investments have again risen by Rs. 18.36 crores. Cash balances are almost unchanged, but money at call and short notice has increased by Rs. 1.99 crore.

The buoyancy in Gilt-edged market shows no signs of flagging. Almost all the dated loans continue to attract good enquiries and there has been a further hardening of prices. The volume of business, however, has not increased to any perceptible extent. Early in the week, the Reserve Bank of India put up its governing price of 3½ per cent. 1969 by 10 nP to Rs. 99.05 and of 4 per cent. 1979 by 5 nP to Rs. 100.10.

3 per cent. 1966 Conversion Loan continues to provide an exception to the general trend, in the absence of any interest. There has been a further drop of 15 nP to Rs. 73.65 in this counter. 2½ per cent. 1961 has risen to Rs. 98.15 ex-voucher from Rs. 98.10 before payment of half-yearly interest on 1st August. 2½ per cent. 1962 has gained 10 nP to Rs. 97.60. 3 per cent. 1963-65 and 1964 have improved by 5 nP and 10 nP, respectively, to Rs. 97.50. 3 per cent. 1966-68 is quoted 20 nP higher at Rs. 95.20 and 3 per cent. 1970-75 10 nP higher at Rs. 92.20. A rise of 15 nP to Rs. 99.50 is noted in 3½ per cent. 1962. 3½ per cent. 1965 has, however, shed 5 nP to Rs. 100. 3½ per cent. 1968 has put on 5 nP to Rs. 99.35 and 3½ per cent. 1974 10 nP to Rs. 99.60.

There are good enquiries for 4 per cent. State loans. West Bengal 1967 and 1968 have each gained 15 nP to Rs. 100.25. Madras 1963 and 1964 are 10 nP higher at Rs. 100.40, as also 1967 and 1968 at Rs. 100.25. Andhra 1967 and 1968 are being quoted at Rs. 100.25, representing an increase of 10 nP over the week. U.P. 1963 and 1964 have each put on 10 nP to Rs. 100.40 and 1967 and 1968 5 nP to Rs. 100.25.

Sterling displayed a two-sided movement in terms of the U.S. dollar. Spot sterling at New York was marked down from 281.17-281.20 cents to 281.06-281.07 cents on Friday last. Since then, there has been a recovery to 281.15-281.18 cents yesterday. Three months' forward is quoted at 281.05-281.08 cents, after touching a low of 280.97-281.00 cents, as against 281.08-281.11 cents a week ago. The rupee-dollar rate also moved in consonance with this trend. Banks' selling rate for U.S. T.T. rose from Rs. 476 to Rs. 476.25 before going back to Rs. 476 per \$100. Their buying rate is, however, unchanged at Rs. 472.75 per \$100.

GOLD FIRM, SILVER STEADY

(From Our Own Correspondent)

BOMBAY, 5th August

The recovery in bullion noted on Wednesday last gathered momentum during the week under review. The sentiment of operators was aided favourably by fresh buying from Delhi, while new offerings were scarce. Gold met with good support induced by reports of large seizure of contraband gold. In sympathy with gold, the white metal, too, ruled fully steady. There would, indeed, have been a marked rise in price but for the sale of nearly 300 bars by a leading Calcutta trader after the close of the session yesterday.

August settlement in silver, which stood at Rs. 197-3 on Wednesday last, moved up to Rs. 197-12 on the opening day. Thereafter, it fluctuated narrowly and touched a low of Rs. 197-1 and a high of Rs. 197-10 yesterday. Opening at Rs. 197-6 today, it improved to Rs. 197-10 before finishing an anna lower. September settlement registered a net rise of As. 7 over the week, today's closing rate being Rs. 197-5. The backwardation rate (Buddi in favour of bulls) for August settlement widened from As. 5 last week to As. 7 on Monday, but narrowed subsequently and stood at As. 4 today.

Ready silver began the week at Rs. 196-14, as against Rs. 196-13, and gradually rose to touch Rs. 197-7 today. Towards the close, it was a shade easy at Rs. 197-6. The daily average arrivals and offtake of silver were 20 bars and 11 bars, respectively. The floating stocks of silver are estimated at 500 bars.

Induced by good buying orders, August settlement in gold registered a handsome rise in value, today's closing quotation being Rs. 118-3, as against Rs. 117-3 last week; at one time today, it had even touched Rs. 118-7-6. September settlement spurred from Rs. 117-3 to Rs. 118-4-6 today before winding up lower at Rs. 118.

Ready gold enjoyed good demand and improved in the course of the week from Rs. 117-1 to Rs. 118-9-6 today. At higher levels, profit-taking set in and the rate eased to Rs. 118-5 towards the close. The daily average arrivals of gold were 3,250 tolas, while the offtake was 2,250 tolas. The floating stocks of gold are reported to be around 45,000 tolas.

There was no change in the quotations for ready and forward silver in the London bullion market during the week; they stood at 78½d. and 78½d. per ounce, respectively. Silver in New York was also unaltered at 91.375 cents per ounce. Ready gold in London, however, firmed up from 249s. 9½d. to 249s. 10½d. owing to the easiness of the pound sterling vis-à-vis the dollar. The latest available dollar rate for gold in London is \$35.11½-\$35.13½ as against \$35.12½-\$35.14½ a week before.

The following comparative table shows at a glance the trend of the market during the week under review:

	5-8-59	Highest	Lowest	29-7-59
GOLD				
Ready (99 fine Mint)	Rs. a. 118 5	Rs. a. 118 9½	Rs. a. 117 5	Rs. a. 117 1
Forward	118 3	118 7½	117 6	117 8
SILVER				
Ready (999 fine Mint)	Rs. a. 197 6	Rs. a. 197 7	Rs. a. 196 13	Rs. a. 196 18
Forward	197 5	197 12	197 1	197 3
London Silver Ready	249s. 9½d.	249s. 10½d.	249s. 10½d.	249s. 9½d.
London Forward	78½d.	78½d.	78½d.	78½d.
London Gold	Rs. 117 3	Rs. 118 4-6	Rs. 117 3	Rs. 117 3
New York Silver	91.375 cts.	91.375 cts.	91.375 cts.	91.375 cts.

* 20th August settlement. † 21st August settlement.

October, November-December, January-February 29.25.

Quiet conditions prevailed in the New York cotton futures market during the week. Futures contracts moved in a narrow range with values showing a sagging tendency. Operators were inclined to await the August crop forecast expected on the 8th inst. Weather and crop news continued to be generally favourable. One private estimate placed the 1959-60 crop at 13.86 million bales, as against last season's production of 11.51 million bales. A further reduction in certified cotton stocks was reported. Government-controlled stocks as on 17th July aggregated about 7.2 million bales, made up of 6.1 million bales of 1958 loan stocks and 1.1 million bales of C.C.C.-owned stocks.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	4-8-59	28-7-59	21-7-59
Spot	...	33.55	33.85	34.40
October	...	32.26	32.37	32.32
December	...	32.29	32.31	32.32
March	...	32.57	32.62	32.58

COTTON YARN MOVES UP

(From Our Own Correspondent)

BOMBAY, 5th August

Trading in the yarn market during the week under review was characterised by distinct firmness of cotton yarns. The firmness was engendered by expectations of substantial fresh export business, in addition to the sale of large quantities of yarn to Indonesia and Burma through the State Trading Corporation. A marked rise in raw cotton prices also imparted much strength. The closing rates for many varieties of yarns today were higher than those prevailing in the past few weeks. In contrast to cotton yarns, art silk yarns encountered selling and tended to decline. This was due to the decline in nylon yarn prices following reports of the grant of advance import licences under the Export Promotion Scheme. Even the perceptible drop in arrivals of imported art silk yarns into Bombay port during the month of July failed to have any effect. The aggregate arrivals during the month were no more than 2.12 million lbs. as against over 3.94 million lbs. in the previous month. Staple fibre yarns also came in for selling on fears that some mills were inclined to sell large quantities in the next few weeks. These mills, it was felt, were likely to receive further quantities of raw staple fibre from the manufacturers. The reports from various consuming districts, too, were not encouraging; offtake was said to be rather restricted.

Cupressa Bamberg yarn (60x2) August delivery suffered a loss of Rs. 19, today's closing rate being Rs. 1,680. October delivery receded from Rs. 1,736 to Rs. 1,731. Spot cupressa was neglected at Rs. 7.56, same as last week. Among imported art silk yarns, 120 Japan and 150 Japan declined by 3 nP each to Rs. 4.84 and Rs. 4.80 respectively. 120 Italy dropped 6 nP to Rs. 4.94. 150 Italy fell by 7 nP to Rs. 4.71. Among indigenous yarns, National Rayons 150 bright cones first grade eased by 7 nP to Rs. 4.24. 120 bright cones first grade lost a like amount to Rs. 4.69.

Staple fibre yarn (40x2) August contract moved down from Rs. 674 to Rs. 666. October contract declined by Rs. 15 to Rs. 654. Spot Kohinoors receded by 8 nP to Rs. 3.56. Citys and Centurys both finished 6 nP lower, the former at Rs. 3.44 and the latter at Rs. 3.56. Imported staple fibre yarns also suffered a setback. Paramounts declined by 16 nP to Rs. 8.06 and Fujis by 19 nP to Rs. 8.62.

The cotton yarn section, as already stated, ruled active with an all-round improvement in prices. Ten counts Podars strengthened by 50 nP to Rs. 13.50. Moderns picked up 25 nP to Rs. 14. Twenty counts Hinds rose by 12 nP to Rs. 16.87. Moderns were done at Rs. 17.25, as against Rs. 17. Forty counts Minaxis spurted by 18 nP to Rs. 25.62. Moderns forged ahead from Rs. 26 to Rs. 26.75. Sixty counts Raghuvams and Finlays were fully maintained at the last week's levels of Rs. 57 and Rs. 63, respectively. Eighty counts Moderns hardened by rupee to Rs. 78. Finlays gained a like amount to Rs. 82. Mahendras advanced by 75 nP to Rs. 73. Citys improved from Rs. 66.75 to Rs. 67.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday as compared with those a week before:

	5-8-59	28-7-59
Art silk yarn—		
60/1 Cupressa Bamberg August (100 Kg.)	1,680	1,690
October	1,736	1,731
60/1 Cupressa Bamberg spot (per lb.)	7.56	7.56
120 Japan (per lb.)	4.84	4.84
150 Japan (per lb.)	4.80	4.80
120 Italy (per lb.)	4.94	4.94
150 Italy (per lb.)	4.71	4.71
Staple fibre yarn—		
40x2 August (per case of 200 lbs.)	666.00	674.00
40x2 October	666.00	660.00
40x2 Kohinoor (per lb.)	3.56	3.56
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.50	13.00
20s Modern	17.25	17.00
40s Minaxi	25.62	25.44
60s Finlay	63.00	63.00
80s Mahendra	73.00	72.25

LINSEED FIRM

(From Our Own Correspondent)

BOMBAY, 5th August

Divergent trends were in evidence in the oilseeds market during the week under review. While groundnuts and castor seeds suffered a slight setback, linseed and cottonseed firmed up. Although the groundnut section gave way at the close of the

week, it had been fully steady during the major part of the week, thanks mainly to fears of crop damage as a result of heavy rains, particularly in Saurashtra. This restricted the offerings. Subsequent reports to the effect that the oilseed crop was not adversely affected by bad weather, set off a revival of selling pressure. The castor seed section was featureless, since the prospects for exports of oil did not make any appreciable improvement. The U.S.'s lack of interest in the Indian market for castor oil continued to be a disquieting feature. Although the arrivals of castor seeds declined slightly during the week, this factor failed to make any impression on the market, presumably owing to the large stocks already accumulated with the traders. The strength in cottonseed is mainly derived from the particularly firm conditions prevailing in the raw cotton market. In the linseed section, there are unmistakable signs of improvement in prospects for exports.

The linseed section depicted a cheerful appearance during the week. Many recent developments have tended to reduce the disparity between the price of Indian linseed oil and its foreign counterparts. In the first place, the production of linseed in India in 1958-59 is estimated at 4,30,000 tons, representing a record since 1948-49 and a rise of about 75 per cent. over 1957-58. The area under linseed has also gone up by 18.5 per cent. to 37,08,000 acres. The expansion in the production of linseed will bring down the price of Indian oil. Besides, there are indications that prices of foreign linseed oil are drifting upwards, thanks to lower linseed crop estimates in the U.S. and the reduction in the Canadian sowings. In these conditions, linseed September 1959 contract, which wound up last week at Rs. 32.56, rose to Rs. 32.87 today, after moving both ways in a narrow groove. Bold ready improved from Rs. 32.50 to Rs. 32.87. Oil advanced from Rs. 15.87 to Rs. 16.12.

In contrast, the groundnut section was dull. The groundnut September 1959 contract remained unchanged at Rs. 191, after fluctuating between Rs. 193.50 and Rs. 191.50 over the week. Bold ready lost 75 nP to close at Rs. 39.25. Oil ex-mill closed today lower at Rs. 20.37, as against Rs. 20.75 last Wednesday.

The castorseed September 1959 contract, which had finished at Rs. 154.75 last week-end, reacted to Rs. 152.87. Ready Madras shed 13 nP to Rs. 30.62. Oil Commercial lost 87 nP to Rs. 15.75. Cottonseed September 1959 contract which closed last week at Rs. 136 improved to Rs. 136.50. The February 1960 contract, however, closed lower by 50 nP at Rs. 112.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	5-8-1959	29-7-1959	22-7-1959
Groundnut			
August 1959	191.00	191.00	195.00
February 1960	112.50	112.50	108.50
Bold ready	39.25	39.25	41.00
Coromandel ready	39.50	40.25	41.00
Khandesh quality	39.50	40.25	41.25
Oil ex-mill ready	20.37	20.75	21.50
Railway receipt	20.87	20.37	21.31
Castor seed			
September 1959	152.87	154.75	157.75
May 1960	158.75	154.37	158.37
Ready Madras	30.62	30.62	31.00
Ready Kanpur	29.50	29.75	30.00
Oil 55.5, 5.0	16.09	15.81	16.31
Oil commercial	15.75	16.02	16.00
Linseed			
September 1959	32.87	32.56	32.31
May 1960	32.25	31.75	32.00
Bold ready	32.87	32.50	32.50
Oil ready	16.12	15.87	16.00
Cotton seed			
September 1959	136.50	136.00	137.00
February 1960	112.50	113.00	116.00
Niger seed	31.00	30.75	31.00
Karai seed	23.50	23.50	23.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cert. 4 candy is 560 lbs., except in the case of cotton seed, for which it is 754 lbs. Spot quotations of seeds are for per cwt. and those for oil per quart.

SUGAR ARRIVALS SMALLER

(From Our Own Correspondents)

BOMBAY, 5th August

Arrivals of sugar by rail and road into the City were smaller during the week under review, as compared with those last week, being 11,000 bags, as against 16,400 bags. Nevertheless, the stocks in the market were quite sufficient to meet the normal rise in demand in the first ten days of a month. The supply position is expected to improve considerably in the next few weeks, as a result of the inflow of sugar against the latest release orders obtained by the sugar mills.

The wholesale rates per bag for the different grades of sugar prevailing today are the same as those prevailing a week before. They are: A grade: Rs. 118.81; B grade: Rs. 114.08; C grade: Rs. 112.02; D grade: Rs. 111.

Sugar circles are awaiting the publication of the Union Food Ministry's note on sugar prices which Mr. A. P. Jain announced in the Lok Sabha on Monday would be presented this week. The announcement was made when a Socialist Member sought to raise through an adjournment motion, the question of mounting sugar prices and the Government's failure to check them. The speaker of the Lok Sabha disallowed the motion, but said that some time would be allotted later to discuss the subject of sugar prices. Mr. Jain agreed to have a discussion.

HAPUR, 3rd August

After early sharp decline, sugar prices tended to go up in the week-end following the announcement of the latest sugar policy by the Government

of India. The inter-State movement of sugar has been banned in order to ensure that allotments made to each State are available for local consumption. There would, however, be no such restrictions in the southern region where enough sugar is reported. Further, there would be no free sale release from factories in the Punjab, the U.P. and North Bihar and sugar in these areas would be allotted in accordance with special arrangements made by States or through licensed dealers. Besides, the Government has also released a large quantity of 1.80 lakh tons for sale. But as sales through fair-price shops established by had dropped to about Rs. 115 per bag, improved and is presently being quoted at Rs. 120 per bag. In retail, sugar is now available at Re. 1.12 per seer.

Mill delivery transactions in sugar in the Muzaffarnagar market came to a standstill, following the announcement of the latest Government policy about sugar, and the price trend, which was bearish, again showed signs of improvement. Sugar is now being quoted at Rs. 120 per bag, after having touched a low of Rs. 115 per bag. Demand was slack from the consuming areas as inter-State movement had been stopped. Sugar prices also tended to register a hardening trend in the week-end in Kanpur market.

Ready khandsari prices registered a sharp fall during the week due to ban on inter-State movement and slack demand and the latest prices are:—khandsari Rs. 35 to Rs. 39, Boora Rs. 38 to Rs. 40 a maund.

Ready gur prices continued steady, as ready stocks are fast declining and is now put at about 32,000 maunds. Latest rainfall has very much improved cane crop prospects, but crushing for new season will not begin before the beginning of October. Current prices are:—gur pasera best Rs. 21.50, kotha mixed dry-wet Rs. 19.75, shakker Rs. 22 a maund.

Gur prices also ruled steady in the Muzaffarnagar market where daily arrivals were small and the latest prices are:—Chaku dry Rs. 24.25, kotha mixed Rs. 23, shakker dara Rs. 22.50 to Rs. 24 a maund.

After early gains, future gur prices sagged, due to continued bear pressure. Opening at Rs. 152.87 last Monday, gur pabgur touched the highest at Rs. 14.63 in the middle of the week and then eased to Rs. 14.18 and is presently quoted near the lowest level of the session at Rs. 14.20.

EXPORT TEAS STEADY

(From Our Own Correspondent)

CALCUTTA, 4th August

With greater demand from all sides, especially from British buyers, steady conditions were in evidence during yesterday's export sales. Quality showed a further improvement, and the good quality teas recorded a fair addition to price. The news that the U.K. tea stocks declined by 2 million lbs. to 112 million lbs. in the week ended 24th July aided sentiment. Trade circles, however, considered this decline to be purely a temporary feature as shipments of tea from Calcutta to Great Britain were on the increase. In fact, shipments to the U.K. are now mostly tea. During this month, clearings to the U.K. would go up within the next three or four weeks. Two ships have already been declared full. Meanwhile, the weaker conditions during the sales held in Mincing Lane last week were attributed to poor quality of the offerings. However, wherever the offering was of good quality as, for instance, the best Dooras, prices tended to harden on keen competition.

In the internal sales held here last week, dusts on offer, amounting to 15,704 chests, met with good general demand. A feature was the improved demand for Darjeelings which were fully firm, in contrast to the quiet trend displayed in recent weeks. Exportable black orthodox teas rose above valuations by 4 to 8 nP with leg-cut Dooras recording a firm to dearer tendency. On the other hand, an irregular tendency was recorded by C.T.C.s. The very best C.T.C.s met with buyers at prices below valuations, while exportable C.T.C.s were taken to levels far above valuations. Medium C.T.C.s declined by 20 nP. The quotations, exclusive of excise duty, were: medium Assam C.T.C. Rs. 2.20, best Assam C.T.C. Rs. 2.70 to Rs. 3.00, medium Dooras Re. 1.80 to Re. 1.86, and medium Assam Re. 1.76 to Re. 1.84.

Leaf on offer amounted to 329 chests including 48 chests of green tea. Demand was good.

One of the features during yesterday's export sale, when offerings amounted to 40,717 chests, was the keen attention to the bright liquoring teas and other teas possessing clean black leaf. There was strong demand when the sale opened, but the demand petered out as the sale progressed and buyers became more selective. Valuations were realised by black well-made whole leaf grades. Similarly, the plainer teas in this section and more particularly the fibrous sorts receded. There was good demand for tippy teas, while Darjeelings met an easier market with the lots of poorer quality being withdrawn. Prices of plain broken quality being additions and, on keen competition, recorded small nings added 15 nP. All bright liquoring teas of orthodox manufacture, on keen support, realised valuations and often above. The quotations, exclusive of excise duty were: best Assam C.T.C. Re. 1.96, best Assam C.T.C. B.P. Re. 3.30 to Rs. 3.50, plain B.P. Re. 1.74 to Re. 1.80, medium fannings Rs. 2.10 to Rs. 2.20, medium B.P. Rs. 2 to Rs. 2.10, and plain fannings Re. 1.86 to Re. 1.96.

Export quota was quoted by sellers at 24 nP. Buyers were prepared to offer only 24 nP, and no business was put through.

MEDIUM TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 29th July

Approximately 900,000 lbs. were offered in sale No. 29, which was held on 28th inst. Quality of teas offered was maintained. The market met with a good general demand. There was keen enquiry for low medium and medium descriptions which were dearer by 5 to 10 nP. Demand for best liquoring high grown broken teas was limited and were difficult of sale. However, similar fannings met with rather better support, but sold at rates below last. Whole leaf grades were generally easier with the exception of orange pekoes which met with a strong demand and were dearer. A small selection of tippy teas sold well at slightly easier rates. The following are the quotations:—

	1959	1958
Low medium	1.55 to 1.68	1.60 to 1.75
Medium	1.70 to 1.80	1.75 to 1.95
Good medium	1.95 to 2.20	1.95 to 2.15
Quality	2.05 to 3.15	2.10 to 3.20

London Market:—Sale of 27th July 1959:—Better demand for Assams and brighter Dooras. Africans irregular and sometimes lower.

Sale of 28th July 1959:—Good demand for Best. Others irregular.

Sale of 29th July 1959:—Best steady. Others lower.

Colombo Market:—Sale of 24th July 1959:—UVA quality improved. Prices correspondingly higher, especially B.O.P.F. small selection. Best Dimbula Dickoya B.O.P.s steady. Others less dear. Substantially lower. Corresponding B.O.P.F. better demand. Dearer rates, Mediums active 15 to 20c. dearer. Low grows 5 to 10c. dearer.

Sale of 27th July 1959:—Active demand. Useful liquoring grainy dusts considerably dearer. Other offgrades better demand. Generally dearer, particularly bright liquoring UVAS.

Calcutta Market:—Export:—40,800 chests. Strong general demand. Teas for price steady. Strongest feature plain and low medium fannings which were 10 to 15 nP dearer. Best C.T.C. well supported. Plainer C.T.C. and medium orthodox B.O.P.s 20 to 30 nP easier. Poorer whole leaf slightly dearer. Darjeeling fair inquiry. Tippy teas well supported.

Internal:—15,700 chests dust. Good demand black exportable types 4 to 8 nP dearer. Medium C.T.C. irregularly 20 nP easier. Best C.T.C. slightly easier.

Export Quota:—The market has been fairly active during this week with business taking place at 24 nP. At the time of writing there are sellers at 3 nP and buyers at 24 nP.

Forthcoming Auctions:—Sale No. 30 will be held on Tuesday, 4th August 1959 and Dust Sale 'U' on Thursday, 6th August 1959.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"Sale 30—975,000 lbs. Good but irregular demand. Low medium broken 5 nP easier, but similar fannings steady. Improved mediums and high-grown dearer, following quality. Whole leaf weaker."

SACKINGS ADVANCE

(From Our Own Correspondent)

CALCUTTA, 4th August

The feature of the trading in the jute goods market during the week under review was the covering demand in heavy goods and keener activity in futures, developed subsequently, leading to impressive gains in prices of heavy goods constructions, in general, and B. twills, in particular. In sympathy, hessian was fully steady, but only routine business was put through and fluctuations were narrow. Encouraging reports from crop areas continued to be received, but mills accorded modest support to the fibre market and accepted fair quantities. Certain market circles were prone to interpret the increased purchases by mills as being due to a desire on the latter's part to be prepared to meet any subsequent rise in prices, considered probable as and when mills decided to increase production. However, fibre prices did not improve, but were fully firm at around previous levels.

Encouraging reports of U.S. burlap consumption, the satisfactory statistical position of goods, the increased demand for heavy goods both for internal requirements and export markets, and estimates of a higher fibre crop incidentally needing more outlet led to expectations of a further unsealing of looms in the near future.

There was the report during this week that recent attempts of a big paper mill in East Pakistan to use jute cuttings as pulp instead of bamboo shavings had met with success. During the last two years, Pakistan is finding it extremely difficult to dispose of its jute cuttings, for which not long ago India was a large buyer. However, with self-sufficiency in fibre supplies in India, Indian mills needed only taken quantities of the Pakistani fibre. In the recent trade talks held in New Delhi, Pakistan officials stressed their country's need to export as much cuttings to India as possible. It was thought here that New Delhi might attempt to help Pakistan in this regard. Trade circles, however, did not agree with this idea, as they thought that, if Indian imports of Pakistani jute increased, there was the danger of slump in India's own market which would dampen cultivators' enthusiasm.

On Tuesday last, heavy goods accounted for a good amount of covering business, and prices were steady. Near and ready delivery goods were keenly sought, and B. twills was fully steady at Rs. 98.50. On the other hand, there was little activity in hessian. The 40" 10 oz. which was quiet at Rs. 40.50. On the next day, conditions were akin as to those of the previous day, and ready B. twills

moved narrowly around Rs. 98.20, and hessian 40" 10 oz. was unchanged at Rs. 40.50. Although, on Thursday, covering business continued, activity in the futures market affected prices and ready B. twills gave way to Rs. 98.05. Covering business in ready goods continued. Hessian 40" 10 oz. also sagged and was quiet at Rs. 40.25. At this stage, China entered the market, and purchased a fresh quantity for shipment in this month and next. B. twills shot up to Rs. 98.85 and, in sympathy, hessian 40" 10 oz. improved to Rs. 40.35. At this stage, keener activity developed in futures, and in the ready market covering business was done on a larger scale. The result was the rise in B. twills to Rs. 100.15 and hessian 40" 10 oz. to Rs. 40.40 during the week-end. On keener activity in the futures and substantial covering demand against sales to China, B. twills rose to a high of Rs. 100.85 yesterday. In sympathy, hessian 40" 10 oz. advanced to Rs. 40.55. During the week, demand was also reported from Burma and Viet Nam, among other countries. Australia was also in the market for cornsacks. Burma accepted tender for 6,000 bales of sacking for September-October delivery.

Better support was accorded to fibre, as mills were anxious to increase their stocks. Stockists hoped that mills would announce their decision to increase production, and stated that this week's increased purchases of the fibre by mills was a preliminary to such a decision. Fair interest was also shown in new crop with northern bottoms being transacted at Rs. 22.75. The latest quotations of the new crop are as follows:

	Middles	Bottoms	Delivery
	Rs.	Rs.	
Lower and Upper			
Assam	25.75	23.25	Aug-Sep.
Northern	25.25	22.75	"
Desal	24.75	22.25	"

U.P.	23.25	20.55	"
Daissee mesta	23.25	20.75	Sep-Oct.
Bimil f.a.q.	Rs. 21.00		Oct-Nov.
Pucca bales 1st mark	Rs. 175.00		per bale

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 3rd August

Quiet conditions were witnessed in the food-grain market during the week thanks to good rains received all over the U.P. which was still now facing drought conditions. Kharif grain and fodder crops are now progressing satisfactorily and with the harvesting of early maize crops, some new maize arrivals also began in the market. In East U.P., however, food situation was reported to be deteriorating, as that area was chronically deficit and wheat was reported to be quoted up to Rs. 27 a maund in some areas. The stock position with the State Government was reported to be in a position to tide over any crisis due to comfortable stock position.

Wheat prices at Hapur ruled quiet and are now being quoted at Rs. 18.25 per maund for average quality and up to Rs. 19.50 for farm produce. Consumer demand was being met out of stocks put forward by producers in private, but arrivals from these sources are also likely to decline with the onset of heavy monsoon. The Government purchases of wheat under the Wheat Levy Scheme here were nominal. The U.P. Government has increased the number of fair-price shops for distribution of grain and sugar which is also being rationed and the number is now put at 3,665 in the State. Rice prices ruled quietly steady and large-scale sowings of paddy and mungji crop would be possible now due to heavy rains received at the week-end. The prevailing prices of rice are:—basmati sela Rs. 33 to Rs. 36, mainpuri

ECONOMIC RESOURCES OF INDIA AND PAKISTAN

By K. C. GHOSH

It provides to the readers all relevant information regarding Man-power, Land, Agriculture, Livestock, Minerals, Forests, Ports, Irrigation and Power Projects, Transport, Industry, Banking, etc., etc. All commercial products have been treated individually and in great detail.

A dictionary of economic resources and a useful book of reference.

Price Rs. 20/- Foreign 30 sh.

K. P. BASU PUBLISHING CO.
42, CORNWALLIS STREET,
CALCUTTA-6

Rs. 25.25, ramajwayan Rs. 25.25, gadda Rs. 23 a maund.

Easy advices from Punjab and comfortable local stocks and slack demand accounted for a fall of 50 nP per maund in gram price during the past week. Local stock is unchanged at 60,000 maunds and continued arrivals are enough to meet day-to-day demand. Barley and bejhar prices steady, while inferior quality new maize was lifted at Rs. 13.75 a maund. Prices of other coarse grains hovered within narrow limits and week-end prices (per maund) were:—gram Rs. 12.62, barley Rs. 13, bejhar Rs. 12.50 to 12.87, maize new Rs. 13.75, jwar Rs. 13.50 to 15.50, guwar white Rs. 14.50, black Rs. 12, bajra Rs. 13.50 to Rs. 15.25. Stocks: gram 60,000, barley 4,000, jwar 8,500 maunds.

Pulses recorded an easy trend in the absence of ready demand. Arrivals of peas were about 150 maunds daily, while those of arhar were small. Local peas stock is put at 55 khatties and that of arhar at 30 khatties. Week-end prices (per maund) were:—peas dara Rs. 12.37, arhar white Rs. 13.50 to 14.25, peas dal Rs. 14, arhar Rs. 16.50 to 16.75, arhar dal Rs. 20 to 21, urar Rs. 19, moong Rs. 20 to 22, massor Rs. 14.50 to 19.

COPPER SCRAP FIRMS UP

(From Our Own Correspondent)

CALCUTTA, 4th August

The feature of trading in the otherwise dull metal market during the week under review was the upward trend in copper scrap, following greater demand. At Rs. 240 per cwt., the berry quality gained Rs. 5. On the London Metal Exchange, spot copper opened at £225½ per ton and soon shot up to £228½. However, as the week came to a close, the price returned to £225½. Demand in London was only of a normal type, mainly covering on Russian and German accounts. The price in London, albeit the recovery of the last two weeks, was still considered to be too low. Despite the recent production cut, it was not yet certain whether even this small recovery in London could be maintained. It was reported that a big mine in Canada was also likely to announce cutback in production in the near future. In New York, the week closed lower at 28.51 cents per lb., as against the opening of 29 cents. The weaker trend was attributed to the settlement of strike in Kennecott's New Mexico Chino Property and the possible settlement of the aluminum workers' strike in the United States.

Tin opened here at Rs. 576 per cwt. and, in the absence of adequate demand, sagged to Rs. 573. This was not to say that the stock position was comfortable. Only, some arrivals were soon anticipated and it was thought possible that demand would soon improve. In London, tin, after sagging

STOCK & SHARE QUOTATIONS

Abbreviations: —D—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Cum. Dividend. e.d.—Cum. Dividend. I.—Interim Dividend. f.—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the companies' 'Paid-up Ordinary Capital' and 'Paid-up per share'.

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the

respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds which a company may have had. Buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

the railways' insistence on a much larger share in the overall traffic than it has the ability to carry at competitive rates.

The Neogy Committee has certainly some important tasks ahead of it. For one thing, it is not easy to assess the growth in traffic in the next eight or ten years, considering that estimates of traffic even for the next two years differ widely from one another. Secondly, it cannot possibly be an easy task for the Committee to allocate the available resources among the different modes of transport, in view of the fact that firm estimates of the quantum of available resources have not been presented; not even the size of the third Plan has been finalised. All that the Committee might reasonably be expected to do is to indicate the broad lines of development of the different modes of transport. But even this task is one of great complexity. It is, therefore, surprising that the Government should have chosen as personnel of the Committee overworked civilians and administrators. The least that the Government should do is to enlarge the Committee by the addition of new members with adequate knowledge of transport or to see that the personnel are relieved of nearly all their normal official duties, so that they can give their undivided attention to their work as members of the Committee.

The controversy over the relative merits of road and rail transport again figured in the debate. Although Mr. Patil was at some pains to convince the House that there was no difference of opinion over the issue between his Ministry and the Railway Ministry, he did not seem to carry conviction to the members. In this controversy, it is the Transport Ministry that carries the House with it. For the House is overwhelmingly in favour of road transport. It is true that everybody recognises that the railways are the single largest national enterprise and their case for carrying an adequate share of the country's traffic should not go by default. But, as Dr. A. Krishnaswamy ably argued, a nationalised undertaking is not *per se* superior in terms of social purpose; the mere fact that parts of road transport are privately owned does not detract from its usefulness. Once this is granted, it will be easy to see the whole problem of rail-road co-ordination in its correct perspective. It must be remembered that, in point of investment, roads are not inferior to the railways; in 1955-56, investment in roads aggregated Rs. 1,400 crores, as against Rs. 975 crores in railways. Again, the return to the Exchequer from roads is of the order of 8 per cent. on investment on roads, as against a mere 4 per cent. from the railways. Above all, road transport employs some 2.6 million, as compared with 1.1 million by the railways. Clearly, road transport, by reason of its quick and efficient service, has given genuine satisfaction to the consumer. This is true not only of India's road transport system but that of other countries too, for, all the world over, automobile vehicles are playing an increasingly important role in the carriage of goods. Road transport, if it is properly encouraged, could perform a similar service to India's economic development. Nor need there be any fear that it will inhibit the growth of the railways, for, as is well known, the increase in traffic in years to come is bound to be sufficiently large to permit both the modes of transport to keep themselves busily engaged.

MYSORE CONFERENCE ON CO-OPERATION

THAT the authorities at New Delhi should show their readiness to make major changes in the "new co-operative policy" adopted by the National Development Council last November is an indication of the measure of their statesmanship. There could be little objection to the advocacy of an approach which one passionately thought to be right. But such an attitude would be nothing short of irresponsibility, if it is adhered to despite the knowledge, acquired as a result of a closer and more dispassionate examination, that it is not entirely correct. It is precisely this scrutiny that took place recently at Mysore at the conference of the State Ministers of Co-operation. The storm of protests that the dramatic changes in the co-operative policy gave rise to since November impelled the authorities to have a closer look at their policy. The resentment felt by the non-official body of co-operators and the States for not having been consulted before the changes were effected seem to have been regarded by the Government of India as genuine. Consequently, the calm that prevailed at Mysore

away from the heat of Delhi constituted the right climate for a careful consideration of the views voiced by non-official co-operators and some State Ministers.

The Conference was significant for more than one reason. One major recommendation of the Conference, the value of which might not be fully apparent at first sight, is that, for some time to come, the primary task of village societies would be to equip themselves to discharge their service functions efficiently and to extend their membership to all rural families. This, however, should not be confused with Mr. V. T. Krishnamachari's pet thesis reiterated, once again, in his address at the National Conference of Community Development held earlier at the same place. His thesis is that "the primary co-operative can be a living force only if it becomes the agent for carrying out the community development activities in its area, especially the agricultural production programmes." The realistic nature of the recommendation of the Conference would be clear from an examination of what Mr. Krishnamachari calls village production programme, and the role he gives to the village co-operative in the formulation and execution of this programme. A village programme, according to him, consists of two parts. In the first part are those block programmes which come under the jurisdiction of the village programme for which funds are allocated. This is not so unworkable as the second part, with which the village level worker, the village co-operative and the *panchayat* are all concerned. Under this part, first, there are certain programmes the execution of which depends on the enforcement of customary obligations. Such programmes include digging field channels for utilising irrigation potential built up to the outer limits of the village and maintenance of bunds and field channels, etc. Secondly, arrangements for the multiplication of improved seed for the village, production of organic and green manures, and distribution of these and fertilisers to the smaller landholders and tenants also come under this part.

It is not the purpose of this article to show how far the unfortunate village level worker, usually a young matriculate, with a few months' training in a Community Training Centre, is the right person to play the vital role of, what Mr. Krishnamachari calls, "the common agent of all development departments at the village level" and "friend, philosopher and guide" of the villagers, and to what extent the "failure" of the community development projects can be attributed to the weakness of this agency. Nor is it proposed to show why the policy of leaving the digging of field channels to the villagers themselves, when from the stage of constructing the dam to that of digging the canals upto the limits of the villages is done by Government agencies, is wholly shortsighted. Our main concern here is with the role that the co-operatives can play in the scheme for rural development. The question whether a co-operative should be a business unit or should undertake other extra-business functions has been the subject of debate for a long time now. It has been realised that it would be unwise to burden the co-operatives with any other functions until they have been found to be efficient in performing their most important traditional functions. In saying, therefore, that the village co-operative, besides providing credit, should concern itself with the supply of improved seed, fertilisers and manures, and not with their production or the marketing of the members' produce, the Conference has agreed with the oft-repeated view that the village co-operative should not function as an agent of the community development programme. This view of the Conference is realistic and inevitable in the present circumstances. In executing the so-called "integrated" plan of the families, the role of the primary co-operative is limited to the extent of providing only the basic necessities of agriculture. When the primary task of the society is thus clearly defined, the further question arises, namely, whether the size of the society should be governed by the need for fulfilling the functions allowed to it adequately and efficiently, or by its having to play the role of an agent of community development. The latter having been ruled out, the fact remains that the size of the society should be determined not by doctrinaire considerations but by economic viability alone.

Another major outcome of the Conference is that the proposed pilot project scheme to provide supplementary line of credit in about 4,000 villages has been dropped. This is the result of a fuller appreciation of the practical difficulties that are likely to arise in providing such

additional finance. This outcome evidently means that the idea of linking credit to the production programmes has, more or less, died a natural death. This is hardly surprising, considering the apathy, even active hostility, that is reported to have been shown by certain States to the proposal of pilot projects. The representatives of the Reserve Bank are said to have explained at length the practical difficulties in implementing the scheme. It has been pointed out, for example, that the primary societies, the central banks and the apex banks have been having a large portion of the credit limits sanctioned to them unutilised. It is said, again, that supplementary finance would introduce double standards, and also increase the dependence of the societies on such funds. It has also been emphasised that, in the absence of proper production plans, adequate supervision and arrangements for linking credit with marketing, the overdues position of the societies would worsen thereby leading to a further reduction in the borrowing power of the societies and the banks. Further, in the absence of Government's guarantees against losses arising from loans provided to non-creditworthy borrowers, the scheme would give rise to enormous losses to the societies and the banks. A notable contribution to the discussion was made, in this connection, by the Governor of the Reserve Bank Mr. H. V. R. Iengar, who attended the Conference. He is reported to have drawn the attention of the Conference particularly to the harmful effects on the economy of providing large amounts of loans to cultivators without, at the same time, making adequate arrangements to ensure that the amounts lent are spent properly and paid back promptly.

The question of providing adequate finance for agricultural operations, however, needs urgent attention. The Conference has, therefore, recommended the constitution of an Expert Committee to examine the question. Since the method of linking credit with the production programmes is ruled out, the Committee has Hobson's choice, namely, State participation in the capital structure of the co-operatives. The large co-operatives established under the second Plan so far with State financial participation have been able to provide increasing amounts of credit as proved by the data available. In fact, several Ministers present at the Conference are reported to have expressed gratification at the progress that has been made by the large co-operatives. One would hardly be surprised, therefore, if this Expert Committee strongly recommends State financial participation in the societies. What with the double need for providing increased finance for agriculture and for strengthening the capital base of the societies, State financial participation seems to be inevitable, though it is not strictly in keeping with the principles of co-operation.

The functions of the primary societies having been appropriately defined by the Conference, the question of the size of the society also should not be any more a matter for debate. The size of the society should be such as to make its working a success. Those who favour small societies seek to solve the problem of resources by suggesting that their borrowing capacity should be raised through liberalisation of credit limits. This suggestion is not convincing. For one thing, it looks a little odd that the credit limits of the societies should be increased when the societies, by and large, are unable to avail themselves in full of even the limits allowed to them now. Secondly, when the overdues position of the societies is bad, liberalisation of credit limits is economically unsound. And, thirdly, enhancement of credit limits is no more indicative of 'self-help' than State partnership. Indeed, the advantage with the latter is that 'self-help' among the members increases in the process of retiring the State's share. State participation has several other advantages, too. It will impart strength to the society, thereby helping it to attract deposits and increase its borrowing capacity, and facilitate prompt implementation of the policy of lending to tenants and enlisting landless members, assuming that the State nominees will be effective and honest. The one great risk involved in the State participating on a large scale in the capital and management of co-operatives all over the country is political. The co-operatives may be used by politicians to entrench themselves in power, as was sought to be done by the Communists in Kerala. It is, therefore, necessary to evolve suitable safeguards for preventing such misuse of the societies.

MARKET GOSSIP

UNDER the energetic and ambitious leadership of Mr. K. D. Malaviya, Union Minister for Mines and Oil, determined efforts are being made by the Government of India to establish itself in the oil business. The Government, it is now pretty clear, is not going to confine its efforts to any one aspect of this business but will cover all aspects, namely, exploration, production of crude, refining and marketing. Thus, it is already engaged in the task of exploration and has spent large amounts, though no tangible results have been reported so far. It has entered into partnership with the Assam and Burmah Oil Companies for producing the crude from the reserves discovered in Nahorkatiya and Moran areas by the former Company. The company to do this job is called Oil India Ltd., in which the Government has one-third interest. A separate company, known as Indian Refineries Ltd., wholly owned by the Government, has been formed to refine the crude produced in Assam. This is proposed to be done in two refineries, a small one in Assam and a big one in Bihar. Another wholly Government-owned company, entitled the Indian Oil Company Ltd., has been established to distribute petroleum products. This Company, which was registered on 30th June this year, will distribute not only the products refined in Assam and Bihar but also the imported products.

The exploration work is being carried out by the Oil and Natural Gas Commission as a department of the Government. As this set-up has been found to be inconvenient and unsuited for expeditious work, on account of the inevitable rules and regulations of a Government department, the Commission is to be converted into an autonomous corporate body. A Bill for this purpose was introduced in Parliament on Wednesday this week and is under discussion at the time of writing. When reconstituted into a statutory corporation, the Commission will be in charge of not only development of petroleum resources but also the production, refining and distribution of oil discovered by it.

Petroleum has proved to be a very convenient and economic fuel. As was pointed out by us last week in an article on world energy pattern, it is fast replacing coal in many countries of the world. That the trend is similar in this country also is brought out by Mr. L. D. Mudie, Chairman of the Burmah-Shell Refineries Ltd., in his speech at the sixth annual general meeting of the Company, vide pages 268 and 269 of this issue. Unlike in other parts of the world, coal has still a bright future in this country for the simple reason that it is available in plenty. In any case, since India has not yet found sizable oil reserves and atomic energy is still a long way off, coal mining and utilisation have to be given high priority and encouragement. Efforts must be made to keep down the cost of coal to the consumer through mechanisation of production and other means. Even so, the use of petroleum in India has been rapidly increasing and will continue to rise. The pace of growth, as Mr. Mudie has indicated, has been greater than that in the rest of the world. Mr. Mudie has also given data to show how backward this country is in the use of oil and the scope that exists for its growth. If all the demand for oil in the coming years is to be met out of imports, a tremendous amount of foreign exchange will be required. There is thus a strong case for intensifying the search for oil in India and the initiative taken by the Government in this direction is commendable and justified. But the task is a colossal one, requiring enormous sums of money, a large number of skilled personnel, and costly equipment. And this task becomes even more colossal when one decides to take up all aspects of petroleum business on such a large scale as the Government of India has done.

So far no spokesman of the Government has given any idea of the financial implications of its venture into oil business. But some idea of the magnitude of the task can be had from Mr. Mudie's speech. It is estimated that, between now and 1967, Indian consumption of all petroleum products will go up by almost 100 per cent., from 6 million tons to 12 million tons and, on a conservative estimate, this would require an investment of Rs. 360 crores. A good part of this will have to be in foreign currency. Since there are so many other equally urgent calls on the resources available to this country, it is but prudent that Government should give full scope to foreign private capital to participate in the development of petroleum in this country.

Experience the world over has shown that foreign capital will be readily forthcoming for investment in oil production and distribution, provided appropriate climate is created. India's own experience in the past ten years bears out this statement. Of the increase of about Rs. 300 crores in foreign business investments in this country between 1948 and 1957, Rs. 112 crores, or well over a third, are accounted for by investments in oil. There is, therefore, no reason to think that foreign private capital, which has already done such a magnificent job in production, refining and marketing of oil in this country, will not be forthcoming in adequate amounts to take care of at least the bulk, if not the whole, of our future requirements too. It will, however, do so only if the impression is created that it is wanted and that it will be given fair treatment. Unfortunately, neither the way in which the Government is treating the existing oil companies nor the manner in which it is seeking to establish itself in this business is conducive to the creation of the right climate. It is not suggested here that the oil companies should be given a free reign or that there should be no check at all on the profits made by them. Only such controls should be exercised in a manner which will generate confidence, instead of distrust and despair.

An instance indicative of the Government's negative attitude may be given here. In reply to questions in Parliament last week whether the

Government had any plan to take over the entire oil distribution work in the country, Mr. Malaviya said that it was now too premature to say whether this would be done. It must be noted that he did not say that such a thing would not be done. This answer is more vague than what he gave at a Press conference a few weeks ago and keeps the door open for the State monopolising the business of oil distribution at a future date. Surely, such an uncertain situation is not favourable for attracting foreign private capital into this business. Indeed, it may even tempt a part of the existing capital to move out of the country.

It is needless to add that, if foreign capital is allowed to do the job in the sphere of petroleum, the amount of foreign exchange which the Government of India intends to devote for this purpose can be utilised for the development of other spheres for which such capital will not be easily forthcoming or is not allowed. Shipping is a typical example. It is conceded by all that Indian shipping has to be expanded rapidly. The amount of foreign exchange lost in payment of freight charges to foreign shipping is as large as that required for buying oil. Further, shipping, too, is of equal strategic importance. While investment in exploration of oil is a gamble, investment in shipping is a sure money earner. So, why not give a higher priority to development of shipping, use the foreign exchange earned by it for importing oil and encourage foreign capital to develop exploration, production and marketing of oil?

Besides the consideration of resources, there is also the question of personnel, know-how and equipment. The marketing of oil is a more complex job than the other aspects of petroleum business. The proposed Government-owned refineries are expected to turn out about 2.5 million tons of refined products by 1961. Even assuming that this target will not be hit before the end of 1962, it would be nothing short of a miracle if the Government-owned marketing company were in a position successfully to handle such a large quantity of oil. It must be remembered that this quantity is nearly as much as the Burmah-Shell Marketing Company is now handling, with its experience of eighty years, elaborate organisation and international contacts. It is hard to believe that, in three years' time, the Indian Oil Company will be able to assemble the requisite men and materials, build the installations, open depots all over the country and do the hundred and odd things necessary to take 2.5 million tons of oil to the doors of consumers. Indeed, when one comes to think of these details, one cannot help feeling that the Government is committing a grave blunder, for which the taxpayer may have to pay heavily. Mr. Malaviya has to do a lot more explaining, before he can convince the thinking sections of the public that he can do this job successfully. A mere statement that the Government is entering this business in order to create better conditions for consumers of oil and petroleum products in the country is not enough. If oil in India is dearer than elsewhere in the world or if there is a surplus in certain petroleum products, it is the Government's tax policy and the system of controls exercised by it that are to be blamed rather than the companies engaged in this business.

Raw Cotton Firm

After a month of exceptional dullness, the cotton futures market has become lively. Futures quotations, which were moving within a narrow range throughout July, have been advancing by day since the beginning of this month. The expiring Jarilla August contract, which was quoted at Rs. 697 at the end of last month, has firmed up to touch a high of Rs. 720.50 at the time of writing (Thursday). What is more remarkable is the keen interest evident in the new crop contract, namely, Jarilla March 1960. This contract, which was practically neglected in July and was trailing behind the August contract, has now become the centre of attraction, with mills, investors and speculators all turning their attention to it. The contract advanced from Rs. 668 at the close of last month to Rs. 681 at the time of writing.

The strength of the August contract is attributed to the comparatively small volume of tenders. While tenders on the first and second notice days were fairly large, 2,300 and 2,350 bales, respectively, on the third notice day, they were as low as 100 bales. On Thursday, the fourth notice day, they were only 150 bales, making the total issued to date 4,900 bales. Such poor deliveries reflect the inability of bears to find suitable cotton for tendering on account of keen demand for good quality cotton in the spot section.

Weather news is the main factor currently influencing the March contract. The delayed start of the monsoon and its subsequent erratic behaviour have made the crop late by at least a month. Barring the Punjab, most other States have reported unfavourable weather. There was excessive rain in Kalyan, Wagad, Kalagin, Vijay and Surti areas. It is only in the Punjab that the weather is reported to have been normal and crop progress satisfactory. Although it is too early to estimate the probable size of the crop, current crop ideas range between 5 and 5.2 million bales.

In addition to the influence of adverse weather, another factor which has helped to bolster the cotton market is the tight statistical position of cotton. With consumption of Indian cotton running at a higher rate—the figure for the ten-month period ended June is 4,859,008, as against 3,685,317 bales during the same period last season, representing a rise of 4.72 per cent.—the cotton crop is expected to end with a carry-over which will not only be smaller in size but also contain very little good quality cotton.

As already pointed out, the firmness of the futures section has been due not a little to the strength of the spot market. Although activity in the spot material slowed down in July, inquiries

have broadened of late. Rates have hardened by Rs. 10 to Rs. 15 over the past week. Several varieties are knocking against the ceiling rates fixed by the Government. A remarkable feature has been the sustained interest in new crop Berar, Khanded, etc., especially from Ahmedabad and Southern mills. Strangely enough, the Government has not yet given permission for trading in delivery contracts in new crop, though it is now more than a month and a half since it allowed operations in March 1960 contract.

Jute Scrips Active

Of late, jute shares on the Calcutta Stock Exchange have been active. Many of the leading counters have scored sizable gains, and, compared with the prices a year ago, they show a big rise, as the following comparative table of representative scrips bears out:

Scrip	Latest price Rs.	A week ago Rs.	A month ago Rs.	A year ago Rs.
Azarpura ..	13.81	13.06	13.00	9.87
Alliance ..	135.00	130.00	128.00	101.00
Andhra ..	290.00	290.00	285.00	184.00
Bally ..	229.00	230.00	230.00	181.00
Birsa ..	24.81	22.75	21.37	19.62
Fort Gloster ..	386.00	370.00	351.00	271.00
Howrah ..	24.12	23.75	24.56	18.06
Kamachari ..	216.00	203.00	208.00	117.00
New Central ..	17.69	18.00	17.00	14.00
Nuddas ..	61.75	62.00	65.50	45.00

Several factors have contributed to the return of jute scrips as favourites among investors and speculators alike. First, there has been an improvement in the working conditions of mills, thanks to the modernisation of machinery. Secondly, the profit-margin of mills has also become better since last year on account of favourable raw jute prices, following a good harvest of raw jute crop, and higher prices fetched for the manufactured goods, particularly for sacking. The better performance of jute mills is reflected in some of the recent dividend announcements. Howrahs, for instance, have returned to the dividend list after a lapse of two years with a distribution of 10 per cent. for the year ended March 1959. Bally Jute has raised the dividend from 6 per cent. to 10 per cent. Alexandria Jute and Biria Jute have maintained the distribution at 10 per cent., as also Fort Gloster at 20 per cent. Thirdly, there is a general expectation that the mills will be able to do still better during their current financial year, what with the substantial improvement in the statistical position of jute goods, consequent on their being able to sell more than they produce, the promise of yet another good jute crop and the prospect of the offtake of jute goods picking up further in the next few months. Prominent among the overseas buyers for sacking in recent weeks is China. The heavy purchases made by the communist country have pushed up sacking prices considerably during the last one week. B. twills (ready) being currently quoted at Rs. 106.50 per 100 bags, as against Rs. 101.40 a week ago. Over the year, B. twills have gained Rs. 9.60 per 100 bags. In sympathy, hessian (40 in. x 10 oz.) has gone up over the week by 30 p.p. to Rs. 40.60 per 100 yards, but it is still below the price (Rs. 41.20) fetched a year ago. The improvement in statistical position of mills and the outlook for offtake in the coming months are discussed on page 260 of this issue.

Yet another factor which has contributed to the spurt in jute shares is the extension of the activities of jute companies to other ventures which hold promise of higher profits. Biria Jute provides a notable example of this trend. In addition to jute goods manufacture, this Company has been manufacturing calcium carbide and the factory is now working to full capacity. The expansion scheme is well under way to raise the capacity from 10 tons to 25 tons per day. The erection of a cement plant has been completed and it has been in production since February last. It has also a staple fibre spinning plant, which began operations in March 1957. The New Central Jute proposes to set up a chemical factory at Ramnagar (U.P.) to produce 40,000 tons each of soda ash and ammonium chloride per annum. The Anglo-India Jute is collaborating with its Managing Agents, Messrs Duncan Brothers Ltd. and a British firm, proposes to set up a wool-combing plant at Jagatdal, West Bengal. India Jute has purchased the Sree Radhesyam Cotton Mills in Howrah, which had remained closed for some years. The Megna Mill proposes to take up manufacture of carpet backing. The Fort Gloster has embarked on a cable-making project, in addition to jute manufacture.

More Looms To Work

The improvement in the statistical position of mills and the prospect of higher offtake of jute goods led to speculation that the I.J.M.A. might unseat some more of the idle looms. It was, however, rumoured last week that the I.J.M.A. had decided to maintain the status quo for the present, presumably due to the fact that decline in stocks during July was below expectations. These rumours have now been belied with the I.J.M.A.'s decision to unseat further 24 per cent. of the total looms with effect from the 24th inst. and had it until January 1960. This will reduce the sealed stock from 16 per cent. of the total, the lowest level since 1956, to compares with 14 per cent. from 2nd March 1959 to 22nd June 1959. It will be recalled that it was only on the latter date that the I.J.M.A. had permitted its member-mills to unseat 14 per cent. of the looms. The full effect of this step was seen in July when the output of gunnies rose by 6,900 tons to 89,600 tons, in contrast to the fall of 4,100 tons noted in June. The larger number of hours worked during the month also contributed to the higher production. This has brought the production to the highest level since January this year. The rise is shared by all the three main varieties. Hessian has gone up by 2,700 tons to 40,500 tons, sacking by 4,100 tons to 39,900 tons and other varieties by 10 tons to 9,200 tons. The I.J.M.A.'s latest decision has evidently been prompted by the sizable despatches during July, which must have been of the order of 92,000 tons, as against 86,600 tons in the previous month. The proposed additional release of 10 per cent. is considered by some as inadequate, but the I.J.M.A. has thought it wise to hasten slowly

EQUITIES MOVE IRREGULARLY RECOVERY TOWARDS CLOSE

(From Our Own Correspondents)

BOMBAY, 13th August

AN irregular trend in equity prices was witnessed on the Stock Exchange during the week under review. The setback noted towards the close of last week continued in the earlier part of this week also, following the news that the Controller of Capital Issues had suggested to the Century Mills that its proposed rights issue should be offered at a premium of 100 per cent. The recommendation of the Directors of the Indian Iron and Steel Company to maintain the dividend at Re. 1 per share for the year ended March 1959 was also received with some disappointment. There was, however, a recovery in the latter half of the week, under the lead of textile shares which came in for good support. The initial disappointment over the Century Mills' new issue at a premium gave place to expectations that the Government was likely to reduce the premium substantially, if not abolish it. There were also reports that the Directors had since decided to defer the issue of rights shares indefinitely. Heavy short-covering on settlement considerations also helped the revival in prices. On balance, while the forward section presented a mixed show, cash counters ruled firm with smart gains in the "growth" scrips.

In the steel section, Tata Ordinaries drifted lower from Rs. 179 to Rs. 175 on Monday this week. After a short-lived revival to Rs. 176.75 on the following day, the shares gave way to Rs. 174.75 yesterday. Today, however, there was again a spurt to Rs. 177.50 at the close. Indian Irons were marked down from Rs. 24.92 to a low of Rs. 24.60 before gaining ground to Rs. 24.92 today. The closing was, however, done a fraction lower at Rs. 24.88.

The highlight of the trading in the textile section was provided by Kohinoors. The shares fluctuated widely between Rs. 312.50 and Rs. 301 before closing with a gain of Rs. 8 over the week at Rs. 311.50. Centurys gave way from Rs. 562.50 to Rs. 535 before advancing to Rs. 554 today. The closing was done at Rs. 552.50. After an earlier rise from Rs. 65.70 to Rs. 66.00, Bombay Dyeings lost ground to Rs. 64.60 on fears of heavy carry forward charges in view of the closure of transfer books of the Company from 8th September for payment of interim dividend. There was, however, a recovery to Rs. 65.20 at the close. Finlays, Gokaks, Indore Malwas and Indu Ordinaries were all slightly higher over the week. Podars shed Rs. 5 to Rs. 150, despite the decision of the Directors to increase its capital by Rs. 5 lakhs through the issue of 5,000 ordinary shares of Rs. 100 each at par in the ratio of one share for eight shares. The additional capital is to be used for financing the Company's modernisation programme. There was a spurt of Rs. 14 to Rs. 568 in Standards on reports that the Company might invest its surplus funds in a rayon project. Simplex were a shade lower at Rs. 162. Svadeshis and Tata Mills were in good demand; the former rose by Rs. 3 to Rs. 247 and the latter by Rs. 3.75 to Rs. 48. In the cash section, Sassoon Spinnings came in for attention and rose by Rs. 6.50 to Rs. 67, following the Directors' decision to raise fresh capital to the tune of Rs. 37.70 lakhs through the issue of 377,010 equity shares of Rs. 10 each at par. These new shares will be offered to the existing shareholders in the ratio of one new share for every share held by them. New City Mills were done Re. 1.50 higher at Rs. 138.75.

Bank shares were quiet, while New Indias, in the insurance section, attracted some attention. Tata Hydro group shares were marked down in the electricity section, despite the Directors' proposal to maintain the distribution for the year ended March 1959 at 8 per cent., by recommending a final dividend of Rs. 45 plus a bonus of Rs. 5 per share in the case of Tata Power and Andhra Valley and a dividend of Rs. 4.50 plus a bonus of 50 nP per share for Tata Hydros.

Sugar shares presented a mixed show. Belapurs moved down from Rs. 313.50 to Rs. 309 before regaining to Rs. 313.50. Phaltans recorded a gain of Rs. 6.50 and Walchandnagars Rs. 5 to Rs. 316.25. Among cash shares, Maharashtra Sugars rose by Rs. 6.50 to Rs. 222.50 and New Svadeshis by Rs. 15 to Rs. 245. In the cement group, Associated Cements were listless and dropped Rs. 2.75 over the week to Rs. 149, while Digvijays improved by Rs. 5 to Rs. 159. Orissa Cements were quiet at Rs. 16.60 and Jaipur Udyogs at Rs. 10.92.

Engineering shares were featureless, except that the losses suffered in the earlier part of the week were nearly made good towards the close. Alcock Ashdowns were unchanged over the week at Rs. 254. Tata Locomotives closed a shade lower at Rs. 207.75. Premier Constructions finished with a loss of Rs. 6 at Rs. 361. Larsen and Toubros were done at Rs. 22, as against Rs. 22.04 a week ago. Mahindras changed hands 16 nP lower at Rs. 20.98. Brady Engineerings dropped Rs. 4 to Rs. 85. Among mining shares, Shivrajpurs shot up by Rs. 6.50 to Rs. 91.50, while Indian Coppers showed no change at Rs. 4.14.

Shipping shares were featureless. Scindias moved between Rs. 18.08 and Rs. 17.52 before closing at Rs. 17.92. Great Easterns were done a fraction lower at Rs. 21.44. Among automobiles,

Hindustan Motors provided a firm feature with a rise of 44 nP to Rs. 11.60, while Premier Automobiles were more or less steady at Rs. 133.50.

In the miscellaneous group, Bombay Burmahs (old) were erratic, moving between Rs. 547 and Rs. 535.50, but the closing was done Rs. 6 higher over the week at Rs. 544. After slipping down from Rs. 348.50 to Rs. 339, National Rayons regained to close at Rs. 352. Gwalior Rayons picked up 52 nP over the week to Rs. 23.20. Chemical shares were in the forefront, except Tata Chemicals which were quiet at Rs. 16.76. Alembic Chemicals added Rs. 10 to Rs. 197 and Amar Dyes Rs. 6.75 to Rs. 193. Dharamsi Chemicals shot up by Rs. 12 to Rs. 123. Polychem by Rs. 13 to Rs. 130. Tata Oils gained Re. 1 to Rs. 68.50. Voltas Rs. 3.50 to Rs. 173 and Wimcos Rs. 6 to Rs. 225. W. H. Bradys rallied from Rs. 387.50 to Rs. 401.25 and West Coast Papers from Rs. 135.75 to Rs. 156. Killick Industries were done Re. 1.25 higher at Rs. 139.25, while Ceat Tyres dropped Rs. 2 to Rs. 174.

Calcutta Stock Exchange

CALCUTTA, 12th August

Earlier in the week under review better advices from Bombay stimulated steadier conditions on the Calcutta Stock Exchange. However, interest was restrained, as operators and investors were cautious. From Monday onwards conditions became dull and the volume of business also shrank. The announcement of a dividend of 10 per cent. by I.L.S.Co. yesterday did not have any effect on the market as it was generally anticipated that the dividend would easily be maintained. The bonus shares issued by the Company in February last are not entitled to this dividend, but market circles expect that since working of the Company has improved during the current year, there would be no difficulty in maintaining the 10 per cent. dividend on the increased capital. Bombay rumours foreseeing an imminent rights issue for Indian Irons were not taken serious note of here, as such a possibility was considered remote. On the other hand, following the release of the 1958-59 T.I.S.Co. report, it was thought that steel producers' claim for higher retention prices was very strong to merit early official consideration. The Finance Minister's declaration of continued L.I.C. support to the private sector, as well as of his faith in the concept of mixed economy, caused satisfaction.

Sectionwise, textiles were in better form, following continued reports of improved offtake of cloth for internal consumption. Jutes were fully steady, as stocks of goods with mills declined further and although the extent of the decline was not as much as expected earlier, the possibility of mills deciding to increase production further was not ruled out. Teas responded to selective enquiries following good corporate results. Coals continued to idle around earlier levels, while miscellaneous industrials, which had recovered in active trading for a time, registered weakness towards the close.

Coals were quiet and transactions were few and far between. Burrakurs declined to Rs. 17.37 from Rs. 17.44, but subsequently improved to Rs. 17.50. At Rs. 306, Bengals accounted for a loss of Rs. 3, but Amalgamateds were firm at Rs. 25.62. New Beerbhooms changed hands at Rs. 20.31, as against Rs. 20.44 previously.

Several features were recorded in the jute section. Alliances opened at Rs. 130 and gave way to Rs. 128, but soon recovered to Rs. 137. At Rs. 174, Barnagores accounted for an improvement of Rs. 5.50. Rameshwaras forged ahead to Rs. 8 from Rs. 6.53 previously, to close at Rs. 7.90. At Rs. 192, Aucklands were better. Birlas gained to Rs. 24.62 from Rs. 22.75 to close at Rs. 24.19. On interested buying, Gourepores were transacted at Rs. 417, as against Rs. 408 previously.

In the engineering section, Indian Irons opened at Rs. 24.88 and soon rose to Rs. 25.12. Profit-taking set in at this stage and the rate soon receded to close at Rs. 24.82. Burn & Co. were a prominent feature with a rise to Rs. 456 from Rs. 450 on interested support. Texmacos hardened to Rs. 24.50 from Rs. 24.30 before giving way to Rs. 24.20.

Miscellaneous industrials were fully steady. Orient Papers had buyers at Rs. 37.45, as against Rs. 36.40 previously, before closing at Rs. 37.10. At Rs. 45.12, Titagurh Papers scored a gain of Re. 1. Indian Coppers rose to Rs. 4.19 from Rs. 4.15 to close lower at Rs. 4.14. Hindustan Motors at Rs. 11.62 scored a further gain. At Rs. 37.12, National Cables were higher by a few naye paise Balmer Lawries shed Rs. 2 to Rs. 194. Metal Boxes moved up to Rs. 42.19 from Rs. 41.87.

Madras Stock Exchange

MADRAS, 12th August

Equities on the Madras Stock Exchange ruled distinctly easy during the week under review, barring cement and a few select miscellaneous industrials which evoked some investment support. Contrary to earlier expectations, the Investment Committee of the Life Insurance Corporation was reported to have not taken any decision on the purchase of certain scrips at its meeting held on Thursday last. This induced operators to be cautious in entering into fresh commitments. Another unhelpful factor was the lower-than-anticipated dividends announced by a few companies under the management of the Peirce Leslie group. Despite reports of sustained overseas enquiries, tea shares gave way. Coffees and rubbers also drifted lower in sympathy. Sugars were subdued in the absence of fresh buying support. Textiles were dull. Even reports of large sales of yarn at higher prices having been made by several mills failed to have any effect.

In the sugar section, Cauverys came in for selling and dropped Rs. 2.00 to Rs. 114.50. E.I.D.s and Deccans receded by 25 nP each to Rs. 39.25 and Rs. 12, respectively. Travancores lost 15 nP at Rs. 12.20. Mysore were neglected at Rs. 49.50 and United Breweries at Rs. 459. Indias, however, gained 15 nP to Rs. 12.45. Kirlampudis changed hands at Rs. 65 ex-right, as against Rs. 79 cum-right. The Company has issued 5,000 equity shares of Rs. 100 each at par to equity shareholders as on the 10th inst. in the ratio of five shares for every twelve shares held, the new shares ranking pari passu with existing shares in all respects.

Among tea shares, Twyford's suffered a setback of 40 nP over the week, today's closing rate being Rs. 20.60. Haileyburias declined by 40 nP to Rs. 20.60 and Kil Kotagiris by 35 nP to Rs. 8.45. Chembras were a shade lower at Rs. 4.28. Nonsuch Teas were neglected at Rs. 27.65. Mamlalaya were dull at Rs. 41.75 cum-div., although the dividend declared by the Directors of the Company is higher at 20 per cent. for the year ended March 1959, as against 15 per cent. for the previous year. United Oucherlony's gathered 5 nP to Rs. 20.75. Coffees, Ossoors fell by 7 nP to Rs. 5.50. Among hullys were marked down by 63 nP at Rs. 3.00. Consolidated Coffees declined by 40 nP at Rs. 3.00. Coffee Lands shed 30 nP to Rs. 23.60. Balmadis lost 13 nP to Rs. 3.12, following the announcement of lower dividend at 7½ per cent. for the year ended May 1959, as compared with 12½ per cent. for the previous year. Cowcoodys were unchanged at Rs. 6.11, as also Babuddins at Rs. 18.50. Rubber 40 nP to Rs. 12.10. Cochins Malabars decreased by 19 nP to Rs. 6.87. Rajagiris were dull at 10 nP to Rs. 17.70. Teekoys were dull at Rs. 7.60, Valukundams at Rs. 27.50 and Malankaras at Rs. 19.50.

In the textile section, Buckinghams, Cannanores and Metturs eased by Re. 1.50 each to Rs. 187, Rs. 140 and Rs. 370, respectively. Virudhunagars moved down by 50 nP to Rs. 42.50. Most of the other shares were quiet.

Among miscellaneous industrials, Textools fell by a rupee to Rs. 177. F.A.C.T.s shed 35 nP to Rs. 9.75. Aluminium Industries declined by 43 to Rs. 22.05 cum-div. The Directors of the Comp have announced a final dividend of 63 nP (1 free) per share for the year ended March 1959, making a total of Re. 1.25, same as that paid in previous year. Metturs Chemicals receded by 18 to Rs. 13.47. Indian Steel Rollings lost 15 nP to Rs. 13.60 cum-div., following the lower dividend of 7 per cent. (tax-free) declared for 1958, as compared with 10 per cent. for 1957. Ashok Leylan shed 5 nP to Rs. 7.75. Dalmia Cements gained 5 nP to Rs. 10.65. India Cements, Orissa Cements and Travancore Cements gained a like amount to Rs. 6.85, Rs. 16.70 and Rs. 9.90, respectively. Western India Plywoods also improved by a 1 amount to Rs. 175. Spencers rose by 20 nP to Rs. 20.50. Farrys picked up 10 nP to Rs. 4.20.

NEWS IN BRIEF

PROPOSAL to fix a ceiling on the prices of woollen yarns is under the consideration of the Government of India.

The Neiveli Lignite Corporation has submitted the Centre a scheme for raising its mine output from an annual rate of 3.5 million tons to 6.0 million tons by the end of the third Plan period.

There are at present 1,785 I.A.S. and 1,082 P.S. officers serving in the 13 States in India. U.P. has the largest number of officers, 241 from the I.S. and 160 from I.P.S., Bombay stands second, with 219 I.A.S. officers and 144 I.P.S. officers.

A seven-man committee (Chairman: Mr. K. R. mle, Secretary to the Union Ministry of Agriculture) has been set up to examine the possibilities of establishing mechanised farms in the various parts of the country on the lines of the Central Mechanised Farm at Suratgarh in Rajasthan.

Two watch factories are proposed to be set up, one at Mettupalayam near Coimbatore and the other at Bangalore, the former being in the private sector and the latter in the public sector. Negotiations for foreign collaboration are now going on and these are expected to be finalised shortly.

The Government of India has sanctioned a scheme worked out by an Andhra firm to put up a plant for the manufacture of caustic soda. The Government has also agreed to the proposal made by the firm to import plant and machinery from West Germany against rupee payment.

The Government of India has signed an agreement with Mackay Radio and Telegraph Company facilities the establishment of a new multichannel radio telegraph service operating from Calcutta to the U.S. via Manila. At present, India's only direct radio link with the U.S. is via Tangier.

The foreign exchange cost of repairs abroad in Indian ships rose sharply from Rs. 33 lakhs in 55-56 and Rs. 43 lakhs in the following year to much as Rs. 135 lakhs in 1957-58, which represents 12 per cent. of the total disbursement abroad. Indian shipping companies during the same year, the sharp rise reflected the steps taken by Indian shipping companies to re-condition their fleet during a year and, in part, the rise in building costs.

The Indian trade centre at Frankfurt, West Germany, will extend its activities to cover the other countries of the Common Market and, eventually, the whole of Europe. An indication to this effect was given by Mr. R. N. Philips, head of the centre, in the course of a Press conference at Frankfurt last week. Meanwhile, India will take part, for the first time, in the Frankfurt autumn trade fair beginning at the end of this month.

No delivery of manganese ore to the U.S. in change for wheat provided for under the barter agreement signed between the two countries some time ago, has so far taken place. Disclosing this, Mr. Nityanand Kanungo, Minister for Commerce, stated in the Lok Sabha that India expects to alter price for its manganese ore after sometime. He also conceded that, while the price of manganese had gone down, wheat prices had gone up.

An agreement has been concluded between an Indian firm and a foreign concern for collaboration in the manufacture of printing machinery at Titagarh in West Bengal. Under the agreement, the Indian firm will be given patent rights and supplied with technical data for the manufacture, assembly, sale and sale in India of flat-bed presses, components, and spares against payment of royalty for seven years. The collaborating firm will also provide technical personnel.

The Union Defence Ministry is examining a proposal for the progressive manufacture of Rolls-Royce "Dart" engines at the Hindustan Aircrafts' new aero-engine plant at Bangalore. The "Dart" is well-established propeller-turbine engine. The "Avro" 748 aircraft, which the Defence Ministry opposes to manufacture at Kanpur in collaboration with the Hawker-Siddeley Group, and the Vient will be fitted with these "Dart" engines. It learned that Hindustan Aircraft will soon commence manufacturing the Bristol "Orpheus" engine for Gnat jet fighters produced by it.

The Government of India proposes to import from Rumania kerosene and high-speed diesel oil against rupee payments. Disclosing this in the Lok Sabha the other day, Mr. K. D. Malaviya, Minister for Mines and Oil, stated that the Rumanian Government had made an offer early this year, but the offer could not be considered because the terms laid down by some Indian oil companies were not favourable. Since the Government Company has now been set up to undertake the distribution of oil in the country, the import of oil from Rumania will be considered afresh.

A draft outline of the third Plan will be ready by the end of the current year, according to Mr. N. Mishra, Deputy Minister for Planning. The various working groups are at present working on different aspects of development. The Reserve Bank, at the request of the Planning Commission, is taken in hand studies of private investment, financial flows, inequalities in income and balance payments. Besides, the reconstituted panel of economists has commenced investigation on problems of foreign trade, price policy, employment, social policy, agriculture and rural industries, banking and monetary policy, fiscal policy, investment priorities and savings and mobilisation of resources.

The State-owned Integral Coach Factory at Changanassery is claimed to have succeeded in bringing down the cost of railway passenger coaches to about Rs. 86,000 each. The cost of production was

PERSONAL

MR. D. P. Mathur, Senior Deputy General Manager, Central Railways, has been appointed Director (Finance), Railway Board.

Mr. G. S. Rao, Accountant General of Bombay, has been appointed Deputy Comptroller General of India. Mr. A. K. Ghosh will succeed Mr. Rao.

Mr. S. M. Shah, President of the All-India Importers' Association, Bombay, has been nominated as a member of the re-constituted Import Advisory Council for a period of two years.

Mr. B. Sengupta, until recently Principal of the Victoria Jubilee Technical Institute, Bombay, has been appointed Director of the Indian Institute of Technology, Guindy, Madras.

Mr. G. B. Kulkarni, a former Professor in the Sydenham College of Commerce, Bombay, who was taken on the staff of the State Bank of India shortly after its establishment, has now been designated as the Economic Adviser to the Bank.

Mr. Fatehchandji Jhunjhunwala, Mr. Hansraj Jivandas and Mr. Khimji Madhavji Thakkar have been elected President, Vice-President and Honorary Secretary, respectively, of the Bombay Cotton Merchants and Mucadams Association Ltd., Bombay.

The London Stock Exchange Council has suspended for six months one jobber and three stockbrokers on a charge of misusing a Finance Act concession which allows jobbers, under certain conditions, to take up stock at a flat stamp duty of 10s. only, instead of the standard rate of £2 per cent., provided they do not hold the stock for more than two months.

Belgium, Holland and Luxemburg have decided to complete the Benelux Economic Union before the complete economic integration of the Common Market of the Six. The Benelux countries, which are also members of the C.M., will continue to give preferential treatment to those countries which are generally accorded among the Six until the C.M. is fully established.

From Abroad

The Bank of Spain has raised its discount rate from 5 to 6½ per cent., with effect from the 3rd inst.

The Nepalese Government is considering a proposal to stop the circulation of Indian currency in Nepal.

A Karachi report claims that Pakistan's second Five-year Plan, which is to be launched in the middle of 1960, envisages an expenditure of Rs. 1,500 crores.

The total population of South Africa at the end of June last was higher by 255,000 at 14,673,000, as compared with a year before. Of the total population, 3,087,000 were whites, 9,751,000 natives, 1,405,000 coloured people and 450,000 Asiatics.

Wheat crop of Australia to be harvested in December 1959 is expected to be 160 million bushels which represents a substantial fall, as compared with the previous season's bumper harvest of over 200 million bushels.

The total production of sugar in the West Indies Federation in the 1959 crop year is estimated at 1,147,098 tons. Jamaica, the major producer, will contribute about 374,548 tons, as against 348,535 tons in the previous season.

Turkey has asked for association with the West European Common Market of the Six, following similar moves by Greece and Tunisia. Turkey depends on the C.M. countries for about 30 per cent of its exports and 35 per cent of its imports.

The U.S.S.R. and Australia are currently examining the possibilities of expanding their mutual trade. The U.S.S.R. is expected to buy Australian wool and some other goods in exchange for plywood, newsprint, electrical equipments, foodstuffs and other products.

The Dunlop Rubber Company (U.K.) has reduced the prices of all popular sizes of new car tyres by 7½ per cent., with effect from the 8th inst. The cut is a sequel to the growth in family motoring and the consequent widening of the market for tyres, as well as to lower costs.

One unit of every three working Americans is now covered by a private pension plan, the actual number being 20.5 million. Of this number, about 15.50 million are covered by corporate pension funds and 5 million by private pension funds administered by insurance companies.

The aggregate expenditure on all forms of advertising in the U.K. rose from £233.60 million in 1957 to £264 million in 1958, representing 2 per cent. of the total national income. Expenditure on Press advertising increased from £162 million to £172 million and on TV advertising from £27 million to £48 million.

The Burma Oil Company has decided to expand its areas of operations to include the Western Hemisphere. Arrangements are being made for the incorporation of a wholly-owned subsidiary company in the U.S., called the Burma Oil Western Company. The proposed company is expected to co-operate with the Murphy Corporation of El Dorado, Arkansas, in oil exploration in the U.S.

Austin and Morris cars will shortly be produced in Italy, under an agreement reached between the British Motor Corporation and the Innocenti of Milan, manufacturers of heavy steel plant and Lambretta motor scooters. The Innocenti has agreed to assemble and partially manufacture B.M.C. cars for the Italian market, a constituent unit of the Common Market.

Spain has removed the restriction on imports of about 200 classes of goods from the other member-countries of the O.E.E.C. and 28 other countries, including India, Pakistan, the U.S., Australia, Canada, Jordan, Libya, New Zealand and South Africa. The list of goods include among others, castor oil, unrefined cod liver oil, tea, seeds, potatoes, crude oil, motor spares, mineral ores (except lead, iron and zinc), cadmium, scrap metal, raw rubber, synthetic rubber and spare parts of industrial machinery, certain mining and refinery equipment.

Some interesting details of the "teenage market" in the U.K., with an annual expenditure of about £900 million concentrated on a comparatively narrow range of products and services, are given by Dr. Mark Abrams in a new London Press Exchange paper, *The Teenage Consumer*. The teenage group represents 13 per cent. of total population, 15 or more, and accounts for 44 per cent. of all consumer expenditure on records and record players, 38 per cent. on bicycles and motor cycles, 24 per cent. on cosmetics, 4 per cent. on alcoholic drinks and 9 per cent. on cigarettes and tobacco.

The British Overseas Airways Corporation has received President Eisenhower's sanction for a jet service from San Francisco to Honolulu to Tokyo—the only present gap in what will now become its regular round-the-world operations, in accordance with the unanimous finding of the United States Civil Aeronautics Board. The B.O.A.C. at present runs a twice-weekly service from London via New York to San Francisco. Its extension across the Pacific had been opposed by an American company on the ground, among others, that this competition would reduce the earnings of American air traffic by \$15,000,000. The Civil Aeronautics Board estimates that the "revenue diversion" would amount to \$7,800,000 in the first year. The B.O.A.C.'s new trans-Pacific service will link up with the already well-known daily service to and from Tokyo—by Comet or Britannia aircraft—which caters for passengers travelling to or from (e.g.) London, Zurich, Beirut, Bahrain, Karachi, Delhi, Calcutta, Bangkok, and Hong Kong.

MACHINERY FOR SALE

Offers are invited up to 31st August 1959 for the purchase of a number of rare and useful machines like crankshaft grinders, lathes, milling machines, turret lathes, drilling machines, grinders, re-boring machines, piston grinders, valve re-facing machines, connecting rod turning machines, power pressing machines, mechanical presses, hand presses, hardness testing machines, centrifugal casting machines, hydraulic pressing machines, electric motors, generators, chucks, tools, accessories and various other machines, mostly foreign makes, in a large factory in Delhi, manufacturing automobile parts, cycle parts, etc.

Offers are also invited from those who are interested to purchase the entire factory with the goodwill. For inspection and for further particulars apply to Post Box No. 1128, Delhi 6. Telephone: 25098.

INDIA AND THE GERMAN MIRACLE

It is common knowledge that, despite heavy destruction suffered in the Second World War, West Germany has rehabilitated its economy in most spectacular manner. Indeed, West Germany ranks today as, one of the largest editor-nations in the world. This remarkable achievement must be attributed in large measure to the policy of free market economy unciated and given effect to by Prof. Ludwig Erhard, Minister for Economic Affairs. In view of this success, many in this country naturally wonder as to why the technique followed by West Germany should not be pursued in India. This question was impressively answered by Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, while addressing the inaugural conference meeting of the Indo-German Social Centre in the City last week-end.

Mr. Iengar sought to stress that it would be wholly misconceived policy to apply the principles that succeeded in West Germany, without necessary change and adaptation, to Indian conditions. In support of this view, he pointed out the basic differences in the economic situation between the two countries and to the fact that, even in the conditions that existed in Germany, the step taken by Prof. Erhard was a gamble which, of course, came off, thanks to courage, as well as to the sense of discipline and hard work of the German people. "Apart from every other consideration, our task," he told him, "is so stupendous as to be beyond the means of what Prof. Erhard would call the free market. The State here must inevitably play an important part in initiating the process of development and, having regard to the lack of resources of all kinds, it would have to do so in accordance with a well-thought-out plan."

No one has argued that the State should not initiate and carry forward the process of development, nor has any reasonable-minded person opposed the need for State control and regulation. But what the critics of the Governments in India have been emphasising is that, in no circumstance should the State attempt to supplant private enterprise as is being done at present on certain ideological grounds. The economic policy of the State is not at all conducive to bring the best out of private enterprise in the drive for the economic advancement of the people. The mounting burden of taxation, the series of excessive controls and regulations on companies, the restrictions on gainful production in some spheres on misconceived ideas of social justice, and the rapidly expanding operations of the State Trading Corporation in spheres where the balance of advantage is in leaving them to the private sector are some of the examples of obstructive character of the economic policy of the powers-that-be. In a speech under reference, Mr. Iengar gave a brief account of the historical experience of the countries now highly developed and pointed out that, in almost every one of the Western countries, as also in Japan, the State took positive action to foster the formation of national industries by itself establishing them. But he took care to add that, "in none of these countries, an attempt was made to supplant private enterprise; on the contrary, the State economic policy was meant to facilitate the growth of private enterprise by creating a favourable economic climate." The question which Mr. Iengar did not answer is whether the governments in India have strictly followed this practice.

Considering that private enterprise in India, carrying a few black sheep, has given a good account of itself and that it is quite capable of doing the job, the State is not justified in encroaching upon the field of private enterprise. As Mr. Iengar very pertinently declared, "if there is scope for vigorous private enterprise, the extent of State enterprise and State control would not go beyond the point necessary to stimulate and sustain development." Elucidating

this point, Mr. Iengar made the following interesting observations:

"It seems to me that it is here—and not in an academic acceptance of the principles of the free market economy—that the German experience is of value to us. It is really a pointer to the future that, when we reach the stage of self-sustaining growth, which we hope to do in a few years, the need for the State to take a direct part in economic enterprise will progressively diminish. The German experience emphasises the enormous contribution that can be made by individual effort and sense of enterprise to a country's development, while not overlooking the fact that the State must at all times exercise the responsibility of ensuring that this enterprise is pursued under well-settled rules intended to secure social welfare. It also suggests, I think, that the employment of general instruments of fiscal and monetary policy offers better scope than the direct use of elaborate physical controls. The use of this latter instrument may be necessary in certain fields and for certain periods, but to what extent it should be employed would require careful examination from time to time in the light of changing conditions."

Another lesson—the most important one—from German experience that is very relevant to Indian conditions, to which Mr. Iengar drew attention, is this: "Before a cake can be distributed, there must be one to distribute, and on a national scale, the baking of a cake involves hard work and discipline at all levels." This is no doubt an elementary proposition, but it requires, as Mr. Iengar himself said, to be restated time and again in India. The need for such a statement is all the greater now when the exuberant socialist members of the Congress Party swear day in and day out by equitable distribution of wealth.

INVESTMENT OF LIFE FUNDS

Mr. Morarji Desai, Union Finance Minister, rightly rejected the suggestion, put forward by some members of Parliament, in the course of the discussion on the first annual report of the Life Insurance Corporation of India, that life insurance funds should not at all be invested in shares of companies in the private sector. This suggestion only betrays either total antagonism to the private sector or ignorance of the basic principles of investment of life funds. Since the honourable members who put forward this suggestion are intelligent and well-informed, it is obvious that they were motivated by a desire to spite the private sector and starve it out of funds. In any case, it is contrary to the solemn assurance given by Mr. C. D. Deshmukh, a former Finance Minister, while piloting the Life Insurance Corporation of India Bill. To quote Mr. Deshmukh:

"I would like to tell the spokesmen of the private sector, industrialists and others that it is not Government's intention to divert the flow of funds, that is, large dimensions of the present funds, to the public sector, to a greater degree than at present. Now, it is my endeavour to see that at least as much money as is available today is made available for investments in the private sector."

The doctrine of guardianship of policyholders' money requires that, subject to the overriding consideration of security of investment, the aim should be to secure the highest possible return. The larger percentage of life insurance funds going into industrial securities, in countries supposed to have the best managed insurance business in the world, is a reflection of the growing popularity of this form of investment from the point of view of yield and also as a hedge against inflation. For instance, in Britain where there is no statutory regulation of insurance investment, of the total life fund investment of £4,537 million at the end of 1958, only 27.2 per cent. were held in Government (British, Commonwealth and foreign) securities, while investments in debentures, preference and ordinary shares were as much as 40 per cent. As compared with this, in India, under Section 27A of the Indian Insurance Act, as amended, as much as 50 per cent. of funds should be invested in Government securities alone. What is more striking is that, in Britain, the new funds for investments during 1958 have gone largely into ordinary stocks and shares while Government securities accounted for only a smaller percentage of the total holdings than in 1957.

The significance of life insurance investments in the capital of private companies in Britain lies not in their present size but in their rate of growth. For example, in the U.K. while life insurance companies' investments in Government and allied securities increased from £1,300 million in 1948 to £1,491 million in 1956, investments in industrial securities increased from £752 million to £1,743 million. The relatively small amounts going to gilt-edged indicates the general recognition of the advantages of equity investment in a period of inflation.

Insurance companies in Britain have also played a significant role in providing risk capital for new enterprises. An idea of this can be had from the statistics published by the Board of Trade which show that the book value of all corporate capital held by British insurance companies rose from £1,009 million at the end of 1951 to £1,743 million by the end of 1956, that is, an increase of £734 million. Since new issues of corporate capital during this period were of the order of £900 million, this means that insurance companies supplied 81.55 per cent. of the fresh capital raised.

In contrast to this trend in the U.K., in the Continent of Europe, insurance funds have been guided into Government and other trustee stocks which were thought to be safe. These supposedly safe investments have proved anything but safe in capital values and yields and more so where Governments have failed to manage their monetary systems well. In the context of the growing inflationary trend in India, it would be unwise to discard investment in sound equities in favour of gilt-edged. Those who put forward such a proposal are actually doing a disservice to policyholders and the L.I.C. These critics are, of course, not interested in the Government doing the right thing, because it does not suit their vested interests.

The Finance Minister rightly termed the suggestion that investment of life insurance funds should be entrusted to the Reserve Bank as "fanciful." The Bank has nothing to do with insurance. As the Finance Minister aptly said, it is just like telling the L.I.C. that "your function is only to bring in the money; it will be the function of some other people to look after it." Such a policy, it is evident, will act as a deterrent to the initiative and enterprise of the officials of the L.I.C. and thereby retard the growth of life insurance.

DEVELOPMENT OF SHIPPING

It is certainly encouraging to hear from Mr. G. L. Mehta, Chairman of the National Shipping Board (vide his speech at the Board's second meeting held at New Delhi on Saturday the 8th inst.), that both the Union Ministry of Transport and the Planning Commission are fully appreciative of the importance of shipping and the need to give it adequate priority in the third Five-year Plan. On the basis of this statement and also of the assurance given by Mr. K. Patil while inaugurating the Board in April last, namely, that the Government would treat the Board's recommendations "with the greatest respect," the target of India-owned tonnage under the third Plan may be taken to be 1,628,200 tons, as against the second Plan target of 900,000 tons. This is the figure proposed by the Ad Hoc Committee (Chairman: Dr. A. Ramaswami Mudaliar) and fully approved by the Board. Assuming that the second Plan target will, in fact, be hit, the net addition to tonnage during the five years ending 31st March 1966 will be of the order of 728,200 tons—443,000 tons in the private sector and 285,200 tons in the public sector. The total outlay estimated by the Committee is Rs. 143 crores, of which Rs. 133 crores, it is said, will go into account the saving in exchange resulting from the production that would be possible of Rs. 17 crores is expected to come from the private companies.

The target of 1,628,200 tons proposed by the Ramaswami Mudaliar Committee is quite a modest one. Even with the fulfilment of this target, Indian shipping will still have a long way to go before the country can attain a maritime status which will be commensurate with its large and growing foreign trade and its own extensive coastline. The portion of India's foreign trade now carried by indigenous ships is negligible, being just 7 per cent. If this proportion is to be raised, it is imperative that the authorities should adopt a more helpful attitude. The National Shipping Board did well to decide on the appointment of a committee to take up with the State Trading Corporation and other Government Departments the question of ensuring carriage of more Government cargo by Indian shipping than is the case now. This is "absolutely essential" for the serving foreign exchange. It is computed that, out of the aggregate annual freight bill of Rs. 150 crores, the Indian shipping companies have so far succeeded in getting only about Rs. 21 crores, the balance being the share of foreign shipping companies most of which has ultimately to be met in foreign currency.

The Board also put forward three other notable suggestions. One, a foreign exchange pool should be established under the aegis of the Shipping Development Fund to provide a continuous source of funds for the purchase of ships

abroad. Two, since the oil trade constitutes as much as 25 per cent. of the country's total maritime trade and is likely to expand in the future, special attention must be given to the question of building tankers, so that, by the end of the third Plan, the entire coastal traffic and at least half of the overseas trade will be carried in Indian tankers. Three, it is necessary to take up long-distance passenger services, as a matter of national policy. The services may be operated in the public or the private sector, but some subsidy for the construction of ships is needed in the initial stages.

In addition to these suggestions, the Board decided to set up a committee to discuss with the railway authorities and others concerned the question of carriage of coal and salt by coastal shipping in the context of the railways' programme. Evidently, this decision is a sequel to the complaint made by coastal shipping companies that there has been a diversion of coal away from shipping and that this may lead even to the laying off of some ships. If this committee is to do any useful work, it must dispassionately study the reasons why the salt manufacturers prefer the railways to coastal ships and refrain from asking for any monopoly in the carriage of this traffic. The producer and the consumer of these commodities should have the freedom to use that means of transport which is most economical to them.

NOTIFICATION OF VACANCIES

It is not clear what precisely are the compelling reasons behind the formulation of the Employment Exchanges (Compulsory Notification of Vacancies) Bill, which makes it obligatory on employers in the private sector to notify vacancies in certain categories to the Employment Exchanges. The Bill, which was passed by the Lok Sabha on the 4th inst., without much ado, provides for punishment of employers who fail to notify vacancies, or furnish false information, with a fine amounting up to Rs. 500. It is true that the Bill does not constitute an encroachment upon the freedom of employers to recruit their own staff, for it does not compel them to recruit any person through Employment Exchanges to fill vacancies, even though they have to be notified. But it confers on the Government the irritating

power of inspecting the relevant records or documents in the possession of the employer, take copies of them and elicit further information from the employers. If the object of the Government is only to collect data on vacancies—a desirable one by itself—this can be achieved by a simpler and less irritating method. Unfortunately, certain remarks by the official spokesmen have given rise to a misgiving that the Government has other objectives also in mind and that this measure is only the thin end of the wedge.

Mr. Nanda, while replying to the debate on the Bill, again reaffirmed his principle of "moral force" in implementing his policies. Why has he then found it fit to have recourse to this punitive legislation, without consulting employers and ascertaining whether the object could not have been achieved by the voluntary co-operation of employers. Is his hint that persistent rejection by employers of the candidates sent by the Employment Exchanges will attract the critical attention of the Government, an indication that, should "moral force" fail, the Government will substitute it by other means?

One wonders as to what purpose the Bill is designed to serve. Is it to help the Government to assess the present and future employment potential or to ensure that no vacancy is filled up without the knowledge of the Government? If filling up of a vacancy from among the candidates sent by the Exchanges is left to the discretion of the employer, what is the purpose in compelling, under pain of punishment, to notify the vacancies?

The Bill is apparently based on the recommendation of the Shiv Rao Committee which submitted its report in 1954. This Committee, it will be recalled, had been asked to recommend measures for improving the working of Employment Exchanges. It had recommended that the working and the results of its proposals pertaining to recruitment by Government and semi-Government employers through Employment Exchanges should be watched for a time before enforcing compulsion on the private sector also. It is strange that, when the working of the Employment Exchanges still leaves much to be desired and the Governments themselves are not extending their full support to the Exchanges, the Centre has thought it fit to

compel the private sector to use the Employment Exchanges. The Government, however, will be well advised (a) to clarify the position by stating that the powers vested in it under this legislation will be used only for collecting data on vacancies and the trend of employment, and (b) to seek the voluntary co-operation of employers through their representative organisations for increasing the utility and popularity of Employment Exchanges. The employers, on their part, will derive considerable benefit to themselves, if they help the Government in this direction. They must volunteer to the authorities constructive suggestions for raising the efficiency of the Employment Exchanges.

EXPORTS OF INDIAN MICA

India has a virtual monopoly of mica—known in vernacular as *Abhrak* or *Abhra*—accounting as it does for about 80 per cent. of the aggregate world supply. The reserves of this strategic mineral are concentrated in three belts of about 1,500 sq. miles in Bihar, 1,200 sq. miles in Rajasthan and 600 sq. miles in Andhra Pradesh. The Geological Survey of India has also located some deposits of mica in the States of Kerala, Assam, Mysore and Orissa. The Bihar belt, which bears the richest veins and accounts for about 60 per cent. of India's mica production, yields the high-quality muscovite mica, considered to be the best in the world. Mica is put to a wide range of uses in the sphere of science and industry. Because of its insulating properties and high power of resistance, it is indispensable in the manufacture of electrical apparatus and appliances. Mica powder is used in the preparation of paints, axle greases and in boiler laggings, etc.

The demand for mica in India is, however, very limited at present. So the major part of the output is exported. Of these, the U.S. buys about 50 per cent. The other leading importers of Indian mica are the U.K., Japan and Germany. It is stated that the U.S.S.R. has now placed substantial orders for Indian mica. Nevertheless, India's exports of mica in recent years have suffered a serious setback. They fell from Rs. 13.53 crores in 1951 to Rs. 6.57 crores in 1954. Although they subsequently improved to Rs. 8.67 crores in 1957 and Rs. 9.34 crores in 1958, they

LONDON LETTER

COHEN COUNCIL'S THIRD REPORT PRICE REDUCTIONS FAVOURED

From Our Own Correspondent

LONDON, 7th August
THE "Three Wise Men," who were appointed just two years ago by the Government as a supposedly impartial body to comment and advise on the course of economic affairs, have just issued their third report. The pure economist member of the trio has now changed but the general approach to problems seemed to have remained the same. The Trades Union Congress continues to boycott the deliberations of the Council (its full name is The Council on Prices, Productivity and Incomes—but often called, after its Chairman, The Cohen Council). But it is unlikely that the T.U.C. could really have expedited the work of the Council, since the trade unions are inevitably affected by its findings.

The broad conclusion of this report is in line with the thinking attributed to the Prime Minister of late, that it is time that manufacturers got down to the business of reducing prices now that increased mechanical efficiency and higher output are increasing net returns. The Council says, in effect, that the inflationary spiral up which the country has been travelling ever since the war has for the time being come to an end. This gives an opportunity for stabilising price levels and adopting a new approach to the general problem of incomes and expenditures in relation to productivity that could prevent a resumption of the spiral as prosperity increases. The words used are: "so far as the rise in output brings lower unit costs but prices are not reduced, either profit margins will be widened, or money rates of pay can be raised up to a point without tending to push up prices in the sector where they occur." And the Council is of the opinion that lower costs should be reflected immediately in lower prices. But it does concede that there should also be some rise in wages—and, though it does not say so, presumably some rise in dividends, too. Basically, however, the benefits of reduced costs should be reflected in reduced prices.

It is odd how such a simple proposition can be misinterpreted. The British Employers Confederation, for instance, comments that the importance of the report is that it describes "quite unequivocally" the key to economic progress—producing more from the various agents of production. But this always has been the key to economic progress and the Council would have seemed a little redundant if this had been, indeed, its statement of the obvious. The Federation of British Industries got the point, however, that there was a novel thought in using higher profits to reduce costs, instead of using them to plough back into industry and

thereby increase production still further. The National Union of Manufacturers also expressed surprise at the idea; but both of these bodies have said that they will think about it. Politically, the Government is very anxious that they should.

The report has also a good deal to say on the way in which the inflationary crisis which developed in 1955 and has led to a depression in output up to this March was handled. They agree with all the critics of Government policy that the process of tightening credit and restricting demand was undesirable. They would have liked to have seen inflation ended without decreasing demand, but they confess that up to now "a better way of preventing the progressive rise has not... been found" and they come to the surprising conclusion that therefore the inflation itself is responsible for the check to output! The Opposition will certainly have something to say about this—or else give up all thought of criticising the Government in economic matters again.

With regard to the immediate future, the Council estimates that expenditure is likely to rise at about 4 per cent. per annum but that this rate should be well within the capacity of rising productivity, so that there is still margin in the economy for carrying out their recommendations.

LITTLE FREE TRADE AREA

LONDON, 31st July

At last, at Stockholm on 21st July, the British Government had their way and a European Free Trade Association is about to be born. The negotiations began on the first of June and this week a White Paper has been published, setting out the recommendations that the Ministers of the seven countries concerned are to put to their Governments. The countries—the Little Seven as they have been called—are Austria, Denmark, Norway, Portugal, Sweden, Switzerland and the United Kingdom. The Ministers concerned are either Ministers for Foreign Affairs or for Commerce and Finance and, in the case of the United Kingdom, the Chancellor of the Exchequer. There is thus little doubt that the recommendations will be accepted by these Governments. Meanwhile, the Convention, which will be the governing document of the Association, is being drafted and it is expected that it will be presented to the Ministers by the end of October. Parliaments should accordingly approve of new proposals before the end of the year, ready for action in 1960.

Of course, this European Free Trade Association embracing, apart from the United Kingdom, only the smaller trading countries in the O.E.E.C., is a very much less imposing affair than originally envisaged. It is indeed the setting up of a camp of the members who, for one reason or another, are not in the six countries of the Common Market. But the British Government in particular has been at pains to publish pronouncements that, in setting up this group of seven, they do not intend to be in opposition to the six but are to assist the economies of the six by co-operating with them in every way, and arrangements are now being made for each of the seven countries to accredit diplomatic representatives to the European Economic Community, where they will be able to meet the representatives of the six as well, of course, as meeting them on the O.E.E.C. It is hoped that, with enough points of contact, the two groups will eventually work together.

The first positive action of the new Association will be the slashing of tariffs between the member-countries by 20 per cent., on the first of July next year. On that date, the Common Market six will make their second cut of 10 per cent. between themselves. Thus, the Free Trade Association's cut will bring the cut in both groups into line.

Thereafter, the member-countries of the Association plan to abolish existing tariffs on imported goods originating among member-countries, at 10 per cent. each time, the first cut coming 18 months after the 20 per cent. cut, the second 18 months after that and the third 18 months later still. It will, therefore, be 1965 before tariffs have been cut to half their present levels. Thereafter, cuts will be at the rate of 10 per cent. per annum, the idea being to eliminate tariffs altogether between the member-countries in ten years' time—unless the economic position of the member-countries is such that they can expedite this rate of freeing of trade.

As for import quotas, no change is immediately contemplated on the levels to which all the O.E.E.C. countries are currently working, but here again the intention is to abolish all quotas on trade between members, at the latest in ten years' time. Moreover, it is expected that existing quotas will, on average, be expanded by about 20 per cent. per annum.

The arrangements envisaged then make all sorts of provision for members who are in special difficulties, etc., very much on G.A.T.T. lines.

The administration of this Association will be in the hands of a Council of Ministers and there will also be a Board of Management consisting of one representative from each member. No further detail has been attempted at this stage. The only other significant point is that a Common Nordic Market which is at present being negotiated between Denmark, Norway, Sweden and Finland, the latter country not being party to the O.E.E.C., but it is hoped that confusion will be avoided by embracing the Nordic Common Market in the New Association.

TREND OF BANK DEPOSITS

RISE IN PERSONAL FUNDS GAINS MOMENTUM

THERE seems to be a fresh move by banks to bring down the ceiling on interest rates on fixed deposits agreed upon among themselves last year. It is expected that the maximum rate of interest on deposits for three months and more will be reduced to 3½ per cent, and on those for less than three months to 3 per cent. per annum from the present ceiling rates of 4 per cent. and 3½ per cent., respectively. This step would appear to be prompted by the decline in the profit-margins of banks, as evidenced by their working results for the first half of 1959, and the prospect of their growing thinner in the coming months, when the demand for funds is usually slack. Investment of their surplus funds in Government securities will not be as remunerative as last year, in view of the lower yield pattern. The reduction in deposit rates is also claimed to be in consonance with the present pattern of market rates and the fall in the yields on other forms of investment also, as, for instance, equities and fixed-yielders.

Although the facts are in favour of the banks' move, there are equally good reasons to feel that lower rates of interest on deposits will not be in the long-term interest of banks, as it will divert the flow of funds from them partly to other business concerns which accept fixed deposits and partly to other remunerative investments and thus impede the growth of the banking habit. It must be remembered, in this connection, that the higher interest rates on deposits during the last few years have contributed to a large extent to the accretion of bank deposits, particularly time and savings deposits. Thus, of the rise of Rs. 548 crores in deposits of Scheduled banks during the three years to 1958, demand deposits account for only Rs. 54 crores or less than 10 per cent., whereas the share of savings deposits is Rs. 59 crores and that of time deposits Rs. 434 crores. In fact, there was actually a drop of Rs. 15 crores in demand deposits during 1958.

It is also pertinent to note that, while a very large part of this accretion in time deposits is due to P.L. 480 funds, a substantial part of it is accounted for by personal accounts, that is, deposits of individuals. Not only the number of personal accounts with banks has steadily increased but the quantum of deposits also has grown. This is confirmed by the latest survey of ownership of bank deposits as on 31st December 1958 covering 87 scheduled banks and 146 non-scheduled banks with deposits of Rs. 5 lakhs and over, conducted by the Reserve Bank of India. The results of this survey are contained in the latest issue of the Bank's *Bulletin* for the month of July 1959. The survey discloses that the general pattern of ownership of deposits does not show any notable variation over the year. Thus, personal deposits continue to constitute the bulk of the total deposits of banks, at 41 per cent., with business deposits ranking second, as in the previous year, though their proportion to the total has declined from 29 per cent. to 26 per cent. Deposits of Government and quasi-Government bodies have maintained their upward trend, with a further rise of over Rs. 46 crores during 1958. A more detailed analysis of the owner-

ship of deposits under the three classes of deposits is to be found in the comparative table published at the bottom of this page.

The pattern of business deposits during the last few years has shown an unsteady trend. After a fall of Rs. 15 crores in 1956, these deposits rose by nearly Rs. 53 crores in the following year. The pace of expansion slowed down considerably in 1958, when there was a rise of only Rs. 3 crores to Rs. 393.95 crores. The increase during 1958 occurred wholly under time deposits which expanded from Rs. 126.77 crores to Rs. 130.03 crores. Demand deposits were more or less unchanged at Rs. 263.95 crores. It will be of interest to note that business deposits with major Indian Scheduled banks and other Indian Scheduled banks rose by Rs. 3 crores and Rs. 13 crores, respectively, while those with foreign banks declined by Rs. 13 crores, "probably reflecting the reduced requirements of building up funds for payment of imports by traders, following severe import restrictions."

Trading deposits, which form the bulk of business deposits, account for a rise of Rs. 17.81 crores during the year under review to stand at Rs. 175.82 crores. Of this increase, the share of demand deposits is only Rs. 4.32 crores and that of time deposits Rs. 13.49 crores. Demand deposits of manufacturing concerns have dropped by over Rs. 2 crores, while their time deposits are higher by Rs. 3 crores.

Personal deposits form an important constituent of bank deposits. They are more susceptible to the changes in interest rates than other deposits. The total personal deposits rose during the year under review by no less than Rs. 76 crores to Rs. 630.18 crores, reflecting the increased savings capacity of people following a rise in money income. "The efforts made by banks," the Reserve Bank's survey adds, "to tap savings in the rural areas through the opening of branches in new places may also have contributed to some extent to the larger accretion of personal savings with banks." This only strengthens the view that, if banks want to continue to tap these rural areas and rely on such funds for their resources, they have to offer higher rates of interest.

To revert to the trend of personal deposits. The rise of Rs. 76 crores during 1958 is on top of an increase of Rs. 66 crores in the previous year. It may be noted here that the pace of expansion in this class of deposits has gained momentum in recent years, particularly in the case of time deposits. Thus, the time deposits of individuals alone have gone up, during the year under review, by Rs. 71 crores and savings deposits by Rs. 16 crores. Demand deposits have, however, declined by Rs. 11 crores. It will be of interest to note that, in the course of the last four years, personal time deposits have more than doubled themselves from Rs. 153.97 crores at the end of 1954 to Rs. 321.40 crores at the close of last year, their share to total personal deposits has, at the same time, risen from 37.7 per cent. to 51 per cent. Personal savings deposits form 30 per cent. of the total, and this ratio shows a slight decline in recent years.

The deposits of Government and quasi-Government bodies have gone up by Rs. 46.57

crores to Rs. 160.35 crores during the year under review, as compared with a rise of Rs. 7.95 crores in 1957. The larger increase in 1958 indicates, as inferred by the Reserve Bank, that the "funds allotted by the Government to local bodies and the statutory corporations under the Plan are not being fully utilised."

WORLD BANK LENDS LESS IN 1958-59

The International Bank for Reconstruction and Development granted 30 loans amounting to the equivalent of \$703 million during the year ended 30th June 1959, as compared with a total of \$711 million in the previous year. This brought the gross total of loan commitments as on 30th June to \$4,522 million. Last year's loans were made in Austria, Brazil, Ceylon, Colombia, Costa Rica, Ecuador, El Salvador, Finland, Gabon, Honduras, India, Iran, Italy, Japan, Malaya, Peru, South Africa and Sudan. The actual disbursements during the year were, however, higher at \$583 million, as compared with \$499 million in the preceding year. The cumulative disbursements amounted to \$3,377 million on 30th June 1959.

During the year, the Bank sold or agreed to sell \$148.4 million principal amount of loans, all without its guarantee. As on 30th June, the total sales of loans amounted to \$568 million, of which only \$69 million was with the Bank's guarantee.

Principal repayments received by the Bank during the year amounted to \$46 million, and borrowers repaid \$64 million on parts of their loans which were held by other investors. This brought total repayments to \$501 million up to the end of the year, consisting of \$264 million repaid to the Bank and \$237 million repaid to the purchasers of borrowers' obligations sold by the Bank.

The Bank's gross income for the year, exclusive of loan commissions, was \$122 million, as compared with \$99 million in the preceding year. Expenses, which included \$66 million for interest on Bank borrowing and other financial expenses, amounted to \$76 million, having gone up from \$57 million last year. The Bank made additions to the tune of \$70.5 million to its reserves during the year, raising its total reserves to \$420 million. The additions during the year were made up of net earnings of \$46.5 million, which were placed in the supplemental reserve against missions of \$24 million which were credited to the special reserve. These figures compare favourably with net earnings of \$42 million and loan commissions of \$20 million added to the reserves in 1957-58. These bring the supplemental reserve as at the end of the year to \$282 million and the special reserve to \$138 million.

As on 30th June 1959, the outstanding funded debt of the Bank was \$1,905 million, reflecting a net increase of \$247 million during the fiscal year. The Bank's borrowing operations during the year, including new public bond issues and private placements of Bank obligations, amounted to \$432 million.

Libya and Spain became members of the Bank during the year, bringing the total number of members to 68. Their subscriptions, together with an increase in the subscription of the Philippines, brought the total subscribed capital to \$9,045.4 million as at the end of the year under review.

STERLING AREA'S RESERVES RISE FURTHER

The gold and convertible currency reserves of the sterling area rose by £17 million in July and stood at £1,150 million on the last day of July and month. This increase, which was on top of a rise of \$19 million in June, reflected the continued strength of the demand for sterling. But for the payment of £7 million during the month in respect of the United Kingdom's bilateral debts with the European Payments Union, the rise in the reserves in July would have been £24 million.

The increase in the reserves is the largest for July since the year 1953, and compares with a rise of £2 million in the corresponding month of 1958, a fall of £4 million in July 1957, and a rise of £7 million in the same month of 1956.

The net gain in the reserves during the first seven months of this year amounts to £54 million. With the exception of two months, when repayments were made on the North American and International Monetary Fund loans, the reserves have risen every month since September 1957.

The increase in the reserves is not only against the normal seasonal trend but has taken place in spite of some withdrawals of money from London during the month. As compared with the position two years ago, the sterling area's reserves are now just over £300 million up, while its debts are down by more than £200 million.

U.S. EXIM BANK CREDIT TO INDIA

The Export-Import Bank credit is available only for capital projects falling within the agreed programme and the progress in utilisation is determined by the rate at which appropriate contracts are entered into by private sector firms holding the necessary approvals and by the public sector projects. Disclosing this in the Lok Sabha on Monday last, in reply to a question, the Deputy Finance Minister, Mr. B. B. Bhagat, said that the comparatively higher prices of certain items of the machinery/equipment was one of the factors affecting the speedy utilisation of the credit from the U.S. Import Bank of the U.S.A. While the level of U.S. prices for particular types of capital goods was not within our control, Mr. Bhagat added every effort was being made to utilise the credit for purchases as being made to utilise the credit requirements in India of such categories of capital goods as could best be ordered from that country, international levels, and at the same time taking into account other relevant factors such as operating efficiency, maintenance, delivery periods, etc.

The steelworks at Durgapur are helping to build a great new India

Today in Durgapur, 120 miles from Calcutta, nearly thirty thousand Indian men and women and a number of Britain's most famous engineering companies are building the steelworks that will soon be the pride of India. From Durgapur, a million tons

of pig iron and steel will pour out every year to be used in India's colossal industrial programme.

It will create employment for many thousands of people all over the country. Durgapur will help

to create a better life for everyone.

MODERNISATION OF COTTON INDUSTRY

CENTRAL GOVERNMENT TO APPOINT STUDY GROUP TO CONSIDER SCHEME

THE reported move of the Central Government to constitute a working group to suggest a programme of modernisation for the cotton textile industry during the third Five-year Plan is in the right direction. The proposed group, according to the report, will consist of seven or eight experts mostly from the industry itself, the Textile Commissioner being the Chairman. The setting up of the group is in accordance with the recommendation made by the National Industrial Development Corporation at its last meeting. The group is expected to lay stress on modernisation of mills' machinery and equipment, rather than rationalisation. It will examine, among others, the sources of, and the procedures for, the provision of finance necessary for implementing the renovation programme which will include installation of automatic looms and other services needed for switching over from coarse to fine production. It is said that such a programme, apart from putting the industry on its feet, is also calculated to strengthen its position in the export market, a very important consideration in the context of the difficult foreign exchange position which is likely to continue during the third Plan period. Before commencing its work, the group is likely to send some of its members, in small teams, to visit such countries as Japan and the United Kingdom and to study the latest equipment, techniques and workloads in the industry there.

The urgency attached by the authorities to the need for modernising the cotton mills is a related realisation of an inevitable fact. There would have been no need for all this, had not the Government stood in the way of modernisation of the industry till almost last year. A large majority of machines in existence in cotton mills today were installed more than forty years ago and have outlived their usefulness. Attention to this aspect has been drawn by several committees and commissions, particularly by the Working Party for the Cotton Textile Industry (1951-52) and the Textile Enquiry Committee (1958). The latter Committee has clearly warned that, if the machinery and equipment of mills are not replaced at an early date, its effect would be felt, as it has been felt in the case of marginal or sub-marginal units, in the form of low production, bad quality of products, engagement of large number of workers, and high cost of production. The magnitude of the problem of rehabilitation, replacement and modernisation of the cotton mill industry will be evident from the following table which gives a summary of the selected items of machinery with 60 mills in Bombay as at the beginning of 1956:

Machinery items	Machinery manufactured			
	Prior to 1910	1911 to 1925	1926 to 1935	1936 to 1956
Blow room machinery	34	32	34	14
Carding engines	40	29	31	8
Combers	12	12	8	8
Inter frames	35	34	27	2
Ring spinning frames	18	34	48	4
Sizing machines	38	39	22	2
Looms	42	33	25	2

The rehabilitation requirements of Bombay mills are estimated to cost about Rs. 150 crores

and, on this basis, the cotton mill industry as a whole will require as much as Rs. 400 to 500 crores in order to bring its machinery on a par with that of the modern mills abroad. The rehabilitation programme involved is certainly a colossal one and every effort must be made to enable the industry to do as large a portion of it as is possible. Some financing agencies, especially the National Industrial Development Corporation, the Industrial Finance Corporation and the Industrial Credit and Investment Corporation, have no doubt been rendering assistance, but the pace of modernisation continues to be slow, thanks to the none too happy financial position in which most mills find themselves today and the lack of foreign exchange for buying the requisite machinery. What is urgently wanted is that the industry should be enabled to have annual surpluses from which it can raise its own finance or pay the instalments due on loans. Such surpluses can be ensured only through a more helpful fiscal policy and a proper adjustment of the wage cost.

Rationalisation

Alongside of measures to modernise the machinery and equipment of cotton mills, energetic steps must be taken to introduce rationalisation of production methods which alone constitutes the short-term solution to the problem of high cost of manufacture and low per capita earning of labour. In many countries, the workloads are said to be manifestly sub-normal, as, for instance, working of one loom by a weaver or a single side by a spinner. It may be noted here that, on an average, an Indian cotton mill operative handles a minimum of one ordinary loom and a maximum of four looms, as against an average of four to six ordinary looms handled by one operative in the U.K. and 32 automatic looms in the U.S. Similarly, the maximum and minimum number of ring frame spindles operated by an Indian operative is 440 and 120, respectively, as compared with an average of 800 in the U.K. and 1,200 in the U.S. It is imperative that workloads must be brought to a normal level without involving any additional remuneration. In view of the equal importance of modernisation and rationalisation measures, the proposed working group will do well to recommend a comprehensive programme covering both modernisation of equipment and rationalisation of production methods simultaneously.

A brief reference to the latest decision of the Union Government to permit the installation of 3,000 additional automatic looms in composite cotton mills with past export may be made here. Broadly, the conditions for allotment of looms will be as under:

1. The entire production of the looms will be exported.
2. In addition, 50 per cent. of the exports in any of the three calendar years 1954, 1955 and 1956 should also be maintained.
3. These two conditions will be enforced by a simple bond.

The conditions are the same as those enforced on the installation of the 3,000 automatic looms permitted in pursuance of the Textile

Enquiry Committee's recommendation. One would want to know as to what will happen to the quantity of cloth produced under the scheme if world market conditions are not favourable to its export. Be that as it may, in addition to these 6,000 automatic looms, the Government has allowed 7,500 looms to be installed over the three years (1959, 1960 and 1961) under the pilot project in replacement of their existing plain looms. In other words, the total number of automatic looms allowed so far is 13,500. Even with this addition, the total number of automatic looms in India will come to no more than 27,250, as against as many as 350,109 in existence (as on 31st January 1958) in the U.S., 67,539 in Japan, 60,053 in Italy, 40,148 in the U.K. and 33,416 in West Germany.

TEXTILE IMPORTS INTO THE U.S.

The cotton millowners in the U.S. continue to urge for an enquiry into the case for restricting textile imports from the Asian countries—Japan, Hong Kong and India. The plea is based on the ground that these imports have gone up so markedly in recent years as to threaten seriously the prospects for the domestic industry. The reaction of the authorities to the plea is not known, but indications are that the possibility of official action is becoming stronger every week. To quote a report from Hong Kong: "It is open to any section of the U.S. textile industry to put in motion administrative machinery that would eventually lead to quota restriction or tariff increases, and the division of opinion in America seems now to be over whether voluntary restrictions are enough or whether U.S.-dictated quotas are not required."

Hong Kong seems to be particularly perturbed over the aforesaid development. Already, the garment manufacturing industry has sought the Government's view on the question whether a voluntary ceiling on certain exports to the U.S. is advisable, in order to avoid a possible unilateral restriction imposed by the U.S. Government. In the first two months of 1959, Hong Kong accounted for 50 per cent. of the total volume of cotton shirts imported by the U.S. and 40 per cent. of body supporting garments (including brassieres). The cotton industry in Hong Kong is naturally of the view justified. It is pointed out that imports of textiles consumption in the U.S. amounting to 3 per cent. of the total that the cotton industry has suffered a distinct contraction in the past decade—the number of mills with a total of 2.5 million spindles going out of operation and with about 400,000 persons leaving the industry—the Hong Kong industry says that the contraction is not due to competition from imports but is merely the continuation of a trend initiated several decades ago, "as is happening in age and status."

Whatever may be the nature of import restriction, India will not be affected to any significant extent. For the exports of cotton textiles from this country to the U.S. are negligible. Thus, out of a total quantity of 136.59 million square yards of unbleached, printed, dyed or coloured cloth imported into the U.S. during 1958, the share of India was only 1.09 million square yards.

The All-India Handicrafts Board has recently completed a survey of the woollen carpet and scattered form in the Mirzapur and Bhadohi areas, in Agra, Gwalior and Kashmir, etc. Two questionnaires were prepared by the Board to cover establishments which form this important cottage industry. Information regarding the number of looms and their size, production capacity, number of persons employed, source of finance, etc., has been collected. Figures relating to the total hand-spun and mill-spun yarn in the industry have also been compiled. The views of the manufacturers and their suggestions to improve the present structure of the industry, too, have been ascertained.

BIG TEXTILE COMBINE TO SCRAP OVER ONE MILLION SPINDLES

REDUCTION IN COTTON GOODS OFFTAKE

From A Special Correspondent

MANCHESTER, 4th August

MORE than a million spinning spindles—equivalent to fifteen mills—will be scrapped by Fine Spinners and Doublers Ltd., the £27-million Lancashire textile combine, under the Government's reorganisation plan for cotton.

Making this announcement in Manchester at the annual meeting, Mr. William T. Winterbottom, the Chairman, said: "This may sound at first to be somewhat drastic, but it is no more severe than our independent streamlining policy has aimed at in the past. The only difference is that we have to take action in a much shorter time than we were planning to do. Maximum shift working at the remaining mills would follow." And he added: "After the inevitable period of adjustment, we would not expect to produce any less than we do at present, while efficiency would be substantially increased."

The decision marks the first definite move by a cotton combine to enter the scheme, which aims at the elimination of six million spindles and 45,000 looms. Machinery for scrapping must be registered with the Cotton Board before 30th September. Compensation will be paid for dismantled plant and, in Manchester last week, it was estimated that the Fine Spinners group would receive upto £750,000 in payment. Commenting on the reconstruction scheme, Mr. Winterbottom said: "It provides the industry with a splendid opportunity to put its house in order. It goes far beyond anything we had hoped for in the way of Government assistance."

Distinct Fillip

Understandably enough, the intimation that the Fine Spinners and Doublers Ltd. intended to submit over a million spindles under the redundancy scheme caught the headlines when it was announced. Participation on such a scale gave a distinct fillip to the sponsors of the plan and went a considerable way towards ensuring that the minimum target would be achieved.

All the big combines in the industry have recognised the need for their own internal reorganisation for some time. In certain cases, decisions have been delayed by the knowledge that compensation would be available and, in others, the current scheme will speed up the general movement towards smaller productive capacity and more efficient running. Increased shift-working should be the outcome of the plan, so long as suitable arrangements can be adopted as regards workpeople.

Mr. Winterbottom, moreover, had plenty to say at the meeting irrespective of his references to the reorganisation scheme. He laid particular stress on the fact that producers had failed to improve their margins, despite the increased

volume of business lately encountered. This situation is linked up with the overcapacity which all are agreed exists throughout the trade. "Normal commercial prudence should ensure that prices take care of the basic costs of our products," he declared. "It is absurd that business men should embark on re-equipment without getting the necessary return on their investment. One would have thought that the substantial amount of re-equipment already done in the industry would have removed this weakness in selling, but somehow it persists."

Not for the first time traders in the current phase of uncertainty have looked back to the conditions prevailing a century ago in view of the difficulty now being found in securing adequate margins. "It would be lamentable if, with this golden opportunity before us, we return to the position of the 1930's, when over 1,000 million lbs. of yarn a year was produced without any significant contribution to interest on capital and depreciation of fixed assets," Mr. Winterbottom commented.

Summertime Lull

In the midst of the holiday season, it is unusual for trading in cotton goods to reach any momentum and some reduction in activity has lately been apparent in various sections of the market, following the substantial turnover which took place a month or so ago. There are many people deeply involved in the industry who are not altogether dissatisfied at this turn of events, mainly because they feared the effect of improving trade on the response to the reorganisation proposals.

In the meantime, it is remarkable to observe how great an effect the weather in this country now has on an industry whose major effort is to provide clothing. Despite the increasing number of end-uses of the cotton fibre, including a myriad industrial products, apparel continues to govern the offtake in cotton and allied materials. Weeks of sunshine after at least a couple of years in which the summer has appeared non-existent have had a profound influence on trading and caught suppliers unprepared for the rush of business arising from the large clearances from the distributing centres.

The result was that many producers were unable to cope with the rising trend of consumption and pressure for supplies outstripped the available goods. Delivery terms lengthened to the extent that they interfered with the free flow of fresh business for the more popular styles, but not before some makers secured a very useful backlog of contracts.

The main drawback in the present circumstances is the limited margin of profit available for producers. Reduced prices, which were forced upon the trade following the verdict of the Restrictive Practices Court, curtailed the earnings of the mills and, although it would be stretching a point to suggest that much business has been done at entirely uneconomic rates,

the earning power of the producing sections has definitely been reduced.

Struggle to Survive

Another factor, coming immediately after the adjustment in price levels, was the intimation that a redundancy scheme was pending. As a result, quite a number of units which might have dropped out of the struggle have kept going in order to participate in any compensation. Other firms have kept machinery running to maintain a labour force in the hope that conditions would improve; the recent rise in activity has justified this attitude.

Much publicity has always been attached to reports in smaller distributing facilities despite the marked increase in the quantity of foreign cloth being handled by merchants on this side. This trend can be expected to continue in the new phase of contraction ahead, and many of the smaller merchant firms may be forced to close their doors.

Textile Merger

A merger of two giant textile groups with assets aggregating more than £15,000,000 was foreshadowed in a statement issued in Manchester last week. From the headquarters of Tootal Ltd., in Manchester, it was announced that "the possibility of a merger" was being considered with William Hollins and Company, Ltd., the Nottingham firm specialising in a wide variety of branded clothing. "Discussions are taking place," the statement said, "but it may well be some time before a conclusion is reached. When that occurs, the shareholders of the two companies will at once be informed by their Boards."

Tootal Ltd. was formed 160 years ago. Assets of the group amount to over £10,000,000. William Hollins and Company, first registered in 1882, has assets of more than £5,000,000.—*All Rights Reserved.*

WORLD IS USING MORE WOOL

After a temporary setback during 1957-58, the world is using more wool and consumption is on the up grade, according to a survey issued by the Commonwealth Economic Committee. The overall level of activity in the wool textile industry of non-Communist countries, which began to fall in the second half of 1957, continued to decline throughout the greater part of 1958. The Committee says: "In the closing months of that year, however, certain signs of recovery began to appear and the upward movement has continued throughout the first half of 1959."

Total consumption of raw wool in non-Communist countries is estimated to have fallen by some eight per cent. during 1958. Decline was particularly marked on the worsted side, with wool top production falling by around 10 per cent. Wool cloth production is estimated to have dropped by about 5 per cent. as compared with the previous year. The countries most affected by the recession included Western Germany, Belgium, the Netherlands, France and Japan. In the U.S., which suffered an activity setback earlier than the other countries named, there was a further fall in the first half of 1958, but, thereafter, conditions began to recover. Activity in the U.K. was also sharply reduced, despite a continued increase in topmaking for export. Less pronounced falls occurred in Italy and a number of smaller producing countries. Finally, in the underdeveloped areas of Asia, Latin America, etc., as well as in the Communist countries (Soviet Union, Eastern Europe and China), activity appears to have increased further in 1958.

Stocks of wool rose substantially in the 1957-58 season, and large quantities of unsold wool accumulated in South America and elsewhere. However, the greater part of these excess supplies were disposed of during the early months of 1959.

STOCKS OF GUNNIES CONTINUE TO FALL LOWEST LEVEL IN NINETEEN MONTHS

THERE has been a further drop of 2,600 tons to 92,800 tons in the stocks of gunnies with mills during the month of July, thus maintaining the downward trend for the sixth month in succession. The aggregate depletion of stocks during this period is of the order of 21,000 tons and has taken them to the lowest level since December 1957. It will be of interest to note that, except during the five months August to December 1957, the stocks of jute goods with mills have not touched such a low level since February 1956. The fall of 2,600 tons during the past month is mainly in sacking and miscellaneous varieties. The stocks of heavy goods have shrunk by 3,200 tons to a low of 54,200 tons, a level not seen since February 1958, and those of miscellaneous varieties by 1,700 tons to 12,600 tons, the lowest level for the past eight months. The stocks of hessian, which have been maintaining an upward trend since February last, have, however, risen by a further 2,300 tons to 26,000 tons, the highest level since June 1958, thanks to the expansion in the production of these varieties, following the switch-over of a part of the looms from sacking to hessian.

Over the year, the total stocks show a decline of 29,100 tons. Variety-wise, sacking shows a fall of 35,400 tons. Hessian stocks are higher by 6,100 tons and miscellaneous varieties by 200 tons, as will be borne out by the following comparative table:

(In tons)				
	As on 31st July, 1959	As on 30th June, 1959	As on 31st May, 1959	As on 31st July, 1958
Hessian	26,000	23,700	21,400	19,900
Sacking	54,200	57,400	61,400	89,600
Others	12,600	14,300	15,600	12,400
Total	92,800	95,400	99,400	121,900

At 26,000 tons, hessian stocks represent 28 per cent. of the total at the end of last month, as against 24.8 per cent. a month before and only 16.3 per cent. at the end of July 1958. The proportion of miscellaneous stocks, which has also grown from 10.2 per cent. a year before to 16.7 per cent. at the close of May last, has since declined to 13.6 per cent. last month. The stocks of sacking, which had formed 73.5 per cent. of the total in July 1958, are now no more than 58.4 per cent.

Successive depletion of stocks with mills during the last six months is due to the fact that despatches from mills have been running ahead of their production and has, in fact, brought about a tight supply position. The shrinkage in stocks of sacking, in particular, has been so rapid that sellers are reserved. China has been a prominent buyer of heavy goods in the last two weeks and is said to have purchased 80,000 bales (about 14,300 tons) of sacking. Some other countries, too, have increased their purchases. This accounts for the sizable improvement in the price of B. twills which, for the first time since August 1958, crossed the Rs. 100-mark last week and stands now at Rs. 101.45 per 100 bags. This rate compares favourably with the low of Rs. 87.85 touched in February this year.

Although the end-of-July stocks of sacking are by no means very small, representing as they do about six weeks' production of these heavy goods, they are considered by a section of the trade as inadequate, in view of the fact that the despatches are running ahead of production and the seasonal demand for heavy goods has yet to pick up. It is pointed out, in this connection, that Australia, the single largest customer for Indian sacking, has to cover nearly two-thirds of its requirements of cornsacks and woolpacks. If the clip position in respect of wool and the wheat harvest turn out to be as big as were earlier forecast, Australia's requirements of sacking will be larger. In view of this prospect, a section of the trade has been advocating the utilisation of some more of the industry's idle capacity and discussions on this subject have been held by the I.J.M.A. It is, however, rumoured that the I.J.M.A. has decided not to unseal any more looms. Till the time of writing, no official *communiqué* has been issued by the I.J.M.A. to confirm or deny these rumours.

The possibility of Australia increasing its purchases is not doubted, but its buying from India depends on the competitiveness of Indian sacking. In fact, it is this factor which has turned some of India's customers to Pakistan. Burma is an instance in point. Though this has been made good to some extent by the entry of China into the Indian market, as stated above, the latter's purchases are sporadic and unpredictable. Some are, however, prone to believe the Chinese contention that the country's next agricultural harvest would exceed even the record harvest of last year and China may take the place of Australia as the largest customer of India. Presumably, the I.J.M.A. wants to be on the cautious side on the question of unsealing, though its own survey of Far Eastern markets has indicated an encouraging prospect.

Notwithstanding the rise during the last few months, the stocks of hessian are still very much below the monthly production and are, therefore, considered very low, in view of the prospect of U.S. consumption picking up in the current half-year. Argentine's effective demand is said to be very large, but its purchases are, at present, held up by foreign exchange difficulties. If, however, Argentine enlarges its purchases, it is stated, there will be a squeeze in hessian, unless production is enlarged by a further unsealing of looms.

JUTE INDUSTRY IN EUROPE

The jute industry and trade in Europe are passing through difficult days. Almost all manufacturing units have been forced to curtail production, on account of lack of orders, according to the *Jute and Canvas Review*, July 1959. Production in France during the first five months of the current year is stated to have declined by 20 per cent., as compared with that in the corresponding period of last year. The output of yarn has dropped from 42,046 tons to 34,940 tons and that of cloth from 32,733 tons to 27,465 tons. Imports of raw jute into France during the first three months of the year were lower at 23,452 tons, as against 28,892 tons in the corresponding period of 1958. The falling off in activity is attributed to lack of local demand and competition from kraft bags and bulk handling. Exports of French jute goods were, however, steady,

the figure for the first three months of the year being 6,547 tons as compared with 6,587 tons in the corresponding period of 1958. French territories account for about two-thirds of the exports and other foreign countries for the balance.

About two-fifths of the workers in the Belgian Jute industry are said to be idle, but there have been no closures of factories so far. The reason for the redundancy is increased imports of bags into the country from Asia, mainly India, and, for the first time, China. The imports from the latter country during the first two months of the current year amounted to 900 tons of bags. "Should this volume of imports be permitted to continue," the *Jute and Canvas Review* says, "imports for the whole year would be in the region of 16,000 tons, which, as compared with the previous year's totals, would represent an alarming increase and might ultimately spell ruin for many Belgian jute firms."

Production of jute fabrics in West Germany during the first four months of 1959 aggregated 18,749 tons, as against 20,949 tons in the corresponding period of last year. The output of yarn also shows a decline from 25,938 tons to 24,773 tons. Imports of raw jute during the first two months of the year amounted to 17,035 tons. The chief suppliers were: Pakistan, 15,899 tons; Thailand, 985 tons; and India, 102 tons.

The Netherlands, a key centre for secondhand jute bag business in Europe, reports that the demand is weakening. Imports of used bags in the first quarter of the current year have declined from 3,544 tons to 2,550 tons. During the same period, exports also have fallen from 3,502 tons to 2,640 tons. In anticipation of increased home demand, the trade has been buying new goods and in the three months to March 1959 such purchases of only 1,575 tons in the corresponding period of 1958. Purchases of heavy sacking also rose from 635 tons to 1,043 tons. Home consumption of new and old bags has not, however, come up to expectations. The domestic consumption, which was at about 4.2 million new and old bags per month at the end of last year, has now declined to about 3 million bags.

Commenting on this situation in the *European jute industry and trade*, the *Jute and Canvas Review* observes:

"The fact is that despite as much larger potential market, jute production has suffered considerably since the war, inasmuch as it has not been able to keep abreast of production increases in other fields, notably agricultural products, and in extent of new jute usage, such as wide hessians volume to offset losses. Through high production costs, coupled with very high and erratic raw material prices, the industries have been forced always to consider those lines which are most profitable a chance to break even. Unfortunately, the fight has been long and uneven and the situation is worsening rather than improving."

"If the jute industry is to make any headway and capture the same percentage of the world trade as it held before the war, some unity on the future unity could be coupled with a determination by all producing countries to co-operate in all purpose, jute might return to favour."

JUTE AND GUNNY STATISTICS

The Indian Jute Mills Association, Calcutta, has just brought out the fourth issue of its *Annual Summary of Jute and Gunny Statistics: 1958*. This booklet, like the earlier editions, contains, as far as they are available, comparative annual statistics relating to the jute industry for the past 29 years. The publication, though slim in appearance, is not only very comprehensive, inasmuch as it presents all relevant data relating to production, despatches, stocks, exports, crop estimate, supply and distribution of raw jute, average prices of gunnies, as well as raw jute, etc., but also gives figures, where relevant, in respect of both the jute season and calendar year. In short, it is a useful reference publication for the study of the growth of the jute industry before and after the partition of the jute continent and is worthy of emulation by other industries. Yet, it is moderately priced at Re. 1 per copy.

DEFENCE ENGINEERING INDUSTRIES NEW LINES OF MANUFACTURE UNDERTAKEN

IN the West, a host of new industries owe their growth and expansion to the impetus given by the Defence establishments and Defence expenditure. Indeed, the relationship between Defence and industrial potential is so intimate that it is sometimes feared that, if the Defence support were withdrawn, several industries must face considerable hardship. In India, too, the Defence Wing of the Government of India draws heavily upon the industrial sector. It also makes an effective contribution to the country's industrial progress by producing vital strategic and other equipment. Although there will be differences of opinion over the economic wisdom of the Defence Ministry's entry into particular manufacturing lines—the recent move of the Ministry to take up automobile manufacture has rightly come in for criticism—there is no doubt that, by and large, Defence establishments continue to contribute to the growth of India's industrial potential. Besides the regular defence products turned out by its ordnance factories, the Defence Department is responsible for production by the Hindustan Aircraft and Bharat Electronics, and also for the manufacture of a wide range of equipment, including transport vehicles and Defence stores.

Production Organisation

In order to keep its production programme under scrutiny, the Defence Ministry has set up the Defence Production Organisation. The functions of this body include: (1) overall control of production of armaments in the ordnance factories, (2) establishment of indigenous manufacture of imported stores, (3) development of domestic production of defence stores by civil trade, and (4) utilisation of surplus capacity in ordnance factories to the best advantage of the Government and civil firms. An important sector of the Defence Ministry is the Defence Research and Development Organisation. The principal functions of this organisation are to undertake research, development and design relating to equipment for the three services, including armaments, ammunition, electronics, aircraft, vehicles and engineer stores, to co-ordinate all matters relating to defence research and to evolve standards for defence equipment and stores.

The ordnance factories are, of course, among the oldest of the engineering enterprises established by the Defence Ministry. There has been a considerable increase in the production of various ammunition items and stores by these factories. During 1957-58, they were responsible for saving nearly Rs. 4.24 crores of foreign exchange through their manufacturing programme. It would appear that self-sufficiency has been achieved to the extent of 95 per cent. of defence needs. Further, indigenous production has been established in respect of 12 types of ammunition, seven types of pyrotechnics and miscellaneous stores and six types of weapons. Besides these, anti-tank weapons, arms and ammunition for civilian use, motorised grinders, polishing machines, precision and tool-room lathes, hydraulic surface grinders and capstan lathes manufactured by the Machine Tool Proto-type factory at Ambarnath, were put on the market; the value of machine tools production is about Rs. 50 lakhs a year. Further, by utilising their surplus capacity, the ordnance factories have developed and produced a wide range of civilian goods. These goods include pressure cookers, blood pressure testing equipment, stethoscopes, hypodermic syringes, gas generating plant using cowdung, window air-conditioning units, tractors, self-propelled plough, microscopes and automatic coffee machines. The value of civil equipment products in 1958 was about Rs. 3 crores.

Trucks

The production of three-ton multi-fuel military trucks has commenced. The project, which is being executed at the Gun Carriage Factory at Jabalpur, is the result of an agreement concluded with M.A.N. of West Germany. The indigenous content of the vehicles, which is about 30 per cent. now, will rise to 90 per cent. within five years. A similar agreement has been concluded with the Japanese firm Komatsu Manufacturing Company for the progressive manufacture in India of certain types of tractors; the indigenous content is expected to go up to 70 per cent. in three or four years. Some components, including main springs, have already been manufactured; 16 tractors have been produced for the Dandakaranya Development Authority. By the beginning of 1960, about 1,200 vehicles are expected to be produced.

In the sphere of aircraft manufacture, the notable developments are the conclusion of an agreement with a British firm for the manufacture of Avro-748 at Kanpur for replacing the Dakotas and the manufacture of the first aero-engine by the Hindustan Aircraft (Private) Ltd. (H.A.L.) and of a multi-purpose four-seater aircraft at Kanpur. Avro-748 (vide Commerce, dated 18th July page 104) is a pressurised low-wing aeroplane, offering comparatively low operating costs and powered by Rolls-Royce Dart Engine. The H.A.L. has built a 90 h.p. air-cooled four-cylinder aero-engine with 95 per cent. of indigenous content. It has also built an ultra-light, two-seater aircraft, pushpak; commercial production of this aircraft has commenced. A start has also been made in the manufacture of Gnat jet fighter aircraft under licence from Folland Aircraft Ltd., U.K., and of Orpheus jet engines under licence from Bristol Aero-engines Ltd., U.K. The Aeronautical Development Centre at the Base Repair Depot of the Air Force Maintenance Command, Kanpur, designed and produced a multi-purpose four-seater aircraft early this year.

Electronics

The Bharat Electronics (Private) Ltd., which was established in 1954, is intended to meet the requirements of the Government Departments in respect of electronic and radar equipment. Electronics equipment, produced by the Company during the first half of 1958-59 was estimated at Rs. 23 lakhs, as against Rs. 28 lakhs in 1957-58. A recent achievement is the development of a twin-channel V.H.F. trans-receiver for air-to-ground communication for the Air Force. This set is primarily meant for fitment in the H.T.-2 trainer aircraft and satisfies a long-felt need of the service. Modified versions of the set for single and 10-channel operation are also under development. The factory has also developed a transistorised loud-hailer, called Bell-hailer. It is an electronic megaphone, with self-contained power supply, which is stated to be in great demand by the police, fire services, defence establishments, railways and dockyards as a handy public-address system. Agreements have been signed with several foreign firms for the manufacture of high-frequency mobile trans-receivers and valves. The factory has already manufactured about 10,000 Belwin transmitters for the Meteorological Department for upper-air observations.

Ships

A beginning has been made to build warships in India. Initially, the construction of survey vessels, mooring vessels and minor craft has been undertaken. Now under construction at the Hindustan Shipyard Ltd., Visakhapatnam, is the mooring vessel *Dhruvak* which is expected to be completed by October next. The vessel has a length of 150 ft. with a beam of 32 ft., and nearly 900 tons by way of displacement. It has been fitted with a steam-reciprocating engine and coal-fired marine boilers. Another ship under construction is the 2,000-ton *Darshak*, a survey ship; it is expected to be ready by September 1960. Several minor naval craft are being built by private firms.

Laboratories

A number of Research and Defence establishments which are spread all over India are concerned with technical design and development of equipment and stores by the three services. Of great defence scientific interest are the three research laboratories—(1) the Defence Science Laboratory, Delhi, (2) the Naval Chemical and Metallurgical Laboratory, Bombay, and (3) the Naval Physical Laboratory, Cochin. The Delhi Laboratory is generally concerned with the performance of weapons and equipment. The subjects dealt with include ballistics, communications, explosives, food research, soil mechanics and instrumentation. The Bombay Laboratory is engaged on work relating to standardisation

of naval stores and anti-corrosion and anti-fouling paints. The physical Laboratory at Cochin is interested in the study of under-water acoustics, oceanology and mines. A defence laboratory, which has been set up at Jodhpur, is designed to organise field trials under dry, sandy and hot conditions, while another laboratory in Mussoorie is being equipped to carry out high altitude physiological and food research work. Facilities are also being extended in the existing laboratories and other establishments to meet new requirements in armament, electronics, aeronautical and metallurgical fields.

U.K.'s AIR SHOW

The 1959 Farnborough air display, Britain's public showcase of its aviation industry, promises to be the biggest in the 27 years' history of the event. Unless vital tests prevent their taking type or another should not make their first appearance, certainly on the flying side. These are the Vickers Vanguard, second-stage airliner Atlantic—west to east—in five and a half hours, a record for turbo-prop aircraft; the Armstrong-Whitworth turbo-prop Argosy, a freighter coach of considerable adaptability; the Short S.C.1. five jet engines and Britain's first project in this field with a big future; and the Hovercraft, built by Saunders-Roe and riding on a cushion of air. There will also be half a dozen new versions of service with British European Airways, the Handley Page Victor bomber powered by four Rolls-Royce Conway engines, and the Saunders-Roe P531 five-seater general-purpose helicopter. The ground exhibition, with a main hall covering an area of 125,000 sq. ft., provides a quick answer to those who doubt the continuing interest in types must clearly be lower in number than they were in the immediate post-war years. There will be a record of 376 stands in this block, rebuilt in 1957, and outside.

Apart from the space given to missiles, there is a further 50 per cent. increase in the second outside equipment display, where the larger air is particularly significant, because, during the last six months alone, British radio and radar aids have been sold to 11 countries overseas, and the latest sets supplied to these customers will be there.

"APSARA" REACTOR

The swimming pool reactor "Apsara," at Trombay (Bombay), celebrated its third anniversary on 4th August, last. The first reactor to go into operation in Asia outside the U.S.S.R., Apsara, now working round the clock, is proving usefulness can be gauged from the fact that during the first year it worked for 17,840 hours, in the second year it was utilised for 1,99,575 kw. the third year it completed 3,18,500 kw. hours of operation. In the past one year, Apsara reached a new peak of 642,998 kw. hours, its utilisation going up by 3,600 per cent. over its first year's reactor last month when it worked for 113,900 kw. hours.

Designed, engineered and built entirely by Indian scientists and engineers, the reactor is the atomic technology and is a new tool in India for engineering and biology. The reactor is also used for agriculture, medicine and industry. Fundamental research in physics is being conducted at the reactor with the help of two crystal spectrometers several hospitals throughout the country with use by doctors in diagnosing and treating diseases. Radioactive phosphorus is valuable in fighting leukemia while radioactive iodine is of help in aid in the diagnosis of thyroid conditions. A number of other isotopes have also been prepared for scientists.

Apsara is a pool-type reactor, its core being suspended in a deep tank of water which provides shielding and allows the core to be moved from one mental facility to another. In carrying out the most of its possibilities, every care was taken to make operating experience the usefulness of the design stalled have been in frequent use. And it is evident that Apsara will continue to play an important part in India's atomic research programme even after more powerful reactors are commissioned.

NEW PRODUCTS AND PROCESSES

Diosgenin From Dioscorea Tubers

DIOSGENIN, a steroidal sapogenin, is a starting raw material for cortisone and other steroidal hormones; it competes effectively with alternate starting materials such as cholesterol and stigmasterol. The plant, *Dioscorea* which grows wildly in the hilly tracts of Kashmir and Punjab, contains 3.5-4 per cent. diosgenin as a saponin. Extraction of diosgenin from the roots of the *dioscorea* plant is a well established industry in U.S.A., Mexico and Central America. In India, the industry has not so far been developed because of the non-availability of the know-how.

Starting with the indigenous growing plant, *Dioscorea deltoidea*, a process for the extraction of diosgenin has been developed at the Regional Research Laboratory, Jammu. It consists in digesting the powdered tubers with a dilute mineral acid, whereby the diosgenin gets hydrolysed and is easily extracted by employing common organic solvents.

The process has been studied on pilot plant scale where 20 lbs. batches of drug tubers have been treated. Yield of diosgenin is nearly 3.7 per cent. with an extraction efficiency of about 90-95 per cent.

Imports of Adrenal Cortical Hormones during 1958 were valued at Rs. 18.48 lakhs. Two firms, namely, Glaxo Laboratories (Private) Ltd., Bombay, and Merck Sharp and Dohme (India) Private Ltd., Bombay, have been licensed for the manufacture of cortisone by the Government of India under the Industries (Development and Regulation) Act. It is estimated that about one hundred tons of *dioscorea* tubers can be collected per annum from the widely growing plants. Large-scale cultivation of the plant has also been taken up by Kashmir Government in their drug farms.

Self-service Post Office

The United States Post Office Department is adding an automated machine to help persons who need paper, envelopes or stamps after the post office windows are closed. The new vending machine will be placed in airport terminals and railroad stations in addition to the post offices. The prototype of what the department calls "customer-operated substations" is to be delivered soon by Electric Vendors, Inc., Minneapolis, Minnesota. According to Mr. Edson O. Sessions, Deputy Postmaster General, it will be only a matter of time until line production models are available.

The self-service stations will go a long way toward eliminating an old problem—how to buy postal materials after post offices close. With the new vendor, persons will be able to put up to one dollar in coins in the machine, purchase an envelope, paper and stamps and get the exact change in return. With his letter written, the patron will be able to insert it into a built-in scale that will weigh it and indicate the proper postage. Stamps in varied denominations can be "dialed," or stamp books will be available as the machines will not automatically print the postage on letters.

Waterproofing Material

A new clean lacquer for waterproofing cartons has been developed in the United Kingdom by Allweather Paints, Ltd. It should, according to the makers, aid packaging of perishable goods for tropical climates. It is said to have an exceptionally good light fastness and resistance to yellowing, at the same time producing a non-toxic film which has a high resistance to water vapour.

The qualities of the new lacquer depend on the use of a chemical compound based on chlorinated rubber. Tests are said to have shown that it has a very low water permeability and a high degree of resistance to salt water conditions. It is also said to produce a protective coating which is resistant to many chemicals. The material can be applied by spray, brush or roller, and dries in about two minutes, depending on the porosity of carton to which it is applied. It can be produced in various forms to suit user requirements.

Metal Smelting

Kazakhstan (U.S.S.R.) scientists claim to have evolved a basically new method of metal smelting, a method, it is said, which can produce a revolution in metallurgy.

The new method is based on the principle of high-pressure injection of hot air, forming a whirlwind, into a cylindrical cyclone chamber. Fuel is fed into this jet of air together with a crushed compound prepared for smelting. Particles of the compound are dashed by a centrifugal force against the walls of the chamber, and are immediately melted in the rapidly rotating current of red-hot gases. The cyclone chamber combines the processes of roasting, smelting and sublimation of volatile metals; this helps to process polymetallic ores, extracting from them all the valuable components. Scientists are of the opinion that cyclone method of smelting will also be effective for turning iron ore directly into steel, by-passing the blast-furnace process.

Radio-operated Tractors

The first Soviet-made radio-operated tractors is reported to have been put to work in the fields of Siberia and Krasnoyarsk Territory. A group of local experts, making use of automation, electronics and radio engineering, have elaborated a new system of 18 tractors being run by a single operator. The latter remains at his command post, issues instructions by radio to each machine. The tractors in time of ploughing, for instance, make the necessary turns, automatically lift the mounted ploughs, and continue to work in the given direction until the next order is received by radio. The test runs of the radio-controlled tractors have shown good results.

CREeping INFLATION—I IMPLICATIONS TO SAVINGS AND INVESTMENT

[Inflation is a world-wide problem. Some have come to regard it as something inevitable, while there are others who even feel that a little inflation is desirable. The Monthly Review of the Federal Reserve Bank of New York is running a series of articles on this subject, bringing out the interrelations between economic growth, the general behaviour of prices and public economic policy. The first article is entitled "Creeping Inflation." Although this article is prepared against the background of the U.S. economy, it is a valuable contribution on the subject of sound money which is of universal importance. Further, much of what is said in this article has relevance to this country also, where the prevailing inflation is much more than that of a creeping nature. We propose to publish the series in instalments, in the hope that it will help the public to appreciate the value of maintaining the purchasing power of the rupee. The first instalment of this series appears on this page.]

Here we would like to pay a tribute to the Federal Reserve Bank of New York for focussing attention on the risks involved to the stability of money even under creeping inflation. The initiative taken by it to educate public opinion in the U.S. on this vital subject of this generation is commendable and deserves to be emulated by the Reserve Bank of India, which has, on its staff, a fine team of economists.—Ed.]

THROUGHOUT history, wherever people have used money to express the values of goods and services, some form of "inflation" has been a recurring theme. Even though the actual inflations of past generations have, as a rule, either had to be stopped by drastic action or ultimately have destroyed themselves, often with intense human suffering and severe economic loss, there seems to be a tantalising fascination in the illusion of greater wealth created by rising prices. That lure has led time and again to a search for a new and more promising form of inflationary solution to pressing economic problems. Today, in the United States, the alchemists are at work once more. The new version is called "creeping inflation."

