CHEMICALS THAT HELP INDUSTRY TO BRING A BETTER FUTURE CLOSER

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS—acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER—Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES—Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES—Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT—Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

CHEMICALS FOR EVERY INDUSTRY

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.

Wakefield House, Sprout Road, Ballard Estate, Bombay 1.
 Also at: Calcutta, Delhi and Madras.

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A.
 Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

UMESH YOGA DARSHAN (First Part)

In Four Languages: English, Hindi, Gujarati and Marathi.

(Author: SHRI YOGIRAJ UMESHCHANDRAJI)

SHRI YOGIRAJ UMESHCHANDRAJI

An excellent treatise on the true meaning of Yoga, which explains to you how to control your digestive, nervous, respiratory, urinary and other body systems. The book is fully illustrated with 108 real Asana Photographs and explains to you about their efficacy in attaining complete remedy of various ailments or disorders through the medium of Yoga, Naturopathy, Chromopathy, Psycho-Therapy, etc.

Useful for men and women alike, young or old, healthy or unhealthy. Deserves a rightful place in every home, hospital and library.

PRICE: **Rs. 15/-** Plus Postage **Rs. 2/-** extra.
 No V.P.P. sent.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: **Rs. 2.50** including Postage, to be sent by M. O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

RAMTIRTH BRAHMI OIL Special No. 1. Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices: **Rs. 4/-** for big bottle and **Rs. 2/-** for small. Available everywhere.

SHRI RAMTIRTH YOGASHRAM,

Dadar, Central Railway, Bombay-14.

Telephone: 62899

COMMERCE

PRICE: Rs. 2

MISSION ON EXPORT PROMOTION

THE report of the Goodwill Trade Mission, sponsored by the Federation of Chambers of Commerce and Industry and led by its recent President, Mr. Madanmohan R. Ruia, is notable for brevity and clarity. Our busy listeners, planners and policy-makers in the Congress Party should, therefore, find it easy to read and digest it. If they have the will and an open mind, the report will serve a good purpose, namely, of enabling them to manage the economic problems better and with greater access. Appropriately enough, the delegation took export promotion as its main task, for maximisation of foreign exchange earnings will be the major necessity of this country for as long a period as one can foresee, unless it is lucky enough to strike some underground riches, such as oil, non-ferrous metals, gold, silver and diamonds. It is true that Mr. K. D. Alaviya, our energetic Minister for Mines and Oil, is trying hard to find them, even by ignoring the risks involved in courting the Communist powers which have apparently succeeded in casting a spell over him. But the search for wealth hidden in the bowels of the earth is a gamble. While it should undoubtedly be continued, the country has to concentrate its energies on developing the export trade with its feet firmly on the ground. The report of the Goodwill Trade Mission is a welcome reminder of the several details that are yet to be attended to by the Government in this important respect. We purposely say details, because the Mission's suggestions are mainly of that nature. The Mission has, of course, made a few observations on Government's policies and attitudes, but they are scattered and, in any case, nothing new.

In recent months, the Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, has been talking in terms of compulsion for stimulating exports. This journal has questioned the merit of this assumption more than once. The Mission has returned convinced that exports cannot be augmented through compulsion. World trade in most of the goods that India can export had become a buyers' market long ago. The mere creation of surplus for export, either through increased production or through restraint on domestic consumption, is not enough now. The goods have to be sold on a competitive basis in terms of price, quality, delivery and continuity of supply. And since as much as 94 per cent. of India's export trade is with the free world, the State Trading Corporation is not an ideal instrument for the task. Indeed, the Mission has come to the conclusion that the S.T.C. is an impediment rather than of any positive assistance. It is of the view that the S.T.C. "is irksome not only to business in India but also to business abroad, especially in free competitive economies." It is apparent that it is the competitive private trade in India that is ideally suited to promote exports. The Government must, therefore, give greater freedom to business men and assist them to sell abroad, instead of treating them as undesirable and unwanted middlemen. It is necessary to reiterate this oft-repeated statement, because of the persisting tendency among the policy-makers in this country to think in terms of State monopoly for foreign trade. It is sheer waste of time to indulge in such thoughts and positively harmful to the growth of India's foreign trade, as it will drive away persons of talent and integrity from this field and that at a time when more and more persons of such quality have to be attracted.

Another important observation of the Mission is that first priority must be for removal of impediments and not for granting fresh incentives. This is commonsense, for, while the latter costs the country, the former brings a net

gain. To this category belongs the Mission's suggestion that (a) there must be continuity in export policy, (b) the quantum of goods earmarked for export should not be allowed to fall below a minimum, even if it meant some inconvenience to domestic consumers, and (c) export quotas should be announced in time—a quota delayed is a quota denied—and they should not be divided into small shares among too many hands. Critics need not rush to the conclusion that the Mission is advocating a monopoly and concentration of economic power, for that is not its object. Spreading the quotas among too many people leads to unsatisfactory export performance in every respect. The monopoly argument, it is needless to add, should not be carried to the extent of impairing the efficiency and profitability of exports which are vitally important considerations for the country as a whole. The Mission has proposed, as a *via media* perhaps, that exports could be effected through associations of different trades, without adversely affecting either the contacts of individual parties or their individual business. The chief merit claimed for this suggestion is that the associations could themselves ensure satisfactory performance by exporters in regard to quality, price, and satisfaction to importers in foreign countries. While this appears to be attractive and a reasonable safeguard against monopoly by a few, it is by no means an ideal arrangement for encouraging individual initiative and enterprise. It is, however, a lesser evil than State control or State trading.

The report contains several suggestions, commodity-wise, country-wise and general. Taken individually, they may appear to be of a minor nature, but, collectively, they are valuable and will yield tangible results, if implemented. To mention some of them. The quality of processing and finishing cotton textiles requires vast improvement. This means that the mills which want to compete successfully in foreign markets should have the right techniques and up-to-date modern machinery and they deserve to be assisted by the Government for procuring these facilities. The jute industry should keep a vigilant eye on the tastes and requirements of its foreign customers. Propaganda for Indian tea is not adequate and has to be stepped up in the U.S., the U.K. and Canada. Some export of a little longer staple cotton than now permitted should be allowed in exchange for cheaper varieties from abroad. Indian firms should be encouraged to open branches abroad and the Reserve Bank's present restrictive policy in this regard should be

relaxed. More foreign exchange should be released for Indian business men who wish to travel abroad for establishing personal contacts. The authorities have to take a liberal view in this matter, for contacts may yield contracts. While every business man that goes abroad may not succeed in winning sizable foreign exchange in the form of either capital for investment in this country or an export order, collectively their efforts are bound to be fruitful. There is still good scope, according to the Mission, for strengthening the commercial sections of Indian Embassies and Consular offices abroad by giving them competent staff. Better and more publicity is required for Indian goods in foreign markets. A comprehensive Export Directory should be published. We feel that a lot can be learned from Japan in this respect. What is required is not one directory, but a directory for each of the principal export items. The working of the various Export Promotion Councils requires to be reviewed, to see in what directions they need strengthening. This is a very pertinent suggestion, for we have a feeling that not all the Export Promotion Councils are functioning satisfactorily.

Of the several other suggestions of the Mission, two deserve to be reserved for special comment. Both are not directly relevant to the subject of export promotion. One is a proposal for setting up an "Investment and Information Centre" at New York, to begin with, with a view to providing prospective investors details of conditions in India in regard to various aspects of making a business investment, such as taxation, company law, labour relations, Government regulations, and availability of land, water, power, transport and other basic services. Not only has this suggestion been made by the Federation two years ago, but it has also been endorsed by some prominent persons who had been to the U.S. recently and have an intimate knowledge of that country; Mr. A. D. Shroff and Mr. G. L. Mehta, for instance, are two such persons. Barring some business men and banks, who are interested in investing in India, the vast majority of the American business community has little or no idea of conditions in India and the potentialities for gainful investment. The Press in the U.S. devotes very little space to India and the official releases by the Indian Embassy are inadequate and unsuitable. American business men generally do not like to gather their information and knowledge from official agencies. They would prefer to meet and discuss the problems with their opposite numbers in India and seek information from unofficial agencies. There is thus a real need for an independent establishment in the U.S. for disseminating economic information in a pure and objective manner and for helping investors in the U.S. to establish contacts with their confreres in this country and *vice versa*. Indeed, some Continental countries, such as Holland and Italy, have already established such centres in the U.S. and greatly profited by them. If an information centre of this nature is to be really useful, it is obvious, it must be well organised and competently run. It must be in charge of a person who knows the U.S. well, has a flair for initiative and ingenuity, and understands the value of public relations work. Further, the information centre in New York should be supported by an efficient organisation at New Delhi which can promptly supply all the up-to-date information it wants and follow up in this country the ground work done in the U.S.

The second suggestion of the Mission pertains to the Federation, in particular, and business men, in general, and their relationship with the Government. The Mission seems to feel that chambers of commerce in India are not given the same importance by the Government as is done by the Governments of Western countries. There is good reason for this grouse. To some extent this is due to the fact that the Government is the hands of political leaders who have no fair

in the merits of private enterprise, who have openly declared that they are not very much impressed by the captains of Indian industry and who feel that the public sector is superior to the private sector and should grow in importance. If they still tolerate the private sector, it is because they cannot replace it overnight, as it were. This is not the case in Western countries, where the Governments are in the hands of leaders who hold the opposite views. This fundamental difference apart, there are in this country too many chambers of commerce and trade associations trying to do the same functions. If this defect is eliminated, a central body such as the Federation can hope to get a better hearing from the Government, as also command sufficient resources and experienced personnel, to serve the business community better without having to invoke Government aid and backing. It is absolutely ridiculous to suggest, as the Mission does, that chambers of commerce should be reorganised with "Governmental assistance" and that the Federation should be given "administrative and legal recognition" as a body to serve the interests of trade and industry. We do not see what kind of independence the Federation can hope to enjoy if it is to exist on State subsidy and patronage. Surely, if it cannot get the voluntary support of the business community for whatever function it seeks to perform, it has no cause to exist. The examples of France and West Germany quoted by the Mission are not at all ideal. The Anglo-American pattern of voluntary form of commercial organisations is the best and a departure from it to the less democratic patterns obtaining in some of the Continental countries would surely be a retrograde step. The Mission's suggestion, therefore, deserves to be strongly deprecated by the Committee of the Federation and all other chambers of commerce which value their independence.

TRANSPORT POLICY

THE Transport Development Council, which concluded its two-day deliberations at New Delhi shortly after we went to press last week, did well to address itself to the vital need for a national transport policy. It is true that the Council did not actually lay down such a policy. Nor could it have been expected to formulate a policy applicable to the whole country's transport system. The magnitude and complexity of the task point to the necessity for a more comprehensive study of the issues than what the Council can undertake. But it is gratifying to note that the Council realised the importance of a national transport policy to India's economic development. And a significant decision taken by the Council was to the effect that a high-level committee should be appointed which would give a clear lead on the role each mode of transport should play in the country's economy and also recommend the best mechanism for the regulation and co-ordination of transport.

The announcement relating to the personnel of the Committee and its terms of reference will be awaited with interest. For, in the light of the recent controversy over the respective roles of rail and road transport, it should be clear that the formulation of a national transport policy may well provide the basis for resolving some of the dilemmas which transport issues in India, as in all countries, throw up for the authorities. In India, the authorities might have been well advised to ensure that rail-road controversy did not raise its ugly head. Surely, it is easy to over-emphasise the importance of one or the other. As the Union Minister for Transport, Mr. S. K. Patil, pointed out, in his address to the Council, there is no scope for any controversy or argument between the railways and the other means of transport for the next 25 years. Again, it would be wrong to represent the railways as a national enterprise, in order to claim for it special advantages. Road transport is also a national enterprise, inasmuch as roads are owned and controlled by the State for the benefit of the community. Further, road transport makes a not inconsiderable contribution to the Exchequer. Mr. Patil, in his speech at a meeting of the Bengal National Chambers of Commerce, held last week at Calcutta, computed that road transport, with an investment of Rs. 1,500 crores, has contributed Rs. 95 crores by way of taxes, as against railways which contributed Rs. 40 crores on an investment of Rs. 1,000 crores. From the overall national point of view, what serves the users best is the best form of transport, irrespective of whether it is owned by the State or not. The preservation of a certain element of competition among the means of transport will alone ensure maximum service to the community.

Among the specific issues discussed by the Council, mention must be made of the formation of viable road transport units. The Council decided that transport operators should be encouraged to form viable units, so as to ensure better service to the public. It may be recalled that the Masani Committee (the Road Transport Reorganisation Committee), after discussing the subject of viable units at some length, generally agreed that the formation of efficient enterprises should be encouraged in all reasonable and legitimate ways. At the same time, it insisted that no ban should be placed on the owner of a single truck in the case of goods transport. In this connection, it quoted the illuminating statistics that, in the U.S., owners of a single truck constitute 83.4 per cent. of the total number of trucks, private and public, though the position in that country is that some 80 per cent. of all carriers happen to be private carriers owning their own vehicles. What is necessary is that a man capable of rendering efficient service should not be prevented from entering the field merely on the ground that he cannot command the resources that would be needed to own a large fleet. This should govern the road transport policy at least in respect of any particular region within a State. However, it is true that, for larger areas, it is the owner of a large fleet that will be in a better position to render efficient services. For State-wide and inter-State operation, there is, therefore, some justification for laying down standards for viable units. The Masani Committee suggested a unit of five vehicles for intra-State operation and a unit of ten vehicles for inter-State transport. We wonder whether even these figures cannot be modified to suit local conditions in each State.

The formation of viable units will, of course, be greatly facilitated, if fears of possible nationalisation are removed, credit facilities augmented and the burden of taxation reduced. It is now generally agreed that there should be no nationalisation of road transport before the end of the third Plan. There is need for extending this period of immunity, considering that road transport will have to expand at a fast pace in the third Plan and it cannot do so without adequate "no nationalisation" assurance. The need for credit facilities for road transport has now won the recognition it did not receive in the past. The Masani Committee recommended that the Reserve Bank should issue directives to the scheduled banks to advance money for hire-purchase of vehicles. It is not known whether such directives have been issued so far. But many scheduled banks have, on their own initiative, now initiated schemes for advancing money for hire-purchase of a wide range of goods. It is not unlikely that they will be willing to extend similar treatment towards those who intend borrowing for purposes of purchase of transport vehicles. Obviously, they cannot go very far in this direction, inasmuch as vehicles constitute a capital asset which should be financed by specialised credit institutions rather than scheduled banks. State finance corporations and other institutions of their kind could certainly do much to provide a fillip to road transport industry by giving liberal advances to operators.

By far the most vexed question has been the burden of taxation on motor vehicles. The Transport Development Council has added its powerful voice to the chorus of support for the demand for reduction in taxes on road transport industry. The Council felt that the States which had not so far fallen in line with the policy of consolidation of taxes, fixation of ceilings on taxes and avoidance of double taxation should take early action along these lines. A notable recommendation of the Council is that tolls should not be looked upon as a source of revenue and they should not be levied on bridges costing less than Rs. 5 lakhs. Tolls and other minor levies serve only to add to the overall burden of taxation. It is computed that the incidence of taxation on a 5-ton petrol-driven truck works out to 7.44 nP per ton-mile and on a 5-ton diesel truck to 4.28 nP per ton-mile. The magnitude of the burden will be evident from the fact that the average freight rate by rail is only 6 nP per ton-mile. In other words, the burden of taxation alone on a petrol-driven truck is far above, and on a diesel truck not far below, the average freight rate for rail transport. This will serve to give one some idea of the enormity of the handicap with which road transport operators have to run their service. The case for relief in taxation, as well as for consolidation of the wide varieties of taxes on motor vehicles, continues to be as strong as ever.

ST. LAWRENCE SEAWAY

THE U.S.-Canadian project, the St. Lawrence Seaway, which was inaugurated on 26th June jointly by President Eisenhower and Queen Elizabeth, has a human as well as an economic significance. It is, as President Eisenhower pointed out, "a magnificent symbol to the entire world of the achievements possible by democratic nations peacefully working together for the common good." Queen Elizabeth recalled how men had dreamed of making a navigable and now at last it was a reality. "It will affect the lives of millions of our peoples; and it is bound to exercise a profound influence on the maritime trading nations of the world."

The significance of the Seaway will become clear when it is realised that it links the Atlantic to the vast coastline of the Great Lakes of the American Continent which have 8,300 miles of coastline, or nearly 2½ times India's coastline. Built at a cost of \$471 million (Canadian share \$340 million and U.S. share \$131 million), the Seaway is an engineering feat, which will rank along with other two great seaways, the Suez and the Panama canals. Broadly speaking, it involved the construction of a channel 1,200 miles long by 27 feet deep, dredged from Montreal to the head of the Great Lakes. Much engineering skill has gone into the making of the Seaway which serves to lift traffic from the sea level to a height of nearly 600 feet which represents the total drop from Lake Superior to the Atlantic. Till the Seaway was constructed, ocean vessels could proceed only 800 miles up the St. Lawrence River from the Atlantic Ocean; at Montreal, the 35-foot channel ended and the cargo for the Great Lakes had to be transferred to smaller vessels. But with the construction of the Seaway, it is now possible for 80 per cent. of the world's ships to go as far as Toledo at the head of Lake Erie—a distance of 1,200 miles. It would appear that the seven great locks on the Seaway can handle general cargo ships with a capacity of up to 9,000 tons. They can also handle ore and grain carriers and oil-tankers of up to 25,000 tons, provided they do not draw more than 25½ feet. Vital to the project is the \$600 million Moses-Saunders hydro-electric power plant, the second largest of its kind in North America, with a capacity of 1.88 million kilowatts. Shipping tolls, which will be levied, are framed on the basis that they should cover maintenance charges and amortise over a 50-year period the capital expenditure on the project.

In assessing the economic significance of the project, one should remember that it serves a rich and ever-growing hinterland. The great industrial and farming area served by the Great Lakes of North America account for two-thirds of the export trade of the U.S. and one-third of that of Canada. The inland region is made up of the provinces of Ontario and Quebec on the Canadian side and 17 States on the American side and constitutes the greatest concentration of industrial and agricultural development of the world today. While the region of Lakes produces three-fourths of the total industrial production in the U.S., the corresponding region in Canada has a large industrial potential, with immense resources of raw materials for further industrialisation. By 1969, the annual tonnage which will be carried through the Seaway is expected to rise to 50 million tons.

How powerful a stimulus to world trade is provided by the Seaway is best illustrated by the fact that it will cost \$12 a ton less to import via the Seaway raw rubber from Singapore to Akron, Ohio, the centre of the U.S. tyre industry, than through North Atlantic seacoast ports. The reduction in transport costs will, of course, work both ways. While it will mean that the U.S.-Canada industries will pay less by way of transport costs in respect of their imported raw materials or the goods they export, it will also imply that foreign goods can compete more effectively in the American markets. Indeed, American manufacturers, it is stated, are concerned at the prospect of increased competition from lower-cost foreign goods. The Seaway is, therefore, generally regarded as a further incentive to effect economies in production costs, in order to meet the competition. We hear that some manufacturing interests in the U.S. have already suggested additional protection in the shape of increased tariffs. It is to be hoped that the U.S., in keeping with its liberal international role, will not yield to the clamour for the upward revision of tariffs and thereby undo the immense benefits which are expected to accrue to world trade from the construction of the Seaway.

MARKET GOSSIP

SUPPORT TO NEW LOANS NOT THAT LARGE F.B.I. ON EXPORT CREDIT—MORE CONTROLS ON SUGAR

THE Press note issued by the Reserve Bank of India this afternoon on the results of the Government of India's new loans is extremely brief and reads thus:

"Subscription lists for the 3½ per cent. Bonds 1969 and 4 per cent. Loan 1979 have been closed today at 1-30 p.m., as the notified amount has been fully subscribed."

The language of the note suggests that the response to the new loans has not been as large as the sharp and sudden fall in the inter-bank call money rate to as low as 1½ per cent. early this week had led many to believe. In fact, so easy was the short-term money market that some thought that the loans would be oversubscribed. It is now clear that there has been no over-subscription. It is true that the lists were closed a day earlier than the maximum number of days chosen and announced by the Reserve Bank. But this does not necessarily mean that, if the Bank had waited for a day more, the loans would have been oversubscribed. The Bank may have closed the lists only after being reasonably satisfied that there was not much to be gained by keeping them open any longer.

No details of the subscriptions to each of the

no loans and of the amounts offered in cash and

inversions are given in the Press note. Perhaps,

the Bank had not the full particulars at the time

issued the communiqué and it is possible that it

may give them later on. This information will be

useful for knowing the extent of response the

medium- and long-dated loans have had.

The Reserve Bank, of course, never gives the

mount of loans taken up by itself. Unless this

information is available, one cannot precisely judge

the response from the market. Knowledgeable circles,

however, say that the Reserve Bank must have

been given a sizeable amount of the long-dated

loan and a fair amount of the medium-dated loan,

even though the banks took much greater interest

has originally anticipated. Indeed, it is said

that one of the chief reasons for inter-bank call

money rate returning to the busy-season level of

1-3½ per cent. between Monday and Wednesday

and staying at that level today is the decision of

one bank, on second thoughts, to invest in the

new loans more than they had intended at one time.

This decision followed their realisation that, if they

were to wait and take up more of these loans later

in the slack season, they might have to pay more.

So, they either called back the banks they had

not staying at that level today is the decision of

one bank, on second thoughts, to invest in the

new loans more than they had intended at one time.

This decision followed their realisation that, if they

were to wait and take up more of these loans later

in the slack season, they might have to pay more.

Madras Stock Exchange

MADRAS, 1st July

COMMONWEALTH DEVELOPMENT FINANCE
COMPANY

While commenting on the reported decision of the Government of India to invest a substantial sum in the new issue of the Commonwealth Development Finance Company (vide page 925 of *Commerce* dated 13th June 1959), it was stated that the Company had given two loans to one of which was for Rs. 10 lakhs to the Industrial Credit and Investment Corporation of India. There is slight inaccuracy in this statement. The C.D.F.C. has not given any loan to the I.C.I.C. as has been stated on page 10.50 of the *Commerce* of the 13th June 1959. The I.C.I.C. is a subsidiary of the Corporation.

NEWS IN BRIEF

IT has been decided by the Government of Bombay to set up 69 new rural family planning centres in the State during 1959-60.

The Andhra Pradesh Rice Millers Association has decided voluntarily to deliver to the Central Government 50,000 tons of fine quality rice before the end of this year.

The Mining and Geology Directorate of the Bihar Government has commenced exploratory drilling operations at Barauni, in order to select a suitable site for locating the oil refinery.

The Indian Oil Company, the first company in the public sector to undertake marketing and distribution of petroleum products, was registered at New Delhi on Tuesday this week. It has an authorised capital of Rs. 12 crores. The new company will have its headquarters in Bombay.

The State Trading Corporation proposes to import art paper and art chrome-board, white printing paper, wood-free chrome art paper, manifold paper and white M.G. tissue paper. The imported paper will be distributed to actual users in both scheduled and non-scheduled sectors.

With the object of simplifying co-operative laws and procedures, the Central Government has asked the various State Governments to consider the appointment of small committees of officials to review the whole position. The drawbacks in the existing system, it is said, include, among others, delays in registration of societies, and disbursement of loans, official interference and lack of provision for appeals against refusal of membership.

The Government of Mysore has taken over thirteen transport bus routes covering 2,743 miles in the Anekal pocket, Bangalore district. The State Road Transport Service has a total fleet of 1,400 vehicles operating a daily mileage of 100,000 and employing about 8,000 persons. It is the biggest transport undertaking in South India and the third biggest in the whole country.

A Committee of agricultural experts with Dr. B. N. Uppal, Agricultural Commissioner, Union Ministry of Food and Agriculture, as Chairman, has been appointed by the Government of India to assess the extent of cultural wastelands in the country. The Committee will make a special study of utilising such lands in the best possible manner so as to raise agricultural production.

The Jammu and Kashmir Government proposes to exploit the huge deposits of borax, an important industrial raw material, found in the Pugga valley of the mountainous Ladakh region in the State, the only known area in India possessing this mineral. The deposits are estimated to contain 60 per cent. of borax. Experiments are being conducted to evolve a cheap method for on-the-spot purification of this element. At present India depends on imports for its requirements of borax.

The total reserves of copper proved so far by the Geological Survey of India are of the order of 3.37 million tons. Encouraging results have also followed the intensive survey carried out by the Department in the copper belts of Rajasthan, Uttar Pradesh, Bihar and Andhra. The Indian Bureau of Mines is carrying out detailed investigations at Khetri and Daribo for the economic workability of these deposits. The production of copper ore during 1957-58 was 450,000 tons.

A taxation research unit is proposed to be set up in the Union Finance Ministry to ensure co-ordination of the tax effort by the Centre and the States. The unit will, *inter alia*, collect and collate taxation statistics, besides constantly reviewing taxation trends in India and abroad. Further, it will evaluate the effective uses of specific taxation measures in securing the objectives for which they have been designed. It will also assess the effects of tax incentives given from time to time on production and investment.

The State-owned Integral Coach Factory at Perambur, near Madras, hitherto engaged in the manufacture of all-welded lightweight passenger coaches only, has now been entrusted with the manufacture of four proto-type all-welded bogie wagons to a special design, for the movement of iron ore for export. The new wagons will carry about 60 tons of iron ore, as against 22-ton carrying capacity of the traditional four-wheeler broad-gauge wagons. The new wagon has been designed by the Indian Railway Research Design and Standardisation Organisation.

The project report of the Italian consultants for utilising about 25 to 30 million cubic feet of petroleum gas per day from the Assam oilfields for the generation of power and manufacture of fertilisers and cements is being examined by the Government of India. Some Italian concerns have offered assistance for the development of these projects. The total volume of gas available in the Assam oilfields is estimated at 100 million cubic feet per day. In view of the limited demand in the State for the processed products and the difficulties in transporting them, it is proposed to pipe out the surplus either to Barauni or to some other convenient place for economic processing there.

For the first time since the Forward Contracts (Regulation) Act was enacted seven years ago, the nominated directors of 21 recognised associations located in the different parts of the country and

conducting forward markets in 13 different commodities will be meeting together for an exchange of views at Bombay on the 27th inst. The meeting has been convened by the Forward Markets Commission. Besides a general review of the working of the recognised associations, the conference will discuss, *inter alia*, the role played by the nominated directors on the governing bodies of these associations, their responsibilities and liabilities, and the ways in which they can effectively contribute to the smooth functioning of markets.

The detailed project report on the heavy machine building plant to be located at Ranchi has been received by the Heavy Engineering Corporation Limited from Messrs. Technoexport of the U.S.S.R. This is one of the projects undertaken for development under the 500-million rouble credit given by the U.S.S.R. This plant, which will manufacture different items of plant and equipments for steel mills and other heavy industries, will have an initial productive capacity of 45,000 tons of machinery per year which will be raised to 80,000 tons in the second stage. It may be recalled that the contract for the preparation of the detailed project report was signed between the Soviet authorities and the Government of India in December 1957.

From Abroad

The U.S. Development Loan Fund has extended a credit of \$5 million to Libya for augmenting electric power facilities in an area of about 100 square miles around Tripoli, which contains the bulk of the country's industry and agriculture.

Foreign tourists spent \$825 million in the U.S. during 1958, a 5 per cent. increase over 1957. As usual, the Canadians accounted for over half of this expenditure. The flow of visitors from Mexico, the West Indies, South America and the Far East was also higher.

British Cellophane is considering the possibility of setting up a factory to manufacture cellulose film in Australia. In order to gather technical and cost information on the proposed project, it has already sent its development engineer to Australia.

The Federal Government of Australia has increased the maximum subsidy rate to be paid to marginal gold producers in Australia by 10s. to £A3.5s. per ounce. The flat rate subsidy to small producers is raised from £A2 to £A2.8s. per ounce, and the subsidy scheme will be extended for a period of three years from 30th June 1959.

A Bill seeking to control monopolistic abuses has been introduced in the Senate by the Government of Belgium. The abuses are defined as those which obstruct free play of competition, limit economic freedom of producers, distributors and consumers and hamper development of production and trade.

Production of steel in W. Germany suffered a distinct setback during the first five months of the current year, as compared with the corresponding period last year. The actual output of raw steel was lower by 44 per cent. at 9.6 million tons and that of rolled steel by 8.4 per cent. at 6.2 million tons. The quantity of raw iron produced was 6.8 million tons, as against 7.3 million tons.

Tea production in the Georgian Republic, U.S.S.R., so far this year aggregates 17,000 tons and an equal quantity is expected to be produced before the end of the year. The total tea output in 1959 will thus be of the order of 34,000 tons, said to be a record level. The Georgian Republic accounts for about 97 per cent. of the tea output in the U.S.S.R.

PERSONAL

MR. S. K. Handoo, Managing Director and General Manager of Voltas Limited, has gone on a two-month business tour of the U.K. and the Continent.

Mr. M. G. Iyer, Chief Commercial Superintendent, North-Eastern Railway, has been appointed senior Deputy General Manager, Western Railway.

Mr. Arne Bøgh Andersen, until recently Counsellor of the Royal Danish Embassy in Washington, has been appointed Ambassador Extraordinary and Plenipotentiary of Denmark in India.

Lord Ritchie of Dundee has been elected Chairman of the Council of the London Stock Exchange, following the retirement of Sir John Braithwaite, who was Chairman for a continuous period of 10 years.

Sir Alexander Fleck, Chairman of Imperial Chemical Industries, London, will be retiring from the Company with effect from 29th February 1960. He will be succeeded by Mr. Stanley Paul Chambers, at present Deputy Chairman.

Mr. Jasjit Singh, I.A.S., the former State Transport Officer, Government of Bombay, has been re-designated as the Director of Transport and will also be incharge of issuing permits for the resale of cars under the provisions of the Motor Cars (Distribution and Sale) Control Order, 1959.

Mr. G. V. Karve, Chartered Electrical Engineer, has taken over the office of the Deputy General Manager of the B.E.S. & T. Undertaking with effect from the 22nd June 1959. Mr. Karve brings with him 23 years' experience of the Tata Hydro-electric Supply Company, Ltd., Central Water and Power Commission (Government of India), Voltas Ltd., etc.

A private Bill, designed to so revise the "Buy American" law as to improve the competitive position of American bidders for Government contracts, has been introduced in the U.S. House of Representatives. The Bill seeks to provide the U.S. bidders for Government orders a differential equivalent to the percentage difference in wages paid by the U.S. and overseas bidders. Under the existing law, the differential in favour of the U.S. bidders has been reduced sharply from 25 per cent. to 6 per cent.

The Yorkshire Insurance Company in Britain has decided not to proceed with its proposal for a merger with the Scottish Union and the National Insurance. The decision is a sequel to the £8-million counter-bid of the Norwich Union Insurance Societies, one of Britain's largest mutual groups, for the Scottish Union, announced just five days after the Yorkshire Insurance Company's £7-million cost and share exchange offer. The Company has reiterated clearly that it has no intention "of taking part in a competition between take-over bidders, a practice which it would greatly deprecate in the insurance industry."

A categorical declaration that, if the British Labour Party returned to power, it would immediately nationalise steel industry and road haulage, was made by Mr. Harold Wilson, the financial spokesman of the Party, in the course of a broadcast talk in Britain. He observed that nationalisation would be considered in the case of any other industry or firm, "which, after due enquiry, was found to be failing the nation." Public ownership, according to him, would result from inefficiency, failure to play an adequate part in the national export effort, abuse of monopoly power, unwillingness to expand sufficiently in the national interest, lack of drive in investment policy, bad industrial relations and failure to co-operate in Government planning measures.

Let
us help you
MIND
YOUR OWN BUSINESS
well!

★

The setting up of workable standards of cost is our business; so is the institution of management controls. It's our job to examine your problems analytically and objectively and to expose and remove all weaknesses anomalies... bottlenecks.

Problems in which we undertake studies include: Direct and indirect labour costs; fuel expense; raw materials expense; stores expense; market survey; office reorganisation; waste control; production standards; costing; transport and material handling; time-keeping and payroll methods; job evaluation and wage structure; incentive plans etc.

An **acbi** speciality is labour - management mediation for ironing out differences. And the objective, forthright **acbi** approach has found favour with clients... has earned their approval!

COAL PRICES

THE delay in the announcement of revised prices of coal continues to cause concern among coal producers. Few outside the industry know how grievous has been the burden of increased costs on this price controlled industry. Since 1947, wages which represent about 70 per cent. of the production cost of coal have gone up by 200 per cent., while the cost of stores and certain other factors has gone up by over 40 per cent. Reckoned in terms of production costs, the increase is of the order of over 40-50 per cent. while the increase in price over the period is only 31 per cent. Since 1956, the production cost, it is computed, has risen by Rs. 8.50 per ton, whereas the increase in price has been only Rs. 5 per ton. The Coal Prices Revision Committee, which was appointed to go into the price issue in 1957, submitted its report in February 1959. This Committee was expected to finish the job in six months, but it took more than two years. It is now four months since the Government received the Committee's report, but it has not been able to make up its mind so far over the revision of prices. Such inordinate delay does not redound to the credit of the public sector.

A delay of about 2½ years in revising the price must have already cost the industry heavily and any further delay would only retard its growth. Not only must the decision be announced early but it should reflect a realistic appraisal of the trends in production costs in the industry. The prospect for the industry is bleak enough in all conscience. At a Press conference in Calcutta this week, Mr. R. H. Wright, Chairman of the Indian Mining Association, pointed out that about 70 per cent. of the Indian collieries were making no profit at all. Of the 47 coal companies, with a total output of over 20 million tons a year, only 24 could declare a dividend, 14 just managed to carry on and nine actually incurred losses. Unable to cut the increased costs of such items as wages, stores, plant, equipment and administration, the industry is going through a period of instability.

Mr. Wright said that it looked as though the Government had shelved the question of revision of coal prices, because of its desire to keep down inflationary trends which it feared would result from increased prices of coal. It is best that this "inflationary" myth is exploded in the interests of the country's economy. For, in the final analysis, nothing is more inflationary than an inadequate price which kills the incentive for production and thereby causes all-round shortages. As Mr. Wright warned, if the coal industry did not expand, every industry dependent on coal for its fuel, would have to cut production, which, in its turn, would lead to the emergence of inflationary conditions. Apart from this consideration, it is well known that coal does not form a very large proportion of the production costs in most of the coal-consuming industries; for most industries, coal forms only 1 to 5 per cent. of production costs. To argue that a slight increase in coal prices will be a tremendous burden on industries is virtually to ask coal to play the role of a dispenser of subsidies for other industries—a role which is better played by the State than by the industry.

In the absence of an adequate price for coal, the industry should find it difficult to reach the 60-million tons target set for it under the second Plan, and much more difficult to prepare itself for reaching the more ambitious target of 100 million tons which is being contemplated for the third Plan. Already, there has been some slowing down in the pace of increase in coal output. In 1958, coal output rose to 45.3 million tons at which level it represented an increase of only 1.8 million tons, as compared with an increase of 4 million tons in 1957. It has been computed that the achievement of the 100-million ton target under the third Plan would imply an additional investment of over Rs. 200 crores. Even if one assumes that a large proportion of the increase in coal output will be allowed to take place only in the public sector—not that such a course is necessary or desirable—it should be clear that the private sector will have to find

large resources for increasing its production to the level permitted by the Government. An adequate price for coal alone will ensure that the industry reaches the higher production targets which, in fact, are necessary in the context of the development programmes for such large coal-consuming industries as cement and steel under the third Plan. The issue of coal prices that are economic to the collieries is thus of vital significance to the future of a wide range of industries. It is to be hoped that the Government will take a prompt as well as realistic decision.

POPULATION AND FOOD SUPPLY

For every minute that adds to the infinity of time, there is a net addition of 13-14 persons to the population of India. If this rate of population growth were to continue, the total number of people inhabiting this country by 1986 would be of the order of over 600 million—the estimate is placed still higher at as much as 775 million by the two American experts, Drs. Ansley Hale and Edgar Hoover—as against 410 million expected at the end of the second Five-year Plan (1960-61). Obviously, such a rise in population would, as Mr. D. P. Karmarkar, Union Minister for Health, pertinently remarked in his speech while presiding over the convocation of the Demographic Training and Research Centre at the Tata Institute of Social Sciences held in the city last week, nullify, to a large extent, the benefits of the increased production resulting from industrial and agricultural development. Mr. Karmarkar stated that "the population problem is, perhaps, the most urgent and most difficult among those with which the country is confronted today." But Prof. J. B. S. Haldane, the world-renowned scientist, who delivered the convocation address, said: "As a biologist, I disagree with this; the food problem is more urgent."

Both Mr. Karmarkar and Prof. Haldane are correct in a way, but one should not hair-split the relative urgency of the problems of population and food supply, for both are equally urgent. They must be tackled simultaneously and with the same vigour and drive. It is highly gratifying to note that this aspect has now been fully realised by planners. The Government of India is, perhaps, one of the few Governments in the world which has taken up the family planning work as a matter of official policy alongside efforts to step up food output.

Stressing the importance of research in the programme to raise food production, Prof. Haldane doubted whether adequate research was being done. "There are," he said, "many vested interests who might persuade the people to believe that adequate research is being done to increase food production. I venture to doubt it." He averred that the problem could be solved if scientific methods were applied to food production. And he was confident that the country had the resources to produce the food it required. It was in this context that Prof. Haldane explained the vital role of what he called animal demography. His observations may be summed up thus: The growth and movement of insect and animal life are not merely an academic problem but are of great practical application as well. The movement of a large swarm of locusts from the Western frontier may do more harm to India's economy than the movement of human beings. There is at present very little idea about the extent to which animal life depends on the soil, because it is not easy to enumerate the innumerable species of animal life.

Coming as they do from such a famous biologist as Prof. Haldane, these observations merit due consideration. The human demographers should pay more attention to the study of this branch of science.

Scientific methods can be applied to food production, as, indeed, to the production of any other agricultural commodity, successfully only if the development programme is a well-integrated one and not a loosely connected set of schemes prepared by different departments. The Planning Commission has done well to impress upon the States the need for considering the tentative third Plan programmes for raising food and other crops in terms of assets to be created, especially irrigation, seed supply, fertilisers and manures, credit, etc., as well as the targets for raising per-acre yields and the total output of each crop in each area. The suitable yardstick suggested for increasing food production is an additional 0.25 ton per acre through major and medium irrigation works and an extra 0.20 ton from minor irrigation schemes.

The total additional yield of foodgrains that will result during the third Plan period from irrigation schemes and creation of other assets

mentioned above is estimated at 26-37 million tons or 29-31 million tons, if fertiliser production can be stepped up still further. Even with this additional yield, the total food production in the country by the end of the third Plan is expected to be below the target of 110 million tons by about 6 million tons. Viewed thus and considering the importance of providing higher nutritional standards of diet, the need for stepping up production of supplementary and protective foods such as milk, dairy products, fish, meat and poultry cannot be too strongly emphasised. The programmes tentatively worked out envisage an increase in the production of milk from 4 oz. per head at present to about 6 oz., of eggs from 2.9 million to 4.5 million, and of fish from 1,233,000 tons to 2,000,000 tons.

CODE OF EFFICIENCY

The formulation of a draft code of efficiency and welfare by the Union Ministry of Labour as a complement to the two codes already in force, namely, the code of discipline in industry and the inter-union code of conduct, reflects the recognition in official thinking of the need for greater emphasis on efficiency and productivity in industry. While the existing codes are largely negative in emphasis, in that they enumerate a series of don'ts, the new code seeks to make a more positive approach to the question. It lays down certain rights and responsibilities of managements as well as unions in making a concerted effort to increase industrial efficiency.

The draft code was discussed at the inter-Ministerial meeting held in New Delhi on 26th and 27th June under the chairmanship of Mr. P. M. Menon, Secretary, Ministry of Labour and Employment. The meeting was attended, among others, by the representatives of the Ministries of Commerce and Industry, Transport and Communications, Fuel, Works, Housing and Supply and the Executive Director of the National Productivity Council. The consensus of opinion among the participants was that the acceptance of the code will be a significant step forward. It was agreed that, on the interpretation of the broad principles laid down in the code, there should be no legal quibbles. Among the important suggestions made at the meeting for securing better industrial efficiency, particular mention may be made of those concerning avoidance of waste and inefficiency by both employers and workers, adoption of suitable productivity techniques and drawing up of suitable recruitment, training and promotion rules by management. The draft code, together with the suggestions made at the meeting, will be considered by a sub-committee of the Indian Labour Conference and they will then be placed before the Indian Labour Conference at its forthcoming session.

There is no doubt that the aims and objectives of the code are unexceptionable in principle and neither the employers nor workers should have any objection to its adoption.

The current emphasis on productivity is a welcome feature of official economic thinking. It is based on the realisation that, while sound industrial relation no doubt forms the important basis for larger and more efficient production, the results in their fullness can be achieved only through positive incentives. Even in Soviet Russia, where the motivations of workers were said to be different from those obtaining in capitalist countries, monetary incentives are being recognised as having an important role to play in obtaining higher production. Linking payments with production, wherever possible, is accepted as a sound policy. Incentive bonus on the basis of productivity is already existing in some of the leading firms in the private sector as also in certain undertakings in the public sector such as the Hindustan Machine Tools. The Government proposes to extend the scheme to other undertakings as well and a team of three Soviet experts, it is reported, will shortly arrive in this country to advise the Government on the introduction of incentive schemes.

PLANNING IN INDIA

Many economic thinkers in the West have expressed their views on India's economic planning, based either on an on-the-spot study tour of this country or on the official documents published from time to time. Every one made in India to speed up economic development, with a view to raising the level of the servers are highly critical of the approach of authorities to planning and some of the policies adopted by them. A few question the very basic assumptions behind the Indian planning

system. To this latter group belongs Dr. H. A. Wolfsohn, Senior Lecturer in the Department of Political Science, University of Melbourne (Australia). Dr. Wolfsohn was in India recently; from August 1958 until last April, he was attached to the U.N.E.S.C.O. Research Centre at Calcutta. A summary of his findings of research in India, which are being incorporated in a report to be submitted to the Government of India, has been made available by the Melbourne Correspondent of *The Hindu* of Madras.

The basic assumptions behind the Indian planning system, Dr. Wolfsohn says, are contradictory. In his opinion, the dividing lines between the private and the public sector have not been carefully demarcated in terms of social responsibility. There is considerable force in this view. The Industrial Policy Resolution of 30th April 1956 has earmarked to the Government a large sector of industry, including almost all the most important ones. The importance attached to the private sector is only secondary. Again it is laid down in the same resolution, on top of the threefold categorisation, that it "is always open to the State to undertake any type of industrial production." Such an approach is beset with disquieting consequences. Already, they are becoming evident. Be that as it may, it will be worthwhile to note here the following observations of Dr. Wolfsohn:

"Indian planners have not consciously enough faced the still strong dualism of Indian life, the pre-capitalist, oriental mode of rural production and the contrasting Westernisation of the cities. For a national plan to succeed, there must be some controlled interaction between these two main groupings and forces. But, while the displacement of the peasantry, which began under Cornwallis, is still continuing to this day—such displacement being a *sine qua non* of 'classic' industrialisation—the second and complementary step of absorbing the displaced peasantry into industry and has not been adequately fulfilled."

Dr. Wolfsohn mimes no words when he declares that, as matters stand, the aims laid down in the "Directive Principles of State Policy" cannot be fulfilled, and that for this reason it is not at all necessary for India to turn to totalitarian methods to solve its problems.

The example of China which he has cited reveals that the revolutionary methods of industrialisation adopted by the Chinese with the elements of compulsion contained in them would be quite inadequate but for massive help from its allies. Mr. Wolfsohn has rightly emphasised that the solution to the problems of India lies in (a) as full a utilisation of rural manpower as circumstances and administrative techniques permit, and (b) the incorporation of the Indian sub-continent into a broad international system of economic planning and assistance. He has also urged the need for a new agrarian policy. He observes: "Whilst there is increasing awareness that greater attention must be paid to the agricultural sector and huge sums have been set aside for community extension projects, a definite agrarian policy does not exist." Given a proper agrarian policy and India's inclusion in a far wider planned economy area, the learned doctor feels, new methods of population control and more efficient husbandry will, in the long run, take away much of the pressure which now threatens to undo the advantages of national planning.

It is, however, difficult to agree with two conclusions of Dr. Wolfsohn. First, the new urban industries, by undermining small-scale, village industries, especially in textiles, create unemployed faster than they can be absorbed into the cities. Secondly, rationalisation of production in the big and relatively new enterprises is demolishing jobs at a rate as fast as, or faster than, new jobs are being created through new factories. The urban industry is not at all undermining the small industries. In fact, it is the other way. The small industries are sought to be fostered at the expense of the more efficient large-scale industries through measures like reservation of markets, grant of complete tax holiday, and active financial assistance and support. In the case of textile industry, a special cess is levied on the mill sector the proceeds of which are utilised for giving subsidies to handlooms. As regards rationalisation, the progress actually made is very poor, thanks to the stiff opposition from labour and to the lack of helpful official policy. Dr. Wolfsohn must know

that several industries in India are suffering from cost inflation and the only effective solution to this lies in modernising equipment and rationalising methods of production. How can the community have an abundant supply of cheap and quality goods unless old and uneconomical methods are discarded in favour of new techniques? Surely, India cannot shut itself off from the rest of the world which is moving fast in the application of technological developments to industrial production.

FREE WORLD ECONOMY

An infallible test of the strength and soundness of an economy is its capacity for steady and sustained growth. Moderate ups and downs in business activity are no sign of its weakness but only manifestations of the emergence of temporary imbalances which are evened out by the operation of the self-correcting mechanism of a free market economy. There is no better proof of the resilience and health of the free world economy than its present recovery from the recent depression.

President Eisenhower has testified to the soundness of the free world economy. In his third annual report to the Congress on the trade agreements programme, the President reports that, despite a dip in trade last year, the economy of the non-communist world remained "essentially strong." Several developments of last year, according to him, held great promise for the future. Among these he listed the creation of the six-nation European Common Market, the moves to make European currencies fully convertible and the four-year extension of the U.S. trade agreements legislation, under which tariff-cutting pacts were made with other countries, as the more significant ones. The U.S., he said, welcomed the E.C.M. and the concept of greater European integration underlying it on political, economic and security grounds. By promoting internal economic growth in Europe, the E.C.M. would provide a basis for more stable Governments and stronger defensive forces. He termed the relaxation of

DELHI LETTER

STIMULATING INDIA'S EXPORTS

SUGGESTIONS MADE BY GOODWILL TRADE MISSION

From Our Special Correspondent

New Delhi, 30th June

THE importance of the use of systematic methods and personal contacts with foreign buyers in promoting exports from India, the need for inviting foreign capital to participate in India's economic development and the opening of additional branches of Indian firms in foreign countries are among the many notable suggestions made in the report by the Goodwill Trade Mission (Leader: Mr. Madanmohan Ruia) which spent two months ended 25th May 1959, visiting Hong Kong, Japan, the U.S., Canada, the U.K., France, W. Germany, Switzerland and Italy. The object of the Mission was to tour several countries with a view to studying the prospects for India's trade with them and thereby supplement the work of the 1957 Industrial Delegation (Leader: Mr. G. D. Birla) which visited Europe, the U.S. and Canada. The Mission has called upon the Government to take early action on the proposal for setting up an Investment and Information Centre in the U.S., with a base office in India. It has urged the need for the observance of a "self-imposed code of discipline" by all sectors, including the Government. It has advised against the expression of extreme views in relation to private enterprise which often tend to upset business sentiment both inside and outside the country.

Foreign Capital

The Mission has emphasised that "if we are to win our share of the world's business, we cannot afford to employ slipshod methods." It adds: "We have to look upon promotion of exports as an effort requiring infinite patience as well as an effort forming part of an overall programme of economic development." Much remains to be done in the matter of inviting foreign private capital to participate in India's economic development. Urging the need for setting up an Investment and Information Centre in the U.S., the Mission observes:

"We would like that both the Federation and the Government of India should give immediate attention to the two-year-old proposal of setting up an Investment and Information Centre, to start with, in the United States, with a base office in India. This Centre should be able to give full information about the opportunities and conditions in India to prospective investors and also help them to contact their counterparts in India. Another useful function which the Centre could perform would be to have the applications of foreign investors processed and expedited. Functioning as Information and Service Organisation for all investors, both foreign and Indian, this Centre, in our view, should be able to stimulate industrial development in the desired fields through foreign investment and acquisition of technical know-how. This will be of particular assistance to medium-scale enterprises and investments. Both official and non-official spokesmen in the U.S.A. put it to us strongly that it is very essential that such a Centre should be set up by India, preferably by a non-official organisation so that it could function in a business-like manner in the interests of Indian and American business men. A related suggestion which we would like to make is that the Federation should send out delegations frequently. These delegations should not, however, attempt to cover too many countries at one time. It will be best if such small delegations are sent to deal with or study some special problems."

It would appear that the Mission had opportunities to study the working of the leading trade organisations in foreign countries. It found that, in certain European countries like France and W. Germany, there is compulsory membership of chambers of commerce. This has enabled the organisations to acquire a status for themselves and also to have at their disposal large funds for carrying on and developmental activities. India has adopted the Anglo-American model of voluntary associations. The Mission feels that "there is need to reorganise the commercial and industrial organisations with Governmental assistance, if necessary, so that they have legal recognition and adequate funds to engage themselves in useful work, such as quick dissemination of reliable commercial information, conducting market surveys, etc." It suggests that a beginning may be made by evolving a scheme which will make available to the Federation the necessary finance on a sound and expanding basis.

The Mission has made a number of observations on India's trade with each of the countries it visited. Some of the Mission's notable suggestions and observations are:

Hong Kong: It is virtually a show-window of the world and trade is carried on a world-wide basis. In a sense, the acid test of India's export promotion measures is the headway it can make in this international market. With proper organisation, India should be able to export to Hong Kong table fans, pumps and diesel engines, tea, groundnut oil, cotton textiles, handlooms, yarn, cement, finished leather, leather goods, pharmaceuticals, carbon paper, etc. The Engineering Export Promotion Council should open a show-room at Hong Kong with facilities for effecting sales.

Japan: While the Japanese economy is a competitive economy, private enterprise operates abroad through organised channels, often invisible, with the active support of the Japanese Government. Manufacturers often co-operate and combine in purchasing goods from foreign countries or in effecting exports. Similar arrangements can be made in India. The answer to marketing India's products in Japan, even of ores, is not the State Trading Corporation but of voluntary association of particular trades. There is demand for washed coal. Exports of cotton could be increased. The question of modifying the 15 per cent. import duty on semi-tanned hides, which Japan has imposed, should be taken up by the Indian Embassy in that country.

U.S.: The U.S. has half the industrial potential of the non-communist world. Although it is the second largest buyer of Indian goods, next only to the U.K., India's share in the total imports of the U.S. is only about 1.5 per cent. India should be able to increase its exports through organisational improvement. It should tap more centres for the offtake of its handloom goods. It should manufacture the specialised jute fabrics which are now being supplied to the U.S. by Japan, the U.K., Germany and Belgium. Tea propaganda should be intensified. The U.S. is not prepared to buy Indian hides and skins in semi-tanned condition since their processing is costly in the U.S. The U.K. buys semi-tanned material, finishes it and then sends it to the U.S. The Government should liberalise the issue of import licences, so that genuine tanners in India may import the machinery and chemicals they need. Tanning facilities will thus be improved. This will enable India to export finished skins and hides to the U.S.

Canada: This is a large and developing country. It is one-and-one-third the size of the U.S., which is itself twice the size of India—with a population of less than 17 million, and abundant resources. The Canadian market has not yet been fully exploited by Indian exporters. Jute manufacturers and tea constitute the most important items of export. The jute interests must be vigilant about the growth of substitutes and tea exporters about competition from other countries. Publicity for Indian tea should be intensified. It is possible to develop business in finished and half-tanned leathers.

U.K.: The U.K. takes about 25 per cent. of India's exports. The Government of India should take up with the British Government the question of "mark up" price of jute manufactures. The U.K.'s pricing policy is detrimental to India's jute exports. Tea publicity should be intensified.

France: The French industry can substantially contribute to our development programmes. There is scope of expanding India's export trade in castor oil, and tanned hides and skins. A leading French firm which imports ores reported that they had difficulties arising out of the entry of the S.T.C. into the trade.

W. Germany: The Government of India should take up the question of restrictive policies and internal levies which respectively interfere with India's exports of textiles and tea to W. Germany.

Switzerland: It would be worthwhile for India to have closer contacts with Switzerland, in that the latter may be deemed to be a test market for products in Europe.

Italy: It should be possible to stimulate India's exports of cashewnut to Italy. The Government of India should take up with the Italian Government the question of the 13 per cent. import duty which the latter levies on imports of East India tanned hides and skins.

Other Suggestions

In conclusion, the Mission makes some additional suggestions for improving India's export trade. Thus, it suggests the publication of a comprehensive export directory and the setting up of a small committee with official and non-official representatives to study the working of trade centres which India has opened in foreign countries. It also suggests that a review should be made of the working of the different

export promotion councils, in order to see how they can be strengthened. It emphasises that India's traditional exports should not be neglected. It advocates the provision of facilities which will improve the quality of processing and finishing of textiles in India. There is scope for co-ordinating the work of the Central and State Governments in the matter of expanding exports. Often, the absence of simple regulation may hold up exports. Thus, the export of lean meat to Hong Kong has been held up for the last two years through India's failure to set up a recognised body for certifying the quality of meat.

The Mission feels that it is wrong to assume that exports can be stimulated through compulsion or through the operation of the S.T.C. It observes:

"There is a tendency to assume that exports can be stimulated through compulsion. This is oversimplifying the matter of export promotion. A surplus—whether real or artificial—cannot be automatically marketed. We have to sell abroad along with other competitors and the buyers must be persuaded to choose Indian goods. In other words, the Government should assist Indian business to sell abroad. The f.o.b. costs of our exports should be brought down. We seem to be still in the stage where Government as a whole are not aware that there are real impediments in the way of exports. The first priority, alas, must be for removal of impediments rather than the question of granting fresh incentives. To illustrate: the export business in manganese ore is currently subjected to several handicaps, old and new. Imagine the cumulative effect of increased railway condition for approval of S.T.C. and the position of an Indian exporter in a falling market. The S.T.C. is not the answer to the problem of increasing our exports. It is up to the Indian industry and trade to organise themselves in a way as to make unnecessary the continuation of the S.T.C. which apparently is irksome not only to business in India, but also to business abroad, especially in free competitive economies."

Export Planning

Among the other specific suggestions made by the Mission are greater attention to export planning by Indian manufacturers and exporting firms, the opening of branches of Indian firms in foreign countries, the formation of export associations of Indian firms and the strengthening of India's embassies and consular offices in foreign countries. The Federation, it is stated, should re-publicise the arbitration agreement it has concluded with the American Arbitration Association and the Japanese Commercial Arbitration Association and also consider the possibility of entering into similar agreements with other countries. Finally, the Mission urges the Government, industry and trade to concern themselves more and more with questions relating to the design and packing of goods, the standardisation of goods, the advertisement of particular products through different media and the display of Indian goods in trade fairs and exhibitions and in foreign departmental stores.

Notice

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE TWENTY-SEVENTH ANNUAL GENERAL MEETING of the Members of Jessop & Co. Ltd., will be held at the Registered Office of the Company on Friday, the Twenty-fourth day of July, 1959, at 11.00 o'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts together with the Reports of the Board of Management and Auditors, for the year ended 31st October, 1958.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 8th to 24th July, 1959, both days inclusive.

By Order of the Board,

D. D. MARKAN,
Secretary

63, NETAJI SUBHAS ROAD,
CALCUTTA, 28th June, 1959.

Note: A member entitled to attend a vote at the Meeting is entitled to appoint proxy to attend and vote instead of himself. proxy need not be a member of the Company

It is most important equipment in Nigeria—the E.M.C. Rubber Wheel Press, supplied through Jessop & Co. Ltd. Each wheel helps in the job of making 10,000 rubber sheets of over 100 ft. long every year.

CO-OPERATIVE BANKING IN BOMBAY INCREASING RELIANCE ON BORROWINGS FROM RESERVE BANK

THE year ended 30th June 1958 was notable for an all-round expansion of co-operative activity, and co-operative banking institutions spared no efforts in fully responding to the demands made on them by mobilising the resources and making the best use of them. The Forty-seventh Annual Administration Report of the Bombay State Co-operative Bank for the year 1957-58 narrates the story of the Bank's effort to equip itself, as the apex bank of the co-operative movement in the State, and its affiliates to fulfil their obligations during the year under review and to face the bigger tasks that lie ahead of them.

From the point of view of resources and lending operations, the progress of the Bank and its affiliates during the year can be said to be satisfactory. The policy of providing better banking facilities to affiliated institutions was pursued vigorously during the year by opening 19 new branches, raising the total number of offices to 262 at the end of June 1958. In spite of the keen competition from commercial banks, the co-operative financing agencies succeeded in strengthening their deposit resources and these, together with the refinancing facilities, enabled them to augment their working capital required for meeting the growing demand for credit, specially for productive purposes. Organisationally, a certain degree of integration within the three-tier system was achieved. Ideologically, the need for specialised financing agencies was recognised, but, in practice, each district central co-operative bank, with a few exceptions, was accepted as a financing agency for all types of co-operatives in their respective districts in respect of their short and medium-term credit needs. The emphasis was shifted from purely agricultural loans to rural credit and the need for strengthening production in the rural sector was appreciated.

The co-operative credit institutions, including the Bombay State Co-operative Bank, as stated earlier, responded fully to the growing credit requirements of the co-operatives, but their task was by no means easy. For, besides the problem of resources and men, they had to accept greater risks and operate on a reduced margin stemming from static lending rates and higher cost of management and deposits. The magnitude of the change is well brought out by the following comparative table:

As at the end of the year (Amount in crores of rupees.)

	Apex Bank		Central Banks		Total	
	1956-57	1957-58	1956-57	1957-58	1956-57	1957-58
No. of offices	57	45	186	217	243	262
Owned funds	1.30	1.79	2.80	4.06	4.10	5.85
Deposits	11.48	11.34	18.53	19.63	29.93	31.59
Borrowings	1.17	3.42	2.38	6.50	3.55	9.92
Working capital	17.64	24.47	22.73	31.66	40.37	56.13
Cash on hand and with banks	0.77	1.08	1.96	2.04	2.74	3.12
Investments	5.65	6.65	8.58	9.79	12.56	16.44
Loans and advances	7.97	9.62	11.05	18.39	19.92	27.91
Profit	0.07	0.08	0.20	0.25	0.27	0.33

It will be seen that the total working capital of the Bombay State Co-operative Bank and its affiliates rose by Rs. 15.76 crores or 38.6 per cent. to Rs. 56.13 crores. Of this rise, deposits accounted for no more than Rs. 3.56 crores, so that the greater part of resources had to be found through borrowings which had gone up by Rs. 6.37 crores. Loans and advances were higher by Rs. 8.89 crores. In other words, the pace of increase in lendings far outstripped the rise in deposit resources. In view of the limitations on the ability of the co-operative credit institutions to augment their deposits, there was more reliance on the Reserve Bank.

Further, the rise in net earnings was not commensurate with the growth of business and the risks attached to it. Thus, the Administrative Report points out that, as against an increase of 46.4 per cent. in lendings and 38.6 per cent. in working capital, the net profit of the institutions was up by only 26.4 per cent. It adds:

"The effort to transact more business at a reduced cost is to be welcomed from the point of view of the institutions; but it also exposes the financing agencies to risks of bad debts and threats of a further rise in administrative costs which are regulated mainly in accordance with the provisions of the Industrial Relations Act."

effort for ensuring the successful functioning of credit mechanism at a reduced cost and for mobilising deposit resources at a fair cost from within the co-operative sector itself."

The growing reliance of co-operative banks on borrowings from the Reserve Bank underlines the importance of self-help in augmenting the resources. But there are, according to the Report, two main difficulties: (1) the inability of co-operative banks to compete with commercial banks for deposits on the basis of interest rates, since their lending rates are subject to a ceiling, and (2) the conflict of interest between co-operative institutions having surplus deposits and others relying on borrowings from their financing agencies. Commenting on this problem of resources for co-operative credit institutions, the Report makes the following interesting observations:

"The realisation on the part of every institution that co-operation stands for collective well-being and no individual institution is entitled to earn more at the cost of the other can alone promote co-operative discipline. Co-operation is trying to cultivate this breadth of vision. Pending the attainment of success, the Registrar has sought to draw the attention of co-operative institutions to the need for conserving co-operative resources within the fold of the co-operative movement by practising co-operative discipline. Another welcome development is the decision of the Government to encourage charitable and semi-Government institutions for placing their surplus funds at the disposal of co-operative banks. While this is most welcome, the full benefits of Government's intentions can be derived only when the distinction drawn by various laws between scheduled banks and co-operative banks for the purpose of accepting deposits is removed. Co-operative banking has been pressing for this reform unsuccessfully. It may also be desirable to define the degree of preference which semi-Government institutions should accord to the State Bank of India over co-operative financing agencies, since both are State-partnered institutions and are expected to serve as instruments of economic development."

"According to the present standards, it is possible to raise sums equal to five or six times the paid-up capital and statutory reserves of each central bank from the Reserve Bank of India for financing agricultural operations and marketing, medium-term investment in land and weavers' societies. The scope of this facility is restricted on account of the exclusion of a variety of production activity, notably forestry and fishing. Again, from the point of view of the Reserve Bank of India, the overall limit is fair, inasmuch as it assures half of the maximum borrowed resources which a financing agency can raise under its borrowing powers. From the point of view of central banks, however, the optimum cannot be had until the demand for medium-term credit and from weavers' societies in each district is sufficiently developed. In view of the rapidly growing demand for financing agricultural operations and the difficulties in mobilising deposit money, a plea is being made for allowing operations within the overall limit by removing the ceiling on borrowing for each type of purpose. Meanwhile, some of the central banks have been obliged to strengthen their borrowing capacity by raising fresh capital through Government assistance in order to secure more funds from the Reserve Bank. In doing so, some of them may be confronted with overcapitalisation."

"Certain States have sought to resolve the dilemma by pooling the resources and the cost at the apex level. This is done by taking into account the borrowing facilities available to the apex bank from the Reserve Bank against the security of promissory notes of central banks and Government securities, as well as its deposits, and pooling the cost of both types of funds. In effect, it is the apex bank which is a lender to the affiliated central co-operative banks and refinancing facilities from the Reserve Bank are available only to the apex bank. This Bank (Bombay State Co-operative Bank) has, however, been passing the funds made available by the Reserve Bank on the strength of credit of individual central banks to them at a margin of 1 per cent. interest and making loans out of its deposit resources at a normal rate of interest. The latter system is beneficial to those institutions which have already built up their strength. Since most of the central banks are strong, they prefer the present practice; but a few especially the newly started ones and those serving the growing marketing and processing co-operatives, are at a disadvantage."

A feature of the credit operations of the co-operative banks is the rise in arrears along with the growth in lending. As a percentage of outstanding loans, however, the arrears show a fall. Thus, in the case of the Bombay State Co-operative Bank, the percentage of unauthorised arrears to total outstanding, which had fallen from 12.5 to 6.8 in 1956-57, declined further to 3.4 in 1957-58 and in the case of the Central Co-operative banks it dropped from 14.1 at the end of 1956-57 to 10.2 at the close of the year under review. But the fall in this percentage is not a

and Marathwada is said to be particularly alarming. "The magnitude of unauthorised arrears," the Report points out, "underlines the shortcomings of the system of supervision over the use of credit and efforts to link production with marketing." It also reflects the lack of consciousness among borrowers to honour their commitments.

Notwithstanding the several handicaps and shortcomings, the progress of co-operation in the Bombay State has been encouraging and several examples of successful co-operative effort in the area served by the Bombay State Co-operative Bank are given in the Report. Much more, however, remains to be done. For, as the Report admits, "co-operation is still far away from its immediate goal of bringing within its fold at least half the volume of agricultural credit, marketing and processing by 1971. The drive for membership of agricultural primaries during the year under report could add only 2.44 lakhs, as against a target of 3.47 lakh members. There has also been a shortfall in short-term and medium-term credit for agriculture. The bulk of the fishing industry is outside co-operation and depends on moneylenders-cum-traders for finance. This is also the position in respect of artisans. Where agricultural co-operation has made considerable headway, projects for raising the productivity of lands through medium-term investment have to be undertaken on a larger scale in future."

There is thus a wide gap between the needs and the actual performance, indicating the vast scope for expansion of co-operation and co-operative credit. It also underlines the magnitude of the effort required to strengthen the co-operative institutions from within. But the main brunt of the task falls on co-operative banking which has to take the initiative and create favourable conditions, since credit is the very foundation of modern economic activity.

I.F.C. TO INVEST IN IRAN

The International Finance Corporation has agreed to invest U.S. \$300,000 in *Sherkate Sahami Kakhkashan*, an Iranian company, for the construction and operation of a ceramic tile plant in Teheran. Kakhkashan was organised in 1956 and is entirely owned by Iranian businessmen. This is the Corporation's first investment in Iran.

The Kakhkashan project consists of the construction and operation of a plant with a daily productive capacity of 10,000 high quality glazed wall tiles of various sizes and colours, and 5,000 floor tiles. The ceramic industry is one that dates from Iran's early history, but this will be the first modern plant in Iran to manufacture glazed ceramic tiles equal in quality to those currently imported. The high rate of construction activity, in both the public and private sectors, has steadily grown in recent years, resulting in a rapid increase in the demand for imported and domestic tiles.

Kakhkashan has been guided in its plans by experts of the United Nations Technical Assistance Mission to the Iranian Ministry of Industries and Mines. Design of the plant and specification of the machinery have been made in collaboration with a British consulting firm. The kilns and mixing machinery are being supplied from two British companies. Engineers of these companies have installed the equipment, and are being retained by Kakhkashan as technical supervisors during the early stages. During this period, Iranians will be trained in the technical operations.

The I.F.C.'s investment will help finance machinery and equipment and provide working capital. Total cost of the project is about \$825,000. The I.F.C.'s investment of \$300,000 will be in U.S. dollar notes bearing interest at 7 per cent, maturing by 1968. In addition, the I.F.C. receives the right to participate in profits of Kakhkashan. Payment of the principal and interest are guaranteed by the stockholders.

It is estimated that within two years Kakhkashan's operations will bring about a saving of foreign exchange equal to the amount of the I.F.C. investment.

DECIMAL COINAGE IN BRITAIN

A questionnaire on the introduction of decimal coinage in Britain is being circulated among traders by the National Chamber of Trade. Among other things, the questionnaire, which has been prepared by the British Association for the Advancement of Science, asks whether pounds, shillings, and pence are inconvenient for retail trade and to what extent cash registers are eliminating the need for mental arithmetic by shop assistants.

Those favouring the decimal coinage system are being asked whether the pound should be retained as a main unit and, if so, whether it should be subdivided with the pound (10 florins) equaling 100 cents. As an alternative, traders are being asked if there would be any merit in retaining the penny as one-tenth of a shilling and leaving the shilling as one-twentieth of a pound. Grocers are also being asked to give their views on changing the present official weights and measures system to the metric system.

LONDON LETTER

A CHANGE IN TREND U.K. EXPORTS INDICATE WORLD RECOVERY

From Our Own Correspondent

LONDON, 27th June

"THE rise in exports in the last two months represents one of the sharpest changes in trend for a long time." Thus announces the Board of Trade in its detailed analysis of British exports in May which it has just issued in supplement of the overall figures on which your correspondent commented last week. In May, there were, substantial further rises in shipments of machinery, cars and commercial vehicles, chemicals, nearly all types of textiles and most other forms of consumers goods. Indeed, monthly record figures were achieved in a number of goods, notably motor cars and chemicals.

The car figures are particularly instructive: in the first quarter of this year, car production in the U.K. as compared with 1958 dropped by 20,000 vehicles, of which 12,000 represented a fall in exports. But, in the past two months, exports have jumped up by 30,000 cars in the year, against an increase in home production of 24,000 cars; thus, in this important section of industry, the export market is outstripping the home

market. There is a similar picture for commercial vehicles; in the first quarter of this year, exports slumped by 6,500 vehicles as compared with 1958 which was exactly the drop in home production. In the last two months, exports have jumped up by 5,000 vehicles, as compared with last year while production has risen by 8,000 vehicles.

Moreover, the area distribution of exports shows a broadening basis of expansion. Although shipments to North America and Western Europe were slightly lower than in April the first signs of recovery in total shipments to sterling area countries which appeared in April were reinforced in May. Exports to the rest of the world also rose strongly on balance in May.

In effect, the improvement, both in quantity and in breadth of market, in the last two months has more than matched the whole of the decline which took place during the previous 18 months.

"It cannot be expected," says the Board of Trade, "that anything like the recent rate of advance will be maintained for long, but the recovery, together with other evidence of the resumption of a strong growth in industrial activity and trade in many parts of the world, now gives a good prospect that the year 1959 will see all, or more than all, of last year's fall in exports caught up."

The price picture is also most encouraging, not only from a British point of view but also

from the point of view of world markets. The food and tobacco group of imports have remained unchanged in their price level in the first five months of this year on average, as compared with 1958; in other words, the slump in prices has stopped but no rise has begun. Basic materials have been running at 5 per cent. below their 1958 level in the first five months of this year, but they have been steady at this level ever since last autumn showing no deterioration. Fuels are running about 5 per cent. below 1958 levels, but, while this is the average for the past five months, the trend in this group is still downwards. Significantly, manufactured goods have been creeping up since the beginning of the year and are now 2 per cent. above the 1958 level. Overall, import prices are 11 per cent. below the 1958 level, but, since the beginning of spring, the drop has been arrested.

In exports, the picture is very encouraging. Export prices have remained stable over the past five months, and, indeed, in manufactured goods, they have shown no change for a year. Even overall, there is only a 1 per cent. drop, as compared with 1958. The terms of trade, which are the ratio between imports and exports, have, in the first five months of this year, improved fractionally over the level for 1958 and recently they seem to have become stabilised. This is a much better outcome than might have been expected.—All Rights Reserved.

Inside this maze of pipes and tanks flows precious oil, for the nation's homes, transport and industries.

Outside — the Trombay refineries are well-protected with a tough coating of GOODLASS NEROLAC paint, made especially to strengthen and preserve the pipes and tanks which hold these vital oils.

Refineries are new to India, but GOODLASS NEROLAC have twenty-five years' manufacturing experience in India, backed by a century of technical and scientific development of methods and products. And each year, GOODLASS NEROLAC's research laboratories are perfecting better, stronger, protective paints.

GOODLASS NEROLAC — the Paint Specialists — supply all types of paints... each one specially manufactured to provide the best protection for every type of industry.

COTTON TEXTILE INDUSTRY IN THE U.S.

CAMPAIGN FOR MORE PROTECTION

INTENSIFIED—QUOTAS FOR JAPAN REVISED

A RENEWED campaign for more active official intervention in cotton textile trade has been launched by both millowners and traders in the United States. The textile interests want the Administration to give them greater protection at home and assistance for selling cotton goods abroad. They allege that competition from Japan is growing and that imported textiles have made important inroads into the domestic textile market. Attention is also drawn to the persistent marked contraction in the overseas demand for U.S. textiles. This is attributed partly to the development of national industries in areas of low labour cost and partly to loss of overseas sales to countries such as Hong Kong, Communist China and India, and, to a lesser extent, to the European Soviet bloc. In addition, the U.S. textile industry feels that protective action taken by foreign countries is especially severe in its effects on U.S. textile exports.

The allegation that India has captured a portion of the markets for American textiles is not justified because the trend of cotton goods exports from this country, too, continues to be downward, notwithstanding all the incentives for exports given by the Government of India. Exports of mill-made piecegoods from India are currently running at an annual rate of not more than 530 million yards, as against the actual shipment of 581 million yards in 1958, 839 million yards in 1957 and 1,072 million yards in 1950. In recent years, India was holding the second place in world trade in cotton textiles. It even held the first place at one time. But now it looks as though it will rank even below the U.S.

Shipment of U.S. Cotton Goods

Although India cannot be blamed for the difficulties of U.S. cotton textile industry, there is no denying the fact that the export trade in American cotton goods has been falling. The value of these goods actually exported during the month of April 1959 was only \$10.1 million, as against \$17.5 million in the corresponding month of 1958. Figures relating to the quantity of exports are not available. It is, however, estimated that the total exports of yarn and cloth in the current calendar year will be substantially lower than in 1958. The following table indicates the actual shipment of U.S. cotton goods in the past ten years:

Year	Yarn (million lbs.)	Cloth (million yards)
1949	26.12	937.94
1950	18.16	692.79
1951	20.22	855.13
1952	22.80	810.61
1953	17.23	661.55
1954	19.02	644.78
1955	15.46	577.08
1956	15.49	545.18
1957	19.17	689.39
1958	12.92	538.29

The continued setback to U.S. textile exports has occurred despite the adoption of two schemes of assistance. First, the American exporters of cotton goods receive Government help through the so-called "equalisation payment programme" started in 1956. This is designed to make exports of such items as cotton grey cloth, finish fabrics and yarns competitive with foreign products made from U.S. cotton sold at reduced prices overseas. Secondly, the International Co-operation administration purchases regularly textiles from the domestic trade. The exporters are urging for a larger share in these purchases, stating that half of this volume should be allocated to U.S. goods, instead of less than 15 per cent. at present.

The reaction of the U.S. Government to the plea for assistance to promote cotton goods exports will be awaited with much interest in India and other exporting countries. So far as the domestic textile market is concerned, the American textile industry is expected to take full advantage of the 1960 Presidential elections to secure higher barriers against imports of Japanese cotton textiles. This at any rate is the fear expressed by the textile industry of Japan which, to quote *The Mainichi* (overseas edition), a monthly published from Tokyo, "has paid a dear price to maintain American markets and friendship."

Japanese Plea

The cotton textile interests of Japan and the U.S. it will be recalled, met at Washington on 5th December 1958 to discuss how much Japan

could export to the U.S. in 1959. The meeting was held in accordance with the documents concerning the curbing of Japanese textile imports into the American market exchanged between the Governments of the two countries on 31st December 1956. At this meeting, the Japanese representatives wanted an upward revision in exports to the U.S. during 1959. The increase asked for was of the following order, with figures in million square yards: cotton textiles—235.0 to 249.1; velveteen—2.5 to 3.5; gingham—35 to 42; made-up goods—122 to 136. They also wanted the abolition of the ceiling on high-grade cotton cloth (26 million square yards). In support of their proposals, the Japanese representatives pointed out that the American market had expanded sufficiently to absorb an increase in their cotton textile exports and stressed that the textile industry of Japan was forced to depend more heavily on the American market as a result of Red China cutting into the South-East Asian market.

The U.S. textile interests, however, did not agree with the aforesaid view. They said that the domestic market, though it had improved lately, was still not as good as in 1956 and 1957 and that, with general demand falling despite the rise in population, the industry's business had been shrinking. They, therefore, put forward a counter-proposal: to allow no increase in imports of velveteen and gingham, though the aggregate volume might be raised; to include stripped gingham in import restrictions; to leave intact the framework of 26 million square yards for higher grade textiles but to give a new quota for typewriter ribbons; to include corduroys in the category of made-up goods; and to do away with the 10 per cent. transfer between Group I (cotton cloth) and Group II (made-up goods).

Agreement Reached

The Japanese rejected the American plan outright because (1) what Japan really wanted was an increase in the exports of high-grade textiles and (2) the proposed abolition of the flexibility clause would virtually amount to a tightening of the then existing import restrictions. Indeed, the textiles industry of Japan, which purchases as much as a million bales of cotton from the U.S., took a stiff attitude. It submitted its final plan on 26th March 1959. The U.S. Department of Commerce approved of it, but the U.S. textile industry spurned it. The Department tried hard to persuade the industry with the support of President Eisenhower who emphasised the importance of foreign trade to Japan. And on 25th April, both sides finally reached an agreement revising the Japanese programme for cotton textile exports to the U.S. as follows:

	Unit	Original quota	1959 quota
GRAND TOTAL	000 sq. yds.	235,000	247,200
Group I (Cotton cloth)	000 sq. yds.	113,000	113,000
Ginghams	000 sq. yds.	38,000	40,000*
Velvetes	000 sq. yds.	2,500	2,500
All other fabrics	000 sq. yds.	75,500	70,500
Group II (Made-up goods, usually included in U.S. cotton broad woven goods production)	000 sq. yds.	30,000	33,000
Pillow cases	000 doz.	400	400
Dish towels	000 doz.	800	800
Handkerchiefs	000 doz.	1,200	1,200
Table damask	000 sq. yds.	10,833	10,833
Other items	000 lbs.	1,875	2,527
Group III (Woven apparel)	000 sq. yds.	71,000	71,000
Blouses	000 doz.	1,500	1,500
Sports shirts	000 doz.	750	750
Dress and work shirts	000 doz.	300	300
Brassieres and other body sup- porting garments	000 doz.	600	600
Shorts and trousers	000 doz.	2,321	3,864
Other woven apparel	000 lbs.	12,000	13,200
Group IV (Knit goods)	000 sq. yds.	450	450
Men's and boys' T-shirts	000 doz.	450	450
Gloves and mittens	000 lbs.	1,477	1,738
Other knit goods	000 sq. yds.	9,000	9,000
Group V (Miscellaneous cotton textiles)	000 sq. yds.	9,000	9,000

* Including gingham stripes.

It will be noted that, excepting a reduction of five million yards in "other fabrics," there has either been an increase or no change in all the other items and that the reduction of five million yards in others has been more than offset by increases in various other items. Nevertheless, the Japanese cotton textile industry is not satisfied with the revision but has reconciled itself to the new deal, in view of the need for maintaining friendly relations between the two countries. Its grouse is that the new flexibility clause places stricter restrictions on Japan's exports of cotton textiles to the U.S.; the clause

prohibits transfers from Group I to other groups, as well as from Groups II, IV, and V to Group III, and limits the transfers among Groups II, III, IV and V to 5 per cent. All the same, the Japanese millowners are said to be anxious to establish better understanding with their counterparts in the U.S. They, therefore, propose to invite the leaders of the American textile industry for a "heart-to-heart talk" and for holding textile negotiations at Tokyo next year. Textile interests in the U.S., however, continue to wage a vigorous campaign for increased protection at home.

AN INTERESTING BOOKLET ON COTTON MILL INDUSTRY

An interesting booklet entitled *The Indian Cotton Mill Industry: Nation's Premier Enterprise* has been written by Mr. Ramnath A. Podar, Chairman, Millowners' Association, Bombay. (Published by Messrs. Podar Trading Co., Ltd., Podar Chambers, Parsee Bazar Street, Bombay 1. Price: Rs. 2.50.) The booklet gives a picture of the origin and growth of the industry, indicates the problems confronting it, and assesses the outlook for it. The study of the cotton industry's cost structure as made by the Indian Cotton Mills Federation Sub-committee with the author as Chairman has been reproduced at the end of the booklet. The publication is embellished with a number of tables and graphs depicting the main aspects of the industry.

Discussing the long-term prospects for the cotton mill industry, Mr. R. A. Podar emphasises, in particular, that, from the point of view of both acquiring the ability to offer quality goods at cheap prices and maintaining its position as a leading exporter of textiles, India must go all out in using the most up-to-date machinery by discarding the present outmoded ones. He has also stressed the need for adjusting production and supply on the basis of a study of consumer preferences. In his opinion, "it might become necessary to produce larger quantities of piecegoods consisting partly of cotton yarn and partly of yarn made out of synthetic fibres. Similarly, a day might come when the manufacturer will have to consider how best he can meet the demand for the non-iron, non-crease and quick-dry varieties of cloth. Indeed, it may not be long before he will have to be prepared to produce non-woven fabrics too!" If the cotton mill industry is to meet such a challenge, it is imperative that it maintains efficiency and economy in its operation through prudent management and that the Government and labour should render active assistance to the industry in reducing production cost to reasonable proportions. Mr. Podar has done well to pinpoint this aspect in his concluding remarks.

WOOL LEADS TEXTILE RECOVERY

The current recovery of wool in the world's markets is to be supported by an intensification of wool promotion in many countries. This was one of the decisions announced by the Executive of the International Wool Publicity and Research Fund, controlling the International Wool Secretariat, at the conclusion of its meeting held at London recently. "Full advantage of the present situation," the Executive said, "must be taken to strengthen wool's position. There is little doubt that wool is leading the recovery from the textile recession of 1958 in the majority of the main consuming countries." The Executive stressed the importance of wool in the economies of the Commonwealth countries concerned and pointed out that increased production had been accompanied by a widening of demand and increased consumption, particularly in the United Kingdom, the United States and Japan.

Research and technological advances has assisted wool to meet the challenge of the synthetics and the requirements of textiles in the modern world. It is forecast that the wool textile industries of the world will soon be employing new processes which give wool additional advantages and answer the desire for "easy care" cloth and clothes. As the three countries supplied more than 60 per cent. of the apparel wool of the world, these achievements will have far-reaching consequences.

The activities of the International Wool Secretariat were reviewed at their meetings. It was agreed that there should be a further extension of the funds provided for promotion and research throughout the world.

The Executive noted that joint promotion campaigns with all sections of the wool textile industry had not only continued but increased and welcomed the inclusion of Austria for the first time in such partnerships.

TEXTILES IN THE PHILIPPINES

The Philippines would impose a blanket ban on all imports of cotton goods by 1961, if the National Economic Council's plan for expansion of the productive capacity of the indigenous industry were to prove a success. The plan envisages a rise in the number of spindles from 153,876 at present to 410,000 in 1961 and looms from 3,478 to 11,000. Special attention is being devoted to bring about a complete integration of textile mills. Four units have already been fully integrated and three others are expected to be integrated in the next two years. The current rate of textiles output is meeting 35 to 40 per cent. of the domestic requirements and it is said that the country will be able to produce more than 50 per cent. of the demand during 1959.

Exports of home grown wool from India in the calendar year 1958 amounted to 34 million lbs. or 10 per cent. less than in 1957 when 37.8 million lbs. were sent out.

SECOND THOUGHTS ON COTTON INDUSTRY REORGANISATION PLAN

FORMATION OF COMBINES FAVOURED

From A Special Correspondent

MANCHESTER, 23rd June

WHEN the outline of the reorganisation plan for the Lancashire cotton trade was drafted into a White Paper only a few weeks ago, the importance of speed in implementing the proposals was stressed on every side. Changing circumstances, however, as so often happens, have made many people in the industry wonder whether first thoughts were best.

Quite by chance, the publication of the scheme coincided with a sustained movement of supplies and more pressure for goods than had been encountered for the past 18 months or so. Order books in many instances rapidly filled up, enabling producers to secure a firmer footing than they had experienced for a long time. The effect of this revival in business, which incidentally has now slackened off, may be of considerable importance in dealing with the programme of redundancy outlined in the reorganisation scheme.

Seasonal buying movements have a habit now and then of changing for no apparent reason. On this occasion, it is being suggested that the spurt of demand, often met with in the early autumn, has been anticipated by customers who were stimulated into sudden activity by a rising trend in prices and the knowledge that supplies in the pipeline were remarkably low.

A Disastrous Policy

Because of this development fears are growing that some of those managements which two or three months ago would have plumped unhesitatingly for compensation and a quick withdrawal from the trade may now reconsider their verdict. With more machinery at work and a fair backlog of orders, they may be tempted to "wait for the next man." Such a policy would obviously be disastrous for the trade as a whole, as it is unlikely that any more favourable opportunity of pruning the excess plant will be offered in the foreseeable future.

The experience of individual traders during this phase of freer buying has naturally varied. Cases have been reported where some mills have done well, regaining an order book at reasonable prices, but a complaint among the majority of producers has been that, although the offtake has improved, the remuneration per contract has been far from generous.

Margins, in comparison with those ruling before the spinners' price regulation schemes were abandoned, have been sharply curtailed. At the same time, the mood of sellers has been to hold out firmly for full rates and instances of weakness have been rare. As order lists have

filled up, so has it been possible to adopt a more independent attitude.

Looking Ahead

Looking ahead to the reorganisation which must be carried through in the second half of 1959, the position of the larger groups is certainly favourable. Their ability to concentrate output in a smaller number of units enables their Boards to make preliminary arrangements and await details of the compensation payable with confidence. Already there are signs that several of the combines have their plans laid, which can be carried into operation as soon as the word is given. In the circumstances, they can hardly fail to benefit from the proposals.

For the single unit mill, however, the position is far more complicated. Not only have the shareholders' views to be considered, but there must be reluctance in some quarters to sever longstanding connections with the industry. Certain firms may have their plans cut and dried, either to withdraw or to carry on, but others must be guided by immediate circumstances.

"A Surgical Operation"

Against this background, the importance of the time-table for the development of the separate sectional schemes was emphasised by the President of the Board of Trade during the committee stage of the Cotton Industry Bill in the House of Commons. Sir David Eccles said that the preliminary talks on the spinning, doubling and weaving reorganisation schemes had already gone much faster than they had anticipated. He hoped that the plans would be ready for presentation to the Board of Trade early next month. Summing up the Government's view of the scheme, the President of the Board of Trade said that it was in the best interests of Lancashire that "we should try a deliberate surgical operation."

In the meantime, a very pertinent question in connection with the whole complicated problem of redundancy has been raised by a firm of manufacturers whose directors have clearly gone deeply into the matter of their survival. This concerns the disposal of the goods when produced by Lancashire spinning and weaving units. Basically, the future of the Lancashire textile industry, this firm asserts, depends not merely on what it produces but what it produces and sells successfully. In other words, the accent must remain on the selling power of the trade, irrespective of the ability of spinning and weaving mills to operate efficiently.

According to the views of this weaving firm, which have been submitted to the authorities, production should be planned now on knowledge of the requirements of markets and customers. Believing that all activities in the textile trade are interdependent, it is fair to let all

Cotton Compensation

The National Insurance Commissioner is likely to be called upon to decide whether Lancashire cotton workers made redundant by the reorganisation scheme are entitled to unemployment benefit while drawing compensation from the industry. The joint Working Party of employers and trade union officials, which has been examining the operation of the compensation scheme, met again in Manchester last week and later announced that each side was reporting back to its constituent organisation. The unions are known to have raised questions on several aspects of the scheme. Speaking after the meeting, Sir Alfred Roberts, the unions' spokesman, said that no decisions had yet been taken.

Asked whether they had found an answer to the unemployment pay problem, he said: "We may have, but this is a question that can only be resolved eventually by the National Insurance Commissioner. Whatever arrangements we come to which in our opinion might overcome the difficulty will still have to go to the Commissioner."

Industrial Development

More new factories for north-west England have been forecast by the Lancashire and Merseyside Industrial Development Association. In its annual report in Manchester, the Association referred to "signs of a slight improvement in the industrial climate" and went on: "When the slack has been taken up and the more successful industries are ready to expand, there should be a considerable increase in factory building in the north-west." Pointing out that other industries had been growing to offset the rapid decline of the textile industry, the report added: "The engineering industry, chemicals, food and paper will all expand further as trade improves."

Turning to immediate problems, the Association referred to the contraction of the cotton industry during 1958 and commented: "The difficulty this time will be in finding alternative employment quickly enough, because there seems little hope of a textile revival requiring the available labour force."—All Rights Reserved.

U.K. KNITTING INDUSTRY

The U.K. knitting industry has sent a brief to the Canadian Tariff Board saying that the higher Canadian tariffs on knitted goods imported from the U.K. would have an adverse effect on the U.K. efforts to reduce duties on goods imported from Canada. The brief is from the Hosiery and Knitwear Export Group, the National Hosiery Manufacturers' Federation, and the affiliated associations in Britain and Northern Ireland. The brief is opposing the application by Canada's primary textile institutes requesting increased tariff protection against imports of low cost knitted goods and fabrics. Canada's institutes ask for a "modest" increase in duties in order to give the Canadian knitting industry a reasonable chance to live and prosper. The brief notes that Canadian exports to the U.K. are vastly above purchases in the U.K.

SUPPLY OF IMPROVED COTTON SEEDS PROGRESS OF I.C.C.C.'S SCHEME

IT is a primary principle of cultivation, known to farmers all over the world, that the quality of the crop harvested depends, to a large extent, on the quality of the seed sown. In the case of cotton, the plant being very sensitive, the problem of finding suitable varieties which will withstand the vagaries of climate, the ravages of pests and, at the same time, give the maximum yield is difficult enough. But it is rendered more so in India, thanks to the wide differences in soil, climate and methods of cultivation as between cotton tracts. This poses a perpetual challenge to the ingenuity and resourcefulness of agricultural scientists working at plant breeding. Their problem is not merely to evolve suitable varieties but also to maintain the purity and quality of the cotton thus evolved. It is here the importance of seed multiplication lies.

Realising this, the Indian Central Cotton Committee emphasised, as far back as in 1929, that multiplication and distribution of approved varieties of seeds should be organised in the different cotton tracts. The Committee, in addition to financing research for the improvement of the race of the cotton plant, has also been financing seed multiplication and distribution schemes in respect of each of the improved varieties officially released for cultivation in any particular tract in collaboration with the State Governments. This policy of extending assistance to the State authorities in multiplying the seed and making it available to the cultivators in an organised manner has enabled the establishment of liaison between the experiment station and the cotton grower. This is as it should be, for research will serve no purpose, unless its results are carried from the experimental stations to actual farms.

Cotton tracts in the different States vary in their extent anywhere from 50,000 acres to over 100,000 to 120,000 acres. It is obvious that providing seed for the entire area in one stage is a very difficult task. The multiplication of seed for covering a given tract is, therefore, organised to be achieved by stages from the nucleus plot on the cotton breeding station until it reached the general cultivator in the last stage. Though the principle of seed multiplication and supply had been accepted and followed by the different States, differences in respect of the number of stages linking the cotton station with the general area exist owing to differences in local conditions. It was found that, in one or two instances, with a large number of intervening stages, there was a tendency for the variety to go out of hand resulting in deterioration of quality. As this defeated the very purpose of seed multiplication by stages, the Indian Central Cotton Committee constituted a small Sub-committee to examine the question of reorganising the seed multiplication in an efficient manner in order that seed of standard purity was made available to the cultivators in all stages including the general area.

Standard Pattern

After careful examination of the different methods of multiplication which the various States had developed, taking into consideration, at the same time, the differences in cultivation practices in the irrigated and the rainfed areas, the Sub-committee drew up a standard pattern for seed multiplication which could be put into operation in all the States irrespective of local conditions. It consisted in raising a foundation stock seed on a fairly large area (10 to 15 acres) from the nucleus seed which is usually maintained on the experiment station by the cotton breeder. The foundation seed would also be under the control and scrutiny of the cotton breeder responsible for the evolution of the strain. The foundation stock seed was then proposed to be grown on the fields of a few reliable and enlightened cotton growers who would be known as A class growers. According to the terms of cultivation they would permit the staff of the Department of Agriculture to examine the crop thoroughly to purify it by a strict roguing, that is, by the removal of such plants which did not conform to the typical strain under distribution. The produce of these cultivators would be taken to the approved gineries where proper precautions would be taken to see that the produce was not mixed with any other type and that the seed was collected and bagged by the departmental staff. The seed would then be subjected to fumigation after which it would be put in bags which would be

sealed and sold for cultivation in the fields of a bigger circle of reliable cultivators known as B class growers, who would similarly bind themselves to have the crop examined, produce pooled and ginned under departmental supervision. The seed from the B class growers' fields would be distributed to a still wider circle of registered cultivators called C class growers whose crop would be generally inspected and the seed procured, bagged and sealed by the department. The seeds from the C class growers would then be made available for general cultivation. In the case of irrigated cottons the penultimate stage of C class might well be dropped as sufficient seed would be available from B class stage for growing in the general area.

Four Stages

It would thus be seen that after its emergence from the nucleus plot, the seed would be multiplied in four definite stages (three in the case of irrigated cottons), namely, the foundation stock, the A class, the B class and the C class. Thus, the organisation has not only been made simple and compact but it also enables the general cultivator to receive seed of the highest purity so that the benefit that accrues as a result of the superior characters and higher yields would be derived by him.

The Indian Central Cotton Committee has so far financed 86 seed multiplication and distribution schemes out of which 62 have terminated and 24 are in operation at present.

As a result of the intensified work under the seed multiplication and distribution as well as extension schemes, the area under improved cotton varieties increased from 2.5 million acres, representing 11.4 per cent. of the total area sown to cotton, in the 1922-23 season to 13.3 million acres, 66 per cent. of the total area under cotton,

in the 1957-58 season. The monetary gain to agriculturists as a result of cultivating these improved varieties of cotton is estimated at Rs. 13.3 crores in 1957-58.

The following improved varieties are under distribution in the schemes now functioning in the States:

State	Name of improved cotton strain released	Name of tract in which cultivated
Bombay	Vimbar Vijaya Kalyan Vijay and Dheviyay H-420 (Rukmini), No. 91, Gaurani 6, Gaurani 12, Daulat, Buri 0204, 170-Co. 2	Khandesh Surri North Gujarat Breach Vidarbha Marathwada Nimar and Vidarbha Saurashtra Karnatak Karnacum and Tinnies Camboodia tract of Comodore and Salem districts.
Mysore	Jayadhar and Laxmi	Summer tract of Ramana- mathapuram
Madras	K.2 and K.5 MCU-1 MCU-2	Ferozepore and sub- mountain tracts Haryana Central Uttar Pradesh Mewar Nimar
Punjab	820F	
Uttar Pradesh	H.14	
Rajasthan	351	
Madhya Pradesh	Indore-1 D.48-164 (Majhari)	

It is expected that reorganisation of seed multiplication on the above pattern would enable cent per cent. coverage of cotton tracts in all cotton growing States in due course. This alone will result in considerable increase in production. If the farmers were to adopt, in addition, better cultural practices and improved application of manure, there is no doubt that cotton output would increase substantially. An important prerequisite for the adoption of these practices, however, is the provision of irrigation facilities.

AN IMPROVED COTTON FOR VIDARBHA

A scheme for multiplication and distribution of Vimbar (197-3) cottonseed in the Vidarbha tract of Bombay State has been sanctioned for the period ending February 1960. The scheme will cost about Rs. 1.29 lakhs. It aims at replacing the H. 420 cottonseed by a superior strain and enhancing its purity by multiplying and distributing it to cotton growers in the tract. It was observed that the strain, H. 420 cotton, introduced in Vidarbha tract, being low ginner, fetched less returns to the growers as compared with high ginning strain Vimbar (197-3).

SUGAR IN MADHYA PRADESH PRODUCTION SUFFERS A DISTINCT SETBACK

SUGAR production in Madhya Pradesh has suffered a distinct setback during the current season (November 1958-October 1959) also. The quantity that has actually come off the crushing plants of mills is believed to have been no more than 22,000 tons, which compares very unfavourably with 33,844 tons in 1957-58 and 49,050 tons in 1956-57. The continued downward trend in production is due to the difficulty of many sugar mills to secure adequate supplies of cane, thanks to the persistent competition offered by gur producers, encouraged by the high level of prices of their product, and to the poorer sugarcane crop. The aggregate yield of cane is estimated at just 1,153,000 tons, as against 1,245,000 tons and 1,672,000 tons harvested in the preceding two seasons, respectively. Reflecting these trends, the quantity of cane crushed is lower at about 225,409 tons, as against 347,000 tons and 502,000 tons in the two previous years.

The decline in sugarcane crop reflects the shrinkage in the area and per-acre yield. The all-India second estimate of the crop for 1958-59 puts the area under cane in Madhya Pradesh at 112,000 acres, as against 122,000 acres in 1957-58 and 131,000 acres in 1956-57. The average yield of cane per acre is shown at 10.2 tons, same as in 1957-58, and 12.8 tons in 1956-57.

Importance of Industry

This disquieting performance in production for the second year in succession must have adversely affected the financial position of sugar mills in the State. This is certainly unfortunate considering the vital role which the industry plays in this State. There are at present five sugar factories, together accounting for a capital investment of nearly Rs. 3 crores. Some 5,000 skilled and unskilled workers are employed by the industry. Besides, a large number of persons is engaged in sugarcane fields, transport and other allied works. About 400,000 cultivators get their livelihood by growing cane. The total payment received by these cultivators every year for the cane supplied to mills represents as much as 50 per cent. of the value of sugar produced.

The following table indicates the trends in the sugar industry of Madhya Pradesh during the first three years of the second Plan:

	1958-59*	1957-58	1956-57
Number of factories working	5	5	5
Average number of actual working days ..	90	98	152
Cane crushed (000 tons)	225	347	502
Sugar production (000 tons)	22	34	49
Recovery (per cent.)	9.77	9.77	9.77
Area under cane (000 acres)	112	122	131
Total output of cane (000 tons)	1,153	1,245	1,672
Average per-acre yield (tons)	10.2	10.2	12.8

* Estimates only.

The production of sugar in Madhya Pradesh during 1958-59, as already stated, is 22,000 tons, as against the estimated consumption requirements of about 250,000 tons. In view of the wide gap thus, there is scope for expansion of the sugar industry in the State. But before allowing such expansion, it is necessary to

examine whether the State has the necessary climate and water resources for growing sugarcane. Sugar is an agro industry and cannot be established wherever one likes.

Performance Not Encouraging

The performance of the State in the production of sugarcane so far is not sufficiently encouraging to support the claim for establishing more factories there. On an average, one acre of land sown to sugarcane yields a little over 10 tons, which is substantially lower than the all-India average yield of 12.7 tons and 27 tons in Andhra Pradesh and Bombay, 26 tons in Madras and 24 tons in Mysore. Similarly, the quality of cane grown is poor. The average recovery of sugar per cent. in cane is only 9.77, while the figure for all India is 10.01, 11.18 in Bombay and 10.28 in Mysore.

If the sugar industry is to maintain maximum production at an economic cost, it is imperative that a more vigorous cane development programme should be launched. The programme must specially provide for better irrigation facilities, supply of fertilisers, distribution of improved seeds, intensive manuring, training of technical staff, plant protection and compost, provision of equipment and insecticides for controlling pests and diseases, supply of improved implements to cultivators on a subsidised basis, and construction of pucca roads from the fields to the factories. The State will do well first to take all these measures for improving the productivity of the fields that supply sugarcane to the existing factories before granting permission for erecting new factories.

SUGAR CO-OPERATIVES IN BOMBAY

Six new co-operative sugar mills with a total daily cane-crushing capacity of 6,000 tons have gone into production in the Bombay State during the current season, bringing the total number of co-operative sugar units in this State to 15, with an aggregate daily crushing capacity of 14,100 tons. The names of the fifteen factories, their location, daily cane-crushing capacity, producer members and sugarcane areas as on 30th June 1958 are given below:

	District of location	Daily cane-crushing capacity (tons)	Sugarcane area (acres)	No. of producer members
Pravara	Ahmednagar	1,200	4,857	1,945
Kopergaon	"	800	3,027	883
Rahata	"	1,000	3,832	1,158
Karagam	"	1,000	3,315	1,076
Rahuri	"	1,000	3,565	1,277
Bhogavati	Kolhapur	1,000	3,500	1,811
Vara	"	1,000	5,981	1,759
Panchganga	"	1,000	4,000	1,605
Malasaon	Poona	1,000	2,690	1,160
Sires Chhatrapati Shivaji	"	800	1,728	598
Shriram	N. Satara	800	2,815	943
Shetkari	S. Satara	1,000	2,000	1,762
Gitra	Nasik	1,000	2,890	1,000
Shreekhand Udyog	Surat	800	1,717	1,419
Kodinar	Amreli	1,000	2,200	1,320
Total	"	14,100	40,177	18,597

The Central Government has issued licences for the purchase of machinery to two more co-operative factories—the Krishna in Rethare, North Satara district, and the Sahakari Khand Society in Gandevi, Surat district. The position in respect of the Dudhganga Vaidganga Society in Bidri (Kolhapur) is not known.

The Bombay State Co-operative Bank has continued to be the financing agency for 10 of the 15 factories mentioned above. The Surat and Poona Central Banks are the agencies for two each, while the Ahmednagar Central Co-operative Bank has taken over the financing of the Kopergaon Sugar Factory with effect from 1st June 1958.

SUGAR INDUSTRY IN PAKISTAN

Pakistan hopes to achieve self-sufficiency in sugar by the end of 1965. The Pakistan Industrial Development Corporation proposes to establish four more sugar factories during the five-year period 1960-65. They will be located in the former Provinces of the Punjab, Sind, Bhagalpur and the N.W.F. The total additional production of sugar from these new units is put at 40,000 tons. The target of productive capacity fixed for 1960 is 235,000 tons, but the actual capacity is expected to be not more than 180,000 tons.

The future pattern of development of sugar industry in Pakistan will be determined on the basis of the report which the ten-member Sugar Commission set up in 1957 will submit to the Pakistan Government. It is reported that the Commission has already completed its findings which cover, among others, sugarcane acreage, production, recovery, future expansion of capacity, and economics of sugar, gur and khandasari sectors. The total area under sugarcane is now about 1,159,000 acres (first estimate for 1958-59). On this basis and taking the average per-acre yield at 11.8 tons, the aggregate cane production works out to 13.68 million tons.

SUGAR FOR "FREE" SALE

The Government of India has released 185,000 tons for sale in the free market. This quantity is slightly less than that released last month, namely, 195,000 tons. In the case of sugar factories situated in Uttar Pradesh, North Bihar and the Punjab, sales are to be effected at prices not higher than the ex-factory prices fixed by the Government on 22nd December 1958. Allotments of sugar will hereafter not be made to persons who are not licensed traders. The parties are clearly advised to mention their licence number in their applications. Further extension of the system of direct allotment, the Government says, will depend on the extent of co-operation offered by the industry in maintaining the controlled ex-factory prices and of the trade in ensuring reasonable market prices.

SUGAR IN THE PUNJAB

The Punjab Government has decided to take over distribution of sugar in the State. The decision, it is said, is a sequel to the need for bringing down the price of sugar which now stands as high as Re. 1.50 a seer. Accordingly, supplies will be made available to consumers through fair-price shops with the exception of sugar produced by co-operative units which will be distributed through co-operative societies. The retail price is fixed at Re. 1 per seer. The Punjab's requirements of sugar are estimated at 144,000 tons per annum, while the actual rate of output is just 72,000 tons. The Centre has agreed to allot the quantity of sugar needed to cover the deficit, as also a small additional quantity for stocks.

The Union Finance Ministry is understood to have released Rs. 70 lakhs of foreign exchange for the year 1959 to meet the equipment requirements of the firms licensed to manufacture complete sugar plants. Further allotment of foreign exchange is proposed to be made for the subsequent two years—Rs. 25 lakhs for 1960 and Rs. 1.5 crore for 1961—so that the demand for twelve plants from licensed sugar factories may be fully covered. It is reported that the firms will deliver four complete sugar-producing plants before 1st January 1961 and the remaining eight plants before the crushing season 1961-62.

NEW PUBLICATIONS

Indian Economy Since Independence. By H. Venkatasubbiah. Published by Asia Publishing House, Bombay. Price: Rs. 17.50.

It is now twelve years since India attained independence. Over this period, perhaps, few underdeveloped countries can show a higher rate of economic progress than India. Many and varied have been the economic changes which this country has witnessed. Again, at no comparable period in India's history was there a more conscious attempt at economic development. India has, therefore, arrived at a point of time, where its historians can conveniently survey its recent past. This is the task to which Mr. H. Venkatasubbiah, already familiar to students of Indian economics as the author of three admirable studies, *The Structural Basis of Indian Economy*, *The Foreign Trade of India 1900-1940* and *Asia in the Modern World*, has addressed himself. There is no doubt that it is a task to which he is eminently fitted by reason both of his extensive knowledge of the subject he deals with and of the experience of men and affairs he has acquired over the last few years in the course of his professional duties as a financial journalist. He has succeeded in presenting a comprehensive and critical account of the economic development in the eventful years which have followed India's attainment of independent status.

In the first two chapters, entitled "Independence" and "Government," both of which provide the necessary background against which India's economic development is presented, the author discusses the problems which the Indian Government had to face in the wake of independence, the enactment of the Constitution and the working of democratic institutions. These are followed by a somewhat detailed review of the land problem, including the abolition of *zamindari*. Two chapters are devoted to the working of public enterprises, nationalisation of the Reserve Bank, Imperial Bank and life insurance and the performance of major State undertakings like the railways and the steel projects. Private enterprise, foreign trade and public finance get a chapter each. The last two chapters are devoted to "Planning" and "Factors of economic change."

This summary of the contents of the book (343 pages) will, of course, do no justice whatever to the author's painstaking treatment of the subject but may convey some idea of the ground the author has chosen to cover. A reviewer may only too easily fall into the pitfall of suggesting that some particular topic or groups of topics or some aspect of a topic should have been dealt with, or enlarged or left out altogether. Naturally, in a book with so vast a theme, particular readers will wish that the balance struck by him had been different. Thus, some may wish that the price question had received more extensive treatment or the food problem been more adequately dealt with. But what one may reasonably expect is that the book, taken as a whole, should give a comprehensive picture of India's economic development and throw, at the same time, light on the successive stages of the evolution of Governmental policies. The book does answer this test. It is the chief merit of the book that the author seldom loses himself in the many mazes of details. On most topics, he maintains a balance. The author admits that he has not eschewed subjectivity altogether. This is all to the good. For complete objectivity in respect of events to which we are so near could perhaps have been achieved only at the sacrifice of the many interesting passages without which the book would have been too colourless a recitation of developments. From this point of view, one wishes that the author had been even less detached than he has been.

Throughout the book, the author sustains the reader's interest by his acute judgment on events and developments. Discussing the prospects of Indian democracy, he observes:

"The fundamental oneness of the people to sustain the Parliamentary system in India must come in the last resort simply from its belief in argument and discussion, a belief which, fortunately, is as ingrained as some of the shortcomings. The love of logic and subtleties is part of the people's heritage. Though often hampering to practical achievement, it is a basic factor in the prospects of democratic Government."

Assessing the results of Vinobaji's Bhoodan movement, he says:

"Ignoring the motive of the giving—some gave for vanity, others to shift the burden of a mortgage and yet others in expectation of petty official or party favours—a considerable extent of donated land was either perfectly useless or could be

brought under cultivation through such initial methods that its prospective users had hardly the capacity for. Since the society that gave the land did not always look after the economic side of the problem before giving, Governments representing the larger society had to look after it when Vinoba took the land. The poor economic result of Bhoodan was due to the almost complete neglect by the Governments of the provision of the appurtenance of cultivation to those presented with land. As long as the new life could not really begin, pride of possession remained hollow. But the fact remained that good land was gifted as well as bad, and to the thousands of families that could and did manage to gather the equipment the tilling of own land, however little of it, was redemption from a curse of generations."

Commenting on the industrial prospects visualised under the second Industrial Policy Resolution (1956), he states how, under it, "the public sector had to grow—and rapidly—and the private sector had to conform to the requirements of the Plan." He adds:

"The private sector had to be given the opportunity and facilities to function effectively within the field allotted to it. But, in practice, the Government was aggressive in the public sector, and the private sector seemed to be getting less consideration than it believed was vouchsafed to it in the Resolution. Among the industries that were reserved for the public sector were practically the whole range of mining and heavy metallurgical industries. The solid base of the country's industrial structure would thus be nationalised in due course."

It is no unfair verdict on the author that his book does not always make easy reading. This stems partly from his understandable desire to achieve economy in the development of arguments and partly from his having to traverse as wide a field as possible within a brief compass. But it is a tribute to the author that, if his book occasionally calls for effort in reading, the reader will find such effort fully rewarding.

Indian Administration. By Asok Kumar Chanda. Published by George Allen & Unwin Ltd., London. Price: 25s. net.

Although India inherited a system of sound public administration on the eve of independence, the system has been under a severe strain since then, thanks to the various new functions it has had to undertake and the several readjustments that are taking place. Also, as the bastion of democracy and a stabilising force in South-East Asia, the form of its democratic institution and the organisation of its administration are vital to India's role in this region. The book on Indian Administration by Mr. Asok Chanda, the Comptroller and Auditor-General of India, will, therefore, be widely welcomed.

In recent months, the administration of some of the public organisations in this country has come in for criticism and examination, raising such fundamental questions as the constitutional responsibilities of a Minister for the acts of his subordinates and the measure of control Government should exercise over autonomous statutory corporations. To examine these problems, few are better qualified than Mr. Asok Chanda who has been a permanent Secretary of important departments in the Government of India. As Dr. Radhakrishnan points out in his foreword—a brief and sweet foreword which indicates the quality of the book—"in a short compass he reviews with impressive lucidity the historical growth of the Indian Administration, its present set-up and trends and the direction in which it would need to be modified to suit the growing needs of our Government and its social policies. The section on "Financial Administration" which deals among others with the accountability of the Executive to Parliament and Audit control is particularly interesting."

The book is divided into four parts. By way of background, the author traces the historical developments together with details of financial policy, till the date of our independence and the progress made thereafter, including the reorganisation of States. He states that if India is to realise fully its declared objectives, to secure all its citizens justice and social, economic and political fraternity, assuring the dignity of the individual and the unity of the nation, the structure of its administration should be reorganised to conform more to the unitary pattern with a well-developed system of local government. He adds that without a diffusion of initiative and responsibility and without creating a feeling that the people of a region have a significant share in its development, the purposes of a welfare State cannot be fully realised. These considerations underline the basic necessity of encouraging the orderly growth of local government and autonomy as

an essential ingredient of Parliamentary democracy.

In the second part, the constitution of Parliament is explained and its role critically examined. The accountability of the Executive to Parliament in a democratic form of government is absolute. This accountability in the field of financial administration is secured through the reports of the Comptroller and Auditor-General who is rightly described as "the guide, philosopher and friend" of the Parliamentary Committee on Public Accounts. Audit of public accounts by an independent authority is an essential aspect of Parliamentary control over expenditure.

In the section on "Executive," the role of the Cabinet, the Services and the Secretariat is discussed. India has had the benefit of various constitutions in the world. The constitution and powers of the Indian Cabinet give evidence of an attempt to resolve various ideologies. There are questions of the real power of the Council of Ministers and the degree of Parliamentary control. Since the days of independence, a series of adjustments and readjustments of the ministries have taken place which bear the impress of improvisation rather than of any constructive thinking. In the section on the "Services," the author discusses the stresses and strains which have developed in the civil services as a result of their past constitution and the impact of a Parliamentary form of government. Briefly, one is struck by the lack of symmetry and mobility in its features. Instead, it is pointed out that the advantages of a single civil service far outweigh the technical advantage of retaining a number of distinct and separate services. By suitable adjustment of the training programme, a single service could be made multi-purpose to fulfil diverse responsibilities and functions with equal ease and competence. The author advocates a comprehensive review of the organisation of the services to make the existing executive instrument better fitted to serve the needs of a welfare State.

Since the author is the Comptroller and Auditor-General of India, the section on Financial Administration will be read with particular interest. The section is divided into three parts dealing with Parliamentary control, Treasury control and Audit control; taking the three sections together, it deals among others with the accountability of the Executive to Parliament and Audit control. Parliamentary control seeks to ensure that the appropriations have been utilised economically and prudently within the grants and for the purposes approved and provided for. The working of the Public Accounts Committee and the Committee on Estimates indicate several interesting experiences, some hampering its work, some in catering their anxiety to overstep their terms of reference. With the increasing number of public enterprises the accountability of these important, the problem being to devise a satisfactory arrangement by which these companies can be endowed with the maximum degree of freedom in movement and operation without disturbing or diluting the essentials of Parliamentary democracy. It is pointed out that having placed the audit arrangements of the public enterprises under the control of the Comptroller and Auditor-General, Parliament must impose some self-restraint in dealing with matters pertaining to the field of industrial and commercial activities of the State.

Historically, in the absence of arrangements and personnel for financial scrutiny internally in the departments and in order to effect economies in expenditure, itemised control was instituted. Gradually, the Finance Department came to be acknowledged as the sole repository of financial wisdom and sagacity, giving way to complete divorce between administrative and financial functions. There has been excessive concentration of authority in the Finance Department not merely in the matter of the allocation and application of general financial, economic policies and principles, which are unquestionably its legitimate and logical responsibility, but also in the exercise of control over meticulous details, over items of expenditure pertaining to estimates which have already been accepted and approved by Parliament for which the necessary resources have been duly appropriated. The question of delegation of financial authority to the ministries and heads of departments involves certain modification to existing procedures. First, there is question of examination of technical detail developmental schemes and work program

CO-OPERATIVE FARMING—I

CONDITIONS IN INDIA ARE UNSUITABLE FOR IT

By Dr. D. S. Chauhan

EVER since the Nagpur resolution of the A.I.C.C. on co-operative farming, there has been a good deal of controversy and heated discussion on it, but, so far, this discussion, instead of leading the country towards unanimity and agreement, has only served to widen the cleavage. A new political party, called the Swatantra Party, has been formed to oppose co-operative farming in particular. Thus, some dogmatism, sentimentalism, and considerable emotionalism (and even heat) seem to be gradually gathering around the Nagpur resolution. Opinions usually differ on all issues; and it is not peculiar that they differ on this question. But the attitude of Mr. Jawaharlal Nehru (as it appears from his recent speeches), particularly towards the critics of co-operative farming, is (if one is permitted a bit of freedom of expression) absolutely undemocratic, and is likely to do a great deal of harm to the country.

Co-operative farming, as the general pattern of our agriculture as presumed in the Nagpur resolution, is a very radical measure, a fundamental reform for reorganising the pattern of agricultural production, implying the remodelling of the whole agrarian life. It involves what may be categorised as economics of co-operation, sociology of co-operation, politics of co-operation, philosophy of co-operation and ethics of co-operation. In other words, in addition to economic, many other considerations such as social, political, philosophical and ethical, are also involved. Its importance and far-reaching character demand considerable forethought on its fundamental motives, broad objectives, concepts, forms, suitability to the genius of the people, machinery to accomplish it, methods of implementation, and the possibilities of its popular acceptance. Segmental or partial approach may lead to one conclusion and an overall or comprehensive approach to another. The problem should, therefore, be taken up in its multiple dimensions and perspectives. In regard to time dimension, it should be examined (i) in relation to the historical context, covering past and present, and (ii) in relation to economic growth, involving future projection. In regard to area dimension, it should be examined in relation to its influence on various aspects of life.

Forms of Co-operative Farming

The Nagpur resolution on co-operative farming postulates "pooling of land for joint cultivation." In the absence of a definite indication, the normal presumption is one village one farm, that is, pooling of all the land of a village, so as to constitute one farm or a single managerial and operational unit. However, in addition to this, there can also be two other forms. One, which Prof. D. R. Gadgil recommended at a seminar on co-operative farming, organised by the Indian Society of Agricultural Economics, is what may be called a "firm and plant approach," where the pooled land may be rearranged in separate blocks, depending upon agricultural conditions. This implies the formation of one co-operative body for one village (the Firm) which will have the authority for taking all the important decisions regarding farming. The decision-making authority will be a collective body of cultivators, instead of individual farmers or component units (farms or plants). The degree of autonomy to be enjoyed by the constituent units and the regulation of relationship between them may not be determined, Prof. Gadgil says, in advance on a priori ideological grounds. The other form may be the formation, in each village, of several co-operative farming units, independent of each other and autonomous in themselves, so far as the decision-making or farming operations are concerned. The size of each may depend upon the willing co-operation of the individual cultivators, satisfying, of course, the minimum conditions laid down in the law governing it, in terms of either the number of cultivators or area of land or both. In small villages, however, there may be only one farm.

Broadly speaking, three patterns emerge: (i) one village one co-operative farming society

*After three years, because it is only from then that co-operative farming is scheduled to be introduced.

and only one jointly cultivated farm; (ii) one village one co-operative farming society but more than one constituent units or farms; and (iii) one village and more than one co-operative farming society, each having its own jointly operated farm. The other two forms often mentioned, namely, co-operative tenant farming and co-operative State farming or collective farming do not reconcile properly with the ideals of joint cultivation, the institution of private property in land, and ideals of democracy and individual liberty. Besides, if we think beyond the idea of total cultivated land being farmed co-operatively, and aim at a combination of co-operative (joint) farming on some land and by some farmers, with a part of the land being cultivated individually by farmers who can do without joint cultivation or do not want it, that is, joint-farming combined with individual farming with service co-operatives for both, a fourth pattern also emerges.

Quality of Persons

One important consideration is to examine the prevailing conditions, and to anticipate those that will exist after three years,* of the persons, who are actually concerned with co-operative farming, that is, the village people, landholders and the landless, including village service castes, artisans and menials, etc., having very small holdings. In the ultimate analysis, the success depends on the quality of persons and the degree of people's participation or the general acceptance and the spirit of co-operation, particularly their emotional and sociological preparedness for co-operative action and living. In our villages at present (considering only those things which have a direct bearing on the success or otherwise of co-operative farming), we find mounting individual and group tensions and formation of factions. We find that new leadership of a manipulative nature is trying to overthrow the traditional one; *panchayats* are being dominated by groups resulting in rivalries and widespread corruption; and the whole rural society is thus being torn by groupism and casteism, exhibiting distrust, hate, quarrel and a lot of bad blood, in the place of community spirit, co-operation, fellow feeling, and the cohesiveness which used to characterise the Indian village communities in the past. Life has become more individualistic and family life rather than community life dominates the scene. There is no psychological, sociological and educational (realisation, awareness and conviction about the utility of co-operation being absent) preparedness amongst the masses at present to accept co-operative farming and to operate it successfully. Neither the existing environment, nor the one that is likely to obtain after three years, offers any potentiality for it.

Emotional Aspect

Considering the emotional aspect, which is a very important consideration for a mass movement or for a programme involving mass enthusiasm or people's participation in general, co-operative farming has little chance of being accepted by many sections, as it is viewed with doubts, suspicion, uncertainty and a sense of lurking danger. In villages, land is the richest possession. It is dear to all, as it is the most important, in a vast majority of cases the sole, source of livelihood. The landholders, who had

acquired the *Bhumidari* or similar rights of ownership, after paying a certain multiple of rent, have recently bought the land at a very high cost and with considerable sacrifice. Others who have been allotted lands in one form or another or have acquired possession after prolonged and costly litigation and long cherished hopes, hold them quite dearly. Some have invested heavily in land improvements. In such circumstances, emotional clinging to land is quite natural. The assurance by the protagonists of co-operative farming that individual freedom will be respected and right of ownership maintained after pooling the land is received with scepticism, if not suspicion. The suggestion that farmers should pool their land voluntarily under a jointly operated and collectively administered farm is likely to face resentment, resistance and hostility from them. It will lead to, if imposed upon them by law, loss of faith in co-operative farming itself, and, may be, even in other forms of co-operation by the simple logic of association. The chances of voluntary merging of land into the community farm are, therefore, very dim.

Taking the value system into consideration, the suggestion implies a shift from the individualistic value system, with its emphasis on achieved status. In our rural society, in which caste still holds a dominant role as a social institution, individual property rights are still cherished, and tradition and conventions continue to exercise a guiding and powerful influence on social conduct. Consequently, implementation of a policy which is not in consonance with the social consensus will have to overcome immense practical bottlenecks and will therefore yield only limited success.

Personal Incompatibility

Again, there are good, bad and indifferent farmers. There are many (even those having some small lands) who have had no agricultural traditions. Those who follow agriculture understand the importance of personal factor in the success of farming. Agriculture is highly technical; even for performing the simplest agricultural operations, some skill is needed. In addition to personal relationships, the level of technical skill likewise limits the scope and chances of joint cultivation by anybody and everybody. All or any group of persons will not cultivate jointly, much less do it successfully. This consideration is more vital in re-farming society, since, in that case, the collective body will have an inherent heterogeneity, and will not acquire a common emotional impulse which is indispensable for the successful operation of co-operative farm. Besides, it is worthwhile to note that similarity of occupational background is insufficient to materially reduce differences, disagreements, and discord. A key to the success of co-operative endeavour lies in personal compatibility grown out of mutually spontaneous choice of members.

Even anticipations of the shape of things to exist after three years of service co-operatives, when co-operative farming is supposed to be taken up, do not hold out better hopes. Neither *panchayats* for over a decade, or the experience of the co-operative movement for over 50 years, warrants any optimism. The level of preparedness for co-operative action in the next three years cannot be of the dimensions which the Nagpur resolution on co-operative farming would need. Surely, what could not be achieved in the past 50 years cannot be achieved in the next three years, whatever may be the support from the Government. This is one of the important considerations that must be borne in mind in determining the scope for co-operative farming and the speed with which it can be brought into force all over the country.

Agricultural Productivity

The case for co-operative farming or for any programme of human welfare should be made on the merits of its broad objectives. The most important objective of this new organisational pattern of agricultural activity is economic efficiency. (The other broad objective, i.e., social justice, associated with that of economic efficiency, implying equality of opportunity for the fullest development to one's capacity, is to my mind, not a very important consideration in the case of co-operative farming as in the case of co-operative farming regard to fixation of ceiling on land or on income.) Though there are several methods for measuring and expressing economic efficiency of agriculture known to experts in farm

ment and agricultural economics, in the case of India, the scarcity of land is the most dominant factor in agriculture, and, consequently, economy in the use of land is the most important problem. Secondly, there is the problem of capital scarcity. For these reasons, productivity per acre is to my mind a more appropriate method of measuring economic efficiency for India. But the pattern of co-operative farming presumed in the Nagpur resolution is likely to create a situation which will lead to a decline rather than an increase in agricultural productivity. It is thus likely to nullify partly the results of national development effort.

A fall in productivity may take place for the following reasons:

(1) The experience of "socialised agriculture," particularly in the U.S.S.R., Yugoslavia and Poland, clearly shows the peasant's unwillingness to work harder or to produce more and that he does not have greater incentive in working for the State or the Commune. The trend towards, and the gradually increasing extent of, private agriculture in these countries are lessons for maintaining the peasant's freedom for individual farming. The anxiety and effort for more efficient operation of agriculture and higher production are greater under individual farming than under co-operative or collective farming.

(2) The story of what happened when everybody was expected to pour one's share of milk in a big pot every day for equitable distribution among all, is well known. The bad and neglected condition of jointly held properties in villages and towns is a common sight. Even in agriculture, the comparative inefficiency of *batai* cultivation (share system) is an old experience. The workers' desire for more wages for less work is a characteristic feature of labour in India at present. The irresponsible behaviour of the junior members of joint family and the consequent increase in the burden to be borne by the rest is a well-known experience of India. It is also common knowledge that this defect is the main cause of partition of many joint families. It is unrealistic to advocate co-operative farming in the face of all this experience in India and elsewhere.

(3) Enhancement of productivity, which is our urgent need, requires considerable capital investment in agricultural improvements. To the extent it is intended to be private or non-public, direct benefit provides the greatest encouragement to make such investment, even though farmers, as individuals, are not fully conscious of their responsibilities towards the nation. The prevailing situation in the countryside is that, as the law and order situation has deteriorated considerably, endangering life and property, the moneyed sections and big landlords have been gradually migrating to towns and cities; and, because of the element of uncertainty of new land reforms, investment in land is being restricted and many important agricultural improvements are being left unattended, with the consequent deterioration in the productivity of land resources. A very large number of sales of land is seen these days in the countryside.