This is not, of course, a single, coherent doctrine. Much of its support comes, in fact, from people who know well the dangers of a cumulative upward price spiral and would oppose anything which they considered to be outright inflation. There are a few, to be sure, who seem to regard sustained price increases as genuinely desirable, in order to evoke what they believe will be the maximum of growth in output and employment. But most are simply inclined reluctantly to accept a regular and moderate edging-up of prices year after year, at a rate of no more than 2 or 3 per cent., as merely the least costly way to resolve many of the conflicting claims now being placed upon the American economy.

Paradoxical Quirk

In the various ways that this general thesis is developed, a paradoxical quirk often appears in the treatment accorded the Federal Reserve System. Both among those who urge and those who reluctantly accept "creeping inflation," there are many who assert their despair of monetary and credit controls, condemning them for such varied shortcomings as being too weak, or harshly punitive, or inequitably discriminatory. And yet those who have confronted the question of how to hold the "creep" of rising prices within the bounds of the 2 or 3 per cent. figure invariably mention monetary and credit controls, along with fiscal measures as the principal means of performing that job. Faced with this ambivalence between mistrust and trust, the Federal Reserve itself might perhaps understandably be puzzled.

This article is an effort to seek clarification, first, by restating briefly some of the various approaches that have been taken by supporters of creeping inflation, and then appraising these in the context of a similarly abbreviated description of the pricing process, savings and investment, "administered" prices and wages, international economic relations, and economic fluctuations and growth.

The appraisal shows that creeping inflation is not merely an innocent vice, a relatively costless or harmless way of relieving tensions. It will lead to much higher rates of interest and a confusing network of "price escalator" arrangements, a distortion and eventual impairment of saving and investment, wider cyclical fluctuations, and a stunting of growth. Moreover, there would be no gains to offset these grave consequences. Over time, creeping inflation would not lessen but would aggravate any threat of unemployment; it would not cushion but would stimulate any abuses that may be associated with "administered" prices or labour's "cost push"; and it would not relieve the kinds of political pressures that may at times interfere with the functioning of a market economy. These serious consequences would not only mean a failure to fulfil the economic potential of the United States, but would also gravely weaken this country's ability to fulfil its responsibilities of leadership in the international economic community and in world affairs.

This single article can only provide a sketch of the analysis underlying these conclusions.

This article, while recognising that there can never be ideal and final solutions to all of the problems of a changing and growing economy, concludes that a public policy aimed at reasonable price stability is essential in a modern economy, if there is to be sustained expansion of employment and income, for the benefit of everyone.

The Case for Creeping Inflation

Much of the appeal of creeping inflation lies in the ready reconciliation it seems to provide among many of the pressing issues of current concern in the American economy. Is not the acceptance of some form of inflation the only way out, for example, for an economy determined to combat depressions and pursuing sustained maximum employment as a national goal, because it will no longer tolerate the conditions under which most of the significant and general price reductions of earlier times occurred? In any event, the argument runs, with so many business concerns able to "administer" prices, and thereby able to reduce output instead of cutting prices when the demand for their products declines, what hope can there ever be again for the kind of old-fashioned price competition that formerly resulted in prices moving freely downward as well as up? Not only are a number of business concerns able to "administer" prices in such a way as virtually to exclude price reductions in periods of slow business, but they are said to be readily able to "administer" prices upward when the demand for their product strengthens. Thus able to pass on cost increases in higher prices, they offer only weak resistance to another inflationary pressure supposed to characterise our modern economy. This is the influence of "cost push," most frequently attributed to the ability of labour to obtain increased wages and fringe benefits that exceed productivity gains.

For all of these supposedly new factors in economic life—the quest for full employment, the banishment of depressions, the spread of "administered" prices, and the emergence of "cost push"—creeping inflation seems to offer an accommodating cushion. Moreover, this simple adjustment to the "facts" of modern economic life can be achieved, the creeping inflationists believe, within the framework of the kind of economy which this country wants to maintain, and with which it is identified in the eyes of the world, that is, a market economy. The argument has been made, in fact, that it is only by accepting some inflation that the freedoms essential for a market economy—the freedom of individual choice and free contract—can be assured. For, in the face of the strong upward price pressures now present in the economy, the argument runs, a determined effort to prevent average prices from rising would almost necessarily require direct Government intervention in the setting of prices and wages. The only alternative, many seem to feel, would be monetary and fiscal policies so restrictive in their impact on aggregate demand as to generate unemployment and reduce the nation's rate of economic growth below its potential. Yet both domestic needs and the present international position of the United States make this alternative unacceptable.

Steady Erosion

The various kinds of creeping inflationists all readily concede that they are accepting a steady erosion in the value of the monetary unit, and hence of the savings put aside by a majority of the people in the form of such fixed-denomination assets as savings accounts, life insurance, pension funds, and United States Savings bonds. Some assert, however, that for the "average" person there is a more-than-compensating gain from the greatly increased rise in the real income of the country as a whole to be brought about by the faster growth that is to be expected, and from the reduction of the real burden of mortgage and other debt implied by ris-

ing prices. And for those unable to share directly in these offsets, as well as for many who do, there will be the possibility of "indexing" annuities or other kinds of income or assets by inserting "escalator" arrangements in the various contracts, linking them to some index of prices.

On occasion, writers who state a case for creeping inflation as a conscious policy also present an impressive array of statistics. These are used to show that rising prices and rapid growth have occurred together in most of the developed countries much of the time. The inference is then drawn that inflation stimulates growth, and a further conclusion is suggested: that satisfactory sustained growth cannot be attained without sustained inflation. Whether these "demonstrations" are representative, or relevant, or perhaps a form of statistical sleight of hand, may become clearer after the following cross-section analysis of the possible impact of creeping inflation upon the kind of economy that exists today in the United States.

Price Changes and Expectations

There is, of course, nothing inherently wrong with individual price increases. As long as such price changes reflect the balance of prevailing conditions of supply and demand for a particular product or service, they serve as part of the essential signalling system that directs the allocation of productive resources in a market economy, just as do individual price declines. The great sweeping movements of the entire price structure in the United States, however, have grown out of extraordinary events. The major increases have come with the convulsions of war, and the major declines have usually come with deep depressions. But in between, when the market economy is doing its normal job of allocating resources, with relative changes in different prices stimulating and guiding intervals of several months, or even a year or more, when the net effect of all individual price changes will emerge as a minor increase, or a decrease, in the average of all prices. There will also, as has been true for most of the past year, be periods of continuing sideways movement.

So long as any general and moderate rise in prices just happens, and no one can count with any degree of certainty at any particular time on a continuing rise, businesses and consumers can form their economic judgments in the orderly way that assures the nearest practicable approach, in an imperfect world, to optimum performance of the economy. When there is a roughly even chance, over any short period ahead, that as many individual prices may rise as fall, and that many will not move at all, one's own competence for possibilities of missing earnings, or economising on purchases, presumption that the average of prices will continue to rise indefinitely, even at a rate that tempted—even compelled—to become a gambler. More and more businesses and individuals find it necessary to protect themselves against expected price increases on the products they buy and find it tempting to speculate on expected that setting, more and more prices become the much less effectively their economic role in a market economy. The cumulative effect of even a small rate of inflation, if it becomes continuous, would indeed be to impair seriously the use-prime requirements for an acceptable monetary unit—both for domestic commerce and in international trade.

Inflation Hedge

Much of what has been said in support of creeping inflation seems to neglect the critical role of expectations in the spending, saving, and investment processes. All but the most rudimentary decisions as to spending and saving, and plant, or inventory, result from judgments based on expectations of the needs and opportunities that lie ahead. If those expectations include a certainty that the value of the dollar—steadily, then every considered judgment must be made in terms of the values of things as they will be a year or several years ahead. That is, home prices move up only in line with average more a year from now, in five years (compound-compounding) \$3,400 more, and so on.

Even with public policy aiming at broad price stability, there have been some peace-time years since World War II when average prices have risen by several percentage points. But, in each such case, the price inflation occurred in spite of public policy intentions and there was no firm reason for projecting price inflation of similar magnitude into the future. Yet each time there has been a tendency for a wave of inflationary apprehension to spread through the expectations of savers and investors. The results, while relatively mild because the episodes were rather short, gave a foretaste of the force that changes in expectations might exert if inflation, even of small annual proportions, were to become a virtual certainty. Wage earners, business men, retired persons, consumers, savers, and investors have only to consult their own experience during one or another of those episodes to recall evidence, more persuasive than any statistical demonstration, that, when inflationary expectations infect the ordinary day-to-day spending decisions, more and more attention is given to subterfuges and hedges of various kinds, including the hoarding of readily storable goods, in order to find some protection from the probable loss in the value of the dollar. That kind of behaviour does not wait for the extremes of recurring inflation and a frantic flight from the currency. It occurs whenever expectations of generally rising prices become widespread.

Impact on Savings

The creeping inflationists generally seem to believe that there need be no decline in the rate of savings from current income with their kind of inflation. Though this view is perhaps subject to question, there will indeed be many individuals who must still continue to save. Upon them—along with all pensioners and others on fixed incomes—the burden of a steady depreciation in the value of each dollar saved will fall heavily and harshly. To the extent they can, however, savers will certainly want to make a decisive shift in the composition of their savings—preferring those forms which offer a prospect of appreciation in value or accretion in yield corresponding to the rate of "creep" intended for the average of all prices. And it is scarcely realistic to expect that the great network of institutional arrangements now mobilising savings in fixed dollar forms could be completely converted, without loss of effectiveness, to a different form of savings. To the extent that these facilities could not be transformed, some decline in total financial savings over time might well occur.

To minimise such shifts, and their consequences, some of the creeping inflationists have argued for the issuance of bonds with a price escalator attached. Also, they propose that the saver should be offered either upward adjustments of interest rates for conventional savings accounts, or accounts at lower interest rates which would be adjusted in principal amount as the relevant price index rose. There is in all of this, to be sure, a rather frightening prospect of conversions and exchanges for the hundreds of billions of fixed-interest-bearing obligations that are already outstanding. But, even if that combination of problems could be surmounted in some way, the banks and insurance companies and businesses and individuals undertaking new liabilities, variably adjusted to one index or another, would be confronted by other virtually impossible complications.

Finland's Experiment

These complications are not, moreover, mere theoretical conjecture; they have occurred in Finland, for example, where an extensive network of escalators was introduced a few years ago, when a general acquiescence in creeping inflation became part of public economic policy. The experiment has already run its course, and the Finnish public has been disillusioned, and the apparatus is being gradually dismantled. What happens, as escalator arrangements crisscross the savings mechanism, is that accountants find themselves unable to balance their books unless managements find a way to write up virtually all of their assets (and realised gross income) at least as fast as the relevant price index is increasing. Banks have to require borrowers to escalate upward their liability on loans, or pay interest that includes a surcharge sufficient (after taxes) to compensate for a rate of "creep" of, say, 2 or 3 per cent. No one—borrower, lender, or depositor—can know how much he owes or is owed, nor whether his realisable current assets can meet his rising current liabilities, nor whether he is indeed solvent, from one month to the next under full escalation, even if there were enough electronic computers to go around.

At best, such schemes impose on the economy an enormously complex superstructure of escalator connections, with opportunities for inequity, incongruity, and inefficiency greatly enlarged. And, even if a fully comprehensive, and all-inclusive, mechanism could be contrived, would not the results be only a peculiarly circuitous approach to the same market allocation that would work itself out under conditions of relatively stable prices? The exercise, if fully successful, would only be similar to that of cancelling out equal values on both sides of an algebraic equation. At the worst, instead of mere futility, the result might instead be a kind of chaos, leading either to a slow strangulation of the financial mechanism or an acceleration of price increases as lender and borrower attempt to match strides—each trying to offset the gains of the other.

The apparent conclusion is that voluntary saving through the institutional facilities now used by most savers would be discouraged in some degree by a permanent condition of creeping inflation, unless interest rates should rise so high, and other escalator arrangements should be contrived so effectively, that some approximation of the present volume of saving could be achieved. In any event, regardless of whether, or by how much, total saving would be reduced, there would be so many new frictions injected into the system that much of the voluntary saving would probably still seek shelter in the stock market and in the direct purchase of

such durable assets as houses and land. A considerable part of total saving would probably, in addition, be "forced" or "involuntary"—a euphemism for the loss of real income suffered by those persons, or those kinds of institutions, which would simply not be able to increase their money incomes as rapidly as prices rise.

Repercussions Upon Investment

In an atmosphere of continually rising wholesale and consumer prices, financial markets would probably take on some of the aspects of a casino and tend to lose their efficiency in directing capital into the most productive uses. At the same time, business concerns or individuals would find it necessary to take into account a new dimension—the certainty of a depreciating dollar—in deciding upon the kinds of physical investment to make, and whether to borrow funds for use in physical investment. The stock markets would probably reflect less and less a consensus of investors' judgments of the long-term growth potential or the soundness of management of a particular corporation, and more and more a guess as to the likelihood that the corporation would be able to hold its own in the price race. In the bond markets, interest rates would tend to rise toward the point at which they could equate, on one side, the advantage to borrowers of financing current investment outlays in a form that could be repaid over the years in depreciated currency with, on the other side, the disadvantage to

Carved from wood and finished in fine work on metal or ivory, the classic sandal demanded skill not only from its craftsmen, but also from its patrons. You had to be adept in using it—a point you'll hardly consider today.

Modern Footwear, in its scientific design and construction, demands all the skill from its craftsmen. They make shoes so snug, supple and comfortable that you hardly know you're wearing them. Only admiring glances keep reminding you.

Bata

lenders of placing their funds in investments whose real value would depreciate over time. Although individual adjustments would occur in different ways, and could include arrangements for escalation of the principal amount as an alternative to pushing interest rates up drastically, one overall result might be a reduced volume of bond financing, which could nonetheless only be carried through at very high cost.

Meanwhile, to the extent that higher interest rates and general escalation of prices and costs fell short of their more or less idealised objectives, there would be strong inducements to business men and individuals alike to accelerate their purchases of durable, investment-type goods. If a new machine will be needed six months from now, and the current flow of income permits, buy it today to avoid the price increase. If rents are rising, buy a new home and plan to take a profit on its resale five or ten years in the future. Moreover, to the extent that interest rates do not rise to the point where they fully offset the prospect of rising prices, investors will want to borrow the money to make these purchases. Even an economically submarginal investment becomes desirable if the service or the product it produces will so increase in price as to assure a profit on the investment, particularly if the purchase price of the investment can be repaid in depreciated currency.

Effect on Social Services

Of course, total saving would probably be quite insufficient to provide all of the additional financing sought by all of the individuals and business men attempting to make tomorrow's investment outlay today. Potential investment outlays would have to be deferred in those areas of the economy where the return from the sale of the product could not be expected to increase so rapidly as the overall price average. What are some of these areas? They include school's, hospitals, and other public service institutions that do not turn out an economic product whose price can readily be escalated. Among them, too, would be many of the institutions and agencies engaged in basic research. And in all likelihood most of the electric utilities and other public utilities concerns, including transportation, would find their prices too slow in adjusting because of the usual lags encountered when prices and rates are regulated by a public body.

In short, both because other prices would rise faster than their own, and because all interest rates would be much higher than they would have to be with prices generally more nearly stable, some of the most important areas for the expansion of this country's basic capital stock of knowledge and facilities would fall behind in the competition for investment resources. The creeping inflationists' answer might then indeed have to be to increase central government regulation of investment flows, perhaps even through direct expansion of Federal investment activities. Even so, school districts, philanthropies, and other public agencies with relatively fixed incomes, or incomes that might lag in adjustment, would probably still be driven to various penny-wise, pound-foolish economies that reduce the efficiency of essential services, undermine the morale of their employees, and justifiably anger the public.

It would seem scarcely conceivable that such an investment mix could result in optimum growth for the economy. The condition of creeping inflation might well stimulate, at least temporarily, a larger numerical total of dollar investment. But neither investment nor the broader goals of economic growth are mere matters of numbers. The composition of investment, and of the national product, are always of crucial importance, both for the current satisfaction of the entire community and for the development of a strong base for continuing growth in the future.

(To be continued)

PUNJAB NATIONAL BANK

The working of the Punjab National Bank Ltd. during the half-year ended 30th June 1959 has resulted in a profit (subject to audit) of Rs. 42.76 lakhs, after providing a sum of Rs. 5.92 lakhs for gratuity fund trust. This represents a slight increase of Rs. 1.09 lakh over Rs. 41.67 lakhs earned in the corresponding six months of 1958 after setting aside Rs. 5.35 lakhs for gratuity. With the surplus of Rs. 4.48 lakhs brought in from the previous year, the amount available for appropriation is Rs. 47.25 lakhs, as against Rs. 46.19 lakhs a year ago. The interim dividend for the half-year has not yet been announced. It will be recalled that a distribution of Rs. 2.50 per share of Rs. 25 each, free of income-tax, was made for the half-year ended June 1958.

During the half-year under review, the Bank's deposits rose by Rs. 6 crores to over Rs. 135 crores. On 30th June 1959, the Bank had 374 offices in India, Burma and Pakistan, as against 356 a year ago.

THE URGE TO BUILD

The innate impulse compels a child to build. So it does to a nation conscious of the desire to progress. Today, the Second Five-Year Plan is under way and India is busy with her various development projects. Bombay State is contributing its share towards the national progress by playing its assigned role under the Plan.

Of the total outlay of Rs. 350.28 crores proposed in the State's Second Five-Year Plan, Rs. 167.26 crores were spent during the first three years from 1956 to 1959. The provision in 1959-60 is Rs. 90.18 crores.

During the first three years, food production increased by about 3.36 lakh tons. And compared with the position in 1950-51, nearly 20,000 more primary schools were built, secondary schools increased by about 1,000 and the number of institutions for higher education almost doubled by the end of the third year of the Plan.

3729 miles of roads were constructed; 104 new bridges and causeways were built; tenements constructed for industrial workers were 13,192; (7,000 more tenements are expected to be completed during 1959-1960). Houses built for low income groups were 4160.

Irrigation, Power, Industrial and other projects are making fast progress under the Plan programme.

BURMAH-SHELL REFINERIES LIMITED

CHAIRMAN, MR. L. D. MUDIE, REVIEWS OIL INDUSTRY'S ROLE IN INDIA'S ECONOMIC DEVELOPMENT

CONSUMPTION EXPECTED TO DOUBLE ITSELF IN THE NEXT EIGHT YEARS

ADDRESSING the shareholders of the Burmah-Shell Refineries Ltd. at their Sixth Annual General Meeting held at Trombay on Monday, 10th August 1959, Mr. L. D. Mudie, Chairman, said that the demand growth for petroleum products in India during the last ten years was much steeper than the world trend. He also indicated that the demand in future was expected to grow at an annual rate of 7 per cent so that, by 1967, the country's annual consumption would be not far short of 12 million tons or just twice the present level.

The following is the full text of Mr. Mudie's speech:

"The Directors' report and accounts for the year 1958 are before you and from these documents you will note that the profit for 1958 has dropped by some Rs. 114.2 lakhs to Rs. 309.6 lakhs as anticipated by the Chairman in his remarks to the shareholders at the last annual general meeting. This decrease is due to the narrowing of the refiner's margin between refined product and crude oil prices and to the increased taxation liability.

"A dividend of fifteen naye paise per rupee (free of income-tax) was declared and paid in April 1959 on the paid-up ordinary share capital absorbing Rs. 207.3 lakhs leaving a balance of Rs. 102.3 lakhs, which, with the balance brought forward from 1957 of Rs. 41.7 lakhs, leaves a balance of Rs. 144.0 lakhs for further appropriation. From this balance your Board has recommended that Rs. 82.0 lakhs and Rs. 8.0 lakhs be appropriated to general reserve and tax equalisation reserve respectively, leaving a balance to be carried forward of Rs. 54.0 lakhs.

Trend of Demand

"I do not think further remarks are necessary on the detail of our 1958 accounts which are set out fully in the documents already circulated to you; I should, instead, draw your attention to the mass of comment, read and heard in recent months, on petroleum and its role in India's economic development. I welcome this as indicative of wide and growing public interest and would like to offer a few remarks that may help to set perspectives for the discussion on petroleum. In so doing, it shall be my endeavour to concentrate on points of general agreement and to supplement Indian experience with lessons learnt from the international operations of the petroleum industry.

"The recession in the United States and the slackening of business activity in Western Europe, slowed down, but did not interrupt the expansion of world demand for petroleum products. Before the recession, world demand had been growing at an average rate of 7 per cent per year; in 1958 the rate of expansion dropped to 5½ per cent per annum. Looking into the future most forecasters predict an annual expansion of 6 per cent in world demand; in other words, such demand is expected to double itself in the next ten years or so. It has been calculated that to finance this expansion the petroleum industry will need to invest about Rs. 67,000 crores, representing capital expenditure in the region of Rs. 5,300 crores per year for the next five years, rising to approximately Rs. 7,300 crores per year, thereafter. That growth, in this magnitude, is continuous and not sudden, is illustrated by the fact that the industry's gross investment in fixed assets rose from Rs. 11,800 crores at the end of 1946 to Rs. 37,900 crores at the end of 1957.

"These are formidable figures and it is obvious that finance, in these magnitudes, is far beyond the capacity of the world's capital markets; the vast proportion of the funds needed to meet the growing demand for petroleum products must continue to be generated from within the industry. To illustrate this point, I may mention that in 1958 the Royal Dutch/Shell Group of Companies raised £126 million (Rs. 188 crores) through the mechanism of the largest single capital issue in European history; the money sufficed to cover the capital and

exploration expenditure of the same Group, for a period of just about four months.

"These facts of international experience have particular relevance at this moment in India's progress towards a self-sustaining economy.

"Over the last ten years Indian demand for petroleum products has shown an even steeper rate of climb than the world trend; since 1948, consumption in India has increased nearly three-fold to 6 million tons, which represents an average growth of 10.5 per cent per annum. In 1958, the rate fell to 6.1 per cent but this was due principally to restrictions, since removed, on kerosine imports, imposed to conserve foreign exchange.

"As for the future, it is expected that demand will advance at an annual rate not less than 7 per cent and that by 1967 the country's total consumption of all products including refinery fuels is likely to be not far short of 12 million tons per year or just on twice the present level of consumption.

Size of Investment

"Finance will have to be found to meet this expansion; the industry's experience, worldwide, indicates that an investment of Rs. 600 is required to locate and market every extra ton of oil. On this basis, the investment to meet the growth of Indian demand to 1967 would be in the region of Rs. 360 crores, on the rather hopeful assumption that present-day costs do not rise during the next ten years.

"I may add that of the notional figure of Rs. 600 per ton, just quoted, a sizeable proportion represents expenditure in this exploration stage. It is now not necessary to demonstrate that expenditure on exploration is not only heavy but hazardous: indeed it is quite possible to spend crores of rupees on the best geological and geophysical advice and have at the end nothing more to show than a series of dry holes in desert or jungle and the advantage of experience, somewhat dearly bought. Indeed, the gambler has, in essence, a better chance than the oil explorer: in the words of a leading journal, 'when throwing a dice one is at least sure that the number 6 exists, whereas if no oil is, in fact, present, an unlimited number of 'goes' would never give a win.'

"Successful exploration is, however, but the start; oil found has to be proved, extracted, transported and refined before it can reach the market. It is not often realised that the development expenditure needed to bring an oilfield into commercial production, though less hazardous, is generally several times as expensive as the original exploration effort.

Gap Between Demand and Supply

"The problem can also be examined with the gap between demand and indigenous crude supply as the starting point. India's crude production now amounts to 0.4 million tons from the Digboi field, to which may be added the 2.5 million tons expected from the Assam Oil Company's discoveries in Nahorkatiya and Moran. With 1967 demand assessed at 12 million tons and indigenous crude output at 3 million tons, the gap—which is the measure of fresh investment needs—is seen to be 9 million tons. The world experience of the industry indicates a figure around Rs. 270 crores as the investment needed to find and produce this additional quantity; to this must be added, however, a considerable sum to cover additional refining capacity (6.4 million tons) and distribution and marketing facilities (6 million tons).

"These figures are impressive but constitute only the beginning of the story. For it must be remembered that, despite the rate at which demand is growing, India's per capita consumption of petroleum products works out at 3.8 gallons per annum against a world average of 70 gallons, and compared with 40 gallons in Japan, 14 in Ceylon, 122 in Latin America, 7 in Indonesia and 600 gallons in the U.S.A.

"The same pattern emerges when the field of comparison is widened to include all forms of energy. Here the Indian figure is 0.12 ton per capita/annum against 1.08 tons for Japan and 3.85 tons in Australia.

"The inter-relationships between the use of energy, levels of productivity and living standards are now generally recognised and the comparisons I have just made point to the enormous scope for development of all forms of commercial energy in India.

"Several attempts have been made to forecast the likely shape of this development and a recent study indicates the following pattern for commercial energy consumption in India.

	Percentage Shares		
	1947	1952	1957
Coal	86	83	80
Hydro-electricity	6	6	6
Petroleum fuels	8	11	14

Coal remains the major source of commercial energy but its dominance is a declining one. The hydro-electric contribution, relative to other sources of energy, is static over the ten-year period; oil alone shows a steady advance.

"The prospects from nuclear power are interesting, but the consensus of expert opinion seems to be that, though this new source will make some contribution during the Third Plan period, its development is a matter of long-term significance.

"It is not sufficient to examine petroleum only as a source of energy, that is, power and heat. To assess India's total demand it is necessary to include other petroleum products which are not used to produce energy such as bitumen for roadmaking, and lubricating oils.

Pattern of Consumption

"The pattern of India's petroleum consumption is dominated by the middle distillates (kerosine, high speed diesel oil, light diesel oil and aviation turbine fuels): the proportion of these to the total is at present about 45 per cent and assuming no external checks on growth rates, the middle distillate share is likely to rise to roughly 50 per cent in 1967, or, about 6 million tons.

"The gasoline (aviation and motor spirit) share has, on the other hand, been contracting at a rate which suggests that by 1967 it may account for 8 per cent (against 15 per cent at present) of total demand.

"The residuals are likely to hold the same position in the consumption pattern, as at present, in the region of 30 per cent.

"To provide the 6 million tons of middle distillates required by the Indian market, entirely from indigenous crude, would call for crude production at the level of 13.3 million tons per annum. The processing of such crude would throw up a surplus of about 3 million tons in the gasoline range; the disposal of this surplus through export may prove to be difficult.

"It is obvious that to depend entirely or imports to cover the enlarging middle distillate gap would be to correct the petroleum imbalance by creating an oppressive and continuing strain on India's foreign exchange reserves.

"I shall not dwell further on this problem which has, of course, a number of facets. I petroleum products, while technical developments, such as the multi-fuel engine, and the utilisation of petroleum products as raw material for other industrial processes hold promise and above all, I would stress the proven ability of the international oil industry to meet challenges through world-wide adjustments of demand and supply as well as by internationally orientated research and development.

"It would be relevant to mention that you Company have already made a contribution towards resolving the imbalance problem between 1956 and 1958, the yield of gasoline has been reduced from 23 per cent to 18.5 per cent

with an expansion of middle distillate production from 31.8 per cent to 34.6 per cent—a remarkable achievement bearing in mind the production pattern for which the plant was designed.

"Your Company have continued to study this problem and recently informed the Government of their ability to increase their crude throughput from the existing level of approximately 2.3 million tons to 2.6 million tons per annum, thereby providing a further 250,000 tons of middle distillates per annum, representing an increase of 30 per cent in middle distillates, together with an export market for 25,000 tons of gasoline. Furthermore, this development is estimated to save about Rs. 1.5 crores of foreign exchange in a full year.

"At the same time, your Company have informed the Government of an active investigation now in hand to expand Refinery capacity to the level of about 4 million tons per annum, together with plant for the manufacture of 50,000/100,000 tons of HVI Lubricating Oil basics per annum. If this examination leads to firm proposals, these will most certainly reflect substantial savings in foreign exchange and contribute materially towards resolving the product imbalance problem.

"In conjunction with these proposals, the Government have been pleased to accept an offer by your Company to forego the existing duty protection on furnace oil, light diesel oil, high speed diesel oil and bitumen, with effect from 1st July 1959. This duty protection, together with the two annas duty protection on gasoline voluntarily surrendered on 1st October 1956, formed part of the agreement with Government which led to the construction of this Refinery.

Outlook for Current Year

"As regards the current year it is, of course, impossible to forecast with accuracy the future course of crude and refined product prices, influenced as these are, by a great variety of factors, quite outside the control of the oil companies and the scope of accurate prediction. If prices remain roughly in the same relationship as at present, and taking into account the duty protection voluntarily relinquished by your Company from 1st July of this year, we can expect the income from refining for 1959 to be somewhat reduced compared with 1958, with a consequent reduction in net profits.

"That we are able, so soon after our Refineries went on stream, to make such offers to the Government of India is due to the foresight, imagination and skill of those who planned our great plant and it gives me particular pleasure to record that efficiency and drive have distinguished the efforts of all employees who have worked in Burmah-Shell Refineries these past years. With them, we look, in confidence, to the future."

VILLAGE HOUSING SCHEME

The Government of India has decided to modify the Village Housing Projects Scheme in order to enable State Governments to utilise part of the loans sanctioned under the scheme for the acquisition of land in selected villages where this is necessary for thinning out densities, provision of additional housing sites, streets, community buildings and other community facilities, and cannot be arranged by villagers through mutual agreement among themselves. Funds needed for the provision of services in the acquired land may be obtained from other Central or State Government schemes for this purpose. The basis for the recovery meant for this purpose. The beneficiaries have been left to the discretion of the State Governments. The State Governments will have, however, to recover the cost of the site along with the loan for building a house in 20 years as laid down in the Village Housing Projects Scheme. These decisions have been taken by Government on the basis of the conclusions of the Seminar on Village Housing held last year in Mussoorie and the recommendations of the Housing Ministers' Conference held at Darjeeling, in October 1958.

The Village Housing Projects Scheme, it has been decided, will be further modified to conform to the observation of the Seminar that the problem of rural housing could in certain cases be tackled by providing open developed plots on the lines of slum clearance scheme. To enable indigent members of the village community to put up huts with their own labour, the Government agrees with the recommendation of the Housing Ministers' Conference that the entire cost of developed plots should be treated as loan to the individual concerned, for recovery over 20 years. The cost of the developed plots should be kept as low as possible and should not exceed 25 per cent of the loan permissible for a house. To ensure co-ordinated development of villages and also that the aid given for various aspects of rural development finds its way in adequate measure to the villages selected under the scheme, the State Governments have been advised to set up a special committee consisting of representatives of the departments concerned. It has also been suggested that similar committees at the district level with the district collector as chairman and district heads of departments as members may also be constituted.

BRITISH INSURANCE IN 1958 PREMIUM INCOME AT RECORD HIGH LEVEL

THE picture of British insurance, unfolded in the statistics published by the British Insurance Association for the year 1958, is, indeed, a reassuring one. The combined net premium income (life and non-life) of member-companies of the Association which transact, between them, 80 per cent. of the domestic and foreign business, rose to an impressive figure of £1,425 million, representing a rise of £82.78 million over the 1957 figure. Even though the increase in 1957 was more remarkable, as much as £116 million, raising the total to £1,342 million, the improvement noted in the past year is highly significant. As Mr. Charles F. Trustam, Chairman of the Association, pointed out, considering that, for the first time since the war, world prices in 1958 were relatively stable, the increase in business in that year denotes a real participation in an expanding economy and not, in any sense, a mere inflation in monetary values.

This increase in premium was possible because of the more favourable economic and financial climate that obtained during the year. No sector of British economy is more vitally concerned with the stability of the pound sterling than insurance. As a result of the measures taken by the Government in 1957, world confidence in sterling grew and this led to a greater use of sterling for world trade and a steady increase in gold and dollar reserves. A substantial slowing down of inflationary trends obviously increased the inherent attraction of life assurance as a means of saving. This perhaps explains why a larger proportion of new premiums of 1958 (53 per cent.) came from life business than from non-life (47 per cent.). During the previous five years, it may be noted here, 58 per cent. of the new premium had come from non-life business, as against only 42 per cent. from life. In 1957, 59 per cent. of the new premium came from non-life and 41 per cent. from life business.

A comparison of the life premium with the total net premium also points to a swing in favour of life insurance. Thus, life premium formed 42.2 per cent. of the total net premium in 1958 and non-life premium 57.8 per cent., as compared with 41.6 per cent. life and 58.4 per cent. non-life in 1957, and 41.4 per cent. life and 58.6 per cent. non-life in 1952. It is true that there was a fall in the pace of growth of non-life business, but there is no doubt that, even after making allowance for this factor, the life business made notable progress.

Non-life Premium

Non-life premiums of the British insurance companies increased by £39 million during 1958 to £823 million, representing a rise of 5 per cent., as compared with 9.7 per cent. in 1957 and 4.6 per cent. over the five-year period 1953-57, that is, an annual average increase of 7.7 per cent. As compared with 1957, fire premiums increased by 2 per cent., accident premium by 7.7 per cent., but marine premium declined by 0.2 per cent. Nearly three-fifths—58.2 per cent. to be precise—of the total premium in the non-life portfolio came from accident business, 32.88 per cent. from fire business and 8.9 per cent. from marine business. These figures compare with 56.7 per cent., 33.8 per cent. and 9.46 per cent. respectively, in 1957 and 49.2 per cent., 38.4 per cent. and 12.46 per cent. in 1952. Accident business thus continues to occupy the pride of place in non-life portfolio which is also a reflection of the still increasing importance of motor and liability business. Motor insurance accounted for a premium income of over £260 million in 1958, which is more than half the total accident business. It is noteworthy that motor insurance premium increased more than sevenfold during the two decades 1938-58. Twenty years ago, this branch brought a premium income of only £38 million. But, in spite of the increase in business, in recent years, it has been found to be the most troublesome section of insurance. The collective underwriting loss on motor insurance in 1958, the fourth consecutive year in which this class of business proved unremunerative, amounted to almost £10 million. Another trend brought out by the figures in recent years is the diminution in the share of marine business. This is the result of recession in trade and the high degree of unemployment of ships.

Life business in 1958 showed an overall increase in premium of £43.7 million, about 7.8 per cent., as compared with £48.6 million or 8.3 per cent. in 1957 and an average annual rise

of 7.8 per cent. for the five years 1953-57. Ordinary life premiums have been growing at almost double the rate of industrial life premium. Thus, in 1958, the increase in the former was of the order of 9.1 per cent., as against 4.45 per cent. in the latter. The following table indicates the trend of growth of insurance in the U.K. during the four years ended 1958:

(Value: In thousand £s)				
Premium	1955	1956	1957	1958
Non-Life:				
Fire	224,287	253,088	265,126	270,399
Accident	338,524	396,001	444,335	479,598
Marine	61,450	65,951	74,109	75,508
Total	624,261	715,060	784,170	823,205
Life:				
Ordinary	385,681	365,423	407,253	444,260
Industrial	188,294	145,160	150,932	157,699
Total	474,075	510,583	558,185	601,929
Grand Total	1,098,336	1,225,643	1,342,355	1,425,134

Note:—One million £s are approximately equal to Rs. 1.88 crores.

"British insurance" virtually means world insurance for there is scarcely any part of the world where British insurers are not operating. Approximately one half of the total premium income of British insurers is derived from overseas. If life insurance is excluded, the overseas proportion of fire, accident and marine business is nearly three-quarters. One may, therefore, take the trend of British insurance, particularly general insurance, as reflecting the trend of insurance all over the world.

Investments

The investment assets of the member-companies of the British Insurance Association at the end of 1958 reached a record of £5,528 million (about Rs. 7,371 crores), an increase of £378 million (Rs. 504 crores) over the preceding year. The life fund alone accounted for £333 million of the increase, demonstrating, once again, the increasingly vital contribution made by the life business in the encouragement of thrift as a desirable habit as also a factor in combating inflation.

Total investments of all the branches of insurance increased by 59 per cent. between 1927 and 1937, 53.2 per cent. between 1937 and 1947 and by as much as 101.6 per cent. between 1947 and 1957. Thus, in the post-war years, the growth of insurance in Britain was twice as much as in the decade ended 1947. The increase in investment is partly a reflection of the real growth in the volume of insurance, both life and non-life, and partly of other factors such as inflation.

An analysis of the investment of life and non-life funds at the end of 1958 shows that 13.6 per cent. of the assets held were in mortgages, 22.4 per cent. in British Government securities, 3.9 per cent. in Commonwealth Government, Provincial and Municipal securities,

4.4 per cent. in foreign Government, Provincial and Municipal securities, 21.5 per cent. in debentures, loans, preference and guaranteed stocks and shares, 18.5 per cent. in ordinary stocks and shares, 8.9 per cent. in properties and ground rent and 6.8 per cent. in other investments. A noteworthy feature is that the new funds for investments during the year have gone largely into ordinary stocks and shares. Investments in mortgages, debentures, properties, British Government securities, and Commonwealth securities also went up, but by a relatively smaller percentage. Indeed, the percentage of British Government securities to the total was less by 1.1 per cent., as compared with 1957. What is even more striking is the fact that, at the end of 1958, their proportion (at 22.4 per cent.) was practically the same as in 1937.

The bulk of invested funds is made up of life funds, aggregating £4,537 million at the end of 1958, as compared with £3,991 million of the non-life funds. Of the life funds, 15.7 per cent. were held in mortgages, 23.6 per cent. in British Government securities, 3.1 per cent. in Commonwealth Government securities, 0.5 per cent. in foreign Government securities, 21.2 per cent. in debentures, preference shares, etc., 18.9 per cent. in ordinary stocks and shares, 9.7 per cent. in properties and 7.3 per cent. in other investments. Of the non-life funds, 4.3 per cent. were held in mortgages, 16.7 per cent. in British Government securities, 7.6 per cent. in Commonwealth securities, 22.3 per cent. in foreign Government securities, 22.9 per cent. in debentures, preference shares, etc., 16.6 per cent. in ordinary stocks and shares, 5.2 per cent. in properties and 4.4 per cent. in other securities.

REDUCTION IN LIFE INSURANCE PREMIUM

Replying to a question, Mrs. Tarkeshwari Sinha, Union Deputy Minister for Finance, disclosed in Lok Sabha that, the Life Insurance Corporation of India recently effected a reduction in premium rates in East Africa, while the premium rates in Malaya and Singapore were left unchanged. The rates of Commission to agents in East Africa, Malaya and Singapore were increased recently. Giving reasons for the reduction, the Minister said that owing to the high average sum assured per policy in East Africa (Rs. 13,500 as against Rs. 3,500 in India), expenses were lower. This enabled the Corporation to pass on the benefit to the policyholders in the reduced rates offered by the Corporation were but the same as those quoted by the leading companies operating in that country.

The scale of commission in any particular territory would depend on a variety of factors like the pattern of organisation, the nature of service rendered by the agent and the conditions in the market. Unlike India, where the renewal commission was payable to an agent throughout the currency of a policy and under certain conditions to the heirs of the agent on his death, in East Africa, Malaya and Singapore, the payment of renewal commission was restricted to only the first few years of the currency of a policy. However, there were no field officers between the branch officers and agents in these countries as in India and for this reason also, the commission rates paid to agents by all insurance companies in these countries were higher than in India. The Corporation's rates of commission payable to agents in these countries were not higher than those paid by their competitors.

INDIAN OXYGEN is playing a vital role in building a more powerful and self-sufficient India in the Second Five-Year Plan.

From transport to electric power, from the steel works to the oil refinery—every day our technical service is keeping the nation up-to-date with the most modern methods of metal fabrication.

The door is open to greater prosperity

Are interested to represent manufacturers and/or sole exporters of all kinds of textiles, crockeries, cutlery, iron goods, leather goods, sports goods, cement, household goods, office equipments, ornamental goods, rain equipments, grocery goods, beverages, alcoholic drinks and children's toys. We are also importers of those products as enumerated above, and free valid samples for effective showroom display should accompany all offers to us. Also looking for Commission Agents in any country to cater for our interests by negotiating on our behalf.

We always use WHEEL BRAND Industrial glycerine
It's guaranteed to contain 98% glycerol

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine — because it is of an unvarying high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

In textiles, dyeing and printing, paints, varnishes and lacquers, plastics, leather, rubber and glass... in these and other industries, WHEEL BRAND GLYCERINE is used, and has been used for years.

Remember, PYRAMID BRAND GLYCERINE is also has many uses in the industry as well as medicinal and domestic uses! Write for

COMMODITY PRICE FLUCTUATIONS REPERCUSSIONS ON PRIMARY PRODUCING COUNTRIES

A DISQUIETING feature of world trade has been the recurring phenomenon of sharp and erratic fluctuations in commodity prices. Worst hit by this instability of commodity markets are those countries which exclusively rely on the export proceeds of a limited range of primary products for the bulk of their national income. These countries, no doubt, are making every effort to diversify the pattern of production. Nevertheless, there has hardly been any appreciable change in the degree of their dependence on primary products. Because of this situation, they are not in a position to cushion the shock as well as the industrialised countries can do by averaging the price movements of different types of exportable goods. Nor is it possible for the primary produce exporting countries to offset the effects of lower prices by a higher volume of sales. For falling prices, particularly in the case of metals and several other industrial raw materials, are generally and in the short-run, the result of a decline in demand rather than an increase in supply. Often, the fall in earnings from primary products is caused both by a lower volume and by lower prices. Indeed, their recent experience shows that, in times of lower prices, the primary exporting countries are able to sell less than in times of higher prices. To give an instance, during the first half of 1958, sales of wool by the sterling area countries fell by 36 per cent. in value and by 14 per cent. in volume, as compared with these in the corresponding half of 1957. Similarly, cotton sales dropped by 27 per cent. in value and 18 per cent. in volume. But even where demand for primary products is highly elastic (which it is not in most cases) and moved inversely to price changes, it would often be physically impossible to offset a fall in prices of, say, 50 per cent. by a higher volume of sales.

Again, what is very important to these countries is not the actual prices fetched by commodities but their relation to prices of manufactured goods, or in other words, their purchasing power. The price of manufactured goods, as is well known, is relatively far more stable. It often happens that, while prices of manufactured goods go up, commodity prices decline. Thus when commodity prices give way, not only the export earnings of the less developed countries suffer, but also their terms of trade with the industrial exporting countries. Such a situation poses a real threat to the economic development of these countries. Besides, it sets off serious social and economic repercussions, which affect not only the rate of economic growth, but also the employment opportunities, including current levels of employment and wages. This aspect of commodity prices forms the central theme of an excellent article entitled "Repercussions of Commodity Price Fluctuations on Primary Producing Countries" in the June 1959 issue of the *International Labour Review*, published by the International Labour Organisation. This is a comprehensive article, examining all the principal aspects of commodity price fluctuations. That the I.L.O. should have paid some thought to this problem is an indication of the growing importance attached by the U.N. agencies to the problems of underdeveloped countries. An attempt is made here to bring out the main features of this article.

Analysis of Recent Trends

An analysis of the trends in world trade since 1930 shows that there has been some improvement in the position of primary products during the past decade or so. In the post-war period, the value of world trade in primary commodities has gone up considerably from the levels in the 1930s and the amplitude of price fluctuation has been smaller. The increase in value is to a considerable extent due to higher prices, which are on an average approximately three times as high as in the years immediately preceding the outbreak of the Second World War and twice as high as in 1929, before they were affected by depressions. The fluctuations in prices during the thirties were marked by violent vicissitudes in trade. For example, between 1929 and 1932 unit values for primary commodities dropped by 50 per cent. and the volume of trade in these commodities by 15 per cent. By way of comparison, it may be mentioned that even in the period of booming prices during the Korean War, export prices for these products did not rise more than about 20 per

cent. between 1950 and 1951, calculated on an average yearly basis. On a similar basis, there was a drop of over 10 per cent. in the following year. Barring this exceptional incident, post-war year-to-year fluctuations in the monthly average prices of the primary commodities have been less than 5 per cent. The volume of world exports of primary products in the post-war period has been rising almost without interruption.

These averages, however, conceal very substantial fluctuations in the prices of different commodity groups and still more of individual products. Many products have shown heavy ups and downs in the post-war period and the swings for some individual commodities have been just as wide as before the war. World prices of agricultural products such as sugar and wheat and of raw materials such as rubber and copper have at times doubled within less than 12 months or fallen in the same period to less than half their previous level. Such wide fluctuations have seriously hurt the economies of industrially backward countries dependent upon the export proceeds of one or two commodities.

Since export proceeds of primary products of underdeveloped countries are used, to a very large extent, for importing manufactured goods, the trend of prices of the latter has also to be examined. They too have fluctuated, though within a narrow range. This was manifest both in the 1930s and in the post-war period. On the other hand, changes in the volume of trade have been larger than those occurring in primary products. The decline in the total value of trade in manufactured goods between 1929 and 1931 was, for instance, of about the same size as for primary products, but the drop of 35 per cent. in prices was matched by a similar decline in volume; in the case of primary products prices dropped more and volume less. The expansion of the trade in manufactures since the Second World War has similarly been ascribable on the whole as much to volume as to prices. Both have gone up by some 125 per cent. since the last pre-war years.

Terms of Trade

Since the value of primary products has gone up by three times during the same period, there has been a considerable improvement in the terms of trade of underdeveloped countries in the post-war period, which reached a peak in 1951. It has been computed that the terms of trade for Latin America from 1945 to 1952 involved the appreciable sum of \$21,000 million, that is, about 8.3 per cent. of the aggregate gross products of the area for the whole seven-year period. It has been further estimated that that change of a mere 5 per cent. in the average prices of exports of underdeveloped countries is approximately equivalent to the entire annual inflow of private and public capital and Government grants to these countries. Since 1951, however, these countries have been confronted with a deterioration in their terms of trade which has been practically uninterrupted. The price index of primary products in 1958 stood at much the same level as in 1950, whereas that of manufactured goods had gone up by about 25 per cent. during the same period. According to the *United Nations Commodity Survey 1958*, the deterioration in terms of trade between mid-1957 and mid-1958 itself represented a loss in import capacity equivalent to about one-sixth of the official gold and foreign exchange holdings of these (primary exporting) countries or to about six years' lending to them by the World Bank at the 1956-57 rates.

There are differences of opinion on the point whether the adverse terms of trade for primary producing countries reflect a secular trend. Some say that it does, while others are a little cautious. Much of the more recent decline can, for instance, be attributed to the striking fall in the textile fibre prices, notably wool. But at the same time the fact remains that, generally, the supply of primary products has outstripped the demand for them. The comparative high prices of these products during the post-war period brought into play concerted efforts by primary producing countries to raise their output. Simultaneously, the industrial countries managed to devise substitutes at lower costs and reduce their purchases of the more expensive primary products.

Commenting upon the effect of substitutes on natural primary produce, the *I.L.O. Review* observes:

"It is difficult to evaluate the threat that man-made synthetic or other industrial substitutes present to natural primary products. It seems that the prospects of substitution have been underrated on earlier occasions and that the last decade has witnessed an expansion in the production of new substitute materials never dreamt of at the end of the war. 'Utilising a few readily available substances—coal, oil, water and, in lesser amounts, chlorine, silicon and fluorine—the chemical industry has produced cheap and effective substitutes for non-ferrous metals, for iron and for natural rubber, wood, glass, cotton and wool.' A pre-war natural raw materials is undoubtedly that with the new substitutes. This, in turn, might involve depressed prices for primary products and a concomitant deterioration in terms of trade, which substitution is only one) that it would be as inevitable."

Short-run Fluctuations

It is neither possible nor desirable to iron out all fluctuations in prices. Indeed, some variations in prices are an essential part of the market mechanism, inasmuch as they serve to ensure, in the long run, proper allocation of resources. What is needed then is not fixity of prices for all time, but elimination of violent short-run fluctuations. This leads us to the question of the main causes for short-term fluctuations. Price variations are brought about by developments both in the demand and supply sides. On the demand side, business cycles still constitute the most important single factor. In periods of prosperity, the demand for primary products and their prices rise and in periods of recession or depression both demand and prices fall. It is true that, in the post-war period, there have hardly been any business cycles in the normal sense of the term. But as the recent recession in the U.S. and W. Europe. Even these have had a marked impact on the sensitive raw material prices. A singular feature of the post-war business cycles is that they have influenced the commodity markets more in their contracting than in their expanding phases. Secondly, there can be incidental fluctuations due to extra-economic occurrences, particularly political events, such as Korean and Suez crises. On the supply side, the fluctuations may be the result of fluctuations in crop yields. They may also arise from "gestation cycle," which may occur in the cultivation of commodities that require a long period for production to materialise, such as rubber and coffee. The difficulty or the impossibility of adapting capacity quickly to changes in demand may produce rather lengthy spells of rising and falling prices; and when at length capacity has been adjusted to the market conditions existing previously, it may be quite inappropriate to current conditions. Some of the other factors which influence commodity prices are monopolistic and monopolistic practices as well as misdirected speculation is a stabilising factor, contagious waves of optimism or pessimism leading to excessive buying on a rising market or excessive selling on a falling market may exaggerate price fluctuations.

An Over-simplification

The author of the article under review draws pointed attention to the general assumption that the underdeveloped countries are the producers and exporters of primary raw materials, while the developed countries are producers and exporters of manufactures. This, he says, is an oversimplification. For one thing, the relatively advanced industrialised countries produce well over twice the amount of raw materials produced in the underdeveloped areas and they import from each other more industrial raw materials and foodstuffs than they import from the underdeveloped areas. In the case of certain developed areas, agriculture and mining play a key role in their economy. Instances of this nature are provided by Denmark, Australia and New Zealand. But there is a fundamental difference between them and the underdeveloped countries. The former employ a small proportion of their population in the production of primary produce, while the latter employ the major proportion. In Denmark, for instance, only 20 per cent. of the total working population is engaged in agriculture which accounts for 75 per cent. of its exports. In view of this difference, the underdeveloped countries are hit to a greater extent than the developed countries when commodity prices fall.

A decline in commodity prices first tells on the balance of payments position of the primary

exporting countries. Then, it is reflected in a reduction in their foreign currency reserves. If the adverse trend were to continue, it would call for a reduction in their imports, unless assured of sufficient foreign credits and investments to cushion the repercussions of declining export proceeds. Since the margin of consumption above subsistence needs is generally small and export proceeds are mainly required to finance imports of essential consumer goods, the brunt of import reduction will often have to be borne by capital goods. As development plans depend to a very substantial extent upon imported capital goods, the consequence is a slowing down in the rate of growth and in the use of real income. This disrupts orderly economic planning. Investment should rationally form a continuous economic process and not proceed by fits and starts; in addition, the real costs tend to rise if capital outlays have to be planned and made with the permanent risk of non-availability of foreign currencies.

Change in Income Distribution

Apart from these repercussions on the national economy as a whole, the declining export prices will lead to a change in the distribution of income between different groups and some of them will feel the effects more than others. In the first place, there will be a reduction in income generated in the export sector. The costs of production and transport and other costs incidental to getting a product to the market tend to move less and later than commodity prices, so that producers will suffer a more than proportionate share of the impact of the actual price reduction of their commodity. If the produce hit by the fall in prices is grown by large-scale plantation companies or mining companies, they may be in a position to tide over their difficulties by drawing on their reserves built up during years of prosperity, assuming that the Government had not skimmed away the excess profit in those years through export duties. But the producers or cultivators of agricultural produce are often individual peasants, who are generally in a very weak position to bear such misfortunes.

While the first incomes to be affected may be profits, it is probable that, if prices continue to fall or remain low, the incomes of wage earners will also sooner or later be affected. Explaining this point, the author of the article observes:

"The earnings of workers may be affected by unemployment, underemployment or reductions in wages. Except in cases where wages are linked, through sliding scales, to the price of the product, it is probable that in the early stages of underemployment and reductions in employment will be decidedly more reductions in wages than in individual wages. If a decline in prices goes on for a long period, wages, too, are likely to be affected even where no sliding-scale arrangements are in force, though trade union pressure or legislative measures, especially in countries where the productive resources are owned by foreign capital, may serve to check or prevent reductions in wages. It should be noted that lower incomes for producers may also affect workers indirectly, by discouraging capital investments and so reducing future employment opportunities. Further, difficulties are liable to be experienced by employers in improving housing and other amenities for workers during a period of falling commodity prices."

"In some countries and in some industries, money wages are on a sliding scale with export prices, though such arrangements do not appear to be very widespread. Through such flexible arrangements the workers share directly in the vicissitudes of an industry. Experience suggests that, where wages are made flexible, employment has tends to be more stable; more generally, it has been observed that the level of employment in export industries appears to depend on the relation between export prices and wages. The whole problem of the interrelations of wages, unemployment and underemployment in underdeveloped countries needs further investigation, but this is made difficult by the lack of reliable wage and employment statistics."

A fairly long account of the difficulties faced by the major primary producing countries in the context of declining commodity prices has also been included in the article. The table at the bottom of the page shows the dependence of these countries on the various commodities together with price changes in the last few years. The dependence of these countries on one or two export commodities is evident from the table. For many products, prices show a decline after 1956, though in varying degrees. The trend was, however, far from uniform. The major exceptions to the general trend were cocoa, copra and jute. International trade statistics show that there were five underdeveloped countries in which two commodities accounted for 90 per cent. of total exports in 1957 and some 20 countries in which two commodities accounted for over two-thirds of total exports.

In Latin America, Chile, which depends heavily on copper, suffered a sharp setback, when

the copper prices dropped by 45 per cent. between the end of 1955 and the first quarter of 1958, when prices touched the bottom. Unemployment rose sharply in the industry, the number registered at the end of June 1958 being 50 per cent. higher than a year before. The other countries in Latin America specialising in the export of a few commodities had also to go through similar difficulties. In Asia, Malaya produces two major commodities for export, namely, rubber and tin, both of which earned less foreign currency in 1958 than in 1957. At the end of last year, 35 per cent. of the tin-mining labour force was out of work. In the case of rubber, however, higher export quantities partly offset lower prices. Ceylon and Indonesia were the other countries worst hit by the decline in commodity prices. In Africa, the fall in copper prices during the last two years led to a deterioration in the balance of payments of the Federation of Rhodesia and Nyasaland. British East Africa, too, had its own share of difficulties.

Means of Ensuring Stability

The article concludes with a brief discussion of the crucial question of ensuring stability for commodity prices. The author examines what can be done both internationally and nationally and comes to the view that there are no cut and dried solutions. He points out that general economic stability, in the sense of the absence of strong inflation and deflation, in the industrialised countries is a prerequisite for ironing out wide fluctuations in commodity prices. To the extent such stability is attained, the business cycles of the post-war type and their repercussions on commodity prices can be eliminated. It is obvious that there can be no economic solution for price fluctuations caused by war or warlike developments.

What about international commodity agreements? After making a study of the three agreements—tin, sugar and wheat—the author observes that the obstacles to be overcome are many and none of these agreements has so far been a complete or permanent success. He then goes on to add:

"The conclusion of international commodity agreements meets, however, with several difficulties. First, there are so many products that it is hardly possible to expect a special agreement for each of them. Secondly, most products are not wholly homogenous and problems arise as to the treatment of different grades and qualities. Another problem is that it is often impossible to induce enough countries to join an international agreement to make it workable. A large exporting country staying out of an agreement may underbid the market price agreed upon or sell such large quantities that it foils all plans for bringing about a better balance between supply and demand. If one or more large importing countries remain outside a scheme this, too, may make it difficult to operate. The United Kingdom has only recently adhered to the International Wheat Agreement, considering the price range (until it was recently reduced) unduly high. The U.S.S.R., by remaining outside the Tin Agreement, retained its freedom to dispose of large quantities of tin and this was a major factor in preventing the attainment of the

objectives of the agreement and caused great difficulties for other producing countries.

"These are examples of what is perhaps the basic difficulty in international commodity agreements—namely, the difficulty of reconciling the interests of producing and consuming countries. It is easy to say, as has been said above, that in principle both groups of countries have an interest in ironing out unnecessary short-term fluctuations around the long-term price trend. It is much more difficult to determine what the long-term price trend is, what is reasonable price or price-range at any given time and what adjustments should be made to reflect changes in long-term conditions. There are few objective criteria to guide decisions on these matters, which have to be reached through negotiations between exporting and importing countries."

"Recent events have intensified the already widespread interest in international commodity agreements, and with further experience it seems likely that such agreements may be improved and extended. By concentrating on traditional 'bell-wether' commodities, which are generally at the same time the most volatile, may perhaps prove feasible also to influence other markets and thus reduce the significance of the fact that commodity agreements cannot be extended to all markets. But it would be unduly optimistic to rely on international commodity arrangements alone to solve the problems of instability in commodity trade."

The measures that can be tried in the national field include, besides what the producers themselves can do, if they are organised and have strong financial resources, State marketing schemes, or national buffer stocks (strongly advocated by the G.A.T.T.), exchange rate manipulation, variable export duties and other measures of tax policy. All these may be tried singly or in combination. The author is of the view that most of them, if wisely used, may considerably reduce the effects of price fluctuations. They are more flexible and easier to administer than international arrangements. But they suffer from a disadvantage in that, as the exporting countries act independently of one another and of importing countries, there is the risk of one country increasing its own stability at the expense of greater instability for others. This is of special importance in the case of products which are to some extent complementary, for instance copper and aluminium. The author further points out that there is also the opposite danger that one country may find itself bearing an unduly heavy share of the burden of maintaining price stability in the interests of others, besides itself.

The Basic Fact

In discussing this problem, the author is fully conscious of the basic fact that the special vulnerability of underdeveloped countries lies in their being industrially backward. Accordingly, he feels that an effective solution will be to diversify their production by establishing domestic industries. This, however, is a long-term process, but a beginning has to be made, as India is valiantly trying to do.

Summing up his discussion of this subject, the author closes the article thus:

"While much has already been learned about the problem of reducing fluctuations in commodity markets, much still remains to be learned. There is no panacea. The problem requires that all countries be prepared to play their part in helping to keep business fluctuations within as narrow bounds as possible and in setting up and working such international machinery as may be necessary. It calls for efforts on the part of Governments and producers in primary producing countries to set aside reserves in periods of boom and to make their economies as diversified as possible. Like so many other economic and social problems, the stabilisation of commodity markets calls for co-operation between countries and between groups within a country."

"PUNJAB TRADE GUIDE"

This is an interesting and useful guide compiled by the Northern India Publications (66, The Mall, Ambala Cantt., Punjab). It gives a bird's-eye view of the finished goods produced in the States of the Punjab, Jammu and Kashmir and Himachal Pradesh and indicates the States' requirements of industrial raw materials. A glance through the pages of the Guide will show how wide and varied are the goods manufactured in the region—which covers an area of over 150,000 square miles. They range from heavy machinery and light engineering products to consumer goods. The Guide also furnishes information not only about local manufacturers, exporters and importers, and leading commercial houses but individuals and firms in foreign countries which import goods from India. There is a separate section in the Guide, namely, "Who's Who," which gives thumbnail sketches of prominent industrialists and business men in the aforesaid States.

The U.K. exports of office machinery during the first half of this year amounted to £10,075,650, which surpassed the last year's record for the same period by £189,000. Shipments of accounting machinery rose in value from £2,600,000 to £2,900,000 and duplicators, cases and parts from £1,193,000 to £1,231,000. Exports in June amounted to £1,648,608, as compared with £1,362,216 in the same month last year. Australia was the leading customer, with imports worth £338,000, followed by the U.S.A. with £145,000.

METTUR CHEMICAL TO RAISE FRESH CAPITAL

CAUSTIC SODA AND BLEACHING POWDER OUTPUT TO BE DOUBLED

A SLIGHT decline of Rs. 1.87 lakh to Rs. 22.97 lakhs in gross profit is disclosed by the accounts of the Mettur Chemical and Industrial Corporation Ltd. (Managing Agents: Messrs. Seshasayee Bros. Private Ltd., Mettur Dam) for the year ended 31st March 1959. This is the first time since 1953 that the profit of the Company has shown a downward trend, after having risen successively from Rs. 4.30 lakhs in 1952-53 to the record level of Rs. 24.86 lakhs in 1957-58. This is mainly due to the setback in the output of basic chemicals, attributed to a variety of unforeseen circumstances. In the first instance, the Company, like many other industries in the South, had to suffer a power cut for nearly three months early in the year under review. Secondly, there was delay in receipt of essential parts of the additional rectifier equipment and the arrival of the suppliers' commissioning engineer. Consequently, the first stage of increasing caustic soda production from 15 to 20 tons could not be completed in time and brought to beneficial use. Thirdly, the major repairs to the caustic evaporation plant entailed reduced output over a long period. In the result, the output of caustic soda suffered a decline from 4,315 tons in 1957-58 to 3,733 tons.

The profit would have been affected much more but for the larger production of bleaching powder at 5,147 tons, as compared with 4,827 tons in the previous year, and the increase in output of vegetable oils from 1,746 tons to 2,050 tons and the profitable working of the latter department.

The net profit (after providing for managing agency remuneration, depreciation and taxation) also shows a decline from Rs. 7.44 lakhs to Rs. 6.19 lakhs. A sum of Rs. 2.54 lakhs, representing more than a third of the net profit, has been ploughed back. This is made up of Rs. 1.93 lakh to the development rebate reserve and Rs. 60,500 to the general reserve, as against Rs. 88,740 and Rs. 60,500, respectively, added last year. The ordinary dividend for the year under review is proposed to be raised by a negligible extent to 8.8 per cent. from 8.75 per cent., to which level it had been raised last year from 7.5 per cent. paid for 1956-57 and 1955-56. There is, however, a difference in the pattern of distribution. While the interim dividend was raised from 3.75 per cent. to 4.4 per cent., the final one is to be lowered from 5 per cent. to 4.4 per cent.

The progress of the Company is fully reflected in the following comparative table:

(In lakhs of rupees)				
	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds	1,21.37	1,17.03	98.89	87.38

Ordinary	0.54	0.54	0.54	0.54
Carry forward	0.15	0.26	1.31	0.98

The first stage of the Company's expansion plan to increase the caustic soda output from 15 to 20 tons was completed and the plant was ready to switch on to higher production in March last, when there was again a power cut. It was not until July last that the increased production of 20 tons per day could be achieved. The plant capacity of caustic soda is proposed to be doubled to 40 tons per day and the Government of India's permission for this expansion programme has been obtained. The necessary machinery and equipment will be purchased from the U.S. by taking advantage of the foreign exchange provided under the U.S. Export-Import Bank loan programme. The estimated cost of the plan, which was originally placed at Rs. 80 lakhs, has now been revised to Rs. 54 lakhs. This will be met partly by a loan of about Rs. 35 lakhs from the Industrial Finance Corporation of India and partly by the

issue of equity capital to the extent of Rs. 19.5 lakhs (195,000 ordinary shares of Rs. 10 each at par) to the existing holders of equity and preference shares. The new ordinary shares will be issued in proportion to the existing holdings. A sum of Rs. 5 per share is payable on application and the balance of Rs. 5 as and when called, but not earlier than 1st January 1960.

The Directors have also decided to double the production of stable bleaching powder from the present rate of 16 tons to 32 tons per day, with a view to achieving self-sufficiency in the country's requirements and meeting the steadily increasing demand for this chemical. Orders have been placed for additional plant; a part of it has already been received. The increased output is expected to be achieved by March 1960.

The present paid-up capital of the Company is Rs. 60.50 lakhs, made up of 405,000 ordinary shares of Rs. 10 each and 20,000 6 per cent. tax-free preference shares of Rs. 100 each. The reserves and surplus aggregate Rs. 19.05 lakhs, including Rs. 6.42 lakhs representing share premium account. As in previous years, the Company redeemed during the year under review the 5 per cent. (taxable) 1964 debentures to the extent of Rs. 1 lakh, bringing the outstanding liability on this account to Rs. 14 lakhs. The other borrowings amount to Rs. 14.72 lakhs, including Rs. 13.50 lakhs from the Industrial Finance Corporation of India. The current liabilities and provisions stand at Rs. 22.38 lakhs. In pursuance of its programme of expansion, the Company spent Rs. 9.32 lakhs on capital expenditure during the year under review, on top of a sum of Rs. 10.47 lakhs expended in 1957-58, bringing the gross value of the block account to Rs. 121.92 lakhs. More than half of this has been written off, the net value of the fixed assets as on 31st March 1957 being Rs. 55.10 lakhs. Work-in-progress at cost stands at Rs. 3.24 lakhs. The other assets amount to Rs. 74.31 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 13.60 cum-div. On an ex-div. basis, the shares offer a yield of 6.7 per cent. per annum, free of income-tax.

STANVAC'S MARKETING RESULTS

The audited accounts of Stanvac's marketing operations for 1958 show that the Company earned a net profit of Rs. 123.05 lakhs, after providing Rs. 195.53 lakhs for income and wealth taxes. Rs. 63.33 lakhs against depreciation and writing off Rs. 25.08 lakhs covering the expenses incurred in search for oil in West Bengal under the Indo-Stanvac Petroleum Project. After the close of accounts for 1958, it was learnt that the Government would not extend the additional depreciation allowance described under the Indian Income-tax Act to cover the year 1958. Consequently, the taxes were understated by Rs. 21.78 lakhs and the actual net profit results for 1958 was reduced by this amount.

The aforesaid net profit resulted from a gross turnover of Rs. 62.15 crores, including inter-company turnover of Rs. 31.54 lakhs, and represents a return of 1.98 per cent. on the total sales turnover—a reduction of 0.12 per cent. from the previous year—3.58 per cent. on the total net assets and 5 per cent. on capital employed.

Sales volume increased from 380.4 million imperial gallons achieved in 1957 to 418.6 million imperial gallons, representing an increase of 10 per cent. While the total operating cost, excluding product cost, increased, the incidence per unit declined by 74 per cent. The cost of products, which were non-controllable, increased, however, both in total and in incidence per unit, largely because of variations in the cost, insurance and freight factors.

Trading receipts indicated that, after the enactment of the additional Excise Ordinance of 26th May, 1958, under which the Company had to pay Government substantial additional duties unrecouvable in the selling price, the Company was unable to recover the full c.i.f. costs.

The value of the Company's total assets at cost increased by Rs. 0.74 crore, that is, from Rs. 33.76 crores in 1957 to Rs. 34.50 crores in 1958. The total value of its inventories in India at cost stood at Rs. 12.16 crores, as against Rs. 12.21 crores in the previous year. The value of its investments in fixed assets at cost increased by Rs. 0.04 crore and stood at the end of the year at Rs. 13.95 crores.

During the year, the Company maintained full levels of employment, despite unfavourable returns, and paid out Rs. 8.05 crores in wages and salaries, as against Rs. 2.71 crores in 1957. The Company's programme of progressive Indianisa-

MYSORE PAPER RAISES OUTPUT

PROFIT, HOWEVER, DECLINES

A TEN per cent. expansion in production and the great demand for paper, resulting in a rise of over 15 per cent. in sales, have not brought about any increase in the earnings of the Mysore Paper Mills Ltd. (Chairman and Managing Director: Mr. M. D. Shivananappa, Bangalore) for the year ended 31st March 1959. On the contrary, the gross profit has suffered a setback from Rs. 19.81 lakhs earned in 1957-58 to Rs. 17.28 lakhs. This drop of Rs. 2.53 lakhs is on top of a fractional decline noted in the previous year from the record profit of Rs. 20.26 lakhs for 1956-57. The increase in production, according to the Directors, has been achieved, despite considerable difficulties experienced in securing steady, sustained and timely supplies of certain raw materials, chemicals and spares. But the benefit of such hard-won achievement has, unfortunately, been more than offset partly by the substantial rise in the cost of raw materials, stores and freight charges, and partly by the increase in wages and salaries, as a result of the implementation of the Industrial Peace Agreement entered into with the labour in May 1958. The sizable expenditure incurred on repairs and renewal of parts of the first paper machine and other units has also contributed to the rise in costs.

Even after reducing the provision for depreciation from Rs. 10 lakhs to Rs. 8.94 lakhs and that for taxation from Rs. 1.30 lakh to Rs. 1 lakh, the net profit, at Rs. 7.34 lakhs, represents a fall of Rs. 1.17 lakh over the year and of Rs. 2.17 lakhs in the last two years. In consonance with this trend, the allocations to the various reserves and provisions have been reduced. The provision for development rebate is lower at Rs. 24.142 (as against Rs. 42.077 a year ago). While a sum of Rs. 2 lakhs was set aside for repairs and replacements last year, no such allocation has been made this year. As in the previous year, a sum of Rs. 3 lakhs has been added to the I.F.C.I. loan redemption fund. The distribution to shareholders is, however, proposed to be stepped up from 10 per cent. paid for each of the three years 1956-58 to 1957-59, to 12½ per cent., as the following comparative table will bear out:

(In lakhs of rupees)				
	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds	1,95.35	1,08.98	1,06.36	87.92
Other income	1.79	1.61	1.50	1.77
Closing stocks	4.02	3.18	1.25	0.62
Raw materials and stores consumed	56.05	46.08	44.04	39.54
Other expenses	54.87	44.11	44.04	39.54
Gross profit	17.38	19.81	20.55	25.48
Provision for—				
Depreciation	8.94	10.00	10.00	10.94
Taxation	7.50	1.20	1.20	—

To reserves	0.80	0.80	0.80	0.80
Dividend	0.15	0.15	0.15	0.15
8 per cent. preference	0.44	0.44	0.44	0.44
Ordinary	0.27	0.27	0.27	0.27
Carry forward	—	—	—	—

The Company's production of paper during the year under review slightly exceeded 8,000 tons, as compared with 7,900 tons in 1957-58, and increased output, the production costs have gone up sizably over the year. The cost of raw materials consumed has risen over the year by Rs. 6.09 lakhs, stores and spares consumed by Rs. 3.93 lakhs and power and fuel consumed by Rs. 2.94 lakhs. Repairs to machinery have cost Rs. 8.73 lakhs, as against Rs. 1.86 lakhs in the previous year. Salaries, wages and bonus have risen from Rs. 18.25 lakhs to Rs. 19.36 lakhs. All these have cumulatively affected the profit-margin, the ratio of gross profit to sales being

tion made further headway and the number of overseas employees was reduced from 20 in 1957 to 25 in 1958. This represents a reduction of 25 per cent. in the number of overseas employees over the past two years.

The Company's operations for the year were accounts reveal that Rs. 16.84 crores were paid under the heading "import duties and export taxes," including amounts paid to the Government under the Mysore Paper Mills Ltd. (Vacuum Refining Company of India Ltd.) and Rs. 36.97 lakhs in property and other taxes in addition to income and wealth taxes levied above. The Company also collected and paid to the various State Governments a total of Rs. 242.37 lakhs in sales taxes.

Total taxes paid to the Government were Rs. 19.43 crores, an increase of Rs. 1.00 crore over 1957, in addition to assessment of Rs. 31.38 lakhs described above.

no more than 13.8 per cent., having declined from 18.3 per cent. in 1957-58 and 19.1 per cent. in 1956-57.

The Company's balance-sheet as on 31st March 1959 reflects a satisfactory financial position. The paid-up capital of Rs. 25 lakhs is supplemented by reserves and surplus aggregating Rs. 34.22 lakhs. Thanks to the improved cash position, the Company has repaid, in advance, to the Industrial Finance Corporation of India, instalments up to the year 1965 amounting to Rs. 22 lakhs, thus reducing the outstanding borrowings to Rs. 20 lakhs. This balance is repayable in five instalments of Rs. 4 lakhs each. The other current liabilities and provisions stand at Rs. 32.92 lakhs. The gross block of the value of Rs. 152.02 lakhs has been written down by nearly two-thirds to Rs. 55.69 lakhs. The current assets amount to Rs. 56.46 lakhs.

The Company has a programme of expansion, but its implementation is being delayed on account of foreign exchange difficulties. Pending the implementation of this plan, the Company has been pursuing a scheme of renovation, replacement and improvement, in order to secure maximum efficiency and economy. Most of the equipment ordered from abroad for renovation of the first paper machine and to replace and renew worn out parts has been received and the major part of the work has been completed. The Directors are taking action to procure a recausticising unit to improve the working conditions of the soda recovery plant and help smooth operations of the bamboo pulp plant, intended to reduce production costs.

The Rs. 10 paid-up ordinary shares are being quoted at Rs. 21.87 cum-div. On an ex-div. basis, the yield on the shares works out to 6.1 per cent. per annum, free of tax.

HINDUSTAN-PILKINGTON GLASS

The Hindustan-Pilkington Glass Works Ltd. (Managing Agents: Messrs. Talukdar Law & Co. Private Ltd., Calcutta) was established in 1951 and, within a few years of its existence, the Company not only made rapid progress towards manufacturing sheet glass to meet the growing demand but also made the business a remunerative one. In the year ended October 1958—the earliest year for which statistics are available—the Company's turnover reached Rs. 32.96 lakhs. Since then, it has grown to a peak of Rs. 67.69 lakhs in 1957-58. The gross profit, which had suffered a slight setback from Rs. 14.59 lakhs in 1954-55 to Rs. 13.14 lakhs in 1956-57, has recovered to Rs. 21.70 lakhs. It was, however, only last year that the Company paid a maiden dividend of 6 per cent. (for 1956-57) and this is proposed to be maintained for the year ended October 1958 also after raising the addition to the general reserve from Rs. 1 lakh set aside last year to Rs. 6 lakhs.

The progress of the Company during the last few years has not, however, been smooth sailing. It has had to fight against many odds. Besides frequent labour troubles, it has had to face many other handicaps, namely, high railway freight, inadequacy of transport, and erratic and inadequate supply of heavy soda ash which is a basic raw material for the industry. It is gratifying to note from the latest Directors' report that, as a result of the persistent efforts made by the management, there has been some improvement in the supply of heavy soda ash, which, if maintained at the present rate, will lead to higher production and better financial results. This is, however, subject to one condition, namely, that labour continues to give fullest co-operation to the management in terms of the recent agreement concluded with them. It is stated that the results for the year under review would have been better but for the stay-in strike, in violation of the subsisting agreement. As a result of this, production had to be suspended for some time. Nevertheless, both production and despatches during the year under review were markedly higher than in the previous year.

The progress of the Company since 1954-55 is fully reflected in the following comparative table:

(In lakhs of rupees)				
	For the year ended 31st October			
	1958	1957	1956	1955
Sale proceeds	67.69	60.45	56.01	32.96
Other income	4.05	1.76	2.00	8.35
Closing stocks	51.95	29.40	24.32	23.25
Raw materials and stores consumed	16.76	17.95	15.68	15.25
Other expenses	1.70	12.14	14.48	14.48
Gross profit	0.65	0.82	0.82	0.35

Depreciation	0.40	0.58	0.58	0.58
Taxation	14.23	6.54	7.47	8.08
Provision for bank repairs	2.61	0.80	1.49	1.74
Net profit	—	—	—	—
To reserves	6.00	1.05	—	—
Dividend	0.60	0.60	0.60	0.60
8 per cent. preference	0.44	0.44	0.44	0.44
Ordinary	0.28	0.28	0.28	0.28
Carry forward	1.04	0.28	0.48	0.68

The Company's installed capacity is 30 million square feet. Its production in 1956-57 was 23.10 million sq. ft., having risen from 21.80 million sq. ft. in 1955-56. The output for 1957-58 is not known, but it is said to have increased substantially. Last year, the Company opened a new chapter in the history of sheet glass production by manufacturing extra thin and extra thick varieties. It also started producing obscured glass.

AMBIKA SILK EARNS MORE BUT PAYS LESS DIVIDEND

NEW LINE OF PRODUCTION UNDERTAKEN

THE year ended 31st December 1958 has proved to be a most prosperous one in the history of the Ambika Silk Mills Company Ltd. (Managing Agents: Messrs. Maganlal Bhagwandas and Co., Bombay). The turnover expanded from Rs. 66.82 lakhs (in 1957) to a peak of Rs. 85.53 lakhs and the gross profit, which had successively declined from a high of Rs. 6.93 lakhs to Rs. 5.98 lakhs in the previous two years, has recovered to a record of Rs. 8.06 lakhs in the year under review. This prosperity has not, however, brought any increase in the dividend to shareholders, because of the heavier incidence of taxation and the higher provision for depreciation. Thus, the provision for taxation has been raised from Rs. 80,000 to Rs. 239 lakhs and that for depreciation from Rs. 2.78 lakhs to Rs. 3.13 lakhs, with the result that the net profit is a shade lower, at Rs. 2.04 lakhs, as compared with Rs. 2.08 lakhs for 1958.

The rate of dividend has been cut from 15 per cent. to 12 per cent., but this is on a higher capital of Rs. 11.51 lakhs raised by a fresh issue of 3,815 shares of Rs. 100 each during the year under review. It will be recalled that the distribution on the old capital of Rs. 7.70 lakhs was pruned two years ago from 20 per cent. paid for 1955 to 15 per cent. and this was maintained in the following year (1957) also. The dividend for 1958 is equivalent to 18 per cent. on the old capital, so that the cut made two years ago has not been fully restored, despite the fact that the gross profit has exceeded the 1955 level, as will be seen from the following table:

(In lakhs of rupees)				
	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds of cloth and waste	85.53	66.82	62.40	63.14
Closing stock of cloth	8.51	9.62	8.36	4.48
Yarn, stores and spares consumed	53.07	49.02	41.94	52.12
Other expenses	25.34	20.96	19.65	16.45
Gross profit	8.06	5.98	6.86	6.88
Managing Agents' commission	0.40	0.35	0.42	0.39
Depreciation	3.13	2.78	2.15	3.03
Taxation	2.39	0.80	—	1.80
Net profit	2.04	2.08	3.79	1.91
To reserves	0.70	0.90	2.60	0.41
Dividend	1.88	1.15	1.15	1.54
8 per cent. preference	(12%)	(12%)	(12%)	(12%)
Ordinary	0.11	0.06	0.06	0.06
Carry forward	—	—	—	—

* On the higher capital of Rs. 11.51 lakhs raised by a fresh issue of 3,815 shares of Rs. 100 each.

As already stated, the sale proceeds of cloth have gone up sizably, but this rise has been offset, to a large extent, by the increase of Rs. 10.06 lakhs in raw materials and stores consumed and of Rs. 4.38 lakhs in other expenses. Of the rise in the latter, salaries, wages and bonus account for Rs. 2.14 lakhs and excise duty for Rs. 1.54 lakh.

The Company undertook various projects for modernisation of the mills during the year under review. A new line of production, namely, manufacture of knitted fabrics under a licence obtained from the Government of India, was also started during the year. With a view to implementing the Government's programme of promoting exports of art silk fabrics, one of the Directors undertook a tour of Far Eastern countries to establish contacts and explore the possibility of exporting the Company's products. The visit is said to have proved beneficial to the Company.

In order to finance the increased turnover, the Directors issued additional capital during the year, as stated earlier, raising the paid-up capital to Rs. 11.51 lakhs. This is supplemented by reserves and surplus aggregating Rs. 9.97 lakhs. The current liabilities and provisions amount to Rs. 28.02 lakhs, of which secured loans from banks account for Rs. 10.97 lakhs. There has been an addition of Rs. 4.50 lakhs to the block account during the year. With this, the Company has spent Rs. 18.47 lakhs on capital expenditure during the last four years. This sum represents more than 50 per cent. of the present gross value of the block account, at Rs. 35.80 lakhs which has been written down (as at the end of the year) to Rs. 16.30 lakhs. The current assets, of the value of Rs. 33.22 lakhs, cover more than adequately the current liabilities and provisions.

COMPANY MEETINGS AND DIVIDENDS

NEW CINNATOLIAH TEA CO., LTD. Annual General Meeting, Calcutta, 25th August 1959. Dividend: Nil. Transfer books will remain closed from 18th to 25th August 1959, both days inclusive.

CHAMONG TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1959. Dividend: Nil. Transfer books will remain closed from 24th to 27th August 1959, both days inclusive.

DIMAKUSI TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1959. Dividend: Rs. 2.50 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 18th to 27th August 1959, both days inclusive.

DUFFLAGHUR TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1959. Dividend: Rs. 4.50 per share (includes interim dividend of Re. 1.50 per share). Transfer books will remain closed from 18th to 27th August 1959, both days inclusive.

SOOM TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1959. Dividend: Rs. 5.00 per share (includes interim dividend of Re. 1.50 per share and a second interim dividend of Re. 1.00 per share). Transfer books will remain closed from 18th to 27th August 1959, both days inclusive.

LINGIA TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1959. Dividend: Re. 1.75 per share (includes interim dividend of Re. 1.00 per share). Transfer books will remain closed from 18th to 27th August 1959, both days inclusive.

RAJGARH TEA CO., LTD. Annual General Meeting, Calcutta, 27th August 1959. Dividend: Rs. 2.50 per share. Transfer books will remain closed from 21st to 27th August 1959, both days inclusive.

RAMESHWARA JUTE MILLS LTD. Annual General Meeting, Calcutta, 28th August 1959. Dividend: Nil. Transfer books remain closed from 10th to 28th August 1959, both days inclusive.

HINDUSTAN WOOLLEN MILLS LTD. Annual General Meeting, Calcutta, 28th August 1959. Dividend: Re. 0.20 per share. Transfer books remain closed from 10th to 28th August 1959, both days inclusive.

NATIONAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 31st August 1959. Dividend: 11 per cent. or Re. 1.10 per share. Transfer books remain closed from 11th to 31st August 1959, both days inclusive.

STRAW PRODUCTS LTD. Annual General Meeting, Bhopal, 31st August 1959. Dividend: Re. 1.25 per share. Transfer books will remain closed from 21st to 31st August 195

SYNOPSIS OF COMPANY REPORTS

Navsari Cotton and Silk Mills Ltd.

The directors of the above Company (Chairman: J. H. Mehta, Esq., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

After deducting depreciation of Rs. 2,52,000 (Rs. 3,90,000), transfer to development rebate reserve of Rs. 1,44,000 (Rs. 56,000) and provision for taxation of Rs. 3,72,000 (Rs. 2,25,000) there is a profit for the year amounting to Rs. 4,03,380 (Rs. 2,68,499). With the balance brought forward from last year of Rs. 21,503 (Rs. 56,004) the amount available for disposal is Rs. 4,24,883 (Rs. 4,24,503) including Rs. 1,00,000 transferred from dividend equalisation fund. The directors have made the following appropriations out of this sum:—

To payment of dividends of 5,000 cumulative 5 per cent. preference shares of Rs. 100 each (free of income-tax) absorbing Rs. 25,000 (Rs. 25,000) and on 31,500 ordinary shares of Rs. 100 each at Rs. 12 (Rs. 12) per share (free of income-tax) absorbing Rs. 3,78,000 (Rs. 3,78,000) leaving a balance to be carried forward to next year's account of Rs. 21,883 (Rs. 21,503).

In view of the general adverse conditions prevailing in the Textile Industry, the result of the Company may be considered satisfactory.

The values of Mills' buildings and plant and machinery show an increase of Rs. 79,638 and Rs. 7,39,287 respectively due to building extensions and the new machinery added. Most of the machines have been installed and are working satisfactorily.

Accounts in brief are as under:—

Radha Krishna Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. A. G. Gurusamy Naidu and Co., Peelamedu, Coimbatore) present the audited accounts of the Company for the year ended 31st December 1958.

The year's trading has resulted in a profit of Rs. 9,28,908 (Rs. 11,63,647). Out of this the following amounts have been provided for:

To managing agency commission at 10 per cent. on the net profits of the Company amounting to Rs. 54,121 (Rs. 72,444) and to depreciation on the fixed assets Rs. 3,87,701 (Rs. 4,39,207) which leaves a balance of Rs. 4,87,086 (Rs. 6,51,996). Adding to this the balance brought forward from the previous year amounting to Rs. 3,877 (Rs. 3,882) the total amount available for distribution is Rs. 4,90,963 (Rs. 6,55,878). The directors recommend to dispose of this amount as follows:

To transfer to contingency reserve Rs. 1,76,366 (Rs. 1,89,196) and to pay a dividend at the rate of 6 (12) per cent. on the paid-up share capital of the company as on 31st December 1958, absorbing Rs. 3,11,190 (Rs. 3,02,616) leaving a surplus to be carried forward to next year of Rs. 3,407 (Rs. 3,877) after transferring Rs. 1,60,189 to general reserve).

Note: The new shares issued for cash in 1958 rank for dividend only from the date of allotment of shares and for the period from the dates on which they were allotted and the various calls thereon were paid upto 31st December 1958.

A sum of Rs. 74,289 has also been transferred from general reserve to contingency reserve to meet the payments in respect of bonus to staff and operatives and income-tax both in respect of the year 1956.

The Company's investment in the equity shares of South India Viscose Ltd., are expected to yield return after the year 1960-61 when that Company is expected to go into production.

The present share capital of the Company is divided into three categories, viz., 100 rupees share, 50 rupees share and 25 rupees share. Share brokers and others have expressed the view that it would be advisable to have a uniform class of shares so that they may have a better and uniform marketability and value. It would also be a very convenient arrangement from the Company's point of view. Accordingly the necessary resolutions for altering the structure of the share capital of the Company and for the sub-division of the 100 rupees and 50 rupees shares are placed at the meeting.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	62,70,950	Gross block	1,07,79,375
Reserves	14,00,000	Less—Depreciation	62,26,967

Gaekwar Mills Ltd.

The directors of the above Company (Chairman: J. H. Mehta, Esq., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

After deducting depreciation of Rs. 4,35,000 (Rs. 4,10,000), transfer to development rebate reserve of Rs. 2,00,000 (Rs. 3,15,000) and provision for taxation of Rs. 5,99,000 (nil), there is a profit for the year amounting to Rs. 3,89,035 (Rs. 3,82,560). With the balance brought forward from last year of Rs. 18,039 (Rs. 35,479) the amount available for disposal is Rs. 4,07,074 (Rs. 8,18,039) including Rs. 2,00,000 transferred from rehabilitation fund and Rs. 2,00,000 from dividend equalisation fund. The directors recommend payment of dividend (free of income-tax) on 40,000 shares of Rs. 100 each at Rs. 10 (Rs. 10) per share absorbing Rs. 4,00,000 (Rs. 4,00,000) leaving a balance to be carried forward to next year's account of Rs. 7,074 (Rs. 18,039) after transferring Rs. 4,00,000 to general reserve).

In view of the general adverse conditions prevailing in the Textile Industry, the result of the Company may be considered satisfactory.

The values of Mills' plant and machinery show an increase of Rs. 7,66,364 due to the new machinery added. Most of the machines have been installed and are working satisfactorily.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	40,00,000	Gross block	1,11,82,513
Reserves	50,54,700	Less—Depreciation	81,40,802
Provision for taxation	6,40,984	Net block	30,41,711
Provision against investment	2,00,000	Stock-in-trade	73,61,024
Liabilities	75,15,899	Stores, spares, etc.	21,68,126
P. & L. a/c (surplus)	7,074	Debits, deposits and advances	29,09,460
		Investments	16,15,784
		Cash	3,22,552
Rs. 1,74,18,657		Rs. 1,74,18,657	

Rameshwara Jute Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1959.

The year's working shows a surplus of Rs. 7,94,577 (Rs. 2,59,557). Out of this, provision has been made for depreciation amounting to Rs. 72,662 (Rs. 85,575), transferred to reserve for development rebate Rs. 7,652 (nil) and wealth tax amounting to Rs. 4,006 (nil) leaving a sum of Rs. 7,10,263 (Rs. 1,73,982). From this amount is deducted the debit balance brought forward from the previous year of Rs. 7,07,557 (Rs. 8,81,539) thereby leaving a credit balance of Rs. 2,706 (debit of Rs. 7,07,557) to be carried forward to the next account.

Depreciation amounting to about Rs. 12 lakhs still remains to be provided for, up to the end of the year under report. There also remains a contingent liability of Rs. 3,57,000 in respect of arrears of dividend on the cumulative preference shares up to 31st March 1959.

In accordance with the working time agreement of the Indian Jute Mills Association, the Mills worked 165 looms on double shift basis throughout the year under review. It will also be seen that all the accumulated loom hours till now have been sold during the year and the sale proceed has been shown separately in the accounts.

For the first time after 1947, sufficient jute has been produced this year in the Indian Union to meet the full requirements of the Jute Industry. As a result of this, trading conditions were better, resulting in improved profits. Relations with labour were also, on the whole, satisfactory and the directors are, therefore, glad to report an improvement in the working efficiency of the Mills.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	27,00,000	Gross block	31,75,367
Reserves	17,976	Less—Depreciation	9,96,846
Provision for wealth tax	4,000	Net block	21,78,521
Liabilities	24,32,429	Stock-in-trade	22,19,206
P. & L. a/c (surplus)	2,706	Stores, spare parts, etc.	5,01,790
		Debits, deposits and advances	78,736
		Investments	72,369
		Cash	1,06,489
Rs. 51,57,111		Rs. 51,57,111	

Tezpur Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The Company's profit for the year is Rs. 6,18,720 (Rs. 2,712). After providing for taxation on profits of the year Rs. 2,58,214 (nil) there remains Rs. 3,60,506 (Rs. 2,712). To this is to be added the amount brought forward from the previous year of Rs. 36,041 (Rs. 72,154) making a profit available for appropriation of Rs. 3,96,547 (Rs. 96,838) including Rs. 21,972 being provision for liabilities no longer required. Out of this the following appropriations have been made or are recommended by the directors:—

Amount transferred to general reserve Rs. 75,000 (nil), amount transferred to development

rebate reserve Rs. 16,708 (nil), to payment of dividend of 12½ (nil) per cent. on the ordinary shares without any deduction for income-tax paid by the company Rs. 2,47,860 (nil) and dividend of 8 per cent. on the cumulative preference shares without any deduction for income-tax paid by the company Rs. 16,440 (Rs. 16,440) leaving to be carried forward Rs. 40,539 (Rs. 36,041) after providing Rs. 10,059 for wealth tax and providing Rs. 34,298 for rice cut compensation paid to labour for previous years).

The outstanding feature of the year under review was the all time record crop of tea produced by North India and the 1958 production of this Company was also a record. Despite the additional quantity of tea on offer to world markets by producers as a whole, and a marked decline in general price levels towards the close of the selling season, it is gratifying to be able to record an increase, as compared with 1957, in the average prices obtained over the season for the Company's teas.

It is clear that buyers have become more discriminatory in recent years and the Company continues to pursue a policy of trying to raise the standard of its manufacture, whilst at the same time effecting economies in expenditure wherever these can be made without adverse effect on quality.

Crop.—The final 1958 outturns were:—Bahipookri 19,062 (15,143) maunds, Orang 10,043 (9,459) maunds and New Purupbari 5,918 (5,706) maunds. The average sale price realised for sea-son 1958 was Rs. 1.92 per lb. compared with 1957 average of Rs. 1.81 per lb.

The estimates for season 1959 provide for the production of a crop of 31,000 maunds at a total cost on revenue account of Rs. 42,23,619.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	21,88,380	Gross block	48,07,609
Reserves	13,66,708	Less—Depreciation	20,65,109
Provision for taxation	5,70,000	Net block	27,42,500
Liabilities	13,36,691	Stock of tea	12,87,127
P. & L. a/c (surplus)	40,539	Stores	6,27,783
		Debits, deposits and advances	6,83,932
		Investments	81,667
		Cash	79,309
Rs. 55,02,318		Rs. 55,02,318	

Rajgarh Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a profit, after charging all expenses, of Rs. 73,872 (Rs. 77,145) of which taxation provision requires Rs. 34,000 (Rs. 42,000) leaving a balance of Rs. 39,872 (Rs. 35,143). The balance brought forward from last year was Rs. 41,480 (Rs. 41,025) making a total available for appropriation, of Rs. 81,352 (Rs. 76,168). The directors have transferred to development reserve Rs. 1,547 (nil). The directors now recommend that a dividend of Rs. 2.50 (Rs. 2.50), per share be paid absorbing Rs. 50,000 (Rs. 50,000) leaving a balance of Rs. 29,805 (Rs. 26,168) directors have forfeited unclaimed dividends in accordance with Article 158 Rs. 8,987 (nil) leaving a balance to be carried forward, of Rs. 38,792 (Rs. 41,480) including Rs. 15,000 being excess provision for taxation in previous years and Rs. 312 being surplus on redemption of investments).

Wealth tax is estimated to amount to Rs. 2,245, against which there is a surplus of Rs. 440 from provisions made in previous years. Rs. 2,000 has been provided in these accounts and a similar sum has been transferred from general reserve.

A crop of 5,755 maunds was secured and sold at an average price of Rs. 2.19 per lb. This compares with a crop of 5,597 maunds in season 1957, which sold at an average price of Rs. 2.16 per lb.

Estimates for the current season have been framed for a crop of 6,000 maunds to be cost had been secured compared with 1,564 maunds manufactured to the same date last year.

In the report of the directors for the year ended 31st December 1957, members of the Company were advised that permission had been received from the Controller of Capital Issues to standing to the credit of general reserve. This having carefully considered the matter, are of the opinion that, in view of the removal of the excess dividend tax but not of the tax on bonus issues, a bonus issue at this stage would not be in the best interests of the Company.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	2,00,000	Gross block	11,38,222
Reserves	8,46,039	Less—Depreciation	4,91,713
Provision for taxation	79,427	Net block	6,46,509
Provision for wealth tax	2,440	Stock of tea	3,53,355
Liabilities	5,38,317	Stores, tools, etc.	2,04,717
P. & L. a/c (surplus)	38,792	Debits, deposits and advances	2,04,203
		Investments	2,098
		Cash	2,94,133
Rs. 17,05,015		Rs. 17,05,015	

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Your goods have a ready market in South East Asia

EXPORT NOW

India produces the very commodities which the South East Asian countries need — jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now — they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

Dividend Warrants will be sent to registered shareholders or to their mandates, registered in the books of the Company on September 12, 1959. Powers of attorney, etc. where necessary should be submitted with completed deeds for transfer registration before the transfer books are closed.

By order of the Board

P. C. VINK

Chairman and Managing Director

August 12, 1959

7 JUSTICE CHANDRA MADHAB ROAD
CALCUTTA 20

Note: A member entitled to attend and vote is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

NATIONAL TOBACCO CO. OF INDIA LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE Twenty-seventh Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, Norton Buildings, 1 & 2, Old Court House Corner, Calcutta, on Monday 31st August, 1959, at 12 noon, for the following purposes:—

- (1) To receive and adopt the Directors' Report and audited accounts for the year ended 31st December 1958;
- (2) To declare Dividends on Ordinary, First Preference, and Second Preference Shares;
- (3) To elect a Director;
- (4) To appoint Auditors and to fix their remuneration;
- (5) To transact any other business that may be brought forward.

(6) As Special Business:—

To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution, namely:

"That the proposed re-appointment and the draft Agreement submitted to this meeting setting forth the terms and conditions on which it is proposed that B. N. Elias & Company Private Limited be re-appointed the Managing Agents of the Company for a period of 10 years from the 15th August, 1960, (which has for the purpose of identification been subscribed by the Chairman of the Board of Directors) be and is hereby approved and application to the Central Government for its approval under Section 326 of the Companies Act, 1956, be and is hereby directed to be made." (Details contained in the printed Circular addressed to the Shareholders accompanied herewith.)

The Share Transfer Books of the Company will remain closed from the 11th to 31st August, 1959, both days inclusive. Shareholders are reminded that Dividend Warrants will be issued in the name of registered holders or their

mandatees only and will be sent to their respective addresses as recorded in our books.

A member who is entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,

For and on behalf of

B. N. ELIAS & COMPANY PRIVATE LTD.,

N. B. ELIAS,

Director,

Managing Agents.

NORTON BUILDINGS,
1 & 2, OLD COURT HOUSE CORNER,
CALCUTTA, 14th July, 1959.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT A MEETING OF THE DIRECTORS HELD on the 7th August 1959, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 25th September 1959, the payment of a final dividend for the year ended 31st March 1959, of 2% (free of Income Tax) on the issued Ordinary shares, payable on the 28th September 1959.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,14,97,610.

Two interim dividends, each of 2% (free of Income Tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1959, were paid on the 27th September 1958 and the 14th April 1959 respectively.

After paying the final dividend amounting to Rs. 30,32,000 and allocating Rs. 79,036 to Capital Reserves, Rs. 5,13,103 to Development Rebate Reserve and Rs. 17,50,000 to Fixed Asset and Stock Replacement Reserve, the amount carried forward will be Rs. 24,64,029.

The Directors also declared a first interim dividend of 2½% (subject to Income Tax) in respect of the year to 31st March 1960, payable on the 28th September 1959.

Under the Finance Act, 1959, the system of grossing of dividends and paying them free of Income Tax was abolished, and instead Income Tax must be deducted at prescribed rates before payment of dividends, commencing with dividends declared in respect of the Company's financial year ending 31st March 1960. The interim dividend of 2½% is payable under this new system and is therefore taxable.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 25th September 1959 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 28th September 1959. The share transfer books of the Company will be closed from the 31st August to the 25th September 1959, both days inclusive, and transfers received in order at the registered office of the Company up to the 29th August 1959 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,

B. GRANGER PEARSON,
Assistant Secretary.

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA.

8th August 1959.

SRI KRISHNARAJENDRA MILLS, LTD.

MYSORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 39th Annual General Meeting of the Shareholders of Sri Krishnarajendra Mills, Ltd., will be held at the Registered Office of the Company, Bangalore Road, Mysore, on Saturday the 29th August 1959, at 3.30 p.m., to transact the following business:—

1. To receive, and if thought fit, to adopt the Directors' Report and the Profit and Loss Account for the year ended 31st March 1959 and the Balance Sheet as on that date, together with the Auditors' Report.
2. To declare dividend.
3. To elect Directors:—

(i) To appoint a Director in place of Sri Chandrakant Mulraj Khatau,

who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.

(ii) To appoint a Director in place of Sri S. N. Gundu Rao, who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.

(iii) To appoint a Director in place of Sri M. H. Mariyanna who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.

4. To appoint Auditors for the Company to hold office from the conclusion of this Annual General Meeting to the close of the subsequent Annual General Meeting and to fix their remuneration.

Sri P. V. Sathyanarayana Setty, Mysore, has given special notice of the following resolution to be moved in the Annual General Meeting of the Company:—

"Resolved that Sri G. Lakshmana Rao, M.A., B.Com., F.C.A., Chartered Accountant, Gandhinagar, Bangalore-9, be and is hereby appointed Auditor of the Company to audit the accounts for the year from 1st April 1959 to 31st March 1960 in place of or in addition to the retiring Auditors."

5. To consider and if thought fit to pass the Special Resolution, separately posted to the shareholders, with or without modification.

Explanatory Statement concerning this Special Resolution as required by Section 173 of the Companies Act has also been posted to them.

By Order of the Board of Directors,

L. KANDASWAMY,

General Manager.

MYSORE, 19th July 1959.

(1) Any member entitled to attend and vote may appoint a proxy to attend and vote instead of himself. The proxy need not be a member.

(2) The Transfer Books of the Company will be closed from 22nd August 1959 to 29th August 1959 both days inclusive and the dividend will be paid to all the shareholders whose names appear in the books on 22nd August 1959.

(3) Dividends when declared will be payable on and after 16th September 1959.

(4) Changes in the address of shareholders should be notified to the Company as early as possible.

Offers should reach the undersigned not later than 12 noon on 9th November 1959.

QURBAN SINGH,

Director, Railway Stores,

Railway Board,

State Entry Road,

New Delhi-2.

GILT-EDGED DULL

(From Our Own Correspondent)

BOMBAY, 12th August

With only a week to go for the opening of the list of subscription to the State loans, the short-term money market has remained steady, though very little activity is reported. Lenders are reserved, in view of the forthcoming loans and interest rates in the inter-bank call money section, which had hardened last week, have remained firm. The common rate among the Exchange banks and big Indian banks is 1½ per cent., and that among the smaller banks is 2 per cent. House money at seven days' notice is also unchanged at 3¼-3½ per cent., and short-term deposits for one to six months at 3¼-4 per cent.

The 91-day Treasury Bill rate, which had declined in the previous two weeks from 2.717 per cent. to 2.519 per cent., has hardened a little to 2.530 per cent. per annum. The response to this week's sale has again been less favourable, the amount offered not having exceeded that invited at Rs. 3 crores. Apparently because of the State Governments' borrowings, there will be no sale of Treasury Bills next week. The next sale will be held on 24th August, for which the tenders have been reduced to Rs. 2 crores. There were no sales of Intermediate Treasury Bills during the period 5th to 8th August, but they are being continued in the period 12th to 22nd August, when they will be available at Rs. 99.381 per cent.

A rise of Rs. 22.87 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 7th August 1959. This is in contrast to the aggregate contraction of Rs. 39.04 crores in the previous two weeks. Notes held in the Banking Department are lower by Rs. 19.50 crores. The total notes issued are thus higher by Rs. 3.57 crores. Foreign securities have declined by Rs. 5 crores, while rupee securities have gone up by Rs. 10.04 crores. Rupee coins also show a fall of Rs. 1.66 crores. The decline of Rs. 5 crores in foreign securities is made good to some extent by the rise of Rs. 3.61 crores in balances held abroad. Deposits of Central Government have shrunk by Rs. 6.79 crores, those of other Governments by Rs. 9.13 crores and of banks by Rs. 4.49 crores. A rise of Rs. 4.66 crores is noted in loans and advances to Governments and of Rs. 3.81 crores in other loans and advances. Investments have fallen by Rs. 10.34 crores.

The upward trend in time deposits of banks has been maintained during the week ended 31st July 1959, with a fresh rise of Rs. 10.58 crores. Disclosing this, the Scheduled banks' statement for the week, however, shows a decline of Rs. 4.40 crores in demand deposits. Inter-bank borrowings are lower by Rs. 2.81 crores. Advances have recorded a further fall of Rs. 5.38 crores and bills purchased and discounted Rs. 3.93 crores. Investments have gone up by Rs. 26 crores, on top of an increase of Rs. 18.36 crores in the previous week, while there has been shrinkage of Rs. 10.94 crores in cash balances.

The Gilt-edged market has turned dull and activity is restrained. In fact, there have been offerings in some of the dated loans, in view of the forthcoming new issues of State loans. State loans too are on offer at rates even below the quoted rates, but buyers are reserved.

3 per cent. 1986 Conversion loan has further declined by 10 nP to Rs. 73.55. 3 per cent. 1968-69 has shed 10 nP to Rs. 97.40. 5 per cent. 1966-68, after moving up from Rs. 95.20 to Rs. 95.25, has drifted back to Rs. 95.20. 3½ per cent. 1965 is 5 nP lower at Rs. 99.95, as also 3½ per cent. 1967 at Rs. 99.40. 3½ per cent. 1968 is on offer at Rs. 99.40, after it had risen from Rs. 99.35 to Rs. 99.45. 3½ per cent. 1974 has been marked down by 8 nP to Rs. 99.55 and 4 per cent. 1972 by 10 nP to Rs. 101.60.

Sterling has been a little erratic in New York. Spot sterling hardened from 281.15-281.18 cents to 281.18-281.21 cents before declining to 281.10-281.13 cents. Three months' forward is unchanged over the week at 281.05-281.08 cents, after touching 280.99-281.12 cents. The rupee-dollar rate also moved in consonance with this trend. Banks' selling rate for U.S. T.T. rose from Rs. 476 to Rs. 476.25 before going back to Rs. 476 per \$100. Their buying rate is, however, unchanged at Rs. 472.75 per \$100.

TANNED HIDES FIRM

(From Our Own Correspondent)

MADRAS, 10th August

Arrivals of E.I. tanned cow hides were fair sized and shippers were actively buying them at firm prices. Cow calf and buff calf were coming into the market in small quantities, due to off season.

Despite August holidays in the U.K., importers were making large inquiries and a penny advance was paid on several lines. The East European countries were also probing the market, and tanners quoted higher prices expecting better market after a fortnight. Owing to good demand from the U.S., buff heavies ruled firm.

In the tanned skins section, 5½/6 lbs. goatskins forged ahead, due to good call from the U.K.—Continents—19s. to 19s. 3d. has been paid for run. 8/9 lbs. skins, too, were in good demand, as also lower ends of heavy weights. Tanned sheep middle class ruled weak, as the importers were not following the high prices quoted at origin. Prime classes ruled steady.

During the month of August, 296 bales tanned cow hides and 10 bales tanned goat were shipped to the East European countries (in addition to the figures given last week).

BULLION BUOYANT

(From Our Own Correspondent)

BOMBAY, 12th August

The bullion market ruled buoyant during the week under review. Gold forged ahead, thanks to bull manipulations, nervous bear-covering and good demand by spot houses. It was reported that some South Indian interests had purchased about 5,000 to 6,000 tolas of gold in this market. With the virtual stoppage of contraband metal from the Persian Gulf ports since the introduction of special rupee notes, even a demand of modest size for ready gold has a perceptible effect on prices. With every rise in prices during the week under review, those who had sold earlier in expectation of a drop in values began covering their sales, while the bulls held tight to their position. Consequently, the backwardation rate (budli in favour of bulls) for gold in August settlement widened considerably from As. 3 last week to as much as As. 12 yesterday, so that the bulls were obliged to pay a margin at the rate of Rs. 10 per tola. Following the imposition of margin, the backwardation rate narrowed down and stood at As. 9 today. Since, however, this was more than As. 8, the margin continued to be operative.

Silver also evoked excellent buying support induced by fears of short supply. Operators noted the poor arrivals of silver coins from Tibet due to the violation of the Indo-Chinese trade agreement. The maturing August settlement continued to be in the grip of bulls. Nevertheless, the carryover rate which stood in their favour for a long time turned against them to the extent of As. 3 on Monday, As. 4 yesterday and As. 6 today.

August settlement in gold rallied from Rs. 118-3 on Wednesday last to touch a high of Rs. 121-11 today before finishing at Rs. 121-6-6. The net gain over the week was Rs. 3-3-6. September contract firmed up from Rs. 118 to Rs. 121-1 today. Towards the close, it was lower at Rs. 120-13-6, owing to profit-taking.

Ready gold, which stood at Rs. 118-5 at the close of last week, spurred in the course of the week to touch Rs. 121-11-6 at one time today. This is the highest level for the past six weeks. The closing rate was As. 2-6 below this peak. The daily average arrivals and offtake of gold were 2,600 tolas and 3,600 tolas, respectively. The floating stocks of gold are estimated at 45,000 tolas.

August settlement in silver met with good support and strengthened from Rs. 197-9 to Rs. 200-7 today before finishing at Rs. 200-5. September settlement registered a net gain of Rs. 2-6 over the week, today's closing rate being Rs. 199-11. Business in October settlement commenced at Rs. 198-14 today. The settlement improved to Rs. 199-10 but finished As. 2 lower.

Ready silver opened the week at Rs. 197-4, as against Rs. 197-6, and rose gradually to touch a high of Rs. 200-4 today. Towards the close, it was quoted an anna lower. The net rise over the week was Rs. 2-13. The daily average arrivals of silver were 11 bars, while the offtake was eight bars. The floating stocks of silver are reported to be around 500 bars.

Both ready and forward silver in the London bullion market tended to move up, the former from 78½d. to 78½d. per ounce and the latter from 78½d. to 78½d. Silver in New York, however, was unchanged at 91.375 cents per ounce. Ready gold in London, after declining from 249s. 10½d. to 249s. 9½d. early in the week due to poor demand, recovered subsequently to 249s. 10½d. owing to the easiness of the pound sterling vis-à-vis the dollar. The latest available dollar rate for gold in London is \$35.11½-\$35.13½, same as last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	12-8-59	Highest	Lowest	5-8-59
GOLD				
Ready (.999 fine Mint)	121 9	121 11½	118 1	118 5
Forward	121 6½	121 11	117 15	118 3
September	78 8	78 8	77 8	77 8
SILVER				
Ready (.999 fine Mint)	200 3	200 4	197 4	197 6
Forward	200 5	200 7	197 8	197 9
London Silver Ready	78½d.	78½d.	78½d.	78½d.
London Forward	78½d.	78½d.	78½d.	78½d.
London Gold	249s. 10½d.	249s. 10½d.	249s. 9½d.	249s. 10½d.
New York Silver	91.375 c.	91.375 c.	91.375 c.	91.375 c.

* 20th August settlement.

† 21st August settlement.

GOOD DEMAND FOR LINSEED

(Messrs. A Bradley and Co.)

CALCUTTA, 10th August

The linseed market remained generally firm during the week. Although prices reacted to Rs. 22.81 towards mid-week, closing prices were steady at Rs. 23.25 with buyers more in evidence than sellers. September options, which followed the same general pattern, were rather neglected, and only small-scale activity was reported. Seeds supplies were poor and a general feeling that Indian linseed oil might return to parity with world markets lent impetus to the present improved tone.

Business in oilcakes was keen. After fair quantities had been sold to the U.K. at prices up to £35 5s., there was a small decline with buyers temporising.

The oil market was active. Some fresh export business was reported at around £101 and shippers were showing keen interest in anticipation of fresh business with the U.K. and Australia.

The latest available quotations are: Ready Rs. 23.37, August-September Rs. 23.62 and September Futures Rs. 23.64 per maund.

COTTON FUTURES CHEERFUL

(From Our Own Correspondent)

BOMBAY, 12th August

The firm trend noted last week in the cotton futures market gathered momentum during the week under review. Futures values advanced on firm local and upcountry support. Sentiment was quite cheerful. The comparatively small volume of tenders against the maturing August contract and the favourable survey results of the cotton tendered on Thursday, imparted strength to the August contract. Speculative buying prompted by reports of excessive rains in Khandesh, Berar and Akola tracts was responsible for the firmness of the new crop contract March 1960. The strength of the spot market, where activity was brisk and prices firm, also helped sentiment. It was feared that unwanted rains might adversely affect the crop which, in the context of smaller stock holdings by mills, would make cotton dearer in the coming months. This consideration led to fresh buying. Investors also lent support to the market. Values consequently staged a smart rally.

I.C.C. Moglai Jarilla August 1959 opened the week at Rs. 708 and steadily advanced, on short-covering, to Rs. 715 yesterday. Commencing at Rs. 714 today, the contract advanced to Rs. 716 before closing fractionally lower at Rs. 715.50. Tenders issued on the 6th inst., the second notice day, amounted 2,350 bales, comprising 2,200 bales of Laxmi, 'A' 50 bales of Cambodia and 100 bales of Kalyan. Total to date aggregated 4,650 bales.

I.C.C. Moglai Jarilla March 1960 started the week's trading at Rs. 676 and advanced, on speculative buying and spot house support, to Rs. 681.25 on Monday. After declining to Rs. 677.50 yesterday, the contract again rallied to Rs. 680 today before closing fractionally lower at Rs. 679.50.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	12-8-59	High	Low	5-8-59
I.C.C. Moglai Jarilla:				
August 1959	715.50	716.00	704.00	710.00
March 1960	679.50	681.25	675.00	677.50

The spot market at Sewri reported brisk activity. Almost all popular varieties received the attention of mills. Prices consequently improved. Good business was done in Kalyan, Wagad, Kalagin, C02 Laxmi, Jaydhar, etc. A notable feature was the keen interest shown by mills in new crop. Ahmedabad and Southern mills were especially interested in new crop Berar, 197/3, 0394, and Khandesh. Sizeable business was put through in these varieties.

Export demand was moderate. Only routine business was reported in Bengal Deshi current and new crop. Wagad and Yellow Pickings also attracted the attention of shippers.

Mill interest in foreign cotton was mostly confined to Sudan cotton. Mills were inclined to buy Sudan cotton because Egyptian prices were of late steadily rising. Moreover, the discount rate on sales to India was also reduced progressively from 35 per cent. to 30 per cent. Consequently, Sudanese styles were considered a better buy. Fairly large quantities of Sudanese cotton were booked by mills subject to the availability of licences.

The announcement regarding payments proffered for Egyptian cotton (see page 258), made by the State Bank of India, has been received with a sigh of relief. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal Deshi 710; Berar Jarilla 750; Khandesh 875; Laxmi 1,010; Jaydhar 950.

Steady conditions continued to prevail in the Karachi cotton market during the week under review. Export interest was moderate and domestic demand normal. Prices remained unchanged at last week's levels. Export of Pakistan cotton, from the commencement of this season till 30th July, aggregated 651,305 bales (of 400 lbs.), as against 640,012 bales in the same period last season.

Cotton futures in Alexandria ruled easy during the week. Report of good weather in the growing regions and satisfactory crop development, in the wake of slack export demand, touched off a wave of selling. Futures values, consequently, declined. The following are the latest available quotations—in tallars per lb.—from Alexandria:

Karnak: November 75.40; January 74.95. Ashmouni: August 67.90; October 66.80.

Cotton values in Liverpool made modest gains during the week on trade covering and mill fixation which found offerings limited. The higher U.S. crop forecast by the Department of Agriculture did not bring forth any sizable speculative selling as the estimate was in line with trade expectations in Liverpool. Sudan contracts advanced, thanks to Commission House buying and encouraging Khar-toum advices. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 21.58; December-January 21.35; March-April 21.12.

American cotton mixed growth contract: October-November 21.55; December-January 21.50; March-April 21.50.

lower levels met with resistance which was prompted by the feeling that the bulk of the crop would enter the loan programme.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	11-8-59	4-8-59	28-7-59
Spot	...	33.15	33.55	33.85
October	...	32.09	32.26	32.37
December	...	32.15	32.29	32.31
March	...	32.51	32.57	32.62

SALES TAX ON COTTON YARN

(From Our Own Correspondent)

BOMBAY, 12th August

The yarn traders are greatly perturbed over the Bombay Government's move to include cotton yarn and cotton thread for the purpose of sales tax in the new Sales Tax Bill which will come into effect from 1st April 1960. Under the Bill, cotton yarn which is at present completely exempted from sales tax will be liable to the payment of a sales tax of one per cent. in the first stage. The rate of sales tax on cotton thread proposed in the Bill is 5½ per cent. The Bombay Yarn Merchants' Association and Exchange Ltd. has addressed a communication to the Secretary, Finance Department, Government of Bombay, in which it has urged the reconsideration of the whole issue and sought exemption of cotton yarn from the levy of sales tax and inclusion of cotton thread under schedule C liable to sales tax at one per cent, like cotton yarn waste. The Association has, however, expressed its satisfaction over the fact that art silk yarns, silk yarns and staple fibre yarns are put in schedule C.

Despite the proposed levy of sales tax on cotton yarn, prices of these yarns continued to move up during the week under review. It was reported that several local mills had done fairly large sales of yarn, particularly 20 counts, for export at rates varying from Rs. 15.25 to Rs. 16.50 per bundle of 10 lbs. The sales at lower prices for export are attributed to incentive which generally amount to Rs. 2.25 per bundle. In view of the handsome incentive, some Ahmedabad mills have also sold a large quantity, estimated at 3,000 bales, for export to Burma and Indonesia at much lower prices than the local sales. Art silk yarns, however, encountered some selling and tended to decline on fears of large arrivals of imported yarns against exports of fabrics under the Export Promotion Scheme. In sympathy with art silk yarns and on reports that the Naini mills had resumed normal working, staple fibre yarns also came in for selling.

Cupressa Bamberg yarn (60x2) August delivery moved down from Rs. 1,680 to Rs. 1,665. October delivery dropped Rs. 19 to Rs. 1,702. Spot Cupressa eased by 6 nP to Rs. 7.50. Among imported art silk yarns, 120 Japan fell by 6 nP to Rs. 4.78 and 150 Japan by 5 nP to Rs. 4.75. 120 Italy receded by 7 nP to Rs. 4.87. 150 Italy shed 3 nP to Rs. 4.68. Among indigenous yarns, National Rayons 120 bright cones first grade were quiet at Rs. 4.69, as also 150 bright cones first grade at Rs. 4.25.

Staple fibre yarn (40x2) August contract suffered a loss of Rs. 5, today's closing rate being Rs. 661. October contract declined by Rs. 2 to Rs. 652. Spot Centours were unchanged at Rs. 3.56. Citys and Kohinoors, however, gained 3 nP each to Rs. 3.47 and Rs. 3.59, respectively. Among imported yarns (60x2), Paramounts were subjected to heavy selling pressure and climbed down from Rs. 8.06 to Rs. 7.72. Fujis lost 6 nP to Rs. 8.56.

In the cotton yarn section, ten counts Podars were well supported and firmed up by 12 nP to Rs. 13.62. Moderns were fully maintained at Rs. 14. Twenty counts Hinds advanced by 25 nP to Rs. 17.12. Moderns rose by a like amount to Rs. 17.50. Forty counts Minaxis forged ahead from Rs. 25.62 to Rs. 26.37. Moderns were firm at Rs. 26.75. Sixty counts Raghuvamsis and Finlays were fully steady, the former at Rs. 57 and the latter at Rs. 63. Among eight counts, Finlays put on a rupee to Rs. 83. Citys improved from Rs. 67.50 to Rs. 68.50. Mahendras and Moderns gained 50 nP each to Rs. 73.50 and Rs. 78.50, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday as compared with those a week before:

	12-8-59	5-8-59
Art silk yarn—		
60/1 Cupressa Bamberg August (100 lbs.)	1,665	1,680
October	1,702	1,721
Spot	7.50	7.56
120 Japan (per lb.)	4.78	4.84
150 Japan (per lb.)	4.75	4.80
120 Italy (per lb.)	4.87	4.94
150 Italy (per lb.)	4.68	4.71
Staple fibre yarn—		
40x2 August (per case of 200 lbs.)	661.00	666.00
40x2 October	652.00	654.00
40x2 Spot	8.56	8.56
Cotton yarn (per bundle of 10 lbs.)—		
10s	13.62	13.50
20s	17.12	17.25
40s	26.37	26.75
60s	57.00	57.00
80s	73.50	73.50

PROMOTING OILSEEDS EXPORTS

(From Our Own Correspondent)

BOMBAY, 12th August

With a view to promoting India's exports of oilseeds, oils and oilcakes, the Bombay Oilseeds and Oils Exchange has requested the Chief Controller of Exports to continue the incentive scheme for the export of groundnut oil up to the end of September and also to extend the shipment period for the export of groundnut expellers earned through the export of groundnut oil and salad oil up to the end of December next. The Exchange

has also requested the Government to extend the shipment period for H.P.S. groundnut which expires at the end of next month up to the end of February. Moreover, it has pleaded for the announcement of a fresh quota without any delay, which will help the overseas buyers to negotiate business with India with confidence. The plea for the extension of the shipment period of groundnut H.P.S. is based on weather considerations. Monsoon is not the proper time for shipping groundnuts. The operators generally are of the opinion that these measures, if approved, will undoubtedly lead to expansion of exports of some of the oils and seeds. The decision of the Government is now awaited with considerable interest.

The groundnut section continued to rule easy, thanks mainly to unencouraging weather reports from the major producing areas. There was heavy liquidation in seeds and oils. The vanaspathi manufacturers and crushers were very cautious buyers. The export front showed no signs of any significant improvement. Some rumours regarding enquiries for oil from Burma failed to enthuse the market. The maturing contract was worst hit, it having fallen from Rs. 191 last week-end to Rs. 189 today. The pronounced weakness in the maturing contract is due to fears of heavier deliveries against it. In contrast, February 1960 contract improved from Rs. 164.87 to Rs. 166.50, after fluctuating both ways in a narrow range over the week. Bold ready lost ground to close at Rs. 38, as against Rs. 39.25 last Wednesday. Similarly, oil ex-mill drifted lower from Rs. 20.37 to Rs. 20.

The castorseed section, too, met with some bull liquidation during the major part of the week as a result of fears of heavy tenders and increased switchover to distant delivery. It showed some signs of improvement today mainly on account of some improvement in the export section. Some support was in evidence at lower levels. September 1959 contract hardened from Rs. 152.87 to Rs. 154. May 1960 contract was marked up from Rs. 153.75 to Rs. 155.75. Ready Madras, however, declined from Rs. 30.62 to Rs. 30.50, and oil B.S.S. from Rs. 16.69 to Rs. 16.50.

Dull conditions prevailed in the linseed section, except perhaps in oilcakes. Traders continue to expect Australian enquiry for oil. But, it has not yet materialised, notwithstanding the rise in prices of foreign oil. September 1959 contract, which stood at Rs. 32.87 last Wednesday gave way to a close the week at Rs. 32.75, after fluctuating in a narrow range. The May 1960 contract, however, met with good support and improved by 50 nP to Rs. 32.75. Bold ready lost 37 nP to wind up the week at Rs. 32.50. Oil was higher by 7 nP to Rs. 16.19.

Cottonseed was active in sympathy with raw cotton. February 1960 contract, which wound up last week at Rs. 112.50, rose to Rs. 113.75 on Monday, it softened to Rs. 113.50. The September contract, however, encountered selling pressure and closed lower by 50 nP at Rs. 136.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	12-8-1959	5-8-1959	29-7-1959
Groundnut			
August 1959	189.00	191.00	191.00
February 1960	166.50	164.87	165.37
Bold ready	38.00	39.25	40.00
Forwarded ready	38.25	39.50	40.25
Khandesh quality	38.25	39.50	40.25
Oil ex-mill ready	20.37	20.37	20.75
Railway receipt	19.69	20.37	20.37
Castorseed			
September 1959	154.00	152.87	154.75
May 1960	155.75	153.75	154.87
Ready Madras	30.50	30.62	30.75
Ready Kanpur	29.25	29.50	29.75
Oil B.S.S.	16.50	16.69	16.81
Oil commercial	16.50	16.75	16.92
Linseed			
September 1959	32.75	32.87	32.50
May 1960	32.75	32.25	31.75
Bold ready	32.80	32.87	32.50
Oil ready	16.19	16.12	16.67
Cotton seed			
September 1959	112.50	113.50	113.00
February 1960	113.50	112.50	113.00
Wiper seed	80.50	81.00	80.75
Kandi seed	23.00	23.50	23.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ All quotations for future contracts are in terms of cash, except linseed, which is in cwt. A ready is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter.

BLACK PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, 12th August

Malabar black pepper ruled steady but irregular during the fortnight under review. The undercurrent, however, remained healthy. The recent reversal in the trend of the world pepper market is believed to be the result of the psychological impact of the news that there will be a sizable reduction in the production of Lampung, Muntok and Sarawak. Singapore and New York were the first to react to the news of the reduced estimates. Singapore spurred from Str.580 to Str.589 for black and from Str.517 to Str.410 for white.

New York, which was until recently a selective buyer and was mostly confined to Lampung, began to bid Malabar black pepper at advanced prices. The dealers there are reported to have purchased more than 100 tons for August shipment from India at \$0.37 to \$0.28. They are offering nearby as well as long forward. Spot in New York improved to \$0.28, with growers showing more interest.

China has purchased about 500 tons of Malabar black at Rs. 185 to Rs. 187½ per cwt. f.o.b. Cochin.

There are fresh inquiries from Russia and other Communist countries but at lower price. Hence no business is reported.

Garbled ready at Cochin remained fairly steady, despite increased arrivals. Following the announcement of President's ruling in Kerala, August and October deliveries in garbled proved erratic, the highest and the lowest being Rs. 123 and Rs. 125, respectively, for August and Rs. 127½ and Rs. 125 for October. Ungarbled at Cochin and Alleppey moved between Rs. 725 and Rs. 737½. Calicut was fairly steady at Rs. 760, there being inquiries for Tellicherry pepper both from the U.S.A. and Europe at 1 cent higher than that of Alleppey.

Most of the Lampong and Sarawak stock at Singapore was reported to be in the strong hands of one or two Chinese firms. News of crop failure in Lampong and Muntok and the reduction in the final estimate of Sarawak encouraged investment buying. As a result, Singapore, which was under-cutting India, is now quoting above Malabar. Hence, there are prospects of fairly good business with New York during the coming two or three at buyers' prices, as was the case with Singapore, and is likely to increase its price at every next sizable business. Neither the grist in Europe and the U.S.A., as the dealers there have been buying hard to mouth. They are likely to come out to buy when they see that the prices are stabilised at a certain level and are content to give pepper at lower price. Future of pepper appears promising.

Ready pepper in Bombay is quoted between Rs. 99 and Rs. 103 per Bengal maund according to quality.

SUGAR SUPPLY COMFORTABLE

(From Our Own Correspondents)

BOMBAY, 12th August

There was a notable rise in sugar arrivals by rail and road into the City during the week under review; they aggregated 18,900 bags, as against 11,000 bags last week. Consequently, the supply position was quite comfortable and the wholesale rates (per bag) for the different grades of sugar were the same as those prevailing a week before. They are: A grade: Rs. 13.81; B grade: Rs. 14.08; C grade: Rs. 12.02; D grade: Rs. 11.11.

Sugar circles are greatly surprised at the allegation of the Union Food and Agriculture Minister, made in the Lok Sabha that the other day, sugar prices, taking advantage of the fall in production and smaller carryover stocks, in the course of a statement issued to the Press, the Minister said that this difficult position had been exploited by the industry and trade which had pushed up prices. The Government had taken various measures to ease the position. The trade has accused the Government for this rise in prices as due to hurried change in decisions, the consumer has presumed that there was shortage of sugar in the country.

Sugar at Hapur, after a fall of about Rs. 5 per bag following the ban on inter-State movements and stoppage of free sale in the U.P., has moved up and North Bihar, improved to Rs. 8 to Rs. 8.25 per bag earlier this week, but declined subsequently to be quoted at Rs. 118 per bag on Monday. Arrangements are being made to supply sugar at controlled prices to consumers on ration basis. In retail, sugar was being quoted at Rs. 1-12 per seer, as against the controlled price of 97 nP.

The Muzaffarnagar sugar market ruled quiet and turnover was moderate. The ex-mill delivery prices were at a premium of Rs. 8 to Rs. 8.25 per bag. Spot delivery prices were Rs. 118 per bag for small grain and Rs. 120 per bag for large grain. The mill delivery quotations were:—Muzaffarnagar Rs. 41-13; Deerpur Rs. 42-4; Saheli Rs. 42-0.

Sugar ruled steady in the Kanpur market, due to scanty arrivals and persistent demand. Ex-mill per bag was not quoted, while spot rate was Rs. 118-8.

Khandesh ruled quiet in the presence of new prices and inter-State movement. The prevailing prices were Rs. 35 to Rs. 38; poor Rs. 34 to Rs. 36; and a maund.

Ready sugar ruled quietly steady in the Allahabad market, where the prevailing prices were Rs. 35 to Rs. 38; poor Rs. 34 to Rs. 36; and a maund.

Our prices were almost unchanged in the running down. The latest prevailing prices were: Chaku dry Rs. 24.35; mixed dry Rs. 24.35; wet Rs. 19.85; shikhar darsa Rs. 22; chaku

Our phagm ran down sharply, due to active bear pressure. It opened at Rs. 14.25 last Monday, declined to Rs. 13.37 and was quoted today at Rs. 13.60.

STRONG DEMAND FOR QUALITY TEAS

(From Our Own Correspondent)

CALCUTTA, 11th August

Under the impetus of strong demand, good quality teas both during yesterday's export sale and at the last week's auctions for internal consumption registered an improvement. The low stock in the U.K.—this was 111.92 million lbs. in the week ended 31st July, as against 112.18 million lbs. in the previous week—was a factor which aided sentiment yesterday.

Note was taken of the freeing of tea from import licensing by Australia. Although Australia imported almost all its requirements from Ceylon, the abolition of import licensing was thought to be of interest here. Another announcement evoking interest here was Ceylon's proposal to establish a pack of tea of its own for internal consumption. Such a blend after being developed would subsequently be introduced to foreign markets also. This measure was designed to ensure the availability of unadulterated quality tea to consumers abroad. At present, Ceylon does not blend and this is being done by purchasing countries.

In the internal auctions held last week, dusts on offer amounted to 13,921 chests. There was keen demand. The black exportable teas were a favourite of buyers. Prices advanced by 10 nP. Darjeelings were fully firm, with the legs-cut Doors realising higher prices. Among C.T.C.s, the vined that the producing countries are not going to give pepper at lower price. Future of pepper appears promising.

Ready pepper in Bombay is quoted between Rs. 99 and Rs. 103 per Bengal maund according to quality.

TEA PRICES IRREGULAR

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 6th August

975,000 lbs. were offered in sale No. 30, which was held on 4th August 1959. The teas on offer in this sale showed a slight improvement. The market met with good demand, but prices were irregular. There was only fair enquiry for low medium broken which were easier by 5 nP. However, corresponding fannings were better supported and were steady on last week's rates. Improved mediums and highgrowns were keenly competed for and sold at dearer rates following quality. Clean black fanning grades were in good demand and were dearer. Whole leaf grades were in less demand at easier rates. The quotations were:

	1959	1958
	Rs.	Rs.
Low medium	1.58 to 1.68	1.55 to 1.65
Medium	1.75 to 1.85	1.70 to 1.80
Good medium	2.05 to 2.20	1.90 to 2.05
Quality	2.10 to 3.10	2.25 to 3.40

Dust Sale 'U'—Offerings in Sale No. 'U', which was held on 6th August 1959, aggregated 730,000 lbs. A useful selection of dusts were on offer in this sale. The market opened with a strong general demand which continued throughout the sale. Prices generally advanced by 10 nP for all descriptions, with the exception of best liquoring highgrowns which are quoted barely steady. Buyers showed keen interest in black grainy dusts which were the strongest feature of the sale. C.T.C. dusts were in good demand and sold well at dearer rates.

London Market:—No sale this week.

Colombo Market:—Sale of 3rd August 1959:—Strong general demand. Improved U.V.As dearer, following quality. Limited selection best available Dimbula Dicksows substantially dearer. Others irregular. Medium broken slightly dearer. Low-grown Gulf types advanced 5 to 10 cents.

Sale of 4th August 1959:—Active demand. Useful liquoring grainy dust dearer. Improved U.V.As black leaf lowgrown offgrades advanced 10 cents. Other sorts firm.

Calcutta Market:—Export:—Sale 8:—40,717 chests. Good general demand. Whole leaf and plain B.P. slightly dearer. Plain fannings up to 15 nP dearer. Bright C.T.C.s slightly easier. Poorer C.T.C.s less demand.

Internal:—14,481 chests dusts in sale 8. Strong demand. Egyptian types 10 to 15 nP dearer. Medium Assam C.T.C. irregularly easier. Best C.T.C. powdery types slightly dearer.

Export Quota:—Some business has been transacted at 24 nP. At the beginning of this week. At present, there is a slightly easier tendency in the market and there are buyers at 24 nP with sellers at 24 nP.

Forthcoming Auctions:—Sale No. 31 will be held on Tuesday, 11th August 1959 and dust sale 'V' on Thursday, 20th August 1959.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"Sale 31:—650,000 lbs. Market irregular. Low medium and medium broken easier, but similar fannings stronger and dearer, particularly black leaf. Limited selection best liquoring steady. Orange pekoes considerably dearer. Flower pekoes weak."

JUTE GOODS FULLY STEADY

(From Our Own Correspondent)

CALCUTTA, 11th August

Fully steady conditions were in evidence in the jute markets during the week under review. More inquiries, keener activity in the futures market, and brisk covering of sacking against sales to China were some of the factors which led to a modest gain in prices of heavy goods, in general, and B. twills and heavy Ceas, in particular. Hessians, on the other hand, accounted for business of a routine nature only, and the fractional gain in mid-week in sympathy with the upward trend in sacking could not be absorbed as the details of mills' stock of hessian at the end of July created disappointment. Earlier in the week, mills bought substantial quantities of new raw jute. However, this failed to lead to a rise in prices, in view of the offers from sellers far exceeding the demand. Sellers put in an air of reserve, which failed to evoke response from mills on continued reports of good harvest, though there was a decline in the quality of the first arrivals on account of poor retting.

The market in heavy goods was gradually rising this week, following good business done with China and several other countries. The upward trend was, however, arrested on Saturday last when the details of stocks with mills as at the end of July were announced. Although sacking goods at 54,200 tons fell by 3,200 tons, the decline was much below the expectations of the market. In view of the very good business done for export and of satisfactory shipping instructions in the month of July, it was surprising that the fall was only 3,200 tons. Market circles apprehended that internal sales had dropped in the month. The stock of hessian at 26,000 tons rose by 2,300 tons, while miscellaneous goods at 12,600 tons accounted for a decline of 1,700 tons. The result is that the overall decline is only 2,600 tons. Market circles thought that such stock figures as these were not a strong case for a further unsealing of looms.

Purchases of sacking by China caused considerable satisfaction in the market. For these have been much more substantial than last year, and indications are that China would continue to

buy at this rate. As regards hessian, business with the United States was for insignificant quantities here and there. Argentine showed interest for near goods, while scattered purchases were made by the United Kingdom. Although, during recent months, export business in goods has been satisfactory, the picture as a whole for the jute season 1958-59 so far is not cheering. Exports in the eleven months ended May aggregated 756,900 tons at which the decline was by 6,300 tons as compared with the corresponding previous figure. A fact which market circles did not fail to take note of was that sacking exports at 421,300 tons actually fell by 67,300 tons, while hessian exports increased by 52,900 tons to 293,600 tons and other goods by 8,100 tons to 42,000 tons. On the other hand, in the same period, Pakistan increased its exports of jute goods to 121,477 tons (sacking 82,123 tons, hessian 38,667 tons and other goods 687 tons) from 98,256 tons, showing an increase of 23,221 tons or a little over 23 per cent. In May alone, the increase in Pakistani exports was by 8,694 tons as compared with May 1958. Pakistani customers included the United States, South Africa, Australia, Burma, East Africa, Belgium, the Netherlands, and Great Britain. It was officially stated in Karachi this week that, in order to encourage fibre exports to the United States, a direct monthly shipping service between East Pakistani and American ports has been started. The American Isthmian Shipping Line would operate, to begin with, between Chittagong and Boston and New York. It was also stated that, in order to co-operate with Pakistan's aim to increase exports of jute cuttings to the U.S., the steamship line had agreed to charge lower freight.

On Tuesday last, following good demand, ready B. twills scored to Rs. 101.20 from Rs. 100.85. The higher trend was interrupted by profit-taking in the course of the day, but, at the lower level, keen enthusiasm on behalf of buyers was shown. Since the recent sales to China was for August-September shipment, ready goods were subjected to substantial covering, and, as a result, scarcity was a feature which aided the gain in prices. But hessian 40" 10 oz. gave way from Rs. 40.55 to Rs. 40.30, due to lack of business. The feature on Wednesday was the business done with Australia in cornsacks. B. twills closed higher at Rs. 101.30. But for profit-taking by bulls, the gain should have been more substantial. Ready hessian 40" 10 oz. was unchanged at Rs. 40.30. Profit-taking in heavy goods continued on Thursday, and B. twills for this reason declined to Rs. 101.10. There were good reports on hessian from the futures market, and ready hessian 40" 10 oz. advanced to Rs. 40.50. While hessian 40" 10 oz. was unchanged at Rs. 40.50 on Friday (Continued on page 284)

Established mainly to organise and effect exports from and imports into India, the S.T.C. has sought to specialize in link arrangements, linking import of essential items with exports of Indian goods. Import of textile machinery and rice against export of Indian goods has been successfully effected in the past. General arrangement for sale & purchase of goods on similar link basis with countries of the world is negotiated to promote Indian trade and the business methods have been so devised as to afford to business organisations in the country, reasonable opportunities for participation in linked transactions. Among various items S.T.C. is exporting some are—Iron Ore, Manganese Ore, Chrome Ore, Handicrafts, Tea, Coffee, Coid, Cardamoms, Jute, Shoes, Salt and other products and is importing—Caustic Soda & Soda Ash, Raw Silk, Textile Machinery, Chemicals and other essential commodities.

THE STATE TRADING CORPORATION OF INDIA LIMITED.

SURVEY

(Concluded from page 251)

have not attained the earlier levels. There have been wide fluctuations not only in the value of exports but also in volume, as has been the case with many other commodities. Brazil has emerged as a strong competitor for mica in the American market. There are also signs of competition from some synthetic substitutes. These developments have adversely affected the economy of mica mines and those engaged in the export of this mineral. Moreover, the absence of a proper organisation to safeguard the interests of Indian exporters have left the foreign importers free to dictate terms for this commodity.

Viewed against this background, it is highly gratifying to find that the All-India Mica Convention, which met at Giridih, Bihar, last week, should have strongly recommended the establishment of an All-India Mica Exporters' and Miners' Association and also an appropriate machinery to fix the minimum export price for mica. The Convention, inaugurated by Mr. S. K. Sinha, Chief Minister of Bihar, was attended by mica mine-owners and exporters, besides representatives of the Central Government and the Mica Export Promotion Council. It was decided that the membership of the proposed Association should be made compulsory for every mica exporter, but optional for miners. The Association would be armed with powers to formulate and enforce measures for the development of mica industry, particularly for evolving a code of conduct for exports and fixing prices. The views of the Association, it was agreed, would be considered authoritative on matters relating to production and exports of mica. The Association will have four offices at Giridih, Kodarma, Gudur and Bhilwara.

One of the important objectives of the Association will be to evolve and implement the minimum export price scheme for mica. This measure is particularly significant to the development of the industry and trade, since the steadily declining trend in the prices of loose splittings, which form the bulk of India's production, has been causing considerable concern and the prevailing prices are uneconomic. The Convention felt that no mica, other than scrap, waste or powder, should be allowed to be exported from India at less than the price fixed by the Association. One, however, wonders whether by excluding scrap and waste-mica—which amount to over 70 per cent. of the crude mica obtained from the mines—from the minimum price scheme, the value of the scheme is not limited. The so-called waste-mica, though very useful in the production of paints and boards and fillers for rubber works, is now exported from India at nominal prices. It is necessary to enable these varieties also to fetch a fair return.

The imposition of minimum prices alone will not be a sufficient solution to the various problems confronting the mica trade. The Convention did realise this. The practice of exporting mica on consignment basis, for example, has been causing considerable harm to the traders. According to this system, mica is shipped to foreign traders, who will stock it to be disposed of as and when demand arises. The Convention, therefore, urged the Government to ban the system. It suggested that export should be allowed only against a minimum of 90 per cent. letter of credit.

In order to control the quality of exported mica and to ensure healthy trade relations between Indian exporters and foreign buyers, the Convention felt that the Mica Export Promotion Council should be authorised to examine all the consignments before shipment. The Convention recommended the opening of a research centre with financial assistance from the industry for exploring new avenues for the use of mica. It was pointed out that research on mica was being done on a small scale in the Central Glass and Ceramic Research Institute, Jadavpur, which had evolved two new uses of mica. But it was felt that the work could be done on a bigger scale by a research centre exclusively for the purpose on the lines adopted by the Shellac Export Promotion Council. The Convention also urged that no sales tax be levied on mica, as it was an exportable commodity. The Convention unanimously passed a resolution that efforts should be made to increase the export of mica by 15 per cent. this year. It also decided that appropriate steps should be taken to increase production. This is essential not only to cater to foreign markets, but to meet the domestic demand, which is bound to go up with the growth of electrical industry.

MARKET REPORTS

(Concluded from page 281)

with a steady undertone. B. twills spurted to Rs. 101.45 on export inquiries and keener enthusiasm in the futures market. Towards the week-end, B. twills closed better at Rs. 101.55, but the gain would have been more impressive had it not been for the decline in stock of heavy goods with mills having been much below earlier anticipations. On Saturday, the price was steadily rising when the announcement became known; earlier in the day, the rate touched a high level. Hessian 40" 10 oz. was quiet at Rs. 40.40. Yesterday, more interest was shown in covering in heavy goods, although the market was officially closed. Near delivery goods were a close and persistent target, and B. twills rose further to Rs. 101.60. On the other hand, ready hessian 40" 10 oz. was quiet at Rs. 40.35.

Mills showed keen interest in the raw jute market and purchased substantial quantities. This, however, did not push up prices, in view of the good number of offers. In fact, August-September Northern bottoms fell from Rs. 23 to Rs. 22.50, and the old crop from Rs. 21.75 to Rs. 21.25. Daissee bottoms were unchanged at Rs. 24.25 new and at Rs. 23.25 old.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 10th August

Quiet conditions prevailed in the foodgrains market during the week. Arrivals continued to be small and the Union Food Minister admitted in the Lok Sabha that State trading in foodgrains had run into difficulty in at least two States, namely, Bihar and West Bengal, where it had to be suspended in order to ensure flow of adequate supplies in the open market. In U.P., under the wheat levy scheme, the State Government could procure only about 25,000 tons of wheat, but the scheme is proposed to be continued in the belief that as prospects of *kharij* crop are bright and the holding power of the cultivator is limited, arrivals of wheat will soon increase.

Wheat at Hapur ruled quiet with a modest decline in the price of *dara* quality. Arrivals in the open market were scarce and consumer demand was being met out of arrivals in private market from rural areas and also some from unauthorised sources. *Dara* wheat was quoted at Rs. 18 and farm quality at Rs. 19.25 a maund. The Government purchases here so far have been nominal.

Rice registered modest improvement, due to tight supply position. The week-end prevailing prices were:—*sela basmati* Rs. 33 to Rs. 36; *main-puri* Rs. 25; *ramajwayan* Rs. 25.50; *gadda* Rs. 23 a maund.

BASE METALS MOVE UP

(From Our Own Correspondent)

CALCUTTA, 11th August

Greater demand against the background of brighter advices from abroad pushed up prices of base metals during the week under review. A visible increase in the demand for copper scrap was in evidence, and the rush of small-scale consumers, especially utensil makers, to purchase as much as available funds permitted resulted in firm prices. Utensil scrap was quoted at Rs. 225, with clean wire scrap being fully firm at Rs. 240.

In Calcutta, electrolytic zinc opened at Rs. 102.50 and gradually rose to close at Rs. 103.50. In view of the increase in business and the greater demand from the fabricating industry, especially the bucket galvanisers, a shortage was felt and that explained for this week's improvement in price.

Spot tin was firm but unchanged throughout the week at £7924 per ton in London, where demand from the Continent was substantial. Here the quotation closed at Rs. 575 per cwt. at which rate the week's gain amounted to Re. 1. The rise mainly due to better advices from the foreign markets. The stock position here was comfortable.

Lead was throughout the week quoted at Rs. 74.50 in Calcutta. Demand was slack. In London, lead opened at £704 per ton and rose to £714 to close at £714.

Notices

THE INDIAN IRON AND STEEL COMPANY, LIMITED

AT A MEETING OF THE BOARD OF Directors of The Indian Iron and Steel Company Limited, held on the 11th August 1959, the Directors have declared an interim dividend in respect of the year ended 31st March 1959, of One Rupee per share on the Ordinary Share Capital ranking for such dividend (that is to say exclusive of the bonus shares issued in February 1959) being at the rate of 10 per cent. per annum without deduction of Indian Income-tax. This action has been taken in order that shareholders shall not be kept waiting for their dividend in view of the closing of the accounts for the year being delayed pending notification by Government of the revised sales retention prices of steel and pig iron.

The Directors wish to make it clear in this connection that this dividend although termed "interim" will in fact be the final dividend for the year and that no further distribution in respect of the year ended 31st March 1959 will be recommended for consideration at the Annual General Meeting to be convened in due course.

As already notified, the Ordinary Share Register and the Transfer Books of the Company will be closed from the 26th August 1959 to the 3rd September 1959. Payment of this interim dividend will be made on or after the 21st September 1959, to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 3rd September 1959, or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED,
P. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, 11th August, 1959.

THE INDORE MALWA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 52nd Ordinary General Meeting of Shareholders of the Indore Malwa United Mills, Ltd., will be held at the Registered Office of the Company at 139, Meadows Street, Fort, Bombay, on Tuesday, the 22nd September, 1959, at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Balance-Sheet and Profit and Loss Account for the year ended 31st December, 1958.
2. To declare a dividend.
3. To appoint a Director in place of Shri Pirelal Sheoparshad Seksaria, who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in the place of Shri Chandansinha Sagatmal Bharkatiya, who retires by rotation and is eligible for re-appointment.
5. To appoint Auditors for the current year, i.e., for the year 1959, and to fix their remuneration.

The Share Transfer Books of the Company will remain closed from Monday, the 24th August, 1959, to Tuesday, the 22nd September, 1959, both days inclusive.

By Order of the Board,
K. L. SEKSARIA,
Chairman.

Dated 25th July, 1959.

N.B.—1. The Dividend, when sanctioned, will be made payable on and after the 3rd October, 1959, to those Shareholders whose names stand on the Register of the Company on the 24th August, 1959, at the Registered Office of the Company, Bombay 1, upon presentation of Dividend Warrants which will be posted to each Shareholder to his last given address.

2. A Member of the Company entitled to attend and vote at the said Meeting is entitled to appoint any other person (whether a Member or not) as his proxy to attend the above Meeting and vote instead of himself.

THE TWYFORD TEA COMPANY LIMITED KOTTAYAM

NOTICE IS HEREBY GIVEN THAT the Forty-fourth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Kottayam, Main Meeting on the 31st August 1959, at 11 a.m., to transact the business of the Company, and to receive the Directors' Report and Accounts, and to elect a Director, to elect Auditors, and to fix their remuneration, etc., and to transact any other business of which notice is given in the notice convening the Meeting.

The Transfer Books of the Company will be closed from 24th August to 3rd September, 1959, both days inclusive. The Company is enclosing a copy of the notice convening the Meeting to each Shareholder, and is enclosing a copy of the notice convening the Meeting to each Shareholder, and is enclosing a copy of the notice convening the Meeting to each Shareholder.

By Order of the Board,
PARKINS,
KOTTAYAM, 10th August, 1959.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."

William Blake.

VOL. XCIX. No. 2526

BOMBAY, 22nd AUGUST 1959

PRICE: Rs. 2

SUGAR MUDDLE—WHY?

WHITE sugar, as distinct from brown sugar, is the favourite of our politicians. Even a modest rise in its price makes them frown at its manufacturers and distributors. A substantial rise actually sends them scurrying to the floor of the House to raise a storm and shower on the Minister, the millowners and the wholesale dealers numerous epithets of a disagreeable nature. It gives them an opportunity to show to the public that they are the champions of the man in the street. But even a steep rise in the price of brown sugar (*gur* and *khandsari*) goes completely unnoticed. The three-hour debate in the Lok Sabha on Friday last was in keeping with this tradition. There was much heat and anger in the observations of most of the Members, but no light nor sense, though there were a few exceptions. Insinuations and innuendoes were hurled at the Union Food Minister, Mr. Ajit Prasad Jain, by several Members of Parliament and some even demanded his resignation. More than one Member openly alleged or implied that the Minister himself had colluded with sugar manufacturers in bringing about a rise in prices. One of them suggested that the manufacturers and traders in sugar had defrauded the public to the tune of Rs. 16 crores, though he gave no indication as to how he arrived at this figure. He also charged the officials of the Department concerned with having made large sums of money. These are serious charges to make, but it is up to the Minister to decide whether a mere denial of them is sufficient or he should go further than that to vindicate his honour and expose the hollowness of the opposition charges.

Quite a few Members of the Lok Sabha charged Mr. A. P. Jain and his Ministry with inefficiency and mismanagement. This, in our opinion, is a legitimate charge. For over a year now, this journal has drawn pointed attention to the rising trend of white sugar consumption and to the possibility of shortage of this essential food. Indeed, for the past two years, we have opposed the plan for building up an export trade in sugar and advocated, instead, the building up of a buffer stock to take care of a shortfall in production in any year for reasons beyond control. Neither the Ministry nor the Minister paid any attention to our suggestions. On the contrary, they persisted in their attempts to export sugar through persuasion and compulsion on the manufacturers. Even as early as in December last, it was quite apparent that there would not be enough white sugar to go round without inducing a sharp rise in prices. And yet the Ministry kept on saying that 100,000 tons of sugar should be exported in the 1958-59 season. At that time, it did not require much foresight to anticipate the developments that actually followed in the subsequent months. And yet the Ministry took no preventive measures. This was complacency, if not irresponsibility. It is true that, later on, the Government announced that only 50,000 tons of sugar would be exported in the first half of the current season and that the position about the export of 50,000 tons would be decided in June after taking into account the supply deposits. It is also true that actual exports have been so small as to make no appreciable difference to the prices for the domestic consumer. capital appreciation's policy has had a psycho-

Although the effect on prices which is inevitable at par, it has met faced with a tight supply. said that the list was an eye, as it were; the much maligned white sugar was the mainstay of the Bombay large-scale diversion of whom are institutions, large-scale manufacture in Uttar Pradesh which is as large as the crushing operations subscriptions for its Rs. 58 season. They pleaded that those for U.P. Government for taking effecting this diversion.

Mr. A. P. Jain and his Ministry paid no heed to these suggestions and the chances of adding 100,000 to 150,000 tons to the sugar produced in that season were missed. Again, throughout 1958 and early in 1959, the spokesmen of the industry reiterated their contention and it was only when it became patently obvious that there would be a shortage in white sugar that the Government took notice of their plea. Even then, the step it took to curb production of *khandsari* sugar was half-hearted and not sufficiently strong. The excise levy imposed on *khandsari* in the 1959-60 budget was only of a modest nature and still gave this brown sugar an advantage of nearly Rs. 11.50 per cwt. over white sugar; indeed, this advantage was raised a little when the tax proposals were finalised by the Finance Minister. Be that as it may, by the time *khandsari* was brought under a relatively small excise duty, much damage had been done, for the bulk of the crushing season was over. Thus, during the 1957-58 and 1958-59 seasons, owing to the defective excise policy of the Government, the country has lost anything between 300,000 tons and 400,000 tons of white sugar. As pointed out by us on several occasions in the past, this quantity is not entirely made up by a corresponding rise in the supply of *khandsari*, because the sugar recovered from cane in the form of this brown sugar is nearly a third less than that when the same cane is used for making white sugar. But for this loss of production, the supply of sugar in the current season would have been a little more than 2.50 million tons, instead of 2.19 million tons as is the case at present. There would have been no scarcity, no rise in prices, no need for wasting resources (men, money and precious time) for devising all the controls that have been introduced during the last two or three months, and no opportunity for an acrimonious debate of the type that took place in Parliament last week.

It was obvious early in March itself that the summer and monsoon months would be a crucial period for consumers of sugar, because by then one could get a good picture of the supply position for the current season. In his presidential speech at the annual meeting of the Indian Sugar Mills Association, Mr. P. Hadfield had given a fair estimate of the situation. That was the time for the Government to have acted promptly by introducing comprehensive controls. Instead, the Food Ministry waited and wavered. It reduced the monthly releases, or delayed them, thereby providing additional grist to the speculators' mill. Subsequently, it introduced controls but only by instalments and region-wise, instead of at one stroke and all over the country. The lessons of controls during the war and post-war

years had been completely forgotten. We had pointed out that partial controls would not be effective, that price control without physical control would be futile and that gentlemen's agreements would be more honoured in the breach than in their observance. This is the lesson that the country had learnt from the controls in the past. Why did the Food Ministry go about the question of controls in a half-hearted manner? The Minister gave no convincing explanation. He said that there was no machinery and that State Governments had to be consulted. These are lame excuses. Most of the controls that are in force now were introduced in the interval of a few days and much of the consultation with State Governments took place only after the situation had deteriorated and prices had gone up sharply. What prevented Mr. Jain from taking in March itself the steps that he took in June and July? The fact is he and his advisers were complacent about the position and did not want to introduce comprehensive controls.

Even now, the Food Minister maintains there is enough sugar in the country. There is undoubtedly an arithmetical balance between demand and supply. As against an estimated demand of 2.10 million tons, the supply is 2.19 million tons. But this does not leave enough margin to cover the normal stocking requirements of the trade and the demand in the initial months of the next season. Again, if production in the 1959-60 season turns out to be no better than in the current season—that is the forecast of some in the sugar industry—even the arithmetical balance will not be there next year; there will be an actual shortfall. How is the Government going to meet the situation? Surprisingly enough, none raised this question in Parliament, nor did the Food Minister care to tell the House about the difficult situation that lies ahead for consumers of white sugar. There are only two ways in which the situation can be tackled: to import sufficient sugar to cover the gap or to introduce rationing all over the country. As the foreign exchange position is not propitious to buy sugar from world markets notwithstanding the marked fall in the international price, to live within the domestic production is the more desirable, though more difficult, of the two courses. But this difficulty can be avoided, if the Government takes steps to ban the production of *khandsari* and to reduce the output of *gur*, so that all sugar factories may be assured of adequate supplies of cane for full capacity production.

Some may say that this solution is a drastic one. But a drastic malady requires a drastic remedy. Further, a little reflection will show that our suggestion is the most economic way of solving the sugar problem. Apart from avoiding the expense, trouble and political unpopularity involved in introducing rationing, more white sugar can be obtained per ton of cane than *khandsari* or *gur*. And that is exactly what the country needs. That is also what our politicians want. If there is any lesson to be learnt by the Food Ministry from the debate in Parliament last week, it is that it should take all possible steps to secure an increase in the production of white sugar and a fall in its price at least to the level that prevailed a year ago. It is significant, in this connection, that, although the price of *gur* has gone up by 30 per cent. since the beginning of this year, as against the 17.7 per cent. increase in the price of white sugar, and although *gur* accounts for about 57 per cent. of sweetening agents consumed in the country, as compared with the white sugar's share of 39 per cent., not one Member of Parliament said a word of protest against the rise in the price of this brown sugar. Incidentally, this only shows that the main object of those who raised the debate on the rise in white sugar prices was not out of any love for the consumer but out of spite against the business community and a desire to bring down the Government in the eyes of the public.

COAL TARGET

MUCH concern was expressed in the Lok Sabha last week over the unsatisfactory performance of the coal industry in the public sector and also over the trends in coal production. It was feared that the 60-million ton target fixed under the second Plan might not be reached. The Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh, however, averred that there was "every reasonable prospect" of the achievement of the target. Again, the Members on their part were somewhat critical about the manner in which the public sector was functioning. Criticism was directed against the losses in some of the public sector collieries. This, of course, is no new criticism, for similar charges have been made in the past. But the point is that they continue to be made. The Government will do well to inquire into the workings of individual collieries and adopt measures which will restore as many of them as possible to sound financial health.

Although there may well be much scope for improvement in the working of individual collieries in the public sector, it would be wrong to lose sight of the overall problem. The fact is that the public sector has had an uphill task to perform. For it has had to begin almost from scratch. And it should not occasion any surprise if its performance has not always come up to the mark. The problem should be viewed from two angles. In the first place, efforts should continue to be made towards improving the efficiency and the pace of progress in the public sector. Secondly, the Government and Parliament should not miss the wood of coal target in their pre-occupation with the trees of public sector collieries. The second is in fact the more serious danger.

The important question is whether there is sufficient evidence to justify the Union Minister's optimism about the achievement of the second Plan target for coal and also whether this is by no means a long-term issue—the ground is being prepared for the achievement of the much larger target that is to be fixed under the third Plan. Under the second Plan, the target for coal, as is well known, is fixed at 60 million tons or 22 million tons more than in 1955, which was taken as the base year. A substantial part of the increase is reserved for the public sector which is expected to increase its production from about 4.5 million tons in 1955 to 16.5 million tons by the end of the second Plan period—an increase of 12 million tons; the private sector is assigned the task of increasing its production from 33.5 million tons in 1955 to 43.5 million tons or by 10 million tons.

Trends in coal production have by no means been very satisfactory. In 1958, the output aggregated 45.3 million tons (private sector 39.5 million tons and public sector 5.8 million tons), as against 43.5 million tons in 1957 (private sector 38.2 million tons and public sector 5.3 million tons), 39.4 million tons in 1956 (private sector 34.7 million tons and public sector 4.7 million tons) and 38.2 million tons in 1955 (private sector 33.8 million tons and public sector 4.4 million tons). It will be seen that, whereas the increase in production in 1957 was of the order of 4.1 million tons, it was only 1.8 million tons in 1958. Again, between 1955 and 1958, whereas the private sector increased its output by 5.7 million tons or by 57 per cent. of its target, the public sector increased its raisings by 1.4 million tons or by a mere 11.7 per cent. of its target. For the current year, it is estimated that production may go up to 47.5 million tons. But this will still be 12.5 million tons short of the target, with only one year left for reaching it. Clearly, there is ground for misgivings over the possibility of hitting the target and also over the performance of the public sector.

In the public sector, the National Coal Development Corporation has drawn up a programme for reaching a target of additional production to the tune of 10.5 million tons in the second Plan. The chief areas from which this additional production will be raised are: Bihar collieries 6.5 million tons; Madhya Pradesh collieries 3.1 million tons; Orissa collieries 0.5 million tons and expansion of production in old collieries 0.5 million tons. With the exception of 0.5 million tons from the existing 11 old State collieries and a further 1.5 million tons from Singareni, the additional production has to come largely from virgin areas to be exploited for the first time. Among the important new mines, the Korba mine project (Madhya Pradesh)—its reserves are estimated at 400 million tons—consist of an opencast mine for 1 million tons and two pairs of inclines for raising 0.6 million tons. In the Kathara project (Bihar), the proved reserves are 251 million tons, the target for production

being 1.5 million tons by 1960-61. The targets for other leading projects with figures in brackets indicating reserves—all in million tons—are: G. di (Bihar) 1.5 (340); Saunda (Bihar) 1.2 (43); and Bachra (Bihar) 0.6 (21). The Government's review of the working of the Corporation in 1957-58 observed that, on the basis of the progress recorded so far, the Government was reasonably confident that the Corporation would be able to give a good account of itself in attaining its target of production. Available evidence does not justify this confidence. This is not to understate the pioneering efforts made by the Corporation nor the teething troubles which are an inevitable part of any organisation. Indeed, it may even be said that the public sector, in the face of heavy odds in the shape of lack of men and equipment and difficulties of opening up new areas, has acquitted itself well. All this cannot, however, add up to a confidence in its ability to reach the target within the specified date.

These considerations point to the need for the reconsideration of the whole issue of the quantum, if not the principle, of reservation of additional coal production in the public sector. It will certainly be wiser to allow more facilities to the private sector which, despite the difficulties imposed by inadequate transport facilities and the Government's failure to arrive at a decision on coal prices, has made a significant contribution to coal production. In the context of the urgent need to raise coal output and the fact that coal remains and will for long remain the staple source of commercial energy for Indian industries, the Government will be extremely ill-advised to postpone the adoption of measures which will help the industry increase its production. It is clearly unnecessary to labour the obvious point that the issue of coal prices should be decided early and in a realistic manner. In deciding this issue, special care must be taken to give the incentive for the production of the varieties of coal for which the demand from metallurgical industries is expected to go up steeply in the next few years. This, of course, is the minimum the Government must do in the cause of coal production. There is next the problem of transport facilities which should be augmented, because it cannot be too strongly reiterated that availability of wagons is a determining factor in the production of coal.

OIL AND NATURAL GAS COMMISSION

ON the legislative anvil at present is a Bill which seeks to give statutory status to the Oil and Natural Gas Commission. Established in August 1956, the Commission has been responsible for organising prospecting for, and drilling of, mineral oil and gas. In view of the fact that the Commission is engaged in a work of great national importance which demands prompt decisions and adequate powers to carry them out, it has for long been felt that it should be given the necessary status and powers which will enable it to discharge its functions in a satisfactory manner. This, in fact, was the view expressed by the Estimates Committee, which, in the course of its report on the Department of Mines and Fuel Oil Division, felt that, if the Commission "is to function efficiently as an industrial body, it must be armed with sufficient powers and given sufficient status so as to provide flexibility in administration as well as operation." Accordingly, it deplored the delay in giving the Commission a statutory status.

Explaining the factors which have led to the Government's decision in favour of giving the Commission its new status, the statement of objects and reasons in the Bill points out that "exploration work in the public sector has reached a stage, where, for efficient and expeditious progress, much more autonomy and elasticity are required than would be possible if the Commission continued to work as a Government department." Under the Bill, the Commission will consist of three members, including the Chairman, and one of the members will be exclusively in charge of the finances of that body. The Commission's chief functions are:

- (1) To organise and implement programmes for the development of petroleum resources;
- (2) to carry out necessary surveys for the exploration of such resources and the drilling and other prospecting operations required for this purpose;
- (3) to promote the production of petroleum and its refinement and the sale of petroleum and petroleum products produced by it; and
- (4) to arrange for the transport and disposal of natural gas and refinery gases produced by the Commission, provided that no industry which will use any of these gases as raw material shall be set up by it without the previous approval of the Central Government.

In the discharge of its function, the Commission will be bound by such directions as the Central Government may, for reasons to be stated in writing, give to it from time to time. In respect of certain matters, the Commission must obtain the previous approval of the Central Government before it takes action. These are: the creation of a post carrying a salary exceeding Rs. 2,000 per month; the implementation of any scheme or proposal which will involve capital expenditure exceeding Rs. 30 lakhs and the disposal of any property, right or privilege, the original or book value of which exceeds Rs. 10 lakhs. This is obviously intended as a safeguard against any possible tendency on the part of the Commission to incur large expenditure without giving it sufficient thought and attention.

Under its new set-up, the Commission should be able to turn out more and better work. That at any rate is the hope of its promoters. The Commission's sphere of activity is widening every year. In 1957-58, it employed 14 geological parties, 8 gravity-cum-magnetic survey teams and 6 seismic parties. The area covered by the geological and gravity-cum-magnetic parties was 1,818 square miles and 13,324 square miles, respectively. In the following year, the Commission employed 18 geological parties, 6 gravity-cum-magnetic survey teams and 3 seismic parties. Geological investigations have been carried on in Jwalamukhi, Janauri, Mandi, Joginder-nagar, Jaisalmer, Bikaner, Baroda and Broach, while gravity-cum-magnetic survey has been conducted in Cambay, Jaisalmer, in certain centres in U.P., and Kutch and in Cambay. For the current year, the programme of operations envisages the survey of 4,200 square miles and geophysical work by 12 field gravity and 10 seismic parties. Currently, drilling is in progress in Jwalamukhi, Hoshiarpur, Cambay and Baroda. It is reasonable to expect that the work of the Commission will be speeded up further when the Soviet team, which has arrived this week in India at the invitation of the Commission, submits its report after assessing the Commission's achievements and difficulties.

Expenditure by the Commission is increasing in proportion to the work done by it. From Rs. 80 lakhs in 1956-57, its expenditure moved up to Rs. 2.05 crores in 1957-58 and to Rs. 2.78 crores in 1958-59. In the first few months of the current year (1959-60), it spent Rs. 6.58 crores; by the end of the year, it may require Rs. 6.00 crores more to meet its capital needs. These figures ought not to cause any sense of surprise or dismay. For prospecting for oil is a laborious and expensive operation. But the reward, in the event of a lucky strike, is also great. And for a country deficient in oil supply, like India, any success in prospecting operations will make expenditure. It must be remembered (vide Commerce, 15th August 1959, page 247) that, between now and 1967, it is estimated that Indian consumption of all petroleum products will go up from 6 million tons to 12 million tons; on a conservative estimate, this would require an investment of Rs. 360 crores. A great responsibility rests on the Commission which it must discharge satisfactorily, if it is not to be said of this body that it wanted new status and enhanced powers, which it could not put to profitable use.

The Bill paves the way for much bold endeavour and constructive action by the Commission. Even so, it may be wondered whether a mere alteration in its constitution will be sufficient to enable it to deliver the goods. The change, now contemplated, will no doubt eliminate several handicaps in financial administration. Explaining one such handicap, the Union Minister for Mines and Oil, Mr. K. D. Malaviya, in the course of his speech introducing the Bill in the Lok Sabha, said: "We live from hand to mouth and quarter to quarter in the Commission. It is, therefore, imperative that this Commission is given full powers to change or shift or modify the programme of work in such a way as to lead to expeditious discovery of oil and gas which will not be possible if this Commission continues to function within the framework of the limitations in which a Government department functions." The question is whether a certain measure of freedom in financial administration is all that is needed for "expeditious" discovery of oil. Perhaps, the Government tends to underestimate the Commission's difficulties. The fact process and requires a combination of expert knowledge and courage in facing risks of failure. This suggests that, in the national interest, the Government, in addition to encouraging the Commission to face its complex tasks, should not hesitate to permit private agencies, capable of applying their resources in men, technical know-how and material, to the location and exploitation of oil reserves.

MARKET GOSSIP

A MIXED trend is depicted by the share markets, as buying has become selective. After the recent debacle, iron and steel shares have attained a large measure of stability, with fluctuations being narrow. The permission given by the Controller of Capital Issues to the T.I.S.Co. for raising new capital at par has infused some confidence. Both bulls and bears are, however, cautious, waiting to see what the Company's Chairman is going to say on the outlook. A careful study of the Company's latest statement of accounts, analysed elsewhere in this issue, reveals a disturbing increase in cost of production and a perceptible fall in profit-margin. It looks as though the Company will not be able to restore the cut in dividend for at least two years to come, unless the Government permits a substantial increase in the retention prices for steel or the productivity of workers registers a marked increase.

Textile shares have managed to retain their buoyancy, thanks to cheerful advices from the cloth market. Notwithstanding the refusal of the Controller of Capital Issues to permit the Century Mills to issue new capital at par and his virtual directive to the Company to charge a premium of Rs. 100 per share, Century's have registered a rise of Rs. 23.50 (to Rs. 562.50) from the lowest level seen after this news had reached the market. The latest closing rate is only Rs. 9 below the highest level witnessed a fortnight ago. This improvement only points to the highly speculative nature of the scrip. There are hopes that the Company's renewed representation will evoke a favourable response from the Controller, but they may well turn out to be wishful thinking. For the third week in succession, Kohinoor have marched forward, the net gain since 30th July last being Rs. 25. This appreciation is attributed to rumours that the management of the Company will soon pass into the hands of Mafatlal House. Knowledgeable circles do not give much credence to them. They, however, admit that, under the active guidance of Mr. Yogindra N. Mafatlal, the present management of the Company is striving hard to improve the profitability of the mills and that Mr. Mafatlal is devoting a little care and attention to the Company merely in his capacity as a director. These circles also say that it will take at least two years for the affairs of the mills to be improved and that one should not be surprised, if the results for the current year were to be not so encouraging as the present rise in the market value of the Company's shares may suggest. If, in spite of this, there is consistent support to this counter, it must be due to considerations of long-term outlook. Among miscellaneous shares, there is fresh buying in growth scrips. Associated Cements, however, have registered a perceptible fall on selling pressure inspired by pessimistic dividend forecasts.

State Loans

The excellent response to State loans has exceeded even the most optimistic expectations; they, therefore, deserve to be described as a resounding success. Of the 13 States that approached the market, eleven got their loans subscribed on the first day itself, while two—Assam and Kerala—had to wait for only a day more. Loans of ten States were oversubscribed and allotment has been partial, and those of the remaining three—Bihar, Assam and Kerala—were fully subscribed. Applications for amounts up to and including Rs. 10,000 have, however, been given full allotment in the case of all loans. Applications for Madras loan in conversion of the maturing loan amounted to Rs. 57 lakhs. They, too, have been given full allotment. The following table shows at a glance the results of each of the 13 State loans:

(In crores of rupees)			
State	Amount Invited	Amount offered	Percentage of allotment
Andhra Pradesh ...	6.00	11.96	52
Assam ...	2.50	2.50*	100
Bihar ...	3.00	3.30	100
Bombay ...	6.00	17.62	37
Kerala ...	4.00	4.00*	100
Madhya Pradesh ...	9.00	5.13	63
Madras ...	8.00	11.55	72
Mysore ...	5.00	8.88	61
Orissa ...	3.50	4.97	76
Punjab ...	2.00	2.97	73
Rajasthan ...	3.50	4.76	80
Uttar Pradesh ...	8.00	12.53	66
West Bengal ...	7.00	9.15	84
Total ...	61.50	99.32	

*Exact amount not known at the time of writing. This figure is inferred from the Reserve Bank's announcement that the loan has been fully subscribed.

The heavy applications for the aforesaid loans reflect the plethora of short-term funds with banks, the steadily growing resources of the Life Insurance Corporation and the sizable unemployed funds with specialised institutions. It will not be surprising if the Scheduled banks' collective decision to reduce the ceiling on interest rates for short-term deposits from 4 per cent. to 3½ per cent. from 1st September has acted as an additional factor in favour of these loans, as they give a yield of a little over 4 per cent. with the prospect of a modest capital appreciation in the coming months.

Although the issue price of the Bombay loan was at par, it has had a spectacular response. It is said that the list was closed in the twinkling of an eye, as it were; the amount offered was nearly three times that invited. This partiality for the whom are institutions and not lay, ignorant people, which is as large as that in Bombay. And yet the subscriptions for its Rs. 7-crore issue have been less than those for U.P. (Rs. 8 crores) and Andhra

Pradesh (Rs. 6 crores) neither of which can boast of any large capital market. In fact, the percentage of allotment in the case of West Bengal loan is the highest among the loans that were oversubscribed. Why is this relatively lukewarm response to the West Bengal issue? Has the Communists' General Elections anything to do with it? The response to the Madras loan has not been so large as it used to be in the past or as was expected, but that to Andhra, Mysore and Uttar Pradesh has been well above expectations. It seems that, in choosing the State loans this year, investors have been less parochial than they used to be, or were made to be, in the past. Otherwise, loans of State Governments which have no money market of any significant size would not have been so overwhelmingly oversubscribed as has been the case now.

T.E.L.Co.=Gold!

Mr. J. R. D. Tata's speech at the annual general meeting of the Tata Locomotive and Engineering Company, Ltd., on Wednesday this week (the full text of which is published on page 299 of this issue) and his reply to the shareholders' queries provide no room for doubt that the long-term outlook for the Company is quite promising if all the proposed schemes of expansion and development go through. His analysis of the prospects was well received by the share market, as witness the jump in the value of the shares today from Rs. 210 to Rs. 215. The closing was, however, a shade lower at Rs. 213.50. When the shareholders complained at the meeting about the inadequate returns they have had during the last fourteen years, Mr. Tata drew their attention to the appreciation in the value of their holdings. He even remarked that "the shares will be gold in your hands in a few years." It must, however, be borne in mind that all the schemes of expansion would involve heavy capital outlay and the maintenance of a steady return to investors will depend on the extent to which the Company will find the resources through fresh issues of capital and the profit margin on these ventures.

The details of the proposed schemes of expansion and development as given by Mr. Tata are pin-pointed here:

1. A scheme is under consideration for the manufacture of Mercedes-Benz diesel engines for locomotives and proposals have been submitted to the Railway Board. Mr. Tata was, however, somewhat doubtful whether the scheme would materialise, in view of the relatively high capital cost of the project in relation to the likely output, in the absence of standardisation in the Railway Board's requirements.

2. Preparations are well in hand for the manufacture of pulp and paper making machinery in collaboration with a well-known Swedish firm. Pending finalisation of certain details regarding the terms of collaboration, the Government of India has authorised the Company to go ahead with the project. The manufacturing operations are expected to commence by the end of the year. This plant will not cost more than Rs. 35 lakhs, as the Company has facilities for welding and fabrication. The whole programme would be phased over a period of five years. Even in the fifth year, only 78 per cent. of the plant would be completed. It is expected that the Company will be able to supply machinery for one plant per year in the first two years and about two plants in the next three years. The turnover will increase from Rs. 43 lakhs in the first year to Rs. 1.50 crore in the fifth year. This venture holds promise of a fairly good profit.

3. In the automobile division, the Government has sanctioned the expansion of the Company's truck and bus capacity to 12,000 vehicles per annum and orders have already been placed for the necessary additional equipment. The ability to reach this target by January 1961 depends on the availability of foreign exchange for essential components and raw materials. If the target is reached by then, the Company will have attained the distinction of achieving in less than six years a fourfold expansion of the original project which was based on a planned output of 3,000 vehicles per annum. The capital outlay on this programme will be Rs. 4 crores. This will, according to Mr. Tata, be found out of the Company's internal resources and no new issue is proposed to be made for this purpose.

4. The Company has submitted a scheme for the manufacture under licence of the well-known DKW light cars, a new model of which is just going into production in Germany. In this project, the Company has been assured of technical assistance from its partner firm, Daimler-Benz, and Auto-Union, the manufacturers of DKW cars. The project is based on an output of 12,000 vehicles per annum, involving a capital expenditure of about Rs. 14 crores, and will be spread over a period of three to four years. Mr. Tata was of the view that the Company would be able to sell these cars at Rs. 6,950 ex-factory and that the demand for them would exceed supply. The Company thought of embarking on this costly venture only after making sure that it was a commercially sound one. Mr. Tata, however, warned the shareholders not to expect a quick financial return for this but to view it from the long-term angle. Mr. Tata also drew attention to the fact that the T.E.L.Co. was not the only one in the field, as a number of other firms too had put forward projects of their own, though he hoped that T.E.L.Co. would be the one ultimately selected and approved by the Government as being the most complete and realistic and embodying the largest initial degree of indigenous manufacture. At the same time, he cautioned the shareholders against any undue optimism.

The Company does not propose to raise any fresh capital now, but it may consider the question

when its scheme for manufacture of light cars materialises.

In reply to the shareholders' demand that a net dividend of Rs. 9 per share should be maintained for the current year, Mr. Tata said that the Directors would very much like to do so, but much would depend on the availability of the profit. He did not, however, give any assurance on this question. He drew their attention to the large amount that the Company would have to find in order to maintain a net dividend of Rs. 9 per share for 1959-60. This will be of the order of Rs. 1.06 crore, as against Rs. 56.48 lakhs for 1958-59, as the new shares, which were entitled to dividend for a period of only two months and odd in 1958-59, would be eligible for a full year's dividend from 1959-60 onwards. Further, the Company would have to pay the 30 per cent. tax on dividends straight to the Government, while the income-tax refund of Rs. 3.15 lakhs on preference shares would not accrue to the Company under the new system. Mr. Tata also pointed out that the Company's tax liability would increase substantially, though the allocation to the development reserve would be much less than that for 1958-59.

World Sugar

An important decision designed to strengthen the marketing position of sugar exporting countries was announced by the International Sugar Council in London on Tuesday the 18th inst. The decision, which is a sequel to the recommendations made by the Council's Executive Committee three weeks ago, seeks to relieve the exporting countries of the obligation to market the entire balance of the 1959 quotas before the end of December next. This is done not only by exempting the countries from penalties but also by allowing them to carry forward into 1960 up to 10 per cent. of their 1959 export tonnages regardless of market conditions. Any country wanting to avail itself of this concession has been asked to submit particulars to the Council in time for the matter to be considered at the session called to fix initial export tonnages for the coming year (1960).

In reaching the above decision, the Council, it is said, fully endorsed the opinion of its Executive Committee that the price levels recently ruling in the world market could not be explained by the overall statistical position. In this connection, it noted that it was the aim of exporting countries to pursue a constructive marketing policy, in accordance with the objectives of the International Sugar Agreement, with a view to restoring confidence in markets.

The latest move of the Sugar Council is somewhat surprising. Only eighteen days ago, the Council's Executive Committee categorically declared that no new developments pointing to the need for energetic action had taken place. In fact, since the Committee last met, the world sugar market has been ruling distinctly firm, with a marked recovery in prices. The latest available quotation for Cuban raw sugar at New York is 2.88 cents per lb. (f.o.b. Cuba), as against the low of 2.55 cents touched on 21st July. Similarly, spot sugar at London now stands at £29½ (Rs. 355) per ton, which compares favourably with £24½ (Rs. 323) on 21st July. The recovery in sugar prices is due to two factors. One, Soviet Russia has bought a large quantity of 170,000 tons from Cuba, though the domestic beet crop is expected to be ready soon. Two, some dealers have tried to cover their position against the possibility of an interruption to Cuban sugar exports as a result of the recent political upheaval in Cuba.

Despite the recovery in sugar prices, the Council has decided to permit the carryforward of export tonnages. Does this mean that the Council has lately revised its opinion about the world sugar supply and demand position? Whatever may be the explanation of the Council, it must be admitted that a fairly large unsold stock of sugar is hanging on the market, thanks to the all-time peak level of world output (more than 50.60 million tons—raw value) in the 1958-59 season, as against 46.49 million tons in 1957-58 and 41.17 million tons in 1956-57. In Cuba alone, the total supplies are at present estimated at over 1.5 million tons, the unutilised export quota under the International Sugar Agreement being 500,000 tons. Now that political conditions in that country are reported to be settling down again, sugar exports may be expected to be smooth.

Overall then, there seems to be little reason at the moment to suppose that the rise in sugar prices will go on much longer, barring, of course, a deterioration in beet crop prospects. According to a report from London, "the basic conditions of supply and demand are still thought in trade circles to be extremely unbalanced. There may be occasional flurries in the market created by political events in Cuba or some other outside development, but it is not anticipated that there will be a sustained recovery to 3.15 cents, the minimum at which the Sugar Agreement aims." Viewed thus, the latest decision of the Council is unlikely to make much difference to the world sugar market.

Soviet Foreign Trade

Recent trade overtures by communist countries reflect a continuing desire on their part for higher trade with the free world. Poland's wish to join the G.A.T.T. and Soviet Russia's undertaking to co-operate with members of the International Tin Agreement in future are two instances which show that they want to inspire confidence among the countries of the free world in their good faith. There is no reason why the free world should shun economic intercourse with communist countries, provided they give sufficient assurances that the obligations of normal commercial relations, as

EQUITIES STEADY

ALL-ROUND RISE IN PRICES

(From Our Own Correspondents)

BOMBAY, 20th August

A STEADY tone prevailed on the Stock Exchange during the week under review, with an all-round recovery in prices. Though the day-to-day movement was somewhat irregular, the general trend was upward, thus sustaining the improvement noted towards the close of last week. Textiles gave a lead to the recovery movement on reports of sustained internal demand for cloth and prospects of better off-take from overseas. In the absence of any adverse news, steels too recorded modest gains. Tata Locomotives, which were a shade dull on the eve of the Company's annual meeting, staged a spurt towards the close, following the encouraging picture of long-term outlook painted by the Chairman at the annual general meeting held yesterday. Notwithstanding the various official measures to curb rise in sugar prices, sugar shares shot up during the week. Rayons, chemicals, automobiles and some of the cash scrips in the miscellaneous group of industrials were in good favour and useful gains were recorded. A notable exception to the general trend was provided by cement shares, under the lead of Associated Cements.

A feature of the week's trading was the good demand for preference shares at higher prices. Debentures too were in request and in the absence of any sellers, the turnover was small and prices were mostly unchanged.

In the steel section, Tata Ordinaries appreciated from Rs. 177.50 to Rs. 180 on Monday. After a setback yesterday to Rs. 177.25, they recovered to Rs. 179 at the close of business today. Indian Irons came up to Rs. 25.45 from last week's closing of Rs. 24.88, but finished a fraction lower at Rs. 25.30.

Century Mills advanced early in the week from Rs. 552.50 to Rs. 560 before receding to Rs. 550. The shares, however, rallied today to touch Rs. 562.50. Bombay Dyeings closed with a gain of 60 nP at Rs. 65.80. Kohinoors provided a feature with a smart rise from Rs. 311.50 to a high of Rs. 324 before closing at Rs. 320.50. A rise of Rs. 5 to Rs. 110 was noted in Central Indias, and a similar gain in Finlays to Rs. 285. Gokaks put on Rs. 3 to Rs. 167, while Indu Ordinaries were a shade quiet at Rs. 8.60. Morarjees shot up by Rs. 20 to Rs. 282.50 and Osmansahis rose from Rs. 6 to Rs. 44. Shree Niwas Cottons rose from Rs. 8.50 higher at Rs. 192.50. Simplex hardened by Rs. 2 to Rs. 164. Standards by Rs. 5 to Rs. 573. Svadeshis by Rs. 8.75 to Rs. 255.75 and Swans by Rs. 12.50 to Rs. 405, while Tatas were a fraction quiet at Rs. 47.75.

Bank shares were featureless. Barodas put on a rupee to Rs. 102.50, while Centrals were unchanged at Rs. 51 and their new shares were Re. 1.80 lower at Rs. 53.20. Bank of Indias were maintained at Rs. 114 and their new shares at Rs. 115, while United Commercials were 50 nP higher at Rs. 62.

New Indias were in favour in the insurance section and rose by Re. 1.70 to Rs. 60.70. Their new shares also gathered Re. 1.50 to Rs. 61. Vulcans were done at the self-same rate of Rs. 21.60.

Cement shares were in the background. After an early rise from Rs. 149 to Rs. 150.50, Associated Cements gave way to Rs. 148.50 on fears of a sizable cut in dividend for the year ended July 1959. Digvijays followed suit with a drop from Rs. 159 cum-div. (dividend Rs. 9) to Rs. 149 cum-div. Orissa Cements were, however, done 32 nP higher at Rs. 16.92. In the sugar group, Belapur staged a spurt from Rs. 313.50 to Rs. 321 before closing at Rs. 320. Phaltans advanced by Re. 1.50 to Rs. 169.80 and Walchandnagars by Rs. 15 to Rs. 331.25. Maharashtra Sugars put on a rupee to Rs. 229.50.

In the engineering group, Tata Locomotives rallied from Rs. 207.75 to Rs. 213.50. Premier Constructors rose by Rs. 5 to Rs. 390, thus nearly making good the previous week's loss. Alcocks were, however, unchanged at Rs. 254. Larsen and Toubros were in the limelight with a rise of Re. 1.08 to Rs. 23.08. Their rights were bid Re. 1.44 higher at Rs. 11.96. Mahindras gained 60 nP to Rs. 21.52. Shivrajpur, among mining shares, were steady at Rs. 92, as also Indian Coppers at Rs. 4.14.

Shipping shares were featureless, Scindias remaining unchanged at Rs. 17.92 and Great Easterns at Rs. 21.44. Among automobiles, Premier Auto's shares staged a spurt from Rs. 133.50 to Rs. 137.75 and Hindustan Motors from Rs. 11.60 to Rs. 12.44.

In the miscellaneous group, Bombay Burmahs were unimpressive in contrast to the general trend. The shares, which had earlier moved up from Rs. 544 to Rs. 551, dropped suddenly to Rs. 540 yesterday, as the market's anticipation of a higher interim dividend did not materialise. The Directors have maintained the distribution at 6 per cent. for the year ended May 1959. Today, however, there was a recovery to Rs. 544. National Rayons rallied from Rs. 352 to Rs. 360 and Gwalior Rayons from Rs. 23.20 to Rs. 24. Tata Chemicals moved up by 28 nP to Rs. 24.10 and their new shares by 24 nP to Rs. 16.32. Alembic Chemicals were placed higher at Rs. 195 ex-div. (dividend Rs. 12), as against Rs. 197 cum-div. Dhrangadhra Chemicals shot up by Rs. 16.75 to Rs. 120.75 and Poly Chems by Rs. 2 to Rs. 132. Amar Dyes were done Rs. 3 higher at Rs. 196 and Indian Dyestuffs were Rs. 2.50 better at Rs. 255. Ceat Tyres were a shade quiet at Rs. 172.50, while Greaves Cottons, recorded a gain of Rs. 12

to Rs. 150. Voltas were marked up by Rs. 2.50 to Rs. 175.50, while West Coast Papers dipped by Rs. 3.75 to Rs. 162.25. W. H. Bradys were done at Rs. 401.25 and Wimcos at Rs. 225.50.

Calcutta Stock Exchange

CALCUTTA, 19th August

Fully steady conditions were in evidence on the Calcutta Stock Exchange during the week under review. There was a tendency for prices to consolidate the gains at every rise. Expectations of an increase in steel retention prices without further delay, coupled with the higher trend in commodity markets, aided sentiment. The maintenance of a 10 per cent. dividend for Indian Irons was a news of special significance against the background of fears entertained in some quarters following the lower dividend for Tata Steel's, although there were many in the market who had no doubt that the dividend would be maintained. Earlier, reports of the irregular trend in Bombay, following the reported insistence of the Controller of Capital Issues that the Century Spinning and Manufacturing Company should make the proposed rights issue at a premium only, were gravely noted. However, market circles thought that Government might follow a uniform policy in allowing companies to make right issues at par. Several features were recorded in jutes following the impressive rise in prices of heavy goods and mills' decision to increase production further. Also, the pace of rise in fibre prices was much slower than that in finished goods, and trade estimates of the crop were higher than the official. A feature of this week's trading was the keen attention to paper mill shares, as it was thought that Government would allow modernisation and further expansion following the countrywide shortage of paper. The increase in demand for paper was difficult to be met otherwise. In teas, Assam gardens were in good demand following expectations of increased plucking of the good quality teas. The improvement in prices of cotton textiles was attributed to increased off-take of cloth for export, as well as to the proximity of the Poojays. In contrast with the general trend, coals idled around lower levels, in the absence of any decision in New Delhi on the long-awaited increase in coal prices.

In contrast to the general trend, coals lacked enthusiasm. Churulia, the dividend for which has been maintained at 5 per cent., fell to Rs. 4.06 from Rs. 4.12. Earlier in the week, Amalgamateds Rs. 25.75 and after rising to Rs. 26.50, disclosed a loss of 62 nP, while Burakurs were quiet at Rs. 17.50. Bengals, at Rs. 311, put on a gain of 4 points and Western Bengals hardened to Rs. 6.72 from Rs. 6.50.

Jutes attracted considerable attention, and details of this week's more important gains are given below:

	Opening	Closing	Gain
	Rs.	Rs.	Rs.
Asarpara ..	13.75	14.19	0.44
Bally ..	228.00	240.00	12.00
Karmacharya ..	216.00	218.00	2.00
New Central ..	107.50	108.06	0.56
Lawrence ..	100.00	108.00	8.00
Bahadur ..	8.00	8.50	0.50
Bahadur ..	23.94	24.25	0.31
Howrah ..	242.00	245.00	3.00
Union ..	61.75	62.50	0.75
Kudus ..	171.50	179.00	7.50
Orient ..	131.00	138.00	7.00
Delta ..	131.00	138.00	7.00

A mixed trend was in evidence among engineering shares. Hindustan Motors continued to meet with buyers and at Rs. 12.25 picked up nearly a point in this week. Angelo Bros. were lifted to Rs. 19.25 from Rs. 18.50 previously. Rohatans Industries sprang to Rs. 23.06 from Rs. 21.56 on interest buying. At Rs. 9.31, Bharat Commercials added 1 point. Bengal Flours had buyers at Rs. 40, as against Rs. 39.50 previously. Dunlop Rubbers, after being better at Rs. 34.75 against Rs. 34.44 earlier, closed at Rs. 34.62. Indian Coppers were quiet at Rs. 4.14, as against Rs. 4.15 earlier and National Insulated Cables receded to Rs. 36.87 from Rs. 37.06. Indian Oxygens met with business at Rs. 27.81, as against Rs. 26.94 previously, and Indian Cables at Rs. 32.69, as against Rs. 32.25.

Madras Stock Exchange

MADRAS, 19th August

Steady conditions prevailed on the Madras Stock Exchange during the week under review. There was revival of some buying support, while fresh offerings were scarce. Consequently, values generally tended to look up. Textiles were held firm, thanks to encouraging off-take of piecegoods and yarn as well as to the reported move of the Central Government to set up a fund of Rs. 85 crores for assisting the renovation programmes of mills. Tea shares met with good support induced by enlarged export demand for teas. Coffees and rubbers, moved up in sympathy.

Sugars, which had suffered a setback last week, registered a smart recovery. Several miscellaneous industrials elicited large buying orders.

A feature of trading in the market this week was the notable gains in values recorded by the shares of State-associated banks. Operators noted with satisfaction the Union Revenue and Civil Expenditure Minister's assurance in the Lok Sabha that compensation to be paid in the event of the State Bank acquiring the business of a banking institution would be on the basis not of share value but of assets less liabilities. This assurance, together with the declaration of higher interim dividend of 11½ per cent. for the year ended June 1959, as against 8 per cent. paid at this time last year, imparted much strength to Bank of Mysore which spurted by Rs. 3.50 to Rs. 318. Travancore advanced by 72 nP to Rs. 24.87. Indian Overseas rose by Re. 1.50 to Rs. 169.50. Punjab National improved by 5 nP to Rs. 22.50. Andhra were fully maintained at Rs. 105.50, Canaras at Rs. 67.60, and Pandyanas at Rs. 36.50. Indians, however, were a shade lower at Rs. 187 cum-div., as compared with Rs. 188 cum-div.

In the sugar section, Kilrampudis were in the limelight, the quotation climbing up by Rs. 5.00 to Rs. 70. Travancore hardened by 17 nP to Rs. 12.37. Indias and Decans gathered 10 nP each to Rs. 12.55 and Rs. 12.10, respectively. Cauverys were firm at Rs. 114.50, E.I.D.s at Rs. 39.25, Mysore at Rs. 49.50 and United Breweries at Rs. 459.

Among tea shares Twyford's attracted good attention and increased by 45 nP to Rs. 16.60. Non-such Teas were marked up by 35 nP to Rs. 28. United Nilgiris gained 15 nP to Rs. 20.90. Halcyonias, however, sagged by 20 nP to Rs. 20.40. Kil Kotagiris and Ouchterlony's shed 5 nP each, the former to Rs. 8.40 and the latter to Rs. 5.45. In the coffee group, Coffee Lands rose by 15 nP to Rs. 23.75. Osoors put on 10 nP to Rs. 3.90. Consolidated Coffees gathered 5 nP to Rs. 22.05. Wary-hullys picked up a like amount to touch Rs. 3.85. Anapara's were done at Rs. 5.15 ex-div., as against Rs. 5.45 cum-div. Babuddins were unaltered at Rs. 18.50. Among rubbers, Highlands advanced by 20 nP to Rs. 12.30, and Cochins Malabars by 8 nP to Rs. 6.95. Vaikundans were fully steady at Rs. 27.50, as also Malankaras at Rs. 19.50 and Rajagiris at Rs. 17.70.

In the textile section, Cannanore elicited good support and picked up a rupee to Rs. 139. Bangalore Woollens were fully steady at Rs. 180.25. The directors of the Company have declared an interim dividend of 4 per cent. for the year 1959. Bucking-hams were fancied at Rs. 147. Coimbatore Cottons Coimbatore Pioneers were 5 nP, same as last week. Lakshmis at Rs. 107.50, Radhakrishnas at Rs. 112, Rs. 39.50 ex-div., as against Rs. 42.50 cum-div. last week-end.

In the miscellaneous section, Western India Plywoods attracted good attention of operators and spurted by Rs. 5 to Rs. 180. Textools rallied by Rs. 2.50 to Rs. 179.50. Mysore Papers advanced by 40 nP to Rs. 22.30. Aluminium Industries were Standard Motors improved by 85 nP each to lands rose by 10 nP to Rs. 7.45. Andhra Cements at Rs. 13.60, Orissa Cements at Rs. 16.70, and Travancore Cements at Rs. 9.90. India Cements; how-ever, dropped 30 nP to Rs. 6.58. Mettur Chemicals shed 22 nP to Rs. 13.25. Dalmia Cements lost 10 nP to Rs. 10.55.

BOMBAY BURMAH REPEATS INTERIM

The Directors of the Bombay Burmah Trading Corporation Ltd. have decided to maintain the interim dividend at 6 per cent. for the year ended 31st May 1959. This works out to Rs. 7.50 per share of Rs. 125 each and Rs. 3 per share of Rs. 125 each (Rs. 50 paid-up) and Rs. 150 per share of Rs. 2,500 each. It is learnt that the dividend is on a tax-free basis, as the profits for the year are to be assessed under the old system of taxation.

The Company's production of tea during 1958-59 amounted to 6,959,132 pounds, having gone up from 6,738,359 pounds in 1957-58.

Notice

THE HAILEYBURIA TEA ESTATES LIMITED KOTTAYAM

NOTICE IS HEREBY GIVEN THAT THE Thirty-sixth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Kottayam, on Monday the 7th September, 1959, at 11 a.m., to receive the Directors' Report and Accounts for the year ended 31st December, 1958, to declare a dividend on Equity Shares, to elect a Director, to elect Auditors and to fix their remuneration, etc., and to transact any other ordinary business of the Company.

The Transfer Books of the Company will be closed from 1st September to 7th September, 1959, both days inclusive.

By Order of the Board,
PARKINS (PRIVATE) LIMITED,
Managing Agents
KOTTAYAM, 6th August, 1959.

NEWS IN BRIEF

INDIA has concluded a barter deal with France, under which it will sell manganese ore in exchange for French stainless steel and tin plates.

The Government of India is exploring the possibilities of setting up a raw film plant in Madras State with the assistance of a Japanese firm.

The production of iron ore in India during the six months ended June 1959 aggregated 3,771,000 metric tons, as compared with 3,078,000 metric tons in the corresponding half-year of 1958.

A tax research unit is proposed to be set up shortly in the Economics Division of the Department of Economic Affairs, Ministry of Finance, which will function broadly on the lines suggested by the Taxation Enquiry Commission.

A new trade agreement has been concluded between India and Afghanistan. The agreement provides for balancing of trade between the two countries and for facilities for export of Afghan goods to other countries through India.

India exported Rs. 11.27 lakhs worth of sewing machines during the first six months of 1959, as against Rs. 3.62 lakhs in the corresponding period last year. The U.K. was the leading buyer, with its purchase amounting to Rs. 4.17 lakhs.

The heating of the second coke oven battery at the Bhilai steel works was started on the 15th inst. The process will continue for about eight weeks till it attains the temperature of 1,000 degrees Centigrade. Like the first one, the second battery also consists of 65 ovens.

The complete blueprint of the proposed Oil Refinery at Nummati, Gauhati (Assam), has been delivered to the Indian Refineries (Private) Ltd., a Government-sponsored organisation, by Rumanian oil technicians. The work on the refinery, with an annual capacity of 750,000 tons, is expected to begin soon after the rainy season.

The number of small cars produced in the country during the first six months of 1959 was 4,311. Production is expected to improve considerably in the latter half of the year, as sufficient foreign exchange for the import of components and raw materials needed for indigenous manufacture has been released. It is estimated that production for the whole year may reach 12,000.

National Instruments Limited, Calcutta, a Government of India undertaking, proposes to manufacture clinical thermometers in collaboration with a Japanese firm. This information was given in the Lok Sabha the other day by Mr. Manubhai Shah, Minister for Industry. The terms of collaboration are under examination by the Company and have also been referred to the Government for scrutiny.

A small-scale industries team (Leader: Mr. P. B. Advani, Vice-Chairman of the All-India Manufacturers' Organisation) has left for a seven-week tour of some of the foreign countries, including Sweden, Holland, West Germany, the U.S.A. and Japan. The team will study the productivity techniques in small-scale industries in these countries. The team has been sponsored by the National Productivity Council.

The Coal Grading Board (Repeal) Act, passed in the last session of Parliament, has come into force with effect from the 14th inst. Accordingly, the Coal Grading Board has been dissolved; it was constituted in 1925 for the purpose of grading of export. The assets and liabilities of the Grading Board has been transferred to the Coal Board. The certificate of shipment to collieries has been arranged to be issued by the Coal Controller, Calcutta.

A techno-economic survey of Bombay State, to be undertaken by the National Council of Applied Economic Research, New Delhi, was inaugurated in Bombay on the 11th inst. The object of the survey is to obtain basic data for the preparation of a programme for the balanced economic development of all the regions of the State in all spheres of activity and to evaluate the investment necessary for power, etc., during the third and subsequent Five-year Plans. The State Government has sanctioned a sum of Rs. 2,50,000 towards the cost of the survey.

The representatives drawn from commercial banks and the Bombay State Finance Corporation held informal discussions with the Japanese team of experts on small and medium-size industries (Leader: Mr. Iwatake, Director General for Small Enterprise Agency, Government of Japan) in Bombay on the 13th inst. The discussion mostly centred round the mode of financing small and medium-scale industries in Japan and the extent to which it could be applied to small industries in India. The visiting team explained how the small and medium-sized industries in Japan were being financed mostly by commercial banks. The organisation and development of industrial co-operative societies and the credit facilities available to small industries, besides marketing aid surveys, were also discussed.

The Union Minister for Mines and Oil, Mr. K. D. Malaviya, observed in the Rajya Sabha the other day that the Government of India considered as premature a suggestion made by the three major

foreign oil companies—Burnmah-Shell, Standard-Vacuum and Caltex—for the appointment of a Government-cum-industry committee to examine the problems arising from the establishment of two refineries in the public sector. The objectives of the Committee, according to the companies, should be (1) to examine the pattern which would emerge and recommend the necessary arrangements for the movement of refined petroleum products throughout India, following the commissioning of the Government refineries at Gauhati and Barauni, and (2) to suggest ways and means of resolving the imbalance between the total production of refined products in the country and the domestic consumption.

With a view to giving a further fillip to the fisheries industry in the Konkan region, the Government of Bombay has accorded sanction to six schemes for the development of fisheries. Under the first scheme, two fish curing yards will be established in Kolaba District, where curers will be afforded facilities to cure their catch in a hygienic manner. The second scheme envisages the establishment of small units for extraction of shark liver oil at suitable places in Ratnagiri and Kolaba Districts, to enable the fishermen to extract oil at reasonable charges. Under the third scheme, it is proposed to subsidise costly fishery requisites such as nylon, fish hooks, twine, sail cloth, etc. The societies supplying the requisites will be given 64 per cent. of the cost as commission. The fourth scheme envisages mechanisation of fishing crafts. It is proposed to allot engines and diesel trucks to fishermen on loan-cum-subsidy basis. The rates of subsidy will be 50, 25 and 20 per cent. for engines, boats and trucks, respectively. Under the fifth scheme, it is proposed to undertake boat trawling through the Department of Fisheries in the coastal areas of Ratnagiri and Kolaba Districts. The sixth scheme seeks to help the fishermen to transport their catches to the chief marketing centres at a reasonable charge on a no-profit-no-loss basis.

From Abroad

The U.K. Government has removed all restrictions on imports of butter from the Dollar area.

Imports into the U.S. reached an all-time record of \$1,369.4 million in June 1959, as against \$1,263.8 million in the previous month and \$1,031.3 million in June 1958.

A new chemical compound, capable of controlling the crop disease 'grey mould', that destroys lettuce, has been developed by the British Boots Pure Drug Company.

More than 200,000 textile workers have struck work in Japan demanding wage increases averaging 2,000 yen a month and minimum wage of 8,000 yen for 18-year-old workers.

The Government of Israel has formulated a plan to plan to double industrial production in the country and increase exports by well over 100 per cent. within the next five years.

A new oilfield has been discovered in the Sudr area of the Sinai Peninsula, probably the biggest oil reserves in the United Arab Republic. The first well is yielding 700 tons of oil a day.

The Business Week Magazine, New York, has predicted that one out of every four cars sold in the U.S. during the 1960-model year will fall in the compact small-economy range—a group that was not even in the serious running three years ago.

Two of the oldest insurance undertakings in the U.K., namely, the Royal Exchange Assurance and the Atlas Assurance Company, have agreed on the proposal for an "operational and financial" merger. The new group will have combined assets of about £155 million.

Passengers in airlines flying over the north-central part of the U.S. can now make telephone calls to almost any telephone in the world. This telephone service is available to telephone-equipped aircraft flying over a large area surrounding the cities of Chicago and Detroit.

The Government of Ceylon has under consideration a plan to set up a national shipping line with 100 per cent. Ceylonese ownership and to explore the possibility of acquiring ships from Yugoslavia, under the existing bilateral trade agreement between the two countries.

The new oil refinery built at Homs, Syria, by Czechoslovakia was opened on the 12th inst. The refinery is supplied with crude oil by the Iraq Petroleum Company and includes units for distilling petrol, kerosene and gas oil. The annual refining capacity of the refinery is one million tons.

The Government of Pakistan has lifted price controls on 50 items. The items include, among others, refrigerators, air-conditioning plants, leather and leather goods, biscuits and confectionery, hosiery and cutlery. Price controls will, however, continue on such goods as foodstuffs, textiles, building materials and medical requisites.

What is claimed to be the world's largest machine for testing how much pressure different objects can withstand has been located at the U.S. Bureau of Standards in Washington. It can exert a force of 10 million pounds. This is equivalent to the weight of a pile of automobiles three miles high.

PERSONAL

MR. Sukich Nimmanheminda has been appointed Ambassador Extraordinary and Plenipotentiary of Thailand in India.

Mr. K. Rangaswami, Joint Chief Controller of Exports and Imports, Madras, has been appointed Regional Manager, State Trading Corporation, Madras.

Mr. S. Chakravarty, I.C.S., who was until recently in charge of the Nagarjunasagar dam project in Andhra Pradesh, has been appointed Principal of the high-powered Central Institute for Research in Community Development, Mussoorie.

Mr. C. T. Venugopal, Director (Finance), Railway Board, has been appointed Additional Member for Finance, vice Mr. Ajit Singh, who has proceeded on leave. Mr. D. P. Mathur, Senior Deputy General Manager of the Central Railways, succeeds Mr. Venugopal as Director (Finance).

The British Board of Trade has appointed a committee, with Mr. Kenneth Johnston, Q.C., as Chairman, to examine the question of modifying regulations for the protection of industrial designs. The Committee will also consider the possibility of enabling U.K. designs to receive cheap and effective protection in other countries on the basis of reciprocity.

Exactly 95 per cent. of the West German population over 15 years of age are presently covered by sickness insurance. Compulsory sickness insurance ends when an office employee or an independent person earns more than a highly qualified worker (DM660 per month). Industrial workers, however, never leave compulsory insurance regardless of their income.

Crude steel production in West Germany during the first seven months of 1959 was at an annual rate of 27.6 million tons, as against the record output of 23.9 million tons in 1957 and aggregate annual capacity of about 28.29 million tons. The high level of output is attributed mainly to the growing domestic orders. The backlog of orders, which stood at about 3 million tons at the beginning of the current year, had gone upto 4 million tons by the end of last month.

Finance Ministers of Commonwealth countries will meet in London for three days from 22nd September next, to discuss problems of common interest such as balance of payments, prospects for sterling area, progress of capital investment in member-countries and commodity price trends. They are also expected to examine the proposal recently made by the U.S. for the setting up of an International Development Association, with a capital of \$1,000 million.

A £30-million contract has been given by British European Airways for 24 new DH 121 turbo-jet airliners to replace its Viscounts to the Aircraft Manufacturing Company, a newly formed consortium of de Havilland Fairey and Hunting, with de Havilland having controlling interest. The DH 121 is the first of its kind designed specifically for the B.E.A. By 1967, nearly half of the B.E.A.'s traffic will be carried by this turbo-jet airliner, the delivery of which will commence in 1963.

A new airline, called the Seven Seas Airlines, has been formed in the U.S. to undertake contract air services throughout the world, including freight and charters for the movement of passengers. The Company has its office at New York and will also have a base at the Schiphol airport, Amsterdam, Holland. To begin with, the Company has secured two Douglas DB4 piston-engined airliners, which will be put into service shortly.

The K.L.M. Royal Dutch Airlines has decided to purchase 12 long-range Douglas DC-8 jet airliners, instead of eight for which orders had been placed previously. The first seven jets will be fitted with the conventional turbo-jet engines (the J T-4As), while the remaining five will have turbo-fan engines, built by Pratt and Whiteys. The turbo-fan engine, it is claimed, will have 14 per cent. lower fuel consumption and makes less noise than the former type of engine. The first aircraft is expected to be put into operation for the transatlantic passenger services in March next.

An oil-tanker, the second largest maritime vessel in the U.S., the s.s. National Defender, was launched in Virginia on the 19th inst. The super-tanker, with a capacity of 65,000 tons of petroleum products, was built for the National Transport Corporation of New York by the Newport News Shipbuilding and Drydock Company. It is 810 feet in length, with a beam of 104 feet and a draft of 44 feet, when fully loaded. The potential speed of the tanker is estimated at nearly 20 knots. The National Defender has a capacity of 546,000 barrels of oil, equivalent to 20 million gallons of petroleum.

The output of radios and TV sets in West Germany rose from 2.4 million in the first half of 1958 to 2.8 million in the same period of 1959. During the first five months of 1959, exports of radio sets advanced by 27,000 to 634,000 and TV sets by 19,000 to 107,000, practically the same as those in the corresponding period of 1958.

In 1950, W. Germany produced no TV set at all, while its radio production was only 2.01 million sets. Since 1950 and up to 1958, it has produced 3.28 million TV sets and 23.77 million radio sets. For every 100 households in that country, there were, in 1958, 86 radios and 12 TV sets, as against 68 and nil, respectively, in 1953.

THE WAR AGAINST NEED

THE war against need must be fought on far wider fronts, with intensified vigour and under a grander strategy." It was in these words that Mr. Paul G. Hoffman, Managing Director of the United Nations Special Fund, stressed the urgency of the need for the economic development of the underdeveloped regions when he addressed the recent session of the U.N. Economic and Social Council at Geneva. Describing the next decade (1960-70) as the crucial one, Mr. Hoffman urged that, in this decade, proof must be given to half the world's people that it was possible to achieve decent living standards, proof in the form of a real breakthrough from poverty to reasonably prosperous conditions. And he added: "If such a breakthrough comes to pass, there will be created a thing called 'momentum.' And, with 'momentum,' we can, by the end of the century, win a resounding victory against poverty, ignorance and ill-health."

The foregoing observations admirably put into sharp focus the overall problem of the development of the less-developed countries. How staggering are the dimensions of this problem will be evident from the interesting data furnished by Mr. Hoffman. Of the 82 member-nations of the U.N.O., no less than 60 countries, with a total population of more than a billion (thousand million), can be classed as less-developed. The average per capita income in this region (on the basis of the total income of \$120 billion in 1957) is just \$120 which is only a small fraction of the average income of \$800 (it is very much more in some countries) in the advanced countries. The recent years have no doubt witnessed efforts at economic development, thanks to bilateral, inter-Governmental and fully international aid programmes, but the pace of progress has not been adequate enough. The net annual rise in national income in these countries is currently being maintained at no more than 1 per cent. (this means a net increase of \$1.20 per person in personal standards of living), the gross improvement in per capita income being 3 per cent. a year and the population growth being 2 per cent. "This rate of increase," Mr. Hoffman rightly declared, "is not acceptable; it is too slow—dangerously too slow."

The aggregate income of the less-developed countries in 1957, as already noted, was only \$120 billion, of which the amount devoted to capital formation was a bare \$6 billion. In addition to this, investment by outside sources—public and private sectors—amounted to \$3 billion. The level of domestic capital formation is thus deplorably low. If the present rate of investment continues, the total investment of the countries themselves would come to \$60 billion and that of outside sources to \$30 billion, or a total of \$90 billion in the next decade. Even with this investment, the net annual rise in national income will be about 1 per cent. Mr. Hoffman wanted this to be stepped up to at least 2 per cent. Although such an increase would not amount to very much in terms of personal income—a few dollars—it would nevertheless bring with it, as Mr. Hoffman said, a vast improvement in living conditions—clear water, better medical facilities, protection against epidemic and endemic diseases, more schools, a chance to learn to read and write and acquire knowledge for hundreds of millions of people.

Taking the annual net rise of 2 per cent. in national income as the modest goal, the investments necessary to achieve it over the next ten years, in the opinion of Mr. Hoffman, should increase from \$60 billion to \$75 billion by the countries themselves and from \$30 billion to \$60 billion by the advanced countries. In this connection, he made it clear that fresh international investment was only one factor in the economic development of the less-developed countries. He warned that any outside investment in these countries would be of little use unless the countries themselves assumed the responsibility to plan and implement self-help programmes. There is considerable truth in this statement, as also in his remark that the sound basis for a successful investment programme in any country is that the physical and human resources, which are at present underutilised, should be

developed profitably in the interest of the increased well-being of the people of that country. It is here that Mr. Hoffman spoke of the role played by the Special Fund. The Fund, we are told, will lay emphasis, to begin with, on projects which would demonstrate the wealth-producing potential of unsurveyed resources, on major training and research institutes, and on such surveys of limited cost as would lead to early investment; moreover, some prominence is to be given to pre-investment surveys which may take the form of preliminary engineering and feasibility reports.

The Fund, it will be recalled, commenced its operations in October 1958. It has already approved of 13 projects in ten countries, involving a total expenditure of \$7.5 million. This amount is, however, negligible as compared with the requests for aid aggregating over \$81 million submitted by 75 countries upto 10th April 1959. The Fund is thus operating "within very harsh limits because of lack of finance." Considering the magnitude of the problem of assisting the less-developed countries in their task of raising the living standards of the masses, it well behoves the members of the Fund, more especially the economically prosperous countries of the West, to strengthen the Fund's financial resources by making generous contributions.

COMPANY LAW ADMINISTRATION

The Central Government's move to delegate additional powers to the Regional Directors (R.Ds.) and Registrars of Companies (R.Cs.) must be welcomed for two important reasons. First, it will expedite the disposal of applications received from the companies and members of the public. Several instances are on record to show that, as a result of the concentration of power in the hands of the Department of Company Law Administration at New Delhi, there is much delay in the issue of official sanctions even to requests of a routine nature put forward by the managements of companies. Apart from the delay, the companies have to incur extra expenditure on the visit of their officials to New Delhi for obtaining the Department's permission. Secondly, the scope for the companies, especially the smaller ones, seeking the Regional Director's technical advice, guidance and clarification with regard to the various provisions of the Act will be widened. Indeed, such a delegation of powers to the regional authorities will, as Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, stated while inaugurating the Third Conference of Regional Directors and Registrars of Companies at New Delhi last week, make the working of the Company Law Administration smooth and flexible.

One of the additional powers proposed to be given to the Registrars relates to the summoning of books and papers from companies. This measure will doubtless go a long way towards preventing and checking abuses on the part of a section of company managements. It is, however, to be hoped that the Registrars will exercise the additional power only after assuring themselves sufficiently that a particular company is not being managed properly and in accordance with the law.

Another welcome move of the Central Government as disclosed by Mr. Shastri is to appoint whole-time official liquidators in Bombay, Calcutta, and possibly Madras, and part-time official liquidators in other places. This will certainly help avoid delay, especially in the disposal of liquidation cases.

Yet another welcome step taken by the Government to simplify and expedite the administration of Company Law is the appointment of four Regional Company Prosecutors, one each at Bombay, Calcutta, Madras and Nagpur, as recommended by the Visvantha Sastri Committee on amendments to Companies Act. The Committee was of the view that the practice, followed hitherto, of entrusting Company Law cases to Prosecutors appointed by the State Governments was not conducive to the efficient or speedy conduct of prosecutions under the Act. The Committee was right in holding this view, for, in many cases of breaches of Company Law, the State Prosecutors have been extremely lenient, thereby contributing to the fall in the public esteem for this branch of law. In several instances, the Magistrates and Judges themselves have awarded very light punishment, as, for instance, the imposition of a small fine. This kind of token punishment has been responsible for delays in holding annual meetings and similar irregular actions by certain irresponsible company managements. They would have probably not happened had there been special prosecutors, answerable to

the Company Law Administration, as suggested by the Committee. These Prosecutors would not only be prompt in taking action against those guilty of offences under the Company Law but also try their best to secure maximum punishment by bringing to the attention of judges and magistrates the exact nature and implications of the offences.

It is gratifying to find that the Government of India has at last recognised the value of the Sastri Committee's suggestion. It may be mentioned, in passing, that Mr. F. R. Ginwalla, of the Bombay City Civil and Sessions Court, who has contributed a series of articles on the Company Law of 1956 to this journal and also published a book on the subject by elaborating some of his earlier articles to this journal, has been appointed one of the four Prosecutors. He will soon be in charge of Calcutta jurisdiction. It needs to be added that Company Prosecutors are vested with the powers and privileges conferred by the Code of Criminal Procedure, 1898, on Public Prosecutors appointed by the State Governments, under Section 492 of that Code. The Company Prosecutors in each of the four regions mentioned above will be entrusted with the work of conducting prosecutions and filing appeals from the orders of the Courts in trials for offences under the Act.

In his speech, Mr. Shastri alluded to the desirability of giving more powers to the auditors of companies. For he said that the auditors had no authority to go into the merits of various transactions or investments entered into by the companies and added: "Not only in India but in the United Kingdom as well, opinions have been expressed by high judicial authorities that the scope of the work of the auditors is limited and prevents them from recording their views on the merits of various transactions of different concerns. In order that the accountants and auditors should not merely do the post-mortem examination, it has been suggested that they should be able to ask for additional information from the companies over and above the examination of the balance-sheets."

It is true that some of the transactions entered into by a few companies are of a dubious nature. Even so, one would ask whether it would be advisable to vest in the auditors and accountants so much power as to investigate the merits of the various transactions and investments of companies. The whole issue is, as Mr. Shastri himself frankly admitted, a ticklish one to decide and "deserves very careful consideration."

The Commerce and Industry Minister emphasised the need for Government interest in the proper management of companies and observed:

"Companies have enormous responsibility towards their shareholders. Unless there is proper check and regulation, the companies are liable to make mistakes, if they only keep in view the limited interest of either managing agents and the selling agents or the main investors in the company. Quite a considerable amount of Government money in the form of loans, etc., is being advanced to the private companies. Sometimes, the loans are guaranteed by the Government. The Boards of such concerns to guard their own interests. It is also necessary that the Government should get the eligible taxes from these concerns."

Few would dispute the need for official checks and regulations on companies. Only, they should not be too complicated and stringent to interfere with the managements of companies in their day-to-day administration. On their part, the managements should always run the business keeping in view the larger interests of their shareholders, in particular, and of the country, in general.

BOMBAY LAND REFORMS BILL

Let it should lag behind other States in implementing the Nagpur resolution on land reforms, the Government of Bombay has hastened to frame a Bill which embodies all the essential features of the socialist philosophy of the Congress. The Bill seeks to fix a ceiling on holding of agricultural land and provides for the acquisition and disposal of surplus lands. The State Government will determine the ceiling area for each local area which will represent the extent of land that will ordinarily yield a net income of Rs. 3,600 per annum. From a specified date which will be notified by the Government, no person will be entitled to hold the ceiling area. In order to ensure that the provisions of the Bill are not circumvented by the transfer or partitions made in anticipation of the law before the notified date or before the

coming into force of the law, provision has been made to supersede such transfers or partitions as are likely to defeat the object of the Bill. These provisions will have retrospective effect from 16th January 1959.

The existing tenancy laws in the different regions of the State already contain provisions for imposition of a ceiling on agricultural holdings. These provisions are, however, not applicable to existing holdings. It has been decided to have a unified law for imposing ceiling on agricultural holdings in the entire State. The Bill, accordingly, contains provisions for placing ceilings on existing holdings and on future acquisition of land and are applicable uniformly throughout the State. The surplus land available for acquisition by the Government will be determined by a tribunal from the data of holdings submitted by farmers to *mamlatdars*. The Tribunal will prepare from the information thus collected a list of persons holding land in excess of the ceiling area and will specify the extent of surplus land held by each person.

As a measure of relief to poor landlords, who have leased their land to persons holding land in excess of the ceiling area, it has been provided that, where land held by a person from such landlords is surplus land, it shall be restored to the landlord who shall hold it subject to the provisions of the relevant tenancy law in respect of fresh tenants. Certain categories of land such as lands belonging to Government, lands reserved for non-agricultural and industrial development under the relevant tenancy law, lands held by charitable trusts for educational purposes and lands used for coffee plantations, or growing of fruits or flowers have been exempted from the operation of the law. But the extent of these lands held by a person would be taken into account in deciding the extent of other land which he would be entitled to retain within the ceiling limit. This provision is similar to the one in the Kerala Land Reform Bill passed by the Communists when they were in power.

Lands declared to be surplus by the Tribunal will vest in the Government free from all encumbrances. Compensation will be paid at the rate of 100 times the assessment of the land

plus the depreciated value of permanent structures and wells constructed by the holder of the land. Where the surplus land is held on lease from the Government, compensation will be twelve times the full assessment together with the depreciated value of structures.

Compensation shall be payable entirely in cash or in transferable bonds or partly in cash or partly in bonds as may be decided by the Government. The bonds will carry interest at the rate of 3 per cent. per annum and shall be repayable during a period not exceeding 20 years by equated annual instalments of principal and interest. In cases where the surplus land is tenanted land, two-thirds of the compensation will be paid to the landlord and one-third to the tenant.

The surplus land acquired will be allotted on payment of occupancy price in accordance with the rules framed by the Government to persons and co-operative farming societies in order of a given priority. Such lands, after they are granted, shall not be alienated or partitioned without the previous sanction of the Collector.

It is clear from the foregoing account that the Bill differs little in essence from similar measures proposed in other States including Kerala under the Communists. Ceiling on land-holdings in excess of the area sufficient to yield a net return of Rs. 3,600, when there is no ceiling on income from sources other than agriculture, and arbitrary fixation of compensation are provisions which have neither logic nor justice to support them. Apart from the fact that a ceiling on land is unsound in principle, more especially when applied to existing landholdings, there is also the danger that it may throw up a fresh crop of complicated problems in regard to the actual fixation of the ceiling. According to the Bill, the ceiling will be determined for each class of land in each area on the basis of the crop grown and the price prevailing, both of which are inadequate bases. The crop grown changes from year to year and prices are subject to frequent and wide fluctuations. Further, the calculation of net income, which will be taken as 50 per cent. of the gross income, is grossly unfair, since it is common knowledge that the actual cost of cultivation exceeds 50 per cent. of gross income.

The submission of returns by individual landholders, the scrutiny of these and the determination of the surplus by the Tribunal, etc., will involve long delays and considerable labour. In the meantime, production will suffer. It is also doubtful whether the surplus land that would be available will be large enough to justify such unproductive labour.

Apart from the disincentive effect on agricultural production of the proposed legislation, there is also the danger that the attention of the officers of the Government will be diverted to administrative problems of implementing the legislation to the neglect of the more pressing problems of increasing production. It is difficult to visualise any long-term benefit resulting from the measure. On the other hand, it might easily reduce the peasantry to perpetual penury and serfdom.

SIR DORAB TATA TRUST

The Sir Dorab Tata Trust is now so much a part of India's life that few perhaps stop to inquire into its origin. The birth centenary of its great founder, which falls on the 27th inst., provides an occasion for grateful remembrance of the generous donor's services. Established in 1932, the Rs. 1-crore Trust has made rich contributions to public welfare, in keeping with the founder's high aims. Sir Dorab laid down that the Trust money should be applied "without any distinction of place, nationality or creed," to relief of distress, the alleviation of suffering and advancement of learning. These are the objectives by which the Trustees have been guided in their choice of causes and institutions for rendering assistance.

The institutions which either owe their origin to, or have been largely benefited by, the Trust make an impressive list. The Tata Institute of Social Sciences, the first of its kind in India, was the first project to be financed and organised by the Trust. An index of the high level of education and training imparted by this institution is that its diploma continues to be a much-valued qualification for employment in many kinds of welfare institutions. The Institute has so far drawn Rs. 31.5 lakhs from the Trust.

AMERICAN LETTER

MARKED RISE IN U.S. CORPORATE EARNINGS

SPURT IN STEEL IMPORTS—DECLINE IN SAVINGS

From Our Special Correspondent

NEW YORK, 11th August

DESPITE the steel strike which will result in temporary setbacks, the United States economy is booming. Second quarter earnings reports of 395 corporations were startling. The total amounted to \$1,733,943,000, as compared with \$991,151,000 in the second quarter of 1958. This is a boost of \$742,792,000, or almost 75 per cent.

Even adjusted for inflation and somewhat higher prices, this is a considerable gain which is one of the main supporting factors of the boom talk heard in every line of business around the land. For many companies, second quarter earnings represented new highs. Setting the pace were steel, automobiles, building materials, chemicals and even the railroads which were in a very bad way a year ago. Indeed, dollar-wise and unadjusted for inflation, 1959 may turn out to be the best corporate profit year in U.S. history.

The immediate business trends are mixed owing to the steel strike, where about one half million workers are affected. Many thousands others have been laid off in related industries and other hundreds of thousands are on their annual vacations. The combined result is a slowdown in economic activity which does not yet show up in the statistics.

Will Government Intervene?

The steel strike has now lasted for about a month and there is no sign of relenting in the position of the trade unions or of steel management. The chances are that, after six weeks of a steel strike, unemployment may be so critical in some areas that there will be Federal Government pressure for a settlement which would mean higher wages, or higher fringe benefits and, perhaps, higher steel prices—another turn in the wage-price spiral and inflation.

Judged from past experience, the decline in economic activity will be relative and short-lived. In the 1952 and 1956 steel strikes, overall employment fell less than 1 per cent. The other side of the coin is that, since midnight 14th July until the end of the strike, steel workers have lost each week \$65 million in wages and the U.S. lost 2 million net tons in raw steel. These figures concern the steel industry alone and not the other related lines.

Foreign competition in the iron and steel industries has been increasing relentlessly since mid-1957, regardless of the rise and fall of domestic steel production. Pre-strike buying for inventory purposes helped to raise the import total.

Imports Exceed Exports

Thus, imports of steel mill products topped exports by more than 77 per cent. in the first five months of 1959. It was the first such sustained reversal of the traditional pattern on record. Imports in May totalled 384,787 net tons, a new high. This was 226 per cent. greater than in May 1958.

Exports of steel mill products of all descriptions declined nearly 37 per cent. during the first five months, as compared with the like 1958 period. Pipe and tubing exports were affected primarily, but shipments to foreign countries decreased in all major product categories.

Foreign steelmakers have been moving in successfully into markets formerly supplied by the U.S. Recently, the President of the European Coal and Steel Community was reported saying that wage differentials give foreign producers a price advantage. Another hike in steel wages, or fringe benefits is apt to increase still further such price advantages of foreign steel producers.

Even before the strike, the increase of steel imports was alarming. Imports were 230,599 tons last December, against exports of 169,508 tons. As indicated above, imports rose to 384,787 tons in May, against exports of 165,856 tons, although the U.S. as the largest steel producer in the world has had, traditionally, a favourable balance of steel exports. So much for steel.

One of the brightest spots in the U.S. economy is construction. Residential building in the first seven months of the year was 32 per cent. ahead of 1958. New construction expenditures for July alone were \$5,200 million, or 14 per cent. higher than in July 1958.

The same trend is reflected in mortgage recordings. Non-farm mortgages of \$20,000 or less reached a record of \$2,730 million in May. But the volume of home mortgage recordings has always been sensitive to the level of interest rates.

During periods of "easy" money there was a rising tendency in mortgage recordings and the reverse was true in times of "tight" money. The rate on conventional mortgages has been moving up. In July, the average rate was 5.9 per cent., against 5.6 per cent. twelve months previously.

Conventional mortgages are extended by banks, mutual savings banks, insurance companies and savings and loan associations. Investors prefer them over Federal Housing Administration and Veterans Administration guaranteed loans which carry lower interest rates. Conventional mortgages in June accounted for 76 per cent. of all recordings. I have dwelt on this subject at such length because building and construction are one of the mainstays of the U.S. economy, the same as steel.

Political developments have had their effects on the U.S. economy as well. The stock market reacted in the form of lower prices to the proposed exchange of visits between President Eisenhower and Premier Nikita Khrushchev. The reasoning, apparently, was that a possible period of East-West amity may lead to reduced spending for defence which constitutes presently nearly 40 per cent. of the U.S. Budget.

High Level of Spending

Otherwise, there is an atmosphere of optimism. Consumers added \$452 million to their hire-purchase debt in June. It was the largest increase since September 1955. The June rise brought the total of such indebtedness outstanding to \$35,800 million which was \$2,800 million higher than 12 months previously.

Conversely, there was a dip in the growth of savings. People were confident enough to go out and spend money. The 518 mutual savings banks in the U.S. reported a gain of \$202 million in deposits in June. This was \$80 million more than in May, but \$100 million less than the deposit gain in June 1958.

The six months' growth in savings by these banks was \$585 million, as compared with nearly \$1,300 million in the first half of 1958. In addition to increased spending for consumer goods, there appears to have been a considerable diversion of funds into rising securities' markets at that time.

There is now much talk about interest rates. The Joint Economic Committee of Congress found the Federal Reserve system to be right and proper in its monetary policy. Yet, members of Congress favouring "easy" money over anti-inflationary "tight" money have blocked, so far, the President's request for an adjustment of the interest rate ceiling on long-term Treasury bonds. Meanwhile, most of the savings banks in New York will pay interest at the rate of 3½ per cent. a year, beginning 1st October, an increase of ¼ of 1 per cent.—All Rights Reserved.

U.S. GROSS NATIONAL PRODUCT

The U.S. gross national product reached an annual rate of \$484,500 million in the second quarter of 1959, representing an increase of \$14,500 million as compared with the previous quarter, according to the Department of Commerce. The figure represents the total value of services rendered and goods produced by the nation. This advance represented a 3 per cent. increase in the real volume of national output. Overall price changes were limited during the period. Since early 1958, quarterly gains have raised the gross national product annual rate by nearly 12.5 per cent. Income moved higher in all the major non-farm industries, with compensation of employees rising to a new high annual rate of \$279,000 million.

THE RIGHT ECONOMIC POLICY

From Our Own Correspondent

LONDON, 14th August

ONE of the most interesting aspects of the Cohen Report which your correspondent referred to last week, relates to the manner in which an inflationary crisis might be tackled. The Council on Prices, Productivity and Incomes no doubt had in mind that the world of economists tends to be divided into "little inflationists" (who prefer to call themselves expansionists) and "little deflationists" (who prefer to call themselves stabilisers).

The first are all for measures "which stimulate output and employment but lead to constantly rising prices" and the second are all for measures of restraint "which stop prices rising but also hold back output and employment." The Council considers it a major problem how to hold a middle course between these two approaches.

The deflationary measures, which operated up to about 18 months ago, have, of course, been criticised, because they lead to a damping down of economic activities and a rise in unemployment, but the Cohen Council have justified themselves on the grounds that they were the only known way of tackling the problem. They do not like them, because they take a long time to become effective and because of their other obvious disadvantages. They accordingly think that some other anti-inflationary policies should be worked out. In other words, some way in which money, incomes and output can rise together without one stepping in front of the other. They are not men who have any liking for the physical controls of the political Left. What the Labour Party would have done in similar circumstances would have been to tighten up Planning Permissions, so that building was centred on the most desirable (by what standards?) objectives. They would have restrictions over import licensing to curtail the expenditure of foreign exchange and restrictions over the raising of capital. These restrictions are, of course, all designed to damp down demand but this would mean the cutting off the channels through which money can be spent. It is argued that such physical controls can be directed to the precise points on which overspending is evident and, unlike the Bank Rate and credit policy, do not indiscriminately beat down the worthy and unworthy.

The Council again would like to see a change in the climate of public opinion sufficiently marked, so that the large Unions would have to take note of it in presenting their wage demands, but they have no faith that such a change could come about merely through demonstrating that dividends and profits are being controlled.

The deflationists—or stabilisers—must, or the other hand, take to heart that there is no economic victory in carrying restraint on demand to the stage where production drops and unemployment rises. There might be economic victory in a public state of mind which deplored wage settlements that inevitably mean rising prices. That is why the Council are now pinning all their faith on the concept of reducing prices, in order to encourage demand, to remove the incentive for higher dividend distribution and equally the incentive for higher wages, unless accompanied by opinion got used to the idea that progress and falling prices went hand in hand, they would regard dividend increases with suspicion and (involved) with even more suspicion. The standard of living of all income earners would then not depend on wage tussles but upon the solid results of bigger output at lower cost; in other words, on higher productivity per man—All Rights Reserved.

The International Finance Corporation has agreed to invest U.S. \$1 million in a new Chilean company, Cementos Bio-Bio S.A., to finance a part of the latter's programme to build a new cement plant at Huachipato, about 350 miles south of approximately 132,000 tons of the new plant will be land and slag cement. The latter two types are represented by the I.F.C.'s investment of \$1 million will be and bearing interest at 7 per cent. in dollars and profits.

LONDON LETTER

NOTES FROM WEST GERMANY

PROMOTING PRIVATE PROPERTY EMPLOYERS' COMMENDABLE EFFORT

From A Correspondent

COLOGNE, 14th August

THERE is hardly anybody in West Germany today—aside from die-hard socialists—who will deny that private property as widely dispersed as possible is a precondition to the sound national and social order of the country. Private property formation not only contributes to individual security or to the promotion of self-reliance, let alone to future increases in the individual income. Private capital formation also feeds the capital market which—if sound and well-balanced—safeguards the economic and social progress of the country as well as the national currency's purchasing power.

These thoughts have led W. German industrialists to consider ways and means designed to foster private capital formation by their employees. The following guiding principles pattern industry's policy to achieve this aim: the creation of individual property, mainly of wage and salary earners, must be based upon the free wish of the individual. Neither State nor any other collective compulsory regulations and directives should interfere in this matter, so that the fundamental idea of private, that is, voluntary property formation may be preserved.

German employers are promoting—or are urged to do so by recommendations of their top-level associations—voluntary private capital formation by an extensive educational campaign. The campaign is designed to show the employee the wide range of possibilities to create individual property—from private life insurance to house building—stressing that no property can be formed without abstaining from a part of individual spendings for day-to-day consumption. A further point is to show types of risks and chances for higher

yields are involved in investments in shares or securities. Banks, savings institutions and unit trusts are co-operating with industrial employers, distributing leaflets and pamphlets popularising the idea of Mr. and Mrs. Middle Majority being small investors.

The country's business men and industrialists are helping materially to concretise the idea by supplying their own administrative services to plant-owned building and loan associations, by offering higher rates of interest for employees' savings made available to the plant, or by providing short-term credits or outright grants to help members of their staff in their effort to start creating personal property. Other ways adopted include the offer of company shares issued to the staff at preferential rates, the encouragement of private life insurance and the use of former employers' contributions to "traditional" pension funds for the purchase of investment shares. The industry's active part in promoting private capital formation of the middle and lower income brackets is not the least reason why private savings in the Federal Republic are steadily rising.

State of Economy

During the first six months of this year, the Federal Republic's economic activities were prospering. Most figures—reaching to July in part—are reflecting a rather strong upturn, here and there exceeding by far last year's respective level. Just published official figures for June this year reveal a 27 per cent. increase in overall industrial orders, as compared with June 1958, and point to a continuing upward trend.

The overall development is due partly to higher public investments, motivated by incentives coming from booming house-building activities, and partly to mounting investments in

private industry. Hitherto, the aggregate offer of goods and services has elastically met the increased demand, thereby ensuring the stability of price level. A slower growth of wage incomes and of consumer spending, as well as the lack of a further reduction in work-week, contributed to keep the country clear from inflationary tendencies so far.

The general business outlook seems to be promising. Capacity reserves and labour supply were hitherto large enough to secure a steady and well-balanced growth. But unemployment now has been reduced to an absolute post-war low, with vacancies exceeding the available labour force. Heavy new investments will, therefore, be necessary, in order to overcome the increasing labour shortage. Export markets and modernisation requirements at home will more than compensate for a slackening of building activities in the future. On the other hand, however, the rate of expansion will more and more depend on efforts to step up productivity.

In spite of some wage rises which have already come into effect, a new round of wage claims is not expected to take place. But trade unions might well be aware of the tempting situation arising from the present full employment. While they thought slack periods good for them to raise claims in order to promote a *Mengenkonjunktur* (expansion of business in terms of quantity), scarce labour would be another handy pretext to skim the milk of rising productivity. This trade union attitude would be very dangerous to W. Germany's expected sound economic development for the rest of the year, since a continuing high rate of private savings and an increasing share of imports in total supplies of goods and services may push up prices here and there.

The continuation of the generally favourable trends visible around mid-1959, therefore, largely depends on whether extreme claims for higher wages or shorter hours can be avoided.

Shipbuilders in West Germany completed 113 seagoing vessels, with a total tonnage of 598,834 G.R.T. during the first half of 1959, as compared with 142 vessels, with 527,949 G.R.T. in the corresponding half of 1958. Of these, 61 ships were for W. German shipowners and 52 ships for foreign shipping companies, the comparable figures for 1958 being 76 and 66, respectively.

STRICTER CONTROL OVER BANKS

LOK SABHA PASSES AMENDING BILL

THE Banking Companies (Amendment) Bill, as reported by the Joint Committee of Parliament, was passed by the Lok Sabha on the 12th inst. after a brief discussion on the various provisions of the Bill. In essence, the Bill seeks to provide for stricter control over banking institutions by the Reserve Bank of India. The Bill, when it emerged from the Committee, was substantially unchanged from the original one, but it did not receive the unanimous approval of the members of the Joint Committee, for four of them (Messrs. S. M. Banerjee (Independent), V. P. Nayyar (Communist), Chintamani Panigrahi (Communist) and Raj Bahadur Gour) had added a minute of dissent saying that the amending Bill was "extremely inadequate to enable the Government of India to regulate banking industry in such a way as to make it function in a manner necessary in a developing economy with a socialist pattern as the goal." They even contended that some of the provisions are "retrograde in character and, in the interest of the industry and the country, ought not to have been embodied." During the debate also, some of the members were critical of the provisions and they went to the extent of suggesting more drastic measures such as fixation of a ceiling on dividends, ban on issue of bonus shares and nationalisation of banks. It is, however, gratifying to hear from the Minister that the Government is not in favour of these steps and that the provisions of the Bill as amended by the Joint Committee would serve the object in view.

The Amending Bill is described as a clarifactory and amending measure within the framework of the Banking Companies Act. The comprehensive Act was first enacted in 1949 and was amended thrice before the latest Bill was introduced. In 1950, for instance, it was amended to facilitate the speedy disposal of winding-up proceedings. The amendments were re-enacted in a more comprehensive form in 1953. In 1956, a number of new provisions were introduced extending generally the scope of the control by the Reserve Bank. It was, however, felt that the wording of the Act, as amended from time to time, had to be reviewed separately in the light of the legal decisions, the suggestions of the Reserve Bank and the difficulties experienced by banks. An opportunity has now been taken to carry out a comprehensive review and the results of this review are embodied in the latest Bill.

Definition of Branch

The Joint Committee of Parliament, as already pointed out, has not made any major changes in the Bill. In clause 2 of the Bill, which deals with the definition of "branch," the Committee has suggested a slight change. In the original Bill, "branch" was defined as any branch or branch office where any of the forms of business referred to in sub-section (1) of Section 6 of the principal Act is transacted. The Committee has felt that this definition should, except for the purpose of Section 35 of the principal Act, be restricted to only such place of business where deposits are received, cheques cashed or moneys lent. This change, as the Minister for Revenue and Civil Expenditure, Dr. B. Gopala Reddi, explained in his speech, while moving the Bill for adoption of the House, has been made in deference to the wishes of banks, as represented by the Indian Banks Association and with the object of clarifying the Government's intention that, while any office of a banking company is liable to be inspected, the time-consuming procedure of applying for permission to establish new offices should be waived, if money is not actually intended to be handled at any place of business. For instance, banks may be carrying on a few forms of business, such as holding of property as security for loans and advances at places where, for the purpose of such business, they may have only a godown and no branch. Under the original provisions of the Bill, the opening of such godown stations required permission of the Reserve Bank of India. Further, it would not have been possible for banks to carry on business as provided by sub-sections (g), (k) and (l) of Section 8 of the principal Act, namely, acquisition and holding and generally dealing with any property, or any right or title to such property, which may form security for any loans or advances, acquisition and construction of any building for the purpose of carrying on the bank's business, and selling, leasing, mortgaging or otherwise dealing with such property in any place, at which they

had no branch as defined in the Bill, without the permission of the Reserve Bank. These would have caused the banks concerned unnecessary inconvenience and hardship. The Joint Committee has recognised the strength of this argument and has amended the clause accordingly.

Management of Banks

The next amendment relates to Section 10 of the principal Act, which, inter alia, lays down that no banking company shall be managed by a person who is a director of any other company, not being a subsidiary company of the banking company. This provision was substituted in the amending Bill by the following clause:

"No banking company shall be managed by any person who is a director of any other company not being—

- a subsidiary of the banking company or,
- a company registered under Section 25 of the Companies Act, 1956,

provided that the prohibition in this sub-clause shall not apply in respect of any such director for a temporary period not exceeding three months or such further period not exceeding six months as the Reserve Bank may allow."

Bankers do not appear to be against this amendment, but they feel that the period of exemption provided in this clause is too short. For, according to them, there may be cases where the officiating manager of a banking company may have to function in this capacity for a period longer than nine months provided in the clause quoted above. They had, therefore, suggested that this period might be extended to a total of two years. The Joint Committee has, however, suggested that the period of extension can be extended up to nine months. This will mean that the Reserve Bank can grant exemption up to a period of one year, as against two years suggested by bankers.

Powers to Remove Directors and Officers

The Joint Committee has added a new sub-clause as a further amendment to Section 10 of the Act. This confers on the Reserve Bank power to remove any chairman or director or manager or chief executive officer of a banking company, if such person has been found by any tribunal or other authority to have contravened the provisions of any law and the Reserve Bank is satisfied that the association of such person with the banking company is undesirable. The Committee feels that the Reserve Bank should also have the power to prohibit such person from taking part in the management of any banking company for such period not exceeding five years as the Reserve Bank thinks fit.

Justifying the introduction of this clause, Dr. Gopala Reddi observed:

"Hon'ble members are aware of the dis-

qualifications provided for in the Companies Act, which prevent the association of certain persons with the institutions governed by that Act. The circumstances in which these provisions of the Companies Act can be applied are very rigidly prescribed and our experience has shown that, although these precise and elaborate provisions may, perhaps, be adequate in relation to industrial and commercial companies, they are somewhat unsatisfactory in relation to financial institutions like banks, which deal mainly with depositors' moneys and are especially vulnerable, in the event of difficulties being created for them either through mismanagement or fear of such mismanagement or otherwise.

"We, accordingly, felt it desirable to insert a new provision in the Act giving the Reserve Bank the power to remove from the office of the chairman, director, or manager or chief executive officer of a banking company any person if he is found by a competent authority to have contravened the provisions of any law and if the Reserve Bank is satisfied that the contravention is of such nature that the association of such a person with the banking company is or will be detrimental to the interests of the company or its depositors or is otherwise undesirable. Care has been taken to see that the power proposed to be taken is not arbitrary. The Reserve Bank of India will be required to satisfy itself regarding the facts of any particular case before any action is taken. An opportunity for showing cause against any proposed action is also intended to be given, wherever this is possible. I am sure that, in the larger interests of the banking industry, the House will welcome this provision."

This new provision has not been welcomed in banking circles on the ground that such statutory powers might seriously affect the reputation of credit institutions. There is also room for fear that such powers are likely to be misused for political victimisation. Some feel that the purpose of this provision can be achieved by friendly directives and advice. In view of certain known cases where persons associated with banks have been found guilty of malpractices and the unsatisfactory experience of the Reserve Bank in such cases, it is not undesirable to have on the Statute Book a penal provision of this nature. If credit institutions are to be aboveboard, it is necessary to have deterrent powers that will enable the Reserve Bank to eliminate undesirable persons from their management.

Declaration of Dividends

The Bill has sought to amend Section 15 of the Act which places some restrictions on the declaration of dividends by banks. These do not cover the declaration of dividend before writing off the losses arising out of depreciation in the value of investments. When there is a wide-spread depreciation in investments in Government securities, as may happen when there is an increase in Bank rate, the question arises off before a dividend is declared. There is, however, a difference of opinion on the obligation of banks to provide for this loss. In order to make the legal position in this respect beyond doubt, a provision was introduced as follows:

"Notwithstanding anything contrary contained in sub-clause (1) or in the Companies Act 1956, a banking company may pay dividends on its shares without writing off the depreciation, if any, in the value of its investments in approved securities, in been capitalised or otherwise accounted for as a loss."

After the Bill with the above provision was introduced in Parliament, it was submitted to the Government that the scope of the proposed amendment should be made wider than it was regard to depreciation on investments in shares of joint-stock companies and also in regard to auditor before any profits or dividends are declared. The Government considers this suggestion, in consultation with the Reserve Bank due course embodying the above suggestion ried out by the Joint Committee by recasting the Government's intention has now been carried out by the Joint Committee by recasting the relevant clause, permitting banking companies "to declare dividends without writing off depreciation, if any, in the value of their investments, debentures and bonds or the losses on account of bad debts, if adequate provision has been made therefor to the satisfaction of the auditor." The provision thus casts a heavy responsibility on the auditors for ensuring the safety of the depositors' money and the interest of the shareholders.

Dissenting Members' Note

The dissenting members of the Committee however, consider this provision as a retrograde step permitting banking companies greater scope for distribution of dividends and bonus shares. They go on to argue:

"A banking company is radically different from an industrial establishment. The shareholders of a banking company hardly

three per cent. of the working capital of the bank. The bulk of the funds on which a banking company operates and which bring so-called profits to the banking companies come from the depositors who have no say in the management of the banking company. It is, therefore, imperative that dividends are restricted rather than allowing greater scope for distributing dividends and bonus shares. Moreover, profit of a banking company could go to enhance the liquid reserves of the bank and be utilised for financing our developing economy instead of being distributed to this small group of shareholders. We do not see any reason for enlarging the scope of distributing dividends, when the trend in the country is of rising profits in the banks.

"We very strongly feel that this amendment should be rejected by the Houses of Parliament and the issue of bonus shares should be prohibited. We regret that the amending Bill is not only allowing increased dividends for the few but also seeking to regularise such irregularly distributed dividends in the past through clause 3 of the amending Bill."

Inspection of Foreign Branches

Another controversial provision in the Bill is the explanation added to Section 35 of the principal Act. This section provides for the inspection of banking companies by the Reserve Bank of India. It was sought to be amended so as to extend the powers of inspection to all branches of banking companies incorporated in India, whether such branches are situate in India or outside India.

Bankers are of the view that the Reserve Bank should not be given power to inspect foreign branches of banks incorporated in India. The main grounds on which they oppose this provision are: (1) such power is likely to create a wrong impression on the minds of people of the foreign countries where branches of Indian banks are situated, especially when branches of other foreign banks in the same areas are not subject to inspection by their central banking authorities; (2) Indian nationals having accounts with these branches are likely to transfer their accounts to branches of other banks which are not subject to such inspection; and (3) no such extra power is necessary, because banks in India are required to take prior permission from the Reserve Bank to open branches outside India and the Reserve Bank has thus control over such branches. The amending provision in the Bill is presumably based on the system adopted by the Federal Reserve Board in the U.S. But there is one distinction between the two, which appears to have escaped the attention of the Government. In the U.S., the F.R.B. is an organisation of the Federal Reserve Banks themselves and not an official organisation, whereas the Reserve Bank of India is an official organisation. Banking in India is modelled on the British system, but the Bank of England does not enjoy any such power of inspection of offices of British banks abroad. It is, therefore, contended, on behalf of banks, that, if banking in India were to have its legitimate growth and progress, banks should be subject to as few controls as possible.

Far from conceding this demand of bankers, the Joint Committee has extended the powers of inspection even to subsidiaries of banking companies formed for the purpose of carrying on the business of banking exclusively outside India.

Appointment of Directors

Section 35B of the Banking Companies Act provides for the approval by the Reserve Bank of the appointment and remuneration of managing or whole-time director or of a director not liable to retire by rotation, etc. This section has been amended so as to cover ordinary or part-time directors also, thus bringing it in conformity with a similar provision (Section 310) in the Companies Act 1956. The bankers are of opinion that this provision is likely to lower the prestige, position and honour attached to directors of banking companies in the estimation of shareholders and other members of the public. For directors of banking companies are not on par with those of other joint-stock companies.

Powers to Wind up Banks

The amending clause, which is to be substituted for Section 38 of the principal Act, extends the Reserve Bank's powers to apply to the Court for the winding-up of banking companies wherever this is considered necessary. This provision also is opposed by bankers. For they feel that the wording of the clause is so wide as to give almost unlimited powers to the Reserve Bank and such powers are not only undesirable but even unnecessary, as they are already provided by the Companies Act and other legislative measures and are sufficient for banking companies also.

The dissident members of the Joint Committee have also opposed the amending provision relating to winding-up of banks. Their argument runs thus:

"Here, we wish to point out emphatically that a banking company is established only after the Reserve Bank approves its establishment. The Reserve Bank regularly inspects the banking company and guides its operations. We, therefore, fail to understand why the depositors are to suffer unilaterally, if a bank is wound-up. We, therefore, propose that, just as Government and the Reserve Bank have been empowered to permit the establishment of a bank and supervise its operations, they should have statutory powers to amalgamate banks working unsatisfactorily sufficiently in time and not allow them to degenerate further and create a ground for their winding-up. We insist on this also, because, at every stage, it is the Reserve Bank which exercises control over the banks and which is in the know of the things happening in the banks and the depositors are kept all along in the dark. In fact, the depositors are attracted to the bank, because of the confidence arising out of the control of the Reserve Bank."

Penalty for Non-compliance

Section 46 relates to levy of penalties for non-compliance of the requirements of the Act, for failure to submit returns, balance-sheets or any other documents, but the provisions of this section do not now specifically apply to certain officers. The amending Bill seeks to extend the penalties to all officers to whom it does not specifically apply now. The bankers do not favour such extension, because there are genuine difficulties regarding filing of returns, particularly on account of difficulties of obtaining returns from distant and small places where branches of banks are situated and where some banks cannot afford to maintain competent and highly paid staff. The penal provision, it is felt, is likely to cause hardship to banks, to interfere with their normal working and to check the expansion of banking to remoter areas. The Joint Committee, instead of conceding this demand of banks, has actually raised the maximum fine prescribed under this clause from Rs. 500 to Rs. 2,000 and where the default is a continuing one, the amount of additional fine has been raised from Rs. 50 to Rs. 100 per day.

No Nationalisation

While some of the provisions of the amending Bill themselves are far-reaching, inasmuch

as they seek to exercise stricter control over banks by the Reserve Bank, some of the members of Parliament went further to suggest wholesale nationalisation of banks or other measures which are concomitants of nationalisation. The Minister, however, turned down these suggestions. Rejecting the demand for nationalisation, Dr. Gopala Reddi categorically stated that, as far as the Government was concerned, it did not contemplate such a measure either for the third Plan, fourth Plan or the fifth Plan. It was true, he added, larger resources were required for the third Plan and the Government was aware of the task before it in creating adequate foreign exchange and mobilising internal resources. Both the Government and the Planning Commission had considered the question of nationalisation in all its aspects and had come to the conclusion that it was not a desirable step from any point of view.

No Control on Dividends and Bonus Shares

Commenting on the suggestion for a ceiling on dividends and prohibition of bonus share issues, the Minister said that the Government did not consider such steps as necessary in the present context. As regards ceiling on dividends, the existing taxation system had sufficient deterrent effect. In respect of bonus issues, banks were already required to take the permission of the Reserve Bank. In allowing the issue of bonus shares, the Minister assured the House, the Reserve Bank considered each case carefully. The suggestion that Section 10 of the Banking Companies Act should be amended so as to permit the grant of bonuses with retrospective effect up to 1956 was also rejected by the Minister. He said that such a request asked, in effect, for the nullification of a recent judgment of the Supreme Court. "I do not see any reason why this judgment should be vacated, or why the old controversies on this subject, which fortunately seem to have disappeared for the moment, should be revived through any fresh amendment."

The Minister would appear to feel satisfied that the scheme of control, taken by and large, is not unsatisfactory, and that, within the limits of that control, the Bill will serve as a useful measure for facilitating the administration of this Act and the supervision and regulation of banking companies.

THE ENTERPRISE OF DURGAPUR

Those friends thou hast, and their adoption tried,
Grapple them to thy soul with hoops of steel

— SHAKESPEARE

Steel, for more than a generation, has grappled Simon-Carves to Indian industry in ever closer friendship. In many contracts for coke ovens and other steelworks construction at Jamshedpur and Burnpur—and now at Durgapur—Simon-Carves have contributed to India's industrial growth and have been rewarded with many friends and much experience.

The vast enterprise of Durgapur is an outstanding example of Indo-British

friendship and co-operation—an enterprise which British engineers, British banks and the British Government have united to help India to bring to reality.

Simon-Carves, as a member of the British consortium ISCON, are proud to be responsible for the coal preparation plant, coke ovens, by-products plant and power station, and for the training of many Indian engineers to build and to operate this great steelworks.

COMMON MARKET TO BAN IMPORT OF UNFINISHED COTTON GOODS

MILLOWNERS URGE OFFICIAL INTERVENTION

THE final decision on the agreement, under which the cotton industries of the six Common Market countries of Western Europe recently agreed not to buy "dumping" textiles and sell them after processing, is expected to be taken by the European Economic Community authorities in Brussels some time next month. The agreement, it is said, envisages the imposition of a blanket ban on imports of grey cotton goods from Asian, South American and Communist regions into the Common Market nations (France, West Germany, Netherlands, Belgium, Italy and Luxembourg) and their overseas dependencies, namely, Belgian Congo, Italian Somaliland, and French West Africa, Oceania, Equatorial Africa and Somaliland. "This action," to quote Mr. Bernard Herrenschildt, President of the Federation of the French Cotton Industry, "aims at all countries which have uncommercial selling or production methods. It involves cotton goods from Hong Kong, India, Japan and Pakistan, the Communist countries including China, and some South American countries, particularly Uruguay, because of special foreign exchange incentives."

The aforesaid move of the Common Market countries has evoked strong protests from the millowners in India. In the course of a communication addressed to the Secretary, Union Ministry of Commerce and Industry, the Indian Cotton Mills' Federation has urged that the Government should effectively intervene to prevent the imposition of a ban on exports of unfinished cotton goods from this country to the Common Market nations and their dependencies. It is true that the Indian piecegoods bought by the C.M. nations and their overseas territories are not substantial: they were only 11.6 million yards in 1958 and 14.0 million yards in 1957. But it is, as the Federation rightly points out, highly derogatory to India that its goods should be banned in any market on the ground of dumping, and it would be alarming if other countries begin to follow this example of the C.M. countries.

Balancing Adverse Effects

The Federation has expressed considerable surprise over the inclusion of India in the list of countries which are dumping cotton textiles and which have uncommercial selling or production methods. Surely, if that were so, the Indian cotton textile industry would not have been in such difficulties merely in maintaining exports at the level of previous years. The fact that India is being driven out of its traditional foreign markets by goods from several competitors like Hongkong, Japan and China shows that India certainly is not one of the countries having uncommercial selling or production methods. One may, of course, point to the incentives for cotton textile exports now being offered by the Government of India, but the objective behind these incentives is not to encourage dumping of textiles in overseas markets but only to balance, to some extent, the effect of the series of adverse factors confronting the mills, particularly the steep rise in raw cotton prices, mounting labour cost and heavy burden of taxation.

The Federation has done well to stress the need for India selling its textiles abroad. Drawing attention to the plans for economic development which have saddled India's economy with a heavy load of foreign loans, it says: "Every effort has to be made to earn foreign exchange and Indian textiles, which are one of the three most important foreign exchange earners of India, are pitted against goods from Hongkong, China, Japan, etc. If anything at all is to be exported, Indian textiles must be sold at prices competitive with those of other textile exporting countries." There is no exaggeration whatever in this statement of the Federation, as also in its view that, "if Indian textiles are allowed to be described by the C.M. countries as goods that are 'dumped' or 'sold under non-commercial selling methods,' this will be a matter for serious consideration, as Indian goods may have to suffer the same disability in other markets." It has accordingly called for effective official intervention.

In the absence of statistical data, it is not possible to say which of the Asian, South American and Communist countries have been dumping cotton textiles in the C.M. nations and their territories. One or two countries—China, and perhaps Uruguay in South America—may be

resorting to this practice. But it would be wrong on the part of C.M. countries to impose a blanket ban on all imports of unfinished cotton goods from the countries in the abovementioned regions. Such a move will only buttress the uneconomic and inefficient manufacturers in both the exporting and importing countries. As this journal pointed out on an earlier occasion, no one will complain if the Western nations succeed in withstanding competition from Asian textile exports through sheer weight of their efficiency, as the United Kingdom is now doing under the £30-million redundancy and re-equipment plan for the cotton industry.

Not Fair

In any case, the authorities of the C.M. countries will not be fair to India and others that export cloth to their region, if they take an *ex-parte*, unilateral decision. In fairness to the international organisations of which they are members, they should submit their grievance to the G.A.T.T. before banning imports of semi-processed cloth. The G.A.T.T. is undoubtedly the most appropriate body for deciding this issue. This will give a chance to the countries accused of dumping to prove their case. Failure on the part of the C.M. to do so will only serve to strengthen the deep-seated misgiving in this part of the world that the formation of the C.M. is only designed to achieve economic gains at the expense of other countries.

The so-called export incentives which the Government of India is providing to cotton mills are of a very modest nature and are more than offset by heavy taxation to which the cotton mill industry is subjected. There are no such burdens of comparable magnitude on the cotton mills in the C.M. countries. Further, these incentives are not so bad as some of the practices adopted by a few of the C.M. countries till very recently. We would like to remind the President of the French cotton industry, in particular, of the multiple exchange rates which his country was following until recently and the number of occasions on which his national currency was devalued. Although this journal is not a great admirer of the monetary and fiscal policies followed by the authorities in this country, it can certainly point out with justifiable pride that India's record in the field of currency and finance, especially from the international point of view, has so far been cleaner than that of

France. The findings of the I.M.F. will bear testimony to this assertion. God alone knows how many industries are being subsidised in France and other C.M. countries even today and how often some of these countries, particularly France, have taken full advantage of the waivers under the I.M.F. and G.A.T.T. rules.

The cotton millowners in these countries may forget the time-honoured adage that those who live in glass houses should not throw stones at others, but surely not their Governments. It is also necessary to add that France has enjoyed the indulgence of the whole free world and the billions of dollars made available by the U.S. for rejuvenating its economy which had been rendered anæmic as a result of its attempts to stick to its pre-war empire in Asia and Africa. If India is seeking such indulgence today, it is not for waging any colonial wars but for guaranteeing the minimum decencies of life to its teeming millions. If only India had half of the generous foreign aid which France has had, it would, perhaps, be unnecessary for its masses to forgo a part of its clothing requirements and sell the cloth thus saved in the foreign markets of the world in order to buy the plant and machinery necessary for creating employment. We would strongly urge the authorities of the Common Market countries to view the economic problems of underdeveloped nations like India against their broader perspective and not merely from their narrow angle.

CLOSURE OF MILLS

The number of cotton mills closed down as on 30th June 1959 was 39, according to the statement placed on the table of the Lok Sabha on the 3rd inst. The State-wise closures are: Andhra Pradesh 1; Bihar 1; Bombay 15; Madhya Pradesh 1; Madras 5; Orissa 2; Mysore 3; Rajasthan 4; Uttar Pradesh 5; West Bengal 1; and Delhi 1. As many as 33 mills were working partially as on 30th June 1959—23 in Bombay, 3 in West Bengal, 2 each in Madras and Pondicherry, and 1 each in Mysore, Kerala and Uttar Pradesh. Three mills that had remained closed at the beginning of the current year have since reopened. They are Aurangabad Cotton Mills, Aurangabad; Pollachi Bagyalakshmi (renamed as Kvality Textiles), Pollachi, and John Princess of Wales Spinning Mill No. 4, Agra. Under the provisions of the Industries (Development and Regulation) Act, 1951, the Government has recently taken over the Atherton West Mills, Kanpur, and the Model Mills, Nagpur. As a result of the closure of eight mills in 1959, the estimated monthly loss is 4,382 bales (1,500 yards each) of cloth and 11,495 bales (400 lbs. each) of yarn.

The Government of India has since taken over the Ajoyhva Textile Mills Ltd., Delhi. It has authorised Messrs. Karam Chand Thapar and Brothers (Private) Limited to take over the management of the undertaking and appointed restarting of the mills has commenced with effect from the 20th inst.

MORE COTTON MILLS TO SCRAP EQUIPMENT

TEXTILE EXPORTS FALL, WHILE IMPORTS RISE

From A Special Correspondent

MANCHESTER, 11th August
PIONEERS in the scheme to scrap Lancashire cotton mills in the £30-million redundancy and re-equipment plan have begun to lodge their applications for compensation with the Cotton Board. Share-

MANCHESTER LETTER

holders in a number of firms have received letters from the directors advising them to keep their shares as in the event of the scheme going through and the company closing down their value will be very appreciably increased. These communications are taken to mean that the firms involved are contemplating withdrawing from the industry.

A definite decision to close down two mills of the Irwell Bank Spinning Company at Stoneclough, near Manchester, containing nearly 300,000 spindles, has been taken by the Board. Mr. George H. Whitehead, the Chairman, in his message to shareholders, said: "We could carry on and offer in the scheme a limited number of mule spindles and with the compensation thus obtained and existing cash embark on a limited programme of re-equipment. We reluctantly came to the conclusion that the limited re-equipment which could be financed in this way would be inadequate in the likely future of the industry."

An analysis of the compensation payments for scrapped machinery and realisation of assets indicated the minimum amount available for each 10s. ordinary share would be 15s. Preference shares will be repaid at their par value of 10s.

Avoiding Sales of Shares

Among the companies which have advised shareholders to avoid selling their shares are Roundhill Textiles Ltd., a group controlling nearly 250,000 spindles in the Peel, Mossfield and Egyptian mills at Bolton, and Unity Ring Mill, which contains over 70,000 spindles at Heywood, Lancashire. Similar action is under review by many mill managements and speculation on the number of companies likely to go into liquidation is widespread throughout the industry. Conversations on the Manchester Royal Exchange at the moment centre almost exclusively on the topic. The names of several firms believed to have reached a decision to close are being constantly mentioned.

Last week, Mr. William T. Winterbottom, Chairman of the big Fine Spinners and Doublers group, announced that his combine would submit more than one million spindles for scrapping.

In order to encourage early application under the plan, a 5 per cent. bonus on compensation will be paid, if claims are put in before the end of this month. At least six million spinning spindles, 400,000 doubling spindles and 45,000 looms must be declared

redundant for the individual schemes to become effective.

Mr. William T. Sutcliffe, Chairman of Taylor and Hartley, Ltd., a group owning nearly 5,000 looms and 370,000 spindles, told the annual meeting at Westhoughton, Lancashire, that there would be some redundancy within the group. No final decisions had been taken, but some mills would be included in the scheme. He said that "whatever we get as compensation for redundant machinery, however, we shall not at present go headlong into buying new machinery." And he added: "We shall give it very careful consideration and, after time has elapsed, we shall be able to gauge the prospects. Eastern countries may well send more cloth into this country and put the trade in jeopardy." Mr. Sutcliffe was optimistic about the future for those firms which remained in the trade. "My prediction is that cloth will become a valuable commodity," he forecast.

Further Plans to Scrap

More big Lancashire spinning mills—the 100,000-spindle Falcon Mill at Bolton and the 85,000-spindle Mather Lane Mill at Leigh—are to close under the reorganisation plan. Built 65 years ago, the Falcon Mill contains outdated mule machinery all of which the Directors intend to submit for dismantling, getting in exchange approximately £75,000 in compensation. Mr. Wilfred Thornley, the Chairman, told shareholders that the Board will submit the entire plant for compensation under the redundancy scheme, after which the Company would be put into liquidation and the assets returned to shareholders. He estimated that a payment of approximately 10s. 6d. for 6s. 8d. shares would be available, as against the current Stock Exchange value of around 6s. 6d.

Commenting on the decision, Mr. Thornley added: "We had to think of the enormous cost involved in replacing old mules with modern ring frames. While doing this, we would also have to pay large sums of money to enable other firms to re-equip. Then, finally, we would have to face the intense competition of increasing yarn imports from abroad, where the cost of production is so much cheaper."

The Combined English Mills, Ltd., owners of Mather Lane Spinning Company, said that the mill would cease production in the near future. Alternative employment would be offered to displaced workers at other mills controlled by the group at Leigh and Atherton.

The Calico Printers' Association announced that 344 fully automatic looms from their Rhodes Mill, Middleton, are to be transferred to their Wellington Mills, Ashton-under-Lyne, to replace 438 Lancashire looms which are to be scrapped under the Government redundancy scheme. This transfer will affect 250 operatives at Rhodes Mills, but employment will be offered to them at Wellington Mills. The spinning section will be continued at Rhodes Mill.

In the half-year to the end of June, shipments of Lancashire cotton cloth amounted to 169,138,000 square yards, as against 207,591,000 square yards in the same period of 1958. Earnings from this source were £22,413,416, as against £27,544,673. In the corresponding months, imports of grey and finished cotton cloth from abroad reached a new high peak of 240,493,000 square yards, as against 201,738,000 square yards in 1958.

Exports of cotton yarn in the six months were only 11,861,790 lbs., as against 14,548,388 lbs. in the same period last year. As compared with the rate of shipments in 1957, sales of yarn abroad were nearly halved. The following table shows the position, with recent comparisons:

(Cloth in thousand sq. yards; yarn in thousand lbs.)

	EXPORTS		IMPORTS
	Cloth	Yarn	Cloth
1st quarter 1957	120,185	10,050	103,064
2nd "	117,030	9,960	114,720
3rd "	109,530	9,200	108,510
4th "	109,020	8,430	105,000
1st quarter 1958	118,248	8,045	118,541
2nd "	91,341	6,503	85,197
3rd "	88,326	6,139	74,893
4th "	88,161	6,110	110,132
1st quarter 1959	82,163	5,725	121,911
2nd "	86,975	6,137	118,582

A few of the smaller importing countries have taken more Lancashire-made cotton cloth, but the deficiency as compared with last year must largely be attributed to the severe curtailment in purchases by the chief Commonwealth markets, which still account for a large proportion of this business. Only Ghana has raised her takings among the markets of any importance to Lancashire. In this case, shipments have increased from 7,536,000 sq. yards to 9,867,000 sq. yards.

The leading consumers of British cotton cloth over the half-year were (in thousand sq. yards, with 1958 comparisons): Australia 26,768 (35,944); South Africa 20,211 (31,327); New Zealand 12,912 (16,900); Nigeria 11,770 (14,044); Rhodesia and Nyasaland 9,996 (10,757).

More variation occurred in the business done in cotton yarn, there being instances where some improvement in trading conditions took place. New Zealand, for example, took 1,361,246 lbs., as against 1,284,158 lbs. in the same period last year, while shipments to Canada were higher at 1,608,303 lbs., as against 1,039,965 lbs.

Against this more favourable trend, exports to Australia fell from 4,418,557 lbs. to 3,665,011 lbs. and there was a sharp slump in trade with India, which declined from 1,054,634 lbs. to 367,994 lbs. Several European countries also absorbed smaller quantities of Lancashire yarn, in particular Western Germany, which took only 92,670 lbs., as against 461,970 lbs. and the Netherlands, whose purchases dropped from 344,643 lbs. to 133,600 lbs.

Importers Still Gain

Arrivals of foreign cotton goods of all kinds continued their upward trend. In the first six months of the year, imports of cloth exceeded 240 million sq. yards, costing more than £18 million. The comparative figures a year ago were 201 million sq. yards, valued at £15 mil-

RAW COTTON IN PAKISTAN

CHANGE IN PATTERN OF TRADE

THE recent reduction in export tax on Pakistan cotton has failed to have any perceptible effect on the price of export varieties of cotton in both that country and India. This is because of the fact that there was only very little exportable surplus left of the current crop in Pakistan. At the end of July, unsold stocks in Karachi were estimated at hardly 50,000 bales. The prospective carryover on 31st August 1959 is expected to be one of the smallest on record. The size of the 1958-59 season cotton crop had been estimated at 1,467,000 bales, comprising 1,356,000 bales of American-seed cotton and 111,000 bales of Desi cotton. This makes the total supply of cotton for the season, including the carryover of 180,000 bales, 1,647,000 bales. The yield per acre has been estimated at 178 lbs. per acre, as against 183 lbs. in 1957-58, 176 lbs. in 1956-57 and 196 lbs. in 1955-56. Total sales registered for export from 1st September 1958 till 15th July last aggregated 382,781 bales made up of 127,906 bales of Desi and 254,875 bales of American-seed cotton, as against 626,738 bales sold during the same period of the previous season.

Purchases by domestic mills are expected to aggregate 1.2 million bales for the 12-month period ending 31st of this month. Assuming that export sales for the whole of the season would amount to 440,000 bales, there will be a balance of hardly 7,000 bales to be carried over into the next season.

As regards the new crop, sowings were completed by about the first week of July. The crop outlook at present is reported to be favourable, though the Punjab and Sind have, of late, received heavy rains. New crop is now said to require a long spell of dry and clear weather to ensure healthy development.

As will be seen from the above figures, a remarkable transformation has taken place in the pattern of trade in Pakistan cotton. Exports of cotton now account for only a minor portion of the total output of cotton in that country. The domestic textile mills absorb the bulk of the cotton crop. While in 1948-49 the crop was of the order of 1,085,000 bales, exports aggregated 1,172,502 bales, the difference between production and exports representing the quantity drawn from stocks. As compared with this, in 1958-59, out of a total crop of 1,356,000 bales, as much as 1,200,000 bales will have been absorbed by mills. This is a reflection of the growth of the cotton textile industry in Pakistan. The total number of mills in Pakistan in August 1947 was only 14. This increased to 60 in 1954, 87 in 1955 and 102 at present. Of this, 31 mills are in Karachi, 51 in West Pakistan and 20 in East Pakistan. The total installed capacity at the end of 1958 was 1,889,000 spindles and 29,000 looms, as against 117,000 spindles and 5,000 looms at the end of 1948. Of these, 1,768,000 spindles and 27,000 looms were actually working. Total production of yarn and cloth amounted to 345 million lbs. and 576 million yards, respectively. As compared with this, total production of cloth was only 88 million yards in 1948.

Earnings from cotton exports have naturally registered a corresponding decline. Thus, from Rs. 96 crores in 1951, they have declined to Rs. 25 crores in 1958. It must, however, be noted that a part of this loss is made up through exports of cotton yarn and manufacture.

CLOTH EXPORTS

If the assessment of the outlook for cloth exports made by Mr. Neville N. Wadia, Chairman, Cotton Textiles Export Promotion Council, in his speech at the fifth annual meeting of the Council held on Wednesday last, is correct, both the textile interests (mills and shippers) and the Government, which has given incentives, deserve to be complimented. Mr. Wadia revealed that exports of cloth recently had been heavier and that in the second half of 1958, we might reach the "normal figure" of 400 million yards. On this basis and taking the actual shipment of 309 million yards in the six months ended June, the aggregate exports of cloth for the whole of 1959 will work out to 709 million yards, as against just 587 million yards sold abroad in 1958, a rise of 122 million yards. Still, they will be very much less than the exports either in 1957 (840 million yards) or in 1956 (744 million yards).

The slightly better performance expected for the second half of 1959 is in keeping with the improvement reported by other exporting countries also. Advances from Britain and Japan say that offtake of cloth is picking up. This is due, to some extent, to the economic recovery in Western Europe and the U.S. and its favourable impact on prices of primary commodities.

The world market for cotton textiles, however, continues to be highly competitive. While the number of countries seeking a share in this trade

has increased with the emergence of Communist China, Hongkong, and East European countries as exporters, the market itself is shrinking. The total world exports of textiles during 1958 amounted to 4,369 million yards which represent a drop of 12.3 per cent. as compared with the exports of 5,002 million yards in 1958, with prices declining by about 15 per cent. in most cases. Mr. Wadia attributed this shrinkage in world textile trade to (1) establishment of new mills in many countries which were not self-sufficient previously such as Nigeria, Abyssinia, East Africa, Rhodesia and Ceylon, (2) expansion of the industry in Pakistan and Hongkong, and (3) reduced offtake by several of India's overseas markets, following the very unsatisfactory prices for agricultural produce. Even in this declining market, Communist China has succeeded in boosting its textile exports by openly quoting 10 per cent. less than Hongkong or Japan. The percentage share of world textile exports captured by China in 1958 stood at over 11.4 (the actual exports being 500 million yards), as against 6.9 (350 million yards) in 1957.

The slight recovery in Indian cloth exports is significant in the context of the persistently rising tendency in cost of production. The currently ruling prices of Indian cotton-cotton accounts for 50 per cent. of the cost of cloth—for instance, are higher than those of similar cottons grown elsewhere in the world. Again, the productivity of the Indian mill worker is much less as compared with his confrere in other countries. The average Indian mill employs 10 to 15 operatives per 1,000 spindles, as against 1.8 of a new mill in Europe. The incentives for exports now being given by the Government have, as Mr. Wadia stated, merely balanced the adverse effects under which the textile industry and trade suffer and, in no case could India be accused of dumping. And he made it clear that India's customers "can be rest assured that we are not using any unfair methods to upset their own industries."

The improvement in cotton textile exports witnessed lately must not, however, lead to a sense of complacency. If this improvement is to be sustained, it is of the utmost importance that vigorous efforts are made to enhance the competitive ability of the industry. Alluding to this subject, Mr. Wadia briefly stated that it was not only in the installation of automatic looms that the cotton industry needed re-equipping, but the latest methods of production, which were now common practice in the advanced textile industries, must also be adopted. Mr. Wadia had also a word of appeal to the mills manufacturing fine and superfine goods, the exports of which account for a bare 4 per cent. of India's total exports. He said that these mills must come forward "in a bold manner" to increase exports by taking advantage of the special incentive scheme. In his considered

opinion, these mills must study the requirements of the overseas markets and bring out a range of goods for their seasonal requirements. Further, styles and fashions play a most important part and must be accompanied by vigorous salesmanship and said that, if these were solved, much headway could be made in export trade.

While on the subject of cotton textile exports, it will be useful to record here the answer given by the Government's spokesman to a question in Parliament on the progress of installation of automatic looms. During 1958-59, 671 additional automatic looms were installed in the mills; 38 more of these looms were added upto the end of June 1959. The number of automatic looms used so far for replacing plain looms was 1,282. Not all the cloth produced on automatic looms has been exported.

COTTON CONSUMPTION

Preliminary figures relating to cotton consumption compiled by the office of the Textile Commissioner place Indian cotton consumption by mills during the month of June at 389,232 bales. This compares with 324,757 bales consumed in the corresponding month of the previous season. The June figure is lower than that of the previous month. But the overall consumption during the first ten months of the season ended June last is 175,000 bales higher than the quantity consumed in the corresponding period of the previous season.

Consumption of foreign cotton continued to be on a lower scale as compared with that in the last season. Consumption in June was higher than in May, but the overall figure for the ten-month period is nearly 100,000 bales lower than that in the corresponding period of the last season. The following table gives the monthly consumption of Indian and foreign cotton during the years 1957-58 and 1958-59:

	(In bales of 400 lbs. each)			
	Indian		Foreign	
	1958-59	1957-58	1958-59	1957-58
September 1958	899,499	899,125	42,554	49,310
October	884,558	872,781	41,303	46,415
November	863,550	890,784	35,644	51,021
December 1958	419,814	891,490	39,301	51,858
January 1959	418,181	892,007	34,370	48,804
February	376,105	850,474	31,580	43,866
March	380,198	854,298	34,294	47,643
April	379,338	845,743	36,225	42,984
May	380,282	860,068	38,058	46,379

When introducing the 'Legion of Honour' Napoleon was reported to have said that

MEN ARE LED BY TOYS

But honour and goodwill in business are no toys. They are real, they can make or mar your future and the country's too. It is more so in international trade.

Strict quality control, supplies according to approved samples, close adherence to delivery schedules—these are the foundations on which a lasting good name, and good business too, can be built. These conditions must be fulfilled while exporting your goods.

TATA LOCOMOTIVE AND ENGINEERING COMPANY LIMITED

SCHEME FOR MANUFACTURE OF SMALL CARS SUBMITTED

MR. J. R. D. TATA ON AUTOMOBILE INDUSTRY

THE Tata Locomotive and Engineering Company, Ltd., has submitted to the Automobile Enquiry Committee, which opened its public enquiry in Bombay this week, a plan for the manufacture under licence of a small German car of advanced design, which can be sold at Rs. 6,950 ex-factory. Disclosing this at the Fourteenth Annual General Meeting of the Company held in Bombay on 19th August 1959, Mr. J. R. D. Tata, Chairman, reviewed, in the course of his address to the shareholders, the various plans of expansion of the Company.

The following is the full text of Mr. Tata's speech:

"LADIES AND GENTLEMEN,

The Year's Results

"As you will have seen from the report and accounts before you, the Company continued to make good progress in its manufacturing operations during the year under review. Our total turnover was a little lower than in the previous year, but only because the 1957-58 figure included the value of a substantial number of imported heavy trucks and other special vehicles. The output and sales of our own vehicles in fact increased substantially as compared with the previous year. We could have done even better in the automobile division had we not been limited, like everyone else in the industry, by the amount of foreign exchange available for the import of essential components and raw materials.

Profits and Appropriations

"The disposable profits were about the same as last year after providing for about Rs. 38 lakhs more for depreciation, taxation and development reserve. The large allocation of nearly Rs. 75 lakhs to this reserve is strictly in accordance with the requirements of the Finance Act and reflects the substantial increase in capital expenditure during the year. The appropriation of Rs. 10 lakhs to deferred taxation is self-explanatory, the intention being to even up the tax burden in later years, when reduced depreciation allowances will increase the ratio of tax to gross profits.

"As disclosed in the report, production in all divisions and departments showed an appreciable increase; in fact, we exceeded most of our targets. What is perhaps even more gratifying is that efficiency and productivity have also shown a marked improvement.

"We have continued to strengthen our position both in equipment and organisation and we now have solid foundations on which to build the further expansion and diversification of our activities in the years to come, for which we have a number of schemes under consideration.

Diesel and Steam Locomotives

"Beginning with the locomotive division, we have offered to undertake the manufacture of diesel locomotives for the Indian railways under an arrangement with our technical associates, Messrs Krauss Maffel. Assuming that the conversion from steam to diesel traction in India is a gradual one, we are willing to continue manufacturing steam locomotives beyond the period of the present agreement which expires on 31st May, 1961, if the Railway Board wishes us to do so. In actual fact, the orders at present in our books will not carry us beyond March 1961 when all the locomotives so far ordered from us will have been fully delivered. The advance planning, preparation and procurement of materials for the manufacture of locomotives takes at least twenty to twenty-four months and, in order to avoid a costly gap in production resulting in idle men and machinery, we have repeatedly, but so far unsuccessfully, pressed the Railway Board to place further orders on us pending a long-term decision on policy.

Locomotive Prices

"I shall not discuss here the question of current and future locomotive prices, as the matter is so complicated and delicate, except to say that, while we are willing to continue to serve the Indian railways after the expiry of the present contract and do not expect more than a modest profit from such business, recog-

nising as we do the encouragement they have given us in establishing this industry, we cannot in fairness to our shareholders and employees, agree to operate continuously at a loss. We appreciate the goodwill and courtesy we invariably received from the Railway Ministry; we believe they recognise the high level of efficiency we have reached in our operations since full production was established. We must, however, deplore the fact that, perhaps because of certain uninformed criticism on the working of their agreement with us, they seem to be unwilling to commit themselves to any basis or formula for fixing locomotive prices which would not result either in a loss to us or at least in the complete absence of any profit.

"We have repeatedly pointed out that the criticism voiced in Parliament that the prices paid by the Railway Board for our locomotives were too high, referred to a period when the factory was still under construction, and full production had not been reached. In any industry, whether in the public or the private sector, costs are high in the initial stages and fall rapidly as production and efficiency rise. Our own costs have come down steadily since 1954 and there now can be little doubt that our prices today compare favourably with those at which locomotives can be imported. In order to make things as easy as possible for the Railway Board, we have expressed our willingness to being treated in future, in regard to locomotive orders, on exactly the same footing as any other bidder in India or elsewhere. While there would be no obligation on their part to place continuous orders with us, we would be free to bid in answer to tenders along with anyone else.

Diesel Engine Project

"We have also under consideration a scheme for manufacturing Mercedes-Benz diesel engines for these locomotives and have submitted proposals to the Railway Board. The relatively high capital cost of the project in relation to the likely output, in view of the absence of standardisation in the Railway Board's requirements, makes it somewhat doubtful whether the scheme will materialise.

Pulp and Paper Machinery

"Reference is made in the report to the scheme for the manufacture of pulp and paper making machinery in collaboration with the well-known Swedish firm of Messrs. A. Johnson and Company, Stockholm, through their associates, Messrs. Karlstad Mekaniska Werkstad. With over 70 years' experience in the line, they have attained a pre-eminent position as suppliers of paper and pulp plant throughout the world. The Government of India have authorised us to commence manufacture of equipment pending finalisation of certain details concerning the terms of collaboration. Preparations for this work are well in hand and manufacturing operations should begin by the end of this year.

Expansion of Auto Division

"Coming to the automobile division, as mentioned in the report, the Government have sanctioned the expansion of our truck and bus chassis capacity to 12,000 a year and we have already placed orders for the necessary additional equipment. Production will rise by stages, but our ability to reach the rated output will depend on the availability of foreign exchange for essential components and raw materials. The raw material problem is, I hope, only a temporary one. As the new steel capacity which is being built up comes into operation and, in time, an adequate range of alloy steels is also made in the country, the need to import the bulk of raw materials for cars and trucks should largely disappear.

"By October of this year we shall have fully discharged the obligation we had undertaken vis-a-vis the Government and the country to establish in four years the full-fledged manufacture of a first-class commercial vehicle with maximum indigenous content. In fact, when the present expansion of our capacity to 12,000 vehicles per year has been completed in January 1961, we shall have achieved in less than six years a fourfold expansion of the original project which, as you will remember, was

initially based on a planned output of 3,000 vehicles a year. We feel that the next expansion of our automobile division should now be in the direction of a new product, and we believe that the best opportunity for us to diversify our operations and at the same time to render maximum service to the country by meeting a great public need, would lie in the manufacture of a small, low-cost passenger car.

Light Car Project

"In this connection, you may be aware that the Government of India recently appointed a high level Committee to examine the cost and prices of motor vehicles at present being made in the country, and also to submit recommendations for the manufacture of an economy car. In pursuance of the objective I have just mentioned, we submitted only a few days ago to this Committee a detailed project for the manufacture under licence of a small German car of advanced design. We are fortunate in that our partners, Messrs. Daimler-Benz, have recently acquired a controlling interest in Messrs. Auto-Union G.m.b.H., an old and reputed firm of automobile manufacturers in Germany, and makers for over thirty years of the well-known DKW light car. A new model of this car is just going into production in Germany, combining outstanding technical features with comfort, performance, economy and long life. Messrs. Auto-Union have agreed to licence our Company for the manufacture of this car at Jamshedpur and we are assured of their and Daimler-Benz's technical assistance. The project, which is based on an output of 12,000 vehicles per year, would involve a capital expenditure of about Rs. 14 crores, including housing, spread over a period of three to four years. The car would sell for about Rs. 6,950 ex-factory and from the enquiries we have made we are confident that at this price and for a car of such high quality, performance and sales appeal, there would be no difficulty in disposing of the entire output. In fact, we believe that, as in the case of trucks, the demand for cars will continue to exceed the supply.

Profitability

"If I am asked whether this project will be profitable, I would answer that we would not think of embarking on such a costly venture unless we believed it to be commercially sound. At the same time, I would request shareholders to view the project not as one aimed at quick financial returns, but as a long-term one. Whether from the point of view of the element of national and public service involved in the manufacture and supply of such an essential product to thousands of people of modest means, or from that of hard economic realities, it is clear that the ultimate financial success of such a project must come not from a large margin of profit on a small number of units, but from a very modest profit made on a large number of units. That, in fact, is the very essence of all modern industries concerned with the manufacture of articles destined for a mass market and has proved particularly to be the case with the low-priced automobile ever since the days of Henry Ford. A large market can be developed, particularly in a poor country like ours, only if the price of the product is low. Low prices are possible only with low costs, which can themselves be achieved only on a large volume of production which, in turn, requires a large market to sustain it. The proper way to break this vicious circle is to keep prices at the lowest possible level from the very start. Even if, applying this principle to the present project, little or no profit is made in the initial stages, the venture would still be well worthwhile in the long run and it would be very much in our interests to go ahead with it for, in the process, our Company would be greatly strengthened by the enlargement of its plant and facilities, the spread of its overheads, the diversification of its products and the development of its organisation which is perhaps its greatest asset.

"We realise that we are not the only ones in the field as a number of other firms have also put forward projects of their own. We can only hope that ours will be the one ultimately selected and approved by the Government as being the most complete and realistic and embodying the largest initial degree of indigenous manufacture. In the meantime, however, I would caution shareholders against undue optimism.

"While on the subject of the automobile industry, I should like to say a few words about the criticism we hear from time to time that

(Continued on page 327)

PLEA FOR HIGHER SUGARCANE PRICE

I.S.M.A. EXTENDS SUPPORT

IT is amazing that the sugar millowners who had all along been stoutly opposing the plea for an upward revision in the existing basic minimum price for cane (namely, Re. 1.44 per maund for gate deliveries and Re. 1.31 for delivery at rail centres) have now come out actively advocating higher cane price. Only three weeks ago, Mr. S. K. Somaiya, the erstwhile President of the Deccan Sugar Factories Association, suggested that, if the Government did not propose to remove the control on sugar, then the only alternative before it was to increase the price of cane to at least Re. 1.75 per maund. The suggested price represents a rise of over 20.5 per cent., as compared with the current price. The Committee of the Indian Sugar Mills' Association has since urged the Central Government to raise the cane price. Thus, in a letter addressed to Mr. B. B. Ghosh, Secretary, Union Ministry of Food and Agriculture, Mr. Jagdish Prasad, President of the Association, says:

"If the Government are not able to see their way to decontrol sugar during the coming season (1959-60) as recommended by the industry, the Committee would suggest that the minimum cane price be raised suitably, with a corresponding rise in the sugar price on this account. The Committee consider that, in view of the general increase in the price of other agricultural crops, it is necessary that the cane growers should also receive a better price. This we consider most essential to ensure high production of sugar."

Until recently, one thought that the persistent agitation of cane growers for an increase in price had been backed only by politicians, including Congress men, in their understandable anxiety to be on the right side of cane growers. Instead of continuing to oppose this suggestion, it is deplorable that the sugar millowners have argued the case for a rise in cane price. Hardly seven months have elapsed since a delegation of millowners in Uttar Pradesh met the Chief Minister of the State and declared that there was no case for an increase in the price of cane. They, however, pleaded that, even on the basis of the ruling price of sugarcane, there was a strong case for a rise in the ex-factory price of sugar. In support of this view, the delegation said that there had been an increase of at least Re. 1 per maund in the cost of sugar production in the current season, thanks to the three main obstacles to the smooth running of sugar mills, namely, low recovery of sugar from cane, near-certainty of a shorter crushing season and fixation of an unremunerative ceiling of Rs. 36 per maund (ex-factory). Surely, none of these

factors has changed since then so as to support the case for a higher cane price.

Few would deny that the minimum cane price has remained unchanged since 1953-54, whereas the prices of all agricultural commodities have gone up. Nevertheless, cane growing still seems to be quite profitable *vis-a-vis* several other crops. Taking the statutory minimum price of cane (Re. 1.44 per maund) and assuming that the average yield of cane per acre is 275 maunds, the gross monetary yield obtained by the farmer from one acre of land in Uttar Pradesh comes to about Rs. 400, as against the gross yield of Rs. 95 from jowar, Rs. 112 (controlled price) and Rs. 152 (open market price) from wheat, and Rs. 236 from rice. If the yield from cane cultivation had not been more profitable than the other crops, there would certainly not have been such a marked expansion in the area sown to this crop in U.P. as has been witnessed in the past four to five years. The aggregate area under cane in 1957-58 was over 3.02 million acres, as against only 1.97 million acres in 1953-54. It is true that, as compared with the area sown to sugarcane in 1956-57, there was a slight fall of 0.05 million acres, but this must be attributed to factors other than price.

Sufficiently High

The price of Re. 1.44 fixed for sugarcane is, after all, the minimum and it is always open to factories to give a higher price, if they want to. In addition to the minimum, the growers have been receiving a share in the prices realised by the factories. One, therefore, fails to understand as to why the Committee of the Indian Sugar Mills' Association should have pleaded for a rise in cane price. Even the minimum price of Re. 1.44 is sufficiently high and accounts for as much as 40 per cent. of the cost of sugar production. This cost is, as Mr. Shyam Sundar Kanoria, President of the U.P. Branch of the I.S.M.A., has stated in his article published in this journal—vide page 863 of issue dated 23rd May 1959—completely beyond the industry's power to change. To quote Mr. Kanoria:

"The prices of cane per maund are higher than in most other countries, though the quality is poorer. Whereas out of 100 maunds of cane it is possible to get 14.33 maunds of sugar in Australia, 12.25 maunds in Cuba and 11.40 maunds in Java, in India, we hardly get 10 maunds. Whereas in other countries the price of cane is fixed on the basis of its quality, in India we have to pay the minimum price of sugarcane irrespective of the quality. It is common knowledge that, in spite of

the high cost of cane, there was a serious agitation by the cane growers in Uttar Pradesh to increase the minimum prices of sugarcane. The Government of India considered their demand to be unjustified and did not agree to increase their price, as it would have further pushed up sugar prices."

The heavy incidence of cane cost is due to the low sucrose content of cane and, as we have ere now pointed out, so long as price is fixed only on the basis of quantity irrespective of quality considerations, the grower will have no incentive to grow better quality cane. Any upward revision in cane price will not only lead to a rise in the cost of sugar production, thereby penalising the consumer, but only result in the diversion of large areas now under food crops to the cultivation of sugarcane. If, however, the sugar millowners fear that the supply of cane to mills will be small, they can urge the authorities to take stringent measures to regulate production of *gur* and *khandasari* in and around factory areas, and subject *gur* also to taxation in lieu of excise duty. By advocating an increase in cane price, with a corresponding rise in the price of sugar, the millowners are ignoring the interests of consumers and want a further impetus to be given to price inflation in the country. In this connection, we would like these industrialists to read the second instalment of the article on creeping inflation appearing elsewhere in this issue.

S.I.S.M.A. Formula

So far as the coming season is concerned, the Government of India can implement the suggestion of the I.S.M.A. Committee, namely, application of the South Indian Sugar Mills' Association formula under which the cane price is calculated on the net amount realised by individual factories from the sale of sugar and on the average recovery obtained by the individual factories of the whole crop for the whole season. In his aforesaid letter to Mr. Ghosh, the I.S.M.A. President observes:

"Along with decontrol of sugar, the Government should also reassure the growers, through a fresh announcement, that the price-linking formula formed an integral part of their policy of decontrolling sugar and that the growers will be entitled to a share of the additional price, if any, realised by the industry, during the ensuing season. The formula appears to be working very satisfactorily in the South, but it has yet to inspire faith and confidence among the growers in the North. The Committee consider that a simultaneous announcement to this effect, along with decontrol of sugar, is essential to promote harmonious relations between the industry and the growers, which will go a long way towards maximisation of sugar production."

"The Committee have even considered it desirable that, with a view to creating confidence amongst the growers in the reality and efficacy of the formula, with which they are not still familiar, such factories as foresee extra payment of cane price according to the formula, as may be finally decided, will be glad to make, on a voluntary basis, pre-

This expert has won the trust of millions in the label 'Sanforized'

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

This is how he does it:

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications before it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed everywhere in the world!

Look for
'SANFORIZED'
on the label
and your clothes will never
shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabric that meet this Company's rigid anti-shrinkage requirements.
For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2

ECONOMIC CONDITIONS OF PLANTATION LABOUR

FINDINGS OF TEA BOARD PILOT SURVEY

MUCH interesting light on the pattern of living of plantation labour is thrown by the results of a survey of the economic life of tea garden workers conducted by the Statistics Branch of the Tea Board of India. The inquiry, which covered 10 gardens round the town of Dibrugarh in Assam, was designed to explore the need and prepare the ground for a more comprehensive inquiry into the economic and sociological behaviour of plantation workers. Since it is in the nature of a pilot survey, it should not be deemed to have given an absolutely correct and complete picture of the income or expenditure pattern or any other characteristic of plantation workers, in general, or even in Assam in particular, but it does provide a fairly representative picture of tea garden families. It enables one to gain an insight into some important aspects of the life of tea garden workers which varies but little from area to area, in spite of differences in the level of economic prosperity.

The survey was conducted during the period January to April 1958, which forms part of what is regarded as the slack season (December to April) in the tea plantations of North India. The plucking season, extending from May to November, is the peak period of activity in the gardens.

The inquiry covered 10 gardens. The selection of the gardens was purposive and care was taken to include both big and small gardens. The planted area of the selected gardens varied from 150 to 1,272 acres. Of the ten selected gardens, five were under non-Indian and five under Indian management. Among the five gardens in the latter category, two were proprietary concerns and three joint-stock companies managed by Indian managing agents.

Two schedules were used for the purpose of the inquiry, one for collecting basic information from the manager's office and the other for getting data from the selected resident families. From the list of resident labour maintained in the garden offices, one family in every 20 was systematically selected at random for inclusion in the sample. In all, 255 families were selected from the ten gardens selected for the survey.

The inquiry revealed that the proportion of resident labour to the total labour force was all throughout high, being no where less than 80 per cent. In two gardens, it was 100 per cent., the gardens employing no outside labour. The smallest garden, which relied more on outside labour, employed 63.00 per cent. of outside labour, as against 36.94 per cent. of resident labour, obviously for reasons of economy.

The extent of employment amongst the resident population in the gardens varied from 7.43 per cent. to 57.85 per cent., the overall percentage being 43.49, leaving 56.51 per cent. as apparently unemployed. Out of a total garden population of 21,474, only 10,146 were on the gardens rolls. On the basis of the age distribution of the eight gardens for which data were available, the number of children upto the age of fourteen in all the ten gardens was estimated at 10,258, while the number above that age was 11,216. Since the number on the garden rolls were 10,146 (that is, 90.46 per cent.), it appeared that unemployment among tea garden population was not very acute. It was also found that 91.83 per cent. of men, 88.97 per cent. of women, 68.24 per cent. of adolescents and 2.20 per cent. of children were actually employed at the time of the survey. Employment in busy periods would naturally be much higher. This pointed to the conclusion that unemployment as such was a problem deserving consideration only in so far as adolescents were concerned.

The bulk of the families investigated—135 out of 255, that is 52.94 per cent.—was found to be natives of Assam. Out of the remaining 120 families, 66 families or 55.88 per cent. hailed from Bihar, 21 per cent. from Orissa and 6.67 per cent. from W. Bengal. Families from M.P., Bombay and U.P. were comparatively small in number. Out of the 120 immigrant families, only 32 had some sort of family or property ties with their native places.

Community-wise, Hindus constituted the largest section of plantation workers, their percentage to total being as high as 97.6. Muslims

were 1.6 per cent. and Christians 0.8 per cent. The overall literacy percentage stood at 11.55, the literacy percentage being the lowest among women, at 1.10. Among children, the literacy percentage was 10.46. If, out of the total number of children, those of ages less than six are excluded, the literacy percentage among children of what may be called the school-going age comes to 17.92 per cent. Thus, it was seen that the overall literacy position among plantation workers was quite low and needed considerable improvement. It was also found that only about 14 per cent. of the children of school-going age were actually attending school at the time of the inquiry. This depressing situation existed, despite the fact that nine out of the ten gardens had schools within the garden. It would thus appear that parents or guardians do not fully realise the importance of providing education to their wards. This underlines the need for making primary education compulsory in tea plantations.

Information collected through the inquiry revealed that smoking was quite popular among men, 61.76 per cent. of them being addicted to it. Among women, smoking was confined only to 5.51 per cent. and among adolescents 29.41 per cent. Among children, 2.78 per cent. were smokers, the overall percentage for the whole of the plantation population being 19.79. As compared with smoking, addiction to liquor was found to be alarmingly high. Almost every adult man and woman was given to this habit, the actual proportion of liquor addicts was as high as 92.81 per cent. and 90.07 per cent. respectively. Even among adolescents and children, it was as high as 67.00 per cent. and 49.04 per cent. respectively, the overall proportion being 70.06 per cent. Another interesting revelation was that the family's economic status had little influence over the incidence of this habit.

Analysis of the composition of families showed that the average size of the family was 4.85, of which 2.33, or 47.98 per cent., were earners. The average number of earners per family also revealed a rising trend throughout, increasing from 1.19 to 5.43 between the lowest and the highest expenditure levels.

The regular income of plantation labour is generally derived from two sources: (1) cash income from the garden as wages and (2) subsidiary income from land, poultry, livestock, etc. Besides, there are non-cash concessions from the garden in the form of subsidised foodstuffs, free medical aid, etc. The value of these concessions has not been computed due to the difficulties involved in finding out their exact money equivalents. But it has been taken into account in an indirect manner. For the average family, considering all the expenditure levels, the total fortnightly income was Rs. 47.86, of which Rs. 42.53 was derived from the garden as cash wages and the remaining Rs. 5.33 from other sources such as land, poultry, livestock, etc. A comparison of the contributions of different members of the family to the fortnightly income showed that the major portion of the cash income was earned by men. But women did not fall far behind, their contribution having been a little less than that of men. Thus, concludes the survey, though the wage rate cannot be considered high in the present circumstances, the combined earnings of different members of the family place tea plantation labour in a comparatively better position than labour employed in many other industries.

The average per capita monthly cash earnings of tea plantation workers were Rs. 7.88 for men and Rs. 6.23 for women in the year 1939-40. The monthly incomes for men and women obtained from the present survey were Rs. 39.90 and Rs. 35.06. Thus, during the period earnings have increased by 406 per cent. in the case of men and 477 per cent. in the case of women. Considering that the earnings at the period of the survey were rather low and that the actual average fortnightly expenditure per family was Rs. 50.21 which is about 18 per cent. higher than the average fortnightly cash earnings of Rs. 42.53 per family, it would be reasonable to assume that the per capita cash earnings now are 597 per cent. higher in the case of men and 681 per cent. in the case of women than those in 1939-40.

There was no significant variation in the expenditure patterns among different expenditure levels. The combined pattern, taken as the pattern of expenditure among tea plantation workers, revealed that an average plantation worker's family spent about 65 per cent. of its budget on food, 11 per cent. on clothing, 9 per cent. on conventional necessities (tobacco, betel leaf, toilet and cinema) and about 8 per cent. on liquor alone. The smallest expenditure was on household purchases and equally small was the expenditure on education which stood at a little over one-third of one per cent.

An assessment of the standard of living of plantation workers, as measured by the extent of expenditure per adult unit, showed that the standard rose slowly but steadily with the rise in total expenditure. Expenditure on food, clothing and miscellaneous items mainly followed this rising trend, the rate of spending on other items remaining more or less steady. Expenditure on liquor was found to be disproportionately high, namely, Re. 1.39 per fortnight per adult consumptional unit in the lowest expenditure level but exhibited no inclination to rise as the standard of living rose, the overall value being Re. 1.10.

Two most disturbing facts revealed by the survey are thus the neglect of education among children of school-going age and the widespread addiction to liquor among plantation labour. The neglect of education of children, in spite of the existence of schools in all but one of the gardens surveyed, can be attributed to the lack of education of the parents themselves and the consequent ignorance of the value of education. By and large, addiction to liquor seems to be universal and is more of a social or environmental habit. But the wholesale indulgence in liquor, covering not only adults and adolescents but also children of less than 15 years of age, is certainly a matter for concern. Increasing emphasis on education and provision of other modes of recreation would help in weaning away some of the adults or at least to check the spread of this habit among the younger generation who are not yet addicts in the strict sense of the term. It is imperative that social workers, company managements and the Government, in fact all those who are interested in the well-being of plantation workers, should turn their attention to the twin ills, namely, addiction to liquor and lack of appreciation of the importance of education for children.

Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication. Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

ECONOMICS OF NUCLEAR POWER

ATOMIC ENERGY COMMISSION'S STATEMENT

ALIVELY controversy has been sparked by the Atomic Energy Commission's announcement of a nuclear power programme, under which the first nuclear power station, with a capacity of 250,000 kw., is proposed to be sited near Bombay. There are two types of controversy. One type is purely parochial. It does not go into the economic merits of atomic power *versus* hydel and/or thermal power. It is merely concerned with the location of the proposed atomic power station. This school of thought has questioned the wisdom of locating the first atomic power station in an area for which large supplies of power will soon be available. The other type of criticism is concerned with the crucial question of economics of atomic power. Those who are responsible for it point out that nuclear power stations, both in terms of absolute cost and foreign exchange, are bound to be too costly for an underdeveloped country. The Atomic Energy Commission has, however, sought to contravert the basis on which the comparisons between conventional and atomic power stations are made. Basing itself on long-term trends in power consumption and the availability of coal and costs of transportation of coal from mines to consuming centres, the Commission has presented its case for a programme for setting up nuclear power stations in the country.

Atomic Power

The former Chairman of the Bombay State Electricity Board, Mr. M. H. Premji, states that the cost of installation of an atomic power station will be over Rs. 2,000 per kw., as against Rs. 1,400 per kw. for a hydro-electric station and Rs. 800 per kw. for a thermal station (figures calculated on the basis of maximum efficiency). He estimates the recurring cost of an atomic station at 6 to 7 nP per unit, as compared with 3 nP per unit for a hydel station and 5 nP per unit for a thermal station. Mr. Premji feels that the country cannot afford to waste valuable foreign exchange and large capital resources on setting up a costly means of generating power. He further feels that the basic cost of atomic generation and that of thermal generation would be nearer each other only if a large block of power could be consumed on a 90 per cent. factor. This, he says, is possible in an integrated electricity grid such as the one in the U.K. but is not possible in India. Some of these issues have been elaborated by a special correspondent to the *Times of India* who, in the course of an article on the subject, argues that, since power from Koyna project will become available by 1964, there will be little demand for atomic power in the Bombay-Poona region. He agrees that Gujarat can certainly do with more power but feels that "it is too exuberant to say that its power needs will grow in the next four to six years to the extent of an additional 250,000 kw." He also adduces figures to show how atomic power is much costlier than thermal and hydro-electric power. Thus, he calculates the cost of atomic power (on the basis of Rs. 55 crores for 250,000 kw. output) at Rs. 2,200 per kw. As against this, the power from the Koyna project (when it reached its full capacity of 500,000 kw.) will be only Rs. 1,000 per kw.; quoting Dr. Bhabha, he states that the capital cost of thermal plants varies from Rs. 740 (Chola second stage) to Rs. 1,370 (Korba). In conclusion, he observes that "economically—and that is what counts for an underdeveloped country like ours with limited resources—it would be wiser to have thermal plants to eliminate the power shortage."