(4) Again, the operation of the common pool of land implies the institutionalisation of production function in agriculture, in which motivation of the improvements in land resources will be determined mainly by social good. Amongst our people, whose dependency characteristics have been the result of joint-family system, even the development of initiative must take quite a long time and the idea of sacrifice for an abstract ideal (society or community and the ultimate individual good coming out of social good) will take a longer time to gain acceptance and support.

(5) In the pattern of co-operative farming, particularly under the first two out of the three forms mentioned at the outset, decision making on all important matters will be done by the collective body. And, in this collective body, agricultural innovators or pioneers of development, those who think of and adopt new ways, and are prepared to take risks with new ideas, will be in a minority, since such farmers are always few. Accordingly, there seems to be a likelihood of suppression of innovations and, consequently, to that extent, agriculture will continue to be on stereotyped and traditional lines. (The examples of numerous innovations being adopted by collective farms in com-

munist countries relate more to agricultural services which voluntary service co-operatives are intended to perform here and not so much to the technique of cultivation.) Besides, in India, co-operatives are to be on democratic lines and so even the limited achievements of collectives in communist countries will not materialise. Again, in a democratic set-up, the proletarian character of societies may lead to the exclusion of intellectuals and innovators from managerial responsibilities.

The combined effect of all these things may be a regression in agricultural productivity, and this will lead to a worse situation.

A New Danger

There is a danger that the administration of the co-operative farming societies under the prevailing conditions and those likely even after three years may degenerate into a new type of bureaucracy in the hands, or under the influence of, dominant groups or new leadership (which is more manipulative than the old) exploiting the situation for individual or group benefit. The chances of the much-feared bureaucratic administration being developed are greater if the present departmental agency and the Congress Party are used as instruments to implement this measure. But an even greater danger arises from the combination of State trading in foodgrains with co-operative farming as presumed in the Nagpur resolution. Though, in theory, there are some positive advantages of such combination, there is no guarantee that, in practice, the farmers will not be exploited; with the State having the monopoly of purchase, prices will be fixed by the Government officials; and they will so fix the prices as to suit their policies. There is a great potential danger of State control being extended to co-operative farms, compelling them to hand over a certain quantity to the Government. There may thus be forced levies or coercion on the farmers to accept certain policies and programmes. This may result in the complete sacrifice of individual liberty and the establishment of full-fledged State control on production and marketing alike.

2, Umada, Kinku, Osaka, Japan Cable Address: "KURARAY OSAKA"

SOME RECENT ENGINEERING ADVANCES IN BRITAIN

COMBINATION of a welded and bolted construction in a new design of walking dragline has made possible quick dismantling and ease of transportation with comparatively easy re-erection on alternative sites. The first of the new machines is being used on opencast coal mining at Heddon-on-the-Wall, Northumberland, England. The second of these machines, recently completed by Ransomes and Rapier Ltd., carries a seven-cubic yard bucket on a 140 ft. boom or a five-cubic yard bucket on a 180 ft. boom. It has a working weight of 380 tons and is capable of cutting to a depth of 125 ft.

Under normal conditions with readily handled material, a cycle of dragging and hoisting the bucket, slewing through 90°, discharging and return should be completed in 50 seconds. Eccentric force rectangular walking shoes (30 ft. long by 5 ft. 6 inches wide) into contact with the ground, tilt the machine on its base, and slide it along in a series of four-feet steps in any desired direction.

In the application of dragline equipment for mining of opencast coal, iron ore or clay, however, ease of dismantling, transfer and re-erection is also a vital factor and a combination of welded and bolted construction was found most suited to meet these requirements. Twelve major welding runs totalling 150 ft. are necessary in assembling the main units of the dragline structure. Seven major welded assemblies form the main base and superstructure elements, the whole being of unit construction. To minimise site welding the main construction was, where possible, carried out at the Ipswich works. The main base was welded in three parts on manipulators in the workshop.

Each assembly is complete with the machinery, drive and other components ready for quick mechanical or electrical inter-connection. Welding along prepared edges, to complete a rigid structure, is carried out when the main units have been bolted together and the welds are made along adjoining edges of main plate members of the welded units in positions which allow down-hand working. Flame-cutting is used to dismantle the machine and is carried out along the welds.

New Hovercraft

Sponsored by Britain's National Research Development Corporation, a revolutionary type of aircraft has just started its first tethered trials. The new machine has been named the Hovercraft and is neither winged aircraft, a ship nor a motor vehicle. It is actually an entirely new means of transport which will be almost frictionless.

Shaped like a flying saucer, the Hovercraft is being built by Saunders-Roe Ltd., at Cowes, for Hovercraft Development Ltd., of London. The prototype machine is 30 ft. long and 24 ft. wide and is powered by an Alvis Leonides 450 h.p. engine which drives a ductless fan to provide the supply of air for lift and propulsion.

This prototype will carry a crew of two, but it is expected that the first Hovercraft to go into service will be big enough to act as a cross-channel passenger and vehicle ferry. An important feature of the machine is that it can be loaded and serviced on land, in an area not much bigger than the Hovercraft itself, making airports, harbours and expensive port facilities unnecessary. This means it will be able to operate in many parts of the world at present inaccessible to modern transport.

Hand-carved wooden fan blades, designed and built by the Aircrow Company and Jicwood Ltd., will provide the lifting force. The fan, powered by an Alvis Leonides Mk 70 engine, provides the air cushion which lifts the Hovercraft off the ground and enables it to "ride" at anything from three to 7 ft. above the surface of the water. On reaching the required height some of the air is bled off to propel the craft forward.

Its four blades are constructed from laminations of aerograde mahogany, glued with waterproof synthetic resin and covered with a special plastic. The blade's leading edges are protected by a metal sheath. Accurate balance of the impeller was obtained by control of the hinged dimensions of the blades within the drawing tolerances. No artificial means of balance was used.

There are also pre-rotational vanes constructed of resin-bonded thick Birch veneers,

with grain direction arranged to give the optimum strength characteristics. The vanes are built into a rigid central blanking which carries the nose fairing. The pre-rotational vanes and the blanking assembly is doweled and bonded at the blade tips to a section of ducting also made of wood. The duct is double-skinned of Birch ply and mounted on plywood rings.

Oil-Drilling Platform

The first mobile oil-drilling platform to be built in the United Kingdom, the Orient Explorer, is on its way to British Borneo. Built at Southampton by steel Structures Ltd., an associate of the John Howard Group of engineering companies, it is fitted with a helicopter landing stage and has been constructed to withstand a wind force of 100 miles per hour. The Orient Explorer is being towed, via Suez, a distance of 9,200 miles to drill for oil into the bed of the South China Sea.

This platform, which contains 3,000 tons of steel and cost nearly £1,000,000, will be used by the Brunei Shell Petroleum Company for exploration drilling in high seas areas up to approximately 40 miles off the west coast of British Borneo.

The platform is completely self-contained, with air-conditioned living accommodation for 56 men, who will be ferried to and from the mainland of Borneo by helicopter. Food supplies and light freight will also be conveyed to the platform by helicopter.

The platform is fitted with four retractable legs, 235 ft. in length and 10 ft. in diameter. When the appropriate drilling site is reached, these legs will be lowered until they reach the bottom of the sea; at this point a powerful hydraulic mechanism is engaged, which literally causes the entire platform to "climb up on its own legs" into a position where it is quite clear of any lifting action from the waves. When drilling is finished the platform is lowered into the sea, the legs are raised and it can be towed to another location.

Electric Furnace

Originally designed to reduce the pollution of the atmosphere, which seems inherent with pottery kilns fired with slack coal, an electric furnace has proved so successful in its designer's pottery that it has now been developed to meet the requirements of all types of pottery makers. With the use of electricity, all smoke pollution is obviated, and it has been found that the new kilns have many other advantages. They practically eliminate all risk of damage or breakages, and also greatly speed up the time needed for firing pottery ware.

Made by Shelley Electric Furnaces Ltd., the "Top Hat" kiln gets its name from the fact that the kiln is simply a base with an upturned box that is lowered on to it. This box is made of aluminium sheeting lined with asbestos slabs and insulation bricks. The heating elements are fitted to the bricks so that when the "Top Hat" is lowered over the loads of china, earthenware or porcelain, they are directly exposed to the heat.

Each of these kilns takes a day to fire and a day to cool, which compares very favourably indeed with the old-type smoke-producing kilns which called for a cycle of 10 days—three for preparation, three for firing, three for cooling and one for emptying. Another great advantage is that by bringing the oven to the pottery, all danger of damage is obviated.

New Conveyor

A new design of conveyor, in which wire ropes replace rigid side frames, is now being produced in England. Chain-linked trouting idlers clamped at intervals between the parallel wire ropes provide a resilient support to the loaded belt and give a carrying capacity up to 20 per cent. greater than that of conventional rigid-framed conveyors. Because of the trouting action of the idlers, spillage is almost eliminated and this flexible method of suspension also considerably reduces impact damage to the belt as it passes over the idlers, cutting down belt wear and giving longer idler life.

Known as the Distington-Goodman resilient ropebelt conveyor, and made by Distington Engineering Company Ltd., first deliveries of the structure have already been made to the National Coal Board. Although primarily designed for colliery use, it is readily adaptable to surface applications, such as quarries, where

an economical and high-capacity conveying system is in demand.

Weighing only one-third of conventional conveyor line material, the ropebelt conveyor can be assembled or dismantled in a fraction of the normal time as the main stands, at which the ropes are tensioned and anchored, are spaced from 150 to 300 ft. apart, depending on the material to be carried. With conventional structure, stands must be lined up correctly at 9 ft. intervals, whereas ropebelt structure is lined up at each anchor point. The equipment can be operated with any existing drive and tail pulley and can be linked to any other type of conveyor structure.

Automatic Die Programming Technique

New programming methods now makes it possible to produce first-class dies on milling machines, direct from the drawing, without the use of an external computer. Special mathematical techniques have been devised to provide continuity in "blending" between the co-ordinates shown on the normal blueprint and produce fully three-dimensional work pieces. Punched tape feeds instructions into what is in effect a built-in computer which controls the mill.

This system—evolved by engineers at the laboratories of E.M.I. Electronics Ltd.—gives, it is claimed, several outstanding advantages over the conventional method of die sinking from mahogany or metal models. For a typical medium-sized product, the tape can be programmed in about half the time required to make a wooden prototype. As girl programmers can be employed instead of skilled model-makers, the cost per hour is also greatly reduced. It is found in practice that the machining time too is considerably less than by normal methods.

The new system ensures a consistent accuracy of +.002 in.—much greater than could be achieved by the use of wooden models made to an accuracy of + 1/64 in. and subject to subsequent swelling or shrinkage.

Television Camera Works from Sound

A television camera which works from sound instead of light and can visualise the internal structure of engineering components and materials and parts of the human body, was recently demonstrated in London. It can also be used for seeing under water. The new instrument, which may become of considerable use to engineering, and to medicine, was demonstrated by its inventor, Dr. C. N. Smyth, of University College Hospital Medical School, London.

Sound waves which carry speech and noises through air or water are in many ways similar to light waves or rays. They can be focussed with lenses, and images of objects exposed to noise can be formed and reproduced at a distance. The wavelengths of audible sounds are too great to make these techniques useful, but for ultra-sound of frequency 1-20 millions of cycles per second the wavelengths in water or oil are only fractions of a millimetre and sound lenses 10 centimetres across are very efficient.

This ultra-sound camera differs from an ordinary television camera, in that the light-sensitive (photo-electric) image-receiving surface is replaced by a sound-sensitive (piezo-electric) image-receiving surface. This is simply a bare slice of crystalline quartz, which, under the impact of sound, develops, on each point of its surface, a voltage proportional to the ultra-sound intensity. The value of this voltage is detected, point by point, by a scanning electron beam, and after amplification controls the brightness of a television receiver to produce a visible image of the invisible internal structure under examination.

The demonstrations of the new camera included the examination of objects immersed in a tank of water. Internal flaws in blocks of aluminium revealed their shape and size clearly. Electroplating that was poorly adherent to the base metal showed as dark patches.

2,200 M.P.H. AIRLINER

Mr. Hall L. Hibbard, Senior Vice-President of Lockheed Aircraft Corporation, declared recently at Los Angeles, U.S., that a profit-making 2,200 m.p.h. passenger airliner could be built and certified by 1965. Design studies and testing indicate, he revealed, the solution of all major technical problems which previously blocked development of a Mach 3.0-to-3.5 transport. Mr. Hibbard, Aeronautical Sciences in Los Angeles, said that the projected airliner would carry about 90 passengers and could operate from today's existing airports. Following a typical supersonic time-table

NEW PRODUCTS AND PROCESSES

Construction Starting with the Roof

THIS unusual method of construction is used in Leningrad, Soviet Russia. It is done like this: high ferro-concrete columns are placed on the foundation. Powerful hoists place on them a ceiling which serves as the roof. After this, whole-cast ferro-concrete ceilings of the other storeys are installed. There are prefabricated building parts on the platform of every floor. Beginning with the upper part of the building, walls are erected and interior trim is done. This method, it is claimed, not only reduces construction period, but also allows a considerable cut in the expenditure of ferro-concrete and steel and reduces the weight of the building.

Microfilm Printer for Insurance Use

A new electronic microfilm printer has been developed for use in handling insurance data. It is designed to be able to handle records relating to up to 130 million people. The new printer converts data coded on magnetic tape directly into printed, readable records on 16 millimetre microfilm. It is said to be capable of printing at a rate of more than 3,000 lines a minute. Each of these lines contains 120 characters. At this speed it is estimated it could print the entire text of an average length novel within two minutes. Calculations which have been carried out show, it is claimed, that it could save as much as £70,000 a year in printing costs when processing the "social security" cards of 130 million people. The machine is designed so that it can be used with conventional electronic computers.

Novel Explosion Detector

An explosion detector has been designed by a team of engineers headed by Mr. Vilhelm Ahgren at the Stockholm firm Salén & Vicaner AB, according to Swedish Press reports. The device is based on the principle that platinum reacts as a catalyst when it comes into contact with explosive gases. The flame-protected and capped "heart" of the new instrument is a platinum filament serving as a conductor for an electric current. When it is exposed to explosive gases, such as hydrocarbons, the electric resistance will change and these data are transmitted to an electronic centre from where the impulses can be made to actuate acoustic or visual alarm apparatus. The electronic centre can be located up to 1,000 metres from the detector. The new device, which is said to have no counterpart so far, is intended for industrial plants, stores, etc.

Instrument for Classification of Mica

An instrument for testing and evaluating the electrical qualities of block mica has been developed at the Central Glass and Ceramic Research Institute, Calcutta. Mica, as is common knowledge, finds many and varied uses in the electrical industry. It is, however, not every kind of mica that can be used in the manufacture of electrical goods. The new instrument has been specially designed for quick and faultless classification of mica on the basis of electrical properties. This helps in the utilisation of not only good mica but also of the spotted or stained type which would, purely on the basis of conventional and visual methods of examination, get rejected. The instrument thus avoids waste of both time and material. There will be less rejection of mica and, at the same time, an assurance that no bad mica finds its way into the electrical industry. The instrument has many other advantages. It is portable, self-contained, battery-operated, direct-reading and uniform in its operation. It is also said to be extremely simple to operate and suitable for rapid grading of mica of every size and thickness.

Plastic Mirrors for Optical Use

A new series of plastic light-weight mirrors which can be reproduced, it is claimed, for quantity production has been developed. The mirrors can be produced, the scientists responsible for developing claim, with sufficient accuracy to permit 90 per cent. of the incident collimated light to be concentrated within a disc 1/10 millimetre in diameter. Tests which have been carried out with the mirrors have shown, it is said, that the new plastic mirrors can withstand repeated rapid temperature changes ranging from minus 55 degrees Centigrade up to plus 125 degrees Centigrade, without undergoing measurable physical changes. At the same time in other tests they have withstood impacts as severe as 22,000 times the force of gravity. The reason for their ability to withstand rapid and repeated temperature changes is the relatively high rate of heat diffusion through the epoxy resin compounds used in their construction. A silicon monoxide coated aluminium film applied under high vacuum conditions is used to provide the reflective surface. An advantage of the plastic mirrors, which can be made at present with 6-inch and 3½-inch focal lengths, is the fact that they can be built so that electrical components and other fixtures can be threaded through, or mounted within the back of the mirror. They could also be made, it is claimed, in novel hyperbolic and ellipsoid shapes which are difficult to reproduce in glass.

Excavation and Blasting Method

A new and revolutionary excavation and blasting method—the outcome of 1½ years of experimental work and the collaboration of four Swedish industries—is at present being used for the excavation of the new outlet from the harbour of Norrköping, on the Central Swedish East Coast.

SEN-RALEIGH INDUSTRIES OF INDIA LTD. MR. S. K. SEN ON PROGRESS TOWARDS SELF-SUFFICIENCY

THE Ninth Annual General Meeting of Sen-Raleigh Industries of India Ltd. was held at Calcutta on 29th June 1959. The following are extracts from the speech of Mr. S. K. Sen, Chairman of the Company, delivered on the occasion.

"Our Directors have in their report explained to you the reasons for the decline in profits of the Company, following shortage of raw materials which did not allow achievement of those targets of production which were necessary to offset the general rise in costs. They have, however, recommended that dividends for the preference and ordinary shares be paid at the same rates as in the past year.

"The year under review opened for us on a note of pessimism with imports of even raw materials being to a degree dependent on the availability of foreign aid. The frequency of layoffs—although mostly sectional—did not make for smooth and regular production and the result was a turnover not much beyond the level of the previous year, achieved, however, at a much higher cost. Our factories were particularly affected, inasmuch as the major part of our plant for expansion had arrived but could not be fed, resulting in so much idle capacity and unremunerative blocked capital.

Import Licensing Policy

"Towards the middle of 1958, an import licensing policy for the bicycle industry, based on the 1957 level of production, was ultimately evolved, but this did not benefit our expansion programme immediately to any great extent, as the foreign exchange released under this policy only allowed the 1957 level of production to be repeated. It was possible to increase production of bicycles beyond the 1957 level, if raw material supplies could be augmented from indigenous sources.

"In the present circumstances, what the industry needs badly is an import licensing system that allows licences for all categories of materials to be issued simultaneously, instead of the issue being spread over 4-5 months in each period when production is always dependent on the last licence issued. Much of the material supply problems encountered by industries today would automatically disappear, if such simultaneous issue of licences could be achieved.

"I am pleased to find from the recent address of the Union Minister for Industries to the Cycle Manufacturers' Association of India at Madras that he is fully alive to the situation and his Ministry have, in the meantime, announced certain changes in the April-September 1959 licensing policies, the effects of which, if fully realised, would help to stabilise production programmes in a large number of growing industries.

Components Manufacture

"In my previous addresses to you, I had stressed the necessity of planning our expansion so that self-sufficiency in the manufacture of components be given priority over the quantum of overall production. The benefits of this policy are becoming evident now when we are in a position to increase our bicycle production well above the 1957 level, because we depend on component imports only to the ex-

Featuring several interesting innovations, the method enables blasting into the bedrock to be performed without previous excavation of covering layers of moraine, clay and earth. What is claimed to be the world's largest delayed-interval blast—when considering the number of holes drilled—was recently detonated at this site by means of the new method. The system, which has been named the "Lindö method" after the name of the canal that is at present being excavated, is based on the Atlas Copco compressed-air method with series detonations, but differs from the normal system in that the rock-steel proper is surrounded by a steel tube equipped with a circular crown bit, used to prevent loose matter from caving in when the bit is being removed. The steel, which protrudes about an inch from the tube, works in conjunction with the latter, and when both have got a firm grip (about 4 in.) on the rock bottom, the tube is disconnected from the drilling movement, while the inner bit continues boring into the rock to the desired depth. When the bit is withdrawn the tube constitutes the connection between the surface and the rock.

tent of Rs. 2 per bicycle, and we are also in a position to use more indigenous materials.

"Despite the difficulties encountered, the foreign exchange stringency has achieved one significant result. It concentrated the attention of all manufacturers on the possibility of utilising the country's resources to the maximum, so that more and more production could be maintained on indigenous supplies alone. This drive towards self-sufficiency accomplished in the short space of one year what would normally perhaps have taken four or five years to realise.

Marked Expansion in Output

"This is evident from the fact that, despite import ceilings being held at the 1957 level of production, the bicycle industry recorded a considerable expansion in production in 1958 and this trend continues into the present year. That the added production was achieved in a period of diminishing import licences for components would indicate that the production of components within the country is now nearly keeping pace with bicycle production. It is important to effect a still larger production of components, particularly of friction parts, as, apart from any question of equipping new bicycles for the road, the time is fast approaching when the indigenous production of friction parts would play a vital part in supplying essential replacement spares.

"There is an increasing demand from assemblers and manufacturers for friction parts made by your Company. The trade has just as big a demand for these parts for supply to consumers as essential spares. In the overall interests of the country—supplies of the friction parts being limited—our products were made available to manufacturers first and only the balance was supplied to the trade. The need for placing more friction spares on the market is fully realised and, through our expansion in the components section, which is now gradually taking place, we hope to be able to meet some part of the market demand later.

"In my last report, I had mentioned that rights of export for bicycles, components and accessories for a number of countries in Eastern Europe and Asia had been granted to the Company by its foreign associates. In addition to the countries mentioned previously, provisional sanction to export bicycles to two further areas, namely, Burma and Egypt, were received during 1958. Our efforts at developing an export market have not as yet met with any major success. Eastern European countries offered prices at which transactions were not possible and, in the case of Burma, notwithstanding the existence of a trade agreement for some time now between that country and India covering imports of cycles from India, no import licences for cycles have been issued as yet by Burma.

Productivity

"During the last year, there has been a growing realisation in this country of the need for the study of productivity. The bicycle industry was well to the fore in this sphere. Two members of the First Productivity Team that was sent out by the Government for studying this subject in the United States and Europe were from the bicycle industry and Mr. Sanjoy Sen, a Director of your Company, was one of them. I am certain the Company will benefit greatly from the experience gained by him during the course of this tour.

"I welcome to the Board Mr. S. Venkataraman, nominee of the Industrial Finance Corporation, who takes the place of Mr. C. D. Khanna. I take this opportunity to thank Mr. Khanna for the valuable services rendered by him to the Company during his term of office.

"Before I close, it is my pleasant duty to thank my colleagues, the staff and the workers of the Company, our foreign associates and our dealers for another year of unfailing support to the Company."

Note: This does not purport to be a report of the proceedings of the annual general meeting.

MANAGEMENT OF FOREIGN CONCERNS IN UNDERDEVELOPED COUNTRIES

SOME PROBLEMS OF STAFF POLICY

THE strengthening of nationalist sentiments and the spread of independence throughout Asia and Africa in the post-war period have been followed by a widespread and insistent demand for greater association of local nationals in the management of foreign-owned and controlled businesses and commercial enterprises operating in these countries. It is true that, even before this demand emerged, a few progressive international concerns had adopted programmes designed to add local talent to their managerial and technical staff. But most typical business concerns established in Asia and Africa had two classes of staff: clerical, almost exclusively local, and managerial and senior technical, wholly European.

The process of recruiting staff of executive calibre locally received considerable momentum after the attainment of independence by these countries. For instance, in India, an analysis of the returns supplied by foreign concerns regarding their employment position as on 1st January 1958, reveals that the proportion of foreigners in the top supervisory and executive posts (drawing a salary of Rs. 1,000 and above per month) has declined progressively in the post-independence period, while that of Indians increased in all categories of companies. Thus, while the proportion of non-Indians declined from 92 per cent. to 45.7 per cent. during the period 1947-58, that of Indians increased from 7.9 per cent. to 54.3 per cent. in the same period.

However, contrary to popular belief, the process of "isolation" as it is called (that is, Indianisation, Africanisation, etc.) is not as simple as the mere substitution of foreigners with nationals. It has deeper implications and poses many problems. An interesting survey of some of the main problems encountered in the process of bringing nationals into closer participation with British and other Western firms established in the underdeveloped countries of Asia and Africa is contained in a broadsheet *Management and Underdeveloped Territories*, published recently by P.E.P. (Political and Economic Planning), an independent, non-party research body in Britain.

Looking Ahead

The training and placement of nationals in executive posts, the survey recognises, must present widely different problems to different companies, depending partly on the nature of their business and partly on the social and educational level of the country in which they exist. However, it maintains that sufficient experience has been gained, especially by the companies with international interests, to allow some appraisal of what is being done and to look at some possible future developments.

Since the recruitment of executives is, in effect, a long-term investment, the survey points out, building up locally-recruited staff means, estimating the volume of business ten or fifteen years ahead. The next difficulty is finding the recruits. In most countries, to begin with at least, nationals, who are capable of filling managerial posts and are willing to do so, were very scarce. In most countries of Africa and Asia, the limited class of people who could afford high education were traditionally unattracted by business careers and there was no counterpart to the Western educated middle class to draw upon. Training schemes had, therefore, to be devised. This meant both finding young people capable and willing to attend courses of higher education and persuading young men already undergoing education in local or European universities that opportunities genuinely existed. Competition for the locally available talent was keen. In some countries, the supply of young men of good calibre was (and still is) limited by the "bonding" of scholarship-holders to Government service for a period. There were other competing attractions too, for these young men. In the experience of one international concern, wastage rate was as high as 40 per cent. in the early stages of its "isolation" policies.

The shortage of educational and training facilities in underdeveloped countries, especially in Africa, has led many firms to set up their own training centres. By a combination of drawing upon the Universities in Europe and

in the countries concerned, with a tendency to draw more and more on the latter source, by establishing schemes for management trainees and upgrading existing staff, considerable changes have been made in the composition of management in British firms in underdeveloped countries. Even after making allowances for the fact that management means different things to different firms and for the impossibility of making a comparison between rates of progress among firms and countries, there can be no doubt, according to the survey, that rapid advances are being made in bringing nationals into the management fields.

The recruitment of young nationals to the management scale inevitably created friction with older men who had worked their way up, often to less senior posts, and problems of job and age structure of the staff and promotion prospects began to present themselves. Further, the accomplishment of partial "isolation" and the prospect of a faster rate in the future bring their own crop of difficulties. One, already familiar to many companies operating overseas, is the rejection, by newly independent countries, of racial or religious minorities. Sometimes, as in Malaya, Pakistan, Ceylon, East Africa and Egypt, minorities form the only commercially minded sections of society, but reliance on them as future managers is hazardous, because they might suddenly become unacceptable to the majority and the firm may be accused of being unwilling to see "true" nationals rising to senior posts.

Implications

Another is the implication of "isolation." As the staff and labour composition of the firm become more heavily weighted with nationals, there must inevitably be some interaction between the Western and indigenous standards of values and outlook on life. If the future executives of the business, and through them the business itself, are to be in sympathy with the community and acceptable to it, how far will Western views about the importance of and purpose of industry and commerce and the standards applicable to them have to be modified? It cannot be assumed that Western standards will be accepted wholesale. The existence of this problem, present and potential, it is pointed out, is recognised by the leading parent companies in Britain. They point out, as a relatively simple example, that the Western tendency in training the young expatriate executive has been to give him all the responsibility he could carry. But there are cultures where effacement is more esteemed than "push," where deference to elders still prevails, where loyalties are to individuals not institutions and where integrity does not include business integrity.

In formulating staff policies, many factors have to be taken into consideration. As one international company observes: "The pattern and tempo of career development and the expectations from it must be adapted to the local environment. In a given country, as the national advances to take his place in the administration of the company so must the local management be prepared to adapt its structure and methods to make the best use of his characteristic qualities, personal and professional."

The process of adapting an organisation to its environment requires looking afresh at the local ability available. Another aspect of adaptation is the need to ensure that expatriate staff, who are selecting, training and working with national colleagues, develop their own powers of understanding. The problem is also one of ordinary social contacts outside business life.

Nationalisation

By the very process of bringing business firms into closer association with the communities in which they are located, each becomes more open to influence by the other. This brings forward the question of nationalisation. Surely, the survey points out, "isolation" facilitates, almost invites, nationalisation. Answering the poser "Can a business be staffed largely or exclusively by nationals carefully trained to a high level of competence without incurring the

risk of take-over in the future?" the survey observes:

"The answer is clearly that, in the first place a refusal to adapt staffing policies at all would invite immediate trouble; 'isolation' at least buys time and the possibility of a workable compromise being evolved. Given the emergence of powerful nationalist sentiment along with independent national status, it is, indeed, the only course open, if the business is to be kept flourishing, even alive. In practice, the implementation of local-recruiting staffing policy has coincided with very considerable expansion of business in most of the territories concerned; and some firms consider that if their 'isolation' policies develop satisfactorily, the possibility of nationalisation will diminish rather than increase.

"This is not to deny the possibility of a more or less gradual assumption of ownership followed by control. In some countries, local shareholders of British companies is already developing and the trend may continue in the direction of greater control. While no one would expect parent companies to view a diminution or loss of control with enthusiasm, the possibility of take-over certainly would not be neutral so damaging as a hasty expropriation, and, if the company remained a going concern, Britain would lose a source of income but the advantages of international trade would remain."

Three Stages

Tracing the stages through which the staffing policies of parent firms have passed and how they are currently shaping, the survey discusses three phases of development of staff policy. In the first phase, broadly speaking, up to the Second World War, overseas concerns were staffed largely by expatriates who general made careers abroad. In the second stage, namely, post-World War II period, the demand that local nationals should share in the recruitment of local talents in competition with the civil service and the professions. Where such talent did not exist, it had to be created either by internal training or by the formation or support of educational opportunities outside the firm.

The third stage is now developing. The emergence of the locally-recruited executive has coincided with, and is partly responsible for, the rapid disappearance of the expatriate career as distinct from the job abroad. Among the international concerns at least, it is said, a new staff policy is developing along the lines of equipping management with international rather than national experience. The aim of the policy is to get a greater cross-fertilisation of ideas through an extensive system of overseas posting during the development of executive careers, in short, to eliminate the concept of an expatriate career by offering jobs abroad as an integral part of management training and promotion.

This new type of policy, according to the authors of the pamphlet, should not only improve the quality of management but also make for greater adaptability. If, for instance, in response to a sudden change in political circumstances in any country, it became necessary to speed up the rate of "isolation," it could be done quickly. In general, any rapid change in the composition of management that might become necessary to reconcile the interests of the firm with those of local governments could be more easily effected if there existed a core of internationally-trained executives. The survey maintains, other threats to the continued harmonious existence of Western firms in underdeveloped countries. But the development of this third phase of staffing policy, according to it, would at least ensure that, on the Western side, the weakness of rigidity is avoided.

Conditions in India

It is no doubt true, as the P.E.P. itself recognises, that, in a general survey covering the entire region of underdeveloped countries which present widely differing patterns of economic and social conditions, it is not possible to avoid generalisations and oversimplifications. Many of the findings and conclusions of the survey, therefore, have varying degrees of validity to the various underdeveloped countries. So far as India is concerned, they do appear to have more than 10 per cent. validity. The majority of problems of association of local nationals in the management of foreign concerns do not exist in India. This is borne out by the rapidity with which the percentage of Indians in top supervisory and executive positions in foreign enterprises operating in India could be raised. Much of the increase in the percentage from 7.9 in 1947 to 54.3 in 1958 is

(Continued on page 33)

THE GLOBAL AIRLINE

This is your Heritage

As you approach the ancient town of Gwalior, you cannot fail to see the lofty towers of the world-famous Gwalior Fort. This magnificent edifice takes you back through the turbulent history of India. Within the fort are many examples of architectural beauty such as the 'Painted Palace' built by Man Singh in 1490. Throughout India, there are many wonderful monuments that speak of the past, set in a countryside that is full of exciting interest to the tourist. And wherever you motor in this vast land, your trip will be more pleasant, and free from 'car troubles', when you drive on Caltex petroleum products.

PROTECTION TO MACHINE SCREW INDUSTRY FOURTH ENQUIRY FOR ITS CONTINUANCE

THE Tariff Commission has taken up for consideration the question of continuing protection to the machine screw industry. It has already completed its public enquiry, which was begun at its office on 16th June 1959 by Mr. C. Ramasubban, its Chairman. The industry has been enjoying tariff protection since 1951. The current period of protection, granted in pursuance of the third tariff enquiry in 1957, is due to expire by the end of this year. The industry has now asked for continuance of tariff protection for a further period of three to eight years. Mr. Ramasubban, while opening the enquiry, observed that the industry had achieved considerable progress since the last enquiry by stepping up its capacity and production. Some of the units had either already diversified their production or submitted proposals to the Government to undertake manufacture of certain types of precision screws and other specialised screws. Mr. Ramasubban was of the view that, while the industry's capacity was adequate to meet the domestic demand for ordinary machine screws, there was considerable scope for developing the manufacture of precision screws and other types of specialised screws.

It may be recalled that, following the recommendation of the then Indian Tariff Board, protection was granted to the industry in 1951 by levying a protective duty of 3½ per cent. ad valorem on imports of iron or steel machine screws. After the second tariff enquiry in 1954, a higher rate of duty was introduced since 1955 at 50 per cent. ad valorem or 9 annas per gross, whichever was higher. Subsequently, under the Finance Act (No. 2) of 1957, the rate of specific duty was rounded off to 60 nP per gross. The third enquiry was followed by the continuance of protection for another two years, that is, upto 31st December 1959, at the same rates.

The scope of the present enquiry covers machine screws made from iron and steel, including the following types: the shank of which has been threaded to within two pitches from the head, namely, (i) mushroom head roofing bolts, all types; (ii) hexagonal head bolts, all types, and (iii) mudguard cycle bolts (with threading other than British Standard Cycle threading).

Production and Capacity

From the facts mentioned by Mr. Ramasubban it appears that the machine screw industry has made substantial progress during the past few years. The present annual capacity of the industry for the manufacture of machine screws, bolts classified as machine screws, and socket head screws aggregates 3.6 million gross on single shift basis, as against about 1.4 million gross in 1957. The combined output of these items have also gone up, from 1.8 million gross in 1957 to 2.7 million gross in 1958. These figures are exclusive of the production of small-scale units engaged in the manufacture of the protected categories of machine screws as also those industrial undertakings and defence departments which manufacture them for self-consumption.

In 1957, there were nine units manufacturing machine screws. The Government has sanctioned the establishment of four more units. Of these, only two units have started production. Rambal (Private) Ltd., which produces mostly brass screws, commenced manufacture in January 1958. The Southern Industrial Corporation, Madras, went into production on a commercial scale in October 1958. Besides, Messrs. T. E. Thompson & Co., Ltd., has been licensed to undertake the manufacture, among others, of studs and set screws.

The domestic demand for machine screws has also been going up. The Commission estimated the annual domestic demand at two million gross in 1957. At the present enquiry, the Commission received various estimates of demand ranging from 2.50 million gross to 4 million gross for 1959 and from 3.25 million gross to 6 million gross for 1962. The Development Wing of the Government of India estimates it at about 3 million gross for 1959, gradually rising by half a million gross per annum during the subsequent three years. This estimate is based on the assumption that the present rate of progress will be maintained in such industries, as bicycles, electric motors and appliances, metal fabricating industries and typewriters. A clean

picture of the trend in demand can be had from the data on apparent consumption of machine screws. The apparent consumption of the screws in 1958 was at 2,281,665 gross (made up of indigenous screws 2,063,665 gross and imports of 218,000 gross), as against 2,037,361 gross in 1957 (1,489,161 gross indigenous and 548,200 gross imported). Mr. Ramasubban pointed out that the coverage of these figures is limited. So, the actual consumption is bound to be more than that indicated by these figures.

Raw Materials

Although the domestic industry has been striving hard to meet the growing demand, its progress is circumscribed by the inadequate and irregular supply of raw materials. The principal raw material for the manufacture of machine screws is mild steel annealed wire from 14 SWG to 2 SWG. The Indian Steel and Wire Products Ltd., and the National Rolling and Steel Ropes Ltd., provide the industry with its requirements of raw material in the form of wire rods or wire. These are supplemented by imports in some cases. With the commissioning of the new blooming and steel bar and billet mills at the Tata Iron and Steel Company, Ltd., the supply position of the billets for conversion into rods and wires has improved considerably from December 1958. We are told that more than adequate supplies of billets have been made available to Indian Steel and Wire Products Ltd., during the first quarter of 1959.

The quality of the indigenous products is said to be generally satisfactory. Commenting on this aspect, Mr. Ramasubban disclosed that while the general trend of evidence showed that the quality was satisfactory, a few important consumers had stated that the screws produced by certain units were inferior to the imported ones. The main defects pointed out by them were that the heads of screws shear off when fully screwed home and that dimensional tolerances with regard to both threads and diameters were not adhered to. These are serious defects and should be rectified by the manufacturers without any further delay. In addition to tariff protection, the indigenous manufacturers are enjoying the shelter provided by severe import restrictions necessitated by foreign exchange shortage. They have, therefore, a special obligation to the consumers in this country in regard to the quality of their products. Owing to drastic restrictions, imports of machine screws in 1957 were no more than 274.10 tons, valued at Rs. 10.66 lakhs; in 1958, they fell further to 109 tons, valued at Rs. 7.72 lakhs. The principal sources of imports were W. Germany and the U.K.

OUTLOOK FOR INDIAN LAC

The Indian Lac Exporters Association, the first annual general meeting of which was held at Calcutta last week, has completed one year of useful service to the lac industry and trade. Unlike other associations of business, this Association was brought into existence specifically for arresting the rot that had set in in the lac export trade and for ensuring a fair return to the producer of lac. It is a sort of co-operative body, with a monopoly for the export of lac. It enjoys the support and help of Government, which has agreed to channel the export quota through this body. It has also, as its objective, stabilisation of lac prices through such constructive measures as promotion of research for expanding the uses of lac, staggering the flow of lac into the export market by organising the trade and industry and establishing a code of conduct for the trade and seeing that the code is followed. Great credit goes to Mr. K. B. Lall, I.C.S., for establishing the Association and vesting it with this responsibility.

Before the Association came into being, there were hectic fluctuations in the price of this commodity. The price of TN pure shellac, for instance, which fetched about Rs. 168 per maund in November 1955, fell sharply to Rs. 57 by April 1958. Mr. C. R. B. Menon, an official of the Central Government and the President of the Association, said at its annual general meeting that, had the Association not been formed, prices would have fallen further. Analysing the cause of the setback, he observed that, with the imposition of the ban on forward trading in lac and the exit of two large firms from the shellac trade, the finance available for the trade became inadequate, because the rest of the trade consisted of small traders with limited resources. The holding power and staying power of the operators who continued in the trade were small, and the phenomenon of exporters under-quoting each other in foreign markets with a view to getting rid of their supplies as quickly as possible developed. Naturally, foreign importers took advantage of this weakness by quoting lower and

lower prices. On top of this there was the growing competition from Thailand, India's serious rival. Besides, the Western countries, which are the principal consumers of Indian lac, were busy introducing a wide range of synthetic substitutes. Something had to be done to save the Indian lac and its producers. The Government of India fixed minimum prices with effect from 1st June 1958 and asked the Association to enforce them strictly. It also applied export control and issued licences only on the production of "price scrutiny slips" supplied by the Association.

The minimum price scheme, it is claimed, has served to impart some stability to the prices of lac. There have been a few cases of evasion of minimum prices by granting higher rebates to foreign importers, a practice which Mr. Menon rightly condemned. The price of TN pure shellac improved from Rs. 57 per maund in April 1958 to Rs. 65.50 by the middle of June 1958 and continued to be more or less at this level at the turn of the current year. In the middle of last month, however, it fell again slightly to about Rs. 62 to 64.

Mr. H. P. Lohia, Vice-President of the Association, in his speech at the annual meeting, conceded that, although the price situation in the first quarter of 1959 was satisfactory, with the start of the new crop season, the price-gap was again tending to widen. He thought that the situation had not yet shown any sustained improvement. He also felt that, while it was some comfort to the growers' lot would have been distinctly worse without the stabilisation efforts, the benefits accruing from price stabilisation had been disproportionately small to the grower and the small manufacturer.

Mr. Lohia attributed the slump in lac prices to the structural weakness in the organisation of its trade. He pointed out that, in the crop year 1958-59, India exported all the lac that was produced during the year, along with a large part of the previous season's carry-forward. This shows that there was hardly any problem of over-supply last year and that the speculators were exploiting the situation to their advantage. The main weakness of the lac trade is the absence of sufficient number of middlemen and manufacturers with adequate resources to hold the stocks and release them in stages according to the demand. Although there are some signs of money coming into this trade, they are not sufficient to warrant the conclusion that all is well. Mr. Lohia, therefore, pleaded for the creation of an institutional stock-holding authority.

Apart from improving the organisation and technique of marketing, attention should be paid to find out new applications for lac, particularly in industry. In the case of so versatile a resin as lac, the problem cannot be insoluble. Referring to this aspect, Mr. Lohia pointed out: "It is no longer enough to advocate remedies within the confines of existing techniques; the need of the hour, therefore, is to achieve an immediate technological break-through in lac. Lac must be metamorphosed into a factory product; it should be capable of natural and synthetic modifications, with or without other graded and standardised and tailored to the exact need of the consumer. It should be offered at a stable price over long periods and must be free from disturbing fluctuations in supply and price." He felt confident that the position of lac would definitely improve, if scientific techniques of production, manufacture and distribution were adopted and applied.

With this object in view, the Association proposes to organise some fundamental and applied research in reputed foreign universities. It also intends to launch an export promotion drive, particularly in the U.S.A., besides conducting survey collected Rs. 8 lakhs through cesses and levies. Some new uses for lac have already been found. Among these may be mentioned: a composition for coating jute cloth so as to make it leak-proof, corrosion-proof, and waterproof; a shellac-based resin capable of giving water-resistant varnishes and paints; and a large range of shellac-based starts, are likely to absorb considerable quantities of lac.

While there is scope for the development of industrial applications of lac, the long-term outlook for the commodity is by no means promising, as will be evident from the following extract from the speech of Mr. Lohia:

"The challenge of the times is so severe that our response may be too feeble and inadequate. What chance does poor lac stand in face of the constantly adaptable and improving synthetic products being turned out by billion-dollar giant corporations? Lac has not shared at all in the rapid economic expansion that has been taking place in the West. Even now, while industrial production is at an all-time high and all branches of the economy are stagnant and is probably shrinking for lac is at best States. It is my belief that, if lac loses the mass markets of the West, it shall have a very bleak future as an export commodity. Demand from the West is not only substantial in nature, but since for it, it is a kind of effective demand. Take the Latin-American countries as a contrast. Judging from demand alone, these countries are capable of absorbing at least three to four times the quantity that they import at present, but this potential due to payment difficulties. Therefore, it is unrealistic to postulate a vastly increased effective world. Some of these countries, especially in the Far East, have large territories, tropical climate, like Thailand, may very soon be growing lac in their own territories. The stress in the cen-

BALMER LAWRIE DOES EXCEEDINGLY WELL

DIVIDEND RAISED SIZABLY—OUTLOOK GOOD

A STRAIGHT increase of 7½ per cent. in the dividend, that is from 12½ per cent. for 1957 to 20 per cent. per annum for 1958, has been recommended by the Directors of Balmer Lawrie & Co., Ltd. (Chairman and Managing Director: Mr. A. T. Montgomery, Calcutta). This has been done by doubling the final distribution from 7½ per cent. to 15 per cent., while the interim payment made in December last, at 5 per cent., was the same as for the previous year. This is the highest rate of dividend declared by the Company so far since the reconstruction of the capital structure in 1954, when the Company's deferred shares were consolidated into ordinary shares and an one-for-one scrip bonus issue was made. It must be noted here that the shareholders had actually received, out of the profit for 1957, a distribution of 15 per cent., but this includes an additional payment of 2½ per cent. for 1955 under Section 23A(3) of the Indian Income-tax Act 1922.

The increase in final distribution for the year under review is in consonance with the excellent performance of the Company during the year, thanks to the considerable improvement in the income from trade investments and from the managing agency. This, in turn, is attributed to the continued progress and development in associated manufacturing companies. Contrary to expectations, trading activity of the Company was fully maintained.

The impressive results are reflected in the sharp rise of over 50 per cent. in gross profit from Rs. 32.28 lakhs to Rs. 49.08 lakhs, thus more than making good the small setback in the previous year when the profit had declined by Rs. 6.35 lakhs. With the improvement during the year under review, the gross profit has set a fresh record for recent years. The net profit, at Rs. 22.14 lakhs, shows an increase of Rs. 6.42 lakhs over that for 1957, after raising the provision for taxation from Rs. 12.37 lakhs to Rs. 22.10 lakhs and that for depreciation from Rs. 4.19 lakhs to Rs. 4.83 lakhs. As in the previous year, no provision has been made for wealth tax liability, as payment of wealth tax is not considered to be a charge against the current profits of the Company and the Directors propose to charge any payment made in respect of such assessment against the reserves. During the year under review, a sum of Rs. 35,694 has been paid out of the general reserve towards wealth tax. After creating a development rebate reserve with an initial allocation of Rs. 61,382, the Directors have increased the transfer to the general reserve from Rs. 2 lakhs to Rs. 5.50 lakhs and have cut down the addition to the pension reserve from Rs. 1.74 lakh to nil.

The progress of the Company in recent years is fully indicated by the following comparative table:

(In lakhs of rupees)	For the year ended 31st December			
	1958	1957	1956	1955
Sales and services	12,54.50	12,57.79	15,80.82	11,64.70
Other income	84.72	25.89	15.74	23.38
Trading stock and work-in-progress	61.38	75.89	1,08.84	1,14.45
Purchases	10,35.79	10,30.82	13,19.52	8,74.88
Raw materials consumed	18.98	19.80	10.98	5.65
Other expenses	1,77.58	1,74.04	1,77.34	1,50.09
Gross profit	49.08	32.28	38.63	35.38
Provision for—				
Depreciation	4.83	4.19	3.48	3.21
Taxation	22.10	12.37	17.38	12.55
Net profit	22.14	15.72	17.77	19.78
Excess provision written back	—	—	6.00	—
To reserves	6.11	3.74	17.70	10.24
Dividend	16.00	12.00	12.00	10.00
	(20%)	(15%)	(15%)	(12%)
Carry forward	5.03	5.01	5.08	5.08

* Includes an additional dividend of 2½ per cent. in respect of 1955.

The Company's financial position is quite sound. The paid-up capital, at Rs. 80.01 lakhs (unchanged since 1954), is supplemented by reserves and surplus aggregating Rs. 83.60 lakhs, of which general reserve alone accounts for Rs. 68.64 lakhs. The secured loans from banks stand increased from Rs. 0.57 lakh to Rs. 8.47 lakhs, while unsecured loans have been reduced from Rs. 65.92 lakhs to Rs. 29.97 lakhs. The other liabilities and provisions amount to Rs. 155.84 lakhs. The gross block of the value of Rs. 74.47 lakhs has been written down by Rs. 38.77 lakhs to a book value of Rs. 35.70 lakhs. The trade investments (at cost) have been enlarged from Rs. 97.84 lakhs to Rs. 113.77 lakhs.

but this increase is more than offset by the fall in other assets from Rs. 237.30 lakhs to Rs. 208.42 lakhs.

The main point of interest in the Company's assets is the large trade investments. These investments used to be revalued in the past at the market value prevailing on the date of the balance-sheet of each year. As a result of this practice, the Company's investment reserve had to be adjusted each year. During the last two years, however, the Directors have given up this practice and are valuing them at cost. Of the total investments (at cost) as on 31st December 1958, those quoted on various stock exchanges amount to Rs. 109.20 lakhs (Rs. 95.59 lakhs at the close of 1957) and unquoted investments for Rs. 4.58 lakhs. The market value of the quoted investments as at the end of the year is substantially higher at Rs. 156.04 lakhs, as against Rs. 112.50 lakhs a year ago. A type-wise breakdown of investments shows that Government securities account for Rs. 0.83 lakhs, shares of managed companies for Rs. 107.64 lakhs and others for Rs. 5.30 lakhs. A further break-up of the investments shows the following changes over the year:

(In lakhs of rupees)		As on 31st December	
		1958	1957
Government securities	..	0.83	0.83
Commercial investments	..	..	..
Ordinary shares (fully paid)	..	50.75	70.82
Preference shares (fully paid)	..	0.10	0.10
Debentures (fully paid)	..	0.24	0.25
Debentures (partly paid)	..	0.09	—
Fully paid shares in subsidiaries	..	61.77	25.84
Total	..	113.77	97.84

The Company's subsidiaries and the number of shares held in each are as follows:

Company	No. of shares
Bengal Flour Mills Co., Ltd.	60,067
Bridge and Roof Co. (India) Ltd.	112,192
British India Electric Construction Co., Ltd.	35,942
Indian Galvanising Co. (1926) Ltd.	194,522
Balmer Lawrie & Co. (Pakistan) Ltd.	20,000

Commenting on the future prospects for the Company, the Directors observe:

"It seems reasonable to expect satisfactory trading results again in the current year, although eventually restrictions on imports must have some adverse effect. On the other hand, this may well be offset by the further development of manufacturing interests."

The Company's shares (Rs. 100 paid-up) are popular with investors and are being quoted at Rs. 202 cum-div. (final Rs. 15), as against Rs. 142 at the beginning of the year and Rs. 165 a year ago. On an ex-div. basis and at the current rate of dividend, the shares offer a very attractive yield of 10.7 per cent. per annum.

F.A.C.T. RETURNS TO DIVIDEND LIST

After a lapse of eight years the ordinary shares of the Fertilisers and Chemicals Travancore Ltd. (Managing Agents: Messrs. Seshasayee Bros. (Travancore) Private Ltd., Alwaye) have returned to the dividend list. The Directors of the Company have recommended a modest distribution of 4 per cent. for the year ended 31st December 1958; the previous year for which the shareholders had received a return on their investment was 1950 when a dividend of 2½ per cent. was paid.

The payment of a dividend for 1958 has been made possible by the all-round progress made by the Company during the year. The production of various products, such as ammonia, sulphuric acid, ammonium sulphate, superphosphate and ammonium chloride, was at a higher level and there was a sizable improvement in demand for these products, as reflected in the rise in sales by Rs. 73 lakhs to a record level of Rs. 2.47 crores. The gross profit has more than doubled itself from Rs. 31.62 lakhs earned in 1957 to Rs. 64.31 lakhs.

It will be recalled that, after 1950, for which year the Company had paid a maiden dividend of 2½ per cent., the Company had to face a lean period and the gross profit had dwindled from Rs. 37.42 lakhs (in 1950) to Rs. 8.03 lakhs in 1953. After providing for heavy depreciation, there were only net losses and, by the end of 1953, the accumulated losses amounted to no less than Rs. 44.97 lakhs. Thereafter, the fortunes of the Company turned for the better and, with the substantial profits earned in the four years 1954 to 1957, the Company was able to reduce its accumulated loss to Rs. 7.08 lakhs at the end of 1957. This also has since been wiped out.

With the rise in gross profit for 1958, the Managing Agents' remuneration also has gone up from Rs. 80,851 to Rs. 3.55 lakhs. The provision for depreciation has been raised from Rs. 19.51 lakhs to Rs. 21.98 lakhs. A sum of Rs. 1.29 lakh has been provided for wealth tax in respect of 1957, as against Rs. 1.47 lakh for 1956. These essential allocations leave a net profit of Rs. 37.49 lakhs, as compared with Rs. 9.83 lakhs for the

previous year. The Directors have created a development rebate reserve with an initial allocation of Rs. 11.26 lakhs—this is the only reserve which the Company has now. Though the rate of dividend is only small at 4 per cent., it absorbs as much as Rs. 13.84 lakhs in view of the large size of the capital. After wiping out the loss of Rs. 7.08 lakh brought in and writing off Rs. 92,775 on account of commission on shares, a surplus of Rs. 4.38 lakh is being carried forward.

The Company has on hand an expansion scheme for doubling the capacity of the ammonium plant and for utilising the additional ammonia to produce ammonium phosphate and for increasing the present production of ammonium sulphate. The air liquefaction plant and the new sulphuric acid plant which form part of the first stage of the expansion scheme have been commissioned. The new dryer and the ancillary equipments in the sulphate plant were brought into use during the year. The work on the rest of the items included in the first stage of expansion is said to be progressing according to schedule and the plants are expected to be ready for operation by the end of 1959. The total expenditure incurred on the Rs. 133.37 lakhs, which is more than double that spent up to the end of 1957, thus bringing the total expenditure so far to Rs. 198.80 lakhs.

A rough idea of the financial position of the Company can be had from the following synopsis of its latest balance-sheet as at 31st December 1958:

(In lakhs of rupees)			
LIABILITIES		ASSETS	
Paid-up capital	346.06	Gross block	493.37
Reserves and surplus	15.64	Less—Depreciation	258.34
Borrowings from banks and I.F.C.	98.31	Net block	235.03
Liabilities and provisions	132.34	Development expenditure	137.48
		Stock-in-trade and stores and spares	25.77

		Cash balances	78.22
Total	592.35	Total	592.35

The distribution of the Company's shares shows that the bulk of it, as much as 62.86 per cent. of the total, is being held by the Kerala Government. The other Governments hold 11.89 per cent. and private shareholders, including companies and banks, account for the balance of 25.25 per cent. of the shares.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 9.10 cum-div. On an ex-div. basis, they provide a yield of 4.6 per cent. per annum.

AMAR DYE-CHEM WIPES OUT ARREARS OF PREFERENCE DIVIDEND

The year ended 31st December 1958 has turned out to be the most prosperous one so far for the Agents: Messrs. Amritlal & Co. Private Ltd. (Managing Agents: Established in 1954 for the manufacture of synthetic dyestuffs vitally needed for the country's textile industry, the Company has earned a gross profit of Rs. 16.75 lakhs in 1958, as compared with a mere Rs. 86,945 in the previous year. This impressive performance has enabled the Company to reduce sizably the arrears of preference dividend and to pay off the 8 per cent. tax-free preference dividends for the five years 1954 to 1958.

Out of the aforesaid gross profit, the Directors have set aside Rs. 5.78 lakhs towards normal Rs. 5.48 lakhs for part of the previous year's arrears. They have also recommended the creation of a development rebate reserve with Rs. 1.10 lakh dividends.

The sales of the Company grew from Rs. 46.24 lakhs in 1957 to Rs. 106.28 lakhs in the year under review. This is due to the keen demand for the Company's, as a result of the paucity of imports. The Company is now manufacturing 12 Amarthols and 16 fast bases. The manufacture of Bon acid, which had remained suspended on account of damage to the plant caused by fire, was restarted at present completely satisfactory. The results are not only expected to obtain improved performance with the help of the technical collaborators. This will exchange but make a considerable saving of foreign exchange in its requirements and large self for manufacture of Amarthols. The Company has Montecatini of Italy, as technical consultants in the place of Messrs. Hilton-Davis Chemical Company of the U.S. Its agreement with the latter for technical collaboration was terminated.

The Company has on hand a programme for expansion of plants and building residential quarters for its employees, at an aggregate cost of Rs. 12 lakhs. In order to provide the necessary raise fresh capital to the tune of Rs. 20 lakhs, by existing shareholders at Rs. 100 each to the share for every three existing ordinary shares. The consent of the Controller of Capital Issues is awaited for this issue. The present paid-up capital of the Company is Rs. 80 lakhs, made up of 20,000 shares of Rs. 4 each. The present tax-free preference dividends (any time after 10 and 60,000 ordinary shares of Rs. 100 each

GROSS PROFIT OF METAL BOX CROSSES ONE-CRORE MARK

DIVIDEND UNCHANGED—DEVELOPMENT PLANS GO AHEAD

AN expansion in production, thanks to an improvement in the supply position of tinplate in the latter half of the year, higher operational efficiency, larger sales of general line containers for a miscellany of packs and the open top cans for processed foodstuffs, and the success in developing sales of containers not made out of tinplate—all these were the main factors responsible for the impressive results of the Metal Box Company of India Limited (Managing Director: Mr. R. W. Westbrook, Calcutta) for the year ended 31st March 1959. The gross profit has crossed, for the first time in the history of the Company, the one-crore mark, to stand at Rs. 111.59 lakhs. This represents an increase of Rs. 23.21 lakhs over that earned in the previous year and, with this rise, the Company has maintained the upward trend in its profit for the fifth year in succession. What is more, within these five years, the profit has more than trebled itself, that is, from Rs. 34.92 lakhs earned in 1953-54 to Rs. 111.59 lakhs in the year under review.

Larger Tax Liability

The net profit, at Rs. 41.57 lakhs, however, shows a relatively smaller rise of Rs. 5.23 lakhs. This is due to the fact that the bulk of the increase in gross profit has been absorbed by the higher tax liability, the provision for which has been raised from Rs. 39 lakhs to Rs. 56 lakhs. The provision for depreciation, at Rs. 14.02 lakhs, takes up nearly a lakh more than in the previous year. Notwithstanding the higher distributable profit, the Directors have not chosen to increase the dividend distribution, which is being repeated at 1½ per cent. per annum, for the third year in succession. Instead, they have recommended the strengthening of the reserves with larger allocations and carrying forward a larger surplus, as will be seen from the following comparative table:

(In lakhs of rupees)	For the year ended 31st March			
	1959	1958	1957	1956
Sale proceeds	6,96.85	5,11.79	5,66.78	4,94.55
Other income	14.59	11.62	9.73	8.08
Stocks of finished goods	7.95	6.45	7.01	7.01
Raw materials consumed	9,78.79	8,41.90	8,27.60	2,79.55
Other expenses	2,22.55	1,91.98	1,70.04	1,48.99
Gross profit	1,11.59	88.88	79.82	75.13

Ordinary	(17.3%)	(17.3%)	(17.3%)	(16.5%)
Carry forward	18.34	18.33	18.34	18.34

* Includes additional dividend of Rs. 46,000 for 1955-56.

It will be observed that the Company's sales have increased by Rs. 85.06 lakhs or 14 per cent. over the year. This improvement would not have been possible, according to the Chairman, Mr. K. C. Mahindra, but for the Company's success in developing the sales of such of its products as are not made from tinplate, a major raw material which was in short supply throughout the year. As the raw material position improved in the second half of the year, the Company was able to increase production and sales and also to make a reduction of 2½ per cent. in prices of general line containers. Open top cans, too, increased, following the emergence of a canned prawn export trade with Europe and America under the stimulus of subsidy given by the Union Ministry of Food and Agriculture for processed fruit and vegetables. Thanks to this subsidy and the fall in the cost of special quality of tinplate imported for open top cans, the Company has been able to reduce the prices of these cans by as much as 41 per cent.

Exports

The Company's indirect exports increased substantially during the year under review, but its direct exports were below expectations, owing to Burma's foreign exchange difficulties. The Company set up, during the year, an export promotion unit and undertook an extensive tour in South-East and West Asia. It has planned an intensification of this work during the current year. Commenting on export prospects, the Chairman, in his annual report, says: "We are thus well placed to make the best of

our opportunities in the more promising of the export markets open to us. As a result, an impressive order book has already been built up and I am confident that, by next year, I shall be able to report a substantial increase in our export sales. We continued to receive excellent support from the Export Promotion Directorate of the Government of India and the Export Promotion Councils. Demand this year remains brisk; there are signs that the market of our customers, the packers of India, is growing and that materials are being made increasingly available to meet it."

Much, however, depends on the supply of raw materials. Despite the larger imports during the second half of the year under review, the stocks of tinplate with the Company are said to be below the desired minimum operational level, but there are now, according to the Chairman, good prospects that the position will improve in the near future. Supplies of indigenous aluminium were adequate during the year under review to meet the substantially increased demand for the Company's non-tinplate products. It appears that the Company will be able to cover the enhanced requirements of this raw material for the current year as well. As regards manufacture of the wide range of industrial components, there is a shortage of steel and the Company has applied for licence to import a part of its requirements of steel to supplement the indigenous supply. In respect of other raw materials, there was a substantial rise in prices during the year under review and the upward trend has since then shown no sign of reversal.

Expansion Plans

On the development side, the Company's progress is encouraging. The new Calcutta factory has been completed and manufacturing activity has started therein. Manufacture of industrial components continues in the old factory and it is proposed to start production of plastics, embracing injection moulding and polyethylene extrusion, printing and bag making in this factory. Provision is being made for the manufacture of a range of spare parts for machinery. Constructional work is progressing for a new factory at Faridabad, near Delhi. This factory is expected to go into production early in 1960. The Madras factory has been extended and an extension of the Worli (Bombay) factory is being planned. A plan is under consideration for the acquisition of additional machinery for extending the range of products manufactured from indigenous raw materials and for meeting the demand for industrial components which are now being imported.

In order to finance the new developmental activities, the Company proposes to increase its capital by a rights issue of ordinary shares at par in the ratio of two new shares for every five, the Government's consent for which has already been obtained. This will bring an additional capital of Rs. 46 lakhs.

Financial Position

The present paid-up capital of the Company is Rs. 145 lakhs, of which ordinary capital accounts for Rs. 115 lakhs and preference for Rs. 30 lakhs. This is supplemented by reserves and surplus aggregating Rs. 165.84 lakhs. There has been a substantial reduction in secured loans from Rs. 49.35 lakhs to Rs. 9.85 lakhs, but this is offset to a large extent by unsecured borrowings from the Metal Box Company Overseas Ltd. to the extent of Rs. 23.53 lakhs, presumably on account of the deferred payment credit obtained from that Company for import of tinplate during the year under review. The other liabilities and provisions amount to Rs. 154.23 lakhs. The additions to gross block during the year were of the order of Rs. 28.27 lakhs, bringing the total value to Rs. 309.15 lakhs. The book value of the block account as at the end of the year is Rs. 196.42 lakhs. The current assets aggregate Rs. 302.02 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 42.87 cum-div., as against Rs. 37.25 a month ago. On an ex-div. basis, the yield on the shares works out to 4.2 per cent. per annum, free of tax.

COMPANY MEETINGS AND DIVIDENDS

SAVAMALAI ESTATES LTD. Annual General Meeting, Calicut, 4th July 1959. Dividend: 12½ per cent. or Re. 0.25 per share. Transfer books remain closed from 27th June to 4th July 1959, both days inclusive.

EQUITABLE COAL CO., LTD. Annual General Meeting, Calcutta, 7th July 1959. Dividend: Re. 1.50 per share. Transfer books remain closed from 24th June to 7th July 1959, both days inclusive.

DHEMO MAIN COLLIERIES LTD. Annual General Meeting, Calcutta, 7th July 1959. Dividend: Nil.

WEST JAMURIA COAL CO., LTD. Annual General Meeting, Calcutta, 7th July 1959. Dividend: Nil.

KAMARHATTY CO., LTD. Annual General Meeting, Calcutta, 10th July 1959. Dividend: Rs. 5.00 per ordinary share and Rs. 5.00 per "B" ordinary share. Transfer books will remain closed from 1st to 10th July 1959, both days inclusive.

KANKARRAH CO., LTD. Annual General Meeting, Calcutta, 10th July 1959. Dividend: Nil. Transfer books will remain closed from 6th to 10th July 1959, both days inclusive.

BRIDGE AND ROOF CO. (INDIA) LTD. Annual General Meeting, Calcutta, 13th July 1959. Dividend: 20 per cent. or Rs. 2.00 per share (includes a dividend of 10 per cent. or Re. 1.00 per share, for 1955 and a dividend of 7½ per cent. or Re. 0.75 per share, for 1954). Transfer books remain closed from 29th June to 13th July 1959, both days inclusive.

BALMER LAWRIE & CO., LTD. Annual General Meeting, Calcutta, 13th July 1959. Dividend: Rs. 15.00 per share (final). Transfer books remain closed from 24th June to 13th July 1959, both days inclusive.

FERTILISERS AND CHEMICALS TRAVANCORE LTD. Annual General Meeting, Alwaye, 15th July 1959. Dividend: 4 per cent. or Re. 0.40 per share, payable on and after 15th August 1959. Transfer books will remain closed from 6th to 15th July 1959, both days inclusive.

METTUR INDUSTRIES LTD. Annual General Meeting, Madras, 15th July 1959. Dividend: 25 per cent. or Rs. 25.00 per share. Transfer books remain closed from 27th June to 15th July 1959, both days inclusive.

METAL BOX CO. OF INDIA LTD. Annual General Meeting, Calcutta, 16th July 1959. Dividend: 17½ per cent. free of tax (includes interim dividend 6½ per cent.). Transfer books will remain closed from 1st to 16th July 1959, both days inclusive.

PULLANGODE RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Fort Cochin, Kerala State, 20th July 1959. Dividend: 5 per cent. or Re. 0.10 per share. Transfer books remain closed from 4th to 22nd July 1959, both days inclusive.

NAZIRA COAL CO., LTD. Annual General Meeting, Calcutta, 25th July 1959. Dividend: 7½ per cent. or Re. 0.75 per share. Transfer books will remain closed from 16th to 25th July 1959, both days inclusive.

RAJA BULAND SUGAR CO., LTD. Annual General Meeting, Rah-Bhara, Rampur, U.P., 21st July 1959. Dividend: Re. 1.25 per share. Transfer books will remain closed from 13th to 25th July 1959, both days inclusive.

CAWNPORE TEXTILES LTD. Annual General Meeting, Kanpur, U.P., 30th July 1959. Dividend: Nil.

ALUMINUM CHEMICAL WORKS CO., LTD. Annual General Meeting, Baroda, 30th July 1959. Dividend: Rs. 12.00 per share, payable on or after 14th August 1959. Transfer books will remain closed from 24th to 30th July 1959, both days inclusive.

SANGAMESHWAR COFFEE ESTATES LTD. Annual General Meeting, Madras, 30th July 1959. Dividend: 9 per cent. or Re. 0.18 per share. Transfer books will remain closed from 25th to 30th July 1959, both days inclusive.

CAVVERY SPINNING AND WEAVING MILLS LTD. Dividend of 9 per cent. or Re. 0.90 per share, for the year ended 31st March 1959. Transfer books will remain closed from 24th to 30th July 1959, both days inclusive.

VIRUDHUNAGAR TEXTILE MILLS LTD. Dividend of 6 per cent. or Re. 3.00 per share, for the year ended 31st December 1958. Transfer books will remain closed from 20th July to 3rd August 1959, both days inclusive.

CANNANORE SPINNING AND WEAVING MILLS LTD. Dividend: Rs. 9.00 per share, final (the interim dividend paid was 6 per cent. or Re. 6.00 per share), for the year ended 31st March 1959. Transfer books will remain closed from 15th to 30th July 1959, both days inclusive.

SPENCER & CO., LTD. Interim dividend of 6 per cent. or Re. 0.60 per share, for the year ended 30th June 1959.

INDIA CEMENTS LTD. Final dividend of 5 per cent. or Re. 0.25 per share (making a total of 9 per cent. or Re. 0.90 per share), for the year ended 31st March 1959; subject to approval of Industrial Finance Corporation. Transfer books will remain closed from 18th to 31st July 1959, both days inclusive.

NAVASARI COTTON AND SILK MILLS LTD. Dividend of Rs. 12.00 per share, for the year ended 31st December 1958, payable on 17th August 1959. Transfer books will remain closed from 20th July to 14th August 1959, both days inclusive.

GAEKWAR MILLS LTD. Dividend of Rs. 10.00 per share, for the year ended 31st December 1958, payable on 17th August 1959. Transfer books will remain closed from 20th July to 14th August 1959, both days inclusive.

SIMPLEX MILLS CO., LTD. Dividend of Rs. 5.00 per share, for the year ended 31st March 1959.</

SYNOPSIS OF COMPANY REPORTS

Bridge and Roof Co. (India) Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie and Co. Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year (including items relating to previous years) after providing for taxation and depreciation, was Rs. 4,59,013 (Rs. 6,35,876) to which is added provision for taxation no longer required of Rs. 2,00,000 (nil) and the balance brought forward from 1957 of Rs. 1,73,321 (Rs. 1,77,445) making a total of Rs. 8,32,334 (Rs. 8,13,321). Out of this total the Board has transferred Rs. 2,43,990 (nil) to development rebate reserve in compliance with the provisions of Section 10 (2) (vi) b) of the Indian Income Tax Act, 1922, and Rs. 2,00,000 (Rs. 4,00,000) to general reserve, leaving a balance of Rs. 3,88,354 (Rs. 4,13,321) available for distribution, which it is recommended be dealt with as follows: To payment of a dividend of 7½ per cent. for 1958 Rs. 90,000, a dividend of 10 per cent. for 1959 Rs. 1,20,000, and a dividend of 2½ (20) per cent. for 1958 Rs. 30,000 (Rs. 2,40,000) leaving a balance to be carried forward of Rs. 1,48,354 (Rs. 1,73,321).

Orders were made by the Commissioner of Income Tax under Section 23A (3) of the Indian Income Tax Act, 1922, requiring the Company to distribute further dividends for the years 1954 and 1955. A reference was made under Section 23A (4) to a Board of Referees appointed by the Central Government, which directed that further dividends for these years amounting to Rs. 75,400 and Rs. 1,04,759 respectively be distributed. The Board therefore recommends that additional dividends (rounded off for the sake of convenience) be paid in compliance with the direction of the Board of Referees. These additional dividends, although expressly declared to be payable in respect of the years 1954 and 1955, will, if sanctioned, be payable to those members whose names are registered in the Register of Members of the Company on the date of declaration. It will be noted that the total distribution will be at the same level as last year.

The provisions of Section 23A of the Indian Income Tax Act, 1922, do not apply to the Company subsequent to the financial year 1955 in consequence of the amendments made to that Section by the Finance (No. 2) Act, 1957.

No provision has been made for liability to wealth tax. Payment of wealth tax is not considered to be a charge against current profits of the Company, and the Board therefore intends to charge against reserves any payment made in respect of such assessments.

Operations.—As evidenced by the higher turnover, output increased, and the prospects for the current year are good. During the year the Company acquired a plot of land adjacent to its existing property. This land will be used in the reorganisation of the Works.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital	12,00,000	Gross block	73,60,535
Reserves	29,30,393	Less—Depreciation	36,42,693

		Work-in-progress	39,86,649
		Goods in transit	1,70,787
		Debits, deposits and advances	34,59,797
		Investments	5,086
		Cash	3,06,300
	Rs. 1,42,28,496		Rs. 1,42,28,496

Equitable Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working resulted in a profit, before depreciation, of Rs. 18,41,973 (Rs. 21,40,560) after charging depreciation at normal income-tax rates, amounting to Rs. 11,01,535 (Rs. 11,33,843) there was a balance of Rs. 7,40,438 (Rs. 10,06,723). Adding thereto the amount brought forward from the previous year of Rs. 59,732 (Rs. 41,728), sundry adjustments (net) on account of previous year Rs. 7,62,299 (Rs. 2,45,299) [Less—managing agents' remuneration on above Rs. 76,230 (Rs. 24,530)], provision for income-tax no longer required Rs. 17,533 (nil), unclaimed dividends forfeited Rs. 515 (Rs. 4,425) and bad debts: excess written off in previous year Rs. 12,800 (nil) there is a total amount of Rs. 15,17,087 (Rs. 12,73,645). From this amount is deducted provision for cesses (net) Rs. 33,380 (Rs. 32,000), wealth tax Rs. 60,571 (Rs. 1,13,349), doubtful debts Rs. 12,800 (nil) and forfeited dividends paid Rs. 75 (nil) and leaving an available balance for disposal of Rs. 14,10,261 (Rs. 11,28,296). The directors propose that this amount be dealt with as follows:—

By transfer to development reserve Rs. 4,00,000 (Rs. 4,00,000) to development rebate reserve Rs. 3,52,000 (nil), to royalty reserve Rs. 1,51,692 (nil), by payment of a dividend on preference shares at the rate of 6 per cent. per annum absorbing Rs. 24,000 (Rs. 24,000) and by payment of a dividend on ordinary shares at the rate of 15 (15) per cent. per annum absorbing Rs. 4,44,564 (Rs. 4,44,564) leaving to be carried forward a sum of Rs. 38,005 (Rs. 59,732 after transferring

Rs. 1,00,690 to debenture redemption sinking fund and Rs. 1,00,000 to investment depreciation reserve).

Net raisings during the year were 17,62,616 tons compared with 18,00,651 tons and 16,84,813 tons during 1957 and 1956, respectively. Despatches amounted to 17,53,176 tons against 18,10,938 tons and 16,84,549 tons during the preceding two years. Stocks totalled 64,744 tons. The Collieries have been maintained in good condition.

Unfortunately, the Company's plans for increased production were temporarily impeded due to unforeseen set backs experienced at three collieries but these mining difficulties have since been largely overcome and, in addition, Jamuria 5 and 6 pits came into operation and started producing coal at the close of the year.

During the year under review, the Company has implemented the new Mines Regulations which were introduced at the end of 1957, subject to the availability of new equipment which had to be imported and the additional technical staff required. The Mines Regulations, 1957, have been an additional burden on colliery costs for which no compensation has yet been granted by any increase in the controlled selling prices for coal. Government's decision on the Coal Prices Revision Committee's Report is awaited and it is hoped that due consideration will be given to the cost of these Regulations as, out of ten collieries worked by the Companies, six collieries are gassy mines and consequently have to bear additional costs on this account. In addition, three of these collieries carry out extensive sandstowing operations for which they are not fully compensated by the assistance paid by the Coal Board.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital	33,63,760	Gross block	4,59,53,374

		Deferred revenue expenditure	3,27,492
	Rs. 3,90,25,322		Rs. 3,90,25,322

West Jamuria Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working resulted in a profit, before depreciation, of Rs. 66,654 (Rs. 1,77,077). After charging depreciation at normal income-tax rates, amounting to Rs. 1,59,240 (Rs. 1,78,661) there was left a debit balance of Rs. 92,586 (Rs. 1,584). Adding thereto the debit balance on profit and loss account brought forward from last year of Rs. 3,49,103 (Rs. 3,20,058), adjustments in respect of previous year Rs. 22,920 (Rs. 87,000), coal sales adjustments Rs. 19 (nil), debt written off Rs. 1,981 (nil) and provision for doubtful debts Rs. 22,286 (nil) there is a total debit balance of Rs. 4,88,855 (Rs. 4,08,932) after adding Rs. 290 in respect of income-tax for 1952-53). From this amount is deducted sundry receipts in respect of previous year Rs. 3,146 (nil) leaving a balance at debit on the profit and loss account amounting to Rs. 4,85,709 (Rs. 3,49,103 after deducting Rs. 57,120 being unclaimed dividends written back and Rs. 2,709 being provision for doubtful debts no longer required).

Net raisings during the year were 2,77,301 tons compared with 2,54,471 tons and 1,67,373 tons during 1957 and 1956, respectively. Despatches amounted to 2,77,786 tons against 2,48,214 tons and 1,80,640 tons during the preceding two years. Stocks totalled 9,885 tons. The Collieries have been maintained in good condition.

Reorganisation in working the West Jamuria Colliery took place last year and while production increased there was no improvement in the financial results during the year under review. The effect of this reorganisation has since been felt and better results are now being obtained.

The Railway's rationalisation policy which limits the movement of coal from the Company's collieries in the "upcountry" direction, where there is greater demand for Grade I coal, proves to be a serious handicap over sales. Until the Eastern Railway complete certain constructional work to their Railway Yards these difficulties will continue.

The Mines Regulations, 1957, have been an additional burden on colliery costs for which no compensation has yet been granted by any increase in the controlled selling prices for coal.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital	7,00,000	Gross block	59,74,151
Liabilities	45,57,037	Less—Depreciation	29,16,909
		Net block	30,57,242

Dhemo Main Collieries, Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working resulted in a profit, before depreciation, of Rs. 37,311 (Rs. 3,77,699). After charging depreciation at normal income-tax rates, amounting to Rs. 90,928 (Rs. 90,238) there was a debit balance of Rs. 53,617 (credit of Rs. 2,87,461). Adding to this the debit balance on profit and loss account brought forward from last year of Rs. 67,535 (Rs. 3,36,908), provision for taxation Rs. 94 (nil), forfeited dividends paid Rs. 350 (Rs. 50), adjustments in respect of previous years Rs. 11,281 (Rs. 14,000) and bad debts Rs. 1,087 (nil) there is left a debit balance of Rs. 1,33,964 (Rs. 63,497). And deducting therefrom hospital grant in respect of previous year Rs. 11,007 (Rs. 8,559), unclaimed liabilities written back Rs. 2,091 (Rs. 200) and adjustments in respect of previous years Rs. 92,771 (Rs. 703) there remains a balance at debit on the profit and loss account amounting to Rs. 28,095 (Rs. 67,535 after taking into account a sum of Rs. 13,500 being provision for wealth tax and cesses).

Net raisings during the year were 2,67,099 tons compared with 2,74,145 tons and 2,12,536 tons during 1957 and 1956, respectively. Despatches amounted to 2,54,838 tons against 2,70,676 tons and 2,10,779 tons during the preceding two years. Stocks totalled 20,860 tons. The Colliery has been maintained in good condition.

Owing to restrictions in working the Raghunathbatty Seam which were imposed by the Mines Department earlier in the year, production dropped below an economic level for several months. During the second half of the year, raisings commenced from the Borachuck Seam and the Company has now returned to more economic working. The latter Seam, however, has been graded provisionally as Grade II and there is little demand for this type of coal at the present time.

The majority of the output of the Company is obtained by sandstowing, for which inadequate assistance is paid by the Coal Board. In addition the Mines Regulations, 1957, have been an additional burden on colliery costs for which no compensation has yet been granted by any increase in the controlled selling prices for coal.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital	16,00,000	Gross block	57,45,962
Provision for taxation	94	Less—Depreciation	32,76,321
Provision for wealth tax	5,500	Net block	24,69,641
Liabilities	35,47,086	Stock of coal	3,75,932
		Stores and spare parts	1,82,771
		Debits, deposits and advances	20,22,681
		Cash	73,555
		Loss	28,095
	Rs. 51,52,680		Rs. 51,52,680

Metur Industries Ltd.

The directors of the above Company (Managing Agents: Messrs. W. A. Beadell & Co. (Private) Ltd., Madras) submit the audited accounts of the Company for the year ended 31st March 1959.

The net profit available for distribution, after providing for depreciation and reserving for taxation Rs. 28,90,000 (Rs. 18,30,000) and taking into account the amount of Rs. 876 (Rs. 5,157) brought forward from the reserves amounts to Rs. 15,12,400 (Rs. 12,00,876). From this amount the directors recommend payment of a dividend of 25 (20) per cent. free of income-tax amounting to Rs. 15,00,000 (Rs. 12,00,000) leaving a balance to be carried forward of Rs. 12,406 (Rs. 876).

The shareholders will remember that at the extraordinary general meeting held on the 11th April 1958 when a special dividend of 10 per cent. free of income-tax was declared, the Chairman on behalf of the directors explained that the circumstances the Board were not able to recommend any expansion of the mill. The Board have now recommended transferring from the reserve further dividend of 25 per cent. in order that the financial year 1958-59. The Board believes that the very heavy taxation liability of Rs. 28,90,000 should not reflect in the ordinary dividend, not only in view of the very sound position of the Company, but also because there would seem to be reserves at a high level. The directors have therefore recommended a further transfer from the reserves to the profit and loss account, the main purpose of which is to offset the heavy taxation liability arising from the special dividend payment of 50 per cent.

Apart from the gross profits of the Company, having been once again seriously affected by heavy taxation from the year's working a sum of approximately Rs. 1,83,980 had to be provided to bonus in addition to the provision of Rs. 3,50,000 already made for the year 1957-58.

There was a slight increase in raw cotton prices over the previous year. The mill's products continued to be popular and our organisation for distribution maintained the usual efficiency.

The mill was affected by power cuts in May and June 1958 and during these months output fell to 21 per cent. production loss respectively was suffered. Notwithstanding these various factors, however, the directors consider the result achieved during the year to be most satisfactory.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital	60,00,000	Gross block	68,13,971
Reserves	29,52,000	Less—Depreciation	49,51,979
Provision for taxation	28,90,000	Net block	18,61,992
Liabilities	28,73,143	Stock-in-trade	30,64,053
Profit	12,406	Stores, loose tools, etc.	17,44,219
		Debits, deposits and advances	23,63,140
		Investments	28,30,510
		Cash	28,63,635
	Rs. 1,47,27,549		Rs. 1,47,27,549

Pullangode Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Aspinwall & Co. Ltd., Calcutta, Fort Cochin) submit the audited accounts of the Company for the year ended 31st March 1959.

The net profit for the year is Rs. 94,604 as compared with Rs. 64,262 for the past year. The increase in profit over last year was mainly due to the increase in crop harvested. The necessary provisions for depreciation on fixed assets and for rubber rehabilitation have been made, also income-tax, agricultural income-tax and wealth tax.

Crops and Costs. Against an estimate of 5,75,000 lbs. the crop harvested amounted to 5,75,000 (5,86,000) lbs. which is a record crop for the Company. The increase in crop was mainly due to the slaughter tapping of areas earmarked for replanting. The average sale price realised was 147.26 (146.81) cents per pound. Estate expenditure was 98.66 (102.35) cents per pound.

It is conservatively estimated that a crop of 5,75,000 lbs. of rubber will be collected during 1959-60 at an Estate expenditure of 115.99 cents per lb.

Replanting. As mentioned in the last report 75 acres of old rubber are being replanted this year and the work is well in hand. A further 100 acres has been selected for felling and replanting in 1961 and this area is now being slaughtered.

Cashewnuts. This area has now commenced to pay for itself and in future years should yield a small profit.

Pepper. The vines in the Company's pepper area continue to be maintained in a healthy condition and a small crop was secured from this area which was planted only in 1954-55. Pepper does not usually come into full bearing until it is eight years old.

General. The Company's properties are being well maintained and it is pleasing to report that the labour situation was generally quiet throughout the year.

Information has recently been received to the effect that the Kerala Government intend to legislate that the weekly day of rest be a paid holiday, which would involve a substantial increase in cost of production. On representations from producers for an upward revision of prices of raw rubber, the Government of India have referred to the Tariff Commission the question of such revision and should this proposed legislation be enacted it is to be hoped that the Tariff Board will take it into consideration in their revised price recommendations.

The profit for the year was Rs. 94,604 (Rs. 64,262) from which is to be deducted Rs. 9,000 (Rs. 9,000) representing 6 per cent. dividend on preference shares and Rs. 31,500 (nil) transferred to rehabilitation reserve. This Rs. 31,500 represents estimated excess income from areas under intensive tapping. This leaves a profit of Rs. 54,104 (Rs. 55,261), which with the amount brought forward of Rs. 76,143 (Rs. 89,504), plus tax provision of Rs. 24,651 (nil) written back, makes available for distribution the sum of Rs. 1,54,898 (Rs. 1,44,765). In recommending a first and final dividend of 5 (4) per cent. for the year on the ordinary shares, the Board point out that this will amount to Rs. 92,500 (Rs. 66,000). This leaves an amount to be carried forward of Rs. 72,398 (Rs. 76,143).

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital	18,00,000	Gross block	21,56,112
Reserves	2,29,315	Less—Depreciation	5,52,520
Provision for taxation	1,13,798	Net block	16,03,592
Liabilities	2,70,740	Stock-in-trade	1,39,619
Profit	72,398	Stores and spare parts	69,680
		Nursery	12,234
		Loans and advances	11,895
		Investments	2,03,301
		Cash	4,45,930
	Rs. 24,86,251		Rs. 24,86,251

A. V. Thomas and Co., Ltd.

The directors of the above Company (Managing Director: Mr. A. V. Thomas, Alleppey) present the audited accounts of the Company for the year ended 31st December 1958.

Taxation.—As has been reported last year, the Income-tax referred case is before the High Court and the directors have been informed that it would be taken up shortly and judgment of the High Court obtained perhaps within two months from date.

The working results of the year under report have been satisfactory. The net profit before providing for taxation is Rs. 2,26,086 (Rs. 2,18,918). After deducting the preference dividend of (Continued on third column)

PROFITS OF NEW INDIA HIGHER DIVIDEND ALSO STEPPED UP

THE results of the working of the New India Assurance Company, Ltd. (Managing Director: Mr. B. K. Shah) for the year ended 31st December 1958 disclose an all-round improvement in the business of the Company. The premium income showed a sharp increase over the previous year's figure. Claims and expenses too indicated an encouraging trend. Thus, the aggregate portfolio premium rose from Rs. 6.30 crores in 1957 to Rs. 7.54 crores in 1958 while the overall claims ratio declined from 52.2 per cent. in 1957 to 51.5 per cent. in 1958. Commission and expenses of management also declined from 39.3 per cent. of premium income in 1957 to 36.7 per cent. in the year under review. Reflecting these improvements, departmental profit increased from Rs. 32.7 lakhs in 1957 to Rs. 55.9 lakhs in 1958. This is reinforced by Rs. 12.4 lakhs received as earnings from investments. The Directors recommend a final dividend of Rs. 2 per share of Rs. 15 paid-up which, together with the interim dividend for a like amount, declared in February last, makes a total of Rs. 4 per share tax-free, as against Rs. 3 per share paid last year on the old capital. It may be recalled that, last year, the Company issued bonus shares in the proportion of one new share for every three old shares held, thereby raising the paid-up capital from Rs. 1.06 crore to Rs. 1.42 crore.

The expansion of the business of the Company is reflected in the steady and continuous rise in net premium income over the past decade. The premium income, which stood at Rs. 1.38 crore in 1948, rose to Rs. 4.36 crores in 1954, Rs. 5.64 crores in 1956, Rs. 6.30 crores in 1957 and crossed the Rs. 7-crore mark, to touch Rs. 7.54 crores in the year under review, representing a rise of almost 20 per cent. over the previous year's figure. The increase in net premium income was shared by all the departments except the fire department where premium income declined from Rs. 3.24 crores in 1957 to Rs. 3.08 crores in 1958, thanks to the pruning of unremunerative business. But this was more than offset by the rise in premium income in the other two departments, namely, miscellaneous and marine. Premium income in the miscellaneous department spurred from Rs. 1.64 crore in 1957 to Rs. 2.50 crores in 1958 and from Rs. 1.42 crore to Rs. 1.97 crore in the marine department.

Foreign business continues to account for the major portion of the premium income. Thus, of the total premium of Rs. 7.54 crores during the year, Rs. 4.84 crores were from business outside India and Rs. 2.70 crores from business within the country.

The following table indicates the trend of progress of the Company during the four-year period 1955-58:

(In crores of rupees)				
	1958	1957	1956	1955
Premium:				
Fire Department	8.08	8.24	2.90	2.74
Miscellaneous Department	2.49	1.64	1.44	1.09
Marine Department	1.97	1.42	1.80	1.15
Total of all Departments	7.54	6.30	5.64	4.98
Funds:				
Fire Department	1.94	2.05	1.88	1.81
Miscellaneous Department	1.45	1.02	0.92	0.74
Marine Department	1.97	1.76	1.65	1.56
Total of all Departments	5.36	4.88	4.45	4.11
Free Reserves:				
Capital	0.82	0.82	1.00	1.00
General Reserve	1.00	1.00	1.00	1.00
Premium on Shares	0.30	0.36	0.36	0.36
Dividend Equalisation	0.30	0.22	0.22	0.20
Exchange	0.08	0.05	0.05	0.05
Investment Reserve	0.22	0.22	0.22	0.09
Total	2.12	2.37	1.85	1.70

As regards claims, the experience of all the three departments taken together has been better, the overall ratio showing a decline from 52.2 per cent. in 1957 to 51.5 per cent. in the year under review. Department-wise, however, while the miscellaneous and marine departments reflected the overall trend, the fire department showed a higher percentage of claims due to the fall in premium income as well as the impact of deferred claims under the adverse portfolios which, as noted earlier, were cancelled. Thus, whereas claims ratio in the miscellaneous and marine departments fell from 52.1 per cent. and 71.5 per cent. in 1957 to 46.1 per cent. and 67.7 per cent. respectively during the year under review, claims in the fire department increased from 43.9 per cent. to 45.7 per cent.

Commission and expense ratio, too, was more favourable than last year. It was only 36.7 per cent. during the year, as against 39.3 per cent. in 1957. In the fire and miscellaneous departments, the ratio was lower at 44.0 per cent. and 35.4 per cent., as against 46.6 per cent. and 36.6 per cent. in 1957 whereas, in the marine department, commission and expenses were higher at 27.0 per cent. as compared with 25

The 23rd June, 1959.

NEW PUBLICATIONS

(Concluded from page 16)

for which the Finance Department is not properly equipped and the present basis of compilation of estimates. One of the remedies would be a division and demarcation of the financial responsibility between the finance and administration ministries; the overall financial control with reference to financial policy and principles should continue to be vested in the Finance Ministry, but detailed scrutiny of proposals at expert level should be vested in the administrative ministry by installing "balancing personnel" within it. In recent months, certain delegation of functions and simplification of procedures have been attempted. The student of financial administration would be interested in these developments.

In a postscript, the author refers to the Chagla enquiry on the L.I.C. deals and poses the question of the constitutional responsibility of a Minister and the administration of autonomous State enterprises. As regards the former, the author remarks that the defined role of the permanent Secretary responsible for advising the Minister on policy and executing the approved policy has received a severe jolt. As regards the latter, the author concludes that there should be re-thinking on the constitution of autonomous corporations and companies. Where a production unit is largely intended to meet a departmental requirement it is not always necessary to give it the form of a company or a corporation. Once a unit is constituted as a corporation or a company it should be made autonomous in reality, the Government only exercising the rights of a shareholder.

In a field about which there is little authoritative information, this book breaks much fresh ground. The problems raised and discussed are the author has not attempted one. The publication is a welcome and notable addition to the scanty literature now available to an earnest student of Indian Administration.

CALL MONEY RATE JUMPS UP

(From Our Own Correspondent)

BOMBAY, 1st July

The subscription list for the Central Government's two loans for an aggregate sum of Rs. 175 crores opened today and has not yet been closed. Though there are no indications of the amount subscribed so far, it is stated that the response is good. The list is scheduled to be closed on the 3rd inst., or earlier.

The demand for funds by banks on account of the half-yearly closing of accounts and for subscribing to the new loans has had a pull on the short-term money market from Monday onwards. Inter-bank call money, which was being offered at 1½ per cent. last week-end, is now being bid at 3½ per cent. among all sections of banks, with very few lenders. House money at seven days' notice is being offered 3½ per cent. to 3¾ per cent. and short-term deposits 3½ to 4 per cent. for one to six months.

In view of the opening of the list for Central Government loans, the sale of Treasury Bills remains suspended this week. It will, however, be resumed next week, when tenders have been invited for Rs. 2 crores. During the week ended 27th June 1959, Rs. 10 lakhs worth of intermediate Bills were sold at Rs. 99.326 per cent., as against Rs. 7 lakhs in each of the preceding two weeks.

For the second week in succession, there has been a substantial contraction in notes in circulation. The Reserve Bank of India statement for the week ended 26th June 1959 shows a fall of Rs. 24.22 crores; this is on top of a decline of Rs. 16 crores in the previous week. Notes held in the Banking Department have gone up by Rs. 5.71 crores, so that the net fall in total notes issued is Rs. 18.51 crores. This is covered by a decline of Rs. 20.01 crores in rupee securities and a small rise of Rs. 1.50 crore in rupee coin. There is no change in foreign securities, but the drain on balances held abroad continues, with a fresh drop of Rs. 1.07 crore, bringing the total foreign assets to Rs. 192.56 crores, as against Rs. 217.71 crores a year ago. The influx of funds to banks last week, leading to a fall in money rates, is reflected in the rise of Rs. 19.46 crores in deposits of banks with the Reserve Bank. Notwithstanding a reduction of over Rs. 2 crores in borrowings of banks against usance bills, loans and advances other than to Governments are higher by Rs. 3.11 crores. The outstanding borrowings by banks against usance bills as at the end of last week are no more than Rs. 1.45 crore. The investment portfolio shows a rise of Rs. 20.04 crores.

A rise of Rs. 6.06 crores in demand deposits and of Rs. 2.19 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 19th June 1959. Inter-bank borrowings too, are higher by Rs. 1.48 crore. Advances are again unchanged, but bills purchased and discounted have declined by Rs. 1.60 crore. Cash balances are higher by Rs. 9.31 crores and money at call by Rs. 2.92 crores.

The gilt-edged market is ruling steady, with enquiry confined mainly to short-dated issues, which, as a result, were further marked up by 5 to 15 nP. Much business is not, however, being done, in view of scarcity of sellers. 2½ per cent. 1961 has gained 15 nP to Rs. 97.95 and 2½ per cent. 1960 has hardened by 10 nP to Rs. 99.50, 3 per cent. 1963-65 and 1964 has each added 5 nP to Rs. 97.05 and Rs. 97.15, respectively. In the 3½ per cent. group, 1963 and 1964 has gone up by 10 nP each to Rs. 100.15 and Rs. 100.10, respectively. 3 per cent. 1966 has softened 10 nP to Rs. 97.70. Among the State loans, 4½ per cent. 1970 of Andhra, U.P., M.P., Bihar and Orissa were marked down by 5 to 20 nP.

There has been no change in the rupee-dollar rate again this week, banks' selling rate for U.S. ready T.T. being quoted at Rs. 475.75 per \$100 and their buying rate for clean T.T. at Rs. 472.50. There has, however, been a further slight weakening of the rupee in terms of the Canadian dollar. Banks sell ready T.T. at Rs. 499.75, as against Rs. 499 a week ago, and buy clean T.T. at Rs. 493.25, as against Rs. 492.25. Sterling is a shade higher in New York at 281.32-281.35 cents per £ for spot, while three months' forward is a fraction lower at 281.08-281.10 cents.

LINSEED DULL

(Messrs. A. Bradley & Co.)

CALCUTTA, 29th June

The linseed market ruled dull during the week under review. With the generally quiet tendency in other oilseeds, linseed sagged. Little interest was shown by either buyers or sellers and the actual turnover during the week was small. With a further improvement in linseed cake prices abroad, fresh business was done and there was brisk activity in the local market. The oil section was lifeless. Prices weakened owing to lack of support from buyers and a decline of about Re. 1.50 was registered during the week.

The latest available quotations are: June-July Rs. 22.50 and July-Aug. Rs. 22.62 per maund.

HIDES IMPROVE

(From Our Own Correspondent)

MADRAS, 29th June

Arrivals of E.I. tanned hides and calves were on the usual scale and clearance was good. Prices remained firm because shippers were active in the local market, except on lowest grades. Shipment was selective and the importers were trying to buy at lower prices which sellers were not to accept, except on cow inferior fifts 5/5½ average.

Tanned goats ruled bullish, following the de-
clination of very small stocks in the June London

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 1st July

The bullion market presented a firm trend during the major part of the week under review. Both silver and gold met with good buying support from upcountry centres, as well as from Calcutta. Consequently, values registered an improvement. The net gains over the week were Rs. 2-6 in ready silver and Rs. 12 in ready gold. The rise in the white metal would have been more marked but for liquidation by some bulls on Monday, following reports that several Tibetan refugees had brought with them large stocks of silver coins. Gold also encountered selling yesterday, due to rumours regarding inflow of contraband metal.

In the gold section, July settlement advanced from Rs. 117-7-6 to Rs. 119-1 on 29th June and, after declining to Rs. 118-1 yesterday, recovered to Rs. 118-3 today before finishing at Rs. 119-2-6. July settlement fluctuated between Rs. 117 and Rs. 118-4 and closed at Rs. 118-3-6. The backwardation rate (bull) in favour of bulls for July settlement widened from As. 9 on Wednesday last week to Re. 1-3 in the mid-session on Monday, but receded thereafter and stood at As. 15 today. As the rate was more than a rupee on Monday as well as yesterday, the bulls in this settlement were required to deposit margin at the rate of Rs. 25 per tola.

Ready gold opened the week firm at Rs. 120-5, as against Rs. 119-10-6, and rose to Rs. 121-5 on Monday. After easing to Rs. 120-7 yesterday, it recovered to Rs. 120-7 today before closing half an anna lower. The daily average arrivals and off-take of gold were 3,800 tolas and 2,600 tolas, respectively. The floating stocks of gold are estimated at 20,000 tolas.

Induced by enlarged enquiries, July settlement in silver spurted from Rs. 194 to Rs. 195-7 on Friday. On Monday, it came in for some selling and receded to Rs. 194. Subsequently, however, it edged forward and touched Rs. 196-3 today. The closing rate was an anna lower. Over the week, August settlement has recorded an increase of Re. 1-15 to Rs. 195-4. The backwardation rate for July settlement widened from As. 11 last week to As. 14 today.

Ready silver strengthened from Rs. 194 to Rs. 195-7-6 on 26th June and, after declining to Rs. 193-14 on Monday, recovered to Rs. 196-7 before finishing at Rs. 196-6. The daily average arrivals of silver were 14 bars, while the off-take was 11 bars. The floating stocks of silver are reported to be around 500 bars.

Both ready and forward silver in the London bullion market were unchanged at 78½d. and 77½d. per ounce, respectively, as also ready silver in New York at 91.375 cents per ounce. Ready gold in London eased from 249s. 8½d. last week to 249s. 7½d. yesterday, owing to the firmness of the pound sterling vis-à-vis the dollar. The latest available dollar rate for gold in London is \$35.10-\$35.12, as against \$35.11-\$35.13 a week before.

The following comparative table shows at a glance the trend of the market during the week under review:

	1-7-59	Highest	Lowest	24-6-59
GOLD				
Ready (999 fine Mint)	120 5	121 5	119 10	119 10
Forward	119 2 6	119 3	117 10	117 7 1
SILVER				
Ready (999 fine Mint)	196 6	196 7	193 13	194 0
Forward	196 2	196 3	193 13	194 0
London Silver Ready	74½d.	74½d.	74½d.	74½d.
London Forward	74½d.	74½d.	74½d.	74½d.
London Gold	249s. 7½d.	249s. 8½d.	249s. 7½d.	249s. 8½d.
New York Silver	91.375	91.375	91.375	91.375

* 21st July settlement. † 22nd July settlement.

public auctions which commence today. Business was done at 3d. more on 5½/6 and 8/9 lbs. average on selected marks, and enquiries for 11/12 lbs. lower ends were in evidence. Tanned sheep were slightly dearer, thanks to enquiries for shipment to Japan.

It is reported that Messrs. Dyster Nalder & Co., who have been conducting the London Public sales for tanned skins for several decades, have decided to close their organisation by the end of the year.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 30th June

Conditions in the metal market were steady to firm during the week under review, and prices were well maintained at previous levels. Tin opened at Rs. 582 and after improving to Rs. 587, closed at Rs. 583. Local demand was fair and a shortage was apprehended. Fresh arrivals were anticipated. On the London Metal Exchange, tin opened at £789 to harden to £790 following buying on account of the Continent and expectations of good orders from the United States. Clean wire scrap was steady at Rs. 238, as was mixed scrap at Rs. 228. Supplies were limited. In London, spot copper receded to £219½ after improving to £226½ from £224. The recession was due to poor demand from Europe and the remote possibility of a strike in copper mines in the United States. Lead was unchanged at Rs. 75, thus reflecting a satisfactory stock position. Electrolytic zinc opened at Rs. 105 but gave way to Rs. 103. The decline was due to poor demand.

COTTON FUTURES RECOVER

(From Our Own Correspondent)

BOMBAY, 1st July

In contrast to the easy trend noted during the past few weeks, the cotton futures market witnessed a smart recovery during the week under review. The recovery was induced by extensive short-covering by upcountry interests and buying by local operators. Although support was lacking at higher levels, lower levels met with resistance.

Reports of inadequate rains in certain cotton areas and the news that the crop was late by almost a month imparted strength to the market. It was thought that, since stocks with mills were limited, the delay in arrival of new crop would make available lots of current crops dearer in the coming weeks. This consideration prompted heavy buying in the maturing current crop contract, namely, Jarilla August, which recorded a strident rise of Rs. 14.50 over the week. The rise in the new crop contract was less marked, being only Rs. 5.50 over the week.

I.C.C. Moglai Jarilla August 1959 opened the week higher at Rs. 677, as against the previous close of Rs. 675.25 and steadily firmed up to Rs. 687.75 yesterday. Commencing today's session at Rs. 688.50 the contract put on Rs. 4 before closing a shade lower at Rs. 689.75.

I.C.C. Moglai Jarilla March 1960 commenced the week at Rs. 664.50 and advanced to Rs. 668.50 yesterday. Opening at Rs. 668.50 today, the contract rose to Rs. 670.50 before finishing at Rs. 688.75.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

1-7-59 High Low 24-6-59

I.C.C. Moglai Jarilla August 1959 ... 689.75 692.50 675.50 675.25
I.C.C. Moglai Jarilla March 1960 ... 668.75 670.50 663.50 663.25

In the spot section, mill demand for available lots broadened. Staple varieties such as Vijay, Digvijay, Laxmi, Jaydhar, Kalpan, Wagad, Co2 were well favoured. Kalagin also evoked interest. Kanpur and Southern mills were especially interested in Kalpan.

Export demand was moderate. Shippers bought Bengal Deshi, Kalagin and Yellow pickings. Exporters were inclined to hope that the Government might make an early announcement of the export quotas for the new season in view of the recommendations of the goodwill mission, sponsored by the Federation of Indian Chambers of Commerce and Industry, which was led by Mr. Madanmohan Ruia, its President. The mission, which visited many countries abroad, held that, as a result of frequent changes in the quota item, foreign buyers were increasingly finding it difficult to depend on India for supplies of cotton. It, therefore, urged that there should be continuity in India's export policy, timely announcements of quotas and removal of impediments to exports. The mission has suggested that the Government should consider the question of allowing a small quantity of longer staple cotton for export and import cheaper cotton from abroad.

Business in foreign cotton was subdued. Although it was known that Egyptian cotton would be available to Indian buyers at a 35 per cent. discount as per the agreement reached between Mr. Madanmohan Ruia, President, Cotton Buyers Association, Bombay, with the Egyptian Government-controlled Misr Foreign Trade Company, the absence of confirmation from the Government of India and necessary instructions to the State Bank for making arrangements for payments, held up business in Egyptian cotton. It appears that, already, many mills have covered a major portion of their quotas, leaving only a small balance for Egyptian cotton.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal Deshi 685; Berar Jarilla Khandesh 835; Vijay 970; Laxmi 975; Jaydhar 905.

Cotton values in Karachi market scored modest gains during the week. Domestic spinner demand was active and export interest better. Interest in Deshi varieties, however, was subdued. Staple styles were in good demand. The futures section continued to remain closed. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind Deshi 82-8; Punjab Deshi 72; 4F Punjab Roller 73-8; S.G. 75; L.S.S. Punjab Roller 75-8; S.G. 76-8; N.T. Roller 75; S.G. 78; 289F Punjab Roller 75; S.G. 78-8.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. Values showed a sagging tendency. Export demand was slack. Crop reports indicated that the new crop was about a week late. But plants showed satisfactory progress. Weather was said to be favourable and water-supply abundant. Crop in Upper Egypt was also satisfactory. According to a prominent shipper, the new crop is expected to be of the order of 1.19 million bales, as against this season's 1.32 million bales. The fall in expected production is attributed to lower planted acreage.

The following are the latest available quotations—in tallars per lb.—from Alexandria:

Karnak: July 75.70; November 76.15. Ashmouni: August 68.53; October 67.75.

The Liverpool cotton futures market depicted a mixed trend during the week. While the old crop positions of both the American and the American type contracts were easy on long liquidation, the new crop positions forged ahead, thanks to Commission House support and trade buying. Sudan

1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 26

To record the main trends in the private sector first. The book value of total foreign business investments in India by the end of 1957 was Rs. 555.6 crores; on the basis of tentative estimate, it was Rs. 590 crores at the close of 1958. These include loans from the World Bank amounting to Rs. 46.9 crores and Rs. 72.1 crores, respectively.

There has been a steady decline in the net flow of foreign private capital into this country, from Rs. 24.7 crores in 1956 to Rs. 16.8 crores in 1957 and Rs. 10 crores in 1958. These figures compare with the annual average of Rs. 16.2 crores for 1954 and 1955.

Retained earnings, which amounted to Rs. 19.4 crores in 1956, declined to Rs. 9.6 crores in 1957, due to a fall in profits, brought about by adverse trading conditions and heavier taxation. In view of the higher level of industrial profits and better export earnings in tea, profits retained in 1958, however, are estimated to have been higher by Rs. 5 to 6 crores in industries other than petroleum. But, as the position in regard to petroleum companies is not clearly brought out by the survey, it is not possible to estimate the amount of profits retained last year. The Bank's survey, however, unmistakably shows that profits retained have a close bearing on the trend of net profits.

Fresh capital received in 1957 was a shade better at Rs. 16.3 crores, as against Rs. 11.6 crores in 1956 and the average of Rs. 8.12 crores for 1954 and 1955. At the same time, the outflow of capital was also higher, being Rs. 9.1 crores in 1957, as compared with Rs. 6.3 crores in 1956 and the average of Rs. 5 crores for 1954 and 1955. The increase in the outflow in 1957 was due to compensation payments amounting to Rs. 4.8 crores to life insurance companies and the Kolar Gold Mining Companies, as a result of their nationalisation in 1956.

The position in regard to inflow and outflow of capital in 1958 is not clear. It, however, seems to us that the outflow must have been fairly substantial and in excess of that in 1957, owing to remittance of capital by petroleum distributing companies. In industries other than petroleum, however, fresh investments are estimated to have been higher than in 1957 by Rs. 1 to 2 crores. On this basis, these must have been of the order of Rs. 9 to 10 crores.

Among the industries other than petroleum that received fresh capital in 1957, mention may be made of rubber goods, electrical goods, medicines and pharmaceuticals. There was an increase in the capital invested by the companies providing engineering and consultation services.

Planting, mining and managing agency houses continued to repatriate their capital in 1957, as in previous years. Further, in these industries, there have been no fresh investments at all in recent years, their expansion, if any, being financed by reinvestment of profits.

Although the U.K. still maintains its overwhelming lead among the countries that have invested in India, in 1957, more capital came from the U.S. than from the U.K. This change in position was the result of India's own making, as it nationalised life insurance and the gold mining companies and thereby caused repatriation of sizeable capital. The deterioration in the fortunes of the tea industry was also responsible for this trend, as it adversely affected the amount of profits retained in business.

Petroleum manufacture, prospecting and distribution have so far constituted the main attraction for U.S. capital. In 1957, 90 per cent. of capital that came from the U.S. was for petroleum activities. Since, in 1958, there was a net outflow of capital from this industry, the U.K. might have regained its position as the principal source of private capital.

The World Bank's investment in the private sector during 1957 was as high as Rs. 32 crores, as against Rs. 12.1 crores in 1956 and Rs. 1.4 crore per annum in 1954 and 1955. In 1958, it is estimated to have invested Rs. 25.2 crores, raising the total to Rs. 72.1 crores. The industries that have received assistance from the World Bank are iron and steel, public utilities and transport.

Now for a few observations on the trend of foreign investments in recent years. A comprehensive picture of trade-wise and country-wise foreign business investments (upto 1957), including loans from the World Bank, is provided by the two comparative tables on this page. It will be noted from them that, during the four years ended 1957, there was a net rise of Rs. 152 crores in foreign business investments. Of this, the share of the World Bank was approximately Rs. 47 crores, so that the net inflow of foreign private capital was Rs. 105 crores. This, together with Rs. 10 crores (estimate) added in 1958, means Rs. 115 crores or

Rs. 23 crores per annum in the past five years. Of the increase of Rs. 105 crores upto the end of 1957, more than half—Rs. 56.67 crores, to be precise—was the share of petroleum business.

An average annual receipt of about Rs. 23 crores of foreign private capital, including the profits retained in business, is not something that India can boast about. It is neither as large as was expected or talked about nor sufficient to meet the capital needs of this country. It is, indeed, infinitesimal, when compared with the \$5.7 billion (about Rs. 2,750 crores) of long-term private capital that flowed out in a single year, 1957, from the main capital supplying countries in the free world. It may be quite pertinent to note here that, during the years 1955-58, the underdeveloped countries alone were receiving foreign private capital of the order of \$2 billion (about Rs. 960 crores) per annum, of which India's share was no more than 2.4 per cent. To give another comparison, foreign investments in Australia during the ten years to 1956-57 were of the order of £100 million (Rs. 130 crores) per annum. For yet another comparison, the experience of Latin America may be quoted. In 1957, that Continent received a little under \$1.5 billion (about Rs. 730 crores), as against a mere Rs. 23 crores by India. Again, U.S. private capital invested in underdeveloped countries in 1957 was \$844 million (about Rs. 406 crores), of which a little more than half was in Latin America. India, however, received only Rs. 10.4 crores, or a bare 2.5 per cent. These comparisons bring out two points: the miserable failure of India to attract foreign private capital and the vast scope that exists for getting foreign private capital, contrary to the belief prevailing in certain high places in this country. The reasons for the negligible flow of such capital into India are well known. The most important of these are the obstructive nature of the Government's economic policies and its social philosophy which is inimical to a vigorous growth of private enterprise.

The very poor inflow of private foreign investments has been offset, to some extent, by the receipt of foreign Government loans, grants and loans from such international institutions as the World Bank and the I.M.F. This trend impressively reflects the growth of the public sector. The ratio of external finance secured by the official sector to that obtained by the non-

official sector during the three years 1956-58 is around 9:1. During this period, official borrowings abroad (including unallocated rupee funds of the U.S. Government under the surplus commodity purchase arrangements) amounted to some Rs. 450 crores, raising the aggregate official liabilities to Rs. 652 crores (of which Rs. 306.3 crores were owed to the U.S., Rs. 161.9 crores to the I.M.F. and World Bank, Rs. 52.6 crores to Russia, Rs. 49.7 crores to the U.K., Rs. 20.4 crores to W. Germany, Rs. 36.1 crores to Pakistan and Rs. 25 crores to others). These were on top of a heavy depletion of official assets abroad from Rs. 1,170.5 crores to Rs. 592.1 crores; the figures include Rs. 300.8 crores, being the Partition debt due from Pakistan but which that country is now stubbornly refusing even to admit, let alone honour.

The net result of changes in the external position of non-official and official sectors is that, by the end of 1958, India had a net indebtedness abroad to the tune of Rs. 648 crores, of which foreign business investments accounted for Rs. 590 crores. On paper, the net indebtedness by the official sector appears small at about Rs. 60 crores, but, since the Rs. 300 crores due from Pakistan are fetching nothing, the net indebtedness for practical purposes is Rs. 360 crores. And this indebtedness is tending to grow rapidly, and with that the servicing of these debts will become onerous in the coming years. It is estimated that, between 1961 and 1966, India will require Rs. 500 crores or Rs. 100 crores per annum, by way of foreign exchange to repay maturing external debts and interest charges. The burden will turn out to be heavier still, if the foreign exchange requirements of the next Plan are sought to be raised through loans. And there will have to be a tremendous increase in India's exports to finance these commitments, a prospect by no means promising. One way of reducing this foreign exchange burden will be to encourage large-scale inflow of foreign private capital, as it does not impose any rigidity in regard to service charges and repayment of the principal. Economic wisdom, therefore, demands that all impediments to investment of foreign private capital be quickly removed and that the private sector be allowed to operate over a much wider area, including heavy industries, mining, power and petroleum, instead of reserving the future expansion of these industries exclusively to the public sector.

BOOM IN SHARES GOING TOO FAR? EMPLOYEE SHARES—TAKE-OVER BIDS IN U.K.—ENGINEERING INDUSTRY

THURSDAY, 5 P.M.

THE boom in share markets is still on. It seems to be a self-generating one, in that every rise in price is leading to a further rise. Although at current levels yields on equities are very low, there is hardly any liquidation by investors. With the money market being easy, speculators have not found any difficulty in taking delivery of what-ever shares that are offered. The Life Insurance Corporation, the single largest institutional investor, must be seeing a substantial capital profit on its investments in equities. Yet it is not keen on booking its profit even on a part of its holdings. Invariably, advice to sell involves a far greater responsibility than advice to buy. This is particularly so, when the trend of the market is upward and one is unable to see the limit, for, if the prices rise further after the shares are sold, there will be a tendency to criticise the adviser. It is, therefore, understandable if the Investment Advisory Committee of the L.I.C. has chosen not to bother about this aspect of the question. The lead must naturally come from the Government, which owns the corporation. But who is there to advise the Government about it? Further, the Finance Minister may be inclined to think that the L.I.C. being an autonomous body, its directors should take the initiative, but, as these gentlemen are honorary workers, they are also in the same position as the members of the Investment Advisory Committee. In such a situation, an autonomous corporation like the L.I.C. is no different from an orphan. If, instead of a monolithic corporation having the monopoly of life insurance in India, there were to be a number of insurers competing for business with one another, there would be buying and selling of equities by them according to the judgment of each one of them. This would have a restraining effect on the market, though it might not, by itself, be able to prevent the emergence of unhealthy booms.

The resignation of Mr. A. Subbiah from the Investment Committee of the L.I.C. has not caused even a ripple. When this issue was raised at a Press Conference a fortnight ago, the Chairman, Mr. P. A. Gopalakrishnan, firmly declined to be drawn into it. A week later, the L.I.C. Board accepted his resignation. Mr. Subbiah, a former General Manager of the Indian Overseas Bank, is reported to have made several diligent suggestions and also many pertinent criticisms. It would appear that there are quite a few defects in the way in which the L.I.C. is making investments. Market circles are wondering whether the Finance Minister has received a copy of Mr. Subbiah's note and got his suggestions thoroughly examined. Independent of the L.I.C. administration. The subject is important enough to merit the disclosure of the grounds on which Mr. Subbiah resigned and the suggestions, as well as the criticisms, made by him.

To revert to the boom in share markets. No-body, whether in official or in unofficial circles, seems to be concerned about it. The rise in prices of foodgrains and commodities, the high cost of production, the low productivity of workers are being discussed frequently, but not what is happening on the stock exchanges. The Forward Markets Commission has often been interfering with the working of commodity markets, in order to curb unhealthy bullish activities. The Reserve Bank has been exercising a close control on the advances against foodgrains and does not hesitate to warn the banks against over-lending. Nothing has been heard from it about the spectacular rise in share prices. Has it taken place justifiably? Is it a rise that has taken place justifiably? Is it healthy? Is there excessive speculation? Are the stock exchange authorities taking adequate steps to prevent a runaway boom?

The lack of attention to stock exchange trends is not understandable. The present boom seems to be keeping everybody happy, except the bears. Investors are gratified to find that, after the distress depression induced by T.T.K., when he was Finance Minister, their holdings are showing substantial capital appreciation and that the upward end is continuing. The speculator, who chose to long, is reaping a rich harvest. The Government and the politicians behind it are happy, because they can proudly point out that, under a socialist system of society, investors are flourishing, with the market value of their holdings being markedly up. Indeed, they can hold forth the boom in the stock exchanges as a clear refutation of the charges that are being made against them by the organisers of the Swatantra Party! The Reserve Bank is happy, as a boom enables it to raise the rate of service charges on deposits on terms more favourable to them. The industrialists are happy, or they, too, can raise more capital and expand their operations.

Why then, one may ask, are we grouching about the boom in shares? Surely, not out of any desire to give comfort to the bears, but for the sake of considering that booms and depressions are unhealthy for genuine investors. Unless checked in time, booms ultimately breed depressions and thereby inflict serious injury to the investment habit in industrial securities. In effect, they do more harm than good. They give rise to a false sense of prosperity, encourage spend-thriftiness, cause labour unrest, and provoke Governments to impose heavy taxation through undesirable levies, which, once imposed, are rarely taken off even after the emergency is over. This is more so in socialist countries where private enterprise is suspect. It is for these reasons that stock exchanges should have their own checks to restrain excessive speculation.

It will not be incorrect to say that stock exchange authorities in India have not taken any such measures this time. They have not even raised their little finger against speculators who have been buying thousands of shares worth several lakhs of rupees. Nor has the Government cared to see that they took appropriate measures.

The manner in which the stock exchanges in this country are functioning is so primitive that there are no reliable data for ascertaining the volume of business or the names of big parties operating on them. There is more secrecy than is necessary for the good of the markets themselves. It is high time the trading practices, rules and regulations, especially checks and balances, were brought in line with those obtaining on the New York and London Stock Exchanges. The system of making in New York is more effective and scientific than, for instance, in Bombay. During the current boom, the stock exchange authorities there have warned the public from time to time against buying shares at high prices. Members of the New York Stock Exchange have spent millions of dollars on advertisements designed to dissuade investors from putting their money on equities, irrespective of yield and other considerations. The President of the New York Stock Exchange has power to remove or suspend from the forward list the scrips in which the supply is not adequate and it is an expression that he does exercise it, whenever he finds it necessary to do so. If this criteria were applied to the Bombay share market, there would, perhaps, be quite a few scrips that might deserve suspension from the forward list.

It will be recalled that, in our issue of 23rd May last, we drew attention to the trends in employees' participation in the share capital of joint-stock companies, with particular reference to the experience in Britain. We had deplored then that no concerted attempt was being made by the companies in India to try this experiment. In this connection, Mr. S. N. K. Sundaram, Managing Director of the Pandyan Bank Ltd., writes as follows:

"It might be appropriate to mention that Pandyan Bank has been a pioneer, if not one of the pioneers, in establishing a scheme of employees' participation in the capital structure of the Bank. But, it is not on the lines you have mentioned, about the scheme of I.C.I. paying bonus in the form of shares to the employees. You may be aware that the employee participation in the capital of an institution is somewhat familiar among American institutions. But one disadvantage that was experienced by some of the American institutions, as gathered by me during my discussions, was that individual ownership of shares does not stay. When there is scramble for shares of an institution which has prospects of shooting up in values, the tendency of the employee shareholder is to take the profit out of his shares and spend away the money. This offered scope for unhealthy elements to exploit the institution. In fact, one of the leading institutions mentioned to me that they had to give up the issue of shares to employees on these grounds.

"The joint holdings of shares by eligible employees is considered as the safest method of participation of the employees in the shareholdings.

"As a result of my study, you will be interested to know, I have been able to formulate and introduce a scheme for Pandyan Bank employees under the style of 'Bankpandyan Family Estate.' It came into force from 1st January 1955. It is a composite employee benefit plan by the voluntary efforts of the employees with substantial support from the Bank itself. The main objects of the scheme are: (1) A long-range programme for family security of the employees; (2) a steadily building estate available to the employee at his retirement by stimulating savings; (3) financial assistance to the family of the employee in the event of his death or illness or disability; (4) contribution to the future happiness of the employee; and (5) giving the employee a share in the ownership of the Bank.

"Eligibility of membership of the Estate is for every employee who has put in a minimum of two years' service in the Bank. It is managed by an executive committee elected by the members of the Estate itself. Contribution to the fund is based on certain formula depending on the length of service and the emoluments drawn during the year of service. The Bank makes a contribution of a high percentage of the total contributions of the employees. All these moneys are pooled together and utilised only for the purpose of acquiring shares of the Bank which are held jointly by the Estate.

"The Bank no doubt helps the Committee to maintain the accounts of each of the member. But these shares become eligible for delivery to the member only in the eventuality of retirement or permanent disability and in case of death to heirs. But, in the event of resignation I

service or discharge, the amount of the value of shares is paid in cash.

"Such, in brief, are the main features of the scheme. From this, it will be observed that the Pandyan Bank is almost first in the field of allowing employees to participate in the ownership of the institution. This has worked successfully for five years and has built up abundant goodwill between the employees and the management."

Mergers of joint-stock companies are not an uncommon feature in a free and flexible industrial society. One of the methods by which such mergers are brought about is take-over bids, that is offer of one company to purchase the shares of another company, which it wants to take over in consideration for its own shares at a price, along with or without some cash payment. This price is usually more than the market value of the shares to be purchased and bears some relation to their intrinsic value. Such take-over bids are rare in India, while they are common in Britain, where the end of the credit squeeze has, to some extent, given a fillip to this practice. In fact, this trend has gained momentum in recent weeks, with an unusual spate of offers extending to such varied lines of business as manufacturing industries, insurance, publishers, brewery, departmental stores and chain stores.

Several amalgamations through take-overs have taken place in small businesses without the public noticing them. But this year, there have been such a large number of amalgamations of big business or offers for take-over in Britain that the British public have become widely concerned over them. A feature of these bids this year is the keen competition among companies to take over a particular going concern with counter-bids, as a result of which the market value of the shares to be purchased even crosses the price offered by the highest bidder, in anticipation that yet another higher bid may be made. One of the notable instances of this battle was provided by the British Aluminium Company which was sought to be taken over by Aluminium Company of America (A.L.C.O.A.) and the Tube Investments Ltd. of Britain, in which the latter won. This was some months ago. More recently, Sears Holdings made an offer to purchase a brewery group, but it was later on withdrawn, after friendly discussion between the Chairmen of the two companies. There was then a battle between Schweppes manufacturers of soft drinks, and St. Martin Prservers for Chivers, the well-known manufacturers of fruit jam.

Not so much public interest has been aroused since the battle for British Aluminium as that no going on between three groups of department stores to take over Harrods, another group, departmental stores. The first offer came from D. benhams, Britain's largest store group, followed by a counter-offer from the House of Fraser which owned less than 50 stores. The Directors of Harrods considered both the offers and recommended to their shareholders the acceptance of Debenhams' offer worth £34.5 million, as against £32.6 million offered by Frasers. A few days after the Directors' recommendation, United Draper Stores joined the battle with an offer worth £36 million. Meanwhile, the House of Frasers made them offer a little more attractive than that of Debenhams. It remains to be seen how far this battle will be carried on. Meanwhile, the Directors of Harrods have decided not to make any recommendation to the shareholders until the offers are forwarded to the latter. They have asked shareholders also not to act on any offer submitted to them before receiving the Board's comment. The three bidders have been asked to send their offers direct to the shareholders of Harrods.

Take-over bids are not as a whole unhealthy. In fact, they dissolve economic stagnation and help the utilisation of the hidden property values which have over a number of years appreciated. This is one of the main objects behind the take-over bids. They also help diversification of activities, as in the case of Courtaulds, one of the leading textile manufacturers of Britain, which, having exploited fully the opportunities in their own field, are now buying various other industries with their surplus resources and hope to get better yields on their new investments. It is less costly, in the long run, to take over a going concern than to start a fresh enterprise.

The take-over bids formed the subject matter of a debate in the British House of Commons last week, when Mr. Harold Wilson (Labour) accused the big companies of adopting get-rich-quick methods. The Chancellor of the Exchequer, however, declared that most of the take-overs to date had been beneficial rather than harmful. He added that, when considering a bid, the shareholders should always insist on enough information to enable them to judge whether the take-over would be fair to the Company's employees, as well as to themselves. He firmly rejected Mr. Wilson's suggestion to levy capital gains tax on speculative gains made through take-overs.