In the course of its Press *communiqué*, replying to some of the points raised in the controversy, the Atomic Energy Commission observes that the "siting of an atomic power station is a very complicated matter, and has to be determined on the basis of many technical criteria, which are more stringent than for conventional stations." Western India, the Commission states, has been selected as the location for the first nuclear power station, in consultation with the Central Water and Power Commission, as it will have the largest power system in India, in a region remote from the coalfields. It is anticipated that, by the time the nuclear power station comes into operation in 1964-65, the present Ahmedabad grid will have an installed capacity of about 200,000 kilowatts of conventional power, while the Bombay grid will have a total installed capacity of about 900,000 kilowatts of conventional power. A nuclear power station of 250,000 kilowatts will, therefore, have an installed capacity of 25 per cent. of the Bombay grid and over 100 per cent. of the Ahmedabad

grid. While a station of this size, according to the Commission, cannot be connected solely to the Ahmedabad grid, which would be too small for the purpose, it could and should be connected to both the Ahmedabad as well as the Bombay grids, which, indeed, should form part of one large grid system, before the end of the third Five-year Plan. The nuclear power station, it is stated, will fill the shortfall of about 250,000 kilowatts, which is anticipated by then, even after taking into account all the planned projects of conventional power.

The Commission observes that the figure of Rs. 55 crores, mentioned as the cost of nuclear power stations, includes expenditure not directly chargeable to the power station; the cost of the station itself is in the region of Rs. 43 crores or Rs. 1,700 per kw.

Coal Reserves

Referring to the coal reserves in India, the Commission notes that while the total proved reserves of coal in India were till recently estimated to be roughly 43,000 million tons, the reserves of high grade coking coal (10,000 to 12,000 B.T.U. per lb.) are not much more than 3,200 million tons. Even if the reserves were double these figures, according to the Commission, India would be much poorer in coal than the U.S.A., the U.S.S.R., the U.K. and China. At present, only high grade coal is used for power generation, and it has therefore been recommended that it should be conserved for metallurgical use, while only the middlings (about 6,000 B.T.U. per lb.) from low grade coal treated in washeries should be used for power generation. It adds:

"When a private party puts up a power station, it is only concerned with the cost of that station, and it is rightly assumed that someone else will find the money necessary for producing the additional coal, and yet another party—in this case, the Government—will find whatever money may be necessary for providing transport in the shape of wagons, locomotives and rail tracks. A Government must, however, take an overall view of the entire picture, and, in planning for the future, it has to consider the total investment necessary to provide one kilowatt of installed capacity or a unit of electricity, taking into account the investment in mining, in processing the fuel, in its transport, and finally in the power station itself. The power station is only the last link of a chain. 250,000 kilowatts of thermal power would require the production of an additional 900,000 tons of high grade coal (10,000 B.T.U. per pound) per annum, and its transport from the coalfields to the site of the power station, whereas it will only require the supply and transport of a hundred tons of uranium per annum. This gives an indication of the relative burden on the railways. If middlings (6,000 B.T.U. per pound) from washeries were used, nearly twice the amount of coal would have to be produced, and the transport system would have to carry 1.5 million tons of middlings per annum, showing that thermal stations remote from coalfields will compel us to use our limited supplies of high grade coal. Even if a thermal station is something over half the cost of a nuclear power station today, a considerable amount must be added in the national investment required on the average to provide the additional mining and transport. The assessment of this additional investment is a very complicated matter, but the Atomic Energy Commission has estimated that it comes to over 50 per cent. of the cost of the thermal power station, if high grade coal is used, and the power station is located at a distance of some 700 miles from the coalfields. From the national point of view, therefore, the capital investment required for nuclear power is by no means so much greater than that required for thermal power in regions such as North-western, Western, and Southern India, which are remote from the coalfields."

Discussing the costs of hydro-electric power projects, the Commission notes that the capital costs per kw. at 80 per cent. load factor of Rihand, Koyna, Kundah I, Kundah II and Periyar are, respectively, Rs. 2,250, Rs. 1,837, Rs. 3,579, Rs. 2,824 and Rs. 2,006. These costs, it is stated, are thus higher than the capital costs of proposed nuclear power station. But the validity of some of these estimates has been questioned by the *Times of India*, according to which, the Kundah project (after the completion of the second stage) will cost Rs. 1,950 per kw. and not Rs. 2,824 as mentioned by the Commission; even this is expected to go down to Rs. 1,650 after the completion of the final stage. Similarly, the cost of Periyar is placed at Rs. 950 per kw. and not at Rs. 2,006 as mentioned by the Commission. This wide disparity requires to be explained and the Commission will, perhaps, do so.

To revert to the Commission's press statement. Referring to the cost of nuclear power, the problem of disposal of atomic waste and the importance of catching up with the progress in atomic age, it observes:

"Electricity from the atomic power station is expected to cost between 3.9 and 4.5 nP per unit.

This is comparable with the cost of power from new thermal stations in Western and Southern India. Fuel plus operating costs for a nuclear power station will only amount to between 1.3 and 2 nP a unit, the corresponding costs for a thermal station in an area remote from the coalfields being 2.6 nP per unit. It is only depreciation and interest on the higher capital investment which brings up the cost of nuclear power to roughly 4 nP, and makes it comparable with conventional power. Thus, once an investment in the power station has been made, there is no danger of a recurring uneconomic liability, since the fuel plus operating costs are much lower than for a thermal station in the same area, even at the present price of coal.

"While it must be the wish of every Indian that oil in substantial quantities will be discovered in this country, the present indications are that all oil that is likely to be discovered in the next few years will hardly suffice to meet the urgent needs of the expanding road transport system, and it is unlikely that any will be left surplus for power generation. It will, indeed, be fortunate if sufficient oil is discovered to avoid the necessity of importing oil in future.

"A nuclear power station does not directly produce nuclear waste, and no high level nuclear waste is discharged into the sea even from fuel processing plants. All discharge of radioactivity into the sea or air is very strictly controlled by international practice, and is so low as not to present a hazard either to man or marine life.

"India and the countries of Asia generally have remained underdeveloped, because they did not keep pace with new ideas and developments, when the Industrial Revolution took place over 150 years ago. If they are not to miss the bus once again in the atomic age, they have to keep step with the developments which are taking place in the industrially advanced countries. The investigations of the Atomic Energy Commission have shown that it is possible to do this without undertaking expenditure which is beyond the economic capacity of the country to bear, and in a manner which will bring immediate benefits."

Now that the controversy over the proposed nuclear stations has boiled over from experts' committee rooms into the public arena, and opinions seem to be sharply divided on the economic wisdom of setting up these stations, it seems both necessary and desirable to subject the whole programme to impartial scrutiny. While the advocates of conventional power stations obviously feel that the Commission is erring on the high side in its estimates of hydro-electric and thermal power, the Commission's critics are probably under-estimating the costs involved in mining additional coal and transporting it over long distances as well as the natural limitation to developing sources of hydro-electric power. There can be no controversy over the fact that not all the regions in India for blessed with sufficient water power for generating electricity, and that, in a few regions, as, for instance, Madras, the available water power has been fully exploited. Naturally, these areas should be given preference for setting up the proposed nuclear power station.

Heavy Price

Although nobody would like to see India miss the atomic bus—it has paid heavily for missing the bus of Industrial Revolution—it would at the same time be wrong to make the country pay a heavy price merely for acquiring the scientific distinction of nuclear power stations. While it may be advantageous to try with one nuclear power station in order to get practical experience, it is a moot point whether India should launch a programme for establishing a series of three or four stations at a time. Even though our coal reserves may not be as large or as rich as those of the U.S. or the U.K., the fact remains that even the known reserves have not been fully developed and that the exploration for fresh reserves of coal is by no means complete. Would it not, therefore, be desirable to give a higher priority to the development of coal and unutilised water power than to the establishment of a series of expensive nuclear power stations? These and other considerations demand a far more expert examination than could be given to them by press statements. Again, since the immediate participants in the controversy seem to differ even on factual data relating to the costs of the various kinds of power, it is clearly the duty of the Government to allow the controversy to be handled by a body of uncommitted experts, undivided attention.

DISCOVERER V SATELLITE

A new earth satellite, Discoverer V, was launched by the U.S. into orbit on 13th inst., carrying a 330-pound capsule of scientific equipment. Tracking stations picked up signals from the 17,000-pound satellite as it made its first pass around the earth in a 94-minute Pole-to-Pole orbit. Preliminary data set the satellite's apogee (farthest point to earth) at 136 miles. The new space exploration experiment was designed to test the vehicle's propulsion, communications, orbital performance.

CREEPING INFLATION—II

EFFECT ON WAGES, PRICES AND FOREIGN TRADE

[The following is the second instalment of the series of articles on "Creeping Inflation" by the Federal Reserve Bank of New York, New York. The first instalment of this series appeared in our last issue.—Ed.]

MUCH of the argument for creeping inflation has been stimulated by the fresh attention given in recent years to what have been called the twin problems of "administered" prices and "cost push" (usually "wage push"). Although it is difficult to define precisely what is meant by "administered" prices, they occur in circumstances in which a few large firms can maintain prices for their products without being closely responsive to short-run changes in supply and demand conditions. The spread of domination by giant firms in some segments of the pricing process has, probably, introduced new elements of rigidity in the price structure. Most observers, including those who accept creeping inflation, would no doubt be most gratified if ways could be found to improve the flexibility of prices through the injection, in one way or another, of more vigorous price competition. But the creeping inflationists, many with regretful resignation, consider such an alternative unrealistic, and look instead for a way of making room within the entire price structure, for the persistent upward bias in prices that they consider inevitable, so long as important sectors of the economy are dominated by administered pricing techniques. A real question is whether creeping inflation can really be only a palliative, or whether it may not simply provide a stimulant to a further spread of administered pricing, making the fundamental problems eventually much greater.

Along with the widening public concern over administered prices, there is general recognition, too, that the growing strength of labour unions, along with the natural pressures of market demand for labour, have brought about a regular, and at times somewhat arbitrary, pattern of continuing increases in money wages—often without relationship to the change in average productivity that may have occurred during the preceding year or two, or during the current year. Some of the more active proponents of creeping inflation consider continuing increases of money wages quite necessary in order to provide increased sales and profits, and thereby induce business men to expand capacity—providing the underpinning for further growth. Many others, however, are less impressed by any need to stimulate purchasing power, and concentrate their attention on the cost aspects of rising wages and labour benefits. While often concerned that such increases may disturb economic balance, they have come to regard them as virtually inevitable, and turn to creeping inflation as a way of accommodating this kind of persistent upward influence upon the price structure. As they see it, the pressure for wage increases from organised labour is so irresistible that public policies which prevented these increases from being reflected in higher average prices would result in unemployment.

Redistributory Effect on Fixed Incomes and Savings

Whether support for creeping inflation originates in a resigned acceptance of administered prices or of wage increases which exceed productivity, or whether it rests upon genuine endorsement of high wages and high costs as a deliberate means of inflating the economy to promote maximum growth, the analysis would seem to have been left surprisingly incomplete. It has to be carried one step further. If a slow but steady rate of general inflation were to be tolerated as a form of surrender to the inevitability of price increases in the "administered" price and "organised labour" industries, the end result would be the transfer of purchasing power to the workers and management in these industries at the expense of those whose savings are being depreciated or who are unable to increase income in pace with prices increases. The proponents of creeping inflation would deny, however, that they intend this type of enforced transfer and would suggest that escalator arrangements be developed in sufficient complexity to prevent the inflation from having an income redistributing effect. Assuming perfect success in this endeavour, the industries and labour groups, whose practices make creeping inflation necessary, would get the same share in the total national income that they would get at stable prices, if inflation had been prevented.

That kind of amplification points up one of the basic fallacies in the argument for creeping inflation. What reason is there to believe that these industries and labour groups would be more likely to accept a smaller share of the national product in a setting of creeping inflation than they would in a setting of broad price stability? Is it not fully as likely that they would continue to press for even larger amounts, in order to preserve at least the same relative share in the total that their strength, then as now, would lead them to expect. Could there ever be a rate of inflation large enough to disguise and mislead these underlying fundamental forces? If creeping inflation were to be accepted as public policy, therefore, the apparent result would seem to be either social injustice, if escalation were not complete, or a tendency toward a steadily more rapid rate of inflation if attempts at widespread escalation were thoroughly successful. It is also notable, though thus far apparently unnoticed by the creeping inflationists themselves, that, one by one, the countries which pioneered in escalation—in this case, a "cost-of-living" adjustment factor, beginning with Australia roughly half a century ago—are now abandoning the approach. They find it impairs needed flexibility, both in reflecting technological changes among industries as the years go by and in meeting the shifts of competition, at home and abroad. These lessons may not be conclusive; but they post a precautionary warning against this aspect of creeping inflation, too, at least until there has been much more study of this experience than has yet occurred in this country.

International Complications

From the evidence already appearing, as the other developed countries of the world reach the positions of strength toward which the United States has been assisting them since World War II, international competition is becoming significant in the domestic economy of the United States. Deliberate adoption of steady inflation would certainly impair the ability of this country's producers to compete, both in our own markets and abroad, with those other countries who have learned in their own way to combat inflation, and who are strongly committed to maintaining price stability. They would certainly be both shocked and chagrined if it appeared that the United States, after having helped them to surmount the obstacles and dislocation created by inflation, had failed to learn from their own lessons. But they would be quick to take advantage of the competitive advantages ensuing as a steady upward movement of United States prices gradually priced American products out of foreign markets.

One can hardly disregard, moreover, the very serious repercussions that continued inflation would surely have on the United States' international financial position, and indeed on this country's stature as a leader of the free world. Apart from its effect on the United States' trade balance, a sustained inflation in the United States cannot fail in the long run to undermine confidence in the dollar. Such international repercussions, in combination with the increasing competitive handicaps of American business, might have the effect of strengthening tendencies toward a new economic isolationism. These tendencies might lead to a reduction or

elimination of foreign aid and investment, in spite of the compelling considerations of world politics and our international responsibilities calling for a continuation of an aid and investment programme. They also would reinforce the pressure that even now is in many instances being mobilised to exclude, by means of tariffs and quotas, imports that are competitive with domestic products. The United States might thus be forced to retreat into a high-cost, "island" economy, while other countries, by pursuing growth in a more well-considered way, were reaping the benefits of international specialisation and a gradual removal of internal controls.

The certain knowledge of continuing inflation, even at a relatively small percentage rate per year, would, as already mentioned, discourage the holding of money, or of obligations payable in a fixed amount of money, as a store of value. Anyone lending money would want to stipulate either a very high rate of interest or repayment in "escalated dollars," or some combination of both. The impression has too often gone unchallenged that a creeping inflation would also mean "cheap" money. Quite to the contrary, of course, as expectations of rising prices are assured, interest rates must rise to provide some compensation for the decline in the value of the dollars that would ultimately be repaid. The question is just as to whether interest rates or escalated adjustments would just be 2 or 3 percentage points greater than under conditions permitting expectations of reasonable price stability, or whether the rise would be much greater. A companion development to rising interest rates or charges, perhaps particularly by concerns or individuals able directly to invest their own gross savings in this way, would be a tendency toward acceleration in investment outlays on durable or storable products. These probable characteristics of creeping inflation are significant in appraising the likely consequences of a creeping inflation policy for the growth of the economy and for the economy's vulnerability to major economic fluctuations.

In the initial transition period, for perhaps a year or more, it is entirely possible that a creeping inflation would increase the flow of resources into all kinds of investments, as an increasing number of businessmen and individuals employed their available cash (and any credit resources available to them on profitable terms) to accelerate investments in equipment, residences, and other assets that would be more costly if delayed. The income generated by this initial acceleration of expenditures would presumably add to the demands for goods of all sorts. Further investment would thus be called for to supply these demands, and the continuous accelerating tendency of the price outlook, reinforced by expanding product demand, would be most likely to have a further multiplying effect upon investment. Economic activity would blossom in the hothouse atmosphere of assured price inflation, fed by a growing volume of investment expenditures intended to create capacity and accumulate inventories to meet a firmly anticipated demand for goods—sometime in the future. What possible fault can be found with this picture?

It has already been noted that the mix of this investment boom would probably include more and more speculative buying of land, for example, and discriminate against schools and the other kinds of investments that are essential to provide the structure needed to support the steadily advancing technology that is required for long-term growth. In general, over time, basic capital would be allowed to run down as price conditions led to increasing speculation, at the expense of considered evaluation of longer range productive potentialities. But that is not all.

Incentive to Overreach

There is always a considerable time interval between the initial appearance of enlarged demand, which leads producers to plan expanded capacity, and the final appearance of this new capacity. Moreover, there is also a rather persistent and quite understandable tendency in a free market economy for businessmen initiating investment plans to reach beyond presently visible demand to provide for some further expansion. As a consequence, investment projects sometimes bunch together, especially when optimism is running high, and the new wave of productive capacity comes into use before demand is fully ready for it. There is an often leads to some reduction of further accumulation, and, if there is a spread of pessimistic concern, to some more general business retrenchment. This pattern has been a significant part of the cyclical swings that have oc-

curred since World War II, although each swing has fortunately been kept within a fairly narrow range of fluctuation. With the continuous insertion of another incentive to overreach—the desire to anticipate price increases—there would seem to be an impelling reason to expect that the forces making for both economic booms and recessions would become more pronounced.

The combination of this greater gyrations in real investment with the likely speculative boom in the stock market, and the related speculative excesses that result from losing the discipline of a stable standard of value, might create circumstances that would have to be described by a stronger word than "recession". Moreover, economic adjustments, when they occurred, would strike an economy from which the inflation prospect had absorbed any reserve of liquidity. Once a turnaround began, so long as financial markets remained reasonably free, most needs for liquidity would have to be met by selling mortgages, or equities. The effects might well be reminiscent of those more hazardous times before modern economies had developed great markets for providing secondary liquidity in periods of economic unsettlement. The tasks of limiting any thrust towards depression from purely financial factors might then become much more difficult than anything experienced in this country since World War II, while public policy has been aiming for reasonable price stability.

For the long run, therefore, it seems likely that a policy of creeping inflation would widen economic fluctuations. Certainly there is no basis for expecting any narrowing. To be sure, reliance upon growth would probably be cited again as the answer, even by those who might, on reflection, concede the possibility of greater cyclical swings. But what is left now of any stimulus to growth, in view of the prospects already described for saving and investment during creeping inflation?

In its early phases, creeping inflation might stimulate an expansion of investment in tangible assets and other equities, partly in real terms but even more as measured in shrinking dollars. Then, later on, perhaps in a year or two or three, as reliance upon the certainty of rising prices became widespread, a new phase would become clearer—that of further and further shifts into the kinds of assets offering the best possibilities for hedging against depreciation in the purchasing power of the dollar. The numerical values of investment, and of income, might still go on rising at impressive rates, although the underlying real structure of balanced productive capacity would have begun to erode. Then ultimately, perhaps after a cyclical downswing, or in a still later phase, the aggregate physical capacity of the economy to produce the goods and services that consumers really want and need might no longer rise at all. By this time, the burdens of maintaining a maze of interrelated escalators, and of diverting effort and materials into providing speculative hedges, would have become so great a drain upon the economy's resources, particularly upon entrepreneurial ingenuity and skill, that it would be difficult indeed even to maintain existing capacity in reasonable balance. Having run its course, creeping inflation would have brought the economy to a state of stagnation, and then, perhaps, creeping paralysis.

Conclusions and Implications

In looking back over all that has been suggested so briefly here, many who are already critical of creeping inflation might note the absence of several important considerations. They could suggest that a serious deterioration occurs in the moral character of a nation when its economic life is subjected continually to the strains of rising prices and deterioration in the value of its monetary unit. They could cite many instances in which countries have drifted into an acceptance of some inflation, only to find themselves eventually drawn into a labyrinth of restrictive governmental controls. And they could point, too, to the experience of a number of economies over the past half-century where, despite a multiplication of devious governmental controls, the outcome ultimately was a runaway inflation. They could then, too, elaborate convincingly upon the horrendous effects of that kind of inflation.

All of these criticisms are, of course, perfectly valid. They have, however, been stated so often and so well that they need no repetition. Any critique of creeping inflation should recognise, nonetheless, that all of these greater eventualities—the sapping of moral vitality, the stultifying influence of rigidifying governmental controls, and the collapse that ensues from runaway inflation—are indeed grave prospects that cannot be ignored whenever a modern economy acquiesces in a pattern of inflation.

The lesson of this analysis of creeping inflation, though, does not come from a parade of frightening extremes. It should be enough for a considered evaluation to recognise that, at the least, a consistent acceptance of creeping inflation will end in futility. There is nothing in the nature of the influence exerted by a steady edging upward in prices that can provide a solution to the important problems that are, indeed, quite rightly the centre of attention in the American economy. But creeping inflation would not only end in futility. The logic of the analysis and the facts of experience demonstrate that the alleged gains from acceptance of creeping inflation cannot actually materialise. At best, the result is a drastic rise in interest rates as prices mount steadily, while one escalator arrangement after another is superimposed upon those segments of the economy that can practicably make use of such devices. And, in the end, with the futility of the escape mechanism fully demonstrated, and as it becomes clear that the hoped-for gains cannot materialise, positively harmful manifestations emerge. Those who can raise prices most readily, or increase wages most effectively, or escalate themselves to a position of neutrality, get more and more of total income, while the unsheltered get less. And, in due course, total real income rises only slowly, if at all. The functioning of a market economy, upon which both the vitality and the growth potential of this country depend, becomes impaired and eventually corrupted.

All along the way, as the panorama of creeping inflation unfolds, the Federal Reserve would probably find itself called upon to attempt a succession of holding actions. Eventually, even greater reliance might actually be placed upon monetary and credit controls than is done today, but because other upward forces of price pressure would also have been condoned and strengthened, the effectiveness of the Federal Reserve would probably be weakened or even nullified. With everyone given a stake in pushing up prices, with credit relationships entangled in escalator clauses, and with interest rates held continuously at very high levels, the scope for flexible variation in monetary and credit policy, and the potentialities for sensitive response to such policy, throughout the financial structure and the economy, would soon become narrow and limited.

Central Banks' Contribution

To be sure, no central bank can be expected to bring about stability in prices and in the economy by its own actions alone. But post-war experience both here and abroad strongly suggests that an effective central bank is one essential part of the governmental apparatus, particularly under any system that aims to avoid direct governmental control over prices and wages. Without attempting to outline the positive contribution that central banking should be able to make, and without touching at all upon the potentialities of such companion instruments as fiscal policy, it should nonetheless be evident that a crippling of the central bank would have serious implications for the implementation of public policy in any market economy.

The creeping inflationist might still, however, wave all of these grave consequences aside, insisting that the principal problem still remains—that any monetary or fiscal policies strong enough to halt creeping inflation will inevitably create a volume of unemployment so large as to be wholly unacceptable, socially and politically, in a modern society. The persistence and grip of that idea, despite dramatic evidence to the contrary in several European and other countries since the war, is truly remarkable. As a theoretical concept, its appeal must come from the logical simplicity of an "either-or" proposition. There is no evidence to support it in United States' experience.

Certainly there is no demonstrated basis for viewing the supposed conflict between price stability and employment, on which the creeping inflationists have fastened so firmly, as inexorable. Even the supposed new influences of administered prices and "cost push" have scarcely been visible long enough to have set in motion the corrective forces which distortions of that kind often produce from inside themselves within a generation, or even less, so long as the force of competition remains at work. And, if competition along old paths may seem for a time to slacken, it will spring up again, so long as public policy gives its determined support, from the influence of new firms, new products or new processes displacing the old, or from the impact of new sellers or buyers abroad.

The issues confronted by the creeping inflationists do not appear to be any different in significance for the current generation from the kinds of issues visualised by the popular economics of "secular stagnation" in the 1930s, or perhaps of "bimetallism" and others even further back. Each of those new theories left behind its grain of truth, as emerging developments pushed aside the base upon which the theory itself had been erected, and there is no doubt that some gain will remain in the articulation of public policy and in the understanding of economic processes, after the creeping inflation thesis has moved on into the archives of economics. But its futility in reaching any of the underlying causes for concern, such as administered prices and wages, and the clearly harmful further consequences that it would also produce, make creeping inflation unacceptable as a basis for public policy.

AGRICULTURAL EXPORTS

The Government of India has decided to relax some of the restrictions imposed on the export of agricultural commodities. This is in pursuance of its present policy designed to meet the requirements of domestic consumption by augmenting production, instead of by resorting to quantitative restrictions on exports. It is proposed, as a first step, to license freely for export the following commodities without any quantitative limit for a period of three years: piper seed, kardi seed, sesamum seed and their oils, salad oil, niger cake, kardi cake, maize oilcake and meal, undecorticated cottonseed oilcake, other oilcakes (excluding groundnut cake, linseed cake and coconut cake) and green coconuts. Fishmeal will also be licensed freely for export for a period of two years. Provision has been made for a review of the trend in exports of these commodities from time to time so as to take necessary steps to promote production and trade.

READY

LATEST AND UP-TO-DATE

The Law of Income-Tax in India

BY

V. S. SUNDARAM

The 8th Edition of this comprehensive treatise on income-tax brings it up-to-date in the light of statutory changes and recent rulings of Courts, of both of which there has been an abundance since the last Edition was brought out in 1954. The book has been thoroughly revised, several portions re-written and some condensed, while all matter now obsolete or superfluous or of little practical importance has been excluded or referred to briefly. The Index has also been expanded. This Edition will therefore be found to be even more useful than its predecessor as a standard book of reference on this intricate and abstruse subject.

The Amendments of the Indian Finance Act of 1959 have been incorporated in the book.

"On the whole this is a most exhaustive, most comprehensive, and most elaborate commentary on the Income-Tax."—*Bombay Law Reporter*.

Are interested to represent manufacturers and/or sole exporters of all kinds of textiles, crockeries, cutlery, iron goods, leather goods, sports goods, cement, household goods, office equipments, ornamental goods, rain equipments, grocery goods, beverage, alcoholic drinks and children's toys. We are also importers of those products as enumerated above, and free valid samples for effective showroom display should accompany all offers to us. Also looking for Commission Agents in any country to cater for our interests by negotiating on our behalf.

DEVELOPMENT OF HOTEL INDUSTRY GOVERNMENT'S NEW POLICY REALISTIC

A FIRST class hotel industry, which will be able to provide healthy and comfortable accommodation, is a *sine qua non* for facilitating expansion of tourist traffic in the country. Much attention has, of late, been devoted in India to the development of tourism. This effort will become futile, unless care is taken to see that the accommodation and catering services available in the important tourist centres are of a nature to suit the convenience of all types of tourists. In major centres, these services should be in different grades to suit the varying capacity of the visitors' purse. All the tourists are by no means rich people. A good proportion of them consists of the middle class who cannot afford to live in expensive hotels. But all of them require a clean bed and bath and healthy meals served in pleasant surroundings. It is, therefore, necessary to see that hotels even in small tourist centres pay attention to these minimum requisites of tourists.

The rapid improvement in the means of communication and transport, particularly the development of jet air services, and the high level of incomes and savings in the Western world, as well as a desire to see and learn how people in other parts of the world live, have provided a great stimulus to the flow of tourists from the West to the East. India, with its long historical background, varying climate, beautiful temples, colourful festivals, picturesque natural scenery and thrilling jungles, offers plenty of scope for a flourishing tourist industry. It is, of course, necessary to see that the country maintains its oriental traditions, that its arts and culture are preserved, that its forests and wild animals are not exhausted, and that its ancient monuments and temples of great architectural beauty and religious sanctity are maintained in good repair. It is needless to add that the temples will be lifeless, unless their chief attractions are continued in their customary glory. It will be no exaggeration to say that all these constitute the assets—the plant and machinery—of India's tourist industry.

If external tourism is to thrive, it is necessary to encourage internal tourism also. Without the latter, several of the aforesaid assets will fall into disrepair and decay. Temples and hill stations are two examples. Both these cause movement of people from one corner of the country to another. People go either for holiday or on pilgrimage. The authorities of this country, in their preoccupation with economic development, should not miss this fundamental aspect of tourism.

Enquiry Committee

Realising the importance of good hotels to tourist industry, the Government of India appointed some time ago an enquiry committee, called the Hotel Standards and Rate Structure Committee, to recommend measures for improving the hotel industry and encouraging its growth. The Committee's report has not been made available to the public yet, but, from the Government's decisions on its recommendations, it would appear that the Committee has done good work and put forward proposals with a practical approach. The Government, too, has acted in a realistic manner. It is willing to give maximum freedom and active assistance to hoteliers. This should encourage people with talent for this business to enter the field and put forth their best.

One of the important recommendations of the Committee accepted by the Government is that the "hotel industry should, by and large, be left to private enterprise, but, where the private sector is unable or unwilling to fill the gap, the Government should step in." This condition is fair enough. After all, tourism is such an important means of earning foreign exchange that if, in certain principal centres of attraction, private enterprise is not able to put up an hotel, the Government has to enter. Before doing so, the Government, however, should see whether, by offering certain incentives, private enterprise cannot be induced to do that task.

Another recommendation of the Committee is that hotels catering to foreign tourists should be classified according to internationally understood "star" system. The Committee had suggested that the hotels in India should be classified into five categories under the "star" system,

after giving sufficient time to hoteliers to improve their standards before classification is actually introduced. In order to give the hotels adequate time, the Government has decided that a three-man committee, to be known as the Hotel Classification Committee, should be set up by June 1960, so that, by the end of that year, they could complete inspection and classification of these hotels. Thus, the hotels have ten months to improve their affairs.

Finance

The growth and modernisation of hotel industry are determined by the availability of finance. Consequently, the Committee had recommended that the hotel industry should be recognised under the Five-year Plan and given financial assistance by State Corporations and banks and that a Government fund of Rs. 10 crores should be set up for the purpose of giving loans to deserving hoteliers. The Government, too, on its part has been convinced of the claims of hotel industry for credit facilities and has, therefore, decided to take steps to make hotels eligible for getting loans from Finance Corporations established by Acts of Parliament or other credit corporations. It has not, however, accepted the suggestion for a separate fund, as the proposition is not considered feasible. The Government, in our opinion, is justified in coming to this conclusion, for a fund of the nature suggested by the Committee might encourage inefficient or dishonest *entrepreneurs* to try their luck in this field with the help of cheap Government loans. All worthwhile and soundly managed hotels should be able to command the support of Finance Corporations and banks.

Foreign Capital

On the question of foreign investment in Indian hotels, the Government has decided that where there are clear and obvious advantages in permitting foreign collaboration in the setting up of any hotel, such collaboration will be permitted, subject to the condition that the foreign capital does not ordinarily exceed 49 per cent. of the total capital invested in any venture. Government will, of course, examine each case on its merits. The official Press note does not say anything about the nature of recommendation made by the Committee on this question. Whatever that might be, the Government's decision is not realistic. While the Government should take care to see that well-established Indian hotels are not placed at a serious handicap by the entry of foreign capital and talent in that field, why should it insist on a rigid condition? It would be more advantageous to the larger interests of the country if foreign capital were allowed to establish hotels on 100 per cent. ownership initially, on condition that, after a specified period, a part of equity capital will be thrown open to Indian investors. The condition now imposed by the Government will only retard the growth of hotel industry, especially in big cities such as Calcutta, Bombay and New Delhi, as there is not a sufficient number of indigenous *entrepreneurs* to join hands with foreign capital.

The introduction of prohibition in many parts of the country has a dampening effect on the development of tourism. The Government, however, says that it has already endeavoured to meet all reasonable needs of foreign tourists in obtaining drinks. It adds that it will con-

tinue to allow relaxations in prohibition to the extent considered reasonable in the interests of foreign tourists, within the broad policy of prohibition and the existing framework of law on this subject in the various States. This is another subject on which the official Press note gives no indication of the Committee's recommendation.

The recommendations of the Committee regarding the reorientation of the rate control on hotel rates have been accepted by the Government. Accordingly, it feels that rate controls existing in Bombay and elsewhere should be abolished. The State Governments have been asked to consider modifications of laws on this subject. The rate structure in hotels, according to the Government resolution, should be governed by the widely accepted "Hubbart formula" with slight modifications to suit Indian conditions. This is undoubtedly the right approach. Direct controls on rates are not suitable for ensuring the growth of hotel industry on sound lines. Complaints of profiteering, however, should be carefully looked into by the tourist promotion authorities and those found guilty should be blacklisted. The prospect of such a punishment itself will act as a deterrent to profiteering.

Other Suggestions

The Committee's suggestions for giving import licences to the hotel industry for getting essential equipments and provisions, besides air-conditioning units, to enable it to maintain proper standards, have also been approved by the Government. Among other suggestions of the Committee, it had been recommended that since the hotel industry was a highly specialised industry, interests like the jewellery and silk trade, whose main motive was to attract customers for the purpose of selling their wares at high and exorbitant prices, should not be allowed in this field. In its resolution, the Government of India has stated that, since the number of people who are exclusively hoteliers is extremely small in this country and since the hotel industry has to attract capital from every available source in order to meet the needs of ever-expanding tourist traffic, it may not be advisable to close the doors to financiers other than hoteliers who are interested in investing in this industry. However, steps will be taken by the Government to check all malpractices in the hotel industry and particularly for preventing interlocking arrangements between hoteliering and shopkeeping.

The Government has also accepted the recommendation regarding the opening of craft and managerial hotel training schools. Efforts will be made to open a first-class hotel training school as early as possible. Encouragement will also be given to schools which are already in existence and are doing useful work in the field. Besides, the Committee had suggested that a common fund should be created for the hotel industry which should be augmented by the levy of a 2 per cent. surcharge on all hotel bills. Government has taken note of this recommendation and, in view of the possibilities it offers for assistance to, and improvement of, hotels, will examine the proposal in consultation with the authorities concerned.

The recommendations of the Committee regarding the establishment of more hotels and expansion of the existing ones have been accepted by the Government. Since the hotel industry is mainly in the private sector, the Government has expressed the hope that private enterprise, given the necessary support, will be

able to put up new hotels to meet the existing and potential requirements. It has also expressed itself in favour of the Committee's suggestions to introduce suitable legislation covering all relevant aspects of the hotel industry.

ELECTROLYTIC MANGANESE

A process for producing electrolytic manganese metal from low-grade manganese ore has been developed by the National Metallurgical Laboratory, Jamshedpur. Although the present domestic demand for electrolytic manganese is very limited, it is expected to go up substantially in the coming years thanks to expansion of steel industry and other developments. Electrolytic manganese is capable of replacing nickel in the manufacture of "nickel-free stainless steel" developed by the Laboratory. The annual demand in the country for stainless steel is estimated at over 1,000 tons. It is also claimed that electrolytic manganese will find large-scale use in substituted brass and other non-ferrous alloys being developed at the Laboratory. It is also likely to yield some foreign exchange, if proper export markets are established.

India has the distinction of possessing one of the world's largest deposits of manganese ore, estimated at 150 million tons. Of this, as much as 90 million tons are considered to be low-grade with a manganese content of 40 per cent. or less. High grade ores are either exported, about one million tons annually, or utilised for the production of ferro-manganese, whereas low grade ores have been generally dumped as waste, which can now be converted into electrolytic manganese metal of 99.95 per cent. purity.

Describing the new process, a Press note issued by the National Research Development Corporation says:

"The ore is crushed to a fineness of 100 mesh and reduced to manganese oxide in a rotary reduction furnace at 500-600° C. The reduced ore is fed to reactors filled with effluent from electrolytic cells where manganese oxide is dissolved by the free acid present. The resulting solution is purified to remove iron, arsenic, phosphorus, copper, nickel, cobalt and other impurities. The purified solution after adjusting its composition is electrolysed. Manganese metal deposit on the cathodes is removed, washed and dried."

The new process has been tried on semi-pilot plant scale unit producing 32 lbs. of metal per day. Recovery of the metal from the ore has been about 95 per cent. of the manganese content. We are told that even ores containing 15 per cent. manganese can be successfully processed by adopting the new process. Iron oxide, obtained as a by-product, can find use as a pigment.

Electrolytic manganese is not so far being produced commercially in India and, consequently, its consumption is very limited. During recent years, electrolytic manganese metal has been successfully produced commercially in foreign countries and used in the manufacture of ferrous and non-ferrous alloys. Because of the many advantages it offers over low carbon ferro-manganese, the use of electrolytic manganese in metallurgical practice is rapidly finding favour. When used as an alloying element in steel making, no new impurities are introduced. The charges can be calculated and weighed accurately and sampling and analysis required to check the composition of the melt are appreciably reduced. The present annual capacity of the American Electrolytic Manganese plants is about 15,000 tons. Appreciable quantities are also being used in Europe and other countries.

BOMBAY'S MASTER PLAN

The Master Plan for Industrial Development of Bombay State will be published sometime in October next. This was disclosed by Mr. S. K. Wankhede, Minister for Planning and Development, in Bombay on the 12th inst. He pointed out that the preliminary work on the Divisional Master Plans had now been completed by the six regional committees, one in each division of the reorganised Bombay State, set up to collect data for, and make suggestions on, the proposed Master Plan. The findings of the six committees would be considered by the State Industrial Advisory Committee to draw up the final Master Plan.

Mr. Wankhede observed that, though Bombay State was considered to be the most industrially advanced State in India, there was still immense scope for planned development of industries, since almost all its industries were concentrated in five or six big cities only. One of the important recommendations of the Master Plan, he said, would be concerned with the dispersal of industries from big cities to the industrially backward areas. In order to encourage such decentralisation, the State Industrial Advisory Committee had already recommended establishment of 16 industrial estates all over the State which would be provided with all modern amenities. He urged the co-operation of industrialists to carry out the scheme, which, according to him, would not be a rigid plan, but would provide ample scope for changes which would fit in the framework of the third Plan. He felt that, if the private sector needed any assistance in this matter, Government was duty-bound to extend it. Mr. Wankhede also pointed out that the geological surveys made by the Directorate of Mining and Geology had raised high hopes of finding large deposits of high-grade quality coal in the Vidarbha area, bauxite ores in Kolhapur, lignite ores in Kutch and mineral oil reserves in some parts of the Gujarat region. The exploration of these valuable minerals will give a new fillip to the industrial development of Bombay.

INSIDE FACTS
REVEAL

Stator Core
"Pre-built" before pressing into frame. Machining of the bore avoided by special assembly tooling.

Cooling Fans
Large fans draw air from the back and blow off through the driving end shield, and thus keep away belt-dust.

Stator Coils
Heavy grade polyvinyl covered wires into mica-insulated slots and impregnated with fully polymerising formaldehyde varnish.

Rotor
Pressure die cast with aluminum and dynamically balanced. Rigidly supported on over-sized ball bearings with ample grease capacity.

Terminals
Avoiding stiff single core leads, heavy multicore flexible cables are used to make working easier and less brittle.

End Shields
Ventilating windows below the horizontal axis make the motor drip-proof.

MACHINERY FOR SALE

Offers are invited up to 19th Sept., 1959 for the purchase of a number of rare and useful machines like crankshaft grinders, lathes, milling machines, turret lathes, drilling machines, grinders, re-boring machines, piston grinders, valve re-facing machines, connecting rod turning machines, power pressing machines, mechanical presses, hand presses, hardness testing machines, centrifugal casting machines, hydraulic pressing machines, electric motors, generators, chucks, tools, accessories and various other machines, mostly foreign makes, in a large factory in Delhi, manufacturing automobile parts, cycle parts, etc.

Offers are also invited from those who are interested to purchase the entire factory with the goodwill. For inspection and for further particulars apply to Post Box No. 1128, Delhi 6. Telephone: 25098.

SYNOPSIS OF COMPANY REPORTS

Kumardhubi Engineering Works Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company, for the year ended 30th November 1958.

The profit and loss account, after providing for all charges and making provision of Rs. 4,35,000 (Rs. 7,21,000) for taxation, Rs. 48,000 (Rs. 92,286) for wealth tax and Rs. 3,04,562 (Rs. 2,85,718) for depreciation, shows a profit of Rs. 5,10,184 (Rs. 5,69,214) to which is added the amount transferred from reserve for bad and doubtful debts Rs. 187 (nil) and balance brought forward from the previous year of Rs. 22,949 (Rs. 25,110) making a total of Rs. 5,33,320 (Rs. 5,94,324). From this is deducted the amount transferred to reserve for bad and doubtful debts Rs. 1,626 (Rs. 18,895) and to statutory development rebate reserve Rs. 1,87,300 (Rs. 11,000) to development rebate reserve leaving an available sum of Rs. 3,44,394 (Rs. 3,59,429) after transferring Rs. 80,000 to reserve for tax contingency and Rs. 1,25,000 to reserve for plant renovation).

The directors propose to dispose of this amount as follows:

By payment of a dividend on the preference shares of 5 per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 60,000 (Rs. 60,000), by payment of a dividend on the ordinary shares at the rate of 30 (45) paise per share without any deduction for income-tax payable by the Company absorbing Rs. 1,84,320 (Rs. 2,76,480) and by carrying forward Rs. 1,00,074 (Rs. 22,949).

After careful consideration the directors have decided on this recommendation of dividends, in view of the necessity of conserving the liquid resources of the Company. They are pleased to report that the managing agents are returning to the Company the amount of commission due to them as an interest free loan until the Company's liquid position improves.

General.—Profits were again reduced compared with the previous year, largely because of shortage of steel supplies to the Structural Shop and the continued change in the pattern of demand for the Steel Foundry products.

Marked increase in competition has become evident on both the structural and foundry side and the directors feel that less satisfactory results than hitherto will continue until steel becomes more readily available and the steel foundry expansion and modernisation is completed. The directors anticipate that the structural steel shortage should begin to ease during 1960 but it is possible that shortage of work for the steel foundry will persist for some time longer until an increased and balanced activity resulting from the effects of the current Five-year Plan becomes apparent.

During the year under review an agreement was signed granting certain increases in dearness allowance to labour and there was some improvement in general labour relationships. Unfortunately this improvement has not been sustained and quite recently there has again been a decline in the situation.

Accounts in brief are as under:—

Bengal Chemical and Pharmaceutical Works Ltd.

The directors of the above Company (Managing Director and Chairman: Mr. Balindra Nath Ghose, Calcutta) submit the audited accounts of the Company for the year ended 31st March 1959.

After meeting depreciation, bad debts and all other charges, the profit and loss account this year shows a profit of Rs. 15,85,498 (Rs. 10,49,360) against which is set off taxation reserve, development rebate reserve and income-tax paid in excess of previous year's provision leaving a net profit of Rs. 7,37,991 (Rs. 5,41,811) available for distribution. Out of this amount, the directors have transferred Rs. 2,00,000 (Rs. 1,40,000) to various reserve funds. From the balance of Rs. 5,37,991 (Rs. 4,01,811) the directors recommend payment of dividend at the following rates:—At 7½ per cent. free of income-tax on preference shares absorbing Rs. 67,500 (Rs. 67,500), at 7 (6) per cent. free of income-tax on ordinary shares absorbing Rs. 87,395 (Rs. 83,649), at 7 (6) per cent. free of income-tax on medical ordinary shares absorbing Rs. 14,357 (Rs. 12,293.50), at 7 (6) per cent. free of income-tax on 'A' ordinary shares absorbing Rs. 77,623 (Rs. 66,534), at 7 (6) per cent. free of income-tax on 'B' ordinary shares absorbing Rs. 1,57,829 (Rs. 1,35,282) and at 4½ per cent. free of income-tax on second preference shares absorbing Rs. 53,556 (Rs. 53,554) leaving a balance of Rs. 79,732 (Rs. 2,999).

The distribution of profit and transfer to various funds from the profit and loss account leaves a balance of Rs. 79,732 (Rs. 2,999) which together with the balance of Rs. 13,00,664 (Rs. 12,97,665) brought forward from the profit and loss account for the year ended 31st March 1958, amounting to Rs. 13,80,396 (Rs. 13,00,664) has been carried as undistributed profit in the balance-sheet.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	69,07,325	Gross block	1,47,81,462
Debitures ...	15,00,000	Less—Depreciation	70,85,452
Reserves ...	50,72,805		
Provision for income-tax ...	7,35,000	Net block ...	76,96,010
Provision for wealth tax ...	75,000	Stock-in-trade	43,49,254
Liabilities ...	62,33,778	Stores, spares and tools ...	8,02,149
Profit and loss account (surplus) ...	13,80,396	Work-in-progress	4,10,971
		Debts, deposits and advances ...	59,65,102
		Investments ...	16,93,103
		Cash ...	9,87,715
Rs. 2,19,04,304		Rs. 2,19,04,304	

Port Shipping Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a loss, after charging all expenses, of Rs. 4,00,161 (Rs. 75,954 after providing Rs. 74,000 for taxation). The balance brought forward from last year was Rs. 19,790 (Rs. 62,822) and the directors have forfeited unclaimed dividends totalling Rs. 12,435 (nil) leaving a debit balance to be carried forward of Rs. 3,67,936 (credit of Rs. 1,88,776 including Rs. 50,000 transferred from reserve for repairs from which dividend at Rs. 1.20 per share, for the year absorbed Rs. 1,68,988 leaving a balance to be carried forward of Rs. 19,790). Rs. 1,989 has been transferred from investment surplus reserve to meet a small loss on the sale of investments.

Although earnings from the carriage of jute and gunnies were slightly higher than in 1957, the demand in the Port of Calcutta for lighters for general import cargo was very poor throughout the year. Freight from import cargo dropped from Rs. 19,95,918 in the previous year to Rs. 5,53,606—a decrease of nearly Rs. 14½ lakhs and the disappointing results for the year were largely due to the decrease in income under this head. Lighters for this type of work having hitherto formed a most important part of the Company's business. Not only was the import of general cargo severely restricted, but also the more expeditious handling of cargo in the docks area by the Calcutta Port Commissioners resulted in a lower demand for lighters.

In spite of the depression in the lighterage business in the port, there was considerable agitation during the year by the tug crews of the five largest lighterage companies, culminating in a strike in the second half of the year. The cost of hiring tugs to tow lighters during the strike period and expenses incurred in repairing tugs which had been maliciously damaged, amounted to approximately Rs. 40,000.

Owing to factors over which the Company has no control, immediate prospects are not encouraging. Not only is less business offering but operating conditions on the river Hooghly have deteriorated, barge tides having become increasingly stronger with consequential increased expenditure on repairs to lighters damaged during these tides and on replacement of broken mooring ropes. The rationalisation of jute mills has resulted in the closing down of certain mills whose products the Company carried for many years, and the resulting loss in lighterage business has been only partially offset by increased business from other mills. The Company has however been able to obtain two new contracts for general work since January 1959 and every possible economy is being enforced. Results for the current year should therefore show some slight improvement, compared with 1958.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	14,08,220	Gross block	50,22,939
Reserves ...	21,22,358	Less—Depreciation	11,02,899

Liabilities ...	12,05,918	Net block ...	39,20,040
		Stores and spares	1,21,667
		Debts, deposits and advances ...	6,36,630
		Investments ...	1,01,500
		Cash ...	8,751
Rs. 47,88,588		Rs. 47,88,588	

Dehri-Rohtas Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1959.

The gross earnings amounted to Rs. 39,29,709 (Rs. 27,72,895) and the working expenses were Rs. 17,44,672 (Rs. 13,94,509) leaving a surplus of Rs. 21,85,037 (Rs. 13,78,386). After deducting interest, depreciation, employees' bonus, managing agents' and directors' salaries, etc., amounting to Rs. 5,62,701 (Rs. 6,65,198) there is a net profit of Rs. 16,22,336 (Rs. 7,13,188). Out of this, provi-

sions have been made for development rebate of Rs. 16,000 (Rs. 11,000) and for taxation Rs. 8,45,000 (Rs. 3,91,000) leaving a sum of Rs. 7,61,336 (Rs. 3,11,188). To this is added balance brought forward from last year of Rs. 2,749 (Rs. 35,541) leaving a balance for distribution of Rs. 7,64,085 (Rs. 3,46,729). The directors recommend apportionment as under:

To payment of a dividend at Re. 1.70 (Re. 1.00) per share, i.e., 17 (10) per cent. (free of income-tax) on 3,00,000 shares for the year ended 31st March 1959, absorbing a sum of Rs. 5,10,000 (Rs. 3,00,000) and to transfer to general reserve Rs. 2,50,000 (Rs. 43,980) leaving a balance of Rs. 4,085 (Rs. 2,749) to be carried forward.

During the year under report, Rohtas-Pipradhi private siding was opened for the carriage of passenger traffic also. Five new railway stations have been opened on this section.

Since the close of the year, rolling stock has been further strengthened by addition of four locomotives, three passenger coaches and one brake van. The volume of goods traffic during the year has registered further increase by nearly 1,80,000 tons. Construction of women's quarters under Bihar Government Industrial Housing Scheme has been now completed at a cost of nearly Rs. 10 lakhs.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	30,02,600	Gross block	73,01,925
Debitures ...	15,00,000	Less—Depreciation	32,79,614
Reserves ...	9,27,000		
Provision for taxation ...	9,14,962	Net block ...	40,22,311
Liabilities ...	20,07,843	Workmen's quarters in progress ...	9,00,183
Profit and loss account (surplus) ...	4,085	Stores and coal	5,80,151
		Debts, deposits and advances ...	24,18,231
		Investments ...	5,361
		Cash ...	4,30,253
Rs. 83,56,490		Rs. 83,56,490	

Katras Jherriah Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st January 1959.

The accounts show a profit, after charging all expenses, of Rs. 9,81,721 (Rs. 12,10,736) of which taxation provision requires Rs. 6,73,000 (Rs. 7,55,000) leaving a sum of Rs. 3,08,721 (Rs. 4,55,736). With the balance brought forward from last year of Rs. 1,68,572 (Rs. 1,38,336) there is a total amount available for appropriation of Rs. 4,77,293 (Rs. 5,94,072). The directors have transferred to development rebate reserve Rs. 25,147 (nil) and have paid an interim dividend of Rs. 3 (Rs. 3) per share on 19th January 1959, absorbing Rs. 1,50,000 (Rs. 1,50,000). The directors now recommend that a final dividend of Rs. 3.50 (Rs. 3.50) per share be paid, absorbing Rs. 1,75,000 (Rs. 1,75,000) leaving a balance to be carried forward of Rs. 1,27,146 (Rs. 1,68,572 after transferring Rs. 500 to capital reserve and Rs. 1,00,000 to general reserve).

Wealth tax in respect of the year ended 31st January 1959 is estimated to amount to Rs. 15,500 and this has been provided for by transfer from investment realisation surplus and capital reserve.

Raisings for the year were 3,44,864 tons, compared with 3,48,065 tons in the previous year. Depatches, which included purchased coal, amounted to 3,54,154 tons as against 3,68,730 tons.

The capacity of the sand getting and stowing arrangements at Laikidh Deep colliery has recently been improved, and a small increase in raisings of the Selected "A" grade coking coal from this colliery will now be possible. The reserves of coal at Seebore colliery are, however, decreasing rapidly and will be exhausted within a few years.

In January 1959 permission was received from the Controller of Capital Issues to capitalise Rs. 7,50,000 out of reserves. In view of tax implications, however, the Board, after due consideration, have decided not to recommend any further action being taken at present. The consent of the Controller of Capital Issues is in any case valid until January 1961 and the position will, of course, be reviewed by the Board from time to time.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	5,00,000	Gross block	52,22,175
Reserves ...	19,74,252	Less—Depreciation	39,91,046
Provision for taxation ...	4,59,402		
Provision for wealth tax ...	14,232	Net block ...	12,31,129
Liabilities ...	17,84,626	Stock of coal	1,19,217
Profit and loss account (surplus) ...	1,27,146	Stores and spare parts	5,42,764
		Debts, deposits and advances ...	19,33,066
		Investments ...	3,29,200
		Cash ...	7,04,282
Rs. 48,59,658		Rs. 48,59,658	

N.B.—Figures within brackets relate to the corresponding period of the previous year.

BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LTD.

EXPANSION SCHEMES UNDER CONSIDERATION

SPEECH OF CHAIRMAN, DR. B. N. GHOSE, AT ANNUAL GENERAL MEETING

ADDRESSING the shareholders of the Bengal Chemical and Pharmaceutical Works Ltd. at their Fifty-ninth Annual General Meeting held in Calcutta on 14th August 1959, Dr. B. N. Ghose, Chairman of the Company, said that the expansion of the Kanpur factory was progressing rapidly and was expected to be completed during the current year. The Directors, he added, had also in view a few other schemes of expansion. For instance, the capacity of the alum plant was to be increased and this would require large quantity of sulphuric acid. Consequently, the Company would have to put up a bigger sulphuric acid plant.

The following is the full text of Dr. Ghose's speech:

"GENTLEMEN,

"It is my proud privilege and pleasure to extend to you a hearty welcome on behalf of the Board of Directors to the fifty-ninth annual general meeting of your Company.

"The Directors' report and audited accounts for the year ended 31st March 1959 have been in your hands for some time and, with your permission, I will take them as read.

"The vacancy in the Board of Directors caused by the death of Mr. T. C. Ray has been filled by the co-option of Dr. B. P. Sur, whose experience and knowledge will be of help to us. During the year, Mr. S. P. Sen, who was the Manager and Secretary of the Company, retired from service on 31st October 1958. We must acknowledge the valuable services that have been rendered by him to the Company during the tenure of his office. Your Board of Directors have appointed Mr. N. Adhikari, who was one of the Assistant Managers, as Manager and ex-officio Director of the Company.

"After the termination of the unhappy strike on 16th June 1958, working on the whole has been satisfactory. Last year, I brought to your notice that several cases between the workers and the Company were pending before the Supreme Court or the Tribunal. Of those, the case relating to the demand for increase in D.A. has been decided by the Supreme Court in favour of the workers resulting in increase of expenditure to the extent of Rs. 2 lakhs. Other cases have not been disposed of and are still pending before the Tribunal.

Expansion of Kanpur Factory

"Expansion of our Kanpur factory is progressing rapidly and it is expected that it will be completed within this year. Incidentally, our branches both at Bombay and Kanpur have given a good account of themselves by maintaining high degree of efficiency in production and increase in the volume of sale.

"Your Company has been functioning during the year economically and it has been our attempt to reduce our expenses wherever possible, so that we can increase our savings.

"Domestic market conditions were difficult; still the Company was able to record a higher sale during the year. The available working period was 9½ months only, due to strike in two of our principal factories, namely, Maniktala and Panihati. I am glad to say that still we have been able to make a bigger profit.

"Gentlemen, incentives produce the maximum out of an individual. Following this principle your Directors have decided to give the employees a special bonus equivalent to one-fourth of their monthly basic pay as an incentive. This is apart from the bonus which the Directors may declare after the annual general meeting. I hope this special bonus will serve its object and it will create an atmosphere for industrial peace and harmony in future. Very often we get demands from labour unions out of all proportion to the profit. I would request the union leaders to guide the workers in the right direction, so that there is increased production and less wastage of raw materials. They should also be educated to be useful citizens of the country and the 'code of efficiency and discipline' should be implemented.

of the fact that the Government planned to construct roads and highways under the Five-year Plans. To our surprise our old suppliers of crude tar, two of the well-known iron and steel manufacturers, cut short and gradually stopped their supply for reasons best known to themselves. Thereupon, we approached the Durgapur Coke Oven authorities who promised to supply us half the quantity of our requirement, but they failed. Fortunately, we are getting some quantity of crude tar from Hindustan Steel who, in spite of their best efforts, are unable to increase their supply due to shortage of tank wagons.

"Any forecast about our future project is liable to a big margin of error. But generally speaking, we look forward to the future which we hope will show substantial progress, in spite of innumerable difficulties.

Profit and Loss Account

"The profit for the year, after providing for depreciation, etc., is Rs. 15,85,497.59, as compared with Rs. 9,96,518.90 for the last year. After distribution of profits and usual transfer to various funds Rs. 79,731.72 has been carried forward in the balance-sheet as undistributed profit. Your Directors have recommended a dividend of 7 per cent. on all classes of ordinary shares free of income-tax. Rs. 8,10,000 has been transferred to taxation reserves. Our net block amounts to Rs. 76,96,000.

"Examination of the profit and loss account and the balance-sheet for the year ended March 1959 will show further that there has been a reduction of expenses under the head 'consumption of raw materials' compared to last year's figure. This is due to lower arrived cost of some raw materials and other favourable factors. This has been referred to before.

"The increase in expenses under 'repairs to plant and machinery, etc.' is due to the fact that machineries remained idle for about 3½ months and had to be thoroughly overhauled before resumption of work.

"Repairs to buildings were also undertaken due to easy availability of cement and other building materials.

"The increase under 'rates and taxes' is due to the fact that Municipal Corporation rates were increased with retrospective effect and had to be paid during the year.

"The increase under the head 'miscellaneous expenses' is due to the inclusion of expenses for the publication of numerous notices appearing in the Press on account of strike.

"The increase under 'conveyance and travelling' is due to extra expenses for free transport which had to be provided to loyal employees to carry them to the factory during the strike period.

Bad Debts

"There has been considerable reduction under this head. Attempts are being made to realise debts previously written off. This year's profit and loss account shows an improvement in this direction.

Balance Sheet—Reserves and Surplus

"This shows an increase of more than Rs. 3 lakhs over last year's figure. This is due to transfer of larger amounts to reserves and higher carry forward balance of profit and loss account.

Secured Loans

"This shows a reduction of Rs. 4 lakhs over last year's figure because of our repayment of Rs. 2½ lakhs of loan to the I.F.C. in addition to the usual payment of annual instalment of Rs. 1½ lakh.

Current Liabilities and Provisions

"This shows an increase of about Rs. 7 lakhs which is principally due to provision of increased taxation and dividends due to higher profits earned.

"I should finish my statement with an expression of grateful thanks to those officers, staff and workers of the Company who have rendered valuable services. I would also thank my colleagues for their ungrudging help and our customers for their unfailing co-operation, without which successful results could not have been achieved."

Note: This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to members

For New Central Jute Mills Co., Ltd.,

For SAHU JAIN LTD.,
A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA, 12th August, 1959.

THE GENERAL INDUSTRIAL SOCIETY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held at its Registered Office at 8, India Exchange Place, Calcutta, on Wednesday, the 23rd September, 1959, at 2.30 p.m., for the following purposes:—

1. To receive and adopt the Report of the Directors and the Audited Accounts for the year ended 31st December, 1958.
2. To declare dividend.
3. To elect Directors in place of retiring Directors.
4. To appoint Auditors and to fix their remuneration.
5. As special business:

To consider and if thought fit, to pass the following Resolution as a special Resolution with or without any modification:

RESOLVED that the figure Rs. 50 be substituted in place of the figure Rs. 25 in the third line of the Article No. 112 of the Articles of Association of the Company.

6. To transact any other business which may be brought forward at the Meeting with the permission of the Chairman.

The Share Transfer Book and the Register of Members of the Company will remain closed from the 14th September, 1959, to the 23rd September, 1959, both days inclusive.

By Order of the Board,

For THE GENERAL INDUSTRIAL SOCIETY LIMITED,
K. C. BAGRI,
Manager.

CALCUTTA, 14th August, 1959.

N.B.—(i) The Directors have recommended dividend on Ordinary Shares at Rs. 2 per share free of Income-tax.

If dividend on shares as recommended by the Directors is approved at the meeting, the dividend will be payable only to such shareholders whose names are on the Company's Register on the day of the Annual General Meeting. No application need be sent for dividend, as relative dividend Warrants will be posted to the Shareholders by 28th October, 1959.

(ii) A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the company.

(iii) Explanatory statement to item No. 5 pursuant to Section 173 of the Act, as stated in the Notice will be issued to the individual members.

SUGAR

(Concluded from page 300)

payment of a portion of the estimated additional price, along with the minimum cane price, as a very special case for this year, without creating any precedent for the future. This will enable them to attract larger supplies of cane. As you will appreciate, it will not be possible to decide upon the exact quantum of such advance payment right now, and this would be possible only towards the end of October, when crop conditions could be fairly have to be adjusted later on, after the finalisation of the accounts, etc., against the share which may will not be refundable to the factories in any case. We suggest that, if it is necessary to amend the Government's notification on the price-linking formula, to make this adjustment possible, steps may kindly be taken in this direction. Payment of increased sugarcane price based on the price-linking formula will create a sound basis for the future and will be of great advantage to all concerned, from the long-range point of view.

The S.I.S.M.A. formula is by no means perfect, but it is a little better than the one followed in U.P., Bihar and other parts of North India. The adoption of this formula in the coming season, together with strict control on production of khandasari and gur and levy of excise duty on gur, will go a long way towards preventing large-scale diversion of cane supplies from sugar to gur and khandasari, the production of which has registered an appreciable improvement.

TEN STATE LOANS CLOSE ON OPENING DAY

(From Our Own Correspondent)

BOMBAY, 19th August

The subscription lists for the thirteen State loans for an aggregate sum of Rs. 61.50 crores opened this morning and have had a good response. At the end of the day, as many as 10 loans, accounting for Rs. 47 crores, were closed. Of these, eight loans for an aggregate sum of Rs. 38 crores were oversubscribed; they were Bombay (Rs. 6 crores), M.P. (Rs. 3 crores), Mysore (Rs. 5 crores), Rajasthan (Rs. 3.50 crores), Madras (Rs. 3 crores), West Bengal (Rs. 7 crores), Orissa (Rs. 3.50 crores) and Punjab (Rs. 2 crores). The other two, Andhra (Rs. 6 crores) and Bihar (Rs. 3 crores) were fully subscribed. It will be of interest to note that the lists for the first four loans were closed within an hour or so of their opening. The three States which are still in the market (up to the end of the day) are Assam (Rs. 2.50 crores), U.P. (Rs. 8 crores) and Kerala (Rs. 4 crores).

The immediate effect of the heavy subscriptions to the State loans on the short-term money market is a spurt in inter-bank call money rate from 1½ per cent. among the Exchange banks and big Indian banks, on Monday this week, to 3½ per cent. today. The banks were closed on Tuesday, as it was a holiday. The corresponding rate among smaller banks has also hardened from 1½ per cent. to 3½ per cent. House money at seven days' notice is, however, unchanged at 3¼ per cent. and short-term deposits at 3¼ per cent.

There has been no sale of regular Treasury Bills this week, on account of State borrowings. It will be resumed next week. Sales of Intermediate Bills were, however, held from 12th to 14th August for an aggregate sum of Rs. 2 crores.

The Reserve Bank of India statement for the week ended 14th August 1959 discloses a slight contraction of Rs. 8.79 crores in notes in circulation. Notes held in the Banking Department are higher by Rs. 9.70 crores. There is no change in foreign securities, but balances held abroad have fallen by Rs. 1.78 crore. Deposits of the Central Government are higher by Rs. 1.17 crore and those of other Governments by Rs. 28.55 crores, reflecting the recent disbursement of loans by the Central Government to the States. Deposits of banks too have gone up by Rs. 18.49 crores. Loans and advances to Governments are, however, lower by Rs. 5.35 crores. The investment portfolio discloses a sharp rise of Rs. 44.58 crores.

A further fall of Rs. 6.27 crores in demand deposits of banks is disclosed by the Scheduled banks statement for the week ended 7th August 1959. Time deposits, however, maintain their upward trend with a rise of Rs. 2.20 crores. Inter-bank borrowings have declined by Rs. 2.69 crores, while borrowings from the Reserve Bank are lower by Rs. 2.37 crores. Advances have further gone down by Rs. 2.09 crores and bills purchased and accounted by Rs. 38 lakhs. There has been a shrinkage of Rs. 2.61 crores in cash balances and of Rs. 3.03 crores in money at call and short notice.

The gilt-edged market rules dull, with the attention of investors diverted to the new State loans. Transactions have been few and far between. Some of the 4 per cent. and 4½ per cent. State loans are on offer, but there is no change in prices. 3 per cent. 1966 Conversion Loan is featureless at Rs. 73.55, 3 per cent. 1965-66 has shed 5 NP to Rs. 97.35, while 3 per cent. 1966-68 and 3 per cent. 1970-75 are unchanged at Rs. 95.20 and Rs. 92.20 respectively. 3½ per cent. 1964-65 is 5 NP lower on balance at Rs. 100.15, as also 3½ per cent. 1974 at Rs. 99.50 and 4 per cent. 1979 at Rs. 100.05.

There has been a slight weakening of the rupee in terms of the U.S. dollar, in consonance with the trend of sterling abroad. Banks' selling rate for U.S. T.T. has gone up from Rs. 476 to Rs. 478.25 per \$100 and their buying rate from Rs. 472.75 to Rs. 473 per \$100. In New York, spot sterling has dropped from 281.10-281.13 cents to 280.95-280.98 cents and three months' forward from 281.05-281.06 cents to 280.98-281.01 cents.

HIDES FIRM

(From Our Own Correspondent)

MADRAS, 17th August

The kip market ruled firm with an upward tendency in prices. Arrivals met with good clearance. Shippers expected better U.K. buying at higher levels during the second half of August and onwards. There were more enquiries for kips for all average weights from the U.K., including inferior fifth cow hides, and higher prices were said to have been paid on most of the lines.

Trading in tanned skins was patchy, because importers were not keen to follow Madras asking prices. Despite all this, goat was firm, as also semi-prime sheep skins. Medium sheep skins were a shade weak and should decline further to stimulate importers' interest in shipment business.

LINSEED RALLIES

(Messrs. A. Bradley and Co.)

CALCUTTA, 17th August

There was a sharp rise in linseed prices and a very firm undertone prevailed throughout the week. Availability of seeds was exceedingly poor, with sellers showing little interest in fairly keen enquiries from traders. This factor combined with the improved trend in the U.K. linseed cake and oil markets, caused the bullish outlook.

September futures advanced to Rs. 24 and May futures opened with buyers at Rs. 23 but no sellers.

Although the oil market improved to Rs. 60.50, it was virtually featureless. Small business was done earlier by shippers at Rs. 48.50.

The latest available quotations for Ready, August-September and September futures were Rs. 24 per maund. May futures stood at Rs. 23.

SILVER FIRM, GOLD QUIET

(From Our Own Correspondent)

BOMBAY, 19th August

A mixed trend was witnessed in the bullion market during the week under review. Thus, silver continued to rule distinctly firm, while gold was quiet, although there was a recovery today. The renewed firmness of the white metal was engendered by the tight hold of bulls over floating stocks and the nearness of the maturity of option deals. Reports from North India also were quite encouraging; the actual offtake was said to have improved markedly of late. Another factor was fresh buying from Calcutta. Gold, however, developed a sagging tendency. The appreciably high levels of prices touched last week attracted profit-taking and values suffered a setback. But, at lower levels today, there was some support which led to a rise in prices. Nevertheless, today's closing rates for gold were a shade lower as compared with last week's closing rates, though they were still substantially higher than those prevailing a fortnight ago.

August settlement in gold encountered selling early in the week and moved down from Rs. 121-6 to Rs. 120-12-6 on Saturday. After recovering to Rs. 121-9-6 today, it finished at Rs. 121-4. September settlement declined from Rs. 120-13-6 to Rs. 120-8-6 on Saturday but recovered subsequently to touch Rs. 121-7 today before closing at Rs. 121-2. The backwardation rate (buddi in favour of bulls) for August settlement was less than Rs. 8 throughout the week except on Monday, the rate today being just Rs. 2. Consequently, the margin at the rate of Rs. 10 per tola ceased to be in operation with effect from the 14th inst.

Ready gold opened the week at Rs. 121-7, as against Rs. 121-9, and receded to touch a low of Rs. 120-12 on Monday. Today, however, it improved to Rs. 121-8 before winding up at Rs. 121-3. The daily average arrivals of gold were 4,000 tolas, while the offtake was 2,000 tolas. The floating stocks of gold are reported to be around 40,000 tolas.

August settlement in silver met with excellent support and forged ahead in the course of the week from Rs. 200-5 to Rs. 203-6 today. Towards the close, it stood at Rs. 203-4. Since the closing rate for this settlement was Rs. 7 higher than the starting rate, the bulls were required to pay margin at the rate of Rs. 500 per bar in accordance with By-law 33. September settlement registered a net rise of Rs. 2-11 over the week, today's closing rate being Rs. 202-6. October settlement jumped up from Rs. 199-8 to Rs. 202-7.

The backwardation rate for August settlement widened from As. 7 on the opening day of the week to As. 14 today. In our last week's report, it was stated that the carryover rate for August settlement on Wednesday the 12th inst. was against bulls to the extent of As. 6. This is incorrect. Actually, the rate had turned in their favour to the extent of As. 10.

Under the impetus of good buying enquiries, ready silver firmed up from Rs. 200-3 to Rs. 203-2 before finishing an anna lower. The daily average arrivals and offtake of silver were 14 bars and 10 bars, respectively. The floating stocks of silver are estimated at 400 bars.

A further rise of ½d. was recorded by both ready and forward silver in the London bullion market, yesterday's closing rates being 79d. and 78½d. per ounce, respectively. Silver in New York, however, was unchanged this week too at 91.375 cents per ounce. Ready gold in London eased from 249s. 10½d. to 249s. 10d. early in the week, owing to the strength of the pound sterling vis-à-vis the dollar, but recovered subsequently to 249s. 10½d. yesterday. The latest available dollar rate for gold in London is \$35.11-\$35.13, as against \$35.11-\$35.13 last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	19-8-59	Highest	Lowest	12-8-59
GOLD				
Ready (99 fine Mint)	121 4	121 8	120 12	121 9
Forward	121 4	121 9	120 12	121 6
SILVER				
Ready (999 fine Mint)	203 2	203 6	200 10	200 8
Forward	203 2	203 6	200 10	200 8
19-8-59				
London Silver Ready	79 4	79 4	78 4	78 4
London Forward	78 4	78 4	77 4	77 4
London Gold	249 10 1/2	249 10 1/2	249 10 1/2	249 10 1/2
New York Silver	91.375	91.375	91.375	91.375

* 20th August settlement. † 21st August settlement.

METALS FULLY STEADY

(From Our Own Correspondent)

CALCUTTA, 18th August

The week under review in the metal market was short of a day on account of the holiday on the 15th, and in the remaining days prices were fully steady. With the revival in demand for copper scrap, the demand for other metals also improved, and on balance closing levels were higher on balance. The 'berry' quality copper scrap moved up to Rs. 243 from Rs. 235 per cwt. with the utensil scrap, though unchanged, being firm at Rs. 225 per cwt. Foreign advices were encouraging, on account of the strike in the United States. On the London Metal Exchange, spot copper closed higher at £238 per ton, as against £228 over the previous week-end. The price in New York also moved up. Tin here hardened to Rs. 680 per cwt. from Rs. 578. Consumers showed greater interest. The price in London, after being higher at £793 per ton, closed at £792. In New York, there was no change to the price at 101.75 cents per lb. Lead here was unchanged at Rs. 74.50 per cwt., while electrolytic zinc closed firmer at Rs. 108.50, as against the opening rate of Rs. 103.

FURTHER RISE IN COTTON

(From Our Own Correspondent)

BOMBAY, 19th August

Further improvement in values was recorded by the cotton futures market during the week under review. The week was a short one of only four trading days. The market was closed on 15th and 18th inst. on account of Independence Day and Coconut day, respectively. Trading sentiment continued to be cheerful throughout the week. Firm advices from the spot market and the small volume of fresh tenders imparted additional strength to the expiring August contract which rallied to a record high level of Rs. 725. In spite of a turn for the better in weather conditions in growing areas, the new crop contract, Jarilla March 1960, attracted fresh support from spot houses and large-scale buying by upcountry operators. Reports of higher cloth and yarn production by mills in July and the delay in the movement of new crop were other helpful factors.

Jarilla August 1959 contract commenced the week at Rs. 717, Re. 1.50 higher than the previous day's close, and advanced to Rs. 724 on Monday. Opening at Rs. 724 today, the contract gathered one rupee, but declined to Rs. 719. The close was, however, higher at Rs. 725. Tenders issued against the contract on the 17th inst., the fifth notice day, aggregated 850 bales, comprising 800 bales of Laxmi A and 50 bales of Vijay, making the total issued to date 5,750 bales.

Jarilla March 1960 contract opened three rupees higher than last week-end closing. It gradually rose, under pressure of buying, to Rs. 684.50 on Monday. Commencing at Rs. 683 today, the contract firmed up to Rs. 688.50 before closing lower at Rs. 687.75.

The following table indicates the trend of prices of the contract during the week:

	19-8-59	High	Low	12-8-59
I.C.C. Moglai Jarilla				
August 1959	725.00	725.00	714.00	715.50
March 1960	687.75	688.50	681.00	679.50

On account of the intervening holidays, activity in the spot market was limited. Nevertheless, mills continued to evince interest in usual popular styles of current crop. Prices were fully firm. Moderate volume of business was reported in Kalyan, Wagad, Vijay, Rajapalayam, Laxmi, Berar, etc. New crop was more briskly traded.

The export front presented a dull appearance. Routine business was done in Bengal Deshi, Zoda and Yellow pickings. Interest was lacking in other varieties. Shippers were eagerly awaiting an export quota for new crop Bengal Deshi.

Interest in foreign cotton was subdued. The cut in discount on Egyptian cotton induced mills to turn to Sudanese styles. The expected import quota for 140,000 bales of cotton of 1.1/16" to 1.3/16" stapling has not yet materialised. Meanwhile, rumours are also current that the quota may not be issued at all since the Government is said to be thinking of making available U.S. cotton under P.L. 480.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal Deshi 705; Berar Jarilla 755; Khandesh 880; Laxmi 1,025; Jaydhar 960.

After having remained closed for three and a half months, the Karachi cotton futures market commenced trading on the 10th inst. But business did not have a smooth run. The Karachi Cotton Association suspended business half an hour after trading began when prices dropped by Rs. 2-8—a limit set under the by-laws of the Association. On the 11th inst. also, eight minutes after the market opened, the Association applied "hella" (closure) as the January contract, which had commenced at Rs. 68-4, dropped to Rs. 68-4. In subsequent sessions also, futures quotation followed a steadily downward trend. The January contract was quoted at Rs. 61-14 yesterday and the March contract at Rs. 62-10, representing a fall of Rs. 11-14 and Rs. 11-2 respectively, from the opening quotation on the 10th inst. The spot section was subdued. Domestic mills evinced little interest. Export inquiries were few and far between.

Fully steady conditions prevailed in the Alexandria cotton futures market during the week under review. Despite the reduction in export price discount from 32.50 per cent. to 30 per cent., overseas demand was well maintained. Crop reports indicated satisfactory progress of new crop. In Upper Egypt picking will become general in about a fortnight. If favourable conditions continue, it is expected that the crop will be excellent as regards both quality and yield. In Lower Egypt, unusual cool weather has slightly delayed the crop but pickings are expected to commence in the last week of this month. The following are the latest available quotations—in talis per lb.—from Alexandria:—

Karnak: November 75.65; January 75.25. Ashmoun: August 68.90; October 67.93.

Liverpool cotton futures market ruled firm during the week under review. Values improved on short covering and good mill demand which found offerings limited. Both the American and American type contracts advanced. Sudan contracts were firm on encouraging Khartoum advices. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 21.60; December-January 21.53; March-April 21.23; May 21.38.

American cotton mixed growths contract: October-November 21.71; December-January 21.68; March-April 21.

Sudan: September-October, November-December, January-March 20.75.

Limited turnover and narrow fluctuation in prices characterised trading in the New York cotton futures market during the week. Values

see-sawed on alternate bouts of buying and selling. Some scattered Commission House liquidation and hedge selling was absorbed in routine trade demand and local buying. Over the week, prices showed little change.

Government-controlled stock as on the 31st of July is estimated at 6,679,960 bales, made up of the 1958 loan stocks of about 6,039,060 bales taken over by the C.C.C. on 31st July and the C.C.C.-owned stocks of 1957 and earlier crops aggregating 640,900 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	19-8-59	11-8-59	4-8-59
Spot	33.10	33.15	33.55	
October	32.08	32.09	32.26	
December	32.15	32.15	32.29	
March	32.55	32.51	32.57	

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 19th August
The yarn market ruled dull during the week under review. This was due to the intervening holidays and cautious attitude on the part of operators to enter into fresh commitments, as they preferred to await the recommendations of the Bombay State Legislative Assembly Select Committee on the new Sales Tax Bill. Business put through, as a result, was at a low ebb. Rayon yarns were well maintained, despite limited offtake from consuming centres. It was reported that shipments of rayon cloth under the revised Export Promotion Scheme were not quite satisfactory. Forward deliveries in staple fibres tended to improve, while spot yarns were a shade easy. There were rumours that deliveries against the tender would be heavy at the end of this month and that several Bombay mills had commenced spinning 40 x 2 and other staple fibre yarns in large quantities. But these reports had no effect on the market. Cotton yarns continued to rule firm. Several mills were quoting high prices.

Cupressa Bamberg yarn (60 x 2) August delivery recorded a rise of Rs. 6 to Rs. 1,671. October delivery improved by Rs. 9 to Rs. 1,711. Spot Cupressa, however, eased by 3 nP to Rs. 7.47. Among imported art silk yarns, 120 Japan and 150 Japan shed 3 nP each to Rs. 5.75 and Rs. 4.78, respectively. 120 Italy lost a like amount to Rs. 4.84. 150 Italy was unchanged at Rs. 4.68. Among indigenous yarns, National Rayons 150 bright cones first grade dropped 5 nP to Rs. 4.20. 120 bright cones first grade declined from Rs. 4.69 to Rs. 4.66.

Staple fibre yarn (40 x 2) October contract met with good support and rose by Rs. 6 to Rs. 658. October contract gained Rs. 2 to Rs. 663. Spot Centurys shed 3 nP to Rs. 3.53. Citys and Kohninoors were done at Rs. 3.47 and Rs. 3.59, respectively, same as last week. Among imported yarns (80 x 2), Paramounts eased by 3 nP to Rs. 7.69. Fujis were quiet at Rs. 8.56.

In the cotton yarn section, ten counts Moderns advanced by 25 nP to Rs. 14.25. Podars were fully maintained at Rs. 13.62. Twenty counts Hinds hardened by 12 nP to Rs. 17.25. Moderns were firm at Rs. 17.50. Forty counts Minaxis put on 7 nP to Rs. 26.44. Moderns were unchanged at Rs. 26.75. Sixty counts Raghuvamsis and Finlays were fully steady, the former at Rs. 57 and the latter at Rs. 63. Eighty counts Moderns and Citys strengthened by 50 nP each to Rs. 79 and Rs. 69, respectively. Finlays were firm at Rs. 83.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday as compared with those a week before:

	10-8-59	12-8-59
Art silk yarn—		
60/1 Cupressa Bamberg August (100 Kg.)	1,671	1,665
October	1,711	1,702
60/1 Cupressa Bamberg spot (per lb.)	7.50	7.47
120 Japan (per lb.)	4.75	4.78
150 Japan (per lb.)	4.78	4.75
120 Italy (per lb.)	4.84	4.84
150 Italy (per lb.)	4.68	4.68
Staple fibre yarn—		
40 x 2 August (per case of 200 lbs.)	663.00	661.00
40 x 2 October	658.00	652.00
40 x 2 Kohninoor (per lb.)	3.59	3.59
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	14.25	14.00
20s Hind	17.25	17.12
40s Minaxi	26.44	26.37
60s Finlay	63.00	63.00
80s City	69.00	68.50

SEEDS STEADY

(From Our Own Correspondent)

BOMBAY, 19th August
Quietly steady conditions were in evidence in the oilseeds market during the week under review. The groundnut section was particularly cheerful, thanks mainly to the pronounced strength in the spot section, which restricted the volume of tenders issued against the maturing contract. Reports that widespread rains in the producing areas damaged some groundnut crop served to limit the offerings. Saurashtra dealers, in particular, were busy covering their sales. Groundnuts and groundnut oil, however, were a shade subdued at the close of the week, which reflected mainly the absence of fresh buying support. In the castorseed section, the continued absence of any advices from the U.S. dampened the enthusiasm of the traders. In view of this uncertainty on the export front, dealers of the maturing contract preferred to switch over to the May 1960 contract. The reports of sizable increase in the estimates of world production of castorseed, too, had a softening effect on the market. Linseed followed the pattern set by other seeds. The operators were optimistic about the prospects for Australian tenders for linseed oil. The brisk buying in linseed cake, too, imparted

some strength. Cottonseed, in sympathy with raw cotton market, continued to be firm.

Groundnut August 1959 contract, which had closed on a weak note at Rs. 189.00 last week, made a smart recovery subsequently to touch Rs. 193.00 on Monday. It, however, closed lower at Rs. 191.50 today. February 1960 contract, which had wound up last week at Rs. 166.50, improved to Rs. 168.37, but fell to Rs. 166.75 today. Bold ready rose by Re. 1.75 to Rs. 39.75, as also Comorandeli by Re. 1.50 to Rs. 39.75. Oil ex-mill gained 50 nP over the week to close today at Rs. 20.50, after moving in a narrow range over the week.

Cottonseed September 1959 contract, which had finished last week at Rs. 154, gave way to Rs. 153 today, after fluctuating between Rs. 153.62 and Rs. 154.37 over the week. May 1960 contract lost 25 nP to Rs. 155.50. In contrast, ready Madras advanced by 25 nP to Rs. 30.75. Ready Kanpur gathered 37 nP to Rs. 29.62. Oil B.S.S. rose by 6 nP to Rs. 16.56 and oil commercial by 12 nP to Rs. 15.62.

In the linseed section, the maturing contract was steady at Rs. 32.75. May 1960 contract picked up 6 nP to Rs. 32.81, after fluctuating both ways in a narrow groove. Bold ready improved by 25 nP to Rs. 32.75. Oil closed higher at Rs. 16.25 today, as against Rs. 16.19 last Wednesday. Cottonseed February 1960 contract which had closed last week at Rs. 113.50 steadily moved up to Rs. 114.75. Niger seed Madras went up by 50 nP to Rs. 31. Kardi seed remained unaltered at Rs. 23.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	10-8-1959	12-8-1959	6-8-1959
Groundnut			
August 1959	191.50	189.00	191.00
February 1960	166.75	166.50	164.87
Bold ready	39.75	38.00	39.25
Comorandeli ready	39.75	38.25	39.50
Khandesh quality	39.75	38.25	39.50
Oil ex-mill ready	20.50	20.00	20.37
Oil B.S.S.	20.25	19.69	20.37
Castorseed			
September 1959	153.00	154.00	152.87
May 1960	155.50	155.75	153.75
Ready Madras	30.75	30.50	30.62
Ready Kanpur	29.62	29.25	29.50
Oil B.S.S.	16.56	16.19	16.49
Oil commercial	15.62	15.50	15.75
Linseed			
September 1959	32.75	32.75	32.87
May 1960	32.81	32.75	32.25
Bold ready	32.75	32.50	32.37
Oil ready	16.25	16.19	16.12
Cotton seed			
September 1959	113.50	114.00	113.50
February 1960	114.75	113.50	112.50
Niger seed	31.00	30.50	31.00
Kardi seed	23.00	23.00	23.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ B.S.S.—All quotations for future contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt., and those for oil per quart.

BLACK PEPPER ADVANCES

(Messrs. Parekh and Co.)

BOMBAY, 19th August

Malabar black pepper saw hectic fluctuations during the week, in sympathy with Singapore where the prices improved markedly from Str.889 to Str.898 for black and from Str.150 to Str.160 for white. Ready ungarbled at Cochin rallied from Rs. 712½ to Rs. 750, with sizable purchases by exporters and dealers. Calicut improved from Rs. 750 to Rs. 750 with good turnover at progressively higher prices. Slow but steady improvement was seen in all primary markets. The approaching Onam and the return of peaceful conditions following the exit of the Communist Government in Kerala were responsible for the recent increased arrivals. This, however, seem to be a passing phase. Arrivals are likely to decrease, as the stocks in the hands of growers are said to be not heavy.

Spot in New York improved from \$0.28½ to \$0.30, with more enquiries from grinders. As the prices are steadily moving up, the grinders are likely to increase their inventories, lest they should have to pay more in the future.

Forward market at Cochin fluctuated widely, the highest being Rs. 135 for October and Rs. 129 for December. Garbled spurted from Rs. 125 to Rs. 130 under pressure of heavy buying by exporters who had to cover their previous sales. New York continued to revise their bids for Malabar almost daily at higher prices. This phenomenon appears to be a reminiscence of the former days when India had a monopoly of supply. If reports of smaller crop of Lampong, Muntok and Sarawak prove correct, a near monopoly of supply is likely to pass virtually into the hands of Malabar once again. The estimates of Lampong, Muntok and Sarawak are variously reported by the trade as under:—

Lampong 6,000 to 8,000 tons, Muntok 3,000 to 2,500 tons and Sarawak 7,000 to 8,000 tons.

The future appears to be bright, inasmuch as the world supply position of pepper during the coming months is likely to be more tight and the present stocks with the spice mills on the Continent and the grinders in the U.S.A. are reported to be sparse. The new crop position of Malabar appears uncertain, in view of early heavy rains and recent drought in the growing belt. The unfavourable rumours that future trading in pepper at New York is likely to be resumed shortly are supporting factors. The total shipment this month to East European countries, including the U.S.S.R., Western Europe, London and the U.S.A. is likely to reach a figure of more than 2,500 tons.

Ready pepper in the local market is quoted between Rs. 100 and Rs. 107 per Bengal maund according to quality.

SCHEME FOR STABILISING SUGAR PRICES

(From Our Own Correspondents)

BOMBAY, 19th August

Sugar continues to be freely available in the different parts of the city at the officially fixed price of 51 nP per lb. The comfortable supply position is due to large arrivals of sugar by rail and road. The total of these arrivals during the week under review was 11,000 bags, as against 18,900 bags last week and 16,250 bags in the week preceding it. The following are the wholesale rates (per bag) for the different grades of sugar; they are the same as those prevailing a week before:—

A grade: Rs. 115.81; B grade: Rs. 114.08; C grade: Rs. 112.02; D grade: Rs. 111.

The Government of India is reviewing the whole question of sugar production and distribution in a comprehensive manner and a "full scheme" to stabilise prices would be prepared. Disclosing this in the Rajya Sabha yesterday, Mr. A. P. Jain, Minister for Food and Agriculture, said that there was no question of setting up any permanent machinery. The Minister admitted that prices of sugar had been high of late, but assured the members that the Government was trying its best to bring down the prices. Referring to the scheme for taking over the entire sugar production in the Punjab, Uttar Pradesh and North Bihar by a system of direct allocations, he merely observed that sugar prices were likely to come down and had come down.

The Government of Bombay has warned the wholesalers receiving sugar stocks from joint-stock sugar factories that their refusal to sell sugar to hoteliers, manufacturers of sweets, etc., and other genuine retailers will be treated as hoarding for the purpose of profiteering and suitable legal action will be taken against them. In a Press note issued by it, the Government says: "According to the scheme for distribution of sugar in this State, the licensed wholesalers in the State are free to sell sugar intended for Greater Bombay and the districts and brought into the respective areas to retailers and other consumers at the agreed wholesale rates which are not more than Rs. 111 for D29 grade of Bombay State sugar and corresponding rates for other grades and as fixed by District Magistrates for extra State sugar. The Government has received complaints from hoteliers, manufacturers of sweets, biscuits, etc., that wholesalers receiving sugar stocks from joint-stock sugar factories refuse sales on the plea that sales are to be made to retail dealers only under the Government Distribution Scheme. This contention of wholesalers is not correct. They cannot refuse to sell such sugar to genuine consumers like hoteliers, etc. There are also complaints that sales are refused even to genuine retailers in some cases. The Government desires to clarify that such refusal to sell will be treated as hoarding for the purpose of profiteering and the Controller of Foodgrains Distribution in Greater Bombay and Collectors in districts will take necessary action under powers delegated to them for requisitioning or under the Licensing Order."

HAPUR, 17th August

Sugar ruled steady during the week, due to tight supply position. Further sales against tenders helped the bullish trend, as persons whose tenders were accepted made unduly huge profits. Sugar prices improved by about Rs. 2 to Rs. 3 per bag, as sales through fair-price shops was being discontinued because the free quota released sugar towards the end of June was reported to have been exhausted. Sugar in retail was quoted at Rs. 1.09 per seer, as against the controlled price of 97 nP.

Sugar at Muzaffarnagar was steady. Owing to restrictions imposed on inter-State movement of the commodity, business put through was restricted. As the free quota releases had been exhausted, quotations for mill-delivery sugar were not available. Local stocks were fast dwindling and spot prices improved by Rs. 2 to Rs. 120 per bag.

Sugar was also steady in the Kanpur market, with short supplies in the market with good festival demand.

Khandasari sought higher levels in line with crystal sugar owing to the increase in festival demand for boora. The prevailing prices were: khandasari Rs. 36 to Rs. 41; boora Rs. 38 to Rs. 43 a maund.

Ready gur continued to rule quietly steady. Despatches during the week were small due to rains, but stocks were gradually declining and were now put at about 22,000 maunds only. Recent rains have proved very beneficial to the standing cane crops and crushing for new season is likely to begin in early October. The prevailing prices at the week-end were: gur punsara Rs. 19.75 to Rs. 21.50; shakker Rs. 22 a maund.

Ready gur improved fractionally at Muzaffarnagar during the week, due to good demand from Madhya Pradesh and Gujarat. Local gur and shakker stock was put at 55,000 maunds, as against 10,000 maunds in the corresponding period last year. Prevailing prices were: gur chaku Rs. 24.75; shakker dala Rs. 21 to Rs. 23; khandasari Rs. 34 to Rs. 41 a maund.

Gur faqun moved both ways during the week in speculative bouts of buying and selling. It opened at Rs. 13.60 last Monday and touching the highest and lowest in mid-session at Rs. 13.89 and Rs. 13.57, respectively. It was quoted today at Rs. 13.80.

TEA IRREGULAR

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 13th August

A total quantity of 650,000 lbs. were offered in Sale No. 31, which was held on 11th August 1959. The quality of some medium teas offered in this sale showed a slight improvement. The market was rather irregular. Low medium and medium broken

met with only fair enquiry and were easier, whilst similar fannings were well supported and sold at dearer rates with keen competition for clean black types suitable for the Middle East. A limited selection of better liquoring high grown sold well at steady rates. Against a strong demand Orange Pekoe grades were dearer. However, Flowery Pekoe and Pekoe grades met with poor support and were easier. The following are the quotations:

	1959	1958
Low medium	1.58 to 1.63	1.55 to 1.65
Medium	1.70 to 1.80	1.70 to 1.80
Good medium	2.00 to 2.15	1.90 to 2.05
Quality	2.10 to 2.45	2.25 to 3.40

London Market:—Sale of 10th August 1959:— Strong demand quality Assams and bright liquoring Doors. Plain sorts weaker.

Sale of 11th August 1959:— Top and bottom firm to dealer. Others irregular and easier.

Colombo Market:—Sale of 10th August 1959:— Limited selection. Best quality Dimbulas Dickoyas U.V.As strong demand. Substantially dearer. Improved quality dealer. Other highgrown distinctly lower, unless colour small leaf lowgrown five to eight cents lower. Leafy Gulf types five cents dearer.

Sale of 11th August 1959:— All dusts active demand about 20 to 30 cents dearer. Bright liquoring fannings broken mixed firm. Stalky kinds lower.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"Sale 32:—900,000 lbs. Good demand. Low medium and medium irregularly 10 nP lower, but better liquoring prices have advanced following quality. All black leaf fannings fully firm to dealer."

GOOD DEMAND FOR EXPORT TEAS

(From Our Own Correspondent)

CALCUTTA, 18th August

Good general demand was maintained throughout yesterday's export sale, while prices during last week's sale for domestic consumption eased.

Meanwhile, the proposal to increase wages of tea garden workers in West Bengal, who threatened to go on strike, has caused some concern in the market. For tea prices only allow a low profit margin, and gardens that produce good support teas invariably suffer losses. If cost of production was further increased, the tea industry's difficulties would only increase further.

Further shipments of tea took place during this week, and shipping companies received a larger number of enquiries for tea bookings. In fact, tea bookings to the United Kingdom prevented a fall in freight market.

During last week's sale for internal consumption, dusts on offer amounted to 21,756 chests. Despite good demand, prices declined. Darjeelings were an exception to the general trend, and prices for the same were firm and sometimes dearer. Leg-cut Doors were a weak feature and orthodox teas lost by 10 nP. Medium C.T.C.s lost by 10 to 15 nP. However, the exportable types recorded a higher trend, and there was good support to the very best C.T.C.s. The quotations exclusive of excise duty were: best Assam C.T.C. Rs. 2.00 to 3.00, medium Assam C.T.C. Rs. 2.05 to 2.20, medium Doors Rs. 1.84 to 1.88, and medium Assam Re. 1.80 to 1.88.

Leaf on offer amounting to 643 chests was in good demand.

Offerings during yesterday's export sales amounted to 58,615 chests which met with good general demand. Good quality teas were shown preference by buyers. A firmer trend was in evidence in plain broken, while fannings of the same category recorded a small addition in prices. However, medium broken and fannings lost by 6 nP. There was good support for tipple teas. Although whole leaf grades received good support, prices were not any better. Darjeelings received little attention followed by withdrawals. Leg-cut teas eased, albeit the good demand. Medium C.T.C.s fell 10 to 20 nP, and in an irregular trend the best C.T.C.s gave way by 50 nP at one time. The brighter orthodox Assams and medium B.O.P.s also eased. The quotations exclusive of excise duty were: best Assam C.T.C. fannings Rs. 3.70 to 4.20, best Assam C.T.C. B.P. Rs. 3.00 to 3.40, medium fannings Rs. 2.04 to 2.14, clean black pekoe Re. 1.98, medium B.P. Re. 1.92 to 2.00, plain fannings Re. 1.94 to 2.04, and plain B.P. Re. 1.80 to 1.84.

Export quota was offered at 24 nP, but buyers were prepared to pay only 24 nP. There was no business done.

SPURT IN SACKING

(From Our Own Correspondent)

CALCUTTA, 18th August

The feature of the trading in the jute markets during the week under review was the sharp rise in prices of B. twills and raw jute, following substantial business in both with China. Purchases of hessian by North America were negligible, while those made by the United Kingdom and the Argentine were not of such an extent as to have an impress on the market. Apart from Chinese interest, other countries only accounted for small purchases. Mills also bought fair quantities of the fibre.

The Indian Jute Mills Association's recommendation to member mills to unseal 2½ per cent. of the looms as from 24th August to 2nd January 1960 was received with satisfaction in the market. It will be remembered that as from 22nd June, 14 per cent. of the looms were unsealed, and an analysis of July production showed that most of the increased production was in sacking. The 2½ per cent. of the looms, which would be unsealed as from 24th August, would be concentrated on sacking goods and would increase production by 2,500 tons. Market circles thought that mills were

following a guarded policy of increasing production by stages in order to prevent speculation from getting the upper hand. Evidently, the effect of the present move would be studied by mills at the end of September and if, despite the increased production, stocks of heavy goods continued to decline, a further increase in production would naturally be attempted.

On Tuesday last, China bought a fresh quantity of 20,000 bales of B. twills, thus bringing the total purchases by China so far this year to 100,000 bales. This has impressed the market in a remarkable way, as this has been far higher than the figure for the comparative previous periods. Ready B. twills jumped to Rs. 105 from Rs. 101.60 and the higher trend was maintained throughout the day, despite the announcement of mills' decision to unseal 2½ per cent. of the total loomage. Hessian 40" 10 oz. at Rs. 40.40 was higher only fractionally. The announcement of reduction by £5 per ton in prices of some jute yarns in Dundee, following lower prices in Pakistan was noted here. On Tuesday last, production details for July were also available. Output at 89,633 tons was higher by 6,949 tons. The increase was attributed to more working hours in the month. Also, July was the first full month when 14 per cent. of the looms unsealed towards the end of June was in production throughout the month. It was noted that, despite increased production, stocks at the end of July declined by 2,600 tons. Stocks at the end of June being 95,400 tons, the total availability of goods amounted to 185,000 tons. Stocks at the end of July were 92,800 tons. Thus, demand in July was in the order of 92,233 tons which was far higher than the increased production. Such a reading of the situation encouraged the hands of stockists, and this was a factor which contributed to Tuesday's spurt in prices. On Wednesday, B. twills scored a further gain to Rs. 106.40. There was profit-taking at the higher level, and covering business was done against ready and near delivery goods. Activity in futures was keen. Hessian 40" 10 oz. was unchanged at Rs. 40.40. On Thursday, B. twills at Rs. 107.50 registered a further impressive gain following stronger advices from the futures market. In sympathy, hessian 40" 10 oz. rose to Rs. 40.90. On Friday, B. twills were raised to as high a rate as Rs. 109.50. Profit-taking failed to reduce the overall gain. Hessian 40" 10 oz. scoring to Rs. 41.50 put on a better appearance. The market was closed on Saturday being Independence Day. Yesterday, prices sagged on account of heavy unloading. Earlier in the day, fully buoyant conditions prevailed. Ready B. twills closed lower for the week at Rs. 107.75 and hessian 40" 10 oz. at Rs. 40.80.

The feature in the fibre market was the business done by the State Trading Corporation with China. China bought about 25,000 bales, and fresh Chinese interest was anticipated. Mills also bought fair quantities, and prices for most varieties improved by 25 nP to Re. 1.25 per maund. Meanwhile, trade circles noted figures of fibre shipments from the time the export ban was removed in March last. So far, a quantity of 56,700 bales of the last season's crop has been exported. It was noted that this quantity was an insignificant percentage of the total 1958-59 crop. A feature of the business done by the S.T.C. was that, of the 56,700 bales, just over half was taken by Communist countries, whose interest in the current season, it was anticipated, would be more substantial. From Rs. 24.25, new disasse bottoms improved to Rs. 24.75 and at Rs. 23.75 new northern bottoms added Re. 1.25. The latest quotations of the new crop for ready and/or near delivery are as follows:

	Middles	Bottoms	Delivery
	Rs.	Rs.	Rs.
Indian:			
Assam Lower and			
Upper	25.75	24.25	Aug-Sep.
Northern	25.25	24.25	"
Desai	25.25	22.75	"
Cuttack	29.00	26.00	"
Murshidabad	24.50	22.00	"
Bihar	24.25	21.75	Sep-Oct.
Bimil f.a.q.	Rs. 21.50		Oct-Nov.
Pucca bales 1st mark	Rs. 17.50	per bale	ready.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 17th August

The foodgrains market ruled quiet to depressed during the week, thanks to fairly good rains and improved kharif crop prospects. Barring wheat, the arrivals of which continued to be sparse and prices stayed steady, other grains and pulses eased fractionally. Wheat held quietly steady around Rs. 18.25 per maund for average quality and upto Rs. 19.50 for farm produce. Arrivals in the open market were meagre, partly due to rains but mostly due to fears that half of the quantity brought to the market would be purchased by the Government at the controlled prices of Rs. 13 to Rs. 15 a maund. Sales through fair-price shops were being continued and supplies to consumers were available from private sources where arrivals were at an average of 100 maunds daily.

Rice ruled quiet. Supplies were better than last week. Recent rains have improved paddy crop prospects and large-scale sowings of muni crops have also been completed. The week-end prices here were: rice basmati sela Rs. 33 to Rs. 36; mainpuri Rs. 25; ramajayan Rs. 25.50; gadda Rs. 23 a maund.

Easy trend in gram prices continued on lower advices from Punjab. The U.P. Government purchased 11,000 maunds of gram here at the controlled price of Rs. 12.50 a maund. Barley and behar continued to be quiet in small turnover. New maize arrivals were delayed due to continued rains, but prices

MARKET GOSSIP

(Concluded from page 287)

commonly understood, would be honoured in fact, the free world countries themselves have of late shown more readiness to enter into trade agreements with communist countries. The five-year bilateral trade agreement concluded between the U.K. and the U.S.S.R. recently, the Japan-Soviet Union trade pact of last December, the increasing interest currently shown by Japan in trade with that country and the reassuring statements made by the U.S. Vice-President, Mr. Nixon, on U.S.-Russian trade are all indications of this welcome development.

The trend and pattern of foreign trade of Russia are, therefore, of more than academic interest to the world outside. But one thing that should be borne in mind is that Soviet Russia is one of the few countries having a minimum dependence on international trade. The factory endowments of that country are such as are capable of producing virtually all essential commodities. And the share of international trade in its national income is so small (hardly more than three per cent.) as to render relatively unimportant the principles on which it plans and conducts its foreign trade. The annual per capita foreign trade turnover of the Soviet Union in 1958, for instance, was \$42, as against \$175 in the U.S. and \$213 in Czechoslovakia.

While this has been the position so far, the future pattern may well be different. It is now fairly common knowledge that Soviet Russia wants to import certain types of capital goods for increasing its production of modern consumer goods, especially those based on chemicals, and consumer durables which it badly needs for raising the standard of living of its people to a level comparable with that of the U.S. and the U.K. At the same time, it also wants to export some other types of capital goods, raw materials and fuel in which it is believed to have a considerable surplus. It is thus obvious that Russia will have to play greater attention to its foreign trade than hitherto.

In 1958, the rate of expansion of foreign trade in all the centrally planned economies, excepting mainland China, slackened. The rise in trade was only five per cent., as compared with 14 per cent. in 1957. The fall in the rate of expansion was due primarily to the sharp deterioration in the trade of the Soviet Union and Eastern Germany which account, between them, for more than half of the trade of centrally planned economies. Soviet Russia's trade in 1958 recorded a rise of only 3.9 per cent., as compared with the overall rise of five per cent. for the whole of the centrally planned economies. In actual figures, Soviet trade in 1958 aggregated 34,600 million roubles, made up of exports 17,200 million roubles (as compared with 17,500 million roubles in 1957) and imports 17,400 million roubles (as against 15,800 million roubles in 1957). The surplus of 1,700 million roubles in visible trade in 1957 was turned into a deficit of 200 million roubles in the following year.

The decline in the rate of expansion reflected the fact that the steep increase in trade in 1957 was due, to a considerable extent, to the high level of exports associated with the expansion of credits granted to several countries of the Iron Curtain. A significant part of the sharp advance was also occasioned by the expansion of trade with the rest of the world.

Soviet Russia's trade with other communist countries in 1958 naturally increased at a higher rate than the trade with the countries of the free world. Thus, while the former was 4 per cent. higher at 25,500 million roubles (as against 24,500 million roubles) the latter showed a rise of only 3.7 per cent. from 8,800 million to 9,100 million roubles. A noteworthy feature of Russia's foreign trade last year was the marked rise in its purchases from and sales to South America and South-East Asia. Trade with Uruguay was higher by 65.7 per cent., with India by 43 per cent., with Indonesia by 53.5 per cent., with Malaya by 138 per cent. and with Japan by 122 per cent.

The share of capital goods and equipment, products of extractive industries and agricultural commodities in total exports and their relative rate of expansion are perhaps a reflection of the structure and output of the Soviet economy. Machinery and equipment increased their share in total exports from 14.9 per cent. in 1957 to 18.5 per cent. in 1958 and metals from 14.9 per cent. to 16.4 per cent., though exports of wheat fell from 12.9 per cent. in 1957 to 8.3 per cent. in 1958. Shipments of complete plants accounted for as much as 40 per cent. of the exports of machinery and equipment. Exports of coal and anthracite increased from 8.8 million tons in 1957 to 9.9 million tons in 1958, of crude oil from 5.9 million tons to 9.1 million tons and petroleum products from 7.8 to 9 million tons.

Imports of capital goods and equipment by the Soviet Union in the post-war years reflected partly short-term substitution of domestic investment and partly considerations of economic advantage. Last year, imports of these goods were distinctly higher by 13 per cent. at 4,300 million roubles, easily the biggest import group, representing 24.5 per cent. of total imports. If past experience is any guide, the rise in imports of capital goods is an indication of increasing substitution of investment by imports or of the relative cheapness of the imported goods or of both.

The obvious conclusion that emerges from the foregoing analysis is that the Soviet economy is beginning to respond in increasing measure to the economic forces underlying international trade. The Soviet Union's export of capital goods to underdeveloped countries and its own reliance on some Western nations for certain types of producer goods, which it either cannot produce at all or produce as cheaply, are perhaps an illustration of the operation of the principle of comparative costs in its foreign trade. It must, however, be noted that in its exports of capital goods to underdeveloped countries, there is a certain element of subsidy and political consideration.

SHARE MARKET EASY

ALL-ROUND FALL IN PRICES

(From Our Own Correspondents)

BOMBAY, 25th August

THIS week's review of the Stock Exchange covers only four working sessions, as the market was closed on Wednesday and Thursday on account of *Gokulashtami*. During this brief period, there was a fall in the prices of most counters. Reports from New Delhi that the Union Government was actively considering the question of splitting the bilingual Bombay State led to some selling pressure. The real reason for the easier trend of the market was the lack of fresh buying support, notwithstanding comfortable money supply position and declining yields on gilt-edged securities. The sentiment of operators was also affected by the persistently rising trend of production costs in industries. In particular, textiles were depressed on fears of reduced profits, due to payment of heavy dearness allowance to workers and firmness of raw cotton prices. Steels lacked support, as operators preferred to await the assessment of the outlook for steel industry by the Chairman of the Tata Iron and Steel Company, Ltd., at the Company's ensuing annual general meeting to be held on Wednesday, 2nd September. The Calcutta report that the Indian Iron and Steel Company might issue right shares earlier than anticipated and vague talks about enhancement of retention prices for steel did not have any sustained effect, as the Calcutta share market itself encountered profit-taking on Tuesday. Engineering, cement, sugar and other shares, too, came in for profit-taking and drifted lower. The undertone of the market was distinctly easy.

Tata Steel Ordinaries moved down from Rs. 179 last week-end to Rs. 176 on Monday. At this level, there was some bear-covering and the quotation recovered to Rs. 177.75. But, on Tuesday, they fell again to Rs. 176.25 before finishing at Rs. 176.50. The net loss over the week was Rs. 2.50. Indian Irons opened at Rs. 25.35, against Rs. 25.30, and receded to Rs. 25.10. After rising to Rs. 25.45, they wound up the week lower at Rs. 25.20.

In the textile section, Svadeshis fell by Rs. 9.25 to Rs. 246.50. Centurys climbed down from Rs. 562 to Rs. 553 on Saturday, but recovered to Rs. 561 on Monday on rumours that the Company would obtain official sanction for the issue of new shares at par either on the proposed basis or at two shares for five held. On Tuesday, however, they came in for selling again and dropped to Rs. 554 before closing at Rs. 556. Khataus suffered a loss of Rs. 6.25 over the week, the closing rate being Rs. 236.25. Simplex, Standards, Podars, Morarjees and Swans declined by Rs. 5 each to Rs. 159, Rs. 568, Rs. 277.50 and Rs. 400, respectively. After a wide erratic fluctuation, Kohinoors shed Rs. 3.50 to Rs. 317. Central Indias eased by Rs. 3 to Rs. 107. Both Gokaks and Shree-nivas lost a like amount; the former were done at Rs. 164 and the latter at Rs. 189.50. Bombay Dyeings were subjected to tired long liquidation and retreated from Rs. 65.80 to Rs. 63.70, as its interim dividend was not encouraging. Tatas shed Rs. 1.50 to Rs. 46, Vishnus Rs. 1.25 to Rs. 110 and Finlays Rs. 1 to Rs. 284.

Activity in the banking and insurance sections was at a low ebb, with values moving narrowly. Among banks, United Commercials receded by 50 nP to Rs. 61.50 and Punjab Nationals by 12 nP to Rs. 22. Barodas were quiet at Rs. 102.50 as also India at Rs. 115 and Jalpurs at Rs. 39.50. Central Banks were quoted at Rs. 50 ex-div., against Rs. 51 cum-div. last week. In the insurance group, New Indias dropped 50 nP to Rs. 60.20, British Indias declined by 28 nP to Rs. 14.24. Jupiters lost 16 nP to Rs. 5.64.

Cement shares also were quiet. Digvijays retreated from Rs. 149 to Rs. 145.50. Associated Cements declined from Rs. 146.50 to Rs. 143 on Saturday, owing to large offerings by a big investor. Subsequently, however, they recovered and touched Rs. 146, only to finish at Rs. 144.75. Jaipur Udyogs and Ashokas lost 16 nP each to Rs. 10.84 and Rs. 8.84, respectively. Orissa Cements, however, picked up 4 nP to Rs. 16.96, following the announcement of a dividend of Re. 1.50 per share on the increased capital.

Sugar shares encountered liquidation and suffered a modest setback. Walchandnagars lost Rs. 7.50 to Rs. 323.75. Belapurs receded from Rs. 320 last week to Rs. 314. Towards the close, they were better by a rupee, but the net loss over the week was Rs. 5. Phaltans fell from Rs. 169.50 to Rs. 164.50. Changdeos were dull at Rs. 27.50. Bhopals, however, gained 28 nP to Rs. 24.

In the engineering group, Premier Constructions were subjected to heavy selling and came down from Rs. 366 to Rs. 348. Tata Locomotives fell by Rs. 9 to Rs. 204.50. Alcocks eased by Re. 1.50 to Rs. 252.50. Larsen and Toubros shed 20 nP to Rs. 22.80. Structural Engineerings fell by Rs. 7 to Rs. 255.50. Mahindras were done at Rs. 21.56, against Rs. 21.52. Among mining shares, Shivrajputs were marked down by Rs. 3.50 to Rs. 88.50. Indian Coppers receded by Rs. 2.50 to Rs. 157.50.

Shipping shares changed hands at lower levels. Scindias declining by 20 nP to Rs. 17.72 and Great Easterns by 8 nP to Rs. 21.36. Automobile shares also drifted downwards; Premier Automobiles dropped Rs. 5.25 to Rs. 132.50. Hindustan Motors shed 20 nP to Rs. 12.24.

Several scrips in the miscellaneous section suffered a setback. Bombay Burmahs moved down

in the course of the week from Rs. 544 to Rs. 528.50. National Rayons declined by Rs. 9.25 to Rs. 350.75 and Gwalior Rayons by 76 nP to Rs. 23.36. Wincos receded by Rs. 8.50 to Rs. 217. Indian Dyestuffs eased by Rs. 11.25 to Rs. 242.75. Greaves Cottons by Rs. 7 to Rs. 143. Alembic Chemicals by Rs. 4.50 to Rs. 190.50. Voltas by Rs. 3.50 to Rs. 172. West Coast Papers by Re. 1.75 to Rs. 150.50. Coat Tyres by Re. 1.50 to Rs. 171 and Polychems by Re. 1 to Rs. 131. In contrast to the general trend, Killick Industries evoked excellent buying support; the new shares forged ahead from Rs. 76 to Rs. 109.50 and old shares by Rs. 5.75 to Rs. 145. Kemp and Cos were also well favoured, the quotation advancing by Rs. 11.25 to Rs. 241.25.

Madras Stock Exchange

MADRAS, 25th August

For the second week in succession the Madras Stock Exchange ruled fully steady, several scrips continuing to move up. Buying support was generally well sustained. The sentiment of operators was influenced favourably by the statement of Mr. Morarji Desai, Union Finance Minister, at the annual conference of the United Planters Association of Southern India (U.P.A.S.I.) at Coonoor yesterday, that the Government would not impose "harassing taxation" on industries, without taking into consideration their capacity to pay. Tea shares, particularly those of companies producing high-grown teas, elicited enlarged buying enquiries, induced by good export demand. Coffees moved ahead on reports of higher prices fetched at auction centres. Rubbers, too, were well supported, thanks to reports of lower rubber stocks, following the increasing trend of domestic consumption. Textiles ruled strong, due to renewed reports regarding good offtake of yarn and piecegoods. Sugars and miscellaneous industrials, particularly cements and chemicals, firmed up on investment buying. Banking shares recorded further gains during the week on hopes of higher profits in the current half-year, following the move of banks to control interest rates on deposits.

Among banking shares, Bank of Mysore were in the limelight, the quotation climbing up by Rs. 24 to Rs. 330. Indian Overseas spurred by Rs. 6.50 to Rs. 176. Travancore advanced by 88 nP to Rs. 25.75. Indias were firm at Rs. 187. Punjab Nationals, however, eased by 30 nP to Rs. 22.20.

A feature of trading in the sugar section was the marked improvement of Rs. 16 registered by Kirlampudis which stood at Rs. 86 today. Cauverys strengthened by Rs. 2.50 to Rs. 117. Indias advanced by 55 nP to Rs. 13.10. E.L.D.s gained 40 nP to Rs. 39.65. Decans gathered 15 nP to Rs. 12.25 and Travancores 13 nP to Rs. 12.50. Mysore were fully maintained at the last week's level of Rs. 49.50.

Among tea shares, Nilgiris rose by 10 nP to Rs. 8.10. Periakaramais and Oucherlonys picked up 5 nP each to Rs. 4.06 and Rs. 5.50, respectively. Nelliampallis gathered 4 nP to Rs. 2.83. Hailey-burias were steady at Rs. 20.40 and Kil Kotagiris at Rs. 8.40. United Nilgiris were unaltered at Rs. 20.90. The directors of the Company have declared a final dividend of 12 per cent., making a total of 19½ per cent. for the year ended March 1959, as against 16 per cent. in the previous year. Among coffees, Coffee Lands put on 40 nP to Rs. 24.15. Wartyhullis improved by 18 nP to Rs. 4.03 and Ossoors by 10 nP to Rs. 4.00, following the announcement of dividend of these two companies—enlisted in the cash section of these two companies—exchange three months back—each at 15 per cent. for the year ended March 1959. Anaparaais gained 7 nP to Rs. 5.22. Among rubbers, Rajagiris advanced by 40 nP to Rs. 18.10. Highlands increased by 15 nP to Rs. 12.45. Vaikundams were firm at Rs. 27.50, Malankaras at Rs. 19.50 and Teekays at Rs. 7.50.

In the textile section, Buckingham's met with good support and recorded a rise of Rs. 2 to Rs. 189. Rajalakshmis rallied Re. 1.25 to Rs. 62.75. Bangalore Woollens were enquired at Rs. 180.25. Cannanores at Rs. 139. Coimbatore Cottons at Rs. 142 and Coimbatore Pioneers at Rs. 280. Today's closing rates for a few other scrips were the same as those prevailing a week ago; the rates are: Dhanalakshmis Rs. 197.50, Radhakrishnas Rs. 112, Trichinopolys Rs. 11, Vasantas Rs. 211, Venkatesas Rs. 121, Virudhunagars Rs. 39.50.

The star feature in the miscellaneous section was provided by Western India Plywoods which jumped up by Rs. 15 to Rs. 195. Textools spurred by Rs. 2.50 to Rs. 132. Rallis hardened by 50 nP to Rs. 77. Mysore Papers improved by 32 nP to Rs. 22.62. Cement shares attracted good attention of operators, Dalmias strengthening by 45 nP to Rs. 11. Orissas by 30 nP to Rs. 17. Andhra Cements by 27 nP to Rs. 9.62, and Travancore Cements by 10 nP to Rs. 10. Spencers gained 25 nP to Rs. 20.50. Indian Steel Rollings rose by 15 nP to Rs. 13.75. F.A.C.T.s and Mettur Chemicals improved by 10 nP each to Rs. 9.45 and Rs. 13.45, respectively.

A sum of DM.96 million has so far been drawn from the West German loan of DM.168 million. Further sums will be drawn in coming weeks. This information was given last week by the Deputy Minister of Finance, Mr. B. R. Bhagat, in reply to a question in the Lok Sabha on the utilisation of the West German loan. Mr. Bhagat added that the object of the loan was to enable the Government of India to obtain funds for meeting the payments due on imports from West Germany. The actual imports from West Germany after the relevant date had been, in fact, more than the total value of the loan.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend o transactions on the Bombay Stock Exchange during the week ended 25th August 1959.

NEWS IN BRIEF

THE Industrial Finance Corporation of India will henceforth grant loans to hotels run as public limited companies or co-operatives.

Two study teams to observe the working of co-operatives in Israel and Yugoslavia are proposed to be sent by the Government of India shortly.

The Deputy Minister for Commerce and Industry, Mr. Satish Chandra, stated in the Lok Sabha that Messrs. Birla Brothers were studying the possibility of securing collaboration from a U.S. firm to set up a fertiliser factory.

The Central Glass and Ceramic Research Institute has developed a new process for manufacturing optical glass.

WHITHER RUPEE?

A LITTLE over two years ago—on 15th August 1957—we observed in the course of an editorial that the supreme task of the hour was to defend the rupee, for, if our currency fell, the whole nation would go down with it. This statement holds good today, with greater urgency and significance than it did then, for, since then, the price level has gone up considerably and the competitive capacity of Indian goods in overseas markets has fallen further. The force of this contention has been acknowledged by no less a person than Mr. H. V. R. Iengar, Governor of the Reserve Bank of India and President of the Indian Institute of Bankers. Addressing the Institute's annual general meeting in Bombay on Thursday the 20th inst., Mr. Iengar declared that the internal value of the currency had declined by about 29 per cent. since independence; between 1951-52 and 1958-59, monetary demand (that is, the combined expansion in the rate of growth of both money supply and income velocity of money) has gone up by 32.8 per cent., while national income (at constant prices) has risen by just 26.2 per cent. It is true that the purchasing power of currency has also fallen in several other countries also—the decline being 69 per cent. in France, 46 per cent. in Britain and 19 per cent. in the U.S.—but Mr. Iengar did concede that such comparisons, though they may serve to show that India "has come off pretty well in the international setting" would be misleading, as "it is necessary always to keep in mind that the physical distress to people on the margin of subsistence can be far greater than the measure indicated by a moderate rise in statistical averages."

Mr. Iengar did well to warn that "the pressure of money supply on available goods and services has reached proportions which we cannot ignore" and that "we cannot afford to allow the real worth of the rupee to go down further." Any failure to take effective steps to maintain the stability of the rupee now is beset with dangerous consequences, what with the huge development outlay—as much as Rs. 10,000 crores—contemplated for the third Five-year Plan. The task involved is, indeed, colossal and it cannot be discharged successfully without a concerted and co-ordinated approach. Mr. Iengar certainly put the whole issue in its correct perspective when he observed:

"The task of maintaining the stability of our currency is beyond the sole competence of the Reserve Bank. Monetary controls by themselves can for a time mitigate the effect of inflationary forces in the economy, but they cannot afford a lasting solution. For this purpose, fiscal and monetary policy must be integrated—fiscal policy including, of course, a policy with regard to deficit financing; in other words, both Governments, Central as well as State, and the Reserve Bank have to adopt co-ordinated measures. The essence of the solution lies in increased production both in agriculture and industry. On Government lies the responsibility for assessing and reassessing, from time to time, every aspect of policy and administration on the criterion of whether it stimulates the maximum increase of production. On employers and labour lies an equal responsibility; for, if, for whatever reason, production is not increased, the country is bound to suffer."

Although nearly eight and a half years have elapsed since planned economic development was initiated, the progress actually achieved has not been satisfactory. During the period 1951-52 to 1958-59, the average rate of increase in per capita income in this period was no more than 2½ per cent. per annum (the rise in the gross national income was 4 per cent.), which compares unfavourably with that noted in some other countries in the period 1950 to 1956—the percentage rise being 7.8 in Japan, 5.4 in Italy and 3.7 in France—and even with Brazil which reported an average of 3.2 per cent. But far more significant than these international comparisons is, as Mr. Iengar said, the fact that the current rate of progress in India has made inadequate impact on the unemployment situation. The number of persons remaining unemployed at the beginning of 1961 is expected to be of the order of 7 million. This number, together with the 14 million new entrants to the labour market in the third Plan period, will bring the total em-

which is nearly equal to three times the population of Sweden in 1958. Considering the magnitude of the problem, the opportunities for employment to be provided in the third Plan will naturally have to be on a substantially larger scale than in the second Plan which is possible only if the investment in the economy is sufficiently heavy. Mr. Iengar pertinently remarked:

"How to mobilise the necessary resources for such increased investment is the basic problem before the country. A fundamental question in any developing economy is the degree to which stability is maintained during the development process. This question is of importance in all countries, even the most advanced, but is of special importance in an underdeveloped country like ours where price increases may affect the living standards of people already leading a marginal or submarginal existence. The question of prices is thus a highly sensitive one."

While admitting that banks in India had continued to render good service to the community, Mr. Iengar pointed out that it was "only on traditional lines." There is justification for his statement that the time has come when the banks should address themselves more actively to a reorientation of their policy with a view to rendering greater service to industry without detracting from the soundness of their lending. In particular, Mr. Iengar urged a more vigorous drive on the part of banks to meet some part of the growing medium-term credit requirements of industries, especially the medium-scale and small-sized enterprises. While the suggestion is quite a valuable one, it must be stressed that the ability of banks to expand their lending activities will depend, to a considerable extent, on the freedom and encouragement given to them by the authorities and on the creation of conditions under which the industries and trade in the private sector are able to expand. The fact that the Re-finance Corporation has made negligible progress though well over a year has passed suggests that, at present, the scope for banks to branch into the new line of business suggested by Mr. Iengar is not that large as is imagined. Conditions, however, may well change for the better in the coming years and the banks should keep themselves in readiness to take the tide when it comes.

CO-OPERATIVE FARMING

There has of late been some indications of the Congress Government's soft-pedalling on the issue of co-operative farming. While the Nagpur resolution of the Congress on agriculture breathed passionate faith in the immediate feasibility and urgency of co-operative farming as a panacea for all the ills of the countryside, the spate of criticism which the proposal has encountered seems to have induced some rethinking in official circles at least in respect of the practical problems of implementing the programme of co-operative farming. It is significant that, in reply to a question in Parliament, Mr. B. S. Murthy, Deputy Minister for Community Development and Co-operation, recently stated that the programme is to be spread over a period of years. He disclosed that a working group had been set up to help formulate an action programme based on available experience. This programme would be finalised in consultation with the State Governments, which would be the principal authority for executing the policy and programmes on co-operative farming.

Co-operative farming has not been practised in this country on any considerable scale to yield data to serve as guide to policy. But available evidence, however, goes to prove that many of the co-operative farming societies are spurious enterprises, formed with a view to circumventing the law on ceilings or with the objective of gaining certain financial benefits open to co-operatives. In any case, a study of the available experience in India and abroad should have preceded the taking of the decision on co-operative farming as was done at Nagpur.

Quite apart from the lack of logic in this habit of putting the cart before the horse, there is the more pertinent reason that to dig out some stray evidence from the results of past experiments is no way of justifying the decision on co-operative farming or demonstrating that it commands popular support. The Congress Party should make co-operative farming and ceiling on land its central election issues and seek a mandate for a land reforms policy clearly laid down in all its details. It is idle to claim that co-operative farming figured in the past election manifestos of the Party. The exact scope and implications of its land reforms policy have never been spelled out in detail in any past election manifesto. It was only at its last session at ... that the Congress ...

adumbrated its land policy in relation to ceiling and co-operative farming. It is now trying to make it a fait accompli before the next elections.

Mr. N. G. Ranga, Chairman of the Swatantra Party, was, therefore, right in maintaining in his reply to the Congress General Secretary's letter asking him to resign his seat in the Lok Sabha, that the Nagpur resolution was a new lead by the Congress independently of the Party's election manifestos. Quoting chapter and verse from the Congress election manifestos, he maintained that this was the first time the issue of co-operative farming was thrown prominently before the people. The 1945 manifesto of the Congress Party, Mr. Ranga pointed out, referred to the necessity for "some system of co-operative farming suited to Indian conditions," while the 1951 manifesto made bold to say that "the line of advance should be co-operative farming, with the object of making the whole or a substantial part of a village a unit of co-operative management." By 1957, according to Mr. Ranga, the Congress came to speak in more moderate terms and contented itself with the statement that "it is desirable to encourage intensified methods of cultivation on a co-operative basis." It was indefensible, therefore, according to Mr. Ranga, for the Congress, or Mr. Nehru, to claim justification for the Nagpur resolution on the basis of the 1957 manifesto which superseded the earlier manifestos.

Such hair-splitting by the Congress Party over a basic issue is, in a sense, futile. Whether co-operative farming has been mentioned in election manifesto or not is not the point. The question is whether such a basic and controversial "reform" could be pushed through without getting a clear verdict of the voters specifically on it.

WAGE RISE FOR W. BENGAL TEA LABOUR

By a stroke of the pen, the West Bengal Government has substantially stepped up the wage bill of the Dooars and Terai tea gardens, to the extent of as much as Rs. 12 lakhs per annum, with effect from 1st June 1959. Thus, the minimum daily wages of nearly 200,000 workers employed in these gardens have been enhanced by As. 2 irrespective of the categories to which they belong. The revised wages are as follows:

	Gardens of 500 acres and above		Below 500 acres	
	Rs.	a. p.	Rs.	a. p.
Male	1	13 6	1	13 0
Female	1	11 6	1	11 0
Child	1	1 0	1	1 0

As regards the Darjeeling tea gardens, the Government says that it will announce the revision only in the first week of October next, that is, after the Minimum Wages Committee submits its report.

The anxiety of the authorities in West Bengal to better the lot of tea garden workers, which stems partly from political considerations, is understandable. Even so, one wonders whether the time chosen for an upward revision in wages is quite opportune. As it is, the tea companies of Dooars and Terai are suffering from the impact of high cost of production, thanks to heavy taxation and various obligations under the Plantation Labour Act, while prices actually fetched are rather unremunerative. It is common knowledge that Dooars and Terai produce mainly common teas which are meeting with stiff competition in world markets from similar teas sold by the low-cost countries such as Ceylon and Africa. The increase in wages is opposed by the owners of tea gardens on the following grounds:

1. The cost of living of plantation workers in Dooars and Terai has actually fallen since the minimum wage was first fixed in 1951 and, despite this, the As. 3 additional wage has been continued since 1st January 1955.

2. The industry is not in a position financially to stand the rise. About 47 per cent. of the Dooars gardens and 77 per cent. of the Terai gardens in 1957 and about 30 per cent. of the Dooars and 50 per cent. of the Terai gardens in 1958 sustained losses. The prices for Dooars tea since the beginning of the 1959 season have been 29 n.p. lb. below last year's figure. If the wages were increased now and the present price trend continued, incur losses in the 1959 season.

3. Hitherto, the industry had generally avoided taking serious measures for retrenching workers and, despite statements to the contrary, the most recent Government statistics obtained by inquiry workers show that the ratio of dependents to workers is no higher than it was previously.

Viewed thus, there is certainly no exaggeration whatever in the statement of Mr. B. P. Bajoria, President of the Tea Association of ... latest addition to the wages.

especially at a time when there is urgent need for financial relief to the industry, will add to the difficulties of the industry and many a tea garden will have to close down. Mr. H. B. Kanoi, Chairman of the Assam Tea Planters Association, has also warned that the Dooars and Terai gardens are already financially hard hit; the increase in wages will result in the closure of several gardens, causing serious unemployment.

It may be noted that labour on plantations, unlike that in other industrial concerns, is employed on a family basis, the wife and children working in the same concern that employs the head of the family. In view of this and considering that free housing is provided by employers, it would be unrealistic to disregard the earnings of wives and children while fixing wages. Since the women and children, more particularly the former, form the more important part of the labour force where plucking is concerned, the earnings of these people also must be taken into account for the purpose of fixing the minimum wages. Judging by this standard, the revised minimum wages, we are told, are on the high side. If so, the tea companies should not be blamed, if they are forced to curtail their operations by retrenching workers. This would result in much distress to workers and their families.

DURGAPUR COKE OVENS

An important stage in the construction of the Durgapur steel works was reached this week, when the coke ovens were lit up nearly ten weeks ahead of schedule. The steel works, as is well known, is designed to produce initially one million tons of ingots per annum; the lay-out allows for the future expansion of capacity to 2½ million tons. Before a single ton of pig iron can be produced, there must be coke for the blast furnace. The coke ovens plant is thus the first step towards the production of iron and steel. For the next two months, the coke oven battery at Durgapur will be gradually heated up to operating temperature and will then start making coke for the steelworks' first blast furnace.

The coke oven battery has been built by Simon-Carves Ltd., a member of the Indian Steelworks Construction Company, Ltd. (I.S.C.O.N.) which is a consortium of leading British mechanical, structural, civil and electrical engineering companies. The contract with I.S.C.O.N. for the building of the steelworks at Durgapur, it may be recalled, was signed on 30th October 1956. Simon-Carves had first to survey their own portion of the site and carry out soil tests in order to enable the foundation of their plants to be designed in detail; actual construction commenced on 1st April 1957. The coke ovens have thus been got ready within 28 months, a record period for the construction of a project of this kind. It may be mentioned here that Simon-Carves have extensive experience (extending over a period of 50 years) in building coke oven plants in India. Their first coke ovens in India were built in 1908 at Giridih for the East Indian Railway. Since early 1920's they have carried out a long series of coke oven contracts for the Indian Iron and Steel Company, Ltd., at Burnpur and reconstructed the coke ovens at the Jamshedpur steel works of the Tata Iron and Steel Company, Ltd. When the expansion programme of India's steel industry is completed, over 60 per cent. of India's pig iron will be made with coke from Simon-Carves ovens. It is gratifying to note that these great coke oven plants in India have been built largely of Indian materials and by Indian labour and also supervised by Indian staff. Over a long period, Simon-Carves have trained many Indian operators who have now acquired the knowledge and experience that are necessary for the installation and operation of coke oven plant.

EFFICIENCY DRIVE

Like the fond parent reluctantly forced to admit the faults of his pampered child, the Union Home Ministry has at last discovered the "tendency of a negative attitude to work" among Government employees, "particularly noticeable among officers of the intermediate grade." It is strange that it took thirteen years for the Ministry to discover this and, even then, it has discerned only a "tendency." But the fact, widely known, as anyone who had at some time or other something to do with Government officials will testify, is that this tendency has hardened into a habit. One of the first tasks the Ministry should have addressed itself to soon after the attainment of independence was the tuning up of the efficiency of the administration. By allowing this to go by default, the

Ministry has only encouraged, though indirectly, indolence among its employees. And there was nothing to keep them on their toes, what with absolute security of service, the eternal enemy of enterprise, and assured promotions, at least in their stipulated grades. The negative attitude has been further encouraged by the tendency of higher authorities not to be satisfied with a reasonable explanation by the officer in the event of his decision going wrong. If, therefore, the Ministry now finds a widespread habit among officers to shirk responsibility and shun decisions it has only to thank itself.

It is heartening to note that the Ministry has now not only realised the full import of this state of affairs but is also determined to take corrective measures. The Union Home Minister, Pandit Pant, in a circular sent to all the Central Ministries, has expressed concern over the situation. He observes that more ingenuity and time are devoted in finding out how a thing is not to be done rather than in processing it constructively towards its speedy disposal. Consequently, the circular adds, schemes which are desirable get held up for long over small objections.

This tendency, the Home Minister feels, reflects itself in the unwillingness to take a decision on a case and in the attempt to move it up to the higher officers. The inevitable result is that the higher officers have themselves to deal with a large number of cases, many of which might as well have been dealt with by officers at the lower level. The latter often wait for their superiors to put up suggestions or papers, instead of taking the initiative and thinking ahead in regard to the work entrusted to them.

The circular makes certain suggestions in this regard. First, it lays down the types of cases on which final decision must be taken by an officer of a specific level who will hold himself responsible for that decision and the speed with which it is taken. The second suggestion is akin to the German system of keeping, the officers under observation for some time to judge their ability and aptitude before they are finally promoted. It is proposed that rules should be evolved under which an officer, on his first posting, could be kept under watch for some period, particularly to see whether he has a positive approach to work. If he fails to make the grade and does not display a clear capacity for assuming responsibility, he might be reverted if he has gained his first posting on promotion or sent back to his State or parent service if he were taken on deputation.

But, as the Home Minister himself recognises, all these will be of no avail, unless there is increased delegation of powers and responsibilities. There should be delegation not only between one office and another but also

LIVESTOCK IN INDIA

The Indian cattle were characterised by the Royal Commission on Agriculture as pointers to the poverty of Indian agriculture. Even after decades, the position remains more or less unaltered. The numerical strength of livestock is, no doubt, considerable. But their quality, by any standards, is deplorably low. According to the Eighth All-India Livestock Census (1956), the total population of livestock is as much as 306.5 million, or an increase of about 5 per cent. over that in 1951. The productivity of these cattle, however, is none too impressive. For instance, the average annual milk yield per cow in India is roughly 400 pounds—lowest in the world—as against 8,371 and 4,796 pounds in the Netherlands and Belgium, respectively. What is more, the availability of milk per capita per day is five ounces in India, as compared with 16 ounces in the U.K. and 32 ounces in New Zealand.

Cattle play an indispensable part in the economic life of this country. It is computed that, even today, coal, oil and electricity contribute only 20 per cent. of India's total energy requirements, the balance being provided by bullocks, horses and other animals. Total annual production of milk is estimated at about 477 million maunds, of which cows contribute no less than 45 per cent. About 16 million hides are available to the processing departments of leather factories. Moreover, it is computed that livestock provide about 500 million tons of manure. The livestock population in India, it must, however, be conceded, is far in excess of the available supplies of fodder and also of the country's needs. With the increase in food requirements of human population, much land is not left for producing food for animals. This leads to the under-nourishment of livestock, which, in turn, tells upon their efficiency and milk yields. It is, therefore, better to have a smaller but more useful number of cattle.

A general scheme for the improvement of cattle was initiated during the first Plan period, known as the "key village scheme," which seeks to ensure co-ordinated development of cattle in selected areas. The scheme consists of castration of scrub bulls, breeding operations controlled by artificial insemination centres—each of which is intended to serve about 5,000 cows of breeding age—rearing of calves on a subsidised basis, development of fodder resources and the marketing of animal husbandry products on co-operative lines. During the first Plan period alone, 555 key village scheme implementation blocks and 146 artificial insemination centres were established in different parts of the country. The target for the second Plan is 1,258 key village blocks and 245 artificial insemination centres. This should lead to the production of about 22,000 improved-breed stud bulls, 950,000 improved bullocks and about an equal number of improved cows. During 1956-57, about 59 existing artificial insemination centres were expanded, besides establishing 26 key village blocks, nine urban artificial insemination centres and seven key village extension centres. In the following year, 89 existing artificial insemination centres were expanded, and 57 new ones were established in rural areas, 23 in urban areas and another eight with dairying schemes. Twenty-three extension centres were also set up and the rearing of over 6,300 calves was subsidised. During 1958-59, six existing artificial insemination centres were expanded and 47 new centres were set up. Ten extension centres were also established during the year.

Apart from improving the breed, the key village scheme also seeks to increase the quality and production of fodder. But the progress of fodder development has been slow in many States, particularly because of the priority assigned to the development of cereals and cash crops. Among the other programmes for the development of livestock, mention may be made of *Gaushala* and *Gosadan* development schemes. The *Gaushalas*, while breeding better types of cattle, will also help augment the supply of milk in urban areas. The *Gosadan* scheme aims at the removal and segregation of old, un-economic and unproductive cattle from the areas of active development work and maintain them economically in *Gosadans*. In a country like India, where a certain uncritical sanctity is attached to livestock it would be better to popularise the *Gosadan* scheme which satisfies the sentiment of the people and also serves at economic purpose.

THE EXPOSURE OF MONETARY POLICY RADCLIFFE COMMITTEE REPORT

From Our Own Correspondent

LONDON, 21st August

THE Radcliffe Committee of Bankers and Industrialists, appointed by the then Chancellor of the Exchequer two years ago, has produced an outstanding report on the structure and working of the British monetary system that will outshine, as it

LONDON LETTER

outdates the only previous study of this kind made by the Macmillan Committee in 1931. That Committee published a report prepared with the thunder of crisis all about it, obsessed with the need for a stable rate of exchange; but it was far from unanimous. The present Report has two outstanding virtues: in the first place, it is unanimous and, in the second place, it is clear it has achieved this only by a wide tolerance of approach to this difficult subject and an omission of positive recommendations. It preferred, instead, to study the working of the monetary system, to point to its weaknesses as well as its virtues and to draw a number of important conclusions. The rest, in the view of the Committee, is a matter of policy. The true importance of the Report lies in its thesis that monetary policy today is far too important a matter to be left to bankers or to the Bank of England. It is a matter of high Government policy—and this in a unanimous report from men who can mainly be regarded as political supporters of a right wing Government.

The Committee begins by analysing the objectives of monetary policy and lists them as follows:

1. The maintenance of employment.
2. The maintenance of the external purchasing power of the pound.
3. The improvement of living standards.
4. The building-up of an external surplus on the balance of payments, both to facilitate overseas lending and to strengthen the external reserves.

There is no mention in these objectives of the maintenance of a stable exchange rate, although the Committee regards this as highly desirable and as bound up with the achievement of the other objectives. It is clearly a point on which there was a difference of view and, because it may often be impossible to achieve all the objectives together, the maintenance of a stable rate of exchange is regarded as a matter of policy, decision about which must be taken in the light both of Britain's external obligations and the impact on the internal objectives.

Having stated the objectives, the Committee then says that these can be achieved by three weapons—monetary policy, fiscal measures and direct controls. Here it makes a plea that Governments should study these matters dispassionately, not in a doctrinaire manner, and be prepared to give each a place in their armoury. The Committee is as critical of the present Government's reliance on monetary measures alone as they are of the Opposition's denial of their significance.

Of monetary measures, it says that "no method, new or old, provides the remedy for all our troubles. We do not find any solution of the problem of influencing total demand in more violent manipulation of interest rates; we find control of the supply of money to be no more than an important facet of debt management; we cannot recommend any substantial change in the rules under which the banks operate; we do not regard the capital issues control as useful in ordinary times; and we believe that there are narrow limits to the usefulness of hire purchase controls... our conclusion is that monetary measures cannot alone be relied upon to keep in nice balance an economy subject to major strains from both within and without. Monetary measures can help but that is all."

On the other hand, the Committee believes "that the authorities could make more deliberate use of interest rates" and they stress that far more can be done by the way in which the

vast National Debt is managed to influence the total "liquidity of the economy." It does not like the way in which the credit squeeze really squeezed the small firms, the light engineering industries and the great nationalised public services; hence, instead of restriction of Bank credit, the Committee looks in future for something wider—what it calls the liquidity of the economy as a whole. It is particularly opposed to hire purchase controls, with their narrow industrial application, though, in times of crisis, it would use that control along with others, if need be.

Having thus put monetary policy in its place, the Committee makes important recommendations concerning the Bank of England. It should be "a highly skilled executant in the monetary field of the current economic policy of the Central Government." The Bank's independence, which has been whittled away since the days of the Macmillan Committee, should be finally stripped by the setting up of a Government Committee responsible for policy. This Standing Committee should be under the chairmanship of the Chancellor of the Exchequer. Other departments would be represented and so would the Bank. The present Court of the Bank would then be concerned with executive matters on which the expertise of the private bankers and financiers would remain. To underline the firm depositing of monetary policy in the hands of the Government, Bank Rate change announcements should be made by the Chancellor of the Exchequer and not by the Bank. In brief, the Committee want to make it quite clear that the Bank's function is to do what the Government decides; and so that the public may be better aware of what it is doing and why it is doing it, it is recommended that an Intelligence Department should be set up inside the Bank and the Old Lady of Threadneedle Street should in future become much more talkative. —All Rights Reserved.

The number of overseas tourists who visited the U.K. during the first six months of 1959 touched an all-time peak of 544,500, about 8 per cent. more than in the same period 1958. The total number of tourists visiting the country in the whole of 1959 is expected to be about 1.40 million, as compared with 1.25 million in the previous year and their expenditure in the U.K. is estimated at £220 million as against £196 million in 1958.

LIMITED NUMBER OF COPIES ARE STILL AVAILABLE

THE BANKING ALMANAC 1958-59

Complete Reference Volume on International Banking

The Almanac is the only complete work of reference published in the East on Indian and International Banking and is an indispensable publication for Banks and Insurance Companies, Importers and Exporters, Manufacturers, Merchants, Stock and Share Brokers, and in fact for all those having dealings with banks.

Summary of Contents

- (1) **Bank Branches in India:** Contains an alphabetical list of towns and places in India with names and addresses of banks therein.
- (2) **Indian Banks:** This section contains complete particulars of all Indian Banks as to addresses, directorate, management, telephone numbers, telegraphic addresses, date of establishment, summary of balance-sheets for the last two years, dividends declared and branches.
- (3) **General Information:** This section contains information and statistics about matters of general banking interest, viz., institutional organizations of banks, Reserve Bank's Returns, Bank failures in India, India currency circulation, Prices of gold and silver in Bombay, World Gold and Silver production, Banks removed from the 2nd Schedule to the Reserve Bank of India Act, Prices (in Bombay) of Government of India Securities, Capital issues sanctioned, etc., Transactions of Post Office Savings Banks, Central and State Governments Loans, Changes in Central Bank discount rates, Members of Clearing Houses and Coins and Notes of the world.
- (4) **International Banks Section:** This section gives complete particulars of all the principal banks of the world as to addresses, management, date of establishment, telegraphic addresses, telephone and telex numbers, codes used, correspondents, dividends, shares and summary of balance-sheets for last two years.
- (5) **Index to Places and Banks:** Contains list of all commercial centres throughout the world with names and addresses of the banks therein. There are separate sections for all principal countries, viz., Argentina, Austria, Belgium, Brazil, Canada, Chile, China, Cuba, Cyprus, Czechoslovakia, Egypt, Finland, France, Germany, Greece, Iran, Ireland, Israel, Italy, Japan, Mexico, Netherlands, New Zealand, Norway, Pakistan, Peru, Spain, Sweden, Switzerland, Turkey, U.K., U.S.A., Uruguay, Venezuela and the remaining countries are grouped under "Other Countries."

Over 800 pages in Demy Octavo Size, Full cloth bound and cover printed in gilt letters.

Price—Rs. 25 plus Rs. 2.50 for packing and postage.

CHEMICALS THAT HELP INDUSTRY TO BRING A BETTER FUTURE CLOSER

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS—acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER—Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES—Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES—Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT—Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

CHEMICALS FOR EVERY INDUSTRY

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.

STATE BANK SUBSIDIARIES BILL PASSED MINISTER JUSTIFIES SCHEME

THE State Bank of India (Subsidiary Banks) Bill, as amended by the Joint Committee of Parliament, met with little opposition in Parliament when it debated the Bill and passed it last week. There was, however, strong criticism from a section of the Houses representing the extreme leftists, of the Government's decision to reconstitute the State-associated banks as subsidiaries of the State Bank of India and thus keep their separate entities intact, instead of straight-away merging them with the latter. Even in the Joint Committee report, in which seven members out of a total of 45 have added four separate notes of dissent, the main brunt of the dissenters' criticism was against the Government's action in not accepting the Rural Credit Survey Committee's recommendation of an amalgamation of these banks with the State Bank of India.

Another point of criticism was that the Bill represented almost a *fait accompli*, on the ground that the directors and shareholders of the State-associated banks themselves had accepted the scheme of things, and the members of the Joint Committee or of Parliament, therefore, had very little to do. It is, perhaps, not widely known that the managements of the majority of these so-called State-associated banks were actually forced to accept his course by the authorities through persuasion.

The other points of criticism made by the dissenting members of the Joint Committee were: (1) no step has been taken to effect rationalisation and economy; (2) the status of employees of subsidiary banks has not been raised on par with that of State Bank employees; (3) the existing rights and privileges of the subsidiary banks have been deprived by giving power to the State Bank to regulate the service conditions of these employees; (4) the power of the tribunal constituted for the purpose of determining the compensation should not be curtailed and it must have the power to call for any documents; and (5) the Reserve Bank, the State Bank and the Central Government have assumed sweeping powers over these banks.

Before proceeding to the Minister's reply to these criticisms, it is worthwhile recording here the main changes made by the Joint Committee in the provisions of the Bill itself. These are of a minor nature and some of them are in favour of the shareholders. The sub-clause (4) of clause 13 of the original Bill, for instance, had provided that, in the event of the compensation offered by the State Bank being not acceptable to the shareholders of a bank, at least one-fourth of the number of shareholders holding not less than one-third in value of the paid-up share capital of the bank concerned should represent to the Central Government before the date notified by the latter. On receipt, of such a representation, the Government will have the matter referred to a tribunal. The Joint Committee has reduced the value of shareholding prescribed in this clause from one-third to one-fourth, as it considered this limit as onerous. Sub-clause (7) of the same clause had fixed a time limit of three months from the date of final determination of the compensation for any shareholder to apply for shares of the reconstituted bank in lieu of compensation. The Joint Committee has liberalised this provision enabling the State Bank to extend, in appropriate cases, the period within which the application for allotment is to be made.

Clause 14 relates to the amount of compensation payable to the State Government of Punjab in respect of the Bank of Patiala, the Bombay Government in respect of the Saurashtra Bank and the Reserve Bank of India in regard to the State Bank of Hyderabad. The original provision had empowered the State Bank, in the first instance, to determine the amount of compensation. This has now been amended so as to provide that the State Bank would fix the compensation in consultation with the Reserve Bank. An anomaly in this amendment is that the Reserve Bank, as the shareholder of the State Bank of Hyderabad, is in a privileged position as compared with the shareholders of the Bank of Patiala and the Saurashtra Bank, or those of the other subsidiary banks, in the matter of determining the compensation receivable by it.

Clause 19 of the original Bill had placed a limit of 200 shares on the holding in the share capital of a subsidiary bank by an individual either in his own name or jointly with any other person. It had also stipulated that such a person would not be entitled to any dividend on the

excess shares held by him over this limit. The Joint Committee has suggested that this limit on shareholding or on payment of dividend should not be enforced in respect of the initial allotment of shares to a shareholder of an existing State-associated bank.

Clause 25 deals with the composition of the Board of Directors of a subsidiary. The clause in the original Bill did not provide for the representation on the Board of a nominee of the Central Government. The Joint Committee has suggested that the Central Government should be empowered to nominate a director in consultation with the State Bank, if it considers it necessary or desirable to do so in the case of any particular bank. The Committee has also reduced the period of office of the Directors appointed by the State on the first constitution of the Board from two years to one year. The officers of the State Bank of India, Reserve Bank of India or the Central Government, who are nominated as Directors of a subsidiary will, however, hold office during the pleasure of the authority nominating them. The non-official directors will hold office for a period of three years. All the directors will be eligible for renomination or re-election.

Clause 27 gives a list of persons who are disqualified to be a director of a subsidiary bank, among which is one who has been removed or dismissed from the service of Government. The Committee has extended the disqualification to persons removed or dismissed from the service of a local authority or a corporation or a company in which not less than 51 per cent. of the paid-up share capital is held by the Government. The original Bill had provided for the disqualification for directorship of a person convicted of an offence which, in the opinion of the State Bank, involved moral turpitude. The Committee has changed this clause to the effect that it is the Central Government and not the State Bank which should decide whether or not an offence involves moral turpitude.

All the aforesaid changes suggested by the Committee have been accepted by both the Houses of Parliament.

Referring to the main criticism in the minutes of dissent, which was supported by some in the Lok Sabha and Rajya Sabha also, namely, that the Rural Credit Survey Committee's recommendation for amalgamation of all State-associated banks had not been carried out, Dr. Gopala Reddi, Minister for Revenue and Civil Expenditure, who piloted the Bill, said that this criticism was based on inadequate appreciation of facts. "We considered it necessary, after careful thought, to depart from this recommendation," he added, "as there was no justification for conferring unjustified benefits on the employees, because we happen to be reconstituting the banks for certain other desirable ends." Dr. Reddi also gave an account of the advantages of the present scheme of things over the scheme of complete merger. First, the State Governments would continue to hold some interest in the subsidiaries, instead of being paid cash compensation and terminating their long association with these banks, as would happen in the event of an amalgamation. It would be advantageous to have this association, because the State Governments concerned know the local conditions and the non-official directors of the banks. All these advantages would be lost if there was a straightaway merger.

The second advantage, according to the Minister, is that the management would be cheap. Elaborating this point, he said:

"We are allowing 45 per cent. of the shareholders to continue. They also have a legitimate claim on the profits of the bank, being shareholders, and if the management suddenly becomes very costly, what they are likely to gain by way of dividends will be reduced to a considerable extent. We know that these subsidiary banks have about 7,000 employees. Last year, they paid about Rs. 150 lakhs as salaries. After paying that, they have declared profits of Rs. 85 lakhs or so last year, that is, 1958 accounts. If suddenly the employees are to be given the State Bank salaries, perhaps, it will be another Rs. 30 lakhs or Rs. 40 lakhs and to that extent their profits will be reduced. The profits will come down and it will not be an incentive for those 45 per cent. shareholders to continue as shareholders of the subsidiary banks. So, all told, there will be cheap management."

It is thus clear that the Government does not mind having under its dominant ownership banking institutions of varying strength and status as it is more economical than to increase the size of the State Bank of India to that of a

great giant and thereby add to its already vast powers and influence.

The third advantage relates to the credit policy. The State Bank of India, the Minister added, had many restrictions in regard to advances. Being an all-India bank, being a State bank as it were, it could not participate in certain types of businesses. Whereas a commercial bank or a subsidiary bank could operate or could give advances in a particular situation, the State Bank of India was precluded under its own rules from such advances. There was, therefore, more elbow room for these banks in the matter of giving advances than would be the case if they were to be merged with the State Bank.

Answering the point raised by some members that no steps had been taken to curtail expenses, as the State-associated banks would continue to remain top-heavy administrative machinery with separate managing directors, board of directors and general managers, Dr. Reddi drew their attention to the provision in the Bill (clause 23) under which they would all cease to exist on the "appointed day." Their services would be retained, if the State Bank so desired, on such terms as they thought fit. Otherwise, their services might be terminated and they might be paid some small compensation.

Referring to the possibility of duplication of branches, the Minister said that these matters would have to be looked into by the State Bank after these banks were taken over. "As far as we can see," he added, "all these banks are operating in areas which before the States reorganisation constituted Part B States, which were generally underdeveloped so far as banking institutions were concerned. The policy is that, in one or two important places, if there are State Bank branches already existing, they may continue, but otherwise the State Bank will try to see that there is not any duplication. If the State Bank has to withdraw a branch office, it may do so and allow the subsidiary banks to open up new branches. This is a matter of detail, about which I am sure the State Bank, together with the directors of the subsidiary banks, will be able to formulate a policy of its own and try to avoid all duplication with regard to branch offices."

Answering the criticism that the Bill does not give all the principles of compensation, the Minister said that these details would have to be given elaborately only if the banks were acquired by force or compulsion. This was a case where a compromise had been arrived at "after persuasion and negotiation." The directors and shareholders were all agreeable. There was, the Minister contended, no question of elaborating the principles and no constitutional impropriety had been committed.

WORLD BANK LOAN TO IRAN

The World Bank has granted a loan of \$5.2 million to Iran to help finance the development of private industry. The loan will be made to the Industrial and Mining Development Bank of Iran (I.M.D.B.I.), which is being formed by private investors from Iran, the United States, the United Kingdom, France, Belgium, Germany, Holland and Italy. Arrangements are nearing completion for the establishment of the Bank, which is expected to be in operation by the end of 1959.

The Development Bank will help stimulate private industrial development in Iran by making medium and long-term loans and by investing in share capital. It will promote and develop a capital market, and guarantee loans and commitments of other investors. The new bank will also provide technical and managerial assistance to Iranian industry. The origin of the Development Bank goes back to September 1957, when Lazard Freres and Company of New York and Chase International Investment Corporation of New York agreed, at the request of the Iranian Government, to sponsor a private industrial credit and investment bank in Iran. The World Bank advised the Government of Iran and the sponsors on the establishment of the new institution.

The initial share capital of the Development Bank will be 400 million rials (\$5.3 million). Sixty per cent. of the shares will be offered shortly to the Iranian public through Bank Mellat, Iran's largest commercial bank, as well as its central bank. The remaining 40 per cent. have been placed abroad. The Government of Iran will make a 30-year interest-free advance of 600 million rials (\$8 million). The U.S. Development Loan Fund is lending \$5.2 million to the bank. In addition, the Government of Iran will turn over to the Development Bank for management a loan portfolio of 1,400 million rials (\$18.7 million); funds arising from repayment of these loans will be available to the Bank for reinvestment. In all, therefore, the Development Bank will start business with the World Bank loan. The proceeds of the \$5.2 million World Bank loan, to be guaranteed by Iran, will be used to pay for imported materials, equipment and services required to carry out industrial projects financed by the new institution. The loan is for 15 years. The rate of interest on the loan has not been fixed, but it has been agreed that interest will be charged at the World Bank rate current for similar loans at the time that portions of the loan are committed for the development projects.

OFFTAKE OF MILL TEXTILES IMPROVES MANY UNITS, HOWEVER, STILL REMAIN CLOSED

THERE has of late been a distinct improvement in the offtake of cotton mill piecegoods and yarn for both domestic consumption and exports. This is clearly indicated by the appreciable reduction in the stocks with the mills. The total of these stocks (both unsold and sold but delivery not taken) at the end of last month was about 618.00 million yards—it was lower still at 567.30 million yards in May 1959—as against 870.60 million yards at the close of December 1958 and 871.35 million yards a year before. The reduction has taken place in both sold and unsold stocks, but it is larger in the latter. The unsold stocks have come down from 505.65 million yards in July 1958 and 491.40 million yards in December 1958 to 310.50 million yards, the corresponding figures for sold but not taken delivery being 365.70 million yards, 379.20 million yards and 307.50 million yards, respectively. Similarly, the stocks of unsold yarn were lower at 15.48 million lbs., those at the end of December 1958 and July 1958 being 25.56 million lbs. and 34.72 million lbs., respectively.

Encouraged by the rise in the offtake of cloth and yarn, the mills are endeavouring to maintain as high a level of output as possible. The quantity of cloth that actually came off the looms of mills during the month of July 1959 aggregated 424.00 million yards, which compares favourably with 405.09 million yards in the previous month and 419.44 million yards in the corresponding month of 1958. With the increase recorded in July, the overall production in the first seven months of 1959 was of the order of 2,868.86 million yards, almost the same as in the January-July 1958 period. If the upward trend in output noted in July were to persist in the remaining months of the year, the total production for the whole of 1959 would be much higher than the 4,926.97 million yards woven during 1958. The improvement in cloth production has naturally followed a notable rise in yarn output which in July 1959 amounted to 146.00 million lbs., as against 135.66 million lbs. in June 1959 and 145.00 million lbs. in July 1958. The aggregate output in the seven months ended July 1959 was a shade higher at 963.86 million lbs., as compared with 963.86 million lbs. in the same period last year; the production in the whole of 1958 was 1,685.38 million lbs.

Trend of Output

The following table indicates the trend of mill yarn and cloth production—month by month—in the January-July periods of 1959 and 1958:

	Cloth (million yards)		Yarn (million lbs.)	
	1959	1958	1959	1958
January	430.09	436.53	150.55	148.70
February	391.75	391.45	136.06	132.86
March	405.78	405.56	141.46	139.48
April	406.86	407.77	139.86	134.07
May	405.29	421.25	136.53	138.70
June	405.09	398.32	135.66	128.05
July	424.00	419.44	146.00	145.00
January-July ..	2,868.86	2,870.32	968.72	963.86

The production performance of mills would have been more encouraging but for the series of stresses and strains, especially the continued high prices of raw cotton, mounting wage bill

and heavy taxation. Over the past one year, raw cotton prices have gone up by nearly 8 per cent. The mills are also paying markedly higher dearness allowance to their workers, consequent on the rise in cost of living. The average amount of allowance paid (for 26 working days) per worker in July 1959 was as high as Rs. 87.15, as against the average of Rs. 81.58 and Rs. 73.99 paid in the whole of 1958 and 1957, respectively. While costs have gone up thus, there has been no corresponding increase in the prices realised by mills on cloth and yarn sales. In fact, in the first quarter of this year, several mills continued the practice of getting rid of their stocks at cut prices. It is only during the last one and a half to two months that prices have registered some improvement. The index number of cotton manufactures (1952-53=100) which stood at 113 in June 1958, fell to 110 in July 1958 and again to that level in January 1959, after being at 111 in the intervening months. It continued to stay at 111 upto April 1959 and improved to touch 113 in June 1958, that is, the same level as a year before.

Employment Shrinks

In view of this disquieting state of affairs, several mills continue to remain closed—39 units as on 30th June 1959—and many others (33 units) are working partially. It is not surprising, therefore, that the daily average number of workers (including budhis) employed in mills continues to be much lower than in previous years. In Bombay mills, for instance, the total number of workers at work as on the first working day in the current month was 195,036, as against 199,532 a year before and 208,983 on the first working day in January 1958.

The current calendar year, may, as already stated, witness a small rise in cloth output as compared with 1958. The rise is expected to be accounted for by medium and superfine counts, while the production of coarse and fine varieties is likely to show a fall. An idea of the pattern of cloth output in the first six months of 1959 and 1958, as also in the whole of 1956, 1957 and 1958 can be had from the figures given below:

	(In million yards)				
	Coarse	Medium	Fine	Super-fine	Total
1958					
January	88.36	290.88	26.76	21.62	436.53
February	74.20	271.74	25.19	19.57	391.45
March	73.77	284.59	26.28	20.92	405.56
April	73.38	286.69	26.54	21.15	407.77
May	70.32	291.81	27.98	22.54	421.25
June	77.81	283.94	26.62	19.95	388.32
January-June 1958 ..	461.84	1,698.65	161.72	125.65	2,450.86
1959					
January	88.94	302.81	20.25	23.10	430.09
February	71.85	280.24	18.82	20.84	391.75
March	69.76	292.84	21.30	21.89	405.78
April	67.89	295.19	21.12	22.70	406.86
May	66.57	294.68	21.49	22.55	405.29
June	69.82	290.07	21.67	23.53	405.09
January-June 1959 ..	429.80	1,755.83	124.65	134.61	2,444.89
Whole of 1958	960.96	3,395.81	303.08	258.14	4,926.97
Whole of 1957	1,153.71	3,502.91	388.07	287.73	5,317.42
Whole of 1956	718.64	3,796.61	444.04	347.29	5,004.47

The performance on the export front in recent months has been somewhat encouraging. On the basis of the actual shipment of 309 million yards in the first half of 1959 and the

anticipated figure of 400 million yards in the second half, the aggregate exports of cloth for whole of 1959 will come to 709 million yards, as against just 587 million yards sold abroad in 1958, a rise of 122 million yards. Still, they will be, as was mentioned in this journal last week (vide page 298), very much less than the exports of 840 million yards in 1957 and 744 million yards in 1956. There is thus not much to crow about the achievement on the export front.

It is stated that, after a long spell of dull conditions, export demand for cloth is satisfactory and has coincided with the revival of business in the domestic sector. Sudan has purchased a large quantity—estimated at 20 million yards—since the beginning of July. The U.K., too, is reported to have bought a fairly large quantity of grey sheetings and some mills have sold for shipment upto November next. There has also been a sizable volume of business on account of Australia, Persian Gulf ports, East Africa and West Africa.

AUTOMATIC LOOMS

It will be recalled that, towards the end of July last, the Central Government announced its decision to permit the installation of 3,000 additional automatic looms in composite cotton mills with past export performance, as an export promotion measure. The actual allotment, it was said, would be subjected to three conditions. First, the entire production of looms would be exported. Secondly, in addition, 50 per cent. of exports in any of the three calendar years 1954, 1955 and 1956 should also be maintained. Thirdly, the two conditions would be enforced by a simple bond. The Government has since issued a circular letter which says that, since it is not possible to identify the cloth produced from the additional automatic looms from that produced from other looms, the mills will be required to give a guarantee to export a quantity of cloth equivalent to the estimated output of additional automatic looms on the following basis:

1. At the rate of 17,000 yards per loom per year for mills, at least 75 per cent. of the total production (in yardage) of which in 1954, 1955 and 1956 was of fine and superfine varieties.
2. At the rate of 21,000 yards per loom per year in all other cases.

In addition to the guarantee mentioned above, the composite mills which have shipped cloth in the past are required to give an undertaking to continue to ship at least 50 per cent. of their exports on the basis of these guarantees, export quotas will be fixed for such mills as are ultimately allotted additional automatic looms. The mills will have to give a bond in a suitable form with respect to the implementation of their export quotas fixed on the basis explained. The number of looms to be allotted to various mills will be decided upon after taking into account all factors relevant for promotion of exports to the maximum.

The last date for submitting applications is the 31st inst. The mills are also required to apply simultaneously to the Union Ministry of Commerce and Industry in form 'E' for a licence to effect substantial expansion in their existing undertaking under the Industries (Development and Regulation) Act.

Replying to a question in the Lok Sabha the other day, Mr. Manubhai Shah, Minister for Industry, disclosed that it was proposed to set up a spun silk mill at Jagi Road in Assam in the public sector under the second Five-year Plan. According to the Minister, the Government of Assam has concluded an agreement with a Japanese firm for import of machinery on deferred payment basis. The contract entered into has been registered with the State Trading Corporation of India and essentially certificate and import licence have been obtained. The State Government is also making efforts to procure items of machinery which are available in the country.

COTTON INDUSTRY REDUNDANCY PLAN RESPONSE FROM MILLOWNERS ENCOURAGING

From A Special Correspondent

MANCHESTER, 18th August

THE Government-supported scheme to reduce the size of the United Kingdom cotton industry has got off to a good start. Scarcely a day has elapsed since the redundancy proposals in spinning, doubling and weaving became effective without an announcement from some firm in the trade that they are contemplating scrapping some, if not all, of their machinery. In the weeks to come, this trend can be expected to continue and, if the rate

MANCHESTER LETTER

of applications for compensation is maintained, the minimum targets should be reached well before the end of September. These targets are: 6 million equivalent mule spindles in the spinning section, 400,000 spindles in doubling, and 45,000 looms in weaving.

By mid-August, within a fortnight of the start of the plan, the special committee of the Cotton Board responsible for dealing with the schemes reported a "very encouraging" response. The number of mule equivalent spindles participating in the compensation plan was given as just over 2,500,000, together with 2,313 carding engines. Looms submitted for scrapping numbered 27,778, and in the doubling section 113,836 spindles had been offered for disposal.

Proper Perspective

To gain a proper perspective of the full response, the returns from individual firms are required and these, of course, are not forthcoming. The intentions of one large group, for instance, have been widely publicised and a good deal depends on how many of the spindles have yet been submitted by this company. On the basis of the actual returns completed, however, it is clear that the half-way mark has been virtually reached towards the minimum targets. In the manufacturing branch, it has already been passed and, in spinning, the plans of several companies should soon bring the total up to 3 million spindles. Lagging behind is the doubling section, where little more than a quarter of the minimum quantity has so far been offered for scrapping.

Considering that the period under review included the August holiday week, the extent of the trade's participation can rightly be regarded as "a good start." It seems safe to assume that those who have been cautiously awaiting information as to how the scheme is going will now be encouraged to make up their minds relatively quickly.

Strange Comparisons

Observers of economic trends have often used the cotton industry as a "guinea pig" in making their predictions about prospects and describing business conditions. No better opportunity has arisen for a long time than the present state of transition in which to attempt an assessment of the position of individual firms. Theory, however, is far removed from practice

and the suggestions now being made in some quarters about the standing of cotton companies lack a good deal of reality.

It is a traditional jibe against statisticians that figures can be made to prove anything and without a thorough background knowledge of every case, it is unwise to generalise. These reflections are stimulated by the prominence given to the exercise in mathematical calculation of cotton company share values and current prices contained in a circular issued by a firm of London stockbrokers. Its reasonings may be logical, but its conclusions about certain mill combines tend to be very wide of the mark.

Taking a number of cotton textile firms, including several of the large groups, as examples, the report compares the maximum compensation available under the reorganisation plan and the net liquid assets in each case with the current price of the shares. The results may be a little surprising even to those closely connected with the industry, but they cannot constitute any guide to the action likely to be taken by the companies concerned in relation to their future trading activities.

Quoting from the document, the following details are given:

	Compensation and assets s. d.	Actual price s. d.
Amalgamated Cotton Mills Trust ..	19 0	14 4½
Berber Textile Corporation ..	6 9	5 0
Combined English Mills ..	1 10	12 6
Crosses & Heaton Lancashire Cotton Corporation ..	6 11	14 6
Shiloh Spinners ..	48 1	46 6
Fine Spinners and Doublers ..	5 6	3 7½
Swan Lane ..	9 11	24 7½
	7 11	6 6

The variations indicated in this cross-section of some of the major companies is quite remarkable, but the authors of the document are surely aware that the most unlikely firms to be involved in any complete closure are those controlling the substantial quantities of plant included in these household names in the industry. Possibly details are more difficult to secure in the case of the smaller units, but it is in this direction that these commentators should look.

Naturally, the combines have the facilities to concentrate their output by switching modern machinery into mills where the older plant is to be dismantled, but to suggest that companies of the calibre mentioned are likely to submit all their machinery for scrapping and go into liquidation shows a total misapprehension of the mechanics of the redundancy scheme.

Scrapping Plans

Since the plan came into operation at the end of last month, a number of companies in every section involved have issued statements giving shareholders and the trade at large an indication of their future plans. No doubt many more will be made public within the next few

weeks, together with some guide to the response from official sources. The progress made in dealing with the proposals by individual companies must be governed by individual circumstances; there can be no hard and fast rule as to the attitude of either boards of directors or shareholders.

In some instances, special meetings have already been called to consider recommendations by the management; in others, those responsible have taken decisions on their own accord. Complete disposal of machinery and subsequent liquidation is to be adopted in certain cases; others believe that their plant is sufficiently up-to-date to require no major adjustment and have declared that they look forward to the re-equipment subsidy providing them with an opportunity to modernise to an even greater extent.

The theoretical mathematician can, by using a slide rule, work out the value of any company on paper. What is omitted in these sums is the practical content of man and machinery and the special circumstances surrounding each firm. Locality, availability of labour, the age and enthusiasm of those in charge, and the thousand and one other items which add up to a commercial enterprise, cannot be measured by a row of figures.

Limiting Imports

Leaders of the United Kingdom cotton industry have noted reports from Hong Kong that the cotton industry there may ask for a "holiday" from its voluntary 3-year undertaking to limit shipments of cotton goods to Britain. A spokesman of the Cotton Board said in Manchester that the Hong Kong industry had not made any official approach. He added: "The view here is that these are only Press reports operating in Hong Kong. We are not prepared to comment on them at the present time."

Asked if he would comment on the complaint that, when Hong Kong entered into its voluntary agreement, it did so in the belief that India and Pakistan would follow suit, the official spokesman said: "At the present time, final agreement has not yet been reached with India and Pakistan." He could not go beyond this statement.

The feeling among Lancashire cotton industry leaders is that to grant Hong Kong a "holiday" from its obligations at the present time because of local difficulties would be to undermine the large-scale reorganisation now in progress within the U.K. industry and to jeopardise Lancashire's future during a difficult period of transition and adjustment. The view is firmly held that, during this period, nothing should be allowed to affect the industry's confidence in its future such as would be the case, if imports of cheap cotton goods from Hong Kong and other Commonwealth markets were allowed to rise unconditionally.

Lancashire millowners are themselves dissatisfied that no voluntary agreement has yet been finalised with the cotton industries of India and Pakistan, although originally co-operation was pledged provided agreement could be reached with Hong Kong first. It is known that a meeting between two Lancashire trade leaders—one of them Sir Cuthbert Clegg—has taken place in London with two representatives of the Indian textile industry. The outcome was inconclusive.—All Rights Reserved.

COTTON TEXTILES IN THE THIRD PLAN

MILLOWNERS' APEX BODY'S MEMORANDUM

THE Committee of the Indian Cotton Mills' Federation has submitted to the Planning Commission a memorandum, setting out the production targets for the mill and non-mill sectors for inclusion in the third Plan. The basis adopted for fixing the targets differs markedly from that followed jointly by the Millowners' Associations of Bombay and Ahmedabad when they recommended targets for the second Five-year Plan in August 1955. Thus, the *per capita* requirement of cloth in 1965-66 is expected to be of the order of no more than 20.3 yards, which is less than the figure of 22.0 yards assumed by the Associations for 1960-61. Similarly, the annual export demand is estimated lower at 800 million yards, as against 1,000 million yards. Accordingly, the total requirements of cloth (for domestic consumption and export) at the end of the third Plan that is, in 1965-66) are put at 9,600 million yards, as compared with the 10,000-million-yards target for the second Plan. The Committee has fixed the target for the mill sector lower at 6,300 million yards, as against 7,800 million yards for 1960-61, while that for the non-mill sector is fixed higher at 3,300 million yards, as against 2,200 million yards.

The following is the text of the memorandum of the Committee of the Federation:

"It will be remembered that the Millowners' Associations of Bombay and Ahmedabad had jointly submitted to the Planning Commission, in August 1955, a memorandum about the role of the cotton textile industry in the second Five-year Plan. In that memorandum, estimates were made on the basis of the information then available about the level of *per capita* income and *per capita* consumption expenditure that was likely to be attained in the last year of the second Plan. The probable increase in consumption expenditure was split up among foodgrains, cotton textiles and other items and, with the help of estimates of cloth prices, it was estimated that the consumption of cloth by the end of the Plan period would reach the figure of 22 yards *per capita*.

Excise Duties Raised

"The brisk upward movement in the *per capita* consumption, which was occurring just before and after the submission of the memorandum in August 1955, justified the industry's estimates and, a year later, actually a shortage of cloth supply was apprehended. Instead of considering the ways and means of increasing the supply so as to meet the demand, the Government of India decided to increase the excise duties in September 1956 with a view to inhibiting consumption and increasing exports. In the words of the Textile Enquiry Committee (1958): 'Before 1956, there was increase in prices, larger off-takes and dwindling stocks, which unmistakably represented an inflationary condition. The somewhat drastic measures adopted in September 1956 would seem to have set the pattern in the contrary direction. In the opinion of the Committee, neither of these factors is a healthy feature either for the industry or the country's economy.'

"Apart from the impact of the sudden increase in excise duties, certain other factors also came into play in the subsequent period. Owing to the increase in the cost of living, brought about primarily by an increase in the foodgrains prices, the common man was required to divert his consumption expenditure from cotton textiles to foodgrains and other essentials. At the same time, there was an increase in cotton prices and in dearness allowance, resulting in higher costs of production. Starting with failure on the foodgrains front, there was a setback in the progress of the country's economy and in the rate of increase of real income, and these also had their repercussions on the consumption of mill cloth.

"Ignoring all these factors, for which the responsibility was not that of the industry, the industry was blamed for its estimate of a *per capita* consumption of 22 yards. Because of this experience, it is with some hesitation that the industry can once again attempt to formulate ideas about the likely trend of consumption of cotton textiles in the third Plan. The estimates that are given hereafter, it must, therefore, be mentioned, are based on the following presumptions:

1. The excise duty and other burdens on the industry are maintained at reasonable levels.

2. Cotton and other raw materials are made available at reasonable prices.

3. Any changes in the wage structure that may take place hereafter will be based on scientific correlation between wage rates and workloads.

4. The economy of the country progresses along the lines of the basic targets of the Plan.

"It is only subject to these safeguards that certain estimates are set forth in this note.

Per Capita Consumption

"The *per capita* availability of cloth in the recent past has been as under:

	Yards
1952	14.4
1953	15.2
1954	15.2
1955	16.1
1956	16.6
1957	16.5
1958	16.7

"The Textile Enquiry Committee (Joshi Committee), which submitted its report in July 1958, stated: 'Since the economic development is not at the rate envisaged in the second Five-year Plan, we do not anticipate that the *per capita* consumption will exceed 17.5 yards.' The *per capita* consumption having reached the figure of 16.7 yards in 1958, the increase in the next three years has thus been pitched by the Enquiry Committee at less than 0.8 yard and it may, therefore, be assumed that the *per capita* consumption would actually reach, if not exceed, the figure of 17.5 yards by 1961.

"We may now proceed to estimate the *per capita* consumption of cloth that is likely to be reached in 1966, if the various Plan targets are fulfilled. The following table attempts to estimate the probable consumption expenditure at 1952-53 prices:

mate the probable consumption expenditure at 1952-53 prices:

	In 1961, i.e., end of Second Plan	In 1966, i.e., end of Third Plan
National income at 1952-53 prices (Rs. crores)	13,480	17,260
Rate of investment as percentage of national income (per cent.)	10.7	13.7
Hence, consumption expenditure in the last year of the Plan (Rs. crores)	12,038	14,895
Population at the end of Third Plan (millions)	408	434
Consumption expenditure <i>per capita</i> (Rs.)	295	343*

*An increase of 16 per cent.

"It will be seen that, at constant prices, the consumption expenditure *per capita* is estimated to go up from Rs. 295 in 1961 to Rs. 343 in 1966, which is an increase of 16 per cent. If the increase in the consumption of cloth is just equal to the increase in consumption expenditure, that is, 16 per cent., the *per capita* consumption of cloth will go up from 17.5 yards in 1961 to 20.3 yards in 1966. In technical parlance, the elasticity of demand for cloth, we postulate, will be unity. In 1966, for a population of 434 millions, the requirement for domestic consumption will, at 20.3 yards *per capita*, amount to 8,810 million yards. Putting the estimated exports at 800 million yards, the total requirements by the end of third Plan will be around 9,600 million yards.

Ambar and Powerloom Sectors

"The revised targets of production in 1961 for various sectors are as under:

	Million yards
Mills	5,100-5,200
Handlooms	2,100
Ambar cloth	300
Powerlooms	400
	7,900-8,000

"The additional production required by the end of the third Plan is thus of the order of 1,600 to 1,700 million yards, and the next question for consideration is how it should be divided among the various sectors of the industry.

"The Ambar scheme has not been able to make progress on the scale originally envisaged, and it is doubtful if the production of Ambar cloth will reach even the second Plan target of 300 million yards. It is also doubtful how far the Ambar scheme is fulfilling its main purpose, namely, that of providing a worthwhile secondary occupation to the village folk. It might, therefore, be assumed that the scope of Ambar cloth might not be expanded in the third Plan beyond what has been allotted to it in the second Plan.

"The additional production of 1,600 million yards required by the end of the third Plan, we suggest, should be allocated between the mill sector and the handloom and powerloom sectors, in the proportion of their targets for the second Plan period. The mill sector with a target of 5,200 million yards for 1961 will thus be required to produce 6,300 million yards by the end of the third Plan, and the handloom and powerloom sectors, with a target of 2,500 million yards for 1961, will be required to produce 3,300 million yards by 1966. We have, in the following paragraphs, analysed from various angles the production that might be allocated to the various sectors and it transpires that the targets arrived at through this analysis coincide with the figures that have just been suggested.

"The production on powerlooms has expanded progressively from 278 million yards in 1956 to 303 million yards in 1957 and 331 million yards in 1958. The powerloom sector, which has been allotted a target of 400 million yards by the end of the second Plan, bids fair to reach and even exceed this target and, if the special privileges now available to the small powerloom units are continued as at present, we should not be surprised if their production reaches even 500 million yards by 1961. However, there seems to be a realisation all round that the small powerloom sector is getting away with the best of both the worlds. While, on the one hand, it pays little or no taxes and is not hampered by any labour legislation, on the other, it can produce all the varieties reserved for the handloom sector. We shall, therefore, assume that the production on powerlooms will not be allowed to exceed 500 million yards in the third Plan, although, with proper vigilance, it might and should be possible to restrain production in the small powerloom units to even smaller proportions. This means that the powerloom sector, whose target for the second Plan is 400 million yards, may be given another 100 million yards for the third Plan.

Handloom and Mill Sectors

"Out of the extra 1,600 to 1,700 million yards to be produced in the third Plan, we are left with 1,500 to 1,600 million yards for being distributed between the mill sector and the handloom sector. It is not for the industry to determine how this extra production should be divided between the two sectors, and all that we can do is to consider the various possibilities as well as the advantages and disadvantages which will flow from allotting this production to one or the other sector. The very first thing which has to be considered in this connection is the policy which is likely to be adopted towards an expansion of the handloom sector. In this connection, it would be useful to turn to the Karve Committee's report published in October 1955. In paragraph 32 of the report, the Karve Committee administers a warning that measures taken during the second Plan should not put handicaps in the way of progress or planning in the future five-year periods. The Committee then goes on to say:

"The importance and relevance of this consideration may be illustrated as follows: The objective of providing additional employment may be achieved by creating special opportunities of work for large numbers of people in productive activity carried on in ways which may yield only a very small amount of net income to them. Programmes of creation of such work would then have to be supported by direct or indirect subsidies to yield a minimum level of subsistence income. In effect, this would involve relief of the unemployed through public funds with only a very small contribution being received from the fruit of their employment. Further, if this involves either bringing in new persons who are not engaged traditionally in those occupations or creating new equipments for the purpose, it would result in the employment of labour in directions where its use is patently uneconomic. In a programme of future development, this would prove a handicap, as, presumably, these resources and personnel will soon have to be withdrawn from these uses. The same reasoning applies to the extent and duration of the protection given to existing employment in means of production which have become completely obsolete or relatively very uneconomic."

"This paragraph applies fully to the handloom industry. The earning of a handloom weaver being almost on the starvation level, the employment provided by handlooms may aptly be described as one which 'yields only a very

small amount of net income.' Handloom cloth is free from excise and additional excise duties, which amounts to an indirect subsidy, and there are direct subsidies as well. Applying, therefore, the criteria of the above paragraph of the Karve Committee's report, future progress or planning of the country would be handicapped, if persons who are so far not traditionally engaged in handloom weaving are allowed to enter this fold. In other words, while the existing handloom weavers should be provided with gainful employment, care would have to be taken to see that there is no fresh accretion to the ranks of handloom weavers.

"If this conclusion arrived at from the recommendations of the Karve Committee's report is made the basis of Governmental policy towards handlooms, the target of production for the handloom sector will have to be set in such a manner that it can be achieved only with the existing handlooms and existing handloom weavers without calling for the creation of new potential. We shall, therefore, estimate how much cloth can be produced on the existing handloom equipment.

"According to the Karve Committee, a daily production of six yards *per loom* may be expected after various technical improvements are made in the existing handlooms. That Committee also suggest that employment should be provided for 300 days in a year, which means an annual production of 1,800 yards *per handloom*. There is a wide difference of opinion about the number of active handlooms. The Kanungo Committee puts this figure at 1.2 million and the Karve Committee at 2.0 million. If it is the former, the maximum possible production from handlooms will be 2,160 million yards, and if the latter, 3,600 million yards, on the assumption that technical improvement is brought about in respect of every single handloom and that all

looms work for 300 days in a year. The Chairman of the Handloom Board recently gave his estimate of the number of handlooms as 2.5 million. Be that as it may, the production of handlooms in 1958 amounted to 1,800 million yards, and the point for consideration is what should reasonably be considered the production potential of handlooms in order to give to handloom weavers full-time employment on existing handlooms. We would regard 2,500 million yards as a realistic estimate of what the handlooms can be expected to produce. As the revised target of production for handlooms for 1961 is 2,100 million yards, the additional quantum to be allotted to them for the third Plan would amount to 400 million yards. The balance of 1,100 to 1,200 million yards of additional production for the third Plan should be allotted to the mill sector.

Other Good Reasons

"Apart from the sound economic argument advanced by the Karve Committee for not allowing expansion of an occupation which requires subsidies to yield even subsistence incomes, there are other good reasons why it would be beneficial to the economy to allot more production to the mill sector than to the handloom sector. The mill cloth, we may assume, will continue to yield to the Central exchequer a revenue of round about 20 nP *per yard* in the shape of excise duty, additional excise duty, income-tax, etc. On this basis, for every 100 million yards allotted to the mill sector, the Central exchequer will derive a benefit of Rs. 2 crores. Over and above that, the consumer will also get his cloth cheaper, which means an advantage to the common man in terms of real income. If the mill sector is allotted 1,200 million yards, it means a benefit of about Rs. 24 crores to the Central exchequer and this will

BID TO CURB POWER OF LABOUR UNIONS IN THE UNITED STATES

BILL GETS APPROVAL OF LOWER HOUSE

THE growing power wielded by labour unions in the United States has been the subject of much concern and comment in that country. American public opinion, which has always opposed monopoly control of Government or the economy by any one group, whether it be labour, industry or trade, has now strongly reacted to the power excesses of and corruption in labour unions exposed by the recent Congressional investigations. In the teeth of opposition by organised labour, the U.S. House of Representatives has passed an Administration-backed Bill, known as the Landrum-Griffin Bill, which drastically curtails the power of labour unions.

Under a series of privileges and immunities conferred by legislative enactments designed to protect the interest of workers, the power of trade unions in the U.S. has expanded enormously. Consequently, from its comparatively weak position a century ago, labour has transformed itself into a very powerful body to be reckoned with. In fact, many in the U.S. feel that the power pendulum has swung the other way.

The biggest enterprises in the U.S. operate under the fierce blasts of intense competition, but trade unions thrive under virtual monopoly conditions. Thus, while the former are prohibited from concluding price-fixing agreement or otherwise trying to blunt the edge of competition under the anti-trust laws, labour unions are exempt from such legal restrictions. They are free to enter into nation-wide combinations for the purpose of fixing the price and conditions of labour.

No Longer the Under-dog

The workers in the United States no longer constitute the under-dog. In fact, they are powerful enough to hold the employers and the whole body of consumers to ransom. Membership of labour unions has increased from less than three million in 1933 to more than 17 million now. Taking into account the worker's family members, the total voting strength controlled by unions amount to 30 to 40 million. According to the estimate of the National Industrial Conference Board, the unions collect a minimum of \$620 million (about Rs. 300 crores) annually as dues. Employee pension funds run into billions. Mr. Donald R. Richberg, in his book *Labour Union Monopoly*, summed up the changed position of labour in the U.S. thus:

"Fifty years ago, the picture of the labour union as a weak, idealistic organisation of down-trodden workers, struggling against an oppressive concentration of property power, was often accurate. Any such picture of an established union today is not merely ridiculous; it is wilfully or ignorantly untruthful."

It must be noted that American public opinion is not averse to labour enjoying its due position and influence in the affairs of the nation. But there has, of late, been repeated charges against unions. One of the charges is that their powers are being misused. Labour intellectuals themselves, whose sympathies are generally with workers and their leaders, have expressed the view that the unions are taking too much from the workers. To take one instance. Prof. Kermit Eby of Chicago University, and at one time Director of Education and Research for the Congress of Industrial Organisations, one of the federating units of the A.F.L.-C.I.O., has observed: "unions are failing at the point of the strongest claim for their existence: respect for human dignity." There have also been corruption and misuse of funds. These have been brought to light by successive Congressional investigations.

Strong Public Reaction

Public opinion in the U.S. has, therefore, now crystallised strongly in favour of clipping the power wings of labour unions. And, in response to pressure from the Administration and members of both the political parties for legislation to correct abuses, the Senate passed in April last a labour reforms Bill, sponsored by Senator John F. Kennedy. The Bill attempted a compromise between the liberal and conservative views on the subject, with the result that it satisfied neither group. A fresh start was made and, after a month of debate in the Labour Committee of the House of Representatives, three different Bills emerged—the first, sponsored by Mr. Carl Elliot (Democrat), the second, sponsored jointly by Mr. Phil-Landrum (Democrat) and Mr. Robert Griffin (Republican), and

the third by Mr. John F. Shelly (Democrat). The Elliot Bill enjoyed the majority support of the Labour Committee, while the Landrum-Griffin Bill was supported by the Administration. The Shelly Bill was acceptable to labour but had little support in the House and it was, therefore, not reckoned as a serious contender for Congressional approval.

One thing common between these Bills is that all the three contain sections aimed at preventing corruption and racketeering and provisions requiring unions to make detailed financial statements. But, on many other issues, there are wide differences. The conservatives think that the Elliot Bill is much too soft on labour, while labour union leaders consider the Landrum-Griffin Bill as outrageously hard on legitimate trade unionism.

Basic Differences

The real differences between the two Bills concern boycotts and picketing. President Eisenhower lent weight to a third issue, in his broadcast talk on TV, namely, the so-called "no-man's land" problem in labour relations. The problem springs from the existence of some areas where the National Labour Relations Board (N.L.R.B.) refuses to assert federal jurisdiction because the number of workers involved is too small but where State laws do not clearly apply.

The differences in the approach of the aforesaid Bills to the main issues, have been summed up by the *New York Times* thus:

Rank-and-file rights: The Kennedy Bill and the Elliot Bill contain a broad code of union members' rights to protect the rank and file against leadership abuses. The Kennedy Bill contains criminal penalties for violations; the Elliot Bill contains

civil remedies. The Landrum-Griffin Bill, on the other hand, contains a more stringent code of rights, makes it enforceable by the Secretary of Labour or Federal courts, and provides criminal penalties for violations.

Picketing: The Kennedy and Elliot Bills bar picketing to force an employer to recognise a union if the employer has already recognised another union or if, within the preceding nine months, the union seeking to picket has lost a plant election. The Landrum-Griffin Bill would outlaw picketing for purposes of union organising, harassment of employers or pressure for union recognition unless the union could show it had considerable support among plant employees....

Secondary Boycott: The boycott, in origin and practice, for many years was accepted by society as a civil rebellion against injustice. Today's problem is a development, if not a corruption of the old-fashioned consumer boycott. It is called a "secondary boycott," because, by definition, it involves a secondary employer who is affected by strike or other economic pressure as a way of punishing the primary employer. In other words, if one union can get one (secondary) employer to stop buying materials from another (primary) employer, the primary employer may come to terms with it. The secondary employer sometimes, but not always, is an innocent victim....

The Taft-Hartley Act bars the secondary boycott but there are certain loopholes in the law. Under one such loophole, the International Brotherhood of Teamsters refuses to handle cargoes to or from firms involved in labour disputes; this is embodied in Teamster contracts as the "hot cargo" clause.

The Kennedy and Elliot Bills would outlaw the "hot cargo" clause but would not deal with other forms of secondary boycotts. The Elliot Bill also contains a safeguard for unions; it would prevent them from being penalised if they refuse to cross a picket line at a plant other than their own. The Landrum-Griffin Bill, more stringent than the others, would outlaw the "hot cargo" clause and other forms of secondary boycott. All three Bills seek to end the so-called "no-man's land" problem in labour relations. Under the Kennedy Bill the N.L.R.B. would retain jurisdiction but could cede its jurisdiction to State labour relations agencies. Under the Elliot Bill, the Board must assert its jurisdiction in all areas where State laws do not apply.

The contest between the sponsors of the

How banking helps the COCONUT OIL INDUSTRY

India ranks second among the coconut growing countries of the world. During the Second Five Year Plan, the Coconut Oil Industry, which is almost exclusively South Indian, has to fulfil a target of 210,000 tons!

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the industry.

We at Palai are proud that so many leading coconut oil producers of South India employ the complete banking service we offer.

U.S. INVESTMENT IN EUROPE CONTINENTAL COUNTRIES PREFERRED TO U.K.

[In the context of India's need for foreign private capital, this article, prepared by the Economic Research Department of the Chase Manhattan Bank and published in its latest Report on Western Europe, will be found interesting by our readers. In it, the authors have brought out the factors that attract U.S. private capital to Western Europe and the prospects for this capital movement, following the formation of the Common Market. It will be noted that total U.S. investment is significantly higher in Britain than in any other European country. Within the Common Market area, both Holland and Belgium have attracted the most American capital relative to their size. By industry, over half of U.S. invested capital in Western Europe is in manufacturing industries (mainly machinery, autos and chemicals). Almost 30 per cent. is in petroleum, the balance in trade, mining, public utilities, finance and other industries. There are, however, substantial differences by country. Britain has relatively more investments in manufacturing. Holland has more in oil. Italy has more in both oil and other non-manufacturing industries. It will also be noted that the main reasons for U.S. capital preferring Continental countries to the U.K. is that, in respect of taxes, labour, raw material costs, growth prospects, tariff structure and geography, the situation in these countries is more favourable than in the U.K. The conditions provided by Italy, Holland and Belgium are very tempting and deserve to be carefully studied in this country, so that it may know what more could and needs to be done for attracting foreign capital.—Ed.]

IN less than ten years, U.S. industry has almost trebled its investment in Western Europe. This is so-called "direct investment," representing both new capital and reinvested profits of U.S. companies operating in the area. In 1950, total investment in Europe was \$1.7 billion. It is now an estimated \$4.5 billion—and growing even more rapidly under the impact of the European Common Market.

There have recently been a number of well-publicised moves of U.S. industry in Western Europe. Du Pont, for example, announced in late 1958 that it would set up plants in both Holland and Belgium. Westinghouse International has concluded several agreements with French firms in the nuclear energy field. The Container Corporation of America made two recent moves in Germany. Such steps—and there have been many more—all indicate wide-scale American participation in the first stages of the Common Market.

This new interest in the European market prompts several questions. For example:

How important are U.S. investments in Europe?

Will the Common Market change the established pattern of investment?

Which countries and which industries are attracting U.S. Capital?

Behind the Figures

Measured by some yardsticks, U.S. investment in Western Europe does not look very significant. It is, for example, less than half of the U.S. capital invested in either Canada or Latin America. And the annual flow of American capital to Europe—recently some \$400 million a year—is only about 1 per cent. of the total amount invested each year in the European economy and is less than 1 per cent. of domestic investment in the U.S.

These comparisons overlook some basic facts about U.S. investments in Europe. In the past, such investment has been largely concentrated in one country (Britain), confined to a few industries, and pretty much a large company affair.

As it now stands, Britain has almost half of all U.S. capital invested in Western Europe. Almost 85 per cent. of this is in oil and manufacturing industries (autos, chemicals, machinery). And the ten largest U.S. companies in the U.K. account for almost two-thirds of such capital. This same concentration holds true on the Continent. In Holland, 56 per cent. of all U.S. investment is in oil. Just three U.S. companies account for close to half of American investments in Germany.

Put in this framework, it can be seen that American capital is already more important than the figures suggest. Subsidiaries of Standard Oil of New Jersey, Ford and General Motors are among Germany's largest companies. A G.M. subsidiary is France's largest producer of refrigerators. In the U.K., the 400 or so U.S. and Anglo-American firms account for over 10 per cent. of all British manufacturing exports.

This has been the post-war pattern of American investment in Europe—highly concentrated by country, by industry and by company. Now, under the impact of the Common Market and the accelerated flow of U.S. capital to Europe, this pattern is gradually changing.

The New Pattern

Over the long run, the U.K. can be expected to lose its "lion's share" of American capital in Western Europe. Britain alone now has more U.S. investment than the six Common Market countries (Belgium, France, Germany, Italy,

Luxembourg and the Netherlands) combined. U.S. investments in the U.K. will continue to expand, of course, but investments will be expanding faster on the Continent. Actually this trend had started to develop gradually before the Common Market. From 1950 to 1957, U.S. investment in the Common Market area increased 145 per cent.—compared to 124 per cent. in the U.K.

This long-term shift is not alone due to the uncertainties surrounding Britain's relationship to the Common Market. It is the much more basic fact that growth in the six Common Market countries has been substantially higher than in the U.K. If this trend continues, relatively more capital will flow to the Continent. Just the idea of the Common Market has dramatised the growth potential of the wider "European" market, as opposed to any single national market.

The net result is that more and more U.S. companies are moving on to the Continent. They include U.S. firms in the chemical, rubber and machinery fields, many of whom in the past considered the U.K. as the main base of their European operations. And they include many U.S. firms who are making their first venture into the European market.

Another change under way is in the means of financing European ventures. In the post-war period, most of the increase in U.S. investment in Europe came from reinvested profits of large wholly-owned subsidiaries. The current trend is towards more new capital from the U.S., and more joint ventures with foreign firms. In addition, there is more diversification in U.S. investment. In the U.K., there is a new interest in electronics and atomic energy by American companies. In Italy the activities of U.S. business are expanding beyond oil and chemicals into appliances, food processing and light metal goods. In the Benelux area the new U.S. ventures include machine tools, construction and special fields in engineering. Medium-sized and smaller companies are important in all these industries within the U.S.—many of them are beginning to invest in Europe.

No Losers in Common Market

One of the interesting facts about the flow of American capital to the Common Market areas is that all countries are sharing in it. This is important since it supports the central idea of the Common Market that all of its members will gain over the long run.

Take Italy, for example. In terms of U.S. investment per capita, she has always ranked behind her Common Market neighbours. Recently, Italy has attracted U.S. capital faster than any other country. In 1958, some \$173 million of private foreign capital went into Italy—almost half of which was of U.S. origin. Much of this is based on Italy's potential gains under the Common Market. There is little doubt that the first rank of Italian industry—companies such as Fiat in autos, Montecatini in chemicals, Olivetti in office machinery—will do well in a

Source: U.S. Department of Commerce and The Chase Manhattan Bank.

large European market. Many U.S. firms see equal opportunities—based on Italy's large pool of low cost labour, a rapid rate of industrialisation and special tax incentives in the underdeveloped south of Italy.

Meanwhile the other Common Market countries are also attracting U.S. investments. In France, the plus factors for American companies have always been a rich home market, close ties with French overseas markets, skilled labour and a rapid rate of industrial growth. Most of the post-war growth in American investments in France has come from reinvested capital of well-established U.S. subsidiaries. Indications are that more new capital will be moving into France in the next few years—attracted in part by the new financial stability which seems to be emerging after the 1959 reforms.

Holland has attracted U.S. firms for a variety of reasons—geographical location shipping and excellent banking facilities. Dutch labour costs are relatively low and corporate taxes are moderate, particularly with the accelerated depreciation and special investment deductions that are available for foreign companies. Also, the Dutch authorities have actively encouraged U.S. investments. In 1958, some 23 U.S. companies set up new branches in the Netherlands, compared to an annual average of seven in the three years 1955-57.

Belgium has vied successfully with the Netherlands in attracting American capital. In 1958, it was a case of matching the Dutch virtually company for company, since 24 U.S. firms moved into Belgium. As a country, Belgium offers highly skilled labour, a high level of productivity, and good trade, technical and banking facilities. Belgium has also been strongly oriented towards private enterprise (no sector of Belgian industry has ever been nationalised). Tax laws are favourable, particularly for growth companies that are planning to finance expansion through reinvested profits.

In Germany, the advantages are a booming economy in which technological advances have been rapid, strong export markets and a fully convertible currency. German tax legislation is extremely favourable for companies planning to pay out large dividends—since the tax is only 15 per cent. on distributed earnings.

These are just a few of the factors which are influencing the location of American investments in the Common Market area. Needless to say, there are important differences in the economic advantages offered by each country. However, under the economic integration and "harmonisation" envisioned in the Common Market, some of these will disappear over the long run. In fact, a good case can be made that the basic factors taken together—taxes, labour and raw material costs, growth rates, existing tariff structure, geography, attitudes towards foreign investment—already tend to balance out in the six countries. Because of this, it is quite probable that no one Common Market country will have a marked advantage over the others in attracting American capital.

Future Significance

In the move towards economic integration of these six countries, U.S. investment can play an important role. Under the Common Market, Europe's industrial structure is already changing. European companies are merging into larger units—often with American partners.

In this process, one of the major contributions of American capital, as it moves into the Common Market, will be the managerial and technical skills that go with it. Over many years, U.S. industry has developed techniques which up to now have been suitable only for the large American market. Now these are being transplanted to Europe.

Thus, the rise in living standards envisioned in the Common Market will include a good dose of American "know-how," mass production, even products developed by U.S. companies. And competition from U.S. companies will play a role in spurring the growth of effective competition inside Europe. As such, it is not just a case of U.S. investment being attracted to the Common Market and Western Europe. Such investment can also make a significant contribution to the success of the Common Market and to future European growth and prosperity.

MANUFACTURE OF LOW-PRICED CAR AUTOMOBILE COMMITTEE EXAMINES PROSPECTS

THE search for a low-priced car is proving even more of a will-o'-the-wisp than had been feared before. The Automobile Committee (Chairman: Mr. L. K. Jha), which is now engaged in investigating, among other issues, the prospects for producing a low-cost vehicle, is faced with evidence which leaves no one in doubt that the day is far off when a Rs. 5,000-7,000 car can be seen on the road. This must hurt the industrial pride of India, considering that few industries in this country commenced their career with a greater appeal to popular imagination than the automobile industry. A low-priced car, within the means of the middle-income groups, has for long remained a tantalising objective. The more one approaches it, the more it recedes. The result is that it remains where it was—a distant possibility rather than something within the realm of practical economy.

The history of automobile industry is a story of missed opportunities, shortsighted policies and thoughtless misadventures. But nothing has perhaps contributed more to its misfortunes than the Central and State Governments' inability to reconcile themselves to a lower level of taxation on the motor vehicle and petrol. The motor car has invariably been the red rag to the Indian socialist bull. An important consequence of this attitude has been that, in Parliament and the State Legislatures, all decisions affecting the fortunes of the industry or the owners of motor cars are loudly acclaimed as great socialist measures. This has intensified the problem of the restricted market which, in turn, has prevented the industry from utilising mass-production methods which alone can serve to reduce costs. India now presents a depressing contrast to other industrial countries. It faces a restricted market, whereas other automobile manufacturing countries, in an effort to meet a rising demand, are scrapping old plants and production methods, in order to replace them by technologically advanced plant and automation techniques.

Terms of Reference

The Automobile Committee's present task is, of course, much wider than the search for a low-priced car, though it is the latter aspect of its investigations that has attracted wide notice in its public inquiries. The principal terms of the Committee's terms of reference are:

(1) to review the progress of the automobile and ancillary industries and recommend measures to increase the indigenous content of the different vehicles in the shortest time, keeping in view the targets and schedules envisaged in 1956, when the manufacturing programmes of the different producers were approved;

(2) to recommend measures to be taken to reduce the cost to the consumer of different vehicles (car, jeep and truck) under manufacture by the automobile industry and suggest the most appropriate pattern of organisation for the future expansion of the industry to ensure low-cost production;

(3) to examine the feasibility of producing a low-cost passenger car within the price range Rs. 5,000-7,000, including within the scope of such examination not only schemes previously presented to Government, but also other models of cars that have been developed in different countries and suggest ways and means of manufacturing such a car in the country;

(4) to recommend targets of production of different types of vehicles for the third Five-year Plan; and

(5) to indicate the financial implications, including foreign exchange, and development programmes that might be suggested under (1), (2) and (3) mentioned above.

In view of the great importance of the automobile industry to national economy, the Government might have been well advised to have formed a more broad-based committee. Since it may not be possible to do so now, the least the Government should do is to provide sufficient facilities for the Committee to make a good job of its task and, if necessary, extend the time for submission of its report. The Committee must go into the causes which impede a rapid increase in the output of automobiles. It may be mentioned here that it is estimated that production this year is likely to reach 34,500 vehicles (13,000 cars, 5,500 jeeps and 16,000 trucks), as against 25,631 vehicles (8,113 cars, 4,118 jeeps and 13,400 trucks) in 1958 and 31,735 vehicles (12,171 cars, 3,899 jeeps and 15,665 trucks) in 1957. The types of vehicles, as is well known, have been rationalised to three passenger cars, three medium type trucks, one

heavy truck, one jeep and one light truck. Cars: Standard Ten; Fiat 1,100; Hindustan Ambassador/Landmaster; trucks: light (1 ton) Dodge (petrol and diesel), medium (3-5 tons) Dodge (petrol); Mercedes-Benz (diesel) and Bedford; heavy: (5 tons and above) Leyland Comet, Tiger/Titan, and jeeps: Willy's jeeps. Production of vehicles is still far below current demand and very much below estimates of prospective demand, which, according to the Tariff Commission, is likely to reach 65,000 vehicles by 1960-61 (20,000 cars, 40,000 commercial vehicles and 5,000 jeep type vehicles). It is not clear whether this estimate takes into account any backlogs in demand that are likely to persist by 1960-61.

DKW Car

An important development in the sphere of automobile production is the light car project of the Tata Locomotive and Engineering Company, Ltd. It would appear that the Company has submitted to the Committee a detailed project for the manufacture under licence of a small German car of advanced design. The Company's foreign collaborators, Messrs. Daimler-Benz, it is stated, have acquired a controlling interest in Messrs. Auto-Union G.m.b.H., the makers of the well-known DKW light car. Messrs. Auto-Union have agreed to licence T.E.L.Co. for the manufacture of the car at Jamshedpur. The project, which is based on an output of 12,000 vehicles per year, will involve a capital expenditure of Rs. 14 crores (inclusive of housing facilities) over a period of four years. The car is likely to sell at Rs. 6,950, ex-factory. The Chairman, Mr. J. R. D. Tata, has expressed his confidence that "for a car of such high quality, performance and sales appeal, there would be no difficulty in disposing of the entire output."

While the above project is still in the blueprint stage, the Automobile Committee is engaged in collecting evidence as to whether a low-priced car is within the realm of possibility. The Committee is also engaged in the study of the other aspects of the automobile industry, covered by its terms of reference. Three independent studies, according to the Chairman, are now in progress. First, a team of cost accountants is examining the cost structure of the industry. Secondly, a technical sub-committee is assessing the progress as well as the problems of the industry on the technical side. Thirdly, a study group is examining the problem of future demands for automobiles during the third Five-year Plan. As regards the problem of producing a low-priced car, the Committee, at its sitting in Madras, was told that the present set of production of models was unsuitable for the manufacture of cars at a low cost. Further, the witnesses urged the creation of a suitable climate in the country by giving relief in taxation and making available raw materials at reasonable prices. At its sitting in Bombay, the evidence led before the Committee was to the effect that a people's car in the price range of Rs. 5,000-6,000 could not be produced in the absence of a widespread ancillary industry, good roads and cheap rail freight for transporting

vehicles. It was pointed out to the Committee that the freezing of models might be helpful in reducing costs of production, provided such a measure did not hamper the progress of the industry.

In assessing the problem of producing the low-priced car, it is well to bear in mind that, in the early stages of automobile manufacture, the understandable anxiety to maximise indigenous content may conflict with the objective of low-cost production. It must be said to the credit of automobile manufacturers that, by and large, they have sought to increase the indigenous content of their vehicles. The break-down of domestic content of different automobiles—arrived at by comparing the c.i.f. price of imported components with ex-factory cost—is: Standard Ten 49.4 per cent., Fiat 1100 56.6 per cent., Hindustan Ambassador 73.4 per cent., jeeps 66.1 per cent., Dodge (3-ton) 62.0 per cent., Mercedes-Benz 64.4 per cent., and Leyland Comet 52.0 per cent. It is believed that, by the end of the second Five-year Plan, the indigenous content of the cars and vehicles will be raised to 75-85 per cent. on an average. A wide-spread ancillary industry—a complete automobile is built up of as many as 4,000 to 5,000 components—specialising in the production of one or more components could, of course, serve to reduce production costs. In the West, an automobile manufacturer produces only 35 to 45 per cent. of the total components he needs and buys the rest from the ancillary industry. In India, there are 44 units engaged in the production of such components as piston assembly, cylinder liners, thin-wall bearings, valves, fuel injection equipment, radiators, brake linings, leaf springs and spark plugs. The Automobile Committee will do well to investigate whether there is scope for reduction in manufacturing costs by the units of the ancillary industry.

Lower Prices

The Committee could, with advantage, examine whether the models now being produced cannot themselves be sold at lower prices. This might be a more practicable alternative to producing a new small-sized car which might not fit into the context of the unsatisfactory nature of India's roads, the relatively large size of an average Indian family, and the scarcity of resources. Whichever way the matter is looked at, it should be clear that the essence of the problem of producing a low-priced car lies in enlarging the market for cars. The vicious circle of a limited market and high-priced cars must be broken. The one point where it should be broken is at the production side. Economy in production costs by streamlining production, increasing man-hour productivity and providing facilities for ancillary industry should receive high priority. The other point at which it should be broken is the consumer end. By appropriate relief in taxation, the cost of car as well as maintenance costs could be reduced. This would serve to enlarge the market which, in its turn, could facilitate larger production and lower costs.

JET AGE

It has been known for sometime now that the jet age in aviation is here to stay. By its sheer speed, the jet plane is bound to make a compelling appeal to the world's air travellers. A typical jet plane can travel at a speed of nearly 600 miles per hour, as against the conventional planes' 350 m.p.h. It can thus complete the journey round the world in about 32 hours, or 2 hours less than day's scheduled flying time, from New York to Bombay. The economics of jet operation has, however, remained a subject of some speculation. As against its speed and larger carrying capacity, which are the jet's chief advantages, must be set its higher cost, which is almost double that of an ordinary plane.

Available evidence, however, seems to suggest that the jet plane is worth its higher cost. Thus, according to the Air Correspondent of the *Financial Times*, the TWA will shortly announce operations inside the U.S. He also cites the evidence of the Pan American's Atlantic Division operations in the first three months of this year. During this time, the airline was running regular daily jet flights between the U.S. and Europe. The Division sustained a loss of only \$3.1 million, as against \$4.9 million in the same period of 1958. A good deal of this improvement, according to the correspondent, is "attributable to jet travel, with types."

It is reasonable to expect that, as jet traffic increases and more and more airlines equip them-selves with jet planes, the costs of operation as well as of equipment will decline. Already, the B.O.A.C.'s Comets and Pan American's Boeing 707's began Atlantic operations last autumn, some 500,000 people are estimated to have flown in jet planes on various routes so far. Of these, nearly

(Continued on page 358)

NEW PRODUCTS AND PROCESSES

Nylon from Sugarcane Waste

AN important material used in the production of nylon—the popular textile fabric of the fashionable city folk—is sugarcane waste which the village people can spare in large quantities after extracting juice.

Sugarcane waste, called bagasse, consists of fibrous and pithy materials left after the extraction of juice. Although it is used as a fuel in all sugar factories for producing steam to work engines and pumps and also for boiling the juice, large surpluses develop, particularly in Uttar Pradesh and Bihar, as a result of increased efficiency of boilers and the development of special varieties of sugarcane.

Bagasse also contains pentosans and Lignins, besides fibrous material. On being treated with an acid under special temperature conditions, Pentosans yields a light yellow oily liquid called fufural. This forms the starting material for production of nylon.

Besides being used in the manufacture of nylon, fufural has wide industrial applications. It is used in petroleum industry as a solvent for refining high grade lubricating oils and in the manufacture of synthetic resins.

The cost of production of fufural, however, is found to be high on account of the costly acid which is used for treating bagasse to yield fufural. The National Sugar Institute, Kanpur, is, therefore, working on a different process of the manufacture of fufural which would eliminate the use of this costly acid. The results achieved so far are very encouraging.

Since bagasse can be obtained in large quantities, there is large scope for the manufacture of fufural at a low cost which will result in increased production of nylon. This could enable the country to meet the home demand and also have an exportable surplus.

Adulteration Test for Ghee

The Central Food Technological Research Institute, Mysore, has worked out two simple modifications of the Baudouin test which is applied for detecting adulteration of ghee with hydrogenated vegetable oil, known as vanaspati. These modifications are intended to overcome one big drawback which made it difficult for the layman to employ the test.

Under the Baudouin test, an alcoholic solution of fufural is added to the sample under test in the presence of hydrochloric acid. If the ghee is adulterated, a pink colour comes over the sample.

However, fufural is not stable under ordinary conditions of storage and it is liable to undergo discoloration. It has, therefore, to be distilled afresh before use. With the modifications worked out at the Mysore Institute, it will now be possible to get the amounts of fufural and hydrochloric acid required for a single test in separate sealed

glass ampoules. In this way, the properties of fufural can be preserved for at least three months.

The second modification involves the use of hydrofuramide powder in place of fufural. This powder, if protected against light and moisture, can be preserved for three months and fufural can be obtained from it instantaneously on treatment with hydrochloric acid. Under the modified system, the test can be performed on ten drops of ghee and adulteration to the extent of 10 per cent. or more with vanaspati can be detected.

Stasol

A new product of considerable importance to the textile industry is claimed to have been developed by Messrs. Arshaws, 7/10, Horniman Circle, Bombay-1. Styled Stasol, it is a silicate-free stabiliser for hydrogen peroxide bleach bath. Sodium silicate is universally used as a stabiliser in peroxide bleach bath and today the long-felt demand for non-silicate stabilisers has been adequately met by products like Stasol. Insoluble silicate salts are formed in hydrogen peroxide bleach bath when sodium silicate is used and these are deposited in the form of scales on the bleaching equipment, these scales affect adversely the metallic surface and entail considerable labour and loss of time in descaling; as also insoluble silicates are carried over by the bleached material resulting in higher ash content and harsh feel to the fabric. Stasol, its makers claim, is free from all these drawbacks common to sodium silicate. Since Stasol works at a lower pH concentration there would be little chance of the formation of oxy- and hydrocellulose. Lower alkalinity with Stasol in the bleached bath, coloured goods, wool, silk and other artificial fibres could be bleached with hydrogen peroxide more conveniently. Furthermore, Stasol has a remarkable property of sequestering, that disperses any metallic particles present in bleach bath, thus preventing rapid oxidation of bleach bath and the formation of oxy- and hydrocelluloses on the bleached fabric. In fine, Stasol is said to have scored on all points as a stabiliser for peroxide bleach bath and it can replace the conventional sodium silicate with advantage.

Spectrometer

A British firm, the Metropolitan-Vickers Electrical Company, Ltd., has manufactured the first production model of a new mass spectrometer—an instrument designed specifically for measuring minute impurities in solid substances by a technique known as spark ionization. The instruments are being produced in the first instance for Britain's National Physical Laboratory, the Services Electronics Research Laboratory, and the Atomic Energy Authority. Orders have also been received from France and the United States. The spectrometer is claimed to be of invaluable use in fields of science and engineering where it is essential to use materials of the highest purity.

such as in nuclear engineering, semi-conductor research and manufacture, and in the development of non-ferrous metals and alloys.

Radio Transmitter

Another British firm, Marconi's Wireless Telegraph Company, Ltd., has announced that two of its engineers have developed a high-frequency (short-wave) radio communication transmitter of revolutionary design. It is claimed that it is the only equipment of its type which can simultaneously radiate two or more completely independent transmissions on entirely different wavelengths.

The secret of the new transmitter is a device known as a distributed amplifier. This, unlike the conventional types, dispenses with tuning controls entirely. The first production equipment to embody the new concepts—the one-kilowatt Marconi HS-113 transmitter—is now on offer to world markets.

Plastic Rope

A new plastic rope made from polypropylene is undergoing tests in Britain on a supertanker. Tests carried out earlier showed that a 7-inch circumference hawser could safely hold on its own a smaller tanker in winds which were so strong that two tugs could not hold the tanker in check. The rope, its makers claim, not only has high strength, but also resistance to rot and mildew. It is waterproof, and has good resistance to chemical attack. It is also very light—a manila rope weighs about two and a half times as much as a polypropylene rope of equivalent strength.

Food for Space Travellers

Food for space travellers poses one of the difficult problems facing future space flights. Scientists at the Massachusetts Institute of Technology are conducting research in the hope of finding the answer. If three men were to take a "short" space journey lasting one year, they would need at least five tons of food, oxygen and water if these substances were used in their natural form. A trip to Mars would take three years and the three travellers would need 15 tons of food, oxygen and water. Dr. Bernard E. Proctor, Head of M.I.T.'s Department of Food Technology, concludes that food for space travellers must be greatly reduced in size and weight and yet retain its high energy. How this can be done in the most effective manner is as yet unknown.

Ceramic Magnets

The Institute of Automobile Electrical Equipment, U.S.S.R., has produced a ceramic magnet which is pressed from iron oxide and barium oxide powders, caked in an electric furnace and then placed in a magnetic field. On an experimental basis 100,000 ceramic magnets have been produced. Mass production will be launched at two factories. Substitution of ceramic magnets for the conventional magnets consisting of nickel and cobalt alloys, it is said, will result in an economy of millions of roubles worth of the expensive metals annually.

CONTROLS ON GENERAL INSURANCE HAVE THEY SERVED THE PURPOSE?

By "Arby"

GENERAL insurance business has been passing through a very trying period during the last decade. Matters have been very unsettled, so much so that over 25 companies have gone out of existence, due to some reason or other, in the course of last four years. The way in which general insurance functions during the next couple of years will, in all probability, determine its future, that is, whether it will continue in its present shape or whether the Government will unwillingly be compelled to take it over. The most important problem which the Controller of Insurance and the trade are trying to solve is the practice of granting illegal rebates to the public. It is only due to this problem that the other difficulties confronting the insurers today have been created and, if somehow this complex point is got round, the other difficulties will automatically vanish.

In order to understand the reasons as to why this sorry state of affairs exists, it is necessary to recall briefly the past history of legislation on the insurance business in India.

Prior to 1938, there were very few statutory rules or limitations regulating general insurance business. There were some restrictions, but they were evolved by the various associations themselves and were generally of a voluntary nature. All the commission payments made were recorded correctly in the account books of the companies.

The introduction of the Insurance Act, 1938, brought into force many important and far-reaching provisions. They related to the statutory deposits, prohibition of rebates, limitation of commission to agents, licensing of agents and submission of periodical returns to the Controller of Insurance.

It was only in 1938 that a statutory control on payment of commission was brought into force. Had there been no limitation, the problem of rebating that has to be faced today would not have cropped up at all. All the legislation passed after that date has a bearing on this serious point.

Restriction on Expenses

The next significant amendment to the Insurance Act was made in the year 1950. The underlying principle of the amended Insurance Act was greater control on, and supervision of, the working of insurance companies. The main provision relating to general insurance business was the restriction placed on the amount of expenses that a company could incur as compared with the gross direct premium written by that company. This measure was mainly designed with a view to curbing rebating and thus strengthening the financial position of companies.

This regulation has, of late, been criticised by several insurance companies and a suggestion is being put forward to change this formula from gross direct premium to net premium. It has been contended that the system of basing expenses on gross direct premium has made companies to secure higher premium without caring as to whether the business canvassed is healthy or profitable. It is further stated that the companies are procuring a big block of business which they cannot easily digest.

It was evident in the year 1952 that all was not well with the insurance trade and some urgent steps were necessary to regularise the working of insurance companies. As a result of deliberations amongst the insurers and the Controller of Insurance, a voluntary Code of Conduct was started in February 1952. The Code of Conduct covered matters relating to insurance agents, inspectors, organisers, field workers, branches and some other general matters. It was also decided to limit the granting of credit to insurance agents to 90 days and also to request companies to declare to the Controller of Insurance their fictitious assets, so as to clean up their balance-sheets. Administrative machinery was also set up at important centres to register all appointments made by the insurers in terms of the Code of Conduct and to examine the complaints received regarding the diversion of business by one insurer to another by using unfair means.

The insuring public was also informed of the impending changes and it was felt that some solution has at last been found to put the insurance industry on sounder lines, but, alas, as ever, the Indian habit of not trusting the other came into play, with the result that

within a few months of the introduction of the Code of Conduct, rebating came back with a vengeance. The insuring public was thus able to see that whatever the measures the companies or the Government took, rebating would continue. Some of the companies, which had seriously tried to adhere to the provisions of the Code, found that, by strictly adhering to the regulations, they lost a good part of their business to other companies which had not changed their practice of offering higher commissions. As a result, they were forced to change their policies and went back to their old method of working.

After the introduction of the first Code of Conduct in 1952, several important changes were made, all half-heartedly, to do away with the evil of rebating. The Controller of Insurance was also seriously trying to solve this problem. It was felt by him that the rates prevailing in India in the fire department were high and that it was only because of this that the companies could show profits, in spite of paying heavy rebates to the public. Accordingly, in the year 1955, the fire rates were reduced to some extent and it was stated that, after a lapse of another three years, some further reduction in rates would follow. The reduction in rates did have some temporary effect on the question of rebating, but, after a lapse of a few months, matters were back to their original state.

New Code

The unsettled state of affairs continued till the end of 1956, when a new and entirely changed Code of Conduct was introduced early in 1957. A lot of propaganda was carried out informing the public as well as the trade of the drastic nature of measures contemplated in the new Code of Conduct. The public was very reluctant to take matters seriously in view of their sad experience in the past.

The new Code is on a voluntary basis and does not have any legal backing behind it. The provisions contained in it were of a radical nature and as such a lot was expected from it. Unfortunately, it contained some provisions, which were impracticable and hurriedly drawn up. The mere fact that 29 circulars have had to be issued clarifying and changing the original Code during the 28 months of its existence will prove this point.

The most important provisions of the Code of Conduct relate to:

1. Collection of premiums before assumption of risks.
2. Maintaining certain minimum departmental reserves.
3. Registration of field workers and their attaining certain educational standards.
4. Having certain minimum margin between their assets and liabilities called minimum security margin.
5. Allowing the Controller of Insurance to carry out an inspection of all insurers as often and at such intervals as he deems fit.

6. Maintenance of records by the insurers in such a manner that information required by the Administrative Machinery could be readily available.

The most outstanding and beneficial provision of the Code of Conduct which has considerably strengthened the financial position of the insurers relates to the collection of premium before the assumption of risk. For no company can accept any cover note issued by the agent, unless and until it is accompanied by the relative premium. The agent is also forbidden to issue a cover note, unless and until he collects the premium immediately. The agent must send the premium so collected within 24 hours. Relaxation in certain cases where premiums cannot be ascertained immediately are allowed.

It was at first felt, when this clause was being discussed, that it would be impossible to follow it strictly and that insurers would find out some way of circumventing this regulation also. However, it must be said to the credit of insurers that, for once, they have tried to follow the conditions laid down strictly. The main reason for this achievement is that this measure is entirely to their benefit. They stand to gain as money is in their hands immediately the cover note is issued.

Balance-sheets of insurance companies prior to 1957 contained two items, the agents' balances, and outstanding premiums, which amounted to lakhs. These items were shown on the assets side of the balance-sheet and those persons or shareholders who did not understand the real position felt that amounts shown under these heads must definitely be of a realisable nature. But it is a well-known fact that one-third, or, in some cases, even half, of such items could not be collected and, in due course, would have to be written off as bad debts. Before the introduction of this regulation, the companies had a hectic time in collecting the premiums from the insured or the agents. Companies had to employ permanently some members of the staff only for doing this work. It was a well-known fact that, in certain cases, the insured refused to pay premiums for six to nine months.

After the introduction of the new provision, however, matters changed considerably, so much so that companies had considerable surplus money left with them for investment. They were able to collect premiums immediately and invest it in shares and thus earn more income and possibly their assets appreciated in value. Gradually all the old outstandings were collected or written off, so that, today, at least there are no fictitious assets left in most of the companies' balance-sheets.

Another beneficial measure contained in the Code of Conduct is the one requiring the companies compulsorily to increase their unexpired risk reserves, starting from December 1957, by 2 per cent. every year in the fire and miscellaneous departments so as to raise it to 50 per cent. in due course. Similarly, in the marine department, the reserve was to be increased by 2 per cent. every year to make it 100 per cent. This has forced the companies to build up their reserves and has thus strengthened their financial position. The 2 per cent. required to be increased annually in the fire and miscellaneous departments is very small and should have in fact been at least 5 per cent. with a limit upto 75 per cent. This would have enabled the companies to show lesser profits but would have helped them to increase their reserves substantially.

Drawbacks

The Code of Conduct contains, at the same time, some clauses which have not been beneficial to the companies and have in fact meant considerable increase in their expenses. The most important provision which comes in this category relates to the registration of organisers, inspectors and field workers, that is, branch managers, branch superintendents and other persons whose duty mainly lies in the procurement of business. These appointments are to be registered with the Administrative Machinery in their respective regions, namely, Madras, Calcutta, Bombay and Delhi. This was done in order to find out as to whether the persons appointed by the companies were actually procuring business or represented mere appointments on paper. It is a well-known fact that such appointments form one of the important sources by which the insurers are able to pass on rebates to clients. Keeping this in mind, one would naturally feel that the idea that such field appointments should be registered and screened would be a step in the right direction towards curbing rebating. Unfortunately, the

users of this regulation did not envisage the task that the Administrative Machinery would have to handle. The Administrative Machinery of various regions should have had a trained and experienced staff at their disposal. It is obvious that this is not the case, as could be clear from the fact that, during the years of their existence, the authorities concerned have not been able to even make any significant beginning. They have not been able to visit most of the areas where the branches and inspectors are numerous. At present, all the energy of controllers is concentrated in the cities in which their headquarters are situated. The cost of the Administrative Machinery, which has not proved very useful, ultimately falls on the insurers themselves and thus increases their expenses.

The Code of Conduct requires all the field workers to appear in an examination conducted by the Federation of Insurance Institutes. The Federation deserves high praise for the practical manner in which it has conducted the examinations. In order to minimise the language difficulty, only such questions are being asked as do not need any elaborate answers; at the same time, the answers required are such as to enable the examiners to know whether the student knows something about insurance or not. The position has, as a result, improved in the sense that the companies nowadays appoint only those persons who can pass the examinations. However, there is an absurdity in these regulations also which would be apparent from the fact that even branch managers of companies who usually have years of experience are required to sit for the same examination for which new trainees of nine months also appear.

The question of abolishing the system of inspectors and organisers is under serious study and as such it is felt that, in all probability, it may be done away with.

Another important clause of the Code of Conduct relates to the necessity of insurers having an excess of assets over liabilities by a certain margin calculated according to a set formula. Insurers have been given time up to December 1959, to fall in line with the rules laid down on this subject. Those companies which are not able to comply with the "solvency margin" will have to close down. The formula laid down is, however, quite liberal and as such practically all companies have been able to fulfil it. Those companies which are not able to do so will have to close down sooner or later.

Costly Failure

The Code of Conduct has given the Controller of Insurance wide powers, inasmuch as he is allowed to inspect or get inspected the account books of the companies as often and at such intervals as he finds necessary. The purpose of this regulation is to find out whether the business is being conducted in accordance with law, Tariff Regulations and directives of the Controller of Insurance. Furthermore, this clause would enable the Controller of Insurance to find out if an appropriate value is placed by the companies on their assets and liabilities. In 1958, a beginning was made in this direction and almost all the companies were investigated, albeit by the auditors appointed by the Executive Committee. These auditors inspected the books of the companies and tried to find out whether the business was being conducted in accordance with the provisions of the Code of Conduct. Unfortunately, the method of inspection followed by these Government auditors were not uniform, with the result that, in certain cases, the auditors took about three months to complete their investigations, while, in other cases, a time of not more than 10 days was taken. The results of these investigations, it is learnt, have not been very useful and it is understood that these inspections have been dropped altogether. Besides, the inspections carried out have proved very costly. The insurers have had to pay very high fees to the Executive Committee for this purpose.

The Code of Conduct also lays down elaborate conditions regarding the information that should be readily available from their books of accounts. The information required is of such a nature that companies have had to change their system of accounting entirely. New stationery had to be printed and the staff had to be trained to keep the records in a particular manner. Some information required was of such a nature that insurers could not gather it in spite of their willingness to carry out the rules laid down for the purpose. It is a moot question whether the enormous expenditure incurred for this purpose has been useful or not. Matters would have been much easier, if a set of forms had been devised, so that all the insurers could have followed it uniformly.

when tomorrow comes...

For him a spade is not yet a spade.

The telegraph wires hum a strange tune, the

distant drone of a plane means faraway places, mystery,

And imitating father is a new kind of play.

When tomorrow comes, play will turn to work.

Life will take on a different purpose. A spade will be a spade, and care will be part of living.

Today's striving and effort is for the world

he will grow into, a world that offers a little more—

a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for... Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products...

Today and Tomorrow... Hindustan Lever serves the home.

SHRI RAMTIRTH YOGASHRAM, DADAR, BOMBAY 14

MINERALS IN THE BOMBAY STATE

PROSPECTS FOR DEVELOPMENT ANALYSED

THE development of minerals has received considerable attention in India in recent times. The known reserves of some of the minerals in the country is not inconsiderable. Nevertheless, the pressure of demand for minerals, such as various metallic ores, oil and some other materials of strategic importance, is fast increasing in the context of rapid industrialisation envisaged under the Five-year Plans. Besides, minerals are earners of valuable foreign exchange. Appropriately enough, the Geological Survey of India has launched country-wide surveys and exploration for minerals, although its work is much handicapped by the scarcity of technical personnel and inability to spend large financial outlays necessary for such schemes. The establishment of the Oil and Natural Gas Commission, the Atomic Energy Commission, the Hindustan Steel Corporation, the Natural Coal Development Commission, the Neyveli Lignite Corporation and the National Mineral Development Corporation, indicates the vital importance the Government attaches to the intensive development of the mining industry. The Geological Survey of India has advised the States to set up their own Directorates of Geology and Mining as it is difficult for the Centre to cope with the huge requirements of mineral activity. Many State Governments have been making earnest efforts to investigate and explore the mineral reserves in their respective regions. The Bombay State, true to its traditions as a premier industrial State, has set up a Directorate of Geology and Mining with Nagpur as headquarters, and commenced many surveys and investigations. The discovery of oil at Cambay and some other parts of Gujarat region has enhanced the position of the State as a mineral producer and opened out new vistas for industrial development.

With the reorganisation of the Bombay State, about eight districts with the richest mines of manganese, limestone and lignite, namely, Bhandara, Nagpur, Chanda, Yeotmal, Jamnagar, Rajkot, Bhavnagar and Kutch have been added to the six mineral-bearing districts in the erstwhile State, namely, Ratnagiri, Kolhapur, Baroda, Panchmahals, Banaskantha and Broach. The State exhibits practically all the geological formations from the ancient Archeans to the Recent Deposits. Out of these, Dharwars, Gondwanas, the Vindhyan, and the lateritic formations are of particular importance from the mineralogical point of view. About 90 per cent. of the manganese and iron ore of the State is mined from the Dharwars. The Gondwanas account for the whole of the coal production. About 60 per cent. of the area within the Deccan Trap bears bauxite and other minerals. The limestone deposits of the State belong to the Vindhyan and the tertiary formations. Saurashtra is said to possess gypsum. Aromatic minerals such as ilmenite and monozite are found in the Ratnagiri coast.

Manganese

Manganese ore is by far the leading mineral produced in the Bombay State. The total annual production in the State is estimated at about 500,000 tons. The ore is particularly useful in the iron and steel industry. While the low-grade ore is normally used in the blast furnace for the production of pig iron, the high-grade ore is employed in the open hearth furnaces in the manufacture of steel production of ferro-manganese. Manganese ore is also used in chemical industry for preparing various salts and chemicals such as decolouriser in glass industry. There is, it is suggested, good scope for setting up a number of ferro-manganese plants in the State, particularly in Nagpur and Bhandara districts in Vidarbha, Panchmahals district in Gujarat and, possibly, Ratnagiri district of Maharashtra. Two ferro-manganese plants, one at Kanhar and the other at Tumsar, are already being set up, which will utilise manganese and limestone available in plenty in these areas.

The Bombay State accounts for about 500,000 tons of coal per year, produced mainly in the Vidarbha region. In this region, coal occurs in a very large area in the Wardha Valley coalfield (Yeotmal and Chanda districts) and in Kamptee coalfields in Nagpur district. Some coal deposits are known to exist in Saurashtra and Kutch areas also. It has not been possible to locate metallurgical coal in the State. Nevertheless, coal is used mainly by the industry as a fuel. There are also small industries based on coal. Low temperature carbonisation of coal can produce very useful pro-

ducts such as soft coke and coal tar. Coal tar is utilised for the manufacture of a large number of products such as phenol, plastics, liquid fuels like diesel, gaseous fuels and road tar.

Iron ore is another important mineral available in the State. Most of the iron ore is smelted for producing pig iron for the manufacture of steel. We are told that Chanda district in Vidarbha and to some extent Ratnagiri district of Maharashtra possess large deposits of iron ore and are suitable for location of steel plants. The Ratnagiri iron ore could be smelted in electric furnaces, now that power will be available in plenty from the Koyna hydro-electric project.

According to 1956 figures, about 13,000 tons of bauxite are available in the State, mainly in Kolhapur district. The very large reserves available there can give good quality of bauxite which can be utilised for aluminium plant. This is all the more possible because the Koyna power is readily available nearby. Again, the extensive limestone deposits located in Vidarbha, Saurashtra and Gujarat could be utilised for setting up a large number of new cement factories in addition to the existing ones. The lime industry can also be developed in Vidarbha, Marathwada, Maharashtra, Gujarat and Saurashtra as several limestone deposits are concentrated in these places. At present, there are three cement factories at work in Saurashtra. The limestone deposits in this area can easily support another two or three factories. Similarly, it is said that a cement factory can be established somewhere in Kutch and near Rajur in Vidarbha. Industries like potteries, glass, refractories and ceramic can be established in each of the regions utilising clay deposits. As limestone and gypsum are utilised for the manufacture of fertilisers and cement, a fertiliser plant could also be established in Saurashtra and Kutch areas where sizable deposits of gypsum occur.

Discovery of Oil

Far more important to the development of industry in the State, as well as in other parts of the country, is the discovery of oil and natural gas in the Gujarat region. It is expected that the new oilfields will yield oil in commercial quantities. The Oil and Natural Gas Commission, set up by the Government of India, is engaged in the prospecting of oil in the region.

The occurrence of metallic minerals in the State affords opportunity to build up many industries based on them. Alloys of iron and other metals, such as chromium, manganese, tungsten, nickel and vanadium can be manufactured in the State, since their raw materials are available in plenty. The raw materials for titanium are also available in the State. Ratnagiri beach sand gives indication of the occurrence of ilmenite in plenty. The bauxite deposits in Kolhapur and iron ore in Vidarbha and Ratnagiri districts are also found to contain titanium.

Industries based on clay minerals can also be developed in the State, in view of the existence of their raw materials such as quartz, silicious sand and feldspar in Vidarbha, Kutch and Saurashtra. Various types of clay minerals such as kaolin, fire-clay, stoneware clays, bentonite, fuller's earth, etc., occur in various parts of the State and a number of industries like the manufacture of pottery, stoneware, tiles, bricks, fire-bricks, high alumina bricks, etc., can be set up. Natural abrasives such as flint and agate stones, garnet sand, quartz pebbles, silicious clays, etc., occur in various parts of the State and a plant to prepare abrasives could be set up.

Refractories could also be prepared out of bauxite, fire-clay, kyanite, talc, mica schists, etc., and industries to prepare these could be set up.

at suitable places. Red and yellow ochres are known to occur in various parts of Vidarbha and Maharashtra and these could be utilised for the manufacture of paints. Saurashtra had good deposits of calcite which could be utilised for preparation of whitening the chalk. Besides, Bombay State is one of the largest producers of salt in India. It is produced largely in Saurashtra, and Kolaba and Thana districts. Since salt is available in plenty and at a cheap rate, steps can be taken to set up soda ash plants.

INDIA'S FOREIGN TRADE

India's adverse balance of trade increased by Rs. 15.07 crores to Rs. 147.15 crores during the six months ended 1959, as compared with the corresponding half-year 1958. Total exports rose from Rs. 257.94 crores to Rs. 268.64 crores. At the same time, imports, too, went up but at a greater pace from Rs. 390.02 crores to Rs. 415.79 crores.

In the month of June 1959, the latest month for which figures are now available, India's exports of merchandise fell short of imports by Rs. 33.74 crores, as against Rs. 23.61 crores in the previous month and Rs. 35.81 crores in the corresponding month of 1958. Imports increased from Rs. 66.11 crores in May 1959 and Rs. 63.93 crores in June 1958 to Rs. 77.28 crores. Exports at Rs. 43.54 crores were lower by Rs. 96 lakhs, as compared with the previous month, but higher by Rs. 15.12 crores, as compared with June 1958.

The following table shows the trend of trade, month by month, during the six months ended June 1959, as compared with that in the corresponding period of 1958:

	(In crores of rupees)		
	Imports	Exports (including re-exports)	Balance of trade
1959			
January	66.58	45.34	-21.24
February	59.79	42.90	-16.89
March	65.61	47.22	-18.39
April	80.42	45.14	-35.28
May	66.11	44.50	-21.61
June	77.28	43.54	-33.74
Total	415.79	268.64	-147.15
1958			
January	66.05	54.77	-11.28
February	66.21	41.92	-24.28
March	70.58	46.68	-23.88
April	59.98	41.73	-18.25
May	63.29	44.71	-18.58
June	63.93	28.12	-35.81
Total	390.02	257.94	-132.08

DAIRY PROJECTS FOR SAURASHTRA

The Government of Bombay has approved four milk supply schemes for Saurashtra, costing Rs. 7,42,300 during 1959-60. These schemes include the establishment of a rural creamery at Junagadh, milk supply schemes at Surendranagar and Jamnagar and a project for ensuring orderly management of grass lands. An amount of Rs. 3,25,000 has been sanctioned for setting up the rural creamery at Junagadh, with the assistance of the Technical Co-operation Mission. The T.C.M. will supply the requisite machinery for the creamery. The Government of Bombay has also decided to wind-up the existing joint-stock dairy company in Junagadh, for which the former Saurashtra Government had contributed Rs. 3 lakhs, representing 60 per cent. of the share capital. The company is said to be experiencing difficulties because it could not secure the remaining 40 per cent. share capital from the public, as originally planned.

Similarly, owing to lack of public response to the participation in share capital of two dairy companies at Surendranagar and Jamnagar, sponsored by the former Saurashtra Government, it has now been decided to run them departmentally. The Government of Bombay has sanctioned Rs. 1,98,000 for the former milk supply scheme and Rs. 2,02,000 for the latter. In order to keep a check on proper and orderly utilisation of the grass lands, such as *vidis*, in Saurashtra and to ensure optimum quantity of milk from the grass lands for Government milk supply schemes, a sum of Rs. 17,300 has been sanctioned. Under this scheme, grass land inspectors will be appointed to ensure proper management of grass lands.

The export bonus scheme, implemented in Pakistan seven months ago, has produced "very good results," according to Mr. Mohammed Shoaib, Finance Minister of Pakistan. He conceded, however, that a better assessment of the working of the scheme would be possible only by the end of 1959. Speaking to the Press last week, he disclosed that certain international organisations had taken technical objection to this scheme, but Pakistan has been defending its action and hoped to uphold its position successfully.

By setting up factories all over India of such goods as were imported from abroad A. K. Industries have planted India's feet firmly on the road to adult self-sufficiency and material prosperity. The trade mark of this House is your guarantee of quality.

NATIONAL TOBACCO'S GROSS PROFIT HIGHEST SINCE 1945

MARKED RISE IN SALES—DIVIDEND RAISED

THE financial results of the National Tobacco Company of India Ltd. (Managing Agents: Messrs. B. N. Elias & Co. Private Ltd., Calcutta) for the year ended 31st December 1958 have more than justified the Directors' hopes, expressed last year, that it was reasonable to expect the results for 1958 to be "no worse than in 1957." Thus, the Company's turnover during the year under review has recorded a rise of Rs. 1.81 crore to a peak of Rs. 8.35 crores and the gross profit has gone up by Rs. 19.83 lakhs to Rs. 65.03 lakhs, the highest level touched since 1945 when it had stood at over Rs. 82 lakhs. The bulk of the increase in gross profit has been absorbed by the larger provisions for Managing Agents' remuneration, depreciation and taxation, the last mentioned item alone accounting for a rise of Rs. 9 lakhs to Rs. 27.83 lakhs. These leave a net profit of Rs. 23.21 lakhs, representing an increase of Rs. 7.28 lakhs over the year.

Almost 50 per cent. of the net profit (Rs. 11.54 lakhs to be precise) has been ploughed back to the reserves. This has been done by transferring Rs. 53,810 to the development rebate reserve, Rs. 9 lakhs to the reserve for capital expenditure and Rs. 2 lakhs to the general reserve. The total addition to the reserves may appear to be substantially lower than that (Rs. 30.74 lakhs) transferred last year, but it must be noted in this connection that the entire sum added a year ago did not come out of the profit for 1957. As much as Rs. 24 lakhs of this represented the provision for taxation no longer required and written back.

The transfer of Rs. 9 lakhs to the reserve for capital expenditure, however, requires some explanation. The Directors point out that the Company has been working to its full capacity for most of the year and the machinery and equipment require replacement due to excessive usage. In addition to replacement of worn out machinery, the Company has to keep pace with modern manufacturing techniques and this calls for frequent changes in equipment. All these require large capital expenditure. With this end in view, the Company has, in the last four years, set aside Rs. 22.50 lakhs out of its profits for this purpose.

In consonance with the rise in profit, the distribution on ordinary shares is also to be stepped up from 9 per cent. to 11 per cent. This is the second year in succession for which the dividend is being raised; last year, it was increased from 7 per cent. to 9 per cent. In recommending the higher dividend of 11 per cent., the Directors say, they have borne in mind the recent budgetary changes.

During the last few years the Company has been doing consistently well, as will be borne out by the following comparative table:

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds	8,85.10	6,58.77	5,18.64	3,98.43
Closing stocks	59.74	50.80	46.45	46.14
Raw materials consumed	1,05.82	1,73.79	1,00.49	1,23.87
Stores and spares consumed	1,63.99	1,20.26	84.91	62.55
Customs and excise duty	2,65.18	1,98.28	1,29.54	99.67
Other expenses	1,81.18	1,45.06	1,25.17	100.88

Preference	2.15	2.15	2.15	2.15
Ordinary	8.10	7.20	6.00	6.40
Carry forward	9.80	8.88	9.08	9.00

The increase in sales of the Company's cigarettes during the year under review is in consonance with the rising trend of cigarette consumption, but it was much in excess of the all-India average of 4 per cent. As in the previous year, the increase in sales was almost exclusively in "one of the most important but relatively less remunerative price categories." Despite the efforts made to increase the sales in other grades, the Company has not been able to achieve its target, due to severe competition.

Though the increased turnover during the last three years has been accompanied by the rising trend in cost of raw materials, stores and spares consumed, as well as in customs and excise duty, the profit margin, it is noteworthy,

has not been affected. On the contrary, the ratio of gross profit to sales in 1958, at 7.8 per cent., is even a shade higher than that of 7.3 per cent. in 1955. This clearly reflects an improvement in the Company's efficiency.

The abolition of sales tax on cigarettes and the imposition, instead, of an increased rate of excise duty has been welcomed by the Company, for the reason that, while it had virtually no effect on the Company's profit, it enabled it to achieve a uniform price structure throughout India. Local terminal and octroi taxes continue to be heavy, but these are being absorbed by the Company in order to keep the prices uniform.

During the year under review, the Company has been able to participate in the increased volume of exports of unmanufactured tobacco.

The Company's paid-up capital stands at Rs. 124.95 lakhs and reserves and surplus at Rs. 90.11 lakhs. Besides a debenture loan of Rs. 12 lakhs, borrowings from banks and the Managing Agents amount to Rs. 53.10 lakhs. The other current liabilities and provisions aggregate Rs. 95.87 lakhs. The gross block of the value of Rs. 130.39 lakhs has been written down to Rs. 58.95 lakhs. The current assets amount to Rs. 317.08 lakhs, of which stock-in-trade and stores alone account for Rs. 240.55 lakhs.

Towards the close of the year under review, the Company introduced the first machine-made filter-tipped cigarettes to be manufactured in India. The Directors are confident that the sales of filter-tipped cigarettes in India will assume greater importance in the years to come. While they do not venture to forecast the outlook for the Company, particularly in view of rising costs and keen competition, they add that the sales during the first few months of the current year have been satisfactory.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 18 *ex-div.*, at which rate and on the basis of the latest dividend, they provide a yield of 6.1 per cent. per annum, free of income-tax.

SWASTIK TEXTILE MILLS

Notwithstanding the withdrawal of the concession given to powerloom factories having over 100 looms in regard to excise duty, the Swastik Textile Mills Ltd. (Managing Agents: Messrs. P. Kashinath & Co., Bombay) has done well during the year ended 31st December 1958. The Company has had to bear an additional burden to the tune of about Rs. 2.20 lakhs by way of excise duty. Nevertheless, the gross profit for the year under review has gone up from Rs. 6.40 lakhs (for 1957) to Rs. 7.80 lakhs. This is due to the enlargement in turnover, higher income from dyeing and printing charges and a reduction in the cost of yarn consumed.

The provision for depreciation has been raised slightly from Rs. 1.63 lakh to Rs. 1.68 lakh and that for taxation from Rs. 2.22 lakhs to Rs. 2.50 lakhs. The managing agency commission is also higher at Rs. 60,653 as against Rs. 46,704 for 1957. Even after these larger appropriations, the net profit, at Rs. 2.92 lakhs, compares favourably with Rs. 2.08 lakhs earned in the previous year. Out of this profit, the Directors have set aside a sum of Rs. 1.01 lakh, as against nil a year ago, for development rebate reserve. The transfer to the general reserve has, however, been slightly reduced from Rs. 1 lakh to Rs. 75,000. After paying the 5 per cent. preference shareholders, the dividend on ordinary shares is kept unchanged at 7 per cent. and that on deferred shares at 12 per cent. The dividend distributions (less tax) absorb, as in the previous year, Rs. 1.35 lakh, leaving a surplus of Rs. 7,170 to be carried forward.

The Company's sales of saris, dhotis, cloth and waste have gone up during the year from Rs. 50.93 lakhs to Rs. 58.30 lakhs and the income from dyeing and printing charges shows a rise from Rs. 22.24 lakhs to Rs. 23.39 lakhs. The cost of yarn consumed has declined from Rs. 34.40 lakhs to Rs. 31.47 lakhs. The excise duty paid during the year amounts to Rs. 5.11 lakhs, as against Rs. 2.89 lakhs in the previous year.

The following synopsis of the Company's balance-sheet as on 31st December 1958 gives an idea of its financial position:

LIABILITIES	Rs.	Assets	Rs.
Capital	26,50,800	Gross block	39,54,837
Reserves and surplus	8,83,538	Less—Depreciation	18,11,227
Current liabilities and provisions	11,07,650	Net block	21,43,610
		Stock-in-trade	16,79,181
		Stores and spares	1,58,737
		Debits, deposits and advances	5,10,922
		Cash	1,49,318
			Rs. 46,41,768
			Rs. 46,41,768

CHEMBRA PEAK RAISES DIVIDEND LEVEL

EARNINGS, TOO, IMPROVE

THE Directors of the Chembra Peak Estates Ltd. (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Calicut) have recommended a higher dividend of 15 per cent. for the year ended 31st March 1959, thus restoring half of the cut effected last year when the distribution was reduced from 20 per cent. paid for 1956-57 to 10 per cent. This action is in consonance with the Company's trend of earnings. The gross profit, which had dropped precipitously from the record level of Rs. 9.39 lakhs for 1956-57 to Rs. 3.93 lakhs in the following year, has improved to Rs. 6.83 lakhs in the year under review. The net profit, too, has gone up to Rs. 2.99 lakhs from Rs. 1.58 lakh to which level it had dwindled in 1957-58 from Rs. 4.17 lakhs earned in 1956-57.

The improvement in earnings is mainly due to the substantially large coffee crop harvested during the year. Both tea and coffee crops are higher, touching new high levels. But the rise in tea crop from 1.62 million lbs. to 1.69 million lbs. is only fractional, whereas that in coffee crop is impressive, such having gone up from 139.48 metric tonnes to 273.88 metric tonnes. The estate cost of production has been brought down substantially from Re. 1.24 to Re. 1.13 per lb. in the case of tea and by nearly 50 per cent. from Rs. 1,671.01 to Rs. 871.26 per metric tonne in the case of coffee. The average price realised for tea, at Re. 1.35 per lb., is nearly the same as that in 1957-58. The average price realised for coffee, on the basis of the valuation, at Rs. 2.12 per point, however, was very much less, being Rs. 2,204.79 per metric tonne, as compared with Rs. 2,613.45 per metric tonne received in the previous year on the basis of a final payment of Rs. 2.51 per point and Rs. 2,928.14 per metric tonne at Rs. 2.81 per point for 1956-57.

Out of the net profit of Rs. 2.99 lakhs, the Directors have transferred to the general reserve Rs. 1.50 lakh, which compares favourably with Rs. 1.00 lakh added last year. The allocation to the development rebate reserve has also been increased from Rs. 9,262 to Rs. 20,460. After writing back a sum of Rs. 12,093 representing the excess provision for income-tax, the Directors propose to pay the aforesaid dividend absorbing Rs. 1.40 lakh, as against Rs. 93,340 in 1957-58, leaving Rs. 75,555 to be carried forward.

The following comparative table reflects the progress of the Company in recent years:

	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds of tea	25,92,589	26,06,706	24,38,988	20,89,822
Pool dividends from coffee	3,97,028	4,82,272	3,82,248	3,09,570
Closing stocks	6,82,087	7,22,498	6,44,208	4,74,067
Estate expenditure	20,82,955	21,28,209	17,52,584	14,82,468
Other expenditure	8,34,890	6,56,578	2,53,325	4,85,238
Gross profit	6,82,571	5,92,082	9,39,325	4,85,238
Managing Agents' commission	45,290	25,000	66,291	48,706
Provision for—				
Depreciation	64,840	62,825	65,778	86,855
Taxation	2,74,000	1,47,000	4,60,000	1,13,000
Net profit	5,98,641	4,56,307	4,17,258	1,56,722
Excess provision written back	12,093	60,888		
To reserves	1,70,480	1,09,282	2,00,000	1,50,000
Dividend	1,40,010	93,340	1,86,580	93,340
Carry forward	75,555	75,261	1,58,000	25,622
Tea crop harvested (lb.)	1,686,968	1,618,987	1,860,470	1,203,192
Estate cost of production				
All-in cost (per lb.)	1.13	1.24	1.38	1.41
Average price realised (per lb.)	1.21	1.31	1.22	N.A.
Tea crop (metric tonnes)	1.85	1.38	1.80	1.69
Estate cost of production (per metric tonne)	278.87	159.477	160.879	113.174
All-in cost (per metric tonne)	871.26	1,671.01	1,292.00	N.A.
Average price (per metric tonne)	945.95	1,775.98	1,898.47	N.A.
	Rs. 2,204.79	2,613.45	2,928.14	N.A.

As will be noted from the above table, the slight fall of Rs. 95,000 in total estate expenditure has been more than offset by the rise of Rs. 1.78 lakh in other expenditure, of which export duty alone, at Rs. 2.59 lakhs, accounts for Rs. 1.66 lakh. The Company was allotted 1.06 million lbs. of tea as export quota for the year 1958-59, being 67 per cent. of the best crop basis.

The Company's estimate of tea crop for the current year is 1.5 million lbs., to be harvested at an all-in cost of Re. 1.28 per lb. The blossom estimate of coffee for 1959-60 was originally put at 152 metric tonnes, but much of the blossom is reported to have failed to set, due to unfavourable conditions at the time of blossom, and the estimate has, therefore, now been revised downwards to a mere 76 metric tonnes.

The Company's balance-sheet as on 31st March 1959 discloses a sound financial position. The paid-up capital of Rs. 9.33 lakhs is supplemented by reserves and surplus aggregating

Rs. 15.55 lakhs. The current liabilities and provisions stand at Rs. 6.44 lakhs. The gross block of the value of Rs. 24.70 lakhs has been written down to Rs. 17.30 lakhs. The current assets amount to Rs. 14.03 lakhs, of which stock-in-trade alone accounts for Rs. 12.08 lakhs. During the year under review, the Company made a capital expenditure of Rs. 1.64 lakh and it proposes to spend another Rs. 2.81 lakhs during the current year, the largest item of which is the new factory extension and machinery at an estimated cost of Rs. 2 lakhs.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 4.27 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 7.5 per cent. per annum.

ASSOCIATED RUBBER INDUSTRIES

A decline in the offtake of automobile components and footwear, resulting from the general recession in industrial activity in the early part of 1958, and a fall in the production of textile accessories, due to shortage of imported raw materials consequent on the serious foreign exchange position, have had an adverse effect on the working of the Associated Rubber Industries Ltd. (Managing Agents: The Associated Agencies Private Ltd., Bombay) during the year ended 31st December 1958. Sales of finished products show a setback from Rs. 22.33 lakhs (in 1957) to Rs. 19.32 lakhs and the gross profit has shrunk from Rs. 3.54 lakhs to Rs. 2.66 lakhs. The fall in gross profit during the year under review is in distinct contrast to the upward trend noted in the preceding few years, that is, from Rs. 1.82 lakh earned in 1954 to Rs. 3.54 lakhs in 1957.

The provision for depreciation has been reduced from Rs. 1.29 lakh (which had included a part of the previous years' arrears) to Rs. 1.09 lakh. There are still arrears to the extent of Rs. 62,045 to be provided for in respect of buildings. The provision for taxation has been raised from Rs. 10,000 to Rs. 49,000. The managing agency commission is also lower at Rs. 9,405, as against Rs. 22,574 for 1957. These allocations leave a net profit of Rs. 98,877, as compared with Rs. 1.93 lakh in the previous year. A sum of Rs. 8,325 has been set aside for development rebate reserve and Rs. 41,321 in respect of bonus for 1955, as against nil last year. No amount has been added to the debenture redemption reserve, which had received Rs. 1.35 lakh a year ago. After payment of a dividend of 5 1/2 per cent. free of tax, for nine months and at 7 per cent. free of tax, for three months on the old preference shares, and at 7 per cent. on the new tax-free preference shares from the date of allotment, the Directors have recommended a dividend of 7 per cent. on the old, as well as new, ordinary shares (on the latter from the date of allotment). The dividend on the old shares is the same as that paid for each of the previous two years after it was raised from 6 per cent. for 1955.

During the year under review, the Company's paid-up capital was raised from Rs. 8.26 lakhs to Rs. 13.25 lakhs, by the issue of 2,740 7 per cent. (free of tax) preference shares of Rs. 100 each and 2,250 ordinary shares of Rs. 100 each. Simultaneously, the 3,010 5 1/2 per cent. old preference shares, which were due for redemption after 31st December 1958, were converted into 3,010 7 per cent. preference shares.

The Company's plants for production of cots and aprons for the textile industry, which were commissioned in November 1956 and March 1957, respectively, could not be worked to full capacity during the year under review, due to shortage of raw materials, although the demand for these items was said to be good. The plant for the production of surgical gloves and prophylactics, which was slightly damaged as a result of an accident, is now said to be operating to full capacity. The demand for these products is stated to be growing, but is not yet sufficient to keep the plant (which is claimed to be the largest of its kind in India) fully occupied.

The Company's products, according to the Directors, have been well received in the market and some export orders have also been secured. Early in the year under review, the Company's Chairman (Mr. Kishore M. Premchand) toured the U.K. and the Continent to explore the possibility of expanding the Company's exports of footwear and increasing the production of cots and aprons. As a result of this, the exports of footwear rose by about 200 per cent., as compared with 1957, and, "with the connections now established, it is hoped that more export business will be booked during 1959."

The Company has entered into an agreement with Armstrong Cork Company, Ltd., for the joint manufacture of the latter's brand of "Acotex" cots and aprons in India. A licence has been obtained to increase the production by about 175 per cent. and, in order to simplify the operation of a joint undertaking with Armstrong Cork Company, Ltd., a separate company, named Inarco Private Ltd., has been formed, the share capital of which will be equally held by the Associated Rubber Industries Ltd. and the Armstrong Cork Company, Ltd.

The Directors have decided to renovate the footwear manufacturing unit and orders for new machinery of the value of Rs. 3.33 lakhs have been placed abroad. The new rubber mixing machinery was received early this year has been already been commissioned.

SWASTIK TEXTILE MILLS LTD.

SPEECH OF CHAIRMAN, MR. P. K. DIVEKAR

ADDRESSING the shareholders of the Swastik Textile Mills Ltd. at their Twelfth Annual General Meeting held in Bombay on 20th August 1959, Mr. P. K. Divekar, Chairman, referred to the heavy burden of excise duty on powerloom factories with over 100 looms and said that no powerloom factory could exist by paying excise duty at standard rates applicable to composite mills.

The following is the full text of Mr. Divekar's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to this twelfth annual general meeting of our Company.

"From the audited accounts of the Company for 1958, which are already in your hands, you will please note the progress made by the Company and hence I will not deal with it again here.

"As far as the working of the Company is concerned, I desire to point out to you only few important events during 1958.

"First, in March 1958, due to the bracketing of powerloom factories with over 100 looms with the composite mills, for levy of excise duty, the Company had to close down its weaving department with 240 looms, entirely. The Government, however, reconsidered the matter and allowed the concessional rates of excise duty on compounded system up to February 1960 and the weaving department restarted on 4th April 1958. The rate of excise duty, which was Rs. 70 per loom per shift per month, was raised to Rs. 110 and the Company now pays Rs. 52,000 and more per month as excise duty, which is quite a heavy burden for a small company like us.

"As regards the limit of February 1960, laid down by the Government, the Company is trying in all possible directions to see that the Government change their views. However, it may be stated here that no powerloom factory can exist in the present circumstances by paying excise duty at standard rates applicable to composite mills.

"Secondly, I am glad to inform you that for improving the processing, the Company has installed two new machines, viz., one 5-bowl Briem rolling and friction calender and one 3-bowl pneumatic operated padding mangle. The Company has made various other improvements in machinery and we are getting good results.

"It is also gratifying to note that we have recently placed our order with Messrs. Voltas Ltd. for one complete Benninger-Maneklal cloth mercerising plant, which will be ready early next year. The Company has approached the Central Government for registration and their reply is still awaited.

"In general working, it may be noted that excise duty on powerlooms is very heavy and any further increase will be unbearable. The Government have also imposed differential duty on processing and hence our Chembur dye-house is also covered under excise rules from 4th July 1958.

"Though we are not so far exporting our products outside India, cloth processed by us is exported by our merchants. We are, however, trying to find out the foreign markets for processed fabrics, that is, dresswares, tapestry, warp printing. Present enquiries are not substantial, but there is a ray of hope in the same and we hope we will make definite progress.

"One of your Directors, Shri S. P. Divekar, is shortly leaving India in order to explore new avenues for future prospects of the Company and I, on behalf of the Board and the Company, wish him bon voyage. Let us hope he will bring for the Company some new lines of manufacture and open up new markets for the Company's products either with or without collaboration with some foreign firms.

"In spite of various difficulties, I, on behalf of the Board of Directors, assure you that we shall spare no pains to see that both of our factories work quite normally and also keep our usual progress.

"I would end this address of mine to this twelfth annual general meeting by thanking you all, our esteemed customers, merchants, the suppliers and the trusted staff and labour for the co-operation the Company has been receiving in its working."

COMPANY MEETINGS AND DIVIDENDS

DHARAMSI MORARJEE CHEMICAL CO., LTD. Annual General Meeting, Bombay, 2nd September 1959. Dividend: Rs. 6.00 per share, payable on and after 4th September 1959. Transfer books remain closed from 31st July to 29th August 1959, both days inclusive.

HASTINGS MILL LTD. Annual General Meeting, Calcutta, 7th September 1959. Dividend: Rs. 6.00 per share, free of tax. Transfer books remain closed from 25th August to 7th September 1959, both days inclusive.

FORT WILLIAM JUTE CO., LTD. Annual General Meeting, Calcutta, 7th September 1959. Dividend: Re. 1.50 per share. Transfer books remain closed from 25th August to 7th September 1959, both days inclusive.

WESTERN INDIA PLYWOOD LTD. Annual General Meeting, Balapattanam, 7th September 1959. Dividend: 10 per cent. or Rs. 10.00 per share, free of tax. Transfer books will remain closed from 1st to 7th September 1959, both days inclusive.

RELANCE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 8th September 1959. Dividend: Nil. Transfer books will remain closed from 1st to 8th September 1959, both days inclusive.

SUNGMA TEA CO., LTD. Annual General Meeting, Calcutta, 10th September 1959. Dividend: Re. 1.50 per share (includes interim dividend of Re. 1.00 per share), payable on or after 21st September 1959. Transfer books will remain closed from 1st to 10th September 1959, both days inclusive.

ASSOCIATED RUBBER INDUSTRIES LTD. Annual General Meeting, Bombay, 10th September 1959. Dividend: 7 per cent. or Rs. 7.00 per share, free of tax, payable on and after 25th September 1959. Transfer books remain closed from 26th August to 10th September 1959, both days inclusive.

CLEVEDON TEA CO., LTD. Annual General Meeting, Calcutta, 11th September 1959. Dividend: 10 per cent. or Re. 1.00 per share (subject to funds being available in India). Transfer books will remain closed from 3rd to 11th September 1959, both days inclusive.

SASSOON AND ALLIANCE SILK MILLS CO., LTD. Annual General Meeting, Bombay, 11th September 1959. Dividend: Nil. Transfer books will remain closed from 8th to 11th September 1959, both days inclusive.

PHILIPS INDIA LTD. Annual General Meeting, Calcutta, 12th September 1959. Dividend: Re. 0.85 per share. Transfer books remain closed from 24th August to 12th September 1959, both days inclusive.

CHURULIA COAL CO., LTD. Annual General Meeting, Calcutta, 15th September 1959. Dividend: 5 per cent. (without deduction of income-tax). Transfer books will remain closed from 1st to 15th September 1959, both days inclusive.

ONDAL COAL CO., LTD. Annual General Meeting, Calcutta, 15th September 1959. Dividend: 5 per cent. (without deduction of income-tax), payable on or after 22nd September 1959. Transfer books will remain closed from 1st to 15th September 1959, both days inclusive.

INDORE MALWA UNITED MILLS LTD. Annual General Meeting, Bombay, 22nd September 1959. Dividend: Rs. 5.00 per share, without deduction of tax, payable on and after 3rd October 1959. Transfer books remain closed from 24th August to 22nd September 1959, both days inclusive.

GENERAL INDUSTRIAL SOCIETY LTD. Annual General Meeting, Calcutta, 23rd September 1959. Dividend: Rs. 2.00 per share, free of income-tax. Transfer books will remain closed from 14th to 23rd September 1959, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Interim dividends of Rs. 150 per share on original shares of Rs. 2,500 each, Rs. 7.50 per share on shares of Rs. 125 each and Rs. 3.00 per share on shares of Rs. 125 each (Rs. 50 paid-up), payable on and after 28th September 1959. Transfer books will remain closed from 8th to 22nd September 1959, both days inclusive.

KUMARDHURI FIRECLAY AND SILICA WORKS LTD. Dividend of Re. 1.25 per ordinary share, without deduction of income-tax, for the year ended 31st December 1958.

MLAMALLAY TEA ESTATES LTD. Dividend of 20 per cent. or Rs. 5.00 per share, for the year ended

Notices

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE OF MEETING

NOTICE is hereby given that the Forty-eighth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on Friday, the 25th September, 1959 at 3.30 p.m. for the transaction of the following business:—

To receive and adopt the Accounts for the year ended 31st March, 1959 and the Reports of the Directors and Auditors thereon.

If considered desirable to declare a dividend.

To elect Directors.

To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from the 31st August to the 25th September, 1959, both days inclusive, and transfers received in order at the registered office of the Company by the 29th August, 1959, will be in time to be passed for payment of the dividend, if approved, to the transferees.

The dividend, if approved, will be paid on the 28th September, 1959, to the Shareholders whose names appear on the Company's Register on the 25th September, 1959, or to their mandatees.

By Order of the Board,

B. GRANGER PEARSON,
Assistant Secretary.

7th August, 1959
VIRGINIA HOUSE,
37, CHOWRINGHEE,
CALCUTTA.

Notes:—A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

Shareholders are requested to notify the Company immediately of any change in address.

CALTEX OIL REFINING (INDIA) LTD.

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5½ per cent. Debenture Stocks 1966-70 will be closed for transfers from 17th September 1959 to 30th September, 1959, both days inclusive.

N. A. KRISHNAN,
Secretary and Treasurer,
State Bank of India,
Agents for Caltex Oil
Refining (India) Ltd.,
for the management of the
Debenture Stocks.

STATE BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY, 31st August, 1959.

ANGLO-INDIA JUTE MILLS CO., LTD.

THE DIRECTORS AT THEIR MEETING held on 17th August, 1959 decided to recommend to the shareholders in the Annual General Meeting dividends for the year ended 31st March, 1959, as follows:—

On Preference Shares at the rate of 7 per cent. per annum (Rs. 7.00 per share)

On Ordinary Shares at the rate of 12½ per cent. per annum (Rs. 12.50 per share)

(both dividends without any deduction for income-tax paid by the Company).

By Order of the Board,

DUNCAN BROTHERS & CO. LTD.,
Managing Agents.

CALCUTTA, 18th August, 1959.

THE PHOENIX MILLS LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held on Tuesday, the 22nd September 1959, at 4.30 p.m. (S.T.), at the Registered Office of the Company, State Bank Building Annexe, Bank Street, Fort, Bombay, to transact the business specified in the Notice dated 23rd July 1959 already forwarded to the Shareholders.

COTTON TEXTILES IN THE THIRD PLAN

(Concluded from page 343)

more than compensate whatever doubtful advantages that may be supposed to be available to the economy due to the potential of the handloom industry to provide employment.

"In order to produce a total quantity of 9,600 million yards and provide the usual extra factory demand, the requirement of cotton will be around 7.2 million bales. If imports of cotton are to continue at the present level of around 600,000 bales, the target for production of Indian cotton will have to be fixed around 6.6 million bales.

"We thus arrive at the following targets to be attained by the end of the third Plan:

(Million yards)	
Total production of cloth	9,600
To be produced as under:	
Mill sector	6,300
Non-mill sector	3,300*
Requirement of cotton (Mill. bales)	6.6

* The indicated division of this being 2,500 million yards for handloom sector, 500 million yards for powerloom sector and 300 million yards for Ambar cloth.

LABOUR

(Concluded from page 344)

scheme was a keen one. The Elliot Bill, strengthened by the majority support of the House Labour Committee and Speaker Rayburn, was considered to have had a better chance before President Eisenhower, in his TV broadcast, lent the weight of his powerful support to the Landrum-Griffin Bill which the House of Representatives has now voted. Observers in Washington are confident that the Bill will also get the approval of the Senate.

The very fact that the Administration was able to get a Bill such as the Landrum-Griffin Bill passed, an achievement which would have been virtually impossible some ten years ago, is a measure of the reaction of the American public to the power excesses and corruption in labour unions. Some say that the move will spark off a more aggressive attitude by unions, so as to recapture a part of their lost power. They, accordingly, feel that the stage is set for a serious labour struggle. This, however, is unlikely, for the labour union leaders and their advisers are intelligent enough to sense that public opinion is not in their favour. The indifference shown by the public to the latest steel strike must have opened their eyes. They may, therefore, quietly reconcile themselves to the new legislation and concentrate their energy in winning the support of middle class workers and the new young entrants to the ranks of labour fresh from schools and colleges. It must be noted here that every year about three million persons are added to the working population of the U.S. These young people belong to the age of prosperity, have had a liberal education and the best of comforts of life which their parents did not enjoy in their childhood and adolescence. They are, therefore, of a different mental make-up and it will require a gentle, dignified and persuasive approach by trade union leaders to bring the younger generation to their fold. May be, the new legislation will help the unions to develop that approach and spread their influence.

REFUND OF PROVIDENT FUND

Appropos our suggestion (vide page 224 of Commerce dated 8th August 1959) that employees' provident fund should be refunded to the workers in cheques rather than in cash, Mr. S. N. Mubayi, Central Provident Fund Commissioner, in a letter to us says that the scheme already has a provision to this effect. Payment of provident fund amount is made at the option of the payee by (1) a crossed cheque sent through post, or (2) deposit in the payee's postal savings bank account or (3) postal money order. As most of the subscribers to the fund do not have a bank account, the Commissioner points out, they desire payment to be made by money order, the cost of the remittance being met from the Funds "Forfeiture Account" and not by the payees.

Since this provision is already there, we hope that the retiring members of the Fund would make use of it, and the employers would advise them to do so, lest they should expose themselves to danger of their life savings being lost in transit as happened in the case of a railway worker in Bombay recently.

ENGINEERING

(Concluded from page 348)

400,000 have flown in Boeing 707's run by such U.S. airlines as American, Continental, National, Trans World and Pan American, while the remainder have flown in Comets or in Caravelles run by Air France and the Scandinavian Airlines system. The world jet passenger figure, it is stated, continues to rise by about 3,000 daily. For these passengers, the chief point of appeal is the speed of jet travel which virtually halves their travel time. Load factors are also believed to be unprecedentedly high—well over 90 per cent. on nearly every flight on every route. Utilisation has also been high; it averaged around 10 hours or more a day for some Boeing 707's. These developments clearly point to the increased profitability of jet operations.

NUCLEAR PROJECT

Against the background of the controversy over India's first nuclear power station—the different views on the subject were summarised last week—it must interest those who are not initiated into the mysteries of this science to know that no country can make a sudden bid for nuclear power. Thus, according to the U.K.'s Select Committee on Estimates, it will take at least 10 to 15 years to develop a new nuclear reactor system from the time of the feasibility studies to the commissioning of a commercial power station. In this period, it is stated, some 1,000 to 2,000 man-years of professional scientific and engineering effort will be required at a cost of between £10 and £20 million and another £20 million of capital expenditure for development facilities and for the building of experimental reactors and the prototype. This is one example given by the Committee to illustrate the vast amount of effort and organisation for a nuclear project. So far as India is concerned, Atomic Energy Commission before the Government contemplated the setting up of a nuclear power station. Be that as it may, in the U.K., there are now five nuclear power station construction groups engaged in building of new nuclear generating stations. Two of them, namely, the Nuclear Power Plant Company and the A.E.I.-John Thompson Nuclear Energy Company, it is stated, are holding negotiations for submitting a joint tender for the Dungeness, Kent; a similar procedure will be followed for the 600 M.W. station to be built at Sizewell, Suffolk. Of these two groups, the former station at Bradwell, Essex and A.E.I.-John Thompson on the 275 M.W. station at Berkeley, Gloucestershire; the N.P.P.C. is also co-operating on a 200 M.W. nuclear power station at Latina, South of Rome.

TREND OF PRIVATE CAPITAL MOVEMENTS IN BRITAIN

OUTWARD INVESTMENT EXCEEDS INWARD

IN the seven years to 1958, outgoing private investment from the U.K. averaged £330 million a year. Inward private investment from other countries to the U.K. averaged £130 million. So the U.K. was a net investor abroad on private account to the extent of about £200 million. Its net investment in the sterling area was only a little less than this. There were also private capital exports from that country to outside the sterling area, mostly Canada, but they were largely offset by incoming private capital, mostly from the U.S.; the annual average, both ways, was something over £100 million. These figures are given by the British Treasury in the August issue of *Bulletin for Industry*.

In the flow of capital, there are two main types of transaction. The first is direct investment, involving active participation in industry and usually controlling policy and profit distribution; this type of investment may take place through the re-investment of locally-earned profits or through the export of capital equipment rather than the transfer of cash. The second type is portfolio investment, the purchase of securities for interest and dividends, and perhaps for capital gains, but not normally associated with control.

U.K. residents may transfer capital freely for both types of transaction to other sterling countries. Direct investments are allowed in non-sterling countries, if they are genuine market transactions to establish or acquire a controlling interest and seem likely to benefit the sterling area. Portfolio investment in non-sterling securities is not allowed, except by money raised from selling other non-sterling securities, as, for example, through "switch dollars."

Direct investment in the U.K. by overseas firms is also virtually free of control, with no restriction on the repatriation of capital or profits. Such investment creates tangible benefits in a number of ways, for example, by enlarging capacity and increasing employment, increasing exports or saving imports; and it serves to introduce scientific and technical discoveries and improved managerial methods. Portfolio investment by non-sterling residents is permitted; it cannot be repatriated across the exchanges, but the proceeds of any sale, called "security sterling," may be used to buy other long-dated U.K. securities. Investment of this type does not have the same advantages as direct investment, but it can make a useful contribution to the finance of industry and help to sustain the U.K.'s own overseas lending. Not being tied to physical assets, it is, however, inclined to be more volatile.

How Big is the Flow?

There are big statistical difficulties in measuring capital movements to and from overseas. Apart from problems of definition, many of the available figures are inadequate in their coverage; in particular, estimates of re-invested profits, as well as of investment in kind, are available only in a few cases. There are also serious problems in the collection of data (the U.K. Government recently announced measures which should lead to a considerable improvement in the available figures in this field).

Broad estimates of the movements of total long-term private investment to and from the U.K. are given in the accompanying table. The gross outward movement during 1952-58 was some £2,300 million, rising fairly steadily up to 1956 but falling back in the last two years

probably as a result of the credit squeeze and world recession. The inward movement—totalling about £930 million—appears to have moved similarly. The net outflow therefore totalled £1,400 million, or £200 million a year.

Sterling Area

Gross U.K. investment in the sterling area totalled about £1,450 million; the inflow (which stopped in 1957) was about £150 million. The net outflow was, therefore, around £1,300 million, or £190 million a year. This included Commonwealth Government issues on the London market subscribed from private sources; issues by sterling area public corporations and public companies; and portfolio and direct investment, including the re-investment of locally earned profits such as those made by the oil companies. Sums raised annually by the first of the above methods were:

(In million £s)			
	Governments and local authorities	Public Corporations and public companies	Total
1954 ..	34	39	73
1955 ..	18	38	56
1956 ..	14	36	50
1957 ..	12	48	60
1958 ..	49	19	68

Commonwealth Countries

For a country breakdown of capital movements between the U.K. and overseas, the main source is the information published by the countries themselves. In many cases, however, the information available is inadequate, largely because the figures cover re-invested profits only in a few cases. Within the sterling Commonwealth, the main recipients were probably the Colonial Territories, the Federation of Rhodesia and Nyasaland, Australia and New Zealand. Total private investment from all sources in the Colonial Territories (mostly direct investment including reinvested profits) rose from £56 million in 1955 to £100 million in 1956, and to £114 million in 1957; more than half is estimated to have come from U.K. sources, of which about £10 million a year is accounted for by Colonial Government issues in London.

U.K. private investment in the Federation of Rhodesia (including Rhodesian Government borrowing on the London market of some £10 million a year but excluding re-invested profits) has averaged about £25 million a year in the last few years. Comparable estimates for Australia (but including reinvested profits) show a steady increase in U.K. investment, mainly direct investment in Australian industry, with the total reaching over £50 million a year by 1957; in the few years before 1957 London market loans were negligible. The scale of British private investment in New Zealand is far smaller; direct investment, including re-invested profits, runs at about £6 million a year and London market loans have averaged about £10 million a year. Indian balance of payments figures of capital transactions with the U.K. indicate very little movement of funds; but separate investigations by the Reserve Bank show that the value of U.K. investments in India increased by about £12 million between 1955 and 1956, and at the end of 1956 were valued at £305 million out of a total of foreign-owned assets in India of £380 million. South African official estimates of foreign-owned capital assets show the U.K. to be the largest single investor. Out of a total of direct investment of over £800 million at the end of 1956, the U.K. was responsible for £556 million; and in addition the U.K. has long-term portfolio investments amounting to some £300 million.

Private Investment To and From the U.K.

(In million £s)									
	1952	1953	1954	1955	1956	1957	1958	Total 1952-58	Annual Average
Rest of Sterling Area									
Outward ..	—169	—212	—221	—182	—221	—261	—187	—1,453	—210
Inward ..	+ 19	+ 22	+ 41	+ 72	+ 31	— 19	— 13	+ 153	+ 20

Inward ..	+ 58	+ 57	+ 70	+120	+200	+160	+123	+ 778	+110
Net ..	— 30	— 20	— 40	— 20	— 10	+ 10	+ 10	— 100	— 10
All Areas									
Outward ..	—257	—289	—331	—322	—431	—401	—300	—2,331	—330
Inward ..	+ 77	+ 79	+111	+192	+231	+131	+110	+ 931	+130
Net ..	—180	—210	—220	—130	—200	—270	—190	—1,400	—200

Direct U.K. investment in Canada has averaged about £30 million a year. (The figure excludes reinvested profits; allowing for these and for other factors the total value of U.K. direct investments in Canada increased by about £45 million a year.) Up to mid-1957 purchases of non-sterling securities were possible through sterling area "free" markets; and in fact they rose sharply towards the end of 1956 and the first half of 1957, accounting for a big increase in portfolio investment. Canadian investment in the U.K. is small:

(In million £s)				
	1954	1955	1956	1957
U.K. to Canada ..	28	25	36	24
Portfolio ..	11	11	43	47

Bringing these estimates together, the total of British private investment in the Commonwealth would appear to be well over £150 million a year.

U.S. Capital

American business began to invest here in the second half of the last century and their stake has grown enormously since then. According to private estimates, there are about 400 United States subsidiaries and Anglo-American firms engaged in the U.K. manufacturing industry. They employ about 375,000 people, some 4 per cent. of the labour force in manufacturing, and may have accounted in 1957 for 5½ per cent. of the gross output of manufacturing:

(In million £s)					
	1954	1955	1956	1957	1958
U.S. to U.K. ..	5	12	99	56	21
Direct (net flow) ..	31	45	30	46	n.a.
Undistributed profits ..	36	57	129	102	n.a.
Portfolio ..	1	14	38	19	—9

Direct investment rose particularly sharply in 1956 (because of the exceptional purchase of a British oil company) and in 1957. In 1958 it fell back, reflecting a decline in United States direct investment throughout the world, because of recession at home and in the world industrial activity. Portfolio investment also rose steeply in 1956, but has declined rapidly since then, and provisional figures indicate a net disinvestment in 1958. The U.K. also invests in the U.S.:

(In million £s)					
	1954	1955	1956	1957	1958
U.K. to U.S. ..	46	34	61	44	—13
Portfolio and direct investment other than U.S. Government securities ..	46	34	61	44	—13

Other Non-sterling

Statistics on the U.K.'s capital transactions with other non-sterling countries are virtually non-existent. There is certainly a two-way flow with Western Europe—particularly close capital links exist with the Netherlands, for example—and U.K. investment in Latin America, especially the oil-producing States, is important. There is probably a small net outflow on these other non-sterling transactions taken together.

Notice

THE PUNJAB NATIONAL BANK LIMITED

Parliament Street, NEW DELHI

NOTICE OF INTERIM DIVIDEND

THE DIRECTORS OF THE PUNJAB NATIONAL Bank Limited, New Delhi, have decided to pay an Interim Dividend for the current year at the rate of Re. 1 gross per share. The dividend will be payable at the Registered Office of the Bank at New Delhi on or after 22nd September, 1959, to the shareholders whose names stand on the register of members of the Bank as on 12th September, 1959.

The Transfer Books and Register of members of the Company will remain closed from 7th September, 1959 to 12th September, 1959 (both days inclusive).

By Order of the General Board of Directors,

A. M. WALKER,
General Manager.

DATED 21st August, 1959.

Note:—Shareholders are requested to intimate change of addresses, if any, to the Bank immediately.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India			
Statement of Affairs for the week ended 21st August 1959			
BANKING DEPARTMENT			
LIABILITIES			
Capital paid-up	Rs.		
Reserve Fund	5,00,00,000		
National Agricultural Credit (Long-term Operations) Fund	30,00,00,000		
National Agricultural Credit (Stabilisation) Fund	4,00,00,000		
Deposits:			
(a) Government—			
(1) Central Government	58,11,09,000

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 26th August

The short-term money market has once again turned comfortable, following the refund of excess subscriptions to the State loans. The total amount offered was Rs. 100.27 crores (including conversions to the extent of Rs. 57 lakhs), as against an aggregate sum of Rs. 61.50 crores invited. After retention of an extra 10 per cent. the over-subscriptions came to Rs. 32.05 crores and the return of such a large amount has improved the supply position. The result is a drop in inter-bank borrowing rates from 34 per cent. a week ago to 2 per cent. among the Exchange banks and big Indian banks and from 34-37 per cent. to 3 per cent. among the smaller banks.

The Treasury Bill rate has also declined slightly from 2.530 per cent. two weeks ago to 2.520 per cent. per annum at yesterday's sales. The amount offered was, however, no more than that invited, that is, Rs. 2 crores. Presumably because of the return of comfortable conditions in the short-term money market, the tenders for next week's sales have been raised to Rs. 3 crores. Sales of Intermediate Bills during the period 17th to 22nd August amounted to Rs. 36 lakhs at Rs. 99.381 per cent., representing a discount rate of 2.476 per cent. per annum. Sale of these bills will be held from 26th to 29th August at Rs. 99.386 per cent., which works out to a discount rate of 2.456 per cent. per annum.

A drop of Rs. 16.31 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 21st August 1959. This is on top of a fall of Rs. 8.79 crores in the previous week. Notes held in the Banking Department are higher by Rs. 2.63 crores, so that there is a contraction of Rs. 13.68 crores in total notes issued. This is covered by a decline of Rs. 14.98 crores in rupee securities and a rise of Rs. 1.32 crore in rupee coin. While foreign securities are unchanged, balances held abroad have recorded a rise of Rs. 3.90 crores, lifting the total foreign assets to Rs. 178.56 crores. The deposits of the Central Government are higher by Rs. 3.56 crores and those of other Governments by Rs. 20.14 crores, while deposits of banks have declined by Rs. 16.15 crores and those of others by Rs. 16.70 crores, reflecting the withdrawal of funds by banks and other institutions for subscription to the State loans. Loans and advances to Governments have declined by Rs. 4.07 crores while other loans and advances have risen sharply by Rs. 14.33 crores, of which advances to Scheduled banks against usance bills account for Rs. 2.44 crores.

The Scheduled banks' statement for the week ended 14th August 1959 shows a rise of Rs. 11.21 crores in demand deposits and of Rs. 1.32 crore in time deposits. Inter-bank borrowings also are higher, but by only Rs. 24 lakhs. Borrowings from the Reserve Bank, however, declined by Rs. 1.90 crore. There has been a fall of Rs. 9.47 crores in advances and a rise of Rs. 1.88 crore in bills purchased and discounted.

The gilt-edged market is ruling firm, with a spurt in the price of many issues of the Central and State Governments. The easy conditions in the money market have brought about fresh demand for securities. The absence of sellers and the increase in the Reserve Bank's selling prices for 34 per cent. 1969, 34 per cent. 1974 and 4 per cent. 1979, have also aided the bullish sentiment. Almost all the new State loans command a premium over their issue prices.

3 per cent. 1966 Conversion loan has spurred from Rs. 73.55 to Rs. 74.05, 24 per cent. 1960 has hardened by 10 nP to Rs. 99.60 and 3 per cent. 1963-65 by 15 nP to Rs. 97.50. 3 per cent. 1966-68 and 3 per cent. 1970-75 have each gained 5 nP to Rs. 95.25 and Rs. 92.25, respectively. 34 per cent. 1962 has moved up by 10 nP to Rs. 99.60, 34 per cent. 1964 shows a rise of 5 nP to Rs. 100.20; as also 34 per cent. 1965 to Rs. 100. 34 per cent. 1969 has been put up by 10 nP to Rs. 99.15, 34 per cent. 1974 by 5 nP to Rs. 99.55 and 4 per cent. 1979 by 5 nP to Rs. 100.10.

Among the State loans, Bombay 4 per cent. 1967 has spurred by 20 nP to Rs. 100.70, 1970 by 35 nP to Rs. 100.60 and 1971 by 30 nP to Rs. 100.40. West Bengal 4 per cent. 1971 has gone up by Rs. 10.20 to Rs. 99.85, Madras 1971 by 40 nP to Rs. 99.90 and Andhra 1971 by 25 nP to Rs. 99.75. U.P. 1971, at Rs. 99.90, commands a premium of 40 nP over the issue price, M.P. 50 nP at Rs. 99.50 and Bihar 55 nP at Rs. 99.75. Punjab 1971 is quoted 50 nP higher at Rs. 99.50, as also Orissa at Rs. 99.50. Mysore 1971 has gone up by 40 nP to Rs. 99.90, Rajasthan by 30 nP to Rs. 99.80 and Assam by 50 nP to Rs. 99.50.

The rupee has weakened further in terms of the U.S. dollar. Banks' selling rate for U.S. T.T. has gone up from Rs. 478.25 to Rs. 478.75 per \$100 and their buying rate from Rs. 473 to Rs. 473.25 per \$100. This is in sympathy with the persistent downward trend in sterling abroad. Thus, in New York, spot sterling has fallen from 28.95-28.98 cents to 28.74-28.77 cents and three months forward from 28.98-28.101 cents to 28.80-28.84 cents.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 24th August

Kips arrivals were small and prices ruled firmer. Shipment business with the U.K. was patchy, with emphasis on top marks and lower selections. Offers of heavy weight kips were small, as arrivals were meagre. Buffalo hides were weak, because the average weights available were too heavy for export market. Arrival of tanned cow calf and buff calf were small; sellers were quoting high prices and the market was firm.

There was good demand for tanned goat skins 54/6 and 54/9 lbs. average. But, as the tanners were quoting fancy prices, importers were making counter-offers which, however, were declined by the shippers at this end.

SILVER TOUCHES HIGHEST LEVEL FOR THE YEAR

(From Our Own Correspondent)

BOMBAY, 25th August

Ready silver in the bullion market touched the highest level of Rs. 204.4 per tola on Thursday last week as well as today. This rate was just Rs. 3 below the all-time peak of Rs. 207.4 seen in June 1951; last week's closing rate was Rs. 203.1. The spurt was due to strong bull support and nervous short-covering, induced by fears of an acute shortage of supplies. The floating stocks of silver throughout the country have shrunk to no more than 1,300 to 1,500 bars. Such poor stocks must be attributed to the virtual cessation of arrivals of silver coins from Tibet, the principal source of supply to India during the past few years. Political developments in Tibet and the declaration of Indian currency as illegal tender in Tibet by the Chinese authorities there have made matters worse and rendered the prospects of early resumption of the flow of silver coins from that region remote. The supply position of silver is expected to be tighter still in the next few weeks, that is, after the seasonal festival demand arises. The abolition of restriction on silver bullion, metal and alloys covered by entry XVI of item 9(A) of Schedule I to the Exports (Control) Order 1958 and silver ores and concentrates covered by entry XXI of item B2 (A) of the same Order with effect from the 19th inst. has also imparted some strength to the metal. Although the world price of silver is far below the Indian price and the prospects of exports of either silver bullion or silverwares are nil, this announcement has had bullish psychological effect. Consequently, the price has gone up markedly.

In sympathy with the white metal and following heavy buying by local and upcountry dealers, gold has also registered a handsome improvement. The rise in values would have been more marked but for intermittent large-scale corrective profit-taking.

Replying to a question in the Rajya Sabha the other day, Mr. B. B. Bhagat, Union Deputy Minister for Finance, revealed that the customs duty derived by the Indian Treasury had diminished as a result of less silver coins being brought by Indian traders from Tibet. He disclosed that, between 30th November 1958 and 30th June 1959, 2,028,259 silver coins were brought into India from Tibet through authorised land customs against import licences issued by the prescribed authority. The customs duty derived on this account was Rs. 8,45,156.

August settlement in gold went off the board on Thursday, the 21st inst., the rate prevailing then being Rs. 121.12, as against Rs. 121.4 on the previous day. September settlement spurted from Rs. 121.2 to Rs. 122.3 on Friday. Since the rate was Rs. 5 more than the starting rate, margin at Rs. 7 per tola became effective on open bull position in this settlement. Notwithstanding the margin, the settlement moved up and touched Rs. 123 today.

Ready gold opened the week at Rs. 121.13, as against Rs. 121.3, and advanced in the course of the week to Rs. 122.4 today. The daily average arrivals and offtake of gold were 2,800 tolas and 2,600 tolas, respectively. The floating stocks of gold are estimated at 37,000 tolas.

September settlement in silver forged ahead from Rs. 202.6 to Rs. 204.4 on the opening day of the week under review. Since the quotation was higher by Rs. 7, as compared with the rate at which business in this contract commenced, the bulls in this settlement were required to deposit a margin at the rate of Rs. 500 per bar in accordance with Bylaw 33 (C) (1) (A). The operation of this Bylaw led to some liquidation and the rate declined to Rs. 202.3 on Saturday. The subsequent sessions, however, witnessed a recovery once again and the settlement rose to Rs. 204.4 today before finishing at Rs. 204.4. October settlement recorded a rise of Rs. 2.1 over the week, today's closing rate being Rs. 204.8, the highest level touched was Rs. 204.10. August settlement ran off the board at Rs. 203.2 on Friday, the 21st inst., as against Rs. 203.4 on Wednesday last week.

Ready silver registered an overnight gain of Re. 1-3 and touched Rs. 204.4 on Thursday, the 20th inst. After declining to Rs. 202.3 in the next two sessions, it rallied again to Rs. 204.4. The closing rate was a shade easy at Rs. 204.2. The daily average arrivals of silver were 11 bars, while the offtake was 9 bars. The floating stocks of silver are reported to be around 400 bars.

Both ready and forward silver in the London bullion market was unchanged during the week, the former at 79d. per ounce and the latter at 78½d. Silver in New York, too, was unchanged at 91.375 cents. Ready gold in London firmed up from 249s. 10½d. to 250s., following the easiness of the pound sterling vis-a-vis the dollar. The latest available dollar rate for gold in London is \$35.94-\$35.11, as against \$35.11-\$35.13 last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	25-8-59	Highest	Lowest	10-8-59

JARILLA AUGUST EXPIRES

(From Our Own Correspondent)

BOMBAY, 25th August

The Jarilla August contract went off the board today. In contrast to its recent hectic career, the contract finished on a subdued note at Rs. 705. In fact, it displayed distinct weakness prior to expiry owing to fears that higher levels might attract larger tenders on the last notice day, that is, today. The contract, which has through most part of its career, been a support position of cotton and the Indian textile activity and trade. It opened at Rs. 675 on the 24th June 1959 and closed at Rs. 728 on the 21st inst. Tenders issued on last notice day amounted to 900 bales, with 1,150 bales issued on the previous day. Total tenders against the contract were 1,500 bales, comprising 8,250 bales of Kalyan, 300 bales of Laxmi B, 50 bales of Cambodian and 100 bales of Vijay. This must be deemed fairly large considering that tenders against the May and March 1959 contracts were 4,750 and 3,650 bales respectively.

The new crop contract, Jarilla March 1960, could not remain unaffected by the fortunes of the August contract. The weakness of August influenced the March to some extent which after a rise early in the week, registered a sympathetic decline subsequently. Market observers feel that attention will now be focussed on the March contract and its course influenced by weather news and other related market factors.

I.C.C. Moglai Jarilla August 1959 opened the week at Rs. 724, and after rising to Rs. 728 the next day, declined to go off the board at Rs. 705 today.

I.C.C. Moglai Jarilla March 1960 commenced the week at Rs. 688. The contract followed more or less the course of the August contract. After rising to Rs. 694.50 on Friday, it receded to Rs. 690.25 on Monday. It declined further to Rs. 687 today, but recovered to finish at Rs. 688.75. The market is closed tomorrow and day after on account of Jammashtami.

The following table indicates the trend of prices of the contract during the week:

	25-8-59	High	Low	19-8-59
I.C.C. Moglai Jarilla:				
August 1959	705.00	728.00	705.00	725.00
March 1960	688.75	694.50	687.00	687.75

In the spot section, good demand was noted for available lots of current and new crop. Current crop Laxmi, Jaydhar, Wagad, Kalagin 197/3 and Kalyan were well favoured. Southern mills were particularly interested in all new crop, especially 197/3 and Rajapalayam.

Permission having been obtained, business in new crop delivery contracts started on Monday. In view of the tight supply position and keen mill interest in new crop, prices showed a firm trend.

Export demand was confined to Bengal Deshi and Yellow Pickings. Moderate business was reported in these qualities. Shippers were anticipating an improvement in demand from Japan in the coming weeks. Many Japanese mills are said to be expecting better offtake of yarn and cloth in the last quarter of the year. This is expected to spark off demand for raw cotton.

The Government of India has extended, up to 30th September 1959, the shipment period of cotton in respect of contracts registered up to and including 21st August 1959. This was welcomed by the trade, although it had requested an extension by two months up to the end of October.

The foreign section was subdued. Following the representations made by the trade, the validity period for shipment of 60,000 bales of raw cotton stapling 1.3/16" and above has been extended up to 15th September. This quota was due to expire at the end of this month. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal Deshi 695; Berar Jarilla 765; Khandesh 870; Laxmi 1,000; Jaydhar 850.

After a sharp setback early in the week, thanks to hedge pressure, the Karachi cotton futures market recovered in subsequent sessions on renewed export demand. Mill inquiries for new crop also broadened. Cotton futures, consequently, made up the lost ground. The following are the latest available spot quotations—in rupees per 82 lbs.—from Karachi:

Sind Deshi 84; Punjab Deshi 72-8; 4F Punjab Roller 71-8; S.G. 73; L.S.S. Punjab Roller 73-8; S.G. 74-8; N.T. Roller 73-8; S.G. 74-8; 289F Punjab Roller 73-8; S.G. 74-8.

The Alexandria cotton futures market ruled subdued during the week reflecting the poor overseas demand and small export turnover. The export price discount remained unchanged at 30 p.c. Weather news was favourable and indicated the prospect of a good crop. The latest available quotations—in tallars per lb.—from Alexandria are as under:

Karnak: November 73.45; January 72.50. Ashmouni: August 67.55; October 66.20.

With the auction held on the 11th inst. at Khartoum, the Sudan Gezira Board has completed the marketing of its 1959 crop. Commenting on this, the Patel Cotton Company, Bombay, observes: "In January this year, the Sudan was faced with long-staple cotton being the 1959 crop of about 600,000 bales in prospect and unsold stocks of about 200,000 bales. The Nuba crop in prospect of about 5,000 bales. By switching to a new realistic approach and then market levels, prices considerably below the varieties, the Gezira Board have not only successfully completed the sales programme but have also created a wider market for Sudan long staples."

Cotton futures values in Liverpool scored handsome gains during the week under review. There was sustained support from American interest in Liverpool and short-covering which met with only limited offerings. The more distant positions were comparatively firmer on account of transfer of holdings to forward positions. Sudan contracts, however, remained unchanged at last week's levels. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One-inch Staple Contract: October-November 21.74; December-January 21.74; March-April 21.60; May 21.85.

American Cotton Mixed Growth Contract: October-November 22.00; December-January 22.00; March-April 21.95; May 21.95.

Sudan: September-October, 21.75; November-December, January-February 21.75.

Cot futures values in New York advanced on trade demand and commission house buying. Rates were, however, held in check by reports of favourable weather in the growing regions. Many observers were of the view that the crop would exceed the recent official estimate of 14.8 million bales. Improved crop prospects discouraged follow-up support.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	25-8-59	19-8-59	11-8-59
Spot	33.15	33.10	33.15
October	32.20	32.08	32.09
December	32.22	32.15	32.15
March	32.65	32.55	32.51

RAYON YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 25th August

Barring cotton yarns which continued to rule firm on good export demand, the yarn market presented a bearish trend during the week under review. Rayon yarns were subjected to selling pressure on reports that several lots of rayon cloth for export had been rejected. Demand for yarn from weaving mills was at a low ebb. Staple fibre yarns were depressed, thanks to slackness in inquiries from consuming centres on account of recent heavy rains and sales of yarns at lower prices by some mills. There would have been a renewal of demand in the next two or three weeks.

Cupressa Bamberg yarn (60x2) August delivery fell from Rs. 1.671 to Rs. 1.642. October delivery dropped Rs. 29 to Rs. 1.682. Spot Cupressa was quoted at Rs. 7.50. Among imported art silk yarns, 150 Japan receded by 7 nP to Rs. 4.71. 120 Italy declined by 3 nP to Rs. 4.81. 120 Japan was negotiated at Rs. 4.75, as also 150 Italy at Rs. 4.68.

Staple fibre yarn (40x2) August contract moved up by Rs. 15 to Rs. 648. October contract suffered a loss of Rs. 10, today's closing rate being Rs. 648. Spot yarns were a shade easy as compared with the closing rates last week.

CASTOR GIVES WAY

(From Our Own Correspondent)

BOMBAY, 25th August

The oilseeds market ruled easy during the week under review. There were widespread rumours in the market regarding the possibility of stricter controls on food prices, following the heated debate on the question in the Lok Sabha and the resignation of the Union Food and Agriculture Minister. Oils and seeds drifted to lower levels, on heavy bull liquidation and lack of up-country support. Castorseed futures touched a new low of the season on Monday, thanks mainly to ears of heavy tenders against the maturing contract. The offerings, too, were sizable. Moreover, he prospects for the exports of oil continued to be bleak, since the U.S. buyers did not seem to entertain Indian offers at the current level of prices. The situation has not improved, notwithstanding the lower estimates of Brazil's castor crop or this year. Groundnuts also gave way, particularly on reports of favourable rains in the major producing centres, such as Saurashtra and other places. Crushers and vamsapati manufacturers referred to wait and watch, in anticipation of a further decline in prices. At the close of the week, oilseeds tended to move up slightly, following me reports of an early announcement of export quota for groundnut oil under the old incentive scheme. The linseed section was subdued in the absence of fresh buying enquiries. The export outlook for linseed oil, however, is said to be improving at the close of the week. Cottonseed, moved in sympathy with other major seeds, its price being determined chiefly by Ahmedabad and kola interests.

In the castorseed section, September 1959 contract, which closed last week at Rs. 153, came in selling subsequently and touched Rs. 149.87 on Monday. It, however, recovered today to Rs. 150.37. Technical grounds, May 1960 contract eased on Rs. 155.50 to Rs. 152.62 on Monday, but rose day to close at Rs. 153.12. Ready Madras lost nP to Rs. 30.12. Ready Kanpur closed lower Rs. 28.94, as compared with Rs. 29.62 last week. Oil B.S.S. released by 31 nP to Rs. 16.25 and commercial by 37 nP to Rs. 15.25.

Groundnut August 1959 contract, which had jund up last week on a weak note at Rs. 191.50, fell by one rupee to Rs. 190.50, after moving in a row range in the course of the week. February 60 contract also lost one rupee to close at Rs. 167.75, after fluctuating over the week between Rs. 166.75 and Rs. 165.50. Bold ready was marked up by 63 nP to Rs. 19.87, Oil ex-mill was up by 69 nP at Rs. 19.58.

In the linseed section, September 1959 contract, which stood at Rs. 32.75 last Wednesday, declined to Rs. 32.37 by Monday, but recovered to Rs. 32.62 today. It, however, recovered today to Rs. 32.62. Technical grounds, May 1960 contract eased on Rs. 155.50 to Rs. 152.62 on Monday, but rose day to close at Rs. 153.12. Ready Madras lost nP to Rs. 30.12. Ready Kanpur closed lower Rs. 28.94, as compared with Rs. 29.62 last week. Oil B.S.S. released by 31 nP to Rs. 16.25 and commercial by 37 nP to Rs. 15.25.

Groundnut August 1959 contract, which had jund up last week on a weak note at Rs. 191.50, fell by one rupee to Rs. 190.50, after moving in a row range in the course of the week. February 60 contract also lost one rupee to close at Rs. 167.75, after fluctuating over the week between Rs. 166.75 and Rs. 165.50. Bold ready was marked up by 63 nP to Rs. 19.87, Oil ex-mill was up by 69 nP at Rs. 19.58.

In the linseed section, September 1959 contract, which stood at Rs. 32.75 last Wednesday, declined to Rs. 32.37 by Monday, but recovered to Rs. 32.62 today. It, however, recovered today to Rs. 32.62. Technical grounds, May 1960 contract eased on Rs. 155.50 to Rs. 152.62 on Monday, but rose day to close at Rs. 153.12. Ready Madras lost nP to Rs. 30.12. Ready Kanpur closed lower Rs. 28.94, as compared with Rs. 29.62 last week. Oil B.S.S. released by 31 nP to Rs. 16.25 and commercial by 37 nP to Rs. 15.25.

TEAS IRREGULAR

(Messrs. Forbes, Ewart and Piggis (Private) Ltd.)

COCHIN, 21st August

Sale No. 32 which was held on 18th inst., amounted to 900,000 lbs. The quality of medium teas offered in this sale showed a slight decline. Amongst high growers there were some teas with improved quality. The market met with a good demand, but prices were irregular. There was only fair enquiry for low medium and mediums which sold at easier rates than last. Buyers showed better interest in improved liquoring high growers which were dearer following quality. Clean black fannings grades suitable for the Middle East continued in demand and were firm to dearer. Whole leaf grades, with the exception of orange pekoes, were easier. There was a useful demand for a small selection of C.T.C. teas at slightly easier rates. The quotations were:

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	25-8-1959	19-8-1959	12-8-1959
Groundnut			
August 1959	190.50	191.50	189.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ B.S.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seed are for per cwt. and those for oil per quartar.

SUGAR ARRIVALS LARGE

(From Our Own Correspondents)

BOMBAY, 25th August

Arrivals of sugar by rail and road to the City during the week were fairly large. The daily average of arrivals was about 2,100 bags, same as that in the previous week. Consequently, the supply position was quite comfortable. The wholesale rates (per bag) for the four representative grades of sugar continued unchanged at Rs. 115.21 for A grade, Rs. 114.08 for B grade, Rs. 112.02 for C grade and Rs. 111 for D grade.

The Government of Bombay has clarified that the retail price of Rs. 1.02 per seer fixed for sugar in Greater Bombay pertains to E27 grade, and not E29 grade as stated earlier. The prices per seer for the various other grades of sugar are: A29; Re. 1.08; B29; A28 and A27: Re. 1.07; B28: Re. 1.06; C29 and B27: Re. 1.05; D29 and C28 Re. 1.04; E29, D28, E28, C27, and D27: Re. 1.03. All retailers of sugar are required to exhibit these prices.

The total sugar production during the season 1958-59 (up to 31st July 1959) was 1,904,000 tons, as against 1,971,000 tons by the same date last season. The offtake of sugar from factories during the month of July 1959 was 175,000 tons, as against 170,000 tons in the corresponding period last season. This brings the total despatches from factories upto 31st July 1959 to 1,576,000 tons, as against 1,521,

Doors Re. 1.80 to Re. 1.84; and medium Assam Re. 1.76 to Re. 1.82.

Leaf offerings amounting to 702 chests were in good demand.

Chests numbering 8,324 were offered in the sales held in Chittagong on 19th August. Demand was good, but the price trend was irregular. Thus, while clean orange fannings possessing good liquors gained by 2 to 4 as., B.O.P.s eased. Legg-cut fannings were about steady. The quotations (in rupees per lb.) were: O.F. 1-11; B.O.P. 1-6-6; P.F. 1-6; and B.P. 1-3.