The priority accorded to engineering industries in the second Plan is second only to that given to steel industry. Out of the aggregate outlay of Rs. 1,094 crores on industrial expansion, engineering industries (heavy and light) account for nearly Rs. 151 crores, or 13.7 per cent. of the total; the investment actually incurred in the first Plan period was just Rs. 46 crores. This high priority was given, partly because the engineering industries are a natural corollary of steel works and partly because they provide from within the country a wide range of industrial machinery and capital equipment. To the extent these industries develop, dependence on outside sources of supply and the drain on the country's foreign exchange resources will be reduced. Viewed thus, it must, indeed, be said to the credit of the engineering industries that the progress achieved by them has

EQUITIES MAINTAIN BULLISH TREND

TATA ORDINARIES CROSS

RS. 200-MARK

(From Our Own Correspondents)

BOMBAY, 9th July

BARRING a slight decline just at the close of business today on profit-taking due to settlement considerations and rumours that sales by the L.I.C. were impending, the share market was bullish during the week under review. Equity values surged forward on keen speculative buying and short-covering to touch fresh high levels. Expectations that the Controller of Capital Issues might give permission to the T.I.S.Co. to issue the new shares at par and the more conciliatory attitude of the Government towards the private sector, indicated in the speech of Mr. Lal Bahadur Shastri at the meeting of the Central Advisory Council of Industries, and of the Prime Minister at a meeting of the Committee of the Federation of Indian Chambers of Commerce and Industry with the former, and encouraging corporate news would appear to have sustained the bullish enthusiasm. The Prime Minister is reported to have assured the representatives of industrialists that the Government had no intention either to nationalise the existing industries or to ban the establishment of large-scale units in future. He also expressed his conviction that there was a wide field for the private sector even with the development of the public sector. While activity was brisk and widespread, some of the counters were concerned in large speculative dealings. National Rayons and Premier Constructions continued to be in the limelight.

In the steel group, Tata Ordinaries forged ahead from Rs. 192 to Rs. 201.50, despite the announcement of lower output in June, as compared with the previous month. Towards the close, however, they dipped to Rs. 198. The output of saleable steel had fallen from 91,400 tons to 88,100 tons. In March it was at a high of 100,700 tons, but declined to 93,300 tons in April. The rise in Indian Irons was less marked. After gaining from Rs. 24.64 to Rs. 25.55, the shares softened to Rs. 25.10. The output of steel by the Company in June was a shade lower at 49,296 tons, as compared with 49,470 tons in May.

Textile shares, too, moved ahead and the gains in some of the counters were very marked. On expectations of good earnings on exports, Bombay Dyeings were lifted up from Rs. 65.70 to Rs. 67.60, before they closed at Rs. 66.90. Centurys moved up from Rs. 567 to Rs. 586 before finishing at Rs. 574. Kohinoors provided an exception to the general trend. The shares which had gone up by Rs. 19 to Rs. 304 in the previous week, suffered a reaction to Rs. 292. Central India too dipped by Rs. 2 to Rs. 102. Finlays gained Rs. 17 to Rs. 282. Gokaks Rs. 3 to Rs. 153 and Khataus Rs. 3.75 to Rs. 248.75. Morarji Mills rose by Rs. 4 to Rs. 261. New Greats by Rs. 15 to Rs. 195. Podars by Rs. 8 to Rs. 180 and Shree Niwas by Rs. 4 to Rs. 179. Simplex, which had gained Rs. 12 to Rs. 183 in the previous week, added another Rs. 12 this week to stand at Rs. 195. Standards advanced by Rs. 29 to Rs. 547, while Svadeshis were unchanged at Rs. 253. Swans were marked up by Rs. 42.50 to Rs. 412.50. Tatas were, however, lower by Rs. 2.50 to Rs. 39. Ahmedabad Advances picked up Rs. 13 to Rs. 150.

Bank shares were done at higher rates. Bank of Barodas put on Rs. 1 to Rs. 162. Central Bank rose by Rs. 2.50 to Rs. 53.50 and their new shares by Re. 1.50 to Rs. 54.50. Bank of India, however, declined by Rs. 2.25 to Rs. 127 and their new shares by Rs. 2 to Rs. 129. United Commercials advanced by Rs. 2.50 to Rs. 63 and Union Banks by 28 nP to Rs. 6.96.

Electricity shares attracted good attention, particularly those in the Tata Hydro group. Andhra Valleys shot up by Rs. 41.25 to Rs. 1,163.75 and Tata Powers by Rs. 65 to Rs. 1,245. Tata Hydros hardened from Rs. 116.75 to Rs. 121. Tata Hydros Suburbans improved by Re. 1.50 to Rs. 106.50, while Ahmedabad Electrics were a fraction lower at Rs. 91.50.

Belapurs provided the highlight of the sugar group, with a sharp jump from Rs. 308 to Rs. 328, before closing at Rs. 323.50. Phaltans gained Rs. 5 to Rs. 166, while Walchandnagars lost Re. 1.25 to Rs. 330. Bhopal Sugars were done 44 nP higher at Rs. 24.44. Among cement shares, Associated Cements gained strength from Rs. 152.50 to Rs. 158, but much of the earlier gain was lost today when the shares closed at Rs. 154. Disnavis dropped Rs. 2.50 to Rs. 155, while Orissa Cements gained 56 nP to Rs. 16.72 and Dalmia Cements 48 nP to Rs. 11.04.

In the engineering and mining groups, Alcocks were prominent with a gain of Rs. 8.50 to Rs. 281.50. Tata Locomotives rallied from Rs. 222.50 to Rs. 233.50, but heavy profit-taking at the close pushed them down to Rs. 225.50. Premier Constructions shot up from Rs. 356 to Rs. 384 but gave way to Rs. 371 at the close. Larsen and Toubros were featureless at Rs. 22.72 and Mahindras at Rs. 21.80. Cooper Engineerings added Rs. 7 to Rs. 159, while Brady Engineerings were maintained at Rs. 83. Shivrajputs were steady at Rs. 82 and Indian Coppers, after rising from Rs. 4.14 to Rs. 4.32, closed at Rs. 4.16.

Premier Automobiles continued to be in favour and rose by Rs. 3.25 to Rs. 127.25, while

Hindustan Motors lost 36 nP to Rs. 9.63. Shipping shares were relatively less docile. Scindias moved from Rs. 18.04 to Rs. 18.48 before giving way to Rs. 17.96. Great Easterns lost over the week 28 nP to Rs. 22.28.

In the miscellaneous group, Bombay Burnmahs (old) shot up from Rs. 556.50 to Rs. 579, but under heavy profit-taking at the close dipped to Rs. 566. National Rayons forged ahead from Rs. 336.50 to Rs. 361.50 before closing at Rs. 332. Their new shares picked up Rs. 18.50 to Rs. 341. Gwalior Rayons were done Re. 1.08 higher at Rs. 21.82. Tata Chemicals were quiet with a loss of 80 nP to Rs. 18.56 and Tata Oils were Rs. 5 lower at Rs. 67.50. Voltas too gave way from Rs. 180.56 to Rs. 175. Wincos gained Rs. 5 to Rs. 213. Cents were done Rs. 3.75 lower at Rs. 188.75. Indian Dyestuffs moved down by Rs. 70 to Rs. 860.

Calcutta Stock Exchange

CALCUTTA, 8th July

A distinctly firm trend was in evidence on the Calcutta Stock Exchange during the week under review, following more buying support on yield considerations. Operators were inclined to feel that the need for a change in the official attitude towards the private sector was gaining ground. The view was based on the concern over the falling rate of private investment expressed by the Union Commerce and Industry Minister, Mr. Lal Bahadur Shastri, when he addressed the Central Advisory Council of Industries at New Delhi this week. Some, however, doubted if Mr. Shastri's view would mean anything in the background of New Delhi policies to extract as much as possible from the private sector when the going was good. Hopes that the Controller of Capital Issues would permit the T.I.S.Co. to issue the rights at par towards the end of August were entertained; if the Government did not accord sanction by then, it was thought, some other scheme would be evolved by the Company. On publication of lower production figures for June (output of saleable steel declined from 49,470 tons to 49,296 tons and pig iron from 94,105 tons to 78,795 tons, while steel ingots production was higher at 62,510 tons, as against 57,483 tons) and fall in despatches of saleable steel (from 52,105 tons to 46,670 tons), Indian Irons were shaded but a subsequent recovery pushed up the rate in accord with the general trend of the market. Other engineering shares were favoured on good corporate news and reports of expansion. The news of expected announcement of increased coal prices by August did not induce a buying wave, as, in view of the considerable delay that had already occurred, operators were not prepared to discount expectations. The Jharia report that coal was accumulating at pit-heads owing to wagon paucity was a pointer for caution. However, the section recorded a few interesting rises. Jutes responded to the buoyancy in the goods market and several counters gained. Teas were for most part of the week subdued, but a ray of light tended to flash on good reports of Monday's auctions. Miscellaneous industrialists responded lively in active trading, though most gains were fractional and guarded. Yesterday profit-taking was in evidence.

Several counters in jutes recorded interesting activity, thanks to considered support. Anglo-India at Rs. 264 added a net addition of Rs. 11. Baranagores, though unchanged at Rs. 160, were fully firm before declining yesterday to Rs. 159 on profit-taking. Bally's gain of Rs. 3 to Rs. 232 was a temporary phase, as the rate soon gave way to Rs. 228. Aucklands rose from Rs. 185 to Rs. 191. Dalhousies changed hands at Rs. 139, as against Rs. 138 previously. Kamarhatties met with unsatisfied demand and moved up from Rs. 203 to Rs. 220. Budge Bidges were taken up to Rs. 159.50 from Rs. 145. Gourepores being pushed up to Rs. 416 from Rs. 396, previously. Champianies touched a high of Rs. 142, at which rate the week's gain was a substantial sum of Rs. 9. Profit-taking set in subsequently to lower the gain to Rs. 7.

In coals, East Indias firmed up by 50 nP to Rs. 24.44, following dividend of 50 nP per share. On good demand, Bengals at Rs. 320 added Rs. 4. At Rs. 32.37, Equitables were fractionally better. Churulis advanced by 25 nP to Rs. 3.75 on sustained demand. Burrakurs were unchanged at Rs. 17.81, while Western Bengals were raised to Rs. 6.68 from Rs. 6.31.

Paper mills met with good support on keen buying, as it was believed that working results for the current accounting period would be more satisfactory. India Pulps opened at Rs. 23.75 and gradually derived strength to rise to a high of Rs. 27.06, when profit-taking set in to reduce the gain to Rs. 25. Ballaparas at Rs. 36.75 were better, while Titaghurs, after remaining unchanged for most part of the week at Rs. 44.50, closed lower at Rs. 44.37. Orients opened at Rs. 36.75, moved down to Rs. 36.60 and rose again subsequently to Rs. 36.90.

Sugars received more attention. Carew and Cos. continued to advance and touched a high of Rs. 15.50, as against Rs. 11.75, before closing fully steady at Rs. 14. Raza Bulands were done at Rs. 14, as against Rs. 13.94 previously, although the dividend for 1958 at 124 per cent. compared unfavourably with 15 per cent. for 1957.

In the engineering group, Jessop and Cos. changed hands at Rs. 30.75, as against Rs. 30.56

earlier, but closed lower at Rs. 30.50. It was announced this week that, for 1958, the dividend would be 6 per cent, as against nil for 1956 and 1957. The Company, which was until recently a Management under Government direction, is expected to show better results, as expansion plans for manufacture of electric multiple unit coaches and road rollers have been completed. From which is planning to hand over its new steel rolling mills to a proposed new company in which Bhartia shareholders would be offered shares at Rs. 17.50 and Rs. 17.37. Indian Irons opened at Rs. 24.76 and, after giving way to Rs. 24.63, hardened to Rs. 24.97. Indian Galvanizings were in good demand at Rs. 21.56, as against Rs. 21.94 earlier.

A strong feature in the miscellaneous group was National Cables which at Rs. 38.05 recorded a handsome gain of Rs. 3.06. Aluminium Corporation after rising to Rs. 15.81 from Rs. 15.12, Rs. 18.25 to Rs. 17.75 and Rohas Industries from Rs. 23.06 to Rs. 22.75. From Rs. 23.06, Phillips India recovered to Rs. 23.19. In Lal Tobaccos, after being lower at Rs. 12.12, as against Rs. 12.44, advanced to Rs. 12.69. At Rs. 5.12, B.I.C.'s registered a small gain, as did National Rollings at Rs. 16.75. Balmer Lawries, after giving way to Rs. 215, regained to Rs. 220 to lose again to Rs. 216. Dunlop Rubbers at Rs. 34.06 were better before being pushed down to Rs. 33.75. National Carbons declined from Rs. 33.50 to Rs. 32.94 before recovering to Rs. 34.87.

Madras Stock Exchange

MADRAS, 8th July

The Madras Stock Exchange continued to rule firm during the week under review. Investment support was quite sustained, but offerings were limited, as floating stocks were scarce. Textiles tended to move up on reports of encouraging offtake of yarn and piecegoods. Selected sugar scrips met with good enquiries. Tea shares were fancied on hopes of better outlook for South Indian tea following damage to crops from floods in the major plantation areas of Assam and the labour strike in Ceylon. Reports of higher prices fetched at the recent tea auctions also imparted strength. Rubber shares attracted keen attention of operators, thanks to expectations that the Tariff Commission would recommend an upward revision in prices. Reports of large world coffee surplus, particularly in view of the approaching coffee season in Brazil, had no effect. In sympathy with teas and rubbers, coffees too ruled strong. Trading in miscellaneous industrialists was active. Inspired by excellent demand, many scrips registered a handsome improvement in prices.

Among sugars, Kiriampudis spurred by Rs. 4 to Rs. 70. E.I.D.s gained a rupee to Rs. 40.25. Indias and Travancores advanced by 10 nP each to Rs. 12.10 and Rs. 12.20, respectively. United Breweries were firm at Rs. 450. Cauverys, however, came in for selling and fell by Rs. 4 to Rs. 115. Mysore receded by a rupee to Rs. 50. Deccans shed 8 nP to Rs. 12.67.

In the tea group, Ouchterlony's hardened by 13 nP to Rs. 5.68. Kil Kotagiris and Periakaramalais picked up 5 nP each, the former to Rs. 8.35 and the latter to Rs. 4.13. Halleyburys were fully steady at Rs. 20.50, as also Nonsuch Teas at Rs. 26.78. Balanors at Rs. 20.50, cum-div., Chembras at Rs. 4.28 and United Nilgiris at Rs. 20.30. Among coffees, Babuddins strengthened by a rupee to Rs. 17, following the announcement of a bonus issue in the ratio of one new share for every one held. Anapara's gathered 25 nP for every one held. Coffee Land's rose by Rs. 15 to Rs. 5.10 and by 10 nP to Rs. 6.70. Osoors put on 8 nP to Rs. 3.90. Sangameshwars rose by 6 nP to Rs. 2.76 and rubber group, Malankaras evoked an enlarged demand and improved by 37 nP to Rs. 19.62. Rajagiris increased by 25 nP to Rs. 18.18. Malabars gained a like amount to Rs. 6.85. Highlands rose by 10 nP to Rs. 12.25. Thrumbadils were a shade higher at Rs. 1.99.

In the textiles section, Buckinghams and Metturs advanced by a rupee each to Rs. 186 and Rs. 398, respectively. Radhakrishnas improved by 75 nP to Rs. 123.75. Cannanores by 50 nP to Rs. 151.50. Coimbatore Cottons were firm at Rs. 142. Coimbatore Pioneers at Rs. 280, and were subjected to selling pressures and fell from Rs. 124 to Rs. 119 cum-div. The Directors of the year ending 31st March 1959 at the last year's level of 12 per cent. tax-free.

Rallis provided the bright spot in the miscellaneous section, the quotation rising by Rs. 3.50 to Rs. 70. Textools hardened by 75 nP to Rs. 188. Mysore Papers advanced by Re. 1.30 to Rs. 21.75. Travancore Chemical Manufacturings rose by 75 nP to Rs. 15.00. Orissa Cements improved by 70 Motors gathered 50 nP each to Rs. 7.55 and Rs. 16.50, respectively. Dalmia Cements gained 45 nP to Rs. 11.05. F.A.C.T.'s rose by a like amount to Rs. 10.20. Mettur Chemicals were higher by 15 nP at Rs. 13.40. Parrys picked up 12 nP to Rs. 4.35 and Travancore Cements 10 nP to Rs. 9.75. India Cements increased by 7 nP to Rs. 6.30. Western India Plywoods were fully maintained at Rs. 172.50, as also Spencers at Rs. 20.25. Mysore Electrical Industries were dull at Rs. 125, despite announcement of higher dividend of 15 per cent. tax-free for the year ended March 1959 as against 11 per cent. distributed in the previous year.

NEWS IN BRIEF

THE West Bengal Government proposes to change its Transport Directorate into a company. It has already sought the permission of the Company Law Administration for this purpose.

Those established importers and actual users who hold licences for cellulose acetate moulding powder are now permitted to import cellulose acetate flakes and plasticisers in the normal proportion in which these are blended in the moulding powder upto the full face value of the licences.

A seven-member committee has been set up by the Government of Bombay to rehabilitate the slum dwellers in the city. The Committee will explore the possibilities of providing, in co-operation with the Municipal Corporation, hutments to slum dwellers on a monthly rent of Rs. 10.

The Government of India, in exercise of powers conferred under Section 18A of the Industries (Development and Regulation) Act, 1951, has taken over the Atherton West Mills Company Ltd., Kanpur. Mr. S. K. Chaudhri, I.A.S., has been appointed the Authorised Controller of the Mills.

The convention of the International Maritime Consultative Organisation has been ratified by the Government of India, subject to certain reservations designed to facilitate smooth and orderly development of Indian shipping. If no objection is raised by the member-countries to the reservations sought, India will become a party to the convention.

The Union Government proposes to set up a security paper mill at Hoshangabad, estimated to cost Rs. 5.5 crores, in addition to the Security Printing Press at Nasik. The contract for the construction of the mill is expected to be awarded to Messrs. Portals Limited, a British firm, from which India has been importing security paper worth Rs. 85 lakhs annually.

The heavy electrical equipment factory, now being established at Bhopal, will have a capacity to manufacture equipment worth Rs. 25 crores annually, as against the original schedule of Rs. 12.5 crores. As a result of the expansion in productive capacity, the cost of the project has been revised upward from Rs. 52 crores to Rs. 70 crores. The factory is expected to commence operations in January 1961.

Central assistance to States for housing schemes in 1959-60 will be increased by Rs. 5.2 crores to Rs. 17.40 crores. Of the enhanced provision, subsidised industrial housing accounts for Rs. 5.35 crores, (as against Rs. 4.23 crores in 1958-59), low-income group housing for Rs. 6.01 crores (Rs. 5.81 crores), slum clearance for Rs. 3.86 crores (Rs. 3.81 crores), village housing for Rs. 2.05 crores (Rs. 1.7 crore) and plantation labour housing for Rs. 12.50 lakhs (Rs. 2.37 lakhs).

With a view to restricting the practice of issuing duplicate or even triplicate shares indiscriminately by companies, the Government of India has framed rules governing the same. The rules provide, among other things, for the issue of share certificates only under the authority of the resolution of the board of directors of a company and cast the responsibility for the safe custody of these certificate-forms and other connected papers on selected officers of the Company concerned.

A five-year bonus agreement covering the period 1957-61 has been signed in Bombay between the Life Insurance Corporation and its two rival trade unions. Under the agreement, the staff of the Corporation in the supervisory, clerical and subordinate grades enjoying a basic salary of Rs. 500 or less per month will be entitled to a cash bonus at the rate of one and a half month's basic salary of the employee as on 31st December of each year of the agreement.

The detailed project report on the establishment of an optical and ophthalmic glass factory at Durgapur, West Bengal, prepared by Messrs. Technoexpert of the U.S.A., has been submitted to the Union Ministry of Commerce and Industry. According to the report, the factory will have a capacity to produce 200 tons of ophthalmic glass and 10 tons of optical glass per year. This is one of the projects covered under the 500-million rouble credit extended by the U.S.S.R.

From Abroad

The French Government proposes to liberalise further imports of goods and commodities from the O.E.E.C. countries as well as those from the dollar areas.

The Government of Ghana has decided to extend the tax holiday for new companies from the present five-year period to such time as the Company recovers its initial investment.

Some 14 million West German wage and salary earners now enjoy a work week of less than 48 hours. Three-fourths of them do not work on Saturdays. Of the Federal Republic's total labour force of some 19 million, about 4 million work less than 45 hours per week.

At the start of this year, there were 124 million holders of insurance policies in the United States and the value of their policies came to a record \$550,000 million, according to the Life Insurance Fact Book. The average amount of insurance held by the American family rose to \$11,000, also a new high.

PERSONAL

DR. Radhakrishnan, Vice-President of India, left Calcutta for Hong Kong on the 5th inst. He will visit the Philippines, the U.S. and West Germany.

Mr. L. M. Jamnadas has been elected President of the Indian Rubber Industries Association for the year 1959. Messrs. S. P. Saha and Basheshar Nath have been elected Vice-Presidents. Mr. K. V. Modak will be the Honorary General Secretary.

Col. Majeed Malik, Principal Information Officer, Government of Pakistan, has been appointed Colombo Plan Information Officer in place of Mr. P. K. Chatterjee of India, who will complete his term of office and rejoin the Government of India in November next.

Mr. George L. Anderson has been appointed Managing Director of the Firestone Tyre and Rubber Co. of India Private Limited, in succession to Mr. Andrew D. Wenzel who left India on 30th June to take over charge as the Managing Director of Firestone in the United Kingdom. Mr. Anderson was formerly the Production Manager and Factory Manager of Firestone-India and was made a Director of the Company in October 1945.

goods." It declared that the Soviet Government did not intend to buy any substantial quantity of consumer goods.

The assembly of big cars in Pakistan has been stopped for some time to come, according to the Finance Minister, Mr. Shoaib. He said no funds would be allocated from Pakistan's foreign exchange for imports of big cars. In his Budget for the current fiscal year, Mr. Shoaib increased the duty on big cars from 107 per cent. to 250 per cent. On medium-sized cars the duty has been raised from 107 per cent. to about 150 per cent. On small cars costing about £350, the duty has actually been reduced from 107 per cent. to 60 per cent. Companies assembling cars—General Motors and All Automobile—would be affected by the decision.

THE CHANGING FACE OF INDIA

the weir & the well

Hovering over the land like a giant cloud, the dam holds the promise of fertility. Where before seasonal wells precariously watered the parched land, today canals from multi-purpose projects irrigate millions of acres all year round.

From the well to the weir—a phrase which symbolises the story of India's progress.

All over the country, in every field of endeavour, a better way to do the job is being found. This needs money... a lot of money. And here the Life Insurance Corporation plays its part. More than a million rupees a day are invested by the Corporation both in the public and the private sectors.

Corporation funds are employed to building dams, to mechanising agriculture, to erecting factories—in fact, to bringing about a modern and prosperous India. And along with the Life Insurance Corporation, every policyholder plays his part in building a better life for himself and the generations to come.

 Life Insurance Corporation of India

ASPLUCE 12

ECONOMIC FREEDOM

JUDGING from the enthusiastic response which Rajaji received in Bombay this week and the applause of approval with which his utterances were greeted, it looks as though it will not be long before the Swatantra Party, which he has chosen to guide, strikes its roots in the Indian soil. To many, Rajaji now represents a Messiah who preaches the new gospel of *Swatantra*, of self-reliance, and not mere freedom from Governmental interference. He was at some pains to explain to his admiring audience the many nuances of the Sanskrit word *Swatantra*, which signified something infinitely richer than the English word "freedom." He said that, whereas "freedom" was a negative concept, indicating freedom from external authority, its Sanskrit equivalent not only included that concept but went beyond it to connote one's reliance on one's own worth and ability. Clearly, *swatantra* is more in tune with the best in Indian traditions which insist on sustained human endeavour and the dynamic expansion of human personality. This is the very antithesis of "stateism" with its pernicious tendency to reduce the individual to the status of a slave, without the saving grace of a human master, who is replaced by a relentlessly impersonal bureaucracy.

The accent in all Rajaji's speeches fell on the supreme importance of safeguarding personal freedom and the freedom to pursue one's avocation against their encroachment by the State. With apt illustrations and parables, for which he is justly famous, he stressed the need for increasing wealth before attempting the task of distributing it. He spoke too of the continued exercise of power by the Congress which had made its members "careeristic, selfish and greedy." The Congress, he said, had indulged in over-government. Its policies were based upon the distrust of the people. Singling out for special attack the Government's land reform policy, in general, and its move to set up co-operative farms in particular, Rajaji declared that these measures would not lead to increased food production. State trading in food-grains would inevitably result in increased costs, for the Government could never manage a trade in as frugal a manner as a merchant. He deplored that the Congress, out of a sense of defeatism, was borrowing its policies from the Communists. If a policy was wrong, Rajaji said, it was wrong whether it was the Congress or the Communists that carried it out.

Although the Party's spokesmen are understandably reluctant to commit themselves to any particular statement on some of the specific issues like the linguistic redistribution of States, which agitate the public mind in particular regions, it is apparent that they have clearer ideas on the major economic issues. Thus, they attach considerable importance to the retention of peasant proprietorship. They would also like to see the early removal of the uncertainty from the minds of self-employed groups who might find themselves in a difficult position through the steadily increasing encroachment of the State into the economic sphere. Rajaji said: "Everybody, whether he is in small business or big business whether he holds a few acres of dry land without water in the well or whether he holds a few hundred acres under an irrigation scheme, whether he is a printing press owner or an iron foundry man, whether he is a motor repairer or whatever other occupation he may be in, is in doubt as to what will happen to his business." This is a depressing uncertainty. To the extent the Party has sworn to remove it, it is bound to have a great appeal to the self-employed groups and business men.

Above all, the Party stands for the restoration of freedom and individual initiative into a position of prominence in the country's economic life. This is a vital contribution to practical economic thinking. "Happiness," Rajaji said, "has to be produced through individual exertion as a result of encouragement, hope, facilities and inspiration to work." He rightly felt that neither industry nor agriculture would flourish if they took away individual responsibility for

work done. The sense of individual initiative as well as of individual responsibility, as is well known, is blurred in a socialist State. An even greater danger is that such a State cannot always ensure greater production, so that it will inevitably resort to more and more coercive methods. The Swatantra Party would like to see the area of Governmental activity reduced to the minimum.

Appropriately enough, the Party draws its inspiration from Gandhiji's words that the Government which governs the least is the best. Through persistent effort, the Party should be able to convince the electorate that neither "over-government" nor "stateism" is a solution to our economic problem, that power corrupts and absolute power corrupts absolutely, and that, in the ultimate analysis, it is individual effort and initiative alone that can increase the country's wealth and lead it to prosperity. It is true that these concepts are somewhat too abstract for the Indian electorate at its present stage of political education. But the average Indian has a great capacity for abstract thinking. It should not be difficult to make him see the dangers of a State, armed with vast powers for controlling the economic destiny of each of its citizens.

COMMUNITY DEVELOPMENT

There has of late been a critical examination of the Community Development Programme and its relationship with the wider aspects of development and administration. In spite of the sound principles of economic and social reconstruction underlying it, the creation of a separate Ministry for it and an outlay of about Rs. 200 crores (including people's contribution) for its implementation during the past seven years of its existence, it cannot be said that, in all areas, the Programme has produced results commensurate with the effort and attention devoted to it. Far from being a people's movement for their own betterment, this Programme, unfortunately, still depends on official spoon-feeding for keeping it alive. Mr. S. K. Dey, Union Minister for Community Development and Co-operation, however, claims that, apart from increasing the people's awareness for a better standard of living, the Programme has increased the standard of living, in the villages which have benefited by it, reduced corruption and changed many wrong practices.

Experience gained so far has induced some rethinking on the role of Community Development Programmes and the methods of administering them. It has been realised that the Programme has no chance of being a people's movement, as long as it is dominated by bureaucratic agencies. The Study Team for Community Development and National Extension Service appointed by the Committee on Plan Projects, after a comprehensive study, made some important recommendations for the reorientation of the Programme. Most of these recommendations are in accord with the approach of the Programme Evaluation Organisation of the Planning Commission. The main recommendation of the Team was for the "democratic decentralisation" of the Community Development Programme, that is, transfer of the responsibility for planning and execution of the programme to representatives of the rural population. This principle has been accepted by the Central and State Governments. Seven States have already initiated the necessary legislation and others are expected to follow suit.

The conference on Community Development, scheduled to be held in Mysore towards the end of this month, is expected to finalise the scheme for vesting the responsibility for Community Development on *panchayats*, co-operatives, and other village organisations. Disclosing this, Mr. S. K. Dey said at New Delhi this week that a sum of Rs. 400 crores is the estimated expenditure on Community Development in the third Plan and that, by the end of the Plan period, it was proposed to bring nearly all the 550,000 villages under the Programme. This sum is more than three times the Government expenditure on Community Development so far. From 2nd October 1952 upto the end of March 1959, Rs. 125.58 crores were spent by the Government. People's contribution, in terms of cash and voluntary labour, amounted to Rs. 72.76 crores. A sum of Rs. 90 crores more is expected to be spent during the rest of the second Plan period.

Since a substantial sum is being earmarked for Community Development, it is necessary to underline the need for proper emphasis. The tendency in the past has been to stress welfare activities more than economic development activities. This can be attributed to a

misplaced zeal for making an impression on the villager of what the State is doing for him. Welfare activities are popular, easy of achievement and impress the casual observer. The villager himself, often unable to understand even the meaning of the terms Community Development and National Extension Service, gives a full measure of his admiration and gratitude for the people who have brought him these amenities. As the Study Team itself had urged, the emphasis should shift to the more demanding aspects of economic development. An intensive programme of economic development, it rightly pointed out, would generate a demand for a programme of amenities. Greater stress on the former, especially in the initial stages, would gradually lead to the latter.

It is heartening to note that the Ministry of Community Development has seen the logic of this reasoning. A reflection of this is to be found in Mr. Dey's statement that the Community Development Programme will intensify efforts to increase food production and, with this end in view, more attention will be devoted to improving agriculture. The Programme will also lay equal emphasis on development of small-scale industries.

While these proposed steps are in the right direction, it is to be doubted whether it is equally wise to seek to bring all the villages in the country within the fold of the Community Development Programme in the third Plan period itself. Mr. Dey himself admits that past experience has brought to light the basic shortage in personnel, supplies and training facilities necessary to implement the Programme. Attempts are no doubt being made to increase the availability of personnel and supply. Has the situation improved to such an extent as to warrant the extension of the programme over the entire country-side? The Study Team as well as the Programme Evaluation Organisation had pointed out that it was advisable to confine an intensive programme in fewer areas rather than extend it in a diluted version over the entire country. The desire for rapid coverage should not blind the authorities to the difficulties in the way of extending the programme. Surely, one should not bite more than one can chew.

FOREIGN ASSISTANCE

Like any other underdeveloped country, India too continues to find itself in a vicious circle of low incomes, resulting in a low rate of saving and a low rate of capital formation, notwithstanding over eight years of planning. In a situation such as this, the part played by foreign assistance is, indeed, very vital. Foreign assistance, as Mr. Manubhai Shah, Union Minister for Industry, remarked in the course of a talk broadcast from All-India Radio on Sunday this week, provides a part of the capital necessary for the large investment for rapid industrialisation and also bridges, by bringing in technical experts and know-how, the gap between the need for and the supply of technical knowledge, as well as trained personnel, required to carry through the development programmes. What is more, technical collaboration and assistance in building up new projects have also been of great importance. According to Mr. Shah, a large number of our industrial projects today have the distinction of being among the most modern and efficient plants, thanks to the technical assistance received for their design, construction and technical know-how. The total of external assistance authorised to-date by foreign Governments and institutions is estimated at Rs. 1,423 crores. Of this amount, the sum actually utilised until September 1958 was about Rs. 690 crores.

Equally important has been the role of private foreign capital. The value of foreign business investments in India has gone up since 1948 at an annual rate of nearly Rs. 29 crores. The aggregate of these investments at the end of December 1958 was of the order of Rs. 590 crores (tentative estimate), as against Rs. 256 crores in June 1948. Stressing the importance of private foreign capital, Mr. Shah said: "Small though the amount, it has over the years meant a sizable increase in the savings available for investment. ... There has been hardly any disinvestment which has been the bane of newly independent countries. This in itself is a very satisfactory indication of the potentialities of future inflow." Mr. Shah revealed that, since 1948, there had been over 500 cases of foreign technical collaboration with Indian enterprises for setting up new units and for organising manufacture of new products.

While foreign assistance plays a vital role in speeding up development thus, it will not be a correct approach if too much reliance is

placed on it. The rate of development must depend, as Mr. Shah very pertinently emphasised, primarily on the effort that we can put in towards the fulfilment of development programmes. "For this," to quote Mr. Shah, "we must be prepared to face every temporary or long-term hardship and to make the fullest use of our existing equipment to accelerate production of all commodities." Few would understate the need for such sacrifice on the part of the people, but what everyone stresses most is that the authorities must follow correct economic and fiscal policies and that the enormous sums of money collected by the State as taxes are spent wisely and not frittered away in implementing highly idealistic, grandiose schemes.

CAPITALISM IN U.S. BENEFITS WORKERS

The productive efficiency of the capitalist system has never been seriously questioned even by its worst critics. It is its distributive mechanism that has come under fire by socialist thinkers of the nineteenth century. Over the years, however, the distributive mechanism, too, has undergone changes, thus strengthening the system in the estimation of the public. Karl Marx, who envisioned the breakdown of capitalism through its own inner contradictions, would, if he were alive, be dismayed at seeing capitalism growing from strength to strength in countries like the U.S., the U.K. and West Germany. He might, perhaps, refuse to believe his own eyes as he sees that, contrary to his prediction that the development of capitalism would speed up the polarisation between the capitalist "haves" and the proletariat "have-nots," leading inevitably to the clash between the two and the equally inevitable victory of the latter over the former, the class barriers in these countries are disappearing and that the workers and their unions are emerging as ardent supporters of the capitalist order.

This transformation of the capitalist system is reflected in a study undertaken by the U.S. Department of Labour. It reveals that the wage-earner in the U.S.—the blue-collar (factory) and white-collar (clerical) workers—have become the most important consumers of the products of the nation's economy. Not only that, the standard of life of the wage-earner has become "well-nigh indistinguishable" from that of his salaried co-citizens. According to their study report, "their homes, their cars, their baby-sitters, the style of the clothes their wives and children wear, the food they eat, the bank or lending institutions where they establish credit, their days off, the education of their children—all these are alike and are becoming more nearly identical."

Under the free enterprise system, American workers have achieved unprecedented levels of material and social well-being. Basic to the ability of the American working men and women to achieve their present standard of living has been the thriving industrial production under its free enterprise system. With only 6 per cent. of the world's population and 7 per cent. of the land area, the U.S. produces more than one-third of the world's goods. The high rate of power application, the development of production tools and techniques and the availability of raw materials have also been basic factors in this phenomenal production. Other contributory factors, according to the report, are "the experimental bent of the American business man in a free enterprise economy, his surprising freedom from tradition and custom and a mobile and adaptable work force."

American trade unionism has had a powerful impact on the economic scene. Rejecting socialist orientation and the theory of class conflict nearly half a century ago, American trade unions have helped to bring capitalist production to full fruition. In fact, trade union growth was in part a response to expanding productivity and the workers' desire to share in it. As Mr. James Mitchell, Secretary of Labour points out, American workers gained not only in material things "but also in many things that may be termed spiritual." They now have "more time to read, to learn, to think, to dream, more time to restore the body and to heal the mind."

PAKISTAN'S FINANCES

The Pakistan Government budget estimates for 1959-60, announced on the radio on Tuesday last week by Mr. M. Shoaib, the Finance Minister, cannot be compared with those for previous years, in view of the change in the

fiscal year from the British pattern (April-March) to the American pattern (July-June). The estimates disclose a revenue surplus of Rs. 2.63 crores, the aggregate revenue receipts and expenditure being placed at Rs. 154.08 crores and Rs. 151.45 crores, respectively. It is, however, not known from the Press version of Mr. Shoaib's broadcast talk whether this surplus has been arrived at after or before taking into account the new taxation measures to bring in an additional revenue of Rs. 4.37 crores in 1959-60, as well as the proposed relief in direct taxes to the tune of Rs. 32 lakhs.

The new tax measures impose a fresh burden on the common man, who is now asked to pay higher excise duty for his requirements of cotton cloth (all varieties excepting coarse cloth), matches, vegetable products and cigarettes, and enhanced sales tax of 10 per cent. (as against 4 per cent. hitherto) on leather goods. The sales tax on cotton yarn is also raised from 6½ to 10 per cent. By way of some relief, the Finance Minister has sought to lower the duties on a few items of daily use such as spices, reduce rail fares and exempt coarse cloth from the enhanced excise duty. Sales tax on locally manufactured gold and silver ornaments and jewellery has no doubt been abolished altogether, but the benefit will be derived only by a negligible minority of the country's population.

In the sphere of direct taxation, two further concessions have been announced. First, inter-corporate tax—that is, tax on investments in other companies—has been reduced to 15 per cent. in the case of holdings in approved undertakings. Secondly, the maximum profit limit for 5 per cent. rebate is raised from Rs. 25,000 to Rs. 2 lakhs. These concessions, together with those announced in the interim budget for April-June 1959 presented on 31st March last, namely, abolition of business profits tax, a two-year tax holiday for limited companies established after 1st April 1959, if the industry is primarily based on Pakistani raw materials, and removal of distinction between public and private companies, certainly signify the welcome determination on the part of the authorities to accelerate the pace of industrial expansion and development through the private sector.

The Finance Minister has not announced any relief in personal taxes beyond the concessions granted in the interim budget. These concessions, it will be recalled, included the raising of income-tax limit from Rs. 5,000 to Rs. 6,000, fixation of the maximum tax payable by any taxpayer at a level not exceeding 75 per cent. of his income, reduction in the marginal rate of tax from 87.5 per cent. (in certain cases, 97.9 per cent.) to 80 per cent., and tax exemption to foreign technicians for a period of 24 months (and not for two financial years).

That the Pakistan Finance Minister has been able to give so much of tax relief to companies and individuals as is indicated above is, indeed, commendable, especially when the nation has committed itself to spending very heavily on defence. Out of every Rs. 2 the Government gets by way of revenue, as much as Re. 1.11 represents defence expenditure, excluding the large-scale expenses incurred in connection with the induction of U.S. military aid. The sum actually earmarked for defence expenditure in the 1959-60 budget is Rs. 86 crores (exclusive of U.S. military aid), or more than 55 per cent. of the anticipated total revenue receipts of the Government, including the net receipts of the Railways and the Posts and Telegraphs Departments after allowing for working expenses. Certainly, to incur defence expenditure on a scale which is so disproportionately high is to do injustice to the urgent nation-building activities by depriving them of their just dues. In India, it may be noted here, the proportion of defence expenditure to the aggregate revenues of the Central Government and the net contribution from Railways together comes to just 31 per cent.

The capital expenditure of the Pakistan Government for the current year (1959-60) is estimated at Rs. 159.66 crores, the largest portion of the sum being allotted for direct outlay by the Centre and loans to the Provinces. No information is available as to how exactly this large amount will be raised, but it is gathered that a sizable part is expected to be met out of foreign aid. The Finance Minister of Pakistan has taken credit for a total foreign aid of Rs. 56 crores (\$117 million), as against Rs. 52 crores (\$110 million) in the previous year.

The budget speech of Mr. Shoaib is notable for the declaration of the Government's intention to accord greater scope to private enterprise. "In line with this policy," he said, "it has been decided gradually to transfer some of the

industrial assets of the Government-owned Pakistan Industrial Development Corporation to the private sector, provided this can be done without upsetting production and without disturbing the stock market."

The review of the recent economic trends made by the Finance Minister may be summed up thus:

Agriculture: Agricultural production is lagging behind the requirements of the country's growing population.

Industry: Pakistan is witnessing a marked increase in industrial production, despite the shortage of imported raw materials and spares. Expansion is remarkable in cotton and jute manufacturing industries. There will be a substantial addition to the country's industrial capacity in a few years immediately ahead—in the field of cement, sugar, fertilisers and newsprint. A number of important new ventures will be started by foreign enterprise in association with Pakistani capital. Arrangements will soon be completed for the establishment of an oil refinery and talks are also in progress with a foreign company for the setting up of a plant for the liquification of natural gas for export.

Foreign trade: Although the total value of exports has not risen significantly, there has been an encouraging increase in some exports. For instance, exports of cotton textiles during the first four months of this year (1959) were more than double those in the whole of 1958. Unfortunately, export trade in raw cotton and jute is not such as one would wish. Export of raw cotton has fallen and Pakistan is losing its monopoly position in jute. Pakistan is particularly concerned with the fall in tea exports; from an average export of 25.5 million lbs. between 1952 and 1957, they had declined to 7.2 million lbs. in 1958. This year, however, exports have shown some signs of recovery.

Money supply: As a result of self-discipline introduced by the new regime, the rise in the volume of money in circulation has been halted and even reversed in the first quarter of 1959. By the end of March 1959, money supply stood at Rs. 545.14 crores, a reduction of Rs. 5.55 crores since the beginning of the year.

The Finance Minister of Pakistan clearly stated that the country would continue for sometime on "strict import ration." He, however, held out prospects of increased availability of imported goods for industry with the help of the U.S. Acknowledging the "great contribution" made to the Pakistan economy by the U.S. loans and aid, he said: "Part of the American aid has taken the form of goods. In 1958-59, the U.S. gave to Pakistan no less than \$80 million and promised \$15 million more for 1959-60, as a result of my visit to this country. The American Development Loan Fund approved in 1958-59 Pakistan's application for loans aggregating \$101.75 million. Another application for \$82.4 million awaits the sanction of the Fund." He also welcomed the recent offer of 170 million marks assistance from West Germany. Explaining the importance of foreign aid, the Finance Minister observed that, without large foreign aid, Pakistan could not expect to accelerate the pace of development in such a way as to increase production and income. This statement holds good as much in the case of Pakistan as in that of any other underdeveloped country striving to raise the living standards of the masses. Even so, it must be asked as to whether it would not be wise on the part of the powers-that-be in Pakistan to cut down defence expenditure to a reasonable level, thereby releasing a substantially larger sum for implementing programmes of economic development.

THE THIRD PLAN

Much discussion on the shape and size of the third Plan has been going on for the past eight months. It is now taken for granted that the outlay on the third Plan, including both the public and private sectors, will be of the order of Rs. 10,000 to 11,000 crores, as against Rs. 7,200 crores in the current Plan. Some believe that this outlay errs on the high side and hence too ambitious. There are others who refuse to share this view. The success of the Plan, in any case, depends not so much on the lofty targets set, but on the availability of requisite resources to finance the Plan and the personnel who will see it through. If experience in the second Plan so far is any guide, one fails to understand how it would be possible for the planners to procure more and more resources without landing the economy into chronic difficulties. Here, too, opinions differ. Dr. B. K. Madan, Principal Adviser, Reserve Bank of India, in the course of a speech at the Rotary Club, Bombay, last week, held the view that it was possible to find adequate solution for the resources problem on the technical plane of the third Plan, as envisaged at present. He hastened to add, however, that any solution would call for courage in political leadership, efficiency in administration and

rigour in execution supported by broad-based public co-operation and understanding of the purposes and *modus operandi* of the Plan. But these conditions are more easily prescribed on paper than implemented in actual practice.

To raise internal resources for a plan of the magnitude now proposed is a matter of no easy solution. Dr. Madan did recognise this. He conceded that "prodigious effort" in mobilisation of the savings of the community through taxation and borrowing in diverse forms will be required to finance the Plan, even assuming larger external assistance and a larger part in the projected investment by the private sector. The role of deficit financing, he maintained, should remain limited, particularly because a great deal of credit creation would otherwise be necessary to finance development in the private sectors, including that of co-operatives, or to finance activities, such as State trading, which replace existing private sector enterprise. Besides, deficit financing has the disadvantage of increasing economic inequality. He made it clear that all strata of the community should be ready to bear additional burdens in direct and indirect taxes. Put in a nutshell, a period of "some real austerity" is ahead. He warned against falling into the fallacious train of reasoning which demanded at once a bigger plan, lower taxes and less deficit financing. In this connection, he pointed out that the incidence of taxation on the agricultural sector was inordinately low. Unless a way was found to raise it appreciably, simultaneously with an increase in the rest of the economy, it would appear difficult to devise a rational method of financing the Plan.

Commenting on the prospects for external assistance, Dr. Madan observed that, in order to implement a Plan of Rs. 10,000 crores, external resources to the tune of Rs. 2,500 crores might be required. Of this, about Rs. 500 crores would be needed for repayment and servicing of the debts outstanding at the end of the second Plan. Admittedly, there is no scope for further scaling down of sterling balances. It is anybody's guess whether the developed countries of the world and the world organisations will be inclined to render economic aid of this order. But this does not mean that India should not try to obtain such help or does not deserve it.

On the place of the private sector, Dr. Madan thought that an investment of Rs. 4,000 crores was well within practicability, because in the second Plan itself this sector will have invested, according to his calculation, Rs. 3,000 crores. He, however, observed that the fact that investment in the public sector had to expand at significantly larger rate limited the possibility of expansion of investment in the private sector above a moderate level.

LONDON LETTER

SHORTAGE OF INK IN FLEET STREET

(From Our Own Correspondent)

LONDON, 4th July

It is possible that, by the time this Letter appears in print the printing dispute, or if not that, the ink dispute, will have been resolved. At the moment, the chances are brighter in favour of the latter than the former, but the issues are substantial enough to make them worthy of comment in any event: that is, that if the disputes are not resolved, there will be no newspapers next week, and, virtually, no printing in the United Kingdom in any shape or form. The whole industry of disseminating news and information to the British public will have come to a stop.

There are, of course, two disputes. The first, which is three weeks' old, is a dispute between the Master Printers and the various Unions representing the printing workers; the second, which came to a head this week, is a dispute between the makers of printing ink and their employees. What many people and the newspaper industry in particular find exasperating is that the national Press which employs its own printers and is not involved in any dispute will be brought to a stop, simply because one of its raw materials will be cut off. Similarly, many printing works which are now carrying on because their owners have made individual agreements with the Unions will also be put out of work through lack of ink. In short, the publishing trade, which is not involved in the dispute at all, is grinding to a standstill this week-end, either because of lack of printing facilities or of lack of ink.

Although at the time of writing the general expectation is, indeed, that no papers will appear on Monday, this is only because of an understanding between the various journals that, if one is unable to appear because of a dispute for which it is not directly responsible, the others will not appear either. Not surprisingly, supplies of ink are not uniform throughout the trade and talks are at the moment being held with the Unions representing the ink-making workers to get their agreement to a pooling of supplies between the various printing undertakings. If this is done, then the national Press will be able to carry on till half-way through next week, by which time there is the better prospect of resolving the problem.

And what is this problem which is threatening to bring publishing in the U.K. to a stand-

still? The basic trouble is 'bad relationships' over a number of years between the Trade Unions (of which there are at least ten involved) and the Master Printers, including in this the ink-making firms. It is three years since the last dispute and both sides have been expecting that its resumption this year would be a good deal more bitter, since it is generally believed that the principal master printers were resolved on victory. The industry consists of very diverse firms, some well equipped but many of them out of date both in capital equipment and in organisation. These have had no incentive to modernise, but the Unions take the view that, if the industry as a whole were to modernise, it could afford the 40-hour week and the higher wages which the men are demanding. The employers on their side are making a condition of resumed negotiations that the men should both call off the strike and agree to drop some of their restrictive practices. So, in an atmosphere of mutual suspicion, neither side is prepared to make a move to meet the claims of the other.

The Minister of Labour who is notoriously diffident about getting involved in a trade dispute now has no option but to intervene; he can either try for a patched up settlement or, as is suggested in some quarters (and the Unions are known to be favourable to this), he can set up a proper commission of enquiry into the industry as a whole. But he will have to be very firm, if he wants to take this line: and this week-end is his chance to decide.

WORKERS' OUTPUT IN U.S. HIGHER THAN IN U.K.

The average American worker's output in 1957 was more than twice that of his British counterpart, according to a joint survey published in Paris. The survey, based on a two-nation study by the Organisation for European Economic Co-operation and Cambridge University's applied economics department, put the American superiority mainly in fields where mechanisation and labour economy had most scope. The disparity was smallest in agriculture, construction and distribution. The report said that the average output per American worker—at British prices—was 2.2 times that of the British worker in the year reviewed.

The greatest U.S. advantage was in fuel production, where the American output figure was 769, against Britain's 100. In manufacturing industries generally, the American worker's output was 2.9 that of Britain's. The lowest U.S. advantage—11 per cent—was in shipbuilding and repairing, despite U.S. earnings of about £3 3s. 7d. for every £1 earned in Britain. It cost about £2 17s. 3d. for each £1 worth of work that could have been done in Britain.

On the same basis, however, America fared much more favourably in motor manufacturing, where output was 4.7 times higher per worker, with wages at £3 7s. 3d. to £1. Thus for every £1 spent by British makers in turning materials into cars, American firms had to spend only \$2.47 (about 17s. 7d.).

AMERICAN LETTER

STEEL STRIKE POSTPONED BUSINESS BOOMING—MORE AND MORE PEOPLE INVEST IN SHARES

From Our Special Correspondent

NEW YORK, 1st July

THE big news in the United States at this writing is the postponement for two weeks of the steel strike at the request of President Eisenhower. This development has led to renewed hopes that a walkout can be averted which seemed most improbable just 24 hours ago.

In anticipation of the previous 30th June strike deadline, various wild-cat strikes broke out last week in the steel industry which led to the banking of furnaces in a number of areas. The net result will be lower production figures, no matter what happens. Up to this point, steel output is headed for a record half-year.

Other indices are headed for substantial gains, too. Automotive sales and production continued on a high level. Consumer spending has been setting a new pace in the business upturn in the first half of this year.

Spendable Income

People's spendable income this year, according to authoritative estimates, will top that of 1958 by about \$18,000 million. Judging from experience, this increased income will be spent in three major areas—soft goods such as food and apparel; hard goods including automobiles, furniture and appliances; and services which cover a multitude ranging from education, travel, and medical expenses to the costs of beauty treatments, utilities and theatre admissions.

Hence, confidence was replaced in the stock market. Investors' hopeful attitudes were also bolstered by other statistics. Machine tool builders reported May orders at 71 per cent, above 1958. Corporate working capital rose by \$2,600 million in the second quarter, bringing the total to \$122,400 million. Paper production stood at 95 per cent. of mill capacity in mid-June. Railroad freight loadings bounded to a 20-month high at the end of June.

Foreign Aid

There is still much uncertainty about the U.S. foreign aid programme as proposed in March. President Eisenhower has now asked Congress formally for funds aggregating \$3,929,995,000 for the fiscal year starting 1st July.

The House of Representatives has already passed its version of the President's request to the tune of \$3,542,600,000. The Senate expects to take up the measure in July. It will debate a \$4,164,000,000 aid bill which has been cleared by the Foreign Relations Committee.

Mr. Eisenhower who is quite conscious of the necessity for foreign aid is dismayed at the 10 per cent. cut in military spending imposed by

very little money can be left over for investments, after household expenses and taxes.

A part of the explanation of the relatively large increase of stockholders has been the rise in stock prices. It has induced people to invest, rather than leave their surplus funds in savings banks where the top return is not more than 3½ per cent. in most localities. Besides, the American people love to take a chance and gamble. There is no authorised lottery here, because of prevailing puritanical laws. Legalised betting at race tracks demonstrate how great a national pastime "reward by chance" is.

Treasury Bills

There are other changes in the investment markets. The role of commercial banks as prime supporters of the Treasury securities' markets, as they were during the last war, is changing. As an example may be cited the fact that, out of \$32,000 million of Treasury bills outstanding, only about \$2,000 million are held by commercial banks and an additional \$2,000 million is held by the Federal Reserve banks.

The balance is in the hands of non-financial corporations. They buy bills as a temporary investment earning interest until the money can be employed usefully in the business. Treasury bills are as liquid as a cash balance in a bank which does not draw any interest.

Thus, the big corporations in this country have replaced the commercial banks as prime lenders. They finance dealers in Government securities on repurchase contracts related to Treasury Bills. They are large buyers of commercial paper, backed by consumer installment contracts. And, as indicated above, they have become the chief holders of short-term Government obligations—a development which was hardly foreseeable 15 years ago.

In a way, it is a rather healthy development, since the corporations rather than the banks are the real income producers all over the world. The banks serve as most useful service institutions providing short-term credit out of depositors' funds for the income producers.

A contributing factor in this shifting investment scene has been the rise in costs and interest rates which is continuing. Higher costs have created a pressure for more income as an offsetting element. Hence, cash balances are kept at a minimum and earning assets are being sought rather desperately.—All Right Reserved.

Financial assets held by individuals in the U.S. rose by more than \$130,000 million to about \$900,000 million in 1958, according to the U.S. National Industrial Conference Board. Individual holdings of corporate stocks and bonds aggregated \$377,000 million and the balance of \$523,000 million consisted of cash, bank deposits, savings, loan shares and insurance and Government securities.

A world conference on peaceful uses of large radiation sources in industry, particularly in industrial chemical processes, will be held at Warsaw on 8th September next. This will be the first major scientific conference of its kind organised by the International Atomic Energy Agency. More than 200 delegates are expected to attend the conference.

THE LONG AND SHORT OF IT

THERE's a long, long list of good reasons for sending your goods as cargo by air—and the list includes reduced transit risks and costs; reduced insurance and warehousing charges; quicker turnover; less tied-up capital; satisfied markets; big profits!

And there's another long list of short, snappy reasons for sending your cargo by Air-India! Numerous weekly flights, direct to so many cities of the globe, with easy connections onwards to all the others—plus Air-India's expert handling of cargo!

AIR-INDIA

GLOSTER
CABLES & WIRES

We have pleasure in announcing that "Gloster Cables" will shortly be manufactured by our Cable Division at Fort Gloster, Bauria, South Eastern Railway. Gloster Cables will be manufactured in long runs on the latest Continuous Vulcanising Machines, the first of their kind in India. This new method ensures consistently high quality Cables because in the C.V. Process the rubber is vulcanised at more accurately controlled temperatures.

FORT GLOSTER INDUSTRIES LTD.
CABLE DIVISION: 14, NETAJI SUBHAS ROAD, CALCUTTA-1
Managing Agents:
KETTLEWELL BULLEN & CO. LTD.
91, STRAND ROAD, CALCUTTA-1.

BANK CREDIT TO MEDIUM AND SMALL-SCALE BUSINESS

WHOLESALE TRADE TAKES UP BULK OF IT

IT is an undeniable fact that small-scale business plays a vital role in the economy of many countries by manufacturing and distributing goods of various kinds and by providing services to consumers. In view of this important contribution, India's planners have laid considerable emphasis on the development of medium and small-scale industries in the second Five-year Plan. Though three years of the Plan period have already passed, much progress does not, however, seem to have been made by these units. The main factor impeding their growth is said to be lack of suitable and adequate credit facilities and promotional capital. This handicap is not due to absence of institutions to provide them the credit needs nor to paucity of funds. There are the co-operative banks and the State Financial Corporations. The State Bank of India also has started providing finance for small enterprises. Maybe, these arrangements have not yet gathered full momentum, but they will, if their present pace of progress is maintained. As for the commercial banks, while they have been meeting the credit requirements of small business to some extent, there are some difficulties which prevent a large-scale extension of this service. These are: (1) inherent limitations of small industries in providing suitable security, (2) low ratio of capital to turnover, as a result of which the available block capital has proved an inadequate security in relation to a given level of production, (3) the uncertain prospects of business, and (4) the difficulties in assessing the existence and strength of demand for the products of this sector. Despite all these handicaps, the commercial banks in India have been meeting a sizable part of the credit needs of small entrepreneurs.

Reserve Bank's Survey

No attempt had so far been made to assess the extent of credit provided by commercial banks. This lacuna has now been filled by an ad hoc survey of advances of a selected (sample) number of offices of scheduled and non-scheduled banks to medium and small-scale business units by the Reserve Bank of India. The results of the survey, published in the *Reserve Bank of India Bulletin* for June 1959, make interesting reading.

Though the Reserve Bank's survey is a sample one, it is fairly representative, in that it covers (1) places in all population groups, (2) various States in the Indian Union, and (3) scheduled and non-scheduled banks operating at each centre. Thus, 74 scheduled banks with 556 branches and 151 non-scheduled banks with 244 branches, making a total of 225 banks with 800 offices, were selected for the survey. But statistics available covered only 752 offices. For the purpose of this survey, small-scale business is defined to include a proprietary concern or a partnership or public or private limited company with total assets less than Rs. 5 lakhs and medium-scale business as one with total assets between Rs. 5 lakhs and Rs. 20 lakhs. The survey relates to the position as on 30th September 1957.

Outstanding Advances

The total outstanding advances (secured and unsecured) of the 752 offices to the aforesaid types of business amounted to Rs. 56.8 crores as on that date. On this basis, the projected figure for the entire commercial banking system is Rs. 256.83 crores, of which the share of scheduled banks is Rs. 241.77 crores, or 94.2 per cent., and that of non-scheduled banks Rs. 15.07 crores, or 5.8 per cent. This means that scheduled banks made a little over 30 per cent. of their total advances to medium and small-scale business units and non-scheduled banks over 61 per cent.

A State-wise distribution of these advances shows that Bombay State accounted for the largest share with Rs. 76.95 crores, followed by West Bengal (Rs. 38.58 crores), Madras (Rs. 22.73 crores), Mysore (Rs. 21.46 crores), Kerala (Rs. 17.86 crores), U.P. (Rs. 14.26 crores) and Punjab (Rs. 13.91 crores). Another feature of the State-wise distribution of advances is that nearly four-fifths of total advances of non-scheduled banks (Rs. 15.07 crores) were concentrated in the three States, Kerala, Madras and Mysore,

with Kerala alone accounting for nearly 50 per cent. This is attributed largely to the relatively high concentration of non-scheduled banks in these States.

The Reserve Bank's survey shows that about 80 per cent. (Rs. 207.44 crores) of the advances to small concerns was secured. The proportion of secured advances was more or less the same in the case of both the corporate and non-corporate sectors. Advances to the non-corporate sector were predominant with Rs. 202.77 crores or nearly 80 per cent. of the total, as the following table shows:

(In crores of rupees)			
	Secured	Unsecured	Total
Corporate sector	44.44	9.62	54.06
Non-corporate sector	163.00	39.77	202.77
Total	207.44	49.39	256.83

Though the non-corporate sector accounted for about 80 per cent. of the total, in view of the generally smaller size of the units in this sector, the average amount of loan was no more than Rs. 17,400 against securities worth Rs. 23,000, while, in the corporate sector, it was about Rs. 85,500 against securities of the value of Rs. 1.20 lakh.

Purpose-wise Credit

A purpose-wise analysis of the advances of all commercial banks (on the basis of the Reserve Bank's survey) shows that Rs. 200.65 crores, or 78 per cent. of the total, were given to trade, of which the share of the non-corporate sector was Rs. 170.28 crores or more than 85 per cent. of the advances to trade. Industry ranked next, but it accounted for no more than 18 per cent. Industrial advances were more or less evenly distributed. Almost the entire advances to construction, services and agriculture were given to the non-corporate sector.

A break-up of the advances to trade has revealed that wholesale business was the single target entity, the amount of scheduled bank credit to this section being Rs. 119.48 crores or 63 per cent. of the total commercial advances to all medium and small-scale units. In the case of non-scheduled banks, advances to wholesale business were only a third of their total to all trade. It will be interesting to note here that nearly half of the total commercial bank advances to all units of wholesale trade was given to small and medium units. Total advances to retail trade amounted to Rs. 27.05 crores, of which scheduled banks accounted for Rs. 23.92 crores and non-scheduled banks for Rs. 3.25 crores. Advances to industries were far behind with Rs. 46.11 crores or 18 per cent. of the total. Among these units, textiles other than cotton, vegetable oil crushing, iron, steel and light engineering, rice milling and "other food, drink, tobacco" were the principal recipients of bank credit.

Security-wise Advances

A security-wise analysis of the advances shows that nearly half of the scheduled banks' credit, or Rs. 98.27 crores, was secured by stock-in-trade. Next in order were documentary bills, advances against which by scheduled banks stood at Rs. 26.60 crores. Advances against Government securities, shares, etc., were fairly high at Rs. 19.96 crores or about 17 per cent. of the total advances against these securities to all units. Scheduled bank credit against finished goods and raw materials were Rs. 10.86 crores and Rs. 9.41 crores, respectively. Such low level of advances against these two securities provides an indication of the general reluctance of banks to accept them as sufficient securities.

From the foregoing analysis, the Reserve Bank survey concludes that "scheduled banks play a more significant role than is realised in providing finance to medium and small-scale business units." It, however, adds that most of the finance is directed towards wholesale and retail trades, small and medium-sized units of industry getting no more than 12 per cent. of the advances made available by the whole banking system to industry, thus pointing to the need for augmenting the credit supply required by the producers.

SMALL SAVINGS IN BOMBAY

Over 50 per cent. of the total net collections under the small savings scheme made in the State of Bombay during the year 1958-59 have come from rural areas, an improvement by more than 20 per cent. over 1957-58, when rural investment in small savings was estimated at less than 30 per cent. This was stated by Mr. Homi J. H. Taleyarkhan, Parliamentary Secretary to the Chief Minister, in his valedictory address early this week at the Small Savings Shibir at Veetnal for training of small savings agents in the district, over which he presided. The total net collections of small savings in Bombay State during the year 1958-59 amounted to Rs. 23 crores (inclusive of interest). Out of this, Rs. 7½ crores came from Bombay City. Assuming another Rs. 3 crores to have come from other urban areas of the State, he estimated over Rs. 12 crores to have been collected from rural areas. Besides, he added, quite a considerable amount which went to the credit of cities came from those residents of towns who invested out of their agricultural incomes.

Mr. Taleyarkhan added that the State was making an all-out effort this year to reach its target of Rs. 26 crores. He said that in the first three years of the Plan, the State had collected a net amount of Rs. 55 crores, as against the total target of Rs. 75 crores at the rate of Rs. 26 crores each year. Although this was far better than any other State, it was not enough, as besides the target of Rs. 52 crores for the remaining two years, the State would still require Rs. 23 crores more to achieve its net aggregate target for the second Plan period.

INFLATION IN THE U.S.

A special Presidential Committee on Price Stability, headed by Mr. Nixon, Vice-President, has urged congressional action to "forestall inflation and ensure sound and sustained growth and progress." In an interim report presented to President Eisenhower and made public by him a few days ago, the Committee observes that, if "inflationary forces are substantially checked, the U.S. can move forward to the greatest and soundest period of economic progress and prosperity in history—a period of sustained economic growth with reasonable price stability."

In sending copies of this report to all members of Congress, Mr. Eisenhower remarked: "I urge that the Congress consider anew the Committee's three recommendations...."

The Committee has noted that "the economy has recovered from the recent recession and is now breaking into new high ground." Stating that the evidence "is unmistakable," it cites the following:

- (1) Overall output is the highest in history and rising vigorously.
- (2) Employment is rising sharply and unemployment is falling steadily.
- (3) Average weekly earnings, personal consumption expenditures and private investment are at record levels and are continuing to rise.

The Committee, which includes the Secretaries of Treasury, Agriculture, Commerce and Labour, the Postmaster General and the President's Chief Economic Adviser, has called on the Congress to take three prompt actions to control inflation. Its recommendations are:

A clear statement by the Congress "that the Federal Government intends to use all appropriate means to protect the buying power of the dollar."

A balanced federal budget in the fiscal year starting July 1959 and some reduction in the national debt.

Elimination of the present limitation on the interest rate of long-term Government bonds to make such bonds more attractive to investors and to reduce the need for very short-term Government borrowing.

"The preceding three steps are direct defences against the present danger of excessive high price rises," says the Committee. "The Administration has already recommended all of them to the Congress. We emphasise them in this interim report, because these actions are needed without further delay."

For the long-term approach to the problem of price stability, the Committee has informed the President that it is studying such questions as tax reform, the U.S. competitive position in overseas markets, Government regulations affecting industry, farm price support programmes, practices of labour and business, and increasing public understanding of the broad problems of economic growth and price stability.

STERLING AREA GOLD RESERVES

The gold and convertible currency reserves of the Sterling Area rose by £19 million in June and stood at £1,133 million on 30th June. The reserves, which now stand at their highest point since September 1951, have shown a net rise of £37 million in the first six months of this year. With the were made out of the reserves, they have risen every month since September 1957.

Last month's rise in reserves compares very favourably with that of £4 million in the corresponding month of 1958 and of £10 million in June 1957. At £1,133 million, the reserves, after allowing for the repayments of loans which had been taken from the I.M.F. and the Export-Import Bank are twice those to which they had fallen in the crisis of September 1957. They do not include the "hidden reserves" of £12 million which the U.K. Government received last month from Germany as a contribution towards occupation costs. This was not added to the reserves, but paid over to the Paymaster in Germany so as to be available to meet future costs.

THE CASE FOR HIGHER INTEREST RATES IN INDIA

By Dr. George Rosen

ANY observer of the Indian economy, and any prospective foreign investor, is rapidly and surprisingly struck by one striking phenomenon in the Indian economy—the low level of interest rates in the organised capital markets. The Reserve Bank rate is 4 per cent., the interest on Government loans is approximately the same, the rate paid on bank deposits is approximately equal, and the rate paid to banks for short-term loans ranges from 4½ to 6 per cent. for the larger companies. The rates on long-term loans from the Industrial Finance Corporation, or from banks via the Refinance Corporation, is about 7 per cent. These rates are also reflected in the returns on industrial securities which range from about 4 per cent. tax-free on debentures to about 6 per cent. tax-free on shares (or about 6-10 per cent. inclusive of tax). This structure of rates, which is confined to the organised money markets, is relatively low—certainly as compared with other underdeveloped countries, and even as compared with certain developed countries. Furthermore, within India itself, if the unorganised money market rates are taken as indicative of the real rates of interest, they are significantly below the real rates.

These organised money rates largely reflect Government policy, as evidenced both by the Reserve Bank rate, and by the Government's active intervention to prevent rates offered for bank deposits from rising. The reasons for the policy, which goes back to the war years, are not hard to find. The Government, which is by far the country's leading debtor, is also attempting to finance a major development programme which may be compared to the war effort. It must pay a substantial sum each year in interest on steadily increasing debts. It is interested in keeping that figure low for straight budgetary reasons, to reduce the cost of the development programme, and for the social reason that the Indian Government is committed to a "socialist society" which has no place for a rentier class. Apart from this, it is felt that a rising rate of interest would reduce the capital value of existing Government securities and thus jeopardise the asset position of the holders—largely institutional—of these securities.

Effect on Savings

These are strong grounds for the Government's interest in maintaining low interest rates. They could only be overridden by the argument that a greater volume of savings would be attracted by higher rates. However, it is claimed that the separation between the organised and unorganised capital markets in India is so sharp that a rise in the interest rates in the former would have little or no effect in attracting a greater volume of savings in the latter. Furthermore, it is felt that, since the demand for capital is determined by the Plan, it would not be reduced as a consequence of higher interest rates. Thus, it is claimed that the interest rate in the organised market would not be performing the usual functions of price. It is best to keep the rate as low as possible, since, thereby, costs are kept low for the Government, and an "undesirable" social class is discouraged.

When so little is known in fact concerning the savings and investment habits of the Indian population, it is difficult to discuss the effects of interest rate changes on them intelligently. Nevertheless, I feel that the arguments for permitting a rise in the interest rates are strong, and outweigh those advanced in favour of retaining the present rates.

First the comparison with a war economy is apt, but it is overdue. In a war economy, the Government will normally take steps to control other prices, as well as the interest rate; and it will also, by patriotism and various methods, ensure that it gets the resources it needs. For a long-term development programme, patriotism is insufficient as a saving stimulus. In India, other prices have not been controlled, except to a limited degree. From 1955-56 to 1958-59, the index number of wholesale prices has risen from 89 to 112—an annual average of about 3 per cent. This means that, with the interest rate roughly constant, the real rate of return in the organised money markets is only about 1 to 6 per cent., rather than the ostensible 4-10 per cent. With such a low rate of return it becomes understandable why potential urban middle-class investors put their savings in bank or in time deposits; and,

if they do invest, it is only in gilt-edged company securities which are almost risk-free and very liquid. There is in India a suspicion of many of the business men; if the rates of return offered were higher, some savers might be willing to take the risks of investment in such enterprises. But, with the general low rates of return on both safe and risky enterprises, the urban investors throng only to the securities of a few safe companies—Indian and foreign—depressing their returns to almost the level on Government securities and leave the others alone, preferring to put money in the bank or in commodities, instead of taking a high risk with a potentially low return.

It is difficult to examine the rural sector's response to higher rates, since, at present, there is little reason for the peasant with a surplus, as well as the urban worker or lower middle-class person, to invest in Government or industrial securities, in preference to gold, or, in rural areas, land. Apart from lack of knowledge of the industries and suspicion of urban business men, the peasant and small urban saver can very safely put his surplus into gold on a rising market. From 1954-55 to 1958-59, gold has risen in price in Bombay from about Rs. 90 to Rs. 112 per tola—or at a rate of about 5 per cent. per year. Gold is risk-free; it is a traditional form of investment; and it is rising in value. In order for other investments to be preferred, they must offer a rate of return that, at minimum, equals the rate which can be earned simply by holding gold for a price rise, even apart from the greater risk in, and the ignorance of, other types of investment. It is clear that present low yields on other investments discourage alternative investment and thus encourage the increasing amount of gold smuggling that has been noticeable since 1955.

Rural Savings

At present, with the proposed ceilings on land, it is believed that at least some rural landowners would be interested in putting their savings (or surplus land) into investments alternative to land. For this to take place, there must, however, be at least the possibility of adequate returns in industrial or Government securities—and this is discouraged by the present low rate of return on these.

Until now our discussion has been in terms only of the supply of savings. If rates of interest rose, would the effect on demand for capital be negligible? In war-time, this would certainly be the case, but does this also hold true in a development programme?

The effect of low interest rates is to encourage large capital-intensive projects—the giant steel mill, the large multipurpose project, etc., and to discourage the smaller, less capital-intensive projects. While to some degree these are not alternatives, to the degree that they are it is highly desirable that the less capital-intensive method be chosen in a country where capital is as scarce as it is in India. It is possible that one of the factors encouraging the large multipurpose projects and discouraging the smaller local irrigation works that might have been even more useful has been the low level of interest rates. The effect of higher interest rates, by encouraging the more capital-intensive projects, also encourages importation of more foreign components (since India probably does not produce them), thus contributing to the foreign exchange crisis.

Allocation of Capital

Furthermore, since the larger projects normally take a longer time to produce their output, the lag contributes to building up inflationary pressures within the economy. Finally, and a very important effect, by discouraging more labour-intensive projects, the low cost of capital reduces the employment consequences of a project. It is worth noting that Russia, which initially abolished the interest rate, has been forced to introduce it under other guises, in order to contribute to the more efficient allocation of its capital resources. Thus, higher rates of interest would probably contribute to a more efficient allocation of capital in India, as well as reduce the demand for capital goods imports and increase the demand for labour. (It may be desirable that some projects be subsidised with a lower rate of interest, but it is better that this be done as a direct subsidy for those few than for all projects.)

The other two arguments for lower rates are subsidiary to the major ones. A higher rate does support a rentier group, but, if the savings of the rentier group are invested in socially desirable investments with a higher return, it is any day preferable to investment in such forms as gold, even though, on this, the Government pays no return. If a rentier class is felt to threaten desirable social goals by the high incomes it earns, this can be met by appropriate tax policies. The effect of higher rates on existing holders of Government securities is a problem, but becomes one in fact, as distinguished from bookkeeping accounts, only if the securities are sold. In order to cushion the blow of a substantially higher rate to the banks and the Life Insurance Corporation, which hold such a large proportion of their assets in Government securities, it might be desirable to give them a bookkeeping credit, or adopt some other method, such as a subsidy on sale of the security, to prevent their bankruptcy in the case of a sharp rise in the rates of interest. This also can be dealt with by specific steps taken within a context of a move toward higher rates.

In spite of these difficulties, there are strong grounds for a policy of encouraging a higher rate of interest in the organised money markets of India; and these grounds outweigh the reasons for continuing the present low interest rate policy. Moreover, if we are correct, our arguments would support a sharp rise in rates, rather than merely a very slight adjustment, whose effects would be negligible.—All Rights Reserved.

U.S. AID TO BURMA

The United States is prepared to make available to Burma over the next four years up to \$30 million in economic assistance, subject to appropriation of funds by Congress, according to an announcement by the State Department made on Monday this week. At the request of the Burmese Government, the United States has offered to provide essential economic assistance to two major development projects in Burma. These projects involve the construction of a modern highway connecting Rangoon with Central Burma and of modern dormitory facilities at the University of Rangoon. Diplomatic notes have been exchanged between the two Governments providing for the use of up to \$1 million of U.S. economic assistance funds to finance feasibility, engineering and other studies for these two projects. It is anticipated that most of these studies will be carried out by the U.S. Army Corps of Engineers.

The \$30 million offer would be subject to mutual agreement on details, compliance with applicable U.S. laws, and appropriation of funds by the U.S. Congress. On its part, the Burmese Government would cover, from loans or other sources, the foreign exchange costs of the projects in excess of this U.S. contribution. The Burmese Government will also cover local currency cost of the projects. The United States is prepared to assist in financing a portion of these local currency costs by providing the equivalent of \$6 million Burmese currency derived from sales to Burma of U.S. reserve commodities.

The State Department said that the assistance "is intended as a token of friendship towards the people of Burma to assist the development of Burma's economic and human resources. A modern highway serving the interior of Burma will stimulate further economic development, while the new facilities at the University of Rangoon will contribute materially to the improvement of higher education for the young people of Burma."

WORLD BANK LOAN TO GABON

The World Bank has granted a loan equivalent to \$35 million to a firm in the Gabon Republic in French Equatorial Africa for the development of extensive high-grade manganese deposits. The loan is for a period of 15 years and bears interest at the rate of 6 per cent., including the usual commission of 1 per cent. The loan, the amortisation of which will begin on 1st July 1963, is guaranteed by the Republic of France, the Republic of Gabon and the Republic of Congo. Messrs. Lazard Freres and Co., New York, has arranged the private sale of maturities representing at least half the amount of the loan. Institutional investors are purchasing "strips" covering the whole 15 years of the loan. These are the longest maturities of a World Bank loan ever to be sold without the Bank's guarantee.

The total cost of the project is estimated to be the equivalent of \$69 million. The Bank's loan will be used to pay for imported goods and services.

DENA BANK

The Devkaran Nanjee Banking Company, Ltd., has earned a profit, subject to audit, of Rs. 6.99 lakhs for the half-year ended 30th June 1959, as compared with Rs. 7.61 lakhs in the corresponding period of 1958 and Rs. 6.45 lakhs in the first six months of 1957. The Directors have, however, raised the interim dividend to Re. 1.86 per share of Rs. 50 each, equivalent to Re. 1.30 (net) per share, as against Re. 1.25, free of income-tax, paid for the corresponding six months of last year. This absorbs Rs. 1.86 lakhs (Rs. 1.25 lakhs), leaving to be carried forward Rs. 8.15 lakhs (subject to provision for taxation), including a sum of Rs. 3.02 lakhs brought in from 1958.

DIFFICULTIES OF U.P. COTTON INDUSTRY MR. SHASTRI IN SYMPATHETIC MOOD

THE cotton millowners of Uttar Pradesh must have felt gratified at the assurance of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, that he would give sympathetic consideration to their suggestions for resolving the crisis in the U.P. textile industry. Speaking at a high level conference on the industry held in Naini Tal on the 1st inst., Mr. Shastri pointed out that, if the Central policies caused any hardship to U.P. mills, efforts would be made to remove them; in any event, these policies were not meant to discriminate against them. And he added: "Some of the suggestions will have to be examined by various Ministries other than my own. Mr. D. S. Joshi (Textile Commissioner) will initiate consultations with other Ministries on the industry's demands before the Government takes a decision."

The Naini Tal conference was attended by representatives of the Centre, the State Government and the millowners. Messrs. Padampat Singhania, Sitaram Jaipuria, K. M. Modi and Ram Rattan Gupta represented the industry and presented the problems confronting the mills, while Dr. Sampurnanand, Chief Minister of Uttar Pradesh, assisted by the Deputy Minister for Industries and other officials, explained the State Government's viewpoint. Mr. Shastri was assisted by Mr. D. S. Joshi, Textile Commissioner, and Mr. C. S. Ramachandran, Joint Secretary, Ministry of Commerce and Industry.

The spokesmen of the U.P. cotton industry were reported to have urged that the industry was subjected to severe stresses and strains and, unless energetic official action was taken, the crisis in the industry would deepen considerably. There is no exaggeration whatever in this statement. How else is one to explain the continued large capacity of the mill sector lying unutilised? The actual extent of idle capacity is estimated to be of the order of over 12 per cent. in spindleage and 15 per cent. in loomage. Out of the 31 mills (10 spinning, 3 weaving and 18 composite) in existence in the State, nine mills with a total of more than 100,000 spindles and 2,000 looms are at present remaining closed. In Kanpur alone, two big mills, the Cawnpore Cotton Mills and the Atherton West Mills, are not functioning.

Textile Output Low

As a result of the continued closure of a number of units thus and the curtailment of operation in a few others, production of textiles continues to be low. The total quantity of yarn that actually came off the spindles of U.P. mills during the first quarter of 1959 was no more than 131.02 million lbs., as against 133.09 million lbs. and 141.84 million lbs. in the corresponding quarters of 1958 and 1957, respectively. Similarly, the cloth output was lower at 335.61 million yards, as against 337.31 million yards in the first quarter of 1958 and 429.40 million yards in the same quarter of 1957.

The yarn and cloth output would have fallen to a greater extent but for the efforts of many mills to maximise production despite all the handicaps. For, by doing so, they could reduce the unit cost of manufacture which would have otherwise been higher. In other words, by keeping production at the highest possible level, they are only trying to minimise their loss and keep their heads above water. The gross profits of the U.P. mills are said to be negligible. To quote a report:

"The U.P. industry's ill-health is specially noticeable when its gross profits are compared to those earned by Bombay and Ahmedabad mills. The industry attributes many of its ills to certain disadvantages which it is made to suffer by the Union Government's textile policy. Ninety per cent. of the imported cotton, which should go to U.P. mills on the basis of their exports, are turned over to Bombay and Ahmedabad mills. U.P. mills pay more for power (notwithstanding the fact that the State Government has already decided to exempt the industry from electricity duty), freight, and insurance and a high rate of excise duty on coarse fabrics."

Several suggestions were put forward by the U.P. millowners at the Naini Tal conference. These covered modification of excise duties on textiles; provision of necessary facilities for modernisation of plant and equipment; liberal allocation of foreign cotton; assistance for textile exports from the State; liberalisation of bank credit; more active lending by financing agencies; and downward revision in railway freight on raw material and finished goods. An important point stressed was that the general depression in the textile trade had hampered the industry's scheme of modernisation which

might have prepared the industry for meeting the changing requirements.

The U.P. millowners' spokesmen pleaded for distributing the spindles and looms lying idle to the mills which are functioning on a *pro rata* basis. The acceptance of the plea, it was argued, would, besides providing employment to a large number of people, benefit the Central exchequer, as the yield from Union excises would increase. This would further alleviate the distress of such of the units as were working uneconomically now. Another plea put forward related to the abolition of sales tax on cotton yarn, which, according to the millowners, was collected only in Uttar Pradesh. They said: "Yarn-consuming interests in U.P., such as handloom weavers and their co-operative associations, now draw their requirements from other States, as supply from outside is more economical. Unless the Central Government decides to impose sales tax on yarn in all States, the U.P. Government should abolish the impost on yarn."

Two Things Essential

It will be seen from the foregoing account that the cotton mills in Uttar Pradesh are suffering from certain special disadvantages, especially locational, *vis-a-vis* their counterparts in other States and as such their plea for special treatment deserves sympathetic consideration. But, at the same time, it must be reiterated that, following the change in ownership and management of most of these mills after independence, there has also been considerable deterioration in the running of most of the units and dissipation of financial resources that had been carefully husbanded during the war and early post-war years. If these mills are to be put on a sound footing and that with

special assistance from the Government, two things, as was mentioned in this journal some-time ago, will be essential. One, the workers employed in U.P. mills must agree to take on a higher work-load. Two, there should be an expert investigation into the management of these mills, so that one may obtain firsthand knowledge of the type of reforms to be made in managements and the extent to which they are morally responsible for restoring the mills to their normal working.

WOOLLEN GOODS EXPORTS INCENTIVE SCHEME

The Government of India has announced an incentive scheme for stimulating exports of woollen goods—cloth, yarn, hosiery, garments, carpets and shawls. Under the scheme, those manufacturers who sell woollen goods abroad will be entitled to utilise a part of the foreign exchange for imports of essential raw materials. Licences for these imports will be granted only once in a quarter on the basis of exports effected in the preceding quarter as indicated below:

Yarn, cloth and hosiery: Licences for the import of raw wool, wool tops and shoddy wool will be given to spinning and weaving units and manufacturers of hosiery up to 75 per cent. of the f.o.b. value of the exports effected. Additionally, licences up to 10 per cent. may also be granted to them for importing permissible types of dyes and chemicals as may be decided upon by the Textile Commissioner. These applicants will have the option to use this 10 per cent. for importing permissible types of machinery, spare parts and accessories for replacement purposes as decided by the Textile Commissioner.

Carpets, rugs and druggets: Manufacturers of carpets, rugs and druggets will be allowed to import permissible types of dyes and chemicals as decided by the Textile Commissioner to the extent of 5 per cent. of the f.o.b. value of their exports. In the case of exports to North and South America and Canada, licences up to an additional 5 per cent. of the f.o.b. value may be allowed for the import of wool and wool tops.

Ready-made garments and shawls: Manufacturers of ready-made garments and exporters of shawls other than manufacturers will be permitted to import raw wool, wool tops and shoddy wool up to 50 per cent. of the f.o.b. value of their exports. Additional licences up to 25 per cent. may also be granted to manufacturers of ready-made garments for importing zip fasteners, buttons and sewing thread.

SUSTAINED DEMAND FOR TEXTILE GOODS SYSTEM OF PAYING COMPENSATION TO COTTON OPERATIVES REVISED

From A Special Correspondent

MANCHESTER, 30th June

WITH half of the current calendar year behind them, quite a number of firms connected with the textile trade will be taking stock of their position. Many will now be far more favourably situated than those who undertook the same task only three months earlier. The transformation in the past quarter may not have been quite as start-

MANCHESTER LETTER

ling as some observers have led the outside world to believe, but it has certainly justified those forecasters who indicated that a change for the better was sure to come once the complicated matter of price irregularity had been smoothed out.

It has, on the whole, been a half-year of remarkable contrasts, but the Lancashire cotton trade is well versed in such variations of mood. Starting in a period when trading has rarely, if ever, been so stagnant, it has seen a transitional phase through the downfall of price regulation and a subsequent reversal of fortunes resulting from a sustained demand for goods which rapidly became in short supply. The volume of stocks held and those in the pipeline quickly diminished in face of a large and persistent call from customers.

These switches in demand from one extreme to the other are difficult to foresee, but efforts are being made in some directions to provide a guide to traders so that adequate steps can be taken to meet eventual developments, whether indicating a dearth or excess of demand.

Figures drawn up quarterly, covering the Lancashire textile trade in man-made fibres, are now being more widely circulated with the object of giving each section of the industry information about general demand, supply and stock positions in each branch and the final off-take of textile goods. It is believed that the intelligent use of these figures should have a stabilising influence on the trade generally.

A Good Guide

All the statistics available for the first quarter of the year indicated a sharp fall in stocks in the pipeline from the closing months of 1958, accompanied by rising retail sales. While yarn and fabric production declined, the stocks held by the industry generally were reduced. The last sentence of the survey forecast: "If final off-take is maintained, this situation should lead to increased activity in the near future." This observation has subsequently proved correct, in view of the pronounced upward movement in man-made fibres manufacture in Lancashire, particularly in May and June.

Historically, the past half-year has witnessed developments which will be regarded as important in the annals of the Lancashire cotton trade. The abandonment of price regulation arrangements in spinning and doubling and the agreement limiting purchases of Hong Kong cloth were factors whose repercussions have not yet been fully felt.

Overshadowing these events has been the preliminary stage of the reorganisation scheme, now rapidly reaching its climax. Within a week, the sectional schemes are due to be submitted to the Cotton Board for approval by the special agency set up to deal with the project and onward transmission to the Board of Trade.

New Pay Pact

Representatives of the employers' organisations in the cotton spinning and weaving industry have agreed to a revised system of paying compensation to operatives who are displaced under the reorganisation plan now under consideration. This followed strong pressure from the trade unions for an unconditional lump-sum payment. Administrative difficulties arising from the unemployment insurance regulations resulted in a modification of the original agreement so that workers will now be able to draw compensation without forfeiting the right to unemployment benefit at the same time.

The formula is based on the same entitlement already agreed on average earnings and according to age. Half the amount will be paid as an immediate lump sum and the remainder will be available for payment by weekly instalments during unemployment on a basis of two-thirds of normal earnings less the standard rate of unemployment benefit. The weekly compensation will stop when the redundant worker is placed in another job.

Examples of how the scheme would work include the payment of £180 in cash for an operative aged 65 or over earning an average of £12 a week plus the balance at the rate of £5 10s. a week. A £9-a-week worker aged 43, which is the average age in the industry, would get £40 10s. in cash and the rest at £3 10s. a week.

Administrative details of the agreement are to be arranged by a joint working party consisting of representatives of the cotton employers and trade unions.

Still on the Wrong Side

Despite the fact that export of British cotton cloth in May were the highest since the same month in 1958, the volume of imports again exceeded comparable shipments. The gap was narrowed but not eliminated; for the first five months of this year, arrivals of foreign cloth have increased by more than 20 million square yards, while exports have fallen by 37 million square yards. By value, exports during May exceeded £6,000,000—again for the first time

since May last year—and the limited revival in shipments of cloth at 33,248,000 square yards must be a source of encouragement. The attitude of many customers abroad, however, still remains remarkably indolent so far as Lancashire-made cloth is concerned. Few stimulating influences can be discerned which might in due course bring a material improvement in the off-take.

At the end of five months, the number of outlets which have taken larger quantities of cotton goods this year as compared with last is scarce indeed; with the exception of one or two West African territories, including Ghana and Sierra Leone, only minor customers are involved. In contrast, the major Commonwealth buyers have invariably cut their purchases substantially, the most notable examples being Australia, whose takings have dropped from 31,137,000 square yards to 22,430,000 square yards, South Africa from 28,790,000 square yards to 17,351,000 square yards and New Zealand from 14,524,000 square yards to 10,743,000 square yards. Trade with the Belgian Congo and French West Africa has also shown a marked decline.

Arrivals of both grey cloth and finished goods continue on a larger scale than a year ago. Unbleached fabrics imported in the five months amounted to 167,656,000 square yards, as against 155,073,000 square yards in 1958. Other cloth from abroad aggregated 28,947,000 square yards, as against 20,314,000 square yards.

The Major Increase

The major increase is in purchases of Hong Kong material, which have risen by almost 50 per cent. Supplies reaching Britain so far this year have been 60,299,000 square yards, as against 40,397,000 square yards. Shipments from India have also broadened from 56,199,000 square yards to 65,165,000 square yards. A slight reduction has taken place in purchases from Japan, while Chinese trade has been sharply affected by the quota arrangements, arrivals being little more than 10,000,000 square yards, as against over 30,000,000 square yards.

In the first quarter of 1959, imports of cotton yarn exceeded comparable shipments for the first time for many years. Subsequent developments have given exports a slight edge, but arrivals are still substantial; at the end of five months, they amounted to 9,609,000 lbs., as against 5,923,000 lbs. in the same period last year.

"Buy British" Plea

Customers of one old-established British textile firm have been told that the Directors have decided unanimously not to supply any foreign-made cloth. Customers were also urged not to handle any. Mr. Norman Taylor, a Director of the 123-year-old Baxter Woodhouse and Taylor, said in a letter from the firm's Poynton headquarters that Britain was being flooded with cotton goods marked "100 per cent. British made." "This statement can be misleading an often in effect means not spun, not woven an sometimes not finished in Great Britain by 'Made in Hong Kong by Chinese workers,'" he said. Customers were told that, in future good supplied by the firm would carry a small label saying "Spun, woven and finished in Great Britain."—All Rights Reserved.

NEW PUBLICATIONS

Industrial Change in India. By Dr. George Rosen.
Published by Asia Publishing House, Bombay.
Pages: 202. Price: Rs. 15.00

DESPITE the fact that India has more than a century of industrial experience, very few attempts seem to have been made to study scientifically the growth of industries in this country. Such treatises on industries as have appeared in the past have generally been historical and descriptive in their treatment. While these have their own value, they are no substitute for the study of technological changes in industries which is essential for a better understanding of the industries and their relationship to the rest of the economy and for projecting probable course of future growth. True, the lessons of the industrial history of the West can provide some guidance, but it is only on the basis of our own experience that future development could be firmly planned.

It is to this neglected field that Dr. George Rosen, a noted American economist, has turned his attention. Dr. Rosen's interest in India's economic problems dates back to his student days. His thesis for the Ph.D. degree at Princeton dealt with the problems of industrialisation of India. After spending a few years teaching economics, and a brief sojourn in Japan on a State Department assignment, he joined the staff of the Centre for International Studies of the Massachusetts Institute of Technology. This afforded him further opportunities to study India's problem. The book under review is the result of an experiment in empirical economic and statistical research into Indian industry he made at the instance of the Centre. It is, as the sub-title suggests, a study of industrial growth, capital requirements and technological change during the period 1937-55. The choice of this period is significant for the developments during this period were chiefly responsible for placing India on the industrial map of the world.

The study, in the author's own words, is aimed at "utilising existing statistical material in India to compute the historical trend of capital output and capital labour ratios in specific factory industries over a period of time. It is intended to provide some tentative answers to the following questions:

What have been the trends with respect to capital intensity and use of labour and capital in Indian industry? How do the observed trends in specific industries between 1937 and 1953 compare with the ratios forecast for Indian industry in the second Plan? How do these trends in India compare with those found in countries with different endowments of capital and labour and at different stages of industrial development? How do these statistical results compared with results based on observation and interview with respect to the use of both machinery and labour in Indian industry? What are the influences acting upon the Indian business man which determine his attitude toward varying combinations of machinery and labour?

The foremost problem which a research scholar in Indian problems has to face is the paucity of statistical data. Even those that are available are either not sufficiently comprehensive in coverage or lack clarity and precision. This imperfect material one has to work on blunts the edge of the tools of research. Realising this limitation, Dr. Rosen, confines the study to five specific industries—cement, paper, iron and steel, cotton textiles, and sugar, for which relevant data are available and which, by their importance and range of problems, are reasonably representative of Indian factory industry. To ensure greater accuracy, he has compared the results of the research with those obtained from personal interviews. As a result of these checks and cross-checks, he is able to develop a statistically satisfying picture of industrial change in India.

The first two chapters give a short historical review of the growth of Indian industry since 1937 and the conditions of that growth. The third chapter contains a brief discussion of the purpose and value of capital-output ratios. In the fourth and fifth chapters are presented the results of statistical studies of five industries, followed by an examination of technological trends in Indian industry, in general, and the cotton textile industry, in particular, in the seventh and eighth chapters.

The author's study indicated a trend towards both higher capital-output ratios and capital-labour ratios over the period. It, however, gave little indication of the reasons for this upward trend in a country like India with apparently 'unlimited' supply of labour and scarcity of

capital. To find out the reasons, the author collected information through plant visits and personal interviews of managers, technicians and trade unionists which form the basis of the discussion of the technological trends in Indian industry. This revealed, *inter alia* that, contrary to popular notion, labour is not cheap, at least to the manufacturing sector of the economy. On the other hand, the scarcity of specific types of labour, skilled and semi-skilled, the cost of training a labour force and the lower productivity of this labour force caused by such factors as newness to an industrial organisation, poor diet and climate, etc., make industrial labour costly in both money and real terms. In addition to these factors, which had already existed in the country, changes that have occurred in the pattern of labour-management relations with the consequent changes in the management's responsibilities in the wage structure since the war and especially since independence have had the effect of raising the cost of labour to management and making it a rigid element at least during a downturn. Dr. Rosen does not pronounce on the merits or demerits of the welfare legislation that produced this rigidity. He only points out how they affect the economics of the industry. This indicates why Indian industrialists, like their counterparts in the West, consider capital relatively cheaper than labour despite its scarcity and the abundance of labour, and perhaps explains the rising capital-output and capital-labour ratios in industry.

Since financial data were available only for the large-scale industry, to complete the picture, a non-statistical study of the small-scale industry was felt necessary, the results of which are presented in chapter nine. It had only a limited aim, namely, examination of the relationship between the large-scale factory establishments and small-scale firms and was confined to small-scale firms in Bombay's engineering industry.

The implications of the conclusions of the study for future industrial development are outlined in the last chapter, along with certain projections of growth. For instance, the author emphasises that the private and public sectors are highly complementary and that, in the in-

terest of rapid development, both must move in unison. To quote him:

"If the required Government programmes are not carried out, the shortages of facilities for the expansion of the private sector will lead to a lower rate of growth than anticipated. At the same time, if the Government programmes are financed by substantial diversion of capital and foreign exchange resources from the private organised industrial sector, the latter sector will be unable to expand as projected. Apart from the immediate effects of relieving a short-run financial crisis, the effects of a sharp cutback in the expansion of private investment could have harmful, long-run psychological consequences in abruptly 'grounding' the take-off of the most dynamic sector of the economy. The simultaneous expansion of both sectors thus requires a careful examination of the programmes in both the Government and the private sectors to evaluate the degree of complementarity and to insure the efficient allocation of capital."

In the concluding portion are indicated certain potential areas of further research into fields related to industrial development.

Dr. Rosen's is no doubt a pioneer study. It has provided certain tentative answers to some important questions, thrown fresh light on some others, enabled a better evaluation of research techniques and prepared the ground for further research. It is upto Indian economists to pursue the line and make similar studies.

Motor Vehicles Act. Published by Sundaram Industries Private Limited, Madras. Pages: 742. Price: Rs. 25

In the context of the need for promoting road transport and the modest fillip which the Government's policies have given to it in recent years, the book *Motor Vehicles Act* will be widely welcomed. Each section of the Act is carefully explained and the relevant case law cited. A notable feature of the book is a series of appendices which cover such subjects as motor vehicles taxation, a chronicle of events in the development of automobile industry in the U.S., and road and automobile statistics. For those interested in automobile industry, in general, and road transport, in particular, the publication will serve as an excellent work of reference.

WAGE STRUCTURE FOR SUGAR INDUSTRY CENTRAL BOARD LIKELY TO SUBMIT REPORT SOMETIME NEXT YEAR

THE Central Wage Board for the Sugar Industry is expected to complete its findings and submit the report to the Government of India sometime next year. This was disclosed by Mr. Bind Basni Prasad, Chairman of the Board, while talking to Pressmen at Bangalore on the 1st inst. According to Mr. Prasad, the Board, after visiting Andhra Pradesh, will return to its headquarters, that is, Gorakhpur. It will then sit in Bombay for compiling the "enormous" data received and for preparing a narrative statement therefrom to find out the various trends in sugar industry. The Board, we are told, has so far visited Patna, Calcutta, Lucknow, Delhi, Chandigarh, Bombay, Madras and Mysore. It had, until the end of May, received full replies from 104 sugar factories and part replies from 34 units to the questionnaire issued by it.

Enquiry

The Board, it will be recalled, was constituted by the Union Ministry of Labour and Employment towards the end of 1957. Thus, already more than eighteen months have elapsed and the Board will still take many more months for completing its findings and submitting its report. This is doubtless a very long period but it is not surprising, considering the comprehensive nature of the terms of reference and the slow movement for which the bureaucratic wheel is wont. The Board has been asked to do many things. It has been asked to determine the categories of employees (manual, clerical, supervisory, etc.) who should be brought within the scope of the proposed wage fixation. It has to work out a wage structure for the sugar industry based on the principles of fair wages, as set forth in the report of the Committee on Fair Wages, bearing in mind the desirability of extending the system of payment by results. It has also been directed to state the principles that should govern the grant of bonus to workers.

The four important factors which the Board is specially required to take account in evolving a wage structure are the financial needs of the sugar industry in a developing economy, the special features of the industry, the requirement of social justice, and the importance of so adjusting wage differentials as to provide incentive to workers for advancing their skill. While on payment by results, the Board has been advised to keep in view the necessity of fixing a minimum (fall-back wage) and also to safeguard against overwork and undue speed. Sometime ago, the terms of reference of the Board was widened to include another issue, that covering gratuity.

Interim Relief

In view of the prolonged delay involved, the sugar mill workers requested the Board to grant interim relief pending the completion of the work. In response to this request, the Board recommended early this year an average interim rise of Rs. 3 per worker drawing up to

Rs. 500 (basic pay plus dearness allowance) per month. The Central Government directed the mills to implement the recommendation on a voluntary basis.

Workers Employed

The award of the Wage Board for Sugar Industry will be applicable to quite a sizable section of industrial workers. The number of workers directly employed in nearly 207 sugar factories that will be in existence at the end of the second Five-year Plan is estimated to be of the order of 160,000-170,000. Of this number, about 30,000-40,000 workers represent fresh recruitment resulting from the establishment of additional capacity through the setting up of 55 new mills and expansion of 68 existing units.

Whatever may be the final recommendations of the Wage Board, they will have a large bearing on the cost structure of the sugar industry which continues to be rigid, thanks to the heavy incidence of cane price and taxation. As it is, the proportion of salaries, wages and benefits to the aggregate cost of sugar production has gone up quite markedly in recent years; it stood at 9.4 per cent. in 1956, the latest year for which statistics are available, as against 8.6 per cent. in 1951. The percentage proportion as it stands now must be still higher, what with the enhanced dearness allowance paid by sugar factories following the steep rise in cost of living. The higher incidence of labour cost is due to the rise in the total earnings of workers. The annual average of these earnings in 1956 was Rs. 964, which compares very favourably with Rs. 785 in 1951. It is true that the average rate of sugar production per worker has also risen—from 11.3 tons in 1951 to 14.6 tons in 1956—but the increase must be attributed largely to the improvement in the manufacturing efficiency of several sugar mills.

Employment and Wages

The following table indicates the number of persons employed and wages, salaries, etc., distributed in the sugar industry during the year 1956 as compared with 1951:

	1956	1951
No. of factories in existence*	169	158
No. of factories from which returns were received	158	147
Percentage coverage	94	93
No. of persons employed:		
Workers	108,985	101,891
Other than workers	18,218	15,787
Total	127,203	117,678
Salaries, wages and benefits (in lakhs of Rs.):		
Workers	8,06.74	6,48.48
Other than workers	8,07.48	2,51.98
Money value of benefits and privileges	74.68	41.77
Total	11,88.90	9,42.23

* Employing 20 or more workers on any day and using power.

It will be evident from the above figures that, while the number of workers employed increased by just 2.7 per cent. over the period 1951 to 1956, the salaries, wages and money value of benefits distributed rose by no less than 26 per cent. An idea of the position

obtaining in the different States during 1956 can be had from the table given below:

	No. of persons employed	In lakhs of rupees		Total
		Salaries and wages	Money value of benefits and privileges	
Bombay	8,606	86.42	14.35	100
Madras	3,975	47.83	2.95	50
Andhra	4,714	46.20	1.95	47
U.P.	68,779	619.93	35.83	655
Bihar	27,374	219.11	15.38	234
Mysore	4,210	41.60	1.98	43
Rajasthan	1,562	10.89	0.81	11
Other States	4,053	43.22	2.33	44
All-India	123,303	11,14.20	74.68	11,88

The foregoing table shows that, during 1956 the State of Uttar Pradesh accounted for bulk of the labour force employed in the sugar industry, its actual share in the total being much as 56 per cent. Next in importance, Bihar, accounting for 22 per cent. Although Bombay sugar mills employed just 7 per cent of the total labour force, its share in the aggregate distribution of salaries, wages, etc., is higher at 8.5 per cent.

To revert to the Wage Board's deliberations. During its sitting at Bangalore last week, representative of both the employers and employees of all the seven sugar mills in Mys State seemed to agree that all workers should come under the Industrial Disputes Act, 1947, should be considered for evolving the wage structure. The reasons for the agreement would appear to be that, if this is not done, if only a few of them are considered for fixation of wages, an industrial dispute may be raised by those who are excluded. The employees drew the pointed attention of the Board to the fact that the "rigid control" by the State left the employers nothing or only a small margin to give an increase in wages to the employees. They said that the price of raw material, as fixed by the State, accounted for 40 per cent. of the cost of sugar and, of the remaining 38 per cent. went towards taxes and cesses per cent. towards manufacturing expenses, only 6 per cent. was left as profit liable to come and super taxation.

Giving evidence before the Wage Board Madras City earlier, the spokesmen of Madras sugar industry urged fixation of minimum wages only for the least skilled manual and clerical workers, leaving the different rates for other categories to be fixed by the respective mills. They also gave their calculation of the minimum wages according to the no-agreed-to-at-the-Fifteenth-Indian-Labour-Conference. The employees' representatives, however, wanted inclusion of all employees concerned under the definition "workman" in the Industrial Disputes Act and they submitted their own calculation of the minimum wages should be fixed.

The Bombay Sugar Merchants' Association decided at a meeting held on 1st July 1959 to operate with the State Government in implementing the Sugar Distribution Scheme announced by the Government on 30th June 1959. It has ther decided that members, while placing or with the mills direct, or through their appointed channels, for obtaining mill delivery sugar, should send one copy of such order to the Association. With a view to safeguarding the interests of all traders, small or big, the members of the Association have decided not to place an order with individual mills for a quantity more than 400 bags at a time.

NEED FOR INCREASE IN COAL PRICES EFFECT ON INDUSTRIAL COSTS WILL NOT BE SEVERE

SPEAKING at the tenth meeting of the Central Advisory Council of Industries held in New Delhi on the 6th inst., Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, said that the Government of India's decision on revision of coal prices would be announced in a few weeks' time. This is welcome news in that it serves to remove any apprehension that the Government had put the question of revising coal prices in cold storage. Whether the increased prices, if any rise were to be granted, would prove adequate to the industry is another point. There is, however, a fear that the industry will not be fully compensated for its rise in costs. This fear is born out of the fact that the Government is wedded to a policy of keeping down inflation. How far this fear is justified will be known only when the Government actually announces the revised prices.

Meanwhile, a well reasoned case has been made out by the colliery owners for consideration of the Government before the latter takes a decision on this important issue of coal prices. This is contained in a pamphlet on *A Fair Price for Coal and Coke*, jointly issued by the Indian Mining Association, Indian Mining Federation, Indian Colliery Owners Association and the Madhya Pradesh Mining Association. The need for exploiting the vast reserves of coal, which India is fortunately endowed with, is unquestioned. This must be done in a scientific manner and as economically as possible. While a large capital is required for maintaining even the existing level of output, it goes without saying that a much larger capital will be required for enlarging the output during the Third and subsequent Five-year Plans. These large sums can only come from the ploughed back profits of collieries, provided, of course, the collieries obtain a fair margin of profit which would allow them to put by something and to provide a decent return on the capital invested. That the collieries have not been able to do so, in the face of a rising cost of production, is the sum and substance of the pamphlet issued by the colliery owners' bodies.

Tracing the history of coal prices since 1947, when the first labour award against the coal industry in India was given, the pamphlet points out that "all increases in coal prices, with one minor exception, were to cover the rise in labour costs due to the various Tribunal awards. While other industries have received price increases to cover rising costs on other accounts, the coal industry has been granted increases in the price of its product only when it has been required to implement labour awards." Following the first labour award of 1947 and a subsequent one for collieries in Madhya Pradesh, which provided for increased wages and additional amenities to workers, the Government increased coal prices by Rs. 3-3 per ton. In 1949, however, the price was cut by As. 9 per ton for steam coal and As. 10 for slack coal, with a view to preventing inflation. At that time, the industry was assured that not only would the prices of commodities which it used be reduced likewise but that it would be relieved of the responsibility of issuing food rations at concessional rates to workers which would reduce the cost of production. This assurance was never given effect to. In 1955, however, an additional As. 3 per ton was granted to collieries mining coking coal with a view to compensating the effect of pegged output. A further increase of As. 3 per ton was given to cover increased contributions to the Coal Mines Provident Fund. This was followed by an increase of Rs. 3 per ton in July 1956 for collieries in Bengal and Bihar to meet the additional cost as a result of the implementation of the award of the All-India Industrial Tribunal (Colliery Disputes). In order to enable collieries to provide the amenities to labour under the Appellate Tribunal's decision, the price of coal was further raised by Re. 1.50 per ton in July 1957. Yet another rise of 75 pP was allowed in May 1958 to cover the increased dearness allowance, but this was reduced to 34 pP per ton in October last. Thus, between 1947 and 1958, the price of coal has been raised by no more than Rs. 8.20 per ton.

This increase has not taken into account the steady rise in operating costs since 1947, due to increased prices of stores, plant and equipment, the introduction of additional mining legislation, higher electricity charges, cesses, increases in

railway freight, additional stowing costs and the effect of rising costs of rehabilitation. Next to labour, the cost of stores constitutes the largest item of production costs, accounting as it does for 10 to 15 per cent. of the total. It is computed that the average increase of "stores costs" in the total of "coal raising costs" per ton is about 75 per cent. The impact of this increase averages from As. 14 to Re. 1-4 per ton. The implementation of the Mines Rules 1955 and the Coal Mines Regulations 1957 will, it is stated, cost collieries between Re. 1-8 and Rs. 2 per ton. In some cases, it will be even more. The cost of electricity has gone up by 123 per cent., that is, from 0.60 anna in 1946-47 to As. 1.34. Besides, there has been a substantial increase in cesses and railway freight and the industry has the obligation to pay lay-off and retrenchment compensation. The industry has, no doubt, been given, after repeated representations, an increase in certain stowing costs by the Coal Board, but this has proved inadequate.

While the foregoing are the more obvious reasons for an increase in coal prices, there are two other important factors which have to be taken into account in determining coal prices. They are: rehabilitation allowance and a reasonable return on capital. On the basis of the formula accepted by the Full Bench of the Labour Appellate Tribunal in the case of the Millowners' Association, Bombay, the rehabilitation allowance for some of the units of the coal industry varied from Re. 1.04 to Re. 1.98 per ton. The adoption of the Full Bench formula alone is not sufficient for the coal industry. Special consideration should be given to the fact that mining is a wasting asset and that additional capital outlay was required to maintain production. Secondly, the depreciation allowance in

the context of rising trend of prices is inadequate. The case for a larger depreciation allowance is made out by the colliery owners thus:

(a) Much of the present plant and equipment was bought 10, 15 and more years ago. Depreciation allows reserves to be built up to the original value of the plant only and present prices are two to three times or more higher than they were during and immediately after the war years.

(b) The development rebate allowed to encourage expansion and installation of new equipment is also insufficient in that, first, the rebate is only allowed on the original cost of the asset which together with depreciation is inadequate for reasons already stated and, secondly, the benefit, if any, is offset by the heavy incidence of taxation.

(c) Unless a margin is provided in the price structure for replacement of plant and the additional plant required to maintain production, there is a grave danger that the industry may not be able to maintain production.

(d) The importance of setting apart some portion of the profit out of the revenue each year for replacement and rehabilitation of plant, machinery and building is an immediate necessity in the case of marginal collieries and must be considered from a long-term point of view for those units which serve, but which will require considerable capital to maintain and increase production in the future.

The industry naturally expects a reasonable return on the capital invested, particularly in view of the fact that it is required to increase the output by 22 million tons during the second Plan period, which involves a heavy capital outlay. Fresh capital for this huge outlay can be secured only if attractive returns are forthcoming. In the case of cement industry, it is pointed out, an allowance was granted to provide for a return of 8 to 12 per cent. on the capital employed. The case of the coal industry is different and demands a higher return.

In this connection, the pamphlet has sought to remove a popular misunderstanding about the "high" rate of dividends declared by coal companies. It says that, in the first place, the rate of dividends is not the correct indication of the return on capital which must be based on the total capital employed, particularly in the coal industry which is undercapitalised. Even taking the rate of dividend on paid-up capital, it is

(Continued on page 65)

THE METAL BOX COMPANY OF INDIA LTD. REVIEW BY THE CHAIRMAN, MR. K. C. MAHINDRA

THE Twenty-sixth Annual General Meeting of The Metal Box Company of India Limited will be held on Thursday, the 16th July, at 59C Iowringhce Road, Calcutta.

The following is a copy of the Review by the chairman, Mr. K. C. Mahindra, which has already been circulated to members:

"On this first occasion that I am addressing you it is particularly satisfying to be reviewing record performance achieved by your Company. Sales for the year increased by Rs. 85 lakhs from Rs. 612 to Rs. 697 lakhs, a 14 per cent. improvement which would not have been possible but for our success in developing the les of such of the Company's products which are not made from tinplate, a major raw material in short supply throughout the year.

"Satisfactory sales of tinplate products—mainly general line containers for a miscellany of goods—were achieved in the face of considerable difficulties which affected the high standard of performance to which we aspire. By the second half of the year the Government of India had recognised the inadequacy of the level of our tinplate stocks and enabled us to increase them. As a consequence, we were able substantially to supply our customers' requirements. During this period we increased our production and improved considerably our operational efficiency. That, with the forward tinplate situation so well assured, we have been able to announce a reduction of 2½ per cent. in our general net prices.

Open Top Can Sales

"Open top can sales have increased following the emergence of a canned prawn export trade with Europe and America and the stimulation afforded by the Ministry of Food and Agriculture's subsidy scheme for processed fruit and vegetables. Under this scheme can prices are reduced by the equivalent of Rs. 500 per ton of tinplate used in their manufacture. For the most popular size of can this means a price reduction of 26 per cent. The Union Government's esting in your Company the responsibility for ensuring that this subsidy is passed on to the anners is a significant expression of faith in us, and in response to this trust we simultaneously announced a reduction in our prices of Rs. 100 per ton of tinplate used. This, together with a further reduction in prices we were able to announce because of a fall in the cost of the special quality of tinplate imported for open top cans, amounted to a decrease in prices of 15 per cent. since 1st April 1958. In total this means that the canner now buys his cans 41 per cent. cheaper at prices which, notwithstanding the fact that open top cans are produced in the United Kingdom by thousands of millions and in the U.S.A. by tens of thousands of millions, must be comparable with the cheapest in the world.

"Though our indirect exports increased considerably, our direct exports, owing to Burma's foreign exchange difficulties, were below expectations. However, during the year we set up an export promotion unit; we undertook extensive touring in South-East and West Asia and planned an intensification of this work for the current year; we are thus well placed to make the best of our opportunities in the more promising of the export markets open to us. As a result an impressive order book has already been built up and I am confident that by next year I shall be able to report a substantial increase in our export sales. We continued to receive excellent support from the Export Promotion Directorate of the Government of India and the Export Promotion Councils.

"Demand this year remains brisk: there are signs that the market of our customers, the packers of India, is growing and that materials are being made increasingly available to meet it.

Raw Materials

"The low level of stocks of tinplate, our most important raw material, caused grave concern in the first part of the year. The possibility of increased imports in view of the critical foreign exchange position seemed unlikely. It was envisaged that the consumption of available stocks would have to be drastically rationed to avoid a major closure of our factories.

"In the second half of the year our Associates in the U.K. responded to our appeal for

assistance by offering to finance the import of a substantial tonnage of tinplate on most generous and favourable deferred payment terms. This, together with the arrangements the Government of India made for the import of tinplate under the U.S.A. Development Loan Fund, resulted in an improved forward position. Stocks are still below the desired minimum operational level, but there are now good prospects that the position will improve in the near future.

"The Tinplate Company of India Limited is maintaining a satisfactory output but has a considerable backlog of orders with which to deal. If Tata's supply of tinplate bar is sufficient to ensure the continuance of indigenous production at the present level, then the prospects of liberalised supplies of tinplate to the container industry are more encouraging than they have been for a number of years. It is to be hoped that the Government of India will be able to maintain an adequate level of imports until the substantial increase in indigenous tinplate manufacturing capacity planned for 1961 comes into production.

Prices of Tinplate

"The price of indigenous tinplate remained unchanged during the year but freight rates and sales tax were increased. A slight downward trend in price was noted in the price of imported tinplate reflecting the export drive in those countries where mills were working below capacity.

"During the year supplies of indigenous aluminium were adequate to meet the substantially increased demand on your Company for a range of non-tinplate products and it appears we will be able to cover the enhanced requirements of this raw material for the current year from the same sources.

"Steel for the manufacture of our widening range of industrial components was in short supply throughout the year. As these components were previously imported and represent a saving in foreign exchange, we believe the Government of India will not reject our present application for a licence to import part of our requirements of steel to supplement the material available to us from indigenous sources to meet demand.

"In respect of other raw materials, it was reported last year that prices had substantially increased. Unfortunately the upward trend continues.

Developments

"The new Calcutta factory was completed and the manufacturing equipment transferred from the B2 Hide Road factory. The benefits of the move have already been reflected in improved operational efficiency.

"The manufacture of industrial components remains in the old premises at B2 Hide Road, which have been reconditioned. The additional space there will be utilised for the production of plastics embracing injection moulding and polyethylene extrusion, printing and bag making. Machinery building on an increased scale will be installed there and provision is being made for the manufacture of a range of spare parts required for our production machinery and machinery sold to customers.

"Government permission was received to proceed with the new factory at Faridabad, near Delhi, and constructional work has already commenced on the site. It is expected that the new factory will be in production during the first quarter of 1960.

"A small extension to our Madras factory has been completed. An extension to our Worli factory in Bombay is being planned and as this will utilise to the full extent the vacant area on the site, negotiations are proceeding for the acquisition of a new site of approximately 12 acres near Chembur.

"Our Research Division which has hitherto confined its activities mainly to the development of indigenous materials to replace imported materials, will be expanded to include the field of plastics and to provide greater service to our customers.

"A plan is under consideration for the acquisition of additional machinery to extend our range of products manufactured from raw materials readily available in India and to meet the

demand for industrial components which are presently imported.

"In order to assist in the financing of the above new developments it is proposed to increase the ordinary share capital by means of a rights issue to shareholders. Consent has been received from the Controller of Capital Issues to a rights issue at par in the ratio of two new shares for every five shares held. It is anticipated that the issue will be made later this year.

Industrial Relations

"During the year there was considerable activity in the field of employee relations.

"In keeping with the Company's policy of reward for increased productivity, the Production Bonus Scheme, in force since 1948, was revised, offering increased incentives. It was implemented in the Bombay factory at the end of the year and already the results have been to the mutual benefit of the employees and the Company.

"A Gratuity Scheme has recently been introduced offering retirement benefits in addition to the yield from the Provident Fund Scheme.

"The Prosperity Bonus Agreement concluded in 1956 expired on the 31st March 1958 and was renewed in March 1959 for another period of three years, after consultations with eight different establishments in five States. The advantages of the scheme are clearly indicated by the results achieved. The bonus earned during the period of the previous agreement averaged 30 per cent. of basic earnings per year and in respect of 1958-59 will be at an even higher level. Unfortunately in the course of discussions relating to the disposal of the Bonus Reserve Account on the expiry of the Agreement, there were breaches of industrial peace for brief periods at the Calcutta and Madras factories, engineered by non-worker leadership of unions. These marred the otherwise very satisfactory record of our relations with our employees throughout India since May 1955.

"On the occasion of the retirement of Mr. H. Chiswell Jones, the employees of all our establishments expressed their appreciation of his 26 years' service in a manner that left no doubt as to their high regard for him and his leadership, and demonstrated the mutual respect and sense of responsibility that exist between the Company and its employees.

Larger Payments to Labour

"The rising cost of living during the year under review resulted in increased payments of dearness allowance and led to the examination of the rates of dearness allowance for the monthly rated employees which have now been linked, as is the case with our daily rated employees, to cost of living indices. The award relating to wages and dearness allowance in the engineering industry in West Bengal was implemented in December at our Calcutta establishments. Although the question of interpretation of certain ambiguous provisions resulted in another Tribunal embracing the industry as a whole, our Calcutta establishments are free from any complication on this score.

"Training continued to occupy a good deal of the attention of the Company. During the year under review ten of our Indian executives were sent to the U.K. for training under the Company's Training Scheme. In addition, advantage was taken of the various facilities for supervisory and craft training that are available in India. Recognising the importance of training, a full-time Training Officer has been appointed at our Calcutta factory and a similar appointment is contemplated for our Bombay factory.

Staff

"The officers and staff are to be congratulated on their efforts during the year, on the ability and ingenuity they showed in adapting themselves rapidly to deal with the constantly changing conditions resulting from an uncertain supply of raw materials and on maintaining cordial relations with customers who must at times have been disappointed by our inability to meet their orders as and when required. We thank them for their continued loyalty and the high sense of duty they display. The satisfactory results achieved despite the difficulties which arose during the year will, we hope, encourage them and make them feel their efforts have been really worthwhile.

"It was with regret that we said farewell to Mr. Chiswell Jones at the end of the year when he retired as Chairman of your Company.

(Continued on page 62)

RISE IN WORLD SHIPPING TONNAGE

SOME INTERESTING DEVELOPMENTS IN TRAMP TRADE

THE increase in world tonnage, the prospects for world shipbuilding yards, the recent developments in tramp trade and the progress made in the application of nuclear science to shipbuilding are among the subjects reviewed in a comprehensive report on maritime transport, containing the findings of a study undertaken by the Maritime Transport Committee of the Organisation for European Economic Co-operation (O.E.E.C.). Between mid-1957 and mid-1958, the total world fleet (excluding 100 g.r.t. and below) increased by 7.7 million g.r.t. to 114.6 million g.r.t. This represents a record increase of 7 per cent. in any one year in the post-war period. Another notable feature of the increase in world tonnage is that it is shared both by ordinary fleet and tankers, the former having increased from 77.1 million g.r.t. to 81.0 million g.r.t. and the latter from 29.7 million g.r.t. to 33.4 million g.r.t.

The following table gives the distribution of world shipping tonnage among the principal maritime countries in mid-1957 and mid-1958:

World Tonnage (In 000 g.r.t.)		Mid-1957	Mid-1958
World tonnage		106,822.0 (29,771.6)	114,556.7 (33,412.3)
Of which:			
O.E.E.C.		53,240.8 (16,407.4)	56,606.8 (18,194.4)
Of which:			
Belgium		579.4 (110.7)	601.4 (111.0)
Denmark		1,857.5 (588.3)	2,034.7 (585.7)
France		4,000.8 (1,304.2)	4,207.9 (1,565.6)
Germany		3,005.7 (922.3)	4,077.5 (1,201.0)
Italy		4,552.0 (1,342.5)	4,899.6 (1,407.9)
Netherlands		1,116.7 (338.4)	1,500.8 (459.8)
Norway		8,486.2 (4,747.0)	9,384.8 (5,853.6)
Sweden		3,047.5 (938.8)	3,303.1 (980.7)
U.K.		19,857.6 (5,585.9)	20,286.6 (5,925.6)
Rest of the world		27,083.4 (8,221.0)	32,274.9 (10,596.6)
Of which:			
Argentina		1,038.6 (341.3)	1,028.6 (336.5)
Brazil		591.5 (182.9)	911.2 (262.9)
Canada		504.1 (124.3)	544.6 (125.1)
Costa Rica		519.3 (17.0)	510.3 (17.7)
Finland		754.7 (144.1)	755.2 (156.9)
India		625.7 (16.8)	625.7 (16.8)
Japan		4,415.1 (548.3)	5,465.4 (1,038.2)
Liberia		7,496.4 (4,129.7)	10,078.8 (5,618.7)
Panama		23,428.1 (2,135.2)	25,054.6 (2,323.7)
U.S.		4,076.6 (2,708.6)	4,040.6 (2,965.8)
U.S.S.R.		2,708.6 (519.9)	2,965.8 (530.7)

N.B.—Figures in brackets show tanker tonnages which are included in total tonnages.

Age Distribution

The present age distribution of the world's fleet reflects the acquisition by the maritime countries of new fleet in post-war years. Thus, out of 31,179 ships (ships of 100 tons and over), the number under five years of age is 5,321 (18 per cent.) and the number of ships between five and ten years 4,281 (13 per cent.). Thus, nearly one-third of the fleet consists of ships below 10 years of age. The number of ships in the age group 10-15 years is 6,122 (25 per cent.) and that in the age group 15-20 years 4,507 (23 per cent.). In the last two age-groups, namely, 20-25 years and 25 years and over, there are 1,781 ships (4 per cent.) and 9,167 ships (17 per cent.) respectively. So far as tankers are concerned, the bulk of the fleet belongs to the age-group 0-10 years. The age distribution of the 4,023 tankers which make up the world tanker fleet, as at mid-1958, is: under 5 years 1,015 (38 per cent.); 5-10 years 416 (26 per cent.); 10-15 years 836 (17 per cent.); 15-20 years 505 (10 per cent.); 20-25 years 242 (4 per cent.) and 25 years and over 509 (5 per cent.).

In recent years, there has been a steep increase in the shipping tonnage built in world's shipyards. During 1958, the number of ships (of 100 tons and above) completed was 1,920, with a total tonnage of 9.1 million, as against 1,964 ships with a total tonnage of 8.1 million in 1957. The tonnages (in thousands) completed in 1958 in some leading shipbuilding countries with similar figures in brackets for 1957, are: Japan 2,224 (2,309); U.K. 1,464 (1,420); Germany 1,355 (1,230); Sweden 737 (617); Italy 556 (384); U.S. 553 (306); Netherlands 506 (529) and Norway 311 (195).

The 1958 levels of completed tonnage represents a peace-time record. It is likely that the tonnage completed in 1959 will be even higher than in 1958, in spite of cancellations. The present rate of completion, at about 9 million tons per year, is very high indeed, considering that, in inter-war years, the average rate was only about 2 million g.r.t. with a maximum of 3 million g.r.t. These figures represent the tremendous increase in shipbuilding capacity in recent years and the growth in world trade. Nevertheless, the total tonnage under construction in the world has declined from 35 million g.r.t. in mid-1957 to 31.2 million g.r.t. in mid-1958.

Prospects

Commenting on the prospects for shipbuilding, the O.E.E.C. report observes:

"Although, as a result of the collapse of the freight market the number of fresh orders is on the decline and a number of orders has been cancelled, the present order books will provide work for most of the major shipbuilding yards of the world for a considerable time. It is obvious, however, that the shipbuilding industry is moving towards a more difficult period particularly in the case of those yards not specialising in tanker tonnage and in those which are only equipped to build the smaller types of vessels."

Notwithstanding a decrease in the price of steel plates in 1958, there was a general increase in the overall price of ship construction, thanks to the increase in labour costs. The cost of construction of a ship, of course, varies from ship to ship. But a general standard for comparison is to be found in the cost of building a 9,500 d.w.t. (5,300 g.r.t.) "Fairplay" basic ship in the U.K. The cost of such a ship was reckoned at £84 5s. per ton in January 1959, as against £83 15s. in January 1958. There has been 100 per cent. increase in construction cost since January 1950, when it was £42 per ton and more than 200 per cent. increase since January 1945, when it was £26 per ton.

World Trade

The increase in world shipping tonnage reflects the overall increase that has taken place in world trade. In 1958, world seaborne trade aggregated 935 million tons (inclusive of 445 million tons of oil), as against 960 million tons (inclusive of 420 million tons of oil) in 1957. Six years earlier, that is, in 1952, world trade consisted of only 680 million tons (inclusive of 285 million tons of oil). The increase in shipping tonnage, however, has exceeded requirements, so that orders for new tonnage, as well as freight rates, have been falling. The tramp freight market has been subject to violent fluctuations. Thus, in the last three years, the coal rate from the U.S. to continental ports, which is taken as a representative of this market, has moved up from 51s. to 119s. and fallen back to 72s. per ton. The structure of the tramp industry has also been changing. In the first place, in the case of a number of important tramp commodities, notably iron ore and also to a lesser extent sugar and timber, there has been a move towards the construction of specialised tramps for particular cargoes. In the iron ore trade, for instance, little of it was carried in specialised vessels in 1945, but, in 1958, there were some 3.6 million d.w.t. of such vessels, representing a carrying capacity of 50 million tons; by 1961, there will be 6 million d.w.t. with a carrying capacity of 90 million tons annually. Secondly, tramp vessels are being increasingly used on a long-term basis, say, for a year or more, instead of voyage by voyage. It has been estimated that over 30 million tons of coal were carried by long-term tramp vessels in 1957 by long-term tramp charter from the U.S. to Europe.

Reviewing the recent developments in marine transport, the O.E.E.C. report refers to

the construction of nuclear-powered vessels. It notes that "it appears unlikely that an economic nuclear-propelled ship will be realised in the near future." It adds: "The nuclear plants in the experimental ships now under construction are very expensive to make and uneconomic to operate. The possibility of a cheaper form of atomic propulsion is being studied, but this is still only at the pre-experimental stage." Further, the voyage of the U.S. nuclear-powered ship *Nautilus* under the North Pole, it is stated, has opened the prospects for the use of such a route for transport by nuclear-powered submarine merchant ships. In spite of formidable difficulties mainly connected with power and cost, several studies are now under consideration to develop giant nuclear submarine cargo vessels.

ATOMIC POWER IN U.K.

Britain expects to achieve at least a three-fold increase in power from uranium in the ad- being built. Speaking of this "second generation" of nuclear-power stations, Sir John Cockcroft, member for scientific research of the United Kingdom Atomic Energy Authority, said recently in Teheran, Persia, that the new stations would have but "we are now carrying out an intensive research and development programme to reduce the capital costs of nuclear-power stations. This will be achieved by raising the operating temperature of the uranium fuel elements and, by this and other technological developments, we will increase the power of 3 or 4 the amount of power which can be developed from a given amount of uranium and a given size of reactor."

Sir John, who was speaking at the opening of the Teheran nuclear centre, referred to the nuclear-power experience in the United Kingdom and said that this had shown that stations, such as Britain's Calder Hall, could generate electricity steadily for months on end, producing hundreds of thousands of kilowatts. Calder Hall had already produced well over 1,000 million units of electricity. He said: "Nuclear power has, therefore, been proved to be technically feasible, and the operation of this new type of power station has been shown to be reliable and no more difficult than that of ordinary power stations."

By 1966, according to Sir John, the United Kingdom's total electricity output would probably be between 5,000,000 kw. and 6,000,000 kw. It was impossible to say when nuclear power would be competitive with power from coal or oil-fired stations, it depended upon a number of circumstances, and the break-even dates would vary from country to country. If, however, they took a long-term view, it seemed quite obvious that nuclear power was essential if the living standards of mankind were to be steadily improved.

Sir John pointed out that for countries with ample supplies of low-cost fuels such as oil, nuclear-power was unlikely to be attractive for at least 20 years, except in special localities far from the source of fuel. In these countries, the immediate benefit of atomic energy would come from applications of radiation, using radioactive isotopes. Sir John then dealt with the many uses of radioisotopes, emphasising that the first well-tried application was in the diagnosis and treatment of disease. In Britain, most large hospitals now had radioisotope clinics.

ROAD TRANSPORT

Several specific suggestions were made by the Transport Development Council, which met recently at New Delhi, for improvement of roads and road transport. In the first place, it recommended that the use of pneumatic tyres in bullock carts should be encouraged. The cost of conversion, it sets from the U.S. would be available for Rs. 200 wheel assemblies should be procured at the first will do well to examine the use of flexible wheel recommended by the Estimates Committee in its report on National Highways. Secondly, the Council suggested that, in order to reduce the "imbalance" as between diesel oil and petrol in the country's economy, experiments should be initiated in the use of "mixed fuel" (10 per cent. gasoline and 90 per cent. high-speed diesel oil). Thirdly, it suggested that societies of educated unemployed for running goods transport services; the scheme, which will be introduced in Bombay, Madras, Kerala, W. Bengal and Delhi, will receive financial help and other forms of assistance, including training, from the Central Government. Finally, the Council recommended that permits should be given liberally for truck-trailer combinations on roads 32 ft. wide all roads other than minor roads. It may be mentioned here that, in the U.S., nearly 50 per cent. of the goods vehicles have multiple axle combinations. Experience in the U.K. suggests that there is a 30 per cent. saving in costs through the use of truck-trailer combination. Apart from this stimulate the manufacture of trailers which is relatively simpler than the manufacture of automobiles. The use of this combination will thus create new industrial potential, besides enabling fewer goods vehicles to carry more traffic.

NEW PRODUCTS AND PROCESSES

Electrolytic Production of Manganese Dioxide

AN improved process for the manufacture of electrolytic manganese dioxide has been evolved at the National Metallurgical Laboratory, Jamshedpur. The process involves production of acidic manganese sulphate solution from manganese ore and electrolysis of it to yield manganese dioxide. Low grade manganese ores available in abundance which at present find no market, can be utilised in this process to produce electrolytic manganese dioxide of 99.99 per cent. purity. Average initial as well as shelf tests have been carried out by a leading dry cell manufacturer on samples of manganese dioxide prepared by this process in comparison with the imported material and the results have been reported as satisfactory. The process has been successfully operated upon a pilot plant scale and economics have been worked out. The raw materials required such as low grade manganese ores, waste effluent or spent liquor from manganese dioxide electrolytic cells, sulphuric acid and other chemicals are available in the country. The yield of electrolytic manganese dioxide which is dependent on the manganese content of the ore treated and current efficiency is about 95 per cent. Plant and equipment required are jaw crushers, ball mills, classifiers, rotary furnaces, rectifiers, clarifiers, filter presses, etc. Most of them can be fabricated in the country. It is estimated that the capital cost of the plant and equipment will be about Rs. 34 lakhs while Rs. 4 lakhs will be needed for working expenses.

New Material for Space Vehicles

A new material that may add to the safety of future space ships and increase the speed of missiles has been developed at the University of California in the United States. The material combines the heat resistance of ceramics with the strength and flexibility of various metals. In making the material, molten metals and ceramics are sprayed in alternate thin layers on a rotating disk. This makes a "layer cake" structure consisting of many thin layers on top of each other. After cooling, the cake is crushed into tiny particles that are smaller than grains of salt. Each particle, however, retains its layercake structure. The grains are then pressed in a mould at temperatures up to 2,200 degrees Fahrenheit. The resultant material is said to be superior to any previous mixture of metals and ceramics. Materials of this type are now usually made by mixing small particles of ceramics and metals as salt and pepper can be mixed. However, they become brittle at high heat and crack or break under stress.

"Handyman"

The General Electric Company of Schenectady, New York, has built a robot that rivals a human being in the work it can do with its massive arms and hands. General Electric engineers call the robot "Handyman." This robot was designed to serve as a master mechanic on experimental atomic airplane engines. It works in radioactive areas, controlled by a human operator some distance away. The characteristic that distinguishes "Handyman" from other comparable robots is its ability to clutch objects in its steel hands. It duplicates very closely the clutching action of the human hand. To do this, it has a thumb and forefinger on each arm. Each arm and hand can perform a total of 10 types of motion. The robot duplicates the movements of the hands of its human operator. Its arms and hands are controlled by an intricate electro-hydraulic system. The operator can make the robot's fingers and thumbs bend and curl. The wrists and elbows can bend, the forearms and upper arms can twist, and there is a forward and sideward pivot in the shoulder joints. Capable of such a variety of motions, the robot can hammer a nail into a board, unscrew a bolt, or twist a hula hoop. The movements of its hands can be so delicately controlled that it can even pluck petals from a flower.

Computers for Textile Research

An analogue computer of modular construction is now being used for advanced research by British Nylon Spinner Ltd., leading manufacturers of nylon and allied fibres in the United Kingdom, at its works in Newport, Monmouthshire. The new computer will enable the firm to explore new methods of producing and processing man-made fibres without the need for building costly pilot plants, and without interfering with the actual production plant of the factory. One of its first tasks will be to investigate the precise control of yarn tension regulating and spooling, which is vital to the faster, more economic running of textile machinery. Each new technique can be tried out on the computer and positive results obtained in a very short time—often within a few hours.

Sheet Aluminium for Tropical Buildings

A new British development in aluminium sheeting will speed up industrial building. The British Aluminium Company Ltd. has produced wall-making material in foot-wide strips up to 40 ft. long which will enable unskilled workers to erect big buildings in a matter of hours. The new exterior covering, called "Rigidal Seawall," was on show for the first time at a special exhibition recently held in London. It is assembled by an easy-to-work punch machine. Aluminium building covering is said to have already proved its worth in many countries. The new material is especially suitable for the tropics, as it can be produced with an embossed surface to reduce the glare of the sun. The makers say that their product is slightly more expensive than conventional-type aluminium sheeting, but claim that this is more than offset by reduced assembly costs. The light weight of the material reduces transport charges, thus keeping the cost per sheet delivered below that of galvanised steel sheeting in many tropical areas.

SOUTH INDIAN SUGAR MILLS ASSOCIATION

MR. B. M. KRISHNAN EXPLAINS CAUSES FOR RISE IN SUGAR PRICE

ADDRESSING the members of the South Indian Sugar Mills Association at their Twenty-second Annual General Meeting held at Hotel Dasaprakash, Madras, on 22nd June 1959, Mr. B. M. Krishnan, I.A.S. (Retd.), Chairman, Mysore Sugar Company, Ltd., explained in detail the various factors which had gone to push up the retail price of sugar. So far as South India was concerned, he said, the prospects for the coming season were that there would be an increase in production which would reduce its dependence on U.P. and Bihar.

The following is the full text of Mr. Krishnan's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to this twenty-second annual general meeting of the Association.

"I doubt whether any major industry in the country has had of late so much public attention focused on it as sugar. It is unfortunate that an impression has been created in the minds of the public that the industry is a free agent and can get away with impunity with most things. Nothing is farther from the truth. It was not so long ago that Shri A. P. Jain, Minister for Food and Agriculture, Government of India, conceded in the Lok Sabha that sugar was perhaps the most regulated industry in the country.

Complete Control

"First, the price of the raw material of the industry, namely, sugarcane is fixed by the Government of India. Over and above this, many factories in the South pay an extra price for cane. Secondly, wages are governed by labour laws and awards. Thirdly, the sugar we produce is entirely at the disposal of the Government of India who alone decide how much shall be released periodically for sale and when. Thus, control over the industry is complete and is only just short of Government taking over the entire distribution themselves. In U.P., North Bihar and the Punjab, Government have fixed ex-factory prices and allot direct to dealers 25 per cent. of the production.

"It may well be asked, therefore, why the price of sugar to the consumer has not been stabilised at a reasonable level and maintained at that level. That the retail price which was

In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG

BRANCHES IN INDIA

BOMBAY CALCUTTA

Offices in Europe and the United States and throughout the Far East.

81 nP. per viss in 1946-47 is today about Re. 1.63 is due to the heavy incidence of excise duty, cess on cane, increase in wages and salaries and the high cost of raw materials for processing and of plant and machinery for rehabilitation.

Delay in Quota

"Nevertheless, what happens at present is that the retail price goes up and down every few months. It comes down when adequate releases are made, but once these releases are sold out, there is a tendency for the price to rise, until the next release is made. The laws of supply and demand should rule when production is adequate and distribution even. A delay of even a week in releasing the monthly quota of sugar can affect prices and once retail prices go up, they have a way of staying high unless radical measures are taken.

"The all-India production in 1957-58 was 19.76 lakh tons. There was a carryover of 4.28 lakh tons from the previous year, so that the total supply available was 24.04 lakh tons. The internal offtake was 20.44 lakh tons. About 31,000 tons were exported. Thus, on 31st October 1958, the end of the sugar year, there was a balance of 3.29 lakh tons. In the 1958-59 season, production fell to 19.04 lakh tons, owing to various reasons outside the control of the industry not the least of which was control over ex-factory prices, *inter alia*, in U.P., the biggest sugar-producing State in India. The total supply available was thus only 22.33 lakh tons, as against 24.04 lakh tons in the previous year. The consumption, in keeping with the increase in population, is estimated to be 21 lakh tons, leaving only 1.33 lakh tons as carryover of which 19,000 tons was exported.

Fears of Scarcity

"The net carryover into 1958-59 was thus only 1.14 lakh tons against 3.29 lakh tons last year. The lower carryover has generated a psychology of shortage of sugar, although, in fact, there is just enough sugar in the country to meet the expected consumption of 21 lakh tons. The decision of the Government to export a further 25,000 tons has contributed to the fear of scarcity towards the end of this year.

"It is in the firm conviction that there is sufficient sugar to go round and to discourage speculative tendencies to exploit the situation that this Association voluntarily decided recently to sell the bulk of the releases direct to the retailers and large consumers and at the same time open fair price shops in all important towns, particularly in the deficit States of Madras and Kerala.

"Prospects are that production in the South, comprising the States of Madras, Andhra, Kerala and Mysore, in the coming season will be more than in the 1958-59 season and this should reduce considerably our dependence on U.P. and Bihar for extra sugar.

"I appeal to the trade in the South to co-operate with the industry to make the present distribution scheme a success. I can assure them that it will not be long before the industry resumes selling through the normal trade channels.

"Thank you, gentlemen."

Note: Mr. V. Ramakrishna, C.I.E., I.C.S. (Retd.), Chairman of the Association, could not attend the meeting. In his absence, Mr. B. M. Krishnan, took the chair and addressed the gathering.

Mr. V. Ramakrishna was re-elected President for the ensuing year.

SUGAR IN KANPUR

The recently-formed *Shakkur Vyapasyi Sangh*, an association of sugar merchants of Kanpur, has launched an agitation to check the movement of sugar from the city. A spokesman of the *Sangh* said recently that they would not allow sugar to go out of Kanpur till the prices were brought down. It was better for sugar dealers to impose control on its movement rather than wait till the Government was forced to step in as had been done in Delhi and Punjab, he added. A meeting of sugar dealers, merchants, commission agents and brokers, held on 30th June, decided by an overwhelming majority to intensify the agitation. Most of the speakers suggested that the interests of the local consumers would be their primary concern. Others were, however, of the opinion that it would not be proper to neglect other parts of the country.

TEXTILE MACHINERY CORPORATION LIMITED

MR. K. K. BIRLA REVIEWS PROBLEMS OF ENGINEERING INDUSTRY

NEED FOR DEVELOPMENT OF ANCILLARY INDUSTRIES STRESSED

ADDRESSING the shareholders of the Textile Machinery Corporation Limited at their Nineteenth Annual General Meeting held at Belgharia, 24 Parganas, West Bengal, on 7th July 1959, Mr. K. K. Birla, Chairman of the Company, said that the development of small-scale industries was of special importance in the engineering sector, because they supplied ancillary products to large-scale industries at a lower cost and were in a way indispensable to the latter. He added that with all the efforts now on hand, the ancillary industries would not take a long time to develop to a stage where they could be of real help to the progress of engineering industry in the country.

The following is the full text of Mr. Birla's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in welcoming you to this nineteenth annual general meeting of Textile Machinery Corporation Limited. The Directors' report and the audited statement of accounts for the year ended 31st December 1958 have already been in your hands for some time and, with your permission, I shall take them as read.

"The year 1958 was a period of cautious adventure for commerce and industry. The recession in the West, though a mild one, had its echoes felt in this land too and affected our international trade adversely. Production also slowed down in certain industrial sectors and consumer resistance developed. A pruning of the second Five-year Plan became unavoidable. With a view to retrieving the situation, the Finance Minister announced certain changes in taxation in this year's budget. The removal of excess dividend tax and wealth tax on companies is a welcome step which the industry, in fact, had been urging for some time. But the increase in the incidence of wealth tax on individuals and the abolition of the system of 'grossing' in respect of dividend incomes are likely to have an adverse effect on the industrial progress of the country. The capacity of the individual to save and invest and thereby contribute to the resources needed for industrial development is bound to be reduced, owing to the rates of wealth tax having been enhanced. Such provisions for taxation are, therefore, not calculated to contribute to a favourable investment climate. Nor can such a climate be induced by austerity or under-consumption. The industrial edifice can only be built on increased demand which means an improved standard of living and additional employment. For all this a new investment climate is needed based on individual incentive and expectation of legitimate return. The importance of creating such an atmosphere is even greater today when the country is thinking of launching on an ambitious third Five-year Plan with an investment outlay of Rs. 10,000 crores.

Foreign Exchange

"Gentlemen, you might recollect that when we met last year I had referred to the shortage of foreign exchange as one of the main difficulties which stood in the way of a rapid industrial development of the country. Though on the surface the situation now seems a bit improved, we cannot discount the subterranean currents that still threaten to slow down the tempo of the Plan. In January 1957, our foreign exchange reserves stood at Rs. 511 crores. By January 1958, they came down to Rs. 283 crores and by January 1959 to Rs. 189 crores. Thus, during the year 1957, the reserves were drawn down by Rs. 228 crores and during 1958 by Rs. 94 crores. The performance of 1958 was no doubt an improvement and it continued in the early part of the current calendar year also. In April 1959, the reserves stood at Rs. 214 crores which means that not only was the drain on our reserves stopped but there was actually an increase of Rs. 25 crores during the first quarter. In the last month the situation has taken a turn for the worse. The important point to note, however, is that even the earlier improvement had been due to a decline in imports and not due to any increase in exports. Imports fell from

Rs. 1,026 crores in 1957 to Rs. 864 crores in 1958, but at the same time the exports also declined from Rs. 638 crores to Rs. 571 crores. During the early part of 1959 also India's export performance continued to be disquieting. For the first quarter of the current calendar year our exports aggregated to no more than Rs. 134 crores, as against Rs. 141 crores and Rs. 163 crores during the corresponding periods of 1958 and 1957, respectively. This indicates that, in spite of our best efforts, exports are declining. The situation could only be improved through a careful consideration of the problems of every industry individually. The engineering industry too has a great potentiality and, if properly handled, can play an important role in the export promotion drive.

"The export of engineering goods during the past three years has been as shown below:

Year	Value of exports in Rs. crores
1956	4.4
1957	4.4
1958	4.1

In the current year, too, the exports during the first quarter were about Rs. 1.1 crore. Thus, the exports continue to remain roughly at Rs. 4 crores annually. They form 1.5 per cent. of the total value of engineering goods produced which stands at Rs. 270 crores today and they form only 0.7 per cent. of the total exports which are of the order of Rs. 600 crores. This is a poor performance indeed, specially in view of the fact that India is fortunate enough to have on her borders good potential markets. In order, however, to take full advantage of these markets and to compete successfully in them against other suppliers, we must be able to establish a reputation for our quality, to reduce our cost of production and to offer reasonable credit facilities to our customers. So far as the quality is concerned I am confident the Indian engineering industry is capable of getting over the shortcomings, if any exist, and would surely build up a reputation in course of time. But the question of the cost of production is a difficult one and not entirely within the control of the industry itself. There is first the problem of insufficiency of raw materials which affected production in many industrial sectors and resulted in a higher cost of production. The availability of steel, for example, has been continuously falling over the last three years as the following figures would show:

	Availability of steel in million tons		
	1956	1957	1958
Indigenous production	1.38	1.44	1.30
Imports	1.79	1.03	1.08
Total availability	3.12	2.07	2.38

As these figures indicate, the availability of steel has been falling, whereas the requirements of the Engineering industry for this main raw material have obviously been increasing. This shortage of steel has been an important factor in rendering idle a substantial portion of the installed capacity in the engineering industry.

Price of Steel

"Apart from the shortage of steel which made it impossible to maintain an economic level of production, the prices of this main raw material have also been increased several times during the past few years. From 1952 onwards, the increases in the price of steel have been as follows:—

Year	First increase	Second increase	Third increase	Fourth increase	Fifth increase	Sixth increase	Seventh increase	Eighth increase	Ninth increase	Tenth increase	Eleventh increase	Twelfth increase	Thirteenth increase	Fourteenth increase	Fifteenth increase	Sixteenth increase	Seventeenth increase	Eighteenth increase	Nineteenth increase	Twentieth increase	Twenty-first increase	Twenty-second increase	Twenty-third increase	Twenty-fourth increase	Twenty-fifth increase	Twenty-sixth increase	Twenty-seventh increase	Twenty-eighth increase	Twenty-ninth increase	Thirtieth increase
1952	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
1953	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
1954	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
1955	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
1956	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
1957	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
1958	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
1959	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
Total increase	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..

"The effect of these increases on the selling price of the more common categories of steel works out as shown below:—

Category of steel	Price in 1952 in rupees per ton	Increase from 1952 in rupees per ton	Present price in rupees per ton	Percentage increase in price
1. Bars and rods	.. 836	.. 309	.. 1,145	139
2. Plates	.. 424	.. 809	.. 1,233	292
3. Structural	.. 346	.. 809	.. 1,155	333

"In order to give an idea of how the price of steel in India compares with that in the other steel-producing countries of the world, a comparative table for a common category of steel, say plates, is given below:

Name of Country	Price of steel plates in rupees per ton	
	On 31st March, 1958	On 31st March, 1959
1. U.K.	.. 561	.. 561
2. U.S.A.	.. 514	.. 565
3. Australia	.. 602	.. 602
4. Belgium	.. 500	.. 500
5. India	.. 725	.. 725

"The above prices are all internal prices. Those for India are *f.o.r.* destination prices, while in other countries they are *ex-factory* prices. These figures would show that the prices of steel in India are roughly 22 per cent. to 30 per cent. higher than those in other countries of the world. Such high prices of steel naturally make the cost of production of our engineering goods unfavourable in comparison with that in other countries and consequently reduce our competitive capacity in foreign markets.

Prospect of Steel Supplies

"It is to be hoped, that the impediment of shorter availability of steel which the indigenous engineering industry is facing today will only be short-lived now. Two out of the three steel plants in the public sector have already started functioning. Although as yet they are only producing pig iron—Bhilai about 1,000 tons and Rourkela 450 tons per day—it is expected that the manufacture of steel would commence before the end of this year. By that time the plant at Durgapur would also have gone into production. With these three plants in the public sector working at full capacity and with the completion of the expansion programmes of the steel plants in the private sector, the total production of steel by the end of the second Five-year Plan should reach something like 4.7 million tons, as against the present level of 1.3 million tons only. With that much of production it is not unreasonable to hope that the engineering industries of the country would not feel shortage of steel and would receive their full requirements of this raw material. While concluding on this subject, I should like to point out that Indian steel which used to be the cheapest a few years back is now unquestionably one of the dearest in the world. I hope, however, that after the steel plants in the public and private sectors attain their rated capacity, they would find it possible to effect reduction in cost, so that the engineering industry may be assured of supplies of steel at reasonable rates and its competitive capacity may not be impaired in any way.

"The other important factor which, besides raw material, controls the cost of production, is the productivity of labour. The per capita productivity of the Indian worker is unfortunately still very low as compared to the per capita productivity in other industrially advanced countries. If the present low level of productivity continues and if wages are increased to improve the standard of living as planned, the effect would be a further addition to the cost of production which is already high. I trust that this important aspect will not be lost sight of and that some sort of a relation would always be maintained between the rise in wages and a corresponding increase in productivity. Otherwise, our capacity, to compete in the export-markets would be further impaired.

Proud Privilege

"Last year, I had mentioned that enquiries from foreign countries for goods manufactured by your Company were being received and that there were fair prospects of sales for exports materialising in the near future. I am glad to inform you that a beginning has already been made. An order for 30 complete ring frames worth about Rs. 8 lakhs has been received this year, against which 19 ring frames have already been despatched. This is the first time in the history of the textile machinery industry in India that some exports of capital goods have been affected by the industry. I am glad to say that it is your Company who has had this proud privilege.

"Gentlemen, it is a matter of satisfaction that, in spite of difficulties, some of which I have pointed out above, the engineering industries of the country have maintained their leading position so far as development is concerned. This is a happy circumstance, particularly, in view of the fact that it is the engineering industries of a country which, more than any other industry,

reflect its general advancement. The indices of production for the various industries given below would illustrate the point:

Name of industry	Index of production (Base 1951=100)	
	1957	1958
1. Cotton textiles	.. 115.6	.. 108.9
2. Jute textiles	.. 120.5	.. 123.9
3. Cement	.. 175.3	.. 189.9
4. Iron and steel	.. 119.3	.. 119.2
5. Sugar	.. 185.5	.. 175.5
6. Paper	.. 150.3	.. 191.8
7. Engineering industries	.. 241.2	.. 252.9
8. General index	.. 137.3	.. 139.4

Production of Engineering Industries

"The above figures show that the index of production of engineering industries has been the highest during recent years. Taking the engineering industries individually, the production in some of the important ones has been as shown below:

Item	Unit	Production		
		1951	1957	1958
1. Machine tools	.. Rs. lakhs	47.3	250.0	375.9
2. Transformers	.. 000 KVA	106	1,219	1,123
3. Bicycles	.. Lakh Nos.	1.14	8.01	9.12
4. Electric fans	.. "	1.94	5.24	6.36
5. Ring frames	.. Nos.	276	1,368	876
6. Carding engines	.. "	..	1,020	1,152
7. Looms	.. "	..	2,868	3,192
8. Sewing machines	.. 000 Nos.	44.4	166.6	205.3
9. Radio receivers	.. "	49.1	190.3	193.1
10. Electric motors	.. 000 h.p.	143	469	624
11. Railway wagons	.. 000 Nos.	3.7	16.9	13.5
		(51-52)		
12. Diesel engines	.. "	7.2	16.5	25.8
13. Automobiles	.. "	22.2	31.9	26.7

"In a few industries, namely, transformers, ring frames and automobiles, the production in 1958 showed a decline, as compared with that in 1957, but the other industries have maintained their development as the above figures show. The most rapid development, as I stated last year, is mainly due to the excellent efforts made by the Hindustan Machine Tools Factory at Bangalore where not only have the targets fixed under the Second Plan been already exceeded but also the quality of production has been reported to be of a very high standard. The development of the machine tool industry is a most welcome sign, because a higher production of machine tools gives promise of the establishment of further manufacturing capacity in the country.

Targets of Capacities

"Perhaps a better measure to judge the progress of an industry is its installed capacity. Actual production in any particular year may be less due to temporary reasons like shortage of raw materials, labour troubles, etc., but the installed capacity is a permanent indication of the stage of development. Although there are still two years to complete the period of the second Five-year Plan, the targets of capacities fixed under the Plan have, in the case of a large number of engineering industries, been either already exceeded or are on the point of being exceeded. Some of these industries are mentioned below:

Name of industry	Unit	Target of capacity under the second Five-year Plan	Capacity already reached as on 31-12-1958
1. Bicycles	.. 000 Nos.	800	925
2. Complete spinning ring frames	.. Nos.	2,810	2,794
3. Dry batteries	.. Lakh Nos.	2,250	2,244
4. Electric fans	.. 000 Nos.	600	765
5. Grinding wheels	.. 000 lbs.	4,728	5,638
6. Sewing machines	.. 000 Nos.	85	81
7. Storage batteries	.. "	850	917

"Gentlemen, the development of small-scale industries side by side with that of the organised sector is also of major importance in the industrialisation of a country. Small industries play a very significant role in the industrially advanced countries of the world, their contribution to the national economy being quite substantial. In the U.S.A., for instance, it was recently estimated that the small industries contribute about 40 per cent. of the total private national income, and more than 33 per cent. of the national product. In the engineering sector, the development of small-scale industries is of special importance, because they supply ancillary products to large-scale industries at a lower cost and are, in a way, indispensable to them. Since the small-scale industries have also great potentialities for providing employment on a large scale, their development is all the more important for a country like India where the question of unemployment is one of the biggest problems of the day. In this context, it is heartening to note that there is now an all-round realisation of the necessity of developing such ancillary engineering industries in this country. Some of the major handicaps that are experienced by small entrepreneurs are a paucity of finance, lack of adequate technical guidance and non-availability of ready markets for their products. Efforts are being made to find a satisfactory

solution to all these difficulties. The National Small Industries Corporation is providing machinery to small entrepreneurs on hire-purchase basis and is also helping them to market their products, while technical guidance is being offered by the Small Industries Services Institutes. Some other schemes are also under consideration through which these entrepreneurs would receive further financial and technical assistance from the large-scale industries themselves. I have no doubt that with all these efforts, the ancillary industries will not take long to develop to a stage when they could be of real help in the progress of the engineering industries of the country.

"Gentlemen, I would now deal briefly with the developments that have taken place in the different divisions of your Company during the year under review.

Cotton Textile Machinery Division

"In my last year's address I had dealt with the factors responsible for lowering the tempo of production of cotton textile machinery. Cotton mills in India had not in the year under review recovered from the slump that started in 1957. Only those equipped with modern machinery—and they are few in number—are working without feeling the pinch, while the vast majority are carrying on in a make-shift manner. Needless to say, the impact of these adverse conditions on the machinery manufacturing industry has been severe. So far as we are concerned, our sales during the year under review were slightly better than in the previous year which, I must say, was a particularly bad year. But our production was much less. The reason for lower production was that whereas the carryover of orders from 1956 to 1957 was very large, the carryover from 1957 to 1958 was quite small and, therefore, the production had to be brought down to a lower level. We were also required to provide financial accommodation to several mills by offering medium-term credit.

"The development work in this Division during the year under review was satisfactory. By the beginning of 1959 we were able to make prototypes of the UD type of ring spinning frame and an improved type of drawing frame. Development work on Simplex fly frame and ring doubling frame is in progress. All the new items are made to the specifications of our collaborators, Messrs. Howa Machinery Ltd., Nagoya, Japan.

"Carding engine production progressed fairly satisfactorily during the year. We are now producing a higher proportion of components in our works. A good deal of progress has been made on the manufacture of special purpose machine tools which will help us in achieving production of almost all the component parts in our factory.

"In the current calendar year, the textile machinery division of your Company is expected to show better results, because the textile industry appears to have turned round the corner and its condition is improving.

Boiler and Heavy Engineering Division

"In this division, the quantum of production during the year under review was substantially higher than in the preceding year. In fact, it was one and a half times higher. Shop extensions undertaken during the previous year have

UNIVERSITY OF BOMBAY DEPARTMENT OF ECONOMICS

APPLICATIONS ARE INVITED FOR THE post of a Research Assistant in Monetary Economics in the Department of Economics in the grade of Rs. 160-15-250 plus D.A. admissible under the existing rules.

Applicants should have a good post-graduate degree in Monetary Economics and some experience of research work, particularly in Monetary Economics. They should state their research qualifications and the subject in which they have specialised. Preference will be given to those who have specialised in Monetary Economics.

Eight copies of the application in the prescribed form (to be had from the Registrar, University of Bombay, Bombay-1), should be submitted. Selected candidates will have to present themselves for interview at their own expense.

Applications should reach the undersigned on or before 30th July, 1959.

T. V. CHIDAMBARAN,
University Registrar.

BOMBAY, 3rd July, 1959.

been completed and we are now preparing to install new plant and equipment for various items of manufacture.

"Due to difficulties in importing the necessary equipment, we have not been able to make as much headway as we had intended in the manufacture of water tube boilers and sugar machinery. Water tube boilers are, however, now in the process of production. Order for Lancashire vertical and locomotive Boilers also continue to be received as before.

"Manufacture of sugar machinery has progressed considerably. On the advice of the Government of India, machinery manufacturers including ourselves have formed consortia to deal with the orders that would be forthcoming for sugar plants in this country. It is estimated that under the present scheme more than 75 per cent. of the equipment required by the sugar factories in India will be made indigenously. With a number of new sugar factories proposed to be set up in future and with a large number of the existing ones requiring replacement of their plants we and the other members of the consortia expect to do quite a large volume of work in this field.

"Our structural shops continued to do a big volume of work during the year under review. You will be pleased to hear that we have already finished the work of fabrication and erection of all the radial spillway gates for the Panchet Hill Dam of the Damodar Valley Corporation. These gates were of gigantic dimensions and due to difficulties of transportation they were despatched in sections and reassembled at site. We are getting orders for dam gates for other schemes as well. This, in fact, is one of the lines we intend to develop further. Among other items of structural work upon which we were engaged during the year under review, I may mention completion of fabrication work on 2,100 tons of various items for the Bhilai Steel Plant. We still have, on hand, work on about 1,200 tons more for the same plant. This work is being done in stages.

"Railway rolling stock production during the year has been satisfactory. In the current year we shall be changing over production to the BOX type broad-gauge wagons. We have also made fair progress on the production of passenger coaching underframes.

Steel Foundry Division

"In this division, we have maintained the progress achieved during the previous years. We are making alloy steel castings, specially high manganese and nickel chrome castings for various industrial purposes. We have also developed capacity for making cast steel gear wheels for sugar machinery. Certain parts of locomotives required by the Chittaranjan Locomotive Works are also being made in our foundry. We are making efforts to develop capacity for heavy castings too.

Machine Tool Division

"The Government of India have approved the terms of our collaboration with Messrs. H. W. Ward & Co., Ltd., U.K., for the manufacture of Capstan and Turret lathes. This scheme is being pushed through with all possible speed and necessary arrangements are being made for an early import of the requisite capital equipment.

"Gentlemen, before concluding I wish to place on record my deep appreciation of the ceaseless efforts put in by the officers, members of the staff and workers in sustaining the progress of your Company."

Five leading Norwegian manufacturers of diesel engines for fishing and coastal fleet have together formed themselves into a single group, called the N.O.R.M.O. While the constituent concerns will continue as independent units, research and design, besides rationalising production by joint planning and control. Production is proposed to be concentrated on only two or three models instead of fifteen as at present. The manufacture of parts will be divided among the five companies, and one of them will constitute the assembly plant.

The number of population censuses undertaken throughout the world, particularly in Asia and Africa, has increased during the past five years, according to the *Demographic Yearbook 1958*, an annual publication of the United Nations. Much of this increased census activity is part of the 1960 world census programme recommended by the United Nations. The programme extends over the years 1955 to 1964, and the Governments have been invited to follow U.N. recommendations designed to improve the quality of the results and the comparability of the data obtained. In Asia, about 60 per cent. of the total population, that is, about 784 million persons, was enumerated between 1953 and 1958. The largest group in this figure was in mainland China where the 1953 census supplied the first modern figures on the status of population in that area.

MOTOR INSURANCE TARIFF W.I.A.A. PROTESTS AGAINST ENHANCEMENT

ECHOES of the protest against the enhancement of motor insurance tariff last year in Bombay are still being heard in automobile-owner circles. Last year, when private car and motor cycle comprehensive cover rates for risks in Bombay City and the island of Salsettee was put up by 40 per cent., by the Tariff Committee of the Insurance Association of India, motor car owners in Bombay had opposed the rise. In a memorandum submitted to the Bombay Regional Council of the Insurance Association of India, the Western India Automobile Association (W.I.A.A.) submitted that, considering the improvement in the accident position in respect of motor cars, as compared with commercial vehicles, it was unfair to raise the premium on cars while that on commercial vehicles was sought to be only slightly raised or even reduced.

At this year's annual meeting of the W.I.A.A., too, its President, Mr. P. R. Bhatt, voiced the Association's strong protest against the enhancement of the premium, Mr. Bhatt regretted that, in spite of the close association between the W.I.A.A. and the Bombay Regional Council of the Insurance Association of India, the latter did not consult his Association before the changes in the rates were decided upon nor did it pay heed to the W.I.A.A.'s suggestions in this respect. The latest instance of such unresponsiveness on the part of the Insurance Association, according to Mr. Bhatt, was the unilateral way in which it repudiated an arrangement regarding rebates which was in force for over a quarter of a century.

Mr. Bhatt observed that the rebate was introduced as a sort of encouragement to motorists to join automobile associations and thus support them in their efforts to promote safer motoring which will ultimately benefit the insurance companies. That the Association was doing useful work in this direction was evident, Mr. Bhatt pointed out, from the fact that, in almost all States, they have been given consultative status in regard to traffic problems and road safety. Expressing surprise that, at a stage when their influence for public good was increasingly felt, the Tariff Committee of the Insurance Association of India should deem it fit to cut the rebate, Mr. Bhatt observed:

"I cannot say what sort of response the Tariff Committee propose to give to the W.I.A.A.'s representation for the restoration of the status quo but assuming it is ignored or by-passed, I am afraid the W.I.A.A. will then have no option but to sit up and take notice of such flagrant floutings of undertakings of 'good faith' arrived at after very careful consideration by the two bodies. In any case, the situation is such that it will be suicidal if we fail to exercise the utmost caution and care in moulding developments."

Mr. Bhatt said that the establishment of the Federation of Indian Automobile Associations last February was a significant achievement in the history of motoring in India. He revealed that one of the very first subjects the Federation expected to tackle was its relationship with the Insurance Association of India and the steps it should take to safeguard the interest of the members in regard to rates, rebates, etc. The attitude of the Tariff Committee, according to Mr. Bhatt, had given rise to strong feelings among the automobile associations which may find shape in common action and concerted remedies. Perhaps, an indication of what the automobile associations intend to do in the matter was his hint at the possibility of motorists evolving a co-operative insurance scheme.

Business Unremunerative

The W.I.A.A. is perhaps justified in feeling uneasy over the fact that it was not consulted in the matter of enhancing the premium and cutting rebate. Prior consultation would certainly have been beneficial to both bodies. But it is not quite correct to argue that the rise in the rates was unjust or unwarranted. Motor insurance in this country is notoriously unremunerative. The hopeless conditions of roads and traffic is obvious even to a casual visitor to the City. The volume of traffic, vehicular and pedestrian, is increasing every year. To give an idea of the increase in passengers on the roads, the B.E.S.T. and the suburban services of the Western and Central Railways handle 2.8 million passengers daily; all of them are pedestrians at one time or another in Bombay City roads daily.

If the number of car miles in the City per day were to be calculated it would be equivalent

to one car going 1,250,000 miles in one day. This is equal to 50 times around the world at the equator. If the momentum of Bombay traffic were to be concentrated into the velocity of one vehicle, it would travel at over 52,000 m.p.h. which is three times the velocity of the U.S.A.'s I.G.Y. space rocket when fired. By comparison, this car would meet with a collision every 20,000 miles. It would injure a person every 80,400 miles and kill a person every 1,660,000 miles.

Transposing these figures to the average driver of a vehicle who does the average 20 miles per day in his vehicle, his chances of meeting with a collision would occur once in every two years and 10 months. He would injure one person every 11 years and would kill another every 227 years or once in three average spans of life and yet statistics show that, during 1958, every fourth private car met with an accident, every B.E.S.T. bus met with 4.5 accidents, every sixth motor cycle met with an accident, every 10th motor taxi met with nine accidents and every seven lorries met with two accidents. In money terms, nearly Rs. 4 lakhs is literally exploded into exhaust fumes daily in the City.

Insurers' Stand

Insurers point out that the enhancement of rates last year was necessitated by the mounting loss ratio. It is true that last year's rise in rates was the third in Bombay City since 1949. But, in spite of the increases, the loss ratio continued to be unfavourable and the ratio for the period 1953-55, on which last year's rate was based, averaged about 73.33 per cent. As regards the rebates given to members of recognised automobile associations, the Tariff Committee maintains that these are in the form of indirect contributions to the automobile associations in the expectation that the service rendered by these associations would ultimately lead to lower claims. It would, however, appear that the

quality of servicing is not always high and that such servicing has not resulted in any reduction of claims. It must be remembered, too, that higher cost of insurance is not a phenomenon confined to this country alone. Motor insurance rates throughout the world are mounting steadily. In the U.S., during the ten years up to the end of 1958, motor insurance rates advanced by 69 per cent. and, this year, insurance companies are asking the State Governments to sanction still higher rates. Many of the insurance companies are so dissatisfied with their motor business that they are said to be trying to sell less and less liability protection. In many States of the U.S., it is said, insurers will accept certain liability only through a type of share-the-loss plan which forcibly assigns to various companies a share of their burden.

There is no doubt that car owners in this country are called upon to carry heavier and heavier burden. The high price of petrol (the price of petrol per gallon in India is Rs. 3, as against Re. 1.79 in the U.S., Rs. 2.85 in the U.K., Re. 1.80 in Australia and Re. 2.45 in Switzerland) the mounting repair charges and replacement costs have made the possession and use of cars prohibitively costly. But there does not seem to be much that insurance companies can do in the matter. The car owner's lot can be improved only when his costs of operation are brought down through relief in tax and other burdens.

The way out of the impasse in respect of car insurance lies in minimising the number of accidents by promoting a "safety climate." This alone could ultimately make car insurance cheaper to car owners and profitable to insurance companies. The formation of a separate co-operative insurance scheme for car owners, as suggested by Mr. Bhatt, does not appear to be the solution to a problem which has its roots in the chaotic condition of traffic in the country's present fiscal system and poor standards of road maintenance.

WORLD ECONOMIC TRENDS U.N. SURVEY ANTICIPATES RISE IN PRODUCTION AND STEADY CONDITIONS FOR PRIMARY PRODUCE

EARLY in 1959, business activity in industrial countries was continuing to recover from the recent recession. By March, the index of industrial production was slightly higher than the pre-recession peak and it was expected that production for the whole of the current year would be above the 1958 level. Despite this, there appeared to be grounds for some concern about the vigour of the current phase of expansion. These are some of the findings of Part II of the *World Economic Survey, 1958* which analyses current developments in the world economy and gives the outlook for 1959. Part I of the *Survey*, dealing with international commodity problems was analysed in our issue of 6th June 1959. The complete report, published in a printed edition by the United Nations, is meant to serve as the principal background document for the discussion of the world economic situation at the twenty-eighth session of the U.N. Economic and Social Council, which began in Geneva on 30th June 1959.

The prices of a number of primary products began to show signs of recovery in the second half of 1958, according to the *Survey*, but prospective developments in demand and supply seemed unlikely to induce a rapid rise in the commodity price level in 1959. Consequently, no great increase in the international trade of the primary exporting countries could be expected. In most of the centrally planned countries, plans for 1959 provide for rates of growth generally below those achieved in 1958.

Some of the more important facts that emerge from the study of trends in economic activity in 1958 and the future outlook are:

For the industrial group of countries, the year 1958 was characterised by economic decline and subsequent recovery.

The gold outflow from the United States can be explained without reference to any deterioration in the competitive power of that country or loss of confidence in the dollar.

The decline in commodity prices caused a reduction in the export earnings of the primary exporting countries. This in turn induced a cut-back in imports and the result in many cases was a slowing down in the rate of economic growth.

In the centrally planned countries, the outstanding development in 1958 was the unusually high rate of expansion reported in mainland China.

One of the main characteristics of the new long-term development programmes recently adopted by many centrally planned countries is the narrowing of the margin between the rates of growth envisaged for industry and agriculture.

Industrial Countries

The *Survey* reports that, notwithstanding a partial recovery in the second half of 1958, average production in the industrial group of countries was slightly lower in that year than in 1957. Although business activity continued to recover in 1959, the available indications were that under-utilisation of both equipment and labour was likely to persist for some time.

The most important factor which helped to overcome the recent recession in both Canada and the United States was, according to the *Survey*, the expansive behaviour of the public sector. In the United States the difference between the behaviour of the public sector in the 1953-54 and the 1957-58 recession provides much of the explanation for the relatively shorter duration of the latter downturn, despite the fact that the decline in activity in the private sector was greater and possessed a more persistent character in 1957-58.

The public sector in the U.S. continued to play a significant part in stimulating the expansion of demand and production after the upturn in production, during the first nine months of the recovery period. The support received by the economy from the public sector in the United States was not limited to Governmental action taken with the deliberate intention of arresting the downturn and promoting a higher level of activity. Certain measures taken for reasons not directly connected with economic conditions also played a significant part in stimulating economic activity both during the recession and in the first phase of recovery.

The stimulus provided to the economy by Government fiscal operations during the recession was, according to the *Survey*, sufficient to offset the depressing influence of the steep decline in fixed investment—the primary factor in the recession. Gross national product rose after

the first quarter of 1958 in line with the advance in industrial production, and, by the fourth quarter of the year, reached a level less than one per cent. lower than the pre-recession peak. For the year as a whole, however, total output was about 3 per cent. lower in volume than in 1957. The *Survey* states that one of the reasons for the present high volume of unemployment in the United States is to be sought in the relatively small rise in demand and employment during the last phase of the upswing preceding the recent recession, which extended from the end of 1955 until the third quarter of 1957.

The U.N. study draws attention to the important similarities between recent economic developments in the industrial countries of Western Europe and Japan and those in North America, particularly as regards the basic slackening of fixed investment. All of these countries experienced a drop in production of greater or lesser magnitude at some point during the period 1957-58. The fact that there had nevertheless been no general decline in economic activity in Western Europe on a scale comparable with that in the United States up to the end of 1958 was due mainly to the greater stability of total demand. Confidence did not weaken to the same extent as in North America, and inventory liquidation was much more limited, affecting only a few specific sectors. Particularly important in sustaining the level of final demand in Western Europe was the continued rapid growth in consumption of durable goods in the main producing countries.

The development of slack in their economies led a number of Governments to remove some of the restrictions on fixed investment and consumption, and, in some instances, to take specific measures to stimulate the expansion of demand. Partly as a result of these steps and a general improvement in economic climate following the recovery of North America, there was a moderate revival in economic activity in Japan and in all Western European countries, except France, in the second half of 1958, which continued into the early months of 1959.

Wages and Prices

The easing in demand pressures in the industrial group of countries during 1958 was accompanied in all countries, except France, by a slowing down in the rate of increase in wages and prices. The fact that wage rates generally rose more slowly in 1958 than in the preceding year does not mean that a similar slowdown occurred in wage costs per unit of output. The decline in the rate of increase of wages, the U.N. report states, appears to have been offset in most countries by a slower growth in labour productivity. In general, it would seem that the fall in prices of raw materials was a more important factor in the greater stability of prices of manufactured goods.

The *Survey* observes that developments in the international trade and payments of the industrial countries during 1958 seem to have been quite the opposite of what the world had come to expect in the wake of a recession in North America. United States imports did not fall significantly, but those of Western Europe did. Western European exports fell much less in value than those of North America, and it was United States foreign exchange reserves that dropped, while those of the other industrial countries increased at a rate which was almost unprecedented.

Although there have been some changes in the structure of United States trade and payments that are likely to be of an enduring nature, the *Survey* states, these changes do not go very far toward explaining the apparently paradoxical behaviour of the United States balance of payments during 1958. Of much more importance, it says, is the fact that the last recession coincided with the coming to an end of the boom in Japan and Western Europe and this had an adverse effect on United States exports to these countries.

Forecast for 1959

Commenting on the outlook for 1959, the U.N. report says that the present upturn is expected to continue, and the rate of economic expansion during the next year or so will be limited only by the level of demand. However, it is doubtful whether the rate of expansion for

the industrial group of countries will be as great in 1959 as that experienced in the early phase of the last upswing, and it is likely to be well below the level which the available labour and equipment resources permit.

One of the major elements in Governmental hesitation to provide a stronger stimulus to the expansion of demand is the fear of price increases if the recovery accelerates. What is frequently left out of account, however, is the fact that a higher rate of growth, while tending to increase the pressure of demand in the raw material and labour markets, would permit a more rapid advance in productivity.

Balance of payments considerations also continue to play an important part in the policies of Western European countries toward economic growth according to the U.N. study. Of potentially greater significance is the increasing preoccupation with balance of payments considerations of countries such as the United States which had not in the past devoted any attention to such considerations in the context of growth policy. The events of the past 18 months, although they do not constitute evidence of a loss of confidence in the dollar, may possibly indicate an increasing reluctance on the part of Governments generally to hold reserves in the form of foreign exchange.

If such reluctance should increase, preoccupation with problems of foreign exchange reserves might assume serious proportions, and Governments might be tempted to compete for scarce supplies of gold by still greater restraints on economic activity than in the past. There is little to be said, the *Survey* avers, for allowing the rate of production of new gold to impose a limit on world economic expansion. Unless the countries which have strong balances of foreign exchange are among the leaders in world economic expansion, the general environment may well become universally unfavourable to high rates of growth.

Primary Exporting Countries

The *Survey* notes that, in 1958, for the first time since 1952, the volume of exports from the primary exporting countries failed to expand. The immediate cause of this was the sharp recession in many branches of manufacturing in North America, a decline in building activity and a slowing down in the growth of several other industries in Western Europe and an almost universal cutback in the output of textiles. But this failure of exports to expand, the study points out, did not represent a sudden change so much as the culmination of a trend toward diminishing increases which had been under way since 1955.

The chief dynamic element in the growth of exports of primary producing countries in recent years has been petroleum, the volume shipped in 1958 being well over 50 per cent. above the 1953 level, whereas the volume of other products shipped from these countries increased a little more than an eighth between 1953 and 1957. During that period, the average unit value of exports remained fairly steady, and in mid-1957 it again stood at the 1953 level. In the course of the following 12 months, however, there was a rapid decline, reflecting a widespread reduction in commodity prices.

Terms of Exchange Deteriorate

The price index of primary commodities in international trade declined by more than 10 per cent. between the first quarter of 1957 and the second quarter of 1958. Since the average export unit value of manufactures continued to rise during this period, there was a sharp deterioration in the terms of exchange between primary products and manufactured goods, and, by mid-1958, this price ratio was at its lowest post-war level. Though there was a 2 per cent. improvement in these terms of exchange in the second half of 1958 as compared with the first half of the year, for 1958 as a whole they were 8 per cent. below the 1957 figure and 24 per cent. below the 1950 figure.

Not all prices were lower in 1958 than in 1957. There was an improvement in the terms of trade of countries exporting mainly cocoa, rice, meat, petroleum, fruit and copra and palm kernels. This was more than offset, however, by the worsening of the terms of trade of the exporters of wool, metals, and ores, sugar, rubber and cotton. In the aggregate, there was a deterioration of about 4 per cent. in the terms of trade and a reduction of about 6 per cent. in export proceeds.

The decline in the export proceeds of the primary exporting countries between 1957 and 1958 was not, according to the U.N. study, the

result of a large falling off in shipments to North America where the recession in industrial demand was most marked. Indeed, exports to North America were better maintained than those to other regions; in terms of value, they declined by only 3 per cent. as compared with a decline of 5 per cent. in exports to Western Europe, 7 per cent. in trade among the primary exporting countries themselves, and 14 per cent. in exports to Japan. Exports to the centrally planned countries, however, were 8 per cent. higher in 1958 than in 1957.

As the rising import bills and declining export earnings began to increase the strain on the external balance of payments in 1957, a growing number of countries turned to remedial action. There was a widespread cutback in imports, except in those few countries that were able to countenance an unhampered drawing down of their foreign exchange reserves, either because of the magnitude of their reserves or because of their expected reinforcement by inflowing capital. In several cases, adjustments in exchange rates also took place.

With the recovery beginning to get under way in the industrial countries, the demand for some of the products of the primary exporting countries also began to pick up slightly in the second half of 1958 and this process continued in the first quarter of 1959. The *Survey* adds, however, that the extent to which the upward price trends are likely to persist and be reflected in the export earnings of the primary exporting countries depends not only on the maintenance of higher rates of consumption in the industrial countries but also on demand from the centrally planned countries as well as the primary exporting countries themselves. As against these signs of probable improvement in the terms of trade of the primary exporting countries, the *Survey* mentions a number of negative factors, chief among which is the problem of longer-term maladjustment between demand and supply, particularly serious in the case of some of the agricultural commodities. On the other hand it says, the restraints on imports may well have somewhat less of an inhibitive effect on internal growth than they had in 1958 as domestic production promises to be appreciably higher—especially in the case of foodstuffs—and this should relieve the foreign trade budget of a part of the burden it bore in 1958. Moreover, present indications suggest that the flow of capital into the primary exporting countries in 1959 should be at least as great as in 1958. Concluding its review of the primary exporting countries, the *Survey* states: "If 1957 was a year of major external imbalance, and 1958 a year of downward adjustment, 1959 could be a year of levelling out, leading, in due course, to a resumption of growth in their international trade."

Centrally-planned Economies

In the Soviet Union, national product rose by 9 per cent. in 1958, as compared with a 6 per cent. increase in 1957. Changes in the rate of growth of national product between the two years were, however, of little significance in Bulgaria, Poland and Czechoslovakia. In mainland China, the changes which occurred were of an entirely different order of magnitude, and the rate of increase in national product seems to have been in the order of 50 per cent.

During 1958, says the *Survey*, the outstanding development in agriculture was the "striking increase" in output of over 60 per cent. recorded in mainland China. In the Soviet Union, the increase was about 12 per cent. In other Eastern European countries, the levels of output attained in 1958 were only moderately higher than in the preceding year, the increases ranging from 1.3 per cent. in Bulgaria to 6.7 per cent. in Eastern Germany. The U.N. study remarks that the expanded output of crops in mainland China was attained without any appreciable increase in the sown area and was mostly the result of technological improvements and more intensive methods of cultivation. The movement for the country-wide formation of communes gathered momentum in August 1958 and by mid-December 1958, it states, 740,000 collective farms, embracing 99 per cent. of all peasant households, were re-organised into 26,000 communes. Public ownership of means of production is far more extensive in the communes than it was in the collective farms. The record crops reaped in the Soviet Union were mostly the result of generally favourable weather conditions. The series of agricultural reforms introduced in 1958 were designed to secure further improvements in the utilisation of resources and to provide increased incentives for production. Compulsory delivery quotas at

lower prices were abolished, resulting in the elimination of the multiple pricing system. The State network of machine and tractor stations was also gradually transferred to the collective farms.

In the Soviet Union and Eastern Europe, industrial production continued to expand in 1958 at about the same rate as in the preceding year. Mainland China, however, reported an unusually high rate of increase, due to the maturing of a large number of investment projects initiated during the Five-year Plan for 1952-57 and to the very great expansion of small-scale production that was made possible through the employment of great numbers of people in productive activities involving little capital outlay. The expansion of output in the Soviet Union and in other Eastern European countries appears to have been fostered by the further elimination of bottlenecks and by more careful planning. In contrast to 1957, when output of consumer goods had risen in most countries at a faster rate than that of producer goods, all but one of the centrally-planned countries registered a larger increase in the producer goods sector in 1958.

Foreign Trade

The rate of expansion in foreign trade of all the centrally planned economies, except mainland China, slackened considerably in 1958. An expansion of 14 per cent. in 1957 gave way to a smaller expansion of 5 per cent. in 1958, primarily because of a sharp deceleration in trade of the Soviet Union and Eastern Germany. The foreign trade of mainland China increased by 14 per cent. in 1958 following an absolute decline in 1957. Trade with the Soviet Union increased by 18 per cent. while trade with some Western European countries more than doubled. During the period under review, imports of the centrally planned economies in their trade with the rest of the world increased more than exports.

In Yugoslavia, agricultural output which, after a decline of 12 per cent. in 1956, had increased by 35 per cent. in 1957, fell again in 1958 by about 15 per cent. As a consequence, national product remained practically at the level reached in 1957, despite the fact that industrial production increased by 11 per cent. The value of foreign trade increased by only 8 per cent. in 1958, as compared to a 32 per cent. increase in 1957.

Reviewing the plans for 1959, the U.N. Study says that the plans for mainland China and Bulgaria envisage exceedingly high rates of expansion, while those of the remaining centrally-planned countries provide for relatively moderate rates of growth, generally below the rates achieved in 1958. In most countries, the advance in industrial production would be realised mainly through increases in output per man and only to a much smaller extent through increased employment.

A special section of the *Survey* analyses the new long-term plans of economic development introduced or revised in 1958. In most countries, industrial production is planned to increase less rapidly than it has in the past, due chiefly to the increasing difficulty of maintaining the previous rate of expansion in the industrial labour supply. However, more than average rates of expansion are planned for the extractive and chemical sectors. As for agriculture, the planned rates of expansion are generally higher than those achieved in the past. Generally speaking, one of the characteristics of the new long-term plans of the centrally planned economies is a very significant narrowing of the margin between the rates of growth planned for industry and agriculture.

THE METAL BOX COMPANY OF INDIA LTD.

(Concluded from page 55)

to return to the United Kingdom. He served with your Company for nearly 26 years and for 17 of those years he was Chairman and, until March last year, Managing Director, bearing the heavy responsibility of managing the Company's affairs and guiding it along the successful path that it has followed. His leadership and energetic management have been an example to us all. Mr. Chiswell Jones continues to be a member of your Board of Directors and has also joined the Board of our Associates, The Metal Box Company Overseas Limited. I am sure you will wish to join me in placing on record the Company's appreciation of Mr. Chiswell Jones' services and our thanks for the success that he has achieved for the Company."

Notices

SHAW WALLACE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on 3rd August, 1959, at 3 p.m., for the following purposes:—

- (1) To consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
- (2) To declare a Dividend on the Ordinary Shares.
- (3) To appoint Auditors and to fix their remuneration.
- (4) To elect Directors in the places of three Directors retiring.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 25th July to 3rd August, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,

D. A. HOUGHTON,

Calcutta Director & Secretary.

4, BANKSHALL STREET,
CALCUTTA, 6th July, 1959.

THE EAST INDIAN COAL COMPANY LIMITED

(Incorporated in England with Limited Liability)

NOTICE IS HEREBY GIVEN THAT AN interim dividend in respect of the year ended 30th April, 1959, at the rate of Naye Paisa Fifty per share, subject to deduction of Indian Income-tax and Super-tax at the prescribed rates, has been declared payable by the Directors and will be paid to the Registered Shareholders as on 27th July, 1959.

The Share Transfer Books of the Company will be closed from the 14th to 27th July, 1959, both days inclusive.

By Order of the Board,

JARDINE HENDERSON, LIMITED,

I. F. MORRIS,

Acting Secretary,

Managing Agents and Secretaries.

4, CLIVE ROW,
CALCUTTA, 26th June, 1959.

N.B.—Payment of the above dividend will be made only to those members whose names are registered in the Books of the Company on the 27th July, 1959 or to their mandatories. No application for Warrants will be necessary. Claims on behalf of the holders of shares on bank transfer will not be entertained.

THE MYSORE PAPER MILLS LIMITED BANGALORE 9

NOTICE

IN CONNECTION WITH THE TWENTY-fourth Ordinary General Meeting of the Shareholders of the Company to be held on Friday the 28th August 1959, at 3 p.m., at the Mysore Chamber of Commerce Buildings, Kempegowda Road, Bangalore 9, the Share Transfer Books of the Company will be closed from 10th August 1959 to 28th August 1959, both days inclusive.

By Order of the Board,
C. V. RAMACHANDRA RAO,
Secretary.

ASIATIC BUILDINGS,
KEMPEGOWDA ROAD,
GANDHI NAGAR P.O.
POST BOX NO. 570,
BANGALORE 9.

FINANCE FOR SMALL AND MEDIUM INDUSTRIES IN JAPAN

CITY BANKS PLAY THE MAJOR ROLE

A UNIQUE feature of Japan's industrial structure is the preponderance of relatively small and medium enterprises. A description of these enterprises and how they are financed is given by Mr. P. Chentel Rao, Secretary of the Federation of Indian Chambers of Commerce and Industry, by way of an annexure to the report of the Goodwill Trade Mission which was reviewed in our last issue. It is worthwhile recording here the main features of Mr. Rao's note, as there is yet no clear idea in this country of the small and medium industries in Japan.

The definition of these industries varies, depending upon the purpose for which it is meant. For the purpose of finance, a small and medium business is taken as one which employs less than 300 persons and with a capital outlay of less than ten million yen. Out of the total business enterprises in the country (excluding agriculture, forestry and fishery) estimated at 3,284,000, the number of small and medium enterprises is 3,281,000, or 99.9 per cent. These enterprises account for 83.9 per cent. of all the total employees (17.62 million) in the country. Their share of total industrial production is 56 per cent. What is more, they handle 52 per cent. of the aggregate exports. Small and medium-scale industries have thus attained a pre-eminent position in the economic structure of Japan. This is not because these units could compete with the large-scale organised sector producing identical goods. Far from it. They exist because they play a strictly complementary role to the larger industries. They function as feeders to bigger industries.

Naturally, Japan's pioneering efforts in this field are looked upon with interest by many developing countries, including India, which lay stress on labour-intensive techniques of production. It is only appropriate that the Goodwill Mission should have devoted some attention to this aspect of Japanese economic development and seek to bring it to the notice of the public in this country.

Sources of Finance

Almost all the financial institutions in Japan provide the small and medium industries with finance. They do not feel that there is an element of risk in financing smaller units, because the bigger enterprises generally lend their name and weight for obtaining credit to those smaller enterprises that cater to their requirements. The bulk of people's savings in Japan is accumulated in the financial institutions. It is only natural then that these industries should depend for their credit needs on these institutions, instead of on the securities market or on individual financiers. While, in the fiscal year 1957, no less than 74.2 per cent. of the total funds to all businesses, including large business, were provided by private financial institutions and 6.7 per cent. by Government financial agencies, the contribution of the securities market was no more than 16.8 per cent. The following table shows the different sources of industrial finance in Japan as in the fiscal year 1957.

	Equipment capital		Working capital		Total	
	Amount	Percentage	Amount	Percentage	Amount	Percentage
Securities market	217.0	31.8	58.1	6.1	275.1	16.8
Corporate bonds	34.6	5.0	0.8	0.1	35.4	2.2
Stocks and shares	182.4	26.9	57.3	6.1	239.7	14.6
Private financial institutions	852.9	50.8	868.2	91.4	1,721.5	74.3
Long-term credit banks	88.3	13.0	7.1	0.8	95.4	5.8
Other financial institutions	200.0	30.8	850.1	90.6	1,050.1	68.7
Government financial agencies	85.7	12.8	23.5	2.5	109.2	6.7

The provisions of industrial finance is regulated by the loss compensation system, the credit guarantee system and credit insurance system. Under the loss compensation system, Government and the local (public) system, Government and the local (public) entities insure against the losses to a certain percentage, incurred by financial institutions from their bad loans extended to the small and medium concerns. The credit guarantee system has been devised to make it smooth to finance small and medium business concerns and people who are incapable of offering either enough personal surety or material security. On the other hand the credit insurance system broadly

insurance and the guarantee insurance. Under this scheme, automatic insurance, to a certain limit, of small loans guaranteed by the Credit Guarantee Association is made possible.

Six kinds of private, Governmental and Government-affiliated institutions are specialising in the small and medium business finance. These are:

- Private institutions (financing big and small-medium business):
 - City banks
 - Local banks
 - Trust banks
- Long-term credit banks
- Private institutions (financing small-medium business only):
 - Mutual loans and savings banks
 - Credit associations and credit co-operatives
- Semi-Governmental institutions (financing small-medium business only):
 - Central Bank for Commercial and Industrial Co-operatives
- Government institutions (financing small-medium business only):
 - Small Business Finance Corporation
 - People's Finance Corporation
 - Small Business Credit Insurance Corporation
- Government institutions (financing big and small-medium business):
 - Japan Development Bank
 - Export-Import Bank of Japan

Place of City Banks

Although there is thus a wide range of agencies providing credit to the small and medium industries, city banks, that is, ordinary banks, play the major role, accounting as they do for 55 per cent. of the total supply. The specialised banks provide about 35 per cent. and semi-Government institutions about nine per cent. The rate of interest varies from eight to twelve per cent.

A brief survey of the activities of the banks specialising in granting credits to small and medium industries is given below:

Central Bank for Commercial and Industrial Co-operatives: This Bank was established by law in December 1937. It had a paid-up capital of 2.84 billion yen at the end of 1956 of which 1.242 billion yen was invested by the Japanese Government in preference stock. Its main business is to make long-term loans without security or to discount bills for affiliated co-operatives and their members from funds received through deposits and debenture issue. The Bank is authorised to issue debenture upto 20 times the total of its paid-up capital and shareholders' reserves. The major portion of loan has been granted for working capital and a small percentage for fixed assets.

Credit Associations and Credit Co-operative Associations: These Associations are non-profit-making bodies. They accept deposits and grant loans to members and discount bills.

Mutual Loans and Savings Banks: These banks carry on the same type of functions as ordinary banks, such as accepting deposits, granting loans, discounting of bills and domestic exchange transactions. However, as small business financial institutions, certain restrictions which do not apply to other ordinary banks are applicable to them such as the maximum loan limit to borrower, regulations as to reserves and deposits, etc. These are essentially institutions for siphoning off petty deposits and savings. The amount of loan granted to a borrower is small, being about 3 lakh yen.

Small Business Finance Corporation: The Corporation has been established by Government for supplying long-term funds to small business enterprises for the purpose of fixed capital and long-term working capital. The Corporation is not authorised to accept deposits or issue debentures but can borrow from Government to supplement its resources.

THE UNITED COMMERCIAL BANK LIMITED

Head Office : CALCUTTA

Authorised Capital	Rs.	8,00,00,000
Subscribed Capital	Rs.	4,00,00,000
Paid-up Capital	Rs.	2,00,00,000
Reserve Fund	Rs.	1,48,00,000

Working Funds
(31.12.58) ... Over Rs. 114,00,000

BRANCHES ALL OVER INDIA (AND ABROAD).

AGENTS THROUGHOUT THE WORLD. PROVIDES EVERY BANKING FACILITY.

G. D. BIRLA, Chairman. S. T. SADASIVAN, General Manager.

People's Finance Corporation: The object of this Corporation which has been set up by Government is to supply petty business funds to the general public. This Corporation is also not allowed to accept deposits or issue debentures. It may borrow from the Government through the Trust Fund Bureau, etc. The amount of average loan granted by this Corporation was of the order of 203,000 yen, as compared with the average loan granted by the Small Finance Corporation of 2.25 million yen. While in the case of the Small Business Finance Corporation about three-fourths of the loans are for fixed capital, in the case of this Corporation less than 25 per cent. of the loans are for fixed capital and the remaining for working capital.

Small Business Credit Insurance Corporation: It was established in 1958 under the credit supplementing system for the promotion of small business, with its capital wholly provided by the Japanese Government. The business of the Corporation is to insure against loss arising from the guaranteeing of obligations of small business entrepreneurs and also to lend Government funds to private Guarantee Associations.

Other Agencies for Credit

The other financial agencies seek to extend credit to both large-scale units and smaller enterprises. First come the ordinary banks, including City banks, having their head offices in big cities and branches throughout the country. Local banks with head office mostly in local towns and the branches concentrated in their respective areas, and Trust banks.

Secondly, long-term credit banks which engage principally in supplying plant and equipment funds and long-term funds. At present Japan has two banks under this category namely, the Industrial Bank of Japan and the Long-term Credit Bank of Japan. The main difference in the operations of long-term credit banks from ordinary banks is that the former can accept deposits only from the Government local public bodies and clients. The principal source of the funds of the long-term credit banks besides their capital is the proceeds obtained from debenture issues. A long-term credit bank may issue debentures up to 2 times the total of its capital and reserves.

Thirdly, the Life Insurance Companies which with ample funds at their disposal are also playing an important role in making direct loans to industry and investment in securities. Besides, Government financial institutions such as the Japan Development Bank and Export Import Bank of Japan, also provide credit to private enterprise including small and medium scale units. The purpose of the Japan Development Bank is to supply long-term loans out of Government funds and to encourage long-term financing on the part of other financial institutions. The function of the Export-Import Bank of Japan is to make loans to Japanese exporters to facilitate plant exports as well as to provide loans to Japanese importers for financing in ports of raw materials contributing to export.

GRINDING WHEEL INDUSTRY

The grinding wheel industry has been enjoying protection for over a decade. During this period, it has made considerable progress both in terms of quantity and quality. This was reviewed by Mr. C. Ramasubban, in the course of his speech at the public inquiry into the question of continuance of protection for the industry, held on 26th June 1959, at Bombay. A notable feature of the industry's progress is that it has diversified its production lines; for all popular types of grinding wheels, except the rubber bonded ones, are now being manufactured indigenously. Further, the industry enjoys a sheltered market, thanks to the severe restriction of imports. No doubt, the industry has to face some difficulties in regard to the supply of one of the principal raw material namely, synthetic abrasive grains. These difficulties, however, will be over, when the newly licensed unit, Krishnalal Thirani & Co., Ltd., Calcutta, commences production of synthetic abrasive grains. It proposes to turn out 150 tons of aluminium oxide during the current year. Besides, it has plans to manufacture silicon carbide grains at a later stage.

The industry has pleaded for the extension of tariff protection beyond 31st December 1959, when the current term of protection expires. Grinding wheels included in the scheme of protection are presently assessed to duty of 25 per cent. ad valorem. Besides, the industry is permitted to import synthetic abrasive grains, a practice which has been followed throughout the period of protection. The industry has asked for other measures of assistance such as incentive or subsidy to promote export and testing facilities at the Government Test House. It is a welcome gesture that at least one of the major units has conceded that there is no need for continue protection. It, however, wants duty-free import of abrasive grains to be permitted.

The scope of the present inquiry covers grinding wheels and segments made of synthetic abrasive grains except the following: (i) grinding wheels of any thickness or bore out more than 1/32 inch in thickness, and (ii) diamond impregnated wheels.

The Tariff Commission, in the course of its investigation in 1957, had estimated the annual

SHREE GOPAL PAPER EARN'S BUMPER PROFIT

DIVIDEND MAINTAINED, BUT GOVERNMENT GETS MORE

THE audited accounts of the Shree Gopal Paper Mills Ltd. (Managing Agents: Messrs. Karam Chand Thapar and Bros. Private Ltd., Calcutta) for the year ended 31st December 1958 make impressive reading. There has been a substantial increase (about 20 per cent.) in the output of paper, from 14,342.21 tons to 17,181.95 tons, thanks to the successful completion of the first phase of the Mills' expansion scheme, raising the productive capacity of the existing three machines to 55 tons per day. Sales of paper and stationery (in terms of value) have risen by over 36 per cent. and gross profit has advanced by more than 62 per cent. from Rs. 60.35 lakhs to Rs. 97.81 lakhs. The main beneficiary of the improvement in profit is the Exchequer, the provision for tax liability having been stepped up from Rs. 22.75 lakhs to Rs. 43.50 lakhs. In consonance with the rise in profit, the managing agency commission also has gone up from Rs. 5.28 lakhs for 1957 to Rs. 8.97 lakhs. The provision for depreciation is, however, lower at Rs. 9.07 lakhs, as against Rs. 10.78 lakhs set aside for the previous year.

The net profit, at Rs. 36.27 lakhs, represents an increase of Rs. 14.73 lakhs over the previous year. Nearly a third of the net profit—Rs. 11.98 lakhs, to be precise—has been ploughed back to the reserves. A sum of Rs. 2.48 lakhs has been transferred to the reserve for development rebate, as compared with Rs. 6.27 lakhs added last year to the provision for development rebate. The dividend equalisation fund has been strengthened by Rs. 9.50 lakhs (as against nil). The dividend on ordinary shares has, however, been kept unchanged at 12½ per cent. for the fourth year in succession on the present capital which had been raised in 1955 by a one-for-two rights issue.

The salient features of the Company's profit and loss account for the year under review are compared with those for the previous three years in the following table:

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds of—				
Paper and stationery ..	3,80.47	2,71.39	2,33.87	2,25.01
Hydrogenated oil ..	25.39	35.03	40.68	66.68
Closing stocks ..	9.58	14.10	17.05	18.38
Raw materials and stores and spares consumed—				
Paper and stationery ..	1,25.46	92.46	92.39	—
Hydrogenated oil ..	20.57	32.09	32.85	—
Other expenses ..	1,57.27	1,23.46	95.75	—
Gross profit ..	97.81	60.38	56.32	60.86
Managing Agents' commission ..	8.97	5.28	5.32	6.06

In addition to manufacture of paper and stationery, the Company produces hydrogenated oil. During the year under review, the Company's production of *vanaspati* suffered a substantial drop from 1,950 tons to 1,247 tons. This is probably due in part to the fall in the number of working days from 206 to 111 and partly to the regulation of production on a fixed monthly quota basis, as per agreement reached during the year among the *vanaspati* manufacturers of North India, in order to stabilise prices of *vanaspati*. Sales of *vanaspati* show a decline from 1,781 tons to 1,346 tons. The trends in output of paper and stationery and *vanaspati* are duly reflected in the value of raw materials consumed by the respective sections. In the paper section, while the prices of wood-pulp remained steady, prices of machine furnishings, indigenous chemicals and imported dyes were higher. The price of paper was raised in April 1958, but this was not approved by the Government of India. The question of fixing fair ex-mill prices was referred to the Tariff Commission, the recommendations of which have not been announced so far. Of the rise of Rs. 33.81 lakhs in "other expenses," the cost of power and fuel consumed accounts for Rs. 9.28 lakhs, salaries, wages and bonus for Rs. 5.55 lakhs and excise duty on paper for Rs. 12.22 lakhs.

The Company's latest balance-sheet shows that the paid-up capital at Rs. 207.97 lakhs is supplemented by reserves and surplus aggregating Rs. 86.96 lakhs. In addition to two debenture loans—5½ per cent. loan for Rs. 10 lakhs redeemable in 1966 or earlier and 6 per cent. loan for Rs. 30 lakhs redeemable by drawings at the rate of Rs. 6 lakhs per annum from February 1961 onwards—the Company's borrowings amount to Rs. 56.17 lakhs. The other current liabilities and provisions aggregate Rs. 138.44 lakhs. There has been an addition of Rs. 16.65 lakhs to the block account during the year, bringing the gross value at the end of the year to Rs. 193.62 lakhs. The net book value thereof is Rs. 78.89 lakhs. In other words, the cost of the fixed assets has been written down by 60 per cent. Construction-in-progress and machinery in transit amount to Rs. 222.09 lakhs. The other assets stand at Rs. 228.59 lakhs, exceeding the current liabilities and provisions by a large margin.

The Company has been successful, after considerable experimentation, in producing and marketing on commercial scale superior and special varieties of paper which are claimed to match well in quality to corresponding imported varieties. It is proposed to increase the production of these varieties, provided adequate releases of wood-pulp are made by the Government. The Company is dependent for a substantial part of its requirements of sabal grass on Nepal forests. The previous lease expired last year and a fresh lease has been obtained for a period of three years, but at a higher cost.

The Company has its factories near Ambala; it now owns three paper machines. The fourth one and the corresponding two pulp mills and soda recovery plant are under erection as part of the second phase of expansion programme. They are expected to be ready by October this year. A new turbine and a new boiler are likely to be installed by January next.

The Company's Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 17.87 *ex-div.*, at which rate and on the basis of the latest dividend, they provide a yield of 7 per cent. per annum.

OWNERSHIP IN U.S. CORPORATIONS

The share-owning population of the United States stands today at 12,490,000 individuals, according to a report just published by the New York Stock Exchange. This compares with an estimated total of 8,600,000 in 1956 and 6,490,000 in 1952. The present total is nearly double that of seven years ago and 45 per cent. higher than it was only three years ago.

One adult in eight is, thus, an owner of corporate stock, the report says, and the number of families involved in corporate ownership obviously represents a large proportion of the total. The report describes the average new shareholder as 35 years old with a median income of \$6,900 a year. Nearly one-half of the new stockowners, in fact, are in the 21-34 age group, nearly one-third are in the \$5,000-\$7,500 income bracket.

Indicative of the broadening base of stock ownership is the fact that shareholders are found not only in all income brackets but also in all occupational groups, from professional men to farm labourers. No less than 4,000,000 housewives are among shareowners.

Employee stock purchase plans, which are offered by many companies in the United States, have contributed materially to shareowner growth. Of the total number of shareowners, more than 2,500,000 first acquired stock through company plans, and an estimated 1,340,000 are investing regularly through these plans. An additional 1,230,000 individuals, four times the number in 1956, are represented in the stockholding total through their ownership of investment company shares.

The report also gives a significant breakdown of other types of investments held by shareowners, indicative of the scope of the personal security protections Americans have built up for themselves through their own efforts. Thus, 81 per cent. have life insurance policies, 80 per cent. have savings accounts, 68 per cent. own their own homes, 59 per cent. hold government bonds, and 37 per cent. are participants in private pension programmes. These are all in addition, of course, to Government social security benefits.

RAZA BULAND CUTS DIVIDEND

PROFIT DECLINES

FOR the second year in succession, the profit of the Raza Buland Sugar Company, Ltd. [Managing Agents: Messrs. Govan Bros. (Rampur) Private Ltd., Rampur], has suffered a setback. The Company had earned a bumper gross profit of Rs. 40.60 lakhs for the year ended 31st October 1958, but there was a sharp fall in it to Rs. 28.98 lakhs in the following year. This has been followed now by a further decline to Rs. 23.47 lakhs in 1957-58. The lower profit for the year under review is again due to a drop in crushing, increase in wages, control on sugar prices, the heavy burden of excise duty on white sugar, and the imposition of the Large Land Holdings Tax in U.P. In view of the lower profit, the dividend has been pruned from 15 per cent. per annum paid for the previous two years on the present capital to 12½ per cent. per annum.

The crushing in the Company's two factories was lower by 1.58 million maunds, at 859 million maunds, mainly due to a decline in the area under cultivation and partly due to diversion of cane from Company's reserve area to other factories under orders of the Cane Commissioner, U.P. The quantity of sugar produced fell from 1,027,884 maunds in 1956-57 to 885,335 maunds in the year under review, but the recovery was higher, the average for the two factories being 10.29 per cent., as against 10.10 per cent. in the previous year. The excise duty on white sugar was doubled in May 1957 and the full effect was felt by the Company only in the year under review. Thus, despite the lower quantity of sugar produced, the Company had to pay an excise duty of Rs. 84.80 lakhs in 1957-58, as compared with Rs. 56.70 lakhs in 1956-57 and no more than Rs. 39.83 lakhs in 1955-56. The price control introduced in July 1958 vitiated against the sugar factories in U.P., Punjab and North Bihar, inasmuch as, while the price fixed under it was well below that agreed to between the Indian Sugar Mills Association and the Government of India, it did not guarantee any minimum price nor did it link the price of sugar to the consumer with the ex-factory price. The U.P. Large Land Holdings Tax Act, 1957 was made retroactive from 1st July 1957 and under this legislation a tax demand of Rs. 2.44 lakhs has been made on the Company in respect of its agricultural lands, the bulk of which has been sold. And this has had to be provided for in the account. The Company has, however, challenged the vires of the Act.

The Directors have made a provision of Rs. 13.20 lakhs, based on the Company's own estimates, to meet the tax liability for the year under review and also the excess dividend tax relating to the years 1955-56 and 1956-57. In addition, they have had to provide Rs. 18.75 lakhs to meet the known shortfall in the provision for taxation up to the financial year ended October 1955. Thus, in all, the Directors have made an aggregate provision of Rs. 31.95 lakhs for tax liability, as against Rs. 12.50 lakhs in the previous year. The excess provision for tax liability has been met by transferring Rs. 20.39 lakhs from the general reserve.

The Company's results for four consecutive years are presented in the following table:

	For the year ended 31st October			
	1958	1957	1956	1955
Sale proceeds ..	3,19.64	3,63.95	2,94.91	1,83.01
Closing stocks ..	29.08	37.13	65.66	84.86
Excise duty ..	84.80	56.70	39.83	18.91
Other expenses ..	2,09.27	2,30.99	2,46.21	1,59.46
Gross profit ..	28.47	28.98	40.60	25.60
Managing Agents' commission ..	1.98	1.45	3.67	2.21

Recovery (per cent.) ..	10.29	10.10	9.70	9.45

* On the increased capital of Rs. 63.59 lakhs raised by a fresh issue of shares following the amalgamation.

The latest balance-sheet of the Company shows that the paid-up capital of Rs. 63.59 lakhs is supplemented by reserves and surplus aggregating Rs. 27.49 lakhs. (This is after transferring Rs. 20.39 lakhs from the general reserve to meet

the tax liability.) The current liabilities and provisions at Rs. 62 lakhs are more than adequately covered by current assets amounting to Rs. 99.98 lakhs. The gross block of the value of Rs. 87.10 lakhs stands written down to Rs. 52.97 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 14.12 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 10 per cent. per annum free of income-tax.

KAMARHATY AND KANKNARRAH JUTES FARE BETTER

The substantial improvement in the raw jute supply position, particularly of the right qualities, enabled many jute mills in West Bengal to dispose of their manufactures at a profit during 1958. The better results also reflected the industry's sustained effort to improve manufacturing efficiency and to reduce working costs. The results of the Kanknarrah Company Ltd. and the Kamarhaty Company Ltd., two of the important units under the management of Messrs. Jardine Henderson Ltd., Calcutta, for the year ended 31st December 1958, provide a notable instance of the turn in the fortunes of the industry. Both of them have earned sizable profits, in refreshing contrast to the losses suffered in the previous two years. It must, however, be noted that the losses of the two companies in 1957 were much less than those incurred in 1956, thanks to the improvement in the working of mills since March 1957.

Of the two units, the results of Kamarhaty Company are far more encouraging, in that the Company has been able not only to wipe out the accumulated losses and pay off arrears of preference dividends but also to declare a modest return to the ordinary shareholders after a lapse of two years. In the case of the Kanknarrah, the profit for the year under review is much less than that earned by the other and it had a much larger deficit to wipe out. It has been able to reduce this accumulated loss to some extent, but in view of the heavy loss still to be covered, the preference dividend for the year has again fallen in arrears and the ordinary shareholders have had to go without any dividend for the third year in succession.

Kamarhaty has earned a gross profit of Rs. 35.94 lakhs in 1958, as against a loss of Rs. 4.48 lakhs in 1957 and of Rs. 7.50 lakhs in 1956. After providing for a larger managing agency commission and depreciation and making a provision for wealth tax, the net profit of the Company amounts to Rs. 23.29 lakhs. This compares very favourably with the net losses of Rs. 9.22 lakhs and Rs. 9.34 lakhs for 1957 and 1956, respectively. After adjusting the loss of Rs. 18.02 lakhs brought in from the previous year, the Directors have transferred Rs. 20,203 to the development rebate reserve and paid off the preference dividend, at 6 per cent. per annum, for the three years 1956 to 1958. They have also recommended a dividend of 5 per cent. per annum on the ordinary shares, which is double that paid on the last occasion for 1955, as will be seen from the following comparative table:

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds ..	3,80.58	3,89.14	3,00.89	3,25.18
Stocks of finished goods and work-in-progress ..	42.95	41.20	37.11	19.85
Manufacturing and other expenses ..	3,56.32	3,46.20	3,11.48	3,17.68
Gross profit (+) or loss (-) ..	+84.94	-4.48	-7.50	+2.38

Dividends ..	—	—	—	—
6 per cent. preference ..	2.88	—	—	0.96
Ordinary ..	2.16	—	—	0.98
(5%) (5%) (5%) (5%)				
Surplus (+) or deficit (-) ..	+40.02	-18.02	-8.80	+4.87

The Kanknarrah Company Ltd. has earned a gross profit of Rs. 19.40 lakhs. In 1956, it will be recalled, the Company made a loss of Rs. 19.39 lakhs and though it had reduced it by nearly 50 per cent. to Rs. 9.71 lakhs in the following year, between these two years its total loss had grown to Rs. 41.59 lakhs. The net profit for 1958 after providing for managing agency commission, depreciation and taxation (wealth tax) is only Rs. 9.91 lakhs, out of which the Directors have set aside Rs. 10,466 for development rebate reserve. The balance available has been utilised to reduce the aforesaid accumulated loss to Rs. 31.78 lakhs. As a result, both the preference and ordinary shareholders have had to go without a dividend for the third year in succession, as the following comparative table shows:

	For the year ended 31st December			
	1958	1957	1956	1955
Sale proceeds ..	8,49.40	2,95.82	2,40.97	2,71.90
Stocks of finished goods and work-in-progress ..	32.95	32.40	35.88	17.45
Manufacturing and other expenses ..	8,22.04	3,06.67	2,62.12	2,68.98
Gross profit (+) or loss (-) ..	+94.40	-42.25	-57.03	-14.53

(5%) (5%) (5%) (5%)				
Carry forward ..	—	—	—	—
Loss (-) ..	—	—	1.37	+4.88

Both the companies worked throughout the year with 12½ per cent. of the looms sealed. On 10th August 1957, the Kamarhaty started working triple shifts on all the new machinery and double shifts in 'B' mill. This arrangement continued throughout 1958. The Kanknarrah had introduced triple-shift working on the new machinery on 17th March 1957 and this arrangement remained in force in 1958 also. Both the Companies had purchased additional loom-hours from the Reliance Jute Mills, another company under the same management—Kamarhaty taking over 20,640 loom-hours per week and Kanknarrah 19,056 loom-hours. In order to work this additional loomage, the Kamarhaty had re-started a shift on part of the old machinery from 9th September 1957. On the same date and for the same purpose, the Kanknarrah had started double shifts.

The working of both the Companies during the current year (up to the end of May) is said to have shown satisfactory results. The Directors of the Kamarhaty, however, point out that, "as a result of the exhaustion of accumulated losses, income-tax will again be chargeable on future profits." They add: "It is in these circumstances and having regard to the necessity to restore the liquid position of the Company, following the large capital expenditure of recent years, which coincided with substantial trading losses, that your Directors have felt unable to recommend any higher dividend on the Company's equity capital out of the satisfactory profits of 1958."

The Directors of the Kanknarrah are, for similar reasons and in view of the fact that there still remains a substantial debit balance on the profit and loss account in excess of the Company's reserves, unable at the present stage to give any indication of the likelihood of payment of arrears of preference dividends and the resumption of dividend on equity capital.

COAL

(Concluded from page 54)

found that the average dividend paid by the coal industry for the five years 1951-55 is no more than 7.1 per cent. and is much less than that paid by other leading industries, such as plantations, iron and steel, sugar, paper, matches, cement and cotton textiles. Further, the coal companies, with a few exceptions, have been in the unenviable position, among the industries mentioned above, of earning the lowest profit between the years 1950 and 1956. Expressed as a percentage of net worth, the profit of the coal industry in 1956 was as low as 2.9, as against 6.4 in 1955 and the average of 6.5 for the years 1951-55. Since then, the position is said to have deteriorated still further.

An analysis of the accounts of 19 units in the coal industry, which account for one-third of the total coal output, made in 1957 showed that the profit after providing for taxation worked out to no more than Re. 1.21 per ton, out of which dividends distributed accounted for 54 p p per ton. These dividends represented a return of 6.3 per cent. on the paid-up capital, which by itself is low as compared with other industries, and much less if the risk involved in mining companies is taken into account. They constituted 3.4 per cent. of the total value of the capital invested. It is found that, after providing for taxation and dividends, the amount set aside for depreciation by the 19 companies was only Rs. 57 lakhs, while the actual capital expenditure incurred by them was Rs. 88 lakhs. In other words, the internal resources of the 19 companies had to be depleted to the extent of Rs. 31 lakhs in one year alone. Taking this to be the average for the other producers, the total amount drawn out by the whole industry in one year worked out to nearly Rs. 1 crore. No industry can afford to allow this trend to continue, much less the coal industry, which by its nature has to meet heavy capital expenditure every year.

The theory that a rise in coal prices would prove inflationary, in that it would increase the cost of other industries depending upon coal, is disproved by official statistics. Thus, the cost of coal and coke, expressed as a percentage of the gross ex-factory value of the products and by-products, is 14.32 in the case of cement, 11.25 in steel, 3.13 in chemicals, 1.15 in cotton textiles, 1.02 in general and electrical engineering, and 0.70 in jute textiles. Even the All-India Industrial Tribunal (Colliery Disputes) has admitted that coal and coke account for a small percentage only of other industries' production costs.

Another ground on which the coal industry's case for a higher price has been firmly laid is that many other basic industries have been permitted to increase their prices in recent years, as an incentive for progressive expansion. But this is being denied to the coal industry. Any further delay in providing adequate increase in price to this industry at its present critical stage will not only ruin it but affect adversely the whole country's industrial development. A realistic decision on this issue by the Government at an early date will certainly be in the larger national interest.

COMPANY MEETINGS AND DIVIDENDS

RAZA BULAND SUGAR Co., LTD. Annual General Meeting, Raha-E-Raza, Rampur, 21st July 1959. Dividend: Re. 1.25 per share. Transfer books will remain closed from 13th to 25th July 1959, both days inclusive.

NEW SAMANBAGH TEA Co., LTD. Annual General Meeting, Calcutta, 23rd July 1959. Transfer books will remain closed from 13th to 23rd July 1959, both days inclusive.

JESSOP & Co., LTD. Annual General Meeting, Calcutta, 24th July 1959. Dividend: 6 per cent. or Re. 0.60 per share. Transfer books remain closed from 8th to 24th July 1959, both days inclusive.

CANNANORE SPINNING AND WEAVING MILLS LTD. Annual General Meeting, Kakkat, Cannanore, 29th July 1959. Dividend: Rs. 9.00 per share, final (the interim dividend paid was 6 per cent. or Rs. 6.00 per share), for the year ended 31st March 1959. Transfer books will remain closed from 15th to 30th July 1959, both days inclusive.

ALEMIC CHEMICAL WORKS Co., LTD. Annual General Meeting, Baroda, 30th July 1959. Dividend: Rs. 12.00 per share, payable on or after 14th August 1959. Transfer books will remain closed from 24th to 30th July 1959, both days inclusive.

SANGAMESHWAR COFFEE ESTATES LTD. Annual General Meeting, Madras, 30th July 1959. Dividend: 9 per cent. or Re. 0.18 per share. Transfer books will remain closed from 25th to 30th July 1959, both days inclusive.

BURN & Co., LTD. Annual General Meeting, Calcutta, 31st July 1959. Transfer books will remain closed from 23rd to 31st July 1959, both days inclusive.

INDIA CEMENTS LTD. Annual General Meeting, Madras, 31st July 1959. (a) These debentures are registered and are transferable by transfer deeds. (b) Option to repay on 3 months' notice at any time at 5 per cent. premium.
 † With option to redeem at Rs. 101 per cent. after 10 years or at Rs. 100 per cent. after 13 years. ‡ Any debenture outstanding on 1-6-1960 will be redeemed on that date with option to redeem all debentures at 101 per cent. on 1-6-1964.
 § From 1st May 1964 onwards. The Company has option to redeem a debenture at 101 per cent. on 1st May 1964 or on 30th September 1964 or on 31st March 1965 or on 30th June 1965 or on 30th September 1965 or on 31st December 1965 or on 31st March 1966 or on 30th June 1966 or on 30th September 1966 or on 31st December 1966 or on 31st March 1967 or on 30th June 1967 or on 30th September 1967 or on 31st December 1967 or on 31st March 1968 or on 30th June 1968 or on 30th September 1968 or on 31st December 1968 or on 31st March 1969 or on 30th June 1969 or on 30th September 1969 or on 31st December 1969 or on 31st March 1970 or on 30th June 1970 or on 30th September 1970 or on 31st December 1970 or on 31st March 1971 or on 30th June 1971 or on 30th September 1971 or on 31st December 1971 or on 31st March 1972 or on 30th June 1972 or on 30th September 1972 or on 31st December 1972 or on 31st March 1973 or on 30th June 1973 or on 30th September 1973 or on 31st December 1973 or on 31st March 1974 or on 30th June 1974 or on 30th September 1974 or on 31st December 1974 or on 31st March 1975 or on 30th June 1975 or on 30th September 1975 or on 31st December 1975 or on 31st March 1976 or on 30th June 1976 or on 30th September 1976 or on 31st December 1976 or on 31st March 1977 or on 30th June 1977 or on 30th September 1977 or on 31st December 1977 or on 31st March 1978 or on 30th June 1978 or on 30th September 1978 or on 31st December 1978 or on 31st March 1979 or on 30th June 1979 or on 30th September 1979 or on 31st December 1979 or on 31st March 1980 or on 30th June 1980 or on 30th September 1980 or on 31st December 1980 or on 31st March 1981 or on 30th June 1981 or on 30th September 1981 or on 31st December 1981 or on 31st March 1982 or on 30th June 1982 or on 30th September 1982 or on 31st December 1982 or on 31st March 1983 or on 30th June 1983 or on 30th September 1983 or on 31st December 1983 or on 31st March 1984 or on 30th June 1984 or on 30th September 1984 or on 31st December 1984 or on 31st March 1985 or on 30th June 1985 or on 30th September 1985 or on 31st December 1985 or on 31st March 1986 or on 30th June 1986 or on 30th September 1986 or on 31st December 1986 or on 31st March 1987 or on 30th June 1987 or on 30th September 1987 or on 31st December 1987 or on 31st March 1988 or on 30th June 1988 or on 30th September 1988 or on 31st December 1988 or on 31st March 1989 or on 30th June 1989 or on 30th September 1989 or on 31st December 1989 or on 31st March 1990 or on 30th June 1990 or on 30th September 1990 or on 31st December 1990 or on 31st March 1991 or on 30th June 1991 or on 30th September 1991 or on

individual. The picture of the future India is, indeed, very disturbing, when it is borne in mind that, on top of State capitalism in industries, there will be State trading in food and a variety of goods, as well as State-dominated co-operative joint-farming and marketing. What would be the fate of democracy in India if, in future, the State, with all this multifarious, mighty economic power, were to fall into the hands of persons who are less tolerant than Mr. Nehru? It is in order to prevent the emergence of such a situation that it is vitally necessary to promote economic development through private enterprise and to build up sound democratic traditions. The business men in this country will be doing a disservice not only to themselves but to the cause of democracy, in general, if they are not bold enough to fight the growing encroachment of State capitalism and State trading into the spheres of free enterprise, before it is too late. It is, of course, needless to add that, in such a fight, they have to carry the public with them and that this they can do only if they follow fair trading practices, treat their employees decently and hold themselves as the trustees of the public.

Again, when prices and profits are strictly controlled, either directly or indirectly, nationalisation of industries has no meaning and so also the assurance of no nationalisation. In such a situation, the Government holds the whip-hand and becomes the major partner of trade and industry, without holding a single share. The State can easily bring about a shrinkage in the size of the private sector or retard its growth by fixing uneconomically low prices and by delaying the upward revision of prices when production costs go up. This is already happening in coal, steel, cement, locomotive, automobile and a number of other important industries. Socialists all over the free world are now conscious of the fact that, in this latter half of the twentieth century, a democratic government can ensure the happiness of the people better through a regulated system of free enterprise than through outright State-ownership of production and distribution. It redounds to the credit of the rightist Governments in the West and in the Far East that they have effectively demonstrated this fact. It is only in India that socialists are outdated in their thinking and, what is more, are reluctant to learn from the experience of the West.

The days when mere verbal assurances of the type given by Mr. Nehru to the Committee of the Federation could enthrone the private sector to go ahead with their plans for putting up new industries or for expanding the existing ones are gone. These assurances tantamount to telling a person who is tied hand and foot that he has plenty of ground to run about and play. If they are to mean anything, they have to be followed up without any further delay by some positive actions, such as a reduction in the burden of taxation and grant of other incentives, abolition of the plans for State trading in food-grains, ceiling on land-holdings and co-operative farming, a firm declaration that ownership of private property will be respected, relaxation of bureaucratic controls, and readiness to admit private capital, both foreign and Indian, into certain key industries that are now reserved exclusively to the public sector. There is no reason to feel that, by giving these concessions to the private sector, the larger interests of the public will be adversely affected. On the contrary, the public will be greatly benefited, for the pace of economic development will be faster than under the existing policy.

L.I.C.'S VALUATION REPORT

THREE weeks have passed since the much-awaited valuation report of the Life Insurance Corporation was published. In the absence of any adverse criticisms from policyholders, in so far as one can make out from the daily Press, it would appear that the report has been generally well received by the public. There is no doubt that it was the most complicated valuation job completed anywhere in the world. It is true that there are private insurers in the West with a portfolio as large as the Corporation's. But none of them ever faced the complicated task of assessing the surplus of an ill-assorted group of 235 insurance offices. The authorities must be congratulated

on the completion of a task which, by reason of its magnitude and complexity, must have presented quite a few actuarial riddles. And to the many thousands of policyholders who had passed through a painful period of uncertainty over the shape of the bonus to come, the valuation report has come as a welcome relief. For the Corporation, the report retrieves partially at least the ground it had lost through the unfortunate "Mundhra" episode, which, coming as it did so early in its career, served to intensify public misgivings about its capacity as an instrument of social benefit.

The basis of the valuation of the Corporation's assets and liabilities, as on 31st December 1957, adopted by the authorities, is: mortality—Oriental (1925-35) ultimate; rate of interest 3½ per cent; expenses—20 per cent. for with-profits policies and 16 per cent. for without-profits policies. The valuation shows a surplus of Rs. 27.04 crores, which, together with Rs. 6 crores, being part of the tax deducted at source during the period commencing from the respective dates of the last valuations of the various insurers, makes in all Rs. 33.04 crores. The tax liability has been estimated at Rs. 4.03 crores, leaving a net surplus of Rs. 29.01 crores. In accordance with the provisions of the Life Insurance Act, 95 per cent. of the surplus (Rs. 27.56 crores) has been reserved for policyholders, the balance (Rs. 1.45 crore) representing the Government's share.

The policyholders' share of the surplus is sufficient to declare a reversionary bonus to the Corporation's policyholders at the rate of Rs. 14 per Rs. 1,000 sum assured on endowment policies and Rs. 17½ per Rs. 1,000 sum assured on whole life policies. The erstwhile private insurers have been divided into no less than seven groups and their policyholders get bonuses at different rates. To the special group belong such companies as "Oriental," "Royal," "Norwich Union" and "Gresham" with the higher rate of bonus, Rs. 21 (whole life) and Rs. 16.8 (endowment). The next group is perhaps by far the most numerous, consisting of such companies as "Bombay Mutual," "New India," and "Hindustan Co-operative." Their policyholders get the same bonuses as those given by the Corporation on its policies. Other companies come under groups which are entitled to get lower bonuses; they range from Rs. 7 to Rs. 14 for whole life policies and Rs. 5.6 to Rs. 11.2 for endowment policies. The policyholders of some companies—by far the most numerous group from the point of view of the number of companies, though not quite so significant from the point of view of the number of policyholders—get no bonus whatever.

Although a sizable surplus has been disclosed by the valuation, it may be wondered whether it is not, at least partly, due to a certain weakening of the valuation basis. Thus, the rate of interest assumed is 3½ per cent., as against the 3 per cent. or even the lower figures which private insurers used to assume in the past. The last valuation of the Oriental was done on the basis of 2.11/16 per cent. Again, the margin in respect of expenses as between "without-profits" (16 per cent.) and "with-profits" (20 per cent.) has been narrowed down to 4 per cent. This margin used to be higher in the past. Thus, it was nearly 7 per cent. in the last valuation of the Oriental and about 6.6 per cent. in the case of New India. These considerations give rise to doubts as to whether the present scale of bonuses can be maintained in future.

It may be noted that the renewal expense ratio continues to rule on the high side, as compared with the experience of several private insurers in the pre-nationalisation period. The hope that was expressed at the time of nationalisation that amalgamation of insurers and streamlining of their business operations would help bring down expenses has not been fulfilled. Now that employer-employee relations, after a period of considerable unrest, have improved, it is to be hoped that efforts will be made to increase the productivity per worker. A team of officials of the L.I.C., it is stated, is going to the U.S. to study the working of life insurance there. They will do well to examine how far India can benefit from the devices of mechanisation and rationalisation of administration which have been adopted with such great advantage in the American insurance offices. In any case, the authorities can never afford to relax efforts at observing strictest standards of economy in the administration of the Corporation.

The policyholders of the erstwhile private insurers of repute will certainly welcome the new rates of bonus which, contrary to their earlier fears, are nearer to the rates they received in the recent past. Thus, the Oriental policyholders receive Rs. 21 (whole life) and Rs. 16.8 (endowment), as against Rs. 22½ and Rs. 18 in the past, while New India's policyholders get Rs. 17½ (whole life) and Rs. 14 (endowment), as compared with Rs. 16 (whole life) and Rs. 14 (endowment) in their last valuation. But the point is whether they do not deserve to get more than they have now been given. This is certainly not the case of Oliver Twist asking for "more." After all, the accounts of these insurers are in the nature of "closed funds"—a familiar feature of the working of the insurance offices which were merged with other offices in the pre-nationalisation period. These "closed funds" used to work, and were assumed to work, on a relatively low expense ratio, thanks to the fact that they did not have to incur expenses on new business. From the point of view of the Corporation, the private insurance offices are in the nature of "closed funds." It should be possible to manage their affairs at a lower level of expenses. If their affairs were so managed, some of them should be able to disclose larger surpluses and receive higher bonuses than now. This is particularly true of certain insurance offices like the Depositors Benefit, for they possessed certain special features which enabled them to work with small expense ratio. It would seem that, under the new dispensation, the policyholders of these companies cannot hope to receive high bonuses. Why should these units be penalised merely because the Corporation is unable to work at the low expense ratio with which they were being managed? These questions are raised not necessarily because ready answers could be easily found but with a view to indicating that nationalisation does not necessarily solve all problems involving economic justice.

The principle of differential bonus, which has been observed in the present valuation, certainly unexceptionable, for the State has right to penalise those people who had chosen to entrust their savings with the really efficiently managed insurance offices. How long this system of differential bonuses to be continued? One way of eliminating it is to let the sum insured in the case of policies of the companies that were paying a bonus higher than the single rate of bonus to be decided by the Corporation. Then, there is the larger question, namely, whether the Corporation, as a nationalised institution, should continue to dangle a carrot before prospective policyholders? Is not more equitable, and also administratively more convenient, to abolish the bonus element altogether? Through suitable upgrading of face value of existing policies, it should be possible to bring them under one group of "with-profit" policies.

A promising development is the marked improvement in mortality experience and investigation into the experience of 34 insurers revealed that actual deaths in 1953 and 1954 were only about 45 per cent. of those expected on the basis of Oriental (1925-35) Mortality Table. Reduction in premiums is a more powerful stimulus to life insurance than an attractive bonus. It is, therefore, every reason to reduce premium which would reflect the improvement in mortality experience, and streamline the business issuing only "without-profit" policies. In any case, the benefit of life insurance can be extended to a larger number of deserving people. If the objection is that, in whatever way life insurance is administered, surpluses will emerge, it could be met by the suggestion that a portion of that surplus could be distributed among all policyholders without any further complications arising from differential bonus. In other words, the pure insurance element should dominate the working of the Corporation, while any surplus that may still emerge should be regarded as incidental to its working. Clearly, this is a question which requires expert examination at higher actuarial level. Since in no other country life insurance has been nationalised after nearly three-quarters of a century of private ownership, there are international precedents which India can adopt. Life insurance in this country must find its own solutions for its problems. This demands courage and vision.

BULLS IN SHARES FORESTALL THE L.I.C. AHMEDABAD MARKET—SHAREHOLDING IN U.S. CO-OPERATIVE FARMING—OUTER SEVEN

THURSDAY, 5 P.M.

THERE has been a sizable setback in the highly speculative counters on the Stock Exchange this week and a modest fall in others. Thus, the upward trend has been arrested to some extent. It will, however, be premature to infer from this reversal that the boom has come to an end. What has happened is this: some of the prominent bulls seem to have liquidated a good part of their purchases. Various reasons are mentioned in market circles for this. Two

of them, in our opinion, are important. First, the bulls got scent of the probability of the Life Insurance Corporation unloading some of its investments. Secondly, they feared that the Government might introduce some control to check excessive speculation in shares.

It is stated that the Investment Advisory Committee has recommended profit-taking by the L.I.C. in some of the shares. But it would appear that the L.I.C. has so far been able to sell only very little of what was recommended, as the speculators were ahead of it in lightening their commitments. There is good reason to feel that the L.I.C. is still amateurish in buying and selling shares and that, unless it has a competent person for carrying out its investment operations, it will be easily outwitted by the character and type of brokers it employs, for there is every possibility that a broker with large-sized clients operating in the forward section will be tempted to cover the position of his clients first before putting through the orders given to him by the L.I.C. It is only commonsense that, if he does not do so and that, if as a result of the L.I.C.'s operations his clients lose money heavily, he, too, stands the chance of suffering a loss.

As for the second factor, namely, the fear that the Government might intervene to check speculation, no definite information is available. The authorities have so far remained silent. Speculators of the undue boosting of equities by speculators. It is high time they took some steps to restrain speculation. In the last settlement, the delivery shares were as large as 582,000, as against 366,000 in the previous settlement, and these included a large number of high-priced scrips. It should not be difficult for the Reserve Bank to find out how such huge deliveries are financed and warn the banks if there are reasons to feel that they are financing budis.

Apocryphal remarks in these columns last week that stock exchange authorities in India have not even raised their little finger against speculators who have been over-riding Mr. R. V. Mehta, President of the Ahmedabad Stock Exchange, serves, in the course of a letter to us, that this generalisation is not well founded. He adds:

"This Stock Exchange had imposed restrictions on the volume of business of members by imposing heavy margins on their daily outstanding transactions, over and above the prevalent margin on the carry-over business, as from 1st May 1959. Daily returns of outstanding transactions were called for and an all-powered Committee was appointed to scrutinise the returns. The Committee held its sittings from time to time, scrutinised the returns, fined heavily those who evaded the payment of margins and called for the margins from them and even warned those found to be overtrading. This lasted for about two months, at the end of which the position was again reviewed by the Governing Board and, having satisfied that the volume of daily business was declining, that the rise in price was not due solely to speculative activity but was due also to other natural causes, it decided to abandon the new margin system as from 4th July 1959, i.e., very recently.

"You will appreciate that this Stock Exchange was always watchful of the activities of its members and the President had many a time in the past warned members of the dangers of over-speculation.

"I am to assure you that my Governing Board will not hesitate to re-impose the new margin system when the occasion calls for such a step."

We are glad to hear that the Ahmedabad Stock Exchange authorities have been quite alert and trying to keep speculation under control. Frankly speaking, when we commented last week, we did not have in mind the Ahmedabad Stock Exchange, but the major stock exchanges, especially the Bombay Stock Exchange, which has taken none of the preventive measures adopted by the Ahmedabad Stock Exchange. It is true that there is a system of margins in the Bombay share market, but it is a mild and ineffective one; it can be and, indeed, is being easily evaded.

Joint-stock companies, the profits of which are taxable in the assessment year 1960-61, that is, those whose financial year-end falls within the current fiscal year 1959-60, have already started implementing the new scheme of taxation of dividends in the hands of shareholders, introduced in the last Central Budget. Under this scheme, the process of grossing the value of dividends received by the shareholders in respect of the year 1959-60 has been abolished. Accordingly, companies will have to deduct tax at prescribed flat rates from the dividend payable to the shareholders, by way of advance recovery, and pay it to the Government.

MARKET GOSSIP

When the shareholders' assessments are made, the tax deducted at source from the dividend received by them will be made good to them either by way of a set-off against their tax liability or by way of a refund. The new system, it is computed, will result in a loss of 46 per cent. of the shareholders' income from dividend, unless the companies stepped up the dividends to compensate this loss.

A few corporate dividend announcements have been made in recent weeks in respect of the year which falls within the fiscal year 1959-60 and as such assessable in 1960-61. Some of them have raised the dividends in order to compensate, at least to some extent, the loss to the shareholders. The first dividend announcement of the season under the new system came from Dena Bank, which has raised the interim dividend for the half-year ended 30th June 1959 to Re. 1.86 (subject to tax) per share of Rs. 50 each, which is equivalent to Re. 1.30 (net) per share, from Re. 1.25, free of income-tax, paid for the corresponding six months of 1958. In fact, the dividends of all banking companies which are due to be announced for the first half of the current calendar year will come within the mischief of the new system. It remains to be seen how far banking companies will be able to oblige their shareholders with the compensatory increase in distribution. But the chances are not bright, if the example of the Bank of India is any guide. This Bank has maintained the rate of dividend at Rs. 3 per share of Rs. 50, but, since this is subject to deduction of tax at the prescribed rate, the net dividend will be substantially less than that for the corresponding half of 1958.

The grossing up of dividend, as readers will remember, was abolished in lieu of the withdrawal of wealth tax on companies and excess dividend tax. It may be noted here that, as banks were not subject to wealth tax, the abolition of this tax does not confer any benefit on them, as it does on non-banking companies. Most of the leading banks were, of course, paying excess dividend tax, but the saving on this score cannot be appreciable, as, barring one or two, the dividends were not so large as to attract the top penal rate. In view of this, therefore, the new system of corporate taxation is distinctly disadvantageous to the shareholders of banks, especially the old well-established banks.

Among the other joint-stock companies, the first one to feel the impact of the new tax system is Burn and Company Ltd., because its financial year ended in April last. Despite a slightly lower gross profit, the Directors of the Company have recommended a gross dividend of 28.5 per cent. per annum, subject to tax, for the year 1958-59, as compared with 20 per cent., free of income-tax, paid for 1957-58. The proposed dividend, it is stated, will make good the loss to the shareholders on account of the abolition of the grossing system.

The exuberant enthusiasts of the socialist pattern of society in India will do well to peruse the New York Stock Exchange's census of shareholders, a brief reference to which was made in our last issue (vide pages 45 and 64). Such a perusal will clearly show how, in the U.S. where private enterprise is accorded the maximum possible freedom and opportunity, ownership of shares in business and industry is widely spread among the whole population, instead of being dispersed among a small minority. Indeed, possession of equity securities is now a common feature of American life. How shareowning has grown in the U.S. during the last seven years is indicated in the following figures:

	1950	1956	1952
No. of individual shareholders in public corporations (in millions)	12.49	8.63	6.49
As % of adult population	11.8	8.6	6.5
No. of those owning shares listed on the New York Stock Exchange (in millions)	8.51	6.88	N.A.
Women shareholders as % of total*	52.5	51.4	49.4
Median income of shareholders	\$7,000	\$6,200	\$7,100
Median age of shareholders	49	48	51
No. of different stocks held by average shareholders	3.5	4.25	4.1

N. A.—not available.

*Leaving aside a small number of shareholders not classified by sex.

*The median divides the shareholders into two equal groups. It is not the arithmetic average.

Three striking features emerge from these figures. First, out of the 12.49 million shareholders, many, if not most, are persons of comparatively modest means, the average annual income of half the number being below \$7,000. It is, however, not known whether this group of people accounts for a small or a large proportion of the total value of shares in private hands. Secondly, distribution of shares among owners is becoming less concentrated; the average number of different stocks held by a shareholder now stands at 3.5, as against 4.25 in 1956 and 4.1 in 1952. Thirdly, more than half the shareholders are women. This makes them take keener interest in the economic affairs of the country and the Wall Street Journal, a national economic daily, has a large number of women readers.

Of the 12.5 million people listed as shareholders, over 2.5 million are believed to have first acquired stocks through employee-stock buying plans organised by the managements of companies

in which they work. About 1.34 million more persons are still in the process of purchasing shares this way. Stockholding in the U.S. has become so widespread that financial newspapers have a large circulation.

The World Bank's loan of \$10 million to the Industrial Credit and Investment Corporation of India (I.C.I.C.I.), now under the chairmanship of Mr. G. L. Mehta, has been finalised; the loan documents were signed this week. It will be recalled that a general understanding with the Bank had been reached a few weeks ago, when Mr. Mehta was in Washington. The loan is for a period of 10 years and carries the guarantee of the Government of India, as all loans of the World Bank do. Repayment of the loan, together with interest, will begin on 1st October 1962. Unlike the other loans of the Bank to India, this loan does not carry a rate of interest determined in advance; interest will be applied to each portion of the loan at the Bank's current rate of interest when such portion is committed to a project approved and underwritten by the I.C.I.C.I., which, it is noteworthy, has been given discretion to choose and sanction projects upto a specified amount without the previous approval of the World Bank. Accordingly, only projects involving large amounts will have to be referred to the Bank for its consent. This welcome departure will help the I.C.I.C.I. to function more expeditiously. Incidentally, it is an indication of the World Bank's growing confidence in the management of the Corporation.

The loan now sanctioned by the World Bank to the Corporation is the second one. The first loan also was for an identical amount. Both are being used to meet the foreign exchange requirements of projects financed by the Corporation. Of the first loan, 65 per cent. (\$6.5 million) has so far been used for six projects in the electrical, chemical, mechanical and shipping industries. The balance, we are told, will be utilised before the end of this year. It is reckoned that the new loan should satisfy the Corporation's foreign exchange needs through most of 1961.

The Corporation's resources position is as follows:

Before the new loan of the World Bank, the resources amounted to Rs. 17.3 crores (\$36.25 million equivalent), made up of Rs. 5 crores of paid-up share capital (of which Rs. 3.5 crores are held by Indian investors and the balance by British and American private interests); a long-term interest-free advance of Rs. 7.5 crores from the Indian Government; the first \$10 million (Rs. 48 crores) loan from the World Bank. Now, in addition to the second World Bank loan of \$10 million, the Indian Government is lending the Corporation an additional Rs. 10 crores from the proceeds of sales of United States agricultural commodities in India. The total resources will thus be Rs. 32.10 crores (\$67.25 million equivalent).

This should, according to Mr. Mehta, take care of the expansion of the Corporation's operations for several years.

So much for the resources of the Corporation. As regards its operations during the last four years of its existence, it has given valuable help to the private sector through investment and underwriting activities. The approvals given so far amount to Rs. 15.83 crores, made up of loans (rupee and foreign currency) Rs. 7.30 crores, underwriting Rs. 6.80 crores and direct equity participation Rs. 1.70 crore. Of the underwriting arrangements approved so far, actual placings have been Rs. 5.50 crores, spread over 18 issues and, of this amount, nearly a third—Rs. 1.80 crore—to be precise—has had to be taken up by the Corporation. These securities will, of course, be gradually disposed of in the market when the projects financed rise in the market value and their shares become easily marketable. Considering the fact that the Corporation did the underwriting for the majority of aforesaid projects at a time when the stock exchanges were passing through a crisis of confidence, this performance is quite encouraging.

Although the Congress leaders continue to swear by co-operative farming, the opinion outside the Party is becoming increasingly vocal over the folly of any move to bring all land within the co-operative fold. Many difficult issues are being raised. And they are too pertinent to be dismissed merely as the device of some grumblers, or that of vested interests to destroy a well-intentioned scheme. For one thing, it is asked whether farmers will be allowed to opt out of the scheme when they have once joined it. If this facility were denied, not many farmers would be induced to throw in their land into the co-operative fold, notwithstanding the credit and other measures of assistance they may be offered. But, if the facility to opt out of the scheme were given and some farmers exercised it, the co-operative farm would consist of sheds and patches of land, not a compact whole. Secondly, Mr. Nehru has been repeatedly saying that co-operative farming will be voluntary and no compulsion will be exercised on farmers. But he has not so far given any assurance that there will be no discrimination against those farmers who wish to remain out of the co-operatives in regard to provision of various facilities. On the contrary, he clearly stated in Parliament that he was in favour of such discrimination. In actual practice, this type of discrimination will amount to coercion or bribery to those who join the co-operatives at the cost of the public as a whole. Thirdly, it is asked how lands encumbered with debts will be treated when they become part of a co-operative farming society. Will the society assume the liability to discharge the debt? If it does, then the entire agricultural indebtedness will become the liability of the co-operative farming societies. The co-operative structure may well crumble under the weight of the debt burden.

SETBACK IN EQUITIES

SLIGHT RECOVERY AT CLOSE

(From Our Own Correspondents)

BOMBAY, 16th July

THE share market suffered a minor shake-out during the last three days, after displaying a hardening tendency early in the week under review. Under a wave of bull liquidation and bear selling, speculative counters gave way and prices fell steeply. Losses over the week were widespread and sizable and were even more pronounced when compared to the peak levels touched on the opening day of the new account, that is, Monday, as will be seen from the following table, giving the fluctuations as some of the leading scrips:

	Last week's closing	Highest	Lowest	Today's closing
	Rs.	Rs.	Rs.	Rs.
Tata Ordinary ..	198.00	202.50	191.50	193.75
Century ..	574.00	581.00	539.00	548.00
Bombay Dyeing ..	66.90	67.60	64.00	65.40
Kohinoor ..	292.00	301.00	284.00	290.00
National Rayon ..	332.00	373.00	343.00	351.00
Telco ..	225.50	230.50	213.50	219.50
Premier Construction ..	371.00	349.00	348.00	359.00

It would appear that some of the speculators who had committed themselves heavily in such shares as Premier Construction, T.E.L.Co., National Rayons, etc., have liquidated their heavy positions. A few of them, who had been caught badly in this wave of selling pressure, have even gone short in Tata Ordinaries in order to cover up their losses in the above counters. The selling pressure was initiated in Tata Locomotives by the disappointment over the dividend for the year ended 31st March 1959 which is being maintained at 9 per cent. Rumours of continued teething trouble in the new steel plant at Jamshedpur and heavy delivery of shares in the last clearing also affected sentiment. Towards the close, however, there was a good recovery, as will be noted from the table above.

Tata Ordinaries rallied early in the week from Rs. 198 to a peak of Rs. 202.50, but the rumours about trouble in the new plant and its effect on production brought about a heavy selling pressure, pushing the shares back to Rs. 191.50 today. At the close, however, they recovered to Rs. 193.75. There were no transactions in Tata Steels (New) from yesterday onwards. The Company has announced that after the distribution of the forthcoming dividends, the new shares will become *pari passu* in all respects with the old ones. The Stock Exchange authorities have accordingly notified that new ordinary shares can be delivered against old shares in the clearing dated 31st July and that there should be no separate transaction for these two classes of shares. Indian Irons, too, moved with the trend in Tata Steels, but the fluctuations were narrow. This was due to support from Calcutta operators. The announcement of the closure of the company's business for the purpose of payment of dividend which will be declared later on, also kept sentiment in this counter steady. After an early rise from Rs. 25.10 to Rs. 25.65, the scrips slid back to Rs. 24.88 and closed at Rs. 25.15.

In the textile group, Bombay Dyeings picked up from Rs. 66.90 to Rs. 67.60 before receding to Rs. 64.90 today. The closing was, however, better at Rs. 65.40. Centurys came down to a low of Rs. 539, after having risen from Rs. 574 to Rs. 581. Kohinoors suffered a loss of Rs. 2 on balance at Rs. 290. Central Indias were marked down by Rs. 6 to Rs. 96 and Finlays by Rs. 7 to Rs. 277. Khataus lost Rs. 11.05 to Rs. 237.50, Morarjees Rs. 6 to Rs. 255, Shree Niwas Rs. 9 to Rs. 170 and Simphor Rs. 10.50 to Rs. 184.50. Standards, however, scored a gain of Rs. 6 to Rs. 553. Svadeshis gave way from Rs. 253 to Rs. 239.25 and Tata Mills from Rs. 39 to Rs. 37.50.

Bank shares too suffered small losses, presumably due to prospect of lower dividend (net) on account of abolition of grossing of dividends and lower earnings. Bank of India, for instance, has maintained the dividend at Rs. 3 per share, but subject to tax, for the half-year ended 30th June 1959. The shares, as a result, drifted down by Rs. 7 to Rs. 120 and their new shares by Rs. 4.50 to Rs. 124.50. Centrals were a fraction lower at Rs. 53. Barodas lost a rupee to Rs. 101 and Jaipurs Rs. 1 to Rs. 41.50. United Commercials were, however, unchanged at Rs. 63.

Sugar shares were weak, in consonance with the general trend. Belapurs closed Rs. 5 lower at Rs. 318.50, after touching Rs. 327. Phaltans were marked down by Rs. 6 to Rs. 160 and Walchandnagars by Rs. 10 to Rs. 320. Cement shares were relatively featureless, but the undertone was steady. Associated Cements moved up from Rs. 154 to Rs. 159.50 before closing at Rs. 155. Digvijays were steady at Rs. 154.50 and Orissa Cements at Rs. 16.76.

In the engineering and mining group, Alcock Ashdowns were placed at Rs. 255 ex-div. (dividend: Rs. 12.50), as against Rs. 281.50 *cum-div.* Tata Locomotives lost on balance Rs. 12 to Rs. 219.50 and Premier Constructions Rs. 6 to Rs. 359. Larsen and Toubros shed 60 nP to Rs. 22.12 and Mahindras 24 nP to Rs. 21.56. Mukand Irons were 60 nP lower at Rs. 18.24 and Cooper Engineering's dipped by Rs. 8 to Rs. 15. Shivrajpur Syndicates were marked down by Rs. 2 to Rs. 80. Indian Coppers were a shade quiet at Rs. 4.14.

Scindias fluctuated between Rs. 18.72 and Rs. 17.76 before closing at Rs. 18. Great Eastern Shippings shed on balance 16 nP to Rs. 22.12. Bharat Lines were done 8 nP higher at Rs. 12.96. Premier Automobiles moved down by Rs. 2.25 to

Rs. 125, while Hindustan Motors were better by 32 nP at Rs. 10.

In the miscellaneous section, Bombay Burmahs (old) rallied early in the week from Rs. 566 to Rs. 578.50, but the wave of selling pressure dipped them down to a low of Rs. 538. At the close, however, the shares recovered to Rs. 546. National Rayons fluctuated widely before closing at Rs. 351 with a loss of Re. 1 over the week. Gwalior Rayons were done 16 nP lower at Rs. 21.72. Tata Chemicals declined by 24 nP to Rs. 18.32, while Tata Oils improved by Re. 1.50 to Rs. 69. Voltas lost Rs. 4 to Rs. 171 and Wimcos suffered a similar loss at Rs. 209. Ceat Tyres had business Rs. 10.75 lower at Rs. 178. Indian Dyestuffs were marked down by Rs. 115 to Rs. 745. I.C.I.C. changed hands at Rs. 81.50. W. H. Brady declined by Rs. 10 to Rs. 395.