Offerings during yesterday's export sales amounting to 56,256 packages met with fair demand. However, an irregular trend with regard to prices prevailed and, towards the end, a definite easing tendency resulted. Broken and fannings in the orthodox varieties were firm at about previous rates, while fannings recorded slightly dearer prices. Medium B.O.P.s of the same category eased by about 15 p to 20 p. Plain fannings were taken at higher rates often with a firm trend in plain B.P.s. Tippy teas eased, as also whole leaf grades. Among the latter, there were some withdrawals. Darjeelings receded by 30 p to 50 p below valuations. Non-withered Doors lost 10 n.p. and a similar recession was recorded in poorer C.T.C.s. Other C.T.C.s were weaker by 20 to 40 p. The quotations (in rupees) were: Best Assam C.T.C. fannings 3.30 to 3.70; best Assam B.P. 2.70 to 3.00; clean black pekoe 1.92 to 1.94; medium fannings 2.08 to 2.18; plain fannings 1.96 to 2.04; medium B.P. 1.94 to 2.04; and plain B.P. 1.80 to 1.84.

Export quota changed hands at 2½ n.p. the price subsequently receding to 2½ n.p. However, sellers were not interested in offers less than 2½ n.p. towards the close.

JUTES WELL SUPPORTED

(From Our Own Correspondent)

CALCUTTA, 25th August

Fairly steady conditions were in evidence in all sections of the jute goods and fibre markets during the week under review. Although prices closed below the best levels for the week, speculative enthusiasm for goods was keen and activities in the futures markets interesting. In heavy goods, orders from foreign countries were considerably less than last week, but stockists anticipated that interest would soon widen. In hessian, shipping this week took place to Cuba and Argentina in small quantities.

Contrary to earlier expectations, lack of orders from the U.S. for hessian in larger quantities was disappointing. The perceptible fall in burlap consumption in that country in July—it was only 68.8 million yards, as against 81 million yards in the previous month—was a factor which kept down speculative interest in hessian constructions. The fall was attributed to the steel strike in the U.S. but consumption there was expected to pick up. Stocks in that country at the end of July, though they fell by 14 million yards to 271 million yards, were sufficient to meet the needs for about 15 weeks. It was believed here that the U.S. buyers were holding off in the hope that prices would decline further. However, the bullish trend in heavy goods in the last two weeks and its sympathetic effect on hessian and miscellaneous goods had introduced a new situation. For, although hessian prices had not improved, the buoyant conditions in sacking goods arrested the declining trend in hessian, and it was expected that a slight change in demand in hessian would push up prices impressively. It was known here that Argentina had yet to buy a good portion of its requirements and, considering this, the stock position in hessian was not a matter of concern to buyers. There was no doubt that most of the increase in production, if not all, in the unsealing of 24 per cent. of the looms from 24th August would be concentrated in sacking to meet the increased demand in the latter. Also, hessian looms were being continued to switch on to sacking wherever possible. The U.S. has yet to buy in a considerable way, considering the meagre purchases made by it so far. Viewed thus, the outlook for hessian is not less encouraging than heavy goods.

Despite the disappointing figure for July consumption in the U.S., it was noted here that the total consumption for the seven months ended July disclosed an average of 74.6 million yards which surpassed the monthly average in the same period during any of the recent years. The New York report that consumption was picking up was considered significant. It was reported in cabled advice from New York that consumption in the coming months would be running high. The realisation in the market that hessian output here was not expected to improve at least up to the end of this year was apparent. All the same, New York prices did not harden, as buying in the primary market had been cautious. There were reports from France that bulk handling there was becoming more and more popular and, reflective of this, mills in France had curtailed production by about 20 per cent.

Although, in sympathy with the finished goods market, fibre prices were quiet and a few varieties recorded a fractional insignificant recession, the undertone was fully steady. Stockists were confident that conditions would soon improve, in view of the need of mills to replenish stocks. In recent months, the mills had adopted a policy of slow buying as a result of the earlier heavy purchases. The result is that they have to pay greater attention to the fibre market. Meanwhile, crop reports continue to be encouraging, and several areas have experienced rains this week followed by sunshine at intervals. Water levels in rivers, tanks and canals improved, and steeping facilities are now more satisfactory. However, in Northern Bengal more rains are required, and anxiety about satisfactory retting continued.

On Tuesday last, ready B. twills hardened from Rs. 107.75 to Rs. 107.85. The rise followed

fair speculative interest, although genuine business passing was negligible. Further, the market was closed on account of a local festival on that day. Hessian 40" 10 oz. remained unchanged at Rs. 40.80. Note was taken of the figures in respect of July despatches released on the previous day. Total despatches from mills at 91,397 tons accounted for a rise of 4,827 tons or just over 5 per cent. as compared with June. While despatches against local consumption fell in respect of sacking and miscellaneous goods, that in hessian recorded a small rise. For export, both hessian and sacking improved, but other goods were lower. On Wednesday, there was keen activity in futures market, and B. twills jumped to Rs. 109.35. Opportunity was taken by bulls for profit-taking. Hessian 40" 10 oz. hardened to Rs. 40.85. Covering business in heavy goods was fair and, on Thursday, profit-taking continuing, B. twills sagged to Rs. 109.50, while, on better reports from New York burlap market, hessian 40" 10 oz. scored to Rs. 41. There were indications of fears in New York as to whether the good business done in Calcutta in sacking would lower hessian production. That explained the firmness of hessian 40" 10 oz. at Rs. 41 here on Friday, while B. twills gave way to Rs. 107.50 on profit-taking. Over the week-end fluctuations in the futures market made ready hessian 40" 10 oz. fall to Rs. 40.90 and ready B. twills to Rs. 106.80. Although genuine business transacted yesterday was limited, prices steadied up, following keener activity in the futures market and good reports over the week-end. Ready B. twills scored to Rs. 107.95, and hessian 40" 10 oz. to Rs. 41.10.

During the week, mills showed less interest than last week in raw jute. Sellers thought that mills were not happy about the rising trend of the fibre, although the rise in goods prices as had been experienced in the last two weeks was significant than in fibre. In the last two weeks, the gain in fibre prices was just fractional, while that in B. twills and other sacking constructions was several points. Sellers, however, did not lose their balance, as they knew that mills would soon buy in larger quantities. Further export commitments by the State Trading Corporation would claim a portion of the crop. New daissee bottoms August-September was unchanged at Rs. 24.50, while the old daissee bottoms lost to Rs. 23.75 from Rs. 24. New northern bottoms at Rs. 23 receded by 50 p. Latest quotations for the new crop are as follows:

	Middles Rs.	Bottoms Rs.
Upper and Lower Assam	26.00	23.50
Northern	25.50	23.00
Desal	24.75	22.75
Cuttack	28.50	25.50
Murshidabad	24.50	21.50
Daissee	26.00	24.00
Agartala	25.00	24.50
Mesta	24.00	21.50
Jungli	23.50	21.00
Bihar and U.P.	26.00	24.00
Bimli f.a.q.	Rs. 21	
Pucca bales 1st mark	Rs. 170 per bale ready	

BASE METALS MOVE UP

(From Our Own Correspondent)

CALCUTTA, 25th August

Base metals and copper scrap recorded a fair improvement during the week under review, following greater demand and higher advices from foreign markets. Tensile copper scrap moved up from Rs. 225 to Rs. 230 per cwt. and, at Rs. 240, the berry quality recorded a similar rise. The strike in the principal copper mines and refineries in the U.S., namely, Phelps Dodge, Anaconda and Kennecott, began from the 20th inst. If the strike were to continue, it would, it is felt, mean a production loss of 75,000 tons a month, which is only 25 per cent. less than the total monthly American output. In New York, the price hardened from 11.38 cents to 11.45 cents per lb. It was noted that, in July, the American output of copper recorded a seasonal decline. Thus, primary production at 81,835 tons was lower by 17,584 tons than in June, and refined output was only 134,020 tons, as against 138,403 tons. However, stocks at the end of July were higher than in June because of lower deliveries to industry. Reports from the U.S. also indicated that lead and zinc mining were being affected. On the London Metal Exchange, spot copper opened at £227 per ton and rose to as high as £245½ to close at £235½.

There was an improvement in demand for tin, as a result of which the price hardened from Rs. 581 to Rs. 587 per cwt. The stock position was far from satisfactory, and this added to the improved sentiment. An improved trend was also reported from Singapore. In London, tin, although unchanged, remained fully steady at £792½ per ton, while, in New York, the closing level at 102.37 cents recorded a fractional recession.

Electrolytic zinc opened at Rs. 106 and, after hardening to Rs. 107, closed at Rs. 106. Greater demand in the face of reduced stock contributed to the upward trend. Lead at Rs. 75 was steady. In London, zinc at £86½ per ton touched the highest level for the week, but returned to the opening level of £86½.

LINSEED DECLINES SLIGHTLY

(Messrs. A. Bradley and Co.)

CALCUTTA, 26th August

Although prices of linseed declined slightly, the undertone of the market remained firm. Business was rather limited. Crushers showed some interest, but sellers were reserved. Despatches from the centres were very poor.

In the options market, trading continued to be on a small scale. Both September and May positions registered small losses with buyers hesitant.

There was good demand for oilcake on the whole, mainly from local buyers and prices advanced above Rs. 14.50; shippers showed no interest beyond Rs. 14, owing to the decline in overseas price to £35.

The oil market was firm. Prices showed little change, but sellers were very reserved. Shippers re-entered the market and business was done up to Rs. 50.25. Overseas price advanced to £106.

WANTED A FOOD POLICY

THE compelling logic of the high food prices in

India must make one wonder whether the time has not arrived for the formulation of a realistic food policy for the country. The new Food and Agriculture Minister, Mr. S. K. Patil, has all that a Minister can want. He enjoys the confidence of Parliament and of the country. Again, on his own admission, he is "unconventional and unorthodox." So was the late Mr. Kidwai, who has gone down in India's agricultural history as the man of the hour, who successfully removed controls without any ill-effects on the economy. Mr. Patil has other qualities too. He can persuade people and carry conviction to them. And in food, as in many other aspects of Governmental policies, half the battle consists in convincing others, the other half being the possession of conviction in one's own policies. It cannot be said that Mr. Patil has yet arrived at the stage where a new food policy can be formulated straightforwardly. But, in the course of his speech at the Rajya Sabha this week, he gave ample evidence of the fact that he knows his own mind. What stands out prominently from his long address is that he is not prepared to be hustled into action. He did much audible thinking, but resolutely set his face against being stampeded into any particular policy on purely doctrinaire considerations.

Although Mr. Patil has not made up his mind on the question of formulating a food policy, he gave some indications of the lines on which he was thinking. Obviously, they are tentative. Even so, they indicate a realistic approach to the food problem. In the first place, he emphasised that there must be an all-party approach to the problem. This has often been said before but has seldom been implemented. Secondly, he recognised that the essence of the problem lay in increased production. This point too has found eloquent supporters in the past, though food ministers, once they are in office for sometime, get lost in the problem of distribution of available food supplies. Mr. Patil, with his characteristic good humour, remarked that he would rather become a Minister of Agricultural Production than remain a Minister of Food Distribution. He stressed that food self-sufficiency must be achieved "under any circumstances and by any means." Thirdly—and this is by far the most important aspect of the problem—Mr. Patil pleaded for inspiring the rural sector with a sense of security. He gracefully conceded that the food problem had been "aggravated or complicated by the fear complexes that we have developed." Illustrating the impact of this man-made complex on the food problem, he referred to the hoarding by farmers out of fear of lean years. Finally, he made the point that what the situation demanded was the provision of incentives for the farmers which would make them "become food-conscious and produce more."

Little exception can be taken to these considerations. It must, however, be admitted that, when it comes to applying them, there are bound to be differences of opinion. Thus, it would be an over-simplification of the problem to suggest that the mere grasp of fundamentals will automatically ensure the evolution of a right food policy, productive of positive results. At the same time, it must be recognised that no food policy which ignores them can deliver the

goods. Again, in formulating a policy, it is necessary to harmonise it with the overall economic policy. The significance of this was brought out by Mr. Jain himself in the course of his letter of resignation to the Prime Minister. He pointed out that "in the complex economy under which we are living, the prices of commodities are affected by the export and import policy, budgetary and monetary policies." He added: "In a developing economy, all these have an effect on food prices." Yet another illustration of the effect of the general economic policy on the food problem was brought out by Mr. Jain as well as by Mr. Patil and the Union Deputy Minister, Mr. A. M. Thomas. This refers to the results of certain agro-economic surveys. It would appear that these surveys reveal that wholesalers do not have much stocks in the country but the stocks are with producers who are now more conscious of price considerations and have larger holding capacity, thanks to liberal supply of credit from co-operative institutions. In other words, the Government cannot with one hand provide liberal credit to farmers with no means of checking upon its being put to correct use and, with the other, seek to stabilise the price levels. Although there were some angry protests in Parliament against this line of reasoning, it is undeniable that there is a certain element of truth in the widely held view that individual farmers have now a better capacity to hold on to their produce. The situation could be corrected only through the adoption of a policy which reconciles the need for meeting credit requirements of the farmers with the equally imperative need for ensuring that the credit is applied only to genuine agricultural operations and is used for preventing distress sales by farmers. Co-operative humanitarianism should not degenerate into a cloak for covering inflationary sins.

The problem of providing incentives to farmers resolves itself into the adoption of a large variety of measures. If the "fear complex" among farmers is to be removed, there must necessarily be an extensive price support programme, if not also crop and cattle insurance schemes. The emphasis on co-operative farming is yet another factor in the farmers' fear complex. It must be abandoned, except in certain special cases. Again, there is the question of providing the physical means by which production could be stepped up. The target for foodgrains (inclusive of pulses) in the third Five-year Plan has been set at 100 million tons. It would appear that this target is based on the assumption that 6.2 million tons of additional foodgrains and pulses over the base figure of production in 1960-61 would be obtained by the use of fertilisers. Clearly, the production of fertilisers, both organic and chemical, should be increased. Again, as is well known, there is wide scope for the application of scientific methods to Indian agriculture. This has now been confirmed by no less an authority than Professor J. B. S. Haldane. In the course of his speech at the Tata Institute of Social Sciences, in June last, this distinguished scientist averred that there were many "vested interests" in India who might persuade people to believe that adequate research was being done to increase food production. "I venture to doubt it," he said. He was of the view that the problem could be solved if scientific methods were applied to the production of food; at present, the country had the resources to produce the food it required. More agricultural research and more application of such research to land are what the country needs today. This is not a mere platitude. The man who can translate research results into actual practice in Indian agriculture may crown himself with glory.

There are, of course, quite a few specific issues which deserve utmost consideration. State trading in foodgrains is one such issue. Mr. Patil made it clear that he would neither swear by it nor swear at it. While the need for some means of State intervention in foodgrain trade is generally conceded, it would be wrong to continue to experiment in State trading, especially when, on official admission, it has proved a failure. Mr. Patil, on his part, confessed that he would be a happier man if he could achieve the objective of adequate food at reasonable prices through free market economy than through State trading. There is next the zonal system of distribution. Mr. Patil pleaded for treating the entire country as a single unit. It is true that the zonal system has had a certain measure of success. It deserves to be examined whether its more recent failure is to be attributed to any inherent defect in the system or to the Government's attempt to dovetail State trading into it. In any case, if the system is retained, the pre-condition for its successful operation, namely, the willingness of the surplus States to share their surplus with the rest of the country, should be fulfilled. Finally, there is the wide range of purely administrative problems of co-ordination of the work of the Central and State agricultural departments and also of the work of the different departments at the Central and State levels. Available evidence shows that agriculture is the least administered of the State subjects from the positive angle. It is only when this defect is remedied that agriculture can come into its own.

COAL PRICES

THE meagre increase of fifty naye paise per ton in prices of coal up to grade IIIA and IIIB in Bengal-Bihar coalfields, announced last week, is not calculated to give satisfaction to the industry. For one thing, it does not fully meet the rise in production costs the industry has had to contend with. Secondly, the revision reflects the findings of the Coal Prices Revision Committee, based on cost data which have been outdated by the delay in the framing of its suggestions. Indeed, it is the second factor which greatly vitiates the Committee's recommendations. Appointed in 1957, the Committee took nearly two years to submit its report. The situation has been rendered worse by the fact that the Government has taken nearly nine months to accept the Committee's recommendations in their entirety. Even for this country which is accustomed to deplorable official delays, the extent of the Government's delay in the revision of coal prices constitutes a very unworthy record. And, as it has now turned out, the Government's decision on coal prices is not likely to make coal producers feel that it was worth waiting for. The only justification which a delay of this magnitude could have would be an attempt to reach a decision that would give all-round satisfaction.

The industry's demand for a more substantial increase in prices had been based on very valid considerations. On behalf of the industry, it has been pointed out that production costs have risen by about 52 per cent. since 1947, whereas the permitted increase in prices has been of the order of only 31 per cent. The fact that an increasing number of collieries are carrying on their operations at a loss has served only to strengthen the industry's case for a larger increase in prices than has been vouchsafed to it. A survey of the financial position of 45 representative coal companies revealed that only 15 of them were in a position to declare dividends in 1958. A similar survey of 19 units, made in 1957, showed that the profit, after providing for taxation, worked out to Re. 1.21 per ton, out of which dividends accounted for Re. 0.54 per ton. It further revealed that the total dividends paid were only 3.4 per cent. of the total value of investment. Surely, this is a very meagre return for an industry with a wasting asset like coal. The financial resources of the industry are being fast depleted, with no prospects of their being replenished. A joint note on coal prices, issued recently by the representative bodies connected with the industry, placed the depletion of reserves in coal industry in 1958 alone at Rs. 1 crore. It emphasised that "no industry can continue to suffer the depletion of its resources to such an extent and the coal industry particularly is one which has to meet regular demand for capital expenditure due to its very nature."

It is, therefore, somewhat deplorable that the Government should have failed to concede the industry's case for a reasonable increase in prices. The increase of half a rupee per ton now permitted falls far short of the industry's demand for a rise of Rs. 3.50 per ton. It must be remembered that, barring South Africa, India produces the cheapest coal in the world. A larger increase in coal prices than the one now permitted would certainly not have entailed too heavy a burden on industries. The increase in cost to the consumer now is only one rupee per ton, consisting of an increase of 50 nP per ton in price, the increase of 25 nP per ton in excise duty and a cess of 25 nP per ton. It is difficult to resist the temptation of contrasting the Government's niggardly attitude towards the industry's case for revision of prices with the attitude which industrial tribunals adopt towards the upward revision of wages. We are far from suggesting that the wages and amenities to workers, in general, and coal miners, in particular, should not be increased. Only, in a commodity like coal, the prices of which are controlled, the Government owes it to the industry, producing the commodity, to ensure that increases in wages and other costs of production are satisfactorily reflected in controlled prices.

In the absence of the text of the report, which has not been made available to the Press, it is difficult to assess the validity of the considerations which prompted the Committee to recommend a negligible increase in coal prices. From Press reports, it would appear that the Committee has assessed the production cost of coal in the Bengal-Bihar region at Rs. 17.90 per ton (exclusive of the cost of stowing operations). A profit-margin of Re. 1.75 per ton is considered fair and reasonable in relation to the capital employed. At the existing level of prices, the average sales realisation, it is stated, works out to Rs. 19.18 per ton. It is on this basis that an

increase of 50 nP per ton has been granted. For the outlying regions of Madhya Pradesh, Bombay, and Orissa, the cost structure has been assessed at Rs. 19.35 per ton. The increase of Re. 1.45 per ton over the Bengal-Bihar coalfields is attributed to higher cost of stores. The graded prices recommended would yield an average sales realisation of Rs. 21.11 per ton, at which level the margin of profit would work out to Re. 1.75 per ton (the same as in the case of Bengal-Bihar fields). The Coal Board has been instructed to fix the final grades for the outlying coalfields. This means that there will be inevitable delay in the application of revised prices to those fields.

Perhaps, the Government, if it was really earnest about taking the industry into confidence, could have released the report earlier, especially because it has taken nearly nine months to announce its decision on the Committee's findings. The intervening period might have been better utilised by inviting the industry to a discussion of the cost and other data on which the Committee's recommendations have been based. Be that as it may, it is not clear whether the Government has taken into account the fact that the provision of appropriate incentives is necessary in the interests of a substantial increase in coal production which the third Five-year Plan will call for. Announcing the decision on coal prices, Sardar Swaran Singh, Union Minister of Steel, Mines and Fuel, said: "I venture to express the hope that the recommendations of the Committee, as accepted by the Government, would go a long way towards the achievement of the targets we have laid down under the second Plan." It is a pity that the Government, in deciding the crucial issue of coal prices, should have limited its vision only to the second Plan. And, even here, it is doubtful if the meagre increase, now granted, will be a sufficient stimulus to the industry to increase its production to the target level.

Two welcome features of the Government's decision are those relating to the provision of incentive for stowing and of subsidy to uneconomic collieries. The Government has agreed that the subsidy on stowing by the Coal Board should meet the full cost of stowing operations, instead of its being limited to 75 to 85 per cent. of the cost, as at present. Additional funds for this purpose are to be obtained from the consumer by increasing the rate of excise duty by 25 nP per ton. Again, a subsidy will be given to uneconomic collieries, the funds for this purpose being provided by a cess of 25 nP per ton on the lines of the cess under the Coal Mines (Conservation and Safety) Act. While this decision may be commendable, it is not clear what considerations will guide the Government in the choice of collieries for purposes of granting financial aid. The relevant recommendation in the Committee's report, it is stated, observes that collieries which are handicapped by one or other of the adverse factors specified by the Committee which inevitably raise their cost of production should be given a suitable subsidy, provided it is found that they have to be maintained in production in the national interest. It would be interesting to watch how these considerations would be applied. In any case, it would be surprising if the queue of the collieries in want of assistance did not grow rapidly with the passage of time. There is bound to be murmurs of discontent among the beneficiaries, though they may well console themselves with the thought that it is wrong to look a gift horse in the mouth.

CHINA'S ECONOMIC LIMP

CHINA has decided to look before leaping further. Its much-publicised "great leap forward" economic programme has now been modified in the light of a sober appraisal of last year's achievements. The Central Committee of the Communist Party, at the end of a two-week conference at Lushan (Kiangsi Province) last month, has scaled down the targets for the current year. The party leaders have admitted that, contrary to their earlier claims of 100 per cent. increase in output in 1958, actual production showed only modest gains; grain output increased by 35 per cent., cotton by 28 per cent. and steel by 50 per cent. Grain and cotton targets for this year have been reduced to about half of the original figures set earlier this year. Steel target is reduced by one-third and is only one million tons higher than the figure of 11 million tons claimed last year. This year's coal target has been reduced by 45 million tons. The general verdict on original targets in the current year's plan is that they were too high and needed readjustment. So the leap has become a limp. Nevertheless, it is still claimed by the Communists that, even if the readjusted targets for the current year alone were reached, China would still

reach the targets, fixed originally for 1962, in respect of a wide range of commodities, including steel, coal, timber, metallurgical equipment, power generation equipment, machine tools, cotton yarn, paper, salt, grain and cotton.

Although a sober approach is always to be welcomed in economic as well as political affairs, it is only in Communist countries that one finds wild and almost hysterical jubilation followed invariably by cautious reappraisals. There is a certain amateurish element in Communist planning. Often, high hopes are raised and great gains are promised or are believed to have been won. But, on closer examination, it is found that the best laid plans of even the Communists may go awry. China's experience is true to type. Less than five months ago, China's Prime Minister, Mr. Chou En-lai, averred that the expansion of the national economy in 1958 was "clearly not just an ordinary advance but a gigantic and all-round leap forward." It was then claimed that, in the case of many industrial and agricultural products, increases in output in 1958 alone exceeded the improvement over a 1952-57 period. Thus, it was stated that whereas in the 1952-57 period, steel output increased by four million tons, coal output by 64 million tons and food crops by 61,200 million catties, the corresponding increases in 1958 were steel 5.73 million tons, coal 140 million tons and food crops 380,000 million catties.

The fact that the 1958 output figures have been markedly cut must raise doubts about the reliability of earlier statistics. It is true that much progress was made by China during the period of the first Five-year Plan (1953 to 1957). Many foreign observers have testified to the immense activity in that country. But, in the light of what has been stated about 1958, it may be wondered whether the earlier official versions of China's progress could be taken as correct. These estimates place the value of industrial output at 65,020 million yuan and that of agricultural output at 60,350 million yuan in 1957, as against 27,010 million yuan and 48,390 million yuan, respectively, in 1952. In 1958—it is the figures relating to this year that have come in for reappraisal at present—the total value of output of industry and handicraft sector was originally placed at 117,000 million yuan and that of agriculture at 88,000 million yuan. Since it has now been discovered that the 1958 figures have greatly erred on the high side, it is not inconceivable that the figures relating to earlier years have been similarly vitiated.

Appropriately enough, some voices of protest against uncritical acceptance of reports of China's achievements were raised in our Parliament. If this indicates a genuine desire to look within, rather than the good. The well-tried Japanese method of growing rice was given up in favour of the new Chinese method, under which the land is to be dug several feet before replanting paddy saplings. God only knows why such deep ploughing has to be done when the roots of paddy plants do not go down beyond a few inches. Yet this method was seriously advocated for Indian peasant, despite the fact that he has not farmer as can be found anywhere. There is little ideology, can give to this country. Further, not every innovation tried in China has been successful. Thus, its programme for producing iron and steel at the backyard through the establishment of numerous cottage furnaces has not achieved any notable result. Many of these furnaces are reported to have been converted into junk. The Government of India was so charmed by the earlier Chinese propaganda that it sent China to study the "magic" of manufacturing one's kitchen garden.

Above all, by accepting without inquiry the Chinese methods, India runs the danger of losing its democratic soul. For, a somewhat deplorable feature of economic planning in China—as, in fact, in all centrally controlled economies—is the attempt to find scapegoats when things go wrong. Thus, in China, the Central Committee of the Party, which has apparently been sorely exercised over the failure of the leap forward programme, speaks of "enemy elements hostile to the socialist cause of our country, both within and without our country" who have tried to "infiltrate" the Party and "sabotage" its work. The Party exhorts the people to "determined blows to disruptive activities of anti-socialist elements." Generally speaking, this complex of fixation of ambitious targets and its covary of failure, followed by the purge of alleged "enemies of people's democracy."

MARKET GOSSIP

THE annual meetings of the Tata Iron and Steel Company, Ltd., India's largest industrial concern in the private sector, have always been an entertaining and enlightening affair to students of company finance. Many questions, relevant and irrelevant, sensible and nonsensical, are raised at these meetings and it has been customary for the Chairman to answer them with unfailing courtesy and remarkable patience. The fifty-second annual meeting of the Company held on Wednesday this week was no exception to this pleasant feature. For the first time, so far as this writer can recall, the meeting was held outside Bombay House, the home of Tatas, in the spacious air-conditioned auditorium of Birla Matushri Sabhagar, in deference to the wishes of the shareholders who had complained in the past two or three meetings that the hall in Bombay House was not large enough to accommodate all the shareholders who wanted to participate in the meeting. As many as 720 shareholders had turned out this year and a very large number of them stayed through the six-hour long session which ended a little after 10 p.m. Of these six hours, the first two hours were spent on a discussion of the proposed increase in the capital of the Company and the remaining four hours were devoted to the Directors' report and statement of accounts for 1958-59. Despite a slight indisposition, Mr. J. R. D. Tata conducted the meeting with a sparkling sense of humour and satisfied the inquisitive-minded shareholders by giving information liberally. He exercised commendable patience, paying close attention to almost every one of the questions.

Quite a few amendments were moved to the resolutions on the increase in capital. One of them sought to make the proposed cumulative non-redeemable preference shares into redeemable after 10 years. But this amendment was withdrawn by the mover, after the Chairman had explained that any amendment to the scheme proposed by the Directors and approved by the Government would only delay its implementation as the change would have to secure the Government's consent again. This explanation, however, did not deter another shareholder, who insisted that no preference shares should be issued and that the portion of capital covered by this class of share should be raised in the form of debentures, as, in the long run, it would be more advantageous to equity shareholders, because interest on debentures was allowed as a charge on the profit for tax purposes. He, however, got no support to his amendment and registered his protest by voting against the main proposition. Mr. Tata gave a convincing reply to this dissenting shareholder and to others of his way of thinking. While he agreed with the point about the tax advantage arising from the debenture finance, he averred that there was a limit upto which this could be done and that that limit had already been reached. He also drew the attention of shareholders to the agreement with the World Bank for maintaining a certain proportion between paid-up capital and loans.

From the speeches made at the extraordinary general meeting on the capital increase, one got the impression that quite a number of shareholders would have liked the entire amount of the proposed increase in capital in the form of equity shares only. The Chairman, however, maintained that the proposals put forward by the Directors were the best and that it was in the interest of ordinary shareholders themselves to let the preference shareholders carry a part of the burden of providing the large capital required for financing the expansion that has been carried out.

Surprisingly enough, the question as to how soon the Directors of the Company would again approach the shareholders for fresh capital was not raised. Since even after the proposed issue of new capital the gap between the net block account and the paid-up capital will be large, there is bound to be another issue of capital after some time, presumably a couple of years later.

T. I. S. Co. Dividend

Both at the extraordinary general meeting and the ordinary general meeting, the question of dividends figured most prominently. Anticipating the criticisms from shareholders on this issue, Mr. Tata had explained the position lucidly in his speech (published in full on pages 376-378 of this issue). Nevertheless, several shareholders strongly voiced their dissatisfaction with the dividend of Rs. 6.80 per share for 1958-59. "Stepmotherly treatment," "badly let down," and "kick in the pants" were some of the expressions used by the disappointed shareholders, who even felt that nothing would have been lost had the Directors drawn from the reserves to pay a dividend of at least Rs. 7.50 per share. A few contrasted the liberal treatment given to the labour, through a progressive rise in wages, bonus and fringe benefits, with the falling rate of return to shareholders. In their anxiety to establish a case for better dividends, some of the shareholders were rather harsh on labour and Mr. Tata did well to bring this point forcefully to their notice and present the issue in its proper perspective.

An impressive and convincing reply was given by Mr. Tata to the shareholders' criticisms on dividends. He denied that the dividend had been cut. On the contrary, he argued that the assurance given by him in 1957 had been more than maintained. The assurance was to the effect that it was the intention of the Directors to pay, until the one-million ton new plant gave full production and yielded adequate additional profit, a dividend that would be equal to a dividend of

Rs. 10.8 per share on the old ordinary share capital and a return of five per cent. on the new ordinary capital. He contended that the dividend of Rs. 6.80 per share for 1958-59 was equivalent to Rs. 10.8 per old ordinary share and a return of 3½ per cent. per annum on the new ordinary share, inclusive of the premium of Rs. 30 per share. He explained at length that a dividend of Rs. 7.50 per share (old and new) would have amounted to raising the dividend over Rs. 10.50 per old share and how such an increase would have been thoroughly unsound. Here are the main points of his case:

1. The shareholders have completely lost sight of the magnitude of the task of building a million-ton new plant, involving a capital cost of over Rs. 100 crores. If a separate company had been formed for this purpose, it would have taken that company four or five years to give any return at all. They should compare this prospect with the fact that they have been receiving a dividend equivalent to Rs. 10.8 on old shares and Rs. 5.8 on new shares right from the date of allotment.

2. In order to see that the shareholders are not inconvenienced to any great extent, the Company has been following a policy of raising capital to the minimum extent and financing the expansion through loans to the maximum extent possible.

3. The new plant has only just begun to yield production and has not contributed to any significant extent to the earnings for 1958-59.

4. Unlike any consumer goods industry, the steel industry was totally controlled by the Government. The Company has to make the steel it is told to do, has to give it to those directed by the Government and at a price fixed by it. There was little discretion for the Directors in these matters.

5. If a higher dividend were paid, the labour would claim full bonus for 1958-59—an issue which yet remains to be settled—and the Tribunal would uphold such a claim, if the matter were to be referred to adjudication or arbitration.

6. A higher dividend would have spoiled the Company's case for getting the permission of the Controller of Capital Issues to issue the new ordinary capital at par. In fact, it would have strongly supported the Government's case for collecting a premium of Rs. 30 per share.

While all this is true, the fact remains that none had expected a dividend of Rs. 6.80 for 1958-59 and that it came as a shock to the market. Why was the share market (we are using the term "market" here to include both speculators and genuine investors) anticipating at least a minimum dividend of Rs. 7.50 on both old and new ordinary shares? Actually, many were expecting something more than this figure. There are several shrewd operators in the market. Yet it does not seem to us that they had placed the same interpretation to Mr. Tata's 1957 assurance as was given by him on Wednesday and in the latest Directors' report. Apparently, there has been a lot of confusion between the quantum of dividend and the rate of dividend and this is due to the fact that, when one says, or gives rise to the impression that the dividend will be maintained, it is generally taken to mean that the rate of dividend will be maintained. This confusion could have been avoided, if the Chairman had clearly spelled out the meaning of his 1957 assurance when it was made.

It would now appear that the Chairman is alive to this point. For, when several shareholders sought to find out as to what would be the dividend for 1959-60, he indicated, without giving any definite undertaking, that, barring unforeseen circumstances, it would be about Rs. 6.64 per share on all the existing ordinary shares and about 26 nP on the proposed new ordinary shares, representing a return of about 5½ per cent. per annum for the short period from the date of allotment upto the end of March 1960.

There were several questions and answers (from the Chairman) about the Company's production, programme, its investments in subsidiary and associate companies, etc. There is no space here to record them. It must, however, be mentioned that the shareholders were quite satisfied with the explanations given by Mr. Tata for the delay in getting full production out of the Company's new plant. No one questioned him on this issue. Nor did the shareholders remember to ask him about the Company's plans for inclusion in the third Plan for the steel industry now being actively discussed by the Government. Whatever that might be, it is evident from the observations of Mr. Tata that, barring Government interference and given normal working conditions, the shareholders can hope to get a better deal from the financial year 1960-61 onwards.

A striking statement made by Mr. Tata on labour relations in his company was that, during the last thirty years (1928 to 1958), there was only one strike by the workers of T.I.S.Co. in 1958 and that too, for political reasons, whereas, in the U.S., steel workers went on strike almost every two years. This is, indeed, an important point which many shareholders conveniently overlook whenever they complain that the management of T.I.S.Co. has been overgenerous to the workers.

Equities Down

For the second week in succession, equities have followed a downward trend. In several counters, the extent of fall has been sharper than in the previous week. It would have perhaps been more, but for a number of holidays this week, for the market sentiment has undergone a distinct change in favour of the bears. This is due more to cold

feet developed by the bulls than to any aggressive pressure by the bears. There are good reasons why the markets should be on the quieter side now. In addition to the move to reorganise the Bombay State on linguistic lines, referred to in these columns last week, there have at least been three disquieting developments since then. First, the unwarranted Chinese intrusions into Indian territory in the Himalayas and the failure of the Chinese Government to make amends, despite the repeated protests by our Government. Second, the mischievous violent demonstrations and riots at Calcutta engineered by the Communist Party of India. Third, the unfortunate misunderstanding between the Defence Minister and the Chief of Staff of the Indian Army which has only been "patched up" to quote the words of the Speaker of Parliament. It is true that none of these developments has in any way seriously upset the earnings of industries. But it is common knowledge that Stock Exchanges are very sensitive even to remote possibilities and immediately react. Further, Mr. J. R. D. Tata's speech at the T.I.S.Co. annual meeting on Wednesday is not such as to revive the drooping trend of the key scrip, Tata Steel Ordinary. While it is undoubtedly encouraging so far as the long-term outlook is concerned, it offers no tonic for the short-term. In its present mood, the market attaches greater importance to short-term prospects than to long-term.

It must be said to the credit of the bears on the Stock Exchanges that they have not behaved so badly as the Communists in this country and their Chinese brethren on our Himalayan borders. They could have easily exploited the aforesaid developments and brought about worries to investors. They have, somehow, refrained themselves from raiding the market. Apparently, they have not yet recovered their strength lost in the recent bull phase.

Bullion Bullish

The very factors that depressed the bulls in the share markets have served as stimulants to their confreres in the bullion market. Although the monsoon period is supposed to be the slack season, the prices of both gold and silver have moved up. The Chinese aggression on our northern and north-eastern frontiers has helped to impart fresh momentum to the bullish trend engendered by the developments in Tibet earlier. In recent years, Tibet has been the principal source of supply for silver to this country. Although the Government had banned imports of silver from abroad, it gave an exemption to the import of Tibetan silver coins as a special case. This source has completely dried up now. Even before the shooting started across the Himalayan borders, the Chinese had placed several impediments in the way of Indian and Nepal merchants functioning in Tibet, replaced the Tibetan currency in circulation with their own currency, and refused to allow Indian currency to function, thereby committing a breach of the agreement on Indo-Tibetan trade. These steps alone were sufficient to stop the flow of Tibetan silver coins into India. The subsequent border incursions have removed what little chances there were of getting them.

In gold, too, there seems to have been a marked fall in smuggling. Thanks to the commendable co-operation given by the management of the B.O.A.C., the efforts of a big gang involved in bringing gold from Hong Kong have been frustrated. On a representation made by the Government of India, the B.O.A.C. has cashed as many as 51 of its staff suspected to be helping the smugglers. These include 46 stewards, three navigating officers, and two engineer officers. Besides, these 51, two stewards and an engineer officer have also resigned following the Corporation's investigations. This is the outcome of action taken by only one airline. It is not unfair to draw the inference that similar action by the other airlines may uncover quite a few persons engaged in this illegal traffic. Officers and men of airlines are well-paid and well-educated people. That quite a number of them should fall victims to the temptations of contraband trade is a striking indication of the highly lucrative nature of this trade.

Disturbance to peace anywhere is a bullish factor to bullion. It is more so when such disturbance takes place on our borders with an external power under a totalitarian regime. News of Chinese aggression at N.E.F.A. and Ladakh came at a time when arrivals were shrinking and the floating stocks were not large. No wonder that silver and gold have shot up during the last few days. While details of changes in bullion prices can be had from our Market Reports Section, it may be mentioned here that, since the unfriendly attitude of China towards India became quite clear by about the middle of last month, silver and gold have gone up by Rs. 8.8 and Rs. 2.8 to Rs. 207.7 per 100 tolas and Rs. 123.12 per tola, respectively. In the last week of June (that is, at the commencement of the slack season), it may be interesting to note, silver was in the neighbourhood of Rs. 190 and gold Rs. 117. Indeed, in the feverish trend caused by China this week, the prices would have gone up higher still but for the decision of a leading bull in Calcutta to book profit on a large sale.

Night Allowance

Apocryphal reference in these columns last week to the Provident Fund contributions of industrial workers, with particular reference to "night allowance," we have just received the following elucidation from Mr. S. N. Mubayi, Central Provident Fund Commissioner:

"As regards the deduction of provident fund contributions on 'night allowance,' the Government of India have advised that it forms part of the basic wages as defined in Employees' Provident Funds Act, 1952. This clarification was given for the first time in December 1957, when the question of 'night allowance' paid by the Western India Match Co., Ltd., Ambarnath, was (Continued on page 412)

SHARE MARKET QUIET

FURTHER DROP IN PRICES

(From Our Own Correspondents)

BOMBAY, 3rd September

AFTER the recent hesitancy to steer a clear course, the share market has taken a definite turn for the worse, with almost all shares staging a sizable retreat. Barring a brief session on Saturday last, which was lively, when the previous day's losses were made up in some selected counters, the market ruled distinctly quiet throughout the week, which, thanks to the intervening holidays, was a short one of no more than three trading days. Reports of Chinese violation of Indian territory caused considerable nervousness. Textile shares were exceptionally weak reflecting anxiety about the working results of mills. The increase in D.A. to mill workers, the high price of raw cotton and increasing operating costs led to fears that these might offset any possible improvement in cloth and yarn sales. The operators now seem to feel that, in the more recent weeks, these shares had been boosted up unduly. Steel shares came down due to lack of support. Interest was subdued in the absence of any further news about the issue of right shares by the Indian Iron and Steel Company. Cement, sugar, and electric shares gave way on selling pressure from investors.

Steels

Tata Steel Ordinaries declined on liquidation from Rs. 176.50 last week-end to Rs. 172.75 on Saturday at which level it attracted bear-covering and improved to close at Rs. 175.75 yesterday. Indian Irons opened the week at Rs. 25.15, as against the previous day's close of Rs. 25.20, and steadily drifted downwards, touching a low of Rs. 24.36 yesterday. The finish was, however, fractionally higher at Rs. 24.40.

Textiles

Textile shares registered all-round decline. Kohinoors reacted sharply, dropping Rs. 16 to Rs. 301, following stale liquidation by those who had bought in the hope that a change in the management of the Company was imminent, a hope which has now been belied. Century Mills moved erratically. Opening Rs. 4 lower at Rs. 552, they climbed down to Rs. 540 on Saturday and recovered subsequently to close at Rs. 547, the net loss over the week being Rs. 9. Bombay Dyeing opened at Rs. 63.60 and, after easing to Rs. 62 on Saturday, partially regained the lost ground to finish at Rs. 62.90, showing a net loss of only 80 p over the week. Simplex suffered a drop of Rs. 4 over the week, the closing quotation being Rs. 158. National Rayons were marked down by Rs. 11.75 to Rs. 339, as against last week's quotation of Rs. 350.75. Central Indias declined by Rs. 5 to Rs. 102. Elphinstones were marked down by Rs. 6.50 to Rs. 34.50. Finlays dropped Rs. 14 to Rs. 270. Gokaks drifted lower to Rs. 158.50, as against last week's quotation of Rs. 164. Khataus dropped Rs. 11.25 to Rs. 225, and Morarjee's Rs. 6.25 to Rs. 271.25. Podars and Shreenivas were done Rs. 5 and Rs. 5.50 lower at Rs. 139 and Rs. 184 respectively. Even Standards declined by Rs. 11 to Rs. 557. Svadeshis changed hands Rs. 8 lower at Rs. 238.50.

Bank and insurance shares were practically neglected. But for minor losses in selected scrips that encountered some selling, values showed very little change. Among bank shares, Baroda 'B' eased by 50 p to Rs. 47. United Commercials were quietly steady at Rs. 61.50. Punjab Nationals remained unchanged at Rs. 22. In the insurance section, New India eased by Rs. 1.20 to Rs. 59, Vulcans softened by 52 p to Rs. 21.24 and Jupiters by 64 p to Rs. 5.

Cements

Cement shares were subdued. Associated Cements declined from Rs. 144.75 last week-end to Rs. 141, representing a net fall of Rs. 3.75. Jaipur Udvoos receded by 28 p to Rs. 10.56. Ashokas and Dalmias eased by 12 p each to Rs. 8.72 and Rs. 10.60.

Sugar shares generally drifted downwards. Belapur opened at Rs. 313 and, after reacting to Rs. 303 on Saturday, recovered to close at Rs. 307.50, as against last week-end closing of Rs. 315. Walchandnagars lost Rs. 6.25 to Rs. 317.50. Phaltans were done Rs. 5.50 lower at Rs. 159. Bhopals eased by 20 p to Rs. 23.80.

Engineering and Others

T.E.L.Cos. in the engineering group, suffered a setback, declining by Rs. 7 to Rs. 197.50. Alcock's eased further by Rs. 5.50 to Rs. 247. Premier Constructions dropped Rs. 8 to Rs. 340. Voltas were weaker by Rs. 6.50 at Rs. 165.50. Among mining shares, Shivrampurs eased further by Rs. 3.50 to Rs. 85.

Shipping shares, too, were quoted lower. Great Eastern declined by Rs. 1.56 and Scindias by 44 p to Rs. 19.80 and Rs. 17.28 respectively. Bharat Lines changed hands Rs. 2 lower at Rs. 12.

In the miscellaneous section, several scrips receded. Bombay Burmahs sharply declined from Rs. 526 at the beginning of the week to Rs. 509.50 on Saturday, though they improved later to close higher at Rs. 514, as against last week's finish of Rs. 528.50. Alembic Chemicals climbed down by Rs. 10.50 to Rs. 300 and Ferro Alloys by a like amount to Rs. 80. Ceat Tyres receded by Rs. 4 to Rs. 167. West Coast Papers declined by Rs. 7 to

Rs. 143.50. Killick Industries (old shares) receded by Rs. 3 to Rs. 142. National Rubbers by Rs. 2.50 to Rs. 13.90 and Hindustan Levers by Rs. 1.25 to Rs. 29.75. Gwalior Rayons were a shade lower at Rs. 23.16 but Wimcos came down by as much as Rs. 6 to Rs. 211.50.

The market was closed today on account of a sectional holiday, but the trend in the kerb was clearly quiet.

Madras Stock Exchange

MADRAS, 2nd September

Equities on the Madras Stock Exchange turned generally easy during the week under review, after remaining distinctly steady during the previous fortnight. The sentiment was somewhat subdued on reports of Chinese infringement of India's territory along the northern borders and riots in Calcutta. Plantations were featureless. Tea shares were dull in the face of reports suggesting declining trend in tea production in the South which, it is estimated, was lower by about 18 per cent. in the first half of the current year, as compared with the corresponding period last year. Coffee shares, too, drifted to lower levels and so also rubber scrips. Miscellaneous industrials were generally easy, but met with selective support. Sugars also lacked fresh buying support. Textiles, however, were active as a result of encouraging enquiries for yarn and piecegoods.

In the sugar section, Kirlampudis suffered a setback of Rs. 2.00 to Rs. 84. Travancores shed 5 p to Rs. 12.45. But E.I.D.s were firm and closed today at Rs. 38.80 *ex-div.*, as against Rs. 39.65 *cum-interim div.* last week-end, the interim dividend being a little over 94 p. Indias were unchanged at Rs. 13.10. Mysore were neglected at Rs. 19.50. Decans at Rs. 12.25 and United Breweries at Rs. 459.

Among tea shares, Kil Kotagiris declined by 10 p to Rs. 8.30. Periakaramalais lost 9 p to Rs. 3.97. Twyfordes were dull at Rs. 16.60, as also Chembras at Rs. 4.25. Oucherlonys at Rs. 5.50. Halleyburias, however, moved up by 10 p to Rs. 8.30. Nelliampathys gathered 5 p to Rs. 2.88. In the coffee section, Wartyhullis fell by 18 p to Rs. 3.85. Coffee Lands were lower by 15 p at Rs. 24. Osoors receded by 12 p to Rs. 3.88. Consolidated Coffees by 10 p to Rs. 22 and Anaparis by 7 p to Rs. 6.15. Cowcoodys, in contrast, picked up 3 p to Rs. 6.13. Among rubbers, Malankaras sagged by 10 p to Rs. 19.40. Cochin Malabars shed 5 p to Rs. 6.87. Vaikundams were unaltered at Rs. 27.50 and Teekovs at Rs. 7.50.

In the textile section, Coimbatore Pioneers were in the limelight with the quotation rallying by Rs. 5.00 to Rs. 285. Dhanalakshmis improved by Rs. 2.50 to Rs. 200 and Coimbatore Cottons by Rs. 2.00 to Rs. 144. Bangalore Woollens were marked up by Rs. 1.25 to Rs. 181.50. Cannanores gained Re. 1.00 to Rs. 140. Trichinopolys were fancied at Rs. 11 and Vasantas at Rs. 211. Radhakrishnas, however, lost Rs. 3.00 to Rs. 109. Buckinghams were lower by Re. 1.00 at Rs. 188. Rajalakshmis dropped 75 p to Rs. 62.

Among miscellaneous industrials, Mettur Chemicals came in for selling and fell by Re. 1.30 to Rs. 12.15. Cement shares, which had ruled steady last week, gave way during the week under review. Orissa Cements and Dalmia Cements lost 20 p each to Rs. 16.80 and Rs. 10.80, respectively. India Cements were lower by 5 p at Rs. 6.60, as also Andhra Cements by 3 p at Rs. 9.59. F.A.C.T.s were pushed down by 15 p to Rs. 9.30. Parry's Confectionery dropped 3 p to Rs. 4.20, though the dividend of the Company, announced this week, has been maintained at 20 per cent. for the year ended March 1959. Indian Steel Rollings were dull at Rs. 13.75 and Textools at Rs. 182. Western India Plywoods, however, elicited keen enquiries and climbed up by Rs. 5 to Rs. 200. Rallis went up by a rupee to Rs. 78. Standard Motors increased by 50 p to Rs. 16.75. The directors of the Company have announced a dividend of 7½ per cent. for the year 1958, the same as that for the previous year. Spencers rose by 25 p to Rs. 20.25. Mysore Papers gained 13 p to Rs. 22.75. The speech of the Company's Chairman, Mr. Shivnanjappa, makes encouraging reading.

SPACE SHIPS

The U.S. National Aeronautics and Space Administration has announced that a nuclear-fuelled electric power plant has been designed to propel large space ships deep into interplanetary space. The planned power plant would weigh about 60 tons and supply 20,000 kilowatts of electricity. It would have a full-power life of about two years. The Space Administration indicated the power plant would enable a manned space ship to leave an orbit around the earth, travel through space to an orbit around Mars, and return to an orbit around the earth in about 250 days. When Mars is closest to the earth, it is about 35,000,000 miles away.

The volume of sales in Sweden's retail textile trade has shown an upward trend during the first half of this year, after having remained largely unchanged throughout 1958, according to the annual report of the Swedish Textile Dealers' Association. It is said that the pessimism voiced earlier by the spokesmen of some sections of the trade has turned into cautious optimism. Sales of leisure clothes are expected to show a continued expansion. This is also true of ladies' and children's readymades, as well as of leather clothes, while total sales of piecegoods will probably show a corresponding decrease.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 2nd September, 1959.

LAND REVENUE IN KIND

THE suggestion made by Mr. Khandubhai Desai, a former Labour Minister of the Government of India, during the debate on food in the *Rajya Sabha*, that land and irrigation revenues should be collected in kind is as outdated as it is impracticable. It is outdated, because it has been tried long ago in the British and pre-British period and found to have serious imitations. It was also seriously considered by the present Government in the past and given up. A similar scheme in respect of supply of fertilisers to agriculturists was sought to be evolved but it met with resistance from the States on many practical grounds. In a country which is fast growing into a modern economy, such hangovers from the barter days will strike a discordant note and retard the progress of monetisation of the various sectors. The practical difficulties are numerous. For instance, even conceding that the scheme may have smooth running in surplus States, in deficit States it will prove unworkable. Farmers in the latter will prefer to pay land revenue in cash, because they can realise a better price for their grain in the free market. The Government cannot legally refuse to accept land revenue in cash should the farmers so choose. And surely there cannot be two systems of land revenue collection, one for surplus States and another for deficit States.

According to Mr. Desai, if land and irrigation revenues are collected in kind, that itself would yield three million tons of foodgrains which could be supplemented by imported grains to build up a food reserve. This, according to him, would constitute a kind of State trading which, in his view, is good in principle. It is obvious that his suggestion stems from the desire to preserve at least the ghost of State trading in foodgrains which has now, even on official admission, proved to be a failure.

ROLE OF ADVERTISING

Mr. N. T. Thakur, President of the Organisation of Advertising Agents, certainly did not carry coals to Newcastle when he emphasised, in his speech at the second session of the Advertising Agents Conference, held in the City on Saturday last, the vital role played by advertising. It is true that people in the advertising profession know the value of advertising. But there are many outside this circle who do not realise the full implications or the value of advertising in building up sales. Mr. Thakur rightly sought to dispel the wrong notion in certain quarters that advertising raises prices of products and this tendency ultimately fleeces the consumer. He declared that advertising will, by increasing demand for products and their mass production, benefit the consumer in the form of lower prices. This explains why colossal amounts of money are spent on advertising in the industrially advanced countries of the U.S., the U.K. and Japan. In the U.K., for instance, advertising accounts for as much as 2 per cent. of national income; the sum actually spent in 1958 was £364 million (Rs. 485.3 crores), of which the share of publicity in Press was £172 million (Rs. 228.7 crores), that of television and radio being £48 million (Rs. 64.0 crores). Similarly, in Japan, the annual advertising budget has reached Rs. 150 crores, representing 1.25 per cent. of national income. When compared with these countries, the advertisement expenditure in India is very negligible, a drop in the ocean.

The need for attaching utmost importance to advertising in India is especially great in the present context in which, with the increasing production of a vast number of goods and commodities, there is the need for not merely "nourishing desire," to borrow the inimitable phrase of Sir Winston Churchill, but also disseminating information about the usefulness of the product. By this process, advertising contributes, as Mr. Ayaz S. Peerbhoy of Everest Advertising aptly says in a communication addressed to us, directly to the social betterment of the community. "Advertising," to quote him, "has assumed new importance of becoming a highly skilled activity in the contemporary world of technological advancements and im-

proved techniques of production." The need for advertising is no less imperative from the point of view of stimulating export demand for Indian products. This aspect was well brought out by Mr. Thakur. He observed:

"It is in fitness of things that the Government of India is much anxious about exporting indigenous products saleable in foreign countries. I am aware that there are many factors, such as the prices, the quality, and the shipping freight, which govern the export markets. But the question of properly advertising Indian products abroad is equally important and I venture to say that, on this score also, we have suffered a great deal. The publicity campaign made by the United Kingdom, Japan, Germany, etc., should be a lesson to us. The Government of India is no doubt spending what seems suitable on this item, but it appears that a still more effective campaign is necessary to popularise our products abroad. Some of our engineering goods have made a remarkable headway in this export drive; and the methods of advertising these products abroad have proved successful. I hope other industries, too, will take suitable steps to publicise their goods in suitable markets all over the world."

Considering the valuable part played by advertising thus, the necessity for providing proper facilities for the training of the personnel of advertising agencies cannot be too strongly emphasised. Mr. Thakur did well, therefore, to suggest the introduction of an integrated course in universities, covering the important branches of the work of an advertising agency. As he rightly pointed out, young men trained in subjects like market research, mechanism of distribution and sales, available and effective media of publicity, psychological effects of publicity campaign and the day-to-day technical functions of an agency should prove useful assets to modern advertising campaigns.

Mr. Thakur touched on the latest move of the Central Government to gather all its advertising and the advertising of Government corporations into the hands of the Directorate of Advertising and Visual Publicity and to seek concessional rates from publications. He endorsed the plea of the Advertising Agencies Association of India for the continuation of Government advertising through private agencies as before. Since the Government's decision has caused much resentment among the advertising agencies, Dr. B. V. Kestkar, Union Minister for Information and Broadcasting, who inaugurated the session, would certainly have done well to explain the reasons which weighed with the Government in taking the decision. All that he stated was simply this: "Government advertisements are mainly for reaching the masses, without expecting any returns, whereas commercial advertising is a business proposition. . . . The percentage of Government advertisement business is less than 10 per cent. of the total advertisements."

It is, however, not so much the loss of revenue that the advertising agencies will suffer as the highly disquieting effect of the move that has given rise to fears in the minds of the agencies and the Press. Mr. Peerbhoy is quite right when he observes that the Government's decision will result in the general lowering of the standard of advertising directly by producing advertising which is of no credit and indirectly by making advertising a source of official patronage. Indeed, the decision is, as this journal warned on a previous occasion, fraught with a danger to the freedom of the Press and the growth of advertising in India.

PUBLIC BORROWING

There was a brief but interesting debate on the issue of public borrowing in the Lok Sabha the other day when Mr. A. C. Guha (Congress), a former Minister for Revenue, moved a motion urging the Government to undertake necessary legislation regulating its borrowing power as envisaged in Article 292 of the Constitution. In accordance with this Article, "the executive power of the Union extends to borrowing upon the security of the Consolidated Fund of India within such limits, if any, as may, from time to time, be fixed by Parliament by law and to the giving of guarantees within such limits, if any, as may be so fixed." All that Mr. Guha wanted was Parliamentary control over Government borrowings and expenditure. His plea was supported by another Congress member, Mr. Sinhasan Singh, as well as by a Communist, Mr. C. Panigrahi, and an Independent, Mr. N. C. Bharucha. The plea was, however, categorically rejected by Mr. Morarji Desai, Union Finance Minister, on the following grounds:

1. What is required under Article 292 is merely permissive and not mandatory legislation. It will be a thoroughly unjustified remark to say that the Government is disregarding this Article by not bringing forward legislation in the matter.
2. The whole programme of loans is put before the House at the time of the Budget and in the Appropriation Bills. The Government works

according to the plan approved by the House and has not gone beyond the limits laid down by it. But, if a limit is to be fixed on borrowing, it should be sufficiently elastic to permit any development work to be executed. This matter (of borrowing) has to be left to the executive Government, if the Plan is to be implemented properly.

3. The Government takes sufficient care to see that there is no misuse of funds and, wherever it occurs, action is taken against those responsible for it.

It is true that Parliament has various opportunities and powers under the law and practices as they stand to exercise a check on Governmental policy in regard to borrowing, rate of interest, etc. Nevertheless, in the absence of legislation, Parliament does not have the proper authority to control the Government's borrowing powers. Mr. Morarji Desai was not justified in asking as to why Mr. Guha did not think it proper to bring forward such a legislation when he was a Minister. As Mr. Guha replied, there was no need for such legislation then. Things have lately changed and the reliance placed by the Government on borrowing—internal and external—has increased very appreciably. The share of internal borrowing alone in the revised second Plan outlay of Rs. 4,500 crores comes to as much as 16.9 per cent. (Rs. 700 crores—original estimate), as against 10.1 per cent. (Rs. 204.4 crores) in the first Plan outlay of Rs. 2,012 crores.

Thanks to large-scale domestic borrowing thus and to the markedly rising loans raised abroad, on the one hand, and to the huge investments without proper returns in several public sector projects, on the other, the Union Government's interest-bearing obligations not covered by interest-yielding assets have gone up sizably. The total of these obligations at the end of the current financial year (1959-60) is expected to be of the order of over Rs. 1,105 crores as against Rs. 793 crores at the end of the first Plan, or a net rise of Rs. 312 crores in four years; the actual increase in the first Plan period was just less than Rs. 55 crores. The position will be worse still in the third and subsequent Five-year Plan periods. India's borrowings (domestic and foreign) in the third Plan period are likely to be of the order of Rs. 1,100 crores annually, according to Mr. Guha. These are colossal amounts and the need for legislation on Government's borrowing policy under Article 292 of the Constitution is, therefore, urgent. In all democratic countries, there is provision for some kind of Parliamentary control on the raising of loans. The Union Finance Minister should certainly have conceded the demand for vesting Parliament with some authority to control the Government's borrowing powers. If this cannot be done, the Government should at least ensure that ample opportunities are afforded to Parliament to exercise careful scrutiny over its borrowing programme and the subsequent stages of the execution of the expenditure programme. There is a widespread feeling that spending departments do not always realise the importance of modifying their expenditure practices in the light of the report of the Audit Department and the Estimates Committee.

TEA INDUSTRY

The importance of maintenance of quality in tea output and of consultations among tea producers at the international level was emphasised by Mr. D. L. Betts, Chairman, India Tea Association, Calcutta, in the course of his speech at the recent annual meeting of the United Planters' Association of Southern India held last week, at Ootacamund. Discussing the problem of prevention of sale of substandard teas and maintenance of a reasonably marketable quality in all common teas, Mr. Betts felt that the Tea Waste Control Order did not go far enough. The sale of substandard teas in the market, he said, depressed the prices of common teas. Accordingly, he appealed for the industry's co-operation in evolving suitable regulations for enforcing quality output. He felt that some form of statutory control might be necessary in the interests of strict quality control in the fields.

Mr. Betts did well to stress the need for consultations among producers, at the national and the international levels. In India, tea produced in two regions, geographically separated from each other. But both regions are important producers of tea. In 1958, the output of tea of 711 million lbs. was shared between North Indian gardens (554 million lbs.) and South Indian gardens (157 million lbs.). It is gratifying to note that the Consultative Committee of Tea Producers' Associations in North and South India have been endeavouring to evolve common policies. Although each region has a few specific problems of its own, there is a wide common ground between them.

from both regions. It is, however, in the international field that much new ground has still to be covered. Perhaps, it would be truer to say that there is ground which needs to be recovered. Since world output of tea is in excess of demand, it will be obviously in the interests of producers to come to some agreement on regulation. In this connection, Mr. Betts had some notable remarks to make. Referring to the question of revival of the International Tea Agreement, he deplored that even the little progress made last year in talks at Colombo had not been maintained and that a good deal of ground had thereby been lost. India and Ceylon, as is well known, are together responsible for the major portion of world production. Between them, India (711 million lbs.) and Ceylon (413 million lbs.) accounted for 1,124 million lbs. of tea, out of the world tea output of 1,343 million lbs. in 1958. Surely, if these two countries alone reached a workable agreement, they could exercise sufficient influence in order to secure its acceptance by other producers.

SMALL-SCALE INDUSTRY

The importance of small-scale industries in the economic framework of India arises from the fact that they provide relatively abundant employment potential, entail limited capital outlay and at the same time serve to diffuse technical know-how. It is, however, puerile to imagine that these units are a substitute for the organised sector of industry. By the very nature of things, these units are incapable of competing with the phenomenally more efficient large-scale sector. There is, however, no doubt that the small units can be profitably dovetailed into the industrial structure in India, as in the case of such developed countries as the U.S. and Japan, if they are assigned a role ancillary to the large-scale industries. This will be possible only if the small units keep up a fairly high level of technical efficiency. The small units in India suffer from many handicaps, which include lack of access to right type of raw materials at a reasonable cost, unsatisfactory state of equipment, insufficiency of credit facilities, inadequacy of marketing arrangements and lack of contact with new techniques of production and with changing requirements of markets. These problems, as is well known, are sought to be solved, among others, by the establishment of proto-type production centres, small industries service institutes and industrial estates in urban and rural areas all over the country. The hire-purchase system for the supply of machinery introduced by the National Small Industries Corporation has helped the small entrepreneurs to overcome the difficulties in procuring relatively costly fixed assets.

One of the major problems for a small-scale unit is the marketing of finished products. The National Small Industries Corporation has been making every effort to secure markets for these products. The Corporation itself is trying to open wholesale depots for specific products of small-scale industries, such as the depot for the hosiery industry in Ludhiana. Besides, it has secured about 20 to 30 per cent. of orders placed by Government bodies, such as the Director-General of Supplies and the Defence Ministry, for these products. Attempts are also being made by the Corporation to secure the co-operation of large industries for enabling a few small units to be permanent feeders of some products

used by the organised sector. Its functions are thus steadily growing. It is only appropriate, therefore, that the Government should be considering plans to set up a marketing corporation in every State before the end of the second Plan. This was disclosed in the Lok Sabha the other day by Mr. Manubhai Shah, Minister for Industry, while intervening in the debate on the annual report of the Small Industries Corporation (1957-58) in the Lok Sabha. He said that the Government of U.P. had already constituted such a body. West Bengal, it is stated, has promised to follow suit. We are also told that a similar proposal has come from the Kerala Government. With barely a couple of years to go for the completion of the second Plan, it is, however, doubtful whether it will be possible within this short period to set up as many as a dozen corporations in the various States.

Mr. Shah averred that the hire-purchase system for the supply of machinery introduced by the Small Industries Corporation had been a great success. He said that orders for more than 100,000 machines had already been placed by the Corporation and, out of them, 4,000 had been delivered. He explained that the delay in getting the machines was due to engineering concerns taking 12 to 18 months to execute the orders. The Government, he pointed out, was now considering a new proposal designed to popularise further the hire-purchase system and enable even small entrepreneurs to set up industries. Under this scheme, if a State Government were prepared to extend a guarantee of at least 15 per cent. of the earnest money and the entrepreneur deposited a mere five per cent. of the cost of machinery, the Corporation would supply the machinery. In the meantime, the Government proposes to increase the capital of the Corporation by Rs. 50 lakhs to Rs. 1 crore. This will go a long way towards increasing the capacity of the Corporation to meet the rapidly growing demand on its meagre resources.

PROGRESS OF STATE PLANS

The poor progress of State plans during the first three years of the second Plan underlines the fact that finding the necessary resources is not the only problem in planning. Proper spending of the allocated sums on the scheduled schemes is an equally, if not more, important task. The average of plan outlays by all the State Governments taken together has been found to be as low as 48 per cent. of the target. What is more discouraging is that the performance of the States has been very uneven. Thus, while Madras topped the list, with an outlay of 59 per cent. of the target, Mysore was at the bottom with only 37 per cent. Other States fell at different positions within these upper and lower limits. States with the above average record are Uttar Pradesh (53 per cent.), Punjab (53 per cent.), Assam (51 per cent.), Bombay (50 per cent.), Orissa (50 per cent.), Andhra (49 per cent.) and West Bengal (49 per cent.). Rajasthan, Kerala, Bihar, Jammu and Kashmir and Madhya Pradesh ranked as below average, with performances of 46 per cent., 45 per cent., 45 per cent., 40 per cent., and 40 per cent., respectively.

The uneven progress of the States' plans is perhaps an indication of the varying levels of administrative efficiency of the State Governments, although other factors may also be responsible for it. While retarding the progress of

the Plan in general, the disparity in the rate of progress will make the economic imbalance between the different regions of the country, which the Plans seek to correct, more glaring. The performance thus reflects little to the credit of the State Governments. Nor does it justify their claim for larger allocation under the third Plan, now under formulation, unless the deficiency is made up in the remaining years of the Plan.

EXTRACTION OF COAL UNDER RIVER BED

The world's first experiment in underground coal-getting at a low depth under the bed of a big river has been carried out in the Vorkuta coal-fields, beyond the Arctic circle. The coal reserves in the Pechora river basin, which includes Vorkuta, are immense. But much of the fuel lies under the rivers. Some 117,000,000 tons of coal are confined within the underwater Vorkuta incline. Until quite recently it was believed that the coal seams under rivers could not be worked, unless the top layers was at least 300 to 350 times as thick as the seams themselves. Repeated attempts to open up coal seams at a low depth under the rivers have been made both in the U.S.S.R. and abroad. However, sporadic achievements did not justify large-scale coal-getting under the rivers. The engineers and technicians of the Vorkuta coal combine spent more than 12 years working on this problem. Studies of the movement of the earth's crust and rock layers were conducted there in 20 surface and 14 underground observation stations. More than 50 wells were drilled for geological and geophysical surveys. A chart of the basic rocks was compiled on the grounds of this drilling. Experimental work to study the deformation of rock was also carried on at two pits. The analysis of these complex observations showed that the underground extraction of coal beneath the Vorkuta river is safe at a depth of over forty thicknesses of the seam. The extraction of coal under the river will boost production by one million tons without the commissioning of new collieries.

AIR TRANSPORT

The International Air Transport Association reports that its 86 member airlines carried a record 69,249,000 passengers last year. This is a 7.3 per cent. increase over 1957. International passengers increased by 12.4 per cent. and domestic passengers by six per cent. Cargo traffic was up 21.5 per cent. Average international passenger in 1958 travelled 1,803 kilometres, an increase of 63 kilometres over the 1957 average. Average domestic or inland journey was down 24 kilometres to 899 kilometres. I.A.T.A. member airlines carried an estimated 87 per cent. of the scheduled traffic, both domestic and international, of all the world's airlines, except those of the Soviet sphere last year. Revenue passenger kilometres flown were 75,165,000,000, an increase of 7.4 per cent.; load factor at 59.6 per cent. was down by 3.1 per cent. The upswing in traffic in the last half of 1958 gave Pan American Airways an increase of 11 per cent. over 1957. An overall increase of 10 to 15 per cent. for international air travel in 1959 over last year's has been predicted by Mr. W. G. Lipscomb, Traffic and Sales Vice-President of Pan American Airways.

CAPITAL ISSUES CONTROL

The Government of India has had under consideration the revision of the exemption limit laid down in the Capital Issues (Exemption) Order, 1949. In view of the rise in prices since the present exemption limit was set and the fact that the capital required for even small and medium scale industries is often well above Rs. 5 lakhs, it has decided to raise the present exemption limit of Rs. 5 lakhs to Rs. 10 lakhs. As at present, the exemption limit will apply to all issues of capital except those by banking and insurance companies and provident societies incorporated as a company. The exemption limit will not apply to the issue of bonus shares by capitalisation of reserves of share premium, for which Government's permission under the Capital Issues (Control) Act, 1947, would still be necessary irrespective of the amount of issue involved.

NATIONAL INCOME AND SAVING SOME RELEVANT FIGURES

By Prof. S. Kesava Iyengar

THE third Plan is being moulded, and at this juncture, it may be useful to gather some relevant figures. According to the first Plan Report, the national income of India was expected to be raised from Rs. 10,800 crores (by the end of the first Plan period) to Rs. 27,270 crores (at 1948-49 prices) by 1975-76. Per capita income was expected to go up from Rs. 281 to Rs. 546 during the same period. The rate of investment was estimated to rise from 7.3 to 17.0 per cent. per annum of the national income. Recently, the Deputy Chairman of the Planning Commission announced that, between 1956 and 1976, the target was to double the per capita income (of course at 1948-49 prices). This would involve trebling the national income, because, in the meanwhile, the population would have increased at least by 200 million to 600 million (at an average rate of plus 8 million net per annum). The latest is the forecast by the Dhebar Committee of the A-I.C.C., which has foreshadowed a rise in national income by 6 per cent. per annum (in real terms) and the rate of saving at 14 per cent. by the end of the third Plan period. Experience has been that the Planning Commission and Parliament generally accept figures and programmes indicated by the Congress. In view of the forthcoming A-I.C.C. Session in the Punjab, it may be worthwhile scrutinising national income and saving figures not only here but also in countries like Britain and the U.S.A. A comparison with other countries on subjects like these may not help much on account of climatic conditions, the philosophy of life and statistical material varying in different countries. Yet, a study of available figures may prove interesting and contribute towards the development of a sense of proportion.

Per capita income is about Rs. 10,000 in the U.S.A. (1958), about Rs. 4,600 in Britain (1957) and Rs. 275.6 in India (1957-58). Facilities for economic development are much greater in the first two countries, and, in any schedule of progress, India would have to adopt a much smaller yardstick. In Britain, the national income rose from £4,816 million in 1938 to £9,507 million in 1948, and to £17,604 million in 1957. The percentage of increase per annum on the average works at 13 as between 1938 and 1957; it was 9.4 as between 1948 and 1957. These percentages are compound rates and the actual annual rate would be slightly lower. It is significant that, in spite of the advancement of science in its application to industry, the national income increased more slowly as between 1948 and 1957 (9.4 per cent.) than in the longer period 1938-57 (13 per cent.).

In the U.S.A., the national income rose from \$87.8 billion in 1929 to \$241.9 billion in 1950, and to \$360.5 billion by 1958. The average annual rate of increase works out to 21 per cent. as between 1929 and 1958, while the same percentage goes down to 6.1 during the period 1950-58. The trend is the same as in Britain, though the range of difference is wider. On account of the Partition in 1947, national income figures of India are available only from 1948-49 onwards. The figure was Rs. 8,650 crores during 1948-49 and Rs. 10,830 crores in 1957-58. The average rate of increase works out to 2.8 per cent. Thus, during the last 10-12 years, the average annual rate of increase in national income was at 6.1 per cent. in the U.S.A., 9.4 per cent. in Britain and 2.8 per cent. in India. Whether we compare our own figures with regard to the past, or figures relating to the United States and Britain, Mr. V. T. Krishnamachari's target of 6 per cent. increase in the national income of India by the end of the third Plan period appears rather too ambitious. It may be remembered, incidentally, that, as between 1956-57 and 1957-58, there was a slight decrease in the national income (from Rs. 11,080 crores to Rs. 10,830 crores).

The Deputy Chairman of the Planning Commission expects the rate of saving in India to go up to 14 per cent. of national income by 1965-66. In the U.S.A., figures stand as follows:

(In billion dollars)

Year	National Income	Disposable personal income	Personal saving	Percentage of personal saving to disposable personal income	Percentage of personal saving to national income
1929	40.2	45.7	0.8	..	..
1950	241.9	207.7	17.6	6.1	5.2
1958	360.5	311.6	21.0	6.7	5.8

It must be noted here that 1933 was the peak depression year and it is no surprise that there was considerable dis-saving: national income was \$40.2 billion while personal income aggregated to \$47.2 billion. In 1950 and in 1958, the ratio of personal saving to national income was at 5.2 per cent. and 5.8 per cent., respectively. The difference between national income and personal income was not much in 1950: the national income was \$241.9 billion while personal income stood at \$228.5 billion. Institutional incomes therefore amounted to \$13.4 billion. Similarly in 1958, the national income was \$360.5 billion, personal income \$354.4 billion and institutional income \$6.1 billion. Institutional income having been so minor, savings out of them could not have added much to personal saving. In the face of these facts, the ambition to raise the saving margin in India to 14 per cent. by 1965-66 lacks a sense of realism, particularly in view of the fact that the average Indian exists on just about the margin of subsistence, with a bleaker future on account of price spirals.

It is held in some quarters that taxation is low in India and it should be practicable to raise more revenues from that source. Such an opinion is not based on facts. The following are pertinent figures:

During 1958-59, tax revenue in India (Central and State put together) was Rs. 1,044.2 crores against the national income of Rs. 10,830 crores (1957-58), working out to 9.6 per cent. In the U.S.A., the corresponding figures for 1958 were \$42.8 billion and \$360.5 billion, working out to 11.9 per cent. The incidence of taxation is today heavier in India than in the U.S.A. Arithmetically, 9.6 is smaller than 11.9, but taxable capacity in India is incomparably much lower on account of the abominably low per capita income. As such, the room for additional taxation is just not there, and the prospect has been worsened by the public sector advancing against a receding private sector. These figures indicate that, on items such as national income, saving and taxation, it is all uphill work, and it would be more realistic to adopt lower targets and thus avoid embarrassment and frustration.

(Concluded from next column)

authorities, and the Committee accepts this view, it is as useless to raise the Bank Rate without taking any other measures as it is to take the other measures without Bank Rate. For, however unreal it may seem, overseas opinion regards movements in Bank Rate as symbolic of Governmental intention. If Bank Rate goes up, that is regarded as "a symbol of determination to defend the pound." Even the Bank of England did not care to defend the practical virtues of the rise in Bank Rate itself but they valued its influence on overseas opinion so highly—its symbolic significance is as great today as a century ago—that its inclusion in the armoury is and must continue to be vital.—All Rights Reserved.

THE SYMBOLISM OF BANK RATE

From Our Own Correspondent

LONDON, 27th August

ONE of the principal matters which the Radcliffe Committee on Monetary Policy examined is the mechanism by which the authorities have sought to control economic crisis. An important branch of this study has been the use of interest rates as part of what the Committee calls a "package deal" approach to monetary policy.

The "package deal" has been the announcement, when restrictive action has been thought necessary, of several restrictive measures together—"usually a rise in Bank Rate, stern words on Bank advances, hire-purchase controls and a pruning of capital programmes in the public sector." One cannot avoid the impression that the authorities have not used the "package deal" simply as a shock measure, but, because they were not sure what the relative efficacy of each weapon would be, they fired off their whole armoury at once, in the hope that something or other would hit the quarry.

When it came to lifting restrictions, then the authorities were so equally uncertain of the effect of taking the lot off that they gingerly put back into the armoury one weapon at a time, looking to see what happened before touching the next.

The measures used always implied a rise in short-term rates and it seems there has been little conscious use of the weapon of long-term rates, which the Committee considers should be examined very fully. Its idea is that operations on the National Debt, reducing it or increasing it, and helping this along with a long-term rate policy, may become an important device in future monetary policy.

Meanwhile, the Committee has noted that one of the immediate effects of a move in short-term rates is on the balance of payments. It calculates that 1 per cent. on the Bank Rate adds, as a result of inflow of foreign money on which interest has to be paid, about £15 million to an adverse balance of payments. If the foreign funds are mainly from the sterling area, then the sterling balances only are affected, but, if they are outside, then the ultimate effect will be a gold loss, screened, for the time being, by the capital inflow.

And here the Committee throws doubt upon the virtues of Bank Rate moves in helping the short-term international position, though it concludes that, nowadays, nearly all movements of foreign funds are covered in the forward exchange market, thus an inflow of hot money is matched by forward outflow and the authorities rightly regard a heavy debit position in the forward market as the next worst thing to immediate gold payments.

Why then, asks the Committee, must the Bank Rate always figure as part of a general attack on inflation and the answer is "the rise in Bank Rate is symbolical." In the view of the

AMERICAN LETTER

IMPACT OF STEEL STRIKE SEVERE INFLATION PSYCHOLOGY PERSISTS

From Our Special Correspondent

NEW YORK, 28th August

THE steel strike, which is still continuing at the time of writing, has raised havoc with economic statistics in the United States. It has reversed a 14 months' rise in industrial output last month and halted an eight months' climb in pay-rolls. The Federal Reserve Board's industrial production index fell from 155 in June to 153 in July. The index is based on the average industrial output of 1947-49, represented as 100. The impact of the steel stoppage which began in mid-July, has not shown up in statistics in other segments of the economy by the end of the month. Rises in other production, again statistically speaking, held the overall drop in July to just 1 per cent. below the June level.

While personal income, seasonally adjusted, increased to a record annual rate of \$384,100 million which was \$300 million higher than in June, wage and salary payments slumped \$500 million to a rate of \$261,200 million. Pay-rolls in all manufacturing industries were off \$1,000 million, but other types of businesses and various Government bodies reported higher pay-rolls.

Also, for the second successive month, the number of persons at work in the U.S. established a new high. The new peak in July of 67.6 million represents a gain over June of 252,000. This compares with 65.2 million employed in July 1958, or an increase of 2.4 million. These Government figures do not reflect the impact of the steel strike, because workers on strike are not counted as unemployed, unless they seek jobs actively. July unemployment was 3.7 million which was 3,55,000 higher than in May when the figure fell to 3.4 million. Meanwhile, the steel strike caused steel production for the month of July to fall 53.5 per cent. from the June level.

Feelings Running High

Secretary of Labour Mitchell called the impact of the steel strike "severe." It is to be felt increasingly in the weeks to come, he added. He also suggested that he did not expect the walk-out to end for some weeks to come.

Mr. Mitchell estimated there were about 625,000 workers either on strike or on enforced lay-offs. This constitutes less than 1 per cent. of the labour force. Pay-roll losses are estimated at \$70 million a week. In addition to the steel mills themselves, industries hardest hit so far by lay-offs traceable to the steel strike are railroads and coal mining. Construction, shipping and ore transport have also been affected.

Feelings are running at fever temperature in the steel strike. Labour accuses management of exorbitant profits and management quite patiently is trying to explain the fiction of such profits in terms of inflation. Indeed, the entire United States has become highly inflation-conscious. The danger is portrayed in cartoons and editorials as well as in advertisements from coast to coast.

For the first time in many years, labour is a bit on the defensive. I have just returned from a swing through the New England States of the U.S., the oldest industrial section of the country. A prominent textile machinery manufacturer, who also has an establishment in England, told me a story which is symptomatic of what is going on.

In his plant at Taunton, Massachusetts, he employs among other people, 150 persons who are members of the United Steel Workers. They threatened to strike with the rest of their brethren in the middle of July. He told them he would abandon this particular work for good if they struck and transfer this operation to England. The 150 never did walk out.

Inflation

The Commerce Department documented inflation the other day. It said the average per capita income was slightly higher in 1958 than in the previous year, but it added that price increases counterbalanced the gain to make real income for the country as a whole a bit less than it was in 1957—a fact which is simply not understood by the masses of the people including the labour leaders.

U.S. Industry and the Space Age

There are vast changes in store for U.S. industry which will have it repercussions all over the world. Just as the battleship has been made obsolete by the aircraft carrier and missile-carrying crafts, private industry is feeling such changes as well.

These changes are, for instance, that the industries involved will not be "heavy industry," in the sense that vast quantities of raw materials are consumed, or that large quantities of individual end-items will be produced. This is apt to pose fascinating and challenging engineering and production problems for many years to come.

In the U.S., these changes are sparked by the National Aeronautics and Space Administration which came into being in October 1958. Its efforts are aimed at three major fields, essentially peaceful. One is the development of higher thrust rocket engines. Several new power plants are under intensive development by several aerospace companies, including a single chamber rocket engine which would have a thrust of 1,000,000 to 1,500,000 pounds, or 450,000 to 675,000 kilograms. This is considered the necessary first step, (i.e., sufficient power) to propel larger instrumented payloads and man into space.

The second aim is the development of greater reliability in all components, particularly in control, tracking and telemetry systems. Finally, development of more knowledge about man himself and the physiological and psychological problems of space flight. The National Aeronautics and Space Administration has a 1959 budget of \$385 million to carry out its new responsibilities. Out of it may come, a vast increase of knowledge about the human race and the universe and also a considerable increase in economic benefits, but vast changes as well.—All Rights Reserved.

CREeping INFLATION—III AN EFFECTIVE REPLY TO ITS PROTAGONISTS

By Dr. Wilhelm Vocke

FORMER PRESIDENT OF THE BANK DEUTSCHER LÄNDER, NOW THE DEUTSCHE BUNDESBANK, THE CENTRAL BANK OF WEST GERMANY

[This article is in continuation of the series on the subject of "Creeping Inflation." It is of special interest to this country, in view of the recent remarks of the Governor of the Reserve Bank of India on the lessons of experiment in West Germany.—Ed.]

THE current debate over the future of the dollar and economic growth has advanced to the stage where the issues are now clearly drawn. The choice is between the path of creeping inflation and that of a strong and stable dollar. A clear decision as to which path is to be taken must be made now in the interest of the business community and the nation, which must know the direction in which the economy is moving and how much trust can be placed in the currency. Things cannot be permitted to drift, creating uncertainty and confusion among long-term investors who must plan ahead and on whose appraisal of the future the economic growth of the country depends.

The Lessons of the German Experience

Let me first make a few observations on the German monetary experience, from which some fundamental lessons can be drawn. When I assumed office as President of the Bank deutscher Länder ten years ago, monetary conditions in Germany were in a desperate state. Several experts, both German and foreign, with world-wide reputation and extensive experience, declared frankly that the Deutsche mark had virtually no prospects of ever becoming a hard currency. That these well-meant opinions proved wrong, as time has shown, is no doubt in part due to a good deal of luck and favourable circumstances. But I, for one, never wavered in my conviction that a monetary policy, consistently and energetically pursued in order to establish and maintain a stable currency, must succeed.

There are, perhaps, two principal lessons to be learned from the German experience. The first is that currency stability can be achieved and preserved even under the most adverse circumstances. The second, and even more significant, is that a monetary policy, firmly committed to currency stability, not only does not conflict with a high rate of economic growth but indeed is essential to its achievement. Germany's remarkable economic recovery and expansion over the past decade was closely linked to the restoration and preservation of a strong and stable monetary unit.

Obviously, these policies did not escape the test of public opinion. In 1955, the German economy was unmistakably headed toward a dangerous boom. All economic indicators—production, employment, income, exports, and above all wages and prices—were surging upward at a high pitch. Under these conditions, prompt and energetic measures by the central bank were called for, in order to keep the economy from losing balance. The steps taken to bridle the inflationary forces proved highly unpopular and were severely criticised by industrialists, Government officials, and the public on the grounds that they would undermine economic growth. As matters turned out, none of the sombre predictions came true. On the contrary, as a result of the early efforts to defend the Deutsche mark, the economy quickly regained both its equilibrium and the basis for continued expansion in an orderly manner. This experience proves that a central bank must be persistent and unruffled in its pursuit of a determined course of action, and must not shrink from occasionally taking unpopular measures if its obligations and responsibilities to the nation are to be properly fulfilled. In Germany, such monetary measures had to be taken on several occasions in the face of widespread criticism. But now that the economy is vigorously moving forward at a high level of prosperity and on the basis of a stable currency, what were once unpopular policies have now become the object of rather general praise.

The experience in the rest of Western Europe has been much the same. Comprehensive monetary and fiscal measures have helped restore financial stability and have revitalised the economies. The United States may regard the accumulation of gold by these countries with mixed feelings, but the fact remains that the gold had to be earned by productive effort. After years of bitter experience with inflation, Western Europe has now turned to monetary

stability. The rejection of policies leading to continual depreciation of the currency was dramatised last December, when thirteen European countries took steps to make their currencies fully convertible.

The "Creeping Inflation" Thesis

To a foreigner it seems almost absurd that there should be certain quarters in the United States where inflation is tolerated or even recommended. Surely, any price to be paid for inflation must be excessive, considering not only the adverse economic and social effects, but the irretrievable losses in national prestige it may entail. The path of inflation in the United States would not only mean the depreciation and ultimate devaluation of the dollar, but also an acute decline in the moral authority, power, and international stature of the United States. That there are close links binding a nation's prestige to its financial posture is evident from the manner in which the emergence of the Deutsche mark as a sound and stable monetary unit has enhanced the stature of the new western Germany in the family of nations.

The arguments advanced by the advocates of inflation must be earnestly and thoroughly considered. To begin with, the arguments set forth are, above all, political in character. The inflationists purport to show that inflation is an inevitable tide that can be stemmed only at the cost of economic progress. Consequently, they say, the attitude toward inflation must be rendered more flexible, and economic doctrine and policy must be adapted to a new institutional setting, instead of plodding along the old rut of a stable currency.

Certainly, the proponents of this thesis by no means favour galloping inflation, but only the mild, creeping kind. In fact, they would, for the most part, readily admit that even a moderate inflation entails certain evils. Nevertheless, they would argue also that, whatever these evils may be, they are far less serious or significant than the grave political repercussions bound to result from a policy that tolerates an impairment of full employment, however temporary. To the advocates of creeping inflation, full employment and monetary stability are incompatible. And, if there exists a choice, the decision would have to be in favour of full employment, for political reasons. Superficially, at least, these arguments may appear more or less plausible, particularly since they rest on political considerations. Yet on closer examination their contradictory nature becomes self-evident.

Let us turn first to full employment. What does it mean and to what degree can it benefit the nation and the economy? If full employment should mean that the labour force is occupied 100 per cent., the law of supply and demand cannot function normally in the labour market, and there exists, in effect, a state of overemployment. Under such conditions, employers can expand output only by outbidding each other for the available work force and by drawing workers away from one another. Labour, in turn, is enabled virtually to dictate its own wages. Such a state of affairs clearly cannot be regarded as the desirable optimum for the nation or the economy, either in its domestic or international aspects.

It is also evident that, in a free economy, the level of employment cannot be maintained constant to any greater degree than the level of production, consumption, investment, or trade. But, while it may not be possible to eliminate economic fluctuations entirely, the magnitude and duration of the cycles can be at least minimised. In this connection, one ought to bear in mind that, even at fairly high levels of prosperity, it is easier to influence or control the oscillations in employment and business activity than to bridle a cumulative inflation which must eventually lead to the proverbial bust. Nonetheless, the proponents of creeping inflation recommend yielding to overemployment, continually rising wages, and the price-wage spiral, while declaring at the same time that what they envisage is merely an inflation that

crawls along at the leisurely rate of, say, 2 per cent. per annum. Let us examine how this invention will work.

The Cumulative Process of Inflation

The initial phase of inflation has a certain appeal. Rising money income activates the economy like a breath of spring that brings out the blossoms everywhere. Industry invests and production expands; credit volume rises, with borrowers planning to repay loans in depreciated money as inflation progresses. Employment climbs, and, for a considerable part of the population, the standard of living actually increases as consumption moves up, while the incentives to save wane. All economic indexes surge upward, mutually reinforcing each other, and setting the inflationary spiral in motion. At this stage, and at this stage only, inflation finds many adherents. But this happy state is usually short-lived and lasts only as long as some faith in the currency is still maintained. Even while this phase continues, an increasing segment of the population, dependent on fixed incomes, begins to feel the ruthless grip of the inflationary pressures.

The inflationists have a remedy at hand for the sectors that are squeezed between rising prices and lagging incomes: the escalator clause. This clause, which automatically links wages, salaries, and even some business transactions to the cost-of-living index or gold, was widely used in France, but with results that proved far from encouraging. In fact, the escalator clause is merely an illusion. As long as the depreciation of the currency is minor, the clause is not invoked. And when inflation progresses, it is satisfactory neither to income receivers nor to income payers; meanwhile, the Government is forced to inflate to an ever greater extent, in order to compensate those groups that remain unsheltered by the index clause. More importantly, however, the escalator clause, in itself, officially discredits the currency and therefore intensifies inflation. Moreover, what it clearly reveals is that, once the currency no longer serves as a stable standard of value, a substitute must be found. Since stability is, after all, essential, the absurdity of abandoning a stable standard of value in the first place becomes patently obvious.

All the various adaptations, compensations, and adjustments to a rising price level may well be bearable as long as inflation remains within narrow limits. But the fact is that inflation is progressive and eventually becomes full-blown. That point is reached when the public begins to lose faith in the currency and the material-value psychosis spreads. The scramble for goods is matched only by the rush into equity investments, while the bond market sags. The damage that inflation inflicts on the market for fixed-interest securities eventually makes it virtually impossible for the Government to consolidate its short-term debt. For no one will acquire bonds when the money invested continually shrinks. The inevitable consequence is that the central bank will be asked to absorb the unmarketable public debt, which adds further fuel to the inflationary surge.

The reluctance to hold money or fixed-interest securities finds expression also in the rapid decline in savings. Wasteful consumption and misdirected investments suddenly become rational economic actions, compared with the foolishness of saving money that is rapidly becoming worthless. At this point, the reckless and amass fortunes, while the honest, conscientious, and weak lose the little they have. As the process continues, customary standards of behaviour are swept away and accepted moral attitudes are shattered. Soon everyone flees from the currency and joins in the furious dance of inflation, while the nation is rapidly moving to the brink of disaster.

No Exaggeration

The succession of events that I have just outlined would probably be considered a gross exaggeration by the proponents of creeping inflation. They would assert that the idea is to let the inflation get out of hand, but to confine it to a delightful 2 per cent. per annum. How is this feat to be accomplished? Obviously, prescribed limits cannot be kept automatically within of inflation. Once begun, inflation spreads like fire and feeds on itself. Moreover, even if a public will try to protect itself, and by doing price rise, stability of the rate of inflation is an illusion, for, if the public knows that there will be a creeping inflation of 2 per cent. per

(Continued on page 411)

AN OBJECTIVE STUDY OF GIFT TAX

By R. K. DALAL, B.Com., F.S.A.A., F.C.A.

THE object of taxing gifts, as the statement of objects and reasons to the legislation points out, is to check avoidance or reduction of estate duty, income-tax, wealth tax and expenditure tax.

When a person gives gifts, there is a voluntary transfer of property without any consideration, so that the donor's estate is depleted by the gift. This depletion affects wealth tax, for wealth is reduced by the amount of gift. It also affects estate duty, for, if the donor were to die, the estate passing on death, will stand reduced by the amount. It affects income-tax, if the funds or asset depleted by gift was income-earning. It affects expenditure tax, for, to the extent of such depletion of cash resources, the funds out of which to expend is reduced. Expenditure can arise out of wealth and savings. If savings are depleted by gifts, the right to collect tax on such funds when expended ceases. Thus gifts also affect expenditure tax. If there is no levy on gifts, it will mean encouraging indirect avoidance of other taxes. In fact, its absence will be a loophole in an integrated system of tax structure, the professed object of which is to check tax avoidance.

Section 3 creates a charge. The charge, when analysed, has the following elements:

- (i) the subject matter of the charge, e.g., gifts;
- (ii) the persons to be charged, e.g., person;
- (iii) the rates of tax, e.g., as per the schedule;
- (iv) the period during which the gifts given are brought to charge, e.g., previous year; and
- (v) the first financial year when it commences operation, that is, year commencing from 1st April, 1958.

Thus, gifts made during twelve months called previous year, that is, the year ending on or before the 1st day of April each year, are subject to tax.

The charging section, unlike the other taxing Acts, does not recite the categories of assesses, e.g., individual, firm, company, Hindu undivided family, association of individuals, but only uses the word 'person.' The word 'person' has been defined as

"including a Hindu undivided family, or company, or an association or body of individuals or persons whether incorporated or not."

A 'firm' is thus not expressly included, but the phrase "body of individuals whether incorporated or not" would seem to include a firm. A firm has been defined as having the same meaning as assigned in the Partnership Act, which is

"Persons who have entered into partnership with one another are called individually partners and collectively a firm."

Gift Defined

The subject matter of the charge is 'gift'. What is a gift? The defining section says:

"Gift means a transfer by one person to another of any existing movable or immovable property made voluntarily and without consideration in money or money's worth and includes a transfer of any property deemed to be gift under Section 4."

The importance of the definition is to give a concrete definition to a gift. The essence of a gift is:

- (1) a transfer of movable or immovable,
- (2) which is made voluntarily, and
- (3) which is without consideration.

The first two are self-explanatory and need no comment. The last one does. Now, consideration may be natural love and affection. It may be adequate or inadequate. It may be valuable or otherwise. The gift tax recognises only one kind of consideration, namely, money. Therefore, so long as there is no consideration in money, the fact that there are other types of consideration will not defeat the provisions of gift tax.

Gift must be a voluntary transfer of property without consideration. Consideration, as defined in the Contract Act, does not apply to gift tax, for the consideration must be in money. Natural love and affection, for instance, may be a good consideration for a contract, but not for a gift under gift tax. Consideration must be money, before a parting of property under the Gift Tax Act is exempted. Money or money's worth is put in perhaps to cover a transaction which is not a sale, in which the question of price, that is, money would arise, but to provide for exemption where there is alienation by exchange of property of equal value.

Adequacy of consideration will also be a factor to determine what part of the property which is not covered by consideration is regarded for purposes of gift tax as a gift.

Gift tax for purposes of assessment will be on aggregate gifts made during twelve months, that is, the previous year. The insertion of the year, therefore, enables both aggregation for determining the tax and also exemption under the Act. The definition of the previous year also secures that all gifts made during the period between the valuation dates determined for two consecutive wealth tax assessments are charged to gift tax in one year. It thus secures a check on the accuracy both of wealth tax and gift tax.

The charging section also makes it expressly clear that gifts made before 1st April 1957 will not attract gift tax, even though such gifts legally may be caught in the definition of the previous year.

To Check Evasion

In order that gift tax may not be avoided by certain known devices, Section 4 expressly provides for the inclusion of the following transactions:

(a) Where a property is transferred otherwise than for adequate consideration, the question of including the deficiency between actual consideration paid and its market value may arise. In the absence of an express provision, this transfer might escape gift tax; hence the express provision.

Consideration is defined as consideration in money or money's worth. The further addition of the words "money's worth" has been found necessary to catch as gift the deficiency in price as compared with market value. A person sells a property for Rs. 50,000. Its market value is Rs. 75,000. Rs. 25,000 deficiency in price is deemed thus to be a gift, for it is a transfer of property without consideration in money's worth, if not in money.

(b) Where a property is transferred for consideration, though ostensibly agreed, but is not intended to pass from transferor to transferee, the property will be deemed to be a gift, notwithstanding that, ostensibly, there is consideration, whether in fact it is not intended to pass in full or part.

(c) Next is a discharge or abandonment of debt. Where such discharge, release or abandonment shall be bona fide, such release or abandonment shall be deemed to be gift, notwithstanding that it does not fall within the definition of gift.

(d) Then there is the case of a person, who vests his property in himself and another. When that another person appropriates such property to himself, it will be deemed to be a gift by the person responsible for release, though such appropriation may not strictly satisfy the definition of a gift.

Exemptions

Just as there are transfers which do not partake of the character of gifts, and therefore deemed to be gifts and taxed as such, there are also gifts pure and simple, for which the Government has given an express exemption from the tax. These are:

(1) Gifts made by a person of his immovable property situated outside India are exempted. This seems to be motivated by the fact that such gifts would normally be subjected to tax in the countries where immovable property of the resident or non-resident is situated and therefore to avoid complication of double income-tax relief, etc., the Government has thought it best to exempt it in the hands of both resident and non-resident, whether a citizen of India or not.

Immovables governed by Lex situs: This rule is also firmly established in private international law. All rights over or in relation to an immovable asset are governed by the law of the place where the immovable is situate (Lex situs). Any other rule, indeed, would be entirely infructuous, because, in the last resort, land can only be dealt with in a manner which the Lex situs would be prepared to recognise.

(2) If one is a resident and a citizen, then gifts of movable property situated outside India will be subjected to tax. If one is not a citizen, then even gift of movable property abroad will not attract tax.

Movables of a resident or a non-resident in India, if he is a non-citizen, are expressly exempt from gift tax. The underlying idea seems to be this. Wealth of a non-citizen outside India is entirely exempted from wealth tax. Now gift tax is a tax for alienating wealth, but, if wealth itself is not liable to wealth tax in the hands of a non-citizen, whether resident or not, it would be illegal to tax it to gift tax which is but an extension of wealth tax. Wealth tax is for the possession of wealth. Gift tax is for parting with such wealth.

Whether one is resident or non-resident will depend upon one's status as determined for income-tax purposes. This is clear from the explanation to Section 5.

(3) Property in the form of savings certificates issued by the Government notified as exempt from gift tax will not attract the tax. Just now, there are no such exempted savings certificates. Therefore, any such gifts of savings certificate will attract tax. In future, however, Government may issue savings certificate expressly exempted from gift tax or make the existing particular savings certificate exempt from gift tax by a notification in the Gazette. This exemption is actuated by the need for encouraging Government's drive for collecting small savings from people to help the development projects and plans in the public sector.

(4) Gifts to Government and local authority are also exempt.

(5) Gifts to charitable institutions which enjoy exemption under Section 15B of the Income-tax Act are also free from the tax. This is a most controversial clause, because communal charities fall outside the exemption. The conditions attached to exemption under Section 15B are: (a) income must be exempt under the Income-tax Act; and (b) it is not for the benefit of a particular religious community.

There has been voluble opposition to taxing charities to gift tax, charities, which though communal, yet enjoy exemption under the Income-tax Act. But, by making this exemption subject to Section 15B, communal charities are brought in for gift tax. The only justification, perhaps, that may be advanced is that, in a secular State, Government should encourage only secular charities—not communal. If benefits of exemption under Section 15B is tolerated, although it does not extend to communal charities, there is no justification for raising objection to gift tax.

(6) If the charities do not fall within Section 15B, on the ground that they are communal, they will be exempted, provided they have been made to such charities before 1st April 1958, although they may fall within the previous year of an assessee, who closes his accounts earlier than the last day of the financial year. If gifts are made after 1st April 1958, they would normally fall within the charge, for clause (5) will not cover this. This clause gives an express exemption, if the gifts in money value do not exceed the maximum of Rs. 100 in value in respect of one previous year to the same donee, in aggregate not exceeding Rs. 500. Small gifts not exceeding Rs. 100 are exempted, if they are for charity. The object behind this is that, if such exemption is not available, then it is possible to tax every rupee of such gift in excess of Rs. 10,000, the maximum limit provided. This, therefore, avoids keeping of accurate and precise account of all such petty gifts made. There is, however, a check, namely, that to the same individual it shall not exceed Rs. 500 in the aggregate. But for this check, it would have been possible to give, for instance, to a communal charity a gift of Rs. 100 per day and defeat the purposes of taxing communal gift.

Gifts To Relatives

(7) If a relative is dependent upon the assessee for support and maintenance, then on occasion of the marriage of the relative a gift of a maximum of Rs. 10,000 in value in respect of each such relative is permissible. This exemption seems to be based on the principle that if a relative is so dependent on a person for his support and maintenance, meeting marriage expense forms part of such maintenance and duty and hence the exemption. It may be noted that the exemption is Rs. 10,000 in respect of each such relative, irrespective of whether more than one marry in the same previous year, so that for each marriage a gift of Rs. 10,000 is permissible. The limit is on each gift and not on the aggregate.

Inasmuch as there is gift tax as well as expenditure tax, it would be interesting to note the distinction between the two. This distinction is important in order to determine which of the two taxes an assessee attracts. Broadly speaking, both gift and expenditure involve disbursement. One takes the shape of disbursement of cash for services. If a person gives his property without consideration, it will be gift but where cash is disbursed for services it is expenditure. An assessee gives a cash gift to the daughter for her marriage expense. It will attract gift tax. But suppose he spends on the marriage of his daughter a large sum. Is it a gift or is it an expenditure? If the moneys are spent by the father in the marriage, he makes no gift. But it is possible for him, instead, to give his daughter a lump sum of Rs. 10,000 and ask her to spend the whole or part, as she may choose on her marriage, and it will be a gift.

Gifts To A Spouse

(8) A gift to a spouse may be of Rs. 1 lakh but here Rs. one lakh is in the aggregate in one or more previous years. What happens if a man has more than one wife? Is it a lakh of rupees in respect of each wife? The clause specifically provides that 'spouse' in such case will mean plurality of wives and Rs. one lakh will be free, taking all wives together. This is with a view to avoiding unpleasant discrimination between a monogamous marriage and a polygamous one.

(9) Gift of policies of insurance or annuities to any person other than wife is restricted to a maximum of Rs. 10,000 in value in aggregate in one or more previous years for the benefit of a person who is dependent for support and maintenance on the assessee. Life insurance is one of the recognised modes of saving which the Government has blessed by exemption even under the Income-tax Act. Following the policy, exemption is provided here for gifts of life policies or annuities to a dependent relative, excluding wife, who has been provided in clause 8 for cash gifts to a maximum of Rs. 1 lakh.

(10) Gifts under a will are exempted. These are ambulatory gifts and come into operation only in case of death. When death occurs estate duty

THE TATA IRON AND STEEL COMPANY LIMITED

MR. J. R. D. TATA REFUTES RUMOURS ABOUT NEW PLANT

NEW SYSTEM OF TAXATION WILL IMPOSE HEAVIER BURDEN, UNLESS AMENDED

ADDRESSING the Fifty-second Annual General Meeting of the Shareholders of the Tata Iron and Steel Company, Ltd., held at Bombay on 2nd September, 1959, Mr. J. R. D. Tata, Chairman of the Company, flatly refuted the adverse rumours about the new plant and explained in detail the reasons for the delay in getting full production out of it. Other subjects covered by him included the dividend policy, outlook for the current year, the implications of the new system of taxation and relations with the Company's labour.

The following is the text of Mr. Tata's speech:

"LADIES AND GENTLEMEN,

"It has been customary for me to open my remarks at these meetings with a review and discussion of important economic trends and events with special reference to those which impinge on business and industry in general and our own affairs in particular. I shall this year curtail such remarks to the minimum, as I know that shareholders are specially concerned with the situation and developments within our own Company and would wish me to give them as complete a picture as possible.

Economic Trends

"On the international front, the year under review was highlighted by the spectacular end of the third economic recession in the Western world since the war, by the outstanding economic progress made by most of the countries of Western Europe and, unfortunately, by the developing crisis in many parts of South Asia reflecting growing political or economic chaos, in striking contrast with the situation in Europe.

"What do these world-wide trends portend for India? The troubles in a number of countries in South Asia, which have led in most of them to the emergence of military dictatorships, naturally have for us potentially serious repercussions. They contain a warning of the inevitable consequences of poor or corrupt administration, doctrinaire or unrealistic economic policies and of the resultant dissatisfaction amongst the people.

"The political stability of our governmental institutions, with the temporary exception of Kerala, and, even more, the stability of the Indian rupee, have brought prestige to India and confidence in her future throughout the world. In political circles abroad there is goodwill and real appreciation of our needs and of what we are trying to achieve for our people. In financial and business circles there is growing confidence in our ability to withstand disruptive forces and to ensure orderly development along with a dawning realisation of the long-term potentialities of the Indian economy; there are also in Europe and America increasing funds seeking investment abroad and a growing willingness to invest both money and technical and managerial skills in underdeveloped countries.

"To the extent that the buoyant economies and general feeling of optimism in the Western world must lead to increased prosperity, world trade and travel, the favourable background to our own situation, which I have just mentioned, should be further improved. With restraint in international affairs in keeping with a genuine policy of neutralism and with realistic economic policies at home, there is much that we could legitimately gain from the present world situation.

"In that context the portents would be discouraging if one were to judge only by the views expressed from time to time by the left wing of the ruling party which is also the most vocal, as often happens with minorities, and which, unfortunately, seems to influence the long-term economic thinking of the Government and the Planning Commission.

Doctrinaire Socialism

"On the eve of the third Plan, little seems to have been learnt in these doctrinaire circles from the mistakes of the past or from the post-

war economic history of Western Europe and Japan. They still cling to an outmoded nineteenth century conception of socialism; they stubbornly ignore the immense changes which have taken place since then, which have led, on the one hand, to the modern democratic welfare State nurtured by a dynamic form of 'people's capitalism' and, on the other, to the totalitarian socialist State generally under Communist rule. They still believe in ideological solutions for economic problems. For instance, the food problem is to be solved not so much by meeting the down-to-earth needs of the farmer in water, seeds, fertilisers, credit, storage, marketing facilities and the like, as by the magic wands of land reform, co-operative farming, State trading and bureaucratic intervention; the growth of industrial production is to be achieved not so much by stimulating initiative and rewarding honest and productive work and thus encouraging people to work, save and invest, as by State capitalism and the heavy hand of bureaucracy. According to them the private sector, with its wicked profit motive, should be eliminated. Pending that happy day it should be rapidly superseded by the public sector and made more subservient to it. Banks and large-scale industry should be nationalised forthwith; there should be ceilings on holdings and incomes; interest or dividend incomes, being immoral, should be taxed out of existence; only self-employment or employment by or through the State should be permitted; above all, people should not be allowed to exercise individual judgment or initiative; only Government and Government officials really know what is good for them. Therefore the bigger the Government, the more pervasive its controls, the more obedient and docile the people, the happier everyone will be!

"In a way, the fact that this sort of thinking has recently been openly and seriously discussed in the higher counsels of the party in the context of the third Five-year Plan, is a good thing, for it brings out in the open the present schizophrenia in the Congress Party's economic philosophy and makes thinking people realise fully where they might be led. Already there are signs of a restiveness in the country and in the party itself against extreme leftist doctrines and policies. In this context, the categorical assurance recently given in Parliament that Government had no intention to nationalise the banking system either today or in the foreseeable future is very welcome and I hope that Government will find opportunities to make similar reassuring statements of policy in regard to other sectors of business and industry.

Progress and Setback

"To come to our own affairs, the year under review has been one of the most difficult ones in our history. It has been a year of achievement as well as of disappointment. On the credit side we may count the completion and commissioning of the new plant, and the conclusion of a three-year agreement with the Union for a comprehensive revision of the wage structure. On the debit side were the lamentable communist-led disturbances and strike of May 1958, the delay of about six months in the completion of the plant as compared to the original target, and the low rate of initial production achieved, reflected in the low profits for the year. We have thus made considerable progress and at the same time suffered some setbacks. Although we may deplore the latter, there is no cause for despondency, for the setbacks are temporary while the achievements are of a permanent nature and should soon bring their expected rewards.

New Plant

"Although it will have taken us longer than we hoped to get the planned additional output from our new plant, there is no question but that we shall get it. I believe some stories have been circulated to the effect that the new plant built is incapable of producing the rated output although Kaiser Engineers have spent on it far more money than was originally sanctioned.

There is no truth in these rumours. It would have been surprising if a project of such magnitude and complexity and carried out with such speed had been wholly free from errors or defects, but the design, lay-out and quality of the new plant as a whole and of all the major units in it are entirely sound. A large iron and steel plant, however carefully designed and built, cannot produce at the maximum rate immediately after its construction and it is the common experience of steel-makers throughout the world that it takes considerable time for all the new facilities included in an integrated plant to be brought into full operation. So far as the capital cost of the plant is concerned, the excess over estimates has been on the whole quite small. Excluding such items as enhanced import duties, increases in the amount of spares purchased by the management and additional items of construction or plant not included in the original scheme, the net excess has been well below 10 per cent.

"Paradoxically, we have suffered to some extent from the very maturity and long experience of our organisation. Had we been entirely new to this industry we would have employed a large number of foreign experts and technicians for starting and operating the plant while our men were being trained. For reasons of economy as well as morale we did not do so, except to a very small extent, and our staff have had to learn the hard way to operate new equipment and to adapt themselves to new techniques and new processes. It is, incidentally, interesting to note, and to the credit of Kaiser Engineers, that in the construction of our new plant, which is comparable in size and capacity to that of the Government plants, the number of foreign engineers and technicians employed on the project was only a small fraction of the number employed at Rourkela and Bhilai. Even the construction labour force at Jamshedpur was, at its peak, much smaller than at the other plants.

Initial Operating Difficulties

"The difficulties we have had, and still have, in achieving a higher rate of output in the plant, have been largely concerned with the quantity and the quality of the raw materials received at Jamshedpur, with the operation of the ore crushing and screening plant, and with Steel Melting Shop No. 3.

"There has been a progressive deterioration in recent times in the quality of both iron ore and coal received at our works and it is most unfortunate that this trouble should have reached its climax just as the new plant was coming into operation and when we could least afford it.

"In the case of coal, the situation has been aggravated by the delay in the installation by Government of a coal washery at Bhojudih earmarked for washing coal destined for Jamshedpur. In consequence we are compelled to use an excessive amount of high-ash coal which adversely affects the quality of iron as well as the rate of output of iron from the blast furnaces.

"In the case of iron ore, our operations had been planned on using a certain proportion of ore from our new Joda mine which, mixed with ore from our older mines, would have given us the most suitable blend. Unfortunately, the Government railway line to Joda was considerably delayed and is still in the process of consolidation. It suffered heavily during the present monsoon, and could not deliver to Jamshedpur anything like the required tonnage of Joda ore. We therefore had to use larger quantities of ore from the other mines with the result that the composition of the ore mixture has been unsatisfactory and has led to irregular blast furnace operation and low production of iron.

"The initial operation of the ore crushing and screening plant has not been satisfactory upto now partly owing to troubles with the plant itself and partly owing to the high moisture content and irregular quality of the ore received during the present monsoon.

"To turn to steel making, the new Steel Melting Shop utilises a scrap/blown metal process which is new to this country. Although the very different from those in S.M.S. No. 2 which more complicated and requires greater speed, timing and co-ordination between the various sections of the shop and between the latter and the blast furnaces. These we hope to achieve in the coming months.

"Furthermore, we are for the first time using oil in open hearth furnaces and lack of experience in the use of this 'hotter' fuel has resulted in an abnormally large incidence of furnace breakdowns, and consequently in poor furnace availability and output, apart from considerable added expenditure on repairs which is lected in the relevant part of the profit and account. In order to expedite progress in the plant, we have recently decided to secure abroad the temporary services of a very minor expert in steel making and also of some minor operators. With their help and the owing experience of our own men, we hope to get over most of the present difficulties in S.M. No. 3 in the reasonably near future. There could also be an appreciable improvement in iron output from the next month onwards when we may expect more regular supplies of better blended ores. I must repeat, however, at full production from the blast furnaces and steel melting shops will always depend on the regular supplies of suitable ores and reasonably low-ash coals. The latter requirement must await the completion of the delayed Bhojudih coal washery to which I referred earlier.

"I am glad to say that, apart from minor tuning troubles, the new rolling mills have shown themselves to be sound and will undoubtedly roll all the steel the melting shops can supply to them.

Financial Results

"While the difficulties and problems from which the plant has suffered in its initial period of operation are not of a serious or permanent character and will undoubtedly be put right in time, they have, in combination with the delay of about six months in completing the plant, had a serious effect on our profit and loss account as shareholders will have found, possibly to their dismay, from the accounts for the year 1958-59. The reasons for the lack of any distributable profits last year have been set out in the Directors' report. The basic cause, of course, was that after spending about Rs. 100 crores on the plant, we produced during the year under review only about 100,000 tons more steel than the rated capacity of the old plant. It is obvious that the additional revenues from such a small tonnage could not bear the overhead charges on Rs. 100 crores, in addition to the heavy non-recurring expenditure incurred in bringing the new plant into operation and the losses inflicted by the strike which took place during the year.

"It must also be remembered that the gross profit earned per ton during the year was substantially lower than in the preceding years owing to increases in costs which have been only partially compensated by increases in prices and also owing to the composition of the output which consisted of an abnormally high proportion of semi-finished products on which the margin of profit is naturally lower than on fully finished products.

"Most of these adverse factors will automatically disappear when the plant operates at full or near full capacity. Only then will we obtain the benefit of lower costs and higher labour productivity resulting from the vast investment we have made in new plant and machinery. The most determined and comprehensive efforts are being made to overcome present difficulties as quickly as possible and we hope that we shall reach an acceptable rate of production by the end of the current financial year. Because of the poor production in the first half of the year, however, the total output for the year must remain substantially short of the original target and the benefits of a higher output can therefore only be expected from 1960-61 onwards.

Current Year Prospects

"While we shall, I hope, make substantially more steel, the overheads per ton will probably be almost as heavy as in the past year. For instance, even at the flat rate of 6½ per cent. on gross block which the Board have decided to adopt for depreciation from this year onwards, the charge on this account next year is likely to be in the neighbourhood of nine crores of rupees while interest charges will rise to about three and three-quarter crores. The increase in wages under the new agreement with the Union will also swell our costs so long as we do not get the full output.

"Much will depend again on the extent to which the Tariff Commission and Government are willing to compensate us for increased costs and on the price scheme they will adopt from 1960 onwards. I am sorry to say in this regard that in the last year or two Government have been somewhat unresponsive to our problems.

For instance, we have been claiming, unsuccessfully so far, legitimate increases in the price of pig iron due to us under the uniform price scheme adopted by Government. Again, although Government had undertaken to increase retention prices to the full extent required to compensate for the increase in excise duty on ingots from Rs. 4 to Rs. 40 per ton from 16th May 1957, they have chosen to adopt a formula under which we have recovered something less than the extra duty paid and we have not been able so far to make Government see the justice of our claim.

"A number of other items of increase in costs, including the higher cost of power supplied by Government from the D.V.C. grid, has been similarly disallowed with the result that we are suffering in the aggregate a loss of revenue under these heads of about Rs. 19 per ton.

Government's Attitude Towards Private Sector

"I hope that this unsympathetic approach to the legitimate problems and difficulties of our industry does not reflect a hardening attitude on the part of Government towards the private sector. While those forming part of this sector may not agree with all the present economic policies of Government, they have repeatedly made it clear that the private sector accepts the general objectives of a Welfare State; it favours a reasonable degree of planning and control; it does not ask for or believe in nineteenth century *laissez faire*; it condemns corrupt practices and abuses wherever they occur, and particularly in its own ranks. All it wants is to be allowed to contribute to the fullest extent to the industrial development of the country and, in the process, to earn and pay a reasonable return on the moneys entrusted to it. It asks no special favour but claims the right to live and serve the country in dignity and in peace and to be

afforded some relief from the surfeit of Government controls and interference.

"In our own Company we have gone to great lengths to be helpful and co-operative. Not only have we willingly undertaken a crushing load of debt and imposed upon our management and staff a great burden of added responsibility and strain in the construction of our new works, but we have gone out of our way to co-operate with, and to be helpful to, the public sector of the steel industry. Our relations with Hindustan Steel could not be more cordial at all management levels and their spokesmen have been good enough to recognise our helpfulness and co-operation. There is a natural fraternal spirit among steel makers anywhere, and I am happy that our and Hindustan Steel's staff, some of whom, incidentally, have come from our own ranks, are mutually so friendly and co-operative.

Dividends for 1958-59

"I am aware that some shareholders of this Company have felt somewhat aggrieved at this year's dividend and are worried as to the likely dividend next year and in subsequent years on the much enlarged capital. I would like first to put the record straight in regard to the dividend your Directors have recommended. From the sharp reaction in the market when the announcement was made, it is clear that many shareholders either expected an increase in dividend this year or have wrongly interpreted the Directors' decision as a cut in the previous year's dividend. I have not been able to understand how such an impression was created in the minds of shareholders, as I thought I had made the position amply clear at the annual general meeting in 1957 and again last year. Shareholders had then asked me what dividend they could expect on the new ordinary shares issued in 1956-57 for an aggregate amount of

for comfort and efficiency

Rs. 13½ crores including premium. I stated clearly then that, barring unforeseen circumstances, it was the intention of the Directors, until the new plant was in full operation and additional profits earned therefrom, to pay such dividends as would in effect maintain the previous dividend of Rs. 10.50 on the old shares and give a return of about 5 per cent. on the new shares, including the premium.

"Your Directors have more than fully carried out this undertaking during the last two years and the dividend this year is in fact equivalent to maintaining the dividend on the old ordinary shares of Rs. 10.50 and to paying 5.54 per cent. on the new capital including premium, which is ½ per cent. more than the rate promised in 1957. While there has thus been no cut in the dividend, I put it to you that it would have been little short of irresponsible for the Directors to have raised the dividends in one of the worst years of the Company's history when there were no disposable profits and dividends had to be paid out of reserves, when the outlook for the subsequent year was still uncertain, when labour had to bear a heavy cut in their bonus and when the Company had applications pending before Government for the issue of new share at par and for a review of retention prices.

Dividend Policy

"The position was fully explained to a delegation of shareholders sponsored by the Bombay Shareholders' Association at the end of July and I think it is only fair that I should repeat today the statement I made at the time regarding the next year's dividend. I was asked whether shareholders could at least count next year on the same net dividends after deducting the 30 per cent. tax under the Finance Act, 1959 or whether the same gross amount would be paid with a resultant cut in the hands of the shareholders. My answer was that, barring unforeseen circumstances, it would be the intention of the Directors to gross up the dividends so that, after deduction of tax, shareholders would earn approximately the same return as under the present formula, that is, Rs. 10.50 on the old ordinary shares and five to five and a half per cent. on all shares issued after April 1956. The additional cost to the Company of such grossing up during the next three or four years under the provisions of the Finance Act, 1959, will amount to about one crore per year, including the loss of income-tax recovered on dividends on preference shares which the Company used to retain but which will now have to be paid over to Government.

"I must warn the shareholders that, unless the provisions of the Finance Act, 1959, are amended, the tax burden will be substantially heavier from the current financial year onwards. While the tax on companies has been reduced under the new system, the total taxes which the Company and the shareholders will pay between them on profits and dividends respectively in a normal year will be substantially higher than under the existing tax system as relief from income-tax will no longer be granted to shareholders on their dividends. Furthermore, under the new system, approximately, Rs. 4 crores of tax relief accumulated in reserves built up from past taxed profits will be lost. The Finance Minister, when introducing these tax proposals, stated that it was Government's belief that the new system would not add to the tax burden and promised to review the position next year if it is shown to him that, in fact, Government would recover substantially higher taxes. I sincerely hope therefore that as a result of the representations made on behalf of industry and commerce, there will be an appropriate adjustment in the tax proposals next year.

Labour

"I am glad to be able to report that after the violent happenings of May 1958, which ended in the total failure of the Communist attempt to capture by force the labour movement at Jamshedpur, the labour situation greatly improved during the year and has since remained satisfactory. The great majority of our workers are intelligent and responsible men who did not take long to realise how grossly they had been misled by the Communists. Such doubts as had been created in their minds as to the Company's intention to carry out its undertaking to grant an appreciable increase in wages once the new plant came into operation, were dramatically set at rest by the comprehensive agreement on a new wage structure, which the Company entered into with the Tata Workers' Union in February of this year. The negotiations in their final stages were assisted by the Labour Commissioner of Bihar acting as Conciliation Officer.

We are grateful to him and to the Government of Bihar for their help in the matter.

New Wage Structure

"The new wage structure which came into force in April 1959 was the end-product of two full years of study and preparation and, finally, of intensive negotiations with the Union. The old wage structure was cumbersome and complicated and suffered from many anomalies. The new structure is a much simplified and streamlined one, reflects a better balance between basic wages and earnings depending on results and has been so devised as to absorb in the next few years, without stress or strain, the gradual changes required under the agreed job evaluation scheme.

"Finally, it carries out in full the promise of a substantial increase in total wages and emoluments which we made in an agreement with the Union in January 1956. The new wage structure will bring our employees at Jamshedpur an immediate increase in their emoluments of about Rs. 1.8 crore in the current financial year, rising gradually to about Rs. 2.25 crores in the fifth year. This is equivalent to an increase of nearly 23 per cent. at the beginning, rising to 28 per cent. in the last year.

"While this additional burden on the Company is a heavy one for us to bear at a time when production is low as at present, it will not be an unreasonable one when spread over the larger output of the plant after normal production is established. It affords a just and fair recognition of the co-operation we have received from the workers and the Union in the reallocation of the existing labour force as between the old and the new units.

"The modernisation and expansion of our plant will automatically result in a marked increase in average labour productivity and even though it will have been achieved at a cost of over Rs. 100 crores on which the additional burden of depreciation and interest will be of the order of some Rs. 10 crores a year, it is fair and in keeping with modern practice throughout the world that the workers should share in the fruits of increased productivity, even when achieved through plant improvements.

Bonus

"The agreement signed by the Union and ourselves in February this year includes a provision under which a new bonus scheme is to be negotiated to replace the old profit-sharing bonus scheme which expired last year. As such a scheme would necessarily be based on the results of a reasonably normal rate of output, it was also agreed that any payment of bonus this year arising from the operations of 1958-59,

should be negotiated on an *ad hoc* basis. When, some months later, the accounts for that year disclosed the fact that there were no disposable profits, we informed the Tata Workers' Union of the situation and also pointed out that the workers themselves had largely contributed to the situation by joining the illegal strike last year which had cost the Company over a crore of rupees.

"The Union have on their side claimed, in our view wrongly, that the annual bonus should be treated as a deferred wage, that the men produced more steel than in the previous year and that, except for the loss of production due to the strike, they had worked hard and under difficult conditions during the year and were not responsible for the poor financial results. On those grounds the Union has demanded the payment of a bonus comparable to the previous year's which is of course unacceptable to us. We have not upto now succeeded in reaching a settlement and the matter may have to be referred to arbitration or adjudication.

"As regards the new bonus scheme for the next three to five years, we are continuing our negotiations with the Union. The scheme in force since 1949 was based on the distribution of a share of the net profits calculated according to a formula which provided for depreciation on the gross block and a return on the issued capital. While this scheme was theoretically sound and attractive, it is a fact that it caused a great deal of trouble and argument in its annual interpretation and application. In fact, I do not remember a single year in which the bonus paid was not made the subject of negotiations.

"We feel therefore that any new bonus scheme should be based on a simpler formula and one less liable to fluctuations due to causes beyond the control of the workers themselves. No final agreement has yet been reached and negotiations are still going on.

"I shall end, as in past years, with an expression of thanks to the management and staff of the Company. The members of management and supervisory staff deserve our special gratitude for their devotion and loyalty to the Company during a most trying year in which they were subjected to tremendous strain and long hours of work, at first in connection with the strike and later, with the operating difficulties to which I have referred earlier. On behalf of the shareholders and the Board, I extend our sincere thanks to them and also to all employees who have worked hard and done their best to increase the output of the plant."

Note: This is not a report of the proceedings at the above Annual General Meeting.

BOMBAY DYEING AND MANUFACTURING COMPANY

FULL EIGHTY YEARS COMPLETED

WHAT began as a humble venture with a paid-up capital of just Rs. 1 lakh eighty years ago ranks today as one of the biggest and most efficient cotton textile units of India. This is the Bombay Dyeing and Manufacturing Company, registered on 23rd August 1879. So remarkable has been the growth of the Company since its inception that those who are at the helm of affairs can certainly look back, on the occasion of the company's eightieth anniversary, with justifiable pride and satisfaction. The Bombay Dyeing is one of the few companies which have had the good luck of being managed by a galaxy of persons with enlightened interest and progressive outlook. The galaxy includes, among others, Messrs. Dinshaw Manekji Petit, Nowrojee N. Wadia, Nusservanjee N. Wadia and the present inspiring and energetic Chairman, Mr. Neville N. Wadia.

To begin with, that is, in 1879, the Company had only a small "Dye Works" set up with a paid-up capital of Rs. 1 lakh. It required six years for the works to be on a sound paying basis. The capital of the Company was doubled in 1885 and again in 1886 and reached Rs. 8 lakhs in 1890. It was, however, only in 1895 that a Textile Manufacturing Company was established, with a capital of Rs. 14 lakhs; 30,000 spindles were first installed in this mill, followed by the installation of 700 looms in 1904. Both the Companies continued to flourish and the capital of the former Company was raised to Rs. 12 lakhs in 1900. A new unit of the first Company, the Spring Mill, began working in May 1908, with 32,280 spindles and 630 looms. In that year, the capital of the Company was increased to Rs. 18 lakhs. The Bombay Dyeing Company and the Textile Manufacturing Company remained as separate units until 1918, when the latter was merged with the former, the combined capital being Rs. 32 lakhs which was raised to Rs. 64 lakhs in 1920-21 by the issue of bonus shares. The Spring Mill was trebled in size, so that it became the largest spinning and weaving mill under one roof in the British Empire. The subsequent years witnessed further marked expansion.

Present Position

The following is the present statistical picture of the Bombay Dyeing:

	Rs. (crores)
Paid-up ordinary capital	2.51
Reserves	3.46
Gross block	9.01
Net block	4.58
Turnover (1958)	9.01
Spring Mills: 132,092 spindles, 1,482 ordinary looms and 1,152 automatic looms.	

Textile Mills: 88,400 spindles, 2,328 waste plant spindles, 1,632 ordinary looms, 56 blanket looms, 54 automatic looms for towels and damasks, and the new bleach works and yarn dyeing department.

The Company owns a 100 per cent. subsidiary company, namely, the Nowrojee Wadia Ginning and Pressing Company, Ltd., with ginning factories at Nanded and Umri. A model high-pressure yarn dyeing plant with super high-speed dryers is now being put into production. Orders have been placed for a completely new blowroom at Spring Mills, high-speed draw frames, combers, 100 new Indian-made ring frames and 22 doublers, 576 more Ruti automatic looms, a resin finishing range and four more steam-bloc boilers. Applications have been made for more automatic pirn winders and an open width bleaching range.

Rehabilitation

The Bombay Dyeing has spent quite a large amount—Rs. 5.67 crores—on the rehabilitation of plant and equipment since 1952. The major items of interest are the installation of 106 modern ring frames made by the National Machinery Manufacturers near Bombay, Barber-Colman high-speed winding and warping machines, new Ruti hot-air sizing machines, 1,206 of their finest automatic looms, and a completely new bleach works with a continuous peroxide bleaching range, mercerising, molten metal dyeing, high-speed jet stenters and sanforising. The rehabilitation programme has enabled the Company to augment its output of cloth and yarn by as much as 50 per cent. The new bleaching, dyeing and printing works is now capable of producing 200 bales of finished goods or approximately 250,000 square yards per day.

The Company employs over 11,000 staff and workers, with salaries, wages, dearness allowance, bonus and workmen and staff welfare expenses aggregating Rs. 2.30

crores (1958). It will be interesting to note here that the average earnings of an automatic loom weaver in Bombay Dyeing come to more than Rs. 270 per month, as against the average total monthly earning of about Rs. 201 per worker derived by the majority of workers employed in Bombay mills. Since 1940, the average annual wage of a worker in the Bombay Dyeing has gone up by four times, from about Rs. 450 to Rs. 1,900, while the output per worker continues to be low, being about 13,000 lbs. Wages now account for the major portion of the cost of production, being over 55 nP per lb., as against less than 15 nP in 1940.

Special mention must be made of the part played by Bombay Dyeing in the textile export trade. The Company's exports account for over 10 per cent. of the total quantity of textiles exported from India every year. During 1958, its actual exports were of the order of 53.5 million linear yards, the foreign exchange earned being Rs. 4.84 crores. Surely, it is difficult "to find," as the brochure commemorating the eightieth anniversary aptly says, "another textile manufacturing company which gins, spins, weaves and finishes such a large quantity for export."

HONG KONG-U.K. TEXTILE PACT

The textile interests of Hong Kong have made representations to their Government urging it to assume responsibility for approaching the British authorities concerned for a "quota holiday" (temporary suspension of the three-year agreement signed on 28th December 1958). Even if the Government takes the view that this is outside its province, it should, they point out, take the initiative "to clear the way for a delegation representative of Hong Kong to visit Britain to conduct appropriate negotiations." It is further suggested that a special advisory committee should be set up to assist the Government in administering the ceiling arrangement, as originally planned. The representations have followed the reported proposal of the Hong Kong Government with a suggestion that the second year's ceiling on exports of cloth to Britain (168 million square yards) be allocated almost entirely on the basis of past performance during the first year, that is, 1958, with only two million

square yards set aside for free quota intended exclusively for new entrants. The plea of Hong Kong millowners for a quota holiday is based on the following grounds:

Hong Kong's ceiling has been in force for more than six months, but Lancashire has still not entered into ceiling agreements with India and Pakistan; this is said to be unfair and unjust. It is recalled that Lord Rochdale had clearly stated when he visited Hong Kong last year that he had in his pocket some voluntary agreements with India and Pakistan and that the agreements were dependent on his getting something satisfactory in the Colony.

No attempt has been made in Lancashire to put back to an appropriate ceiling the subsequent re-exports of Hong Kong's cotton textiles from Britain against the Colony's quota, as is specifically laid down in Article 9 of the original agreement.

The ceiling on Hong Kong's cotton piecegoods exports to Britain has caused much difficulty to the Colony's industry. It is said that so far, about 30 million square yards contracted for delivery to Britain have been cancelled, because current quotas have been exhausted.

The Hong Kong industry is facing mounting pressure from the U.S. for a similar quota arrangement.

The reactions of Lancashire millowners to the aforesaid plea of Hong Kong are not known. Many are likely to oppose the plea, especially now that the implementation of the U.K. Government's £30-million redundancy programme for cotton industry has just commenced.

RAJASTHAN WOOL BOARD

The Rajasthan Sheep and Wool Development Board was formally inaugurated at Jaipur on 20th August by Mr. M. V. Krishnappa, Union Minister for Agriculture. The Board was recently constituted under the chairmanship of the State Agriculture Minister Mr. Nathuram Mirdha, to advise the Government on matters relating to promotion of wool production and trade, and to make recommendations regarding sheep and wool development in Rajasthan. In his speech, Mr. Krishnappa emphasised the need for improving shearing grading and marketing systems during the third Five-year Plan. He said that the superior breeds of local sheep might be used for further breeding so as to evolve sheep producing wools in quantity as well as quality. And he added: "High yielding breeds of sheep which can be profitably reared on farms will have to be selected so that it would be economical to rear flocks under intensive farming conditions. The Board discussed the policy to encourage private sheep stud farming and extension facilities to be provided to the flock masters in Rajasthan. It also discussed the possibilities of the extension of community sharing sheds at suitable places to help flock owners shear, grade and pool their wools in a better way. In order to improve the community grazing lands, the Board considered the possibilities of establishing pasture protection boards in the various sheep rearing areas.

UMESH YOGA DARSHAN (First Part)

In Four Languages: English, Hindi, Gujarati and Marathi.

(Author: SHRI YOGIRAJ UMESHCHANDRAJI)

An excellent treatise on the true meaning of Yoga, which explains to you how to control your digestive, nervous, respiratory, urinary and other body systems. The book is fully illustrated with 108 real Asana Photographs and explains to you about their efficacy in attaining complete remedy of various ailments or disorders through the medium of Yoga, Naturopathy, Chromopathy, Psycho-Therapy, etc.

Useful for men and women alike, young or old, healthy or unhealthy. Deserves a rightful place in every home, hospital and library.

PRICE: Rs. 15/- Plus Postage Rs. 2/- extra.
No V.P.P. sent.

SHRI YOGIRAJ UMESHCHANDRAJI

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: Rs. 2.50 including Postage, to be sent by M. O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

RAMTIRTH BRAHMI OIL Special No. 1. Registered.

An Invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices: Rs. 4/- for big bottle and Rs. 2/- for small. Available everywhere.

SHRI RAMTIRTH YOGASHRAM,

Dadar, Central Railway, Bombay-14.

MORE APPLICATIONS FOR SCRAPPING SPINDLES AND LOOMS

DECLINE IN TEXTILE OUTPUT PERSISTS

From A Special Correspondent

MANCHESTER, 25th August

It can be said that the destiny of the Lancashire cotton industry in the foreseeable future has now been determined. In the past week, the two key sections of the industry—spinning and weaving—have moved towards their minimum redundancy targets under the reorganisation scheme with an alacrity that must have surprised those who tend to think that some at least of the industry's troubles stem from indecision and caution and lack of clear-cut action. Indeed, the weaving mills have already achieved their target of 45,000 looms for scrapping; by Friday noon of last week, the Cotton Board could report applications aggregating 46,305 looms, and it can be assumed that the steady flow of application forms is continuing.

Since each sectional scheme is quite independent of the others (a subtly compelling incentive in itself), the weaving reorganisation scheme became a reality immediately the 45,000-loom mark was reached. This in turn meant that work could start on administering parts two and three of the scheme—that is, the calculation of compensation due and the raising of levies.

It seems certain that, in the very near future, possibly even before the end of the current week, the Cotton Board will be able to announce that the spinning scheme has also come into operation. Against its minimum target of 6,000,000 mule equivalent spindles for scrapping, the spinners had offered 5,014,417 by noon last Friday, together with 5,589 carding engines.

Doublers Lagging

The only doubt now centres on the doubling section which at the latest count was less than half-way towards its target (182,524 doubling spindles, as against the 400,000 called for). This represents only an additional 70,000 spindles in the week since the Cotton Board's first interim report on the response to date.

With the weaving scheme assured and the spinners' as good as, all within a mere three weeks or so from the opening date, some people are now asking: Where will it end? If the redundancy targets are only a "floor," how high is the "ceiling" going to be?

It is true that the schemes still have another five weeks to run before the closing date for applications. It is equally true that no upper limits have been set. Yet it hardly seems likely that the volume of machinery for scrapping will become so overwhelming as to be embarrassing to the architects of the scheme (although a London firm of stockbrokers has commented in a circular that "few shareholders have yet realised how generous are the terms

offered by the scheme... they are far better than the industry had expected"!)

For one thing, the targets were hardly over-ambitious ones, considering the amount of idle machinery in the industry (it will be remembered that the spinners themselves estimated that no fewer than 12,000,000 spindles were surplus; the weavers put their figure at no less than 70,000 looms). For another, the main weight of the applications can be expected before the end of August, the closing date for the special "early bird" 5 per cent. bonus on compensation rates. On the other hand, it is known that a number of companies have yet to hold meetings to decide their future, although, by and large, these are not among the "big boys" of the industry.

It has been suggested, too, that some mill directors have been deliberately holding back from participation in the redundancy schemes until they could feel certain they would get the necessary support to bring them into operation; if this is so, the next week or two may well bring further substantial offerings of surplus plant. To be set against this argument, however, is the likelihood that some directors who were undecided may now elect to continue in business, in view of the substantial quantities of plant put forward for scrapping.

From the customers' viewpoint—and Lancashire will need the support of as many of them as it can get if the big reorganisation is to succeed in the final analysis—there is everything to be said for producing firms making known their intentions for the future as quickly as possible.

Naturally enough, the Cotton Board is not prepared to name individual firms participating in the redundancy scheme and the information at this stage can only come from the firms themselves. Many have already made announcements and others have promised to do so in the near future.

Goodwill on all sides will be essential during the difficult period of transition and adjustment, and the sooner the picture becomes clear the better for all concerned. Similarly, it seems good business sense for firms to make it clear—as Hayeshaw Ltd. did the other day—when they take a decision to continue in business without joining in the redundancy scheme.

Decline Continues

Yarn and cloth production figures for the first half of the year, available at a timely moment in the industry's affairs, should provide some serious, perhaps sombre, thinking for those firms still undecided about their future under the reorganisation scheme. At 377,810,000 lbs., output of single yarn for the half-year was 40,530,000 lbs. down on the corresponding period last year. The trend in manufacturing followed a similar pattern; production over the

six months fell away by 131,450,000 yards to 973,570,000 yards.

In their cold, detached way, the statistics reflect what the bystander, nurtured on accounts of short-time working and closing mills, has come to accept as the inevitable, depressing transformation in the industry's fortunes. The industry has tested the bitterness of recession; there can be no gilding the lily on that score. But closer analysis of the figure lends a faint touch of relief to the shadow which—superficially at least—seems to make up the broader canvas.

Production in both spinning and weaving in the second quarter of the year showed a definite improvement on the first quarter and bore more relation to the returns for the comparative period of 1958 than could be said for the first three months. Indeed, in the case of single yarn, output was actually slightly higher than in the April to June period of last year.

Yarn production reached 194,560,000 lbs., as compared with 183,250,000 lbs. in the first three months and 194,100,000 lbs. in the second quarter of last year. In the case of cloth, the figures were 500,750,000 yards, as against 472,820,000 yards in the period January to March and 525,490,000 yards in the second three months of 1958.

More Shift-working?

How radical a change can be expected in the volume of production and the "muster" of workers when excess capacity has been eliminated under the reorganisation schemes must be pure conjecture at this stage when many firms are still considering their future. But developments in the manufacturing section over the last few days perhaps provide a pointer to a changing pattern of working over the next year or two. Within the last week, eight more weaving concerns have lodged applications with the trades unions for permission to start or extend shift-working.

Four of them are anxious to introduce night shifts, two want to start double-day shift-working, and the remaining two are seeking authority for evening shifts. None of the firms, apparently, is planning to take advantage of the reorganisation schemes to close down. This, probably, is merely an early milestone in a gradually accelerating change-over to a more widespread shift-system in Lancashire—the planners' dream suddenly promising to mature.

Two factors seem bound to lend speed to the operation. More firms would doubtless like to introduce night shift-working were they able to recruit sufficient male labour to staff the machines. The wholesale scrapping of plant now envisaged seems certain to divert enough skilled men on to the market to encourage its more positive consideration. The second, and more telling, influence is likely to be the Cotton Industry Act itself. In the process of deciding whether or not to scrap surplus plant, no firm is likely to have overlooked the re-equipment grant offered by the Government towards the installation of new machinery or the modernisation of existing plant undertaken within the next three years and completed within five.

And in contemplating re-equipment they must also consider shift-working. For how else can they operate the new machines more economically to reduce costs and meet successfully the challenge of competition from abroad?—All Rights Reserved.

EXPANSION OF SUGAR INDUSTRY GOVERNMENT'S RECENT DECISION EXAMINED

In the course of a Press note issued recently, the Union Commerce and Industry Ministry announced that the Government had decided to license additional capacity in the sugar (white) industry. The new capacity to be installed, it is said, would be partly for the establishment of new factories and partly for the expansion of the existing units. On the face of it, the decision may appear somewhat surprising, considering that licences fully covering the net expansion of one million tons in the installed capacity of the industry envisaged in the first and second Five-year Plans have already been granted and that the Planning Commission has still not prepared even the draft outline of the third Plan. But, according to the Government, the decision has been taken in view of the likely increase in sugar consumption during the third Plan period and the time required for putting up the additional capacity.

The Press note has not, however, indicated the extent to which new capacity will be licensed. Presumably, the basis would be the production target of 3.00 million tons recommended by the Indian Central Sugarcane Committee at the end of a two-day session at New Delhi on 21st March last. This target, it will be recalled, represents an increase of 750,000 tons, as compared with the production target of 2.25 million tons fixed under the second Plan. Although the basis on which the target is fixed is not made known, a rough idea can be had on the question whether the target is realistic, on the basis of the available projected statistical data relating to the size of population and per capita income.

Conservative Estimate

Let us take the sugar season 1957-58. The per capita annual consumption of white sugar in that season was 11.7 lbs. (the aggregate consumption was 2,042,000 tons and the population of the country was 393 million). On this basis and taking the average retail price of 48 nP per lb. prevailing then, the average amount of money spent on sugar by one person comes to Rs. 5.62 per annum. This expenditure accounts for as much as 2.02 per cent. of the per capita income of Rs. 275.6 (1948-49 prices). The per capita income is expected to rise to Rs. 396.00 at the end of the third Plan, that is, 1965-66. The 2.02 per cent. of this income, or nearly Rs. 8, will represent the average per capita expenditure on sugar. Even assuming that the present level of sugar prices—average of 52 nP per lb.—will continue, the per capita consumption of sugar will be about 15.4 lbs. per annum. Taking the projected estimate of population, namely, 434 million, the total domestic requirement of sugar will work out to 3.0 million tons per year, which is just the target recommended by the Central Sugarcane Committee.

The estimate of 3.0 million tons is, however, a conservative one. It does not, for instance, take into account the continued shift in consumer preference from brown sugar (*gur* and *khandsari*) to white sugar as a result of the improvement in the living standards of the masses, following the implementation of the series of development schemes, the spread of urban ideas in rural areas, and the increase in consumption of soft beverages such as tea, coffee and cool drinks. A look at the trend of consumption of the different sweetening agents over the past seven years (from 1950-51 to 1957-58) will reveal that the per capita consumption of sugar has gone up from 6.7 lbs. to 11.7 lbs., while that of *gur* has declined from 21.0 lbs. to 17.0 lbs.; the consumption of *khandsari* does not show any marked variation, the figure for 1957-58 being 1.2 lb., as against 0.8 lb. in 1950-51. Again, the target of 3.0 million tons does not take into account the nutritional requirement of sugar which, on the basis of experts' suggestion, comes to nearly 23 lbs. (white sugar alone) per capita, as against 15.4 lbs. now tentatively assumed for the third Plan period. The fulfilment of this requirement will mean a sugar production target of approximately 4.5 million tons.

Progress of Expansion

Be that as it may, licences for the additional installed capacity of one million tons envisaged in the first and second Five-year Plans—the target for 1960-61 being 2.5 million tons, as against 1.5 million tons in 1950-51—have already been granted. This capacity is being achieved by the establishment of 55 new mills with an aggregate daily cane-crushing capacity of 53,600 tons and expansion of 68 existing units involving a fresh cane-crushing capacity of 35,356 tons per day. Already, 29 new factories, with a total annual production capacity of 333,000 tons, are said to have gone into production. Seven more units, with a capacity of 72,000 tons, are expected to commence operation in the ensuing season (1959-60) and the rest—10 mills—in subsequent years. As regards progress in expansion, 31 existing units, with an additional annual production of 164,000 tons, have completed their schemes, eight more units involving a fresh capacity of 60,000 tons are expected to complete their programme in 1959-60, and the remaining 29 factories in subsequent years. Some sugar factories have also made partial expansion of their plants covering an additional production of 50,000 tons.

While the Government of India's decision to license additional capacity well in advance must be welcomed, it remains to be seen whether the Government will be able to sanction the necessary foreign exchange required for import of machinery and equipment, in view of the tight exchange position

which is bound to continue throughout the third Plan period. It may be noted here that the total foreign exchange requirements per factory with an average daily cane-crushing capacity of 800 tons, come to about Rs. 75-80 lakhs. As it is, the Government has stopped giving licences for import of sugar machinery, so that 12 new sugar mills are being set up by fabricating the machinery in India by using such minimum essential imported component parts as are necessary for the fabrication of complete plant and machinery. The creation of additional capacity will, therefore, depend on the ability of the six firms, licensed to fabricate complete sugar plants in collaboration with foreign manufacturers of repute, to expand their production and/or on the willingness of the Government to provide foreign exchange.

FRESH RELEASE OF SUGAR

The Government of India has released 175,000 tons of sugar for sale, according to a Press note issued by the Ministry of Food and Agriculture on 30th August 1959. There will be no free sale release from factories in the Punjab, Uttar Pradesh and North Bihar. A small quantity will, however, be released to each factory for sale to its employees. Allotments of sugar to Madhya Pradesh, Rajasthan, Uttar Pradesh, Bombay State and Himachal Pradesh from factories in the controlled region will be made only to the nominees of the State Governments.

In the case of Punjab and Jammu and Kashmir, the allotments will be made direct to the State Governments or their nominees. As regards Bihar, Orissa, West Bengal and Assam, and the Union territories of Delhi, Manipur and Tripura, applications for allotments will be considered by the Directorate of Sugar and Vanaspati according to the existing system or according to the arrangements indicated by the respective State Governments or administrations.

All allotments would be made at prices fixed under the notification of 22nd December 1958.

SUGAR EXPORTS

The Government of India has not yet decided to join the new International Sugar Agreement. Revealing this in the Lok Sabha the other day, Mr. A. M. Thomas, Union Deputy Food Minister, pointed out that there was no urgency in coming to a decision. According to the Minister, without being a signatory to the Agreement, a country cannot export sugar to another signatory country. If India joins the Agreement, a basic export quota will be allotted to it.

Mr. Thomas said that it had to be seen whether any further exports of sugar could be made by India. "We have exported sugar to a small extent, as we have to maintain our contacts with markets like Malaya." In this connection, the Minister admitted that an increase in the production of *gur* and *khandsari* has affected sugar production.

The U.P. Government has ordered 24 sugar factories in the State to pay a total bonus of Rs. 10,84,250 to their workers for the crushing season 1957-58. According to the order, payment is to be made within six weeks of the notification. These factories had previously urged for exemptions and their cases were referred to a sub-committee. The order followed the recommendations of the sub-committee and will remain in force for a period of one year in the first instance and the period may, if necessary, be extended from time to time.

ECONOMICS OF JUTE PRODUCTION FINDINGS OF AN INVESTIGATION RELATING TO 1955-56 SEASON

MUCH interesting light on the economics of jute and paddy growing is thrown by the latest investigation conducted by the Economic Research Section of the Indian Central Jute Committee. The inquiry, which is the eighth in the series conducted by the Committee, relates to the 1955-56 season, makes a comparative study of the cost of growing and the income and net profit from jute and paddy, the principal crops grown by farmers in certain districts of W. Bengal, Bihar, Orissa and Assam. The authors of this research are Mr. K. C. Basak, Director, Economic Research, and, Mr. S. M. Ganguli, Statistical Officer, of the Committee. Their report contains an analysis of the farmers' income and expenses, giving an insight into the balance-sheet of the economic position of typical farmers.

The inquiry under reference covered, in all, 196 jute growing farms, in the Hooghly and Jalpaiguri districts of West Bengal, Purnea district of Bihar, Cuttack district of Orissa and Nowgong district of Assam. The number is the same as that covered in 1954-55, but five among them failed to produce any jute and eleven of the selected growers received no paddy from their farms. Only 191 jute and 185 paddy farms were, therefore, actually covered by the investigation. The average area sown to jute per farm recorded an increase in 1955-56 to 1.25 acres from 0.97 acre in 1954-55. The proportion of land under jute to the total cultivated area also increased from 25.90 per cent. in 1954-55 to 34.10 per cent. in 1955-56. The increase in area under jute is attributed to (1) fairly good weather, (2) better pre-sowing jute prices, (3) the higher parity ratio in 1954-55, as compared with that in 1958-59 between jute and paddy prices, which is known to influence jute acreage with a time lag of one year.

The study under review showed that a definite relationship could reasonably be expected to exist between the size of holding and the area under jute—the bigger farms sowing jute more extensively than the smaller ones. The same trend was also noticed in respect of the total cultivated area of the average farmer.

Cost of Production

As regards the cost of production of jute, it was found that, though there was a sizable reduction in yield, the average cost of jute production remained unchanged at Rs. 19.14 per maund, because the lower yield was followed by a fall in the per-acre cost of fibre preparation. The estimates for individual centres showed that, except at Bedakoba, where a significantly lower cost followed higher production, the cost per maund registered an increase in all other centres. While the average cost of production remained the same in both 1954-55 and 1955-56, the price received by the growers declined in the latter year by a little more than a rupee per maund. So, the profit per maund came down from Rs. 6.60 to Rs. 5.37. It is noteworthy that, after a continuous rise in jute prices since 1953, some recession was noticeable in 1955-56 more or less in all the centres, though the extent of fall in prices varied from centre to centre.

The average farmer received during the year more fibre from a larger area sown to jute than in 1954-55. Consequently, though jute production showed a comparatively smaller profit per unit of output in 1955-56, the total net return from the crop was not correspondingly low and worked out to Rs. 63.47 per farm, as against Rs. 55.67 in 1954-55. Indeed, his net income can be said to have increased if the contribution of the farmer's self-labour is taken into consideration. Under a cost concept which ignores the value of farm labour as an element of cost, the net income is much higher than that otherwise calculated, that is, Rs. 147.35, as against Rs. 63.47 per farm. Measured thus, even loss in some centres turn out to be comfortable income. It may be noted that, in the case of most farms, the labour contributed by the farmer and the members of the family was substantial.

An analysis of the cost structure indicated that, of the two principal cost elements, namely, operational expenses and rent, the latter was fairly susceptible to variation caused mostly by the changing value of share rent. The cash rent, constituting about only 2.3 per cent. of the total cost on an average, remained, as usual, very low while the average share rent registered

an increase from 14 per cent. in 1954-55 to 16.3 per cent. in 1955-56. This was obviously not due to any better production, or higher jute prices, which are known to inflate the share rent, but because more land in the sample was cultivated under that system.

A breakdown of the operational cost showed that in 1955-56 human labour accounted for 81.46 per cent., cattle labour 11.77 per cent., seeds 3.22 per cent. and manure 3.55 per cent. of cost, as compared with 80.80 per cent., 10.60 per cent., 4.20 per cent. and 4.30 per cent., respectively, in 1954-55. It is evident from this that, in contrast to the previous year, there was a fall during the year under review, though not a significant one, in the proportional cost of seed and manure and an increase in the percentage costs of human and cattle labour. Still, the overall cost structure maintained an almost identical pattern marked by an overwhelming importance of human labour, as compared with other cost items. This is an indication that there has practically been no improvement in the production technique so far as jute is concerned. The characteristic feature of age-old methods, namely, very large input of human labour but not much of cattle labour and insufficient manuring, was clearly evident.