Calcutta Stock Exchange

CALCUTTA, 15th July

Higher advices from Bombay underlined by rumours that Government had permitted the rights issue of the Tata Iron and Steel Company Ltd. at par brought the Calcutta Stock Exchange earlier in the week under review to almost the brink of buoyancy. Gains were recorded in the leading counters in all sections, and both genuine investors and speculative elements participated in the bullish trend. Profit-taking on Monday and Tuesday reduced earlier gains. The reported intention of the L.I.C. to book profits in some of its recently acquired holdings alerted speculators, but it was thought unlikely that the Corporation would be willing to dispose of the first-class equities among its holdings. The upward trend was also aided by Mr. Nehru's statement that there was no proposal for nationalising existing industries. The further details of the recent seminar discussions at Ooty on the Congress approach to the third Plan, available this week, contained several surprises, such as suggestions for additional taxation of Rs. 2,500 crores (of which Rs. 600 crores was said to be direct taxation), ceiling on property holding and individual income, cancellation of the development rebate, lowering of the depreciation allowance, checking rigorously speculation on commodities, etc. It was thought here that these proposals went counter to Mr. Nehru's indication of a bright future for the private sector, and as such market men did not pay attention to these reports. However, it should be said that but for the public knowledge of these highly socialistic ways of thinking at some Congress level, activity in the market should have shown further expansion. For the present, the market has again been caught up in the bull phase, and indications are that it would continue for some time in view of the changed attitude in New Delhi towards the private sector and encouraging corporate results.

Sectionwise, jutes continued to command keen attention. New Centrals touched a high of Rs. 17.89 from Rs. 16.87 to close at Rs. 17.37. Anglo-Indias stood at Rs. 256 earlier in the week but moved up to Rs. 266 on interested buying following anticipations of improved working results and diversification of activity. The Company is shortly setting up a wool-combing plant. Barnagores were lifted to Rs. 166 from Rs. 157 before declining to Rs. 163.50 on profit-taking. At Rs. 165 Budge Budge scored Rs. 4. Khardahs changed hands at Rs. 172, as against Rs. 169 previously. Ganges reached a high of Rs. 94 from Rs. 90.25 to close at Rs. 91.50, while Auchlands remained unchanged at Rs. 193. Howraths encountered support to rise to Rs. 24.62 from Rs. 23.87, but closed at Rs. 24.19. Gourepores eased to Rs. 418 from Rs. 424 and Kinnisons to Rs. 193 from Rs. 196. Nuddeas hardened to Rs. 66 from Rs. 65, but Ballys were quiet at Rs. 230.

Coals met with improved demand, but the upward movement was fractional, as it was not yet certain when the price for the commodity would be increased, albeit New Delhi rumours anticipating imminent rise. Burrakurs, after touching Rs. 18.56 closed at Rs. 18.06. From Rs. 318 Bengals scored to Rs. 322, but soon gave way to Rs. 416. East Indias at Rs. 25.75 recorded a gain of Re. 1.50 and South Karanpuras hardened to Rs. 13.62 from Rs. 13.25. New Beerbhooms were lifted to Rs. 21.44 from Rs. 196. Nuddeas hardened to Rs. 66 from Rs. 65, but Ballys were quiet at Rs. 230.

Among minings, Indian Coppers touched a high of Rs. 4.28 to give way to Rs. 4.13, following the Directors' recommendation to repeat the dividend at 18 per cent. for 1958. Burma Mines recovered to Rs. 1.68 from Rs. 1.61 to close at Rs. 1.64.

In the engineering section, Indian Irons opened at Rs. 25.10 and gradually rose to Rs. 25.56, when a recession set in on easier Bombay advices and the shares dipped to Rs. 25.06. Texmacos met with good demand and, after being higher at Rs. 26.20, were dealt with at Rs. 24.55 *ex-div.* Burn & Cos. were unchanged at Rs. 455, while Indian Standard Wagons were done at Rs. 93, as against Rs. 94.50 previously. Bhartias lost to Rs. 16 from Rs. 17.31, while Brathaythals were fractionally higher at Rs. 6.56. Jessops were quiet at Rs. 30.25.

More interest was shown in sugar shares, and the star feature of the week was provided by Ramnugger Canes with a jump to Rs. 22.12 from

Rs. 17.82 previously. Carewys were subjected to profit-taking to sag to Rs. 12.81 from Rs. 13.75. Cawnpores, on keen support, gained to Rs. 14.37 from Rs. 13.56. Champarans at Rs. 17.50 scored one point.

Indo-Burma Petroleums were an outstanding feature in the miscellaneous industrials section and, at Rs. 29, recorded a handsome gain of Rs. 2.38. Balmer Lawries regained to Rs. 220 from Rs. 218 with National Pipes commanding keen attention earlier at Rs. 18.25 to sag to Rs. 17.81 subsequently. Hindustan Motors advanced to as high as Rs. 10.34 from Rs. 9.37. Rallis advanced to as high as Rs. 79.75 from Rs. 69 to close fully steady at Rs. 76.50. Indian Aluminiums were better, at Rs. 22.94 as were Indian Cables at Rs. 33.31 before easing to Rs. 32.75. Indian Oxygens were on good demand at the slightly improved rate of Rs. 28.58. National Rollings touched a high of Rs. 17.06 from Rs. 16.69 to close at Rs. 16.81. Port Shippings, on good support, were pushed up to Rs. 14.31 from Rs. 13.37. Britannia Biscuits, at Rs. 25.37, were noted for a modest gain. Hindustan Filtingor Glass, after being higher at Rs. 18.87, were crossed at Rs. 17.50. National Carbons recovered to Rs. 35.50 from Rs. 34.87 and Dunlop Rubbers to Rs. 34.12 from Rs. 33.87, while Alkali Chemicals at Rs. 22.69 were noted for a recession.

On better auction results, a small improvement was in evidence in teas. Brooke Bonds had buyers at Rs. 21.06, as against Rs. 19.81 earlier. Banarhats rose to Rs. 305 from Rs. 304. Grobs at Rs. 18.75 added a few nP, as did Tezporos at Rs. 17.37. Bishnaths encountered support at Rs. 20, as against Rs. 19.81 earlier.

Madras Stock Exchange

MADRAS, 15th July

Equities on the Madras Stock Exchange continued to move up generally during the week under review. Although fresh investment was somewhat hesitant, even the small purchases led to rise in values, because the floating stocks, scrips, especially the popular ones, were scarce. The recent assurances of the Prime Minister regarding the role of the private sector were widely welcomed by operators. Towards the closing sessions of the week, the market developed sagging tendency on rumours of the Life Insurance Corporation selling a portion of its holdings. The fall in values, however, was negligible, so that today's closing rates, for a majority of shares were either higher than, or on a par with, those prevailing a week ago.

Activity in the sugar section was quite brisk. Cauverys spurred Rs. 3.50 to Rs. 118.50 and Kirian pudies by Rs. 2.50 to Rs. 72.50. E.I.D.s improved by 60 nP to Rs. 39.85 *cum-div.*, following the announcement of an interim dividend of 1.17 per cent. for the year ending 30th September 1959, against 5 per cent. (interim) paid last year. Mysors were marked up by 50 nP to Rs. 49.50. Travancors rose by 20 nP to Rs. 12.40.

Tea shares in the planting section were supported, thanks to reports of good demand at higher prices. Halleyburias hardened to 75 nP to Rs. 19.75. Twyford's strengthened to Rs. 17. Kalasas gained 5 nP to Rs. 4.03. Nonsuc at Rs. 20.50, Chembras at Rs. 4.28 and Peernad at Rs. 19.35. But Emerald Valleys receded by 20 nP to Rs. 6.10, reflecting disappointment of operators over the dividend of 6 per cent. announced for the year 1958, which is same as that paid in 1953. Coffee shares also enjoyed enlarged buying enquiries. Anaparaais advanced by 40 nP to Rs. 163.50. Coffee Lands rose by 10 nP to Rs. 24.42. Sangames were hardened by 10 nP to Rs. 2.86. Cangoos *ex-div.* done at Rs. 6.45 *cum-div.*, as against Rs. 6.10 last week. In sympathy with tea and coffees, rubber shares, too, elicited good support. Malankaras rallied from Rs. 19.62 to Rs. 19.10, Highlands put on 10 nP to Rs. 12.35. Valkundars were fully steady at Rs. 27.25. Rajagiris at Rs. 27.00 and Teekoys at Rs. 7.70.

In the textile section, Buckingham's registered a rise of Rs. 2 to Rs. 189. Bangalore Woollens at Rs. 178 and the latter to Rs. 152. Kotharis gained 4 nP to Rs. 10.10. Coimbatore Cottons were at Rs. 142 and Coimbatore Pioneers at Rs. 21. Many other scrips in the textile section remain unchanged at last week's level. Venkatesas were also firm at Rs. 119, notwithstanding the announcement of lower dividend of 16 per cent. for the year 1958, as compared with 20 per cent. for the year 1957.

The miscellaneous section ruled strong. Cement chemicals and paper company shares were particularly fancied. Rallis provided the bright spot, the quotation moving up by Rs. 5 to Rs. 79. Travancore Cements hardened by Rs. 5 to Rs. 10.50. Mysore Papers hardened by 70 nP to Rs. 10.50. Indian Steel Rollings improved by 62 nP to Rs. 22. Orissa Cements increased by 35 nP to Rs. 16. Indian Cements and Mettur Chemicals gathered 10 nP each to Rs. 6.55 and Rs. 13.65, respectively. Spencers 13 nP to Rs. 20.38 and Ashok Leyars 5 nP to Rs. 11.10. Andhra Cements picked up last week's level of Rs. 10.20, as also Standard selling and declined by Rs. 3 to Rs. 1. Western India Plywoods were unchanged at Rs. 17.25 *cum-div.* The directors of the Company have maintained the dividend for the year ending March 1959 at the previous year's level of 10 per cent. Travancore Chemicals were unchanged at Rs. 15 though the dividend announcement for the year ended March 1959 was lower at 6 per cent. as compared with 7 per cent. distributed

NEWS IN BRIEF

INDIA exported 8,809 sewing machines, valued at Rs. 8.72 lakhs during the first five months of 1959, as compared with 1,782 machines worth Rs. 2.77 lakhs in the corresponding period of 1958. The U.K. was the leading buyer, its actual intake being 4,705 machines worth Rs. 3.31 lakhs.

A proposal for the establishment of a plant at Bombay, to produce heavy viscosity industrial lubricating oil basics has been submitted to the Union Government by the Burma-Shell Oil Company. The average annual imports of lubricants are at present of the order of Rs. 12 crores.

A mechanised boat-building yard is proposed to be constructed shortly at Tondiarpet in Madras. The State Government has sanctioned Rs. 1.65 lakh and necessary equipment has already been secured. The initial production target is eight boats. In due course, the yard will be expanded to meet the entire requirements of the State.

The Government of India and the U.S. Atomic Energy Commission have signed an agreement for the lease of 15 tons of heavy water for use in India's atomic energy research programme. Heavy water is one of the most efficient materials available for moderating atomic reactions under controlled conditions in an atomic reactor.

The Norms Committee, constituted by the Government of Bombay, to evolve norms in respect of various industrial matters, has decided to fix certain norms for such matters as leave, holidays, retirements, benefits, etc., in 24 industries in the State. It does not, however, propose to deal with wages and dearness allowance.

It is claimed that the series of traffic test surveys conducted on the different routes of Government roadways in Uttar Pradesh have resulted in a saving of Rs. 30 lakhs by way of economy in the use of tyres, batteries and engines as well as by gaining more mileage per gallon of fuel and oil consumed. During 1958-59, about 400 such surveys were conducted in the State.

As measures of export promotion, the Government of India has now allowed drawback of customs duty paid on imported material used in the manufacture of tinned steel wire products, granted rebate of customs and Central excise duty paid on materials used in the manufacture of air conditioners and cement tiles, and revised the rates of drawback applicable to exports of galvanised iron wire products of different gauges.

The Inter-Departmental Committee on second shipbuilding yard, headed by Mr. N. R. Pillai, Secretary-General, External Affairs Ministry, recently visited Cochin with a view to making a further study of the proposed site there. The Committee is expected to submit first a report to the Union Government on the technical feasibility of the site, before it takes up a decision on the location of the second shipyard.

The National Productivity Council has undertaken an audio-visual programme to promote productivity consciousness in industries. The programme includes distribution of films dealing with various techniques and processes designed to increase productivity, in the various parts of the country through the five regional directorates of the Council and other interested institutions. It also proposes to organise a series of exhibitions.

The Government of Bombay has acquired a twenty-one-acre plot of land at Worli in the City for setting up the second milk dairy. The new plant, which is expected to function by the end of next year, will have a capacity to process about 8,000 maunds of standard whole milk. The cost of the project is estimated at Rs. 2 crores. Of this, the U.N.I.C.E.F. has given a grant of Rs. 45 lakhs in the shape of machinery and equipment.

In order to give a fillip to the marine fishing industry, the Union Government has appointed three advisory boards to review the deep sea fishing stations, one each at Bombay, Cochin and Tuticorin. The terms of reference of the Boards cover effective utilisation of assistance from the Technical Co-operation Mission by way of fishing vessels, proper working of the three fishing stations, and greater co-ordination among Central Fisheries Department, the concerned port trusts, naval authorities, trade and fisheries departments of States.

A tentative scheme to start a network of dairy development projects during the third Plan period at a total cost of Rs. 60-70 crores—about three times the allocation made in the second Plan—was recommended at a conference of Central and State Government representatives held at New Delhi recently. The object of the projects is to organise milk supply schemes for 100 cities with populations exceeding 500,000, about 30 rural creameries, two cheese factories and twelve milk product factories. A Milk Supply Board for each of the cities and Apex Milk Boards at State level were also suggested.

Up to the end of April this year, over 1,611 million pieces of decimal coins had been put into circulation all over the country. These include 240.2 million pieces of 10 nP coins, 268 million pieces of 5 nP coins, 356.7 million pieces of 2 nP coins and 746.2 million pieces of 1 nP coins. Simultaneously with the circulation of increased number of decimal coins, the withdrawal of old coins has been progressing apace. Between 1st April 1957 and 31st January 1959, 661.4 million pieces of coins in anna-piece series had been withdrawn.

PERSONAL

D.R. B. K. Madan, Principal Economic Adviser, Reserve Bank of India, has been appointed Executive Director of the Bank.

Dr. Omar Hayat Malik, High Commissioner-designate of Pakistan in India, has arrived in New Delhi.

Mr. Donald Kerr, Director-designate of British Information Services in India, vice Mr. J. T. Hughes, arrived in India on Monday this week.

Mr. William Rountree, U.S. Assistant Secretary of State for Near East and South Asian Affairs, has been appointed U.S. Ambassador to Pakistan.

Mr. Kantilal Manilal Sonawala and **Mr. Premchand Kedia** have been elected President and Vice-President, respectively, of the Bombay Bullion Association for the year 1958-60.

Mr. Khatau G. Dayal has been elected President of the Western India Automobile Association for the current year. **Mr. Babubhai M. Chinai** and **Mr. Dahyabhai V. Patel** have been elected Vice-Presidents.

Mr. W. D. C. Erskine Crum, Sales Manager of the British Overseas Air Corporation, South-East Asia, has been appointed Sales Manager in India in place of **Mr. P. A. Gillibrand**, who is leaving this country shortly to take up a senior post with British European Airways as its Manager in Germany.

the world market. Under the agreement, the STAL is to take over the Laval plant and at the same time change its name to Turbin AD de Laval Ljungstrom (TALL), while de Laval will remain largely as a holding company.

The Anglo-Egyptian Oilfields, the biggest single British concern sequestrated after the 1956 Suez crisis, has been handed back to its British parent company, the Shell-group. This is the last of the four companies to be returned under an agreement reached in April last between the Government of U.A.R. and the Company. Since the Anglo-Egyptian financial agreement was signed last February, over 50 per cent. of British property in Egypt has been dissequestrated.

Sales of West Germany's textile industry still were 5 per cent. less during this year's January-April period than in the same time last year. Though incoming orders have bettered by about 24 per cent. during the same period, the industry thinks that this might only be a temporary recovery from the heavy setback last year. The textile industry's production index (1950=100) stood at 149 in January 1959, and recovered to 157 in April, as against a high of 171 in January 1958.

The Tobacco Export Promotion Council of Rhodesia has brought out a publication intended to stimulate world-wide interest in Rhodesian tobacco. The Council proposes to circulate among cigarette factories throughout the world a documentary colour film on tobacco industry in the country. Meanwhile, the representatives of the Council are touring abroad, establishing personal contacts with foreign manufacturers and Governments to persuade them to join the list of 40-50 countries that are already buying Rhodesian tobacco.

Suggestions to amend the European Coal and Steel Community Treaty have been approved by the High Authority, which will be placed before the Council of Ministers at its meeting to be held at Luxembourg on the 23rd inst. The main amendment suggested by the Authority relates to the continuing offer of aid to marginal Belgian collieries during their reconstruction, including its contribution to the re-training and re-settlement of displaced workers. The provisions of the Treaty as stand at present put a stop to such aid after February 1960.

Tax concessions amounting to £17 million have been announced in the latest budget of the New Zealand Government. The concessions have been made possible by the improvement in the country's economy, following increased prices for its exports, which, it is said, has obviated the need for heavy overseas borrowing this year. The concessions are designed to enhance the purchasing power as more goods and services become available. The budget provides for a total Government expenditure of £317 million which is less by £100,000, as compared with the estimated revenue receipts.

President Eisenhower has asked Congress to appropriate \$1.5 million to construct the nation's first demonstration plant for the conversion of sea water to fresh water. The sum is part of a \$10 million programme to build conversion plants already authorised by the Congress. The first plant will be located on the Gulf of Mexico. Two other plants for the conversion of salt water are planned, one on the west coast and the other on the east coast. The proposed plants, when completed, will be able to produce at least one million gallons of fresh water daily.

The Pakistan Government has decided to set up an Agricultural Commission to examine the factual development for the slow progress of agricultural development and to recommend measures for boosting food output. The Commission is headed by **Mr. Malik Amir Mohammed Khan** of Kalabagh, Chairman of the Industrial Development Corporation, and consists of six other members, including three experts lent by the World Bank and the F.A.O. It will fix production targets for the various crops, besides considering the possibility of organising co-operatives in the field of food production and for the better management of land.

STEADY IMPROVEMENT IN TRADE EFFICIENCY ALSO HIGHER

From Our Own Correspondent

LONDON, 11th July

LONDON LETTER

BRITAIN'S trade figures for the month of June, though in sharp contrast to the phenomenal May results, still support the view that the tide of international trade has turned for the better. Imports in June at £331 million and exports and re-exports at £260 million gave a notional trade gap of £71 million, as compared with £11½ million in May. But the second quarter of the year as a whole shows a gap of only some £108 million, as against the £117 million for the first quarter. Moreover, the notional adverse balance for the first half-year of £225 million is 90 per cent. accounted for by freight and insurance on imports; thus nearly the whole of the country's substantial "invisible income" represents the true favourable balance of trade.

If the second quarter of the current year is compared with 1958, then imports are 6½ per cent. up, while exports are 4½ per cent. up; at the same time, exports are 7 per cent. up on the first quarter. Whichever way one looks at the picture—provided one is not unduly swayed by the results of a single month—the improvement is there.

The home production picture is equally reassuring: apart from January, the first quarter failed to show improvement over the corresponding quarter in 1958. Then April showed a 4 per cent. improvement for all industries and May has shown a 5 per cent. improvement—most of this being in the manufacturing industries.

This rise in output has considerably outstripped the fall in unemployment, showing, once again, that a period of recession is one for improving efficiency, increasing mechanisation and reducing costs—and that, after such a period, the same previous level of production is achieved, with a lower labour force.

The same pattern of improvement is visible on the spending side, in the country's retail trade. The first quarter of the year showed a rise of nearly 4 per cent. on the corresponding trading period a year before, then April and May have both shown a 6 per cent. rise on 1958. The reason for the retail trade to show a faster rate of increase than the production trend is due to the hire-purchase boom which has enabled consumption to anticipate earning power. It is estimated that the total outstanding hire-purchase debt at the end of May was some £727 million, an increase of £84 million or 13 per cent. over the past three months.

Coming back to the point about the rise in productivity, the O.E.E.C. has just published a comparative study of the output and productivity of particular industries in both Britain and the U.S.A. This shows that the same processes have been at work in the U.S.A. since their recession, so that unemployment figures in that country conceal the rate at which output has been rising without employing more workers. It is significant that, in the past decade, the U.K. has failed to narrow the gap between the average level of productivity in this country and in the U.S.: it seems that the American worker, by reason of his greater command of capital resources, still produces between two and a half to three times as much in his working week as does the British worker.

But Britain can export successfully to the U.S., because the American advantage in productivity is more than swallowed up by higher wages, i.e. labour cost is higher in the U.S. than in the U.K. But this is not a particularly good reason for British self-congratulation (especially as the British worker is trying through higher wages to increase British labour costs) and the moral of the study is that the U.K. should try a lot harder to increase its domestic productivity—or for ever go in fear of American competition reviving.—All Rights Reserved.

STEEL GIANT IN WALES CAPACITY THREE MILLION TONS A YEAR

By Sir Oscar R. Hobson

LONDON, 6th July

NEARLY 12 years ago, in October 1947, I stood on the railway embankment near Port Talbot and looked south over the desolate expanse of sand dunes separating me from the sea. That five miles by three-quarters of a mile stretch of waste land, on which no building then stood, was the site of the Margam and Abbey Works of the Steel Company of Wales.

I have visited the place many times since and watched this great plant grow. I was there in 1951, when the first plan (Scheme K, they called it) was completed and the works were turning out 1,250,000 tons a year of hot and cold rolled sheet for use in motor cars, ovens, bridges, and the whole catalogue of consumer durables, or else for conversion into tinplate for the canning and other industries.

I was there again in 1956, by which time Scheme L was complete and output was running at 2,400,000 tons a year at Margam, while two tinning works were in operation at Trostre and Velindre farther along towards Swansea.

And, finally, I was there last week and saw the major extensions called Scheme M virtually complete. Scheme M, when fully run in, will raise Abbey-Margam's output of what are none too euphoniously called "flat rolled" products to 3 million tons a year. It will raise to the highest of any steelworks in Britain the output of a plant which a dozen years ago was non-existent.

To achieve this last 25 per cent. increase in output there has had to be expansion of capacity all along the line from coke and iron production to steel melting and cold rolling. There is a new £7 million blast furnace, one of the biggest in the world, there are new coke ovens, there is a new slabbing mill. Most important of all, because most revolutionary, are the three new basic Bessemer steel furnaces, which supplement the 24 open hearth furnaces.

The Bessemer process of steel melting, invented a century ago by an Englishman but

BANK CREDIT AGAINST FOODGRAINS RESERVE BANK MODIFIES DIRECTIVE

THE Reserve Bank of India has again modified its earlier directives to Scheduled banks regulating bank credit against foodgrains. The latest modification, made last week-end, follows the adoption of procurement programmes by some of the State Governments recently in respect of paddy, rice or wheat, involving in some instances a reduction in stocks of these commodities with wholesalers. The procedure of procurement and methods of reimbursing wholesalers for purchases of foodgrains vary from State to State. This, in turn, calls for a suitable regulation of credit to the trade. It has become necessary, for instance, to increase the credit to the purchasing agents of the Orissa State Government, in order to assist the State Government's procurement of rice. In Madras, on the contrary, as a result of the purchases by the State Government itself, the stocks with the trade would be less. This, consequently, reduces the credit needs of traders in that State. The Reserve Bank of India has, therefore, thought it necessary to modify its earlier directives in the light of the position in the major States without affecting the seasonal requirements. The existing ban on sanction of fresh credit limits or increase in the existing limits in excess of Rs. 50,000 has been withdrawn.

The latest directive not only consolidates the earlier ones but also supersedes them, insofar as they relate to credit limits and advances against the security of paddy and rice, wheat and other foodgrains. In the case of composite credit limits, that is, credit limits sanctioned against the security of foods and against any other types of security, banks have been asked to segregate the credit limits against (1) paddy and rice, (2) wheat, and (3) other foodgrains, and follow the restraints contained in the latest directive.

The modified directive calls upon every Scheduled bank to maintain, as hitherto, a margin of not less than 40 per cent. of the value of stocks in respect of each credit limit against the security of paddy and rice, or wheat or other foodgrains. Under the new directive, the average aggregate level of credit against foodgrains has been changed to a State-wise classification and separate maximum levels of advances against paddy and rice are prescribed in respect of offices and branches of banks in (1) Andhra, (2) Madhya Pradesh, (3) Madras, (4) Orissa, and (5) other States.

Thus, in the case of branches in Andhra and Madhya Pradesh, banks have been asked to maintain each month, commencing from August 1959, an average aggregate level of credit against the security of paddy and rice which is not in excess of the level in the corresponding month of 1958. Of this level, the credit to parties other than rice mills should not exceed 33-1/3 per cent. In respect of offices in Madras State, the average level of credit should not exceed 60 per cent. of that in the corresponding month of 1958. For offices of banks in Orissa State, however, the Reserve Bank has fixed a financial limit, but this is subject to two provisos, namely, (1) not less than 80 per cent. of such credit is made available to rice mills or other parties acting as purchasing agents of the State Government, and (2) notwithstanding the overall margin limit of 40 per cent. in respect of all foodgrains, the margin on credit to purchasing agents should not be less than 25 per cent. In all other States, the average aggregate level of credit should not be in excess of 120 per cent. of that actually maintained in the corresponding month of 1958.

In the case of advances against wheat and for the purpose of keeping an average credit level each month, the States have been broadly classified into two. In the Punjab, Himachal Pradesh, Delhi and Jammu and Kashmir, the average monthly credit level should not exceed 75 per cent. of that actually maintained in the corresponding month of 1958. In the Punjab, however, banks are permitted to keep an additional average aggregate credit level equivalent to 25 per cent. if the additional credit is given to persons who have entered into storage delivery contracts with the State Government. In respect of advances to this category of borrowers, the margin has been reduced to 25 per cent., as in the case of advances to procuring agents in Orissa. For all other States, the average aggregate level of advances against wheat should not exceed that actually maintained in the corresponding month of last year.

In the case of other foodgrains, too, the States have been broadly classified into two for the purpose of fixing the average aggregate credit limit. For banks in Madhya Pradesh and Uttar Pradesh such credit level should not exceed 75 per cent. of that maintained in the corresponding month of 1958 and for those in other States, it should not exceed the level maintained a year before.

The exemption hitherto granted in favour of branches opened on or after 1st January 1958 and other exemptions are continued with slight modifications. Thus, the limits granted to branches opened on or after the above date, in a centre without banking facilities, are not to be taken into account for the purpose of computing the average

level of credit. This exemption is subject to the following provisos:

(1) The foodgrains against which advances are made should be in the possession or under the control of the branches concerned, (2) if the average aggregate level of credit against foodgrains exceeds in any month Rs. 1 lakh, such excess is taken into account for computing the average credit level, and (3) this concession will cease to be available after one year from the date of opening of a branch.

This exemption is also given to branches opened on or after 1st January 1958 in places where banking facilities are already available, provided that, if the proportion of credit granted by all such offices or branches of a bank against foodgrains to their total outstanding credit at these offices exceeds in any month three times the proportion which the credit granted by its other offices against foodgrains bears to the total outstanding credit at these offices, of 15 per cent., whichever is lower, such excess will be taken into account for computing the average aggregate level of credit.

Advances against foodgrains granted against the pledge of warehouse receipts issued by warehouses established by the Central and State Warehousing Corporations or granted by Scheduled banks to co-operative marketing and processing societies are also exempted from the aforesaid directive.

I.F.C. TO INVEST IN CHILE AND COLOMBIA

The International Finance Corporation has decided, subject to completion of the necessary legal formalities, to invest \$500,000 in Laminas, a Colombian Corporation, to finance a programme for improving and diversifying its fibre board products and \$1.5 million in Carozzi, a Chilean Corporation, for expansion of production of a variety of pasta (macaroni) products.

There is a growing demand for fibre board on account of the increasing volume of construction of low-priced housing and the rising demand for packaging, furniture and other industries. Laminas is purchasing new machinery to supplement its present facilities, improve its products and ensure greater flexibility to meet changing market requirements. The total cost of the programme is \$625,000. The I.F.C.'s investment of \$500,000 will be in U.S. dollar notes maturing by 1967 and bearing interest at 7 per cent. in dollars and additional

interest related to profits up to a maximum of 5 per cent. in Colombian pesos. In addition, the I.F.C. will receive an option to take up the shares of the Company.

The Chilean Corporation, Carozzi, owns one of the largest pasta plants in the world with a capacity of 24,000 tons per year. To supply a large and growing market for its products, the Company is building a new wheat mill and macaroni factory. The new plant will have a capacity of 12,000 tons of pasta products, bringing the total annual capacity to 36,000 tons. The I.F.C.'s investment will help finance new equipment, packaging machinery, wheat storage silos and warehouse facilities. The total cost of the new plant is estimated at \$2.5 million. The I.F.C.'s investment of \$1.5 million will be in U.S. dollar notes, maturing by 1970 and bearing interest, payable in dollars, at 6 per cent. and additional interest payable in Chilean pesos, contingent on profits. In addition, the I.F.C. will receive an option to subscribe at par to ordinary shares of the Company.

BANK OF INDIA LTD.

Notwithstanding the sharp rise in the advances of Scheduled banks during the busy season 1958-59 and the ceiling on deposit rates, the half-year ended 30th June 1959 does not seem to have been more profitable than the corresponding six months of the previous year. On the contrary, the earnings of the Bank of India Ltd. provide an instance under review amounts to Rs. 28.11 lakhs, as compared with Rs. 33.14 lakhs for the first half of 1958. After previous year, the Directors have declared a dividend of Rs. 50, subject to deduction of tax at the prescribed rates, for the first half of 1959. The rate of dividend is the same as that for the corresponding half-year of 1958, but there is a difference, in that, whereas the latter was free of tax, the dividend now announced is subject to tax. This absorbs Rs. 18 lakhs, leaving to be carried forward Rs. 22.91 lakhs, subject to taxation.

INDIAN OVERSEAS BANK

The net profit of the Indian Overseas Bank Ltd. for the half-year ended 30th June 1959, subject to audit, amounts to Rs. 14.84 lakhs, which is a shade better than that of Rs. 14.02 lakhs for the first six months of 1958.

The Directors of the Hongkong and Shanghai Banking Corporation have declared an interim dividend of £1-2-6 per share payable on 10th August 1959. The transfer books will remain closed from 24th July to 8th August, both days inclusive.

VISIT TO A U.S. COMMERCIAL BANK SOME LESSONS FOR BANKS IN INDIA

By Dr. K. C. Chacko, New York

IN order to see the actual working and operation of an American commercial bank, I visited the Chase Manhattan Bank in New York. The Chase Manhattan is one of the largest banks in the world; it has over 51,000 correspondent banks and branches and its total deposits exceed \$7,000,000,000. The Bank's headquarters, which has a staff of about 14,000, has outgrown in size and will be moving in a year or two to a new 60-storey building, costing about \$130 million. To give some idea of its size, I may add that, when completed, it will stand on a 2-acre open plaza, covering the greater part of two city blocks. The vault of the Bank is installed five floors below the ground level. The building, when completed, will add some colour to the rather dull-looking financial district of New York, namely, Wall Street.

To get a clear perspective of the Bank's operation, I spent the first three days at one of the branch offices of the Bank. Here one is able to come into personal contact with most of the employees and to discuss with them more leisurely. Here one is able to see the Bank in a miniature form. A branch office is always in close contact with the head office. Usually, transferring of funds to another State or to foreign countries, collection of bills, etc., are channelled through the head office. Unlike those in India, United States banks are allowed to have branches only within a comparatively small area, and never outside a particular State. State laws do not permit banks from one State to establish branches in another State. Thus, all the 103 branches of the Chase Manhattan Bank are in New York City, within a radius of about 20 miles. This is true of all the large bank in New York. The Chase has over 20 offices in foreign countries and correspondent relationship with hundreds of banks in other parts of the United States, and also other countries. These correspondent banks do many of the functions which branch banks do.

International Department

Coming back to the head office, after visiting the branch, I spent several days with the International Department. Since the end of the last war, there has been a tremendous increase in the scope and operation of this Department. At the conclusion of the war, there were only 284 employees in this Department, but now they number over 1,000. The Department is in the charge of an Executive Vice-President, who is assisted by several Vice-Presidents, each of whom deal with certain regions.

The International Department is almost like a bank within a bank. The Department performs for its customers practically all the banking services, i.e., loan and credit, maintaining accounts, trading, remittances and collections, which are performed by any well-established commercial bank. The customers of this Department fall mainly into two categories—banks throughout the world engaged in foreign trade and exchange; and business firms or individuals. In addition, several central banks also keep accounts with the Chase Manhattan Bank.

The Department issues over 200 commercial letters of credit in an average day. Once a proper application is received by the Bank, letters of credit are usually issued on the same day. Letters of credit may be divided into two types—import and export credits. An American importer buying goods from India may ask the Chase Manhattan Bank to open a letter of credit. The terms of this credit may be passed on through its Indian correspondent bank to the Indian exporter, usually without the Indian bank confirming the credit. Because of the prestige and reputation of the Chase, it is generally not considered necessary to have its letters of credit confirmed by a foreign bank. On the other hand, when foreign banks issue letters of credit in favour of American exporters, the Chase Manhattan Bank usually confirms such credits, thereby adding its own guarantee to that of the foreign bank.

The Department keeps a large file covering all its customers. The customers' balance-sheets are scrupulously analysed each year, and based

Dr. Chacko is the author of the *Monetary and Fiscal Policy of India*, published by Vora and Company, Bombay. Recently he spent several weeks as an observer at the Chase Manhattan Bank and the Federal Reserve Bank in New York.

on their credit and financial standing, the bank establishes a line of credit (similar to overdraft arrangement) for each customer. It is the policy of the Bank to maintain close and friendly relations with all its customers and to meet their requirements whenever possible. In some cases, the Bank has gone out of its way to help its customers in non-banking business. For example, a foreign bank requested and received help from the Chase Manhattan Bank in drawing a plan for the construction of a modern bank building in its own country.

Trade and Investment Promotion

The Chase Manhattan Bank has a department for trade and investment opportunities. An Indian businessman, who has an economically sound project for promoting foreign trade or investment, may seek its assistance; but such requests for assistance must be first made to his Indian bank, which in turn may forward it to Chase. The latter would then be able to put the Indian businessman in touch with American businessmen.

Commercial banks can do a great deal in promoting foreign trade and investments. That is the main reason why many of the important Japanese banks have their offices in New York and also in other important cities of the world. These banks do the spade-work for the businessmen in Japan. There is no reason why Indian banks should not, as in the case of Japanese banks, establish offices in all the important cities. These foreign offices need not be full-fledged branches; a small office or a representative can help in the promotion of foreign trade and investments. At the present time over 27 foreign banks have offices in New York. Their distribution is as follows:

Japan, 6; England, 6; Canada, 4; Switzerland, 3; Formosa, 2; France, 1; Italy, 1; Holland, 1; Philippines, 1; Hong Kong, 1 and Mexico 1.

I visited all the other major departments of the Bank and discussed the method of operation and policy with the respective heads of the Departments. In a short article of this nature, it is possible only to refer to some topics which I think would be of special interest to the readers of *Commerce*.

The magnitude of the operation and volume of business handled by the Bank may be estimated by the fact that, on an average day, the head office of the Bank processes over 1,500,000 cheques, the value of which sometimes exceed \$1,500,000,000. These cheques are collected free of cost to the customers with the assistance of the Federal Reserve Bank.

Trust Department

The Trust Department is an important feature of commercial banking in the United States. The Chase Manhattan has over 2,000 persons working in this Department. The functions of the Department vary from taking care of personal business of a customer to that of issuing corporate bonds of several million dollars. A well-to-do customer of a Bank may spend his time merrily travelling around the world, leaving all his personal business, including that of paying rent, bills and other routine business, in the care of the Bank. The Trust Department manages the estates of families, acts as executors of wills, provides facilities for the safekeeping of securities, manages charitable funds and pension funds of private corporations, and maintains an investment service division where a large number of specialists and research workers make a continuous study of the stock market and advise their correspondent banks and customers on investment problems. In the Corporate Trust Department, the Bank acts as trustee for corporations which issue bonds.

While loans of large amounts are usually made to corporations and businessmen, the Bank also maintains a large personal loan department for making smaller loans on instalment basis. A regular customer of the Bank can easily borrow the equivalent of Rs. 2,000 or more for one to two years without any collateral at all. Once the application for a loan is properly filled, a customer with a good credit record may expect the loan within twenty-four hours. In addition, the Bank has now started a charge plan, which enables consumer-members to show their charge

plan card and purchase their requirements from member-stores on credit up to Rs. 2,000 or more. The customer can pay the Bank for these purchases at the end of every month or over a period of time, if an instalment credit is established with the Bank.

In addition to such personal instalment loans, American banks also make large loans for purchase of houses and other types of real estate. Before the adoption of the Federal Reserve Bank Act in 1914, commercial banks in the United States were not allowed to make real estate loans, but now about 25 per cent. of all bank loans in the U.S. are real estate loans. This has been made possible by several schemes of Government guarantee of such loans.

Staff Kept Happy

The efficient operation of a huge institution like the Chase Manhattan Bank is achieved only by the ability and high calibre of its staff. The Bank takes good care of its staff and provides all facilities for self-improvement. Several kinds of indirect benefits are also offered. For example, the Bank pays the tuition fees for those members of the staff who attend college or banking institutions. It also has a special internal training programme for newly recruited college graduates and other members of the staff who have demonstrated outstanding ability. In addition to the internship in several departments, the Economic Research Department offers a course in banking theory. The Bank also provides several kinds of insurance and benefit plans, including subsidised lunches.

When an institution becomes too large, there is always a tendency for its efficiency to decline. This, however, cannot be said of a bank like the Chase Manhattan Bank. A sign posted in the Bank reads:

"What is a customer? He is the most important person ever to come into this place of business—either by person or by mail. . . . We are not doing him a favour by serving him—he is doing us a favour by giving us the opportunity to do so."

The Bank thus takes every possible measure to keep the customer well satisfied. Transfer of funds, payment of bills, establishment of letters of credit, answering enquiries—all these are done in the most efficient way. To give an example, transfer of funds in large amounts to any part of the United States is done in a few minutes. When a New York commercial bank wants to transfer funds to a San Francisco commercial bank, the New York commercial bank types a draft and runs it through an "Intrafax" facsimile machine which is connected to the Federal Reserve Bank of New York. Within three minutes a photo of the draft appears on the machine of the New York Reserve Bank, which in turn transfer the funds again through an "Intrafax" machine to the Reserve Bank in San Francisco. The San Francisco Reserve Bank immediately credits the account of the commercial bank in San Francisco under advice to them. The whole transaction is completed in a few minutes. In addition, Chase and other large banks maintain their own private wire system, telegraphically connecting hundreds of correspondent banks in various parts of the U.S.

Similarly, most of the accounting work is done by expensive electronic machines, thus saving time and adding to efficiency. Some of the Departments work 24 hours a day with three shifts of staff.

Service to the Society

A bank's income accrues mainly from its investments and loans. Investments of banks in the United States are in Government securities and first class bonds. Therefore, there is not much room for any appreciable loss in banks' investments. It is, of course, true that income from investment is also small in relation to income from loans. Thus, the major problem of any bank is how to make safe loans and at the same time earn good profit. In the United States, the banks make various kinds of loans, like commercial and industrial loans, loans for purchasing investment securities, real estate loans and consumer loans. Yet the loss arising from bad loans is negligible, and this is the key to successful banking. This is made possible partly by extensive credit reports on the bank's borrowers. The banks not only analyse the balance-sheet and credit standing of the borrowing businessman, but also study his business acumen and ability. A sound and productive loan is not only good for the borrower and the bank, but also for the country as a whole, for it adds to the total production of goods and services in the country.—All Rights Reserved.

TRENDS IN WOOLLEN INDUSTRY OUTPUT LOWER—PRICES TEND TO FALL

IT is, indeed, surprising that the Development Council for Woollen Industry, which met at New Delhi on the 7th inst., has not released anything to the Press indicating as to what transpired at the meeting and what decisions were taken. The only information available is from a private news agency, revealing that the Council considered a suggestion that indigenous raw wool could be utilised to better advantage, if spun on semi-worsted machinery. The two other important items on the agenda, according to this report, were (1) question of permitting installation of carpet powerlooms and (2) problems confronting the wool hosiery sector. In the absence of details of the deliberations of the Council's meeting, one is not in a position to assess the contribution made by the Council to the development of woollen industry. The Council will do well to issue a Press note at the end of its meetings at least in future.

The woollen industry would appear to be passing through difficult times, thanks to the decline in rate of production, on the one hand, and fall in prices, on the other. The total quantity of woollen-worsted fabrics woven during the first four months of 1959 was no more than 4.25 million yards, as against 6.03 million yards in the corresponding period of 1958. On this basis, the production for the whole year of 1959 will amount to just 12.75 million yards, which compares unfavourably with 19.37 million yards in 1958 and 15.79 million yards in 1957. The fall in fabrics output has followed a decline in the quantity of yarn spun which in the four months ended April 1959 was 8.78 million lbs., as against 9.06 million lbs. in the same period last year, the annual rate of output being 26.34 million lbs., as against 29.14 million lbs. and 27.84 million lbs. spun in the two preceding years, respectively. The prices of woollen goods have tended to recede. The average index of wholesale prices (base: 1952-53=100) for the week ended 20th June 1959 stood at 104.2, as against 105.9 a year before.

As a result of the low rate of output of woollen-worsted yarn and fabrics thus, there is quite a sizeable idle capacity in the industry—to the extent of as much as 70 per cent. in the weaving sector and 34 per cent. in the spinning sector. For the purpose of this calculation, the present aggregate rated capacity of the woollen textile industry has been taken as 48 million yards of fabrics and 40.39 million lbs. of yarn, on the basis of double shift of eight hours and 300 working days in a year.

The following table indicates the trend of woollen-worsted textile output during the first four months of 1959 and 1958, as well as in the whole of 1958 and 1957:

	Yarn ('000 lbs.)	Fabrics ('000 yds.)
1958—		
January	2,266	1,553
February	2,104	1,368
March	2,544	1,720
April	2,058	1,390
Total—January-April ..	9,042	6,029
1959—		
January	2,239	1,087
February	2,159	973
March	2,022	1,029
April	2,368	1,101
Total—January-April ..	8,778	4,246
Whole of 1958	29,143	19,369
Whole of 1957	27,838	15,785

In view of the low level of production and with the object of promoting exports of woollen goods (cloth, yarn, hosiery, garments, carpets and shawls), the Government of India recently announced the export incentive scheme, the details of which were given in these columns last week. It will be seen therefrom that those manufacturers who sell woollen goods abroad will be entitled to utilise a substantial part of the foreign exchange for imports of essential raw materials—raw wool, wool tops, shoddy wool, dyes and chemicals. It remains to be seen how far the scheme will prove successful. Meanwhile, some differences of view have arisen among woollen producers over the allocation of imported raw wool and wool tops. The Federation of Woollen Manufacturers of India has recommended to the Textile Commissioner a proposal to change the basis of allocation from past consumption to 50 per cent. past consumption and 15 per cent. spindleage. The revised formula has been stoutly opposed by thirteen Ludhiana spinners who are already believed to have resigned membership of the Federation. The

whole issue, it is said, will be examined by the Federation at a meeting due to be held this week-end.

A brief reference to the wool trade of India during the year 1958 may not be out of place here; detailed figures covering recent months are not available. India imported in that year 3.02 million lbs. of raw wool, 15.90 million lbs. of wool tops and 3.01 million lbs. of wool yarn. The corresponding figures (in million lbs.) for 1957 were 3.09, 16.27 and 4.54, respectively. The country-wise imports in the two years are shown below:

	1958	1957
Raw wool:		
Australia	1,610	1,346
New Zealand	1,308	1,450
United Kingdom	69	259
Other countries	29	21
Total	3,016	3,085
Wool tops:		
United Kingdom	11,156	11,323
Australia	4,474	4,089
Other countries	289	854
Total	15,899	16,266
Wool yarn:		
Italy	2,006	4,199
United Kingdom	52	190
Japan	36	81
Other countries	17	101
Total	3,011	4,541

It will be seen from the above table that imports of raw wool, wool tops and wool yarn during 1958 were lower than those in 1957. Similarly, imports of wool tissues were on a reduced scale, being just 253,000 linear yards, as against 1.21 million yards in the previous year. The reduction was accounted for by all the main categories. The breakdown figures in thousand linear yards for 1958, those in brackets covering 1957, are: woollen and worsted piecegoods 85

(708); shoddy cloth 17 (121); mixed wool piecegoods 35 (181); others 116 (203). Imports of blankets and rugs, too, declined, from 424,000 lbs. in 1957 to 37,000 lbs. in 1958.

There was a distinct setback to exports of home-grown wool from India during 1958. Total exports were 33.95 million lbs., as compared with 37.81 million lbs. in 1957 and 35.08 million lbs. in 1956. The table below indicates the trend of exports according to destination:

	1958	1957	1956
(In thousand lbs.—actual weight)			
United Kingdom	12,925	16,399	15,424
Soviet Union	8,965	8,990	4,354
United States	7,332	8,910	11,023
Belgium	1,381	1,744	1,373
France	1,222	2,110	837
W. Germany	618	1,270	751
Netherlands	510	573	532
Other countries	1,112	1,104	782
Total	33,945	37,808	35,077

The foregoing table shows that exports of Indian raw wool to the U.K., the chief buyer, were lower by 20 per cent. and those to the U.S. by 19 per cent. There was, however, a perceptible improvement in exports to the Soviet Union, the quantity actually shipped in 1958 being 8.97 million lbs., as against 5.69 million lbs. in 1957, representing a rise of 56 per cent.

TEXTILE PRODUCTIVITY TEAM GOES ABROAD

A seven-man team consisting of millowners' executives and labour leaders, led by Mr. P. V. Mehta, Director, Calico Dyeing and Printing Mills, Bombay, left New Delhi last week on a tour of Japan, the U.S., the U.K., West Germany, France and Switzerland to study productivity techniques sponsored by the U.S. Technical Co-operation Mission. The team's itinerary includes visits to plants, shops, laboratories and offices of cotton textile manufacturers in the aforesaid countries. On return, it will submit a report to the National Productivity Council; the report will later be disseminated to the industry. It is expected that three representatives of the Central Government organisations, for whom final participation arrangements have not been completed, will join the team shortly.

"Dressing up a scarecrow, Mrs Banerjee?"

This isn't a scarecrow. It's my husband. A thousand apologies. But it is obvious your husband has not heard of BINNY'S Quality Control! their production you know...

"Quality Control? Never heard of it! What does it do?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S suitings stay smart so long."

"That's wonderful news. We shall dash to the nearest BINNY'S shop the moment I can fix this tie and my husband is able to breathe again."

BINNY - a great name in textiles

• Testing the effective staple length of cotton

This apparatus measures the length and variation of all cottons that go into BINNY'S cloth. The quality of the cloth depends largely on the cotton used. Only specially selected cotton goes into BINNY'S fabrics. That's why they last so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussore - Union Fabrics - Silk Sarongs - Rugs etc. etc.

DETAILS OF COTTON INDUSTRY SCHEME EXPECTED WITHIN A WEEK SPECULATION OVER EXACT ARRANGEMENTS

From A Special Correspondent

MANCHESTER, 7th July

UNLESS printing hold-ups intervene, the details of the long-awaited scheme for reorganising the Lancashire cotton industry should be known to all within a week. The terms of the various plans have now been accepted by the trade associations and have been submitted to the authorities, whose task it is to advise the Board of Trade on their effectiveness to meet the current and future needs of the industry.

Speculation over the conditions binding those entering the project has been heightened accordingly and, despite the call for secrecy from those "in the know," various "interpretations" of the proposed arrangements have already been put forward. It is understood that, in addition to an irrevocable time limit of 30th September, firms registering plant for scrapping before the end of August will receive slightly higher compensation. Not only this, but the Board of Trade has power to "close its books" at any time before the end of September.

Everything is clearly being done to encourage the timid to take the plunge. There is no desire to force managements into hasty decisions when so much is at stake, but it is equally imperative that "the surgical operation" should be carried out without delay. Much will depend on the exact terms of the compensation payable for redundant machinery. It is probable that the scales will vary according to the type of plant involved, whether already standing idle, or as part of a reconstruction scheme, or in a mill scheduled for complete closure.

Redundancy Outlook

Plans to participate in the Government's reorganisation scheme for the cotton industry are now being considered by practically all firms in the trade. Amongst them is the old-established Salford group of Richard Haworth and Co. (Holdings) Ltd., whose financial results in recent years have frequently been far from satisfactory. Mr. Stanley Beddow, the Chairman, in his annual report covering the year to the end of March, says that the Company's plans to make its contribution to the scheme to reduce the number of spindles and looms and subsequent re-equipment are in the embryo stage. He adds that he hopes to be in a position to say more about this at the annual meeting later this month.

In the year to 31st March 1958, the group made a trading profit for the first time since 1953. During the past year, earnings amounted to £71,899, as against £22,824 in the previous twelve months. Arrears of preference dividend have now been paid to 30th November 1955 and

the net bank overdraft has been reduced from £508,988 to £245,336.

"Throughout the year, it has been one constant effort to maintain and increase sales in each section of each unit within the group," says Mr. Beddow. A small weaving shed at Padiham was closed down early this year as a direct result of foreign cloth imports, but, in the other mills, machine activity has been maintained at around 65 per cent. except between December and February when it fell to around 55 per cent.

Better Results

In 1958, described by many reliable Lancashire critics as "one of the most difficult years in living memory for the textile industry," the Manchester manufacturing and merchant firm of Boardman, Marden Ltd., made a record net profit of £266,049. This represented an increase of £55,433 on the previous year and the dividend has been stepped up from 17½ per cent. to 27½ per cent. for the year.

Mr. K. O. Boardman, the Chairman, in his annual statement mentions the return of confidence in the industry which, he says, makes the immediate future bright, and indicates a greater autumn and spring demand than for many years past. The emergence of five factors in quick succession early in 1959 almost completely restored confidence to the distressed home industry, he continues, and could very well bring an end to the long slump. In order of importance, the factors creating this situation were the Government aid plan, the break up of the Yarn Spinners' Agreement, a warm spring, an incentive budget and the Hong Kong quota agreement.

Increased Activity

Will history repeat itself so far as production of cotton goods in the United States is concerned? That is the question posed by the latest summary of conditions issued by the Cotton Board, which observes that, in the first quarter of the current year, the gain in output in the United States was particularly pronounced. "In the past, such a rise has often preceded an increase in output in the other main producing centres," adds the review.

The first quarter's results in 1959 showed the maintenance of global cotton yarn production at around the early 1958 levels, after a period of five quarters when output was consistently below the level reached a year previously. Exports of cotton cloth, on the other hand, continued on a much lower basis, being 10 per cent. below those recorded in the corresponding period of 1958.

Since the end of March, orders for yarn and cloth in Lancashire have been much larger in total and this has brought about a welcome increase in activity, the survey declares. The

spell of warm weather in May encouraged retail sales of clothing, but the low level to which pipeline stocks had fallen and the upward movement in raw cotton prices were the main factors behind the spurt in buying. At this point, the report offers a timely warning to those who might feel unduly optimistic about prospects. "Whilst this improvement is naturally welcomed by the trade," it adds, "it would be unfortunate, if firms in the industry were to be induced by it to forget their past experiences so far as to neglect the opportunities now offered by the reorganisation proposals."

Improvement Abroad

The textile situation in the United States has lately shown a remarkable improvement. The Cotton Board comments: "Manufacturers of cotton fabrics experienced sales volumes in April and May seldom equalled at that period of the year." Mill margins widened to an average of 27.18 cents in April, as against 25.06 cents in December and 22.75 cents a year ago.

Another pointer to the more prosperous mood was the fact that, at the end of April, stocks of cotton cloth held by the mills amounted to 27 per cent. of unfilled orders as compared with 72 per cent. twelve months previously. Yet a straw in the wind affecting the import situation was the news that exports of cotton goods from India entering America in the first quarter of this year aggregated 790,000 yards. The quantity is minute, but the amount of Indian cotton cloth absorbed in the United States in the whole of last year was only 690,000 yards.

In Japan, the rate of output curtailment of cotton yarn from the figure of 30 per cent. has been cut to 27 per cent. from the current month. A distinct improvement was recorded in the position of the cotton and staple fibre branches of the textile industry in the last few months, but exports of cotton cloth fell from 331 million square yards in the first quarter last year to 291 million square yards in the same period this year.

Yarn Supplies

Monthly returns issued by the British Board of Trade do not indicate the sources of arrivals of cotton yarn, now reaching this country in larger quantities than for a very long time past. From Cotton Board figures now available, however, it can be seen that India is the main supplier and has increased her shipments substantially. During the first quarter of 1959 imports of cotton yarn from all quarters amounted to 6,230,000 lbs., as against 4,050,000 lbs., in the same period last year.

Arrivals from India at 2,940,000 lbs. were double the quantity taken in the first quarter of 1958. The other major supplier is Hong Kong and in this case also arrivals have increased, from 1,120,000 lbs. to 1,360,000 lbs. The level of Hong Kong shipments in the first quarter this year is practically the same as in the final three months of 1958. Other countries have sent only negligible supplies, except Italy which provided 960,000 lbs. The quantity of yarn secured from Pakistan, at 280,000 lbs., is similar to the amount imported in the first quarter last year, but, in subsequent quarters of 1958, arrivals from Pakistan were below 100,000 lbs.—All Rights Reserved.

RECENT TRENDS IN COTTON SIZABLE DROP IN CARRYOVER STOCKS

SINCE the current cotton season is drawing to a close, it will be appropriate to examine the supply and distribution of cotton during the season. An analysis of the statistical position of cotton shows that, owing to higher mill consumption, larger exports and smaller crop during the season, the carryover at the end of the season will record a sizable decline as compared with stocks at the beginning of the season. Thus, the estimated carryover at the end of the season is of the order of 1.95 million bales of 400 lbs., comprising 1.76 million bales Indian and 0.18 million bales foreign cotton. This compares with 2.2 million bales, comprising 2.04 million bales Indian and 0.16 million bales foreign cotton at the end of the previous season.

Total supply during the season aggregated 7.42 million bales, comprising a carryover of 2.2 million bales, an estimated commercial crop of 4.75 million bales and imports of 0.47 million bales of which arrivals till the middle of June were of the order of 0.35 million bales.

As regards distribution, the consumption of cotton during the first nine months of the season is tentatively placed at 3,824,611 bales, of which 3,491,282 bales were Indian and 333,329 bales foreign cotton. This is as much as 130,722 bales higher than the consumption during the corresponding period of the previous season. But it is noteworthy that this increase was entirely due to the higher consumption of Indian cotton which more than offset the slight decline in foreign cotton consumption. Thus, while Indian cotton consumption increased from 3,360,560 bales to 3,491,282 bales, that of foreign cotton declined from 430,242 bales to 333,329 bales. The table below gives the monthly break-down of figures for the period under review:

		(In bales of 400 lbs.)			
		Indian		Foreign	
		1958-59	1957-58	1958-59	1957-58
May	1959	379,044*	360,068	38,058*	46,379
April	"	382,238	348,743	36,225	42,934
March	"	380,193	354,288	34,204	47,643
February	"	376,105	350,474	31,580	43,808
January	"	413,181	392,007	34,370	48,804
December 1958	"	419,814	391,490	39,301	51,858
November	"	398,650	380,724	35,644	51,031
October	"	394,658	372,781	41,503	48,415
September	"	382,499	359,125	42,554	49,310
Total	"	3,491,282	3,360,560	333,329	430,242

* Provisional.

If the present trends in consumption were to continue, it is quite likely that aggregate mill consumption of foreign and Indian cotton for the whole season may well exceed the 5-million bales figure, as against last season's 4.9 million bales, and may well be equal to the 1956-57 consumption of 5.23 million bales.

As regards exports, though they are none too encouraging, they have been running at a higher rate than in the previous season. Shipments during the first ten months of the season aggregated about 306,680 bales, as compared with 204,245 bales in the same period last season. This improvement has been possible because of fairly good demand for Bengal Deshi, particularly from Japan. But, due to paucity of stocks, the demand could not be met fully. This has led of late to sizable business in new crop Bengal Deshi with Japan. Out of a total shipment of 306,680 bales during the first ten months of the season, Japan absorbed the bulk, 215,469 bales, to be precise.

It may be noted, in this connection, that the Goodwill Mission sponsored by the Federation of Indian Chambers of Commerce and Industry which recently visited nine countries, made certain pertinent suggestions for stimulating exports of cotton. It pointed out that, as a result of frequent changes in quota items for export made by the Government, foreign buyers were finding it difficult to depend on India for supplies. The Mission recommended that there should be continuity in export policy, timely announcement of quotas and removal of impediments in the way of exports. It also suggested that Government should consider the question of allowing a small quantity of long-staple cotton for export and import cheaper cotton from abroad.

The general expectation is that, if the present trend in exports is maintained, total shipments during the whole season will be of the order of 350,000 bales. This compares with a little more than 290,000 bales exported during the previous season.

To sum up, the distribution pattern of cotton during the present season reveals the follow-

ing picture: Out of a total supply of 7.42 million bales, mill consumption may absorb 5.12 million bales. Exports during the season are expected to be of the order of 350,000 bales, making a total of 5.47 million bales. This will leave a balance of 1.95 million bales as carryover at the end of the season with mills and trade.

PROMOTION OF COTTON CONSUMPTION

Commenting on the need for intensive promotional activities for stimulating cotton consumptions, Mr. Farid A. Moustapha, a leading cotton trader of Egypt, observed recently as follows:

"Consumption of long-staple cotton in Western countries has decreased considerably during the last two years. This is due not only to more consumption of artificial fibres and chemical products, but to a large extent to the general shifting of the consumers' habits and requirements. The demand for textiles in general has decreased in comparison to that of other goods. Production of household goods such as refrigerators, automatic washing machines and television sets has increased at a high rate. Through sales facilities and intensified sales promotion consumers have rushed to acquire such electric appliances to the detriment of textiles consumption.

"Long-staple cottons had to undergo a period of recess, manufacturers had to curtail their production and look for cheaper raw material. If this state of affairs should continue producers of high quality cottons have to revise their situation.

"If they still believe that cotton should continue to maintain its place as a leading fibre and one of the most important products—that a large proportion of the agricultural population in the world are still mainly dependent on it—then people representing cotton-growing countries have to sit together and study what should be done to restore cotton consumption to its normal level."

The problem, according to him, is to convince consumers to spend more on clothing and home decoration. The object should be to raise the percentage of consumption of goods made of cotton.

A few years ago, several countries started moves to promote sales of cotton textiles. Successful promotion campaigns have been carried out by the U.S., Egypt, Switzerland and France, but

the situation is still inadequate. Funds raised for that purpose are small in comparison to those allocated for sales promotion purposes of other goods and man-made fibres. Consequently, promotional activities in cotton producing and manufacturing countries are lagging. He suggested the formation of an international cotton centre to study ways and means of increased spending on better clothing and decorated homes should be established.

SEA-ISLAND COTTON

In spite of the various handicaps such as adverse weather and indifference of farmers, the results of the programme of Sea-island cotton development, in the first year, that is, 1957-58, though not as encouraging as was earlier expected, can be termed satisfactory considering its experimental nature. In the first year, about 25 bales of pure Sea-island cotton was marketed which fetched about Rs. 2,200 per candy.

The area under cultivation was enlarged in the present season, that is, 1958-59. The total quantity of seed available from the 1957-58 crop was sown over 1,642 acres, 1,142 acres in Kerala, 490 acres in Mysore and ten acres in other States. Only 1,049 acres, cultivated by 831 growers, were, however, available for harvest. The fall in acreage was due to the fact that some of the areas had to be reserved owing to adverse seasonal conditions while a few of the cultivators did not raise the crop over the expected area though they had purchased the seed.

Out of the current season's crop till the close of May 1959, a total quantity of about 2,51,380 lbs of seed cotton from Kerala and Mysore was pooled and it is expected that some more quantity of the monsoon in parts of Kerala and Mysore of ginning facilities in the Kerala and Mysore States, the entire quantity had to be transported to this cotton fetched a price commensurate with its quality, it was decided to auction the cotton in lots as and when pressed, at about fortnightly intervals. The auctioning was conducted with the aid of a small committee known as the 'Sea-island Cotton Disposals Committee' constituted for the purpose. A total quantity of 204 bales (inclusive of 3 per candy obtained for these bales was for Rs. 3,510 to Rs. 2,850 for 170 bales and Rs. 265 per candy for yellow lint of 30 bales which were sold by tenders. A total quantity of cleaned seed cotton of 1,69,932 lbs. has now been procured for distribution in 1959-60 for achieving the target of extension over 20,000 acres consisting of 15,000 acres in Kerala and 5,000 acres in Mysore. In the course of the year, 300,000 acres are expected to be brought under Sea-island cotton.

SUPREME COURT'S DECISIONS ON INDUSTRIAL AWARDS RESULTS AND BENEFITS ANALYSED

THE sharp increase in the number of industrial disputes going up in appeal to the Supreme Court has of late caused much concern in industrial and legal circles. An idea of this increase can be had from the fact that the number of petitions for special leave to appeal in those granted leave, which were 59 and 23, respectively, in 1953, increased to 291 and 257 in 1956 and 189 and 148 as on 1st October 1957. About 209 cases were pending before the Supreme Court as on 30th November 1958. As the Law Commission pointed out in its report, part from clogging the work of the Supreme Court, and the grave delays caused in the disposal of matters which need speedy attention, the graver aspect of it is that labour matters are being thrust upon a court which has not the means or materials for adequately informing itself about the different aspects of the questions which arise in these appeals and therefore finds it difficult to do adequate justice.

The reason for this state of affairs is to be found as much in the hasty abolition of the Labour Appellate Tribunal as in the restricted powers of the High Courts under Article 226 of the Constitution. With the abolition of the A.T., cases which would otherwise have gone to that body have naturally come before the Supreme Court for decision. Since the jurisdiction of High Courts under Article 226 of the Constitution is limited—a High Court can only quash an order of a tribunal but cannot make its own decision and substitute it for that of the tribunal—a party aggrieved by the decision of a tribunal has no alternative other than approaching the Supreme Court.

Such being the case, there is no truth in the view assiduously propagated by certain sections of trade unions that the increase in the number of appeals is due to the employers' attempt to spite unions by dragging them to the Court by going in appeal against tribunal awards on flimsy grounds. An analysis of the results of appeals filed in the Supreme Court against industrial awards during 1957 and 1958 gives the lie to this view. The analysis has been made by the Evaluation and Implementation Division of the Union Ministry of Labour to determine the advantages secured by appellants both in terms of money and by way of vindication of principles. It showed that, of the 33 cases disposed of by the Supreme Court during the period, 25 were initiated by employers, five by workers and three by State Governments. Employers were wholly successful in eighteen out of the 25 cases filed by them, that is, in about 72 per cent. cases, partly successful in one and unsuccessful in the remaining six cases. Workers succeeded in two of the five appeals filed by them—i.e., in 40 per cent. of the cases. The State Governments were partly successful in one case and unsuccessful in two.

Nature of Cases

Cases pertaining to the termination of service, wages and bonus accounted for about 85 per cent. of the appeals made to the Supreme Court. The remaining were related to miscellaneous issues, including compensation for accidents outside the works premises, the power of the Government to supersede a reference pending before a tribunal by a fresh notification, the validity of awards after a prescribed date and the scope of the term "worker."

While the monetary gains could not be precisely estimated, the analysis showed that, in a majority of cases, the monetary stake was comparatively small. For instance, in most of the 12 successful cases concerning termination of services of workmen, the total monetary gain involved was not more than Rs. 10,000. There were also some cases which involved only one or a few workmen.

Apart from the monetary stake involved, the analysis showed that certain advantages had resulted from the appeals in terms of principles upheld or enunciated by the Supreme Court. The principal advantage was that, once the principles determining a particular issue were decided by the Court, they continued to govern similar issues in future. For instance, in the appeals pertaining to the termination of service, important points of law or guiding principles were settled by the Supreme Court while deciding such cases. In cases concerning

bonus, the Supreme Court enunciated several important principles. Thus, the Court laid down that bonus was not a bounty or gratuitous payment made by the employer to his employee nor was it a deferred wage. On the other hand, it held in *Muir Mills Co., Ltd. vs. Suti Mill Mazdoor Union, Kanpur*, that "the term bonus is applied to a cash payment made in addition to wages. It generally represents the cash incentive given conditionally on certain standards of attendance and efficiency being attained. This decision is based on the view that both labour and capital contribute to the earnings of the industrial concern and so it is but fair that labour should derive some benefit if there is surplus available for that purpose. Even so, the claim for bonus cannot be effectively made, unless two conditions are satisfied; the wages paid to workmen fall short of what can be properly described as living wages; and the industry must be shown to have made profits which are partly the result of the contribution made by the workmen in increasing production."

It is clear that the majority cases arise out of some genuine grievance or the need for enunciating some points of law. Many suggestions for speedy disposal of cases have been put forward from various quarters. The Law Commission itself had recommended that the right of appeal in industrial matters should be provided either by constituting tribunals of appeal under the labour legislation itself or by conferring a right of appeal to the High Courts in suitable cases. Prof. J. H. Richardson, an I.L.O. expert on industrial relations, who recently submitted his report to the Government, had advocated that a permanent court of industrial arbitration and adjudication should be

established for adjudication of industrial disputes of national importance. Prof. Richardson's recommendation amounts to a plea for a revival of the Labour Appellate Tribunal. These suggestions are expected to be considered by the Indian Labour Conference scheduled to be held in Madras this month. It is to be hoped that some workable solution which will ensure speedy disposal of cases and dispensation of justice, will be found.

EMPLOYEE SUGGESTION SCHEME

Two workers of the U.S. Steel Corporation for the past 15 years—one negro and the other white—have been awarded \$10,000 each as reward for their suggestions for improving a blast furnace operation.

The two workers, Messrs. Oscar M. Dansler, a keeper, and Salvatore Lumella, a stove tender, both employed at one of the big plants of the U.S. Steel Corporation, shared equally a \$20,000 prize awarded by the Company under the employee suggestion plan.

The idea that brought the two the largest employee cash award in the history of the steel industry concerns the separation of molten iron from slag as it is taken from the blast furnace. Under the previous method of separation, some of the iron was trapped in the slag and transported to a dump, where it was picked up as scrap material.

Messrs. Dansler and Lumella submitted a design for a basin and gate so placed as to catch the molten iron which, being heavier than the slag, drops to the bottom of the basin and is then released through the gate into a runner leading to the iron ladle for immediate use.

Presenting the awards, Mr. Thomas W. Hunter, Superintendent of the plant, said that the company viewed the event as another indication of how men closest to a job often are best able to handle improvements in working methods and operations. U.S. Steel's employee suggestion programme was initiated in 1957. It provides for awards based normally on 20 per cent. of the first year's estimated savings resulting from a suggestion, after deducting the cost of installing any new equipment. To date employees have submitted more than 12,000 suggestions, of which approximately 25 per cent. have been approved by the Company. The minimum award is \$10; the maximum, \$10,000.

STATISTICAL POSITION OF JUTE GOODS CONTINUES TO IMPROVE

SACKING, HOWEVER, STILL FACES COMPETITION

AFTER a spell of brisk activity and sharp rise in prices, the jute goods market has been ruling a shade quiet. Both hessian and sacking have shed a part of their earlier gains, despite the fact that the statistical position of the industry continues to improve. The price of hessian 40"×10 oz. (ready) which had gone up to a high of Rs. 41.85 per 100 yards last week has come down to Rs. 41.05 and B. twills from Rs. 98.25 to Rs. 97.20 per 100 bags. The setback, albeit slight, is mainly a corrective reaction to the earlier speculative rise due to manipulations in the futures market. To some extent, it is also attributed to rumours about the prospect of a further unsealing of looms, as a section of the trade feels that the last unsealing of 1½ per cent. with effect from 22nd June is inadequate.

Considering that this is the time of the year when foreign demand usually picks up, it is contended that the current stocks of manufactured goods with mills would prove inadequate to meet the demand. It is further argued that there is a reasonable prospect of the Argentine buying about 70,000 tons of hessian this year and, if this comes on top of the steady improvement in the offtake from the U.S., there may as well be a squeeze in hessian, unless steps are taken to increase production. It is this line of argument that has given rise to hopes of a further unsealing of looms. How far this expectation will materialise remains to be seen.

Stocks Decline

The persistent improvement in the statistical position of mills is again reflected in the figures of stocks with mills at the end of June, which show a fall of 3,500 tons to 95,900 tons. With this, stocks have maintained the downward trend for the fifth month in succession, the aggregate decline during this period being of the order of 17,900 tons. The position is even more encouraging, when compared with the peak level of 134,000 tons reached at the end of June 1958, as will be seen from the following comparative table:

	As on 30th June, 1959	As on 31st May, 1959	As on 30th April, 1959	As on 30th June, 1958
Hessian	23,700	21,400	19,600	31,000
Sacking	57,000	61,400	68,200	87,000
Others	14,300	10,600	17,600	15,100
Total	95,000	93,400	105,400	134,000

The shrinkage in stocks in June is accounted for by sacking and miscellaneous goods. The stocks of the former have dwindled by 3,500 tons to 57,000 tons, the lowest level touched since March 1958. They represent a fall of no less than 30,000 tons over the year. At this level, they constitute 60.4 per cent. of the total stocks, the corresponding proportion at the end of May being 61.7 per cent. and at the close of June 1958 65.6 per cent. There is a further fall of 2,300 tons to 14,300 tons in miscellaneous varieties, thus bringing them down by 3,300 tons from the peak of 17,600 tons touched at the end of April last. This decline has, however, been offset by an increase in hessian stocks from 21,400 tons to 23,700 tons. This is the fourth month in succession in which hessian stocks have recorded a rise, having risen from 15,500 tons at the end of February. They are, however, still lower than those a year ago by 7,300 tons. At 23,700 tons, the stocks of hessian constitute 24.7 per cent. of the total, as against 21.5 per cent. a month before and 23.1 per cent. a year ago.

Unsealing of Looms

The successive expansion in stocks of hessian in recent months is due to the switch-over of some of the looms from sacking. The unsealing of 1½ per cent. of the looms from 22nd June might have also helped the trend to some extent. The full effect of this unsealing will, however, be reflected only in the figures for the current month.

The substantial improvement in the statistical position with regard to sacking is not a thing to gloat over. For the heavy goods are still facing keen competition from Pakistan. Commenting on this aspect, the latest Jute

Bulletin for June 1959 of the Indian Central Jute Committee says:

"The better statistical position in sacking at present is more the result of reduced output and improved internal consumption than of increased foreign purchasing. Relative to hessian, sacking is taking a smaller share of total exports. Sacking-consuming countries far outnumber those taking mainly hessian. Hitherto, they have received scant attention from the Indian industry, because their dependence on it has been taken for granted. Now the situation has completely changed following the emergence of Pakistan as a rival seller for sizable exportable surplus of sacking goods. It is Pakistan's policy to woo these tiny marginal markets, usually neglected by India, and a good response has already been achieved.

Pakistan's Advantage

"Just how Pakistan has been managing to sell heavy goods cheaper than India is not quite clear, but then the industry there has been allowed a substantial subsidy on internal sales, which amount to some 50,000 to 60,000 tons of jute goods annually. Also, the huge surplus of jute cuttings in Pakistan this season has come as a blessing to local manufacturers who have been enabled to keep the batching cost low by making liberal use of the material. This, no doubt, is an advantage which India at the moment can do little to offset. If, however, it is going to be a price war, the industry here is in a stronger position to wage it and, if necessary, to the bitter end. Indian mills have certain other advantages which their Pakistani rivals have not. It is widely believed that, the high stocks of heavy goods notwithstanding, mills are not making as much hessian as they can or should, because at current prices the manufacture of sacking yields a larger margin of profit. This curious fact would seem to suggest that the price of Indian sacking is far from being the lowest at which mills can afford to sell to stay competitive and the recent unsealing of looms, which may not be the last for this year, should enable them to reduce costs further."

That the larger internal consumption has improved the lot of sacking is borne out by the fact that, in the first eleven months of the 1958-59 jute season (July to June), the despatches of heavy goods from mills for internal consumption have gone up to 155,800 tons from 141,900 tons in the corresponding period of 1957-58, while those for export purposes have dwindled from 403,200 tons to 346,800 tons. At the aforesaid level, the internal consumption of sacking is the highest since 1945-46.

Despatches of hessian for internal consumption during the eleven months under review are, however, a shade lower at 19,600 tons, as against 20,000 tons in the corresponding period of 1957-58, while those for export purposes have risen from 357,200 tons to 399,700 tons. Despatches of other varieties for both export purposes and internal consumption show a rise, the former from 26,200 tons to 38,100 tons and the latter from 22,300 tons to 28,300 tons. Summing up, the total despatches for export purposes of all varieties have suffered a fall of 2,000 tons to 784,600 tons, while those for internal consumption have improved by 19,500 tons to 203,700 tons, raising the cumulative total from 970,800 tons to 988,300 tons.

PAKISTAN JUTE ENQUIRY COMMISSION

The Jute Enquiry Commission set up by the Pakistan Government recently is expected to complete its work and submit its report by the end of the year. Its draft report is likely to be ready by November. The Commission has commenced its work by setting up two sub-committees, one of which, an eight-member body, will visit important ordination of the growers' interests with those of other sections of the trade, as well as national interest. It is expected to submit its report to the Commission by the end of August. The second sub-committee has been entrusted with the task of drawing up a detailed questionnaire, in which Finlow and Fawens Inquiries of 1933 and 1939. The questionnaire will be sent abroad also to ascertain the views of overseas interests.

Beginning with only a small machine shop in 1939, NSE expanded rapidly and today it operates three major engineering factories, each engaged in producing vital equipment, covering the gamut of the country's developmental needs. Through engineering skill and technical knowledge garnered over the past two decades, NSE has earned the confidence of the various industries it serves.

CO-OPERATIVE FARMING—II

EMPLOYMENT ASPECTS—PRODUCTIVITY OF LAND—ADMINISTRATIVE PROBLEMS

By Dr. D. S. Chauhan

IN any discussion of the pros and cons of co-operative farming, the question of return to labour is important enough to merit careful consideration. The return will depend upon the area of land pooled and the number of persons associated with it, that is, on the land-man ratio, and the level of productivity. If the principle of "land to the landless" is applied and along with the small and big cultivators all the landless and a still larger number of those who have very tiny pieces of land and for whom agriculture is a subsidiary occupation are accommodated on the co-operative farms, there will be no increase in labour income. On the contrary, a deterioration is bound to result. Two arguments are often advanced to dispel these fears. They are closely connected. One is that economies of large-scale farming operations arising from co-operative farming may enhance labour income. Secondly, the pooling of all resources will create fresh productive employment on these farms in such developmental activities as adequate and fuller cultivation, improvements in layouts and levelling, laying out of field channels, bunding, repairing the damaged land and other soil conservation activities. It is further believed that co-operative farming will facilitate the shifting of surplus agricultural labour, at present clinging to small units and unremunerative operations, and thereby reduce the pressure on land, bring about more balanced occupational distribution, and thus account for better income and higher standard of living for those released from land.

Much careful thinking is necessary before coming to definite conclusions on these lines. Although projection into the future or forecasting has its limitations, a fairly good estimate of future outcome is possible, provided the details of the future situation are anticipated as accurately as possible. Since there is some degree of theoretical assumptions in the aforesaid arguments, their veracity sounds questionable. Further, the points in the paragraphs that follow are worth consideration.

The available evidence on the comparative economics of small and large farms and the comparative performance of individually operated and co-operative farms establishes the superiority of the former over the latter in both the cases. The specialists in Agricultural Economics are familiar with the uncomparable character of the vast mass of information available on this point. Hence care has been taken to present here only a bit of such data as are comparable.

Small Farms Yield More

The results of the four tables on this page are quite clear and speak for themselves. In addition to this, the results of the studies on farm management being carried on under R.P.C. show that the yields of food crops are higher on smaller than on larger holdings. Besides, the experience of Mexico, where co-operative farming has been extensively practised along with individual farming for over a quarter century, has shown that production per acre on land under co-operative farming is much less than on land under individual farming.

Agriculture should not be considered only in terms of cereal cultivation. The greater efficiency of small units in vegetable farming, flower culture and market gardening, and, above all, of mixed-farming units, which are the common pattern in the country, is already established. Even after imagining all the favourable and unfavourable conditions of agriculture for smaller and large farms alike, the latter do not have any inherent or peculiar advantage over the former. On the contrary, if the existing handicaps regarding the supplies of credit, seeds and manure, and of marketing of farm produce were overcome through service co-operatives, the small farms would prove superior to larger ones in matters of productivity and rate of return. It should be appreciated that the basic factors in production which hold the key for enhancing farm productivity or higher yield are irrigation, manure and seed which are not related to the scale of farming. This is true of the two other services also, namely, credit and marketing, which are also important for enhancing farm incomes in India. This contention can be supported by many evidences.

A study of the correlation between the size of holding and yield of sugarcane in U.P. at the instance of the I.C.A.R., for instance, concluded that "there is no correlation between the size of holdings and average yield of sugarcane per acre." An F.A.O. report on *Factors Affecting Rice Production* concludes: "Whereas, in general, larger holdings are conducive to higher yields, the small size of holdings in Japan, Korea, Formosa, Spain and Italy has not impeded intensification of rice cultivation with the resulting higher yields. The low yields, from comparatively large holdings in Thailand and Burma must be attributed to factors other than the size of holdings." And Dr. J. L. Buck in his Herculean study, *Chinese Farm Economy*, also concludes that the "size of farm in and of itself does not determine yields."

Not Adequate

The type of productive employment which is expected to be enlarged on co-operative farms, that is, levelling, bunding, soil conservation and laying of channels, etc. is not of such nature as to provide regular employment during an agricultural year. Some of these operations are done only once a year, some take only a few days in the year, and some are to be done once in several years. And all the possible enlargements and new openings as a result of land being pooled will be too inadequate to provide sufficient productive employment on the co-operative farm during the agricultural year. Enhancement in productive employment on farms is mostly dependent on the intensity of cultivation, which again is not related to the organisational aspect or on the scale of farming. On the contrary, intensity is generally higher on smaller farms, and will be higher still after successful service co-operation. The results of two studies, published in *The Journal of Social Sciences*, Vol. 1,

No. 1, January 1958, by D. S. Chauhan, and Vol. 1, No. II, July 1958, by A. N. Sharma, may be of interest in this connection. The Index of Crop Intensity on small farms, with an average size of 13.6 acres, was 131.7 and on large farms with an average size of 135.4 acres, 115.6 only. Besides, the experience of China (*Report of the Indian Delegation to China*, p. 140) is that, "in the last analysis, actual increase in production could be brought about mainly by technical reforms." Land reforms and co-operation were useful, because they created conditions conducive to the development of Chinese agriculture.

Accommodation of small tenants and the landless on co-operative farms will, by providing a sense of security, check mobility of labour to non-farm avenues particularly amongst those who otherwise would be the first to shift.

Unemployment Will Rise

Thus, the system of co-operative farming envisaged in the Nagpur resolution is likely to bring about a fall in labour return and farm income as compared with small-scale, independently operated farms served by efficient service co-operatives for the essential agricultural supplies. Secondly, contrary to common belief, it is likely to enhance agricultural idleness and perpetuate chronic underemployment in agriculture. Besides, attachment of a larger number of people to land is, in the process of economic growth which is taking place in the country, a backward step, and will retard the process of growth. Thirdly, there is a likelihood of deterioration in cattle wealth.

If, however, the intention is only to keep an optimum number on co-operative farms, a huge quantity of disguised and chronic underemployment will be turned into open unemployment for being absorbed in non-farm employment. One of our studies carried on in Uttar Pradesh some time back showed that, if Eastern Europe's standard of cultivation, requiring 12 workers to operate 100 acres of cultivated land, is taken into account, about two-thirds of the existing working force will be in surplus. Again, assuming that the programme for consolidation of holdings will be accomplished, that the units of production will be reorganised on optimum basis and that other technical improvements in agriculture (except tractor cultivation) will be

opted, there will be scope for gainful employment for only 30 per cent. of the existing work-force in agriculture. An important consideration that must be borne in mind is that, in order to make the co-operative farming work, simultaneous provision of avenues of non-farm employment (which should be understood as different from mere job opportunities) is to be made. It is very important to realise at the degree of success in the latter will determine the scope for the former. In view of employment and unemployment situation during the second Plan period and the anticipations which are being made in this regard for the third Plan, the situation that will exist even after three years does not appear to be promising. Implementing co-operative farming as a general pattern of our agriculture with an optimum number of operators. Expectations of equate degree of industrialisation, along with the necessary accompanying things such as rural electrification and transport to be accomplished within three years, look like wishful thinking and not a realistic and feasible anticipation.

Apart from the aforesaid considerations, in discussion on economics of co-operative farming, a distinction has to be made between the comparative economics of co-operative farming and individual farming, on the one hand, and the financial results of co-operative farming, on the other. The former consideration leads us to the conclusion that co-operative farming is not the best method of improving the standard of living of farmers and of modernising agriculture. The latter (the history of the experiments of co-operative settlements, particularly the State-sponsored modern types—the Mexican Ejido, the Russian Kolkhoz, the Palestine Kvuza and the Chinese co-operative farm) leads to the conclusion that, under special circumstances, as a rehabilitation and settlement programme for the handicapped, destitute and displaced, co-operative farming is one of the tried and accepted forms, but not as a universal reform of agriculture in general.

Machinery for Implementation

Implementation of the programme of co-operative farming implies a tremendous task. Successful implementation is very much different from mere creation of an institutional set-up or formation of societies and their legal recognition. The programme for rural education is a typical illustration. In this case, many schools exist only on paper; in many cases, there are no teachers and no equipment; and, in many, there are no students, but the Government believes that the graph showing expansion of rural education expressed in terms of number of schools reflects a genuine picture. There are many rural and urban co-operative societies, too, which were hastily formed and do not function or function unsatisfactorily. The need for caution is very great, lest the same experience may be repeated with the Nagpur scheme of co-operative farming societies. It is a common experience almost the world over of many programmes of radical change; and it is a great pity that there cannot be an occasion to prove the wisdom of the alternative measures, since, in the process of change, what is done is done, and there cannot be an opportunity to show as to what would have happened had the alternative measures suggested been adopted. Even in Communist countries most of what the word "Success" connotes is only institutional setting up or organisational change; it refers to the number and not quality.

Secondly, attention has to be paid to the capacity of the different agencies which are likely to play important roles in the implementation of co-operative farming and the availability of trained personnel. In view of the immensity of the task, full reliance cannot be placed on Government departmental agencies, and it may be necessary to assign an important role to village panchayats. Considering the capacity of these latter bodies in terms of technical personnel for organisational, administrative and operational functions, and in terms of group relationships and the spirit of co-operation, one wonders whether they can shoulder the heavy responsibilities in running co-operative farms. The Congress Party, and one or two other political parties, which may take up this programme, do not have the required team of workers, possessing the four basic qualifications for successful implementation: (1) understanding of the rural situation, (2) ideological conviction, (3) technical training, and (4) organisational discipline. Besides, too much reliance on departmental agencies may lead to bureaucratic control and too much reliance on party cadres may have certain undesirable political implications.

COMPANY LAW AMENDMENT BILL NEED FOR CAREFUL CHECK

By F. R. Ginwalla, B.A., LL.B.

[Attention of the reader is invited to the previous article of the author which appeared in our issue dated 27th June 1959.—EDITOR.]

THE increasing diffusion of property rights in the corporation through multiple ownership of stocks and shares and the simultaneous concentration of control and management in the hands of a few as typified by the managing agency system created special problems for the State. The present legislation could not meet with these problems and came to grief. The labours of the Sastri Committee resulted in a report on the basis of which the amending legislation is introduced in Parliament. The existing Act is yet a tender plant and anything that affects its potency to bear fruits must receive our serious thought.

It is necessary to remind the reader at the outset of the lamentable confusion which the present legislation has created because of its portentous bulk and cumbersome detail, of its failure to distinguish between the essential and the unessential, and, above all, of its vagueness and obscurity. The Sastri Committee by virtue of its terms of reference was called upon to suggest changes in the form or structure of the existing Act which were necessary or desirable to simplify it. We find from the Committee's Report that it was possible to have a different layout of the present Act on the basis of a subject-wise arrangement and regrouping and recasting of its different provisions but the Committee restrained from making any recommendations for the reasons stated in its Report. One of the reasons was that "well-informed opinion" was almost unanimous against its attempting such a drastic or wholesale change. It is an irony that, after the publication of the Report, views were strongly expressed that the Committee was in error in skipping over this important issue and they have been reiterated after the introduction of the amending legislation in Parliament.

The amendment of a massive piece of legislation like the present Act is a formidable task. But probably there is no more important or more inspiring a task than this.

A Deterrent

It is significant that the operations of the companies now embrace the largest part of the economic life of nearly 400 million. The existing legislation is not enacted purely from legalistic and technical aspects but is based on a much more important factor, namely, social and economic needs of the country in the context of the directive principles in our Constitution. The root of development of public interest in this legislation is in the increasing awareness of its economic background. It is an undeniable fact that it is difficult to lead a country towards economic development, unless the provisions of its regulations are capable of being understood in their proper perspective. Vagueness and obscurity in a purposive regulation like the present one constitute a deterrent to the economic progress of the country.

Let us now see to what extent the Bill goes to cure the existing legislation of vagueness and obscurity and contributes to the economic development of the country. The amendments to the existing legislation, as included in the Bill, are to be viewed with an open mind and judged by their merits. The space here does not permit intensive discussion. But, nevertheless, I will point out a few clauses of particular importance in the Bill.

In India, today, there is much talk of collaboration between Indian and foreign companies. The root of this is in the increasing awareness that collaboration for economic advancement is needed not only in the interests of economically underdeveloped countries, but as a step forward to a better integration of the world economy as a whole. There seems to be an absence of this realisation in the proposed Section 43A which is wholly based on the philosophy that private companies, which employ public money directly or indirectly to considerable extent, should be subject to the same restrictions and limitations that apply to public companies.

Let us go further into this section which displays a valiant effort in its drafting. Sub-section (6) of this Section proposes to exempt an Indian private company if it is 100 per cent. owned by another Indian private company. In the case of foreign companies, this sub-section proposes a double exemption if such foreign

companies are 100 per cent. owned by one or more foreign bodies corporate. In other words, the sub-section proposes to exempt a foreign private company if it is 100 per cent. owned by another foreign private company or a foreign public company. The double exemption proposed to be given to foreign companies is understandable and is purely a matter of economic and financial policy of the State. It is significant that exemptions contemplated by Section 43(6) are automatic. Here again, care should be taken to avoid a possible danger of such exemptions being abused.

There is one more point to be urged with regard to this proposed section which provides that a private company in which shares to the extent of 25 per cent. or more of the paid-up capital are held by one or more bodies corporate, shall be deemed to be a public company. A question may well be asked here whether for the aforesaid purposes holdings of companies referred in sub-section 4 of Section 49 (which relates to investments of companies) should be taken into consideration. If it is so, Section 49(4) might also require a suitable amendment. The proposed amendments to Section 49 does not cover this point.

Fresh Issue of Capital

The Sastri Committee after careful consideration proposed an amendment to Section 81, because it felt that it was so worded as to make its interpretation difficult. The intention of the Legislature in enacting this section, which relates to further issue of share capital, was to exclude a possibility of directors abusing their power by allotting shares to themselves or their nominees or relatives on favourable terms or when the market became favourable. The phraseology of the draft of Section 81(1) proposed by the Committee was not satisfactory and it was feared that criticism against the section might remain smouldering. The Bill has retained the phraseology of the draft proposed by the Committee except for a few changes. This has made the interpretation of the section even more difficult. It might be considered whether the opening words "Where at any time after the expiry of one year from the allotment of shares in a company made for the first time after its formation..." bring out the meaning as envisaged in the note on clause 15 of the Bill. I am afraid the words italicised make the application of the section difficult both practically and technically.

Section 125 of the existing Act states that a charge is void against a liquidator or a creditor, unless it is registered with the Registrar of Companies in the prescribed manner within 21 days after the date of its creation. The proposed amendment empowers the Registrar to condone a delay of not more than seven days in filing the instrument creating the charge if the company satisfies him that it had sufficient cause for not filing the particulars and instrument within the prescribed period. The proposed amendment is intended to obviate inconvenience of seeking court intervention for condoning even unavoidable postal or other delays. It is pertinent to observe here that the time limit of seven days will be too short in actual practice. It is true that law does not countenance unjustifiable delay and this is purely a matter of concession to companies. But the proposed concession will not serve its purpose unless the time limit is extended to some extent, as a week is too short a period.

Managing Agent

Section 356 refers to the appointment of a managing agent or associate as selling agent of goods produced by the company. In proposing an amendment to sub-section 2(a) of this section the Sastri Committee observed:

"If a managing agent keeps an office outside India only for selling the goods of the several companies of which he is the managing agent, it could not be said that he is keeping an office for his own business or for a business not connected with that of the managed company. In that case the managing agent would be charging the managed company *pro rata* and recovering his expenses under Section 354."

In order to ensure that no commission was allowed in such a case, the Committee proposed an amendment to Section 356(2)(a). As a consequential amendment, an amendment to Sec-

tion 358(2) was also proposed. The amendments advocated by the Committee have been incorporated in the Bill. It might, however, be pointed out here that these sections even when amended thus could be made ineffective by making contracts for business with one or more companies which are not managed by the managing agents or with any firm or individual doing overseas business.

Section 372 relates to purchase by a company of shares or debentures of other companies in the same group. Clause 138 of the Bill proposes to replace this section by a new one. The implications of the proposed section need careful attention. Sub-section (2) of the proposed section provides as follows:

"The Board of directors of the investing company shall be entitled to invest in any shares or debentures of any other body corporate upto ten per cent. of the subscribed capital of such other body corporate:

Provided that the aggregate of the investments so made by the Board in all other bodies corporate shall not exceed thirty per cent. of the subscribed capital of the investing company;

Provided further that the aggregate of the investments made in all other bodies corporate in the same group shall not exceed twenty per cent. of the subscribed capital of the investing company."

The first proviso to the above Section 372(2) is new, while the second proviso is the same. It may be true that the object of the proposed addition is to extend the principles underlying the section to all inter-company investments. But it leaves one guessing as to the purpose of imposing further restrictions on the powers of companies to invest even in companies which are not in the same group. Since an underdeveloped country gives its Government much greater responsibilities than is done by developed countries, it is for the Government to consider whether the restrictions as suggested in the proposed section will be conducive to the rapid expansion of business activities in the country which is the desire of all.

A discerning student of the Bill will find that the State is anxious to improve upon the existing Act, without impairing the original objectives underlying it. The great necessity is to consider the Bill in all its aspects. Otherwise, it will distort the very purpose for which the Sastri Committee was appointed. It might be recalled here that the Joint Select Committee appointed to consider the Bill which eventually emerged as the Companies Act, 1956 had made material amendments in a hurry and what was worse, further amendments were made in Parliament without expert consideration. It need hardly be emphasised that, in amending this complex piece of legislation, there should not be a battle against time.

Positive Elements

The Bill has its positive elements which cannot be overlooked. They may be briefly stated as follows:

(1) Section 2 clause (3) is proposed to be amended so as to bring within the definition of the term "associate" in relation to a managing agent a subsidiary of a body corporate which is under the control of a managing agent.

(2) It is proposed to clarify that, for the purposes of the Act, co-operative societies do not fall within purview of Section 2(7). A further provision is proposed to be made to empower Government to exclude any other body corporate from Section 2(7) by a notification in the official Gazette.

(3) A more suitable definition of "branch office" is proposed, so that the provisions of Section 228 which relate to audit of accounts of a foreign company's branch office, may be more effective. Provide that the accounts of a branch office of a company are to be audited by a chartered accountant acting as its statutory auditor.

(4) Amendment to Section 2(26) seeks to minimise character alone will not make a director a managing director. A further provision is proposed so as to provide that the managing director is as much subject to the managing direction and control of the board of a company as other managerial personnel.

(5) Sub-section (7) is proposed to be added to existing Section 4, so as to place a private company registered in India, which is a subsidiary of a public company, at par with an Indian company registered in India. An exemption is proposed to be provided in the case of a public company registered in India which is a 100 per cent. owned subsidiary of a public company incorporated outside India.

(6) There are several sections in the Act, the pith of which either cannot be fully carried out or which serve no useful purpose in the case of public companies. Section 25 is proposed to be amended, so as to empower Government, by a general or special order, to modify the requirements of such sections in their application to bodies like clubs, trade associations, chambers of commerce, etc.

(7) An amendment to Section 31 is proposed, in order to ensure that conversion of

company into a private company is not resorted to merely with the object of evading the restrictions placed on the management of public companies.

(8) In view of the increase in the general level of prices, subscriptions payable by the members of a club, or other associations have to be raised by an amendment of the articles pursuant to a resolution of the company so as to be binding on all members. The proposed new proviso to Section 38 brings out this effect. Moreover, the proposed amendment clarifies the view taken by the Bombay High Court in *re. Royal India Turf Club Ltd.*

(9) Section 76 relates to payment of commission in respect of shares. The proposed amendment to Section 76(2) clarifies that the commission payable to a person in consideration of his having subscribed to, or having procured subscriptions to, shares and debentures should be limited to 5 per cent. or 25 per cent. of the price at which the shares or the debentures may be issued, irrespective of whether such commission is paid out of profits or capital moneys. The proposed amendment gives effect to the judgment of the Bombay High Court in *re. Changoor Sugar Mills Ltd.* [vide 60 Bom.L.R. 254; (1958) 28 Comp. Cas. 312].

Voting Rights

(10) Section 89 relates to termination of disproportionately excessive voting rights in existing companies. The changes proposed in the section seek to make provision for adjustment of voting rights attached to different categories of shares within any class, so as to bring them into conformity with the voting rights attached to equity shares under Section 87(1) and (b). This proposed amendment does not apply to preference shares issued before the commencement of the Companies Act 1956. A further provision is proposed to be made so as to empower any shareholder of a company to apply to the court for an order under Section 89, in case a company fails to equalise or adjust the voting rights.

(11) A provision is proposed to be made in Section 111 so as to require a company to disclose reasons for refusing to register a transfer or transmission of shares or debentures, even though its articles do empower it to refuse to disclose reasons.

(12) Under the present Section 159, a company could contend that, if it made default in holding the annual general meeting, it could not be penalised for not filing the annual returns and accounts. The proposed amendment seeks to remove this lacuna in Section 159.

(13) In order to avoid burdensome work of a repetitive character, it is also proposed to make a provision in Section 159 which will dispense with the filing of bulky annual returns every year.

(14) It is proposed to make a provision in Section 165, requiring auditors of a company to certify the correctness of the account of all receipts and payments of the company.

(15) Important amendments are suggested in regard to Section 166. A public company or a private company, which is a subsidiary of a public company, may by its articles fix the time for its annual general meetings and may also by a resolution passed in one annual general meeting fix the time for its subsequent annual general meetings.

So far as private companies are concerned, general meetings might be held at such times and places as may be unanimously agreed by the members. Section 166 has introduced a rigidity into the matter of convening general meetings which, in practice, is proving irksome to companies limited by guarantee such as chambers of commerce and to small companies generally. In order to remove this hardship, it is proposed to amend Section 166(2) by providing that the Central Government may exempt any class of companies from the provisions of sub-section (2) of Section 166 on such terms as it may impose.

Annual Meetings

(16) Penal provision in Section 168 is tightened up so as to make it difficult for a company and its officers to escape easily the consequences of failure to hold annual general meeting. The offence is proposed to be treated as a continuing offence punishable with fine extending to Rs. 250 for every day during which such default continues.

(17) It is proposed to amend Section 172, so that it may not be necessary for companies to publish the explanatory statements required under Section 173 along with the notices advertised in newspapers.

(18) The amendment to Section 176 seeks to clarify that a company shall not require that an instrument appointing a proxy shall be deposited with the company earlier than 48 hours before the time for holding the meeting.

(19) The amendment to Section 193 is designed to ensure the authenticity of the minutes of proceedings of general meetings and of the proceedings of the board meetings.

(20) The amendment to Section 197 is for discouraging the practice of giving publicity to the Chairman's speeches alone without indicating the trend of the discussion at the meeting on the agenda.

(21) Section 198 relates to overall maximum managerial remuneration. The changes suggested in this section are intended partly to clarify the overriding character of its substantive provisions, and partly to emphasise that the maximum managerial remuneration payable by a public company or its subsidiary to its directors, managing agent, secretaries and treasurers or manager in respect of any financial year shall not exceed eleven per cent. of the net profits of that company for that financial year and that the maximum is only in respect of managerial remuneration and not payment for other services rendered in conformity with express provisions elsewhere in the Act. Moreover, it is proposed to clarify the meaning of remuneration in relation to the managerial personnel. (Attention of the reader is invited to the criticism of the Bombay High Court in *re. Ramabehn vs. Jyoti Ltd.*, 59 Bom. L.R.P. 67.)

(22) Section 205 provides for payment of dividend only out of profits. This section is proposed to be replaced by a new section which provides that dividends can be declared or paid only out of profits after providing for normal depreciation or out of profits of previous years arrived at after providing for similar depreciation.

Section 350 which relates to ascertainment of depreciation is proposed to be substituted by a new section. The proposed new section changes the concept of normal depreciation inasmuch as it now provides that normal depreciation includes the extra and multiple-shift allowances.

(23) Sub-section (2) of the proposed Section 205 provides for payment of dividends in cash, in order to discourage the practice of some companies, which pass on unremunerative shares held by them in other companies to their shareholders in lieu of dividends in cash.

(24) The proposed new section for Section 207 seeks to ensure that companies quickly comply with the statutory requirement to distribute dividends within the prescribed period. In order to eliminate the possibility of dividends payable being utilised by companies for their own current expenses the proposed section requires every company to deposit the total amount of dividend in a scheduled bank within 14 days of the declaration of a dividend.

The existing penal provision is proposed to be tightened up.

(25) Section 217 relates to the Board's report required to be attached to every balance-sheet laid before a company in its general meeting. New clauses (d) and (e) are proposed to be added to sub-section (1) of the foregoing section so as to improve the quality of the directors' reports and make them up-to-date for the benefit of the shareholders.

Inspection of Private Companies

(26) Section 220 is proposed to be amended so as to require a private company to file before the Registrar copies of its profit and loss account along with its balance-sheets. It is further proposed to provide that no person other than a member of the Company concerned shall be entitled to inspect and obtain copies of the profit and loss account of:—

- (1) a purely private company,
- (2) a private company which is 100 per cent. owned by one or more bodies corporate incorporated outside India,
- (3) a "deemed" public company to which concession has been extended by the Central Government under the section [vide proposed proviso to the existing section 220(1)].

(27) Cornering of shares by unscrupulous persons is made more difficult by the proposed amendment of Section 250. It is proposed to empower Government to impose restrictions on the transfer of shares in a company for such period not exceeding three years as may be specified in the order. The proposed amendment, however, does not bar recourse to the court.

BURMAH-SHELL REFINERIES LIMITED ACCOUNTS 1958

The Directors' Report and Accounts reveal the following items of interest.

2.27 million metric tons of crude oil were processed during the year, yielding 2.23 million metric tons of finished products.

Capital expenditure during the year amounted to Rs. 34 lacs.

As anticipated last year the profits for 1958 show a decrease compared with 1957 due mainly to the narrowing of the margin between refined products and crude oil prices and to the increased liability to taxation.

The net income for the year ended 31st December 1958 after providing for depreciation and an estimated liability for taxation amounts to Rs. 309 lacs.

To which is added the balance brought forward from last year of Rs. 42 "

From which has been appropriated—

Dividends Rs. 207 lacs

General Reserve Rs. 82 "

Tax Equalisation Reserve Rs. 8 " Rs. 297 "

Leaving to be carried forward to next year's account Rs. 54 "

The Government has accepted an offer by the Company to surrender, as from 1st July 1959, the duty protection enjoyed on Furnace Oil, High Speed Diesel, Light Diesel and Bitumen and the Government has agreed to an increase in the refinery intake to approximately 2.6 million tons per annum which will help materially to rectify the present imbalance of products and will also result in a saving of foreign exchange. The effect of this Agreement as regards the financial results for 1959 will be a reduction of income from refining.

The Company are also examining a scheme for increasing the refinery intake up to 4,000,000 tons of crude oil per annum and a plant for the manufacture of Lubricating Oils. Government have given their assurance that when these proposals are submitted with all necessary details, they will be examined by them on their merits.

(28) A private company which is a subsidiary of a public company need have at least two directors, instead of three as required by Section 252. The existing inconsistency is thus removed.

(29) Section 261 states that certain persons are not to be appointed directors, except by a special resolution. It is proposed to amend this section, so as to make it clear that the restrictions contained in the sections against the appointment of persons associated with the managing agents as directors of the managed company apply even when such persons are proposed to be appointed in a casual vacancy or as an alternate or additional director.

Associations

(30) A new section 263A is introduced so as to give statutory recognition to the practice of electing office-bearers by ballot by chambers of commerce, clubs and other associations licensed under Section 25 of the Act.

(31) Conviction by a foreign court for an offence involving moral turpitude will have the effect of debarring a person from working as a managing or whole-time director. This is the effect of the proposed amendment of Section 267 of the Act.

(32) A new Section 269 is proposed to be substituted for the existing section. It seeks to provide (with certain exceptions) that the appointment or re-appointment of a person for the first time after the enactment of the Bill as a whole-time or managing director shall be subject to approval by Government.

(33) A director may file a declaration of his having acquired his share qualification with the Registrar, instead of with the company. The proposed amendment of Section 271 brings out this effect.

(34) It is proposed to provide by a further proviso to Section 280(2) that a person elected as a director at an age below 65 years, of a public company or of a private company which is a subsidiary of a public company for a term not exceeding three years shall not be required to vacate his office merely on the ground that he has attained that age before the expiry of his term of appointment.

(35) Section 283 relates to the vacation of office by directors. The proposed amendments to this section are mostly of a clarificatory nature. A penal provision is introduced and a person who functions as a director when he knows that the office of a director held by him has become vacant on any of the disqualifications enumerated in the section renders himself liable for punishment with fine which may extend to Rs. 500 for each day on which he so functions as a director.

(36) Section 285 relates to board meetings. This section is proposed to be substituted by a new section which provides that, in the case of every company, a meeting of its board of directors shall be held at least once in every three calendar months; and not more than two calendar months shall intervene between any two meetings. Provision is proposed to be made to relax the requirements of the section in favour of those companies which do not have enough work to justify expenditure on quarterly board meetings.

(37) Section 287 is proposed to be amended so as to clarify that the presence of at least two disinterested directors is necessary to constitute a quorum for the board meeting.

Donations To Political Parties

(38) Section 293 relates to restrictions on powers of the board of directors. Several amendments on the lines suggested by the Sastri Committee are proposed in this section. One of them is with regard to donations to political parties subject to the amplification that any donation made for any political purpose to any individual or body should also be disclosed in the profit and loss account. This amendment is proposed on account of the views expressed by the High Courts of Bombay and Calcutta [vide 59 Bom. L.R. 738 A.I.R. 1958 Bom. 155; A.I.R. 1957 Cal. 234].

(39) The changes suggested in Section 294 are designed to regulate the appointment of former managing agents of companies or their associates as sole selling agents of the same companies. It is further proposed that no sole selling agents should be appointed in future in such industries as may be notified, except with Government's approval.

(40) Section 295 relates to loans, etc., to directors. It is proposed to widen the scope of Section 295(1), so as to bring within its purview loans, guarantees, etc., given indirectly by a company to any of its directors, their relatives, etc.

(41) Section 297 relates to the board's sanction for certain contracts in which directors are interested. The proposed amendments in sub-section (1) relax the restrictive provisions in emergent cases. The amendment suggested in sub-section (2) is designed to exclude contracts of insurance and services rendered by a bank to a director, etc., from the purview of Section 297. A clarification is made that a company may sell the goods it produces to any director, his relative, etc., upto Rs. 5,000 in any particular year.

(42) Section 299 relates to disclosure of interests by directors. A new sub-section (6) is proposed to be added to this section, so as to exclude from its onerous provisions contracts and arrangements between two companies where the interest of any director of the one company in the other does not exceed a shareholding of 2 per cent. of the paid-up share capital of the other.

(43) Section 303 relates to register of directors, etc. The amendment to this section is intended to make it permissible to companies to notify minor changes in the particulars contained in the register of directors, etc., only once a year.

(44) Section 309 refers to remuneration of directors. The proposed amendments clarify the scope of the provisions relating to the remuneration of directors. A new sub-section 5(A) indicates the action to be taken where a director draws re-

muneration in excess of the prescribed limits. It is proposed to make him liable to refund the excess amount to the Company on the footing of a trustee for the company. A similar provision is proposed in Section 363, so as to ensure that a managing agent does not retain any excess remuneration received by him.

(45) Section 314 refers to the holding of office or place of profit by directors. The amendments to this section serve to remove hardships experienced by companies by the operation of the present provisions of the section.

(46) While there need be no bar to a person holding more than two managing directorships in purely private companies, a person, who holds managing directorship in one public company or one private company which is a subsidiary of a public company, must not hold more than one other managing directorship in whatever type of company it may be. This intention is brought out in the proposed amendments to Sections 315 to 317 of which Section 315 is proposed to be deleted.

(47) A new Section 325A is introduced in order to provide that, after the present Bill becomes the enacted law, no company shall appoint or employ as its managing agent any body corporate which is itself a subsidiary of another body corporate.

Responsibility of Agents

(48) Section 342 refers to resignation of office by a managing agent. This section is proposed to be amended so as to clarify that resignation of a managing agent from his office will not absolve him from the liability of his acts of omission or commission during his tenure of office as a managing agent.

(49) The amendment to Section 356(2) (a) seeks to preclude a managing agent from charging commission from the company under his management if the office from which the sales are effected is maintained by other companies of which he is also acting as a managing agent.

(50) Section 369 refers to loans to a managing agent. Apart from bringing in loans given indirectly to the managing agent or his associate through intermediaries, the amendments seek to prevent camouflaging of loans or ordinary transactions in the shape of current accounts.

(51) Section 370 refers to loans, etc., to companies under the same management. Amendments are proposed to this section partly to remove drafting defects and partly to give a more definite meaning to the expression "companies under the same group."

As regards loans made before the commencement of the Companies (Amendment) Act, 1959, a provision similar to Section 295(3) is proposed, so as to require companies to enforce repayment of loans, if the loans are such as would have attracted the provisions of Sections 369 and 370, had those sections been in force at the time when the loans were made.

(52) In order to avoid the danger of managing agents getting their own nominees elected as the chairman of the board of directors, the new sub-section (1A) of Section 377 proposes to ensure that the managing agent does not assume as a matter of right the power of nominating the chairman of the board.

(53) It is proposed to extend the prohibition on the appointment of a firm or body corporate as its manager also to private companies. Section 384 is proposed to be amended to bring out this effect.

(54) Section 387 is proposed to be amended so as to clarify that the remuneration of a manager whether in the form of a monthly salary or otherwise shall not exceed 5 per cent. of the net profits of the company. The new Section 388A excludes a purely private company from the restriction.

(55) The proposed amendment to Section 388 seeks to make the appointment of a manager subject to Government approval in the same way as the appointment of a managing or whole-time

director. The new Section 388A excludes a purely private company from the application of Section 388.

(56) Section 408 refers to powers of Government to prevent oppression or mismanagement. By one of the amendments to this section, it is intended to provide that a director nominated by the Government under the section need not be a member of the company. By another amendment the number of members required to join in the application under the section is reduced to 100 from 200 at present, to make it less difficult for the members to apply to the Government.

To prevent changes in the Board that may stultify the nomination of a director by Government, the new sub-section 408(5) provides that no change in the board of directors of a company on which Government have appointed directors shall have effect, unless approved by the Government.

Changing Board of Directors

(57) Section 409 deals with the power of Government to prevent change in the board of directors likely to affect a company prejudicially. The important amendment proposed with regard to Section 409(1) (b) is to enable the Government to take action in anticipation of a change in the board of directors, brought about by a change in the ownership of shares.

(58) The proposed amendment to Section 411 seeks to enable Government to dispose of frivolous applications received by it under Sections 408 and 409, without referring them to the Advisory Commission. It is significant that, under the existing Act, it is the duty of the Company Law Advisory Commission to enquire into and advise the Government on all applications under Sections 408 and 409. These statutory duties are laid down in clause (b) of Section 411. The proposed amendment of this clause takes away the applications under Sections 408 and 409 from the purview of the Commission. Further, the proposed amendment makes it clear that it is not necessary to consult the Commission even before making interim orders under Section 409(2).

(59) Section 417 requires employees' securities to be deposited in a scheduled bank. The proposed amendment to this section gives effect to the recommendation of the Sastri Committee that, where the company receiving moneys or securities of employees is itself a scheduled bank it may be allowed to retain moneys or securities with itself but in a special account. It is also proposed to lay down a time limit for compliance with the requirements of the section.

(60) Section 418 refers to provisions applicable to the provident fund of employees. The proposed amendments are designed to relieve difficulties experienced by companies generally in regard to collections of fund contributions, and payments from provident fund trust accounts, which must retain adequate cash balance to meet immediate current needs.

General

(61) The Bill makes an attempt to bring the balance-sheet more in conformity with the accepted accountancy concepts and to ensure that profits and losses for the relevant year emerge in an intelligible shape.

(62) The Bill seeks to solve the difficulties of official liquidators. It further seeks to enlarge the powers of official liquidators and Registrars of Companies, in order to ensure the proper conduct of the liquidators' proceedings and speed up their disposal.

(63) The Bill seeks to enlarge the existing powers of the Registrars of Companies and confer additional powers of a far-reaching character. These powers may be found particularly in the following sections:

- (a) power to condone delay in filing the particulars of charge, etc. (vide proposed amendment to Section 125);

- (b) power to call for and inspect books of account, etc. (vide proposed amendment to Section 234);

- (c) power to seize documents (vide proposed amendment to Section 234A);

- (d) power to present petition for winding-up (vide proposed amendment to Section 439);

- (e) power to apply to the court for the appointment or removal of the liquidator (vide proposed amendment to Section 515).

(64) New powers are proposed to be conferred on the inspector, appointed by the Government to investigate into the affairs of a company. These powers are given by Section 240A and are similar to those proposed to be given to the Registrar under the new Section 234A in respect of seizure of documents.

(65) Penal provisions are tightened up wherever they are found inadequate. Section 629A is introduced to deal with those cases when no specific penalty for contravention has been prescribed in the Act.

(66) Powers of the court are proposed to be enlarged, by amending Sections 440 and 454.

(67) The Bill attempts to bring several provisions of the Act in line with the provisions of certain other enactments.

(68) Rates of copying fees are increased by the proposed amendments to Section 610. A higher fee is proposed as a penalty on filing documents after the prescribed time. The necessary amendments to this effect are proposed in Section 611.

Section 197 refers to inspection of minute books of general meetings. This section is proposed to be amended so as to clarify that the company would be entitled to demand advance payment of fees for supplying copies of minutes of proceeding from its members. The existing rate of 37 pP for every 100 words is proposed to be increased to one rupee.

The majority of the clauses in the Bill seek to introduce new sub-sections or new provisions. In a few cases, some sub-sections or provisions are proposed to be deleted, as they are found unnecessary on account of the proposed amendments.

The Bill proposes to delete five sections, namely, 315, 521, 622, 639 and 650, as they are otiose or unnecessary.

Nearly 15 sections in the Act are proposed to be replaced by new sections. These sections are: 6, 106, 194, 198, 205, 207, 264, 269, 285, 296, 305, 343, 350, 372 and 618.

New sections which are proposed to be added are 17, namely, 43A, 167A, 197A, 234A, 240A, 263A, 325A, 370A, 388A, 531A, 614A, 619A, 620A, 624A, 624B, 629A and 637A.

The Bill when it finally emerges from Parliament will bring the total number of sections in the Act to 670, as against 658 at present.

CABLE PROJECT

Speed has been the keynote of a new factory at Bauria (near Calcutta) which is being installed by Fort Gloster Industries Ltd. (Managing Agents: Kettiewell Bullen & Co., Ltd.) to manufacture various kinds of electrical wires and cables. The B.I.C.C. of London for technical collaboration in this project and proposes to follow what is called the C.V. (continuous vulcanisation) process, a fast rubber insulated cables and wires, for the first time in India. Some sections have already started working and the entire factory is expected to go into full production shortly. This addition to go country's production of wires and cables is expected to meet the domestic requirements to a large extent.

Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need—jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

**THE INDIAN OVERSEAS BANK
LIMITED, MADRAS**

Branches at: AHMEDABAD, BOMBAY, CALCUTTA, CUTTACK, HYDERABAD, MADRAS, NEW DELHI and throughout South India. Overseas Branches: BANGKOK, COLOMBO, HONGKONG, IPOM, KLANG, KUALA LUMPUR, MALACCA, PENANG, RANGOON, SINGAPORE.

TACK

PERSONAL SALES TRAINING

means more sales at less cost...

Sales managers of large and small companies—marketing every kind of product and service—have found that TACK Sales Training contributes positively to solving their major sales problem: How to increase turnover without raising costs...

whatever the product or service!

Mr. T. R. Shields, Sales Director of Indian Oxygen Limited, says: "Now that Tack Sales training courses are being held in India I can ensure that all our sales staff receive the benefits of this training and I am convinced that no organisation in India which has a progressive sales policy can afford to miss the opportunity of using Tack sales training now being provided through the British Institutes in Bombay."

Mr. D. K. Desai, Sales Manager of Dumex Private Limited, says: "... I found the three-day Sales Training Course a refreshing one... Your approach, technique and emphasis on courtesies and human relations are really absorbing. I have no hesitation in saying that your Course would do a world of good both to the young and old, irrespective of the line of merchandise they are in to sell."

★ Tack Course in Salesmanship and Human Relations—3 days
★ Tack Course in Sales Management—2 days

PROTECTED WATER-SUPPLY FOR URBAN AREAS PROGRESS MADE UNDER NATIONAL PROGRAMME

THE importance of protected water-supply and sanitation to India's social and economic progress will be evident from the fact that, through inadequate and unhygienic system of water distribution, waterborne diseases such as cholera, typhoid and dysentery claim an annual toll of two million lives and afflict no less than 50 million people every year. Most Indian towns are even now ill-supplied with protected water. This also interferes with the development of healthy suburbs and actually encourages concentration in the already overcrowded parts of the towns. All this could be corrected only when adequate sources of supply of drinking water are located and exploited for use by urban dwellers through schemes of protected water-supply and sanitation.

Before the first Five-year Plan, each town's water-supply problem tended to be treated in isolation. Although the position remains more or less the same even today, there has been a national awareness of the importance of water-supply. Attempts have also been made to view the problem in its national context and to increase the financial allocation to urban areas. In the first Five-year Plan, provisions were made under the plans of State Governments for water-supply and sanitation projects. In 1954, the Central Government sponsored a programme on a national basis, with a view to promoting rapid development of water-supply and sanitation services. Under the national programme, the Central Government approved of 229 water-supply and 62 drainage schemes at an estimated cost of Rs. 61.5 crores in the first Plan period.

First Plan

The pace of implementation was, however, very unsatisfactory, thanks to the fact that the schemes were finalised only towards the end of the period. Actual expenditure under these schemes was only Rs. 10.3 crores, resulting in a spill-over of Rs. 51.2 crores in the second Five-year Plan. During the second Plan, the cost of the schemes had to be revised upwards because the prices of materials had gone up. Some new schemes were also added, as some of the States, which had not participated in the national programme in the first Plan period, joined the programme in the second Plan period. The total cost of the schemes, old and new, is placed at Rs. 65.5 crores. Actual expenditure on the schemes by the end of the second Plan period, it is estimated, will aggregate Rs. 56.6 crores. It may be mentioned here that, under the Indo-U.S. operational agreement, a sum of \$6.2 million has been made available by the U.S. Government for purchase of certain materials and equipment to be used in the national water-supply and sanitation programmes. Stores worth about \$5.6 million were received upto the end of March 1958 and distributed to the States for their water-supply and sanitation schemes.

A State-wise analysis of the pace of implementation of the programme shows that Andhra, Bihar, Jammu and Kashmir, West Bengal and the Union territories of Himachal Pradesh and Delhi will be able to complete all the schemes by the end of the second Plan period. Assam, Mysore, Rajasthan and Punjab are expected to have a small spill-over in their schemes into the third Plan period; they are likely to complete the schemes by the end of the first year of the third Plan. The States of Bombay, Kerala, Madhya Pradesh, Madras and Uttar Pradesh are expected to have a heavy spill-over of their schemes into the third Plan period.

Training facilities and advisory service continue to receive attention. In the second Plan, a provision of Rs. 50 lakhs was originally made for public health engineering training programme; this was subsequently reduced to Rs. 30 lakhs. During the first three years of the second Plan period, 141 engineers, 157 engineering subordinates, 76 waterworks operators and 27 sanitary inspectors were trained under this programme. The training courses for engineers and overseers has been organised at the Engineering College, Guindy, Madras, the Roorkee Engineering College, and at the All-India Institute of Hygiene and Public Health, Calcutta. The waterworks operators courses and the sanitary inspectors courses are organised at regional centres from time to time. As regards advisory service, the Government of India has set up a public health engineering organisation in the

Directorate-General of Health Services to render technical guidance and advice to the States on their water-supply and sanitation problems and also to scrutinise the schemes sponsored by the State Governments under the national water-supply and sanitation programme.

The implementation of water-supply programme depends, of course, on the availability of pipes, pumps and other equipment. The requirements of the cast iron and galvanised iron pipes for urban water-supply during the last year of the first Plan amounted to 100,000 tons. The demand for these items in the current Plan period is estimated at 125,000 tons per year. It is to be hoped that, with the implementation of the programme for the production of various types of water-supply equipment in the second Plan, the demand for such equipment will be met entirely from domestic sources of supply.

Planning

Much planning must necessarily precede the implementation of water-supply schemes. The search for water resources has often to be extended to places far away from the towns. Again, the water requirements of the towns should not be allowed to conflict with those for irrigation. Municipal bodies receive assistance from the Central and State Governments for their water-supply schemes. But it is their responsibility to see that the loans are serviced, waterworks constructed economically and funds become available for subsequent maintenance of the works. They have to educate the consumers in the practice of economy in the utilisation of water and, at the same time, provide facilities for its widest possible use by the public along right lines in the interests of national health.

ATOMIC POWER PROJECT

Details of progress in a nuclear project in which 12 European nations are collaborating in the development and construction of a new type of high-temperature tower reactor were given recently to correspondents at Britain's latest atomic-energy research establishment at Winfrith Heath, Dorset, where the reactor is to be built. Giving the history of the project, known as "Dragon," Mr. C. A. Rennie, appointed by the Organisation for European Economic Co-operation (O.E.E.C.) as its chief executive, said that in March of this year 12 O.E.E.C. countries agreed "to participate in studies and research in connection with a high-temperature, gas-cooled reactor system and in the possible design, construction and operation of a reactor experiment." Six countries—Belgium, the Federal Republic of Germany, France, Italy, Luxembourg, and the Netherlands—would take part through Euratom, the other partners in the enterprise being Austria, Denmark, Norway, Sweden, Switzerland and the United Kingdom.

The agreement provided for a joint project over a period of five years from April 1959. The cost might amount to £13,600,000 and the participant countries had agreed that £10,000,000 of this should be shared between them on an agreed basis, any excess up to £3,600,000 being paid by the United Kingdom alone. All installations, however, would remain the property of the United Kingdom.

It is hoped the Dragon reactor will halve the cost of the present Calder Hall-type reactor. It was intended that the ultimate development of the gas-cooled reactor would lower capital costs, double the fuel elements, and give greater efficiency. The international staff taking part would begin arriving in September or October.

Mr. Rennie said that the fuel elements for Dragon would be cylindrical and consist of an "impermeable" graphite can containing fuel inserts. A helium coolant would remove heat from the core of the reactor, and gas temperatures of 800° C. would be achieved. The United Kingdom had had its own programme of high-temperature reactor systems for the past two or three years. Among the special equipment developed was the new Zenith reactor, which would be made available to the project on a rental basis. The joint project would thus be able to take advantage of British work in this field.

Zenith is a very low-power reactor (about 100 watts) which will be used in the preliminary work for the 10 M.W. Dragon. Construction of Zenith is now virtually complete, and the testing and commissioning period has begun. It should become operational at the end of the year.

(Concluded from next column)

in mind. The Indian Airlines Corporation is stated to be anxious to replace its Dakotas by a suitable plane. If the Corporation decides to buy Avro 748, it will be enlarging the market for this type of aircraft and thereby paving the way for reduced costs of production. An advantage which the Corporation is likely to derive from such a decision is that, since the aircraft will be manufactured in India, the supply of spare parts will not present serious difficulties.

BRITISH AIRCRAFT FOR INDIA PROGRESSIVE MANUFACTURE ENVISAGED

THE agreement entered into last week by the Union Defence Ministry with the Hawker Siddley Group of the U.K. provides for the progressive manufacture in India, under licence from the group, of the Avro 748. The turbo-prop plane, which is stated to be more or less another but a slightly smaller version of the Viscount, will initially replace Dakotas in the Indian Air Force. Hailed as the vindication of the British superiority in technical excellence in aircraft manufacture, the contract between the Government of India and the U.K.'s leading aircraft firm, valued at between £20 and 25 million, opens out new vistas of aircraft manufacture in the Indian soil. It is believed that the aircraft manufactured in India with the technical collaboration of the British parent company will find a market in the neighbouring countries also.

The Avro 748, which, as stated at the outset, is expected gradually to replace Dakotas in the Indian Air Force, is described as a pressurised monoplane which will carry a payload of 10,000 lbs. and has a cruising speed of 260 m.p.h., as against the Dakotas 170 to 180 m.p.h. It can carry between 33 and 44 passengers and its normal cruising height is 20,000 ft. Its cost of production is placed at £170,000 in the U.K. The contract for the supply of Avro 748 is believed to be the second of its kind secured by the Hawker Siddley Group, for, last month, the U.K. Ministry of Supply opened negotiations for the purchase of three units of Avro 748. The Government of India has apparently found in Avro 748 a good aircraft with which to replace Dakotas from the point of view of performance, design and safety of operations.

Sir Roy Dobson, the Managing Director of the Hawker Siddley Group, who signed the agreement on behalf of the Company, observed that the contract had been won in the face of extreme competition from American, Dutch and French manufacturers. "It says a lot for India's loyalty to the Commonwealth," said Sir Roy, "to choose not only the best aeroplane but a British one." He added: "If the contract had gone to the Americans or Dutch, it would have shut us out of Indian aviation for a long time." He felt that the Avro 748 was the forerunner of many more industrial exports—"ships, railway engines and so on"—from the Hawker Siddley Group to India.

Avro 748

The Avro 748 is yet to be manufactured and tried. The first prototype of this plane, it is stated, will fly in Britain only early next year. Why has the Government decided to go in for an aircraft the efficiency of which is yet to be proved? No explanation for this question is available in the reports that have appeared in the daily Press. In an article to the *Hindu*, Wing Commander R. Vaughan-Fowler, after posing this question, observes:

"The Hawker Siddley Group is by far the largest group of aircraft manufacturers in the United Kingdom; in size, it compares with the largest in the U.S.A. It has tremendous industrial resources behind it, also a vast experience. The Anson of the last war was a masterpiece. The famous were both built to more than 11,000 units each. The Shackleton submarine hunter-killer is almost certainly the most deadly enemy of the submarine in existence. Its research and strike facilities are range is fantastic. Aeroplanes such as these are not produced by chance, they are the children of a team of experts who know the answers. This team new but it has been brought to the drawing board with the full knowledge of the weaknesses and has done everything to eliminate errors in layout, in structure and so on. Therefore, I claim that the 748 is more up-to-date and has a far better chance of fulfilling the Air Force and Army requirements than any other type."

This opinion, no doubt, comes from an expert in aviation. Even so, the selection of the Avro 748 should be adequately explained and justified in the public interest.

The Union Ministry expects the production of the first plane of the type in India by 1961. The plant at the Air Force Technical Centre at Kanpur, where the plane will be manufactured, has already started making tools and jigs. The technical assistance. The scheme envisages training of Indian technicians and engineers in the U.K. in the various aspects of the manufacture of aircraft, including its designing.

It would appear that no firm decision has yet been taken as to whether the Defence Ministry should manufacture planes of this type for civil use. But the consideration has been borne (Continued in previous column)

NEW PRODUCTS AND PROCESSES

Gas Regulators Without Gauges

INDUSTRIAL gas regulators without gauges are now available in the U.S. They are designed for use with oxygen, acetylene, or propane on cylinders, or manifolds, and are large capacity single-stage regulators having stem-type valves. They are said to have a long life because of their few exposed parts and to be valuable where subject to rough handling and frequent changing from cylinder to cylinder. Delivery pressures are calibrated on an anodised aluminium plate on the cap of the regulator and the delivery pressure is shown by an indicator movable in a slot alongside the calibrated scale. As the pressure-adjusting screw of the regulator is turned in or out, the indicators move to show the pressure setting. Cylinder pressure is shown by a sturdy metal shaft which extends one quarter of an inch from the regulator body when the cylinder is full and drops into the body as the cylinder pressure decreases. The regulator has reinforced rubber diaphragms to assure flexible operation and high sensitivity. It is claimed that it is rarely necessary to replace parts other than the stem seat or diaphragm and these parts can easily be inspected and replaced without special tools.

Millivoltmeter

A range of alternating voltage measurement of one millivolt to three hundred volts and a response in the frequency range of two cycles per second to one megacycle per second are the features of a new millivoltmeter now available in the U.K. The instrument has a low input capacity and a high input resistance, and is protected against overloading. It incorporates a stable six-stage amplifier, the output of which is rectified by a circuit including crystal diodes. The rectified output is used to operate a moving coil meter. Very good scale linearity is claimed for the instrument, which is portable and tropicalised. The amplifier can be used separately. The millivoltmeter is expected to find wide use in the acoustic and ultrasonic fields, on intermediate frequency and audio frequency amplifiers, and on carrier telephone installations. The mains supply voltage range on which the instrument will operate is 110 volts to 245 volts, and the supply frequency 40 to 100 cycles per second.

Steel Making Without Blast Furnace

An experimental process for producing strip steel without the use of blast furnaces, open hearths, coke ovens and blooming mills has been developed by the Republic Steel Corporation of the United States. In the technique, finely powdered iron ore is compressed by rollers into semi-solid strips. The strips then pass through a furnace heated to 2,200 degrees Fahrenheit and through hot-strip rolling stands where they are reduced to desired gauge and rolled into coils. About 1,800 pounds of steel have been produced in the laboratory and the steel is said to be comparable in quality to that produced by usual methods. The process is considered to be about five, or six years from the point where a commercial plant will be built. Such a plant, it is expected, would cost less than 50 per cent. as much as conventional installations. The next stage, according to officials of the company, will be to move the process from the laboratory to a continuous pilot plant.

Instant Bread

A bread that requires about 35 minutes to mix and bake, as compared to some four hours for standard methods, has been developed by the University of California for the U.S. Army Quartermaster Corps. The development stems from discovery of a way to dry the yeast flavouring component that gives bread its characteristic flavour and aroma. The dried flavouring is mixed with other ingredients for the bread, which rises from baking powder. The mix is said to make good dinner rolls and cinnamon rolls as well. The primary use of the new product is for field rations for troops, but there is a possibility, according to the University of California food technologists, that instant bread and roll mixes may be made available for home use.

Fully Automatic Mine

A 100 per cent. automated mine, claimed to be the only one of its kind in the world, is being built in the Dzhezazgan copper ore basin of the U.S.S.R. All processes there, from cutting the ore to loading it into railway cars, will be operated by one man from the control board.

A Process for Producing Oil from Coal

Research workers in the United Kingdom are continuing their efforts to develop an economic process for producing oil from coal. At the new Warren Spring laboratories of the Department of Scientific and Industrial Research near London, a pilot plant which has an output of 70 to 100 gallons a day from about two tons of fuel is in operation. The process depends on the gasification of solid fuel in the first place, and it is this gas which is converted into fuel oils by the use of suitable catalysts. One of the chief objects of the current research programme is to produce improved catalysts that will yield a higher proportion of end-products. Eventually it is hoped that it will be possible to design a full-scale plant for installation in a coal-mining area.

UNION CO-OPERATIVE INSURANCE SOCIETY LTD.

SPEECH OF THE CHAIRMAN, MR. J. L. MEHTA

THE Tenth Annual General Meeting of the Union Co-operative Insurance Society Ltd. was held in Bombay on 4th July 1959. Addressing the shareholders on the occasion, the Chairman of the Society, Mr. J. L. Mehta, observed as follows:

"GENTLEMEN,

"The report of the Directors on the working of the Society for the year ended 31st December 1958 and the revenue accounts and the balance-sheet for the year, duly audited, have been in your hands for some time now. I am sure you must have studied the same with great interest.

"During the year under review, as reported at the last annual general meeting, effort was made to expand our activities throughout the country. This, of course, has resulted in a higher premium income in all the departments, a large increase in the total reserves, maintenance of dividends at 5½ per cent. and maintenance of bonus to policyholders at 12 per cent., subject to tax.

"The gross premium income for the year 1958 amounted to Rs. 12,80,000, as against Rs. 9,30,000 for 1957. The net premium income in all the departments amounted to Rs. 8,47,000, as against Rs. 5,33,000 of the previous year. The total reserves amounted to Rs. 5,24,000, as against Rs. 3,50,000.

"The expenses during the year have gone up, but that is mainly due to the cost incurred in the new areas and I am sure it would prove to be a worthy investment in the near future and this year's working shows that this estimate will not be wrong.

"From the Directors' report to the shareholders it will be found that the Directors have proposed to maintain dividend at 5½ per cent. free of tax, and bonus to policyholders at the rate of 12 per cent., subject to tax.

"We were promised by the Central Government that payment of bonus being a return premia would not be taxed, but the said promise has not yet materialised. On the other hand, the rate of tax has considerably gone up and we had to make bonus subject to tax.

"An amount of Rs. 70,000 has been transferred to policyholders' bonus fund this year also. Adequate provision has been made for contribution to the education fund to the Bombay State Co-operative Union.

"The Society started transacting marine insurance business in the year 1958. The conservative policy of underwriting was maintained in the department, but due to heavy losses in the business of the Indian Insurance Companies' Association Pool, the Society had incurred a loss in the department.

"Our efforts to offer more types of insurance cover to both co-operative and non-co-operative clients continued and we have introduced workmen's compensation and machinery breakdown cover this year. We are also offering now comprehensive covers to banking institutions, which is popularly known as bankers' blanket policy. I have pleasure to inform you that more and more co-operative societies have come forward to take advantage of these types of varied covers.

"Out of the new branches opened during the year 1958, our branches at Nagpur, Rajkot, Calcutta and Delhi are now working satisfactorily. We have to put more energy in the branches at Ujjain, Sholapur and Bangalore.

"I have pleasure to inform you that the Registrars of Co-operative Societies, West Bengal, Madhya Pradesh, Bihar and Assam are taking active interest in our organisation and we are sure that, under their able guidance and with the valuable support of the co-operative officials and co-operators in the States concerned, we shall be able to continue our progress and accelerate the pace of development in the days to come.

"So far as the State of Bombay is concerned, the Surat, Baroda, Ahmedabad and Jalgaon branches have shown considerable progress and practically almost all the co-operative institutions in the area are insuring with us.

"We have maintained very cordial relations with our sister co-operative insurers abroad and we are sure that with the help of the International Co-operative Alliance we would be able to come in closer touch with more and more co-operative insurers abroad. We have also requested our sister co-operative insurers to give us guidance and help in expanding our activities in this country by providing as much of technical and other help as they could and we are sure we would be able to get material assistance from them.

"It will be also seen that our foreign reciprocity is steadily increasing and the premium received this year amounts to Rs. 2,34,000, as against Rs. 1,91,000 for last year. Arrangements have already been made to receive more business by way of reciprocation from foreign treaty offices.

"I am also pleased to inform you that sister insurers transacting business in India have extended their hearty co-operation without which it would not have been possible for us to underwrite large risk.

"A glance at the assets side of our balance-sheet will show that the assets have considerably gone up. The total investments in Government Papers and house properties now exceed Rs. 14,50,000. Over and above that there are other assets also. We have kept in mind our ultimate aim of diverting more funds in the co-operative field, but as referred to in my last speech, due to various difficulties, we have not been able to do enough justice, but we are sure that with larger availability of funds after a stage we would be able to invest our funds in the co-operative field.

"With great regret I have to draw your attention to my last year's speech which referred to the Government's policy in regard to co-operative insurance and its execution and administration. In spite of repeated requests the business of co-operative sugar factories is being handed over to the Indian Insurance Companies' Association Pool. The business of co-operative sugar factories in other States have been handed over to co-operative insurers. We are really surprised and are sorry for the decision taken by the Bombay Government as also the way in which the entire matter has been handled. I am, however, sure that the Government will reconsider its decision and give us our dues. I am also surprised that even the resolution passed at the last conference of the All-India Co-operative Congress requesting the Government to keep insurance business of co-operative societies as preserves of co-operative insurers and the suggestion to consider the question of giving a decent portion of the Government's own business has not yet been fully considered."

NEW PUBLICATIONS

Economic Surveys in Underdeveloped Countries. By Dr. P. K. Mukherjee. Published by the Asia Publishing House, Contractor Building, Nicol Road, Ballard Estate, Bombay 1. Pages: 264. Price: Rs. 18.50.

THE title chosen for the publication gives one the impression that the study is devoted to the entire range of economic surveys in underdeveloped countries. But the actual contents of the book pertain only to rural surveys. Perhaps the author has felt that, since the economy of underdeveloped countries is predominantly rural in character, an analysis of the methodology for the conduct of rural surveys would be more than sufficient. Even so, the author might perhaps have chosen the title "Rural Economic Surveys," instead of such a general term as "Economic Surveys."

That apart, the chief merit of Dr. Mukherjee's study is the lucid and comprehensive way in which the different concepts used in rural economic surveys are defined, the modes of collecting data discussed, and the methods of analysis suggested. A careful perusal of the study will clearly reveal that the basis on which most of the surveys that have already been or are being carried out is defective. Thus, the exact and precise meanings of various attributes under study are not described properly, nor the methods of collecting data adequately considered in relation to their appropriateness for the purpose. Naturally, the surveys constitute nothing but a mere collection of facts and figures, rather than an analytical presentation of the integrated functioning of the different parts of the economy. This is, indeed, a fundamental defect which robs the surveys of their effectiveness and utility. The defect could certainly be overcome if the suggestions put forward by Dr. Mukherjee were adopted and implemented in conducting rural economic surveys.

The author has prefaced his study by a fairly long introduction indicating what the new approach to research in agricultural economies attempted in the study is. The approach, we are told, is three-fold: (1) It treats the problem as a whole even at the risk of covering a very wide field rather than look into different constituent parts of it in isolation; (2) it is interlinked with and conditioned by the peculiar economic and social features present in a particular area; and (3) it studies the economies with the help of the redefined concepts in their dynamic aspects. The author has sought to give methods of studying and, if possible, of measuring, the nature of transition from a primitive economy to a developed one.

The exact meaning of methodological research is explained with two extreme interpretations—one concerned with mere fact-finding and the other engaged on research on refined technique. The author rightly emphasises that the proper way lies in a "macro-analysis" of the whole economy with due examination of both the endogenous (internal) and the exogenous (external) variables. The exogenous variables, in the form of social habits and conditions and historical materials, are mentioned in Part I of the study. In Part II, the endogenous variables in the form of economic categories are discussed theoretically and also with regard to their measurability. Part III contains a discussion, through the use of a "macro-analysis" approach, of the practical aspects of statistical measurement and the methods of analysing the survey data.

It must be said to the credit of Dr. Mukherjee that the methods of collecting data he has recommended are such as would avoid the problems of hypothetical imputations and evaluation of different familiar categories. Again, the several methods of analysing the data proposed by him provide not merely for an assessment of the situation in a rural economy at a point of time but also for taking account of the changes that take place in it as the years go by. For this purpose, the author has recommended for acceptance three techniques of analysis,

namely, a statistical model depicting the inter-relationships in rural regional economy based on Leontief's input-output method, an estimate of rural consumption figures from sources other than family budget surveys, and an estimate of gross rural income with the help of a concept similar to that used in Keynes' "multiplier" approach.

There are at the end of the publication two appendices, one on problems of evaluating non-monetary income and outgoing in a farm family enterprise and the other on problems of studying the level of economic welfare in a self-subsisting economy. A model schedule for collecting data on economic transactions of households is also incorporated. In fine, the study of Dr. Mukherjee will be found useful by economic investigators not only in India but also in the several other underdeveloped countries which are striving to raise their living standards.

A History of Technology, Volume V: The Late Nineteenth Century. Edited by Messrs. Charles Singer, E. J. Holmyard, A. R. Hall and Trevor I. Williams. Published by Oxford University Press, London. Available in India at Oxford University Press, Box No. 31, Bombay. Pages: 932. Price: £8-8s. net (in U.K. only).

With the publication of this volume, the eight-year old project of Imperial Chemical Industries-Clarendon Press (Oxford) collaboration has successfully been completed. The project consisted of writing "A History of Technology" since the earliest times to the beginning of the present century. The previous four volumes covered (1) from early times to fall of ancient empires (500 B.C.); (2) Mediterranean civilisation and Middle Ages (700 B.C.-A.D. 1500); (3) from Renaissance to Industrial Revolution (1500-1750); and (4) Industrial Revolution (1750-1850). The present volume covers the late nineteenth century (1850 to 1900). The continuation of the *History* beyond this period was considered undesirable, as "it would then have been necessary to deal with events too recent to be seen in proper historical perspective."

The five volumes put together contain over 4,000 pages, illustrated with more than 2,500 line drawings and 200 pages of halftone photographs. There are 134 chapters, each written by a distinguished authority.

Like its predecessors, the latest volume is written in plain language with few specialist terms, so as to be understood by those with a minimum of technical or scientific training. Very great care has been taken with the illustrations, nearly all of which are specially drawn. No efforts have been spared to convey information graphically by maps, charts and tables. The *History* is intended for general reading and to meet the needs of people who have little knowledge of the history either of science or of man. It aims, too, at providing students of technology and applied science with a humane background for their studies and to be a useful auxiliary to the more specialised studies of historians, archaeologists and other scholars.

Viewed thus, it is hardly surprising that the *History* has earned wide popularity and won laurels the world over. Volume I, published in November 1954, has already been reprinted for the third time and later volumes, it is said, have done correspondingly well. Substantial sales are not, of course, the sole criterion of a book's success, but "they are" it must be stressed, "none the less remarkable for a work which, because of its high standards of physical production, costs forty guineas the net." Surely, there is no exaggeration whatever in the tribute paid by the *Times Science Review* that there has been nothing before like this *History*.

The Economy of Pakistan. By Messrs. Russell Andrus and Azizul Mohammod. Published by Oxford University Press, London. Pages: 512. Price: Rs. 25.

Despite the bifurcation of the Indian sub-continent into two independent countries, namely, India and Pakistan, and the political differences that exist between them, the two countries are bound by many common ties. Both are cast in the same geographic mould, have the same cultural heritage and similar social background. Economically, too, the two countries are closely complementary; at least they were till recently. An economically strong and politically stable Pakistan is as important to the prosperity and security of India as is a rich and stable India to that of Pakistan. The political and economic developments in each country are, therefore, of mutual interest.

There are many books dealing with the economy of undivided India and, after Partition, many others have appeared dealing extensively with India. But very few attempts seem to have been made to study the economy of Pakistan as an integrated whole. This deficiency is fully made up by the book under review which is an excellent treatise on the recent developments in the main branches of Pakistan's economy. It is compact, concise and, at the same time, a comprehensive review, compressing within its five hundred and odd pages a wealth of statistical data intelligibly tabulated and lucidly interpreted. Almost all aspects of the economy are adequately dealt with. Starting with land and people, the authors survey agriculture and its problems, land tenure and rural credit, co-operation and marketing, large, medium and small-scale and cottage industries, fuel and power, railways, ports and shipping, civil aviation and telecommunication, foreign trade, balance of payments, financial relations between the Federal and Provincial Governments, central and commercial banking, insurance, and capital markets, financial corporations, price trend and a host of other related subjects.

There will always be room for differences of opinion as to the adequacy or inadequacy of the treatment of different topics in a book covering such a vast field. But it must be said in fairness to the authors that, on the whole, their treatment has been balanced. One observation, however, by way of comment. The last chapter on development planning is not satisfactory. By too sketchy a treatment and its relegation to the end of the book, it has almost been reduced to a postscript.

Eternal Efficiency Epitome. By R. K. Murti. Published by Efficiency Publications, Bombay 19. Pages: 165. Price: Rs. 10.

This publication belongs to the class of self-improvement books which is finding an expanding readership at present. But it differs from others of this class in that, as against their materialistic content and approach, it represents India's traditional, spirit-based, integrated approach to efficiency. The author's conviction is that the principles propounded in the *Gita* are applicable as much to the problems of this work-a-day world as to those of the human spirit if only the true import of the *Gita*'s teachings is imbibed and its principles and maxims applied to everyday life. In fact, it is a practical guide book for self-culture.

The author gives a detailed description of a technique of living which is unique in itself. It is intended to serve as a stimulus to the initiative of the reader in devising and adopting ways and methods for meeting any situation. The book is meant for all people, but designed in particular to serve the needs of officers and supervisors at all levels in all kinds of corporate organisations, whose business it is to get work done.

"And, of course, Sir—the Taj by moonlight?"

Of course.

The Taj Mahal by moonlight is a must for every tourist.

And every tourist who comes to this country brings with him foreign exchange.

That's why the tourist industry is so valuable... it earns currency as well as goodwill.

But there are many other tourist centres waiting to be developed in India... centres which can only be reached by road.

Yet another reason why road construction must have topmost priority. Everything to do with roads is important to the country as a whole.

Bitumen, for example. One of the better road-building materials.

Inexpensive. Easy to handle. Long-lasting. Hard-wearing. Supplied by Burmah-Shell.

Burmah-Shell Bitumen is more than an important material—it's a service. Burmah-Shell make available the advice and experience of skilled engineers, whose job it is to assist in the construction of roads. Good roads. Cheaper roads.

BURMAH-SHELL BITUMEN CAN BE SUPPLIED IN BULK. THIS STEP FORWARD MADE BY BURMAH-SHELL, SAVES VITAL STEEL BECAUSE IT MAKES DRUMS UNNECESSARY. BULK BITUMEN IS PARTICULARLY SUITABLE FOR MECHANIZED ROAD CONSTRUCTION—AND IT IS MUCH CHEAPER IN ITS INITIAL COST.

BURMAH-SHELL BITUMEN FOR BETTER ROADS

How do your costs compare?

How does your performance rate?

Is there wasteful or avoidable expenditure on your plant?

Let us do the worrying for questions like these...and help you find the answers. It's not just enough, if you compare current costs and performance with what these have been in the past or with what are accepted as normal. Do costs and performance compare with what these should really be? That's the acid test... and we conduct it.

acbi diagnoses and prescribes... you are not only told why wasteful expenditure occurs, but precisely what remedial action you should take.

acbi is currently assisting industries in both public and private sectors. If you have problems relating to cost control, labour-management relations, job evaluation, work study, production control, quality control, material handling, office reorganisation etc., you'll do well to

IMPACT OF COMMON MARKET ON INDIA'S AGRICULTURAL EXPORTS

TOBACCO AND OILS MAY SUFFER MOST

INDIA has considerable stake in the developments taking place in the economic and commercial fields in Western Europe. The formation of the Common Market of the Six (France, W. Germany, Italy, Belgium, Netherlands and Luxembourg) has naturally caused a little concern in this country. India has sizeable volume of trade with these countries. What is more, it has been running heavy deficits on its trade account with the Six. In 1957, India had an adverse balance of trade with these countries to the tune of Rs. 170 crores, exports being Rs. 46.74 crores and imports Rs. 218.74 crores. In 1958, exports fell to Rs. 38.67 crores and imports to Rs. 163.66 crores, leaving a deficit of Rs. 125.05 crores. At a time when India has huge trade deficits with these countries, it can ill-afford to suffer even a slight setback in its exports. The formation of the C.M., it is feared, will imply a preferential treatment in respect of trade among the Six and their dependent territories and discrimination against the third countries. Already, India has been facing many difficulties in the trade with these countries on account of import duties and quotas fixed by them. Against this background, an article on "European Common Market and Indian Agricultural Exports," appearing in the test issue (May 1959) of the *Agricultural Situation in India*, published by the Union Ministry of Food and Agriculture, will be read with interest. Agricultural commodities, including raw cotton, wool, tea, coffee, vegetable oils, hides and skins and spices account for as much as 43 per cent. of aggregate Indian exports to the C.M. countries. Minerals, ores and metal scraps amount to 31 per cent. and the rest consists of finished products, such as tanned leather, cotton piecegoods, jute fabrics, coconut fibre yarn and coir products. The table at the bottom of the page shows the value of India's exports of principal agricultural products to the Six in 1958.

First Step

It may be recalled that, on 1st January 1959, the Six took the first step in adjusting their tariffs towards a gradual removal of all ariffs among themselves. To sum up the measures already initiated, the tariff rates applied on 1st January 1957 among the member countries were reduced by 10 per cent. Besides, bilateral quotas granted to member States were converted into "global quotas" applied without discrimination to all member countries. Moreover, the value of the new quotas within the C.M. has been raised on an average by about 20 per cent., as compared with the preceding year.

These measures are so designed as to enable the Six countries to complete the establishment of a Customs Union of their own by 1970, or at latest by 1973. The first phase of the scheme, already in force, envisages elimination, as between member countries, of customs duties and quantitative restriction in regard to the import and export of goods, as well as other measures with the same effect. The second stage conceives the establishment of a common customs tariff and a common commercial policy towards third countries. In order to promote economic development in the dependent territories of the member countries, it is proposed to set up a

European Investment Bank and a European Social Fund. In the sphere of agriculture, a Common Marketing Organisation will be established, which will be entrusted with the task of evolving a common agricultural policy, particularly with regard to price regulations, production and disposal subsidies, stockpiling and common stabilisation arrangements for imports and exports which may extend to the creation of an agricultural guarantee fund.

Three Factors

How will the C.M. affect India's foreign trade? There are at least three ways in which it can affect India's exports:

1. The Common Market countries will no longer need compete among themselves to buy Indian raw materials to the same extent as before which in turn may affect the price secured by Indian exports.
2. According to the scheme, the external tariff of the C.M. countries will be the arithmetic average of the different tariffs now in force. Whenever the final Common tariff is higher than the previous one, the demand for Indian exports will be affected.
3. India will have to face a more severe competition than before from the overseas dependent territories of the C.M. countries. The exports of these territories will enjoy preferential treatment in the matter of tariffs in the C.M. countries. A difference in tariffs, however small, is often effective in diverting trade. Some of these countries are strong competitors of India in some of the items of its agricultural exports like cotton, coffee and vegetable oils.

Besides, the establishment of the Common Market can affect Indian exports to other countries, notably the U.K. As a result of the scheme, the U.K. may lose industrial markets in the member countries and their associated overseas territories. This can reduce its import of industrial raw materials from India.

Cotton

The article examines the extent of the danger posed by the C.M. to some of India's important agricultural export commodities. To take raw cotton first. Of the total Indian exports of raw cotton, the C.M. countries accounted for 7,000 tons in 1954-55, or 23.5 per cent., 23,700 tons in 1955-56, or 19.6 per cent. and 4,300 tons in 1956-57 or 10.4 per cent. Its cotton exports to these countries in 1958 amounted to about 6,000 tons, valued at Rs. 135.66 lakhs. The decline in Indian exports to the Six is attributed mainly to lower prices fetched for them in these countries, as compared with those elsewhere, particularly Japan. The C.M. countries, taken together, represent the largest single importer of cotton; they account for one-third of cotton entering world trade. They have well developed textile industries, but they do not cultivate cotton, except perhaps Italy, which produces cotton on a very small-scale. A part of their requirements is met by indigenous supply of synthetic fibres and the rest by imports. On an average, the Six import over 900,000 metric tons annually of which their overseas territories account for only about 80,000 metric tons.

On the whole, it would appear that the formation of the C.M. is not likely to threaten to any marked extent the competitive strength of India's exports of raw cotton. In the first place, no significant changes will occur in the tariff imposed on the entry of raw cotton from any foreign country in the C.M. countries. As

far as India is concerned, even before the C.M. came into being, its cotton exports to these countries were allowed entry free of duty, except in Italy, where a six per cent. duty was levied. Secondly, the development of cotton in the overseas territories of the member countries is not expected to render India's position worse. For the territories cultivate only those varieties of cotton found in the American continent, and not those in Asia. So, the Indian cotton exported to C.M. countries are complementary rather than competitive to the cotton offered by the French African colonies. Thirdly, as already indicated, the prices fetched in Japan for Indian cotton are higher than those in the C.M. countries. With the growing demand for Indian cotton in the Japanese market, India is not likely to face any serious problems in disposing of its raw cotton surpluses.

Another important item of Indian agricultural exports to the C.M. countries is coffee. Overseas territories of the C.M. countries now produce nearly 200,000 tons of coffee, which is hardly 8 per cent. of the total world production and is less than half of the requirements of the C.M. countries. These territories are fast developing and when the economic assistance received by them is stepped up through the proposed European Investment Bank and the European Social Fund, their pace of development will be further accelerated. In these circumstances, production of coffee may also go up. Coffee produced in these territories will get duty-free entry into the C.M. countries, whereas coffee from other countries will carry a uniform *ad valorem* duty. Against these facts, there remains the fact that the quality of Indian coffee is much superior to African or for that matter any other coffee. Arabica coffee, which forms the bulk of our coffee exports, is famous for its cup quality and blending. Further, Indian coffee meets only a fraction of the requirements of the C.M. countries and there is no real threat to it.

As far as exports of tea are concerned, no change is likely to occur. Tea is not produced in any of the C.M. countries nor in any of their dependencies.

Wool is another commodity exported from India, in which there is hardly any sign of competition from the C.M. countries or their dependencies. These countries buy about 25 per cent. of India's exports of wool. Of the total exports to these countries, 43 per cent. goes to West Germany, 25 per cent. to France, and nearly 16 per cent. each to Belgium and the Netherlands. The value of India's shipments of wool to these countries aggregated Rs. 136.31 lakhs in 1958.

Tobacco and Oils

While India's exports of such commodities as raw cotton, coffee and tea will not be affected seriously on account of the C.M., the new tariff regulations in respect of certain other items, especially tobacco, fruits and vegetables and oils, give room for some concern. The C.M. countries buy about 8 per cent. of India's total exports of unmanufactured tobacco. In 1958, the value of India's exports of tobacco to the C.M. countries amounted to about Rs. 60 lakhs. The Netherlands, Belgium and France were the major importers among the Six. The C.M. treaty provides for a higher levy of 30 per cent. *ad valorem* duty on unmanufactured tobacco. Moreover, tobacco is excluded from the general rule applied to other commodities which seeks to apply the arithmetical average of the existing tariffs. India's exports of tobacco, it is feared, will suffer considerably under the new system. The competition from overseas territories may not be too strong. Although France imports substantial quantities of tobacco from Algeria and other overseas territories, these varieties are not in demand in Germany and Benelux countries. Nevertheless, Italy will offer stiff competition to the Indian product. India's principal variety for exports is flue-coulored Virginia tobacco, which is used for cigarette and cigar manufactures. This variety is grown in Italy also. Besides, the relatively high duty on tobacco from third countries will give a fillip to domestic production in West Germany and France, besides Italy. It may be noted that the total production in these countries was no more than 152,000 tons in 1956, or 48 per cent. of the total requirements of the region. Increase in production of tobacco, now envisaged in these countries, will reduce the demand for the India than two per cent. of the total imports of tobacco into the region.

The C.M. countries apply a common tariff of 7½ per cent. *ad valorem* in respect of fruit (Continued on page 120)

BOMBAY FIRE AND GENERAL INSURANCE COMPANY

RESULTS HIGHLY ENCOURAGING

A FURTHER improvement in the business of the Bombay Fire and General Insurance Company, Ltd. (General Manager: Mr. K. K. Dastur), is reflected in the audited accounts of the Company for the year ended 31st December 1958. The combined net premium income of the three departments aggregated Rs. 20.44 lakhs, which compares favourably with the previous year's figure of Rs. 18.82 lakhs. It is noteworthy that this is the third year in succession when the combined premium income has recorded an increase.

The combined claims ratio has shown a welcome decline from 43.73 per cent. in 1957 to 39.10 per cent., though commission and expenses recorded a slight increase from 49.78 per cent. to 50.80 per cent. The profit works out to Rs. 1,77,997, as against a loss of Rs. 30,197 in the previous year. The distribution to shareholders has been stepped up to Rs. 7.25 per share on the Rs. 40 paid-up shares, as against Rs. 3 in the previous year, and to Re. 1.81 on the Rs. 10 paid-up shares, as against 75 nP in the previous year.

The increase in net premium was shared by all the three departments. The net premium in the fire department amounted to Rs. 11.54 lakhs. Claims paid and outstanding aggregated Rs. 3.13 lakhs, being 27.13 per cent. of premium. Commission and expenses of management and foreign taxes amounted to Rs. 6.72 lakhs, being 58.25 per cent. of premium income. The fire fund stands at Rs. 5.93 lakhs, being over 50 per cent. of the premium income. A sum of Rs. 1.51 lakh has been transferred to the profit and loss account.

The net premium in the miscellaneous department was Rs. 3.87 lakhs. Claims paid and outstanding amounted to Rs. 2 lakhs, being 51.85 per cent. of premium. Expenses of management, commission and foreign taxes aggregated Rs. 2.05 lakhs, being 52.02 per cent. of premium income. The miscellaneous fund, after transfer of Rs. 29,813 from the profit and loss account, stands at Rs. 1.95 lakh.

In the marine department, net premium aggregated Rs. 5.03 lakhs and claims amounted to Rs. 2.85 lakhs, being 56.78 per cent. Expenses of management, commission and foreign taxes were of the order of Rs. 1.62 lakh, being 32.21 per cent. of premium. After setting apart Rs. 5.03 lakhs to the marine fund, which is 100 per cent. of the premium, a sum of Rs. 13,715 has been transferred to the profit and loss account.

After closing the departmental accounts thus, the profit and loss account shows a credit balance of Rs. 1.78 lakh. With Rs. 1.76 lakh brought in from the previous year's account, there is a total of Rs. 3.54 lakhs. Out of this, a provision for taxation of Rs. 1.50 lakh has been made, leaving a balance of Rs. 2.04 lakhs. The dividend of Rs. 7.25 per share on the Rs. 40 paid-up shares and Re. 1.81 on the Rs. 10 paid-up shares will absorb Rs. 76,040 only, leaving a balance of Rs. 1.28 lakh to be carried forward.

Explaining why the Directors have decided to increase the dividend so markedly, rather than strengthen the reserves further out of the profits, the Chairman told the annual general meeting of shareholders held on the 16th inst. as follows:

"Although the Directors would have liked to strengthen the reserves out of the profits, the same cannot be done, as our Company comes under the clutches of Section 23A of the Indian Income-tax Act and, as our free reserves are more than our paid-up capital, we are forced to distribute to the shareholders the balance of our profits as reduced by the income-tax payable thereon by the Company."

Here is a glaring instance of the pernicious effect of Section 23A of the Income-tax Act on a risk-bearing and service-rendering business like general insurance. Insurers the world over set apart a good portion of their profits for strengthening their finances in order to offset fluctuations in business and to meet sudden losses. No insurer who has the long-term interest of the company at heart, will fritter away profits accruing in good times through inflated distribution to shareholders. It is a strange paradox that, while, on the one hand, the Government enforces on insurance companies the solvency test rules under the Code of Conduct regulations to increase their reserves as far as possible, on the other, it forces companies which try to build up such reserves, to distribute all their profits in paying dividend to the shareholders, so that it may enable Government to gather some more super-tax from the shareholders. It is high time the Government corrected this anomaly.

Are You a Small-scale Industrialist?

This will interest you

To help small-scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

TATA OIL TO PAY RECORD DIVIDEND GROSS PROFIT TOUCHES NEW HIGH, DESPITE HIGHER RAW MATERIAL PRICES

THE Tata Oil Mills Company, Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay), has had the most prosperous period in the whole forty-one years of its history, during the year ended 31st March 1959. Though turnover (in terms of value) is not at its peak, being Rs. 11.56 lakhs less than that touched in 1956-57, the gross profit has risen to a high of Rs. 54.69 lakhs, representing an increase of Rs. 19.44 lakhs or 55 per cent. over that earned in the previous year. It also exceeds the previous record of Rs. 47.32 lakhs touched in 1955-56. The main beneficiary of this prosperity is the Exchequer, the provision for taxation having been nearly doubled from Rs. 11.62 lakhs for 1957-58 to Rs. 21.75 lakhs for the year under review. This is equal to nearly 40 per cent. of the gross profit, as against 33 per cent. in the previous year and 31 per cent. in 1955-56.

The shareholders too are to be benefited by the improvement in the results of the Company. For the Directors have recommended the payment of a dividend of Rs. 3.25 per share of Rs. 25 each, or 13 per cent. on the ordinary capital, as compared with Rs. 2.50 per share or 10 per cent. paid for each of the previous two years, thus more than making good the cut made two years ago from 12 per cent. distributed for 1955-56. It may also be noted here that the dividend for the year under review is the highest so far in the history of the Company. The higher dividend, it is noteworthy, has been recommended only after ploughing back a larger sum of Rs. 5.50 lakhs to the reserves, as against Rs. 1.07 lakh added last year. The allocation to the reserves could not be raised further without paying a dividend lower than that now proposed, because the net profit (after providing for managing agency commission, depreciation and taxation), at Rs. 17.10 lakhs, is only Rs. 6.95 lakhs more than that for 1957-58 and a fraction better than that for 1955-56, on account of the substantially large provision for tax liability, as will be evident from the following comparative table:

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	6,51.08	6,14.70	6,62.64	5,63.10
Other income	12.78	8.82	13.13	10.63
Stocks-in-trade	1,09.27	79.43	1,02.17	86.93
Raw materials and stores consumed	5,96.62	5,40.73	4,57.28	3,86.33
Other expenses	2,90.97	2,42.77	2,03.98	1,90.07
Gross profit	54.69	35.25	34.50	47.32
Managing Agency commission	4.55	2.98	2.71	4.03
Provision for—				
Depreciation	11.30	10.80	10.80	11.75
Taxation	21.75	11.62	9.10	14.88

The improvement in the results for the year is attributed to: (1) judicious purchases of raw materials, (2) larger turnover of all products, excepting *vanaspathi*, (3) upward revision in prices of soaps and toilet products in August 1958, and (4) a reduction of Rs. 1.50 lakh in interest charges as a result of smaller borrowings during the greater part of the year. There was a general rise in the prices of raw materials used by the Company during the year. Thus, the average cost of coconut oil was 10 per cent. higher, despite better realisations from the sale of copra cake. A similar rise was recorded in mowra oil. The price of groundnut oil shot up by Rs. 200 per ton between the months of June and October 1958, but, thanks to the judicious purchase of groundnut and the remunerative prices realised on deoiled meal, the cost of groundnut oil was kept at a reasonable level. There was, however, a reduction in the price of palm oil, the average landed cost having been nearly 15 per cent. lower than in the previous year.

The other main features of the year's working are: (1) crushing of copra and seeds in the Company's two factories was more or less the same as in 1957-58; (2) the solvent extraction plant worked at nearly full capacity throughout the year and operated satisfactorily; (3) sales of laundry and toilet soaps recorded an increase of 9 per cent. over the year to set a fresh record; (4) the output and offtake of glycerine also rose

by the same extent; (5) the revision of selling policy in respect of *vanaspathi*, under which prices were fixed on a f.o.r. Bombay and Ernakulam basis, instead of a uniform rate throughout the country, showed satisfactory results, except in Bombay, and led to a stabilisation of prices; and (6) sales of toilet products expanded by 16 per cent. Exports of the Company's products did not show any improvement. In view, however, of the potentialities for the Company's soaps and toilets in the Middle East and African markets, efforts are being made to improve sales there.

Fresh capital expenditure to the tune of Rs. 25.14 lakhs was made during the year under review. This was more than double the sum (Rs. 12.49 lakhs) spent in the previous year, bringing the total cost of the block account to Rs. 239.11 lakhs at the end of the year. This, however, stands written down to Rs. 93.27 lakhs, the total depreciation provided being Rs. 145.84 lakhs. In addition, buildings, plant and machinery, etc., of the value of Rs. 5.74 lakhs are under erection. The other assets amount to Rs. 396.16 lakhs, of which stock-in-trade alone accounts for Rs. 214.94 lakhs. As against these assets, the current liabilities and provisions aggregate Rs. 353.71 lakhs, leaving a net asset of Rs. 141.46 lakhs. This is represented by a paid-up capital of Rs. 99.96 lakhs and reserves and surplus of Rs. 41.50 lakhs (including a share premium of Rs. 14.94 lakhs). It will be noted here that the ploughed back reserves amount to no more than Rs. 26.56 lakhs. Considering the age of the Company, its paid-up capital and the capital expenditure over these years, these reserves represent a poor performance.

The Rs. 25 fully paid-up shares of the Company are being currently quoted at Rs. 71 *cum-div.*, having risen from Rs. 52.50 at the beginning of May. Early in the year they stood at Rs. 42.75. A year ago they were at Rs. 42.25. On an *ex-div.* basis, and at the current rate of dividend, the yield on the shares is 4.8 per cent. per annum, free of income-tax.

KHANDELWAL FERRO ALLOYS

The Directors of Khandelwal Ferro Alloys Ltd. have, in consultation with the authorities of the Bombay Stock Exchange, allotted the recent new issue of shares on the following basis:

In respect of equity shares, 50 per cent. of the total number of shares available for allotment have been allotted to applicants of five and ten shares by drawing lots, so that each of them gets five shares. The remaining shares available admit of only 45 per cent. of the total number of shares applied for by the other applicants. In doing so, the broken units of over 2½ shares have been rounded off to the next higher multiple of five and those of 2½ shares and below have been dropped. As regards preference shares, all applicants for five and ten shares will get five shares each and those who had applied for more will get 75 per cent. allotment. As in the case of equity shares, broken units of over 2½ shares have been rounded off to five and those of 2½ shares and below have been dropped.

Intimations of allotment, letters of regret and refund cheques have been posted to shareholders. Share certificates are expected to be ready by the end of this month.

INDIAN RAYON CORPORATION

The allotment of shares of the Indian Rayon Corporation Ltd. has been decided upon by the Directors and the details of allotment are as follows:

Equity shares		Allotment	
No. of shares applied for:		No. of shares applied for:	
5 shares (50 per cent. of the applicants will get by drawing lots)		Full allotment	
10 to 20		60 per cent.	
25 to 50		50 per cent.	
60 to 80		50 per cent.	
100		50 per cent.	
150 to 175		50 per cent.	
200 to 250		50 per cent.	
400 to 500		50 per cent.	
600		50 per cent.	
800		50 per cent.	
2,000		50 per cent.	

Correcting a misapprehension, the Directors state that the receipts sent to applicants for money received do not represent allotments nor do they guarantee any allotment.

INDIA CEMENT DOES WELL PROFIT GOES UP THOUGH OUTPUT IS LOWER

NOTWITHSTANDING a loss of production of about 20,000 tons as a result of the closure of one unit for a period of three months due to heavy power cut, the results of working of India Cements Ltd. (Managing Agents: Messrs. Essen Private Ltd., Madras) during the year ended 31st March 1959 are encouraging. The gross profit, for instance, which had gone up from Rs. 28.91 lakhs to Rs. 39.34 lakhs in 1957-58, has staged a further rise to Rs. 44.85 lakhs, thus maintaining the upward trend since 1952-53, when the profit had stood at Rs. 14.17 lakhs. After providing Rs. 3.78 lakhs (as against Rs. 3.13 lakhs for the previous year) for managing agency commission, Rs. 11.58 lakhs (Rs. 11.90 lakhs) for depreciation and Rs. 11 lakhs (Rs. 8.82 lakhs) for taxation, the net profit amounts to Rs. 18.49 lakhs, representing an increase of Rs. 3 lakhs over that for 1957-58.

The distribution to the shareholders has been maintained at 9 per cent. per annum, but this is again on a higher capital brought about by a fresh issue of shares. The addition to the reserves, however, has been cut from Rs. 4.20 lakhs (made up of Rs. 4 lakhs to the loan redemption reserve and Rs. 20,000 to the reserve for development rebate) to a mere Rs. 21,000; this sum has been credited to the latter reserve. It is noteworthy that the higher profit has been utilised to donate a sum of Rs. 4.25 lakhs to a polytechnic institute set up at Talaiyuthu, under the auspices of the Company.

The encouraging progress made by the Company in recent years is fully reflected in the following comparative table:

	For the year ended 31st March			
	1958	1957	1956	1955
Sale proceeds	1,76.90	1,43.24	1,07.43	1,39.81

Deferred	(0%)	(0%)	(0%)	(0%)
Carry forward	0.70	0.71	(0.41)	(0.41)

The Company unfortunately has not published statistics of its actual production of cement. It is, therefore, difficult to trace the progress on the production side. However, as stated above, the power shortage during the months April to June resulted in a final loss of production of 20,000 tons, despite the Company's efforts to make up the deficit during the remaining period. Despite the loss of production, sales show an increase of Rs. 33.56 lakhs. The cost of raw materials consumed has gone up by Rs. 21.87 lakhs and other expenses by Rs. 7.76 lakhs.

The Company was granted during the year under review an increase in the retention price from Rs. 54.50 to Rs. 60.50 per ton. The rise in price is effective from 1st July 1958 for a period of three years.

The Company's first expansion plan was completed by the end of 1956 to give an additional capacity of 100,000 tons. The full rated capacity of 200,000 tons was reached in 1957. The Company was also given licence for the installation of yet another additional plant of 200,000-ton capacity, so as to raise the total output to 400,000 tons per annum. The Directors were, however, successful in negotiating and procuring a plant of greater capacity of 750 tons per day than the one (of 600 tons per day) originally planned. The Government of India, too, has agreed to the installation of the larger plant. When this plant goes into full production, the annual output of the Company will be 500,000 tons. The erection of the third unit at Talaiyuthu is said to have been almost completed. The Directors expect the new unit to go into production by the end of July or early in August this year. In order to finance this expansion programme, the Company had applied to the Industrial Finance Corporation of India for a loan of Rs. 2 crores in 1957. This application is said to be still pending with the Corporation.

The Company had also programmed to set up an additional factory at Visakhapatnam but

progress regarding this has been slow, due to the delay in obtaining mining rights for lime-stone. The Directors, however, expect to get the rights shortly.

The paid-up capital of the Company is Rs. 176.01 lakhs and is supplemented by reserves and surplus amounting to Rs. 31.11 lakhs. The Company's borrowings from I.F.C.I. stand reduced from Rs. 45 lakhs to Rs. 40 lakhs, while those from banks and other sources have gone up from Rs. 17.51 lakhs to Rs. 54.85 lakhs. Outstanding dues to suppliers of machinery under deferred payment arrangement amount to Rs. 52.21 lakhs and other current liabilities and provisions to Rs. 64.80 lakhs. The gross block of the value of Rs. 223.08 lakhs stands written down to Rs. 138.28 lakhs. Besides, there is an unallocated capital expenditure on new units to the tune of Rs. 114.88 lakhs. The other current assets aggregate Rs. 165.83 lakhs.

The Rs. 5 fully paid-up shares of the Company are being currently quoted at Rs. 640 *cum-div.* On an *ex-div.* basis, they provide a yield of 7.6 per cent. per annum, free of income-tax.

JESSOP AND COMPANY RESUMES DIVIDEND

The sacrifice made by the ordinary shareholders of Jessop and Company Ltd., Calcutta, by forgoing the dividends for the years ended 31st October 1956 and 1957 has contributed to a good extent to the rehabilitation of the Company's finances—almost the entire net earnings for these two years were ploughed back—and has brought a small reward to them for the year ended October 1958. Though the year under review proved to be a difficult one for the Company, owing to shortage of steel and components, resulting in a setback in output and profit, and though it is still necessary to build up the Company's resources for its expansion scheme, the Directors have felt justified in recommending a dividend of 6 per cent., free of income-tax, on the ordinary shares for the year, as against 30 per cent. paid on the last occasion for the year 1954-55. It must, however, be noted that the proposed distribution is on a higher capital doubled in January 1956 by a rights issue. On the old capital, therefore, the distribution for 1957-58 is equal to 12 per cent.

The gross profit for the year has dropped from the record level of Rs. 87.64 lakhs touched in 1956-57 to Rs. 63.71 lakhs. The net profit, too, is lower, but by a smaller extent, at Rs. 29.72 lakhs, as against Rs. 38.83 lakhs for the previous year. The provision for taxation has been cut from Rs. 42 lakhs to Rs. 23.10 lakhs, while that for depreciation has been raised from Rs. 6.81 lakhs to Rs. 10.89 lakhs. Out of the net profit, the Directors have transferred Rs. 3.54 lakhs to the development rebate reserve and Rs. 24 lakhs to the general reserve. The balance available for distribution is not enough to pay the proposed dividend. The Directors, however, supplemented it by writing back Rs. 5.01 lakhs, being the excess provision for taxation not required.

The Company's progress during the last three years is well brought out by the following comparative table:

	For the year ended 31st October			
	1958	1957	1956	1955
Sale proceeds	6,90.73	5,94.19	5,98.14	6,73.12
Other income	14.70	7.70	12.83	6.49
Closing stocks and work-in-progress	3,75.17	3,49.95	2,36.80	90.22
Expenses	5,01.70	5,13.81	4,98.87	6,29.52

Depreciation	10.89	6.81	5.10	6.85
Taxation	29.72	38.83	24.34	24.57
Net profit	5.01	37.83	24.75	14.00
To reserves	27.64	0.76	0.76	0.50
Dividends—				
6 per cent. preference	1.00	1.00	0.75	0.50
Ordinary	(0%)	(0%)	(0%)	(0%)
Carry forward	0.58	0.82	0.82	0.14

As mentioned earlier, the year was a difficult one due to shortage of raw materials and components. The shortage was increasingly felt as the year progressed and became acute at the close of the year. The consequent decline in output is not, however, reflected in sales. While the agency sales fell from Rs. 60.52 lakhs to Rs. 54.63 lakhs, the Company's own works sales show a rise from Rs. 533.67 lakhs to Rs. 596.10 lakhs. This apparent anomaly is due to the fact that the Company's works sales in respect of 1956-57 do not represent the true value of goods despatched during the year. The figure of Rs. 533.67 lakhs for that year was arrived at after excluding Rs. 153 lakhs representing "on-account" payments and included in the preceding year's sales, so that the actual goods despatched or sales made, as the case may be, at Rs. 687 lakhs. The corresponding figure for 1957-58, at Rs. 506 lakhs, however, gives the correct picture of sales for the year, so that there is actually a fall in sales to the tune of Rs. 81 lakhs, thus reflecting the setback in production.

The Directors are confident that, once the supply position in respect of raw materials improves, the Company's production would rise rapidly, because the order book continues to be satisfactory. Further, the Company's manufacturing potential has been considerably strengthened by the commissioning of the new coach works towards the end of 1958. The major expansions planned for the manufacture of electric multiple unit coaches and road rollers were completed by 31st October 1958. The Company is, however, still

TRAVANCORE CEMENTS LIMITED WHITE CEMENT PRODUCTION COMMENCED MR. C. S. LOGANATHAN ON COMPANY'S PROGRESS

ADDRESSING the shareholders of the Travancore Cements Ltd. at their Twelfth Annual General Meeting held at Kottayam on 10th July 1959, Mr. C. S. Loganathan, Chairman, disclosed that the Company had commenced commercial production of white cement in May last and that the quality of the product was "better than any other white cement now available in India." The following is the full text of Mr. Loganathan's speech:

"GENTLEMEN,

"It is my proud privilege and pleasure today to extend to you a most hearty welcome to the twelfth annual general meeting of your Company.

"The balance-sheet as at 31st December 1958 and the profit and loss account for the period from 1st January 1958 to 31st December 1958, together with your Directors' report, have been already sent to you separately. With your permission, I shall take them as read.

"In my speech last year, I had mentioned that the Tariff Commission's report regarding the fixation of fair price to be paid to the cement producers was before the Government of India and that the Government's decision thereon was being awaited. The Government of India have subsequently announced increases in the retention price of cement for various units based on the recommendations of the Tariff Commission. However, these recommendations have been given effect to only from 1st July 1958 and not from 1st January 1958, the date recommended by the Tariff Commission. As mentioned in your Directors' report, the retention price for your Company has been fixed at Rs. 80.5 per ton loose which is Rs. 7.50 per ton more than the previous rate. This increased price will be in force for three years and it has given us a partial measure of relief.

"During the year 1958, your Company has been functioning economically and efficiently. The production for the year was 52,500 tons of cement, which is more than the rated capacity of the plant. We sold 53,861 tons of cement, out of which the Government share was 23,697 tons.

"With the improvement in the domestic production of cement, the supply position has eased greatly, with the result that it has been possible for the Government to relax the control over distribution to a certain extent in the interests of both the consumer and the producer. The year 1958 has been a year of consumer resistance due to various reasons, namely, non-availability of enough steel, the higher retail prices, etc. Although the domestic market conditions were difficult, your Company was able to dispose of the year's production without much accumulation of stock.

White Cement

"The erection of machinery of our white cement project was completed in March 1959 and after trial runs, commercial production was

faced with the necessity of making considerable modifications to its manufacturing facilities, in order to meet two important changes in the demands of the Railway Board. The necessary work is on hand. All these require more resources and the Directors' policy of conserving as much as possible will stand the Company in good stead. The progress of the Company's expansion programme is reflected in the growing capital expenditure. During 1957-58 alone, it spent Rs. 83.72 lakhs, as against Rs. 53.93 lakhs in 1956-57 and Rs. 22.21 lakhs in 1955-56.

The Company's investments in shares of joint-stock companies (at cost) stand as on 31st October 1958 at Rs. 76.15 lakhs, of which investments in Madras, the number of such companies was 165 and 28, respectively. Twenty-nine foreign companies had their branches in Assam, while the Union territory of Delhi had main branch offices of 28 foreign companies. A country-wise analysis of the origin of the companies shows that 442 foreign companies were of the Commonwealth origin, whereas 130 companies belonged to countries outside the Commonwealth. Continent-wise, 444 of these companies belonged to Europe and 72 to North and South America. Foreign companies of Asian origin numbered 46, whereas those belonging to Australia and Africa were 8 and 2, respectively. Taking country-wise distribution separately, 398 companies had their origin in the U.K. and 59 in the U.S.A. The number of Pakistani, French, West German and Japanese companies, was 13, 13, 12 and 10, respectively. All other countries had less than 10 companies in India.

started in May 1959. In my speech last year, I had expressed our hope to start white cement manufacture by the end of 1958. That white cement production commenced only from the beginning of this year is entirely due to the delay in the arrivals of the Danish erection engineer and later the chemical engineer, which again was due to exchange difficulties. On account of these, we were not able to keep up our programme.

"I am very much pleased to inform you that the quality of white cement, now being manufactured in your Company, is better than any other white cement now available in India. Arrangements are being finalised for the sale of the white cement throughout the country and I have no doubt that it will establish for itself a market of its own amongst discriminating consumers.

Agreement with Labour

"Shareholders will be interested to know that during the year, after long discussions and negotiations, an industrial truce has been signed between the Company and the Workers' Union, which will be in force till the end of May 1962. This agreement covers wages, annual increments, bonus, gratuity, etc. Rights and responsibilities of both the workers and the Company have been clearly defined and agreed to and it can be reasonably expected that we will have industrial peace in the years to come.

Wage Board for Cement Industry

"An important announcement made by the Government during the year was the setting up of a central Wage Board for the cement industry. The problems for their consideration, however, are very difficult, particularly as the economics of the industry differs from factory to factory and region to region. I trust the Board would tackle the problem before them with fairness and courage and lay down a wage structure giving due consideration to the finances of the industry to ensure that they are not stretched to breaking point.

Profit and Taxation

"The net profit for the year 1958 after providing for depreciation is Rs. 5,33,192 to which is added the balance brought forward from the previous year Rs. 3,24,681, making a total of Rs. 9,07,873. Another Rs. 3,00,000 from the profits has been transferred towards taxation reserves, making a total reserve of Rs. 9,00,000.

"After deducting the sum of Rs. 3,00,000 towards taxation reserves and Rs. 40,000 towards contingencies, the balance available is Rs. 5,67,873. Your Directors recommend a dividend of 6 per cent. per annum, free of income-tax, which will absorb Rs. 3,00,000, leaving a balance of Rs. 2,67,873 to be carried forward.

"I take this opportunity to express our thanks to the employees of the Company for the good co-operation rendered by them for the successful operation of the factory.

"I now move that the Directors' report and the audited accounts for the year ended 31st December 1958 be adopted."

NOTE: This does not purport to be a record of the proceedings of the annual general meeting.

FOREIGN COMPANIES IN INDIA

The total number of foreign companies having branches in India was 572 as on 31st March 1959. State-wise distribution of these companies show that more than half the number of them had their branches in the State of West Bengal, the actual number being 295. In the States of Bombay and Madras, the number of such companies was 165 and 28, respectively. Twenty-nine foreign companies had their branches in Assam, while the Union territory of Delhi had main branch offices of 28 foreign companies.

A country-wise analysis of the origin of the companies shows that 442 foreign companies were of the Commonwealth origin, whereas 130 companies belonged to countries outside the Commonwealth. Continent-wise, 444 of these companies belonged to Europe and 72 to North and South America. Foreign companies of Asian origin numbered 46, whereas those belonging to Australia and Africa were 8 and 2, respectively.

Taking country-wise distribution separately, 398 companies had their origin in the U.K. and 59 in the U.S.A. The number of Pakistani, French, West German and Japanese companies, was 13, 13, 12 and 10, respectively. All other countries had less than 10 companies in India.

PROGRESS OF LARGE CO-OPERATIVES MERITS OF NEW CO-OPERATIVE POLICY EXAMINED

By B. V. Rao

A FOREMOST exponent of the Raiffeisen system of co-operatives, Sir M. L. Darling, who undertook a brief study of the working of the Integrated Scheme of Rural Credit in 1957, at the instance of the Planning Commission, did not completely reconcile himself to the idea of large-sized co-operatives. He, however, felt that they deserved a fair trial. He also suggested that formation of large co-operatives and the revitalisation of small societies should go hand in hand; and that, after a reasonable period, an enquiry should be held into the working of the large co-operatives to ascertain whether the objectives were being realised.

The Planning Commission, however, did not seem to have been satisfied with his observations. The Programme Evaluation Organisation (P.E.O.) was asked in 1958 to study the working of the large co-operatives and report. So there was the P.E.O.'s report, which came out long after the contemplated policy changes were already effected. The P.E.O. has concluded that the large societies are no better than the small ones.

In the course of this enquiry, the P.E.O. seems to have thrown to the winds some of its usual methods of enquiry. It was on the lookout for miracles achieved by large co-operatives in a period of one or two years. No wonder it was disillusioned. It chose for the enquiry 33 societies out of as many as 4,470 large societies existing as at the end of June 1958. Of these, 9 have existed for full two years, and 14 for one year, while the rest for less than a year. Besides, as many as 15 of them were established for the first time in backward and sparsely populated areas.

Major Departures

It is common knowledge that large co-operatives and all that they stand for involve certain major departures from attitudes and practices that have been followed for decades. Forming one society where four or five were the order in the past, throwing open membership of the society to tenants and other landless people, issuing loans not against land but against anticipated crops, are some examples of such departure. Like every other major reform, this reform also has encountered opposition, especially from the trading class and the bosses of political and sectional cliques in the villages, whose supremacy is in danger.

There are other organisational and administrative difficulties. State assistance, for instance, reaches the society several months after it has been granted. The required managerial personnel have to be sent for training. Assistance for the construction of the godowns for the societies might be delayed or the formation of marketing societies might take more time than is assumed.

A godown for the society can be built faster than enlarging the membership. It is rightly said that one can make a peasant believe that the sun is ninety million miles away, but, when it is said that the paint is wet, he wants to make personal investigation! The peasant wants to assure himself before he pays in his share capital that the society is being run efficiently and soundly, and that he gains by joining it. The peasants are especially reluctant to associate themselves with an institution when Government policies pertaining to it are indefinite. The case of producers-cum-consumers societies established in Madras during the premiership of the late Mr. Prakasam may be cited here as an example. Several thousands of peasants lost their investments in these societies.

Similarly, a society which has known only too well the spending habits of its members does not readily dole out crop loans, just because it is desired by the policy-makers. Progress here is a slow process. Bombay, where the crop loan system has been in force for over a decade, has still to make great headway.

Progress Fairly Good

Notwithstanding these serious limitations, the progress made by the large societies is fairly good in several States. The data obtained from reliable sources indicate that in Madras, for example, the average paid-up share capital of a large society was, as at the end of June 1958, ten times as much as that of a small society. The

average large co-operative, however, covered 7 villages, as against slightly more than one village covered by the small society. Between the two years, June 1956 to June 1958, the average share capital per member of the large co-operative increased by more than twice as much as in the case of small ones.

Similarly, the 245 large-sized societies existing as at the end of June 1958 covered as much as 33.7 per cent. of the population of the area served by them, as against 27.2 per cent. of the population covered by as many as 8,000 small societies in their area. In the case of deposits also, a substantial improvement was shown by large societies. The total deposits increased between the two years cited above, from Rs. 2.6 lakhs to Rs. 18 lakhs. As at the end of June 1958, the deposits per small society amounted to Rs. 343, as against Rs. 7,367 in the case of a large society. Loan advanced per member, again, amounted to Rs. 66 in the case of small societies, as compared with Rs. 150 in the case of large ones. Between the two years, while the advance per member rose from Rs. 47 to Rs. 66 in the case of the small, the corresponding figure in the case of the large societies rose from Rs. 76 to Rs. 155.

In Andhra Pradesh also, similar progress was witnessed, although the large societies have been in existence for less than 2 years. As a result of converting 831 small societies into 351 large societies by 30th June 1958, the membership has increased from 134,000 to 229,000. Deposits have shot up from Rs. 20 lakhs to Rs. 66 lakhs, and loans advanced from Rs. 114 lakhs to Rs. 475 lakhs. In other words, loan per member has increased from Rs. 85 to Rs. 208. As against this, the average loan that a member of the rest of the societies was getting was only Rs. 77. At the same time, the proportion of overdues to outstandings declined from 14 per cent. to 8 per cent.

Between 1956-57 and 1957-58, in Mysore State, again, the formation of as many as 435 large societies has helped to raise the membership from 73,000 to 138,000, while paid-up share capital more than doubled from Rs. 24 lakhs to Rs. 51 lakhs. Loan per member was reported to be as high as Rs. 126, as against Rs. 70 in the rest of the societies. Besides, the total deposits also are said to have witnessed a substantial increase from Rs. 11 lakhs to Rs. 24 lakhs. On the other hand, the position of as many as 4,000 small societies has remained more or less the same during this period.

In other States, such as West Bengal, Rajasthan, Bombay, Orissa and Punjab, too, more or less similar progress has been witnessed. To State briefly, the average loan per member is said to have risen to Rs. 227 in a large society, as against Rs. 132 in the case of a small society, in Madhya Pradesh. The corresponding figures for certain other States are given below:

Orissa—Rs. 94 and Rs. 52; Punjab—Rs. 163 and Rs. 88; West Bengal—Rs. 80 and Rs. 38; and Rajasthan—Rs. 110 and Rs. 65.

A High-sounding Programme

Despite the good progress thus shown by the large co-operatives, the programme relating to them has been abandoned, not in favour of a more practicable or realistic one, but in favour of one which is more high-sounding but less practicable, and which, in essence, seems to be more "unco-operative," than the other. According to the policy circulars that are reported to have been issued to the States recently—the policy is based largely on the Working Group's Report on Co-operative Policy—a target of 20 million members has been set for 1960-61. The number of members as at the end of 1957-58 was, however, 10 million. Those who are familiar with what Sir M. L. Darling had said, namely, that the second Plan envisaged too fast a rate of expansion of co-operatives, might find this target a source of amusement. But there are other aspects of the policy that are more interesting.

There will be, generally, a society for every village. If, however, the villages are too small, a society can be formed for a group of villages upto a population of 1,000. This, of course, can be done with the consent of the people concerned. In Soviet Russia, we are told, electors

have a large choice—they have to choose either this or that communist!

How have the policy-makers arrived at this figure, it may be asked. The record of the small co-operatives during the last half century does not support this formula. Nor the considerations of economic viability. But the planners seem to have two considerations in mind. First, the need for what is called "mutual knowledge" among members. Raiffeisen insisted on this a century ago, because he wanted to raise a large part the funds necessary for production in the village itself through "mutual knowledge" and "mutual trust," and to raise the rest through collective responsibility. Our planners have failed to explain to what extent mutual knowledge is necessary among the members of a society which gets 90 per cent. of its funds from outside agencies. They also seem to believe that conditions in India which bring about contact among the rural people are no better now than they were a century ago in Europe. The second reason is that the co-operative is expected to assist the now famous village level worker and the village *panchayat* to draw up production plans for the village. (The merits of this will be considered elsewhere.)

Credit Union

However, a different pattern is proposed for the economically and co-operatively backward areas. Here, there will be a Credit Union for a group of villages. But each of these villages will have a society to look after other functions. The idea, apparently, is that the function of credit may suffer in the process of revitalising chronically weak and dormant societies in these areas.

This formula ignores several important considerations. First, supply of fertilisers, manures seed and other necessities for agriculture is as much important as the provision of credit. In fact, in the absence of these, provision of credit alone will not help. When this is conceded what is the logic in keeping this function with village societies which have no prospect of working efficiently? Second, the members in these backward areas will have to subscribe to the share capital of two societies, the Credit Union and the village society. How far this prospect will encourage the farmers, who do not have enough resources to subscribe to the shares of even one society, is an extremely doubtful proposition. Third, the inconvenience arising from having to get their needs satisfied from two different societies through cumbersome procedures will also be a disincentive to the peasants to join as members. Fourth, the problem of finding the required type of persons to manage all these societies is also not easy or solution.

The financial burden under the proposed programme is no less discouraging. Management expenses of both the village societies and Credit Unions during the first five years, at the rate of Rs. 900 per society, are proposed to be subsidised. The new small co-operatives, together with those proposed to be revitalised during the second Plan period, aggregate to 100,000 according to the Working Group. At the rate specified above, the financial outlay will amount to Rs. 1 crores for village societies alone. This is by no means a good investment, especially when it is realised that, even after five years, there is no certainty of the societies paying their way.

If, however, the same sum were to be used to give a boost to the societies in the initial stage by way of contribution to their share capital at the rate of Rs. 10,000 per society covering say, 5 to 6 villages on an average, it would help to provide efficient service functions to as many as 9,000 societies. It should be remembered moreover, that this contribution is returnable.

No State-partnership in the capital structure of the primary societies is contemplated under the new policy. It has been explained that such participation would be contrary to the principle of "self-help." Since, however, the borrowing capacity of the society depends on its financial strength, such capacity is sought to be increased in a curious way. In the first instance, the borrowing capacity of its members is proposed to be increased by effectively linking up every family participative, and also with that marketing of agricultural produce. It is stated that this method will lead to several notable results, such as prompt repayment of loans and membership of the society. Thus, the borrowing strength of the society according to the present standards is expected to increase.

The difficulties that are likely to arise in the course of the actual working of the plan and the unhappy results that it would lead to

not, however, seem to have been fully appreciated. First, to be able even to attempt this task without jeopardising normal agricultural production, the agencies on whom the responsibility for its working depends, namely, the village level worker, the co-operative and the *panchayat*, require a far higher level of organisational efficiency and competence and sense of responsibility than is normally witnessed now. Secondly, if the amount of credit made available to the cultivator is to be based entirely on his requirements, instead of on the amount of marketable surplus that is likely to be available with him, it is difficult to understand how the amount will be recovered merely by linking credit with marketing. Thirdly, assuming that there are only about 200 self-supporting agriculturists in a population of 1,000, of whom, again, no less than two-thirds are small cultivators, it passes one's comprehension how the resources of the society will be fast increased just by marketing the uncertain surpluses of the small cultivators.

In a nutshell, the scheme involves circumventing of the "owned funds" as the basis of the borrowing power of the society in the initial years. This is, perhaps, so far unknown in the history of co-operatives. Where State-partnership in co-operatives in the initial years—which is certainly more co-operative in spirit and content than this novel scheme—seeks to strengthen the borrowing capacity of the society by strengthening the owned funds of the society, the new scheme first seeks to lend more to the cultivators, and then increase the "owned funds." Where is the element of "self-help" in this arrangement? It is like putting the cart before the horse.

It is for these reasons that the Pilot Scheme recently proposed by the Union Government for providing a supplementary line of credit has been received with considerable dismay by competent observers of Co-operation. Under this scheme, it is proposed that 20 villages in each of the 200 Community Development Blocks will receive supplementary credit from the Government, in order to meet the requirements of the intensive production programmes drawn up in them. This line of credit, it is stated, is intended to fill the gap between the requirements and the normal credit limits granted to the societies concerned. The total outlay is estimated to be Rs. 8 crores.

It is feared that this system of providing credit will not only affect the normal process of building up owned funds of the societies, but will also promote increasing dependence on the supplementary line of credit. Such a development will, obviously, disturb the normal functioning of the central and apex banks also. The fact that these banks will have to bear the losses arising from non-recovery of loans under this scheme will further affect their business.

That the programme for large co-operatives which is gaining strength should have been given up in favour of a programme which is still in the elementary stage of formation and experiment, and the potentialities of which are still unknown, is amazing. Until at least the results of the new Pilot Scheme are known, the damage that is being done to the cause of food production now can be repaired in two ways. First the village society should be allowed to consist of at least 2,000 to 2,500 population and to receive capital contribution from the Government. Second, the Credit Union, as it is called, should also undertake other functions such as supply of seeds and fertilisers, etc., until the necessary conditions are created for creating smaller societies. It is to be hoped that the planners will see the logic in following a policy that shows promise of fruitful results.

The establishment of co-operative tenant farming societies has been recommended by the high power official committee appointed by the Rajasthan Government to examine the question of introducing co-operative farming on Government lands, and also on lands left over as a result of the imposition of ceilings. The proposed societies, it is suggested, will divide the lands into small units which will be leased out to individual tenant cultivators who are members of the societies. The whole area will be cultivated in accordance with the broad plans laid out by the societies, although the manner of execution will be left to the discretion of the tenants. Each tenant will pay a fixed rent for his holding. He will retain absolute ownership of the produce from his holding, but ownership of the holding will be vested not in the individual but in the society, the rights of the individual being restricted to the discretion to implement the production plan drawn up by the society concerned.

The Working Group on co-operative farming (Chairman: S. Nijalingappa) has issued a questionnaire to State Governments in order to collect detailed information on both the agricultural and co-operative aspects of the existing co-operative farming enterprises.

NEW GREAT INSURANCE CO. OF INDIA LTD.

SPEECH OF MR. AMBALAL
KILACHAND

MR. Ambalal Kilachand presided over the Sixteenth Annual General Meeting of the shareholders of the New Great Insurance Company of India Ltd. on 11th July 1959 in the unavoidable absence of the Chairman, Mr. Tulsidas Kilachand, and referred to some of the problems facing the insurance industry.

Code of Conduct

One of the most formidable problems confronting the industry was the implementation of the provisions of the Code of Conduct relating to the eradication of the so-called malpractices. Although the rules had been amended several times, with a view to making the Code perfect and to plugging the loopholes, the problem continued to defy solution. This, Mr. Ambalal Kilachand said, was not a little due to the checks and controls included in the Code which, apart from failing to take into account human nature, enjoined on all insurers—big, medium and small—to transact business under one uniform pattern of working as to rates, premium, commission, and policy conditions. He hoped that the Sub-committee appointed by the Executive Committee would take into consideration the conditions in the industry in the light of past experience and reframe the rules giving scope to all units, so that they would be able to function on healthy lines.

Premium Reduction Move

Dealing next with the proposal to reduce the fire premium rates, Mr. Ambalal referred to the dangers inherent in such precipitate move at this critical juncture, which would have the effect of crippling the entire industry. If fire rates were reduced, marine rates might have necessarily to be increased, at least to some extent, to make the insurance worthwhile on its own merits. This might result in marine business being deflected by powerful foreign competitors, thereby retarding the progress of our trade with overseas countries. He hoped that the authorities would view the entire proposal in its proper perspective and see wisdom in dropping consideration of this move altogether.

Limitation of Management Expenses and Scramble for Business

Mr. Ambalal then referred to the present provisions of Rule 17E of the Insurance Rules in regard to the limitation of management expenses of general insurance business, which were based on the gross direct premium in India, and pointed out how this resulted in a scramble for direct business amongst companies, mainly for the purpose of survival. On the one hand, there was shrinkage of funds available for investment following the nationalisation of life insurance which affected all general insurers, and on the other, small and medium-sized companies found it almost impossible to invest in new enterprises and consequently they were deprived of a share in this business. He was of the opinion that everything should be done by the authorities, including reconsideration of Rule 17E, to enable companies to work on sound underwriting principles and not go in for business at all costs, as was the case at present, and to spread out their funds in varied investments, consisting of marketable securities, so that in the event of any unforeseen occurrences, adequate funds would be immediately available for meeting losses. This would also facilitate them to play their part at a time when there was vast and rapid industrial development in the country.

Company's Accounts

Dealing last with the departmental accounts, Mr. Ambalal Kilachand stated that the gross direct premium for the year 1958 was Rs. 37,57,651 in fire, Rs. 22,22,434 in miscellaneous insurance, and Rs. 30,07,154 in marine, whilst the net premiums were Rs. 31,57,206, Rs. 22,23,445, and Rs. 19,53,082, respectively. After providing for losses and expenses and reserves at 50 per cent. in respect of fire, and miscellaneous insurance and 100 per cent. for marine, the net amount transferred to the profit and loss account in all was Rs. 1,70,678, whilst the total standing to the credit of the profit and loss appropriation account amounted to Rs. 2,80,910. The Directors proposed to transfer Rs. 40,000 to staff gratuity account and to pay the tenth dividend on ordinary shares at Rs. 2 per share, free of income-tax, amounting to Rs. 2,00,000, which was the same as last year.

NOTE.—This does not purport to be a record of the proceedings of the annual general meeting of the Company.

Notices

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Transfer Books of the Company will be closed from Monday, the 3rd August 1959, to Saturday, the 29th August 1959, both days inclusive.

Notice is also hereby given that the dividends for the year ended 31st March 1959, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company on Saturday, the 29th August 1959.

Notice is also hereby given that in the event of the Special Resolutions I and II mentioned in the Notice of the Extraordinary General Meeting of the Company, dated the 29th May 1959, being passed at the adjourned Extraordinary General Meeting of the Company to be held on Wednesday, the 2nd September 1959, and the Controller of Capital Issues giving his consent to the issue of new Ordinary and "A" Second Preference shares mentioned in Resolution II, the holders of Ordinary shares and the holders of Preference and Second Preference shares on the Register of Members of the Company on Saturday, the 29th August 1959 (being the date fixed by the Board for the purpose) will be entitled to the new Ordinary and "A" Second Preference shares in terms of the said resolutions.

Dated at Bombay this sixth day of July 1959.

By Order of the Board,
For and on behalf of
THE TATA IRON AND STEEL COMPANY LTD.,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
by their constituted attorney,
V. G. MOKASHI.

COMPANY NOTICE

INDIAN COPPER CORPORATION LIMITED

(Incorporated in England)

DIVIDEND NO. 33

NOTICE IS HEREBY GIVEN THAT AT THE Thirty-fifth Annual General Meeting to be held in Committee Room No. 1 of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday the 23rd September, 1959, at 11-30 a.m., the Directors will recommend payment of a Dividend (No. 33) for the year ended 31st December, 1958 of 18 per cent. (4.32 pence, i.e., 24 Naye Paise per unit of stock) free of Income Tax payable by the Company in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 30th September, 1959 to all members registered in the books of the Company at the close of business on the 3rd August, 1959.

The Registers of Members will be closed from the 4th August to the 29th August, 1959, both days inclusive.

The nett profit for the year ended 31st December, 1958, was £197,785 (against £252,215 for previous year), after providing £150,000 for Depreciation (£175,000 last year), £467,282 for Taxation (against £522,534), £125,000 for General Reserve (against £175,000), and £50,625 for Development Rebate Reserve (against Nil). With £120,361 brought in from 1957, there is an available balance of £318,146 (against £267,195). After providing £246,834 for proposed Dividend of 18 per cent. free of Income Tax payable by the Company (Dividend No. 32 of 18 per cent. free of Income Tax last year—£246,834) the balance carried forward is £71,312 (against £120,361 brought in from previous year).

By Order of the Board,
S. C. GLADSTONE,
Acting Secretary.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA-1, 8th July, 1959.

SYNOPSIS OF COMPANY REPORTS

Jagatjit Cotton Textile Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Karam Chand Thapar and Bros. Private Ltd. Calcutta) present the audited accounts of the Company for the year ended 31st January 1959.

Working: Production of yarn during the year under review has been higher compared to the previous year on account of larger number of spindles having worked per shift. Quality of cloth and yarn was as usual well received in the market, and the Company successfully introduced the hosiery yarn even in the distant market of Calcutta.

Trading conditions, however, remained unfavourable almost throughout the year. Poor oil-take of cloth led to the heavy accumulation of stocks with the Mills and dealers. The Government appointed a Textile Enquiry Committee to go into the problems facing the Industry and on the recommendation of the Committee, the excise duty was revised downward by way of relief from July, 1958. Notwithstanding this, there was not much relief from the burden of heavy stocks which Textile Mills were carrying. The yarn market also continued to be weak. The expectations now are that with the prospect of good crop in the coming season and consequent improvement in the food situation, there may be increased demand for cloth. The demand of yarn in recent months has improved a little due to increased demand from hand and power looms.

Rajpura: Extension of time under the Industries (D. & R.) Act for completion of this project has been obtained for another year. Steps to implement this project will be taken as soon as preliminaries are satisfactorily settled and import licences for the required foreign machinery for this project have been obtained.

The accounts for the year under review after providing for interest on debentures and other interest, managing agents' and directors' remuneration, Rs. 8,70,064 (Rs. 15,73,970) for depreciation, Rs. 2,80,422 (Rs. 6,89,548) as development rebate reserve, show a net profit of Rs. 18,81,864 as against Rs. 21,86,041 in the previous year. After setting aside Rs. 10,00,000 (Rs. 12,50,000) for taxation and Rs. 50,000 (Rs. 75,000) for wealth tax, there remains Rs. 9,18,531 (Rs. 8,67,353) including the amount brought forward from last year which the directors propose to distribute as follows:

To dividend on preference shares at 5 per cent. per annum (free of income-tax) for the year ended 31st January 1959 Rs. 77,313 (Rs. 96,550), to dividend on equity shares at 10 (10) per cent. per annum (free of income-tax) for the year Rs. 3,86,814 (Rs. 4,33,760), to amount of dividend short provided last year Rs. 969 (Rs. 376), to transfer to general reserve Rs. 2,50,000 (nil) and to carry forward Rs. 2,03,435 (Rs. 3,36,667).

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	56,71,090	Gross block	1,96,05,537
Share suspense account	10,268	Less—Depreciation	1,17,88,863
Debitures	30,00,000	Net block	78,16,674
Reserves	23,93,622	Other assets	6,395
Provision for taxation	19,88,816	Work-in-progress	30,73,186
Liabilities	1,14,88,021	Advances and deposits	5,17,662
Profit	2,03,435	Stock-in-trade	31,88,524
		Stores etc.	4,95,683
		Debits and advances	61,63,214
		Investments	13,69,757
		Cash	18,19,954
			3,04,203
	Rs. 2,47,55,252		Rs. 2,47,55,252

Sangameswar Coffee Estates Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Patco Agencies, Madras) submit the audited accounts of the Company for the period ended 31st March 1959.

Acreage: There has been no material change since the directors' last report except that the areas under Cardamom in Karadykhan and Kondakhan have been pulled out and it is proposed to bring them under coffee cultivation in due course. The total area under coffee is 1,162½ acres and cardamom covers 10 acres.

After providing for depreciation and all charges except taxation, the accounts show a profit of Rs. 2,54,816 (Rs. 4,87,747) to which is added the balance brought forward from last year of Rs. 13,432 (nil) making a total of Rs. 2,68,248 (Rs. 4,87,747). From this amount the directors recommend a dividend of 7 per cent. without deduction of tax on 3,50,000 preference shares up to 31st March, 1959 absorbing Rs. 24,500 (Rs. 25,557), transfer to taxation reserve Rs. 85,000 (Rs. 1,80,000), transfer to development reserve Rs. 35,000 (Rs. 75,000) and recommend payment of a dividend of 9 (9) per cent. on equity shares absorbing Rs. 1,08,000 (Rs. 1,08,000) leaving a balance to be carried forward to next year's accounts of Rs. 15,748 (Rs. 13,432) after writing off Rs. 60,656 for preliminary expenses and transferring Rs. 25,000 to general reserve.

Taxation: On the provisional assessment to Mysore Agricultural Income-tax a sum of Rs. 1,68,034 has been paid out of the total provi-

sion of Rs. 1,80,000 in the accounts for the period ended 31st March 1958. It is considered that the balance in the provision for taxation made last year will adequately cover the liabilities for Central Taxes including wealth tax. For the year under report, a provision of Rs. 85,000 has been made to cover taxation under all heads.

Debentures: Debentures of the face value of Rs. 1 lakh were redeemed through a market purchase during the year under review. Since the close of the last financial year, a further purchase of debentures of the face value of Rs. 50,000 has been made reducing the outstanding liability under this head to Rs. 5½ lakhs.

The crop harvested during the year amounted to 5,343 (8,507) cwt. at a cost of Rs. 110,24 (Rs. 80,69) per cwt. and this has been delivered to the Coffee Board and valued in the accounts at Rs. 2,25 (Rs. 212) per point. Outturn statements and valuation reports in respect of this crop have been received only partially and what has been shown in the accounts as still due represents the balance on the estimated valuation of Rs. 2,25 per point mentioned above.

The cost of production during the year shows a considerable increase on that of the previous year. Apart from the substantially lower crop contributing to the increase in costs, the effect of higher wages to labour in a full year and the adoption of higher scales of pay and allowances to the staff account for this significant rise. Nevertheless, the Estate expenditure at about Rs. 500 per acre is considered reasonable under present conditions.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	15,50,000	Gross block	18,24,855
Debitures	6,00,000	Less—Depreciation	68,427
Reserves	1,35,000		
Provision for taxation	96,966	Net block	17,56,428
Liabilities	2,81,477	Stock-in-trade	744
Profit	15,748	Stores, spare parts and loose tools	81,300
		Other assets	5,59,129
		Loans and advances	3,942
		Cash	2,77,648
	Rs. 26,79,191		Rs. 26,79,191

Harinagar Sugar Mills Ltd.

The directors of the above Company (Chairman: Narayanaswami Bannalal, Esq., Bombay) beg to submit the audited accounts of the Company for the year ended 30th September 1958.

The accounts show a net profit of Rs. 4,83,994 (Rs. 1,77,192) which includes the profits earned by the farms. This together with the amount brought forward of Rs. 21,427 (Rs. 19,236), makes a total of Rs. 5,05,421 (Rs. 1,96,428) which the directors have appropriated as under:

To development reserve Rs. 5,507 (nil), to investment reserve Rs. 1,00,000 (nil), to provision for taxation Rs. 3,00,000 (Rs. 1,00,000), to payment of dividend at 7½ (7½) per cent. free of income-tax Rs. 75,000 (Rs. 75,000) and to reserve for bad and doubtful debts Rs. 20,000 (nil). This leaves a balance of Rs. 4,914 (Rs. 21,427) which is proposed to be carried forward to next year.

During the 1957-58 season, the factory crushed 11,83,400 (45,87,700) maunds of sugarcane and produced 1,43,957 (1,42,740) bags of sugar. The sugar recovery obtained was 9.51 (9) per cent. This season also the workers of the factory frequently resorted to illegal slow-down strikes, resulting in poor working of the factory and recovery obtained. Looking to the frequent go-slow tactics of the workers, a lockout had to be declared. After protracted negotiations and finally an undertaking given by the workers, the mill was re-started.

The Company's Cane Farm earned an income of Rs. 1,03,823 (Rs. 2,00,537) during the year. The adverse climatic conditions this year also affected the cane supplies from the Farms. The title deeds of farm lands have been transferred in the name of the Company.

The Shrangila Food Products Ltd.—a subsidiary of this Company suffered loss during the year ended 31st March 1958. Looking to the financial position of the Company, the Directors have decided to forgo the interest due to the Company on the loans advanced to the said subsidiary, for the period 1st October 1957 to 30th September 1958.

SHOTTIK OVERSEAS ENTERPRISES

P. O. Box 233

EBUTE — METTA — NIGERIA

Are interested to represent manufacturers and/or sole exporters of all kinds of textiles, crockeries, cutlery, iron goods, leather goods, sports goods, cement, household goods, office equipments, ornamental goods, rain equipments, grocery goods, beverage, alcoholic drinks and children's toys. We are also importers of those products as enumerated above, and free valid samples for effective showroom display should accompany all offers to us. Also looking for Commission Agents in any country to cater for our interests by negotiating on our behalf.

Pankaja Mills Ltd.

The directors of the above Company (Chairman: Mr. A. T. Krishnaswami Mudaliar, Coimbatore) present herewith the audited accounts of the Company for the year ended 31st December 1958.

The net loss sustained by the Company for the year 1958 amounts to Rs. 8,11,738 and adding this to the loss brought forward from the previous years amounting to Rs. 13,17,124 there is a total loss of Rs. 21,28,862 which is carried forward. The managing agents have waived the minimum remuneration of Rs. 36,000 due to them for the year 1958 in view of the loss incurred by the Company.

As envisaged in their last year's report, the directors regret that the working of the mills during the year under review was very unsatisfactory resulting in a heavy loss. The prices of raw materials remained high and more or less steady while the prices of yarn produced by the medium and low spinning tendency. There was also a power cut for a period of nearly four months during the year which resulted in considerable dislocation of production.

The directors regret that the question of recommendation of a dividend does not arise in view of the absence of reserves and the heavy loss carried forward by the Company.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	15,00,000	Gross block	37,30,104
Liabilities	38,25,088	Less—Depreciation	19,70,041
		Net block	17,60,063
		Stock-in-trade	6,20,791
		Stores and spare parts	1,51,411
		Debits, deposits and advances	6,31,641
		Investments	3,751
		Cash	28,581
		Loss	21,28,862
	Rs. 53,25,088		Rs. 53,25,088

Jaybirpara (Doors) Tea Co. Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a loss, after charging all expenses, of Rs. 34,854 (Rs. 74,517) to which has been added the debit balance brought forward from last year of Rs. 62,442 (credit of Rs. 12,075) making a total debit of Rs. 97,296 (Rs. 62,442). The amounting to Rs. 21,377 (nil) and have transferred excess tax provisions made in previous years, a balance to be carried forward of Rs. 60,915 (Rs. 62,442). The directors regret that they are unable to recommend payment of a dividend. The amount to Rs. 28,028 (Rs. 28,286).

The size of the 1958 crop was a disappointment. It is clear that the effects of the serious yet been eradicated, and remedial measures are being continued. A crop of 6,362 maunds was secured and sold at an average price of Rs. 1.85 in season 1957, sold at an average price of Rs. 1.87 per lb.

Estimates for the current season have been framed for a crop of 7,000 maunds to be cost durably and crop to the 14th June, 1959, amounted to 1,449 maunds, compared with 1,279 maunds to the same date a year ago.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	7,00,000	Gross block	11,20,425
Reserves	4,51,384	Less—Depreciation	5,11,413
Provision for taxation	2,784	Net block	6,09,012
Liabilities	3,09,530	Stock of tea	4,24,878
		Stores, tools, etc.	1,92,318
		Debits, deposits and advances	64,244
		Investments	2,100
		Cash	1,71,096
	Rs. 14,63,648		Rs. 14,63,648

*Reserves are shown after deducting Rs. 60,915 being the debit balance in the profit and loss account.

N.B.—Figures within brackets are corresponding period of the previous year.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 15th July

The stringent conditions which had prevailed in the short-term money market since the beginning of the current month, have eased substantially in the last few days. With the slack season well under way, the return of funds to banks has once again gathered momentum. Most of the banks have turned lenders in the inter-bank call money market. This has resulted in a drop in interest rates. The rate among the Exchange banks and Indian banks now stands at 2½ per cent., as against 3½ per cent. a week ago, and that among the smaller banks has declined from 3½-4½ per cent. to 3-3½ per cent. House money at seven days' notice is being quoted at 3½-4½ per cent. and short-term deposits for one to six months at 3½-4½ per cent.

The change in the complexion of the market also reflected in the drop in Treasury Bill rate to 2.70 per cent. to 2.74 per cent. at 3 months. The amount offered is higher at Rs. 2.60 per cent. as compared with Rs. 2.05 per cent. last week. The market for next week is still unchanged at Rs. 2.05 per cent. There were sales of Intermediate Treasury Bills for Rs. 7 lakhs between 8th and 11th July at 99.326 per cent. and they are being offered at 99.331 per cent.

The Reserve Bank of India statement for the week ended 10th July 1959 discloses no worthwhile variations in the Issue Department except a drop of 5.5 crores in foreign securities and a corresponding rise in rupee securities. Notes in circulation are higher by no more than Rs. 31 lakhs. In the banking department, balances held abroad have one up by Rs. 1,27 crore; this makes good to some extent the decline in foreign securities, so that there is a net drop of only Rs. 3.73 crores in total foreign assets. Deposits of Central Government have fallen by Rs. 7.35 crores, while those of banks have risen by Rs. 1.16 crores. Loans and advances to Governments have gone up by Rs. 2.72 crores; so also other loans and advances by Rs. 3.91 crores. Investments show a decline of Rs. 5.21 crores.

A rise of Rs. 4.09 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 3rd July 1959. Time deposits have, however, declined by Rs. 5.36 crores, as also inter-bank borrowings by Rs. 5.17 crores. Borrowings from the Reserve Bank have moved up by Rs. 7.42 crores and those from the State Bank by Rs. 1.75 crores. Advances show a sharp rise of Rs. 19.88 crores, consequent on the demand for bank credit to take up the new Central loans. Bills purchased at discount are higher by Rs. 56 lakhs. There is a rise of Rs. 6.27 crores in the investment portfolio, but this does not fully reflect the banks' investments in the new loans. Cash balances have risen by Rs. 31.15 crores and money at call and short notice by Rs. 5.89 crores.

The gilt-edged market continues to rule firm, there has been a further uptick in prices, due to persistent demand for short and medium-dated issues. The Reserve Bank's open market operations have been unchanged; the Bank continues to be a seller of the recent two Central Government issues at the same rate as a week ago, that is, at 5½ per cent. The 3 per cent. 1960 Conversion Loan has edged a sharp rise of 35 p.p. to Rs. 74.15. 3 per cent. 1970-75 has advanced by 20 p.p. to Rs. 91.90 and 3 per cent. 1966-68 by 30 p.p. to Rs. 94.85. 3 per cent. 1963-65 has advanced by 10 p.p. to Rs. 97.20 and 3 per cent. 1959-61 by 5 p.p. to Rs. 100. 2½ per cent. 1962 shows an improvement of 10 p.p. to Rs. 97.50 and 2½ per cent. 1961 a similar rise to Rs. 98.10. 3½ per cent. 1961 has provided an exception with a drop of 10 p.p. to Rs. 100.20, as also 3½ per cent. 1965 which has shed 5 p.p. to Rs. 100.05. 1 per cent. 1964 is marked up by 5 p.p. to Rs. 100.20. 1 per cent. 1967 and 1968 by 10 p.p. each to Rs. 99.50 and Rs. 99.30, respectively. 8½ per cent. 1974 has advanced by 10 p.p. to Rs. 99.40.

State loans rule steady with some enquiries for 4 and 4½ per cent. loans. The volume of business done, however, is not large, as buyers are keenly awaiting the terms of new State issues scheduled for next month.

In the foreign exchange section, the rupee is a shade weaker in terms of the U.S. dollar. This is in consonance with a similar trend in sterling broad. Banks' selling rate for U.S. dollars (T.T.) as gone up from Rs. 475.75 to Rs. 476 per \$100 and air buying rate from Rs. 472.50 to Rs. 472.75 per \$100. In New York, spot sterling has declined from 281.23-281.26 cents to 281.16-281.19 cents. Three months' forward has, however, moved up from 281.06-281.08 to 281.13-281.16 cents.

TANNED HIDES IMPROVE

(From Our Own Correspondent)

MADRAS, 13th July

There was no appreciable change in the tone of the hides and skins market during the week. Arrivals were of usual volume and shippers were bearing the stocks at firm prices. As U.K. enquiries were good, prices ruled firm in the tanned hides and raw markets were kept up in sympathy. Exporters paid higher prices on a few selected skins, but were resisting the asking prices at origin.

Tanned goat skins increased by 3d. and tanned sheep skins by 2d.

In the June tanned skins public auctions, tanned goat skins selected lots of good marks appreciated by 2s. to 2s. 6d. per lb. and sheep prime nanges 2s. to 3s. per lb. and other descriptions 1s. to 1s. 6d. on May levels. As the consignors had secured high limits on several parcels, 75 per cent. goat and 50 per cent. of sheep skins only were sold.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 15th July

The firm trend noted in the bullion market towards the closing sessions last week gathered momentum during the major part of the week under review. The market, however, developed a sagging tendency today, although a recovery ensued again at the close. The earlier firmness was engendered by persistent bull support and bearing in silver on reports that arrivals of Tibetan coins had practically stopped on account of heavy rains on tracks leading from Tibet to India. There was also good buying by uncountried interests. Further, some Calcutta operators who had sold previously turned out as buyers. Consequently, silver registered a distinct improvement. In sympathy, gold tended to move up. Today, both the metals ruled easy, as follow-up support was lacking, but the fall in prices was negligible.

July settlement in silver was well supported and gradually advanced from Rs. 194-14 at the beginning of the week to touch Rs. 197-6 yesterday. It, however, receded to Rs. 196-10 today but finished at Rs. 197. The net gain over the week is Rs. 2-2. August settlement, spurred from Rs. 194-11 to Rs. 196-15 and, after declining to Rs. 196-5, recovered to close at Rs. 196-11. The backwardation rate (buddi in favour of bulls) for July settlement widened from As. 3 last week to As. 6-6 on the 10th inst. On Saturday, the settlement was quoted at par with the August settlement. Thereafter, the backwardation rate widened and stood at As. 6 yesterday. Today, it was an anna lower.

Ready silver enjoyed good buying enquiry and moved up to touch a high of Rs. 197-3 yesterday as against Rs. 195-6 last week. After easing to Rs. 196-7 today, it finished higher at Rs. 196-13. The daily average arrivals of silver were 16 bars, while the offtake was 15 bars. The floating stocks of silver are reported to be around 350 bars.

In the gold section, July settlement opened the week at Rs. 118-12, as against Rs. 118-12-6, and improved by stages to Rs. 119-2-6 yesterday. It receded to Rs. 118-13 today before finishing at Rs. 118-14. August settlement recorded a rise of As. 8 over the week, today's closing rate being Rs. 119-8, the highest level touched during the week was Rs. 118-12 yesterday. The backwardation rate for July settlement narrowed down from As. 9-6 last week to less than As. 8 throughout the week, except on Thursday when it was As. 8, and was actually just As. 5 today. The bulls in this settlement were, therefore, not obliged to pay a margin of Rs. 10 per tola.

Ready gold, which stood at Rs. 119-4-6 last week, improved to Rs. 119-11 on the opening day. After going to Rs. 118-13 on Saturday, it recovered thereafter and touched Rs. 119-5 yesterday. Today, it was quoted at Rs. 119-2. The daily average arrivals and offtake of gold were 3,400 tolas and 2,000 tolas, respectively. The floating stocks of gold are estimated at 30,000 tolas.

Ready silver in the London bullion market rose from 78d. to 78½d. per ounce and forward silver from 77½d. to 77½d. Silver in New York, however, continued to remain unchanged at 91.375 cents per ounce. Ready gold in London moved up further during the week from 249s. 9½d. to 249s. 11d. owing to the persistent easy trend of the pound sterling vis-à-vis the dollar. The latest available dollar rate for gold in London is \$35.114-\$35.134 per ounce, as against \$35.104-\$35.124 a week before.

The following comparative table shows at a glance the trend of the market during the week under review:

	15-7-59	Highest	Lowest	8-7-59
Rs. a. s.	Rs. a. s.	Rs. a. s.	Rs. a. s.	Rs. a. s.
Ready (99 fine Mint)	119 2 6	119 8	118 13	119 4 1/2

TRADING IN LINSEED OPTIONS

(Messrs. A. Bradley and Co.)

CALCUTTA, 13th July

Although activity in the linseed market was limited and the general condition of the market was dull, prices were maintained and there was very little movement either way. Crushers showed some interest in forward delivery but sellers were reserved. Business in oilseeds was negligible with overseas buyers pausing. Trading in the oil market was slow and buyers showed a meagre interest at lower prices only.

Trading in the linseed options market for September delivery will commence on the 15th inst., under the auspices of the Calcutta Wheat and Seeds Association. With a view to curbing possible speculative elements, margins have been fixed at Rs. 2 per maund if prices rule above Rs. 24 per maund, Rs. 4 if above Rs. 25, and Rs. 6 if above Rs. 27.

The latest available quotations are: Ready-July Rs. 22.50 and August Rs. 22.75 per maund.

COTTON FUTURES SUBDUED

(From Our Own Correspondent)

BOMBAY, 15th July

The cotton futures market was subdued during the week. Selling was not aggressive, nor was buying, as and when it emerged, brisk. Prices moved erratically in a narrow range. The overall trend was downward in both the contracts. But over the week, the fall in the price of the new crop contract, Jarilla March 1960, was more sharp than in the current crop contract, Jarilla August 1959. The tight statistical position of cotton, the shortage of supplies of good quality cotton in the ready section and the consequent steadiness of spot values discouraged heavy selling in August. Reports of favourable weather in most of the leading cotton tracts was the main factor responsible for the easiness in March.

I.C.C. Moglai Jarilla August 1959 opened the week at Rs. 698 and gradually receded to Rs

Newly built dwellings in West Germany have become larger and more comfortable since 1952. Just published statistics disclose that the living space per new dwelling increased by 18.6 per cent while the number of rooms per new flat mounted by 15.5 per cent. from 1952 to 1958. Of the publicly assisted building projects last year, 104,500 were single family homes, with one or two flats as compared with 65,000 in 1957. New dwellings have been built at an average rate of half a million in recent years. For 1959, experts predict a new high of some 560,000 dwellings.

CONSUMER PRICE INDEX NUMBERS FOR WORKING CLASS

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 16th July 1959.

[illegible]

Sl. No.	Name of the State	Year	Amount	Date	Particulars	Rs.		Paise		Total	Date	Particulars	Total	Date	Particulars	Total

MARKET GOSSIP

(Concluded from page 83)

Above all, a pertinent question is the quantum of financial assistance the co-operative farming societies will need. As already stated, Mr. Nehru has averred that some discrimination will be permitted as between co-operative farming societies and private landowners, in that the farmer will have preferential treatment in the matter of supply of credit, fertilisers and other facilities. Only, no one seems to have calculated what such preferential treatment will mean in terms of money. Some interesting calculation of the cost of co-operative farming has been made by the Hindu. It is based on the loan (Rs. 32,125) and subsidy (Rs. 15,375) which the Government of Madras has offered to a co-operative farming society which owns in all no more than 106 acres; to this has to be added the cost of the services of a senior inspector of co-operative societies and a field assistant to be made available to the society by the Government, say, at a cost of Rs. 2,000 a year. On this basis, the financial assistance comes to the tune of Rs. 500 per acre. Given this facility, a private owner can certainly do better than a co-operative society. Be that as it may, the more interesting question is what such assistance will mean on all-India scale. There are 320 million acres of cultivated land in India. Assuming that all this land will be brought within the co-operative fold, it will, on the basis of Rs. 500 per acre, cost Rs. 16,000 crores. The area under foodgrains alone is 270 million acres; to bring it under co-operative farming, the State must make available (on the basis of Rs. 500 per acre) Rs. 13,500 crores. It is true that the advocates of co-operative farming do not visualise the immediate conversion of all private land into co-operative ownership. Even so, it is well to ask that co-operative idealists should know what it will cost to make their dreams come true. This would enable them to acquire some sense of down-to-earth realism.

Four days from now—on Monday the 20th inst.—a ministerial meeting of Austria, Britain, Denmark, Norway, Portugal, Sweden and Switzerland will commence at Stockholm to continue negotiations on the establishment of an outer seven free trade area. The discussions will centre round the plan drawn up by the Working Party of officials after deliberating at Stockholm for thirteen days early last month. The latest reports from Europe suggest that there may not be any basic changes in the plan, which provides, *inter alia*, for complete abolition of industrial tariff over a ten-year period, removal of quantitative restrictions on industrial products, special agreement on agriculture, and separate treatment for fish and other marine products. The expectation seems to be justified. Denmark, which was at one time very much hesitant to join the plan on fears that the plan involved the risk of a trade war in Europe and that its exports of agricultural products to West Germany, a Common Market country, would suffer a distinct setback, is now enthusiastic about the plan. This change in attitude has followed the assurances received by Denmark from Britain, Sweden and Switzerland to the effect that its agricultural interests would be fully safeguarded if it joined the outer seven free trade area.

Under a new agreement reached between Britain and Denmark, the former will abolish the 10 per cent. tariff on Danish bacon in two stages, the first on 1st July 1960 and the second a year later and do away with the 10 per cent. tariff on canned pork luncheon meat (5 per cent. on some types), blue cheese and canned cream on 1st July 1960. The cost of the concession on bacon, estimated at £6.6 million annually, will, it is said, be borne by the Exchequer and not by U.K. farmers.

Sweden has followed Britain in agreeing to adjust import duties on Danish bacon, canned meat, sausages, potatoes, canned milk, butter, eggs and egg products to Denmark's advantage. The adjustment will not mean abolition or reduction of duties. Only, the duties will be unchanged, but 60 per cent. of the total proceeds will be refunded to Danish producers. On the basis of the present volume of trade, this 60 per cent. will work out to about 10 million Swedish crowns (£689,000) per annum.

Switzerland also has assured Denmark that it is prepared to increase its imports of Danish agricultural products, particularly slaughter cattle, meat and butter. With the agreement reached between Denmark, on the one side, and Britain, Sweden and Switzerland, on the other, the way would appear to be now open for a general agreement among the "Seven" at the forthcoming ministerial meeting at Stockholm. And, if everything goes well, the outer seven free trade area is expected to function from 1st January 1960.

Now that the chances of the "outer seven" getting together have distinctly improved, the six Common Market countries have begun to think seriously about the impact of the new area on their external trade. Barring France, which has remained indifferent, since it feels that its exporters will not suffer, at least for many years, the general impression is that the new area will be a very lively rival grouping. In particular, West Germany and Italy have both come round to the view that a rival free trade area will damage their economic interests considerably. About ten days ago, Dr. Erhard, West German Vice-Chancellor and Economics Minister, declared that the formation of separate economic communities in Europe would increase friction. Stressing that there should be no new trade blocs in Europe, Dr. Erhard expressed the hope that the West European nations might still reach agreement on a wider free trade area. Holland also is strongly in favour of an economic association of all the seventeen O.E.E.C. countries.

The West German point of view is expected to be pressed at the special Common Market Committee meeting to be held at Brussels shortly. It remains to be seen whether West Germany will

succeed in persuading France to accept its view. The French Government is now flushed with the success which it has achieved in strengthening the economic position of France and is determined to take full advantage of its strategic role in the Atlantic alliance.

An important point widely recognised by practically all the "Seven" and the "Six" is that, whatever steps they take should not jeopardise the ultimate objective of establishing the seventeen-member European free trade area. If this objective is to be achieved, it is imperative that the two groups must refrain from antagonising each other in the months ahead. It is, therefore, gratifying to find that the fifteen-nation Council of Europe's Political Committee has asked the O.E.E.C. to mediate between the "Six" and the "Seven" for the creation of an area embracing both the blocs. The United States, too, is advising the West European Governments to patch up their economic differences through an early settlement of this question.

CO-OPERATIVE FARMING—II

(Concluded from page 99)

Thirdly, even after taking into account all the facilities for the training of gazetted officers, inspectors, block level officers, junior officers and non-officials organised by the Government, the Reserve Bank and the All-India Co-operative Union, one feels doubtful about the availability of the required trained personnel in good time.

The proposed village co-operative farms, under the Nagpur Resolution, may provide administrative convenience for collecting agricultural surpluses, since it may be easier to deal with fewer organised large units than a very large number of small, scattered cultivators. But this is likely to reduce both the market arrivals and the marketable surpluses for some time at least, that is, until a sufficiently high rate of production is attained. The ideas of higher standard of living inculcated through national Extension Services and the growing realisation of the right to at least the minimum standards of comforts to be guaranteed under popular acceptance of a State-sponsored programme, are very likely to stand in the way of the formation of marketable surpluses. What comes to the market (market arrivals) at present for urban consumption is not merely the marketable surplus (representing the excess over the requirements of farmers) but includes also a good deal of forced sales which take place because of farmers' anxiety to hold land or what appears in the guise of "land revenue as the first charge," and interest on borrowings. But when both these things are provided by the co-operatives, sales now being effected to meet them as first priority will be given a lower priority by farmers. This in turn will affect the marketable surplus and operate as a factor for higher prices. One of our studies completed a few years back in Uttar Pradesh showed that, amongst agriculturists (excluding agricultural labourers and those following agriculture as a part-time occupation) only 41.3 per cent. families were self-sufficient so far as their annual requirements were concerned; of the total amount of food consumed, 28.6 per cent. was purchased (71.4 per cent. being met by own farms); and the percentage of actual sales was 198 of real marketable surplus. There will thus be a potential hindrance to the mobilisation of surplus, as a result of introduction of co-operative farming.

Besides, there are also possibilities for the development of an organised opposition to the imposition of development levies which is very necessary for successive economic planning, especially because the third and successive Plans will need greater internal resources in the form of agricultural taxes, land revenue, water rates and other development levies. In short, the mobilisation of rural savings. The total outcome of co-operative farming may, therefore, be a slackening in the rate of economic growth, particularly at a time when an acceleration in it is urgently needed.

(To be concluded)

COMMERCE AND INDUSTRY

(Concluded from page 108)

and vegetables. With the removal of different rates of duty in these countries, the duty levied by the Benelux countries has gone up. This will adversely affect India's exports of fruits, mainly cashew kernels and walnuts, to these countries.

Some of the vegetable oils exported from India will face considerable difficulties in the C.M. countries. The region constituting the European Common Market is the largest single market for fats, oils, and oilseeds. These countries import nearly one-third of the oil entering world trade. Though domestic production is quite substantial, nearly half of the requirements are met from imports. Overseas territories supply about 22 per cent. of their total imports. The U.S.A. figures as another major

source of oils. India's share has, of late, become more or less negligible; it was no more than Rs. 66.51 lakhs in 1958. Nevertheless, India attaches much importance to the export of its vegetable oils (both essential and non-essential oils) to the C.M. countries. In respect of exports of its essential oils, including sandalwood oil and lemongrass, India enjoys a special position. Its exports of essential oils, therefore, are not likely to be affected. As regards non-essential vegetable oils, India is already facing competition from the overseas territories of C.M. countries. When assistance is made available from the European Social Fund and the European Investment Bank, these countries will be able to develop domestic production of vegetable oils. The products of overseas territories will enter the C.M. countries duty-free; this will ensure supplies to metropolitan countries and also provide export market for the territories. The C.M. countries have already entered into agreements with some countries like Tunisia, Morocco and Libya, allowing preferential entry of goods. Negotiations regarding tariffs on oil from other countries are yet to be commenced. India will do well to impress upon the C.M. countries the necessity to provide preferential treatment to oils from India. The Common Market spokesmen have stated more than once that they will give due consideration to the difficulties of primary exporting countries arising from the tariff changes made among the Six. It remains to be seen how far this assurance will be implemented.

To sum up, India exported in 1958 goods worth Rs. 39 crores to the Common Market of the Six, as against its total exports to all countries of Rs. 579 crores. About 40 per cent. of its exports to the Six consisted of agricultural commodities valued at about Rs. 15 crores. Of these, coffee, tea, cotton and wool accounted for as much as Rs. 9.75 crores, or about 65 per cent. It will be seen from the foregoing account that the competitive capacity of these goods—India's principal items of agricultural exports to the Six—will not be materially affected. Exports of unmanufactured tobacco, cashew kernels and non-essential vegetable oils, however, may have to face severe competition. But the markets for these items in the Six are relatively small, the aggregate value of their exports being no more than Rs. 1.25 crore in 1958, or about 8 per cent. of total Indian exports of agricultural commodities to the C.M. countries. Moreover, it will take considerable time for the overseas territories of C.M. countries to compete effectively with India, because their development cannot be achieved overnight. In view of all these considerations, it will be pertinent to conclude that the adverse impact of the Common Market on exports of agricultural commodities to the countries concerned will not be as serious as is generally believed. Then, there is also a positive side to it. The economic integration of the C.M. countries will naturally pave the way for their rapid industrial growth, probably ensuring for the region as efficient an economy as of the U.S.A. This will naturally increase the demand for industrial raw materials. Some benefits are bound to accrue to India from such a development, provided this country takes care to improve its economic efficiency.

Notice

THE SIMPLEX MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Transfer Books of the Company will be closed from 30th July 1959 to the 14th August 1959, both days inclusive.

The Dividend, if sanctioned, will be paid on and after Monday the 24th August 1959 to those Shareholders whose names stand on the Register of the Company on the 14th August, 1959.

16,800 new Equity Shares, if approved at the Extraordinary General Meeting to be held on the 23rd July, 1959, shall be issued and offered to the holders of the existing Equity Shares as on 14th August 1959 in the ratio of one new Equity Share for every five existing Equity Shares held by such holders.

Shareholders are requested to notify immediately any change in address to the Company.

CONCENTRATION OF ECONOMIC POWER

ONE of the misconceptions under which the Congress Party and other socialists are labouring hard pertains to concentration of economic power. When leftist politicians—and they are in great majority today—talk on the need for preventing concentration of such power in a few hands, they assume two things. One is that either there is already too much concentration and it should be broken up or there is anger of it happening and, therefore, steps should be taken to prevent it, or there are both. Secondly, the principle of egalitarianism should be carried to a point at which one will not have more economic power than the other has. This means that everyone should have not only equality of opportunity but also equality of ownership. Since this latter conception is 'topian, one can straightaway dismiss it as an impractical ideal. All that is necessary is to remind the reader that, although all men are born equal, all do not have the same mental and physical equipment and that there are, therefore, bound to be differences in economic status between man and man. It is an undeniable fact that these differences have existed all through the long human history and exist even today in the free and communist societies alike.

The first assumption is a gross exaggeration, not a myth. Those who complain about concentration of economic power refer to ownership and managerial control over production and distribution. A modern State has such enormous powers of intervention that it is not very much of an advantage for one to build and possess an industrial or trading empire. In India, in particular, the Government has a supreme hold over industries and trade. There is hardly anything worthwhile that a business man in this country can do without consulting the Government and securing its permission. One can freely register a company, but, thereafter, every action of the entrepreneur is subject to Government sanction. The issue of capital and its terms, change in board of directors, the type of products to be manufactured, terms and the extent of foreign capital participation, the appointment of foreign personnel, the import of raw material and stores, the price of the finished products, the amounts to be ploughed back in business and distributed to shareholders, the wages and other benefits to workers—all these aspects of a business are liable to be controlled, and are in fact being controlled in the vast majority of cases, by the Government. Consequently, if there is any concentration of economic power, it is in the hands of the Ministers, that is, the party in charge of the Government. It is, therefore, not fair for them to accuse the business community of designing and promoting concentration of economic power in a few hands.

Partly due to historical reasons and partly to force of circumstances, several industries have been in the hands of a limited number of business men. The managing agency system is a singular feature of India's industrial progress. Whatever its drawbacks, there is no doubt that it has contributed a lot to even the modest advance that India has made in this sphere. Even the biggest industrial houses are not as big as compared with the giants in the Western world. Further, there is a gradual diffusion of ownership and management control. There are hardly any family-owned big industries in this country now. The tax laws are such that partnerships and private limited companies have yielded place to public limited companies. Even the few that exist are bound to follow suit sooner or later. More and more people are beginning to appreciate the value of investing their savings in industrial securities, and their number will rapidly increase when agriculture ceases to be a source of short-term

investment to non-agricultural classes. The natural trend is thus for distribution of ownership of industries over a wide circle of the people. If the authorities are really anxious to prevent concentration of economic power, they should take positive steps to strengthen this trend, instead of merely resorting to slogan-mongering.

Unfortunately, some of the official policies are not conducive to a speedy growth of wider ownership of industries. Through taxation, individual savings, for instance, are penalised to a greater extent than corporate savings. Income from investments belonging to an individual is treated as unearned income and charged to a higher rate of tax. The Labour Law and the Company Law are such as to retard the expansion in the number of industrial entrepreneurs. Consequently, only the existing industrialists have to take on more and more of manufacturing activity. This, in turn, leads to an increase in economic power in the hands of a limited number of industrialists. Instead of establishing new companies for undertaking new lines of manufacture, the existing companies themselves take them up as separate branches of their business. The result is that a source for expanding the number of investors is denied to the community. In some cases, new lines of manufacture are entrusted to wholly-owned subsidiaries. Here, too, the result is more or less the same.

There are three partners in every business—the shareholders, the Government and the labour. Nowadays, the last of these three is as powerful as the second. It is, therefore, incorrect to say that those who own and manage a company or a series of companies have all the powers in their hands. The trade union leaders, with hardly any stake except their popularity with workers, also wield enormous powers. This aspect of industrial structure is scarcely presented to the public by the critics of the private sector.

Again, the rapid expansion of the public sector in the spheres of trade and industry is providing a new source of vast concentration of economic power. The three steel plants alone in the public sector are equal, in terms of economic power, to both Tatas and Birlas combined. After the third Plan, they will command even more power than these two topmost business houses in the private sector. And there are

several other large enterprises in the hands of the public sector and several more will come to be possessed by it in the coming years. In the case of companies in the private sector, at least a good part of the share capital is owned by investors other than the managing agents or the directors. The Government is the sole proprietor in the case of public sector concerns, with the result that an enormous amount of economic power is concentrated in the hands of Ministers and bureaucrats. As compared with this concentration of power, the one that is supposed to exist in the private sector pales into insignificance.

Usually, the objectionable types of concentration of economic power are monopolies and the like, indulging in restrictive practices that are harmful to consumers and try to throttle new inventions which will bring immense benefit to the community in general. If there are such unhealthy combinations of power in this country, they deserve to be liquidated. There are, however, no such monopolies in this country. It is true that, due to a variety of causes stemming from the development Plans, certain enterprises are enjoying monopolistic or near-monopolistic conditions. But these are purely of an adventitious character and will lose that status in course of time; in any case, most of these enterprises are strictly controlled by the Government, in order to safeguard the interests of the public.

U.S. STEEL STRIKE

THE unique position which the U.S. occupies in the free world justifies as well as explains the world-wide interest the steel workers' strike in that country has evoked. The strike, which commenced on 15th July, affects 500,000 workers in that key industry and another 20,000 workers in other industries; an additional 50,000 workers, it is computed, are likely to be affected. It is a sequel to the refusal of the 12 major steel companies, which account for 90 per cent. of the U.S. steel output, to grant the demand for a 15-cent-an-hour increase in the workers' wages which average about \$3.10 an hour. Prolonged negotiations to reach a settlement proved abortive and the workers decided to stage the sixth major strike since the end of World War II.

A steel strike in the U.S. is by no means an unusual event. The industry negotiates long-term settlements every time and, when each settlement comes up for revision, there is nearly always some showdown or resort to strike. But what invests the present strike with a new significance is the inflationary context in which the workers' demands have been rejected. Prejudiced political observers outside the U.S. might be inclined to attribute the strike to some unjustifiable attitude on the part of the employers. But this would be contrary to facts. Actually, the U.S. steel workers are among the highest paid workers in the U.S. or elsewhere. Thus, the hourly wage rate in the U.S. steel industry averages \$3.10, as against \$1-\$1.25 in Switzerland and 80-90 cents in Germany. The U.S. steel managements are understandably apprehensive over the fact that any further rise of workers' wages will price American steel and steel manufactures out of the world markets. The workers' representatives argue that there have been significant increases in productivity which justify their demand for higher wages, though it is generally admitted that such increases are due to large investments on new equipment. They further contend that profits of steel companies are high enough to permit an increase in wages without raising the prices of steel. It is obviously difficult to estimate in their entirety the repercussions of the strike. During the first half of the current year, the U.S. steel industry produced steel ingots at a record annual rate of 10 million tons. It is believed that more than

The Bank of Baroda, Ltd., too, has earned slightly higher profit of Rs. 14.19 lakhs in the half year ended June 1956, as compared with Rs. 13.34 lakhs in the corresponding period of last year.

Directors have declared an interim dividend of Rs. 3.50 per share, against Rs. 3.00 each and Rs. 1.50 per share of Rs. 25 each and Rs. 1.50 per share, subject to deduction of tax at the prescribed rate. This works out to a net distribution of Rs. 2.25 per share of Rs. 50 and Rs. 1.50 per share of Rs. 25 each, against Rs. 2.00 and Rs. 1.50 per share, respectively, for the first half of 1955. The interim dividend payable is Rs. 8.75 lakhs, as against Rs. 7.50 lakhs in the corresponding period of 1955. Rs. 47 lakhs to be carried forward, including Rs. 3.08 lakhs brought in from last year's account.

SHARE MARKET EASY FURTHER FALL IN PRICES

(From Our Own Correspondents)

BOMBAY, 23rd July

FOR the second week in succession, the share market displayed an easy tone. There was a further marking down of prices all round this week, though the losses were less pronounced than in the previous week in most of the leading counters. There was constant bull liquidation due to uncertainty over the dividend of Tata Iron and Steel Company, Ltd., which is expected to be announced this evening. Rumours about the prospect of extending the margin system, which is now confined only to two scrips, namely, Tata Ordinaries and Indian Irons, to a few other speculative counters also prompted selling. Renewed fears about the L.I.C. coming out to unload a part of its investments in equities and the uncertainty about the terms of the T.I.S.Co. issue also restrained buyers. The technical position of the market is now said to be good, thanks to the large corrective liquidation by bulls.

Tata Ordinaries retreated from Rs. 193.75 to Rs. 190 before staging a short-lived recovery to Rs. 193 yesterday. The proximity of dividend announcement and anxiety over the quantum of distribution caused liquidation at the above level, bringing the shares down to Rs. 190.75 at the close of business today. Indian Irons dropped from Rs. 25.15 to Rs. 24.72 and, after an improvement to Rs. 25.05, gave way to Rs. 24.68 at the close.

Textiles were erratically lower. In the absence of any encouraging factors, they followed the lead of steel shares. Bombay Dyeings staged an early spurt from Rs. 65.40 to Rs. 65.90, but soon reacted to a low of Rs. 64.50. After a recovery to Rs. 65.60, they closed at Rs. 65.20. Centurys came to be done at a high of Rs. 55.50, as against last week's closing of Rs. 54.8, but the earlier gain was more than wiped out today when the shares finished at Rs. 54.50. Kohinoors provided an exception to the general trend with a rise of Rs. 6 over the week to Rs. 296. The shares were done early in the week at Rs. 302. Central Indias too gained Rs. 1 to Rs. 97, while Finlays suffered a loss of Rs. 1.50 to Rs. 272.50. Khatas were done Rs. 3.75 lower at Rs. 233.75 and New Greats Rs. 6 down at Rs. 184. Shree Nivras Cottons put on a rupee to Rs. 171 and Standards Rs. 5 to Rs. 558. Simplex were marked down by Rs. 4.50 to Rs. 180 and Svadeshis by Rs. 1.25 to Rs. 238, while Tata Mills staged a spurt from Rs. 37.50 to Rs. 42 on interested buying from some quarters.

Bank shares were easy, presumably due to cut in dividends of some banks and prospect of more banks following suit. Central Banks which had reduced the interim dividend from Re. 1.50 per share, subject to tax (or Re. 1.33 net), dropped by Rs. 3.30 to Rs. 49.70 and their new shares by Rs. 3 to Rs. 50. Bank of Indias lost Rs. 2.50 to Rs. 117.50 and their new shares Rs. 2 to Rs. 122.50. Union Banks were 20 nP lower at Rs. 6.72 and United Commercial Rs. 1.50 lower at Rs. 61.50.

Electricity shares presented a mixed trend. Ahmedabad Electrics gained 20 nP to Rs. 91.70. Bombay Suburbans, too, were marked up by Rs. 1.25 to Rs. 107.75 and Surat Electrics by 25 nP to Rs. 107.50. Andhra Valleys moved up by Rs. 6.25 to Rs. 1,172.50 while Tata Hydros shed 50 nP to Rs. 120 and Tata Powers Rs. 2.50 to Rs. 1,242.50.

Sugar shares were subdued, under the lead of Belapur, which declined from Rs. 318.50 to Rs. 312. Bhopals changed hands 20 nP lower at Rs. 24.24 and Chandgoes Rs. 1.25 down at Rs. 28.25. Walchandnagars dipped by Rs. 10 to Rs. 310, while Phaltans were a shade better at Rs. 160.50. Cement shares too were featureless. Associated Cements were a little erratic. After gaining from Rs. 155 to Rs. 156, they fell back to Rs. 152.75 on Tuesday. After an improvement to Rs. 154.75, they gave way to Rs. 153 at the close. Digvijays lost on balance Rs. 1.50 to Rs. 153. Orissa Cements were a fraction lower at Rs. 16.88 and Jaipur Udyogs at Rs. 11.08.

In the Engineering and mining group, Alcock Ashdowns recorded a gain of Rs. 2 to Rs. 257, while Tata Locomotives fluctuated widely between Rs. 220.00 and Rs. 211.50 before closing at Rs. 216.25 with a loss of Rs. 3.25 over the week. Premier Constructions were pushed down from Rs. 359 to Rs. 348. Mahindras were 20 nP lower at Rs. 213.8. Larsen and Toubros were, however, picked up 25 nP higher at Rs. 22.80 and Cooper Engineering gathered Rs. 2.50 to Rs. 153.50. Shivrajputs put on Re. 1.50 to Rs. 81.50, while Indian Coppers lost 6 nP to Rs. 4.08.

Shipping shares were listless. Scindias moved between Rs. 18.16 and Rs. 17.84 before finishing 16 nP lower on balance at Rs. 17.84. Great Eastern Shippings suffered a similar loss at Rs. 21.96. Bharat Lines, however, provided an exception with a gain of 44 nP to Rs. 13.40. On the announcement of a maiden dividend of 5 per cent. for the year ended March 1959, Hindustan Motors hardened from Rs. 10 to Rs. 10.80 before finishing at Rs. 10.68. Premier Automobiles staged a sharp rise of Rs. 3 to Rs. 128.

In the miscellaneous group, Bombay Burmahs (old) drifted down from Rs. 546 to Rs. 531.50, but gained partially to close at Rs. 537. The Partly-paid shares were, however, unchanged at Rs. 190. National Rayons slipped back from Rs. 351 to Rs. 338.50 and after recovering to Rs. 331.50 again dropped to Rs. 344.50. Gwalior Rayons shed 42 nP

to Rs. 21.24. Tata Chemicals lost 48 nP to Rs. 17.81 and Ta a Oils Re. 1 to Rs. 68, while Poly-Chems shot up by Rs. 9.50 to Rs. 108. Voltas declined by Rs. 2.50 to Rs. 168.50 and Wincos by a similar extent to Rs. 206.50. Killick Industries gained Re. 1 to Rs. 149. Indian Dyestuffs rose sharply from Rs. 745 to Rs. 925, while W. H. Bradys were further marked down by Rs. 9 to Rs. 386. Ceat Tyres lost Rs. 2 to Rs. 176.

Madras Stock Exchange

MADRAS, 22nd July

The Madras Stock Exchange ruled easy during the week under review, with values of many scrips drifting lower. The easiness was due to bearish advices from other markets and lack of fresh buying support. Tea shares encountered selling, despite reports of good demand for export tea at higher prices at the recent Cochin auctions. For operators would appear to be concerned over the continuing rise in cost of production. In sympathy with teas, rubbers and coffees were subdued. Textiles were generally dull. Even reports that Burma had bought a sizable quantity of cotton yarn (about 10 million lbs.) and that Indonesia had concluded a deal with the State Trading Corporation for the purchase of 5 million lbs. of yarn failed to impart strength. The miscellaneous section was devoid of any special features, the general tendency of prices being downward. A few selected counters, especially in the sugar section, however, tended to move up on enlarged buying enquiries.

Among sugar shares, United Breweries advanced Rs. 7.00 to Rs. 457.00. Kirlampudis spurred by Rs. 4.50 to Rs. 77.00. Indias and Travancore picked up 10 nP each to Rs. 12.20 and Rs. 12.50, respectively. Mysore were fully maintained at Rs. 49.50. Cauverys, however, came in for selling and dropped Re. 1.50 to Rs. 117.00. Decans lost 10 nP to Rs. 12.45. E.I.D.s eased by a like amount to Rs. 39.75. E.I.D.s inter dividend announced last week, was 7.1/7 per cent. taxable, which is equivalent to 5 per cent. tax-free. The cash value of the previous year's dividend is thus maintained this year too.