Input

A study of output in relation to input per acre showed that input, as shown by the operational cost, steadily decreased with increases in the size of holdings. In other words, bigger-size farms spent less per unit of area in men and materials on jute cultivation than the smaller ones. This is in keeping with the observed patterns. It is common knowledge that agriculture, in general, and jute cultivation, in particular, still follows the primitive method and to this big growers are no exception. There is as yet hardly any attempt at effecting improvement. Rather, their managerial incapacity, combined with other limitations, prevents them from devoting simultaneous attention to, and making adequate outlay for, all their plots. The smaller farms, on the other hand, do their utmost and put in whatever resources they have in order to make a living out of their tiny holdings.

What is more important to the cultivator is not so much the total cost, as the actual cash expenditure he has to incur for jute cultivation. This is because, not only does he feel the burden of cash cost, but his limited cash resources also impede the progress and improvement of jute cultivation. Cash expenditure on human labour, which is the most important cost item, largely determines the cash requirement of the farmer. This, in its turn, is dependent, first, upon the proportion to which hired labour is employed and, secondly, on the mode of wage payment, that is, whether it is in cash or in kind. In 1955-56, it may be noted, 55.50 per cent. of human labour was supplied by the farmers' family and 45.78 per cent. by hired labour. Of the cattle labour, 99.04 per cent. came from the farmer's own cattle and 0.90 per cent. hired. The average proportion of hired labour moved within a narrow range as between one year and another. Per-acre cost of hired labour was Rs. 61.78 in 1955-56, of which Rs. 46.83 or 75.80 per cent., was paid in cash and Rs. 14.95 or 24.20 per cent. in kind. On an average, nearly three-fourths of the wages were paid in cash. Cash expenses on seeds and manure were very small, being only about 5 per cent. of the total cost.

Cash Payment

Nearly 40 per cent. of the total operational cost had to be paid for—30 per cent. in cash and 10 per cent. in kind. Of the total paid cost, again, 95 per cent. was accounted for by hired labour. With the fall in the operational cost in 1955-56, the cash expenses on jute cultivation declined to Rs. 50 per acre, that is, by Rs. 10, as compared with the previous year. But the average farmer, growing jute on a larger area, that is, 1.25 acre, spent about Rs. 58, as against Rs. 55 in 1954-55. If, however, the rent in cash is included, the total cash expenses work out to Rs. 54.12 per acre or Rs. 63.10 per farm which is about 27 per cent. of the total jute production cost. Considering the total input in labour and materials, whose money equivalent works out to Rs. 164.8 per acre or nearly Rs. 191 per farm, the total cash expenditure is not much,

But continuous investigation over a number of years has shown that the small growers, who form the bulk of the farming community, do not have the wherewithal to invest even this small amount of money. Whatever little is spent imposes a great stress on their meagre resources. This is obviously the reason why no improvement in agriculture has been effected, although there is great scope for increasing output through higher input.

Conclusions

The report sums up the conclusions of the investigation thus:

(a) Better pre-sowing jute prices and a favourable parity ratio between the prices of jute and paddy helped expansion of jute acreage. The increase was more on the share-rented than on the cash-rented lands.

(b) The cost of jute production moved up in some centres and came down in some others according as bad or good weather prevailed, but the overall cost remained unaltered.

(c) Except for a tendency to lower the seed rate and thereby reduce the cost of seed and of thinning, virtually no improvement was noticeable in the production technique. That is why the cost and its distribution over the different items maintained nearly the same pattern as before.

(d) Manuring practices, in particular, made little progress; rather the quantity of manure applied per acre somewhat declined due to the difficulties of application. The use of ammonium sulphate was also very insignificant.

(e) Money cost closely followed the real cost owing to little fluctuation in the wage and cattle hire rates ever since 1953.

(f) A similar cost structure and equal labour rates meant nearly the same volume of cash outlay per unit area under jute as a year ago. But a larger acreage sown in 1955-56 somewhat increased the total cash expenses of the average grower.

(g) The profit on jute cultivation which involved the same cost as in 1954-55, was a little less with the decline in the grower's average price of jute by more than a rupee per maund.

Jute and Paddy Compared

A similar investigation was conducted into the economics of paddy growing and the results of the two studies were compared. The following conclusions emerged from the comparison:

1. Though paddy sowings did not increase to the extent jute sowings did, still, the former were more than two and a half times larger than the latter.

2. With an average yield per acre nearly 2 maunds less than that of paddy but a much higher cost per acre, the cost per maund of jute was double the corresponding paddy cost.

3. The parity ratio between jute and paddy prices slightly declined but it still remained significantly higher than the cost ratio. The average profit per unit of output was, therefore, larger for jute than for paddy.

4. The paddy grower gets a stabler income than the jute grower, because rice is always available for consumption on the farm while jute brings in income from sale in an uncertain market. This, among other reasons, explains why a large shift from paddy to jute cultivation is not always possible, even though the latter is more profitable.

5. The comparative costs nearly followed the proportion of human labour input for the production of the two crops. Jute required somewhat more cattle labour and manure, while paddy had a higher seed cost.

6. The rent (cash and kind), bearing an equal percentage of cost for both the crops was considerably higher for jute than for paddy.

7. A greater input of human labour for jute, of which a larger proportion is hired, than for paddy, increased the paid cost (operational) of jute calculated at four times the corresponding cost of paddy cultivation. So the fibre crop requires a substantially higher investment than the food crop both in the total as well as in cash.

A significant point that emerges from the investigation is that, in respect of both paddy and jute, the small growers make a heavier input per unit of land despite their meagre resources. The big farmers, on the other hand, are not as efficient, as their input is not large; rather, it is less, in relation to the income. There is, therefore, considerable scope for improvement in the productive efficiency of the big growers through diversion of savings into agriculture, although this cannot solve the problem, because the big growers account for only a relatively small cultivated area.

CHINA BUYS INDIAN JUTE

It is reported that China has been buying raw jute from India through the State Trading Corporation. Its orders so far are placed at 25,000 bales. Total exports of raw jute from India to all countries since March 1959 to 15th August amount to 72,100 bales.

China's purchases of raw jute from India in preference to Pakistan must be attributed to the relative cheapness of the Indian material. At one time, it was believed that China was self-sufficient in raw jute. But now it seems that its internal capacity has been expanded to meet its growing domestic requirements.

BILL TO AMEND ELECTRICITY ACT ADOPTED BY PARLIAMENT SIGNIFICANCE OF NEW PROVISIONS

THE Bill to amend the Electricity Act, just passed by both Houses of Parliament, marks a definite stage in the evolution of electricity legislation in the country. The original Act, enacted in 1910, had remained largely unchanged, except for some minor modifications made in 1920, 1937 and 1950. The Bill, now adopted and pending the President's assent, brings the Act in line with the provisions of the Electricity Supply Act 1948. It also embodies the Government's decisions on the findings of the Advisory Board which submitted its report on electricity industry in 1954. Although nearly five years had elapsed between the submission of the Board's report and the formulation of the Bill, the intervening period was well spent in ascertaining the views of all the parties concerned. The result is that the Bill reflects the considerable measure of agreement which exists between the Government and the industry.

The amended Act confers several benefits on the consumers in areas remote from sources of electricity supply. From their point of view, a notable change is in respect of conditions which must be fulfilled before they get supply of electricity. For the purpose of obtaining the supply, the number of requisitionists has been reduced from 6 to 1. Again, whereas the requisitionists had to guarantee offtake for not less than two years and also a "reasonable return" to the licensee, the amended Act lays down that the sole requisitioner or two requisitionists between them need only "assure to the licensee at the current rates charged by him an annual revenue not exceeding 15 per cent. of the cost of the distribution mains (not including transformers and other sub-station equipment)" so as to make it obligatory for the supplier to comply with the requisition.

An Anomaly

The new Act rectifies an anomaly which had crept into the electricity industry. Under the original Act, State Governments, which engaged themselves in supply of power, often claimed certain privileges which were not available to the State Electricity Boards or licensees. The amended Act confers on consumers of Government electricity departments the rights which are enjoyed by those receiving supply from a State Electricity Board. This will put to an end any tendency on the part of electricity departments of States to bring into their work considerations which have no relevance to supply of power. For instance, a certain State Government, which has a departmental framework for the supply of electricity, is reported to have insisted that an industrial undertaking should have its head office within the State before it claims power. A parochial outlook of this kind is certainly detrimental to the industrial progress of the region itself. Again, the Bill, in its original form, sought to vest the State Governments with sweeping emergency powers empowering them to give directions to licensees in regard to supply of energy to essential services. The Select Committee has held the view that "the State Government should not have any power to direct a licensee to supply energy, in preference to any other consumer, to any establishment merely on the ground that it is a Government establishment." The powers of the State Government have, therefore, been limited to establishments "used or intended to be used for maintaining supplies essential to the community."

Tenants

A welcome change made by the amending Act concerns the rights of tenants in buildings. Formerly, a tenant in a building had to get the consent of the landlord in order to get electricity for his premises. Under the Act now, an occupier of premises, who is not the owner himself, enjoys the right to obtain supply of electricity without the consent of the owner. This must be a boon to tenants who are harassed by landlords who are unwilling, for some reason or other, to give their consent to their tenants' plea for electrical installations.

Yet another change, which has evoked satisfaction, is the composition of the Central Electricity Board. The Board is a body which will make rules so as to regulate the generation, transmission, supply and use of energy and generally to carry out the purposes of the Act. The Board has been made a fully representa-

tive body. Besides the representatives of the Central and State Governments, the Board will consist of nominees of the State Electricity Boards, the Railway Board, the Chief Inspector of Mines, the Indian Standards Institution and the Federation of Electricity Undertakings of India. The fact that the Board is a broad-based one will enable the interests concerned with the supply of electricity to be closely connected with the functions of the Board.

Compensation

An important amendment to the Act which was adopted by Parliament during the passage of the Bill refers to the compensation to electricity undertakings which are taken over by the State. It may be mentioned here that, during the period of the first Plan, 71 undertakings were taken over by the State and before the end of the second Plan, another 26 undertakings would have been taken over. Be that as it may, the amendment relating to compensation provides that the undertakings will receive interest at a rate of one per cent. above the prevailing Bank rate for the period the compensation is not paid. This provision will compel the authorities to take prompt decision on payment of compensation.

In the course of the debate on the Bill, the plea was made from many quarters that the supply of electricity should be nationalised. The Union Minister for Irrigation and Power, Mr. Hafiz Mohammad Ibrahim, averred that the nationalisation of existing electrical undertakings in the country was "impracticable at present." He revealed that the Planning Commission had come to the conclusion that electrical undertakings should not be disturbed except in cases of "bad conduct." While this assurance, as far as it goes, will be welcomed, it is a pity the Government has not been able to give electrical undertakings a positive assurance of immunity from nationalisation. It is also deplorable that a section of opinion in India should clamour for nationalisation of electrical supply, considering that few industries or services are more rigorously controlled than electrical undertakings. By the device of rigid controls over the profit-margin which an undertaking can earn, the Government has acquired a very effective means of control over the fortunes of an electrical enterprise. This virtually reduces the enterprise to an agency working for the Government for a modest remuneration. Thus, the present arrangement has the virtue of nationalisation, without the handicap of actual State ownership.

Finance

It must be emphasised that, so long as electrical undertakings are in the private sector, they should be allowed facilities for strengthening their financial position which alone will determine their capacity for extending their services. In this connection, a serious disability of electrical undertakings, to which reference was made by Mr. P. D. C. R. Clark, Chairman of the Bombay Suburban Electric Supply Ltd., will be read with interest. Mr. Clark, in the course of his speech at the annual meeting of the Company, held recently in Bombay, said:

"A development of far-reaching consequence which has taken place since we last met, and on which you will certainly expect me to speak today, is the new scheme of corporate taxation introduced by the Finance Act of 1959. I am sure you have read and discussed the implications, in general terms, of the arrangement whereby all future dividends will be subjected to deduction of tax at the source at the prescribed rate of 30 per cent. The position of electricity companies in general is very much more complicated, in that these companies come under the dual control of the provisions of the Indian Income-tax Act and the much more technical and restrictive regulations of the Electricity (Supply) Act, 1948. The reality in terms of available net earnings for distribution of dividends in the case of an electricity supply undertaking is set by the exhaustive financial provisions embodied in the Sixth Schedule of the latter Act and while there has been divergence of views as between the authorities and the industry over what should constitute the "fair return" to the investor, there has been no two opinions that the return fixed by law should be "net" and free from income and all other taxes. This position would be seriously undermined, if, for purposes of determining "clear profit" under the Electricity (Supply) Act, the tax deducted from dividends at the prescribed rate and payable to Government under the Finance Act, 1959 (and applicable and effective from the assessment year 1958-59) is not also permitted as a charge to the consumers."

It would appear that a representation has been made by the industry to the Government of India, suggesting that the tax deducted from dividends should be reckoned as an expense for the purpose of computing "clear profit." It is to be hoped that the industry which has already suffered heavily through deferred taxation and the denial of "grossing-up" of dividends in the hands of shareholders, will not be denied the facility now sought.

LOW-SHAFT FURNACE

A landmark in the history of iron manufacture in India was made last month when the first low-shaft iron furnace, with a capacity of 120 to 150 tons of pig iron per day, went into operation at Barbil (Orissa). This is the first of the five such furnaces now being set up by the Kalinga Industries Ltd. B. Patnaik of the Company is reported to have stated at Calcutta that their next plant would be set up in Salem (Madras State) and that 95 per cent. of the plant would be fabricated by Indian engineers.

The plant at Barbil was designed by Messrs. Fried-Krupp of Essen, West Germany; 50 per cent. of the plant was manufactured in India. Ore size 10 to 40 mm. which cannot be used in any large quantity in conventional blast furnaces, waste, is the principal raw material for this plant. Experiments are under way to use ore fines which are lying in large dumps at pit mouths. Nut coke which cannot be used in blast furnace to the extent of more than 5 per cent. is used as fuel in this furnace. It has been established elsewhere that such furnaces can be operated with poor quality coke or coke out of lignite and in due course such experiments on commercial scale will be carried out in this furnace. After observing the performance of this furnace for 2 days, the Company's Technical Adviser is convinced that any grade of pig iron can be produced in this furnace.

These plants it is stated, have a great future in India as well as Asian countries where good quality metallurgical coke is not available easily. Sardar Swaran Singh, Union Minister for Steel, Mines and Fuels, indicated the Government's policy all over the country for supply of pig iron to foundries.

Since 80 to 90 per cent. of such furnaces can be manufactured in India, these plants can go up all over the country without any drain on our foreign exchange resources. Production of iron can be decentralised and transport bottlenecks obviated, thereby assuring timely and regular supplies to the consuming points all over the country without unduly loading the already strained railway capacity. With the new steel plants producing steel to full capacity by 1960-61, foundry pig iron of proper grade available from these plants will not be sufficient to meet the country's estimated requirement of 1.5 million tons by the end of the third Plan. The deficiency of about one million tons of foundry iron could easily be met by such furnaces as these erected in various parts of the country.

AIR FRANCE

As a result of negotiations that have taken place between the French and the Americans at Paris, the two French companies, Air France and Transports Aeriens Intercontinentaux, will be able to open a round-the-world service by the spring of 1960. By virtue of this Agreement which will be ratified in the very near future by the French and the American Governments, Air France is authorised to operate a new service connecting Paris and Los Angeles, with a call at Montreal, Transports Aeriens Intercontinentaux, on its part, is authorised to operate a service Papete/Los Angeles via Honolulu. In other words, for the first time, on board the aircraft of French companies, the world in a single change of plane at Los Angeles. The operation of a service to Papete. This round-the-world trip ex Paris via Montreal, Los Angeles, Honolulu, Tahiti and Saigon will cost approximately Rs. 10,510 in first class and Rs. 7,730 in tourist class.

By the end of June 1960, Air France will operate a service Paris/Montreal/Los Angeles with Boeing Intercontinentals at a frequency of twice a week in each direction. Air France will add the capital of California to the 210 stations already operated by its planes, and its network will extend to 196,250 miles, the largest in the world.

KALINGA TUBES LTD.

The expansion scheme undertaken by the Kalinga Tubes Ltd., established in April 1955, and step drawn poles by middle of 1960. The target is 100,000 tons of pipes and 300,000 poles per year. Since its inception, the Company's factory, which is situated at Choudwar (Orissa) has saved Rs. 10 crores of foreign exchange. The Tube Mill is equipped with the most modern high frequency electrical induction welding process, suitable for water and gas connection and embarked upon an ambitious export programme and expects to earn valuable foreign exchange during the first year to the tune of Rs. 60 lakhs, and Rs. one crore next year. The quality of the produced anywhere in the world. The Company employs about 700 people.

NEW PRODUCTS AND PROCESSES

Improved Forsterite and Dolomite Refractories

As a result of prolonged research efforts, two types of refractories, forsterite refractories from magnesium silicate, and completely stabilised dolomite refractories from dolomite have been developed by the National Metallurgical Laboratory, Jamshedpur. Forsterite refractories are used as substitutes for magnesite, chrome or chrome-magnesite refractories in the walls of basic open-hearth steel melting furnaces above the slag line, in non-ferrous metallurgical furnaces like those used for copper and lead smelting and refining, glass tank super structures and checkers, rotary cement kilns and ceramic kilns. Apart from their low production costs, forsterite refractories, developed by this process, possess higher refractoriness-under-load than magnesite (forsterite 1600°C, magnesite 1500°C) and a thermal spalling resistance of more than 32 reversals (magnesite 8, chrome magnesite 30). Chrome magnesite bricks have a tendency to burst due to the action of reducing atmosphere and iron oxide, whereas, forsterite bricks are immune to bursting on exposure to iron oxide or reducing atmosphere. Forsterites are volume stable at high temperatures, while magnesite bricks shrink gradually with time and temperature. Thermal conductivity of forsterite is also less than magnesite and silica at higher temperatures. Forsterite refractories, are made by mixing magnesite with cheaper ores like serpentine, saxonite and dunite, in specified proportions with suitable binders, pressing and firing at 1600°C. The grog so obtained is pressed into bricks and finally fired at 1500°C. Similarly stabilised dolomite refractories find application in the iron and steel industries, copper converters and refining furnaces, cement kilns, etc. as substitutes for magnesite and chrome magnesite. Apart from their comparable refractory properties, stabilised dolomite bricks are volume stable and cheaper as compared to magnesite bricks. For producing stabilised refractories from dolomite, the mineral is mixed with stabilisers such as serpentine, dunite, borates, apatite, chromite, etc., in suitably adjusted proportions, crushed and fired at 1400°-1650°C. The fired material is graded, blended and mixed with a green bond, pressed into bricks and refired at 1400°-1600°C before storage.

Novel Flywheel Converter

The growing transition from direct links to coaxial or radio links for long-distance transmission of telephone traffic has resulted in a Swedish company, Asea, initiating the manufacture of a flywheel converter for supplying continuous A.C. current at a constant voltage to the repeater stations essential for this type of linkage. So far, 71 sets have been supplied to the Swedish Board of Telecommunications, 13 sets for telephone stations in Colombia and a similar number to the Finnish Postal and Telegraph Authorities.

The flywheel converter, of which sets of outputs up to 63 kW have been made, consists of a three-phase induction motor and a single-phase synchronous generator, linked together by means of a flywheel. In the case of a break in the power supply system, the energy stored in the flywheel is intended to provide power until the automatic standby power plant has had time to start and take over the feeding of the flywheel converters. The wheel is designed to be able to provide full output for 30 seconds. During this time the frequency drops by 20 per cent., while the voltage is kept constant with an accuracy of ± 3 per cent. Since the starting time of a standby power plant is about 5 seconds, the drop in frequency is, in fact, not more than 3 per cent. and the variation in voltage is reduced to ± 1 per cent. The generator is fitted with a rectifier exciter.

In order to avoid the necessity of having large and bulky switching starters which would otherwise be required for a set of this kind, it is connected to the standby plant, the speed of which is slowly increased to full speed. The standby power plant is also used for braking the converter.

Acid Bath Tapers for Aircraft

A \$100,000 chemical milling system has been built by engineers at Lockheed's Marietta Georgia plant to "melt" surplus weight of the JetStar—the Company's 600-m.p.h. 10-passenger utility jet transport. In this process, etching acids eat away surplus metal in areas of parts inaccessible to mechanical machining methods. In a test, a JetStar wing was dipped first into a tank containing an etching bath, then into a tank containing a fixing agent, and finally into a tank of water to rinse. Each tank is 30 feet deep and 5 feet in diameter. The rate of shaving off surplus metal is automatically controlled by the speed of immersion and withdrawal from the etching tank. Thickness of a 30-foot wing panel can be tapered in thickness from one-fourth inch at one end to paper-thin tolerances on the other.

High-precision Surface Grinding Machine

A high-precision surface grinding machine capable of working material up to 72 in. long, 18 in. wide, and 20 in. deep has been produced by a Sheffield engineering firm—Snow & Co. Ltd. It will be shown at the European Machine Tool Exhibition to be held in Paris this month. The machine is controlled electronically by push-buttons and selector switches from an elevating control panel which can be raised or lowered hydraulically to the height most convenient for the operator. Automatic downfeed is incorporated, which gives an independent choice of roughing and finishing feeds, working in conjunction with automatic sizing equipment. This sizing equipment not only compensates for the amount of abrasive removed from the grinding-wheel during the truing operation, but also compensates for loss of abrasive during the actual grinding.

This is your Heritage

Motoring north from Moradabad, you come to the picturesque hill station of Naini Tal, with its famous lake 6300 feet above sea level. The beauties of Naini Tal have been extolled by famous Indian poets throughout the centuries, and it derives its present name from an old temple of the goddess Naini Devi. This temple stood on the edge of the lake, and was destroyed by the landslide of 1880. Naini Tal is one of the beauty spots of India that everyone should visit. And wherever you motor in this vast country, your trip will be more pleasant and free from "car troubles" when you drive on Caltex petroleum products.

THE INDIA CEMENTS LIMITED, MADRAS

MR. P. SURYANARAYANA'S SPEECH AT ANNUAL MEETING

NEED FOR STIMULATING DEMAND FOR CEMENT BY LOWERING EXCISE DUTY MOST URGENT

ONCE again, Mr. P. Suryanarayana, Chairman of the India Cements Limited, stressed, this time at the Thirteenth Annual General Meeting of the Company, held at Madras on Friday, 31st July 1959, that the most urgent need today was to stimulate demand and increase sales of cement. One of the specific measures suggested by Mr. Suryanarayana was a reduction in excise duty on cement which, he said, had been raised from Rs. 5 per ton to Rs. 20 on 16th May 1957 and then to Rs. 24 on 1st March 1958. These increases, it may be noted, were made mainly for restraining demand for cement. Now that the situation had changed, it was but right, he declared, that the excise duty should be brought down to Rs. 5 per ton "to wear down consumer resistance."

The following is the full text of the Chairman's speech:

"GENTLEMEN,

"I extend to you all a cordial welcome to this thirteenth annual general meeting of the Company. The report of the Directors and accounts for the year ended 31st March 1959 have been in your hands for some time and, with your permission, I shall take them as read.

"It is needless for me to offer any detailed explanation regarding the financial and other aspects of the accounts of your Company, as the figures in the balance-sheet bear testimony to the strong, sound and stable position of your Company. The working of the Company during the year has been quite satisfactory, excepting for the first quarter when there was a heavy power cut. This power cut necessitated the closure of one unit during the period which resulted in a net loss in production of 20,000 tons, in spite of our best efforts to make up the deficit during the remaining period.

Growth of Production

"The year 1958 has been marked by a slowing down of the tempo and pace of industrial production, the average general index of 139.4 representing an increase of only 1.5 per cent., as compared to 3.5 per cent. in 1957 and 8.3 per cent. in 1956. The rate of growth of cement production also slowed down. Production of 6.1 million tons in 1958 showed a rise of 8.3 per cent., as compared to 13.7 per cent. in 1957, as against a target of 9 million tons visualised in 1958.

"The year has also been conspicuous by a remarkable rise in production in certain categories like machine tools, industrial machinery, light engineering items, electrical and scientific equipment, etc., and for branching out into new fields of enterprise and production of goods which have not been attempted in this country before, despite handicaps and obstacles which, at one time, almost threatened to halt industrial growth to a standstill. The fact that the industrial advance was not only not halted but fresh strides were taken by a large number of industries does credit to a country's capacity to withstand difficulties in the march forward towards economic progress. These difficulties were the difficulties of growth and not of stagnation. They were caused by the shortage of foreign exchange, by the fact that a number of industrial projects in the middle of the second Plan had reached an advanced state of execution, but had not reached fruition and by the rapid growth of industry in the previous years which meant greater consumption of raw materials, spare parts and capital equipment.

The Company's Achievements

"Against this background of the general economic picture of the country, the achievements of your Company in respect of its expansion programme, I have no doubt you will agree, are creditable. In my speech at the last annual general meeting in August 1958, I adverted to the fact of our having secured the necessary permission from the Government of India for the installation of a 750 tons plant in furtherance of our programme for raising the rated capacity of our Talayuthu factory to 500,000 tons cement per annum. It was then visualised

that the additional capacity will go into production by September this year. I am happy to inform you that erection of this plant has almost been completed and it is proposed to put the new plant into commission in the next week or ten days. Your factory will then be one of the biggest factories, producing 500,000 tons. This has been rendered possible by clearing the heavy machinery at Tuticorin by a highly technical floating process. The Managing Agents are to be congratulated for their careful planning and expeditious execution.

"The starting of the branch factory at Visakhapatnam, I am sorry to say, is delayed due to circumstances entirely beyond the control of your Directors. The preliminary work connected with the starting of the factory, as you are all aware, has already been completed. The Government of Andhra Pradesh is expected to sanction the necessary mining rights shortly.

Demand Declines

"Although your factory has maintained its full quota of sales during the year, as you will see from the astonishingly low stock of cement of the value of only Rs. 1,871 at the end of the year, there has occurred a serious imbalance between supply of and demand for cement in various regions, as well as in the country as a whole. The immediate cause for the sudden drop in demand since August last has been the fall in the offtake by Central and State Governments and various project authorities, as a result of the slowing down of the second Five-year Plan schemes and, secondly, a sharp recession in industrial and private consumer demands because of the high price of cement and slowing down of building activity, generally due to non-availability of steel. In 1957, the Government and quasi-Government demand stood at 50 to 55 per cent. of the output, whereas, during 1958, the demand fell to 30 to 35 per cent. of the total output.

"You may remember that I referred to the necessity of a reasonable reduction in the price of cement to the consumers when I spoke to you last. I would like to reiterate that it is essential that certain remedial measures are now taken for increasing the consumption and demand for cement. Up to 15th May 1957, the excise duty on cement was only Rs. 5 per ton. The duty was increased to Rs. 20 per ton on 16th May 1957, and then to Rs. 24 per ton on 1st March 1958 for inhibiting the demand, and it is but right that the excise duty should be brought down to Rs. 5 per ton to wear down consumer resistance. With the Government steel projects going into production and constructional steel becoming increasingly available, the demand for cement is also likely to be greater. In this connection, I welcome Government plans for concrete.

ing of roads. The most urgent need today is to stimulate demand and increase sales of cement, particularly in view of the fact that the installed capacity may go up to about eight to nine million tons before the close of the second Five-year Plan, as against the ambitious target of 16 million tons visualised for the second Plan, which now has to be spread over to the third Plan also.

Future for Industry Bright

"Taking an overall view, the industry's future must be regarded as bright. It should not be forgotten that the per capita consumption of cement in India does not exceed 33 lbs. a year, which is remarkably low, when compared with Switzerland's 1,084 lbs. Even comparable Asian countries such as Thailand, Ceylon and Malaya consume 46 lbs., 63 lbs. and 134 lbs., respectively. The scope for raising the consumption of cement in India is, therefore, colossal, considering the fact that millions of tons will be required for providing rural and urban housing, national highways, dams, bridges and a host of other things.

"Last year I referred to the necessity of developing an export market for the industry to augment the much needed foreign exchange to carry out our national development programmes. I am happy to inform you that the export of cement from the South Indian factories to Ceylon has now become a regular feature and your factory has been regularly exporting cement to Ceylon. During the financial year under reference, your factory has exported over 15,000 tons of cement to Ceylon, which has now been stepped over to 3,000 tons per month from the beginning of this financial year. I reiterate, once again, here what I have said at the last general body meeting that a foreign trade policy in respect of cement and other essential commodities should be framed and executed, not by reference to surpluses as may become occasionally available, but rather as part of a deliberate and steady policy to suit the needs and requirements of the importing countries. I hope that the Government will take up this question in all seriousness at the earliest opportunity.

Wage Board

"Shareholders are perhaps aware of the fact that the Government of India have constituted a Central Wage Board for Cement Industry. The Board is charged with the task of determining fair wages and recommending principles governing payment of bonus, etc. The deliberations of the Board in regard to its hearing the views of the labour and management are over. A heavy responsibility rests, therefore, upon them to make recommendations which would in no way disturb the economic equilibrium of the country, and which will help the fulfilment of the Plan target and be acceptable to both the labour and the producer, the investor and the consumer.

"I am happy, indeed, to be able to report once again that our relations with labour continue to be harmonious. I would like to congratulate our employees on their sense of realism, maturity and increased awareness of their responsibilities in our common and joint endeavour.

"Your Company has always been keen on providing facilities to the employees and in furtherance of this aim has embarked upon a housing scheme, which was recently inaugurated by the Hon'ble Minister for Industries and Labour of the Government of Madras.

"Before I conclude, I should, on your behalf and on my own behalf, like to express our thanks to all employees at the Company's offices, works, and quarries for their unremitting hard work and unstinted co-operation. The Company looks forward to their sustained, loyal and devoted services in the years to come."

N.B.—This does not purport to be a record of the proceedings of the annual general meeting.

Messrs. John Dalglisch of Glasgow has developed a new process which is claimed to improve productivity in the textile industry. The process relates to the use of a combined pin and clip, instead of the traditionally septic pin and clip. It is stated that up to 500 of the traditional pins and clips may be used in one chain to hold fabric taut during processing. They are required to operate at high speeds and temperatures. The novel design of the new combined device has to meet these conditions and is said to eliminate all screws, springs and material requiring lubrication.

40,000	7%	Cumulative tax-free Convertible Third Preference shares of Rs. 100/- each	Rs. 40 "
5,00,000		Equity shares of Rs. 10/- each	Rs. 50 "
1,00,000		"A" Equity shares of Rs. 10/- each	Rs. 10 "
			Rs. 200 lakhs.

ISSUED, SUBSCRIBED AND PAID-UP CAPITAL

10,000	5%	Cumulative Preference shares of Rs. 100/- each fully paid-up in cash	Rs. 10 lakhs.
30,000	6½%	Cumulative Second Preference shares of Rs. 100/- each fully paid-up in cash	Rs. 30 "
5,00,000		Equity shares of Rs. 10/- each fully paid-up in cash	Rs. 50 "
1,00,000		"A" Equity shares of Rs. 10/- each fully paid-up in cash	Rs. 10 "
			Rs. 100 lakhs.

The First Preference shares are repayable at a premium of Rs. 5/- per share at any time at the option of the Directors. The Second Preference shares are redeemable at par at any time after 30th September, 1965, but not later than 30th September, 1971.

ISSUE OF NEW SHARES

40,000	7%	Cumulative tax-free Third Preference shares of Rs. 100/- each redeemable within a period of 15 years from the date of allotment	Rs. 40 lakhs.
30,000	7%	Cumulative tax-free Convertible Third Preference shares of Rs. 100/- each convertible into Equity shares at par on the expiry of 7 years at the option of the shareholders and redeemable at par in case of non-conversion within 15 years from the date of allotment	Rs. 30 "
			Rs. 70 lakhs.

The holders of the said Preference shares shall be entitled to be paid out of the profits of the Company a fixed cumulative preferential dividend @ 7% per annum free of income-tax and to a preferential right of payment, on winding up, subject to payment to the holders of the First and Second Preference shares, of all arrears of dividend whether or not earned or declared down to the commencement of the winding up and also to be repaid the amount of capital paid-up and/or credited as paid-up on the said Preference shares held by them respectively, but shall not be entitled to any other rights, profits or assets of the Company.

OFFER FOR SALE

Out of the said issue of Third Preference shares 40,000 Third Preference shares of Rs. 100/- each and 5,000 Convertible Third Preference shares of Rs. 100/- each have been either taken or agreed to be taken by the existing shareholders, and by the Directors, Managing Agents and their friends. The balance 25,000 Convertible Third Preference shares are now offered at par to the public for subscription.

AMOUNT PAYABLE { With application Rs. 25/- per share.
On allotment Rs. 25/- do.

Balance Rs. 50/- per share will be payable in two instalments of Rs. 25/- each, when called up by the Directors. Due notice will be given for such calls in accordance with the provisions of the Companies Act, 1956.

STAR PAPER MILLS LIMITED—Cont'd.

HISTORY AND BUSINESS

The Company's paper mills are situated at Saharanpur, U.P. One Fourdrinier paper machine with the daily production capacity of 15/16 tons of paper from sabai grass was installed in October, 1938. The renovation of the paper machine and the addition of certain modern equipment in the pulp plant enabled the Company to step up the production from 15/16 tons to 21/22 tons a day in May 1955. The present annual production of about 6,500 tons consists mainly of writing and printing papers such as (1) White Printing, (2) Creamlaid, (3) Azulelaid, (4) Coloured Printing, (5) Covers, (6) Bonds, etc.

DEVELOPMENT AND EXPANSION

It is now proposed to increase the annual output of the mills to about 21,000 tons, by installation of two M.G. paper making machines, one having a daily production capacity of 30/25 tons thin substance paper, the other one of 30/35 tons paper of heavy substance. A licence No. L/21/13/54 dated L/24/1/8

1st December 1954, under the Industries (Development and Regulation) Act has been granted to the Company. It is proposed to manufacture on the new paper machines M.G. Kraft paper of genuine quality not hitherto manufactured in India. Besides M.G. Kraft paper, M.G. Sulphites, Pressings, Manila, Posters and other varieties of M.G. papers will also be manufactured.

RAW MATERIAL

At present, paper is manufactured from sabai grass which is obtained from the Western Circle forests of U.P. The manufacture of M.G. papers on the new plant will be made from pine wood which is an excellent raw material for the production of the high grade Kraft paper. The Company has been fortunate in obtaining sanction of a long-term lease of twisted pine, available in the Almora and Naini Tal forest divisions of U.P. It is estimated that the cost of twisted pine delivered at the mills will be about Rs. 120 a ton or say Rs. 2 a cu. ft. which is a comparable price for raw materials in the industry, if yield and quality of pulp made from it are taken into consideration.

POWER

The normal capacity of the existing steam and power plant is 50,000 lbs. of steam an hour obtained from two boilers at a pressure of 250 lbs. a sq. inch, and 2,000 Kw. power obtained from one 2,000 Kw. turbine. There is one stand-by boiler with a capacity of 25,000 lbs. of steam an hour at the above pressure. There is also a stand-by turbine of 1,200 Kw. capacity. The total requirement of power after expansion is expected to be about 5,500 Kw. The existing stand-by turbine of 1,200 Kw. will be modified to suit the increased

demand for power and steam. The U.P. Government having agreed to make available to the Company, during the current year 2,000 Kw. of power from their existing hydro-electric power station. They will also supply further power later on, when required by the Company.

COST OF EXPANSION SCHEME

The total investment of capital for the implementation of the expansion scheme is estimated at about Rs. 330 lakhs made up as follows:—

1. Plant and machinery including erection	Rs. 260 lakhs
2. Factory buildings and staff and labour quarters	Rs. 40 "
3. Working capital	Rs. 30 "
	Rs. 330 lakhs

The Industrial Finance Corporation of India, after carefully examining the scheme, sanctioned a loan of Rs. 1 crore to the Company. This loan will be available against existing as well as future assets. Deed of Mortgage has been executed in favour of the Corporation and the Company has so far received the sum of Rs. 30 lakhs from them.

DEFERRED PAYMENT FACILITIES FROM THE MACHINE SUPPLIERS

The total f.o.b. cost of the imported plant and machinery has been estimated at Rs. 185 lakhs out of which machinery worth about Rs. 20 lakhs is being imported from the U.S.A. on cash terms. Machinery for the remaining amount of Rs. 165 lakhs f.o.b. is being imported from the U.K. and the Continent under deferred payment terms. The Company has received necessary Government sanction for the foreign exchange for the import of the entire plant and machinery required for the expansion scheme. Orders for the entire plant and machinery and auxiliary equipments have been placed. One of the two machines has been shipped and it is anticipated that this will be installed and started by the end of 1959. The other machine is expected to be shipped by September, 1959, and installed by the middle of 1960. As it will take some more time for the delivery and erection of the Soda recovery plant, full anticipated production from the new plant is expected to be achieved by the end of 1960. By the end of 1960, a total amount of Rs. 60 lakhs will have to be paid to the machine suppliers in the U.K., Sweden and West Germany, which will leave a balance of about Rs. 105 lakhs payable later by the Company to the machine suppliers out of profits earned on the new plant. The total estimated cost of the expansion scheme assessed at Rs. 330 lakhs, will thus be

financed as under:—

Deferred payment facility from machine suppliers	Rs. 105 lakhs
Loan from Industrial Finance Corporation of India	Rs. 100 "
Company's finances out of previous issue of share capital	Rs. 55 "
New Issue of share capital	Rs. 70 "
	Rs. 330 lakhs

PROFITS AND DIVIDENDS

At present, the average profit per ton of paper is about Rs. 200 which means an annual profit of about Rs. 13 lakhs on a production of 6,500 tons. After full implementation of the scheme the average profit per ton of paper is estimated at Rs. 467. After allowing Managing Agents as well as Directors' commission, the annual profits on the basis of the said estimate are expected to be about Rs. 87 lakhs, which will be sufficient to declare a dividend of 10% on the Equity share capital of the Company as well as fixed dividends on the entire Preference share capital.

CAPACITY TO REPAY LOANS

As stated above, the net annual profits after expansion are estimated at about Rs. 87 lakhs, after making provision for depreciation. Taking annual gross profits, before allowing depreciation, at Rs. 100 lakhs, the tax liability for the first three years, after taking into account Development Rebate, is estimated at Rs. 54 lakhs, which leaves a balance of Rs. 246 lakhs. The amount of dividend payable on preference shares at the fixed rates of 5%, 6½% and 7% free of income-tax and on Equity shares calculated at 10% comes to Rs. 16,50,000 per year, which means a total sum of Rs. 49,50,000 for three years. After deducting this amount of dividend, the sum of Rs. 196.5 lakhs, remains with the Company as surplus for repaying the loans. This amount will be sufficient to pay off the liability of Rs. 105 lakhs to the foreign machine suppliers. From out of the future profits it will be quite convenient for the Company to make payment of yearly instalments with interest against the loan taken from the I.F.C. which is repayable within 15 years from March 1962. Even if there is a fall in selling prices to the extent of Rs. 100 per ton due to competition, profits earned by the Company after expansion will be sufficient to meet the Company's liabilities to the machine suppliers and to the I.F.C.

LAND AND BUILDINGS

The Company has got sufficient land for the erection of the new plant as well as for the construction of staff and labour quarters. The construction of buildings for the new plant has started. The Preparatory, Machine and Finishing Houses will be completed shortly when installation of the new plant will be started.

AUDITORS' REPORT

THE DIRECTORS,
STAR PAPER MILLS LIMITED, 27, BRABOURNE ROAD, CALCUTTA-1.
DEAR SIR,

We have examined the books of Accounts of the Star Paper Mills Limited for 5½ years ended 31st March 1959, in which for the half-year ended 31st March 1959, Statement of Accounts of Mills at Saharanpur duly certified by the Mill Manager are included which have been audited by us and report that the profits of the Company are as set out below. The Profits have been arrived at after charging all the expenses of Manufacture, working and Management and after making such adjustments as are in our opinion appropriate.

	Year Ended 30th Sept., 1954	Year Ended 30th Sept., 1955	Year Ended 30th Sept., 1956	Year Ended 30th Sept., 1957	Year Ended 30th Sept., 1958	Six Months to 31st March, 1959

* This Dividend has been declared on increased Capital.

1B, OLD POST OFFICE STREET,
CALCUTTA, the 8th day of June, 1959.

Yours faithfully,
LODHA & CO.,
Chartered Accountants.

MAIN OBJECTS

The main objects of the Company include the manufacture and sale of all kinds and classes of paper, board and pulp including writing paper, printing paper, wrapping paper, tissue paper, anti-lake paper, bank or bond paper, azulelaid, cream-laid, creamwove, drawing paper, kraft paper, manilla paper and other varieties of paper.

MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present offer on which the Directors will proceed to allotment is Rs. 10,00,000.

BROKERAGE

Brokerage will be paid to the brokers and banks at the rate of Re. 1 on each Preference share

of Rs. 100 each on allotments made in respect of applications bearing their stamps. An additional brokerage at the rate of Re. 1 on each Preference share will be paid to the Managing Brokers.

INSPECTION

Originals and/or copies of the Memorandum and Articles of Association of the Company, Balance-sheet and Profit and Loss Account and the above-mentioned Auditors' Report, Consent Order of the Controller of Capital Issues, licences issued by the Government of India permitting expansion of manufacturing capacity, contracts and agreements can be inspected at any time during the usual office hours at the Registered Office of the Company for a period of 14 days from the date of this announcement or until the subscription list closes, whichever is earlier.

APPLICATION FOR SHARES

Applications for the said Preference shares should be made on the respective forms accompanying the Prospectus and delivered before the closing of the subscription list. The Application form together with the remittance for the full amount payable on application should be sent to the Registered Office of the Company at Calcutta or to the branches of the Company's Bankers.

Copies of the Prospectus and Application forms will be available from the Company's Bankers, Managing Brokers and the Brokers to the issue and also from the Company's Registered Office.

Dated at Calcutta, 21st day of August 1959.

MYSORE PAPER MILLS LIMITED, BANGALORE

VIGOROUS STEPS TAKEN TO BRING DOWN COSTS AND RAISE PRODUCTIVITY

MR. M. D. SHIVANANJAPPA, CHAIRMAN, STRIKES A NOTE OF CONFIDENCE ON OUTLOOK

THE Twenty-fourth Ordinary General Meeting of the Mysore Paper Mills Limited was held at Bangalore on Friday, 28th August 1959. Mr. M. D. Shivananjappa, I.A.S., Chairman and Managing Director, presided. In his speech to the shareholders on this occasion, Mr. Shivananjappa briefly recounted the main difficulties confronting the Company in securing certain raw materials, chemicals and spares and outlined the measures taken to overcome them and to bring down the cost of production through improvements to plant and machinery. He disclosed that the Company had sought the Government's permission to double its productive capacity from 8,000 to 16,000 tons and that its application was receiving the active and sympathetic consideration of the Government.

The following is the full text of Mr. Shivananjappa's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the twenty-fourth ordinary general meeting of the shareholders of the Company and to place before you the report of the Directors and the audited balance-sheet for the year ended 31st March 1959. These have been circulated already and, with your permission, I shall take them as read and would proceed to review the salient features of the year's operations.

"I assumed charge of the office of the Chairman and Managing Director in October last, in succession to Sri T. Shamanna, I.A.S., Director of Industries and Commerce. Your Directors have placed on record their high appreciation of the valuable services rendered by him to the Company during the period he held office as Chairman and Managing Director.

"I am happy to be able to report that, during the year under review, 8,000 tons of paper have been produced in your mills, registering an increase by 10 per cent. over the previous year's level and reaching the near rated capacity. The chief factor that contributed to the achievement of this result is the policy steadily pursued to increase the production of pulps in our mills from indigenous materials and that too mainly the bamboo-pulp which has touched 6,400 tons, surpassing all previous records. Still our paper-making potential exceeds our pulp-making capacity and advantage has been taken of the favourable market conditions obtaining in the wood-pulp exporting countries to import some quantities of wood-pulp to supplement our own pulp production to keep the two paper machines running continuously and concurrently to obtain increased production.

Supply Position of Materials

"Mention has been made in your Directors' report that considerable difficulties were experienced during the year under review for securing steady, sustained and timely supplies of certain raw materials, chemicals and spares, and I do not propose to give an exhaustive review of the difficulties faced and difficulties continuing, but I do wish to inform you a few of them which sometimes tend to develop critical situations that threaten operations in the factory.

"The supply position of bamboo was far from being satisfactory during many months in the year. Action has been taken to secure regular and even flow of this essential raw material and it would be of some relief to hear that arrangements to ensure regular and adequate supplies have been recently made, thanks to the co-operation of the Mysore State Forest Department and the Mysore Iron and Steel Works, the former having agreed to make available the requisite quantities and the latter to transport appreciable quantities to mill site.

"Another disturbing factor was the difficulty experienced in the matter of procurement of waste paper at economic prices and it was with very great difficulty that a minimum quantity of this material was procured and I may add that new sources of supply are being tapped. Likewise, the supplies of chemicals,

particularly of Glauber's salt and caustic soda, rosin, etc., have been irregular and inadequate during some months in the year. Previously, Glauber's salt used to be procured from Rajasthan and the sources there having been dried up and the indigenous production being inadequate, we have to depend on imports at higher costs. Again, in the case of caustic soda also, we have to depend on imports for part of our requirements. Thanks to the State Trading Corporation, New Delhi, we have been able to secure stocks without much delay. However, I should state that all these factors have added to our production costs to a considerable extent.

Improvements

"Referring to the question of higher working expenses this year, I deem it appropriate to say a word or two by way of elucidation regarding the work of renovation, replacement and improvements undertaken during the year under review. Many units of production like beaters, electrolyzers, bamboo pulp and first paper machine had been working continuously for the past two decades and many of the parts had been worn out, and required urgent attention. I attach very great importance to the maintenance side of plant and machinery and am of the view that they should be kept in a high state of efficiency, if we have to put the various equipments installed to effective and efficient use to procure maximum benefits of production and economy. With this end in view, necessary licence to import the spares and machine parts had been procured, orders placed with the foreign suppliers and equipments acquired and I am glad to inform you that major works relating to renovation, replacement and other essential repairs were undertaken, carried out and completed during the year under review and some portions of the work still remaining are being completed during the current year. With these improvements and replacements, it is expected to carry on the operations in the factory smoothly, as several of the bottlenecks have been eased or eliminated, which would secure better results by way of increased production and reduced costs.

Fair Price Question

"Despite the mounting manufacturing costs necessitated by the upward trend of prices of raw materials, chemicals and spares and on account of heavy repairs described just now and due to substantial additions to the wages' and salaries' bill as a result of the Industrial Peace Agreement concluded with our Labour Association in May 1958 and payment of a month's salary and wages to our staff and labour as a mark of recognition of the successful implementation of the expansion scheme, we have, keeping in view the interests of the consumers, continued to maintain our price structure unaltered as in the previous year. In this connection, I have to inform you that the Government of India in September 1958 have referred the question of paper prices to the Indian Tariff Commission for investigation and fixation of prices and the Tariff Commission have concluded their labours and is understood to have submitted their report to the Government of India. At this stage, I could only express the hope that the prices to be fixed would be fair and reasonable both to the producers and the consumers, allowing a fair return on capital. In spite of the difficulties referred to above, and the execution of the major works, it is a matter for gratification to your Directors—and I have no doubt it would be to you—to hear that the production during the first few months of the current year has been quite promising and I can hold out hopes to maintain the progress, provided the arrangements made for procuring the essential materials within the country work satisfactorily and licences would be forthcoming to import the necessary materials in requisite quantities from abroad without undue delay.

"I shall now turn to a brief review of the main features of the balance-sheet. As I have earlier stated, there has been increased produc-

tion this year and this has helped to reduce costs and to secure favourable results. But the financial results would have been better but for further upward trend of prices of raw materials and chemicals consumed and other items of expenditure to which I have already made a reference.

Heavy Demand

"The turnover this year, amounting to Rs. 125,35,169, has exceeded that of last year by Rs. 16,81,942. Demand for our products was heavy and was far in excess of our productive capacity. The tonnage that we are called upon to supply to the Central Government and State Government further reduces the tonnage available for the civilian market. Steps have been taken to arrange for distribution of our products on equitable basis and in conformity with the instructions of the Paper Directorate of the Government of India. Besides distribution through regular trade channels as per normal practices, we have, as in the previous years, made arrangements for direct supplies from the mills to essential users of paper like text book publishers, schools, and colleges and co-operative societies and particularly to those affiliated to educational institutions. In spite of all this, I have a feeling that these arrangements have not given total satisfaction to all parties concerned. In my opinion, the solution to the problem is to be found in expanding the activities of the manufacturing units and I shall come to this aspect later.

"Coming back to the consideration of the balance-sheet, we have provided for depreciation on fixed assets amounting to Rs. 8,94,326 calculated on the basis of rates allowed for normal depreciation and extra shift allowances as per I.T. Rules and have paid interest amounting to Rs. 1,62,084 on borrowings. A sum of Rs. 80,000 has been provided this year in addition to a sum of Rs. 3,30,000 provided to meet the liability towards payment of retirement gratuity to employees in terms of the Industrial Award. A further sum of Rs. 24,142 has been provided towards development rebate in accordance with the Finance Act of 1958. Though provision for income-tax as in the previous year is not considered necessary, a sum of Rs. 70,000 towards future tax liability has been provided, besides providing Rs. 30,000 towards wealth tax. After making all these provisions, the net profit for the year stands at Rs. 6,29,158.52 nP, as against Rs. 5,29,437.85 nP in the previous year.

I.F.C. Loan Repayments

"Before I proceed to the question of disposal of surplus, I wish to state that, as on today, the Industrial Finance Corporation of India loan stands reduced to Rs. 16 lakhs, payable in four instalments of Rs. 4 lakhs, each falling due in July 1967, 1968, 1969 and 1970. In terms of the Mortgage Deed dated 31st March 1953 executed in favour of the Industrial Finance Corporation of India, the loan of Rs. 50 lakhs was repayable in 16 instalments with the first instalment commencing on 1st July 1955. It had been reported to you at the last meeting that the fifth, sixth, seventh and eighth instalments falling due on 1st July 1959, 1960, 1961 and 1962 amounting to Rs. 12,00,000 had been repaid, reducing the loan to Rs. 30,00,000. Agreeably with the policy of repayment, we have since paid the ninth, tenth, eleventh and twelfth instalments falling due on 1st July 1963, 1964, 1965 and 1966 amounting to Rs. 14 lakhs, thus reducing the loan to Rs. 16 lakhs payable in four equal instalments of Rs. 4 lakhs each, and these payments ahead of due dates would go to reduce interest charges appreciably.

"In regard to disposal of surplus of Rs. 6,56,294.03 nP, inclusive of carryover, your Directors have decided to set apart Rs. 3,00,000 towards the Industrial Finance Corporation of India loan redemption fund and to recommend declaration of 10 per cent. dividend plus 2½ per cent. bonus absorbing Rs. 3,12,500 the balance being carried forward. After a careful consideration of all the aspects of the question whether the present rate of 10 per cent. dividend should be maintained or a slightly higher rate should be recommended, your Board of Directors, in deference to the wishes of the shareholders expressed at previous meetings, have decided to recommend declaration of 10 per cent. dividend plus 2½ per cent. bonus, in all 12½ per cent., and, in arriving at this decision,

RATE OF EXPANSION OF GENERAL INSURANCE SLOWS DOWN FURTHER REPORT OF THE CONTROLLER OF INSURANCE

THE Indian Insurance Yearbook, containing the annual report of the Controller of Insurance, Government of India, is by far the most authoritative document on general insurance in India. In addition to giving a consolidated picture of the income and outgo during the year and the financial position of the companies as at the close of the period, it also provides an insight into the quality of business transacted as revealed in the claims, expense and lapse ratios. Although the report refers to a period which is generally one year behind the financial year of insurance companies for which they publish their statement of accounts, the range and comprehensiveness of the data presented more than compensate their belated publication. Together with the Controller's comment on the working of insurers in the light of the statutory requirements, the report constitutes an official balance-sheet of general insurance in the country.

At the end of December 1957, according to the Indian Insurance Year Book 1958, published by the Controller of Insurance, there were 184 insurers registered under the Insurance Act 1938 for transacting one or more classes of general insurance business of which 91 were Indian and 93 non-Indian. Of these, 49 Indian and 38 non-Indian insurers were registered for all the three classes of general insurance business, 13 Indian and 20 non-Indian insurers were registered for two of the three classes and the rest, namely, 29 Indian and 35 non-Indian, were registered for only one class.

Indian insurers registered in Bombay State, numbering 52, accounted for 59 per cent. of the total premium income. Among foreign insurers, British companies, numbering 66, accounted for the bulk of the premium income of non-Indian insurers, their share being as high as 71 per cent. Net premium income in India of the seven non-tariff Indian insurers transacting miscellaneous insurance business was about 8 per cent. of the premium income in India of all Indian (tariff and non-tariff) insurers.

Commenting on the growth of general insurance, the Controller observes that the rate of increase of general insurance business in India was further reduced in 1957. Thus, the index number of general insurance business in India rose by 0.7 in 1957, as against 4.2 in 1956 and 23.1 in 1955. The gross premium written direct in India by both Indian and non-Indian insurers aggregated Rs. 27.79 crores, of which Indian insurers accounted for Rs. 17.93 crores, made up of Rs. 7.17 crores from fire business, Rs. 4.39 crores from marine business and Rs. 6.37 crores from miscellaneous business and non-Indian insurers for Rs. 9.86 crores, comprising Rs. 4.70 crores, Rs. 2.65 crores and Rs. 2.51 crores from fire, marine and miscellaneous insurances, respectively. Gross premium from business written direct outside India by Indian insurers aggregated Rs. 6.37 crores, comprising Rs. 2.06 crores from fire business, Rs. 1.97 crore from marine and Rs. 2.34 crores from miscellaneous insurance.

Gross Premium

The gross premium written direct in India by Indian insurers during 1957 was higher than that during 1956 in marine and miscellaneous insurance business, while it was lower in fire insurance business. The non-Indian insurers wrote a larger gross premium in India in fire and miscellaneous business during 1957, as compared with 1956, but their gross premium income from marine business was less in 1957 than in 1956. The gross premium written direct outside India by Indian insurers during 1957 was less than during 1956 in fire and marine insurance business but it was higher in the miscellaneous business.

The net premium income from business both in India and outside India of Indian insurers was higher in 1957 than in 1956 in all classes of insurers. The net premium income in India of non-Indian insurers was also higher in 1957 than in 1956 in fire and miscellaneous insurance business but was less for marine insurance business. The combined net premium income in India during the year of Indian insurers amounted to Rs. 10.93 crores made up of Rs. 3.76 crores from fire insurance, Rs. 2.09 crores from marine insurance, and Rs. 5.08 crores from miscellaneous insurance. Net premium income of non-Indian insurers aggregated Rs. 7.16 crores, of which Rs. 3.11 crores were from fire insurance, Rs. 1.91 crore from marine insurance and Rs. 2.14 crores from miscellaneous insurance. Net premium outside

India of Indian insurers, including reinsurance, amounted to Rs. 11.59 crores made up of Rs. 6.93 crores, Rs. 2.05 crores and Rs. 2.61 crores from fire, marine and miscellaneous insurance business, respectively.

The ratios of the net premium income to the gross premium written direct for fire, marine and miscellaneous insurance business in India ranged between 44 per cent. to 53 per cent., 43 per cent. to 51 per cent. and 75 per cent. to 81 per cent., respectively, for Indian insurers and between 59 per cent. to 66 per cent., 69 per cent. to 74 per cent. and 85 per cent. to 95 per cent. respectively, for non-Indian insurers during the seven years from 1951 to 1957. The corresponding ratios in respect of business written outside India by Indian insurers ranged between 263 per cent. and 336 per cent. for fire, 76 per cent. and 124 per cent. for marine and 100 per cent. and 115 per cent. for miscellaneous insurance business. It will be seen from the foregoing data that the percentage of net premium income to gross premium is lower in the case of Indian insurers than that of foreign insurers.

The share of Indian insurers in the total gross as well as net premium income in India, however, rose further during 1957 in all classes of general insurance business except for gross direct fire insurance business. In 1957, Indian insurers wrote 60 per cent., 62 per cent., and 72 per cent. of the total gross premium written direct in India in fire, marine and miscellaneous insurance business, respectively, while their share in the total net premium income in India was 55 per cent., 52 per cent., and 70 per cent. respectively. Of the total gross premium written direct by Indian insurers in the classes of fire, marine and miscellaneous insurance business, 78 per cent., 69 per cent. and 73 per cent. respectively was written in India and of their total net premium income, 35 per cent., 51 per cent. and 66 per cent. respectively was earned in India.

Income and Outgo

An analysis of the consolidated income and outgo of Indian insurers indicates that, of the total income of Rs. 23.13 crores, premium income from business written outside India amounted to Rs. 11.59 crores and premium income from business written inside India aggregated Rs. 10.93 crores. Interest, dividends and rents amounted to Rs. 0.33 crore and the balance of Rs. 0.28 crore came from miscellaneous sources. The total outgo of all Indian insurers amounted to Rs. 20.47 crores, comprising claims, commission expenses and miscellaneous outgo of Rs. 10.69 crores, Rs. 3.31 crores, Rs. 6.16 crores and Rs. 0.31 crore, respectively. Of the balance of Rs. 2.66 crores, Rs. 1.63 crore was absorbed by the increase in reserves for unexpired risks and additional reserves. The net profit transferred to the profit and loss account aggregated Rs. 1.03 crore. This, together with Rs. 0.09 crore brought in from the previous year and Rs. 0.75 crore and Rs. 0.17 crore received by way of interest and miscellaneous income, amounted in all to Rs. 2.04 crores. Expenses of management absorbed Rs. 0.13 crore, taxes paid and provided for Rs. 0.77 crore, transfers to particular funds or accounts Rs. 0.27 crore, dividends for the year 1957 paid or provided for Rs. 0.15 crore (dividend paid in the previous year Rs. 0.56 crore), additional dividend paid for the year 1955 Rs. 0.91 crore and miscellaneous expenditure Rs. 0.37 crore. The balance carried forward amounted to Rs. 0.34 crore.

Commenting on the underwriting experience in respect of gross direct business in India in all classes, the Controller of Insurance observes that the claims experience of non-Indian insurers during the year was better than that of Indian insurers. The following table illustrates the position:

Ratio to net premium income of	(Percentage)					
	Fire		Marine		Miscellaneous	
	Indian	Non-Indian	Indian	Non-Indian	Indian	Non-Indian
Net claims	38.8	16.9	62.2	46.6	51.1	44.0
Commission and expenses	46.7	64.8	28.7	40.9	42.9	46.7
Increase in reserves*	4.3	1.8	0.8	-1.6	7.1	2.7
Miscellaneous outgo	1.2	6.9	2.3	4.1	1.1	2.7
Balance	9.0	29.3	-0.5	10.0	-2.2	4.5
Total	100.0	100.0	100.0	100.0	100.0	100.0

* Increase in reserves is obtained by taking 40 per cent. in the case of fire or miscellaneous and 50 per cent. in the case of marine insurance business of the increase in net premium income during 1957 over that of the preceding year.

Non-Indian insurers had a better claims experience throughout the six years from 1952 to 1957, except during 1957 in respect of miscellaneous insurance business. On the other hand, the proportions of the gross premium income spent by way of commission throughout the period and by way of expenses and miscellaneous outgo from 1954 onwards were higher for non-Indian insurers than for Indian insurers.

Reviewing the experience of insurers in the matter of expenses of management, the Controller remarks that, during the year 1957, a larger number of groups (of parent and subsidiary companies taken together) of both Indian and non-Indian insurers contravened the provisions of Section 40C of the Insurance Act than during 1956. Nearly one-third of the groups of insurers who contravened the said provisions during 1956 were administered a warning in terms of Section 64M(2) of the Act in respect of the said contravention. The Controller also states that, of a total of 144 groups, both Indian and non-Indian who transacted business during 1957, 22 groups of insurers contravened Section 40C of the Act four or more times during the years from 1952 to 1957 and that 16 of these groups were warned one or more times in terms of Section 64M (2) of the Act.

The groups of insurers who spent less than the basic limits in terms of Rule 17B of the Insurance Rules, 1939, wrote a decreasing proportion of the total gross premium written direct in India. Considering the aggregate experience of all insurers for all classes of business together for the period 1954 to 1957, the Controller observes that, though the actual expenses were less than the basic limits, the margin between the two has been narrowed down.

As compared with 1956, a larger share of the gross premium written direct in India went to insurers spending more than the basic limits for fire and miscellaneous insurance business, while the position was the opposite in marine insurance business. In respect of the groups of insurers spending more than the basic limits, the percentage of such excess to their gross premium income steadily decreased from 4.9 per cent. in 1955 to 3.0 per cent. in 1957 for fire and miscellaneous insurance business, but increased from 4.3 per cent. in 1955 to 5.8 per cent. in 1957 for marine insurance business.

Assets

An analysis of the assets held by Indian insurers showed that, at the end of 1957, total assets aggregated Rs. 49.02 crores, as compared with Rs. 43.00 crores at the end of 1956 and Rs. 41.65 crores at the end of 1955. Of this, 15.9 per cent. were invested in securities of Government and public authorities, 4.2 per cent. in foreign Government securities, 22.6 per cent. in shares and debentures of Indian companies, 1.7 per cent. in land and house property, 28.0 per cent. in deposits, cash and stamps 2.7 per cent. in loans, 7.3 per cent. in miscellaneous assets and the balance of 17.6 per cent. in agents' balances, etc. The assets in India of the non-Indian insurers as on 31st December 1957 were of the order of Rs. 11.91 crores, of which 23.0 per cent. were in securities of Government and public authorities, 24.6 per cent. in shares and debentures of Indian companies, 3.3 per cent. in land and house property, 27.8 per cent. in deposits, cash and stamps, 2.0 per cent. in loans, 7.4 per cent. in miscellaneous assets and 11.9 per cent. in agents' balances. It may be noted here that, as compared with this, the non-life assets of British insurers in the U.K. at the end of 1956, were distributed as follows: 4.3 per cent. in mortgages, 16.7 per cent. in British Government securities, 7.6 per cent. in Commonwealth securities, 22.3 per cent. in foreign Government securities, 22.9 per cent. in debentures, preference shares, etc., 18.6 per cent. in ordinary stocks and shares, 5.2 per cent. in properties and 4.4 per cent. in other securities.

Growth of General Insurance

	(1951=100)					
	1958	1953	1954	1955	1956	1957
Index number of general insurance business written direct in India (pro-duction)	112.3	194.7	112.2	185.3	159.5	140.2
Gross premium written direct in India (Rs. in crores)	108.6	105.6	112.9	122.1	132.6	137.3
Net premium (Rs. in crores)	21.94	20.82	21.35	23.10	26.00	27.79
Net premium (Rs. in crores)	18.81	18.12	18.00	14.41	16.04	18.00

DEVELOPMENT OF FERTILISERS GREATER IMPORTANCE TO BE GIVEN IN THIRD PLAN

THE inadequate attention given to the replenishment of soil in India is one of the important causes of low productivity in agriculture. The average consumption of fertilisers per acre of cultivated land in this country is no more than 1.05 lb., as against 193 lbs. in Japan, 175 lbs. in the Netherlands, 125 lbs. in Norway, 121 lbs. in W. Germany, 107.38 lbs. in Denmark, 46 lbs. in the U.K. and 32 lbs. in Italy. India's backwardness in the application of chemical manures is due not only to its non-availability in sufficient quantities but also to the poor supply of irrigation. That there is good scope for boosting agricultural production by the application of chemical fertilisers is borne out by a recent official estimate that one ton of ammonium sulphate, at the rate of 80 to 100 lbs. per acre, is capable of raising an additional production of two tons of foodgrains, that is, an increase of 27 to 30 per cent., depending upon the type of foodgrain. There is, however, a growing recognition of the importance of fertilisers, as is evident from the widespread demand for fertiliser factories in every State and the readiness of the authorities to fall in line with it. All available indications suggest that the development of fertilisers is bound to receive the pride of place in the programmes for agricultural development in the third Plan. It was only a fortnight ago that Mr. Manubhai Shah, Minister for Industry, admitted, while inaugurating the annual meeting of the Andhra Chamber of Commerce, Madras, that fertiliser was "one of the highest priority items in the national economy today." He hoped that every State in India would have one major fertiliser factory established by the end of the third Plan. This emphasis on fertilisers is quite welcome, since consumption of fertilisers is rapidly going up in the country during recent years, resulting in widespread shortages. It will go up even faster when irrigation facilities now being made available are fully utilised. In view of the foreign exchange difficulties, it is unwise to rely on imports. The only alternative left is to increase indigenous production.

Third Plan Target

This point was effectively stressed by Mr. K. R. Damle, Secretary of the Union Food and Agriculture Ministry, in his speech to the fourth annual general meeting of the Fertiliser Association of India, at New Delhi on 29th August 1959. He referred to the tentative target of 100 million tons for foodgrains (both cereals and pulses) and revealed that, of the increase of 19.5 million tons envisaged over the basic figure of 80.5 million tons in 1960-61, about 6.2 million tons are expected to be raised by the use of fertilisers. The supply of organic manures is extremely insufficient even for maintaining the poor fertility of the soil. According to figures quoted by Mr. Damle, approximately 982 million tons of bulky organic manures will be needed by 1965-66 only to maintain the present low fertility level of the soils. As against this, the availabilities of such manures in that year is expected to be no more than 309 million tons. This leaves a gap of 673 million tons (in terms of bulky manure) to maintain the present fertility of the Indian soil. There is thus enormous scope for the production of both organic and chemical manures.

At the aforesaid meeting, Mr. Damle estimated the demand for nitrogenous fertilisers to go up to 1,250,000 tons of nitrogen by the final year of the third Five-year Plan. Besides, India would need 500,000 tons of phosphatic fertilisers and 200,000 tons of K₂O (potassic fertilisers). He pointed out that steps had already been taken to license capacity to the tune of 470,000 tons of nitrogen and that the establishment of some of these units had already reached a fairly advanced stage. This was a part of the Government's plan for the establishment of an additional capacity of 750,000 tons of nitrogen by the middle of the third Plan. For the second half of the third Plan period, the Government proposed to license and set up a further capacity of 500,000 tons, thus seeking to fulfil the target of 1,250,000 tons, which compares with the current output of about 79,000 tons of nitrogen.

The prospects for the development of phosphatic fertilisers, Mr. Damle averred, was not so bright as in the case of nitrogenous fertilisers, because it was dependent on the availability of the imported raw material, namely, rock

An idea of the development of the industry envisaged at present can be had from the following table, which gives the proposed scheme for expansion of the existing factories and also for the establishment of new units.

Name	Nitrogen production per annum (tons)	Type of product	Expected time of starting production
Expansion programme			
1. Sindri	47,000	Urea and ammonium sulphate-nitrate	1959
2. F.A.C.T., Alwaye	9,000	Ammonium sulphate and ammonium phosphate	1960
3. Iron and Steel Works, New factories	6,000	Ammonium sulphate	..
1. Mangal	70,000	Calcium ammonium nitrate	1961
2. Kourkela	80,000	Do. do.	1962
3. Neyveli	70,000	Urea	1962
4. Sahu Chemicals	12,000	Ammonium chloride	1959
Total	294,000		

Side by side with the increase in the production of nitrogenous fertilisers, imports also have been going up in response to higher domestic demand. The value of imports (excluding those on Government account) of all the nitrogenous fertilisers and allied materials, including ammonium sulphate, nitrate of lime and urea rose to Rs. 7.61 crores in 1958, from no more than Rs. 3.5 crores in 1957 and Rs. 2.8 crores in 1956. Many are, perhaps, not aware that India also exports some fertilisers. There was, however, a fall in these in 1958. Exports of nitrogenous fertilisers, including guano, horn-meal and other natural fertilisers, suffered a sharp setback from Rs. 2.16 crores in 1956 to Rs. 32 lakhs in 1957 and Rs. 17 lakhs in 1958. This decline is apparently due to the increase in domestic consumption.

Among phosphatic fertilisers, the production of superphosphate has gone up, from 46,650 tons (7,464 tons nutrient P₂O₅) in 1952 to 167,404 tons (26,784 tons nutrient) in 1958. The existing installed capacity for these fertilisers is estimated at 334,300 tons. This indicates that as much as 50 per cent. of the capacity remains unutilised. Imports of phosphatics were of the order of Rs. 3.14 crores in 1958, as compared with Rs. 3.02 crores and Rs. 2.11 crores in 1957 and 1956, respectively. India depends on imports for practically all its requirements of potassic fertilisers. The imports of muriate and sulphate of potash amounted to Rs. 82 lakhs last year, as against Rs. 88.15 lakhs in 1957 and Rs. 58.62 lakhs in 1956. It is, however, a pity that concerted efforts are yet to be made to produce indigenously the phosphatic fertilisers. The development and popularisation of non-nitrogenous fertilisers are yet to make headway in this country. Experts are of the view that a balanced development of all the three kinds of chemical manures (nitrogenous, phosphatic and potassic) is essential for enriching the fertility of Indian soil. Alluding to this aspect of the fertiliser problem, Mr. Smith, Chairman of the Association, observed that the targets for phosphate and potash were on the low side and that steps should be taken to ensure a closer approximation to the world ratio of 1 : 1 : 1 in India's plan for the establishment of fertiliser factories.

INDIAN BICYCLES FOR BURMA

Under the recent bilateral trade agreement between Burma and India, it is expected that, by December 1959, Indian bicycles to the value of Rs. 8 lakhs will be exported to Burma. Mr. S. Sen, Director of Sen-Raleigh Industries of India Ltd., who has just returned from a tour of Burma, told Pressmen in Calcutta that, in view of Burma's continuing sterling shortage, there were bright prospects of increasing the quantum of Indian bicycle exports from year to year under the Indo-Burma Trade Agreement which will operate up to the end of 1963. He estimated that Burma's yearly requirement of bicycles was 50,000.

Exports of Indian bicycles up to date to Burma and elsewhere have been negligible. For instance, barely half a dozen Indian bicycles have been exported to Burma during the last two and a half years. The bicycle market in Burma is highly selective and has traditionally favoured certain well-known U.K. models. It is stated that about 80 per cent. of the total value of Indian bicycle exports to Burma up to December 1959 will be accounted for by two U.K. models, which have always been popular in Burma, and which are now being made in India under licence from the U.K. manufacturer. In Mr. Sen's opinion, the established popularity of these bicycle models in Burma will be of long-term advantage to India.

These models—Raleigh and Humber—fetch the highest price in the Burmese bicycle market and are the only Indian bicycles which are being quoted to Burma at a price equal to that of similar machines imported from the U.K. This implies that India will earn more foreign exchange with each such bicycle exported. Mr. Sen added that, of the approximate export value of Rs. 150 per bicycle manufactured by his firm, less than Rs. 1.50 represented the value of imported components; new material imports accounted for a further Rs. 40. Thus, India's net foreign exchange earnings from each such bicycle exported would be above Rs. 100.

Name of the firm	Installed capacity in tons	
	Material	Nutrient (N)
1. The Baran Coal Co. Ltd., Loyalabad	1,155	236.8
2. The Burmah Coal Co. Ltd., Bauxford	1,250	236.8
3. The Indian Iron and Steel Company, Ltd., Burnpur	9,240	1,894.2
4. The Indian Iron and Steel Co. Ltd., Kulti	1,650	338.2
5. Sindri Fertilisers and Chemical Private Ltd.	350,000	71,750.0
6. Tata Iron and Steel Co. Ltd., Jamshedpur	16,500	3,352.5
7. Fertilisers and Chemicals Travancore Ltd., Alwaye	44,500	9,122.5
8. The Mysore Chemicals and Fertilisers Ltd., Belagola	6,500	1,332.5
Total	480,795	88,812.9

'BEHAR' the dependable name in FIRECLAY & SILICA Refractories

For over 25 years "BEHAR" REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cane Mills and other industries in the country.

Cable: "BEHARCO"

THE BEHAR FIREBRICKS & POTTERIES LTD.
22, STRAND ROAD, CALCUTTA

PROFIT OF HINDUSTAN MOTORS UP BY MORE THAN 50 PER CENT.

BEDFORD TRUCKS TO BE MANUFACTURED

THE sustained rise in the market value of the ordinary shares of the Hindustan Motors Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) from Rs. 10.52 to a peak of Rs. 12.60—they are now placed at Rs. 11.84—following the declaration of a maiden dividend of 50 nP per share of Rs. 10 for the year ended 31st March 1959, would appear to be justified by the excellent results of the Company for the year under review and the Directors' indications of the Company's future programme. Though the turnover was sizably lower, due to lower output of cars and trucks consequent on the inadequate and irregular supply of imported components, the large savings in the cost of raw materials, stores and spares consumed has resulted in a sharp rise in profit. The gross profit has jumped up from Rs. 83.54 lakhs to Rs. 126.87 lakhs, an increase of Rs. 43.33 lakhs or nearly 52 per cent. This is on top of a rise of Rs. 36.92 lakhs (that is, from Rs. 46.62 lakhs to Rs. 83.54 lakhs) recorded in the previous year.

The net profit, which had been marked down from Rs. 16.62 lakhs to Rs. 12.97 lakhs in 1957-58, has advanced to Rs. 50.85 lakhs in the year under review. This is after the provisions for taxation and depreciation. After setting aside a sum of Rs. 2.13 lakhs for managing agents' remuneration—this is the first time, after a lapse of many years, that the managing agents have drawn any remuneration—the Directors have raised the provision for depreciation from Rs. 63.60 lakhs to Rs. 69.63 lakhs. They, however, point out that, while all normal depreciation has been provided, initial depreciation and development rebate are still in arrears to the extent of about Rs. 97 lakhs. In view of these arrears, there is no liability for taxation, excepting wealth tax for which a sum of Rs. 4.25 lakhs has been provided out of the profit for the year under review. A sum of Rs. 8.10 lakhs has been transferred to the development rebate reserve and of Rs. 7.87 lakhs to write off discarded machinery and equipment. The 6 per cent. tax-free preference dividend absorbs Rs. 14.28 lakhs and the ordinary dividend at 5 per cent. Rs. 24.81 lakhs, leaving to be carried forward Rs. 5.19 lakhs, as against Rs. 9.39 lakhs, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds	8,69.08	10,45.68	10,02.82	7,72.89
Other income	20.62	6.98	7.25	10.27
Closing stocks	92.90	78.32	1,08.16	1,04.24
Raw materials, stores and spares consumed	6,08.69	7,02.15	8,60.08	6,50.91
Other expenses	1,70.72	1,75.11	1,67.09	1,18.58
Gross profit	1,26.87	83.54	46.62	47.32
Managing Agents' remuneration	2.13	..	..	..
Provision for—				
Depreciation	69.63	63.60	30.00	37.36
Taxation	4.25	6.97	..	..
Net profit	50.85	12.97	16.62	9.96
To reserves	8.10	1.41	..	9.00
Discarded machinery written off	7.87	..	6.99	..
Preference share issue expenses	..	..	..	..
Adjustment of income-tax for 1950-51 and 1951-52	..	..	1.40	..
Dividend—				
Preference	14.28	10.10	8.75	..
Ordinary	24.81	..	7.93	6.16
Carry forward	5.19	9.39	7.93	6.16

As is evident from the table above, the sales have dwindled by Rs. 1.76 crore. This is partially made good by the rise of Rs. 13.54 lakhs in other income, a decline of Rs. 93.56 lakhs in cost of raw materials, stores and spares consumed and of Rs. 4.39 lakhs in other expenses.

The fall in the Company's output—the exact number of vehicles produced is not given in the report—is due to scarcity of imported components. During the last few months, however, the Government has liberalised, to some extent, the imports, but it is, in the opinion of the Directors, far short of the requirements of the Company on the basis of its productive capacity and market demand. They hope that the production of cars and trucks during the current year will be maintained at a higher level than in 1958-59 and "should meet, to some extent, the demand for Hindustan Ambassador cars and Bedford trucks." The Company has made representations to the Government for larger imports of materials to enable the Company to maintain an even flow of production according to its capacity. The Directors point out, in this connection, that that the Ambassador model needs the lowest amount of foreign exchange per unit, the imported components representing 21 per cent. in the sale price of this model.

Another development of interest which will have a bearing on the outlook for the Company is the proposed progressive manufacture in India of Bedford trucks. It will be recalled that, in pursuance of an agreement with the General Motors Corporation of the U.S., the Company started assembly of Chevrolet and Bedford trucks. It is now stated that the Bedford truck has been selected by the G.M.C. for progressive manufacture in this country and necessary arrangements are being made for this purpose. Some of the machinery and equipment ordered for the same are said to have already been received. Already a high percentage of local manufacture has been achieved. The Directors hope that, by the end of the current financial year, the chassis frame of the truck would be manufactured in India. The gear box and the axle are also expected to be taken up for progressive manufacture by then. The Company is awaiting sanction for the manufacture of engine for the Bedford truck.

The manufacture of low-priced small cars is now the subject of an enquiry by a committee appointed for the purpose. In this connection, the Company has represented to the Government that, if a reasonable volume of Baby Hindustan cars can be sold in addition to its other lines of approved models, it will be feasible to sell a Baby Hindustan, when in full production, at a price below Rs. 7,000 to the dealers in India.

The Directors hope to raise the indigenous content of Hindustan cars to about 90 per cent. in the next two years, saving thereby a good deal of foreign exchange, as also to increase production according to demand. The Company's heavy engineering shop for steel fabrication has started working. It has also been allowed by the Government to take up the manufacture of shovels, towed scrapers, dumpers and cranes. Necessary arrangements will be executed with foreign collaborators in due course.

During the year under review, the Company made a capital expenditure of Rs. 70.45 lakhs, bringing the total as at the end of the year to Rs. 580.44 lakhs. The depreciation provided on this amounts to Rs. 286.53 lakhs, so that the net value of the assets stands at Rs. 293.91 lakhs. The other assets aggregate Rs. 657.42 lakhs, of which stock-in-trade accounts for Rs. 332.70 lakhs and cash balance for Rs. 186.38 lakhs. As against these, the current liabilities and provisions come to Rs. 145.54 lakhs, leaving net assets of Rs. 805.79 lakhs, represented by a paid-up capital of Rs. 781.09 lakhs and reserves and surplus of Rs. 24.70 lakhs.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 11.84 cum-div. in Bombay. On an ex-div. basis, the yield on the shares works out to 4.4 per cent. per annum, free of income-tax.

FOREIGN COMPANIES

The Finance Minister, Mr. Morarji Desai, told Mr. M. Basavapunniah in the Rajya Sabha that, according to the March 1959 issue of the *Monthly Blue Book on Joint Stock Companies in India*, the number of foreign companies (i.e., incorporated elsewhere other than in India, but having places of business in this country) at work was 572 as on 31st March 1959. This number included branches of foreign banks, non-profit organisations, purely agency offices in India of foreign firms and some very small units which did not figure in the Reserve Bank's data relating to non-banking foreign investments. The approximate number of foreign controlled Indian joint-stock companies was 563 as at the end of 1958.

Mr. Desai said further that the non-banking foreign business investments in branches of foreign companies was Rs. 281.68 crores as at the end of 1957.

KHANDELWAL FERRO ALLOYS LTD.

Share Certificates of the recent offer of Messrs. Khandelwal Ferro Alloys Limited of 34,937 equity shares and 50,000 7½ per cent. tax-free, redeemable cumulative preference shares covering an aggregate value of Rs. 84,93,700 have been issued to the allottees. It may be recalled that subscription lists for the issue opened on 30th May 1959 and closed on 3rd June 1959, with both the Ordinary and Preference capital being oversubscribed. The allotment was made on 25th June in consultation with the Bombay Stock Exchange authorities. Letters of regret, together with refund cheques, were posted on 7th July, while intimations of allotment were sent out on 10th July 1959.

The speed and efficiency with which the Company handled the issue have been commended by the investing public.

Mr. Madanmohan Ruia has joined the Board of Directors of the Company, making the total number of Directors ten.

HOWRAH JUTE RETURNS TO DIVIDEND LIST

IMPROVEMENT IN WORKING MAINTAINED

AFTER a lapse of two years, the ordinary shares of the Howrah Mills Company, Ltd. (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta), have returned to the dividend list, following the Directors' recommendation to make a distribution of 10 per cent. per annum for the year ended 31st March 1959. This is twice the amount distributed on the last occasion, namely, 5 per cent. paid for 1955-56. Although the higher distribution does not fully make good the absence of any return to shareholders in the previous two years, it could be considered satisfactory, having regard to the substantial depreciation charge and the necessity to restore the Company's liquid position which had been weakened by the financing of the modernisation programme which unfortunately coincided with a period of difficult trading, resulting in a heavy loss of nearly Rs. 25 lakhs during the year 1956-57.

The declaration of a dividend of 10 per cent. for the year under review has been rendered possible by the sustained improvement in the working of the Company, thanks to the availability of raw jute in larger quantities and of the right qualities at prices which made the manufacture of goods more profitable. The better results also "reflect a sustained effort to improve manufacturing efficiency and to reduce working costs." Thus, the gross profit has gone up from Rs. 23.61 lakhs in 1957-58 to Rs. 31.48 lakhs in the year under review. The provision for depreciation has been slightly reduced from Rs. 14.10 lakhs to Rs. 12.34 lakhs. There is no liability for income-tax and super-tax, in view of the past losses and depreciation allowances. A sum of Rs. 69,500 has been provided for wealth tax, as against Rs. 60,385.

The net profit, after making these provisions and providing for Managing Agents' commission, amounts to Rs. 16.73 lakhs, which is nearly double that (Rs. 8.41 lakhs) earned in the previous year. Last year, the net profit was supplemented by a sum of Rs. 34.50 lakhs withdrawn from the machinery renewal reserve, whereas this year the Directors have drawn Rs. 4.20 lakhs from the general reserve. They have, however, transferred back Rs. 12.20 lakhs to the general reserve, as against Rs. 14.24 lakhs a year ago, and added a small sum of Rs. 8,008 to the development rebate reserve.

The following comparative table shows the progress of the Company in recent years:

(In lakhs of rupees)

	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds (gross)	3,78.75	4,02.12	3,65.22	3,71.47
Other income	0.35	4.36	4.37	2.09
Closing stocks	90.02	91.98	1,05.30	82.84
Manufacturing and other expenses	3,45.63	3,82.86	3,89.42	3,72.72
Gross profit (+) or loss (-)	+21.48	+23.61	+13.83	+1.04
Managing Agents' commission	1.71	0.50	0.50	0.36

Depreciation	12.34	14.10	10.33	7.25
Taxation	0.69	0.40	..	..
Net profit (+) or loss (-)	+16.73	+8.61	+24.66	+6.37
Transfer from reserves and provisions	4.20	34.50	..	12.44
To reserves	12.28	14.24	..	1.09
Dividend—				
7 per cent. preference	1.84	3.67	..	1.84
Ordinary	6.56	..	..	3.24
Carry forward	0.38	0.33	24.66	0.57

The decline of Rs. 25 lakhs in sales has been more than made good by the reduction of Rs. 37 lakhs in manufacturing and other expenses.

The Company worked, throughout the year under review, additional loomage through the purchase, in terms of the Working Time Agreement, of 12,960 loom-hours per week from the Reliance Jute Mills Company, Ltd. This agreement, which was for an initial period of one year to 8th September 1958, has been renewed for further periods of six months to 8th March 1959 and 8th September 1959, respectively.

The Company experienced some trouble in the operation of some of the mill machinery during the year. While modifications have been carried out on these machines with beneficial results, the Directors believe that "there is further scope for an increase in productivity, which compares unfavourably with that of other mill units under the same management."

As a result of modernisation of mill machinery and the concentration of the Company's production in Nos. 1 and 2 mills, the No. 3 mill is said to be lying idle since its closure in February 1957. The Directors have for some time past been thinking of putting it to useful

purpose, either by installing some new manufacturing process or its disposal by sale or lease. The first two solutions present some difficulties. Negotiations are, however, in progress for a twenty-year lease of the mill to Remington Rand of India, with break clauses after ten years and fifteen years on reasonable terms. If these negotiations are successfully concluded, the lease will take effect from 1st September 1959.

The Company's paid-up capital of Rs. 91.87 lakhs is supplemented by reserves and surplus aggregating Rs. 36.66 lakhs. In addition to a debenture loan of Rs. 30 lakhs, the Company's borrowings stand at Rs. 89.29 lakhs, having been reduced from Rs. 113.56 lakhs. The other current liabilities and provisions amount to Rs. 37.45 lakhs. The gross block of the value of Rs. 235.37 lakhs has been written down to Rs. 98.89 lakhs. The current assets and investments aggregate Rs. 156.39 lakhs.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 23.62 ex-div., at which rate and on the basis of the latest dividend, they provide a yield of 4.2 per cent. per annum, without deduction of tax.

STAR PAPER'S NEW ISSUE

The Star Paper Mills Ltd. (Managing Agents: Messrs. Bajoria & Co., Calcutta) proposes to raise fresh capital to the tune of Rs. 70 lakhs to finance a part of the Company's development and expansion programme. A detailed announcement about this issue appears on pages 388 to 390 of this issue. This will be in the form of 40,000 7 per cent. cumulative tax-free third preference shares of Rs. 100 each and 30,000 7 per cent. cumulative tax-free convertible third preference shares of Rs. 100 each. The one is redeemable within a period of 15 years from the date of allotment, while the other is convertible into ordinary shares at par on the expiry of 7 years at the option of the shareholders and redeemable at par, in case of non-conversion, within 15 years. Out of the above issue, the entire 40,000 third preference shares and 5,000 convertible third preference shares have been either taken or agreed to be taken by the existing shareholders, the Directors, Managing Agents and their friends. The balance of only 25,000 convertible preference shares are now available to the public.

The Company's present annual production is 6,500 tons mainly of writing and printing papers. This is proposed to be raised to about 21,000 tons per annum by taking up the manufacture of M.G. kraft paper of genuine quality not hitherto manufactured in India, and other varieties of enough papers. The Company has assured itself of enough supplies of pine wood, which is an excellent raw material for the aforesaid variety of papers. The total cost of the project is Rs. 3.30 crores, which will be financed thus: deferred payment facility from machine suppliers Rs. 1.05 crore, loan from I.F.C. Rs. 1 crore, Company's own resources Rs. 55 lakhs and the proposed new issue of share capital Rs. 70 lakhs.

The management feels that the expansion programme will prove to be very profitable. At present, it is earning an average profit of Rs. 200 per ton on a production of 8,500 tons. After full implementation of the scheme—the full anticipated output from the new plant is expected to be achieved at the end of 1960—the Company is expected to earn a profit of Rs. 467 per ton, which the management feels will be enough to pay the preference dividends and to declare a dividend of 10 per cent. on ordinary shares, as also to meet the Company's loan liabilities.

The Company's working during the year ended September 1958 was good, the gross profit having gone up from Rs. 81.72 lakhs to Rs. 97.76 lakhs. During the current year also, its performance is encouraging; the gross profit for the first six months amounts to Rs. 49.25 lakhs. The financial position of the Company is satisfactory. In view of the shortage of paper in the country, the Company's venture holds promise of success.

STERLING GENERAL INSURANCE COMPANY, LTD.

A steep rise in the gross premium income is disclosed in the audited accounts of The Sterling General Insurance Company, Ltd. (General Manager: Mr. M. N. Seth), for the year ended 31st December 1958. Gross premium during the year increased by Rs. 16.52 lakhs to Rs. 1.21 crore, as against Rs. 1.04 crore in 1957, representing a rise of 16 per cent. The net premium income, however, increased by only Rs. 1.45 lakh to Rs. 56.51 lakhs, as compared with Rs. 55.01 lakhs in 1957, thanks to the larger volume of reinsurance effected during the year. Claims and expenses showed a rising trend. Nevertheless, the year's working resulted in a net profit of Rs. 1.40 lakh, as against Rs. 1.20 lakh in the previous year. The dividend has been maintained at last year's level of five per cent. per share of Rs. 55 paid-up, free of tax. The following table indicates the salient features of the working of the Company during the three years ended 31st December 1958:

(Rs. in lakhs)

	1958	1957	1956
Fire—			
Premium	14.16	12.71	11.00
Claims	3.33	3.35	3.35
Expenses of management	4.46	4.14	3.31
Fire fund	6.37	5.27	4.90
Marine—			
Premium	5.57	4.60	4.32
Claims	3.67	2.80	2.92
Expenses of management	2.01	1.38	1.13
Marine fund	3.38	3.44	2.95
Accident and miscellaneous—			
Premium	36.78	37.69	32.23
Claims	25.50	23.70	16.09
Expenses of management	12.85	11.12	6.31
Miscellaneous fund	16.18	15.58	15.31

THE STERLING GENERAL INSURANCE CO., LTD.

NEW DELHI

GROSS PREMIUM EXCEEDS RUPEES ONE CRORE TWENTY LAKHS

THE fifteenth Annual General Meeting of the Sterling General Insurance Company Limited was held on 31st August 1959 when the Accounts of the Company for the year ended 31st December 1958 were passed. The following is an extract from the Directors' Report.

The gross premium booked during the year amounted to Rs. 1,20,88,518 (Rs. 1,04,36,280 in 1957), showing an increase of about 15.8 per cent. and the net premium amounted to Rs. 56,50,889 (Rs. 55,01,062 in 1957).

Reserves Exceed Rs. 25 Lakhs

The reserve for unexpired risks at the end of the year amounted to Rs. 25,94,355, as against Rs. 25,04,427 at the end of the previous year.

Increase in Profit and Dividend

After providing for various reserves, writing off bad debts and increasing the reserves against doubtful debts, the working of the year resulted in a net profit of Rs. 1,39,838. Adding to this Rs. 4,096 brought forward from the previous year, the total profit came to Rs. 1,43,934 which has been appropriated as follows: Rs. 72,000 as provision for income-tax and Rs. 68,324 as provision for dividend to shareholders. The balance of Rs. 3,610 has been carried forward to next year.

All-round Progress

The working of the Company during the year under report resulted in all-round progress in business development and financial strength of the Company. The gross premium increased by over Rs. 16 lakhs over the figures of the previous year. The net premium increased, however, only by Rs. 1,49,827 because of larger reinsurance effected. Paid up capital increased by over a lakh and the Company has been able to declare a dividend to shareholders at 5 per cent. free of income-tax on the increased capital.

Assets Exceed Rs. 89 Lakhs

The total assets of the Company amounted to Rs. 89,01,253 at the end of the year (Rs. 83,39,640 as at 31st December 1957).

The combined net premium in all the three departments amounted to Rs. 56.51 lakhs, as against Rs. 55.01 lakhs in 1957, comprising Rs. 14.16 lakhs in the fire department, Rs. 5.57 lakhs in the marine department and Rs. 36.78 lakhs in the accident and miscellaneous department.

Claims, as noted above, showed a rising tendency in all the departments. Claims paid and outstanding in all the departments taken together amounted to Rs. 35.45 lakhs, as compared with Rs. 30.33 lakhs in 1957, made up of Rs. 6.26 lakhs in the fire department, Rs. 3.67 lakhs in the marine department and Rs. 25.50 lakhs in the accident and miscellaneous department. The higher claims ratio in the fire department is attributed, partly, to the reduction in premium rates effected at the instance of the Government. Despite increases in premium rates in several countries in which the Company operates, claims ratio in the motor department was higher. The marine and aviation sections too could not show a better record in respect of claims ratio. Effective steps are, however, being taken to bring the claims ratio under control.

Net commission amounted to Rs. 78,333, as against Rs. 3.25 lakhs in 1957. Expenses of management were of the order of Rs. 19.38 lakhs, as compared with Rs. 17.09 lakhs in 1957. The fire, marine and miscellaneous funds at the end of the year stood at Rs. 5.66 lakhs, Rs. 2.23 lakhs and Rs. 14.71 lakhs respectively, each being 40 per cent. of the respective premium income. Besides this, provision has also been made for additional reserves to the tune of Rs. 71,000 in the fire department, Rs. 1.16 lakh in the marine department and Rs. 1.47 lakh in the miscellaneous department.

Income from all sources amounted to Rs. 58.39 lakhs, made up of a net premium of Rs. 56.51 lakhs and interest, dividend, rent and miscellaneous receipts of the order of Rs. 1.88 lakh. Total outgo aggregated Rs. 55.62 lakhs, leaving a balance as profit of Rs. 2.77 lakhs which, after writing off and making provision for bad and doubtful debts and strengthening the reserves for unexpired risks, yielded a net profit of Rs. 1.40 lakh, as against Rs. 1.21 lakh in 1957. This, together with Rs. 4,096 brought in makes in all Rs. 1.43 lakh. Provision for taxation absorbs Rs. 72,000 and dividend Rs. 68,324, leaving a balance of Rs. 3,610 to be carried forward.

As a result of the year's working, the total assets of the Company increased from Rs. 83.39 lakhs at the end of 1957 to Rs. 89.01 lakhs at the end of 1958.

COMPANY MEETINGS AND DIVIDENDS

INVESTMENT AND FINANCE CO., LTD. Annual General Meeting, Calcutta, 8th September 1959. Dividend: 5 per cent. or Rs. 5.00 per share. Transfer books remain closed from 25th August to 8th September 1959, both days inclusive.

GENERAL INVESTMENT AND TRUST CO., LTD. Annual General Meeting, Calcutta, 8th September 1959. Dividend: 3½ per cent. Transfer books remain closed from 25th August to 8th September 1959, both days inclusive.

INDIAN COPPER CORPORATION LTD. Annual General Meeting, Calcutta, 23rd September 1959. Dividend: 18 per cent. free of income-tax.

NOT BE A MEMBER.

(b) The Transfer Books of the Company will remain closed from 7th September 1959 to 23rd September 1959, both days inclusive.

(c) The Relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under item 5 is annexed hereto.

EXPLANATORY STATEMENT

As required by Section 173 of the Companies Act, 1956, the following explanatory statement sets out all material facts relating to the special business under item 5 mentioned in the accompanying Notice dated 28th August, 1959.

Under Article 134 of the Articles of Association, Mr. I. H. Cameron was appointed a Director in the vacancy caused by the resignation of Mr. J. A. Andrew. In accordance with the said Article, Mr. I. H. Cameron retains his office only upto the date of the Annual General Meeting of the Company but is eligible for re-election. He is a businessman of wide experience and it is in the interest of the Company that he be re-appointed as a Director.

By Order of the Board,
D. V. SHIVESHWARKAR,
Secretary.

THE KARANPURA DEVELOPMENT COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE KARANPURA DEVELOPMENT COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Wednesday, the 30th September, 1959 at 11 a.m., for the following purposes:—

- To appoint a Director in place of a retiring Director.
- To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 15th September to 30th September, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 24th August, 1959.

Note:—A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

THE BORREA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE BORREA COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Wednesday, the 30th September, 1959, at 10.50 a.m., for the following purposes:—

- To consider and approve the audited Accounts of the Company for the year ended 31st December, 1958, and to receive the Directors' and the Auditors' Reports thereon.
- To declare the Dividends recommended by the Directors.
- To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being over 65 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

To be Proposed as an Ordinary Resolution:

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

- To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 15th to the 30th September, 1959, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

CALCUTTA, 24th August, 1959.

Note:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 7th October, 1959, to those Shareholders so entitled whose names appear in the Company's books on the 30th September, 1959, or to their mandatories. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE BORREA COAL COMPANY LIMITED

THE BOARD OF DIRECTORS HAVE recommended payment of the following Final Dividends for the year ended 31st December 1958, without any deduction for Income-tax payable by the Company.

On Preference Shares for half-year at 6½ per cent. per annum.

On Ordinary Shares at 2½ per cent. making a total of 7½ per cent. per annum for the year.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, 24th August, 1959.

GREAVES COTTON AND COMPANY LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Thirty-ninth Annual General Meeting of the Shareholders of GREAVES COTTON AND COMPANY LIMITED, will be held on Monday the 28th September 1959 at 4.30 p.m. (I.S.T.) at the Registered Office of the Company, 1, Forbes Street, Bombay, to transact the following business:—

- To receive and adopt the Directors' Report and Audited Balance-sheet and Profit and Loss Account for the year ended 31st March 1959.
- To declare dividends on preference and equity shares.
- To elect a Director in place of Mr. Karamchand Thapar who retires by rotation and, being eligible for re-election under Article 148 of the Articles of Association, offers himself for re-election.
- To elect a Director in place of Mr. H. D. Varma who retires by rotation and,

being eligible for re-election under Article 148 of the Articles of Association, offers himself for re-election.

- To appoint Auditors to hold office for the period from the conclusion of the meeting until the conclusion of the next Annual General Meeting of the Company and to fix their remuneration.
- To consider and, if thought fit, to pass with or without modifications the under-noted Resolution which will be proposed as a Special Resolution:

"RESOLVED that Article 101 of the Company's Articles of Association be deleted and that the following be substituted therefor, namely:—

"The Chairman of the Directors shall be entitled to take the chair at every General Meeting, whether Ordinary or Extraordinary. If there be no such Chairman, or if at any meeting he shall not be present at the time appointed for holding such meeting then the senior Managing Director present thereat shall be entitled to take the chair and failing him the Members present shall elect another Director as Chairman, and if no Director be present or if all the Directors present decline to take the chair, then the Members present shall elect one of their number to be Chairman."

Notes:—

(a) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

According to Article 118 of the Articles of Association, the instrument appointing a proxy and the power-of-attorney or other authority (if any), under which it is signed or a notariably certified copy of that power or authority, shall be deposited at the Registered Office of the Company not later than forty-eight hours before the time for holding the meeting; in default the instrument of proxy shall not be treated as valid.

(b) The Share Transfer Books of the Company will be closed from the 14th day of September 1959 to the 28th day of September 1959 both days inclusive.

(c) The dividend when sanctioned at the Annual General Meeting will be payable to those members whose names have been registered on the Company's Registers on 14th September 1959. It will be payable at Lloyds Bank Ltd., Bombay, on and after 12th October 1959.

By Order of the Board of Directors,
N. M. WAGLE,
Managing Director.

BOMBAY, 31st August, 1959.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act 1956

The following explanatory statement as required by Section 173 of the Companies Act 1956 sets out all material facts relating to the special business under item 6 mentioned in the accompanying Notice dated the 31st August 1959.

The Article 101 sought to be amended provides, *inter alia*, that if at any meeting the Chairman shall not be present within fifteen minutes of the time appointed for holding such a meeting then the senior Managing Director present thereat shall be entitled to take the chair. It therefore happens that even although prior notice of the Chairman's inability to be present at a meeting is duly received the senior Managing Director cannot take the chair until the prescribed period of fifteen minutes has lapsed resulting in the proceedings being unduly delayed. The amendment therefore is designed to avoid this delay, and the Board of Directors, including the Chairman, recommend the adoption of the proposed new Article 101.

By Order of the Board of Directors,
N. M. WAGLE,
Managing Director.

BOMBAY, 31st August, 1959.

GOVERNMENT OF INDIA MINISTRY OF RAILWAYS (Railway Board)

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to purchase from established and reliable producers, the following items of Steel Track materials:

- | | |
|----------------|---------------|
| (a) Rails | 1,50,000 tons |
| (b) Fishplates | 5,309 " |

The tender documents including drawings and specifications can be had on payment of Rs. 15 per set (or equivalent) from any of the following offices during working hours:

- The Director, Railway Stores, Ministry of Railways (Railway Board), State Entry Road, New Delhi,
- The Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London W. 3, and
- The Director, India Supply Mission, 2536 Massachusetts Avenue, N.W. Washington 8, D.C.

Tender will be received by the undersigned upto 12.00 hours on the 28th October 1959 and opened in the office of the Railway Board on State Entry Road, New Delhi, at 15.00 hours on the same day.

DIRECTOR, RAILWAY STORES,
Railway Board,
State Entry Road,
New Delhi.

THE BURRAKUR COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Thursday the 27th August, 1959, the following interim dividends were sanctioned to be paid for the year ended 30th June, 1959.

- 1st Preference Shares—3½ per cent. from which will be deducted Income-tax in accordance with the provisions of the Indian Finance Act, 1959.
- 2nd Preference Shares—3 per cent. from which will be deducted Income-tax in accordance with the provisions of the Indian Finance Act, 1959.
- Ordinary Shares—5 per cent. from which will be deducted Income-tax in accordance with the provisions of the Indian Finance Act, 1959.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, 27th August, 1959.

SONE VALLEY PORTLAND CEMENT COMPANY, LIMITED

NOTICE

IS HEREBY GIVEN THAT THE ANNUAL General Meeting of the Shareholders of Sone Valley Portland Cement Company Limited will be held on Wednesday, the 30th September, 1959, at 4.30 p.m., at the Registered Office of the Company at 11, Clive Row, Calcutta, to transact the following business:—

- To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958.
- To declare a Dividend.
- To elect a Director in place of Shri V. Poddar who retires by rotation, but being eligible, offers himself for re-election.
- To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. Lovelock and Lewes, Chartered Accountants, being eligible, offer themselves for re-appointment.

The Transfer Books and Register of Members of the Company will remain closed from the 18th September to 30th September, 1959, both days inclusive.

By Order of the Board,
S. L. TAPARIA,
Secretary.

CALCUTTA, 25th August, 1959.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on poll instead of himself and such proxy need not be a member of the Company.

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD., METTUR DAM R.S.

DR. P. S. LOKANATHAN ON COMPANY'S PROGRAMME TO EXPAND PRODUCTION

ADDRESSING the Twenty-second Annual General Meeting of the Company held at the registered office of the Company at Mettur Dam R.S., on Saturday, 29th August 1959, Dr. P. S. Lokanathan, Chairman of the meeting, said:

"GENTLEMEN,

"I have great pleasure in welcoming you all to this twenty-second Annual Meeting. The Directors' report and audited accounts have been with you for some time which I believe you must have perused with interest and I, therefore, take it as read.

"I have to refer with profound regret to the death of Sri S. Vaidyanatha Iyer and Sri V. Seshasayee in September and October last year. Sri S. Vaidyanatha Iyer was a Director of this Company from February 1941 and its Chairman since November 1948. He guided the activities of this Corporation with great ability and helped to place it on a firm foundation. Sri V. Seshasayee was a pioneer industrialist in South India and his contribution to the growth of chemical and fertiliser industries will always be remembered.

Power Shortage

"It is rather unfortunate that the problem of mounting power requirements, particularly in the industrial sphere, has not been handled satisfactorily yet. In consequence, most of the industries that have not installed standby generating units have to cut down production substantially below installed capacity in the summer months, when the water levels in the hydel reservoirs get depleted due to the vagaries of the monsoon. Considering that power cuts have become an almost annual feature, the economic waste involved in working available productive plant below capacity has been a source of some concern to industrialists, particularly when the Central Government is so anxious that India should reach high production targets. Let us hope that, with the Neveli thermal scheme now afoot and the commissioning of the Kundah project, a more satisfactory solution to the chronic power shortage will be found. The expansion of alkali industry is very much dependent on the uninterrupted availability of power from the grid, since it is a major electro-chemical industry using nearly 4,000 k.w.h. per ton product. A more permanent solution lies in the regional development of power potential supplemented by the establishment of an atomic power plant. The future growth and prospects of Madras depend upon a bold and imaginative effort in developing power and transport facilities.

"Since independence, the country has made impressive progress in the alkali industry. The production of caustic soda prior to 1947 was only about 3,000 tons per annum, but, during the past twelve years, we have covered a lot of ground attaining a level of 60,000 tons in 1958. Production is expected to be stepped up to over 110,000 tons by 1961 so as to meet the full demand for this important chemical. As against two units in 1947, there are now 15 units in operation and licences for more units have also been issued.

"India's requirements of caustic soda are rising rapidly. With the big developments in prospect in rayon, paper and pulp, textiles and aluminium, caustic soda requirements will be about 300,000 tons by 1965 and 500,000 tons by 1970.

Capacity Expands

"Our factory has now grown from a five-ton caustic plant in 1941 to a capacity of 20 tons per day at present. Likewise, bleaching powder capacity has increased from 7 tons to 16 tons per day. It is also necessary that, in the interests of economic production and self-sufficiency, we expand further. It is, therefore, in the fitness of things that your Directors have decided on increasing the production of caustic soda to 40 tons and bleaching powder to 32 tons per day in the immediate future. I consider this step vital to the Company having regard to developments elsewhere.

"I am glad to announce that the Company has reached full capacity production of 20 tons caustic soda in the course of this month and, for the rest of the year, I feel sure normal production will be realised.

"In view of the exigencies of foreign exchange and the facilities made available to us to obtain dollar exchange through the Export-Import Bank of the United States, your Company has opted for Hooker cells producing commercial caustic soda in place of mercury cells producing rayon grade caustic. This change-over results in a considerable cutting down of capital costs, apart from the fact that this falls in line with our existing equipment and our operating personnel have a long-term experience of Hooker cells. This is welcome also from the commercial angle, as the demand for commercial grade caustic is far in excess of mercury cell caustic.

Issue of Equity Capital

"It has been decided by your Board to finance the expansion now contemplated partly by issue of equity capital and partly by borrowing. A resolution is, therefore, before you to sanction the issue of equity shares for Rs. 19.5 lakhs to both equity and preference shareholders. The approval of the equity shareholders to make the right to participate in the new issue available to preference shareholders also is sought in order to make the proposed issue broad-based. I have every confidence the proposed issue of shares will meet with the support it deserves at your hands.

"The net result of the year's working is no doubt relatively less than that of the previous year by Rs. 1.9 lakh. This is mainly due to the lower production consequent on power cuts and unforeseen plant additions and replacements which were delayed in receipt from abroad. Notwithstanding such adverse factors, it is fortunate that the Company has made sufficient profit to maintain the same rate of dividend and it is confidently expected that the position will improve considerably during the current year to enable us to maintain the *status quo*.

Dividends

"The new Finance Act will impose some strain on the maintenance of dividends at existing levels. In the case of the 6 per cent. tax-free dividend on the preference shares, the Company will have to pay a gross dividend of 8.4 per cent. and on equities the gross dividend will be as high as 12½ per cent., if the *status quo* is to be maintained. Nevertheless, it is estimated by our Directors that it will be possible to maintain the net dividend on the equity capital of the Company at current levels after meeting preference dividend obligations.

"I am glad to be able to announce at this meeting that the Government of India have informed us that they will be pleased to approve the reappointment of our Managing Agents on the terms already approved by you, provided the reappointment is for a period not exceeding five years only from 15th August 1960, presumably in accordance with a general policy of sanctioning five-year tenures of managing agents for companies. The Board, at its meeting held today, has agreed to this modification and I trust the final approval of the Government to the reappointment will be received early.

"I wish to make special mention of the very satisfactory relations subsisting between labour and management. This is a good augury for the successful execution of our development projects. It is my pleasant duty to record our appreciation of the excellent work turned out by all ranks of workers and staff and the anxious care evinced by the management to place the industry on a sound footing."

Notes: This does not purport to be a report of the proceedings of the Annual General Meeting.

INTEREST RATES CUT

(From Our Own Correspondent)

BOMBAY, 2nd September

An important development of the week in the money market is the reduction in the ceiling on interest rates agreed to under the Inter-Bank Agreement concluded under the auspices of the Indian Banks' Association. The ceiling for seven-day deposits and for deposits less than three months has been brought down from 3½ per cent. to 3 per cent. and that for deposits for three months and over from 4 per cent. to 3½ per cent. per annum. These revised ceilings came into force from 2nd September 1959.

The trend of the market continues to be extremely easy. The demand for funds was poor, with the turnover greatly restricted. Inter-bank call money among Exchange Banks and big Indian banks was at 1½ per cent. and amongst smaller banks 2½ per cent., as against 2 per cent. and 3½ per cent. last week. House money at seven days' notice was quoted at 3 to 3½ per cent., with the bulk of the business being done at the latter rate. One to six months' deposits were taken up at 3 to 3½ per cent.

There was a better response for 91-day Treasury Bills of the Government of India this week. As against the invitation for Rs. 3 crores (which was one crore more than last week), the total amount offered was Rs. 3.05 crores, as compared with Rs. 2 crores in the past week. The average rate of accepted tender was also a shade lower at Rs. 2.519 per cent. per annum, as against 2.520 per cent. per annum. The tender for next week has been reduced to Rs. 2 crores. Sales of 91 days Intermediate Bills are being continued, even though there was no response for them during the period 26th to 29th August 1959.

The Reserve Bank's statement for the week ended 29th August 1959, as compared with that for the previous week, shows a contraction of Rs. 13.59 crores in notes in circulation. Notes held in the Banking Department have gone up by Rs. 14.84 crores, resulting in a net addition of Rs. 1.25 crore to the total note issue. This has been balanced on the assets side by a rise of Rs. 1.25 crore in rupee coin. There is no change in rupee security as also in foreign security, but, as balances held abroad in the Banking Department have gone up by Rs. 4.70 crores, total foreign assets held by the Bank are up by that figure to stand at Rs. 183.25 crores. Deposits of the Central Government, as well as those of banks, have improved by Rs. 5.38 crores and Rs. 7.08 crores, respectively. But deposits of other Governments and other deposits have fallen sharply by Rs. 28.11 crores and Rs. 55 crores, respectively. Loans and advances to Governments show very little variation but other loans and advances have shrunk by Rs. 10 crores. There has been a big fall of Rs. 78.62 crores in investments. This apparently is a result of the decline in deposits of other Governments and those of others as just noted above.

The gilt-edged market was quite steady and there was a slight increase in the value of medium and long-dated securities. The turnover was relatively modest, as compared with the previous week. The Reserve Bank was a buyer in short-dated securities and a seller in long-medium and long-dated loans.

In the foreign exchange section, banks' selling rate for U.S. dollar has risen by 75 nP to Rs. 477.50 per hundred U.S. dollars. Similarly, the buying rate has also gone up to Rs. 474 per 100 U.S. dollars. In the New York market, spot sterling was distinctly quiet, the rate declining from 280.74-280.77 cents to 280.22-280.26 cents. There was a drop of 0.34 cent in the rate of three months forward sterling which finished at 280.47-280.51 cents.

PLAIN SORT TEA STRONG

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 27th August

There was no sale in Cochin this week due to tea trade holidays on account of the U.P.A.S.I. Annual Conference.

London Market: Sale of 24th August 1959.—Best C.T.C. and orthodox were stronger, while the remainder were steady.

Sale of 25th August 1959.—Firm to dealer.

Sale of 26th August 1959.—Better general demand, with good Assams dearer.

Colombo Market: Sale of 24th August 1959.—Smaller selection high-grown, due to July strike. All useful liquoring teas active, particularly B.O.P.F. Better Dimbula Dickoyas substantially dearer. U.V.A. quality improved. Very active and much dearer. Useful mediums dearer. Low-grown down by 5 to 10 cents.

Sale of 25th August 1959.—Strong demand. Useful liquoring fannings dearer. Improved U.V.A.s dearer. Other sorts easier, particularly stalky broken mixeds.

Calcutta Market: Export.—Sale 1,156,000 chests. Good demand at irregular rates. Plain B.P. and fannings were about steady. C.T.C. easier by 20 to 40 nP. Orthodox Assams following quality.

Internal.—18,850 chests dust. Good general demand. Orthodox steady. Medium C.T.C. upto 25 nP easier. Best C.T.C. steady.

Export Quota.—The market has been slightly active and business has gone through at 2½ nP. At the time of writing, there are sellers at 2½ nP, with buyers at 2½ nP.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 33 held on Tuesday, 1st September. Offerings aggregated 1,125,000 lbs. Good general demand. Plain sorts were particularly strong and dearer by 5 to 10 nP. Mediums weaker, but improved quality stronger. Black leaf keen enquiry."

BULLION PRICES SAG, AFTER EARLY RISE

(From Our Own Correspondent)

BOMBAY, 2nd September

This week's review of the bullion market covers only three full working sessions, as it remained closed on Thursday and Monday, as well as partially yesterday. On the first two days which this review covers, that is, Friday and Saturday, the market ruled distinctly firm, with a sharp rise in values. Silver evoked hectic speculative enquiries induced by reports about infiltration of Chinese forces in the North-Eastern frontiers of India. There was also brisk demand from spot houses, while offerings were restricted. In sympathy with the white metal, gold also met with excellent support. Yesterday, silver suffered a setback, following unloading by operators who had applied call options after the fixation of option settlement. One prominent dealer was reported to have sold about 500 bars. Gold, too, eased. The downward trend continued today also, owing to large sales of silver by a Calcutta operator.

The Bombay Bullion Association has submitted a memorandum to the Government of Bombay, urging it to exclude all processes of bullion from the definition of manufacture in the new Sales Tax Bill. It has also urged for the modification of the proposed sales tax of ½ per cent. on bullion at the last stage, which, it is pointed out, would impose a heavy burden on one head only and divert a large part of business from Bombay to other States.

September settlement in gold advanced from Rs. 123 to Rs. 123-12 yesterday, but declined to Rs. 123 before recovering to Rs. 123-2. Business in October settlement commenced at Rs. 123 on 29th August. After improving to Rs. 124-2 yesterday, it receded to Rs. 123-5 today. Towards the close, it was As. 2 higher.

Ready gold rose from Rs. 122-14 to Rs. 123-8 yesterday. It eased to Rs. 122-12 today before closing at Rs. 122-14. The daily average arrivals of gold were 3,300 tolas, while the offtake was 2,300 tolas. The floating stocks of gold are reported to be around 37,500 tolas.

September settlement in silver began the week firm at Rs. 204-14 (on 28th August), as against Rs. 204-2 and rallied to touch Rs. 206-3 on the same day. It, however, encountered selling in the subsequent sessions and moved down to Rs. 203-4 today, but finished higher at Rs. 203-11. October settlement, after spurring from Rs. 204-8 to Rs. 206-11, declined to touch a low of Rs. 203-9 today. Towards the close, the settlement was a shade better at Rs. 204-1.

Ready silver was well supported earlier in the week, the quotation forging ahead from Rs. 204-2 to Rs. 206-3. But subsequently, it suffered a setback, the lowest level touched today being Rs. 203-2. The closing rate was As. 7 higher. The daily average arrivals and offtake of silver were 10 bars and 6 bars, respectively. The floating stocks of silver are estimated at 350 bars.

Both ready and forward silver in the London bullion market recorded a fall of ¼d. during the week, the former easing to 78½d. per ounce and the latter to 78¼d. Silver in New York, which had stood unchanged at 91.375 cents per ounce for a long time, improved to 91.625 cents per ounce. Ready gold in London firmed up further from 250s. per ounce to 250s. 2½d., owing to the persistent easiness of the pound sterling vis-à-vis the dollar. The latest available rate for gold in London is \$35.104-\$35.124 per ounce, as against \$35.04-\$35.114 last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	2-9-59	Highest	Lowest	25-8-59
GOLD				
Ready (99 fine Mint)	122 14	123 8	122 5	122 14
Forward	123 2	123 12	122 8	123 0
SILVER				
Ready (999 fine Mint)	203 0	206 3	203 2	204 2
Forward	203 11	206 3	203 4	204 2
TEA				
London Silver Ready	78 1/4	—	—	79 1/2
London Forward	78 1/4	—	—	79 1/4
London Gold	250 1/4	250 1/4	250 1/4	250 1/4
New York Silver	91.625	91.625	91.375	91.375

* 17th September settlement. † 18th September settlement.

LINED SEED LISTLESS

(Messrs. A. Bradley and Co.)

CALCUTTA, 31st August

Lined seed showed virtually no change during the week. Trading was rather limited, but the tone of the market was quietly steady. Arrivals from the centres were poor and ready supplies were scarce locally. Crushers showed a moderate interest mainly for early delivery.

The news of tension on India's N.E. frontier caused some bullish activity in the options market, but no material gains were recorded and activity remained small on the whole.

The oilcake market remained firm at Rs. 14.50 and, although fair to moderate trading was reported for local consumption, shippers withdrew from the market.

In the oil section, activity was negligible. Overseas prices dropped to £103, making Indian quotations well above world parities once again. The local demand was exceedingly small.

The latest quotations are: Ready September Rs. 23.75, October-November Rs. 24, September futures Rs. 23.81 and May futures Rs. 22.75 per maund.

COTTON FUTURES IRREGULAR

(From Our Own Correspondent)

BOMBAY, 2nd September

During a short week of only four trading days, the market having remained closed on Wednesday and Thursday on account of *Jannashami* and, again, on Tuesday, it being *Parsi New Year Day*, the cotton futures market depicted an irregular trend. Values moved in a narrow range on alternate bouts of buying and selling prompted mainly by weather reports from the growing areas. Even the release of an export quota of 75,000 bales of Bengal *Deshi* and an import quota of 140,000 bales of cotton stapling 1.3/16" and above failed to have any marked effect on futures market. In the beginning of the week, prices gave way on selling by upcountry interests touched off by news of satisfactory progress of new crop. Recent rains proved beneficial to the crop in Madhya Bharat, Punjab, and Rajasthan. Earlier fears of damage to the crop in Saurashtra and Gujarat turned out to be somewhat exaggerated.

The market, however, staged a mild rally on Monday, thanks to heavy short covering and firm bull support prompted by reports of continuous rain in Berar, Khandesh, C.P. and the Punjab. Prices sagged again yesterday, in kerb trading, on account of selling by upcountry interest and liquidation by weak bulls who had made heavy purchases on the previous day. Sentiment was subdued today, with the quotation for the March contract declining by a rupee at close, as compared with the opening level. Over the week, the contract showed a net loss of Rs. 2.50.

The Jarilla March contract opened the week at Rs. 688.75 and, after receding to Rs. 682.75 the next day, rose to Rs. 691.75 on Monday. Commencing at Rs. 687 today, the contract gained one rupee before declining to Rs. 685.25. The finish was, however, slightly higher at Rs. 686.25.

The spot section was active. Mill demand for new crop cotton was fairly large. Southern mills continued to buy new crop Berar, and 197/3, while local mills were interested in Vijay, Berar, Khandesh and 197/3. Old crop, especially Laxmi, Kalyan and Wagad also evoked interest but business done was small, thanks to paucity of supplies.

The announcement of the export and import quotas was considered a good augury for the new cotton season which started on the 1st inst. The export quota consists of 75,000 bales of Bengal *Deshi* valid for shipment upto 28th February 1960. A part of this quantity will be earmarked for distribution among co-operative societies and the balance will be licensed on a first-come-first-served basis, subject to an individual quantitative ceiling of 10 per cent. of the quantity allowed. The import quota is for 140,000 bales of cotton of staple length 1.3/16" and above. Out of this, a quantity not exceeding one lakh bales has been reserved for allotment to non-actual users and needy mills. The balance of 40,000 bales will be made available to such mills as may be prescribed. Details of the procedure for the allotment of quota and the issue of licences for both the above quantities will be announced in due course.

Barring the quota announcement there was no notable development on the import and export fronts. Export inquiries are expected to broaden now that the quota, which the trade has been pressing for, has been issued. Interest in foreign cotton was confined to selected Sudanese and U.S. growths.

The following are the latest available spot quotations—in rupees per candy of 785 lbs.—from the spot market at Sewri:

Bengal *Deshi* 690; Berar Jarilla 755; Khandesh 860; Laxmi 985; Jaydhara 840.

Cotton futures in Karachi firmed up during the week under review on firm mill support and good export demand, especially from the U.K. and of prices. The spot market was also firm. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 79; Punjab *Deshi* 67-8; 4F Punjab Roller 70; S.G. 71-8; L.S.S. Punjab Roller 71-8; S.G. 72-8; N.T.R.G. 71-8; S.G. 72-8; 289F Punjab Roller 71-8; S.G. 73-8.

Easy conditions prevailed in Alexandria cotton futures market during the week, thanks to the export price discount and better crop prospects. The export price discount was further reduced from 29 per cent. to 28 per cent. with effect from Monday. The export duty on all varieties of cotton, except that the price of cotton for overseas buyers remained unchanged.

New crop continued to make excellent progress. Damage due to insect infestation is reported to be insignificant on account of successful pest control measures. In lower Egypt, picking has become general while in Upper Egypt, it has commenced in some districts. The plants are progressing well despite some delay caused by recent unfavourable weather. Excellent yields are expected in both areas.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 72.10; January 71.95. Ashmouni: October 65.42; December 64.85.

Cotton futures in Liverpool recorded further gains in value during the week under review. Moderate volume of buying by American interests encouraging news from the yarn and cloth market pushed up values. Sudan cotton futures were able quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 21.90; December-January 21.75; March-April 21.98; May 22.25.

American cotton mixed growth contract: October-November 22.30; December-January 22.08; March-April 22.30; May 22.30.

Sudan: September-October, November-December, January-February 29.75.

New York cotton futures market ruled fully steady during the week. There was a moderate volume of trade demand and some short covering.

The Bureau of Census of the U.S. Department of Commerce in its second ginning report of the 1959 season has estimated that ginnings prior to 16th August aggregated 472,000 bales. The quantity of 1958 crop ginned at the same time last year was 586,000 running bales.

The Government-owned stocks of cotton of 1958 and earlier crops as on the 14th August aggregated 5,672,637 bales, representing a reduction of over one million bales from the stocks as on the 1st inst.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	31-8-59	25-8-59	19-8-59
Spot		33.25	33.15	33.10
October		32.31	32.20	32.08
December		32.23	32.22	32.15
March		32.63	32.65	32.55

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 2nd September

Dull conditions prevailed in the yarn market during the week under review. Business put through was at a low ebb, with values moving narrowly. Operators preferred to await developments on the rayon fabrics export front. There were fears of large-scale arrivals of imported yarns in the coming weeks against licences granted under the Export Promotion Scheme. It was reported that licences covering import of yarn worth Rs. 4.50 crores had already been granted. Staple fibre yarns were quiet in the absence of any encouraging reports from consuming centres. Offtake of staple fibre cloth was said to be slow. Cotton yarns, however, continued to be well supported, in view of the continued restrictions on imports of cop as well as bundle yarns as before. Supplies of good quality yarns were stated to be scarce.

The Textile Commissioner has reviewed the position with regard to the distribution of indigenous art silk yarn to the weaving units during the current quarter, that is, July to September 1959, and has decided that 20 per cent. more allocation can be made to such units as have been issued allocation cards for the supply of indigenous art silk yarn during the current quarter. All those art silk powerloom weaving units which have been issued allocation cards in the current quarter are required to approach the indigenous yarn manufacturers for additional supplies of the same.

Cupressa Bamberg yarn (60x2) October delivery stood at Rs. 1,689 today, as against Rs. 1,682 last week. Spot Cupressa was quiet at Rs. 7.50. Imported art silk yarns were quoted at the last week's closing levels of Rs. 4.75 for 120 Japan, Rs. 4.71 for 150 Japan, Rs. 4.81 for 120 Italy and Rs. 4.68 for 150 Italy. Among indigenous yarns, National Rayons 150 bright cones first grade changed hands at Rs. 4.20 and 120 bright cones first grade at Rs. 4.62.

Staple fibre yarn (40x2) October contract was done at Rs. 656, as against Rs. 648. Spot quotations (in rupees per lb.) for 40x2 yarns produced by a few important mills were: Kohninoor 3.66; Morarji 3.46; Hind 3.34; Century 3.44; Sitaram 3.37; Mahindra 3.50; Nagada 3.40.

Coarse counts cotton yarns recorded a rise of about 25 nP per bundle of 10 lbs. Medium counts also recorded a similar increase. Forty counts met with good support, the prices rising by an average of 50 nP per bundle of 10 lbs. Sixty and eighty counts, too, were transacted at higher prices. The latest available quotations (in rupees per bundle of 10 lbs.) for a few popular counts of cotton yarn are: Hinds 14.75; Podars 14.50; 20s: Moderns 18; Hinds 17.75; Podars 17.50. 40s: Madura and Moderns 26.25; Minaxis 25.56. 60s: Raghuvamshi 56.50; Mahendras 53. Finlay 63; Pioneer 41.50; 80s: Mahendra 74; Moderns 79; Finlay 83; City 69; Elphinstones 72.25.

SEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, 2nd September

Distinctly easy conditions prevailed in the oil-seeds market during the week under review. There was heavy bull liquidation, notwithstanding two measures for export promotion announced by the Government, namely, the extension of shipment period for groundnut H.P.S. and a fresh export quota for linseed oilcake. The Joint Chief Controller of Exports announced on Friday that the Government had decided to extend further the validity period of the current quotas for groundnut H.P.S. from the end of September to the end of December 1959. This move was generally welcomed, since a sizable part of the declared quota still remains unutilized. According to another export announcement at the commencement of the week under review, the Government of India has released a fresh quota of 15,000 tons of linseed oilcake for export by all shippers without any restriction of maximum shipment by an individual shipper up to the end of September 1959. The overseas demand for oilcakes continues to be strong, and, therefore, trading interests comment, this measure quite timely. These developments, however, failed to make any impression on the market as a result mainly of fears of heavy tenders against maturing contracts, and substantial offerings.

The groundnut section was subdued. Saurashtra came in for heavy selling. Reports of

good weather conditions from producing centres and lack of fresh support by crushers and *canaspat* manufacturers tended to push down values. The August contract went off the board at the end of the month. This contract, which had wound up last week at Rs. 190.50, received good support at the closing day to touch Rs. 195. February 1960 contract drifted lower from Rs. 165.75 last week-end to Rs. 163.75 today. Bold ready lost 75 nP to Rs. 36.75. Oil ex-mill was lower by 25 nP at Rs. 19.62.

The castorseed section, too, depicted pronounced weakness. In view of the fears of tenders against the maturing contract and the comfortable supply position of castorseed, bulls became nervous. Some sporadic reports of export enquiries failed to enthuse the operators. September 1959 contract, which had finished last week at Rs. 150.37, gave way subsequently to close today at Rs. 147.75, after fluctuating between Rs. 148.37 and Rs. 149.37. The May 1960 contract sagged from Rs. 153.12 to Rs. 151.50. Ready Madras eased by 75 nP to Rs. 29.37. Oil B.S.S. dropped 25 nP to Rs. 16.

Linseed moved in sympathy with other seeds and oils. Except for extractions, which elicited good support from overseas buyers, the linseed section was dull. Linseed September contract was particularly weak, on fears of heavy tenders against it and closed lower by 88 nP at Rs. 31.62. May 1960 contract shed 37 nP to Rs. 32.25. Bold ready receded from Rs. 32.37 to Rs. 31.60, after moving in a narrow groove over the week. Linseed oil, however, closed slightly higher at Rs. 16.15, as compared with Rs. 16.06 last week-end.

Cottonseed was featureless. Cottonseed September 1959, which had stood at Rs. 137 last week-end, moved down to Rs. 135.75. February 1960 contract declined by 50 nP to Rs. 114.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	2-9-1959	25-8-1959	19-8-1959
Groundnut			
February 1960	163.75	165.75	166.75
Bold ready	36.75	37.50	38.75
Coromandel ready	37.62	38.50	39.75
Khandesh quality	37.62	38.50	39.75
Oil ex-mill ready	19.62	19.87	20.50
Railway receipts	19.31	19.56	20.25
Castorseed			
September 1959	147.75	150.37	153.00
May 1960	151.50	152.12	155.00
Ready Madras	29.37	30.12	30.75
Ready Kanpur	28.37	29.94	29.62
Oil B.S.S.	16.00	16.25	16.56
Oil commercial	15.12	15.25	15.62
Linseed			
September 1959	31.62	32.50	32.75
May 1960	32.25	32.62	32.81
Bold ready	31.60	32.37	32.75
Oil ready	16.50	16.06	16.25
Cotton seed			
September 1959	135.75	137.00	—
February 1960	114.00	114.50	114.75
Niger seed	30.50	31.25	31.00
Kardi seed	22.50	22.75	23.00

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.
‡ All quotations for futures are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quartar.

SUGAR HARDENS

(From Our Own Correspondents)

BOMBAY, 2nd September

The position in respect of sugar stocks in the City is said to be tight, as a result of the fall in arrivals by rail and road. The total of these arrivals during the week was just 7,000 bags, as against 14,700 bags in the previous week. Nevertheless, sugar is being sold freely in all shops at the officially fixed prices. In so far as the interior centres are concerned, however, there are reports of shortage of sugar supplies and rising tendency of prices, following manipulations by third and fourth party buyers. The Government of Bombay is reported to have discussed the question with the Deccan Sugar Factories Association (D.S.F.A.) One of the proposals mooted by it relates to the handing over of 60 per cent. sugar stocks (reserved for distribution in the interior) by mills to the Collectors of districts for being distributed to the different centres. But the D.S.F.A. has opposed the proposal on the ground that it will throw out of gear the present machinery of distribution. It has requested the Government not to insist on direct sales to Collectors. It has assured it that the sugar factories would exercise sufficient care to check any manipulation on the part of both wholesale dealers and retailers. The final decision of the Government is expected to be taken this evening or tomorrow.

With the latest free market sugar release of 175,000 tons, arrivals into the City are expected to be quite large in the coming weeks. The sugar mills have still not received the necessary release orders from the State Government.

The wholesale ex-godown rates (per bag) for the four representative grades of sugar continue unchanged at Rs. 115.21 for A grade, Rs. 114.08 for B grade, Rs. 112.02 for C grade and Rs. 111 for D grade.

HAPUR, 31st August

Sugar registered further hardening tendency and touched new high level during the week-end, as sales through fair-price shops were closed and supplies in the market were very much restricted. Demand was reported to be brisk, due to festival season.

The Government of India has released 175,000 tons of sugar for sale, but there would be no free

sale releases from factories in the Punjab, U.P. and North Bihar and sale here in U.P. will be only through State agencies. The latest prevailing prices here were:—Rs. 125 per bag, retail Re. 1.19 per seer, as against 97 nP controlled.

Sugar also ruled steady in the Muzaffarnagar market, but the week-end witnessed a slight fall, following the release of new quota for sale. The week-end prices were:—New Shamli D29 Rs. 36.75 per maund; small grains Rs. 120 per bag; bold crystal Rs. 121 per bag.

Sugar advanced in Kanpur, on renewed buying in an understocked market. Price was around Rs. 124 per bag.

Khandari ruled quietly steady, as demand for borra due to festival season was very brisk. Production in some centres continued from old stuff. The prevailing prices were:—Khandari Rs. 37 to Rs. 41

COPPER SCRAP HARDENS

(From Our Own Correspondent)

CALCUTTA, 1st September

While prices of copper scrap hardened, prices of other metals eased during the week under review. The rise in copper scrap prices reflected the acute scarcity of the material. Trade circles hoped that, since the country's requirements of copper had gradually increased with the acceleration of industrial progress, greater provision would be made for copper in the import policy that comes into effect from 1st October. Beery quality copper scrap at Rs. 240 per cwt. was fully steady with untensil scrap being quoted at Rs. 230. On the London Metal Exchange, spot copper opened at £231½ per ton and eased to £228 as demand, especially from Europe, was poor. Price, however, soon recovered and closed higher at £236½ by the week-end, thanks to reports that stockists were holding on. On the other hand, a weaker trend was reported from New York despite the continuance of the copper strike. This was taken to mean that consumers possessed adequate stocks.

Virgin lead opened at Rs. 75 per cwt. and closed at Rs. 74.50. Scrap was in greater demand than the virgin metal. Lead in London, having declined to £71½ closed higher at £72 per ton, as against the opening of £73.

Tin at Rs. 582 per cwt. was lower by Rs. 6. The recession was due to more arrivals and weaker advices from foreign markets. Electrolytic zinc closed at Rs. 107, as against the opening of Rs. 108 per cwt.

TEA EXPORTS FARE BETTER

(From Our Own Correspondent)

CALCUTTA, 1st September

Conditions were better during the export sale held yesterday and last week's internal sales. Note was taken of the improved conditions in the auctions held in Mincing Lane last week, attributed to the need of buyers to replenish stocks. Stocks in London in the week ended 21st August had increased to 109 million lbs. from 107 million lbs. Good shipping space was taken by tea this week.

The attention of market circles was drawn to the claim of the Deputy Minister for Commerce, Mr. Satish Chandra, that Indian tea exports had gone up after the recent reduction of export duty on tea by Ceylon. How the Minister could connect the two developments was difficult to understand. However, what market circles inferred from this statement of the Minister was that the Government was not prepared to follow Ceylon's example and reduce the export duty on tea with a view to enabling the industry to step up exports. Mr. Satish Chandra had earlier referred to the unlikelihood of 1959 tea exports from India reaching the 1958 level, thanks to the heavy accumulation of stocks in London because of heavy purchases towards the end of last year.

However, market circles were inclined to hold a different view. Increasing competition from Africa and the desire of other producing countries to secure a share in the world trade of tea, they felt, accounted for the poor performance of the Indian industry in the first four or five months of this year. The statement of the U.P.A.S.I. President, Mr. M. M. Verghese, that the tea industry was one of the heavily taxed industries in the country and paid more than 80 per cent of its net income in fiscal burdens was recalled in this connection. His appeal to the Government of India to examine the tax burdens on the tea industry and to accord relief to it in order to enable it to face the challenge in India's export markets was considered by the trade and industry here as timely and deserving immediate attention.

At the internal sales held last week, dusts on offer aggregated 18,691 chests, the general demand for which was good. A dearer tendency was displayed by leggy teas while the strongest feature of the sales was provided by black leafy teas fit for export to the Middle East. Bright liquoring medium Assams were also nearly steady on good demand. Darjeelings were weak. In C.T.C.s, the very best lots were steady, but all other types in this category eased by 10 to 25 nP. The quotations were: best Assam C.T.C. Rs. 2.65 to Rs. 2.90, medium Assam C.T.C. Rs. 2.00 to Rs. 2.10, medium Assam grainy dust Re. 1.78 to Re. 1.86, and medium Doars Re. 1.78 to Re. 1.86.

Leaf offerings, numbering 419 chests, met with good general demand.

A feature at the internal sales held in Chittagong on 27th August was the rise in prices by one to two annas above valuations for most varieties. Leaf offerings amounted to 15,262 chests. The best liquoring teas as well as plain fannings gained about 2 annas. Leggy cut fannings met keen competition. Green teas on offer were 128 chests in one invoice which met with good demand. Dusts on offer amounted to 4,884 chests in addition to 80 chests subsequently offered. Prices rose by about 2 to 3 annas. The quotations were: O.P.S. Rs. 2-12, O.P. Rs. 2-7-6, B.O.P. Rs. 2-8-6, P.F. Rs. 2-7-6, Pek. Rs. 2-6-6, B.P.S. Rs. 2-7, and B.P. Rs. 2-6-6.

Following increased demand during yesterday's export sale, when offerings amounted to 62,482 chests, prices hardened. Fannings and plain B.P. were fully steady, having recorded a dearer tendency. Fannings and B.P. rose by about 10 to 20 nP above valuations. Prices also hardened in respect of medium B.P. and fannings, particularly the liquorings. On the other hand, although at the beginning of the sale there was a better demand for C.T.C.s, as the sale progressed, demand petered out and the price declined by 20 to 40 nP. However, the cheaper lots and the very best sorts in C.T.C.s were about steady. Prices for orthodox Assam B.O.P. eased, but there was good demand for the best liquorings. O.F.s were irregular. In

non-wither Doars, the better sorts declined by 6 to 12 nP while the cheaper ones were about firm. In tippy teas, a few of the best lots were firm, but others declined. Darjeelings were subjected to withdrawals, and whole leaf grades eased. The quotations were: best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.90, clean black pekoe Re. 1.92 to Re. 1.94, medium fannings Rs. 2.10 to Rs. 2.20, medium B.P. Re. 1.96 to Rs. 2.06, plain B.P. Re. 1.82 to Re. 1.86, and plain fannings Re. 1.88 to Rs. 2.08.

Export quota was on demand at 2½ nP with sellers insisting on 2½ nP. As a result, there was no business done.

JUTES EASY

(From Our Own Correspondent)

CALCUTTA, 1st September

Prices of jute goods eased by a little during the week under review, following buyers' resistance to extend support at higher levels and anxiety regarding Chinese incursion in the N.E.A. which gave rise to nervousness among speculators. Actual business done during the week was poor, and buyers thought it better to put off purchases in view of the declining trend. Prices of raw jute were also affected, but the recession here, as in goods, was insignificant.

A notable feature of the week was renewed Chinese interest, this time in fibre. It was only recently that the Chinese placed an order for 25,000 bales. It was expected, however, that more orders from China were in the offing. There was no surprise, therefore, when the State Trading Corporation put through business with China for 25,000 more bales. The Corporation, in turn, invited tenders from exporters here. The increased Chinese interest in fibre has led to the inference that China has increased output of goods. It was also believed that, with speedy economic progress, Chinese demand for packing materials had also gone up. Hitherto, that country had purchased fibre from Pakistan. Although China was bound to lift more jute goods and fibre, there was anxiety if the worsening Indo-Chinese political relationship and the Dalai Lama's decision to refer the Tibetan issue to the U.N. would affect trade. Meanwhile, good crop reports continued to be pouring in, although the quality of the arrivals so far had been below standard.

On Tuesday last, prices of goods fluctuated within narrow limits on account of weaker reports from the futures market. Ready B. twills eased to Rs. 107.40 from Rs. 107.95, while in hessian 40" 10 oz., at Rs. 41.15, recorded a small rise. Judging from preliminary figures, shipment of heavy goods in August was higher than in the previous month, while that was not the case with hessian. The market was closed on Wednesday, and when it re-opened on Thursday there was some covering business. As, however, genuine business was lacking, prices eased with B. twills receding to Rs. 107.20 and hessian 40" 10 oz. to Rs. 40.85. On Friday, prices were affected sharply on heavy selling in futures prompted by anxiety about the incidents on the Indo-Chinese border. B. twills were pushed down further to Rs. 105.30, but the recession in hessian 40" 10 oz. at Rs. 40.80, was less marked as the recent uptrend in prices of heavy goods was not reflected in hessian constructions. Towards the week-end, prices continued to give way with B. twills being priced at Rs. 105 and hessian 40" 10 oz. at Rs. 40.80. During the week as a whole, purchases of hessian by the U.K., the U.S.A., and Argentina consisted of limited quantities only, while in sacking goods, overseas buyers were reluctant to enter into commitments at current rates. The feature of yesterday's trading was the uptrend in heavy goods following a Government tender for B. twills in the September-October delivery position. The price of ready B. twills scored to Rs. 105.80. Earlier in the day, a weakening tendency was evident but, at lower levels, buying support was forthcoming. Hessian 40" 10 oz. was steady at Rs. 40.40.

Although mills showed good interest in fibre and accepted many offers, with the undertone remaining steady, prices eased fractionally in view of the weakening trend in finished goods. From Rs. 24.50 new crop daisies bottoms dropped to Rs. 24.25 and from Rs. 23.00 northern bottoms declined to Rs. 22.75. Chinese showed lively interest in fibre, and placed an order for 25,000 bales with the S.T.C. Latest quotations for the different varieties of 1959-60 crop are as follows:

	Middle Bottom	Rs.	Rs.
White:			
Assam Lower and Upper ..	..	28.00	23.50
Northern ..	..	28.50	23.00
Dessal ..	..	24.75	22.25
Cuttack ..	..	28.25	25.25
Murhabad ..	..	24.25	21.75
Bihar, Jungli and U.P. ..	..	23.75	21.25
Towels:			
Ordinary daisies ..	..	26.50	24.00
Murhabad ..	..	25.75	23.25
Assam-Agartala ..	..	26.75	24.25
Meets:			
Daisies ..	..	24.00	21.50
Jungli ..	..	23.50	21.00
Bimbi f.a.q. ..	..	Rs. 21.00	
Puoca bales 1st mark ..	..	Rs. 170.00	per bale ready.

(Concluded from next column)

date of birth is 14-10-1887, the provision of Section 280 of the Companies Act is applicable in his case. It is therefore necessary to have the approval of the Annual General Meeting under Section 281 for his re-election and for his continuing to hold office as Director of the Company. Special Notice of the intention to move a Resolution to that effect has been given by a Member, Shri C. L. Tiwari, and accordingly the Resolution is submitted to the Meeting.

Notice

THE NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

NEPANAGAR

NOTICE

THE TWELFTH ANNUAL GENERAL MEETING of the Shareholders of the National Newprint and Paper Mills Limited will be held at Nepanagar on Monday, the 28th September 1959, at 3-30 p.m. to transact the following business:

- To receive and adopt the Directors' Report, the Audited Profit and Loss Account for the period from 1st April 1958 to 31st March 1959 and the Balance Sheet as on 31st March 1959.
- To consider and if deemed fit, to pass the following Resolution:

"RESOLVED that the strength of Board of Directors inclusive of Managing Director and the Chairman be increased from 9 to 12 Directors."

- To consider and if deemed fit, to pass the following Resolution with or without modifications:

Special Notice of the intention to move the following Resolution has been given by Shri C. L. Tiwari, a Member of the Company. To be moved as an Ordinary Resolution.

"RESOLVED that sanction be and is hereby accorded to Sir A. Ramaswami Mudaliar to be re-elected as and continue to be the Director of the Board of Directors, notwithstanding that he has passed the age of 65, and the age limit prescribed under Section 280 of the Companies Act shall not apply to him."

- To elect a Director in place of Sir A. Ramaswami Mudaliar who retires under Article 140 of the Articles of Association and who is eligible for re-election.
- To elect a Director in place of Major Raja Bahadur Birendra Bahadur Singh who retires under Article 132 of the Articles of Association and is eligible for re-election.
- To elect a Director in place of Shri G. K. Moghe, who retires under Article 132 of the Articles of Association and is eligible for re-election.
- To appoint Auditors for the ensuing year and to fix their remuneration.
- To transact such other business as may be placed before the meeting by the Managing Director with the permission of the Chair.

By Order of the Board of Directors,

S. L. VISWANADHAN,
Managing Director.

The Share Transfer books of the Company will remain closed from 12-9-1959 to 28-9-1959 both days inclusive.

Shareholders desirous of having at the Annual General Meeting any information concerning the Accounts of the Company hereby presented are requested to send a written requisition to the Managing Director so as to reach him seven (7) days before the meeting.

A member entitled to attend and vote at the meeting, is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

EXPLANATORY NOTE TO ITEM Nos. (2) AND (3)

2. The present strength of the Board of Directors as approved at the last Annual General Meeting is 9 including Chairman, Managing Director, 3 nominees of Union Government, 3 nominees of Government of Madhya Pradesh and 1 Director representing the shareholders. At the last Annual General Meeting it was expressed by the Shareholders that the shareholders should have more representation on the Board. One more Director has therefore been co-opted to represent the shareholders. In addition both the Union Government and the Madhya Pradesh Government have indicated their desire to nominate one more Director each. This will therefore increase the strength of Board of Directors from 9 to 12.

3. Sir A. Ramaswami Mudaliar retires under Article 140 of the Articles of Association and offers himself for re-election. Since his (Continued in previous column)

chemicals which are too valuable to be discarded, specially so, at the present time, when caustic soda has to be procured from abroad with considerable difficulty and expense. Hence many modern mills with larger capacity provide for the installation of a modern soda recovery unit which gives a high percentage recovery of chemicals and also generate steam, resulting in considerable savings. Speaking about our mills, I have to state that such a unit we could go into only when we step up our pulp production to 16,000 tons and schemes are under contemplation to which I shall refer presently. However, for the present, technological and economic considerations are in favour of installing a Dorr Oliver Recalcitising Unit which is also linked with modern recovery furnace and the present proposal to install this unit would fit in with our further and larger scheme of expansion in contemplation and this may be said to be the first concrete step in that direction. I wish to add that the scheme is estimated to cost about Rs. 11 lakhs and is proposed to be financed from current resources and is considered a good investment as it replaces an outmoded equipment.

"In regard to development plans, I wish to say that I am well aware that you would like rapid rate of progress in the developmental activities of your Company and I should hasten to add that your Directors are also of similar mind.

Expansion Plan

"The question of expansion of the production capacity of the mills, is, as you are aware, engaging attention for some time past. We have submitted our application to the Government of India for expansion of production from 8,000 tons to 16,000 tons and it is receiving active and sympathetic consideration at the hands of the Government. Should my anticipation to secure the necessary licence be correct and fulfilled, appropriate steps would be taken to place specific proposals before you for consideration and acceptance and I hope it shall be possible to meet you in an extraordinary general meeting for the purpose much earlier than the next annual general meeting, when I shall look forward with confidence to your support and co-operation.

"Before I conclude, I wish to express on behalf of the directors and the shareholders our grateful thanks to the Central and State Governments for the abiding interest they have in the progress of the mills. I am very grateful to my colleagues on the Board for their uniform courtesy, consideration and valuable guidance. I wish also to express on behalf of the directors and my own warm appreciation of the willing and efficient co-operation of all our employees.

"Gentlemen, with these observations, I now move that the Directors' report, the audited balance-sheet and profit and loss account for the year ended 31st March 1959 be approved and adopted."

Note: This is not a report of the proceedings at the above meeting, of which proceedings a separate report will be circulated.

MARKET GOSSIP

(Concluded from page 387)

referred to the Government. Later, the Regional Provident Fund Commissioner, Madras, pointed out that similar night allowance was being paid by several textile mills in his region and the Government of India, therefore, directed, in June 1958, that such allowances should also be made liable to provident fund deductions. The Government had further directed that the decision in the case of the Western India Match Co., Ltd. should be implemented from 4th December 1957 in all other factories. As several factories were not deducting provident fund contributions on the 'night allowance', they represented that implementing the decision of the Government with retrospective effect would be a great hardship. On my recommendation, the Government of India have agreed to enforce this decision with effect from 31st August 1959 only, in order to avoid hardship to employers.

"As the question here was one of interpretation of the existing definition of the expression 'basic wages' used in the Employees' Provident Funds Act, namely, whether or not it included the night allowance, a Government notification was not required. This decision was, however, circulated to all Regional Provident Fund Commissioners for further necessary action.

"At present, contributions are being deducted on basic wages and dearness allowance including cash value of food concession, if any. The Government of India have under consideration a proposal to amend the Act with a view to recovering Provident Fund contributions on 'total earnings'. The allowances mentioned in Government of India's circular letter dated the 25th May 1959 are illustrative; the list is not exhaustive. The main proposal is to amend the Act to recover contributions on 'total earnings'."

incentives of money and other individual rewards will have a place in the new social set-up. But the motivations for social or economic activity would have to undergo a change and a climate will have to be created in which it would be easier for common men and women to work for the sublimation of their egoistical impulses. We feel that, in the background of India, its culture and its philosophy, it should not be difficult to accomplish this, given a proper lead by those who constitute the leadership in the political, social and economic spheres of the country's life."

What is farcical about this quotation is the Committee's claim that it has put forward these proposals "bearing in mind the principle that good economics and good politics should take note of what is possible and practicable." What is more, it has come to this conclusion after X-raying the failures and deficiencies in the implementation of the first and second Plans. Of the deficiencies it has discovered, two are worth mentioning. They are, in the words of the Committee, "deficiencies in official and non-official organisational efforts" and "deficiencies in creation of the necessary social outlook, lack of sufficient regard for values on which we have decided to base the new social order, the lack of a sensitive regard for the lot or plight of our people in the lower rungs of the social ladder." Does the Committee think that these deficiencies, which could not be overcome during the last eight or nine years, could be made up in the next two years, thereby paving the way for the smooth implementation of the third Plan envisaging an investment of Rs. 10,000 crores to Rs. 11,000 crores? The Committee seems to have suffered from a confusion of objectives. Surely, the chief objective before the country is economic development and not social revolution. The former will automatically bring about the latter, as it has done in most of the countries of the world. By giving an excessively high priority to social revolution, the Congress Party is only retarding economic growth which alone can abolish inequalities.

WHITHER FOOD POLICY?

THE National Development Council has met and dispersed without shedding any new light on the Government's food policy. The result is that, so far as this body is concerned, there is to be no change in the way in which the food situation is to be handled. A semblance of State trading in food will be maintained. It is not clear from the official Press note on the Council's deliberations whether the Council wanted any changes to be made in the system of State trading. Press reports, however, stress that the Council decided that there should be no reversal of the policy. Beyond this, nothing is known. From this point of view, the position remains obscure. This is deplorable, for it is widely held that the chief inspiration for the present high level of food prices is the sense of uncertainty, if not insecurity, engendered by State trading plans in the minds of farmers, who are apparently convinced that stocks in their hands are worth more than in Government's godowns.

It is difficult not to label the Government's policy as one of "drift." It is also a policy which is inspired by doctrinaire considerations. The Government will be satisfied if State trading in foodgrains is maintained, irrespective of whether it results in improvement in the food situation or not. Apparently, the Union Food and Agriculture Minister, Mr. S. K. Patil, is not entirely free to implement his pragmatic approach to the problem. How far is he a free man today? It is not merely cartoonists who have raised this question. The public is really interested in knowing what the Central Government, and as a representative of that Government on the food front, Mr. Patil, have to say on the future of India's food policy. After all, it is a matter of utmost significance to the farmers who produce food and the consumers who comprise all sections of the people that they should know where the Government stands. Is the country in for total control on food articles? Are the States willing and able to assume such control? Will stocks disappear from private traders' establishments and reappear in fair-price shops run by the Government? To none of these questions the Central and State Governments are in a position to provide clear answers.