In the tea group, Haileyburias fell by 60 nP to Rs. 19.15. Balanors shed 25 nP to Rs. 20.25. Ouchterlony declined by 15 nP to Rs. 5.50 and Periakaramalis by 4 nP to Rs. 4.12. Chembras and Kalasas lost a naya paisa each to Rs. 4.27 and Rs. 4.02, respectively. Kili Kotagiris were neglected at Rs. 8.30, as also Twyfordis at Rs. 17.00 and Peermades at Rs. 19.35. But Nonsuch Teas elicited special support and improved by 72 nP to Rs. 27.50. United Nilgiris gathered 5 nP to Rs. 20.50. Among coffee shares, Coffee Lands dropped 17 nP to Rs. 24.25. Consolidated Coffees decreased by 15 nP to Rs. 22.10. Oosoor declined by 10 nP to Rs. 3.77. Wartyhullis lost a similar sum to Rs. 3.65. Babuddins were quiet at Rs. 18.50 and Cowcoodys at Rs. 6.45. Among rubbers, Highlanders suffered a loss of 15 nP over the week, today's closing rate being Rs. 12.20. Cochin Malabars receded by 10 nP to Rs. 6.70. Valundams were dull at Rs. 27.25. Malankaras at Rs. 19.75. Rajagiris at Rs. 18.00. Kaipettas at Rs. 12.60 and Teekoyis at Rs. 7.70.

In the textiles section, Ranga Vilas were subjected to selling pressure and closed lower by Rs. 2.00 at Rs. 52. Radhakrishnas declined by Re. 1.25 to Rs. 122.50. Madura Mills fell from Rs. 30.50 to Rs. 29.85 early in the week, but recovered to Rs. 30.10 today, following news of settlement of the dispute between the management and the workers. Kotharis lost 10 nP to Rs. 10.10. Coimbatore Cottons were quiet at Rs. 142.00. Coimbatore Pioneers at Rs. 280. Dhanaalakshmis at Rs. 197.50. Rajalakshmis at Rs. 62.00. Trichinopolys at Rs. 11.05 and Vasantis at Rs. 211.00. Premiers failed to attract attention, although the dividend for the year ended March 1959 is higher at 12 per cent., as against 9 per cent. distributed in the previous year; today's closing rate for the scrip is Rs. 165.50, same as last week. Venkatesas, however, rallied from Rs. 119 to Rs. 121 on special support. Bangalore Woollens rose by a rupee to Rs. 179. Buckinghams gathered a similar amount to Rs. 190. Cannanores were higher by 60 nP at Rs. 152.60. Metturs were done, at Rs. 371.50 ex-div., as against Rs. 396 cum-div. last week. Krishna Rajendras were dull at Rs. 74. The directors of the Company have declared a final dividend of 8 per cent., making a total of 12 per cent. for the year ended March 1959, as against 9 per cent. for the previous year.

In the miscellaneous section, Rallis and Textols declined by a rupee each to Rs. 74.00 and Rs. 184, respectively. Standard Motors fell by 50 nP to Rs. 16.00 and Mysore Papers by 47 nP to Rs. 21.90. Orissa Cements dropped 27 nP to Rs. 16.60. F.A.C.T.s eased by 25 nP to Rs. 9.75. Ashok Leylands declined by 22 nP to Rs. 7.45. Spencers lost 13 nP to Rs. 20.25 and Parrys sagged 12 nP to Rs. 4.20. Metallur Chemicals and Indian Cements were lower by 10 nP each, the former at Rs. 13.55 and the latter at Rs. 6.45. Andhra Cements at Rs. 11.10. Mysore Chemical Fertilisers at Rs. 10.85 and Western India Plywoods at Rs. 172.50. But Travancore Chemical Manufacturers were marked up by 25 nP to Rs. 15.25. Indian Steel Rolling Mills by 15 nP to Rs. 15.75 and Travancore Cements by 10 nP to Rs. 10.60.

VESTED INTERESTS WHO ARE THEY?

By S. Narayanaswamy

ONE of the most overworked phrases in our public life is "vested interests." In proportion to the degree of its over-use, it has ceased to have much meaning and when such misfortunes overtake words and phrases, they are elevated to the standing of slogans—and you are rarely called upon to explain slogans or symbols. For instance, recently one Central Minister has chosen to dismiss the newly formed Swatantra Party as a party of "vested interests."

What are "vested interests"? The harried clerk in the business house that has, by pinching and scraping, put by Rs. 500 in his savings bank account alongside of the rich man that has a lakh of rupees in fixed deposit with the same bank as the clerk have both a vested interest in the solvency and strength of the bank that holds their money and pays them interest—and in the purchasing power of their stored savings remaining unimpaired by inflation. Probably the clerk is far more worried about his five hundred rupees than the plutocrat is about his lakh—for the five hundred rupees symbolise to him years of hard work and self-denying ordinances, while the plutocrat's money is probably merely unearned inheritance.

The public sector today derives its economic sustenance from taxation and borrowing. The taxes come from "vested interests." Taxes on income which are a fairly sizable part of the Central Government's revenue are derived from less than one million assesses in a country that has a population of 390 million. Borrowing programmes depend for their success (a) on banks that hold the savings of the people; (b) on the Life Insurance Corporation of India which mobilises the savings of millions of people through premia income that flow in annual or half-yearly dribbles, and (c) directly on the savings of the people and those of corporate units.

The small savings wing of the borrowing programme depends on men of small means to subscribe for certificates of 7- or 12-year currency, who again subscribe in the hope that, at the end of the period, they will not confront a serious decline in the real value of their money. All these have a "vested interest" in the security of their investment, in the quantum of interest they get and in the unimpaired purchasing power of their savings.

Vested interests are not merely the unfortunate milch cows that are called upon to yield copious pails of good milk when electioneering is on and are held up to ridicule in the rest of the five-year cycle; but those who hold small bits of cultivated land, those who have small urban or rural properties or interests of any kind and the men who participate in promotion of trade and industries in small and unobtrusive ways. These constitute a large number in India and are less easy to dismiss than the moneybags and merchant princes who are already given round-the-clock sponge-baths by the tax pattern—the Income and Super taxes, the Wealth tax, the Expenditure tax, the Capital Gains tax and the Estate Duty, during their lifetime and beyond.

It will not profit the ministers to talk of "vested interests" and make it appear that any new approach to economic problems that does not look rabidly leftist and that does not constitute a stealing of some other party's clothes is reactionary. The tragedy of the last 15 years of legislative effort has been that the tenant has been set up against the landlord, the borrower against the lender, the factory worker against the industrialist, the white collar worker against the top saw-tive in business houses. The constitution of economic battlefields has been among the infelicitous major by-products of the uncoordinated efforts of the powers-that-be to rear an egalitarian edifice; and all this needless bitterness, bickering and deep rancour has been produced to a degree that will be difficult to eradicate in the strenuous days that await us.

Every time the favourite war-whoop has been that "vested interests" were obstructing this or that measure. Surely, when increased production is the aim of the Government and towards this aim we are called upon to make so many sacrifices, the Government cannot hope to secure the desired increase in production by setting up one group against another in any unit of economic activity and call it "social justice." Such promotion of "social justice" has been costing the country dear, very dear indeed, in terms of man-hours lost, in both rural and urban production sectors, in strikes and lockouts.

Those who took the trouble to establish instruments of production in India gave in helpless and silent bewilderment at the Government asking people to go and build up industrial units and augment production capacity, on the one side, and simultaneously encouraging the workers to demand through the party's trade union wing, in the Central Government, that the Government should provide financial assistance through the Industrial Finance Corporation, on the one hand, which it does after examining the profitability of the enterprise, and on the other hand, State Labour Ministers asking possible of implementation awards that are impracticable working of the industry concerned. This the Centre and the States, on the one hand, and between two Ministries of one State Government, invested their resources and energies in industry a Procrustean bed on which to lie.

The Labour Ministry is an important vote-getting wing of the Government and has, therefore, (Continued on page 163)

NEWS IN BRIEF

THE ceiling on land holdings in Madras is proposed to be fixed by the State Government at 30 acres of irrigated land or 100 acres of dry land.

A payment made as compensation for loss of employment is a capital payment which is not liable to income-tax. This was the judgment given recently by the Bombay High Court while disposing of a reference petition concerning a former employee of a textile mill situated in Orissa.

The share of India in the latest grants announced by the Ford Foundation, U.S., is \$636,734. The major part of this amount, namely, \$415,000, represents grants to the Government of India for continued training and demonstration assistance in village and small-scale industries.

On the recommendation of the State Family Planning Board, the Government of Bombay has appointed a five-member sub-committee, with the Deputy Minister for Health as the Chairman, to suggest ways and means for propagating family planning in the State.

India exported more than 4,000 tons of pepper during the first half of 1959. Of this quantity, the U.S. alone accounted for as much as 1,087 tons. The U.S.S.R. and Canada took 475 tons and 343 tons, respectively. The total quantity exported to Europe, including the communist bloc, was 1,800 tons. Internal consumption of pepper during the same period is estimated at about 5,000-6,000 tons.

The Ship Repair Committee (Chairman: Mr. O. V. Alagesan), set up by the Government of India, has recommended the construction of new dry docks, the provision of twelve fully equipped berths for Bombay and Calcutta and the formation of all-India organisation of ship repairers and shipbuilders. The Committee has also urged the adoption of a policy for progressive manufacture in India of ship repair materials and shipping stores.

The two-month-old labour dispute in the Madura Mills, Madras, has been settled with the signing of an agreement between the management and the representatives of the workers' unions, except the A.I.T.U.C. affiliated union, on the 21st inst. The agreement, according to the Labour Commissioner, will lead to the reopening of mills at Madurai and Ambasamudram, which has remained closed since 19th May last.

The Government of India has approved of a scheme proposed by a U.K. concern, Isaac Holden and Sons, to set up a 38 wool comb plant at Jagatdel in W. Bengal. A new company, called Isaac Holdens (India) Private Ltd., will be formed in collaboration with Duncan Bros. and the Anglo-India Jute Mills Co., Ltd., Calcutta. It will commence operations by the end of this year, and work on a "commission-combing" basis only. The plant will sort out and process wool consigned to it by the U.K. top makers and deliver the finished wool tops according to their instructions.

The Government of India, on the recommendation of the Forward Markets Commission, has granted recognition to the Hyderabad Oils and Seeds Exchange Ltd., Hyderabad, for a period of one year in respect of forward contracts in groundnut oil. The hedge contract to be traded under the auspices of this Exchange will have pure raw groundnut oil as its basis. There will be six deliveries in each calendar year, namely, February, April, June, August, October and December, and the unit of trading will be 100 oil maunds. The trading is subject to a graded system of margins. The Commission has accorded permission to the Exchange to commence trading in December 1959 delivery with effect from the 15th inst.

The design for an open cast coal mining plant to be set-up in Madhya Pradesh has now been completed by the Techno-Export (Russia), under a contract concluded with the National Coal Development Corporation Ltd., of India. The proposed plant will be located at the site of the Korba deposits in Madhya Pradesh, where a 30 metre thick coal seam lies at a depth ranging from 5 to 180 metres. The known coal reserves in the Korba deposits aggregate 80 million tons. Mining of coal will be done in two sites at various levels. The production process is so mechanised as to secure a turnover of 400 tons per worker per month. Coal will be delivered to a concentration plant also designed by Soviet experts.

A seminar on management of public enterprises in Asia and the Far East will be held at New Delhi from 1st to 11th December 1959. Organised by the United Nations in co-operation with the Government of India, the seminar will bring together the working managers of public industrial enterprises in the sixteen countries of the E.C.A.F.E. region for an exchange of views on the procedures and problems of these enterprises from the managerial standpoint. Special emphasis is proposed to be laid in the seminar on the peculiar position of these enterprises vis-à-vis private industrial concerns on the one hand and regular departmental activities of the Government on the other.

The Government of India has set up a central advisory council, the Export Risk Insurance Corporation, in order to make available to the Corporation the benefit of advice of experienced persons connected with the export trade. The Council consists of the Chairman of the Corporation, its Managing Director, Mr. T. C. Kapur, who also functions as the Secretary, Messrs. S. L. Kiroloskar, T. Abdul Wahid of Madras, L. C. Kenol of Calcutta, S. P. Puri, Managing Director of the State Bank of India, Bombay, F. E. H.

PERSONAL

MR. G. D. Birla, who had been on a business tour of Europe and the U.S., returned to Bombay on Sunday the 19th inst.

Mr. Gordon Davidson, B.O.A.C. Manager, Bombay, will be leaving India shortly to take up his new post of B.O.A.C. Sales Manager, South-East Asia, Singapore.

Mr. K. D. Mathur, Member, Railway Board (Transportation), has been appointed Chairman of the Board vice Mr. P. C. Mukerjee who has proceeded on leave preparatory to retirement.

Dr. Omar Hayat Malik, High Commissioner of Pakistan in India, presented his credentials to President Rajendra Prasad at New Delhi on the 21st inst.

Mr. Jayant S. Dalal and Mr. T. M. Telang have been elected Chairman and Vice-Chairman, respectively, of the Indian Insurance Companies Association, Bombay, for the year 1959.

Mr. K. C. Neogy, a former member of the Planning Commission in charge of industries and transport, has accepted the chairmanship to the Rail-Road Co-ordination Committee.

Mr. M. Ananthasayanam Ayyangar, Speaker of the Lok Sabha, who led the Indian Parliamentary delegation to some countries on the Continent, returned to this country on Tuesday this week.

(motives) to private ownership, according to the Minister for Federal-owned Property, Dr. Hermann Lindrath. The Government plans to sell the shares of these industries to the average citizens by offering price discounts.

The 26-member lines of the Atlantic Passenger Steamship Conference have decided to increase their basic fare rates in 1960 by about 7½ per cent., generally, and up to 10 per cent. in some cases. The effects of the increases is, however, proposed to be offset to some extent by a reduction of 10 per cent. in round-trip tickets and the introduction of a new low emigrant class fare.

The Council of the International Civil Aviation Organisation will undertake an immediate study of the prospects for supersonic civil airliners, which are expected to become available within the next decade. The proposed study will cover the probable important technical, economic and social consequences of such aircraft, the problems in relation to noise, the size of airports and the various factors relating to the adoption of a co-ordinated policy by the Governments concerned.

A new official Bill, introduced in the Belgium Senate, seeks to set up a national investment company and a network of regional investment companies. The share capital of the company will be subscribed equally by the Government and private investors. These companies are expected to reinforce the activities of the various para-State credit bodies by subscribing risk-bearing capital to new industries as well as to the existing ones which want to expand.

The total of British investments in the U.S. and Canada at present is estimated at \$4,500 million and \$3,000 million, as against \$4,000 million and \$2,550 million, respectively, in 1939. Of the investments in the U.S., about \$2,100 million are accounted for by direct investment in plant, equipment and other business assets, the balance representing portfolio investments in securities. In Canada, direct investments are of the order of \$1,300 million and the rest is portfolio investment.

The U.S. General Electric Company has reduced the prices of its large steam turbo-generators substantially with a view to competing more effectively with overseas manufacturing firms which have recently captured a large part of the American market. The reduction in prices which range from \$200,000 to 200,000 kw. units to \$2.4 million on those of 600,000 kw. capacity has been linked to the new automated processes introduced at its Schenectady (New York) plant.

The aggregate world rice production during 1958-59 touched the all-time peak level of 135 million tons which represents an increase of 9 million tons, as compared with 1957-58, according to the U.N. Food and Agriculture Organisation. Importing countries accounted for the larger part of the increase in world production. There was, however, a setback to rice output in several exporting countries. More rice was grown in every Asian country, except Pakistan and Cambodia. The shipments of rice from the seven main exporting countries, namely, Burma, Thailand, Vietnam, the U.A.R., the U.S., Italy and Cambodia, which together with overseas demand account for four-fifths of world trade in rice, were substantially lower in 1958-59; they were just one-third of the quantity exported in 1957-58.

The Government of France has announced some tax reform proposals which are expected to be discussed at the autumn session of Parliament and incorporated in the Finance Bill towards the year-end. One of the proposals seeks to raise the starting rate for submission to income-tax to £300 for bachelors and £900 for married men with two children. The other proposals cover reduction in death duties in cases of direct succession and increase in duties on indirect succession, abolition of tax exemption on proceeds of stock revaluation (instituted to protect companies from the effects of currency depreciation) and removal of 'local taxes' on retail sales which were used to finance local governments. Another important provision relates to the amalgamation of the two existing forms of income-tax. This measure will not, however, come into operation until 1962.

Goddard, Manager of the Chartered Bank and N. M. Choksi, General Manager of the Bank of Baroda. For the present, the term of the Council is one year.

An agreement for the avoidance of double taxation of income between India and Norway was signed at New Delhi on the 20th inst. The agreement now requires to be ratified after which it will become effective in India from the assessment year 1959-60. The agreement follows talks between the two Governments at official level in February this year when a draft agreement was initiated. An agreement with Sweden has already been ratified and is now in force. An agreement with Switzerland, limited to the profits of air transport, is also in force. India has also signed an agreement with West Germany and another is to be signed shortly with Denmark. A similar agreement with the U.S.A. has been initiated at the official level and is awaiting approval by the respective Governments.

The Government of India has decided to take over the Model Mills of Nagpur and entrust to the Government of Bombay the task of making arrangements for its running as an unemployment relief scheme. The possession of the Mills is expected to be taken by the State Government in the first week of next month and will begin production within a month thereafter. While the State Government will be responsible for the running of the Mills, the profit or loss will go to the Company in contrast to the arrangement made in respect of Narsingijri Mills at Sholapur and Seksaria Mills under which the profit or loss goes to the Government. It is estimated that the Mills will require a working capital of Rs. 75 lakhs. It has about 49,000 spindles and 950 looms. The number of workers in the Mills, when it closed on 6th April, stood at 6,700.

Steps to accelerate the tempo of productivity movement in the country will be discussed at a two-day conference of productivity experts to be held at New Delhi under the auspices of the National Productivity Council on the 30th and 31st inst. Mr. Manubhai Shah, Union Minister for Industry, will inaugurate the conference. The conference, which will be attended by about 300 productivity experts from all over India, will review the programme of activities of the N.P.C. and local productivity councils and devise ways and means of securing the co-operation of industrial productivity experts in the productivity drive. During the deliberations, special attention will be paid to the Council's training programmes, advisory services for introducing productivity techniques in plants, audio-visual programmes, the scheme for organising productivity teams within the country and other methods of increasing productivity.

From Abroad

The U.S.S.R. has granted a long-term low interest-bearing loan of 400 million roubles (about Rs. 43.7 crores) to Ethiopia.

The number of employed persons in the U.S. rose from 92 million in May 1958 to a record figure of 97.342 million in June 1959.

The U.S. Senate and the House of Representatives have approved of a compromise figure of \$3,556.20 million for foreign aid during the current fiscal year (July 1959-June 1960).

A proposal to place a contract for the detailed design work on a supersonic long-range airliner capable of covering 1,300 miles an hour—twice the speed of sound—is under the consideration of the U.K. Government.

The total consumer expenditure on food in the U.K. has almost doubled in the past seven years, from £2,949 million in 1951 to £4,672 million in 1958. A part of this rise—about 25 per cent.—is accounted for by an increase in prices.

The unemployment situation in Australia showed signs of further improvement during the month of June 1959 when the number of persons registered for employment fell by 1,913 to 65,000 and the number of persons receiving unemployment pensions was lower by 398 at 27,000.

The Governments of Malaya and Singapore have decided to do away with all restrictions on direct import of U.S. dollar goods with effect from 1st August next. Thereafter, dollar goods will receive the same licensing treatment as that accorded to goods imported from the O.E.E.C. countries.

It is reported that China has plans to produce about five million jin (one jin=1,023 lb.) of wild jute in 1959 from what is believed to be barren land in the Tarim basin, off Takla Makan desert in Sinkiang-Uighur autonomous region. The jute will be used to manufacture high-grade fabrics, fishing nets and rope.

The British Petroleum Trading Company and the Shell International Petroleum have reduced the bunker prices for marine diesel oil by 4s. a ton and light diesel oil and gas oil by 5s. a ton in ports east of Suez, namely, Suez, Aden, Basra, Aden, and Red Sea, Persian Gulf, Pakistan, India, Ceylon, Burma, Australia and New Zealand.

New Zealand has ratified the fourth International Wheat Agreement. Accordingly, it will buy a fixed percentage of its actual requirements from India, namely, 50 per cent. of wheat ranging from \$1.50 to \$1.90 per bushel. Under the previous agreement, New Zealand had to take a fixed quantity when world prices were between \$1.50 and \$2.00.

The West German Government has decided to hand over the remaining State-controlled industries (including aluminium, coal, petroleum and auto-

LABOUR PROBLEMS

IN the course of his address at the annual meeting of the All-India Organisation of Industrial Employers, held at New Delhi this week, the Union Minister for Labour and employment, Mr. Gulzarilal Nanda, declared that, whereas he found in Europe "a rising wave of prosperity" which was being shared very widely, he found in India not so much a sense of achievement as a "sense of grievance everywhere, a sense of discontent all round." This, indeed, the crux of the labour problem. Why does Indian labour, despite the anxious care bestowed upon it by the Government and the beneficial legislation enacted by the Indian Parliament, still labour under a sense of neglect? Mr. Nanda, on his part, did not answer the question he did so well to raise. But it is worth all the time and energy that one could spare in an effort to find an answer to the question. For not day passes without some vociferous demonstration of their discontentment by one or other of the numerous sections of Indian workers.

Although the judgment may seem harsh, it is undeniable that Indian labour is more conscious of grievances than appreciative of benefits readily provided. Not infrequently, it behaves like some spoiled child in a none too prosperous family which cannot always afford the things it wants. Seldom does industrial labour in this country realise that there are other sections of the population and that it cannot claim exclusive monopoly of benefits and attention. As Mr. Lakshminipat Singhania, President of the employers' body pointed out, "it is well to remember that the number of industrial workers total only about seven million out of the total labour force of 154 million in our country." By international as well as national standards, Indian labour can have little justification for pursuing a great sense of grievance. Mr. Singhania stressed how "the most striking thing to be noticed is that the disparity between India and other countries in respect of industrial wages is much less than in national incomes." Thus, although the national incomes of the U.K. and the U.S.A. were more than 15 times and 34 times, respectively, India's national income, industrial wages there were only five times and 15 times the average wages in this country. If a comparison were instituted in respect of the wages of different classes of workers in India itself, the industrial workers would come off very well indeed. Mr. Singhania pointed out that, in 1951-52, the average daily wages of agricultural workers was only Rs. 17.5, as compared with Rs. 54.5 earned by industrial workers. This disparity could not have varied greatly since 1951-52.

It should thus be clear that India's industrial labour has little reason to feel despondent over its position. At the same time, it would be idle to aver that all its grievances are illusory. For it is undeniable that there are employers who have not yet learnt the art of granting gracefully what they must give anyway. Nor can it be denied that soaring prices continue to erode the benefits that are given. Inflation is still labour's enemy No. 1. There is little hope of any improvement in labour's position in Indian economy so long as inflationary forces are not held in check. Indian labour, even more than any other section of the population, has a special responsibility to safeguard the value of the rupee. An effective means of ensuring it is to recognise that, generally speaking, all increase in wages should be related to increase in productivity. As Mr. Singhania pointed out, "the old saying that the labourer must be worthy of his hire is indeed very true."

Among the measures which have been adopted or suggested in order to maintain peaceful industrial relations, mention must be made of the Code of Discipline, the adjudication machinery and workers' participation in management. Mr. Nanda insisted that the Code was an indispensable element in industrial relations and was a move in the right direction. What is, of course, necessary is that labour unions should have a healthy respect for the Code. Mr. Nanda revealed that the machinery

which had been set up to take note of the breaches of the Code had brought redress in a large number of cases.

As regards adjudication machinery, Mr. Singhania suggested that, in its higher levels, it should be manned by High Court judges or men with similar ability and status. He also suggested that consideration should be given to the question of restoring the Labour Appellate Tribunal. It is to be feared that its abolition without the safeguard of a set of all-India norms which could govern industrial disputes has done considerable harm to the country's industrial progress. On the larger question of the relative merits of adjudication and collective bargaining, Mr. Singhania felt that "it may not be possible to do away with the existing adjudication machinery and depend entirely on collective bargaining in the existing set of circumstances." This view is, by and large, correct in the context of the present situation in the country. But it should not be allowed to prevent all experiments in collective bargaining which, it may be noted, have never been tried seriously in the country. No experiment in collective bargaining can succeed unless the Government is prepared to encourage it actively.

Mr. Nanda reiterated his plea for expediting schemes for workers' participation in management on a voluntary basis. He recalled that workers' organisations had pleaded for legislation on the matter but had agreed to his view that the scheme should be introduced on a voluntary basis. He added: "My hands will be very greatly weakened if we do not move on a voluntary basis." But one would like to know from the Union Labour Minister as to what type of employee participation he has in mind and as to what the workers themselves want. If our memory is right, the talks on this subject have all along been on vague lines. How could there be any response from employers to his appeal, unless the idea of employee participation is clearly spelled out?

BOMBAY PORT

Bombay Port is the largest major port of India through which passes the bulk of the country's overseas trade. The Port accounts for as much as 47 per cent. of the aggregate annual imports of about 20 million tons and 34 per cent. of exports amounting to 11 million tons passing through the principal ports. The volume of goods and commodities handled by the Port is bound to increase considerably in the coming years, what with the accelerated tempo of economic development envisaged in the Five-year Plans. It is, therefore, of the utmost importance that the facilities available at the Port must keep pace with the expanding cargo traffic needs. Viewed thus, the warning given by the Bombay Chamber of Commerce and Industry, in the course of a communication addressed to the Chairman of the National Harbour Board, that, if action is not taken in the near future, it will be found—too late—that the docks are obsolete and unable to cope satisfactorily with the ships which will be on the seas at that time, is quite timely and pertinent. The Chamber has rightly urged the inclusion of the "Minimum Scheme" in the third Five-year Plan.

What is the "Minimum Scheme"? It is a group of works for the improvement of the Princes and Victoria Docks, which originally formed part of a larger plan of development. The purpose of the improvements is to permit ships of deeper draught to be admitted to these Docks at all states of the tide. The scheme envisages construction of an entrance lock, the closing of the existing dock entrance gates, the widening of the communication passage between the docks, and the lengthening of certain berths in the Victoria Docks. The scheme was prepared by the Bombay Port Trust's Consulting Engineers and approved as early as in 1949. As the full project was estimated to cost Rs. 13.15 crores, the Trustees decided to concentrate attention on the minimum improvements necessary to remove the handicaps to vessels using the obsolete Princes and Victoria Docks. Recently, when the question arose as to whether provision should be made in the third Plan for the implementation of the scheme, the Government raised objections, financial and otherwise.

Whatever may be the objections, the importance of the scheme cannot be stressed too strongly. The Princes and Victoria Docks, now over 70 years old, are already obsolete. The Government may ask as to why the Bombay Port Trust itself cannot implement the scheme out of its own resources. It is true that the

annual revenue receipts of the Port are quite large, the budget estimate for 1959-60 being Rs. 10.37 crores. But the expenditure side of its budget is equally large, so that external assistance is necessary for undertaking large-scale capital works. The Bombay Chamber has drawn attention to this aspect and emphasised that to finance the scheme at present costs by the Port Trust itself would probably mean raising the existing surcharge of 33½ per cent. on dry cargo wharfage to about 125 per cent. and even to 150 per cent. "Such an increase in wharfage charges," to quote it, "is too high to be seriously considered.... There is a point at which Government's offer of loan facilities and the capacity of the traffic through the Port of Bombay to bear additional charges such as will not divert trade elsewhere may be made to meet."

The Chamber is of the view that any decision to develop the Port should not be based necessarily on whether the developments will be productive of immediate revenue. For it says: "The improvements and developments of an obsolete dock inevitably take several years to plan and finance. Moreover, as the demand for the limited supply of technical knowledge and experience increases as each underdeveloped country seeks to improve the facilities of its ports, so the cost of the improvement increases." This has already been the bitter experience of the Trustees of Bombay Port. And it is gratifying to note that the Chamber has highlighted this aspect and urged the advisability of action in the near future. When so many schemes based on highly ideological considerations and involving crores of rupees of expenditure are proposed to be covered by the third Plan, the inclusion of such an important project as the "Minimum Scheme" of the Bombay Port will surely not entail any strain on the Central Exchequer.

GOVERNMENT ADVERTISING

It is deplorable that the Central Government should have reversed its policy, enunciated only four months ago, in regard to its advertisements. It stated then that "increased use is being made of Indian advertising agencies for the release of Government display advertisements" (vide page 41 of the Information and Broadcasting Ministry's Annual Report, 1958-59). But hereafter, all Government advertising, Central and State, as well as autonomous corporations, is proposed to be gathered into the hands of the Directorate of Advertising and Visual Publicity. The implications of this proposal are threefold; 1. The Directorate will seek from newspapers a concession or discount in rate equal to 15 per cent. commission now received by the recognised advertising agencies. 2. The State Governments and autonomous corporations will be offered, in addition to the grant of a part of the concession, free art work and services for which the normal commercial agencies usually make a small charge. 3. The policy matters concerning Government advertising will be dealt with directly with individual newspapers (and periodicals) and agencies rather than with associations of either.

The aforesaid decision of the Government is sought to be justified under the cloak of economy in expenditure. But the real objective behind the decision may be far from this. It to establish virtually a monopoly of Government's publicity business by encroaching upon the profession of advertising agents and consultants in Government work. How disquieting out by Mr. S. Natarajan, in the course of an article, contributed to the *Hindu* of Madras. He says:

"The first can be regarded as an extension of seen at work in profits' policy which we have a difference which is sinister. While there, the and excise duties, here, the Government proposes venue of private enterprise. The second involves because it is interested in killing competition out-right. The third is a blatant attempt to build up ment department, while breaking down the cohesion have to deal."

There is no exaggeration whatever in these remarks. Indeed, the Government's decision is fraught with a danger to the freedom of the Press and the growth of advertising in India. The Indian and Eastern Newspaper Society has done well to voice its criticism of the Government's decision. At a meeting held at New Delhi recently, the Society pointed out that the decision ran counter to the practice hitherto

followed and that it enjoined upon the Government to deal in policy matters with the Society and not deal directly with individual papers. Drawing attention to the complaints from member-newspapers of undue pressure being applied on them for reduction in their established commercial rate structure, it reiterated that this structure should not be disturbed by the Directorate of Advertising and Visual Publicity. It is to be hoped that the special committee, set up by the Society jointly with the Advertising Agencies Association of India to represent matters of common interest to the Government of India in relation to the advertising policy, will succeed in impressing upon the Ministry of Information and Broadcasting the need for revising the decision.

If, however, the Government were to stick to its decision, it would indicate its determination to reduce advertising to the level of patronage. Such a policy is bound to tell on the quality of advertising.

The "economy" argument is also untenable. After all, the total expenditure incurred by the Directorate of Advertising and Visual Publicity on display advertisements and classified advertisements in newspapers and publications is not more than Rs. 36 lakhs per annum (worked out on the basis of the figures for the first nine months of the financial year 1958-59). The commission and discounts (average of 15 per cent.) will result in a saving of just Rs. 5 lakhs. This amount will certainly be more when all the advertisements of the public sector are centralised and distributed through the Directorate of Advertising. But even if the commission thus saved were Rs. 50 lakhs, it would still be a mere drop in the ocean, as compared with the revenue budgets of both the Central and State Governments aggregating Rs. 1,615 crores. In its anxiety to save this small amount, the Directorate will have to set up an elaborate machinery to handle the advertisement business directly which will more than neutralise the saving anticipated, not to speak of the red-tape and inefficiency that are usually associated with a bureaucratic organisation. In view of all these considerations, is it not advisable for the Government to use the existing agencies, strengthen them singly and in association "by calling on their assistance in really national, emergency campaigns and help them to build up better standards and practices in the profession"?

GENERAL INSURANCE

The stimulating address delivered by Mr. M. S. Dastur, Chairman of the Indian Insurance Companies Association, at the thirty-first annual general meeting of the Association held at Bombay this week, deserves to be read to a wider audience. Mr. Dastur raised certain points of criticism on some aspects of insurance in the country, highlighted the problems of insurers and made quite a few suggestions for their solution. He preferred to call them his personal viewpoints but there is no doubt that they will be shared by the vast majority of his colleagues in the insurance world.

Mr. Dastur regretted that certain restrictive practices of banks and other financing institutions like the Industrial Finance Corporation continued to cause considerable difficulties to insurers. While certain banks have laid down conditions of their own for the inclusion of Indian insurers on the approved list—some insisting that insurance companies lodge with them Government and other securities or alternatively, get policies issued by them guaranteed by another insurance company of repute acceptable to them—the I.F.C. requires insurers to obtain letters from their Treaty and Reinsurance offices to the effect that, in the event of a claim arising, these offices would pay the amount direct to the Corporation. These conditions, Mr. Dastur pointed out, were a needless reflection on the companies which should be deprecated as derogatory to Indian insurance as a whole.

There is no doubt that insurance companies and banks and other financing institutions are highly complementary. If insurance is to develop into an important adjunct of the national economy these should move in unison. Banks and other financing institutions should, therefore, endeavour to be as accommodating as possible consistent with their interest, and see that their actions do not hinder the growth of insurance.

Whether the Code of Conduct adopted by insurers has been a success or not is a question on which there are wide differences of opinion among insurers. Mr. Dastur did not agree with

those who maintain that, barring the provision for advance payment of premium before the assumption of risk, the Code of Conduct has failed to achieve any of its objectives. He felt that, on the whole, the Code had achieved reasonable success and that, if it were given a fair trial, in the long run, it would bear fruit. He thought it was not advisable to make frequent changes in the Code, nor to make the Code elaborate, complicated and expensive. It was, according to him, necessary to formulate a well-planned balanced scheme and to give it a good trial.

The proposed revision of fire tariff rates has attracted much attention of late. Proposals for reduction in fire rate are under consideration at present. Mr. Dastur had some sage counsel to offer in this respect. He stated, in effect, that a reduction in rates was not justified. According to him the criticism that fire rates in India were too high was not supported by any concrete evidence, except that the Indian fire claims ratio was low. If it meant that the total premiums were high, such figures as were available showed, according to him, that the contention was not correct. If, on the other hand, it meant that the expenses were high, it must be said that these expenses were justified for the service rendered to the insured. He maintained that to judge the claims ratio in the fire department as a whole, that is, including the premium derived under other sub-sections such as riot, earthquake and other extraneous risks, was unscientific. If the premiums on these accounts were excluded, the net premium on the pure fire section would be lower by at least 15 per cent. As regards expenses, while the rise in premium income in the fire department during the period 1946-56 was only 16.99 per cent., as against 78.21 per cent. in marine and 122.61 per cent. in accident departments, the general expenses of conducting the business as a whole had gone up considerably during the period.

Mr. Dastur underlined the need for building up free reserves to meet unforeseen circumstances. Free reserves of Indian insurers till recently had been insignificant. It was only after the adoption of the Code of Conduct that 10 per cent. of the net premium was set aside as free reserves. The other 40 per cent. reserves on net premium might be termed reserves for unexpired risks. It was the duty of the powers-that-be, he averred, to see that insurers were financially strong and such strength could be built up only from the rate structure.

The Chairman had some suggestions to offer for making the notoriously unremunerative motor insurance profitable. He thought that constant increase in rates, making insurance costly, was no remedy. What was required was to find out where and how the claims were arising and the way such claims were settled. The best method to improve the claims ratio for this class of accident business, according to him, was either for all insurers to agree not to give comprehensive cover to motorists whose claims experience was not good or to revise the no-claim bonus by giving higher no-claim bonus to cautious motorists. The revision in no-claim bonus to a higher level, he rightly pointed out, would not only tend to reduce the claims but would also meet to some extent, the non-tariff competition.

THE BANK OF MAHARASHTRA LIMITED

ESTD. 1935
SCHEDULED BANK
CAPITAL

Paid-up Capital	Rs. 30,00,000
Reserves	Rs. 13,00,000

PROGRAMME FOR CO-OPERATIVES

The broad contours of a new co-operative policy were indicated by the National Development Council in November 1958. The Council decided to organise co-operatives on the basis of the village community as the primary unit. Besides, it emphasised the need for entrusting the village co-operative and panchayat with the entire responsibility and initiative for social and economic development at the village level. A Working Group constituted by the Ministry of Food and Agriculture examined the administrative and organisational arrangements necessary for implementing the decision of the Council. It submitted its report early this year. The stage has thus been set for carrying the experiment in co-operative development further. The Government of India has already drawn up a preliminary schedule in such a way as to enable all the rural families to be brought under the purview of co-operatives before the end of the third Five-year Plan. Incidentally, it is said that the policy on co-operative farming will be finally decided only after the Working Group, now studying the question, submits its report.

Since the development of co-operative movement is a State subject, the Centre has only a minor role to play in the actual execution of the programme. The present schedule is, therefore, intended to ensure speedy implementation of the prescribed policy in the various States. One of the most important provisions of the new policy relates to the removal of restrictive features of the existing legislation, particularly in the administrative and procedural spheres. The States have now been asked to appoint committees to consider this issue and report back in three months. The resulting Bills are to be put on the Statute Book before the end of March 1960. Meanwhile, the States are expected to complete a review of the position of personnel and work out in a couple of months the likely requirements during the next three to five years. The States have further been asked to give high priority to the scheme for organising "supervising unions" at the block equivalent levels and for federating them into district and State unions. The primary object of the schedule is to lay the basic structure of village co-operatives everywhere in the country by the end of 1962.

The expansion of marketing and processing facilities is to be given special attention. The State Governments have been directed to implement the programme already approved for the current year as also the supplementary programme. Each State has been asked to draw up a definite scheme for enabling the marketing co-operatives to take up State trading in food-grains. Meanwhile, the Bill which seeks to separate the Central Warehousing Corporation and the National Co-operative Development and Warehousing Board is expected to be introduced in the forthcoming session of Parliament. The provisions of the Bill, it is expected, will be put into operation by November next.

The proposed measures for co-operative development call for additional finance, necessary for the larger membership envisaged. Provision of finance will require careful study by the Reserve Bank, the State Governments and State Co-operative banks. The pilot project scheme launched in this connection will also take some more time in getting under way. At any rate, some definite measures of policy in this regard are proposed to be drawn up by the end of the current year.

A notable desideratum in the working of the co-operatives is scarcity of adequate number of well qualified and competent personnel. The Centre has, therefore, asked for a review of the existing facilities and possibilities for expansion. The Central Committee for Co-operative Training is expected to complete the collection of necessary data sometime next March. Further, it has been suggested that intensive instruction on the principles of co-operation should be given in schools and colleges. Besides seeking to attract talents to the sphere of rural reconstruction, these schemes are designed to make the country co-operative-conscious.

Even so, it is to be feared that the Government is putting the "co-operative" cart before the "training" horse. Further the mere increase in co-operative training facilities will not ensure the success of co-operation. The required level of organisational maturity can be acquired only through experience. By pushing ahead with the co-operative programme in great haste, the Government is sacrificing even the slender chances of success which the movement may otherwise be expected to yield. The result may well be that many organisational sins, including financial misdeeds, will be safely covered under the banner of co-operative idealism.

AMERICAN LETTER

MR. KOZLOV CARED NOT TO MINGLE
WITH WORKERS

INTEREST RATES HIGH—NEW NUCLEAR SHIP

From Our Special Correspondent

New York, 17th July

SOVIET First Deputy Premier, Mr. Frol R. Kozlov, has completed his visit to the United States after opening the Russian exhibit here and after a tour of the country. There are a number of things worth recording for readers in India, trivial as they may seem on the surface.

At no time during his visit here did Mr. Kozlov find it convenient and proper to look into American workers' housing and living conditions. He did not accept an invitation, extended by trade union officials, to visit trade union headquarters and have an exchange of opinion with ordinary workers, or with union officials. Instead, Mr. Kozlov preferred to be wined and dined almost exclusively by Government officials and by leaders of big business and finance. The *New York Times* said editorially that "it was a curious performance for a leader of the proletariat."

The Soviet exhibition in New York has attracted many visitors, who were provided with books to voice their opinions about the things they saw. Quite a few Americans were sceptical. They liked some of the Russian goods, but they pointed out that no price tags were attached to them. They also raised questions as to the availability of such goods. The Moscow Press distorted these stories immediately. It said that hoodlums were belittling the Soviet exhibits, without stating that random visitors were registering their opinions in plain language as they are used to every day. It must, however, be said that the Soviet exhibition is impressive, as most of their fairs are; there is no question about it.

As a final sidelight to Mr. Kozlov's visit, it may be emphasised that the Lord Mayor of Detroit, the home of one of the strongest trade unions, the Automobile Workers of America, refused to receive the Soviet First Deputy Premier, against the wishes of the State Department.

U.S. Business Conditions

The gross national product, or the total of goods and services produced, registered a record of \$479,000 million in the second quarter of this year. Government economists predict that this figure will break through the \$500,000 million mark before mid-1960. God and inflation permitting.

In this context, it must be reported that Washington D.C. wound up the fiscal year ended 30th June, with an estimated Budget deficit of \$12,500 million which is a record for a peacetime year. As a result, Congress passed a Bill and President Eisenhower signed the law, raising the national debt limit, temporarily, to \$295,000 million. With revenues booming, the

Administration now counts on a balanced budget for the fiscal year beginning from 1st July 1959. There are many other hopeful signs in the American economy. Building activity is at a peak. Automobile sales have been beyond expectations. They may reach 6.5 million units this year. The retail sales for the first half of the year fetched \$102,500 million, as compared with \$95,000 million in the same period of 1958.

But so confident is the American public in the future that consumer credit, hire-purchase, or instalment credit, as it is called in the U.S., charge accounts, bank loans, mortgages and so on, now amount to about \$44,000 million. In other words, considerable family income has been committed. Nobody knows what the proper proportion of credit is under given circumstances, but there must be question marks.

In fact, consumers increased their outstanding hire-purchase debt by \$443 million in May, reflecting the spending mood as personal income mounted. Total hire-purchase credit outstanding was a record \$35,000 million at the end of May.

At the same time, it may be reported that savings have not diminished. Individuals added \$5,500 million to their nest eggs in the first quarter of 1959, the same as a year earlier.

Interest rates are still rising. In one of the recent offerings, the U.S. Treasury had to pay 4.728 per cent. for a 366-day bill issue, the highest in 38 years. In keeping with this, all rates are going up.

Corporate Pension Funds

Total assets of public and private pension funds were about \$88,800 million on 31st December last. They now exceed the assets of Government social security programmes. Receipts of corporate pension funds aggregated about \$3,500 million in 1958, or 5 per cent. more than in 1957.

Investments of these funds are rather interesting. About 53 per cent. went into corporate bonds; about 30 per cent. into corporate stocks; 2 per cent. into mortgages; 9 per cent. into Government securities and 6 per cent. into miscellaneous assets.

The Nuclear Ship "Savannah"

Private industry, the U.S. Commerce Department, the Maritime Administration and other Federal agencies have devoted a good deal of activity into making the nuclear ship *Savannah*, a reality for peaceful purposes.

Many new and exotic metals have been employed in the construction of the ship, including hafnium, zirconium, boron, thorium and so on.

Materials are the most pivotal items to establish criteria. But educating and training crews for nuclear ships is a necessary part of the programme. The training schedule for the

Savannah is intended to produce operating personnel who can cope with any situation. In due course, it will visit India.

The captain and 16 engineering officers for operation of the *Savannah* were selected. These men are undergoing intensified and specialised training.

Weight and space requirements are as important in nuclear ships as they were to the development of steamships. The advantage in nuclear ships is that fuel, as it is known today, is needed no longer.

Qualified engineers claim that the new *Savannah* will be a safer ship than any conventional vessel. No seaport need be concerned about nuclear contamination from this ship, since adequate precautions have been taken, should this nuclear ship be involved in a collision, or sinking.

All radiological safety measures are being taken. A steel housing cylinder provides for protection against any instantaneous rupture of the reactor. The protective housing is designed to prevent any radioactive matter from reaching other parts of the ship in the worst conceivable accident.

With regard to disposal of radioactive waste, the method used on the *Savannah* provides for the complete retention of all liquid and solid wastes until the ship returns to a port equipped with special facilities for safe removal and shipment to a waste disposal area.

General acceptance of nuclear-powered ships by the many ports and authorities throughout the world is mandatory to successful operation. —All Rights Reserved.

NEW JET PLANE

The U.S.'s second passenger jet airliner, the huge DC-8, which will carry 176 passengers in the most streamlined luxury and nearly seven tons of cargo, is scheduled to enter commercial passenger service late in 1959. Built by the Douglas Aircraft Company, the jet airliner will include some remarkable features, new innovations ever made in large aircraft design and will point to some of the latest engineering advances in the field of aviation. The 152-ton DC-8 is 150 feet long and its wing span is nearly as great, measuring 140 feet. A unique characteristic of these wings is their virtual elasticity which permits them considerable up-and-down movement. This cushions air turbulence as if the wings were giant springs. These great hollow wings store more than 57 tons of kerosene, the fuel that jet planes burn. Yet these fuel tanks can be filled in 15 to 20 minutes.

The first DC-8s will have four Pratt and Whitney JT3 engines developing a total of 24,000 horsepower. They will drive the plane at a speed of about 560 miles an hour. Eighteen electronic systems, including a weather radar, will guide the plane and keep it in touch with the ground 35,000 to 40,000 feet below. The air-conditioning system's four compressors are each one-quarter as big as an average home refrigerator's cooling unit, but 100 times more powerful.

The air in the plane's cabin, completely changed every three minutes, is kept at a passenger-comfortable temperature of 70 degrees Fahrenheit though outside temperatures may range from 100 degrees Fahrenheit above zero to 100 degrees Fahrenheit below zero. The cabin is pressurised so that sea-level atmosphere is maintained up to 23,000 feet. At 34,000 feet, cabin pressure equals that of 5,000 feet; and at 40,000 feet that of 4,700 feet. The plane's huge tail towers more than 42 feet. Hot air from the engines is circulated through ducts along the leading edges of the wings, tail surfaces and engine pylons to prevent icing.

PROFITS OF SCHEDULED BANKS DECLINE
BY NEARLY A QUARTER IN 1958
CHEAP CREDIT ONE OF THE CHIEF CAUSES

THE year 1958 proved to be one of steady growth for Scheduled banks in India, inasmuch as they were able to extend their banking services by opening more branches than in any previous year and to enlarge their deposit resources by a greater extent than before, though such growth has not been remunerative to all the units. In fact, the earnings of almost all banks suffered a setback, for the first time since 1953. This was due to the large accretion of high-interest bearing time deposits, without a corresponding increase in advances and the rate of interest thereon, and the mounting level of establishment expenses. A closer study of the problem of bank profits shows that credit facilities are being made available at a comparatively cheaper cost to the borrowers. A brief analysis of the trend of earnings and expenses of twenty-five large Scheduled banks was recently made by the Reserve Bank of India and published in its annual publication, *The Trend and Progress of Banking During 1958*. A more detailed analysis of the earnings and expenses of all commercial banks (Indian Scheduled banks, foreign scheduled banks and Non-scheduled banks) in India is now available. This is published in the *Statistical Tables Relating to Commercial Banks in India* for the year 1958 brought out by the Reserve Bank of India and made public this week.

Before proceeding to analyse bank earnings and expenses, it will be worthwhile to make a brief reference to the changes in the main assets and liabilities of Scheduled banks as at the end of 1958. The most striking feature of the year's working, as already pointed out, was the further accretion to Scheduled banks' deposits, which recorded a rise of Rs. 226 crores to Rs. 1,684 crores, on top of an increase of Rs. 280 crores in 1957. Thus, in the course of two years, the Scheduled banks' deposits have grown by 44 per cent. Deposits of Indian Scheduled banks alone rose by Rs. 234 crores during 1958, while those of foreign Scheduled banks actually declined by Rs. 8 crores. Nearly 50 per cent. (Rs. 112 crores) of the rise in deposits of Indian Scheduled banks was accounted for by the State Bank, the bulk of which is attributed to the accruals of counterpart rupee funds under P.L. 180. Nearly nine-tenths of the deposit expansion took place under time deposits which increased from Rs. 518 crores to Rs. 722 crores. Even after making allowance for P.L. 480 funds, the rise in time deposits was surely considerable.

As against the rise of Rs. 226 crores in deposits, the advances (including bills purchased and discounted) of Scheduled banks rose by only Rs. 7 crores in 1958 (to Rs. 901 crores), as compared with an increase of Rs. 74 crores in 1957 and of Rs. 155 crores in 1956. The slowing down of the expansion in bank credit was due to (1) the slackening of the rate of investment in the private sector and (2) credit curb by the Reserve Bank of India to check inflationary tendency. This moderate growth in bank credit, coupled with the impressive growth in deposits, left banks with large liquid funds which they invested in Government securities. As a result, investments of Scheduled banks in Government securities rose sharply by Rs. 201 crores (to Rs. 634 crores) in 1958, as against Rs. 70 crores in the previous year and a decrease of Rs. 18 crores in 1956.

The aforesaid changes in the asset structure of banks had an adverse effect on their earnings. Thus, the aggregate net profit of all Scheduled banks (Indian and foreign) declined by Rs. 3.14 crores (or 24.7 per cent.) to Rs. 12.70 crores, as against a rise of Rs. 2.21 crores in the previous year. To take the Indian Scheduled banks first, their current operating earnings rose by Rs. 9.99 crores to Rs. 71.80 crores, thus keeping up the consistently upward trend noted since 1953. The current operating expenses, however, rose more sharply by Rs. 12.27 crores to Rs. 61.13 crores. This rise compares unfavourably with that of Rs. 10.10 crores in 1957 and of Rs. 5.14 crores in 1956. As a result, the profit of Indian Scheduled banks suffered a fall of Rs. 2 crores to Rs. 10.50 crores during the year under review, as against a rise of Rs. 2.42 crores in 1957 and of Rs. 2.72 crores in 1956.

As regards foreign Scheduled banks, their current operating earnings actually declined by Rs. 77 lakhs to Rs. 16.18 crores, as compared with the rise of Rs. 1.42 crore in 1957. At the same time, their current operating expenses continued

to maintain the upward trend, with a further rise of Rs. 44 lakhs to Rs. 14.08 crores. Consequently, there was a shrinkage of Rs. 1.14 crore in net profit to Rs. 2.19 crores, the lowest level since 1949, the earliest year for which figures are available.

A detailed analysis of the profit and loss accounts of the Indian and foreign Scheduled banks for the past five years, as compiled by the Reserve Bank of India, reveals the following additional features:

(1) The share of income from the main asset (advances and bills) in the current operating earnings has declined from 63.5 per cent. (in 1957) to 60.5 per cent. in the case of Indian Scheduled banks and from 75.8 per cent. to 75 per cent. among foreign banks.

(2) The interest paid on deposits was 42.4 per cent. of the current operating earnings in 1958, as against 34.5 per cent. in 1957 and 26.8 per cent. in 1954.

(3) The outgo by way of interest paid on deposits, which formed 47 per cent. of the interest earned on advances and bills in 1954 in the case of Indian banks, was as high as 70 per cent. of the latter in 1958.

(4) The rise in the quantum of establishment expenses in 1958, as compared with 1957, was in consonance with the increase in total earnings, the ratio of these expenses to current operating earnings being unchanged at 31.8 per cent. In 1955, it was higher still at 39 per cent.

(5) The allocations to reserves from the net profit (before taxation) have been reduced over the year from 15.1 per cent. to 14.9 per cent., but the shares of shareholders and employees (bonus) in the net profit have both gone up, the former from 25.4 per cent. in 1957 to 31.3 per cent. in 1958 and the latter from 12.9 per cent. to 17.2 per cent. In 1954, it may be noted, 9 per cent. of the net profit went to general reserve, 37.2 per cent. to shareholders and 15.1 per cent. to employees.

(6) The share of tax provision in net profit in 1958 was 22.4 per cent., as against 32.6 per cent. in 1957 and 24.9 per cent. in 1954.

The setback in banks' earnings could have been offset, if not more than made good, if the banks had raised their rates of interest on advances, loans and bills purchased and discounted. No convincing explanation has so far been heard as to why the banks did not pass on a part of the rise in the cost of their operations to whom they lend. An analysis of the rates of interest charged by them shows that the bulk of their advances is being made at less than 6 per cent. and, if any increase was made in 1958, it was only in the group of credit given at 4-5 per cent.

The margin between the average rate of interest earned on bulk of the advances and that paid on time deposits and call deposits is, if anything, thin. It is most unprofitable, nay, unwise, to do banking business at such slender margin of profit. No wonder the banks are unable to have a contented staff and to strengthen their reserves.

WORLD BANK LOAN TO INDIAN RAILWAYS

The World Bank granted last week a loan equivalent to \$50 million to India for modernisation and expansion of Indian railways. The loan is for a period of 20 years and will bear interest at the rate of 6 per cent. per annum, including the usual commission of 1 per cent. Amortisation of the loan will begin on 15th January 1963.

Seven private banks are participating in the loan, without the World Bank's guarantee, for an aggregate sum equivalent to \$3,762,000, representing all of the first three maturities and parts of the fourth, fifth and sixth maturities falling due between January 1963 and January 1965. All the banks, except Lloyds Bank Ltd., participate in U.S. dollars, while the latter alone participates in pound sterling. The participating banks are: Lloyds Bank Ltd., London, the Chartered Bank (New York agency), the Chase Manhattan, the Bank of America, the Irving Trust, the Hanover Bank and the Riggs National Bank of Washington.

The total expenditure called for by the railway programme during the second Plan period is estimated at Rs. 1,121.5 crores (about \$2,355 million), of which Rs. 385 crores (\$809 million) are in foreign currencies. The foreign exchange part of the expenditure during the last two years of the Plan period is estimated at \$276 million. A part of this amount has already been covered by foreign exchange credits other than the latest World Bank loan.

The latest loan brings the total amount of World Bank lending to India for the current railway programme to \$225 million and will be applied mainly to expenditures for imported equipment, materials and services during the current year of the Plan ending 31st March 1960.

NATIONAL AGRICULTURAL CREDIT FUND

The Reserve Bank of India had, in terms of Sections 46A and 46B of the Reserve Bank of India Act, established in 1956, two funds, namely, the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund. The amounts standing to their credit as on 30th June 1959 were Rs. 30 crores and Rs. 4 crores, respectively. During the year 1958-59, a sum of Rs. 592.37 lakhs was sanctioned out of the Long-term Operations Fund to the State Governments for contribution to the share capital of co-operative credit institutions and Rs. 452.05 lakhs to the State Co-operative Banks as medium-term loans, as compared with Rs. 603.68 lakhs and Rs. 772.00 lakhs, respectively, sanctioned during the year 1957-58. During the year, a loan of Rs. 16.47 lakhs was also sanctioned to one central land mortgage bank out of the Long-term Operations Fund.

The State Governments have drawn during the year Rs. 574.49 lakhs against the amount sanctioned to them and the total amount outstanding as on 30th June 1959 stood at Rs. 1,317.86 lakhs. Medium-term loans have been drawn by State Co-operative Banks to the extent of Rs. 399.54 lakhs, the outstanding as on 30th June 1959 being Rs. 577.18 lakhs.

No occasion has so far arisen for operating upon the National Agricultural Credit (Stabilisation) Fund.

TAKE-OVERS RUN RIOT EVEN NEWSPAPERS ARE INVOLVED

From Our Own Correspondent

LONDON, 17th July

WHAT is the matter with the City these days? It is less than a year ago that one thought that all the worthwhile take-overs had been exhausted and yet here they are, once again, providing the main topic in the City and controversy in the backwaters of the Parliamentary parties.

LONDON LETTER

It will be recalled that the take-overs which have made City headlines in the past few years have been essentially the raiding by a go-ahead organisation of the hidden reserves of old-established, substantial property-owning, conservatively-managed firms. The cardinal feature of these latter firms was that they owned assets, particularly land and buildings, which were valued either at pre-war rates or in any case far below current market prices. The take-over was achieved, either by the quiet buying up of controlling shares or by the making of an offer to shareholders to buy their shares at a price which gave a very substantial capital profit. The successful bidder then sold the properties to an insurance company or a finance house, from which he then rented them back. The substantial volume of cash accruing enabled capital costs to be paid to the original shareholders as well as giving the bidder large liquid funds—with which he could then go on to make further bids.

Parallel to the liquefaction of the assets would usually go a progressive business policy throughout the usage of the firm in a way calculated to make more profits for the shareholders.

But some of the recent bids did not seem to conform to these basic principles of capitalisation of undervalued and underdeveloped assets. Take, for instance, the take-over, which is creating most interest at present, for the large London departmental store of Harrods—which in turn controls retail stores in other parts of the country. The bidders consist of other departmental store groups and the objective appears to be to enlarge the empire of the latter. A bid in such a case is more in the nature of an amalgamation. It is unlikely that there are any underdeveloped assets, while the bidders have declared they do not propose to change the nature of the business. As one bidder after another has gone into the field offering the shareholders better and better terms (the Directors meantime advising shareholders to sit tight until the top of the market had been reached) one begins to wonder whether this kind of exercise makes economic sense. It seems that the bidders are out to enlarge their trading empires without any hope of making a capital gain and indeed with the risk that their price may be beyond the potential earning capacity of their new acquisition.

Similarly, the Kemsley newspaper group is being bid for by a Canadian newspaper owner, and it seems that both sides are prepared to do business, although it is not yet clear whether the main London dailies will be left out of the bid—though it is presumed that they will. In this case, the newspaper empire covers, besides the London dailies, important Sunday papers and provincial papers. Now, the price of the shares of the group doubled as soon as news of the negotiations leaked out. But from where would the extra earning capacity come? If the Sunday papers and the provincial papers are hived off into a new empire, there would be a larger concentration of papers in one pair of hands, but the additional dividend can only come if new management should result in increased circulation.

It is not surprising that, with an Election coming near, the Opposition should see in this type of transaction a manipulation of share values without economic significance and a good talking point—however insubstantial—against a capitalist system which enables share jugglery to go on and ownership to change regardless of the effect on the consumer.—All Rights Reserved.

THE CHLORIDE ELECTRICAL STORAGE CO. LIMITED

ONE OF THE WORLD'S LEADING BATTERY MANUFACTURERS

EXTRACTS FROM CHAIRMAN'S REPORT FOR 1958

Expressing satisfaction with the continued progress of The Chloride Electrical Storage Company Limited, the Chairman, Mr. A. W. Browne, O.B.E., M.I.E.E., disclosed striking developments in the Company's research, manufacturing and sales resources.

Competition in world battery markets was intensifying, particularly in the markets for automotive batteries and batteries for electric factory trucks. In some countries battery producing capacity had outstripped foreseeable demand, and manufacturers who were not efficient and well-equipped were likely to find themselves in difficulties.

"We are meeting this challenge," said Mr. Browne, "in two principal ways:

"First, we continue to devote much of our effort and financial resources to technical research and development. This has resulted, and will result, not only in the continued improvement of our batteries, but also in increased efficiency of the plant to produce them. The new Research Laboratories are nearing completion and will make a substantial contribution to our technical progress.

"It must also be remembered that in addition to the highly competitive battery markets to which I have already referred, there is an important demand for many other types of batteries for literally hundreds of different applications. In many of these the degree of technical skill and know-how required is of a high order.

"An important result of our efforts is that leading battery manufacturers in other countries welcome technical arrangements with us. We are also able to provide for the receipt of a useful income by way of royalty.

"I am therefore able to state with confidence that we are well placed technically to retain our traditional position as one of the leading battery manufacturers of the world.

"Our second answer to the challenge is by concentration and the streamlining of our manufacturing, selling and service facilities.

"Last year I mentioned certain rationalisation schemes that were taking place in this country. These are now nearing completion and it is clear that the expected benefits to our economy will be forthcoming.

"Our preoccupation with the matters which I have just outlined has not distracted us from our day-to-day business of supplying high-quality batteries throughout the Commonwealth and in many other countries. Whilst the outstanding performance of our friends in the motor industry has played an important part in our success, our other battery business continues to be satisfactory, and the overall profits are ahead of last year."

CO-OPERATIVE FARMING—III PEOPLE ARE UNPREPARED FOR THIS REFORM

By Dr. D. S. Chauhan

THE Nagpur Resolution of the Congress Party envisages the establishment of co-operative socialism in agriculture. For proper functioning of any system of economic and social organisation, uniformity is an essential element. Different systems of economic organisation in different sectors of national economy (co-operative socialism in agriculture and mixed economy in industry, for instance) may create some confusion regarding the institution and forms of private property and cause shifting of resources and administration. Although the ideal of co-operative socialism is nothing new, for its proper conception considerable imaginative projection is yet needed, which only a few are in a position to do. Hence, a big psychological gap between the leaders of this idea and those who are expected to follow them is quite natural. This situation is also termed as the psychological unpreparedness of the people. The present opposition may, to some extent, be a manifestation of it. By trying to hammer the point again and again in a heated atmosphere, the protagonists are only inviting more opposition. Practical wisdom, therefore, demands time for things to cool down. It is possible that, after a few years' working of the service co-operatives, the social and economic climate may ripen for the adoption of a modified form of co-operative farming, for some farmers, on some lands, and for some enterprises in agriculture, though not for the one presumed in the Nagpur Resolution. And it is also possible that many of those who are over-enthusiastic about co-operative farming today may themselves be inclined to believe that there is a better alternative. In this context, one is reminded of Goldsmith's lines in *The Deserted Village*:

"Princes and lords may flourish or may fade,
A breath can make them as a breath has made;
But bold peasantry, their country's pride,
When once destroyed, can never be supplied."

Dynamism Vs. Conservatism

Opinions generally swing to extremes, while realism demands balancing, reconciling and harmonising the two. The Congress, as a political party, wishes to be too dynamic with agrarian reforms and the rate of economic growth. There are, however, several (some of them are in the Congress also) who are supposed to be conservative in this regard. Really speaking, in some cases, the differences are not so much ideological as in regard to the speed and the extent of change from the point of view of practicability. One group gives more weight to caution, slow and steady progress, consolidation and safety and security. The dynamic section is characterised by high ambition, radical ideas, adventure, preparedness for big risk, and, perhaps, has a faith in the nature of surgical treatment of the social ills. It is realised by both that agrarian reforms should be comprehensive, and that, in order to avoid suspense, indecision and uncertainty, they should be speedily implemented. But there is a limit to dynamism.

Making a choice and judgment is quite a delicate and difficult function. One set of criteria for sound judgment is the personal psychological factors that influence the individual outlook. The second set is quality and capacity of the people, for whom the change is intended, to adapt and adjust themselves. And the third is the concept of the ideal. Our goal is broadly defined in the Constitution as the guarantee to all of social, economic, and political justice, equality of status and opportunity, and freedom of thought, expression, belief, faith, worship, vocation and action. The Congress has decided to achieve this goal through a socialist pattern of society, and is trying to double the per capita income by the early seventies. These are fixed goals. Hence attention towards the second set of criteria is very necessary. Experience so far shows that many radical measures tried by the Congress Party have failed because of their impracticability, resulting from the economic, social, psychological and emotional unpreparedness of the people, even though the measures were backed by sincerity of effort and honesty of purpose.

Too much of dynamism may result in emotional disintegration, institutional imbalance and social disorganisation, and, instead of leading to social and economic vigour and vitality, it may start a process of decay. At the time when stabilisation of democracy is very necessary (parti-

cularly in view of its tumbling down in several neighbouring countries), experimentation with too many, too radical and too fast measures may fail by their own speed and weight, irrespective of their inherent merits. They may prove to be premature and very wide of the technical tradition, social heritage and cultural moorings.

Lack of Tolerance

Since the Congress President has given a choice to all those Congressmen, who are unable to reconcile themselves to the dynamism of the Nagpur Resolution on co-operative farming, to leave the Congress Party, and the Prime Minister, in his characteristic vein of flamboyancy, categorises all opposition to co-operation as stemming from "vested interests," one wishes a toning down in this super-dynamism. One does not know for certain whether Mr. Jawaharlal Nehru does not really "see any logic and sense" in the arguments of those who are opposed to the Nagpur Resolution or he simply does not want to tolerate any opposition or criticism. There is likewise a possibility that the nation is not able to catch up with Mr. Nehru's imaginations on socialism and the implications of the socialist pattern of society. In a situation of sharp differences of opinion, it is really very difficult to say as to which side is right. In such a situation, the guiding factor should be the nation's pulse. If for social, psychological and emotional reasons, the nation refuses to accept a reform, even if it is supposed to be economically good, it should not be introduced. Challenges are likely to generate reaction and to be followed by counter-challenges by political parties and organised groups. And, at a time when the nation requires constructive efforts by all sections and parties, nothing should be imposed or insisted upon which is likely to precipitate divisions and widen differences.

Scope for Application

A basic consideration is whether co-operative farming is intended to be the general pattern of agricultural production, covering the entire agricultural resources and the entire agricultural population, or whether it is intended to be a partial application, covering some sections and some lands whose improvement is supposed to be accomplished best through group action. Total co-operation in the agricultural sector alone (with other sectors remaining without it) is an impossible situation. Hence the choice is between complete or overall co-operation covering all sectors and partial co-operation. In the latter case, however, it is possible to have co-operation only in agriculture, but in actual practice it has already been extended to non-agricultural productive activities. In this choice of complete or partial co-operation, that is, in the determination of area or scope of co-operation, another consideration is whether it has to remain confined to production alone or has to be extended to consumption and living.

In deciding these broad questions, the ultimate goal is taken as an important criterion. On the ultimate goal of human society, opinions are unanimously in favour of establishing a community of peace, prosperity, brotherhood and individual liberty. But, as regards the practical form of it and the methods for achieving it, there has been considerable divergence of opinion amongst the different societies for historical reasons. The question whether an action is right or wrong is connected with spiritual, moral and social values of a society; it therefore becomes relative to different societies and cannot be decided by one standard. Accordingly, in any situation, the right action is that which is in congruence with social consensus, that is, an action which is in accordance with the social, moral, ethical and spiritual values of the particular society.

Co-operative commonwealth or co-operative socialism of the highest type (overall approach) has been tried in Russia. In view of its origin and the methods of extension (indirect compulsion through political power), I believe that democratic societies cannot do so. And, in view of the need for preserving individual liberty (which is a basic consideration in regard to the relationship of the individual and the society), no country should attempt that model. Since a system of overall co-operation has an inherent tendency to degenerate into collectivisation, and since, under collectivisation, the experience is that individual liberty and individual incentive,

which are the most valuable things, cannot be maintained, the country should not be made to go through the same painful process. There may be some truth in the statement that the validity of co-operative living should not be judged wholly on past experience and that one should also take into account the potentialities of co-operative action for human welfare. Yet, in view of the basic diversity of human nature, we have no sure ground for faith in it.

Apart from the consideration of economic performance of the co-operatives, there is the question whether group action for a nation of matured and traditional individual farmers of at least a thousand years' standing is desirable. In the evolution of agriculture, individual farming is a later stage development than group farming (which was practised in different forms). Surely, man has passed the stage of group farming a long time back.

To sum up. (1) Co-operation is not the only method for improving the standard of living of farmers and for modernising agriculture. (2) It is not the best method either. And (3) the history of co-operative settlements and communities shows that economic success has proved to be as important a threat to co-operative endeavour as economic failure. There is a limit to the subordination of individual behaviour and individual interest to social interest both in terms of degree and direction, in practical daily life and also as an ultimate goal. This is a crucial point. And, lastly, the members of co-operative farms who have failed to cope with their problems in a competitive society form a weak foundation. Those who have failed for personal reasons (incapacities) can hardly succeed co-operatively, and those who have failed not because of personal inadequacies or incapacities but because of handicaps arising out of economic and social framework, will break away from the co-operative society as soon as they feel strong enough to stand on their own feet, or as soon as that handicap is over or they find more remunerative employment outside agriculture.

Need for a Stimulating Motive

The history of co-operative communities shows that the basic motives which led to their origin and establishment were amongst the factors which determined most decisively their fate. The history of the co-operative movement in India also shows that, amongst the factors which are mostly responsible for its failure, the lack of spirit of co-operation is an important factor. Hence, for the formation of co-operatives, for knitting the group together and for its survival and success, a vital motivation is necessary.

The relationship between the nature of motives and the life of co-operative communities has an important lesson. The older experiments, which were motivated by religious creeds or by socio-reformist zeal, proved to be rather short-lived, and the life of the more intellectual experiments was still shorter. Data compiled by L. E. Deets—*Data From Utopia*, Sociology, Vol. 3, New York, Dec. 1940—about 130 settlements show that 32 lasted less than one year, 50 less than two years, 59 less than five years, 91 less than a decade, and only thirty-nine more than a decade. *Jewish Encyclopedia* mentions that, of the 20 colonies formed after 1880, 12 lasted less than one year, seven for 2-5 years and one nine years.) The modern co-operative settlements are a kind of socio-economic organisation for improving rural conditions. Whether they aim at total reorganisation as in Russia and China, or at rehabilitation of low income farmers as in Mexico and U.S.A., or at occupational redistribution of the unemployed as in England, or at the solution of any crucial problem, the basic motive has been predominantly economic. In our economic planning also, this is an important motivation. But it should be appreciated that any irrational motivation, as of the Utopian Communities, is not applicable to modern conditions (even to a country like India which is a predominantly religious country); and the purely rational, modern types of co-operatives have achieved their aims best only where the political system of the country is favourable to the idea as in China and Russia. Therefore, wherever co-operation is intended to be a voluntary growth, a stimulating motive is needed for carrying conviction, for activating individual action, for overcoming inertia and for creating thinking in terms of the community. For the formation of motives, special circumstances or problem situations, such as rehabilitation of handicapped and destitute farmers and colonisation and settlement of newly opened areas, provide favourable conditions. But purely economic motives may prove inadequate for sustaining the system even for a reasonable period of time.

(Concluded)

BOMBAY GOVERNMENT TO RESCUE COTTON MILLS IN DISTRESS LOANS FROM BANKS TO BE GUARANTEED

THE latest move of the Government of Bombay to help cotton mills in distress is, indeed, commendable, assuming that it will be implemented prudently and without any loss of money to the exchequer. The details of the aid scheme were announced by Mr. Shantilal Shah, the State's Labour Minister, at a Press conference on Thursday last week. The scheme envisages grant of financial assistance to those mills which, in the opinion of the Government, can be made profitable if working capital is given and if they are properly managed. The Government itself will not, of course, lend money to the mills. But it will arrange with commercial banks for loans to be given to all economically viable units as working capital. The loans will be backed by Government guarantee. Further, the Government will also help the mills to rehabilitate, renovate or change their machinery over a period of ten years, by standing guarantee for any additional money that the units may require other than what they have received from the National Industrial Development Corporation.

The scheme is applicable to the entire State. But for the present the benefit of the scheme is restricted to cotton mills situated in North Gujarat, Saurashtra, Khandesh, Sholapur and Vidarbha regions. It is gratifying to hear from the Minister that the mills which are mismanaged or which have hopelessly outmoded equipment will not be covered by the scheme.

Assessment of Creditworthiness

The Government guarantee, it is clearly stated, will be given only after a thorough assessment of the creditworthiness of the mills in financial difficulties, so that the State does not suffer any financial losses. When the Government receives an application for assistance from a mill, it will depute a committee of experts to examine the mill's fixed assets such as land, buildings and machinery, and other accounts, with a view to finding out whether the assets are in proper condition and the mills are being run properly. On the basis of this Committee's report, the Government will decide the total amount that should be guaranteed and then advise banks accordingly. It is proposed to constitute a small non-official committee to advise the Government whether, with the new machinery, the capacity of mills to earn can be sufficiently re-established to enable them to repay the loans and stand on their own feet thereafter. It is also proposed to create a machinery under a Deputy Secretary (Textiles) in the Industries Department to keep a check on the working of such mills.

The mills receiving assistance on the aforesaid lines will have either a resident director or a resident manager nominated by the Government. His duty will be to report to the Government every week about the happenings in the mills; in short, he will be a kind of "watch dog" in the mills on behalf of the Government. The report of this person will be scrutinised by the aforesaid small non-official committee which is expected to meet every week. If any mill is reported to be not functioning properly, the Government will ask it to remedy the defects and, if it fails to follow the directive, the Government will not renew its guarantee.

According to Mr. Shah, about twelve cotton mills in the State are in need of immediate financial assistance. The Government may have to stand guarantee for a sum of Rs. 3 to 5 crores annually.

Anxiety To Prevent Closure

The Bombay Government's decision to help the cotton mills in distress has evidently been prompted by the anxiety to prevent their closure which will create unemployment as well as bring in its train several other disquieting economic consequences. Analysing the financial difficulties experienced by some of the units producing coarse and medium cloth, Mr. Shah rightly pointed out that the heavy excise duty on cloth and the shift in consumers' preference from coarse and medium counts to finer varieties had adversely affected such mills. Consequently, there was, he said, shortage of working capital which forced several units to buy cotton on credit at high prices and resort to distress sales of cloth in order to pay their workers. In fact, everybody tried to exploit the financial difficulties of these mills. It was with a view to helping such mills that the Government, Mr. Shah

stated, had come out with the new scheme. And he expressed his confidence that, as a result of the scheme, the mills would, within the next five or seven years, be in a position to install new machinery to produce finer and superfine categories of cloth.

Bold Policy Wanted

The Bombay Government's scheme will certainly help many cotton mills which have suffered losses continuously for some years, owing to the fact that they have become economically weak because of old machinery. In particular, the mills manufacturing coarse yarn and cloth "have become exhausted," as coarse cloth does not have a good market at its present cost structure. The new scheme will keep these units alive, but it will not, as Mr. Ramnath A. Podar, Chairman of the Millowners Association, Bombay, feels, provide a permanent cure for their ills. In his opinion, what is required is a bold policy to reduce the cost of production.

By "bold policy" Mr. Podar means modernisation of equipment and rationalisation of the methods of production in mills. The former, as readers are aware, involves huge capital outlay and will take a long time. As regards rationalisation, there is stiff opposition from labour which fears that there will be widespread unemployment and reduction in wages. The fears are clearly exaggerated. As Mr. Podar has indicated, rationalisation affects just 5 per cent. of workers in a mill employing, say, 1,000 workers, whereas, if the mill were to close down, all the workers would lose their jobs. Why should there be any objection to the mills maintaining just as much labour force as they need, so long as the workers displaced as a result of rationalisation are not denied the compensation due to them? What is more, rationalisation is bound to lead to higher earnings for workers.

NEW SHUTTLELESS LOOM

The problem of designing a shuttleless loom has been one on which engineers have been working for years. Several fairly acceptable designs have seen the light, but the only one that is stated to be capable of weaving full-size cloth (35-45 wide) with dry yarn is the Maxbo loom, invented by an Estonian living in Sweden, Mr. Max Paabo. With economic assistance for his experiments by the foresighted management of the Swedish Co-operative Union, Mr. Paabo has step by step perfected his invention. A small, practical unit is now in series production. It is used in Swedish mills as well as in some mills abroad. A pioneer installation of 40 looms for bulk production is in operation at the Varberg plant of the Swedish firm Malmö Yllefabrik and was recently shown to the Press.

The Maxbo loom, which is designed on the jet principle, is reported to have a number of advantages over conventional weaving machines. It can work with very high-twist yarns which produce a hard-wear dirt-repelling cloth; its capacity of speed is 60-75 per cent. higher than that of other looms; it is simple in design and has 50 per cent. fewer parts than a conventional loom. Further, it is more silent and practically vibrationless. The latest models are small, light and compact and require no anchoring foundation. The weft of the Maxbo machine is blown through the shed by means of compressed air. The pick of weft passes cleanly through the shed to a suction tube located at the opposite end, whereupon a cutter (located at either end of the warp) cuts off the weft. The speed prevents the weft yarn from untwisting and a twist factor as high as five can be used, improving the quality.

The cloth woven on a Maxbo machine differs from other cloth in that it has an unconventional selvage. The selvage proper is of the continuous twisting type, two bobbins at either end of the warp rotating continuously about each other, while the narrow fringe (about 1/4 inch long) which protrudes from it gives it a different look. As selvages are but rarely used for hemming, this fringe is of little importance in making clothes, which is the main use to which the Maxbo-produced materials are put at present—mainly working clothes.

A set-up of Maxbo looms has been delivered to Israel, and single units are at present being tested at other places abroad. Production on licence has recently been started in several countries. The Maxbo machine, introduced at the Manchester Fair last autumn where it gained considerable attention, will be shown at the textile machine fair in Milan to be held in September next.

WORLD CHAMPIONS CHOOSE Firestone ..SO SHOULD YOU

because — In the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

To the ever growing list of Firestone racing champions, comes Mickey Thompson who recorded an average speed of over 266 miles an hour at Bonneville Salt Flats in Utah.

COTTON INDUSTRY SCHEME DETAILS MINIMUM TARGETS SET FOR EACH SECTIONAL REDUNDANCY PLAN

From A Special Correspondent

MANCHESTER, 14th July

ONE topic has dominated all discussions in the Lancashire cotton industry during the past week—the reorganisation plan for scrapping large quantities of redundant machinery followed by a modernisation scheme for the remaining plant. The first three schemes involving the spinning, doubling and weaving sections in the industry have been submitted to Parliament.

If there is adequate justification for their introduction, similar programmes for the finishing branch of the trade will be prepared in the autumn. The object of the scheme is to eliminate excess capacity to an extent which will really benefit the section of the industry concerned, but at a cost which will not involve undue expenditure of public funds.

Minimum targets have been set for each sectional redundancy plan and, if these are not reached, the schemes will not become operative. In spinning, at least six million mule equivalent spindles must be scrapped, in weaving 45,000 looms and in doubling 400,000 spindles. Each scheme will operate independently and it is, therefore, possible for one or other section to proceed with a scrapping plan without the rest being necessarily involved.

Three Categories of Compensation

Three categories of compensation are proposed, a standard rate for firms closing down complete mills or plant, a premium rate for those going out of business altogether and a discount rate for units already closed down or plant standing idle on 24th April, the date on which the Government approval of the plan was first announced. The final date for acceptances under the arrangements will be 30th September and, to encourage early entry into the schemes, a bonus of 5 per cent. will be paid to those applying before the end of August.

Variations occur within the different sections, although the schemes in general are closely in line. The actual rates to be paid in compensation for scrapped machinery have been worked out with great care by the Cotton Board in consultation with each branch. Standard rates range from 8s. per mule equivalent spindle to £250 per carding engine; from 10s. to 14s. per doubling spindle and from £45 to £80 per loom, according to a variety of factors.

All machinery involved will have to be destroyed or made unfit for further use. This must be completed by the end of March 1960 unless special permission is obtained for an extension. Some plant may be excluded from the scrapping clause, if the Cotton Board consider it to be in the interest of the trade for it to remain in existence. In this case, permission to sell the plant second-hand would be given, but no compensation would be available and

foreign buyers would be debarred from purchasing such machines.

Two Levies

To finance the schemes, the Cotton Board will raise two levies. One will be to defray the one-third cost of compensation for the elimination of excess capacity being met by the industry and will cover the administrative expense of the schemes. The other will meet the cost of compensation for displaced workers. Individual mills will not pay the operatives who lose their jobs under the reconstruction and payment will be from a central fund. The amount of the levies and the period over which they are raised cannot be settled until the response to the schemes is known.

A maximum of eleven weeks of decision now lies before the producing sections of the Lancashire cotton industry. Within this relatively short period, millowners must weigh up the terms offered and consider the outcome, if, through lack of support, the redundancy schemes are allowed to fail by default.

Throughout the discussions which have gone on for nearly three months already, the accent has been consistently on the need for speed; the latest developments still emphasise the importance of putting the plans into operation as quickly as possible.

The Most Vital Part

Perhaps the most vital part of the overall project is the minimum volume of machinery which must be registered for scrapping before each scheme can be unconditionally approved. The White Paper omitted any reference to such a basic idea; now it is clear that one or other sectional scheme can go through without necessarily involving the rest. This has its dangers which those firms now on the brink of decisions would do well to ponder. Without sufficient support from the spinning branch, for example, a position could arise where the number of customers for yarn might be seriously reduced, leaving the mills high and dry with even more surplus plant than at present.

Leading members of the industry welcomed the schemes on their announcement. Mr. Michael Grey, Chairman of the Cotton Manufacturers' Association, said:

"The purpose of the scheme is to get rid quickly of remaining surplus capacity which, in spite of persistent shrinkage in recent years, still undermines the stability of the industry and is also a discouragement to reorganisation and re-equipment by those firms intending to remain in it. This reshaping is urgently needed, preferably by the removal of whole productive units but also by partial elimination of loomage in firms which have excess capacity. It is no time for half measures, and it is essential that the incentives should be adequate to attain their objectives.

"The decisions now lie with individual firms themselves and we hope the scheme will attract the wide response needed to bring it and the re-equipment grant into operation. Every effort must be made to take this opportunity, as it seems most unlikely that there could be any repetition in future."

Mr. Philip Lees, President of the Master Spinners' Federation, said that the scheme was recommended for the urgent attention of all spinning firms in the confidence that fair terms of compensation for scrapping of machinery were offered. "A good opportunity is now available for firms to go out of business, if their mill structures and equipment are not suited to modern requirements; firms continuing in business should also be able to shed surplus capacity and to concentrate production on their most economic units," he added.

Freer Trading in Textiles

An aspect governing the response to the reorganisation plan is the recent freer trading in yarn and cloth which has allowed many firms in the industry to secure better order books and gain some ground. Commenting on this situation, the Cotton Yarn Doublers' Association said: "It is hoped that the temporary improvement in the offtake of doubled yarns will not blind firms in the doubling section of the industry to the necessity for such a scheme. The improvement in trade may prove to be only temporary and everyone must realise that this is probably the last opportunity the industry will have to put its house in order. If advantage is not taken of the scheme within the next few weeks the opportunity will be lost for ever."

Meanwhile, the Directors of Fine Spinners and Doublers Ltd., one of the biggest mill groups in the Lancashire cotton industry, intend to do everything possible to get the maximum possible aid from the scheme. Announcing this in his annual report, the Chairman, Mr. William T. Winterbottom, said that, when the industry was reorganised, extensive shift working on modern machinery would be called for. He said that the group was pressing on with its policy of streamlining production into the more efficient units in buildings suitable for re-equipment. Ten spinning and doubling mills had been closed down during the year. At Burnley, round-the-clock working was planned in a weaving mill now being entirely re-equipped with automatic looms.

More Cotton Supplies

World production of raw cotton in the 1959-60 season, which opens at the beginning of next month, should be the highest for several years. This situation is by no means unexpected in view of the much larger acreage planted in the United States which will probably be responsible for raising the output in that country by some 2,500,000 bales as compared with the season just ending.

The first estimate of the area planted to cotton in the United States gave a total of 15,890,000 acres, as compared with 12,379,000 acres in the previous season. Over the growing belt as a whole, favourable conditions have been encountered, despite some storm damage early in June. Average estimates of the crop indicate output of around 14 million bales, as against the production of between 11 and 11½ million bales over the past two seasons.

Latest developments in the raw cotton situation are mainly concerned with a probable rise in consumption during the forthcoming season as compared with the low levels to which the use of the raw material dwindled in the past twelve months. Exports from the United States showed a remarkable drop to only 2,800,000 bales in the current season, nearly three million bales

U.S. TEXTILE MILLS TO BE HELPED WITH CHEAP COTTON

BID TO RECAPTURE "FAIR SHARE" OF WORLD MARKET

[N a bid to recapture what is called a "fair share" of the world textile market, the U.S. Senate has passed a Bill by a voice vote. The Bill, now sent to the House of Representatives for consideration, has been sponsored by Republican Senator Margaret Chase Smith. It directs the Secretary of Agriculture to sell 3.75 million bales of Government-owned surplus cotton to U.S. textile mills over the next five years at prices which will permit the textile manufacturers to regain the export level of cotton textiles obtaining during the years 1947-52. The Bill lays down that sales should not exceed 50,000 bales in any one year and that mills should guarantee that the cotton would be used only for the manufacture of textiles for export. According to Senator Smith, a return to the export level of 1947-52 would give the U.S. its fair and historical share of the world markets. It may be noted here that exports of cotton textiles from the U.S. during the period 1947-52 averaged about 899 million yards per annum. Exports have progressively declined since then. They were 506 million yards in 1956, 548 million yards in 1957 and 510 million yards in 1958.

This measure is likely to spark sharp reactions in other textile exporting countries. Last year, when the U.S. Department of Agriculture announced its decision to attempt to regain for it a fair share of the world cotton market, cotton producing and exporting countries the world over stoutly opposed it on the ground that it would disrupt world markets. In spite of the repeated assurances of the U.S. Administration that it would not take any measures that would undermine the stability of the market or harm the interest of other friendly countries, the fears were not allayed. At this year's meeting of the International Cotton Advisory Committee, Washington, some delegates even disputed the theory of the fair and historical share of U.S. cotton in world markets. For instance, Dr. Kroese, President of the International Federation of Cotton and Allied Textile Industries, contended that, in view of the structural changes that had come over the textile industries of the world, this U.S. concept of fair and historical share of the world market had to be given clear consideration. Some of the delegates insisted on a definition of the fair share in terms of bales.

Rejecting the aforesaid contention, Mr. McClain, U.S. Assistant Secretary for Agriculture, pointed out that it was difficult to give a rigid definition in terms of bales to a concept which was flexible. He observed:

"The term 'fair historical share' is naturally a general and flexible concept. We believe that it is

a variable dependent, to a large extent, upon total world trade. It would be unrealistic to attempt to fix an absolute bale figure as the fair historical share of the world market for United States cotton. In 1956-57, we exported 7.6 million bales, without causing any decline in prices, while other exporting countries were able to sell all of their export availabilities. The United States exported 5.7 million bales in 1957-58 without seriously interfering with the exports of other producing countries. On the other hand, our exports during the current season will probably be less than three million bales; and, if we attempted to force five million bales into the market this season, world prices would probably be seriously disrupted. It is, therefore, obvious that periods of good demand should be permitted to offset periods of weak demand.

"For these reasons, it does not appear feasible for the United States to announce a firm bale figure to be exported from the United States in any given period. If that figure could be exceeded without interfering with the normal exports of other countries, it would be unwise for the United States to embargo exports when they reached such a figure. On the other hand, in a period when the export of such a quantity would cause serious disruption to world prices, the United States certainly would not attempt to force the announced quantity into the export market."

Cotton exporting countries still feared that the U.S. exports would adversely affect them and some countries of Latin and Central America have joined together and formed an Inter-American Cotton Federation with the object of finding out on a regional basis the best ways of ensuring stable prices for cotton in international markets. It is needless to add that what applies to cotton applies to cotton textiles also.

Realising this, perhaps, the U.S. Department of Agriculture opposed the Bill, but the Senate has rejected the opposition. The Department's opposition is said to have been based on three considerations. First, the Bill is unsound in principle. Second, its cost to the Department will be very high. Third, other textile producing countries will strongly oppose it. Senator Smith's contention that a return to the 1947-52 level of exports would give the U.S. a fair and historical share of the world cotton textile market has been disputed by the Department. Mr. Ezra Taft Benson, Secretary of Agriculture, in a report on the Bill submitted to the Senate Committee, points out that his Department does not feel that direct Government subsidisation of the domestic textile industry for the express purpose of increasing exports to the level prevailing in the period 1947-52 can be justified. Textile exports from the U.S. during that six-year period, according to him, were the highest in history. Government subsidisation of the domestic textile industry in an attempt to restore and perpetuate these abnormal conditions

would, according to him, be clearly uneconomic and difficult to justify.

Mr. Benson estimated that such sales of cotton to domestic mills would cost his Department \$37.5 million. The current export programme for cotton products operated by the Department, he maintained was a better solution to the problem of smaller U.S. cotton textile exports. In any case, it seems clear that any system of subsidies for exports runs counter to the whole concept of free multilateral trade which the U.S. has been advocating all along as the ideal goal.

MANCHESTER LETTER

(Concluded from previous page)

down on the previous year and five million bales lower than in the 1956-57 season. On the other hand, shipments from other competing countries were a million bales higher at eight million bales.

According to the latest review of the position issued by the International Cotton Advisory Committee: "Everything hinges on consumption. A rise in the use of the raw material would create much more favourable conditions for the cotton trade as a whole and prices. An increase in total trade, together with at least the possibility of some decline in production outside the United States, should pave the way for substantially increased exports of American cotton without adversely affecting the trade of other countries," observes the report. "All this should tend to react favourably on the cotton price level."

Recent signs of improvement in textile business in Western Europe have raised hopes concerning the future trend of cotton consumption, and a better offtake of goods in the United States has lately been freely reported. A keen demand has been encountered for a wide range of fabrics and the American textile industry appears to be in a much stronger position than for some time back. Mill margins are stated to be at their highest level for over two years.—All Rights Reserved.

NYLON CARPET CENTRE IN LONDON

A nylon carpet centre—claimed to be the first in Europe—was officially opened in London recently by Sir Gordon Russell, Director of the Council of Industrial Design. The centre is the idea of Mr. Alfred Morris, Managing Director of British carpet firm, whose aim was to provide a showroom where buyers and the public alike might see at leisure the vast range of pure nylon carpet and rugs which are designed to match any colour scheme or any style of decor. Mr. Morris said in an interview that he hoped eventually to export as much as a quarter of total production.

The opening of the new centre reflects the growing popularity of man-made fibres as a carpet material. In one month this year, 1,300,000 lbs. of man-made fibres were used in carpet manufacture, out of a total of 5,800,000 lbs. In Britain nine years earlier, the total amount of fibres used was just over 4,800,000 lbs., but man-made fibres share of this was only 16,000 lbs. Moreover, this increase has been attained in a pioneering period fraught with the usual troubles and setbacks of a infant industry.

WORKING OF WORLD COMMODITY AGREEMENTS

U.N. SURVEY URGES REALISTIC AND WORKABLE PROGRAMME OF ACTION

ONE of the striking aspects of international economic co-operation since the second world War relates to the persistent attempts at abolishing the free world commodity markets. Though these attempts have not met with complete success, they have at least served admirably to indicate the futility and the imprudence of cyclical "beggar-my-neighbour policies" which predominantly characterised world economy before the war. One such attempt has been through the mechanism of international commodity agreements. Now that more than a decade is elapsed since this mechanism was first introduced, it would be appropriate to review the actual working of the agreements. The three questions that immediately rise in one's mind are: What exactly are the implications of the agreements for national policies? Have the agreements had any effect on price or income stability? And have they dealt successfully with structural problems? For the answers to these questions, one has only to peruse that illuminating *World Economic Survey 1958*, published by the United Nations, New York (Price: \$3.00).

The world commodity agreements, it will be recalled, usually stipulate a set of definite terms which the participants are pledged to observe and implement, the operating principles falling into three main types—the export quota, the buffer stock, and the multilateral contract for purchase and sale. Four commodities have been made the subject of agreement on a broad multilateral basis comprising both exporters and importers. These are: wheat, sugar, tin and olive oil. The functions of the olive oil agreement are rather limited, resembling those of a study group, and it has in any case not yet come into force. The other three are of wider interest, because their operations illustrate the working of broad principles, especially the export quota principle in sugar, the buffer stock principle in tin and the multilateral contract principle in wheat.

Price Mechanism

A common feature of the agreements covering the aforesaid commodities is their reliance on the price mechanism as the critical indicator or action, as is indicated below:

Sugar: Revisions of export quotas become mandatory when the market price reaches certain critical levels: minimum and maximum levels per lb. fixed for Cuban raw sugar at New York (i.e. Cuba) are 3.12 cents and 4.00 cents, respectively.

Wheat: Importers are committed to take delivery of an agreed quantity when prices reach the floor (\$1.50 per bushel), while exporters are obliged to supply an agreed amount when prices reach the ceiling (\$2.00 per bushel).

Tin: The buying and selling operations of the Buffer Stock Manager are also guided by minimum (£730 per ton on the London Metal Exchange) and maximum (£890 per ton) prices, although there is some freedom of action when prices lie within certain ranges.

In all the aforesaid commodity agreements, there are implications for national policy which are not made explicit in their provisions. Mention, for instance, may be made of payment of subsidy in respect of wheat exports by a national Government, a pooling arrangement between two countries and adoption of some equalisation scheme in importing countries. The Sugar and Tin Agreements explicitly or implicitly require certain adjustments in exports, stocks and production to be made. While an export quota scheme does not in itself necessarily give rise to a dual price system, such a system is formally recognised by the Sugar Agreement. A special provision in this Agreement discourages subsidies, but it does not appear to have actually been enforced. In the case of the Tin Agreement, it is necessary to ensure that there is a relatively free market in which the Buffer Stock Manager may buy or sell.

The *Survey* has drawn special attention to a basic weakness of the existing international arrangements, namely, conflict between world commodity agreements and national policies. There is, according to it, a general presumption that, if world agreements are to be effective, the Governments of the member-countries must be prepared to adjust their national policies accordingly.

Assessing the impact of commodity agreements on price or income stability, the *Survey*

points to the asymmetry between upward and downward movements of prices which is more evident in the Sugar and Tin Agreements than in the Wheat Agreement. To quote it: "In an export quota arrangement, it is at least theoretically possible to cut exports drastically enough to support a given price level, but it may be much more difficult to assure a level of exports adequate to prevent a rise in prices." In the case of sugar, as readers are aware, the Agreement has not been entirely effective of late in arresting a fall in prices, thanks to the severe restrictions imposed in the Agreement on the range within which export quotas may be cut. As regards tin, one form of asymmetry in buffer stock operations lies in the fact that no stabilising release of stocks is possible when a buffer stock is first established during a period of rising prices, since the Buffer Stock Manager has no stocks to operate with. Moreover, the suspension of buffer stock operations in tin in September 1958 points to the difficulty of arresting a downward movement of prices, if financial resources are limited. The commodity agreements have also not helped to stabilise incomes or export proceeds, since these depend not only on the volume of exports but also on the prices prevailing and since all exporting countries are not covered by agreements.

Structural Adjustment

The *Survey* then alludes to the problem of the relationship between commodity stabilisation and structural adjustment. This problem is considered to be common to both wheat and sugar and, to a lesser extent, tin. Posing the question whether the international agreements tend to promote or hinder its solution, the *Survey* makes the following interesting observations:

"While the measure of success achieved thus far in dealing with the surplus problem through restrictive measures in sugar and tin offers a significant contrast with the failure in wheat, it needs to be noted that restrictive measures also give rise to long-term problems in so far as they tend to freeze the pattern of production among the participants and to encourage expansion of production by non-participants. International agreements involving quotas have a bias towards freezing production patterns on the basis of past experience or of relative bargaining strength rather than of considerations of cost or efficiency. Rationalisation schemes for the orderly elimination of high-cost producers are lacking. Indeed, there is a strong tendency to protect high-cost producers who might find it difficult to retain the same share of the market under more competitive conditions. True, the pattern of production is subject to revisions and a number of participating countries have actually succeeded in enhancing their share in the total market. Nevertheless, these concessions are made by the other participants mainly to prevent a deadlock in negotiations for an agreement rather than to achieve a more rational distribution of resources from the point of view of resource allocation. This situation contrasts with that prevailing in buffer stock or multilateral contract arrangements, which do not tend to freeze the pattern of production but are, at the same time, ineffective in bringing about a more rational allocation of resources."

The ineffectiveness of the Wheat and Sugar Agreements is also due to shortcomings caused by omissions rather than of commission in some respects. Thus, in the operation of the Wheat Agreement, the danger, according to the *Survey*, is to be found not so much in any tendency to freeze the existing pattern of production as in the ability of some major exporter to increase its production, both absolutely and relatively, a commodity in surplus supply. In the case of sugar, aside from the tendency to freeze the pattern of production among exporters, it is, perhaps, the conspicuous inability to do anything about subsidised high-cost sugar production in importing countries that seems to be open to the most serious objections from an international point of view. Because of the outstanding example of uneconomic resource allocation that it provides.

It is against this background that the *Survey* has examined the various schemes of a more comprehensive character designed to ensure stability in world commodity markets. Two major types of approach are distinguished, involving, first, overall measures which do not deal with particular commodities as such and, secondly, measures dealing directly with groups of commodities. Under the former, special stress is laid on the need for attacking the commodity problem at the root by promoting growth

and stability and by progressive liberalisation of trade. The *Survey* no doubt admits that this aspect has received international support but feels that some measure of relief from the impact of the commodity problem on underdeveloped countries can be derived from general economic aid and from overall increases in international liquidity.

Commodity-oriented Proposals

The attempts to give special emphasis to the commodity problem in overall economic schemes have yielded several comprehensive proposals which are clearly commodity-oriented. The U.N. *Survey* has briefly examined these proposals and brought out certain conclusions which may be summed up thus:

International co-ordination of national stabilisation schemes: The scope for the application of this method may be limited, since existing stocks which may be regarded as operating according to buffer stock principles are relatively few in number and tend to be concentrated in a few hands such as wheat in the U.S. and coffee in Brazil.

Multilateralisation of commodity agreements: There are great "mechanical" difficulties in setting up such complex negotiations among a large number of countries. There is also some doubt as to how far the interests of primary producing countries in the one or two commodities which dominate their exports will really be modified by considerations relating to the less important commodities. Further, the link between concessions made and benefits obtained in multi-commodity stabilisation schemes will be exceedingly difficult to establish.

International buffer stock scheme: The main difficulty will be that of maintaining contact with market realities by providing adequate means of adjusting the average stabilised level of prices as required; failure to do so will cause the ultimate breakdown of the scheme. There is danger in over-reliance on automaticity.

Composite index stabilisation scheme: A decisive drawback of the scheme is that the benefit of, say, a price support operation may be largely concentrated in a particular group of commodities and countries.

Commodity reserve currency scheme: It is open to question whether the underdeveloped countries can afford to lock up large resources for the purpose of international stabilisation. A huge social cost is involved in accumulating commodities on a large scale to serve as currency backing. The scheme is inherently asymmetrical in that it provides an unlimited market for commodities but does not necessarily guarantee that commodities will always be available at the net prices.

Multi-commodity insurance scheme: Since the scheme does no more than pool the resources of participants over time, its interest may be limited, especially since some commodity producers would appear to be subsidising others on account of fluctuations in the pattern and periodicity of fluctuations. The latter consideration may make it particularly difficult to secure agreement on a scale of premiums.

The difficulties surrounding world commodity stabilisation policy noted above certainly focus attention anew on proposals for strengthening the liquidity position of the underdeveloped countries. The International Monetary Fund has no doubt been playing a prominent role in this direction, but its activities have only a marginal, rather than central, bearing on the problem of commodity instability. The *Survey*, therefore, points out that the time has, perhaps, come to consider seriously measures for mitigating the impact of commodity instability per se on underdeveloped countries—be it through suitable world arrangements to assist underdeveloped countries to strengthen their national liquidity reserves or through some form of world commodity insurance to provide partial compensation for fluctuations in foreign exchange earnings. The *Survey* pertinently remarks that the problem of commodity instability must be viewed not in a narrow context of price haggling between producer and consumer interests but in the perspective of the need to place economic development on a more stable footing.

INTER-STATE WATER DISPUTES

The Government of India has framed a set of rules governing inter-State water disputes under Section 13 of Inter-State Water Disputes Act 1956. Details regarding the form and manner in which a complaint relating to a water dispute between two or more States, as well as the procedure for solving them, including the method of appointing officers for a tribunal, have been prescribed. The Act stipulates that a serving or retired judge of the Supreme Court or a serving judge of the high court can be appointed by the Chief Justice of India to form a one-member tribunal in case of dispute between two or more States. In the rules, it is laid down that, where the Government of a State desires to refer any water dispute to a tribunal for adjudication, it should address its communication to the Secretary to the Government of India Ministry of Irrigation and Power, New Delhi giving particulars of the dispute.

INDIAN INSURANCE COMPANIES' ASSOCIATION

MR. M. S. DASTUR ENVISAGES A BRIGHT FUTURE FOR GENERAL INSURANCE

ADDRESSING the members of the Indian Insurance Companies' Association at their Thirty-first Annual General Meeting held in Bombay on Tuesday, 21st July 1959, Mr. M. S. Dastur, Chairman of the Association, envisaged a bright future for general insurance business in India. Proceeding, he observed:

"With the progressive implementation of the various schemes for the economic development of the country, there will be a considerable scope in the years to come for insurance companies to develop new lines of business to meet the many and varied requirements of industry." He, however, felt that it would be necessary for certain conditions to be fulfilled and certain handicaps removed, if the vast potential was to be realised in practice. Examining at some length the proposal to reduce fire tariff rates, he urged the authorities to take into account the various factors which go to determine the fire premiums, including rising costs of management and the need for building up adequate reserves to meet unforeseen contingencies, like conflagration, which occurred at long intervals.

Acceptance of Policies

After prefacing his speech with a brief reference to world economic conditions and the general prospects for insurance, Mr. Dastur went on to refer to the onerous conditions imposed by financing institutions in their dealings with insurance companies. In this connection, he cited the example of the Industrial Finance Corporation which insisted on some insurers to obtain letters of credit from their treaty and re-insurance offices to the effect that, in the event of a claim arising, these offices would pay the claim direct. He also mentioned other industrial investment corporations which required companies to participate in the share capital of the corporations in order to ensure acceptance of their policies. Continuing, he added that some banks also insisted on special conditions, requiring insurers to lodge with them Government or other securities of certain value or, in the alternative, provide for the policies issued by them to be guaranteed by another insurance company of repute, acceptable to the banks. He deplored the insistence on these conditions, as derogatory to Indian insurance as a whole and emphasised how it was essential, in the interests of trade and industry, that the two important adjuncts to national economy, banking and insurance, should work in close co-operation.

Formula for Expenses

Adverting to the problem of expenses of management of insurance companies, Mr. Dastur said that the expenses had risen more steeply than the premium income during recent years. He referred, in this context, to the formula for expenses provided under Section 40C of the Insurance Act, read with Rule 17E, which was framed as far back as 1950 and suggested that, inasmuch as economic conditions had changed since then, the formula should be revised so as to reflect the requirements of the trade in the altered circumstances.

Code of Conduct

The code of conduct for general insurers, according to Mr. Dastur, had achieved reasonable success. Given a fair trial, it should yield good dividends in the long run. He expressed the hope that the sub-committee of the Executive Committee, which had been appointed to take stock of the present position in the trade and recommend on the future course, would evolve a satisfactory solution acceptable to all sections of the trade. He also appealed to the authorities not to change the code frequently nor to make it too elaborate, complicated or expensive, but to formulate a compact and balanced scheme. Further, he stressed the need for such stringent measures as enforcement of a uniform pattern for maintenance of account books and appointment of inspectors. He made a fervent plea to insurers to adopt a policy of "live and let live" and evince a sense of mutual co-operation, based on tolerance and goodwill.

Reserves

The Chairman regretted that the Indian insurers' plea for facilities designed to encourage the building up of ample reserves continued to be ignored by the Government. He felt that heavy taxation and failure to take into

account the special features of the industry would tend to weaken insurers. He strongly urged the Government to allow the industry to build up tax-free reserves to enable it to provide still better and more efficient service to the community.

Fire Tariff Rates

Proceeding, Mr. Dastur subjected the move to reduce fire tariff rates to critical scrutiny. He observed how fire insurance rates, in the aggregate, must be sufficient to cover (1) losses, (2) expenses of management, (3) ample free reserves to withstand unforeseen calamities and (4) fair and reasonable profits to shareholders. He, however, said that only the first of these factors was now being taken into consideration for the purpose of revision of rates. The fire department underwriting, on the other hand, really consisted of several sub-sections, such as (1) fire, (2) riot, (3) earthquake and (4) other extraneous risks. Fortunately, insurers had not faced in recent years losses under (2) and (3) and there had been very little losses under (4). He, therefore, pointed out that it would not be proper to revise the premium rates on the basis of a claims ratio which, while taking into account premiums derived from all sub-sections, was in effect based on the actual occurrence of losses in one sub-section alone, ignoring the possibility of losses in the other sub-sections. He also emphasised that, in deciding the case for the revision of fire tariff, the relatively limited increase in fire premium income, the increase in expenses of management and the need for building free reserves to meet unforeseen contingencies should all be taken into account. Again, it was necessary to bear in mind that it was easier to reduce the rates than to raise them

again when circumstances so warranted. Nor would their reduction eliminate malpractices.

Marine Insurance

Discussing the trends in marine insurance, Mr. Dastur observed that the market continued to be erratic, because of the reduction in rates. He hoped that the market would stabilise itself. The loss ratio in the department had risen due to theft, pilferage and non-delivery of goods. Inadequate packing and rough handling at destinations had contributed to the large number of claims. He thought that, if the marine market hoped to make reasonable profit, it should have obligatory tariff for business.

Miscellaneous Account

Turning to miscellaneous account, Mr. Dastur said that the motor section of the account was in a bad shape; the claims ratio in this section was as high as 65 to 70 per cent. Continuous rise in repair costs, increase in accidents, insufficient road sense and overloading of vehicles were among the factors responsible for high claims ratio in the motor section. He felt that frequent increases in motor premium rates was not the remedy. Instead, insurers could agree not to give comprehensive cover to motorists with bad claims record or, in the alternative, they could give higher "no claim" bonus to cautious motorists. Incidentally, such concessions would help meet non-tariff competition.

In conclusion, Mr. Dastur referred to the difficulties arising out of the operation of the Companies Act, particularly from Sections 299 and 301 of the Act; these sections required companies to maintain separate registers of contracts with their Directors. Since insurance policy came under the definition of "contract," insurers were compelled to maintain registers of policies issued to their Directors or to their firms and partners and to the concerns of which their Directors were also Directors. Since no useful purpose was served by the maintenance of such records, he felt that insurers should be exempted from the operation of these and other sections of the Act which gave rise to practical difficulties in the day-to-day working of insurance offices.

GLOBAL NAILBITINGS

Selling in export markets is always a tough job, it is more so now when competition is fierce. All over the world experts are doing a lot of nailbiting to develop export markets.

Nearness to the Afro-Asian markets and familiarity with conditions and needs there, are India's clear advantages over her competitors.

With quality products and competitive prices, Indian engineering products could keep on feeding the Afro-Asian markets for decades to come.

E.E.P.C. can help you in your export drive.

men of faith

"From early morning till late at night the Tata offices in Bombay were besieged by an eager crowd of investors. Old and young, rich and poor, men and women, they came offering their mites; and, at the end of three weeks, the entire capital required for the construction requirements, £ 1,630,000 (over Rs. 2 crores), was secured, every penny contributed by some 8,000 Indians."

— Azal Sahlin

India's first venture into heavy industry. The Tata Iron & Steel Company, was thus launched on 26th August, 1907, with overwhelming support from investors and the public. Its growth into the country's largest single private enterprise and the principal steel producer was not without struggles and heartaches. In the 1920's when the very existence of the Company was at stake, there were many stout-hearted investors whose faith never faltered, and who cheerfully accepted the risks of a pioneering enterprise.

JAPAN'S ELECTRICITY INDUSTRY

EQUAL EMPHASIS PLACED ON HYDRO-ELECTRIC AND THERMAL POWER GENERATION

NO country outside North America and Europe has a more extensive electric power industry than Japan. Whether from the point of view of *per capita* consumption or from that of extensive application of power to industries, Japan ranks very high among the world's leading industrial powers. It has now enhanced its reputation as an industrial nation by becoming an important producer of a wide range of electrical equipment. It produces not only such consumer goods as electric irons, fans, washing machines and refrigerators, but also heavy and light electrical equipment of almost every description. All this has been made possible through the widest possible use of electricity, the *per capita* consumption of which is over 800 kwh. as against a mere 26 units in India. Although Japan lags behind the U.K. and the U.S.A., the *per capita* consumption of which is 1,702 kwh. and 3,800 kwh., respectively, it is well above the *per capita* consumption in India, or for that matter in China, which consumes per person a little over 30 kwh.

Large Funds

Japan had a relatively later start in power generation. It had no power industry before 1883. But it has made rapid progress in the last 50 or 60 years. It now produces about 14.34 million kw. annually. A feature of the industry is that power production is heavily concentrated in a few leading power enterprises, of which nine leading companies account for over 90 per cent. of the total power output. However, Japan, like other countries, knows that it must undertake large programmes of expansion in the coming years if it must successfully meet the demand for power. It also knows that large funds will be necessary to implement a vast expansion programme. This problem is being tackled in two ways. In the first place, the nine electric power companies have taken in hand a co-ordinated operational system to effect an overall rationalisation of management of the power industry as well as streamline the supply organisation in the nine regions to which they cater. Presumably, this will result in cutting down costs of operations. Secondly, since the availability of funds for expansion depends ultimately on an equitable rates structure, beneficial to the producer and not burdensome to the consumer, the Japanese Government has established a body, entitled Electric Rate Survey Council, which will study the measures for evolving a sound schedule of rates. It will be interesting to find out what solutions this body will suggest for the complicated financial problems involved in the expansion of electric power resources. Japan, like other countries, realises that the element representing capital outlay in the cost of electricity increases as new production plans are implemented. It would appear that the power companies are convinced that it is imperative that the "Government should decide on appropriate and fair charges, considering the rise in generation costs." Meanwhile, the Government-sponsored Electric Power Development Company, Ltd., is engaged in large-scale development of power resources.

Demand

A large increase in the demand for power facilities is anticipated in the next few years. The demand for electric power for industrial use is increasing every year, thanks to the expansion of Japan's economy. A rise of 12 per cent. over the preceding year was witnessed in 1955, while the increase in each of the years 1956 and 1957 was 19 per cent. The household consumption of electricity has also witnessed a steady increase in the past several years due to the rise in the people's standard of living. In addition to the increase in demand for lighting purposes the household use of electricity for heating and electric appliances has also witnessed a large increase. At the present rate of increase in demand for electric power, it is estimated that the demand in 1962 will be 50 per cent. larger than in 1957. During the seven years since their inception in May 1951, the nine power companies completed construction of hydro-electric and thermal generation plants, aggregating 4,552,000 kw. or 53 per cent. of the 8,571,000 kw. generation capacity at the time they were established. However, if the power industry is to cope with the annual increase in power demand and maintain the balance between supply and demand, it is estimated

that the construction of hydro-electric and thermal power plants aggregating 7,223,000 kw. or 56 per cent. of the present capacity is necessary by the end of fiscal year 1962.

The past policy of giving priority to the construction of hydro-electric plants has changed recently because thermo-electric generation has become more economical. This is attributed to the technical progress witnessed in this type of generation. New high efficiency thermal plants have been installed. Equal emphasis is now being placed on hydro-electric and thermal development projects.

Funds invested by the nine power companies for the expansion of their generation facilities since their inception in 1951 have aggregated 838,400,000 million yen. An additional outlay of some 639,400,000 million yen is necessary for the construction of new power plants by the end of fiscal year 1962. However, together with the cost for the purchase of other equipment and facilities, including those for transmission, transformation and distribution purposes, a total of 1,186,800,000 million yen in expenditures would be required by the end of fiscal year 1962. This would amount to an annual average outlay of 237,400 million yen or about twice as much as the average annual spending of 119,800 million yen witnessed in the past seven years. Total fixed assets of the nine power companies as at the end of March 1958 were 1,125,600,000 million yen. This was approximately 30 per cent. of the combined fixed assets held by all industries in Japan.

Nuclear Power

A notable development in Japan in the last year or two is that efforts are being made to harness atomic energy to peaceful purposes. It may be noted here that, for several years after the war, Japan was forbidden to undertake nuclear research and generation of atomic energy. However, since 1954, Japan has been taking great interest in the development of nuclear power. Five major groups, each with a nucleus of some important electric equipment manufacturer, are engaged in the development and application of atomic power. They are: Daiichi Atomic Energy Industrial Group, Mitsubishi Atomic Energy Industrial Company,

Ltd., Nippon Atomic Energy Enterprises Company, Ltd., Tokyo Atomic Energy Industrial Association, and Sumitomo Atomic Energy Industrial Association. These organisations will assist in the construction of experimental reactors in universities and research institutes. But the major task in which they are engaged is participation in the construction of the improved Calder Hall type reactor (natural uranium fuelled, gas cooled reactor with 150,000 k.v.a. output) which is being imported from the U.K. by Japan's Atomic Energy Power Generation Company.

U.N. HELPS DEVELOP WATER RESOURCES

Indifference to water resources planning cost a country much in terms of wealth and human life. Proper measures for the utilisation of water resources can be an effective insurance against devastating floods, drought and scarcity of power. Harnessing the turbulent waters in the service of man, however, calls for huge financial commitment and technical know-how. The less developed countries are not always in a position to meet these demands themselves. It is, therefore, gratifying to note that the United Nations and its specialised agencies have come to the aid of these countries for developing their water resources. The project aided by the U.N. include, among others, survey of resources, river-basin development, drilling of wells, construction of dams for hydro-electric power and irrigation, water purification and sanitation, pilot projects in watershed management and drainage and experiments in new irrigation practices. Many of the projects are receiving financial aid from the Expanded Programme of Technical Assistance. Five projects have received allocations from the first operational fund of the U.N. Special Fund approved in May last.

One of the pioneering undertakings under the U.N. aid is the Lower Mekong River Basin Project, which will benefit Laos, Cambodia, Thailand and Vietnam. A multi-purpose programme for the development of irrigation, flood control, hydro-electric power and navigation, the project is expected to benefit a population of 17 million. A present, work is progressing on a five-year programme of data-collection and planning, estimate to cost \$9.2 million, as recommended by a U.N. survey mission in January 1958. In addition, plans have been approved for several relatively small pilot projects on Mekong tributaries, expected to bring almost immediate benefits.

As part of the overall programme, an aerial survey of the main stem of the river will be made by Canada at a cost of 1.3 million Canadian dollars. The U.S. is contributing \$2.2 million for investigations on the ground, including river measurements; Japan is providing ground reconnaissance of Mekong tributaries, estimated to cost up to \$240,000; New Zealand has contributed \$100,000 for river survey work; and will supply 366 rain gauges at a cost of \$32,000. France has announced contribution amounting to \$320,000 and Australia \$225,000. The U.K. has provided \$56,000 for a launch at meteorological equipment.

Besides, technical assistance is being provided by the U.N. to quite a few projects. Last year the U.N. experts worked on assignments ranging from the extraction of salt from sea water in Iceland, by means of geo-thermic (hot springs) energy to investigation of ground water in the western coastal belt of Malaya.

The first operational programme of the U.N. Special Fund, although it was approved only a couple of months ago, has allocated \$1,770,000 for five projects, one each in Ghana, Greece, Israel, Thailand and the United Arab Republic.

The F.A.O. has been assisting various countries in assessing their water resources and requirements, protection of land against flood irrigation and drainage and rural water-supply. The largest project undertaken by the F.A.O. is the Rufiji Basin Survey in Tanganyika, where eleven experts are helping the Government carrying out investigations on the territory's potentials for economic development. The basin covering about 68,500 sq. miles represents virtually 20 per cent. of Tanganyika's area. Further, mention may be made of the assistance being rendered by F.A.O. forestry experts, since 1952, in conducting surveys and studies for timber production and industrialisation in Brazil. The F.A.O., in collaboration with the U.N. Educational Scientific and Cultural Organisation, has sponsored some schemes for research on certain problems related to arid zones, including demineralisation of salt water. The U.N.E.S.C.O., with the aid of Advisory Committee on Arid Zone Research, is organising seminars, granting subsidies national research bodies for studies in hydrology and geophysics.

Among some of the other schemes organised by the other specialised agencies of the U.N. particular mention need be made of India's Dardar Valley Project, Yankee project in Ceylon, Thailand, Voltwino and Tavolere schemes in Italy all of which are receiving financial assistance from the World Bank. Another loan granted by the World Bank will aid in the construction of a large-scale experiment in the irrigation of land in the Aichi region of Honshu Island.

Above all, the four regional economic commissions of the U.N. are also making every effort to foster water resources development activity within their respective regions. Besides, a World Resources Development Centre has been set up in the U.N. headquarters. It is expected to serve as a focal point for promoting concerted and coordinated action among the U.N. and the regional agencies and services in the field of water resources.

NEW PRODUCTS AND PROCESSES

Bacterial Diastase for Desizing

BACTERIAL diastases or amylases find extensive use in the desizing of textile fabrics. They are more stable to heat than diastases from other sources and are preferred for desizing purposes. Bacterial diastases are not at present manufactured in India and almost the entire requirements of desizing agents are met by imports. Conditions have been worked out at the National Chemical Laboratory for the production of bacterial diastase. Selected strains of bacteria, *B. subtilis* or *B. mesentericus*, are grown in submerged culture in media favourable for the production of diastase in high yields. The diastase is then isolated from the filtered medium by low temperature evaporation, precipitation and drying. All the raw materials required for the process, such as groundnut cake, wheat bran and salts, are readily available in the country. The diastase has been found to be stable on storage. The process has been studied with reproducible results in a pilot plant for the production of highly concentrated material on a 2-lb. scale, which is equivalent to several times the weight of commonly used commercial desizing agents. The cost estimates have been prepared for a commercial plant producing about 33 lbs. of concentrate per day, which is expected to meet the requirements of the country. Precise figures for the annual requirements of desizing agents are not available, but a commercial plant of this capacity is expected to meet the requirements of the country. The material has been tested in some of the leading textile mills and compare favourably with imported desizing agents.

Liquid Seed Dressings

Two liquid seed dressings for use with cereal, sugar beet and other agricultural seeds are to be introduced for commercial U.K. use by the Shell Chemical Company. This is said to be the first time liquid seed dressings have been used commercially in the U.K. One of the dressings, called Panogen, is a mercury-based fungicidal dressing which has been used successfully for many years in Sweden, other European countries and America. The second, called Astex, is a new insecticidal one which is said to give control of wire-worm and other soil pests. A new highly efficient liquid seed dressing machine has also been developed and is being made available. It is capable of applying Panogen alone, which will give, it is claimed, an effective replacement for the standard mercury dust seed dressings, or a mixture of Panogen and Astex together, which will give a "dual purpose" protection to cereal and sugar beet. A feature of the machine is the simplicity with which it is possible to change from single to dual-purpose dressing, or from one variety of seed to another. Checking of the dressing rate is easily and quickly carried out. One of the chief advantages of using liquid dressings instead of powders is that they eliminate the danger of harmful mercury-laden dust being in the atmosphere or contaminating the mill. They can be applied also to seed with greater accuracy, and eliminate the risk of subsequent loss of dressing from the seed prior to drilling. The costs of the two liquid dressings, per bushel of seed treated, are similar to the costs of equivalent dust dressings. The seed-dressing machines are available to merchants on loan, and will be serviced by Shell.

New Ejection Seat

The U.S. Air Force F-104s are to be equipped with a new upward ejection seat system developed by the Lockheed Aircraft Corporation. This advanced emergency escape system—designated C-2—incorporates rocket-catapult devices and techniques not available when the Company's interceptor was first introduced. The first aircraft with the new seat installed will fly within the next few weeks and all the U.S. Air Force F-104s now in service, as well as those on the assembly line, will be equipped with the system. Lockheed officials disclosed that full recovery (safe escape) capabilities of the seat span a speed range from 115 m.p.h. up to 630 m.p.h. and from zero altitude up to 30,000 feet. In the pre-ejection phase, completed in just three-tenths of a second, (1) metal stirrups, attached by cable to a spring-loaded reel on the bottom of the seat, pull the feet close to the body and hold them securely until time of man-seat separation, (2) knee guards rotate into position to hold legs in place and to counteract the effects of outward airloads, and (3) arm-support webbing flaps up to prevent outward movement of arms. Upon completion of these split-second actions, the seat moves up guide rails and a single striker initiates the post-ejection functions which occur one second later. The post-ejection phase includes (1) release of the automatic seat belt, (2) cutting of the foot restraints cables by a guillotine-type device and (3) pilot-seat separation.

New Light Sources

Blue, green, yellow and orange light sources which require no electric current are now available in the U.K. in the form of lamps, markers, signs and torches, and for illuminating instrument dials. The sources are said to give years of service without maintenance and rely on special phosphors which are activated by the radioactive gaseous isotope Krypton 85. The luminosity of the sources ranges from 50 microlamberts for a disc marker, for example, up to 2,000 microlamberts for a five-inch diameter lamp. The radiation emanating from the sources is said to be as low as to come well within the most stringent safety limits likely to be imposed by the authorities. A further safety factor is that, in the event of accidental breakage of the lamp or sign, the Krypton 85 gas which is biologically and chemically inert is readily and immediately dispersed so that the excitation of the phosphors is stopped.

MARINE AND GENERAL INSURANCE COMPANY, LIMITED

CHAIRMAN, MR. R. N. BANGUR, EXPRESSES CONCERN OVER JUTE FIRES

THE Fifteenth Annual General Meeting of the Marine and General Insurance Company, Ltd., was held in Calcutta on 23rd July 1959. In the course of his statement to the shareholders made at the meeting, Mr. R. N. Bangur, Chairman, disclosed that the incidence of fires in jute industry had increased this year and hoped that the combined investigation being made now by insurance and jute interests to solve the problem would meet with early success.

The following is the full text of Mr. Bangur's statement:

"I have pleasure in presenting to you the Directors' report, audited accounts and balance-sheet for the year ended 31st December 1958.

"Although 1958 has been difficult for industry generally, I am pleased to report the continued progress of your Company and our total net premium income amounted to Rs. 6,72,426, an increase of Rs. 42,706 as compared with 1957. Commission and expenses of management amounted to Rs. 2,46,538 (36.7 per cent.) and incurred losses to Rs. 3,11,251 (46.3 per cent.).

Fire Department

"In the fire department, there was an increase over the previous year's total of Rs. 14,955, producing a premium income of Rs. 4,39,811. Net losses were Rs. 1,50,986 and commission and expenses of management Rs. 1,70,952. I am pleased to report that, as a result of the improvement in our claims experience, our profit in this department shows an improvement of Rs. 56,121 compared with the previous year and, as a result, a profit of Rs. 1,10,680 has been transferred to the profit and loss account.

"You will, no doubt, recollect that last year I mentioned the high incidence of jute fires and the loss as a result thereof to the national economy, and I regret to have to report that 1958 showed no improvement. Indeed, the position has deteriorated and this year again we have seen numerous jute fires causing considerable anxiety to the jute industry. It is to be hoped that the combined investigation at present being made by insurance and jute interests to solve the problem of these jute fires will meet with early success.

"The net premium income of the miscellaneous department, at Rs. 1,11,467, showed an increase of Rs. 14,435 over the previous year and after taking into consideration net losses at Rs. 50,192 (45 per cent.) and commission and expenses of management at Rs. 46,914 (42.1 per cent.), there is a profit of Rs. 7,144 transferred to the profit and loss account.