Even those who are the most convinced partisans of free enterprise recognise that the State should exercise some control over production and distribution of foodgrains. Only, the point should never be missed that the aim is not State control but availability of foodgrains at reasonable prices. This indeed was the point which Mr. Patil sought to emphasise in the course of

his speech in the Rajya Sabha last month. He said that he was neither in favour nor against State trading. He added: "If I can do without it, I shall be happy because, some time, after five or ten years, free economy must come into play." He was, however, prepared to resort to State trading as an economic measure only for a "limited period" and for a "limited objective"; but he could not think of it as a permanent policy. Further, he attributed the rise in food prices partly to the fear complex in the country which, in its turn, was the result of "maladjustment of the food distribution system." These observations are the outcome of Mr. Patil's preliminary study of the problem. Further study is, however, likely to confirm, rather than refute, the truth of these observations. Available evidence suggests that the announcement of State trading has scared the peasants into an attitude of secrecy over their stocks. It is true that, if the next harvest turns out to be a bumper one, they will not be able to hold out for long. But it is not unlikely—this too has been revealed by *ad hoc* surveys—that plentiful supply of cheap credit and absence of control over the uses to which it is put may strengthen the farmers' hands as against the buyers. This might well give another twist to the inflationary spiral.

To those who expected that the National Development Council might subject the State trading scheme to a critical scrutiny, its deliberations must have caused deep disappointment, if not also some resentment. What purpose does the Council hope to serve if it merely underlines a policy which, on the Government's own admission, has failed? The official Press note avers that the representatives of all the surplus States were in favour of State trading in foodgrains. They pointed out that, despite a late start and certain deficiencies in the administrative arrangements, prices had on the whole been maintained at lower levels than during the past year. This is true. But is this favourable trend to be attributed to State trading or to more plentiful crop? Many men, with extensive experience in the trade, have suggested that, in the absence of State trading and zonal restrictions, prices would have dropped to lower levels. Perhaps, this kind of reasoning is defective, in that it is at best a surmise based on assumptions which are contrary to the facts of the situation. But it cannot be altogether incorrect, for some members of the Council themselves admitted that there were certain wasteful cross movements of foodgrains which ought to be prevented. A free economy could certainly ensure the prevention of such movements. Be that as it may, the Council failed to give a clear guidance to the Government as to the ways in which State trading, if it must be maintained at all, should be modified in the light of the experience gained in its working.

It is, however, gratifying to note that the Council generally recognised the responsibility of the food surplus States to make available their surplus to the other regions. It would appear that the representatives of the deficit States expressed doubts as to whether the surplus States would be able to obtain the supplies required, if they confined their operations to levy from traders. They thought that these States should employ more intensive methods of procurement, not only from the trade but also directly from producers and that they should fix retail prices also. If the surplus States were not able to fulfil the assurances given by them, the deficit States would necessarily have to look to the Centre for making up the deficit. The representatives of all surplus States recognised their responsibility to make available supplies for deficit areas to the maximum extent possible. It is to be hoped that these assurances will be vigorously implemented for, if the country does not pull together even on the food front, it will be a serious reflection on its level of emotional integration.

A somewhat deplorable feature of the Council's deliberations was that no serious attempt was made to assess the programme for increased food production. A brief reference seems to have been made to paucity of pig iron supplies for agricultural implements and an assurance was given by the Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh, to the effect that supplies of pig iron had improved lately and the steel position would ease in the next six months. But the Council could have spent its time more usefully in an overall review of food production programmes. After all, there is no denying the fact that, if food is in plentiful supply, there will be no need to waste administrative talent and energy on food distribution and, if it is in deficit, the best system of distribution will fail to give complete satisfaction. The Government will do well to convene a meeting of agricultural experts to decide how best the country's food output can be speedily stepped up.

FUTURE OF ENGLISH

THE debate in the Lok Sabha on the report of the Committee of Parliament on Official Language provided an occasion for a further review of the question of the future of English which has agitated the best minds in the country for sometime now. The Committee, it may be recalled, has expressed the view that the approach to the question of the final change-over from English to Hindi has to be "flexible and practical." It has also recommended that, after 1965, when Hindi becomes the principal official language of the Union under the Constitution, English should continue to be used for such purposes as may be specified by Parliament by law and for as long as necessary. This has been generally regarded as a compromise solution which meets the reasonable aspirations of the protagonists of Hindi and the doubts and fears expressed by those who are opposed to the change-over.

In the course of the debate on the report, Mr. Nehru reiterated the assurance he had given earlier that there would be no imposition of Hindi on the country and that the question as to how long English should continue as an associate language would be determined only by the non-Hindi-speaking people. The Union Home Minister, Mr. G. B. Pant, who expressed his agreement with the Prime Minister's view, reiterated that English would continue even after 1965 and that the pace of change-over to Hindi would be determined by the degree of co-operation they got from the people living in non-Hindi regions.

These assurances will be widely welcomed. It will, however, be regretted in several quarters that the case for continued retention of English as the Union language and as the medium of instruction in higher education has not received the support it deserves. But it is noteworthy that many participants in the debate, including the Prime Minister himself, spotlighted the immensity as well as the complexity of the problem of transition from English to Hindi and regional languages. In the judicial and administrative fields, the problem is one of maintaining unimpaired a certain continuity in tradition and usage. There is a real danger that any abrupt change-over will mean severe setback to standards of administration, if not also grave confusion. Further, the essential unity of the country, which was given a shape and a direction by the use of English language extending over several decades, might be easily endangered through the transformation of the official language at the Centre and in the States. He does no service to the country who underestimates the difficulties involved in transition.

No less difficult is the problem of change-over in the medium of instruction in technical and higher educational institutions. Those who point angrily to the fact that, despite decades of English education, the people with knowledge of English language are a microscopic minority, ignore the consideration that, in all countries, the intellectuals form only a small fraction of the total population. The question is not whether the English-knowing section is small or large. The point is what their disappearance from the national scene will mean to the country. In other words, so long as the rich heritage in administrative skill, technical knowledge and higher learning is confined to people who can express themselves best only in English, it is also best that the transition—that is, if it should take place at all—is spread over a reasonably long period that will permit adequate adjustments to be made.

Any abrupt change in medium of instruction in higher institutions of learning and in general administration, particularly in judicial administration, is fraught with dangers of serious dislocation. Mr. Nehru rightly deprecated the "business of some kind of slot machine turning out Hindi words and translations which was an artificial, unrealistic, fantastic, absurd and laughable approach." Surely, it is an oversimplification of the problem to think that, if a dictionary of terms were compiled, the transition from English to Hindi and regional languages could be easily and speedily effected. Words acquire their meaning through long and popular usage. To think that words can be coined in a lexicographer's mint is to ignore the essence of growth of a language. And yet, without even the semblance of experimental approach, the medium of instruction and the language of administration are sought to be changed. It is time those who have the country's intellectual and technical good at heart cried halt to this reckless speed in linguistic transition.

MARKET GOSSIP

THE share markets have recovered from the drooping trend. The riots in Calcutta, caused by the Communists, have been brought under control and the City is fast returning to normalcy. The rift between the Defence Minister and the Army Chief of Staff has been closed. Thus, two of the three bearish factors that influenced the stock markets last week, have ceased to operate. China is, of course, still in an aggressive mood, refusing to recognise India's just stand. It is firmly holding on to bits of Indian territory in N.E.F.A. and Ladakh. It has repudiated the McMahon Line. All these developments show that China is going to be a big headache to this country. But the share markets do not seem to be perturbed by this prospect. What could be the reasons for this attitude?

In the first place, the general impression is that neither China nor India is going to start a war over the border incidents. Secondly, it is felt that the Congress Party will refrain from encouraging the Communists. The third feeling is that the climate for the private sector will improve. Fourthly, the Chinese aggression will, it is argued, lead to a strengthening of India's friendship with the U.S., the U.K. and other countries of the free world, which in turn will brighten the prospects of getting external assistance for India's third Plan.

Although the chartists are predicting that the share markets are heading for a big slump similar to the one experienced in 1956-57, this week's price trend shows that the operators are not impressed by this forecast. This is not surprising, for, barring the threat from China which has, in any case, been ignored, no new bearish developments are in the offing. The bulls are feeling heartened by the fact that India's relations with Pakistan show promise of a distinct improvement. Conditions in the money market are extremely easy and interest rates are gradually falling. The Dhebar Committee report on the third Plan is not as bad as it was feared to be. Although the Committee has not gone out of its way to support the private sector, it has refrained from making any attacks on this sector. Its observations on the resources for the Plan do not contain any suggestion for an increase in direct taxation. On the contrary, the Committee seems to share the view that there is little scope in this direction, though, in one place, it says that the middle class and the upper middle class should be made to pay more for the financing of the Plan than they are doing at present.

Spate of New Issues

Although the money market is easy, with banks flushed with funds, money may well become quite usable in a month's time. A number of new capital issues by the private sector is pending to be put through. Before the end of the year, the aggregate amount of these issues will be at least Rs. 30 crores, if not more. The Bombay Municipality will shortly be approaching the market with an issue of Rs. 5 crores. The rate of interest on this loan may be 4 per cent. for 12 years, with the issue price at a slight discount. The Government of India itself is likely to come out with a second issue of its new loans before the end of this month. The amount may be Rs. 40 or 45 crores.

Since all these borrowings are going to be spent, they will come back to the banking system in course of time. A good part of new capital due to be raised by the T.I.S.Co. for instance, will be used to repay the loans taken from banks. The Bombay Municipality will raise the loan and put the funds back with its banks for withdrawal by stages.

Incidentally, it came as a revelation to us when Mr. J. R. D. Tata told the shareholders of the T.I.S.Co., at their annual general meeting last week, that several banks were quite willing to give the Company large amounts by way of fixed deposits at 4½ per cent. per annum and that it had, indeed, taken a few crores of rupees on this basis. That banks should place deposits with industrial companies seems to be something quite novel. It must be noted that a deposit amounts to an unsecured loan. If the banks are prepared to go that far, it is a striking indication of their difficulties to find remunerative outlets for their funds. No wonder, Mr. Tata declined to accept the suggestion of a shareholder that the T.I.S.Co. should take deposits from shareholders in amounts of Rs. 25,000 and over at 4½ per cent. per annum. He thought that it would not be a wise thing for a company like the T.I.S.Co. to take deposits from hundreds of individuals when such funds could be easily had from a handful of banks for a short period.

A Suggestion

The comfortable conditions prevailing in the capital market and the fall in interest rates are serving as a great attraction for several industrial concerns to replace their borrowings either by long-term debentures or by capital (equity or preference). It would certainly be advisable for them to improve their financial position by issuing equity capital at par or at a slight premium, preferably the latter, as that would make the task of getting the permission of the Controller of Capital Issues easier. The only stumbling block in the way of such reorganisation is the new system of corporate taxation. If the Government were to modify this system and abolish at least the tax on bonus shares and capitalisation of share premium account, many companies would go in, more for equity

capital than for debentures and loans from specialised financial institutions such as the I.F.C., the N.D.C. and the I.C. and I.C. It would be a good thing if the country as a whole if, by a slight adjustment in the fiscal policy in favour of investors, the Government were to facilitate the existing companies to raise capital direct from the market for financing expansion, development and modernisation, rather than continue to help them with loans through its financial institutions. The resources of these institutions could be used for helping new industrial companies to come into being. It is needless to add that, when existing companies raise their requirements of capital through the issue of equity and preference shares, there is invariably an increase in the number of shareholders and a reduction in concentration of economic power, an important objective of the Government. It will also tend to restrain the boom on the Stock Exchanges by bringing about an increase in the supply of shares.

Killick Industries

After the acrimonious controversy that went on in the managing agency house of Killick Industries recently, resulting in the exit of Mr. K. G. Milne and Mr. E. D. Sheppard, things are said to be settling down to normalcy. The house will soon be an entirely Indian institution as the few old British shareholders have sold their holdings to a small group of Indian business men, headed by Mr. Kantilal Nahachand. Some time ago, Mr. Purshotamdas Thakurdas, who had led the opposition to Mr. Sheppard and Mr. Milne, left the Board of Killick Industries Ltd. of his own accord. It is believed that Mr. Chunilal V. Mehta will also shortly relinquish his directorship.

Mr. A. N. Haksar, the new Managing Director and Chairman of the Company, has just returned from a business tour of the U.K. Some of the industrial projects which the Company had worked out as part of its expansion plans are likely to be taken up for execution in the near future, with the help of British collaboration.

Foreign Private Capital

The need for creating a more favourable climate for foreign private capital is emphasised in the annual report of the Reserve Bank of India for the year ended 30th June 1959. The report points out that the inflow of this capital has continued to remain at a low level in relation to foreign Governmental assistance and the World Bank aid. Total fresh capital receipts from private sources abroad amounted to only Rs. 6 crores in 1958 (provisional estimate), as against Rs. 16.3 crores during 1957 and Rs. 11.6 crores in 1956. These figures are inclusive of petroleum investments, which showed large fluctuations. Excluding petroleum investments, the private capital investments with Rs. 5.5 crores in 1958, as compared with Rs. 4.1 crores in 1957 and Rs. 2.8 crores in 1956. Commenting on these trends, the report observes: "The disappointingly small flow of private foreign capital indicates the need for further efforts for creating a better climate for investment, including simplification of procedures." The report is also highly appreciative of the role of foreign capital in the economic development of this country. It says:

"With the utmost intensification of domestic effort and improvement of exports, the country would have to depend for some years to come on foreign assistance on a substantial scale, until the economy reaches the stage of self-sustaining growth. In this context, it is desirable from time to time to assess policies and procedures with a view to stimulating the flow of private capital from abroad."

Coal Prices

The coal industry, as is only to be expected, is disappointed over the increase in coal prices announced by the Government. It feels that the 50 p increase is inadequate to cover the rise in production costs. The Coal Prices Revision Committee, the report of which forms the basis of the Government's decision on coal prices, has itself admitted it was unable to arrive at a general cost structure for the industry. The industry feels that the Committee has made some entirely incorrect assumptions in arriving at the "normal cost" of Rs. 17.90 per ton. In the course of his analysis of the problem of coal prices, made at a Press conference in Calcutta, Mr. R. H. Wright, on behalf of the Joint Working Committee of the Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners' Association, expressed the view that the depreciation and development allowance had been under-assessed by the Coal Prices Revision Committee by at least Re. 1 per ton. He felt that the present cost structure of the industry justified a further increase of Rs. 2 per ton.

Other points stressed by Mr. Wright were the abandonment of the ceiling prices on grade III coal and additional incentives for increased production of soft coke of which there was shortage. He also urged the immediate application of the price increase formula to the collieries in Madhya Pradesh, Bombay and Orissa, pending the finalisation of arrangements for the grading of the coal produced by them, as against the Government's decision to grant them increase in prices only after grading arrangements have been completed. He, however, expressed the industry's appreciation of the Government's acceptance of the plea for increased assistance for stowing and for help in the operation of deep, gassy and difficult mines.

In view of the fact that the rate of increase in coal output has not been maintained and there are reasonable apprehensions that the 60-million-ton target under the second Plan may not be reached, the Government will do well to see how best the industry can be encouraged to increase its output. It would appear that the industry's representatives are likely to seek an interview with the Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh. It is to be hoped that the interview will pave the way for a more acceptable settlement of the issue of coal prices.

I. M. C. O.

It is heartening to note that the U.S. will support India's demand to be listed as a party to the convention on the Inter-Governmental Maritime Consultative Organisation (I.M.C.O.). The convention, evolved in 1948, lays down that the Organisation should provide a forum for consultation on technical matters relating to the safety of ships and for consideration of issues relating to discriminatory practices by maritime nations. India has ratified the convention, subject to certain reservations on the question of discrimination. Its stand, in effect, has been that aid and assistance by a State to its national shipping is in the nature of flag protection, rather than flag discrimination. Some of the more important maritime nations have objected to the acceptance of India's ratification of the convention on the ground that it does not signify full acceptance.

India's stand should, however, gain wider recognition through the U.S. support to it. India insists that the liberal interpretation, which is the basis of a U.N. resolution passed in 1952, should be made applicable to its ratification of the I.M.C.O. convention. This resolution calls upon the U.N. Secretary-General to accept deposits of documents containing reservations to multilateral conventions under the U.N. auspices without pronouncing on the legal consequences of such reservations; there could be no attempt at applying the "unanimity rule" to a multilateral convention. If the principle embodied in this resolution is applied to India's stand on the I.M.C.O. convention, it will be readily conceded that its reservations cannot be held a bar to the acceptance of its ratification of the convention.

World Sugar

The world sugar market is ruling firm, with prices registering further gains in the past three weeks. Cuban raw sugar at New York has touched the 3.48-cent-per-lb. (f.o.b. Cuba) mark, as against 2.88 cents prevailing on 19th August. India's 2.55 cents on 21st July last. Similarly, spot sugar at London now stands higher at £27.7/8 (Rs. 372) per ton, which compares favourably with £26.5/8 (Rs. 355) and £24.3/4 (Rs. 323) on the aforesaid dates, respectively. The International Sugar Council may claim that the series of steps taken by it, especially the one seeking to relieve the exporting countries of the obligation to market the entire balance of the 1959 quotas before the end of December next—this measure, it will be recalled, was decided upon at the London meeting held on 18th August, 1959—have succeeded in stabilising the conditions in the world sugar market. This claim, however, will be justified only to some extent. For the real causes for the marked rise in world sugar lie elsewhere. Among them, special mention must be made of the following:

1. The beet sugar crop in Northern Europe is said to have suffered a setback on account of the drought through the summer. In particular, West Germany, which is normally an importer of sugar but was self-sufficient last year thanks to a large beet crop, is considered very likely to resume buying sugar in the world market this autumn.

2. The sugar crop in Cuba, the world's largest producer and exporter of sugar, in the ensuing and subsequent seasons is expected to be lower; the actual extent of the fall in 1959-60 as compared with the current season's output is placed at 500,000 tons. The expectation is based on three grounds. One, the Cuban Government has decided to restrict sugar production in its anxiety to raise prices from the present low levels. Two, the move to divide sugar plantations among peasants will result in inefficiency of small-scale operations which, to quote a report, "will reduce the crop quite appreciably without the need for extra administrative action." Three, there are persistent rumours of counter-revolutionary activity which may disrupt production.

3. It is stated that several countries are negotiating purchase of Cuban sugar. A Cuban delegation was in Japan recently to conclude a deal of 300,000 tons of raw sugar. China is asking for offers from Cuba, and Spain wants to buy 40,000 tons of sugar.

Whatever may be the factors that have been responsible for the improvement in world sugar prices, the prospects for the increase to go on much longer do not seem to be encouraging. The unsold stocks of sugar still hanging on the world market are very substantial, consequent on the failure of the rise in consumption to keep pace with the actual production. Currently, the world sugar output is at an annual rate of over 50 million tons (raw value), while the rate of consumption is below 45 million tons.

Price Trends

Now that the first nine months of the current calendar year are nearly over, it would be useful to look back at the trend of prices in the country. Throughout the first half of 1959, wholesale prices showed an upward trend. But for occasional ups and downs, the price curve was steadily climbing up. The general index (base: 1952-53=100), which had tended to look up early in January after a con-

(Continued on page 453)

SHARE MARKET FIRM

VALUES RECORD HANDSOME GAINS

(From Our Own Correspondents)

BOMBAY, 10th September

THE downward trend in equity values noted on the Stock Exchange in the past two weeks abated during the week under review. In fact, the market ruled distinctly firm. Several bulls were busy making replacement purchases, while fresh offerings were restricted. There was also good investment buying which followed hopes of better working results for industries. The hopes stemmed from the belief that the authorities might revise their economic and fiscal policies in the light of the growing public criticism lately. The surfeit of funds available in the money market and the declining yields on gilt-edged securities also enlivened the interest of operators. Even the possibility of a crisis in Indo-Chinese relations following the latest rejoinder of the Chinese Prime Minister to India's aggression charge would appear to have had no significant effect.

Section-wise, textiles were particularly buoyant, thanks to reports of excellent offtake of both yarn and piecgoods for domestic consumption as well as exports. Several cotton mills situated in Greater Bombay are contemplating to shift to places outside the City and the State Government is expected to encourage such shifting. Steels and engineering also were well supported on expectations of better return on investments in the coming years after the expansion schemes are fully implemented. Sugars, too, elicited good buying on rumours that the Government might concede the industry's demand for enhanced sugar prices with a view to boosting production next season. Cements changed hands at higher rates, despite fears regarding the Wage Board's recommendations, for the long-term outlook was considered to be quite encouraging.

In contrast to the general trend, preference shares were somewhat subdued. Fresh buying support was lacking. Those who are holding these shares are anxious about the effects of the application of the Indian Finance Act which makes it obligatory on the part of companies to deduct tax from dividends. The anxiety is said to be especially great in the case of investors who hold shares of companies which do not specifically say whether they will pay dividend free of tax or subject to tax.

Steels

Tate Ordinaries began the week at Rs. 175.77 on Friday the 4th inst., as against Rs. 174.75, and, after recording a rise of 25 nP on the same day, eased to Rs. 175.35. On Tuesday, the shares were ex-highted, the closing rate being Rs. 181. The quotation advanced to Rs. 183 today before finishing at Rs. 182.50. Indian Irons improved in the course of the week from Rs. 24.40 to Rs. 24.96; at one time today, they were higher still at Rs. 25.05.

Textiles

Most of the scrips in this section registered marked gains. Centurys spurred by Rs. 142 to Rs. 565. Khataus advanced by Rs. 17.50 to Rs. 242.50. Kohinoors and Shreevatsas rose by Rs. 16 each to Rs. 317 and Rs. 209, respectively. Standards strengthened by Rs. 15 to Rs. 572, Svadeshis by Rs. 12.50 to Rs. 25. Monsoons by Rs. 16.75 to Rs. 252. Finlays by Rs. 10 to Rs. 280. Central Indias by Rs. 7 to Rs. 109. Podars by Rs. 6 to Rs. 145 and Gokaks by Rs. 4.50 to Rs. 163. Tata Mills put on Rs. 2 to Rs. 46.50. Indores gained Rs. 1.50 to Rs. 93. Elphinstones gathered a like amount to Rs. 36. Bombay Dyings climbed up from Rs. 62.90 to Rs. 64.70 today before closing at Rs. 64.60. The net rise over the week was Rs. 1.70. New Greates, however, encountered selling and fell by Rs. 7.75 to Rs. 175.25. It is stated that the Managing Agents of the Company (Messrs W. H. Brady & Co. Ltd.) have sold to the parties (Messrs. Shrinani Prasad Jain and S. R. Damani) 9,000 shares at a little over Rs. 190 per share and that the two parties concerned have already acquired the controlling interest.

Banks and Insurance

Bank shares generally tended to move up, while insurance shares were a shade easy. Among the former, United Commercial Bank advanced by Rs. 1.50 to Rs. 63. Barodas increased by Rs. 1.45 to Rs. 183.50 *ex-div.* B' shares rising from Rs. 45.77 to Rs. 47 *ex-div.* Central Banks were fully firm at Rs. 90, as were Indias at Rs. 114. Jaipurs at Rs. 59.50, and Punjab Nationals at Rs. 25. In the insurance group, New Indias dropped 60 nP to Rs. 59.40, S' shares declining by a rupee to Rs. 60. British India Generals lost 24 nP to Rs. 140. All Indias were dull at Rs. 3.59.

Sugars

Good buying support was noticed in the sugar section. Reflective of this was the spurt of Rs. 6.25 in Walchandnagar which stood at Rs. 323.75 today. Belapur advanced from Rs. 307.60 to as high as Rs. 314.60 today; towards the close, they were given a little lower at Rs. 313. Phaltans rallied from Rs. 159.40 to Rs. 163. Bhopals were fully maintained at last week's level of Rs. 23.80.

Cements

Cements scored handsome gains during the week. Associated Cements picked up Rs. 4.35 to Rs. 145.25, after being higher at Rs. 147.75 on Tuesday. Digvijays improved by Rs. 2 to Rs. 146. Orissas rose by Rs. 1.80 to Rs. 14.76. Bagalkots gathered 33 nP to Rs. 8.64. Ashokas were fully steady at Rs. 8.72. Dalmins and Jai-pur Udyogs, however, eased by 4 nP each, the former to Rs. 10.56 and the latter to Rs. 10.52.

Engineering, Minings and Shippings

In the engineering group, Premier Constructions were well favoured and firmed up by Rs. 13.50 to Rs. 353.50. Tata Locomotives spurred by Rs. 5.50 to Rs. 184. Alcock Ashdowns by Rs. 4.50 to Rs. 251.50, Voltas by Rs. 3.50 to Rs. 169. Lamps and Tonbros by Rs. 1.32 to Rs. 23.16. To Rs. 169. Lamps and Tonbros by Rs. 1.32 to Rs. 23.16, and Mahindras by 40 nP to Rs. 21.88. Among minings, and Shrivastavs attracted good attention and advanced by Rs. 5.50 to Rs. 90.50. Indian Coppers were better by

4 nP at Rs. 4.10. Shippings were irregular; Scindias gained 4 nP to Rs. 17.32, whereas Great Easterns receded by 40 nP to Rs. 19.40.

Miscellaneous Industrials

There was a rise of Rs. 13 in Bombay-Burmahs which stood at Rs. 527 today. Indian Dyostuffs advanced by Rs. 12.50 to Rs. 260. National Rayons strengthened by Rs. 11.50 to Rs. 350.50. Wincos were marked up by Rs. 7.50 to Rs. 219. Today's closing rate for a few other popular counters, with figures in brackets indicating net gain over the week, are: West Coast Rs. 151 (+Rs. 7.50); Anil Hardboard Rs. 215 (+Rs. 6); Tata Oil Rs. 64.50 (+Rs. 3); Alembic Chemicals Rs. 181 (+Rs. 1); Gwalior Rayons Rs. 24.12 (+96 nP); Polychem Rs. 129 (+45 nP); D.L.C. Rs. 5.40 (+30 nP); Hindustan Lever Rs. 30 (+25 nP). Automobile shares ruled strong. Premiers spurring by Rs. 3.75 to Rs. 135.75 and Hindustan Motors by Rs. 1 to Rs. 12.88.

Calcutta Stock Exchange

CALCUTTA, 9th September

Civil disturbances followed by curtailment of transport facilities markedly affected trading on the Calcutta Stock Exchange during the week under review. The volume of transactions was pitifully low and, in the uncertainty thus caused, prices gave way on a wide front. However, by Saturday, as peaceful conditions returned and normal life was again in evidence, operators on the Exchange began to put in an air of confidence, which was duly reflected in the business put through since then. The recovery was nevertheless too slow and painful and closing levels for the week were mostly lower on balance. There was keen sense of disappointment when three of the prominent companies, which had been paying dividend to their preference shareholders tax-free, announced that they would now pay the preference dividend after deducting tax. The disappointment was all the greater, since it had been believed that the new taxation system for companies would not affect the net return to the shareholders, whether preference or ordinary. Market circles, on learning that only those companies the articles of association of which specifically mention the word "tax-free" are now legally bound to continue paying dividend tax-free, became nervous and this explains this week's rapid fall in prices of preference shares. Operators feared if ordinary dividends would also likewise be affected.

Among coals, Burrauks were as low as Rs. 16.25 before recovering to Rs. 16.75. From Rs. 8, Central Indias declined to Rs. 7.94, but closed at Rs. 8.25. New Beerbhooms were dealt with at Rs. 30.50, as against Rs. 21.12 previously, while Ranegungees recovered to Rs. 17.25 from Rs. 16.94. Western Bengalis were quiet at Rs. 6.50. Karanpura Developments rose from Rs. 13.25 to Rs. 14.56.

The feature in jutes was the subsequent recovery that set in. At Rs. 205, Aucklands put on Rs. 5, but closed at Rs. 204. Caledonians, on interested support, were pushed up to Rs. 191 from Rs. 187. From Rs. 88.50, Ganges hardened to Rs. 98, while Howrahs were at one time as low as Rs. 23.25, as against the opening of Rs. 24 before closing at Rs. 23.37. Kinnisons gave way from Rs. 191.50 to Rs. 177 and Birlas from Rs. 22.81 to Rs. 22.62. Deltas at Rs. 179 accounted for a loss of Rs. 1.

Among engineering, Indian Irons opened at Rs. 23.40 and, after remaining quiet, rose to Rs. 23.94 before closing at Rs. 23.88. On a proposal of rights issue of preference shares, Texmacos sagged to Rs. 23.60, but, with the general recovery, were subsequently better at Rs. 23.25. Indian Standard Wagons changed hands at Rs. 80.50, as against Rs. 86 previously. Guest, Keen Williams sagged to Rs. 38.50 from Rs. 39.25 and Kumardhubs to Rs. 6.62 from Rs. 6.87. Indian Steel and Wire Products were firm at Rs. 37.

Among miscellaneous industrials, National Cables recorded a spurt advance to Rs. 39.25 on a proposal for a rights issue at par in the proportion of one share for every two shares at present held. Hindustan Motors recovered from Rs. 11.81 to Rs. 12.44. Titagarh Papers from Rs. 43.87 to Rs. 44.62 and Orients from Rs. 38.15 to Rs. 38.80, while Martin Burns eased to Rs. 27.69 from Rs. 27.94. Indian Coppers lost 7 nP to Rs. 4.05 before recovering to Rs. 4.10. Indian Cables closed at Rs. 31.31, after being lower at Rs. 30.75, but at Rs. 14. B.I. Corporations declined by 10 nP to Rs. 8.12 but soon jumped to Rs. 8.52.

Madras Stock Exchange

MADRAS, 9th September

The Madras Stock Exchange ruled quiet during the week under review. Professional buying was at a low ebb, thanks to anxiety over the reported Chinese incursions into Indian territory and that country's objection to accept the McMahon Line for the demarcation of the north-eastern border. Textile shares lacked support, notwithstanding encouraging domestic offtake and export demand. Teas were also subdued. Even reports of higher prices at the recent Cochin auctions had no effect. Coffee and rubber shares, too, were easy. Sugars ruled dull, as operators preferred to await the emergence

of a clearer picture regarding the outlook for the industry, in view of the latest decision of the Centre, taken after consultations with the South Indian Sugar Mills' Association, to ensure a more systematic distribution of sugar in the Southern States. Miscellaneous industrials were also dull in the absence of buying support.

Among sugars, Kirlampudis encountered selling and moved down by Rs. 1.50 to Rs. 82.50. Travancoroses sagged by 10 nP to Rs. 12.35. Conveyers were neglected at Rs. 117.50, E.I. Ds at Rs. 38.80, Indias at Rs. 13.10 and Mysorates at Rs. 49.50. Decans, however, gained 13 nP to Rs. 12.28.

In the tea section, Kil Kotagiris receded by 5 nP to Rs. 8.25. Two-fords were dull at Rs. 16.60, as also Nelliampathys at Rs. 2.88. Haileyaharies were quoted at Rs. 18.50 *ex-div.*, as against Rs. 20.50 *ex-div.* last week-end. Nilgiris were unchanged at Rs. 7.80. The Directors of the Company have announced a dividend of 5 per cent. for the year ended March 1959, as against 5 per cent. paid in the previous year. Ouchterlony, however, gathered 5 nP to Rs. 5.55. Periakaramalais 4 nP to Rs. 4.01 and Chembras 3 nP to Rs. 4.28. In the coffee section, Anaparis declined by 5 nP to Rs. 5.10. Ossoors shed 3 nP to Rs. 3.85. Coffee Lamps were quiet at Rs. 24. Consolidated Coffees at Rs. 22 and Vartiyahills at Rs. 3.85. Mysore Amalgamateds were unaltered at Rs. 5.90. The Directors of the Company have declared a dividend of 10 per cent. for the year ended March 1959, same as that distributed last year. Among rubbers, Kailassas lost 20 nP to Rs. 4.70, following the announcement of the final dividend at 10 per cent., making a total of 20 per cent. for the year ended February 1959, as against 25 per cent. for the previous year. Vaikundams were dull at Rs. 27.50, Highlands at Rs. 12.65, Malankaras at Rs. 19.40 and Teekoyas at Rs. 7.50. Rajagiris evoked special support and gained 65 nP to Rs. 18.70. Midlands rose by 10 nP to Rs. 12. The dividend of the Company for the year ended March 1959 has been maintained at the previous year's level of 10 per cent.

In the textile section, Coimbatore Spinnings suffered a loss of Rs. 2 to Rs. 48. Coimbatore Cottons eased by a rupee to Rs. 143. Trichinopoly shed 10 nP to Rs. 10.90. Bangalore Woollens were quiet at Rs. 181.50, as were Cannanores at Rs. 140. Rajalakshmis at Rs. 62, Vasantas at Rs. 211. But Metturs put on Rs. 2.00 to Rs. 372. Buckingham increased by a rupee to Rs. 189.

In the miscellaneous section, Rallis retreated by 50 nP to Rs. 77.60. Orissas Cements fell by 30 nP to Rs. 16.50 and Dalmia Cements by 20 nP to Rs. 10.60. Travancore Cements shed 5 nP to Rs. 6.65. Andhras and Ra. 10.25, respectively. F.A.C.T.s were lower by 7 nP at Rs. 9.23. Parrys were a shade easy at Rs. 4.19. Mettur Chemicals were unchanged at Rs. 12.16, Sponcers at Rs. 20.25, and Western India Plywoods at Rs. 200. Textools, however, spurred by Rs. 3 to Rs. 185. Aluminium Industries gathered 40 nP to Rs. 21.95 on reports of satisfactory working in the year ended March 1959 when the sales of the Company were higher by Rs. 40.25 nP to Rs. 17.

ADVANCE PAYMENT OF TAX BY COMPANIES

Following the changes introduced by the Finance Act 1959 in respect of company taxation, all payments of advance tax (including income-tax) by companies under Section 18A during the current financial year 1959-60 in respect of the assessment year 1960-61 will be wholly accountable under the account head "III Corporation Tax." At the time tax due on 15th September 1959 (and subsequent instalments), the companies are, therefore, required to show the correct account head in the challans. The account head to be shown for both income-tax and super-tax will be:

"III Corporation Tax—Section 18A collections—Ordinary collections—"

Similarly, the tax (both income-tax and super-tax) deducted at source from dividends payable to companies, whether interim or final, declared by a company in respect of its accounting year relevant for the assessment year 1960-61, and from the interest on debentures payable to companies on or after 1st April 1959 will also be accountable under the head "III Corporation Tax." The persons responsible for the deduction of tax from dividends and interest payable to companies should deposit the tax deducted under the following head:

"III Corporation Tax—Deductions from dividends and other income—(a) Income-tax, (b) Super-tax."

In the case of any doubt or difficulty, the Income-tax Officer concerned should be contacted.

Notice

MARTIN BURN LIMITED

CONVERTIBLE NOTES

NOTICE IS HEREBY GIVEN THAT INTEREST for the half-year ending 30th September, 1959, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 30th September, 1959, or in accordance with their instructions.

A. G. CHIDAMBARAM

12, MINSTER ROW,
CALCUTTA, 10th September, 1959

NEWS IN BRIEF

THE Government of India has set up a committee, headed by Mr. G. D. Somani, M.P., to inquire into the affairs of the Edward Mills Company, Ltd., Bewar, Rajasthan.

As a measure of export promotion, the Government of India has decided to allow drawback of customs and central excise duty paid on materials used in the manufacture of rubber goods.

Ten million bullock carts, four million bicycles and 400,000 automobiles are at present plying on the roads in India, according to a pamphlet brought out by the Central Road Research Institute.

Deep drilling for oil is expected to begin at Mahuvej village, about 40 miles from Surat. To start with, 4,000 feet of deep drilling will be done; the bore will be 6" at the top. The results of the drilling operations will be known within six weeks.

The Deputy Minister for Food and Agriculture, Mr. M. V. Krishnappa, stated in the Lok Sabha that the requirements of States in regard to iron and steel for agricultural purposes this year would be met to the extent of only 22 per cent. of their demands.

The Bengal-Nagpur Cotton Textile Mill has closed down with effect from the 6th inst., resulting in unemployment to about 3,000 workers. It is learned that the Union Government will soon appoint a committee to inquire into the financial and economic position of the Mill.

An all-India industrial exhibition, called "India Can Make It," will be organised by the Swadeshi League in Bombay in November next. The principal object of the exhibition is to revive the spirit of swadeshi and to promote the development of indigenous industries.

Exports of onions will continue to be licensed freely to all shippers, including co-operative societies, by endorsement on shipping bills, and will be allowed to all permissible destinations other than Pakistan and Portuguese possessions in India. The export to Pakistan will be permitted under Open General Licence (O.G.L.).

The Union Government proposes to extend the use of metric weights throughout the country in the course of next year. This was disclosed by Mr. Satish Chandra, Deputy Minister for Commerce and Industry, while inaugurating a conference of State Controllers of Weights and Measures at New Delhi on the 4th inst.

A seven-member trade delegation from Iraq, led by Mr. Hamid H. Al-Nassir, Acting Director General, "Date Association," Government of Iraq, has arrived in Bombay for discussions with Government officials and trade representatives. The delegation, which has already visited Pakistan, will also visit Burma, Malaya, Indonesia and Ceylon.

The production of copper ore in India during the second quarter of 1959 was 100,984 metric tons, as compared with 98,961 tons in the preceding quarter. The entire production was reported from Singhbhum district of Bihar State. The production of copper metal during the period was 2,180 metric tons, as compared with 1,798 tons in the preceding quarter. The entire quantity produced was fire-refined copper.

India has secured from East Germany orders for the supply of goods worth Rs. 110 lakhs at the autumn Leipzig Fair which came to a close on the 6th inst. The goods include, among others, hand-made shoes, which account for two-thirds of this sum, tea, cashewnuts, coir fibre, yarn and matting, handicrafts, animal feeding stuffs, crushed bones, raw wool, goatskin, cotton and woollen textiles.

The final all-India estimate of the Jethui (Kusmi) lac crop for 1959 places the total yield at 35,000 maunds, as compared with 30,000 maunds last year and 27,000 maunds in 1957. The rise in output is accounted for mainly by Bihar and Orissa. Production in these States is put at 15,000 maunds and 5,000 maunds, respectively during the current year, as against 13,000 maunds and 2,000 maunds, respectively, in 1958.

The Government of India has decided to establish a Stock Exchange Directorate which will function under the Department of Economic Affairs of the Union Ministry of Finance, with headquarters in Bombay and branch offices at Calcutta and Delhi. The Directorate will be composed of expert officials. It will maintain close contact with Stock Exchanges and keep a careful watch over the activities of operators.

India had an adverse balance of trade to the tune of Rs. 147.15 crores during the first six months in 1959, as against Rs. 132.08 crores in the corresponding period of 1958. The widening of the adverse balance occurred, despite the rise in exports from Rs. 258 crores to Rs. 289 crores. For this rise was more than neutralised by the heavy imports which went up from Rs. 390 crores to Rs. 416 crores.

An official Bill to amend the Mines Act, 1952, relating to the regulation of labour and safety in mines, has been introduced in the Lok Sabha. The Bill seeks to change the provisions governing wages and leave, stipulate the need for maintaining first aid rooms in mines where more than 150 persons are employed (instead of 500 persons as present), and prohibit employment of persons

in a mine when its owner fails to comply with certain safety regulations.

The Government of India has decided not to consider fresh proposals for the establishment of new units to manufacture fountain pens in future till the position is once again reviewed. As the number of units manufacturing fountain pens in the country is already very large, it is considered that any addition will "reduce the possibility of improving the quality of fountain pens." Proposals from smaller units for coalescing themselves into larger ones will, however, be considered.

The *ad hoc* Committee (Chairman: Mr. P. S. Rao, a former Chairman of the Damodar Valley Corporation) appointed by the Government of India to examine the question of passenger steamer services on the Konkan coast, is meeting in Bombay shortly to consider, among other things, a memorandum of the Bombay Steam Navigation Company, which runs the Konkan services. The Company has been asking the Government to permit an increase in passenger fares or grant financial aid to run the services.

Production of steel in India will reach the two-million-ton mark this year. This was revealed by Mr. A. S. Bam, Iron and Steel Controller, while replying to a memorandum submitted by the Iron and Hardware Control Stockists Association of Hyderabad-Secunderabad recently. According to him, the supply position will ease this year, owing to increased production and the proposed large-scale imports of steel from abroad out of the assistance granted under the U.S. Development Loan Fund. Besides, the U.S.S.R. is expected to supply about 250,000 tons of steel this year.

From Abroad

The retail prices of coffee in Holland have been reduced by 40 to 56 cents per kilogram (about 4d. to 5jd. a pound) following the fall in world prices.

The Australian Government proposes to abolish the system of import licensing in the "measurable future." The Government has already been following a policy of progressively relaxing licensing restrictions.

The Government of Burma is considering a proposal to grant an oil lease to a Japanese concern from Osaka. It will be a joint venture company with Burmese Twinsas (oil well owners), already working in the Yenangyung area.

A "washable non-iron wool fabric" has been developed by the Commonwealth Scientific and Industrial Research Organisation at its laboratories in Geelong, Australia. The new fabrics will be put on the market next year.

The Standard-Vacuum Oil Company has found large deposits of natural gas in the Sind province of West Pakistan. Stanvac and the Pakistan Government are jointly studying the possibilities of exploiting these deposits on a commercial scale.

British companies invested £450 million in Australia during the ten years ended June 1957 and ploughed back £100 million into their subsidiaries and branches there. In the same period the U.S. and Canadian companies invested £76.8 million and ploughed back £112.8 million.

Under a trade agreement signed in Colombo between the Ceylon Government and a Cuban Economic Goodwill Mission, Ceylon will buy 20,000 tons of sugar from Cuba before the end of this year. About 60 per cent. of the proceeds derived by Cuba on this transaction will be utilised to buy Ceylon products.

The total number of motor vehicles registered in the U.S. is expected to reach 70.42 million this year, or 3.1 per cent. more than that in 1958. The total is made up of passenger cars 58.60 million and trucks and buses 11.82 million. The rate of increase will reverse the declining trend evident since 1955, when registrations reached a new high, reflecting record automobile output.

The Chairman of the British Council on Prices, Productivity and Incomes, 71-year old Lord Cohen, has tendered his resignation, which has been accepted. The reason given is "to devote more time to legal duties." Of the three original members of the Cohen Council, only one person, Sir Harold Hawitt, remains. Sir Dennis Robertson resigned last December and was succeeded by Prof. E. H. Phelps Brown.

The U.S. House of Representatives has passed a Bill which provides for stern measures to fight racketeering in the U.S. labour unions. The Bill, a compromise version of the one passed by the Senate, lays down new safeguards for the rights of union members, requirements for financial reporting by unions and employers, measures intended to ensure democratic election in unions, and other provisions designed to prevent labour leaders from abusing their office.

A trade and payments agreement between Sweden and Rumania, the first since the end of World War II, has been signed in Bucharest. The agreement which is valid for one year and which will be automatically prolonged until notice is given includes commodity lists to a total value of Kr. 60,000,000 (£4,138,000). At the same time, technical prerequisites have been created for a settlement of Sweden's claims on Rumania for nationalised Swedish property in that country. Continued talks are to be held concerning the scope of these claims.

The U.S.S.R. has decided to open new underground and opencast coal mines capable of yielding

PERSONAL

MR. S. Vijayalakshmi Pandit, India's High Commissioner in the U.K., has arrived in India on a short visit.

Mr. Justice Bhuvaneshwar Prasad Sinha, a Judge of the Supreme Court, has been appointed Chief Justice of India vice Mr. Justice Sudhi Ranjan Das, who retired on the 1st inst.

Mr. W. Wilson Mayne, General Manager, Kannan Devan Hills Produce Company Ltd., Madras, has been elected President of the United Planters' Association of South India for the year 1959-60.

Dr. H. J. Bhabha, Chairman, Atomic Energy Commission, will represent India at the third session of the general conference of the U.N. International Atomic Energy Agency opening at Vienna on the 22nd inst.

Mr. C. H. Bayliss, the U.K. Trade Commissioner in Bombay, and Mr. E. J. Ellis, Regional Information Officer of the British Information Service, Bombay, returned from the U.K. on Tuesday this week after home leave.

200 million to 220 million tons a year during the current Seven-year Plan. By 1965, the total production of coal is expected to be over 600 million tons, representing a rise of more than 21 per cent., as compared with 1958. It is also planned to set up a power station with a capacity of 6 million kw. within the next six years on the Yenesei river in Siberia. This station will supply current to the Siberian power grid and industrial centres of the Urals, about 1,560 miles away.

The representatives of the Organisation for European Economic Co-operation and the International Monetary Fund are currently in Turkey examining the working and the results of the economic stabilisation programme introduced a year ago. The Government of Turkey is expected to utilise this opportunity to discuss with these representatives the possibility of securing foreign exchange credits to the tune of \$500 million to \$700 million, necessary for implementing the proposed three-year development programme, scheduled to begin in 1960.

A satisfactory solution to the U.S. steel strike is still not in sight. Nine Democratic Governors have now informed the President of the critical damage done to their States' economy on account of the strike. Meanwhile, the A.F.L.-C.I.O. has decided to collect \$25 million (about Rs. 12 crores) in order to aid the steel workers and to keep them from "being starved back to work." A sum of \$1 million (Rs. 48 lakhs) has already been handed over to the United Steel Workers' Union. The U.S. Commerce Department has announced that steel imports in this year so far has already passed the record annual total witnessed in 1957 and that imports in July at 430,000 tons (as against 161,000 tons in the same month last year) constituted a record for any month.

France and Tunisia have signed a one-year trade agreement which enables the latter country to trade more freely with the dollar area while remaining within the franc zone. It regularises Franco-Tunisian trade, following Tunisian independence and the devaluation of the French franc. All Tunisian financial operations will now be made through Paris foreign exchange market. In order to facilitate this, the Bank of France will credit the Tunisian Central Bank with \$15 million. Besides, France will extend preferential tariffs to Tunisian goods and purchase considerable quantities of Tunisian wine and grain at above world market prices. The imports of French goods into Tunisia, either duty-free or under special preferential tariffs, include foods, chemical goods, tractors, cars and all forms of textiles.

A grouping agreement has been signed by nine Japanese shipping companies, operating cargo liner services between Japan and New York. Under the agreement, the nine lines have formed themselves into three groups for the purpose of co-ordinating freightage pooling and shipping arrangements, in order to end excessive competition. One group will be composed of the Nippon Yusen Kaisha and Mitsui Lines; the second, the Osaka Shosen Kaisha, the Kawasaki Line and the Yamashita Steamship Company; and the third, the Hano Kalun, the Shinnihou Steamship Company, the Mitsubishi Shipping Company and Daido Kisen. These nine lines now operate 144 sailings annually in the service. Their agreement will come into force on 1st October 1959.

The Government of Pakistan has appointed a Company Law Commission, with Mr. Ismail Chundrigar, a former Prime Minister of Pakistan, as Chairman, to suggest modifications in the existing company law. The Commission will consider, among other questions, measures to prevent foreign capital from flowing into non-productive channels of the country, to control and regulate the establishment of foreign companies in Pakistan, and to provide for the association of indigenous capital in foreign enterprises. The Commission has been asked to suggest modifications in company law whereby the extent of control by shareholders of joint-stock companies would be increased. The Commission will also report whether the managing agency system should be continued and, if so, under what restrictions and conditions. It will also recommend modifications which would further safeguard the interests of the shareholders and the public, particularly with reference to the formation of new companies. Arrangements for remunerating management and indirect method of seeking financial control of companies, such as interlocking directorates and voting control by the majority are the other matters likely to engage the attention of the Commission.

ECONOMIC TRENDS IN 1958-59

THE trends in the major sectors of the Indian economy during the year ended June 1959 form the subject of an interesting and comprehensive review by the Central Board of Directors of the Reserve Bank of India for that year. The report of the Directors points out how available evidence points to an increase in agricultural production during 1958-59, which is a welcome contrast to the sharp decline of 8.4 per cent. to 113.4 in the index number of agricultural output (Base: 1949-50=100) in 1957-58. The rate of increase in industrial production slowed down. Thus at 139.7, the index of industrial production (Base: 1951=100) showed a rise of only 1.7 per cent. in 1958, as compared with 3.5 per cent. in 1957 and 8 per cent. in 1956. The index number of wholesale prices (Base: 1952-53=100) rose by 2.1 per cent. to 115.7 over the year 1958-59; in the previous year, the increase was 2.3 per cent. The report notes that the estimated record production of foodgrains was not fully reflected in price indices. "This suggests, what is also borne out by *ad hoc* inquiries," according to the report, "that the inflow of supplies to the market has been affected to some extent by the announcement of introduction of State trading in foodgrains." And yet, there is no disposition on the part of the authorities to abandon the State trading project.

In the monetary sphere, the main feature, it is stated, was the substantial rise on money supply and bank credit. Money supply expanded by Rs. 152 crores to Rs. 2,531 crores; the rise was only Rs. 36 crores in 1957-58. The larger expansion in the year under review is attributed to the substantial expansion in bank credit and a marked decline in the balance of payments deficit. Scheduled bank credit expanded by Rs. 81 crores (from Rs. 903 crores to Rs. 984 crores), in contrast to a contraction of Rs. 15 crores in the previous year. Aggregate deposit liabilities rose by Rs. 234 crores, a good part of the rise in deposits being due to counter-part funds arising from P.L.480 imports. A "relieving feature" of the economy during the year was the marked lessening of the strain on the country's balance of payments. Over the year, the Reserve Bank's foreign assets declined by only Rs. 21 crores, as compared with Rs. 242 crores in 1957-58. At the end of June 1959, the reserves stood at Rs. 193 crores. In the following month, however, there was a further drop of Rs. 13.6 crores; the reserves came to stand at about Rs. 178 crores.

Reviewing the Bank's credit policy, the report observes that it "has continued to be one of general restraint, bearing in mind the requirements of a developing economy." The Bank continued to "operate with flexibility its selective credit controls in the light of changing conditions of demand for, and supply of, the relevant essential commodities." The report acknowledges the co-operation the Reserve Bank received from the banks which carried out the provisions of the directives it issued from time to time. Clearly, selective credit controls, by themselves, cannot offer a panacea for all inflationary ills. The report rightly observes:

"Selective controls are not designed to correct the general inflationary pressures within the economy nor is their success to be judged precisely by the extent to which the prices of the relevant commodities have fallen; prices are dependent on various other factors bearing on the demand and supply position of the commodities. The controls by arresting an undue expansion of credit in the busy season and accelerating its reduction in the slack season may be expected to exercise only a limited, perhaps a marginal, effect on prices, more particularly when banks have large liquid resources."

As regards the general economic outlook for the country, the report notes that the prospects for implementing the revised second Five-year Plan, in financial terms, are now "more assured." It adds: "While the quantum of deficit financing in the financial year 1958-59 showed a welcome drop, it is estimated to be larger in the current financial year and it is not unlikely that the original estimate of deficit financing of Rs. 1,200 crores in the second Plan period will be exceeded, notwithstanding the substantial increase in foreign assistance over

and above what was provided for in the Plan and the sizable assistance under P.L. 480 imports." In this context, the Bank emphasises the imperative need for a satisfactory rate of increase in food production.

An effort to secure even the rate of growth projected for the second Plan would involve during the third Plan period a high order of investment. While this conclusion, according to the report, seems to find ready and general acceptance, there appears to be insufficient appreciation of its implications in terms of the measures of internal effort and external assistance required for its successful accomplishment. The report warns that, unless requisite internal resources and foreign aid are forthcoming, much larger expenditure programmes are likely to "jeopardise economic and monetary stability to the point of endangering their very fulfilment." Accordingly, it rightly insists that the "maintenance of monetary stability during the process of development thus becomes an objective of prime importance in the very interest of successful achievement of the targets of development itself." Here is some food for thought for those who are perhaps inclined to think that economic stability is of secondary importance as compared with economic development.

SOVIET ECONOMIC CHALLENGE

It is becoming increasingly clear that the war between communism and democracy will be fought not in the barren deserts of dogma but in the fertile fields of economic competition. Mr. Khrushchev threw down the gauntlet when he recently challenged the Western democracies to compete with the Soviet Union in offering a better life for their respective peoples and in helping the peoples of underdeveloped countries at the same time. Soviet citizens, who have so long had to wait while the present was being mortgaged for the future, have been promised a fair deal. The Soviet economy is being geared to serve this end. Soviet planning, which had so far laid emphasis on heavy industries, will now give more importance than hitherto to light industries, especially consumer goods industries. It has been clearly spelled out that the chief task of the Soviet Seven-year Plan (1959-65) is a "further mighty upsurge of all branches of the economy on the basis of priority expansion of heavy industry and a substantial improvement in the country's economic potential so as to ensure a continuous rise in people's living standards." It has even been stated in no uncertain terms that "the main economic task" of the U.S.S.R. is to overtake and surpass, in the shortest possible time, the most highly developed capitalist countries in the output per head of population.

If these pronouncements indicate a probable shift of emphasis from guns to butter as the main plank in the competition between communism and democracy, it is all to the good. At the same time, it offers an opportunity and a challenge to the democracies to prove that their economic system and way of life are demonstrably superior to those promised by communism.

Full recognition of this challenge and the responsibilities flowing from it is reflected in a study prepared for the U.S. Senate Foreign Relations Committee by the Corporation for Economic and Industrial Research (C.E.I.R.). The study, which is one of the sixteen commissioned by the Committee after its review of U.S. economic and foreign policies throughout the world, urges that the U.S. should take the initiative with the industrial nations to fashion a common strategy for economic development against the economic threat of the U.S.S.R. The Soviet Union, according to it, is mobilising its industrial strength to take over the world for communism. The U.S. and its industrialised allies should, therefore, undertake a "bold, imaginative programme of economic development similar to the Marshall Plan for the underdeveloped areas."

The study, it is noteworthy, does not understate Soviet economic potential. An analysis of the trend of growth of national product in the U.S.A. and the U.S.S.R. made by it led to the conclusion that the Soviet Union would probably surpass the U.S. in the output of non-consumer industrial equipment by 1970. The gross national product, according to the study, grew faster in the last decade in the Soviet Union, Western Europe and Japan than in the U.S.A. The Soviet rate of growth had been twice as much as the growth of 4 per cent. in the U.S.A. Projecting this rate of growth, the study concludes that Soviet industrial output is likely to grow by 9 per cent. per annum and by 1970 would approximate the present volume of U.S.

industrial production. It is likely to equal 60 per cent. of the 1970 industrial output of the U.S. At that time, the Soviet Union would probably exceed the U.S. in the output of industrial equipment.

Some of the other major conclusions and policy recommendations of the study are:

"While the income of the Soviet bloc would grow by 120 per cent. by 1970, that of the free world would grow by only 83 per cent., and that of the U.S.A. by less than 70 per cent. In industrial output other than for consumers, the Soviet Union might overtake the U.S.A. before 1970. World population would rise rapidly—22 per cent. by 1970—and that of the free world underdeveloped countries by almost 30 per cent. Because of this, disparities in per capita income would grow even greater between the rich and the poor countries of the free world. The underdeveloped countries are pressing under a world-wide dissatisfaction with present conditions and methods, and are impatient for rapid economic growth. Unless the free world can make a distinct change and create soundly-based hope for rapid economic improvement, the underdeveloped countries may fall a prey to the 'growth-without-consumption' formula of the communist system."

"Loss of the resources of the underdeveloped countries to the communist community would completely change the world balance of power in favour of the Soviet Union. The free world must, therefore, continue to promote the growth of the industrialised countries at faster rates, with co-ordination of efforts and embark on a long-range free world programme concentrating on decisive growth of the underdeveloped countries under the 'growth-with-consumption' formula financed with long-term loans. The U.S.A. must become increasingly 'growth-conscious'; policies and laws should be examined from the point of view of their impact on growth. Recent balance of payments deficits in the U.S.A. had been shadowed wider reconversion, they would ease world trade and payments problems. Confidence in the U.S. dollar is a key factor. Sound domestic economic and financial policies, public and private, are essential to maintain stable prices and the international competitive position of U.S. goods. The U.S. should aim at maximum liberalisation of trade in the free world and set an example by removing its own restrictions."

The C.E.I.R. study has no doubt as to which system is superior. The U.S.A. and Western Europe, it maintains, have a much better economic system which combines growth with consumption and three times the economic wealth of the communist bloc. It is, therefore, optimistic that the contest can be won, provided these countries have the wisdom and the will to act.

WAGES DURING CLOSURE OF FACTORY

Is an employer liable to pay wages to his workmen during the period of closure of the factory, if the closure was forced on him by circumstances which threatened danger to life and property? In the strike-ridden atmosphere obtaining in the country at present almost every employer, at some time or other, will be called upon to ask himself this question. The answer is "no," provided the closure is only against the mischievous elements among the workers. The employer can even ask for an undertaking for peaceful conduct within the factory.

This question came up for decision before the Bombay High Court recently. Chief Justice Mr. H. K. Chainani and Mr. Justice V. S. Desai, dismissing the petition filed by two workers of the Premier Automobiles Ltd., Bombay, upheld the decision of the Small Causes Court and the Payment of Wages Authority that the workers were not entitled to wages for the period of closure, as they did not present themselves or offer to work during the period. The facts of the case are that, following the failure of the conciliation proceedings in regard to their bonus demand, the workers held demonstrations inside the factory from 8th October 1953 onwards. The management felt that these demonstrations were likely to result in injury to the Company's property and in personal risk to the officers and it was impossible to run the factory. A notice was, therefore, put up, announcing the closure of the factory from 8th November. It was, however, stated in the notice that the factory would be kept open wholly or partially if workers gave an undertaking to be peaceful and observe discipline and a sufficient number of workmen were available on those terms.

On 8th November, most of the workers went to the factory, but the main gate was closed. The wicket gate was, however, kept open. No one entered the factory and offered to work. This state of affairs continued for about 15 days, it was stated.

The factory resumed work on 8th February 1954. The workers subsequently filed applications

before the Payment of Wages Authority claiming wages for the period from 8th to 30th November 1953. The Authority dismissed the applications and their appeals against that decision were rejected by the Small Causes Court. The two workers then filed the present petition.

Dismissing the petition, their Lordships observed that the lower court was right in its observation that the closure of the factory was not absolute but only against the mischievous elements among workers. The contention that the absence of workers from work was due to the action of the management, according to their Lordships was not correct. The Company had offered to keep the factory open, if workers gave an undertaking to observe discipline, but none came forward to work on those terms. Upholding the employer's right to receive an assurance of good conduct from workmen, their Lordships observed:

"If, in the course of their employment, the workers engage themselves in activities which create a reasonable apprehension in the mind of the employer that it would be dangerous to the safety of his officers and the staff and of his property to keep the factory open, the employer would be justified in asking the workers to give him an assurance that they would work peacefully and not resort to violence. In so doing the employer would only be asking his workmen to fulfil and abide by the terms of the contract."

This verdict should deter labour unions and workers from resorting to violent behaviour and illegal strikes.

FOOD SITUATION IN W. BENGAL

West Bengal's food situation has been front-page news for some time now. Admittedly, the State is deficit in food, particularly in rice, the staple diet of the people there. The situation, which had gradually deteriorated after the separation of some of the fertile regions in the east, following the Partition in 1947, has worsened through the subsequent emphasis on the extension of jute cultivation, resulting in curtailment of land available for paddy. At the same time, the influx of refugees pushed up the pressure of demand on the available food. All this cannot, however, provide any justification for the virtual mob-rule in the State's capital. What makes this state of affairs particularly reprehensible is the attempt of certain politicians to make capital out of food. The State Government, together with the Centre, has been endeavouring its best to ease the food problem in the State. In fact, there are at present unmistakable signs of improvement in the food position. Mr. S. K. Patil, the Union Food and Agriculture Minister, stated in the Rajya Sabha the other day that there was a larger availability of foodgrains in the market and the price of rice had declined substantially in most places. Viewed thus, it is difficult to understand the economic logic behind the agitation launched by the Price Increase and Famine Resistance Committee in Calcutta, resulting in an orgy of arson, violence and bloodshed, destroying life and property in the State.

The agitators in West Bengal complain of relatively high prices, inadequate supply and bad quality of rice available in the State. In its anxiety to ensure fairplay, the State Government has taken various measures, probably of a trial-and-error nature, to reduce prices and augment supply. It withdrew its price control order for foodgrains in June last, which had been introduced early in the current year, following the inability of the State to enforce price controls, and the resultant hoarding. Decontrol, though it had failed to bring down prices in the initial stages of its implementation, seems to have at last been instrumental in making appropriate adjustments in the demand and supply position by ensuring freer flow of stocks. As pointed out by Mr. Patil, by the beginning of this month the price of *Kamalbhog* rice had declined to Rs. 25 per maund from Rs. 28 three weeks back, that of *Kalma* rice from Rs. 30.40 to Rs. 26 per maund, and that of *Sitalal* from Rs. 33 to Rs. 31. There has been a further drop in prices subsequently, though at this time of the year, the prices of rice usually go up in West Bengal. It is said that, at one place, the price of rice has fallen by as much as Rs. 7.00. It is, however, contended that the purchasing power of the people is low, in relation to the prices prevailing in the open market. This is true to a certain extent, but this argument holds good for any other part of the country. And it must be remembered that rice is being supplied to low-income groups at a subsidised rate through fair price shops. We are also told that about 800,000 people receive gratuitous relief from the State Government. Moreover, over 10 million people have been brought under the modified

rationing system this year so far, as against about 5 million covered this time last year.

The supply position of rice in the State, too, does not warrant any undue anxiety or alarm. The Central Government has agreed to deliver 1,100,000 tons of rice and wheat to this State in 1959, as against the deficit of foodgrains estimated by the State Government at 835,000 tons. For the month of September, the Centre has allotted 50,000 tons of rice, as against the usual monthly quota of 45,000 tons. What is more, the coming harvest is expected to be good.

There is, no doubt, considerable discontentment over the quality of rice supplied through fair price shops. The local variety of rice is superior to that imported from the other neighbouring States. It is not clear what the complainants expect the State Government to do in the matter; for, if the State is deficient in rice, it must necessarily import whatever varieties are available in the rest of the country. Nevertheless, the Government will do well to give some attention to the quality of rice, which is the staple food of the people.

On the whole, though it has to be conceded that West Bengal faces a serious food problem, as many other States, the situation does not justify an anti-Government agitation, much less the kind of gross vandalism exhibited in Calcutta. The inescapable conclusion is that the Communists, who dominate the Price Increase and Famine Resistance Committee, are out to exploit an admittedly difficult situation, either to wreak vengeance over the Kerala episode or to detract attention of the people from the aggression by Communist China on our northern borders. The food problem of West Bengal cannot be solved by slogan-shouting in the streets. The permanent solution will depend on how people, irrespective of party affiliations, co-operate with the State Government to raise agricultural production and ensure appropriate machinery for efficient distribution.

CUSTOMS AND EXCISE

Over 57 per cent. of the Union Government's revenue receipts is accounted for by customs and excise duties, the actual anticipated total yield from these sources in the current financial year (1959-60) being Rs. 458 crores, out of the estimated aggregate revenue of Rs. 781 crores. Naturally, those who contribute such large sums to the Exchequer have a right to expect that the efficiency of the administrative machinery entrusted with the task of collecting the taxes is maintained at the highest level possible, with due regard to the difficulties encountered by the people. A high level of efficiency can be ensured only if there is a common platform which, on the one side, enables the taxpayer to ventilate his grievances and, on the other, makes the tax-gatherers understand those difficulties and try to redress them. Such a platform is now provided by the Customs and Central Excise Advisory Council, inaugurated at New Delhi on Thursday last week by Mr. Morarji Desai, Union Minister for Finance. In his speech, Mr. Desai struck a note of realism when he declared:

"I have always considered it essential that representatives of the people should be associated with the administration at as many levels as possible, if the administration is really to serve the needs of the people. However efficient the administration is, it is not possible for it to know the details of the difficulties encountered by the people. . . . Laws and rules are meant for the convenience of society and, where there is conflict between the two, it is the laws and rules which ought to be reconsidered. If there are any rules which are found to retard efficiency or cause harassment to those who are affected by the rules, those rules ought to be considered and changed. It is here that the Government looks forward to the Council for help and guidance."

AGENTS THROUGHOUT THE WORLD. PROVIDES EVERY BANKING FACILITY.

G. D. BIRLA S. T. SADASIVAN,
Chairman General Manager.

The three oft-repeated criticisms levelled against the administration are corruption, delay and harassment in the process of the levy and collection of taxes. Mr. Desai frankly admitted that the state of things existing at present was not satisfactory. "I feel almost ashamed," he said, "that we are not able to remedy a situation which leads to a lot of corruption which comes out of harassment, intentional or unintentional." And he did well to urge the immediate removal of unintentional harassment and the punishment of intentional harassment with a very heavy hand. He also did well to stress the need for correcting the procedures in the levy and collection of taxes in such a way as to cause no delay and no unintentional harassment. It is to these tasks that the Advisory Council will have to address itself in right earnest. Reassuring is the statement of Mr. Desai that he "will have no objection if some policies which impinge on procedure are also considered by the Council and, if a recommendation is made, it will be considered."

The usefulness of the Advisory Council is reflected by the cordiality which was reported to have prevailed at the two-day session, as well as by the full and frank exchange of views. Some of the suggestions put forward and accepted at the meeting cover establishment of advisory committees at minor ports and major land customs stations; allowing of reshipment in *bona fide* cases where goods have been wrongly shipped by foreign suppliers to importers in India; issue of Press notes whenever duties are altered; speedier clearance of goods by resorting to the second appraisal system in a greater measure as far as possible; and grant of full drawback of duty paid on imported paper used in the manufacture of bags for cement for export.

The Government also agreed to consider a few other suggestions made by the representatives of the trade. These include (1) allowing the importer whose case was under consideration, as to whether or not his licence was valid for the goods imported, to appear personally before the joint weekly meeting of customs and trade control officials at which such cases are examined; (2) elimination of the procedure asking for fresh evidence of actual value of goods when the goods are shipped on contracts of which the period of validity has expired by a few days; (3) every effort to eliminate delays and simplify procedures, so that there is no cause for any genuine complaints; (4) steps to reduce the time taken on account of the test itself or because the sample has to be sent to some outside laboratory for test; (5) augmentation of the strength of appraisers, in general, and expert appraisers, in particular; (6) speedy disposal of appeals and revision petitions; (7) the value to be taken for debit of import licences (it was pointed out that the matter was mainly the concern of the Ministry of Commerce and Industry; however, the problem would be looked into again carefully in consultation with it); and (8) amendment of the customs schedule so as to bring it into line with the Import Trade Control schedule. (The F.I.C.C.I. has offered to submit a note on the subject to Government.) Most of the 23 items discussed on the Central excise side were of a procedural character. By and large, the Government accepted the suggestions made by the trade.

COMMITTEE ON CO-OPERATIVE CREDIT

The Government of India has constituted a Committee, with Mr. Vaikunth Lal Mehta as Chairman, to examine: (i) (a) the existing standards for credit limits prescribed under the Co-operative Societies Act, rules or the by-laws of the societies in the different States and (b) their justification from the point of view of the principles of sound co-operative banking; (ii) the loan policies and practices of co-operative credit institutions from the apex to the primary level; (iii) the working of a few representative co-operative societies in the Community Development Blocks by way of case studies; (iv) the measures necessary for increasing the borrowing power of primary credit societies to the extent necessary in this connection; and, in the same context, the question of revising the existing standards for fixing credit limits and the conditions under which it should be effected with a view to providing more effective credit for agricultural production plans; and (v) the desirability of share capital participation by the State in village societies, and if the Committee is in favour of it, the terms and conditions subject to which such State participation should take place. The Committee should utilise for this investigation the existing data as far as possible. Where necessary, it may visit the societies and study their working. The other members of the Committee are: Messrs. T. M. N. Pillai (Vice-Chairman), Tarannao Chaudhary, B. Venkatappiah (Deputy Governor, Reserve Bank of India), V. K. Rao (Planning Commission), B. P. Patel (State Bank of India), M. R. Bhidé (Department of Co-operation), Siddique Hasan (Member, Board of Revenue, Uttar Pradesh), A. Palaniappa Mudallur (Member-Secretary) and a representative of the All-India Co-operative Union.

CHEAP MONEY VERSUS DEAR MONEY AN INTERESTING CONTROVERSY IN THE U.S.

[A piquant situation has arisen in regard to public debt in the U.S., following the reluctance of Congress to sanction President Eisenhower's request for raising the ceiling on the rate of interest payable on medium and long-term Government loans. The nature of dispute and its implications not only to the U.S. economy but also to the rest of the free world are explained at length in the September issue of the *Monthly Bank Letter*, published by the First National City Bank of New York. The whole issue boils down to a controversy over cheap money versus dear money. The relevant extracts from the *Letter* are published on this page, as the issue discussed therein is of great importance to students of monetary economics and as a day will come, sooner or later, when a similar problem will confront India, too.—Ed.]

THROUGH the sultry summer, debate continued over the President's urgent request, made on 8th June, for removal of old statutory limits on interest rates payable on U.S. Treasury bonds. The President wanted to raise the rate payable on Savings bonds (now limited to 3.26 per cent.) to 3½ per cent. and to pay more than 4½ per cent. if necessary to sell marketable Treasury bonds. The Treasury is blocked off from placing bonds due after five years, because they could not be sold in today's market within the 4½ per cent. legal limit, which was set back in 1918. Meanwhile, savers' dissatisfaction with the current 3½ per cent. rate on Savings bonds is reflected in the growing excess of redemptions over new sales, involving a steady drain on Treasury cash.

The President's proposal encountered bitter resistance from "liberals" who pressed for an amendment stating it to be the "sense of Congress" that the Federal Reserve should buy more U.S. securities, of varying maturities, to "assist in the economical and efficient management of the public debt." The House Ways and Means Committee, which had the responsibility of clearing a Bill, worked patiently to amend the proposed "sense of Congress" amendment into a reasoned statement of economic and debt management policies that could satisfy everyone.

Issue Shelved

On 12th August, the Committee tentatively approved of a Bill which suspended rate limits on Treasury bonds for a three-year period and which rewrote the "sense of Congress" amendment in language acceptable to Secretary of the Treasury Robert B. Anderson and Federal Reserve Board Chairman William McC. Martin. But opposition in other quarters led the Committee to shelve the measure for the present session of Congress. As a result of this stalemate, the Treasury will have to concentrate its borrowings within a five-year maturity limit, paying whatever rates may be required. In this area, no rate limits apply.

Selling only obligations due within five years—as the Treasury perforce must do—gives an extra upward impulse to shorter-term rates and, moreover, builds the volume of near-term Treasury obligations. As the situation stands at the beginning of September, no less than 73 per cent. of the marketable public debt is due within five years. This means that the Treasury, to meet maturities, must be constantly coming to the market to refinance itself, interfering with the freedom and flexibility of Federal Reserve credit policy, and involving problems of digestion of successive new offerings. It would be better for everyone concerned if more of the debt were in the hands of long-term investors, put away in the box for years.

The book, of course, is not closed on the rate problem. Sooner or later the Treasury must have authority to manage the debt in an orderly way.

Meanwhile, it could turn out that the "liberals" are being penny wise and pound foolish. If the effect is to give fresh impulse to inflationary psychology, savers and investors may demand higher rates. Every irresponsible fiscal action has a cost in interest charges. (Italics ours.—Ed.)

Result of More Borrowings

The upward push in interest rates over the past year has been a result of increased borrowing demands from all sides: from the Federal Government financing a peace-time record deficit; from State and Local Governments raising money for roads, schools, and other local improvements; from home builders putting up new houses; from individuals buying new cars; from industry financing record-high production and pay-rolls. The interest rate rise that began in June 1958 was unexpectedly rapid—though so also was the return of booming business conditions and inflationary psychology.

It is a pity, in retrospect, that the Congress did not act promptly upon the President's recommendation, inasmuch as market conditions favourable to bond offerings developed

during the summer. In part this reflected the reassurance investors felt in the President's masterful statement of debt management fundamentals and veto of another big Housing Bill, as well as feelings that stocks were high and bonds relatively cheap. The supply of new corporate and municipal issues temporarily declined, and an opening was created for bond financing. The Treasury must have discretionary authority to take advantage of such situations in a timely way.

The President's proposal, documented by the Treasury Department, spelled out what seemed quite obvious: something had to be done to stem the rising tide of Savings bond redemptions and permit the Federal Government to continue flotations from time to time of bonds in the long-term investment market.

Stalwart opposition, however, was voiced in speeches on the floors of Congress and in hearings conducted by the Congressional Joint Economic Committee on the subject of Employment, Growth and Price Levels. Trenchant in their criticisms were three members of the Committee, Senator Paul Douglas of Illinois, Chairman, Congressman Wright Patman of Texas and Congressman Henry Reuss of Wisconsin.

Their proposals for Federal Reserve support of the Government bond market were vigorously opposed by Treasury Secretary Anderson and Chairman Martin. Mr. Martin stated that:

"... under present conditions, I am convinced that this amendment, when stripped of all technicalities and regardless of whether the language is permissive or mandatory, will cause many thoughtful people both at home and abroad to question the will of our Government to manage its financial affairs without recourse to the printing press. To me this is a grave matter.

"We are here dealing with trust and confidence which is the keystone of sound currency. Therefore, I must oppose this proposal as vigorously as possible..."

Trick Solutions

"Liberal" opinion is reopening the Pandora's box of tricks studied and rejected before the bond market was unpegged in 1951.

As early as 4th June, Congressman Reuss proposed a resolution, citing the rise in interest costs on the national debt, urging greater reliance on purchase or retention of Government obligations by the Federal Reserve Banks, and also asking the Federal Reserve System to explore methods of raising bank reserve requirements as an anti-inflationary tool.

The use of the Federal Reserve to create cheap money while placing special restraints on private lenders and borrowers apparently has a considerable following in neo-liberal circles. It is part of the prescription for progress advocated in a new pamphlet put out by the Conference on Economic Progress (C.E.P.) an organisation led by Leon H. Keyserling and supported by a number of trade union leaders. In a speech on 16th July, Congressman Patman called the attention of the House to the following passage in the C.E.P. pamphlet which bears the title, "Inflation—Cause and Cure."

"The so-called tight-money policy is both repressive and inflationary. The Federal Reserve System should resume sufficient support of the Government bond market to stabilise interest rates at lower levels, and to facilitate the management of the national debt.

"The inflation attributed to such policies during war-time was due to other causes. If necessary, the Federal Reserve System can counteract any inflationary effect of bond support by lifting bank reserve requirements.

"A more selective system of credit controls should be instituted. The overall tight credit approach restrains those activities which are in need of expansion, long before it touches those which need restraint. It is also hurtful to economic growth."

Congressman Patman commended the C.E.P. study, which, he said, "cuts through all the mystical fog and gobbledygook which have been built up around the tight-money and high-interest policies." The "fog and gobbledygook" in the C.E.P. pamphlet translates into an effort to deal with inflation by insuring an unlimited supply of cheap money for Government to spend

while empowering Government to dictate to the people how much or little they may be permitted to borrow and spend.

Of critical importance in the unpegging of the U.S. bond market in March 1951 was a special study undertaken by a Sub-committee of the Joint Economic Committee in the winter of 1949-50. This Sub-committee, presided over by Senator Douglas, stated that: "As a long-run matter, we favour interest rates as low as they can be without inducing inflation, for low interest rates stimulate capital investment." But, Senator Douglas' report went on to say:

"... we believe that the advantages of avoiding inflation are so great and that a restrictive monetary policy can contribute so much to this end that the freedom of the Federal Reserve to restrict credit and raise interest rates for general stabilisation purposes should be restored even if the cost should prove to be a significant increase in service charges on the Federal debt and a greater inconvenience to the Treasury in its sale of securities for new financing and refunding purposes."

Senator Douglas' View

In the recent controversy, Senator Douglas has not repudiated these findings, nor has he specifically endorsed the Patman-Keyserling idea of raising cash reserve requirements of the commercial banks to offset the inflationary influence of Federal Reserve bond purchases. Senator Douglas supported legislation enacted in July to make the existing system of member-bank reserve requirements more logical and equitable. But Senator Douglas' view on the bond rate limit, as expressed in a major Senate speech on 8th June, was that the pressure on money rates was temporary and that the Treasury should finance itself with obligations due within five years where no rate limits are applicable. The trouble with simply suspending bond offerings is that passage of time is constantly shortening public debt maturities. Too little of the debt is funded at long-term. The Treasury needs to keep in contact with the long-term investment market by periodic new issues.

Congressmen, including Mr. Reuss, had been critical of the Treasury for not having put more of the debt into long-term form. The trouble is that there always have been reasons to be mustered why long-term offerings should not be made. In times of boom, it is held to be too expensive. In times of business recession, the fear is that Federal bond offerings will cut into the supply of funds for stimulation of home building. The incredible result is that, over thirteen years, the U.S. Treasury has put out only five issues of bonds due after twenty years. Even though the Federal Government has the largest debt, and the largest needs for funding debt, other borrowers have been allowed something like a monopoly claim on long-term investment funds. In 1953, the Treasury was scolded for paying 3½ per cent. on 30-year bonds; the Treasury would be saving money today if more had been sold.

Federal Reserve Bond Purchases

Senator Douglas, in urging Federal Reserve bond purchases, endorsed the view of the Federal Reserve Bank of New York that the Federal Reserve should drop its so-called bills only policy and intervene less infrequently in the U.S. bond market in periods of weakness. Wrapped up in this issue are thorny questions of the circumstances in which the Federal Reserve is warranted in intervening to maintain an orderly market, to help take up new Treasury security issues, and to influence or regulate conditions in the bond market in the interests of general economic stability. Whatever can be said for less infrequent bond transactions on the part of the Federal Reserve Banks, there is one vital benefit out of leaving the market free: the Treasury has a base from which to gauge the receptivity of the market to new issues.

What disturbed many people was the emphasis given to Federal Reserve purchases of bonds. It seemed to be forgotten that the problem is to enlarge the investment market for U.S. bonds, not to reduce that market by drawing them off into the vaults of the Federal Reserve Banks. A great deal of time was devoted by the Joint Economic Committee to the presentation of a thesis pressed by Congressman Reuss, that the Government could save itself some interest expense in this way, since the greater part of the Federal Reserve Banks' net earnings are paid back to the Treasury. There is hardly any folly greater than operating a central bank of issue to see how much profit it can amass. The sky is the limit as long as people are amenable to depreciation in the value of their currency.

In hearings of the Joint Economic Committee (27th July), Senator Douglas pressed

Chairman Martin to agree that Federal Reserve purchases of Government securities are no more inflationary than equivalent reductions in cash reserve requirements of member-banks. Actually, the Federal Reserve has used both methods to allow greater liberality in extension of credit during periods of business recession. Federal Reserve holdings of U.S. Government securities right now are at a record peak. Bank reserve requirements, while eased in 1953-54 and 1958, remain considerably above the standard levels stated in the Federal Reserve Act.

The Federal Reserve Board has not raised cash reserve requirements since the bond market was unpegged in 1951. It is safe to increase the requirements only when, as during the gold inflow of 1934-41, there is an uncontrollable excess of idle funds in the market. When, as now, the banks are under strain, a demand that they raise more cash to hold idle would quite simply panic the bond market. The problems the Treasury already has in financing itself would be compounded by forced bank selling on a falling market. These would hardly seem to be legitimate objectives for public policy.

Looking to the future, Congressman Reuss argued that the Federal Reserve, if not actually raising reserve requirements, should refrain from reductions. Thus, he would supply all additional needs for credit over the years through the purchases of Government securities by the Federal Reserve Banks, helping the Federal Treasury through its share in Federal Reserve Bank profits.

Congressman Thomas B. Curtis of Missouri, in an exchange with Congressman Reuss on the House floor, offered a "better way to try to keep interest rates down." Pointing out that "really what has driven interest rates up and has created this situation of debt management is the great size of the Federal debt and the budget deficits," Mr. Curtis went to the heart of the matter:

"You can help by keeping these appropriation Bills down. They are getting larger all the time. That is what you can do, if you are really interested in keeping interest rates down. Otherwise, I can tell you, you are just talking a lot of nonsense and about a lot of useless monetary shifting, because it is the size of the Federal debt that has caused the trouble in managing it. This causes high interest rates. This creates the pressures that result in inflation.

Bank Profits and Interest Rates

There is a common misconception, as noted by Treasury Secretary Anderson in an interview with *U.S. News and World Report*, that banks gain a great deal from rising interest rates. For one thing, banking is a highly competitive business, with competition not only among the thousands of banks subject to Federal law but also thousands of other financial institutions of diverse sorts, foreign as well as domestic.

Like other people, bankers have had increased expenses to face, more offices to open, and rapid growth in items handled. Increased interest rates themselves are not an unmixed blessing. When interest rates rise it is because banks are short of money to lend, because deposits are harder to get and hold, because higher rates must be paid on interest-bearing deposits, and because losses must be incurred when investments are sold to make room for more loans.

"Easy-money" advocates, looking back to 1947 when 91-day Treasury bills were pegged at 3 per cent., can speak of bill yields (recently 3 to 3½ per cent.) as having risen ten times. But dividends on bank stocks have shown no such rise. As a matter of fact, the dividend return on bank capital funds has been among the most sluggish "interest rates" of all, moving up only from 3.3 per cent. in 1947 to 4.1 per cent. in 1958.

Bank profits, measured as a return on capital funds, have quite consistently hung around 8 or 8½ per cent. ever since 1947. The average for the past ten years, 1949-58, has been 8.3 per cent., on the low side as business enterprise goes. For example, the average for manufacturing corporations over this period was 13.4 per cent.

It is interesting to note that the peak profit rate for banks in modern history, nearly 11 per cent., was attained in 1945, when profits on security transactions were virtually guaranteed by the pegging practice Congressman Patman wants to put back in force. His scheme to have the Federal Reserve purchase 2½ per cent. Treasuries to drive them back to par would give capital recoveries or gains to banks, though the biggest profits no doubt would accrue to speculators.

Bank profits in the aggregate and also bank capital accounts, have risen since the war parallel with the rise in gross national product. Bank supervisory authorities keep urging banks to build capital funds faster. It takes more profits to support more capital funds.

Meanwhile, in terms of total assets, the commercial banks have lost ground relative to other classes of financial institutions. Dr. Gurley, in his testimony before the Joint Economic Committee, referred to this as a result of "controls"—something the "liberals" would increase. Banks need to share in economic growth, build profits and capital funds, if they are to strengthen their ability to serve the people. It is impossible to conceive of a vigorous free enterprise system where banks have their lending power sterilised to support Cheap Government borrowing.

President's Plea

President Eisenhower, in a strongly worded message on 25th August, expressed "grave disappointment" at the failure of Congress to remove "artificial limitations" on interest rates. He urged reconsideration, stressing that "no issue of greater importance has come before this session of Congress." He went on to say:

"We have worked tirelessly for a balanced budget. We need this balance, so that we can avoid the deficits that lead to higher prices, to a rising cost of living and to an eating away of the value of the billions of dollars that thrifty and far-sighted Americans have saved. But Congressional inaction on our debt management proposal could do much to offset the progress we have made toward fiscal responsibility..."

"The vital interest of all Americans is at stake, because excessive reliance on short-term financing can have grave consequences for the purchasing power of the dollar. The issuance of a large amount of short-term Treasury debt would have an effect not greatly different from the issuance of new money. Because these securities are soon to be paid off, their holders can treat them much like ready cash."

The President emphasised that the Treasury must have the capacity to finance the Government's requirements in free credit markets, without artificial restrictions. He added:

"Let me state plainly as I can that this is not legislation to increase interest rates. This Administration is not in favour of high interest rates. We always seek to borrow as cheaply as we can without resorting to unsound practices..."

"... To prohibit the Treasury from paying the market price for long-term money is just as impracticable as telling the Defence Department that it cannot pay the fair market price of equipment. The result would be the same in either case; the Government could not get what it needs.

"The issue... is whether we are going to demonstrate responsibility in the management of our Federal debt. Ours is the richest economy in the world. We have a large public debt, but we can certainly handle it soundly and efficiently, if we remove the artificial obstacles to borrowing competitively in the free market.

By adopting the Administration's proposals, the Congress would be demonstrating to people at home and abroad that we have the determination to preserve our financial integrity and to protect our currency."

NEW INTERNATIONAL TIN AGREEMENT TO BE DRAFTED

The International Tin Council has set up a technical committee to draft a new agreement to come into effect when the present agreement expires in 1961. Disclosing this at a Press conference in London on 4th September, M. Georges Peter, Chairman of the Council, said that the technical committee would begin its work this week. In view of the Council's experience over the past three years, it would be necessary to amend several articles in the present agreement. The draft agreement would be placed before the Council in December and then submitted to all members of the United Nations. A conference of interested nations to be held in New York next May would try to reach accord about the new agreement. It would then be placed before the Governments concerned for ratification.

Referring to the Council's decision to fix a permissible total export amount for the six producing members of the agreement during the control period October to December at 30,000 tons, as compared with 25,000 tons for the preceding three months, M. Peter said: "The decision was taken unanimously. It shows there is good agreement between producers and consumers." India, Australia, Belgium, the Belgian Congo and Ruanda-Urundi, Bolivia, Canada, Denmark, the Federation of Malaya, the Federation of Nigeria, France, Indonesia, Israel, Italy, Korea, the Netherlands, Thailand, Turkey, and the United Kingdom are represented on the International Tin Council.

THE CHANGING FACE OF INDIA

The bullock cart rumbles along a village track, while close at hand a diesel train thunders on gleaming steel rails. This is the sharp contrast of a changing India.

Everywhere the country is awakening to a new age of prosperity. Fostering this renaissance is the Life Insurance Corporation. Every day the Corporation invests a million rupees in the country's economy. This money, collected from premium-payers, helps build, among other things, the roads and railways so vital to our economy.

Just as the Life Insurance Corporation participates in this mighty adventure of construction, so too does each policyholder. He participates today through the premiums which he pays; and he will participate tomorrow in the better standards of living which the country as a whole will enjoy.

Life Insurance Corporation of India

LUCE-18

ENCOURAGEMENT TO BANKS TO EXPAND PLANNERS RECOGNISE NEED—PLEA FOR NATIONALISATION TURNED DOWN

THE Planning Sub-committee of the All-India Congress Committee deserves to be congratulated for having taken a realistic attitude with regard to the development of banking. Thus, in its report on the broad pattern of the third Five-year Plan, which was generally approved by the Congress Working Committee at New Delhi on Sunday last, the Sub-committee has not advocated nationalisation of banking. On the contrary, it has laid special emphasis on "encouragement to banks and other institutions like charitable trusts and private institutions to contribute to the Government's borrowing programmes." Although the motive behind the emphasis is one of augmenting the resources of the public sector, the plea nevertheless reveals a welcome change in the approach of the policy-makers on such a vital sector of the country's economy as banking. By saying that the banks should be encouraged to invest in Government loans, the Sub-committee clearly implies that they should be allowed to grow and expand, for it is obvious that they cannot take up more and more of Government securities, unless they are helped to attract more and more deposits. Banks, as is well known, play a very important part in the economic set-up of a country, by channelling the savings of the people into productive investments, not to speak of the valuable role played in the financing of industries and trade.

Sometime ago, the banks were greatly perturbed over reports suggesting that some senior Congress members and economists had openly advocated nationalisation of banks. The note on the implications of the socialist pattern of society, brought to Bombay by Mr. U. N. Dhebar, a former President of the Congress and Chairman of the Planning Sub-committee, towards the end of April last for discussion with twenty economists clearly urged nationalisation of banks. Here is the relevant extract from that note:

"Banking is another field which requires radical reorganisation in the context of socialist society. In a socialist society, bank credit is required mainly for Governmental or co-operative enterprise; if private enterprise continues to exist, the credit facilities extended to it will have to be regulated and rationed in the light of overall planning. Nor can there be any privacy or bankers' secret about individual incomes or wealth in a socialist society. It would be necessary both for the efficient working of socialist enterprise and the preventing of the unplanned and anarchic expansion of private enterprise that banking ceases to be a matter of private ownership and/or management, and is not only owned but also operated by the community in the light of the requirements of the efficient working of the planned economy."

Ooty Seminar

The above view was reiterated by some who participated in the A-I.C.C. Seminar on Planning held at Ootacamund early in June. But thanks to stiff opposition from some members of the Congress Party and a few economists with intimate knowledge of banking in India and abroad, the case for nationalisation of banks did not find a place in the *communiqué* issued at the end of the Seminar. Subsequently, the plea for nationalisation of banks has been rejected by several spokesmen of the Government. In view of the importance of the subject, it is proposed to record here the observations made by some of the spokesmen.

A categorical declaration that nationalisation of banks will not be of any advantage to the Government or the country was made by Mr. Morarji Desai, Union Finance Minister, in the Lok Sabha on 6th August, while intervening in the debate on the report of the Life Insurance Corporation of India. Mr. Desai said:

"Some of my hon. friends without any occasion have also taken this opportunity to plead for nationalisation of banks. Well, I am going to speak about it when the proper time comes... But I have already once before spoken about the banks and nationalisation. I can only say on this occasion that nationalisation will not be of any advantage to Government or the country. It may satisfy some members who want to look very forward, but it does not do any good, and I wish my hon. friends, at any rate on this side, think about it better."

Six days later, that is, on 12th August, when the Lok Sabha was debating the Banking Companies Amendment Bill, Mr. B. Gopala Reddi, Minister for Revenue and Civil Expenditure, reiterated the Government's decision not to nationalise banks, in order to have resources for the Plan and declined to accept the suggestion

to that effect made from the opposition benches. Mr. Reddi observed:

"As far as the Government is concerned, it does not contemplate such a measure either for the third Plan, fourth Plan or the fifth Plan. It is true that large resources are required for the third Plan and the Government is aware of the task before it in creating adequate foreign exchange and mobilising internal resources. Both the Government and the Planning Commission have considered the question of nationalisation in all its aspects and have come to the conclusion that it is not a desirable step from any point of view."

Resolution in Lok Sabha

Despite the categorical pronouncements by Mr. Desai and Mr. Reddi, a Congress member of the Lok Sabha, Mr. Ram Krishan Gupta, moved a non-official resolution seeking nationalisation of banks on 21st August. Opposing the resolution, Mr. B. R. Bhagat, Minister for Finance, firmly ruled out nationalisation of banks either purely for the sake of nationalisation or for getting resources for the development projects of the Plan or for preventing tax evasion or on any other grounds. The daily Press version of Mr. Bhagat's statement is given below:

"The Minister rejected the suggestion that unutilised reserves of banks would be available for development projects if they were nationalised and said that this was only an exaggerated notion. He gave out figures of the total investments, deposits in Government securities, inland and foreign bills of banks in support of his contention. He was emphatic that nationalisation would not lead to any increase in the resources but would only create, on the other hand, more administrative difficulties; if it was for the purpose of long-term and medium-term finances, they had the Life Insurance Corporation. Mr. Bhagat did not agree with the suggestion that nationalisation of banks could check inflation and rise in prices. These, he said, had nothing to do with nationalisation of banks; they were the cumulative result of various other factors. As for the purpose of checking tax evasion, Mr. Bhagat drew the attention of members to the fact that, even under the income-tax rules, Government had powers to look into bank accounts. The Reserve Bank, he added, had been given powers to exercise control over all banks with the most important power of inspection."

The plea for nationalising banks was once again turned down by Mr. Morarji Desai when he was addressing a luncheon meeting of the Bankers' Club at Madras on 25th August. Mr. Desai averred:

"The dealings of bankers will be futile, if they do not look to the happiness of those with whom they have the dealings. It is there you can go on increasing your dealings with people who will advance and who will enable you to advance and, ultimately, both will enable the country to advance. This is where I want the banking business to be reoriented. It is because of this that I want the banks to continue (in the private sector) and I am saying that nationalisation will do no good to the country. What I am saying will be justified only if bankers are true to themselves and do their duty as the country expects them to do."

Whatever the currency, the Bank of Kobe is expert at solving all foreign exchange problems. Our head office is conveniently located in Kobe, world-famous trading port. Please write us for complete information on our export-import services.

HEAD OFFICE: KOBE, JAPAN

REPRESENTATIVE OFFICES:
LONDON · NEW YORK

It is crystal clear from the foregoing survey that the authorities are not at all contemplating nationalisation of banks. Indeed, they seem to recognise that the banking business will expand and develop on a sound footing only if it continues to be in the private sector. After all, why should the authorities take upon themselves the heavy burden of managing the large number of banks scattered in the different parts of the country, when they have all the powers to control and regulate the activities of banks? The Banking Companies (Amendment) Bill, which was passed by Parliament only recently, places in the hands of the Government stricter control over banks than before. Even the appointment and dismissal of bank managers have been brought under the purview of the Reserve Bank. Further, under the income-tax rules, the Government has powers to look into bank accounts. Again, by owning and managing the State Bank of India and nearly ten of its subsidiaries, the Government has a mighty weapon in its hands with the help of which it can easily check the activities of the commercial banks in the private sector in the manner it wants. The Government thus enjoys all the advantages of nationalisation without its disadvantages.

W. GERMAN DISCOUNT RATE RAISED

With effect from the 3rd inst., the Central Banking Council in West Germany has raised the discount rate to 3 per cent, from the 2½ per cent. level in force since 9th January last. The upward revision, it is said, has been necessitated by three important developments, namely, (1) signs of business activity in some sectors expanding too fast for comfort; (2) weakness of the market in fixed-interest securities; and (3) rising tendency in U.S. interest rates.

Following the enhancement of discount rate, the Bundesbank has stepped up its rate for loans by ½ per cent, to 4 per cent. Explaining the decision, the Bundesbank says that there is no cause for alarm, despite the tension caused in some sectors of the economy by the summer boom. Nevertheless, it warns: "Sharper measures of credit controls of new orders and the tightening of the labour market variously observed were to be expected to demand price and wage increases calculated to endanger the stability of the price level."

The procedure drawn up in 1958 for the release of Central assistance to States for Plan schemes will be followed during the current year as well. Such Central assistance comprises assistance for schemes included in the State Plans and for centrally sponsored schemes. A substantial portion of such assistance will be made available to the State Governments as lump sum ways and means advances by the Finance Ministry. Three-fourths of the total amount will be released in this form from May 1959. Such releases will be made automatically on or about the 15th of the month. On from the Central Ministries in the latter half of February 1959, the Accountant General will clear these outstanding advances. The balance, if any, ways and means advances will be interest-free, but the loans into which they are ultimately converted or any unconverted balance of such advances outstanding at the end of the year will be deemed to have been made to the State on the 1st October 1959, and will carry the appropriate rate of interest.

U.S. ANSWER TO SOVIET CHALLENGE

(Can the U.S., economically and militarily the most powerful nation in the free world, fully meet the economic challenge of Soviet Russia? To those who are sceptical about the U.S. capacity to grow as fast as Soviet Russia, the following article taken from *Better Living*, the employee magazine of E.I. Du Pont de Nemours & Co., U.S., provides an answer. It succinctly states the dynamics of growth and argues that the U.S. economy is capable of even more spectacular performance, provided business organisations are not harassed but left free to expand.—Ed.)

DURING the past six months, the rate of growth of the U.S. economy has become a topic of fevered discussion. Congressional leaders have called for its consideration; college professors have made it the subject of solemn seminars; and the nation's Press has debated it endlessly. Triggering this widespread agitation was the bold pronouncement, early in 1959, by Mr. Nikita Khrushchev, that Russian economic planning would aim at an annual growth rate of eight per cent. Since America's lofty level of living, as well as its mighty military potential now underwriting the defence of the free world, has been achieved by a growth rate averaging about three per cent. per year over the past 50 years, many have nervously asked: Would not the projected U.S.S.R. growth rate mean an early Russian supremacy in world affairs?

Accurate evaluation of the Soviet challenge requires a recognition of these facts from recent Russian history: Goals set by communist leaders have usually proved highly overdrawn, serving more as a propaganda stimulant than as a meaningful blueprint. More significantly, comparing rates of growth as a measuring device can be misleading. The smaller the base for statistical calculation (and Russia's is much smaller), the easier it is to show a high percentage growth rate. In 1958, for example, Russia apparently increased steel capacity by 4 million tons, an increase of 6 per cent. Meanwhile, the U.S. increased steel capacity by 6 million tons, an increase of about 5 per cent. over its larger base. While the U.S. percentage rate of increase may have been less than Russia's, the

real increase in capacity was about 50 per cent. greater, extending this country's present total productive capacity margin.

Nonetheless, Russia's intense effort to overtake the U.S. is a serious challenge, and it is important to keep America's growth rate high without threat to its fundamental freedoms. The vital question is: What has been the secret of U.S. growth, and how can that growth be maintained?

The story of U.S. economic growth in this century has largely been the story of industrial expansion. By boldly committing business and industrial earnings to new risks, business managers have, in less than 60 years, helped raise the gross national product from \$90 billion to \$438 billion, and spawned billion-dollar industries in every decade (e.g., automobiles, petroleum refining, radio, movies, air transportation, television). By steadily expanding and modernising production and distribution facilities, and by offering constantly more alluring incentives to wage and salary earners, business and industrial leaders have nearly banished want and have infinitely expanded the prospect of enjoying good things. By enlarging research from scattered laboratory curiosities to extensive probing of the unknown, industry has found new and better products and processes. By enlarging corporate structures to provide organisations capable of mass-producing and mass-marketing consumer goods, industry has helped stimulate an employment increase from 29 million to 65 million even while industrial and farm output jumped fivefold.

If the U.S. is to continue to grow and prosper, it must make certain that business organisations are free to grow as necessary to supply the nation's expanding demands. It must be alert to trends which block or weaken industry's power to produce: for example, hostility toward fair profits, excessive Government regulation, crippling or discriminatory tax programmes, the substitution of Government subsidy for private enterprise, or the too easy tolerance of inflation.

For harassment of the business community does more than penalise individual companies and their owners: it saps the creative energy from which future growth must derive.

LATEST REVIEW OF SECOND PLAN

THE hope that the actual outlay under the second Five-year Plan will reach, if not exceed, the National Development Council's estimate of Rs. 4,500 crores (made in November 1958) has been expressed by the Planning Commission in its latest review, entitled *Plan Resources and Outlay*, presented to Parliament on Monday last week. Nevertheless, the Commission urges that efforts must be intensified if the essential objectives of the Plan are to be realised. Incidentally, it points out that though the primary reference in the review is to the second Plan, the problems and the experience of the Plan reviewed in the document gain even greater significance for the correct determination of the approach to the next phase in India's planned development, now that work on the preparation of the third Five-year Plan has been taken up intensively both at the Centre and in the States.

At its meeting in May 1958, the National Development Council decided to divide the Plan in the public sector into two parts, Part A involving a total outlay of Rs. 4,500 crores, which was to include projects and programmes directly related to increase in agricultural production, projects included in the "core," those which had reached an advanced stage and other inescapable schemes. The second part of the Plan—Part B—with a total outlay of Rs. 300 crores was to be undertaken to the extent to which additional resources were available. The Council also emphasised that the Central and State Governments should endeavour to raise resources to the maximum extent possible, through additional taxation, mobilising small savings, and achieving economies in Plan and non-Plan expenditure.

The debate in Parliament in November 1958 also focussed attention on the various measures which had to be taken for realising the second Plan objectives. Among the points stressed were the need for careful preparation of cost estimates of large projects, the need for economy and the elimination of waste in construction, the importance of price stability and the avoidance of excessive deficit financing, priority for agricultural production, reorientation of employment policies, and the desirability of taking early steps to commence work on the third Five-year Plan.

In the review of the position regarding Plan outlay and financial resources prepared by the

Announcing

AMCO Batteries have now entered into a Technical Collaboration Arrangement with Gould-National Batteries Inc. U.S.A. Under this arrangement, AMCO will receive complete Technical Know-How for production of all types of Storage Batteries.

Gould-National, the world's largest manufacturers of Automotive Replacement Batteries, have 29 Battery Plants strategically located all over the United States of America and Canada. These Plants produce Batteries for Automobiles,

Railways, Telephones, Telegraphs, Aircrafts, Ordnance, Missiles and submarines as well as for other Heavy duty and Industrial purposes. It is noteworthy that Goulds were commissioned to fit the batteries for the World's First Atom-powered Submarine—"Nautilus." Obviously, this Technical Tie-up with an organization of such eminence is a positive guarantee to revolutionise the Scope and Technique of Battery Manufacture and bring AMCO in line with the status attained by the Battery Industry in the most advanced countries in the world.

COTTON TEXTILES ADVISORY COMMITTEE WORK DONE SINCE ITS APPOINTMENT REVIEWED

EIGHT months have elapsed since the Cotton Textiles Advisory Committee (Chairman: Mr. D. S. Joshi, I.C.S., Textile Commissioner) was set up. The constitution of the Committee, it will be recalled, was announced on 14th January 1959, as a body to tender advice on any general or particular questions relating to the textile industry. These include production control, demand-supply position in respect of cloth and yarn for domestic and export purposes, rationalisation, rehabilitation and modernisation of the industry, and procurement of raw materials, machinery, stores and accessories, etc., required by the industry. During the brief period of its existence, the Committee has done much useful work, an official review of which has just been published.

One of the first and very important subjects tackled by the Committee at its inaugural meeting held on 21st February related to the assessment of the existing arrangements for imports of machinery and capital goods. The Committee appointed a special working group which recommended that available foreign exchange should be distributed for the aforesaid imports under the following heads in order of priority:

1. Components and raw materials required by the textile machinery manufacturers.
2. Spare parts required by the textile mills.
3. Machinery for replacement.
4. Essential machines for additions.
5. Machines for modernisation and improvement of the quality of cloth and yarn, as, for example, processing machinery and combers.

The annual requirements under (1) are estimated at Rs. 5 crores. It is, however, said to be difficult to assess the requirements of spare parts. According to the Committee, indigenous manufacturers are producing spare parts to the extent of 20 per cent. of the value of imports on an average. The ceiling for imports of spare parts is Rs. 2 crores per annum. It is felt that small-scale industries can be developed to produce spare parts. These and other recommendations, we are told, are being implemented as far as possible within the foreign exchange made available and with due regard to the development of the indigenous machinery manufacturing industry.

Mills' Printing Quota

Another important aspect to which the Committee has paid attention relates to the revision of printing quota of mills. The subject was discussed at considerable length at the meetings held on 21st February and 18th April. Before the Committee could make a formal suggestion to the Government, a five-member sub-committee was set up to have discussions with the All-India Handicrafts Board. Since the discussions at the meeting held on 15th May could not provide a meeting ground between the representatives of the organised mill sector and the Handicrafts Board, the Advisory Committee accepted, at its meeting held on 19th June, the Chairman's suggestion for requesting the Union Ministry of Commerce and Industry to hold joint consultations with the representatives of the textile industry and the hand-printing industry before taking final decisions. Accordingly, the Ministry convened a joint meeting at New Delhi on 18th July. In the light of the discussions held at this meeting, the Ministry is expected to take final decisions.

The Committee has approved of proposals to relax certain provisions of the Textile Control Orders as put forward by the Departmental Committee of the Textile Commissioner's Office. Some of these proposals approved by the Board are designed to minimise the need for obtaining prior permission from the Textile Commissioner for deviation from the Order in the present context of the change in demand and pattern of production. These and certain other amendments to the Cotton Textile (Control) Order have now been brought into force. Special mention may be made of the following:

Clause 12(1) of the Order, which requires composite mills to sell specified quantities of yarn every quarter, has been amended, so that the obligation to sell is dispensed with in respect of those mills the obligation of which works out to 200 bales or below per quarter in each case.

Clause 20A, which required mills to take prior permission for producing cloth and other articles from cloth, has been deleted.

Clause 20B has been removed. This clause was originally intended to restrict mills to the weaving of cotton cloth only; subsequently, a certain percentage of the capacity was permitted to be used for the production of staple fibre yarn and cloth.

Some of the provisions of Clause 21 setting specified quantities of cloth and yarn to be packed by mills, which have become out of date, have either been omitted or suitably modified.

Sub-clause (2) of Clause 25, read with Clauses 26 and 29, laid down a time limit, from the date of marking, within which cloth and yarn bales had to be disposed of by mills and dealers; these provisions have been deleted.

Clause 28 setting quantitative limits on cloth and yarn which may be normally kept in unpacked and packed condition by manufacturers and dealers has been entirely omitted.

Restrictions on the processing (not printing) by composite mills of cloth produced by other composite mills, except dhotis and varieties reserved for handlooms, have also been relaxed.

The Textile Commissioner has also removed the restrictions on the manufacture of gauze as well as bandage cloth by mills for the purpose of export with export markings.

The restrictions on the production of saris by mills have been relaxed to some extent.

The requirement of prior permission from the Textile Commissioner's Office to open and repack bales of cloth and yarn meant for local sale has been dispensed with, so that the mills can now meet without delay the buyers' request made subsequent to the packing of bales by making readjustment of colour, yardage, design, etc.

The question of general permission to composite mills to purchase yarn for use in borders and other special purposes without prior permission from the Textile Commissioner is under examination.

Another important question under consideration is the revision of Schedule II to the Textile Commissioner's Notification No. TCS.1/20 dated 22nd September 1949, so as to permit of a wider range of counts of yarn and wider variations of reeds and picks in cloth used as recommended by the Textile Enquiry Committee. An Expert Committee has worked out a revised Schedule II and an amendment of Clause 8 of the said notification. The amendment of the schedule and the clause will result in considerable reduction in time and labour involved in obtaining deviation orders from the Textile Commissioner's Office and will enable the mills to produce cloth which, apart from durability and quality, will satisfy consumer demand.

A departmental Study Group is also at work in evolving further simplification of procedures under the Textile Control Orders.

Rationalisation and Maintenance

Due attention has also been paid by the Cotton Textiles Advisory Committee to the question of rationalisation, modernisation and maintenance. At its second meeting (18th April), the Committee appointed an ad hoc group of members representing mill management, labour and textile technologists to work out the details of the functions of the proposed committees on rationalisation and modernisation and on maintenance. This group made the following four recommendations:

Maintenance of machinery: There is great need for proper maintenance of machinery in all mills. The poor state of maintenance is in many mills due partly to lack of finance and partly to unavailability of spares. There should be a small body at the top for maintenance. The main work would, however, be done by five or six separate regional bodies consisting mainly of technicians. The Maintenance Committee would recommend whether spares of specified types required by individual units are available indigenously or should be imported. Imports of spares not manufactured in the country should be freely allowed on the recommendations of the Committee.

Modernisation: The replacement of machinery whose useful life has expired should not be resisted. While such replacement may entail some reduction of labour in particular units, the installation and working of the replaced machinery elsewhere will be of benefit to the industry. After general principles of modernisation are worked out, the individual units may be left free to decide on the items and phases of modernisation.

Rationalisation: In the opinion of some members of the Group, the conditions in the Resolution of the 15th Indian Labour Conference cannot apply in their entirety to the cotton textile industry. In particular, the condition that there should be no retrenchment or loss of earnings to labour except through natural separation or wastage will not be workable. Moreover, there is great disparity in accepted principles of rationalisation between different regions. Workers in some centres are not agreeable to workload, accepted as norms based even on proper assessment; thus the mutual agreement contemplated in the Resolution of the Conference becomes difficult. The Rationalisation Committee should formulate norms and assist in their implementation wherever necessary. The work of the Committee will be within the scope of the tripartite agreement and the labour laws and regulations, though it will be open to suggest modifications.

Liaison with research institutions: The Rationalisation and Maintenance Committees must seek the assistance of the Textile Research Associations at Ahmedabad, Bombay and Coimbatore.

The Advisory Committee has deferred for further discussion the question of constituting a committee on rationalisation and modernisation. But it has accepted the recommendation pertaining to maintenance of machinery. A small central committee has been set up to guide and direct the regional bodies. The committee consists of Messrs. Bharat Ram (Chairman), G. K. Devarajulu, T. P. Chakravarti, S. A. Kher and A. N. Ghosh. It has powers to co-opt other members from mill management and textile technicians. The regional bodies consist mainly of technicians and will work in collaboration with the Textile Research Associations in advising units on maintenance. It is, however, not known how many such regional bodies have already been established: the original proposal was for five or six regional bodies.

The foregoing account indicates that the Advisory Committee has rendered valuable work on improving the conditions in the mill industry. And it is gratifying to note that its suggestions are being implemented by the authorities promptly and expeditiously.

REBATE ON HANDLOOM CLOTH SALES

The Government of Bombay has decided to continue the scheme of rebate on the sales of handloom cloth with certain modifications from the 1st inst. The rebate is admissible at the rates and in the manner specified below:

Genuine retail sales of handloom cloth worth Rs. 2 or over (i) from weavers' co-operative societies or State-owned depots and (ii) from consumers' co-operative societies which purchase handloom cloth only from weavers' co-operative societies and which deal, so far as cloth business is concerned, only in hand-woven cloth: 6 nP in the rupee.

Genuine retail sales of handloom cloth for a total period of fifteen days in a year for eight days during the Handloom Week celebrations and for seven days on suitable festival occasions (specific orders will be issued for such special rebate): 4 nP in the rupee.

Wholesale sales of handloom cloth by weavers' co-operative societies. For this purpose a wholesale sale will constitute sale of handloom cloth worth Rs. 100 or above at a time in a single transaction: 3 nP in the rupee.

Co-operative societies or State trading organisation on sales for export of handloom cloth purchased from weavers' co-operative societies and (ii) co-operative societies exporting handloom cloth direct: 6 nP in the rupee.

All other categories of sales of handloom cloth except those specified above on which rebate might have been allowed until now have ceased to have the benefit of rebate with effect from the 1st inst.

PRODUCTION OF "SARIS"

The statement of Mr. Somappa and some other members of the All-India Handloom Board, which appeared in a section of the Press recently, alleging liberalisation of restrictions on the mill production of saris has been denied by Mr. D. S. Joshi, Textile Commissioner and Chairman of the Board. Thus, in the course of a statement, Mr. Joshi has reiterated what he stated at the meeting of the Board's Standing Committee held at Madras on 27th August, namely, that not merely relaxation has been made in the present restrictions but, in some manner, the restrictions have been made more effective. The object of the circular issued, according to him, was to simplify the procedures followed by him, was to simplify the office of the Textile Commissioner. He says, "Although there is a provision in the original 1950 Order to permit mills to manufacture saris with border less than 3" in width, no permission would, hereafter, be given; no borders would also be allowed wider than 2 1/2" or heading wider than 9". It was only in respect of borders between 1 x 2 1/2" that a supplementary restriction about headings (introduced to prevent saris being sold for use as dhotis) is relaxed as a normal course, instead of by individual relaxations as usually done hitherto."

WORKING GROUP ON MODERNISATION OF COTTON MILLS

The National Industrial Development Corporation has set up a Working Group to suggest measures for an early and thorough modernisation of the cotton textile industry in India. The Group consists of: Messrs. D. S. Joshi, I.C.S., Textile Commissioner (Chairman), Krishnaraj M. D. Thackersey, G. D. Somani, K. Srinivasan, S. P. Vasavada, Ramratan Gupta, Trilokinath Sharma and N. Majumdar. Mr. K. R. Aravamudan is the Secretary.

The Working Group has been asked to examine the extent of finances necessary, the portion of foreign exchange required, the extent of industry itself and how the balance of the needs may be met from public or private financing agencies. The question of increasing the resources of public financing agencies like the N.I.D.C. will also be considered. It may send out some of its members to visit countries like the U.K., Japan, the U.S.A. and Switzerland where modernisation of the cotton textile industry has been done remarkably well.

The Group is expected to complete its work by 30th November 1959.

GIANT UPHEAVAL IN COTTON INDUSTRY EXPORT TRADE DISAPPOINTING

From A Special Correspondent

MANCHESTER, 1st September

FOR years to come those whose future is still tied to the Lancashire cotton trade will carry vividly the memory of the happenings of the past week when the industry seemed to

many people to be melting away to the bare bones and when the shadow of the sledge-hammer lengthened over the mills almost hour by hour.

The prospect of an industry only half the size of the present one suddenly looked like becoming a reality.

In putting forward the plan for large-scale scrapping of machinery as a first step towards a healthier, more efficient cotton industry, Government and trade leaders both rightly urged the importance of speed. They have certainly got it.

Stories of anxious millowners breathlessly racing one another down the corridors to the Cotton Board offices, gasping out at the end "Any application forms left?" are no doubt slightly exaggerated. But the rush of applications during recent days, sending the volume of spinning and weaving plant for scrapping soaring high over the minimum targets, has certainly surprised a good many people, including some of those administering the scheme.

By Friday noon the spinners (minimum scrapping target 6,000,000 spindles) had offered 10,200,000 mule equivalent spindles and 12,000 carding engines. The weavers (target 45,000 looms) had put in applications covering no fewer than 82,000 looms. Even the doublers, thought by some to be in danger of being left at the tape, put in a strong burst to pass their minimum target of 400,000 doubling spindles. The compensation already involved is in the region, at a rough estimate, of £12,000,000 to £13,000,000.

Bonus Race Ends

Another four weeks remain before the final closing date for applications, but yesterday (Monday) marked the end of the qualifying period for the extra 5 per cent. bonus on scrapping compensation rates. The next four weeks should, therefore, be quieter than the last four.

A final count taken by the Cotton Board up to the end of August brought a further astounding increase in the quantity of plant submitted for scrapping. This showed nearly 12,000,000 spinning spindles, 14,400 carding engines, 95,500 looms and 493,000 doubling spindles had been entered under the scheme for disposal.

Accepting that in the present situation there is really no convincing alternative to the redundancy plan, one or two thoughts remain. One is the tragedy of a state of affairs in which some of the best known mills and firms in Lancashire cotton, recognised as well managed and progressive, have decided to go out of business. The casualty list of the past few days has certainly contained some surprises.

Another thought is that there must be very few British industries today in which a giant upheaval on the scale of that going on inside the cotton industry at this moment could be pushed through without a violent reaction from organised labour.

Meanwhile, the certainty that the operation to re-shape the cotton industry is now going to be a major one has given trading in yarn and cloth something of a shot in the arm. Some salesmen have done better in the past day or two than at any time for several weeks past and the tendency has been for individual orders to be more substantial.

Freer operations in the main seem to have gained their impetus from customers' fears that supply difficulties may arise during the period of transition. Delivery dates are lengthening and another factor which appears to have influenced customers is that prices are almost certain to go against them.

Meanwhile, union leaders of Lancashire's 200,000 cotton workers, worried by the snow-balling effect of mill closures under the £30,000,000 reorganisation scheme, are to suggest to the Cotton Board that the blow should be softened for people in the worst-hit districts by postponing the shut-down for a few months.

Sir Alfred Roberts, the spinning union leader, said after a meeting of the Legislative Council of the United Textile Factory Workers' Association in Manchester this afternoon that some workers were blaming the union leaders for mills closing down. "We have never agreed to the closing down of a mill," he said. "This is a Government scheme and all we have tried to do is to soften the blow by getting compensation for the displaced workers."

The unions had been told in the early stages that, although it would not be possible to determine which mills should close down on a geographical basis, it would be possible to suggest to the employers that the closing down should be delayed where the social consequences on an area were likely to be particularly severe.

Exports

In spite of a slightly better performance in July, overseas trading figures for British cotton goods in the first seven months of the year make a pretty sombre backcloth to the developments now taking place in the industry. Again the story is one of grey cloth imports eclipsing Lancashire exports by a substantial margin.

At 197,000,000 square yards for the seven months, shipments of cotton cloth from Britain were more than 40,000,000 yards down on the corresponding period of last year. Grey cloth imports from abroad at 244,270,000 yards, ironically, were more than 40,000,000 yards up, with India and Hong Kong both recording sizable increases, although the contributions by China and Japan were both lower.

Exports of Lancashire-made cotton cloth to key Commonwealth markets showed a disappointing decline. Australia took 31,800,000 yards, a fall of more than 10,000,000 yards on last year,

South Africa 23,800,000 (a drop of 11,000,000) and New Zealand 15,300,000 (5,000,000 down). There were modest gains in shipments to Kenya, India, Norway and Sweden.

Cotton yarn shipments in July failed to reach the 2,000,000 lbs. mark. For the seven months, they amounted to 13,681,237 lbs. valued at just over £5,000,000, as compared with 16,588,335 lbs., worth nearly £7,000,000 in the corresponding period last year.

Earnings from all types of cotton yarns and manufactured goods during June and July, dropped below £5,000,000, as compared with the sharp improvement recorded in May when their value exceeded £6,000,000. To the end of July, shipments earned £36,543,487, as compared with £44,379,255 from exports in the first seven months of 1958.

How Much Cloth?

Supply statistics drawn up at the end of the first half of last year covering cotton and rayon goods available in Britain showed a reduction in every aspect—output, imports and exports. Comparable figures for the current year provide a similar story, with the exception that arrivals of foreign cloth have, as is well known, reached a new high peak.

The table below sets out the position covering recent years:

(In million yards)					
Year	Output (a)	Imports (b)	Total (a) & (b)	Exports	Balance for Home Trade
1937	4,122	75	4,197	2,001	2,196
1947	2,012	174	2,186	639	1,547
1949	2,592	400	2,992	1,078	1,914
1951	2,960	478	3,438	1,105	2,333
1952	2,192	210	2,402	871	1,531
1953	2,632	143	2,775	895	1,880
1954	2,775	335	3,110	812	2,298
1955	2,479	365	2,844	688	2,156
1956	2,814	380	3,194	695	2,499
1957	2,287	490	2,777	567	2,210
1958	2,030	434	2,474	468	2,006
First 6 months—					
1955	1,350	200	1,550	351	1,199
1956	1,215	201	1,416	301	1,115
1957	1,232	250	1,482	295	1,187
1958	1,105	229	1,334	257	1,077
1959	974	237	1,211	201	1,010

Another sharp fall has occurred in the quantity of cloth produced in local mills since the beginning of 1959 and the deficiency has not been fully covered by the increase in imports. The total available is 100 million yards smaller than at the same stage a year ago.

Cotton Conference

This year's Cotton Board Conference, to be held at Harrogate from 16th to 18th October, will be taking place shortly after the closing date for applications to scrap surplus machinery under the industry's reorganisation plan.

Speakers will include Lord Rochdale, Chairman of the Board, and Mr. A. W. Tuke, Chairman of Barclays Bank. Mr. H. A. Clegg and Mr. R. M. Hartwell of Nuffield College, Oxford, will present a paper dealing with "The Organisations—Employer and Trade Union—of the Cotton Industry," and Mr. C. E. Harrison, President of the Manchester Chamber of Commerce and Vice-Chairman and Managing Director of English Sewing Cotton Company, Ltd., will read a paper on "A Producer Looks at Marketing." The "Question and Answer" session will be repeated, and a panel under the chairmanship of Mr. Lewis T. Wright, consisting of Mr. A. G. Bardsley, Mr. D. Burn of *The Times*, Mr. M. H. Ferguson, Mr. J. M. H. Grey, Sir Alfred Roberts, C.B.E., and Mr. W. T. Winterbottom, C.B.E., will answer questions put by members of the industry.—All Rights Reserved.

SUPPLY POSITION OF RAW COTTON

TIGHT CONDITIONS TO PERSIST

THE new cotton season (1959-60) seems to have had an auspicious start. Both the mill industry and the cotton trade have special reason for gratification, because the Government of India had announced a day before the commencement of the season an import quota for 140,000 bales of foreign cotton, followed the next day by the release of an export quota for 75,000 bales of Bengal Deshi, thus fulfilling the long-awaited hope of the industry and the trade. This move of the Government is taken as indicative of its awareness of the industry's needs and its readiness to act even with a certain amount of risk.

Stocks of both foreign and Indian cotton at the beginning of the season are small, being no more than 1.8 million bales. The prospects for the new crop at present are none too encouraging. The monsoon has been erratic. While some regions have lacked sufficient rain, others have had an excess of it, necessitating re-sowing in some areas and impeding weeding operations in others. Only in the Punjab can the weather be said to have been fairly favourable. These seasonal factors have considerably affected prospects for the crop which is currently estimated at 4.80 million bales. Together with imports, which may be of the order of about 550,000 bales, a total supply of 7.10 million bales is indicated, as against 7.3 million bales in the season just ended. Mill consumption of both foreign and Indian cotton is expected to be of the order of 5.3 million bales and exports may aggregate 400,000 bales. There is, therefore, every possibility that the carryover at the end of the new season might be reduced further to 1.5 million bales.

The 1958-59 season just ended was a fairly good one for cotton. The output during the season is estimated to have aggregated 4.80 million bales, as against 5.15 million bales in the previous season. The carryover of all cotton at the beginning of the season was of the order of 2.05 million bales. Total import allocation during the season aggregated 597,000 bales, including the 140,000 bales released recently, made up of 310,000 bales of cotton of staple length 13/16" and above, 190,000 bales of cotton of staple length 1.1/16" and above but below 1.1/16" and 97,000 bales of American cotton. Of this actual arrivals upto 22nd August 1959 were of the order of 479,455 bales, as compared with 416,247 bales in the same period of the previous season.

Exports made a better showing during the season. Total export quota released aggregated 500,000 bales. Actual shipments from the commencement of the season till 22nd August amounted to 366,518 bales, as against 270,566 bales shipped in the same period of the previous season. The higher export was possible because of the liberal release of quotas, and the reduction in duty from Rs. 50 to Rs. 25 per bale effected in November last. The quotas were issued on a first-come-first-served basis which is responsible, in no small measure, for larger exports. A small percentage was, no doubt, reserved for co-operative societies, but their performance in this respect was disappointing. The following table gives the destination-wise break-down of exports and sources of imports:

(In bales of 400 lbs.)

Description	From 1st September to 22nd August	
	1958-59	1957-58
Imports—		
East African	200,069	125,723
Sudan	116,938	78,603
American	86,640	147,485
Egyptian	68,778	62,931
Pakistan	6	6
Other sorts	7,024	1,505
Total	479,455	416,247
Exports—		
Japan	267,862	195,977
Hong Kong	39,995	19,594
Continent	31,018	26,480
United Kingdom	8,605	16,389
U.S.A.	7,924	11,040
China	7,548	—
Other countries	3,566	1,106
Total	366,518	270,566

Mill consumption of cotton, though not spectacularly higher, must be considered to have been well above that in the previous season. During the first ten months of the season, that is, from 1st September 1958 upto 30th June 1959, Indian mills consumed 4,213,263 bales of cotton (both foreign and Indian), as compared with 4,158,321 bales in the corresponding period of

the previous season. The rise in aggregate consumption was wholly due to the increased off-take of Indian cotton, whereas that of foreign cotton was lower. Thus, while consumption of Indian cotton during the ten months was higher at 3,841,224 bales, as compared with 3,685,317 bales in the same period of the previous season, that of foreign cotton actually declined to 372,039 bales from 473,004 bales in the corresponding period of the previous season. The average monthly rate of consumption during the ten-month period was higher at 384,120 bales for Indian cotton and lower at 37,200 bales for foreign cotton, as against 368,538 bales and 47,300 bales, respectively, in the same period last season. On the basis of these figures, consumption for the whole season is estimated to have exceeded five million bales. The following table indicates the trend of consumption during the ten-month period:

(In bales of 400 lbs.)

	September to June	
	1958-59	1957-58
Indian cotton	3,841,224	3,685,317
Foreign cotton	372,039	473,004
Of which:		
Egyptian	67,453	54,838
Peruvian	661	5,503
Sudan	74,493	72,244
East African	154,383	122,613
Russian	—	168
U.S.A.	73,825	212,226
Mexican	—	61
Belgian Congo	—	1,376
Others	1,224	3,975
Grand total	4,213,263	4,158,321

* Estimated.

To sum up, supplies during the 1958-59 season aggregated 7.33 million bales, comprising a carryover of 2.05 million bales, a commercial crop of 4.80 million bales and estimated imports

of the order of 480,000 bales. Mills absorbed 5.05 million bales. About 50,000 bales are believed to have been used up by hand spinners and the surgical industry. Estimated exports aggregated 400,000 bales, leaving a balance of about 1.8 million bales as stocks at the end of the season.

U.S. COTTON EXPORTS

Cotton experts in the U.S. are optimistic that the U.S. will export 6 million bales (of 478 lbs.) of cotton in the current (1959-60) season. Prominent among them is Mr. Seton Ross, Associate Publisher of the *Cotton Trade Journal*, Memphis, U.S.A. This optimism is based mainly on two factors: (1) U.S. prices are more competitive and (2) mill stocks in Western Europe are at a low level. They are sure that, unless the Department of Agriculture succumbs to outside pressure, or some unforeseen calamities occur, at least a minimum of 5 million bales would be exported this season.

Writing in the *Journal*, Mr. Seton Ross observes:

"No valid reason exists now for mills overseas to hold back buying of U.S. cotton. The fear that the review provision in this country's export policy may lead to an increase in the export subsidy is largely groundless. Hand-to-mouth purchasing does not make good sense any more. Pre-empting that, if the export subsidy is to be revised at all during this season, it will be a downward, not an upward revision.

"Everyone in Washington expects that the U.S. will have no difficulty in selling its fair share of the export market in cotton before the end of the season. In fact, if sales are as heavy as some expect, there is a possibility the export price will be boosted a bit, especially since the export price will be the International Consultative Cotton Committee, aided by the U.S. State Department, will exert every pressure for such action when our exports near the 5,000,000-bale mark."

According to Mr. Ross, it looks as though the volume of barter transactions would be reduced below what they were in the season just ended, because competitive export prices obviate the necessity for more extensive use of barter in moving cotton.

Mr. Ross also feels that domestic consumption of raw cotton in the U.S.A. will increase to 9 million bales, as against 8.5 million bales in the last season and that the crop will be about 14 million bales. In support of his contention that consumption of cotton is likely to rise, Mr. Ross argues:

(Continued on page 441)

CRISIS IN WEST GERMAN COAL INDUSTRY

ECONOMIC CABINET SUGGESTS SPECIAL LEVY ON FUEL OIL

THE crisis in the West German coal industry arising from accumulation of stocks and growing preference for oil is engaging the urgent attention of the authorities in that country. The Government is currently considering the series of measures suggested by the coal industry and trade, as well as those put forward by the Economic Cabinet (Chairman: Dr. Ludwig Erhard, Minister for Economics). One of the important proposals is that a levy of DM30 about Rs. 33.33) per ton be made on all grades of fuel oil, with a view to equalising competitive conditions between the coal and oil industries until the former can be rationalised and the redundant manpower found work elsewhere. The full Cabinet of the West German Government considered this suggestion at a meeting held on 28th August but did not take any decision. It only referred back to the Economic Cabinet the entire coal problem. The two other proposals now being examined by the Government cover (a) downward revision in coal prices and (b) payment of resettlement allowances to miners who lose their jobs. The Government is expected to take a final decision on these proposals for submission to Parliament sometime next month.

The continued crisis in the West German coal industry has arisen, as already stated, from accumulation of heavy stocks consequent on lagging sales. The total of pithead coal and coke stocks is put at over 17.00 million tons, as against just 1.36 million tons at the end of 1957 and 13.95 million tons in December 1958. This quantity represents as much as 10 per cent. of the annual rate of output, namely, 176.02 million tons. It may be noted here that West Germany is the largest producer of coal and coke in the European Coal and Steel Community (the other members of the Community are: Belgium, France, Italy, Luxembourg, and the Netherlands), accounting as it does for 54 per cent. of the total hard coal output and 58 per cent. of coke output of the Community.

Coal Statistics

The heavy accumulations of stocks have persisted notwithstanding the fall in production and decline in imports in recent years, as will be evident from the following table:

	(In million tons)			
	1958	1957	1956	1955
Hard Coal—				
Production	132.58	133.16	134.41	130.73
Imports	11.99	15.81	17.15	13.88
Exports	11.54	2.43	2.68	2.49
Coking Coke—				
Production	43.44	45.19	43.44	40.50
Imports	—	—	—	—
Exports	2.04	2.66	2.86	8.57
Total—				
Production	176.02	178.35	177.85	171.23
Imports	11.99	15.81	17.15	13.88
Exports	3.58	5.09	5.54	6.06
Pithead Stocks (at the end of the year)—				
Hard coal	8.56	0.74	0.70	0.57
Coking coke	5.29	0.62	0.18	0.16
Total	13.85	1.36	0.88	0.73

The collieries have struggled to cope with the situation, either by adopting new methods of coal sales promotion at home and abroad or by trying to cut down production somewhat. As many as 5.6 million man-shifts have been dropped so far, and a 40-hour week has been granted to miners. Also, the industry's labour force has been reduced by more than 10 per cent. to about 445,000 now, mainly by not replacing personnel leaving the coal industry for natural reasons, such as disablement and change of job. Even so, production has shrunk by only about 6 per cent. as compared with last year, not enough to avoid a further, though slackening, rise of pithead stocks.

Late in 1958, a so-called slump cartel agreement, one of the few types of cartels legally permissible in the Federal Republic, was signed by the coal industry and major fuel oil companies. The oil companies agreed not to try to win new customers who had used coal so far and not to sell fuel oil below world market quotations until 1960. But early in August last, the oil companies withdrew from the cartel, because outsiders in the fuel oil business (that is, non-members of the cartel) had been long since undercutting the cartel price, thus gaining a growing share of the fuel oil market.

Hard coal undoubtedly still is—and will for long continue to be—West Germany's main

supplier of energy, accounting for some 70 per cent. of energy consumption, as against about 13 per cent. for fuel oil. The coal industry knows that it will have to face competition from fuel oil now and later—possibly—from atomic energy, but it thinks that it deserves a fair period of respite to complete the modernisation of its equipment, a move which is in full swing already. The Federal Government, accepting this line of thought and being convinced that coal should be secured its proper place within the nation's energy supply scheme, is trying to give hard coal this breathing spell. Early this year, it decided upon an import duty on coal imports from the non-E.C.S.C. countries to ease the pressure of imported coal, and now it plans a tax or levy on light and heavy fuel oil for a limited period, possibly two to four years. The coal industry has already made it clear that it will continue to do its best to give "hard coal a real chance to compete successfully with fuel oil in the long run."

It is, however, not known whether the proposed levy of DM30 per ton will be levied on all fuel oils or only on the heavy grades. Some in West Germany feel that a levy on light fuel oil, which largely goes into domestic heating, would be politically dangerous while there are others who fear that the political dangers of widespread unemployment in the Ruhr would be even greater. The latter section even warns that the danger of unemployment can cost Dr. Adenauer's Christian-Democratic Party its hold upon the State Government in North Rhine-Westphalia and even decisively weaken it in Federal politics.

COAL MINES LABOUR WELFARE

At its meeting held at Dhanbad recently, the Coal Mines Welfare Fund Advisory Committee approved of a scheme for the establishment of a centre at the Jamadoba Multipurpose Institute for training and rehabilitation of disabled colliery workers for a period of one year to begin with.

About 20 disabled persons from among the 'Tatas' Jamadoba Group of collieries will be admitted for training in the making of garments and cane baskets. A stipend of Rs. 30 per month per trainee will be given, out of which Rs. 20 will be borne by the management of the above collieries. The finished products will be purchased by collieries sponsoring disabled persons for the training course. Another proposal approved was for the setting up of a common blood bank for both the Central Hospitals, Dhanbad and Asansol. The Committee also approved of the Coal Mines Labour Welfare Fund Fatal Benefit Scheme, which provides for the payment in cases of fatal accidents, namely, (i) payment of a sum of Rs. 100 to the widow or other persons wholly dependent on the deceased, (ii) a monthly allowance of Rs. 10 for the widow for a period of three years, and (iii) a monthly scholarship of Rs. 5 for each school-going son or daughter of the deceased till the child attains the age of 15. One-tenth of the total expenditure on the scheme will be borne by the Coal Mines Labour Welfare Fund. The scheme is estimated to cost over Rs. 9 lakhs per annum. The Central Government has approved of the proposal of the Welfare Fund for opening a rehabilitation-cum-convalescent home for the workers in the coalfields of Bihar and West Bengal. The other schemes approved by the Committee cover the following:

Establishment of a residential home for children of coal miners suffering from infectious diseases like leprosy and T.B. Only children of those colliery patients who are not segregated will be admitted to the home. It will be set up at Bhuli, near Dhanbad. The intention is to protect the children from infection. The scheme is expected to cost Rs. 5,400 non-recurring and Rs. 17,300 per annum recurring.

Establishment of 10 urban and 20 rural family planning clinics in different coalfields. The Union Ministry of Health recommended the establishment of two model clinics at the Central Hospital, in addition to the Fund's proposal. The Committee approved of the whole proposal, with the stipulation that, in the matter of opening Fund's clinics, the State Governments should be prevailed upon to open as many clinics as possible in the coalfields and that the Coal Mines Welfare Fund's clinics should be located where the State Governments have not been able to set up any.

Payment of subsistence allowance to the dependents of leprosy patients undergoing treatment at a rate not exceeding Rs. 50 per month for a maximum period of six months; payment of diet charges at Rs. 30 per month for a maximum period of six months to patients receiving outdoor treatment; grant to institutions or organisations who have provided facilities for treatment of outdoor patients at the rate of Rs. 10 per annum per patient; and grant for treatment of indoor patients at leprosy hospitals or clinics at the rate of Rs. 3 per patient.

DURGAPUR

IS GETTING READY

At the Durgapur steelworks at this moment, nearly ten weeks ahead of schedule, the first Simon-Carves coke oven battery is being gradually and carefully heated up to operating temperature. When this highly skilled process is finished, the coke ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

Simon-Carves, a leading member of the British consortium ISCON which is building the Durgapur steelworks, are privileged to be the first contractors to put their plant into service—plant which is vital to Durgapur's coming production of another million tons a year of Indian steel.

PICTURE OF INDIAN ECONOMY TRENDS IN EMPLOYMENT AND UNEMPLOYMENT

By R. P. Aiyer

A SERIOUS weakness in the Indian economic scene is the paucity of reliable data. This has to a certain extent vitiated planning. The gap in statistics, however, is being increasingly plugged and, in this effort, special mention must be made to the various sample surveys conducted by the National Sample Survey. The plight of underemployment is part of India's rural picture and to this has been added urban unemployment inherent in the country's efforts to break through to the industrial age. How deep-rooted are the twin problems of underemployment and unemployment? What effects these maladies have on family life, both in rural areas and in the cities? These and a host of other problems plague the perspective planner who, while not being able to ignore the impact of the untapped labour force, must perforce set his vision inexorably to enduring advances towards greater productivity.

Take Off

Prof. Rostow in his recent Cambridge Lectures has been somewhat of an optimist when he classified India as one of the nations which is in the process of "take off." Would the time factor involved in achieving the take off be a decade? a generation? or a much longer period? This will depend upon the effort the country will be able to put forth during the third and fourth Five-year Plans. The time factor will be greatly influenced by the dedicated effort of the elite thrown up by the recent transformation of political and economic power, and the determination with which the Central Government acts on important matters of policy. Nevertheless, the period could be shortened if the vast inert rural mass could be activated. Towards this purpose a measure of knowledge of the characteristics of the country's population will be vital and this need has been sought to be met by the National Sample Survey which has presented in a volume* relevant data collected between April 1952 and March 1954. These data, as Prof. P. C. Mahalanobis says in his foreword, "gives for the first time some characteristics of the population and of the labour force on an all-India basis, with breakdown for rural and urban areas, different rural population zones, and different size classes of towns."

Basic Data

The Survey reveals some basic facts, which are not fully appreciated even by the experts in their relative fields, and these may be usefully summed up here. With a land mass of 1.27 million square miles (811 million acres) and a population of 385 million in 1956 (estimated), India is tending to add to the population at the rate of 5 million a year. Eighty-three per cent. of the population live in rural areas, out of which 70 per cent. depend on agricultural occupation. The land per head is two acres, as compared with 12 in the U.S.A. and 24 in the U.S.S.R. About 20 per cent. of the rural households own no land, 50 per cent. own less than 1.5 acre. Half of the net national product consists of agricultural products. Of the country's geographical area of 811 million acres, about 300 million acres are annually cultivated and 55 million acres are under irrigation. Out of the 30,000 odd factories in India, about 20,000 employ less than 100 persons, and only about 1,000 are really big. The net output of the organised factories employing 10 or more persons with power or 20 or more persons without power accounts for less than 10 per cent. of the net product. The national income in 1953-54 was about Rs. 10,500 crores, which indicated a per capita national income of Rs. 281.

The publication is also replete with considerable additional information on such very relevant points as age distribution, household size and the composition of labour force in terms of sex and age. These data indicate in statistical terms the socio-economic problems the country is faced with and, as Prof. Mahalanobis has pointed out in his foreword, the results

which have emerged in the course of the study are of "considerable demographic interest."

Age Groups

In the case of a community which is undergoing the process of an explosive increase in numbers, one redeeming feature is that the proportion of persons in the younger age group tends to be higher and the pattern is reflected in a greater measure in India—which is accepted to be a typical feature in pre-industrial economies. For example, the Sample Survey has revealed a percentage of 33.87 in the age group of 0-11 over the entire country, with both the rural and urban areas maintaining near parity with percentages of 34.45 and 33.87 respectively. In the age group 17-61—an important category to be reckoned with in relation to employment—the percentage of population is of the order of 51.61, which leaves a percentage of 3.59 to cover the age group 62 and above, the balance of 10.93 per cent. being made up of the age group of 12-16. The huge working population in the country—the number augmented by the under-age persons who are obliged to be economically active—should in a rationally integrated society offer great strength, but as is the bane with all underdeveloped economies, what should be a tower of strength is, as a result of large-scale unemployment, proving to be the weakest link in the chain.

More than unemployment, it is underemployment which poses a challenge to the planner. Speaking of underemployment and unemployment in the country, even a layman could well perceive the chronic lack of opportunities for gainful employment which would both meet the needs and aspirations of large sections of the population. Nevertheless, an attempt at solving problems presupposes a mea-

sure of factual knowledge, and the relevant data in relation to underemployment and unemployment are contained in the National Sample Survey's report on employment and unemployment.†

Different Connotations

The terms "employment" and "underemployment" have definite connotations in the industrialised nations of the West, the operational meanings being whether a person is engaged in a specified work or is seeking work. These terms applied to the Indian scene would, however, need to be modified by virtue of the fact that a very large number of persons work in household and family enterprises. One is not surprised when the Survey revealed that "about 2 per cent. of the urban population and 0.29 per cent. of the rural population were unemployed in May-August, 1955," which, in terms of overall numbers of unemployed, indicated a figure of 1.3 million in respect of urban areas and 0.9 million for rural areas. These figures by themselves would imply a situation of near full employment, but it is when we come to the picture representing underemployment that we are confronted with a depressed situation. The "severely underemployed," according to the Survey, is of the order of 13.8 million in rural areas and 1.6 million in urban areas. The chief aim of planning for national development, therefore, is how best fuller utilisation can be achieved of the underemployed.

Picture of Calcutta

The employment situation in the country varies from region to region, depending upon their development. In this context, Calcutta poses special problems as, notwithstanding its industrial base, the city has the most educated unemployed. How deep is the malady has been brought out in yet another National Sample Survey Publication! To summarise some of the findings of the Survey: About one person out of 14 among the general population is unemployed, and in the labour force the unemployment incidence is one out of five. The percentage of unemployed

(Continued on page 452)

"Lost your shirt, Parameswar?"

"Don't remind me of shirts! One dozen shirts, made just 6 months ago, returned from the dhobi 'plut'!"

"Tut, tut! You must have been so busy hunting for fancy cloth that you haven't heard of BINNY'S! BINNY'S Quality Control! their production, you know..."

"What is this Quality Control?"

"Modern machines process yarn and cloth so fast, that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S fabrics last so long."

"Your words give me courage, brother. Lead me to the nearest BINNY'S shop."

BINNY — a great name in textiles

Testing the uniformity of cotton fibres

Durability of cloth depends on the strength of the yarn used. This, in turn, depends on the uniformity of the fibres in the cotton. Only specially selected cotton goes into BINNY'S fabrics. That's why BINNY'S cloth lasts so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Shirtings - Tussore - Union Fabrics - Silk Saris - Rugs - etc etc

EVIL OF REBATING IN GENERAL INSURANCE

SOME REMEDIES FOR ELIMINATING IT

By "Arby"

THE fact that rebating has come to stay permanently has got to be faced. It may be that it will be reduced, but it can never be eliminated. To reduce it appreciably will require herculean efforts on the part of the Controller of Insurance. To leave it to the insurers to find an agreeable and workable solution acceptable to all is to ask for the impossible. It must be acknowledged that the insurers are incapable of thinking for the entire trade. Representatives of the insurers have been suggesting in the past only such steps as their own companies can easily follow, leaving aside the point as to whether the majority will be capable of implementing them. Alternatively, such suggestions are made as can easily be got over.

A question that may be asked is as to why all companies, big and small, do not meet and decide on a solution which would be practicable and acceptable to all. The answer is simple. First, there are three divergent groups amongst the insurers, two led by the two big giants of the trade and the third representing the medium and small companies. All these groups pull strings for their members, as a result of which no solutions contemplated are acceptable to each other. Each group waits and watches as to how it can get the better of the other. Every insurer will do anything to snatch the business, however small it is. Secondly, and this is most important, there are today very few qualified managers running the companies who can sit together and draft out a really workable scheme. The managers of today will do their best to procure business but underwriting or administering the business is not their department. They say we are paid by the Directors to write big business and not to waste our time in the office.

Keeping the above facts in mind, it must be said that an endeavour should be made to tackle the problem on a realistic basis rather than haphazardly. Efforts should be made to go to the root cause of the trouble rather than handle the matter superficially.

Some of the steps that are being suggested by the Controller of Insurance and representatives of insurers to tackle the problem are as follows:

The Controller of Insurance has for the last few years held the view that it is only because of high fire premium rates that the insurers are able to keep their heads above water in spite of paying high rebates. It is his belief that, if the rates are reduced, the profits will naturally fall and, as a result, the companies will not be in a position to give rebates. There is a unanimous opposition from insurers all over India who maintain that such a step, if taken, would strangle several insurers. It is stated that the fire department of companies is the only department which regularly shows profits while the other two departments, namely, marine and miscellaneous, are usually running in losses. Thus, if the fire rates are also reduced, the majority of companies will show big losses. Besides, it is argued that, when in 1955 the fire rates were reduced, there was only a very small decline in rebating. It is maintained by the companies that, out of the net premium of Rs. 20 crores written by the Indian insurers in 1956 only a sum of Rs. 18 lakhs (i.e., less than 1 per cent.) was available for distribution of dividends. If there is a reduction in the fire rates, the profits of companies would automatically vanish. The companies suggest that the Controller of Insurance should not take a negative step but should try to strengthen their position.

Even today, as matters stand, there are several marginal companies whose existence is in the balance and a drastic step like reduction in rates would kill them. The Controller, it is suggested, should, by legislation if necessary, force the companies to build up their reserves every year by about 10 per cent. of the gross premium written, so that the amount thus utilised will reduce the profits of companies and thus build up their strength and will not leave with them sufficient funds for the purpose of rebating. This matter of reduction of rates is still unsettled and it is only hoped that the Controller of Insurance will not insist on it.

Another suggestion put forward is that the present practice of allowing companies to incur management expenses as a percentage of the gross premium income should be changed to net premiums. It is contended by the sponsors of this scheme that companies, in order to show higher business figures, write any class and quality of business and thus they are able to save some money for rebating. Changing over to net premium basis will encourage companies to accept better quality of business which they can retain and which will achieve the object of companies trying to secure reciprocation from abroad and thus save some foreign exchange. However, the opposers of the scheme maintain that this change over would be in the interest of only bigger companies who are well established for several years and who have been able to secure reciprocity from abroad. They mention that, if an analysis of business written by the companies is carried out, it will be found that only the bigger companies are able to write substantially high net premiums as compared to their gross premiums. The ratio of net premiums to gross premiums for bigger companies will be as high as 80 per cent. (in case of some big companies it is over 100 per cent.), while, in cases of smaller companies, the ratio would be about 50 per cent. The smaller companies moreover contend that the bigger companies are not co-operating with them in ceding reinsurance business on reciprocal basis and as such they are bound to be permanent losers if net premium basis formula is adopted. Further, it is felt that, although the hankering for business may slow down, rebating would continue.

A third measure suggested is the gradation of commission according to the business written by the agent, that is, higher commission being paid to those agents who are able to procure higher business. The small companies will be allowed to pay higher commission to the same agent as compared to bigger companies, so that the agent may have some incentive to go to smaller companies as well. The proposition is being examined seriously by all companies, but it is very doubtful if rebating would end there, as it does not go to the root of the problem. Along with this measure, other stricter measures will have to be adopted like checking of expenses, etc. This again would lead to the interference of the Department of Insurance of the Government of India in day-to-day affairs.

A fourth measure, which goes hand in hand with the suggestion of graded commission, is the proposal for the abolition of the system of inspectors. There is no unanimity among the insurers on this point. One powerful group is

in favour of continuing this system, while others who are against it maintain that this system has lost its importance and is today only a source of granting rebates.

A fifth suggestion put forward and perhaps the most logical and correct one is the abolition of the sections 40A(3) and 41 which restricts the payment of more than 15 per cent. commission to agents. It is a well-known fact that this section was introduced in 1938 and it is only since then that the questions of rebating and malpractices have cropped up. If this restriction on commission is removed companies will be able to pay as much rebate as they like and they will be able also to show the commission paid officially in their books. The Government will also be able to collect income-tax on commissions paid which they are not able to do today. The sponsors of this scheme state that the present restriction of not allowing the companies to spend over a particular percentage should continue; if necessary, the percentage be reduced, so that there will be a check on the maximum commissions that companies could pay. This will no doubt lead to some competition between the bigger and smaller companies but so is the case in our day-to-day business also. A small shop has to face competition from bigger stores; yet both of them survive and it is only efficiency and service which count in the long run.

The above are some of the steps advocated by the trade and the Controller of Insurance. One thing, however, which needs pointing out is that whatever final decision is arrived at it must be thought of quickly and implemented soon. The present intransigence is not in the interest of the trade. The companies, the inspectors and the field workers do not know where they stand. The companies are unable to plan for the future.

Before this article is closed one important aspect remains and that is that the Directors of companies must take keener interest in the day-to-day working of companies. They must understand the responsibility thrown on them by the Companies Act. Relying entirely on the managers who do not have any financial stake (except getting their salaries regularly) in the well-being of the Company is not in their interest. The Directors must stop insisting on the managers to write bigger volume of business every year.

The general insurance business has a very big role to play in the future. Each Five-year Plan completed means greater industrialisation in both the public and private sectors. Insurance companies will be called upon to cover more and more complex risks, for which they must be prepared. Companies must stop thinking of insurance as consisting of three departments only, fire, motor and marine. Staff must be trained from now on to tackle insurance of machinery breakdown, erection, employers' liability, atomic energy and several other types of cover, which companies will have to handle in the future. Finally, insurers must set their houses in order so as to be able to face the future with confidence.

HOURS OF WORK AND LABOUR EFFICIENCY PROS AND CONS OF SHORTER WORKING PERIOD

By Dr. J. N. Mongia

PROBLEMS of labour have assumed great importance these days in almost all the countries of the world, because a large part of the population is either selling or buying labour or is dependent upon such sales and purchases for a livelihood. As a matter of fact, for intelligent people, both young and old a major interest in life consists in seeking and discovering solutions for problems of one sort or another. To such persons, the modern world offers a wide choice of problems. In the opinion of many, no type of problems is more interesting than the one generally described as "social problems," and no division of that field more intriguing than the problems associated with labour in modern society. As a matter of fact, recent years have seen an increase in popular as well as in scientific interest in labour problems. Attention has been focussed upon such problems by a variety of circumstances, including the political recognition accorded to labour and the advancement of so-called labour legislation by political administrations. A similar influence has been exerted by a rapid expansion in labour organisation. The fact, however, remains that, besides regularity of employment and wages, few considerations affecting labour have received more popular attention in recent years than hours of employment.

Working hours, more or less, are closely related to a variety of other situations from which current labour problems arise. That there is considerable relationship between hours and the extent and stability of employment is beyond question, though the relationship is not so simple as is frequently assumed. Hours are related also to wages, for marginal hours may be quite as important as marginal workers. Several studies have shown a relationship between hours and workers' health and it is well known that long hours are frequently associated with fatigue and increased accidents. The social and political life of workers is directly related to their hours of employment, in that long hours place definite limits on their participation in such activities.

Hours and Efficiency

The precise effect of shorter hours upon output and total costs is, however, difficult to determine. The available evidence consists primarily of data on total output or costs before and after the hours change. It does not, therefore, make full allowance for current changes in other conditions of production, besides the length of the work period, such as changes in the technique or methods of production, in the personnel, in the quality of the product, in materials and other costs, in the psychology of the workers, etc. Furthermore, it takes time for shorter hours to affect a worker's efficiency and output, consequently, the test period must be sufficiently long, if the total effects of the change in hours are to be measured.