Marine Department

"In the marine department, despite the severe restriction on imports, the premium income also showed an increase to Rs. 1,21,148 compared with Rs. 1,07,832 for 1957, but I regret that the experience has been far from satisfactory and after taking into consideration net losses at Rs. 1,10,073 and commission and expenses at Rs. 13,177, there is a loss of Rs. 15,418 transferred to the profit and loss account. This loss has arisen as the result of the adverse experience of imported materials and here again I feel that I must call attention to the effect of such losses on our national economy. Losses can be reduced considerably by co-operation between all parties in seeing that these materials which have been brought many miles from overseas are carefully handled and cleared from the dock areas without delay, thus saving foreign exchange of which our country is, unfortunately, so short.

Profit

"After making the departmental transfers to the profit and loss account and taking into consideration non-underwriting expenses, interest and other income, I have pleasure in reporting a profit of Rs. 1,42,217 (21.2 per cent.).

"In the later part of 1958 two new branches were opened, one at Bombay and the other at Ujjain which have produced satisfactory results and in accordance with the policy of the Company further branches will be opened as circumstances warrant.

"Finally, I would like to thank our agents and policyholders for their continued support and also the staff for their work during the year under review."

(Note: This does not purport to be a report of the proceedings of the annual general meeting.)

Weighing
the
world
up...

... even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG

BRANCHES IN INDIA

BOMBAY — CALCUTTA

THE CENTRAL BANK OF INDIA LIMITED

PROFITS FOR THE HALF-YEAR ENDED 30TH JUNE, 1959.

The Net Profit of the Central Bank of India, Limited, for the half-year ended 30th June, 1959, subject to audit, including the sum of Rs. 17,32,515.29 brought forward from the last year's account, amounts to Rs. 60,85,726.52 which the Directors have resolved to dispose of as follows:—

To pay an <i>ad-interim</i> dividend at the rate of Rs. 1.90 per share, subject to tax (i.e., Rs. 1.33 net) for the half-year ended 30th June, 1959, as against Rs. 1.50 per share tax-free paid for the corresponding period last year	Rs. 23,94,000.00
---	------------------

To carry forward to next half-year's account subject to provision for taxation	36,91,726.52
	Rs. 60,85,726.52

THE DIRECTOR IN SOVIET INDUSTRY

By Alec Nove

READER IN SOVIET ECONOMIC STUDIES, UNIVERSITY OF LONDON

[What is it like to be an industrialist under a Communist system? The writer, who recently accompanied the British Trade Mission to Moscow, discusses the powers of the Russian director, his relations with Government, Trade Union and Party officials, and his problems in fulfilling the Plan.]

THE object of this article is to discuss the position and powers of the Soviet director. To begin with, it is necessary to define his legal status and that of the enterprise which he runs. The director is the top manager, the commander-in-chief, responsible to superior authority for all operations. There is no board of directors. The enterprise and its funds are State property, and so the director is an official appointed to manage the property, in accordance with the desire of the owners. In some respects, his position is similar to that of a manager of a factory in this country (the U.K.), in relation to a large company which owns and operates many factories. The Soviet enterprise is endowed with a legal personality and operates on a profit-and-loss basis, but this is essentially a matter of convenience. There is no subject on which the enterprise's hierarchical superior cannot issue instructions, and a factory may be ordered to transfer, without payment, any of its assets to another enterprise. Nonetheless, this very subordinate legal status co-exists, as we shall see, with considerable *de facto* autonomy.

Until 1957, the director was appointed by, and was responsible to, the economic ministry responsible for the given sector of the economy. Thus, for example, the director of a cotton mill was appointed by the Ministry of Textile Industry (in practice by the division—*glavok*—of the ministry covering that sector of the industry). However, in 1957, nearly all industrial ministries were abolished, and enterprises were henceforward subordinated to Regional Councils of the National Economy (C.N.E.), of which there are 103. There is such a Council for the province of Ivanovo, which is a major centre of cotton textiles. If the factory is there, the C.N.E. of Ivanovo—or rather its appropriate functional division—would appoint the director. However, the post of director of any important enterprise was and is treated as a political appointment. We know from documentary evidence* that such jobs appear on the appointments list (*nomenklatura*) of provincial or more senior committees of the Communist party. This does not necessarily mean that their view is decisive in the process of choice, still less that they appoint technically unskilled party men on political grounds, but they certainly have the right of veto. Conflict with his superiors in the State or party hierarchy, or dissatisfaction with his work, could lead to dismissal at any time.

The most senior of his colleagues, notably the chief engineer (who acts as deputy director) and the chief accountant, are also appointed by superior authority. More junior appointments are made by the director.

Plan is the Primary Objective

The director's primary duty is to fulfil the output plan, which is handed down to him from the C.N.E., though, of course, the latter must conform in its turn to the plans and instructions of superior authority. However, this does not mean that the director has no say in what the plan is. It is his duty to begin the entire process by submitting his own plan to his superiors, and he can and does argue with them if he feels that they ask for the impossible. The plan is expressed where feasible in quantitative terms, such as metres of cloth or tons of coal, though for some commodities gross value of output in roubles has to be used. The director who fulfils the plan is liberally rewarded. The financial reward varies in different industries, but it is generally a large sum for achieving 100 per cent. of the plan, plus a percentage addition to his basic salary for every per cent. of overfulfilment. These and other bonuses can frequently double the basic salary of a director. In addition, he basks in the sunshine of official and party approval. Underfulfilment of the plan is followed by searching inquiries into the reasons, and an ambitious director does his utmost to avoid such a contingency.

It is the director's duty to fulfil the plan while minimising costs, and he is rewarded for doing this. A small percentage of the planned profits, and a larger share of overplan profits, is paid into a so-called "enterprise fund," which

the director can use to finance various amenities (housing, canteens, etc.) or to issue as special bonuses to his colleagues or outstanding workers. However, the director cannot change the prices of his product or of the materials purchased by him from other enterprises. In many cases, he is tied to one disposals agency, which handles all he produces. Prices are (with minor exceptions) fixed by the State, and are printed and published in enormous schedules. Since these prices are generally related to average costs in the given industry, it follows that many enterprises inevitably make losses. In such cases, there is a reward for achieving less than the "planned loss." Thus, the director's job is so to manoeuvre, in the operation of his plant, as to fulfil the plan, with due regard to economy. However, his primary duty is to fulfil the plan, and this takes priority over profit-making when the two aims conflict.

Allocation of Materials

The director is subject to severe restrictions to his freedom to purchase materials. Basic materials are, in most cases, subject to allocation by superior State authority. He is only entitled to buy these if he possesses an allocation certificate. Sometimes, the supplying enterprise is specified by the superior authority, but, often, it is the director's duty to seek out a supplier. This must also be done in the many instances in which no allocation certificate is necessary. Because plans throughout the economy are made on the assumption of full employment of resources, there is a chronic tendency for shortages to develop.

Failure of supplies to arrive is a constant directorial nightmare. He guards against it to the best of his ability, by accumulating excessive (and often unreported) stocks, by over-indenting, by mustering any available political influence and also by the employment of professional supply agents ("pushers," *tolkachi*), some of whom do not scruple to use bribery. It

would be wrong to suggest that the Soviet supply organisation is based on a series of informal rackets, since the allocation system does by and large, generally work. But an efficient director must countenance many departures from prescribed procedures, and must be something of a diplomat into the bargain, since he may well find that the authority which approves his output plan has failed to co-ordinate its activities with the (often different) authorities which allocate materials and place orders for the final product.

In assessing the *de facto* powers of director it should also be borne in mind that many decisions, ostensibly made by his superiors, originate with the director. He submits indents, he gives information on the productive capacity of his enterprise, and applies for investment funds. He often has very considerable powers over the assortment of the final product, since it is physically impossible to cover all variants in the plan. Indeed, as part of the struggle against overcentralisation and bureaucracy, there has been a tendency to make State plans less precise.

Directorial Initiative

The results of directorial initiatives are often unsatisfactory, and are the subject of extensive criticism in the Soviet Press, because the incentives system to which they respond runs counter to the requirements of the superiors and to economic rationality. For example, it is in the interest of the director to conceal his production possibilities, to have a modest plan target, because then his "overfulfilment" bonus is easier to earn. It is in his interest to adjust his output assortment to whatever is the measure of plan fulfilment, rather than to the requirements of his customers. Many examples can be cited of a tendency to produce narrow goods when the plan is pressed in length, too many of the dearest type if the plan is in terms of gross value (i.e., robes), unnecessarily heavy articles if the plan is in terms of square metres, and so on. The reaction of directors to new ideas, or new designs, is greatly influenced by whether or not they "fit" the measuring-rod used for fulfilment.

Of course, the freedom of choice of a director in these respects is not unlimited. The plan may specify the assortment in some detail. He must not distort the product mix to an extent

which might bring on him the wrath of his superiors, though it must be borne in mind that they too are interested in being able to report plan fulfilment. Nonetheless, the difficulties which have been caused by managerial "deviations" have repeatedly attracted the critical attention of Soviet planners and economists, and so these problems are serious, even though directorial freedom of choice is further limited by certain other controls, which it is now necessary to consider.

Labour Questions

The director is subject to a number of limitations in dealing with labour questions. So far as his salaried staff are concerned, there are elaborate precautions designed to prevent Parkinson's Law from operating; the establishment is laid down from above, as are the basic salaries for each post. There is more freedom of manoeuvre in respect of the workers proper, but the director is bound to follow the wage schedules laid down centrally for each grade of job and must not exceed the "wages fund" approved by his superiors, unless he exceeds the output plan. The local branch of the State Bank, where the enterprise's funds must be kept, is under instructions to refuse to pay out wages in excess of levels permitted under the regulations. (The Bank has other control powers, too, particularly if the enterprise is financially unsuccessful.)

In reality, these rules do not prevent a chronic tendency towards "overspending of the wages fund." Thus, piecework rates and other bonuses have to be settled very largely on the spot, and the actual wages are substantially above the tariff rates laid down by the central authorities. Informal bargains, based on the supply and demand situation for labour, have a great *de facto* influence. The piecework "norm" can be deliberately set low, workers are often overgraded in relation to their skill. The resistance of the Bank can generally be overcome by appeals to higher authority, so long as the management is successful in fulfilling the plan. There is, therefore, more room for manoeuvre than might appear at first sight.

In dealing with individual workers, however, there are severe limits on managerial discretion. A worker cannot be dismissed without proper cause, and there are many instances in which the management has been compelled by the courts to reinstate an unjustly dismissed worker. Arguments over pay, grading and other labour disputes are referred to a conflicts commission, on which the trade union branch officials have great influence. Overtime requires the approval of the trade union branch, which also has a statutory right to interfere in the disposal of welfare funds, in housing allocations, safety and health regulations, and so on. Since 1958, in addition, enterprises have a so-called "permanent production council," elected by the employees, to which the management must refer many important operational and planning decisions.

Relations with the Trade Unions

The full catalogue of the powers of these bodies would lead the unsuspecting observer to suppose that the director is subject to extremely thorough "workers' control." However, these limitations are not as serious as they appear. This is, above all, because the union officials are not representative of the workers, but are nominated by the Communist party to carry out its policy among the workers. The basic task of the trade unions, as has been repeatedly stated by their leaders, is to help the party to fulfil the aims embodied in the economic resolutions of the party congress, which means, in the context of the enterprise, mobilising the workers to fulfil and overfulfil the plan.* This is also the principal aim of the management. Consequently, though conflicts can and do arise over minor issues, the director and the trade union secretary generally pull together. Nonetheless, the fact remains that a range of decisions do require the co-operation of the trade union branch. This co-operation might not be forthcoming if the director wishes to act in ways inconsistent with the desire of the local party organisations, under whose leadership the trade union operates.

Authority of the Party

The party has, of course, other means of exerting influence. There would certainly be a branch of the party within the enterprise. The director would probably be a member of it, but would not be its chief. The branch takes its orders from the local party secretary, who is the boss of the town or district and with whom it is (Continued on page 163)

DEVELOPMENT OF SUBSIDIARY FOODS NEED FOR HIGH PRIORITY IN THIRD PLAN

IT is rightly claimed that each Five-year Plan of India has brought about a revolution by itself. The revolutionary aspect of the first Plan lay in breaking the barrier of decades-old stagnation in the agricultural sector. The second Plan has caused a revolution by ushering in an expansion of the producer goods industries. The third Plan, now on the anvil, would naturally envisage several revolutionary developments. One of these, in the agricultural sector, should be much greater emphasis on subsidiary foods.

Bulk of the energy and protein requirements of an average Indian diet being met from foodgrains (cereals and pulses), all other articles of food play a subsidiary role and are termed as subsidiary foods. In common parlance, however, only root crops, including potatoes, sweet potatoes and tapioca, and fruits like bananas and papaya, which are rich sources of energy (calories), are called subsidiary foods. These may be distinguished from protein-rich foods like milk, meat, fish and eggs, and from fruits and vegetables in general which primarily serve to protect the body from various ailments and diseases and are called protective foods. The availability of subsidiary and protective foods at present is much smaller than what it should be, as would be seen from the following comparative figures of actual availability of different foods and the requirements of a balanced diet laid down by the Nutrition Advisory Committee:

(Ozs. per adult per day)

Foodstuff	Standard diet as recommended by the Nutrition Advisory Committee	Availability in 1956-57
Cereals	14	15.4
Pulses	3	2.9
Root/vegetables	3	0.9
Leafy and other vegetables	7	2.5 to 3.0
Fruits	3	1.0*
Milk and milk products	10	4.5*
Vegetable oils and ghee	2	0.5*
Meat, fish and eggs	4	0.5*
Sugar and jaggery	2	1.7

* Rough estimate.

The development of subsidiary and protective foods is a wide subject, and the present discussion would be confined to more important among the subsidiary foods, namely, potatoes, sweet potatoes, tapioca, bananas and papaya. The significance of these foods lies in the fact that a given area under these crops can support a much larger number of people than the same land under cereals. This is clear from a comparison of the nutritive value of per acre output of cereals and the subsidiary foods as given in Table I.

Among cereals, the highest calorific value per acre is obtainable from rice. In comparison with rice, potatoes provide 1.7 times as much calorific value per acre. Similarly, the calorific value per acre of sweet potatoes is 3.2 times, of papaya 2.9 times and of tapioca 3.2 times that of rice. The banana crop has even greater advantage. An acre under banana yields about 4.5 times the number of calories yielded by an acre under rice. While having this tremendous advantage in terms of calorific value, these subsidiary crops also compare favourably with rice in their protein and mineral content per acre of output.

The high-yielding character of the energy-giving subsidiary foods and their ability to support, as compared with cereals, a larger number of people on the same acre of land greatly enhances their importance and usefulness in a country like India where the pressure of population on land is heavy and is increasing every year, progressively reducing the per capita area available for cultivation. During the first Plan period, a part of the increase in the production of cereals was achieved through an increase in the area under them, which went up by about 10 per cent. In the first three years of the second Plan period, there has been little increase in the area and almost the entire improvement in production has been realised through higher yields per acre. The scope for an increase in area hereafter is highly limited. It is but logical, therefore, that the country should secure as much food as possible from these land-saving subsidiary foods, so that the land thus released is used for producing protein foods and commercial crops

like jute and cotton, the requirements for which are increasing rapidly. In fact, the expansion of the high-yielding subsidiary food crops may be regarded as one of the most important developments in the history of human effort to keep food production apace with population growth.

Another advantage of these crops is that they can be grown as rotation crops with cereals and can also be cultivated in sub-marginal and newly-reclaimed lands. While capable of saving land considerably, these crops do not make any heavier demands on other scarce factors of production (except, perhaps, organic manure) than rice does. Thus, the subsidiary food crops are important for augmenting the total food supplies from the same area of land; for diversifying the average diet and making it better balanced by partial replacement of cereals which at present dominate the average Indian diet heavily; and for promoting intensive use of land by cultivating subsidiary food crops in rotation with cereal crops.

The Subsidiary Food Production Committee, 1949, recommended increased cultivation of subsidiary foods, which would strengthen the general economy of the country by making a larger net quantity of food available from less land and labour. The Foodgrains Enquiry Committee, 1957, also stressed the importance of these foods in the following words:

"We must recognise that our population is increasing faster and requires the maximum efforts to step up the food production potential of the

country, including non-cereal foods. One way of getting a more balanced diet that what we are having today would be to get the carbohydrate requirements of our diets from such crops as would require smaller acreage to produce the same calories as compared with cereals and use the area thus saved for the production of protein and other essential items for a balanced diet."

Area and Production

The trends in area, production and per acre yield of the subsidiary foods in recent years in this country would be evident from the figures in Table II.

In the case of bananas, production has suffered a setback due largely to a decline in the average yield per acre. Papaya has shown an increasing trend in per acre yield, but this has been offset by a decline in area so that production has shown no improvement. Root crops have recorded an increase in production, due more to increase in per acre yield in the case of sweet potatoes and tapioca and to increase in area in the case of potatoes.

Despite some overall improvement in their production in recent years, the subsidiary food crops still play a very insignificant role in the cropping pattern in India. But, in many parts of the world, these crops occupy an important position. A comparative picture of the importance of root crops vis-a-vis cereals in India and a number of other important countries of the world as of 1956 is given in Table III.

The area under root crops constitutes about 0.8 per cent. of the acreage under total cereals in India, whereas this percentage is more than 20 per cent. in many other countries and even more than 30 per cent. in some countries. The figures of production reveal a rather startling

(Continued on page 163)

SETTLING DISPUTES IN EXPORT TRADE SOME EFFECTIVE AUTHORITY REQUIRED

By Chinoobhai C. Javeri

SETTLEMENT of disputes in our foreign trade has become an important factor for promoting exports, since any such dispute affects not only the trade relationship between individuals but also the overall exports and the prestige of the country. The grounds of disputes commonly relate to quality, delivery and non-fulfilment of the contract which are usually resolved by litigation, arbitration or amicable settlement. Disputes often arise also on account of non-payment of dues by the importer to the exporter. So long as a contract exists between the parties, disputes could be settled by referring them to a Court of Law or Arbitration in accordance with the terms of the contract. The question of arbitration can also arise when there is some lacuna in the contract or the parties concerned agree to such a method of settlement. It is common knowledge that the trade, by and large, would prefer amicable settlement rather than have recourse to litigation or arbitration. The chambers of commerce can render yeoman service in settling disputes amicably by arbitration in a just and equitable manner and, if need be, to bring pressure and exercise their influence on the parties concerned to enforce the arbitral award in case of non-compliance.

In recent years, the pattern, the composition and the distribution of trade in India have undergone a vast change in keeping with the times. The country, being free to shape and foster its own plans and policies, has made much headway towards industrialisation. Although raw materials constitute the bulk of our country's exports, there is a continuous stress on the need for export of our manufactured goods which, in consequence, is on the increase.

Burning Problem

Commercial disputes are inevitable, but, with us, it has become a burning problem, because of the peculiar circumstances under which our export trade developed during the war followed by a period of scarcity and boom. Looking to new trends, in this context, and the need for developing the export of manufactured goods, it is imperative to organise the export trade of the country on healthy lines. This alone can create confidence and goodwill for Indian products among foreign buyers. Unless foreign buyers are assured of adequate service and proper supply of goods, there can be no hope of maintaining, not to speak of increasing, our exports in the future. All these emphasise the necessity for striking at the root of disputes by boldly grappling with the problem of eradicating the causes of complaints.

The various Export Promotion Councils, which cover among them a large number of important items, must lay down the minimum standards of quality for their products. Ad hoc inspection and quality control at the source of supply or manufacture may be introduced. A Standard Contract for export in respect of sales between manufacturers and exporters buying for export may also be formulated, making its use obligatory. The Export Promotion Councils, being composed of exporters and based commoditywise, have sufficient knowledge and understanding of the intricacies and problems of the export trade in that particular commodity. Naturally, they are more competent and better qualified than others to deal with such disputes. Besides, they are recognised and backed by the Government. The existing practice and the basis of settling disputes with foreign buyers may, therefore, be carefully studied by them and their findings incorporated in formulating the Standard Contract between the exporter and the local manufacturer.

As a natural corollary, the drawing up of a Standard Contract between the exporter and the foreign buyer will arise. But the suggestion is out of court, because trading conditions vary from country to country. That being so, the contractual obligations and the terms of these transactions may be better left for negotiation to the parties concerned depending upon their personal relations. Incidentally, in most items, only a sale note is exchanged at present and there is no regular contract specifying terms and conditions.

Usually, the difficulty arises in deciding the place of arbitration. Invariably, the buyer and the seller prefer to have the arbitration conducted in one's own country and by an agency better known to him. To tide over the difficulty, it is politic that the trade associations of

the two countries should arrive at an agreement of mutual benefit. So far as India is concerned, the Federation of Indian Chambers of Commerce and Industry has come to certain agreements with the arbitration-associations of the U.S.A. and Japan.

Manufacturers' Liability

The liability of manufacturers to pay claims to exporters when their fault is proved will make them cautious and deter them from supplying sub-standard goods or goods which are not in accordance with the contract. Consequently, care will also be exercised in complying strictly with the terms of the contract. This liability on the part of manufacturers or suppliers is essential, because the bulk of our export trade is handled by exporters. Thus, it is not the manufacturer but the exporter who is liable to the foreign buyer for the proper execution of the contract. That is the reason why "Local Standard" contract forms in respect of export-goods are necessary to protect the interest of exporters which alone can embolden and encourage them to take risks and make vigorous efforts to sell our goods in foreign markets.

The Cotton Textiles Export Promotion Council has evolved for export a Standard Contract between mills and exporters buying for export. The use of the Standard Contract both by the mills and the exporters is made obligatory. Their names are being registered with the Council. Only those whose names are registered with the Council are entitled to the prescribed incentives.

The Cotton Textiles Export Promotion Council has also set up a Complaint Committee and formed Panels comprising manufacturers and exporters for hearing disputes and settling them amicably. This Committee is functioning successfully and satisfactorily, rendering fruitful service which is greatly appreciated by foreign buyers.

While the use of a local Standard Contract will standardise trade transactions on the one hand, the fair and impartial arbitration carried out by various Councils will make the settlement of disputes easier on the other. Foreign buyers might also avail themselves of arbitration by these councils.

A New Device

In order to make the scheme effective, some sort of authority or sanction is necessary to ensure that the awards of the Complaint Committee will be respected; otherwise, the object underlying the settlement of disputes would be defeated. Practical difficulties are no doubt encountered in providing sanctions. The purpose, nevertheless, could be served by withholding incentives from the defaulting parties. This measure will have a deterrent effect upon

the contracting parties. Its scope, it is agreed, will be limited, since there are not many Export Promotion Councils, but these councils cover a wide range of the main and important items of our exports.

An alternative scheme of registration of exporters and manufacturers selling for export subject to annual renewal may also be introduced in respect of those items for which there are Export Promotion Councils. The renewal of registration may be refused to defaulting parties or their names be struck off in case of default. It is true that annual renewal of registration will give the defaulting parties a year's lease for trading. Even then the fear of non-registration will hang like the Sword of Damocles over the contracting parties, warning them to avoid disputes in their own interest.

In view of the urgency for maximising exports, it is high time that our export trade was organised on healthy lines, so that foreign buyers could have confidence in the quality and deliveries of Indian goods so vitally needed today. Once the causes for disputes are reduced to the minimum and confidence is restored, exports of Indian goods will improve and realise better prices.

INDIA'S FOREIGN TRADE

India had a larger adverse balance of trade of Rs. 113.41 crores during the five months ended May 1959, as against Rs. 96.27 crores during the corresponding period of 1958. While the total imports rose from Rs. 326.09 crores to Rs. 338.51 crores, exports (including re-exports) declined from Rs. 229.82 crores to Rs. 225.10 crores.

In the month of May last, the latest month for which figures are now available, India's exports of merchandise fell short of imports by Rs. 21.61 crores, as against Rs. 35.28 crores in the previous month and Rs. 18.58 crores in the corresponding month in 1958. Imports at Rs. 68.11 crores were lower by Rs. 14.31 crores, as compared with the previous month, but higher by about Rs. 3 crores, as compared with May 1958. Exports were lower at Rs. 44.50 crores, as against Rs. 45.14 crores in April 1959 and Rs. 44.71 crores in May 1958.

The following table shows the trend of trade, month by month, during the five months ended May 1959, as compared with that in the corresponding period of 1958.

(Value: In crores of rupees)

	Imports	Exports (including re-exports)	Balance of trade
January 1959	66.68	45.34	-21.24
February	59.79	42.90	-16.89
March	65.81	47.22	-18.59
April	80.42	45.14	-35.28
May	66.11	44.50	-21.61
	338.51	225.10	-113.41
January 1958	66.05	54.77	-11.28
February	66.21	41.98	-24.23
March	70.56	46.68	-23.88
April	61.98	41.73	-20.25
May	63.29	44.71	-18.58
	326.09	229.82	-96.27

AUTOMATION IN THE U.S.

The National Planning Association of the U.S. has called for a comprehensive industry by industry study of the economic and social aspects of automation in order to better understand it. "Automation is needed as the key to the survival of our way of life," says the N.P.A. report titled *Automation: Its Impact on Business and Labour* prepared by Mr. John Diebold, an automation expert and business consultant. It adds: "There is no doubt that the new technology and machines of automation... will have a very great social and economic effect," and therefore, "before either the opponents or proponents of automation go too far, we must have the facts on which to base and evaluate ideas and policies."

For the present and next few years, Mr. Diebold looks for automation's biggest and most immediate impact to take place in the office rather than in the factory or plant. However, he says, there still exists a wide gap between engineering development of automotive office equipment and business understanding of how the equipment can best be used. "Automation" to quote him "is more than a series of new machines and more basic than any particular hardware. It is a way of thinking as much as it is a way of doing and so far management has not been altogether successful in a full realisation of the present possibilities of automation." Since automation is a long-term process, to better understand its possible future impact, an industry-by-industry study of what automation has meant so far is recommended. The author suggests a detailed case-by-case approach to a number of specific industries that are representative of several types of applications of automation practised today.

SALT MANUFACTURERS TO BE LICENSED

An important decision taken by the Central Advisory Board for Salt, at its recent meeting at New Delhi, was to utilise the proceeds of the salt cess levied under the Salt Cess Act in such a way as to benefit the maximum number of salt manufacturers. The meeting, which was presided over by Mr. Nagesh Bahadur, Chairman of the Board, further decided to formulate a scheme for the welfare of labour employed in the industry. Another decision taken at the meeting was that all manufacturers of salt should be licensed, for the purpose of obtaining complete statistical information about the industry.

SHORTAGE OF STEEL AFFECTS BURN AND COMPANY GROSS PROFIT DECLINES AGAIN—WORK ON MAGNESITE PROJECT BRISK

A SETBACK in earnings, for the second year in succession, is disclosed by the accounts of Burn and Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) for the year ended 30th April 1959. The gross profit of the Company, which had dropped from Rs. 1.52 crore earned in 1956-57 to Rs. 1.41 crore in the following year, has further shrunk to Rs. 1.33 crore in the year under review. This decline in profit is attributed mainly to the enforced restriction on work owing to shortage of steel culminating in the closure of the wagon shops at the Company's Howrah works for four months, August-December 1958. The Company's performance would have been worse but for the fact that the loss of profit on wagon work was offset to a large extent by the improved working of the Company's three trading departments and the several refractory works.

The shortage of matched steel and the prospect of closure of the Company's wagon works were not unanticipated and, in fact, the Company had made representations to the Railway Board to this effect. The planning of imports of steel to produce, with indigenous supplies, the matched stocks which must be available to carry out a wagon building programme is, as the Directors of the Company point out in their latest report, the responsibility of the Railway Board and Iron and Steel Control. It is, therefore, a matter entirely outside the control of the Company. It is, however, gratifying to hear that the quantity of steel delivered has increased, but it remains to be seen whether there has been any improvement in the planning and supply of matched steel, so that there may not be a repetition of enforced idleness for the Company's works.

The net profit is, however, a fraction better at Rs. 52.95 lakhs, as compared with Rs. 52.09 lakhs for the previous year. The provision for taxation has been reduced from Rs. 59 lakhs to Rs. 50 lakhs, consequent on the decline in profit and the reduction in income taxation from 51.5 per cent. to 45 per cent. Last year's provision, it may be noted, includes a sum of Rs. 2.10 lakhs for wealth tax, while this year's allocation does not include any provision for wealth tax on companies in the last Central Budget. The Company is liable to pay excess dividend tax on last year's dividend and this liability absorbs Rs. 5.04 lakhs. There is, however, no such liability in respect of the dividend for 1958-59, consequent on the abolition of this tax in the last Budget. The provision for depreciation has been raised slightly from Rs. 17.36 lakhs to Rs. 18.31 lakhs. In tune with the lower gross profit, the managing agency commission also has suffered a cut from Rs. 12.83 lakhs to Rs. 11.76 lakhs. The transfer to the reserves has been reduced from Rs. 33.27 lakhs to Rs. 26.88 lakhs. This includes a sum of Rs. 20 lakhs (same as in the previous year) added to the reserve for Salem magnesite project, Rs. 1 lakh (as against Rs. 6 lakhs) to the reserve for Niwar project, Rs. 3.63 lakhs to the reserve for works reconstruction expansion and Rs. 2.07 lakhs to the development rebate reserve.

The salient features of the Company's profit and loss accounts for the last four years are compared in the following table:

	For the year ended 30th April			
	1956	1957	1958	1959
Sale proceeds	10,16.81	9,55.68	8,49.81	8,82.01

Preference	2.07	1.81	1.81	1.81
Ordinary	28.81	31.46	33.40	35.00
Carry forward	1.87	1.80	1.10	1.13

The saving on wealth tax and excess dividend tax, which together works out to Rs. 7.14 lakhs, as pointed out earlier, is to be utilised by the Directors to make good the loss to the ordi-

nary shareholders on account of the abolition of the system of grossing dividend. They have, accordingly, recommended a gross dividend of 28½ per cent. (subject to tax), as against 20 per cent., free of income-tax, paid for each of the previous three years. This has been done after engrossing the final dividends on the 6 per cent. and 7 per cent. preference shares at 30 per cent. under the Finance Act 1959.

The progress on the Company's project at Niwar (Madhya Pradesh) for setting up a silica brick works is not at the rate originally contemplated, on account of the fact that the refractory technical staff is busy on the Salem magnesite project. Steady progress continues in the expansion work at the other refractory works and at the Howrah works. After frustrating delays in the plan for acquiring magnesite mines in Salem, Madras State, and building a factory there, the management was successful in completing, on 31st July 1958, the purchase of all the assets in India of the Magnesite Syndicate Ltd. of the U.K. Shortly after taking possession of the mining properties at Salem, the Directors appointed a well known London engineering consultant to advise upon and supervise the construction of a complete works for the manufacture of magnesite shapes by the most modern methods. Work at site is said to have commenced and steady progress is being made.

The progress of the expansion plans is reflected in a capital expenditure of Rs. 39.42 lakhs during the year under review, bringing the total value of the block account as at the end of the year to Rs. 478.18 lakhs. The net value of the fixed assets is Rs. 191.81 lakhs. Besides, a sum of Rs. 16.97 lakhs has been spent on incomplete work. The other assets aggregate Rs. 762.03 lakhs. As against these assets, the current liabilities and provisions aggregate Rs. 631.28 lakhs, leaving a net asset of Rs. 339.53 lakhs. This is made up of a paid-up capital of Rs. 112 lakhs and reserves and surplus amounting to Rs. 227.53 lakhs.

The Rs. 100 paid-up shares of the Company are being currently quoted at Rs. 453 cum-div. On an ex-div. basis and at the current rate of dividend, the shares provide a yield of 6.7 per cent. per annum, subject to tax.

RESULTS OF STANVAC REFINERY

An increase in the volume of crude oil processed, larger sales of refined products and a higher profit are the main features of the results of working of the Standard-Vacuum Refining Company of India Ltd. during the year ended 31st December 1958. The quantity of crude oil processed during the year averaged 33,890 barrels per day, as compared with 31,638 barrels per day in 1957. Sales of refined products show a rise from 384.77 million Imperial gallons to 409.27 million gallons. The gross profit for the year amounts to Rs. 292.64 lakhs, representing an increase of Rs. 21.26 lakhs over that for 1957.

The net profit, however, shows a decline from Rs. 191.12 lakhs to Rs. 135.10 lakhs, on account of the substantially larger provision of Rs. 81.15 lakhs for taxation, as against Rs. 42.7 lakhs set aside last year. The provision for depreciation, too, has been slightly raised from Rs. 75.99 lakhs to Rs. 76.39 lakhs. The estimated liability for taxation, it may be noted, is still higher at Rs. 93.10 lakhs (including Rs. 5.04 lakhs for wealth tax), but a part of this—Rs. 11.95 lakhs to be precise—is being met from reserve for deferred taxation. After writing off debenture issue expenses to the extent of Rs. 52,712, the entire net profit available has been ploughed back, as in the previous year. The Directors have not recommended the payment of any dividend on the ordinary shares for yet another year, as they consider it essential at this stage to retain the earnings in the business.

Of the total sales of refined products during the year under review, as much as 311.79 million gallons were made in India and the balance, namely, 97.48 million gallons, consisting of motor gasoline and furnace oil, which was surplus to the country's requirements, was exported to Australia, New Zealand, British East Africa, Ceylon and Japan. The sales within the country represent an increase of 27.04 million gallons over 1957, while exports were slightly lower by 2.54 million gallons.

The Directors observe that all phases of the refinery expansion programme, approved by the Government last year, will be completed by the middle of 1959 and will supply the asphalt and other additional products required in India. This will result in additional saving of foreign exchange to India.

PROFIT OF CALICO MILLS RISES SHARPLY SPECIAL VARIETIES FOR EXPORT TO BE PRODUCED

NOTWITHSTANDING the acute shortage of foreign cotton and other raw materials, due to import restrictions, and the high prices of superior varieties of Indian cotton, the performance of the Ahmedabad Manufacturing and Calico Printing Company, Ltd. (Calico Mills, in short), during the year ended 31st March 1959, is impressive. The gross profit of the Company for the year under review amounts to Rs. 1.59 crore, representing an increase of Rs. 31 lakhs over that for 1958. This has offset to a good extent the drop of Rs. 58 lakhs, that is from Rs. 1.86 crore to Rs. 1.28 crore, suffered in the previous year. The effect of the cut in imports of Egyptian and Sudanese varieties of cotton was more severely felt by the Company, being a manufacturer of superfine cloth, and upset the established pattern of the Company's production. The replanning of the production programme was also rendered difficult, as the cotton import policy was not announced sufficiently in advance. Nevertheless, the Company has been able to do well, thanks mainly to the success of its efforts in pushing up the internal offtake of its cloth through such promotional methods as organising travelling Domes with fashion shows displaying the latest "Calicloth" styles in the principal cities of India. They have helped the Company in getting some indication of consumer preference and in introducing new varieties of cloth such as "Miniron" wash and wear poplins and printed dress materials.

The coming into production of the Company's alkali plant at Bombay towards the close of the previous year with an initial monthly output of 180 tons of caustic soda, which was subsequently raised to 300 tons in July 1958, has also helped the Company earn a higher profit in 1958-59.

The net profit, at Rs. 67.34 lakhs, shows a rise of only Rs. 3.07 lakhs, on account of the substantially larger provisions for depreciation and taxation. The allocation to the former has been raised from Rs. 18.63 lakhs to Rs. 30.17 lakhs and that to the latter from Rs. 36.37 lakhs to Rs. 50.75 lakhs. The transfer to the various reserves has been reduced by 50 per cent. to Rs. 14.60 lakhs, as will be noted from the following comparative table:

	For the year ended 31st March			Fifteen months ended 31st Mar. 1956
	1956	1957	1958	
Sale proceeds	9,15.05	8,49.67	8,52.65	8,44.80

Ordinary	1.82	1.32	1.82	1.82
Carry forward	8.14	9.28	1.18	2.32

* Includes Rs. 1.09 lakh relating to previous year.

While last year's allocation to the reserves was entirely added to the rehabilitation and development reserve, this year's allocation is to be distributed thus: Rs. 8.70 lakhs to the development rebate reserve, Rs. 2.90 lakhs to the rehabilitation and development reserve and Rs. 3 lakhs to the general reserve. The pattern of distribution to ordinary shareholders is also slightly different from that for 1957-58. The whole dividend for the year under review (interim: Rs. 10 per share and final: Rs. 12 per share of Rs. 125) or 17.5 per cent., is on the increased capital of Rs. 206.25 lakhs raised in March 1958 by a one-for-two scrip bonus, whereas, in the previous year, the final dividend of Rs. 14 per share alone was on the higher capital, the interim one of Rs. 11 per share being on the old capital of Rs. 137.50 lakhs.

On the export front, while the country's shipments abroad mainly consist of unbleached coarse and medium varieties, the off-take of fine and superfine cloth is not much. As the Company specialises in the manufacture of fine and superfine varieties that are bleached, dyed, printed or processed to give special finishes, the Company's sales abroad are not

such. In order, however, to push up exports, the Company has drawn up a phased programme. Negotiations for the purchase of a plant suitable for manufacture of export varieties were also started during the later part of the year. An agreement was concluded in April last for the purchase of No. 1 Mill of Bharat Vijay Mills Ltd. at Kalol, comprising 8,824 spindles and 320 looms, for a sum of Rs. 11.50 lakhs. The machinery of this mill is said to be in good condition and the spinning plant is equipped with high drafting system. The acquisition of this mill, along with the efforts made to promote the export of specially dyed goods for foreign markets," according to the Directors, "are expected to result in satisfactory exports by the Company during the coming years."

The Company's application for raising the capacity of its alkali plant at Bombay to 600 tons per month has been sanctioned by the Government of India. As part of the scheme to develop its chemical division, the Company has decided to set up Polyvinyl chloride and calcium carbide plants at Bombay. The necessary import licences for the plants have been obtained and orders have been placed therefor. The total foreign exchange sanctioned for these two plants is Rs. 1.52 crore, of which about Rs. 60 lakhs, in relevant foreign currencies, will come from the I.C.I.C. and the balance from instalment payments to be made by the Company between 1961 and 1963 in accordance with the plan of foreign exchange remittances approved by the Reserve Bank.

That the Company's financial position is quite sound will be evident from the following synopsis of its latest balance-sheet:

LIABILITIES		ASSETS	
Capital	2,35.58	Gross block	6,88.44
Reserves and surplus ..	2,87.44	Less—Depreciation ..	3,04.88
Secured loans	2,54.55	Net block	3,83.56
Current liabilities and provisions ..	2,58.04	Stock-in-trade, shares, etc., deposits and advances ..	3,30.24
		Investments	17.70
		Cash balances	—
Total	10,36.61	Total	10,36.61

Of the gross block of Rs. 6.88 crores, more than half—Rs. 3.52 crores to be precise—represents additions made during the past two years alone, that is, Rs. 2.15 crores in 1957-58 and Rs. 1.37 crore in 1958-59.

The Rs. 125 paid-up ordinary shares of the Company are currently quoted at Rs. 624.50, at which rate the yield works out to 3.6 per cent.

SIMPLEX CARRIES OVER LOSS

The difficult trading conditions in the textile industry during the past year have affected the earnings of many units, particularly the coarse and medium count mills. One of the victims of such adverse circumstances is the Simplex Mills Company, Ltd. (Managing Agents: Messrs. Forbes, Forbes, Campbell & Co., Private Ltd., Bombay). The Company's gross profit, which had dwindled from a high of Rs. 30.20 lakhs earned in the year ended March 1956 to Rs. 13.30 lakhs in 1957-58 and further to Rs. 11.80 lakhs in the following year, has suffered yet another setback in 1958-59 to Rs. 5.06 lakhs. It will thus be seen that the profit has shrunk almost to a sixth in the course of three years (taking it to the lowest level for many years).

In spite of the fall in earnings the Company is obliged to provide a larger sum for depreciation; this has been raised from Rs. 3.43 lakhs to Rs. 9.02 lakhs. The provision for taxation has, however, been reduced from Rs. 1.58 lakh to Rs. 54,800 and the managing agency commission from Rs. 82,900 to Rs. 25,000. A small addition of Rs. 45,875 has been made to gratuity reserve (nil), leaving a net loss of Rs. 5.96 lakhs for the previous year. While last year the Directors had transferred the whole of the net profit to the reserves—Rs. 2.70 lakhs to the development rebate reserve and Rs. 3.26 lakhs to the general reserve No. 2—and paid a dividend of 17 per cent. out of the general reserve No. 1, for the year under review they have recommended the distribution of a dividend of 10 per cent. by drawing a further sum of Rs. 4.20 lakhs from the same reserve. After adjusting the small surplus of Rs. 8,089 brought in from the previous year, a net deficit of Rs. 5.14 lakhs is to be carried forward to the next year.

The Company's rehabilitation and expansion programme is said to be progressing satisfactorily. In accordance with this programme, the Company has made a capital expenditure of Rs. 21.59 lakhs during the year under review; this is on top of Rs. 75.95 lakhs spent in the previous year, bringing the gross value of the block account to Rs. 217.13 lakhs. The depreciation provided so far amounts to Rs. 88.86 lakhs, so that the net block stands at Rs. 128.27 lakhs. The other assets aggregate Rs. 115.33 lakhs. As against these assets, the current liabilities and provisions amount to as much as Rs. 176.58 lakhs. The net assets thus left (Rs. 63.46 lakhs) are represented by a paid-up capital of Rs. 42 lakhs and reserves amounting to Rs. 21.46 lakhs.

For some time past, the Company has been borrowing large sums from banks in order to meet the heavy capital expenditure on its rehabilitation

and expansion programme, as also to provide the working capital for the Company. These borrowings are far in excess of the paid-up share capital of the Company. Consequently, there is a wide disparity between the block account, in which such borrowings have been largely invested, and the paid-up capital. As an instance in point, it may be noted that the Company's borrowings from banks as at the end of the year under review stand at Rs. 132.40 lakhs, as against a paid-up capital of Rs. 42 lakhs and a gross block of Rs. 217.13 lakhs (net Rs. 128.27 lakhs). The Directors, therefore, propose to reduce this wide disparity and repay a part of the bank borrowings by issuing 16,800 new equity shares of Rs. 50 each and raising a 6½ per cent. (taxable) debenture loan of Rs. 60 lakhs. The new equity shares are to be issued at par, in the first instance, to the existing shareholders in the ratio of one share for every five shares held now. While the proposed issue of fresh equity shares is yet to receive the consent of the Controller of Capital Issues, the latter has given sanction for issue of debentures to the extent of Rs. 75 lakhs, though for the present the Directors propose to raise only Rs. 60 lakhs. The debentures will be secured by a first mortgage on the fixed assets of the Company and will be redeemed at par within a period of 10 to 15 years. They are to be underwritten by the Investment Corporation of India Ltd. and the United Commercial Bank Ltd. for Rs. 30 lakhs each. The terms of underwriting are a commission of 2 per cent. and a brokerage of ½ per cent., besides a fee of Rs. 1,000 per annum to each of the two debenture trustees.

The Rs. 50 paid-up shares of the Company are being currently quoted at Rs. 183 cum-div. On an ex-div. basis, the yield on the shares works out to a low of 2.8 per cent. per annum, free of income-tax.

NEW GREAT INSURANCE CO. OF INDIA LTD.

A handsome improvement in the premium income of the New Great Insurance Company of India Ltd. (General Manager: Mr. M. G. Mody) is disclosed by the results of the Company for the year ended 31st December 1958. The combined net premium in the three departments amounted to Rs. 73.34 lakhs, as against Rs. 65.90 lakhs in the previous year, representing a rise of over 11 per cent. All the three departments shared in the increase, but the largest percentage increase was in the marine department, where premiums rose from Rs. 15.52 lakhs in 1957 to Rs. 19.53 lakhs in 1958, a rise of over 25 per cent. Nevertheless, the adverse claims experience in this department and also in the miscellaneous department resulted in an underwriting loss of Rs. 3.16 lakhs in the former and Rs. 38.958 in the latter. This, however, has been more than made good by the profit in the fire department which amounted to Rs. 5.26 lakhs. The dividend to shareholders has been maintained at the previous year's level of Rs. 2 per share of Rs. 20 paid-up (free of income-tax).

The following table indicates the salient features of the working of the Company during the three-years in 1956, 1957 and 1958.

(In lakhs of rupees)		1956	1957	1958
Fire—				
Net premium	31.57	28.89	31.00	31.00
Claims paid and outstanding ..	17.79	10.77	10.28	10.28

Fire fund	15.78	14.44	15.50	15.50
Miscellaneous—				
Net premium	22.28	21.49	20.69	20.69
Claims paid and outstanding ..	12.40	11.86	11.50	11.50
Commission, expenses, etc. ..	10.09	9.87	9.26	9.26
Miscellaneous fund	11.12	10.74	10.34	10.34
Marine—				
Net premium	19.53	15.52	15.34	15.34
Claims paid and outstanding ..	14.48	13.81	14.20	14.20
Commission, expenses, etc. ..	14.55	2.03	3.33	3.33
Marine fund	19.53	15.52	15.34	15.34

After crediting the revenue accounts with the approximate interest earned by the respective departmental funds, the remaining interest, net gain on sale of investment, sundry receipts and transfer fee amounting to Rs. 3.46 lakhs has been credited to the profit and loss account. To this has been added Rs. 5.26 lakhs being the profit transferred from the fire department. Expenses of management, not applicable to any particular fund or account, amounted to Rs. 16,905. After setting apart a sum of Rs. 2.5 lakhs as provision for taxation and having made up the loss of Rs. 3,16,617 in the marine department and Rs. 38,958 in the miscellaneous department, a balance of Rs. 2,49,934 is transferred to the profit and loss appropriation account. This, together with Rs. 10,976 brought forward from last year's account, gives in all Rs. 2,60,910. Out of this Rs. 40,000 has been transferred to staff gratuity account. The dividend of Rs. 2 per share, free of income-tax, absorbs Rs. 2 lakhs, leaving a balance of Rs. 20,910 to be carried forward.

UNION CO-OPERATIVE INSURANCE SOCIETY

A remarkable feature of the working of the Union Co-operative Insurance Society Ltd. (Manager: Mr. D. N. Desai) in recent years has been the steady improvement in premium income, especially since 1954. From a modest figure of Rs. 1.39 lakh in 1954, the net premium income rose steadily year by year to reach Rs. 5.33 lakhs in 1957 and then spurted to as much as Rs. 8.47 lakhs in 1958. Thus, during the five years, the premium income has increased more than sixfold. This impressive record has been the result of the expansion of the Company's activities and more vigorous canvassing of business. During the year under review, the Company intensified its efforts to attract more types of insurance cover to both co-operative and non-co-operative clients. It has introduced Workmen's Compensation and Machinery Break-down Covers. It is also now offering comprehensive covers for banking institutions, popularly known as Banker's Blanket Policy. Another noteworthy development is that, during

the year under review, the Company commenced transacting marine insurance business, thus offering its clients service in every department of general insurance.

Along with the rise in premium income, the expenses too have gone up, mainly because of the high cost incidental to the opening of new branches. Nevertheless, the net profit has shown a modest rise to Rs. 1.86 lakh from Rs. 1.81 lakh in the previous year. The dividend has been maintained at the preceding year's level of 5½ per cent., free of tax. Bonus to policyholders has also been maintained at 12 per cent., subject to tax.

Net premium aggregated Rs. 7.45 lakhs in the fire department, Rs. 93,000 in the miscellaneous department and Rs. 8,946 in the marine department. Claims paid and outstanding amounted to Rs. 1.35 lakh in the fire department, being 18 per cent. of premium, and Rs. 14,794 in the miscellaneous department, being 16 per cent. of premium. As compared with this highly satisfactory performance, the claims experience in the newly started marine business has been adverse, the percentage of claims being as high as 140 per cent. of the premium income. This is due mainly to the very bad results of the business of the Pool. Expenses of management, at Rs. 6.5 lakhs, though well within the statutory limits, is still high, thanks to reasons mentioned above.

Net profits transferred to the profit and loss appropriation account aggregate Rs. 1.86 lakhs, which, together with Rs. 2,213 brought in from last year, makes in all Rs. 1,88 lakh. Out of this, Rs. 65,000 has been set apart as provision for taxation; Rs. 12,100 transferred to the general reserve fund; Rs. 1,850 to education fund, and Rs. 5,000 as reserve for bad and doubtful debts. Shareholders' dividend at 5½ per cent. will absorb Rs. 32,000 and bonus for policyholders Rs. 70,000, leaving a balance of Rs. 1,893 to be carried forward.

MARINE AND GENERAL INSURANCE CO. LTD.

Although the past year was a difficult one for insurers generally, the accounts of the Marine and General Insurance Company, Ltd. (General Manager: Mr. H. Norington) for the year ended 31st December 1958 disclose, that the Company made steady progress during the year. The combined net premium income of the three departments increased by Rs. 42,706 to Rs. 6.72 lakhs over the previous year's figure. Commission and expenses of management recorded a slight decline to 36.7 per cent. of premium from 36.9 per cent. in the previous year. Claims ratio was, however, a shade higher at 46.3 per cent., as against 45.1 per cent. in 1957. The dividend has been maintained at Rs. 5 per share of Rs. 50 paid-up; that is, at 10 per cent. per annum. The following table summarises the salient features of the working of the Company during the three years ended 1958:

(In lakhs of rupees)		1956	1957	1958

SYNOPSIS OF COMPANY REPORTS

New India Fisheries Ltd.

THE directors of the above Company [The Fisheries (Agency) Private Ltd., Bombay] present the audited accounts of the Company for the year ended 31st March 1959.

The year's working after meeting all expenses of operation and management and after allowing for depreciation shows a loss of Rs. 1,11,136 (profit of Rs. 2,26,124). Adding to this the credit balance brought forward from the previous year of Rs. 16,849 (Rs. 1,41,976), the amount transferred from reserve for repairs of Rs. 91,000 (nil) and the amount transferred from general reserve of Rs. 50,000 (nil) the amount available for disposal comes to Rs. 46,713 (Rs. 3,68,100). The directors recommended that this amount be disposed of as under:—

By payment of a dividend on 1,912 6 per cent. tax free cumulative preference shares absorbing Rs. 11,472 (Rs. 11,472) and by payment of a dividend on 5.738 ordinary shares at Rs. 6 (Rs. 7) per share free of tax absorbing Rs. 34,428 (Rs. 40,166) leaving a balance to be carried forward of Rs. 813 (Rs. 16,849 after paying Rs. 11,022 as dividend on deferred preference shares, free of tax; Rs. 38,591 as dividend on deferred ordinary shares free of tax and transferring Rs. 2,00,000 to reserve for repairs and Rs. 50,000 to general reserve.

Company's working.—Operation of the trawlers during the year was satisfactory as was evident from the bigger catch of fish and the quicker turnover of the Company's vessels. Despite the higher catches, the Company suffered a net loss of Rs. 1,11,136, due to somewhat lower price of fish realised, higher cost of stores and fishing gear resulting from restrictions on foreign exchange and unduly heavy expenditure on repairs to trawlers. The expenditure on repairs was unavoidable as the repair docks in Bombay are few and are meant, moreover, for merchantmen. Spares needed for replacement are not readily available and their manufacture involves much time and heavy expenditure.

An increase in the wage bill and the expenditure incurred on repatriation of thirteen members of Japanese crew also absorbed a large part of the Company's earnings.

Other difficulties confronting the Company are lack of ice and cold storage space, inadequate marketing facilities and unsatisfactory arrangements for transport on the railways. As the repair charges in India were found to be about thrice the cost of similar repairs in Japan the directors decided to send the trawlers to Japan for the purpose and to import stores and fishing gear on their return journey.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	15,00,000	Gross block	13,41,911
Reserves	1,09,000	Less—Depreciation	3,03,297
Liabilities	1,65,962		
Profit	813		
		Net block	10,38,614
		Stock-in-trade	93,271
		Stores, etc.	1,69,616
		Other assets	25,706
		Debits, deposits and advances	1,26,215
		Cash	3,22,353
	Rs. 17,75,775		Rs. 17,75,775

Clive Buildings (Calcutta) Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

As anticipated in the directors' last report, the results for the year under review show an improvement and may be considered satisfactory.

All available space in the building is let and no difficulty is anticipated in maintaining this position in the future.

The gross receipts amounted to Rs. 6,43,115 as compared with Rs. 6,37,378 last year. The gross profit for the year amounted to Rs. 3,63,771 (Rs. 3,06,477). After meeting the usual charges for managing agents' remuneration, debenture interest, depreciation, sinking fund, etc., there remains a net balance of Rs. 2,25,497 (Rs. 1,92,193).

To this is added the credit balance brought forward from the previous year of Rs. 1,41,669 (Rs. 2,08,478) making a total profit before taxation of Rs. 3,67,166 (Rs. 4,00,669). The provision for taxation absorbs Rs. 1,99,009 (Rs. 2,15,000) leaving a balance of Rs. 1,68,157 (Rs. 1,85,669). The directors recommend that this should be disposed of as follows:—

In paying a dividend on the 10,000 ordinary shares of Rs. 150 each at Rs. 4.60 (Rs. 4.60) per share, without any deduction in respect of income-tax payable by the Company absorbing Rs. 46,000 (Rs. 46,000) and on the 1,000 management shares of Rs. 15 each at Rs. 4.60 (Rs. 4.00) per share, without any deduction in respect of income-tax payable, by the Company absorbing Rs. 4,600 (Rs. 4,000) leaving to be carried forward to next year Rs. 1,17,557 (Rs. 1,41,669).

LIABILITIES	Rs.	ASSETS	Rs.
Capital	15,15,000	Gross block	48,86,977
Debentures	15,98,000	Less—Depreciation	7,94,961
Reserves	12,21,962		
Provision for taxation	2,53,898	Net block	40,92,016
Liabilities	2,82,088	Investments	4,19,216
Profit	1,17,557	Debits, deposits and advances	47,692
		Cash	4,29,582
	Rs. 49,88,506		Rs. 49,88,506

Palani Andavar Mills Ltd.

The directors of the above Company (Managing Agents Messrs. Baghyalakshmi & Co., Udumalpet) present the audited accounts of the Company for the year ended 31st December 1958.

The year's trading has resulted in a net profit of Rs. 69,950 (Rs. 3,72,545) after meeting all expenses and providing a sum of Rs. 3,30,650 (Rs. 3,65,076) towards depreciation. This together with the surplus brought forward from the previous year amounting to Rs. 8,909 (Rs. 8,529) and the transfer from contingency reserve amounting to Rs. 1,37,557 (nil) along with the sum of Rs. 1,17,661 (nil) representing the credit balance in the provision for taxes account and tax refunds together make up a sum of Rs. 3,34,077 (Rs. 3,81,074). Setting off against this a sum of Rs. 1,20,077 made up of the bonus paid for the year 1956 amounting to Rs. 1,07,927 Rs. 1,07,637) and charity and donations paid amounting to Rs. 12,150 (Rs. 2,985), the balance of amount available for distribution is Rs. 2,14,000 (Rs. 1,94,000) which the directors recommend for appropriation as under.

To pay a dividend of 7 per cent. on cumulative preference shares for the year 1958 absorbing Rs. 14,000 (Rs. 14,000) and to pay a dividend of 20 (18) per cent. on equity shares for the year 1958 absorbing Rs. 2,00,000 (Rs. 1,80,000).

The trading conditions during the year covered by the report were none too bright as the prices of cotton remained high and the prices of yarn were fluctuating. There was a considerable dislocation in production of account of the power cut for a period of 54 months from the middle of January upto the end of June 1958 ranging from 25 per cent. to 75 per cent. necessitating the working of the generator, which is uneconomical, to supplement the power requirements of the mills.

The installed capacity of the mills as at the end of the year 1958 stood at 47,000 spindles.

LIABILITIES	Rs.	ASSETS	Rs.
Capital	12,00,000	Gross block	76,28,149
Reserves	11,62,443	Less—Depreciation	31,96,927
Liabilities	44,14,378		
		Net block	44,32,221
		Stock-in-trade	15,31,099
		Stores and spare parts	2,98,376
		Debits, deposits and advances	3,48,269
		Investments	16,000
		Cash	1,50,855
	Rs. 67,76,821		Rs. 67,76,821

Virudhunagar Textile Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Thiagaraja Chetty & Sons Private Ltd., Sulakral, Virudhunagar) submit the audited accounts of the Company for the year ended 31st December 1958.

The year's working has resulted in a net profit of Rs. 9,09,238 after paying an excise duty of Rs. 3,33,312 and after providing for depreciation and development rebate for the year of Rs. 1,66,124, wealth tax of Rs. 5,105 and arrears of initial depreciation and development rebate for the years 1951 to 1956 amounting to Rs. 3,12,859.

The directors recommend dividend of 5 per cent. tax-free on preference shares and a tax-free dividend of 6 per cent. on equity and deferred shares, amounting in all to Rs. 85,457 and to set of the balance of profit of Rs. 23,779 against previous years' losses.

LIABILITIES	Rs.	ASSETS	Rs.
Capital	17,58,965	Gross block	24,85,206
Reserves	5,080	Less—Depreciation	12,54,272
Liabilities	8,95,173		
		Net block	12,30,934
		Stock-in-trade	5,56,877
		Stores, loose tools, etc.	3,39,473
		Debits, deposits and advances	65,865
		Cash	4,02,325
		Loss	63,744
	Rs. 26,59,218		Rs. 26,59,218

Lukwah Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Tania Brothers (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

Tea crop weighed out at 12,21,280 lbs. against the estimated figures of 12,00,000 lbs. and were disposed off at an average price of Rs. 2.37 nP per lb. for graded tea and at the rate of 0.56 nP per lb. for stalky and broken teas.

After allowing depreciation, managing agents commission and providing for bonus of Rs. 73,720 (Rs. 85,000) there remains a profit of Rs. 4,89,948 (Rs. 5,99,746) to which is added the balance brought forward from last year of Rs. 1,44,612 (Rs. 1,06,618) making a total of Rs. 6,34,560 (Rs. 7,06,362). The directors recommend to deal with this amount as follows:—

To reserve for taxation Rs. 2,50,000 (Rs. 3,00,000) to development rebate reserve Rs. 19,500 (Rs. 38,000), to interim dividend on 47,500 preference shares at 5 per cent. (free of income-tax) Rs. 23,750 (Rs. 23,750) and to interim dividend on 80,000 ordinary shares at Rs. 1.00 (Rs. 2.00) per share (free of income-tax) Rs. 80,000 (Rs. 1,60,000). The directors recommend to pay a final dividend on 80,000 ordinary shares at Rs. 1.50 (Rs. 0.50) per share (free of income-tax) absorbing Rs. 1,20,000 (Rs. 40,000) leaving a balance to be carried forward to next year of Rs. 1,41,310

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	12,75,000	Gross block	16,64,157
Reserves	9,91,487	Less—Depreciation	4,92,848
Provision for taxation	11,72,848	Net block	11,71,309
Liabilities	9,35,021	Stock of tea	9,02,044
Profit	2,61,310	Stores, etc.	2,38,181
		Debits, deposits and advances	3,04,414
		Investments	19,81,195
		Cash	38,521
	Rs. 46,35,666		Rs. 46,35,666

Enago Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts show a loss, after charging all expenses of Rs. 1,961 (Rs. 37,721) to which has to be added the debit balance brought forward from last year of Rs. 63,469 (Rs. 39,748) making a total debit balance of Rs. 65,430 (Rs. 88,469). The directors have forfeited unclaimed dividends in accordance with Article 158 Rs. 5,905 (Rs. 5,000) being excess tax provisions in previous years transferred to profit and loss account leaving a debit balance to be carried forward of Rs. 59,525 (Rs. 63,469). The directors regret that they are unable to recommend the payment of a dividend.

Although generally the prices obtained for 1958 season's teas were somewhat better than those for the previous season's crop, they were still unsatisfactory. The year's working however would have shown a small profit, had it not been for the burden of Rs. 13,049 levied in respect of West Bengal Entry Tax.

A crop of 3,348 maunds was secured and sold at an average price of Rs. 1.89 per lb. This compares with a crop of 2,944 maunds manufactured in season 1957 which sold at an average price of Rs. 1.67 per lb.

Estimates for the current season have been framed for a crop of 3,250 maunds to cost Rs. 47,729. This is considered a conservative crop forecast and, provided normal conditions prevail, it is likely that a larger crop will be secured.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	1,20,000	Gross block	4,99,213
Reserves	2,04,475	Less—Depreciation	2,85,581
Provision for taxation	19,042	Net block	2,13,632
Liabilities	2,95,870	Stock of tea	2,57,792
		Stores, tools, etc.	68,239
		Debits, deposits and advances	63,194
		Investments	2,001
		Cash	34,529
	Rs. 6,39,387		Rs. 6,39,387

Naxos Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Tania Brothers Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

After allowing for managing agents commission and depreciation there remains a profit of Rs. 44,651 (Rs. 1,50,741) to which is added the balance brought forward from last year of Rs. 55,358 (Rs. 37,673) and the excess provision of taxes in respect of assessment year 1957-58 (year ending 31st December 1958) Rs. 5,455 (Rs. 3,061) making a total sum available of Rs. 1,05,464 (Rs. 1,91,475). The directors recommend to deal with this amount as follows:—

To reserve for taxation Rs. 25,000 (Rs. 80,000) and to payment of dividend on 74,124 shares of Rs. 10 each at 75 (75) nP per share (i.e., 7½ (7½) per cent. free of income-tax) absorbing Rs. 56,118 (Rs. 56,118) leaving a balance to be carried forward to next year of Rs. 24,346 (Rs. 55,358).

Output and despatches for the last three accounting years were as follows:—

Year ended	Raising in Tons	Despatches in Tons
31-12-56	16,817-5	16,476-10
31-12-57	22,463-0	21,783-10
31-12-58	13,795-17	14,854-19

The Company has passed through a difficult year and this is reflected by the substantial fall in stoppage of underground workings of the Waktung Mine since 17th June 1958. This point was dealt with in directors' last report. Since then the management made efforts to resume the workings and the Company was ordered by the Government to resume underground workings from 31st January 1959 and consequently workings have actually started and raisings are now normal.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	7,48,240	Gross block	13,72,629
Reserves	2,30,000	Less—Depreciation	10,20,509

	Rs. 15,39,947		Rs. 15,39,947

N.B.—Figures within brackets relate to the corresponding period of the previous year.

NEW INDIA ASSURANCE COMPANY, LIMITED

MR. A. D. SHROFF ADVOCATES AN OBLIGATORY MARINE TARIFF

THE Fortieth Annual General Meeting of the shareholders of the New India Assurance Company, Limited, was held at Bombay on 22nd July 1959. Presiding over the meeting, Mr. A. D. Shroff, Chairman of the Company, drew attention to the continuing drift in international affairs and made a fervent plea for peaceful co-existence. In the economic field, Mr. Shroff analysed the broad trends in the developed and underdeveloped countries and said that the recessionary trends of the previous year have tended to peter out and a cautious re-expansion of economic activity was well under way in a number of countries. Referring to the establishment of common markets or regional groups in the sphere of trade, he expressed his apprehension that these might degenerate into rival blocks indulging in economic wars, and exploiting and weakening the underdeveloped countries, instead of becoming reservoirs of strength for their uplift. He was gratified to note that more emphasis was now placed on economic rather than military aspects of aid to underdeveloped countries.

After reviewing the trends in the Indian economy, Mr. Shroff stated that our national policies called for a fundamental reorientation and readjustment so as to make them consistent with our paramount need to maximise production. In this connection, he pleaded for Government policies which were free from ideological or doctrinaire inhibitions. In the industrial sphere, Mr. Shroff favoured the establishment of industrial nuclei of key and basic industries around which small clusters of ancillary cottage industry units are organised and developed. This would not only solve the problems of technical know-how, credit facilities and marketing, etc., but also evolve a diversified and integrated industrial structure. In this connection, he advocated the establishment of special types of institutions for hire-purchase financing, central marketing and technical services. He recommended the promotion of institutions like the Unit Trusts to promote savings on a larger scale.

General Insurance

Turning to general insurance, Mr. Shroff stated that 1958 continued to be a difficult one for general insurers the world over. Alluding to the Code of Conduct and its administrative machinery, he said that, though results had not yet been adequate, a more effective organisation of the administrative machinery and observance of the Code by the insurers, both in letter and spirit, could improve matters a great deal. He expressed the hope that the adjustments in fire rates proposed by the Tariff Committee would be a significant step forward in achieving the ultimate objective of a rate structure equitable to the insurer and the insured. Analysing the problems of the industry, Mr. Shroff said that insurers should build up an efficient claims organisation to investigate into claims and render prompt service to the insured with the same zeal which they now display for the procurement of business. He strongly advocated an obligatory marine tariff in so far as India was concerned, in order to avoid wasteful and un-economic competition. Mr. Shroff very much regretted that his appeal to the Government for an equitable and just deal to private enterprise in the matter of placing the insurance business of Government-owned or aided industries had so far gone unheeded. He emphasised the need for a spirit of healthy co-operation between the public and private sectors of the industry to eradicate common maladies.

Company's Funds Rise

Reviewing the results of New India's operations during 1958, Mr. Shroff stated that the total premium income for the year amounted to Rs. 7.54 crores, as against Rs. 6.30 crores in 1957. Profit transferred to the profit and loss account amounted to Rs. 55.90 lakhs, as against Rs. 32.7 lakhs in 1957. As a result of the year's operations, the Company's total funds increased by Rs. 61.4 lakhs to Rs. 9.11 crores.

Mr. Shroff concluded by saying that the Directors were confident of the continued expansion of the Company's activities.

(This does not purport to be a record of the proceedings of the Meeting.)

AMAR DYE-CHEM LIMITED
CHAIRMAN, SHRI A. K. DOSHI, REVIEWS
PROGRESS AND EXPANSION PLANS

THE Fifth Annual General Meeting of Amar Dye-Chem Limited was held in Bombay on 16th July 1959. In the course of his address to the shareholders on the occasion, Shri A. K. Doshi, Chairman, outlined the progress made by the Company during 1958 and gave an account of the expansion plans on hand.

The following are extracts from Shri Doshi's speech:—

"Accounts as revealed in the balance-sheet and profit and loss account of the Company for the year 1958 show a profit of Rs. 16,75,378, as against the meagre profit of Rs. 86,945 for the year 1957. The satisfactory financial results has not only enabled your Directors to provide for normal and extra shift depreciation for the year 1958 but also for arrears of accumulated depreciation in respect of previous years which have been wiped off in part. Your Directors have gone a step further and have recommended dividend on preference shares up to the year under review. This is no mean achievement during such a short period, as the Company has started production only in the latter part of 1956.

Production

"There has been an increase in production during the year under review compared to 1957. In 1959, the production has picked up very satisfactorily including that of BON acid. The Company's manufacturing activities are progressing as per schedule. The Company is at present manufacturing 12 Amarthols and 16 Fast Bases. Your Directors intend to manufacture all the important Amarthols and Fast Bases in the very near future.

"You might be aware that during the year under review the dyes market experienced an acute shortage of Amarthol AS-G. A scare was created and prices rocketed higher and higher. Various factors contributed to this scare. Uptil now the country's requirement of AS-G was estimated at 50 tons a year and production was planned accordingly. The country's consumption went up and the present estimate is about 125 tons. The Company decided to meet the challenge as best it could in the circumstances it was and produced 159,850 lbs. in 1958. Every effort was made to increase the production of AS-G even at the cost of other items. Priority was given to the demands of genuine consumers. The Company saw that all legitimate demands of genuine consumers for AS-G were met and goods reached their hands at scheduled prices. The Company has produced 139,528 lbs. of AS-G in the first six months of this year and a separate plant for this item is under construction and

shall be of sufficient capacity to meet the full demand of the country.

Sales

"The sales front has shown assuring results. The sales have increased both in quantity as well as in value. During the year 1957, the overall sales of the Company's products amounted to Rs. 46.26 lakhs; as against this, the sales during the year under review have amounted to Rs. 1.06 crores.

"The sales are maintaining the same upward trend during the current year.

Expansion

"The Company has before it plans of manufacturing other ranges of dyestuffs, namely, acid and basic colours. Negotiations with Messrs. A.C.N.A., a subsidiary of Montecatini, our present Technical Consultants, are in a state of finalisation for the manufacture of these ranges with their technical collaboration. All the expansion programme would require a capital outlay on a conservative estimate of Rs. 50 lakhs. Your Directors have decided to raise the sum of Rs. 20 lakhs by issue of fresh capital, for which an application to the Controller of Capital Issues was made and to which consent has been accorded recently.

Managing Agents

"The Managing Agents, taking into account the heavy liabilities the Company had to fulfil in respect of depreciation, development rebate and accumulated dividend on preference shares, have conveyed their decision to forgo the managing agency commission for the year 1958 too. I am sure, you will agree with me in appreciating this gesture of the Managing Agents to look into the Company's interests first and foremost.

"In conclusion, I refer to the difficulties experienced by the Company in procuring the services of trained technical personnel, who can be relied upon to shoulder the responsibilities of running the plants. The Company's efforts to find suitable personnel to build up the development and research department have not yet materialised. This department has, however, been started with the help of some of the members of the present staff and all efforts are being made to expand this very important branch of the industry. Chemical industry is fast growing and it is high time that the Government and industrialists join hands and devise ways and means to solve the paucity of trained personnel."

Note:—This does not purport to be a report of the proceedings of the annual general meeting.

THE MYSORE PAPER MILLS, LTD., BANGALORE

NOTICE

NOTICE is hereby given that the TWENTY-FOURTH ORDINARY GENERAL MEETING of the Company will be held on Friday the 28th August 1959 at the Mysore Chamber of Commerce Buildings, Kempegowda Road, Bangalore City, at 3 p.m., to transact the following business:—

- To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st March 1959 and the reports of the Directors and Auditors.
- To declare a Dividend.
- To elect Directors:
 - To appoint a Director in place of Sri M. Ct. Muthiah, who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
 - To appoint a Director in place of Sri G. Sivappa, who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
 - To appoint a Director in place of Sri N. Narayanappa, who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
- To appoint Auditors for the current year and fix their remuneration.

The Share Transfer Books of the Company will be closed from 10th August 1959 to 28th August 1959, both days inclusive.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
C. V. RAMACHANDRA RAO,
Secretary.

ASIATIC BUILDINGS,
KEMPEGOWDA ROAD,
POST BOX NO. 570,

BANGALORE, 9.
Dated: 29th June 1959.

N.B.—The Board of Directors have recommended payment of dividend at 10 per cent. plus bonus of 2½ per

FERTILISERS & CHEMICALS, TRAVANCORE LTD.

GOOD PROGRESS OF FIRST STAGE OF EXPANSION SCHEME

DR. JOHN MATTHAI'S SPEECH AT ANNUAL GENERAL MEETING

CONSIDERABLE progress has been achieved in the execution of the first stage of expansion scheme of the Fertilisers and Chemicals, Travancore Ltd. The expanded plant is expected to go into full production in the second quarter of 1960, if not earlier. The second stage of expansion is likely to be completed in the second half of 1961, if orders for plants are placed without any further delay. This was disclosed by Dr. John Matthai, Chairman, in the course of his speech at the Fifteenth Annual General Meeting of the Company held at Alwaye on 15th July 1959.

The following is the full text of Dr. Matthai's speech:

GENTLEMEN,

"I have pleasure in welcoming you to this, the fifteenth annual general meeting of the company, and in presenting to you the accounts of the Company and the report of the directors for the year ended 31st December 1958. As these have been circulated to all the shareholders, I presume they may be taken as read.

"As the last annual general meeting was held towards the end of December 1958 I was able to give you in my speech a forecast of the working results for the year under review. From the audited accounts now before you it will be seen that my anticipations have been more than fulfilled. Production of superphosphate and ammonium chloride reached new high levels, and sales of our products. From the profits earned for the year we have not only been able to wipe off the previous losses completely but also to recommend a dividend of 4 per cent. After setting apart Rs. 11.26 lakhs as reserve towards development rebate, and Rs. 4.38 lakhs towards general reserve. I hope you will agree that this indicates a satisfactory state of affairs so far as the Company is concerned.

Labour Relation

"The year 1958 has been satisfactory from the point of view of labour as well. The result of their co-operative attitude has been reflected in the profits of the Company and has, in turn, secured for them a substantial return in the form of bonus. The provision made in the accounts will give every employee 96 days' salary inclusive of D.A., as against 284 days for the year 1955 which was the highest bonus so far earned in any previous year. I am glad to say that my observation last year that improved industrial relations will pave the way for making labour realise that it is in their own interests to maximise production stands justified.

"Another achievement that I feel deserves special mention is the settlement that we were able to negotiate with the F.A.C.T. Employees' Association for a period of three years. The most important feature of this agreement is that the Association and the Company have agreed not to resort to strikes and lockouts for solving any dispute. This is a great step forward in the history of this Company and I have no doubt that the mutual confidence now created by this agreement would result in maximising production and bringing in better dividends to the shareholders. Under the provisions of this agreement a Joint Council of Management and Labour has been formed. Although most of its functions are only advisory, I have no doubt it will instil in labour a real sense of participation in the management and thus bring out the best in them for the prosperity of this industry.

First Stage of Expansion

"As regards the first stage of the expansion scheme, considerable progress has been achieved in its execution. However, owing to the extension of the delivery dates of certain items of equipment by foreign suppliers and difficulties experienced in the procurement of steel, I feel that a delay of about three to six months may become inevitable for the completion of the project. From the present indications I expect the expanded plant to go into full production in the second quarter of 1960 if not earlier. The above expectation is on the assumption that the State Electricity Board will be able to supply us the required electric power

according to the schedule of requirement already furnished to them. I would like to remind the State Government of their promise to supply power in time and would appeal to them to see that the promise is kept. I am diverting to this because of the power rationing that the Government introduced early this year, in spite of their previous assurances to the contrary.

"In my speech last year I referred to the advantages in adopting gasification of oil for the second stage of expansion. I am glad to say that approval of the Government of India has since been received on the technical aspects of the scheme. Detailed discussions with the experts of the firm that submitted the lowest tender have now been completed and the approval of the Industrial Finance Corporation of India is awaited. It is hoped that we shall be able to place final orders for the plant soon. This scheme of expansion which will increase the ammonia capacity to 120 tons per day in place of the existing 40 tons, or 80 tons after the first stage of expansion, is also expected to make the cost of production of our ammonium sulphate sufficiently low to enable us to sell our product to the Pool at the same price as the product from Sindhri. From the calculation made by our staff it is seen that even that selling price should leave sufficient margin of profit to enable this Company to discharge its obligations to its shareholders in a fair manner. The formalities connected with the implementation of this scheme have taken much longer time than I had anticipated and as such the hope that I expressed of having this stage of expansion completed by the end of 1960 requires to be modified. If orders are placed without further delay we can expect the plant to go into production early in the second half of 1961.

Prospects for Current Year

"At the last two annual meetings I dealt in fair detail with the anticipations for the succeeding year. This was possible because each such meeting was held towards the end of the succeeding year. The production of ammonia, ammonium chloride and ammonium sulphate during the first half of the current year could not be maintained at the same level as we achieved during the corresponding period last year. This lower production was necessitated by the power cut imposed on the Company from 23rd March to 24th May 1959, and also owing to the excessive number of power interruptions during the period. I am, however, glad to say that we were able to step up the production of superphosphate to 16,000 tons during the period, as against 6,436 tons produced during the corresponding period last year. As regards the production during the rest of the current year, I am convinced that we can easily achieve the figures reached during the second half of 1958. However, I do not propose to deal with the prospects in further detail, as I shall be laying down my office as Chairman and Director of this Company from the end of this month.

"I would like to take this opportunity to make it clear that my resignation has not been prompted by any lack of faith in the potentialities of this concern or the future of the industry. I decided to sever my connection with the Company, because of the differences I have had with the Government of Kerala in their approach to certain problems connected with the running of this industry, an approach which, in my judgment, is immature and unsound and not in the best interests of the industry.

Managing Agents

"In view of the criticisms recently made regarding the Managing Agents of the Company, I feel it necessary to state that much of the criticism overlooks the inherent difficulties of an industry like this in the conditions prevailing in this part of the country. If the adoption of wood as raw material led to difficulties, it must be remembered that it would have been impossible to make a beginning at all otherwise, as neither the alternative of using coal nor the adoption of the electrolytic process was feasible then. The gasification of oil now

being considered for the second stage of expansion was also not then available as an alternative as the process itself was developed only much later. The Managing Agents, therefore, took a risk in starting with wood and they were, in my opinion, justified in doing so. The failure of the Company to make any profits in the earlier years was explained by me in detail in my speech of December 1957. In the light of the many adverse circumstances against which the Company was struggling, the attempt to put the blame on the Managing Agents is neither fair nor justified by facts. It is my considered opinion, looking over the years, that they have worked loyally for the Company and have rendered good service to it. I believe that the industry has now turned the corner and provided the tendency to amateurish and bureaucratic handling by the State Government is held in check, there is no reason why it should not continue to prosper.

"Before I conclude, I wish to express my gratitude to the Government of India, the Governments of Kerala and Madras and to my colleagues on the Board for the valuable assistance rendered by them. My thanks are also due to the Managing Agents, the staff and all other employees who have, by their loyalty, enthusiasm and keenness contributed towards the success achieved during the year 1958."

N.B.—This does not purport to be a report of the proceedings of the general meeting.

Notices

THE INDIAN IRON AND STEEL COMPANY, LIMITED

12, MISSION ROW, CALCUTTA

NOTICE

THE BOARD OF DIRECTORS OF THE Indian Iron and Steel Company, Limited, in meeting held today, has decided that the Ordinary Share Register and Transfer Books of the Company will remain closed from Thursday the 20th August, 1959, to Thursday the 3rd September, 1959, both dates inclusive, for the purpose of payment in due course of dividend for the year ended 31st March, 1959, on the Ordinary Shares ranking for such dividend, that is to say, exclusive of the Bonus Shares issued in February, 1959. The dividend when declared will be paid to those shareholders entitled thereto whose names appear on the Company's Register of Members for Ordinary Shares on the 3rd September, 1959, or to their mandatories.

Announcement of the Directors' recommendation of the dividend for the year ended 31st March, 1959, will be made in due course.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

14th July, 1959.

THE BENGAL PAPER MILL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the One-hundred and thirty-fifth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 7th August, 1959, at noon, to consider the Accounts of the Company for the year ended 31st December 1958, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 24th July, 1959 to 7th August, 1959, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co., Ltd.,
D. MANSON,
Secretary,
Secretaries & Treasurers,
21, NETAJI SUBHAS ROAD,
CALCUTTA, 10th July, 1959.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

notice.

THE TATA OIL MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FORTY-FIRST ANNUAL GENERAL MEETING OF THE TATA OIL MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, on Monday, the 3rd August, 1959, at 4-30 p.m. (S.T.), to transact the following business:—

- (1) To receive and adopt the Directors' Report and audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1959.
- (2) To declare dividends on Preference and Ordinary Shares.
- (3) To appoint a Director in place of Sir Chunilal V. Mehta, who has attained the age of 78 years and who retires by rotation and to consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Sir Chunilal V. Mehta, who has attained the age of 78 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

- (4) To appoint a Director in place of Mr. D. R. D. Tata, who retires by rotation and is eligible for re-appointment, and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto, as prescribed by Section 173 of the said Act:

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. D. R. D. Tata, who retires by rotation and is eligible for re-appointment, and who is a director, officer, member and an associate of Tata Industries Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an ex-officio and a special director to the Board) be and is hereby re-appointed a Director of the Company."

The reasons which make the above resolution necessary are more fully set out in the Explanatory Statement referred to above which Explanatory Statement for the purpose of Section 261 shall be deemed to be incorporated in this Notice.

- (5) To consider and, if thought fit, to pass the following resolution as a Special Resolution:

"RESOLVED that pursuant to Section 380 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves of, confirms and consents to the arrangement between the Company and The Associated Building Company Private Ltd. (associates of the Managing Agents, Tata Industries Private Ltd.) for letting to the Company on a monthly tenancy office space and storage space in Bombay House, Bruce Street, Bombay, owned by The Associated Build-

ing Company Private Ltd and for facilities of air conditioning, board and conference rooms and general facilities and services appertaining to the said building or for the benefit of the Company at an inclusive rent and charges of Rs. 1,591 per month, plus a varying charge for air conditioning facilities not exceeding Rs. 22,500 per annum with liberty to the Directors of the Company to agree to any additions, reductions and alterations in office or storage space or in regard to such facilities and services as may be deemed necessary or desirable, subject to such increases and reductions in rent and service charges as may be agreed to between the Directors and the landlords."

- (6) To consider and, if thought fit, to pass the following resolution as a Special Resolution:

"RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves of, confirms and consents to the arrangement between the Company and Tata Sons Private Ltd. (associates of the Managing Agents, Tata Industries Private Ltd.) for letting to the Company on a monthly tenancy office, shop and storage space in the Army and Navy Building, Mahatma Gandhi Road, Bombay, owned by Tata Sons Private Ltd. and general facilities and services appertaining to the said building or for the benefit of the Company at an inclusive rent and charges of Rs. 2,103 per month with liberty to the Directors of the Company to agree to any additions, reductions and alterations in office, shop or storage space or in regard to such facilities and services as may be deemed necessary or desirable, subject to such increases and reductions in rent and service charges as may be agreed to between the Directors and the landlords."

(7) To appoint Auditors for the current year and to fix their remuneration.

Note.—(a) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items Nos. (3), (4), (5) and (6) set out above are annexed hereto.

(b) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(c) The Transfer Books of the Company will be closed from Monday, the 6th July 1959, to Friday, the 31st July 1959, both days inclusive.

(d) If dividends on shares as recommended by the Directors are passed at the meeting, payment of such dividends will be made at the State Bank of India, on and after 4th August 1959, to those members whose names are on the Company's Register on 31st July 1959.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents.

P. A. NARIELWALA,
Director.

BOMBAY, 29th June, 1959.

(The Explanatory Statements referred to in Note (a) above are annexed to the Notice of the Annual General Meeting posted to all shareholders individually.)

Charging Giant Open Hearth Furnace at the Burnpur works of The Indian Iron & Steel Company Limited

The great ladle tilts, disgorging its cargo of molten metal into the open hearth. Here is the last stage in the ordeal by fire which transforms iron into the master metal—Steel.

STEEL, the starting point of all industries.

MONEY DISTINCTLY EASY

(From Our Own Correspondent)

BOMBAY, 22nd July

Conditions in the short-term money market are quite comfortable. With the growing seasonal influx of funds, deposits of the public with banks and banks' own funds with the Reserve Bank have swelled further. There are few borrowers in the inter-bank call money section; even the rate of interest has been lowered. Inter-bank call money is being offered at 1½ per cent, among the Exchange banks and big Indian banks and at 2 per cent, among the smaller banks. House money at seven days' notice is quoted at 3½-3½ per cent, and one to six months' deposits at 3¼-4 per cent.

The comfortable conditions in the short-term money market are reflected in the results of the sale of 91-day Treasury Bills held this week and the larger volume of Intermediate Bills sold last week. As against the invitation for Rs. 2 crores, the amount tendered aggregated Rs. 3.90 crores. Tenders at Rs. 99.325 and above were accepted in full and those at Rs. 99.320 allotted approximately 71 per cent. The average rate of accepted tenders, consequently, declined from 2.748 per cent. to 2.717 per cent, per annum. Tenders for next week's sale have been raised to Rs. 2 crores. Sales of Intermediate Bills during the period 15th to 18th July aggregated Rs. 1.19 crore. Further sales of these bills will be held this week between 22nd and 25th July.

The Reserve Bank of India statement for the week ended 17th July 1959 discloses a contraction of Rs. 16.63 crores in notes in circulation and a rise of Rs. 3.09 crores in notes held in the Banking Department. The consequent fall of Rs. 13.54 crores in total notes issued is covered by a decline of Rs. 14.98 crores in rupee securities and a rise of Rs. 1.44 crore in rupee coin. Foreign securities in the Issue Department show no change, but balances held abroad in the Banking Department have dropped further by Rs. 3.63 crores, so that the total foreign assets stand at no more than Rs. 182.93 crores. The deposits of the Central Government are lower by Rs. 2.13 crores, while those of other Governments and banks have risen by Rs. 25.30 crores and Rs. 14.65 crores, respectively. Loans and advances to Governments have advanced by Rs. 8.24 crores and other loans and advances by Rs. 7.08 crores. Investments have swelled by Rs. 54.55 crores, apparently reflecting the Bank's investment in the new loans of the Central Government.

The main feature of the Scheduled banks' statement for the week ended 10th July 1959 is the rise of Rs. 37.49 crores in time deposits of banks lifting them to Rs. 1,030.62 crores. This is the first time in the history of Scheduled banks in India that their time deposits have crossed the Rs. 1,000-crore mark. The rise in time deposits has been offset to a large extent by the decline of Rs. 28.19 crores in demand deposits to Rs. 712.71 crores. Inter-bank borrowings are higher by Rs. 1.12 crores, while banks' borrowings from the Reserve Bank stand reduced by Rs. 3.44 crores and those from the State Bank by Rs. 2.63 crores. There has been a decline of Rs. 19.37 crores in advances and of Rs. 3.35 crores in inland bills purchased and discounted. Foreign bills, however, show a rise of Rs. 3.02 crores. Investments have risen by Rs. 30.37 crores, which with the rise of Rs. 6.27 crores, give an indication of the extent of banks' subscription balances are higher by Rs. 6.76 crores and money at call and short notice by Rs. 3.82 crores.

The gilt-edged market continues to rule firm. The stepping up of the Reserve Bank's buying prices for the short-dated issues—an action reflecting the scarcity of offerings in these counters—coupled with the persistent keen demand for short and medium-dated issues, has strengthened sentiment, though this is not reflected in prices, most of which are unchanged over the week. The Reserve Bank is still offering the new loans at the same rates as last week, namely, 3½ per cent, 1969 at Rs. 98.90 and 4 per cent, 1979 at Rs. 100.05. 3 per cent, 1966 Conversion loan has, however, dropped by 15 nP to Rs. 74. 3 per cent, 1970-75 has hardened by 10 nP to Rs. 92 and 3 per cent, 1966-68 by 5 nP to Rs. 94.90. All 3½ per cent, 3½ per cent and 4 per cent issues are well held at previous week's rates, except 4 per cent, 1973 which has shed 5 nP to Rs. 101.50. State loans are featureless, though the demand for 4 and 4½ per cent issues continues.

In the foreign exchange section, the rupee rules steady in terms of the U.S. dollar. The banks' selling rate for U.S. T.T. is unchanged at Rs. 476 per \$100, and their buying rate at Rs. 472.75 despite the erratically lower trend displayed by the pound sterling abroad. In New York, spot sterling has, after improving from 281.16-281.19 cents to 281.20-281.23 cents, declined to 281.14-281.17 cents. Three months' forward, too, has fallen over the week from 281.13-281.16 cents to 281.08-281.11 cents.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 21st July

The metal market ruled steady during the week under review, following better advices from abroad. Copper spot opened at £2094 on the London Metal Exchange and soon recovered to £2215. By the week-end, the price rose further to £2245, thus completely wiping out the decline of a week ago. Locally, copper scrap prices were unchanged. Clean-wire scrap was quoted at Rs. 235. However, local demand for scrap was insignificant. There was no demand from upcountry. This was due to availability of the virgin metal through the permit system.

Little interest was shown in tin which was quiet at Rs. 573. In London, the price improved by £1 to £792. Lead was unchanged but steady at Rs. 75. As was electrolytic zinc at Rs. 101.

SILVER FIRM, GOLD EASY

(From Our Own Correspondent)

BOMBAY, 22nd July

An irregular trend was in evidence in the bullion market during the week under review. Thus, silver ruled firm practically throughout the week, while gold was subdued. The firmness of the white metal was due to fresh buying by upcountry traders and bullish advices from Calcutta side. Even reports that large import duty on Tibetan coins had been paid and prospects of sizable arrivals were distinct failed to have any significant effect on prices. With bulls having a strong grip on the July settlement, the backwardation rate (budli in favour of bulls) for this settlement widened considerably from As. 5 last week-end to as high as Re. 1-5 yesterday, so that they were obliged to pay a margin of Rs. 1,000 per bar. This did not deter the bulls from having their way and the backwardation rate widened further to Re. 1-14 today when the settlement went off the board.

In contrast to silver, gold encountered selling on reports of a marked rise in the floating stocks in the City of late, following increased arrivals of contraband gold from China through Ceylon, Calcutta and other East Coast points. There were also large offerings by Madras operators in the ready section. The selling was so pronounced that the carryforward rate for the maturing July settlement, which was for a long time in favour of bulls, turned against them to the extent of As. 6 at one time yesterday, although it was As. 2 lower at the close when the settlement terminated.

July settlement in silver opened the week at Rs. 196-13, as against the previous closing of Rs. 197, and firm set up on persistent support to touch a high of Rs. 198-8 today before running off the board at Rs. 198. August settlement, too, advanced from Rs. 196-11 to Rs. 197-5 on Saturday and, after declining to Rs. 195-10 yesterday, recovered to Rs. 196-7 today. It, however, closed As. 5 lower. Business in September settlement commenced at Rs. 195-13½ on Monday. Today's closing rate for this distant settlement was Rs. 195-14.

Ready silver rallied from Rs. 196-13 to Rs. 198-8 on Monday. At high levels, profit-taking set in and the quotation receded to Rs. 196-12 yesterday. Opening firm at Rs. 197-14 today, it spurted to Rs. 198-2 but, as follow-up support was lacking, wound up easy at Rs. 197-10. The net gain over the week was As. 13. The daily average arrivals and offake of silver were 17 bars and 13 bars, respectively. The floating stocks of silver are estimated at 300 bars.

July settlement in gold came in for selling and moved down in the course of the week from Rs. 118-14 to Rs. 118 yesterday, at which rate business in this settlement came to an end. August settlement eased from Rs. 118-9 to Rs. 117-14 on the 17th inst. and, after recovering to Rs. 118-10 on Monday, declined again thereafter to close at Rs. 118-4 today.

Ready gold, which stood at Rs. 119-2 last week-end, receded gradually and touched Rs. 118-2 today. The daily average arrivals of gold were 3,500 tolas, while the offake was 2,500 tolas. The floating stocks of gold are reported to be around 35,000 tolas.

There was a further rise of 1d. in both ready and forward silver in the London bullion market during the week under review, yesterday's closing rates (per ounce) being 78½d. and 78d., respectively. Silver in New York, however, was unchanged at 91.375 cents per ounce. Ready gold in London, which was maintained throughout the week at the last week's level of £249. 11d., firmed up to 249s. 11½d. yesterday, owing to the persistently easy trend of the pound sterling vis-a-vis the dollar. The latest available dollar rate for gold in London is \$35-13-\$35-15, as against \$35-11-\$35-13½ a week before.

The following comparative table shows at a glance the trend of the market during the week under review:

	22-7-59	Highest	Lowest	15-7-59
GOLD				
Ready (99 fine Mint)	118 2	118 15½	118 2	119 2
Forward	118	118 15½	117 15	118 14
SILVER				
Ready (999 fine Mint)	197 10	198 2	196 9	196 13
Forward	198 0	198 8	196 8	197 0
London Silver Ready	78½	78½	78½	78½
London Forward	78½	78½	77½	77½
London 14-28-17	249 11½	249 11½	249 11½	249 11½
New York Silver	91 37½			91 37½

* 21st July settlement.

† 22nd July settlement.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 20th July

The kip market remained firm, as demand kept pace with arrivals. Shipment business continued to be difficult, because importers did not accept the asking prices at origin without a struggle. Higher prices were established on several items, and the tone was bullish.

There were large inquiries for tanned goat skins and the market was firmer. Middle class sheep skins were also in demand and prices locally improved by 19 nP per lb.

E. I. tanners were active in the raw markets and prices ruled firm.

COTTON FUTURES CHEERFUL

(From Our Own Correspondent)

BOMBAY, 22nd July

In contrast to the subdued note evident last week, the cotton futures market put on a cheerful appearance during the week under review. Values firmed up on extensive buying by upcountry interest and local mill support. Investors also lent a helping hand. The centre of attraction was the maturing August contract which smartly rallied to Rs. 703.50 on Saturday and further to Rs. 705.50 yesterday. With paucity of supplies of good quality cotton in the ready market, it was feared that there would be acute shortage of tenebrous cotton. This, together with firm spot advices, prompted heavy buying in the August contract. New crop contract Jarilla March 1960 recorded a sympathetic rise. Pending a clearer picture of new crop development, traders were hesitant to enter into large commitments. Price movements in new crop contract were mainly influenced by weather in the growing areas. Profit-realising led to a mild recession in value today. But the market closed fully steady.

I.C.C. Moglai Jarilla August 1959 opened the week at Rs. 696.50, as against the previous day's close of Rs. 695.75, and firmed up to Rs. 705.50 yesterday before closing at Rs. 703.50. Commencing at Rs. 702 today, the contract improved fractionally. Profit-taking resulted in the contract declining to Rs. 699. But the finish was higher at Rs. 701.25.

I.C.C. Moglai Jarilla March 1960 started the week at Rs. 662.50 and gradually rose to Rs. 698.50 yesterday. Opening at Rs. 668 today, the contract gathered fresh support and closed at Rs. 677. I.C.C. Moglai Jarilla at close and finished higher at Rs. 668.50. The following table indicates the trend of prices of the contract during the week:

	22-7-59	High	Low	15-7-59
I.C.C. Moglai Jarilla August 1959	701.25	705.50	695.00	695.75
I.C.C. Moglai Jarilla March 1960	668.50	669.25	661.50	663.75

The spot section was active. Kalyan and spinnings, especially Ahmedabad mills and also some Bombay mills, purchased fairly large quantities of Laxmi cotton. Southern mills were particularly interested in higher grade Co2.

Export demand for Bengal Deshi was fairly good. Japan continued to show interest in this cotton. Zoda and yellow pickings evoked inquiries. Mill interest in foreign cotton was lacking. Inquiries in Sindh styles were in demand. Sudan G2S was done at prices ranging from Rs. 1,405 to Rs. 1,410. Most mills have now utilised their allotments. The clarification of the payments procedure for import of Egyptian cotton is eagerly awaited. The follow-up per candy of 784 lbs.—from the spot market at Searvi.

Bengal Deshi 705; Berar Jarilla 730; Khandesi 865; Laxmi 990; Jaydhar 925.

Listless conditions continued to prevail in Karachi cotton market during the week. Mill interest in spot cotton tended to flag. Export demand was slack. Growing areas reported favourable weather. Nevertheless, values ruled fully steady, thanks to the tight supply position and paucity of stocks. The following are the latest available quotations—in rupees per maund of 42 lbs.—for at Karachi:

Sind Deshi 83; Punjab Deshi 72-8; 4R Punjab Roller 79-8; S.G. 75; L.S. 75; Punjab Roller 76; S.G. 78; S.T. Roller 77-8; S.G. 78; 280P Punjab Roller 78; S.G. 80.

Cotton futures values in Alexandria market ruled fully steady during the week. The steadiness was influenced by speculative support prompted by hopes of better export demand. West German was said to be keenly interested in Egyptian cotton. The textile industry in that country was reported to be seeking a ten per cent share in Egypt's long staple cotton exports. Demand from Indian buyer last week was also expected to revive. The following are the latest available quotations—in tallars per lb.—from Alexandria:

Karnak: July 74.15; October 75.00. Ash moum: August 67.90; November 68.90.

Quiet conditions prevailed in the Liverpool cotton futures market during the week. In the absence of fresh incentives, trading interest was American and Sudan cotton contracts were practically unchanged from last week's levels. The quotations showed improvement, thanks to short-covering in pence per lb.—from Liverpool:

American cotton one-inch staple contract: July August 22.65; October-November 21.30; December January 21.15; March-April 21.05.

American cotton mixed growth contract: July August 22.80; October-November 21.80; December January 21.45; March-April 21.40. Sudan: August, September-October, November-December 29.25.

Cotton futures in New York depicted a mixed trend. Near deliveries improved on scattered trade, reflecting the prospect of a large cotton crop and crop progress satisfactory. Spot values to were easy.

The Agriculture Department has announced the export sale of 2,025 bales of U.S. Government-owned cotton at 28.47 cents per lb. basis Midland last July. The department sold 4,903 bales at 28.4 as the Department now changes entirely to dollars under the payment-in-kind programme. Under this plan U.S. exporters will receive a subsidy in the form of a credit of 8 cents per lb. for cotton sold abroad. They can apply these credits to the purchase of additional cotton from Government stocks.

Net sales of this short-staple cotton since the 1958-59 disposal programme began on 12th May, 1958 aggregated 2,357,781 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	21-7-59	14-7-59	7-7-59
Spot	...	34.40	34.95	35.60
July	...	34.40	34.95	34.82
October	...	32.32	32.17	32.28
December	...	32.32	32.22	32.33
March	...	32.58		

MORE ABOUT EXPORT SCHEME FOR ART SILK FABRICS

(From Our Own Correspondent)

BOMBAY, 22nd July

The Textile Commissioner has announced specifications of the different varieties of fabrics which would enable mills to get import licences for art silk yarns under the Export Promotion Scheme or any other benefits under the Scheme during the licensing period April-September 1959. The fabrics selected have been classified under six categories, namely, synthetic yarn, viscose yarn, acetate yarn, cupronium (Bamberg) yarn, staple fibre yarn, and synthetic-rayon-staple fibre yarn mixed fabrics. All the varieties in any of these categories have been further classified according to the description of the fabrics. The maximum f.o.b. value for the approved variety of fabrics on the basis of which the admissible incentives will be calculated have been laid down by the Textile Commissioner. The manufacturers will, of course, not be allowed to import during the Scheme in excess of Rs. 6,000 per loom per annum or Rs. 1,500 per loom per quarter. Accumulations or adjustments of quarterly licences may be allowed up to six months.

The exporters would appear to be not satisfied with the revised scheme of the Government. They feel that a lot of discrimination has been made by the Government between the incentives granted to them and those given to manufacturers. It is stated that the incentives given to exporters are very negligible, as a result of which any large-scale shipment business is not possible. The exporters have represented to the Government, drawing its attention to the injustice done to them. Hopes are expressed that the Government may revise the Scheme, so that exporters will put on a par with the manufacturers. It is these hopes which have imparted considerable strength to art silk yarns. Prices of many deniers have registered a handsome improvement. In sympathy with art silk yarns and on renewed reports of enlarged offtake from consuming centres, staple fibre yarns also have too, are ruling distinctly firm on expectations of enlarged export business. The expectations are based on reports that the State Trading Corporation of India has concluded a Rs. 80-lakh deal with Indonesia for the sale of 5.0 million lbs. of yarn during August-October quarter, on the basis of about Rs. 60 per pound of 20 counts yarn. It is said that several spinning units in Bombay and Coimbatore may participate in this order.

Meanwhile, the Civil Supplies Management Board of India is reported to have purchased from India about 10 million lbs. of cotton yarn. Shipments of this quantity are scheduled to be completed before November next.

Cupressa Bamberg yarn (60X2) October contract forged ahead from Rs. 1,705 to Rs. 1,735. August contract registered a rise of Rs. 22 over the week, today's closing rate being Rs. 1,702. Spot Cupressa rallied from Rs. 7.40 to Rs. 7.50. Among imported art silk yarns, 150 Japan hardened by 7 nP to Rs. 4.78. 120 Japan picked up 4 nP to Rs. 4.81. 150 Italy gathered 3 nP to Rs. 4.71. 120 Italy was fully maintained at Rs. 4.96. Among indigenous yarns, National Rayons 150 bright cones first grade gained a naya paise to Rs. 4.25. 120 bright cones first grade were done at Rs. 4.75, same as last week.

Staple fibre yarn (40X2) August contract advanced by Rs. 11 to Rs. 674. October contract strengthened by Rs. 10 to Rs. 673. Spot Centurys moved up by 15 nP to Rs. 3.62. Kohinoors rose by 7 nP to Rs. 3.66 and Citys by 6 nP to Rs. 3.53. Among imported yarns (80X2), Paramounts were keenly bid, the quotation spurring from Rs. 7.37 to Rs. 7.81. Fujis climbed up by 37 nP to Rs. 8.31.

Cotton yarns, as already stated, were firm. Ten counts Podars advanced by 25 nP to Rs. 13. Moderns were fully steady at Rs. 13.75. Twenty counts Moderns recorded a rise of 13 nP to Rs. 17. Hinds were unchanged at Rs. 16.62. Forty counts Moderns put on 13 nP to Rs. 26. Minaxis, however, eased by 7 nP to Rs. 26.2. Sixty counts Finlays were firm at Rs. 63. Eighty counts Moderns gathered 50 nP to Rs. 77. Mahendras increased by a like amount to Rs. 72.50. Finlays and Citys were fully maintained at the last week's levels of Rs. 81 and Rs. 66.50, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week before:

	22-7-59	15-7-59
Art silk yarns—		
60 Cupressa Bamberg August (100 Ks.)	Rs. 1,735	Rs. 1,705
60 Cupressa Bamberg spot (per lb.)	7.50	7.40
120 Japan (per lb.)	4.78	4.71
150 Japan (per lb.)	4.81	4.78
120 Italy (per lb.)	4.71	4.68
150 Italy (per lb.)	4.71	4.68
Staple fibre yarns—		
40 X 2 August (per case of 200 lbs.)	674.00	668.00
40 X 2 October (per lb.)	673.00	668.00
40 X 2 Kohinoor (per lb.)	8.31	8.31
Cotton yarns (per bundle of 10 lbs.)—		
10s Podar	13.00	12.75
20s Moderns	17.00	16.87
40s Hinds	16.62	16.19
80s Finlay	63.00	63.00
80s Mahendra	72.50	72.00

SMART RECOVERY IN SEEDS

(From Our Own Correspondent)

BOMBAY, 22nd July

The oilseeds market, although it ruled dull during the earlier sessions, staged a smart recovery at the close of the week under review on heavy short-covering and replacement buying. The earlier weakness was mainly the result of bearish crop reports. Besides, there were sizable offerings, but fresh support was lacking. The tables were turned around Tuesday on good upcountry support. There were some overseas enquiries for oils as well. The pronounced strength in oilseeds further pushed up the values.

Groundnut was in the limelight with the August contract gaining as much as Rs. 3.50 over the week. The low levels were, however, touched in the initial sessions, particularly on reports of satisfactory rains in the producing areas. Saurashtra was a persistent seller. At lower levels, groundnut witnessed a fresh bout of buying support. Shippers, who had sold groundnut oil to Burma, covered their sales in Saurashtra. Heavy rains in the producing areas led to reductions in the arrivals of seeds. August 1959 contract which wound up last week at Rs. 191.50 rallied to Rs. 194.00 today, after touching Rs. 189.50 by Thursday last. February 1960 contract hardened from Rs. 167.25 to Rs. 168.50 today, which had touched a low of Rs. 166 in the initial sessions of the week. Bold ready picked up 50 nP over the week to Rs. 41, after fluctuating between Rs. 39.50 and Rs. 39.75. Oil ex-mill improved by 25 nP to Rs. 21.50.

The castorseed section, too, witnessed a rally in prices at the close of the week. The earlier slump in prices was mainly on account of lack of any fresh support. There was no encouraging enquiry for oil from abroad. Pressure of supplies dampened the market. September 1959 contract which had wound up last week at Rs. 156.62, after moving both ways within a narrow range, closed firm at Rs. 157.75. Ready Madras gathered 13 nP to close at Rs. 31 today. Oil B.S.S. improved from Rs. 16.69 to Rs. 16.81.

The linseed section was listless. In the face of comfortable supply position and absence of any signs of export demand, linseed yielded ground. By the close of the week it, however, picked up strength in sympathy with other seeds. The September 1959 contract hardened by 12 nP to Rs. 31.81, after witnessing narrow fluctuations over the week. Bold ready, however, shed 17 nP to finish at Rs. 32.50. Oil, however, was marked up by over 30 nP to Rs. 16.00.

The firmness in raw cotton induced strength in cottonseeds. The September 1959 contract and February 1960 contract, which had closed at Rs. 138 and Rs. 135, respectively, last Wednesday, improved to finish at Rs. 137 and Rs. 136.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	22-7-1959	15-7-1959	8-7-1959
Groundnut			
August 1959	194.00	191.50	191.50
February 1960	168.50	167.25	167.25
Bold ready	41.00	40.50	42.25
Groundnut ready	41.00	40.50	42.25
Oil ex-mill ready	21.50	21.25	21.75
Oil ex-mill ready	21.50	21.25	21.75
Oil ex-mill ready	21.50	21.25	21.75
Oil ex-mill ready	21.50	21.25	21.75
Castorseed			
September 1959	157.75	156.62	159.50
February 1960	158.37	156.62	158.62
Ready Madras	31.81	30.87	31.00
Ready Madras	31.81	30.87	31.00
Oil B.S.S.	16.81	16.69	16.87
Oil commercial	16.81	16.69	16.87
Linseed			
September 1959	32.50	32.60	32.25
February 1960	32.50	32.60	32.25
Bold ready	32.50	32.60	32.25
Oil ready	16.00	15.90	16.00
Cotton seed			
September 1959	137.00	136.00	137.50
February 1960	119.00	118.00	118.50
Wagon seed	81.00	81.25	81.50
Kard seed	23.75	23.75	24.00

* Rates include excise duty but exclude sales tax.
Sales include both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in owt. A candy is 500 lbs., except in the case of cotton seed, for which it is 700 lbs. Spot quotations of seeds are for per cwt. and those for oil per quart.

NEW SUGAR RELEASE EXPECTED SOON

(From Our Own Correspondents)

BOMBAY, 22nd July

The Union Food Ministry is expected to announce the normal monthly sugar release before the end of the current week. With this release, arrivals of sugar into the City by road and rail will be quite substantial. The quantity that actually arrived during the week under review was less than that in the previous week, being 14,800 bags, as against 20,000 bags. Despite the reduction in arrivals, no difficulty is reported to have been experienced by consumers in getting their requirements of sugar at the Government fixed price of 51 nP per lb.

The wholesale rates per bag for the different grades of sugar prevailing today were the same as those prevailing a week before. They were: A grade, Rs. 115.61; B Grade, Rs. 114.08; C grade, Rs. 112.02; D Grade, Rs. 111.

The Government of India issued a notification on the 16th inst. reading as under:

"Control is now being exercised on the prices that can be charged by dealers to whom direct allocations of sugar are made by the Government of India. The decision is a sequel to the recent introduction of the system of licensing genuine dealers in sugar. It was announced at the end of

last month that allotments hereafter would be made only to licensed dealers. Under the order, District Magistrates have been given power to fix prices at which sugar can be sold by allottees. These prices are to be fixed within the limit specified in the order. According to the notification, every dealer who is allotted sugar by the Government is required to sell at a price not exceeding the aggregate sum

STOCK & SHARE QUOTATIONS

Abbreviations: D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Company has Preference shares. H.—Accounts published half-yearly. N.—Nominal quotations. L.—Lm. Dividend. I.—Interim Dividend. P.—Dividend for first half of the year.

Shares.—If a company has different classes of shares—as for example, "A" shares and "B" shares—these are indicated by the letters "A" and "B" under the column "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts.—Figures in the "Accounts Closed" column represent the months of the year in which the

respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and all other funds, which a company may have at its disposal for the purpose of providing for its liability and providing fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for the financial year.

M—Managed by the Board of Directors. * Less income-tax. * Olyve Mills have paid dividend at \$a. 101 on bonus shares for the year 1965. * Incentive bonus. * N—Central Jute Mills—Dividend for 1965 is on shares of Ra. 10 each. The African and Luthien Jute companies have been amalgamated with New Central Jute Co. with effect from 1st December 1964. (On dividend) * P—Wangal Coal Co. Dividend for 1965 is on shares of Ra. 10 each. * On increased capital. * R—Fort William Jute Co. has sub-divided ordinary shares of Ra. 100 into shares of Ra. 10 each. * In investments. * S—For 1965 the dividend of Ra. 17.50 includes an interim dividend of Ra. 7.50 per share. In 1966 the shares of Ra. 300 were split into shares of Ra. 100 each.

VESTED INTERESTS

(Concluded from page 124)

fore, an eye for what rival labour unions of more leftist persuasion are doing, to wean away labour from its unions and not for what will make for the long-term prosperity of industry, with which the prosperity of its labour force is inevitably linked. All the time, therefore, the main preoccupation of labour leaders has been to steal the thunder of the more extreme labour unions and make it impossible for the latter to promise more. In all these contexts, when concern is expressed over the unworshipful nature of these compromises, those that express anxiety are held up in contumely as vested interests, conservatives, reactionaries or outmoded thinkers steeped in the nineteenth century doctrines.

The time has now arrived in our nation's economic affairs when production has to be stepped up on the foodgrain front, on the industrial front and in all production sectors that meet the basic needs of the people—if only to catch up with the terrific rate of population increase. A decline in heart-breaking death rates which should normally be hailed as a triumph, has compelled us today to find ways and means of giving a curb on our high birth rate. But meanwhile, we are closing our eyes to the fact that those that constitute the current population of India. In this task, "vested interests," which phrase embraces all those that have small or large stakes in the country, have to be harnessed to the massive output of production, for the formidable horsepower they can contribute, and should not be treated as hostages to be tied to the wheels of that chariot.

The Prime Minister has latterly been telling the free enterprise sector to take from the public sector lessons in economy, efficiency and speed. The private sector has fortunately the humility to learn from any quarter, even from those that might have undergone their probation in the private sector, but have since moved over to the public sector, because of the larger opportunities available to unfold their talent with the more formidable plant and machinery which the public sector, with its enormous resources and its super-priorities, has been able to command.

One hopes the Prime Minister who twists the private sector for going to the Government for loans will, being a diligent student of history, pause to find out why. He would find, he will realise how the unfortunate industrialist, who knows the value of his capital, whose flow the dramatic changes in the pattern of taxation has arrested; how he is unable to get his plant and machinery easily from abroad because of external delays; is often unable to get the electric power and transportation he needs and frequently finds it difficult to get licences for machinery parts; that all that often results in prolonged shut-downs; that he is unable to deal with labour, educated into exaggerated notions of what wages the industry could afford: all of which put up the consumer prices of articles produced— independent of excise duties, where such are levied.

In the meantime, it would be poor political strategy for the party bosses and ministers to talk of "vested interests," as though they are a biological species that must be exterminated in non-election seasons, because it is as inconvenient to have them around.

Years ago, I heard a doggerel about patriots that appeared to me wicked and acrimonious. It described a patriot as one who

"Asks for money from the rich and votes from the poor
And promises to protect each from the other"

Sometimes, when you hear these odious platitudes about "vested interests" from the votaries of latter-day leftism and observe what all they really mean to forget, in their anxiety to throw away "vested interests" like flattened tubes of toothpaste, you begin to wonder whether a new generation of patriots, instead of making nonsense of this unedifying doggerel, are trying to live down to it. I hope they will do the former and not the latter.

INVESTOR'S INDIA YEAR-BOOK 1959

The debacle in share markets during the years 1956 and 1957 had considerably shaken the confidence of investors to its roots. The general view was that they had put in their savings in bullion which was the only safe investment. The bullish trend since 1952, instead of in shares. They had reason to feel disappointed, because they saw over 25 per cent. of their savings wiped out within the span of those two years. Further, the sharp decline of the change that was to come in the following months. During the last year and half, equity values have regained a good part of the losses suffered in the previous two years, though there was a lull in the economic situation that justified the change. The general sentiment is, therefore, a natural anxiety among investors whether the present bullish trend will persist or whether, from a long-term point of view, equity investments are quite safe. Such a view will be greatly reinforced by the fact that the compilers of the *Investor's Index Year-Book 1957* are of the view that "equity investments are the best way to share in the benefits of economic growth."

Discussing the outlook for 1959 in their above edition of the Year-Book, Messrs. Place, Siddons and Gough observe: "An appraisal of the investment outlook for 1959 shows the usual interlarding of light and shade, but perhaps on balance would be correct to say that it shows more light than shade. The economy is developing, productive capacity is expanding, a whole range of new industries has come into existence and the structure of the economy, on which all development must depend, is being strengthened. The pace of advance may appear disappointingly

gress there is and in the space of another Five-year Plan or two, more steel, coal, power and machine-building capacity will transform a stagnant underdeveloped economy into a modern industrialised one. This element of dynamism is perhaps the most hopeful feature of the situation."

The above edition of the *Year-Book*, which is the forty-fifth in its series, contains the usual features, such as summary of last year's balance-sheets of companies, the salient features of the profit and loss accounts for ten years and details of companies' history and capital changes. The general introduction under the caption "More Light than Shade" makes interesting reading. It gives a factual account of the country's economy. This is followed by a brief review of important industries. The edition is priced at Rs. 20 and published by Orient Longmans Private Ltd., Calcutta. The book of reference is invaluable to all well known and well established that it is unnecessary to commend it to them. It would be trite to say that the *Year-Book* is an invaluable guide to investors, but it is so in actual fact.

THE DIRECTOR IN SOVIET INDUSTRY

(Concluded from page 143)

unhealthy to quarrel. The party organisation is apt quite frequently to interfere in the detailed running of the factory, as well as acting as a kind of inspectorate on all kinds of matters regarded as important by the party leadership. It is true that the director is in command, and the party branch in the factory cannot give him orders. In fact, party periodicals often accuse some secretaries of party branches in factories of being too much under the thumb of the director. However, they can invoke higher party authority and could make serious difficulties for directors who choose to disregard advice received. This has been particularly true since the abolition of central ministries, because the regional Councils of National Economy are themselves largely dominated by "their" provincial party secretary.

Here again, the director's situation is mitigated by the party secretary's own interest in plan fulfillment. It was Khrushchev himself who went so far to suggest party officials' salaries be made dependent on plan fulfillment in their area of responsibility. All too often, judging from official reports, they, therefore, connive at a variety of evasions and sharp practice on the part of the director.

This by no means exhausts the list of possible controllers and inspectors. For instance, there exists a State Committee of Soviet Contractors (formerly Ministry of State Control), whose local inspectors are liable to pounce on breaches of regulations. Then the Ministry of Finance's officials are directly interested in the enterprises' financial situation, because the largest part of the budgetary revenues consists of payments by enterprises, and they have local inspectors too.

Directors, as has already been stated, are under the orders of their regional C.N.E.* However, they also enter into contracts with a large number of other enterprises (industrial, transport, trade, etc.) and disputes over these contracts are extremely common. One enterprise alone (the Moscow "Hammer and Sickle" works) was involved in 2,119 cases in the one year 1957. Most cases of this sort are heard by special arbitration tribunals. These tribunals take into account not only the provisions of the contract, but also the plan and the economic policy of the authorities. Enterprises have a legal department

ment, which is busy dealing with such cases. Too busy, indeed, according to one critic: seems that the legal department's "output" measured by the number of cases in which it is involved, thereby encouraging needless litigation.

Thus, the Soviet director requires great skill in energy and many *entrepreneurial* qualities, to negotiate the complex physical and institutional obstacles which stand between him and plan fulfillment. There is much discussion in the Soviet Union today about the need for more initiative at the ground level, with increased initiative at the top level of the enterprise and more rights for directors. In particular, they have far too little control over investment funds, and too many of their rational decisions require the permission of higher hierarchical superiors. However, an inelastic and often irrational price system, with no true market, does not provide a sound basis for decentralisation of decision-making to enterprises. One cannot rely on the profit motive, unless there is a tie-in between prices and the pattern of demand, and no such tie-in exists at present. Therefore, there are arguments, so far inconclusive, about a change in the price system.

* Directors of large enterprises may sometimes be on the board of their region's C.N.E.

† *Kommunist*, No. 3/1959, p. 52. This seems to be exceptionally large!

However, let us not forget that the existing system of incentives, despite its defects, does encourage directors to produce more, as the remarkable rate of growth of Soviet industrial output bears witness.—*Courtesy: F. B. I. Review, the Journal of the Federation of British Industries, London.*

DEVELOPMENT OF SUBSIDIARY FOODS

(Concluded from page 144)

picture. In India, production of root crops is about 6.6 per cent. of the total cereals production. But in a large number of other countries, output of root crops exceeds, in many cases, by several times, the output of cereals. Part of the root crops grown in several other countries are fed to animals. But in human consumption also, these crops play a very significant role—many times more significant—than in India.

Many European countries, faced with the pressure of population on food resources, have tried to rely to a large extent on root crops so as to reduce their dependence on imports. India is also in the same position and steps are urgently called for to promote greater production and consumption of these crops.

As already stated, the present production of subsidiary foods in India is much short of even the requirements of the balanced diet. The availability of root crops (potatoes, sweet potatoes, and tapioca) is 0.9 oz. per adult per day, as against 3 ozs. provided for in the balanced diets. In view of the high yielding character of these crops, their production should be expanded to bridge, by the end of third Five-year Plan, the gap between availability and what is necessary for the standard diet. An additional production of about 14 million tons of these crops would be

needed for this purpose. Over and above this, the subsidiary foods including root crops, bananas and papaya should be utilised to reduce dependence on cereals to some extent. The present consumption of cereals per adult per day is more than 15 ozs. In the third Five-year Plan, a target of 110 million tons of foodgrains (cereals+ pulses) has been suggested by the Ford Foundation, which would give daily consumption of about 17.5 ozs. of cereals and about 35 ozs. of

of about 150 gms. of cereals and about 350 gms. of pulses per adult per day. Thus, the per capita availability of cereals which is already some 10% below what in excess of the requirement of the balanced diet is required to be augmented further during the third Five-year Plan to meet the deficiency of other foods. Certain sections of population in rural areas depend much more on cereals. It is desirable to reduce this dependence of the average Indian diet partly by substituting energy-giving subsidiary foods for

cereals. Nutrition experts are of the view that these subsidiary foods can safely replace cereals to the extent of 25 per cent. Mixed with certain protein foods such as oilseed meals, gram, etc., these crops can play an even more important role. The objective of the third Five-year Plan should, therefore, be that, in addition to meeting the requirements of the balanced diet, the energy-giving subsidiary foods should replace cereals to the extent of at least 1 oz. of cereals per adult per day. This additional production of subsidiary foods should stand in good stead in the event of production of cereals lagging behind.

the country's requirements. The additional production of subsidiary foods required for replacing 1 oz. of cereals would be about 28 million tons. The total target of additional production for the third Five-year Plan should, therefore, be 42 million tons of subsidiary crops.

This target, which means a sixfold increase over the present production of subsidiary foods, may appear colossal. But, in terms of the additional acrea required, it would come to a modest figure. As part of the additional production would be achieved through improvement in present yields. If the yield per acre of these crops which at present is low, is doubled in the Third Five-year Plan then the additional acreage required to achieve the target of production would be about five million acres. If the yield per acre goes up by 50 per cent., the additional acreage needed would be about seven million acres. This is hardly 2 per cent. of the cropping area in the country. There is a large possibility for growing subsidiary foods as second crop after cereals, rather than in place of cereals. There is also the possibility of planting such of them as kitchen garden crops. In view of these factors, the additional production of the

crops need not involve much diversion of acreage from other crops. All the same, since the foods are partly to replace cereals in human consumption, some transfer of land to them is

Considering that the code was finalised only in May 1958, it is certainly encouraging to be told that the branches of the code are not too many. Mr. Nanda revealed that, as far as he could judge from the reports from the State Governments and the Implementation Division of the Centre, the code had worked satisfactorily; 17 out of court settlements of industrial disputes have been brought about. The central organisations of employers and workers have already set up machinery for screening appeals to High Courts and the Supreme Court. All this augurs well for the success of the code.

If the code continues to work satisfactorily, it will have gradually prepared the ground for voluntary settlement of disputes. Mr. Nanda did well to stress that the parties should be encouraged to "settle practically every dispute without outside intervention." He agreed that, if recourse to tribunals and courts became the rule, rather than the exception, the conflict would really shift to the arena of the courts and the skill of the lawyers would take the place of trial of strength between parties. It is gratifying to note that the Conference has responded to Mr. Nanda's call for settlement of disputes through arbitration and mediation, rather than through adjudication. The Conference suggested that a panel of arbitrators should be maintained in order to help the parties choose suitable arbitrators for the settlement of disputes and the principles and norms enumerated in awards should be compiled and published for the guidance of arbitrators. It urged the Central Government to examine afresh the provisions of the Industrial Arbitration Act, with a view to determining the extent to which it could be made applicable to the arbitration procedure laid down in the Industrial Disputes Act. These decisions are certainly commendable. For there is no doubt that arbitration is nearer to collective bargaining than adjudication. Nevertheless, it would be folly to overlook the inherent advantages of collective bargaining which alone can bring the much-needed sense of realism into industrial relations and can help labour achieve a certain degree of maturity in its relations with employers. It will be to their ultimate benefit if the employers themselves try their best and encourage conciliation rather than yield to the temptation of resorting to industrial courts and other tribunals.

It is not clear whether the Conference discussed the issues arising out of the political lines of approach consistently adopted by labour organisations wedded to extremist ideologies, especially the issues thrown up by the ruling party in Kerala. It may be recalled that the Kerala Pradesh Congress Committee, in its memorandum submitted to the President, has drawn attention to the partisan attitude of the Communist Government in Kerala, the State Government's refusal of protection to life and property of employers and other matters of grave importance to industrial relations. To the extent these issues stem from the existence of an extremist political party in a democratic set-up, it may be difficult for a purely tripartite organisation, like the Labour Conference, to give a correct lead to the country. However, since they arise partly from inter-union rivalry, the Conference has done well to agree to certain specific proposals relating to union organisation. Thus, it accepted the proposal to prescribe a minimum subscription of As. 4 a month for union membership. As regards recognition of unions, where there is only one union, the union may be recognised even if it has less than 15 per cent. membership, and where there are more unions, each of which commands only less than 15 per cent. membership, none of them will be recognised. These decisions are sensible and should settle many a thorny controversy in the organisation and recognition of unions.

INDO-PAKISTAN TRADE

IT is hard to make out precisely the achievements of the Indo-Pak Conference held at New Delhi at the Secretariat level from the brief official communiqué published on Monday last. The Conference lasted for five days and all that seems to have happened is an exchange of sweet words and nice platitudes on both sides. The object of the Conference was not to negotiate a new trade agreement, but to review the working of the pact concluded early in 1957 for a period of three years, to examine the causes for the fall in the trade between the two countries despite the pact, and to decide the measures required for reversing this trend and promoting a larger volume of trade between them. The Conference thus had a limited objective, but it does not seem to have succeeded in fulfilling even that. The Press note says, *inter alia*, that "the review took place in a cordial atmosphere

and covered the main items under the agreement," that "certain concrete proposals intended to reverse this (downward) trend have been discussed" and that "the delegations hope that, as a result, some expansion of trade to the mutual advantage of both the countries will take place." If the Press note is carefully studied, it will be seen that its contents are more negative than positive and that it concludes with a pious hope. It will be noted that certain concrete proposals were only discussed and not concluded. In the absence of any agreement on these proposals, what is the point in merely expressing the hope that, in future, Indo-Pak trade would improve to the mutual benefit of both the countries? What is worse, the communiqué says nothing as to what these concrete proposals are. One cannot understand this secrecy.

Apparently, the truth is that there is nothing much to be said. The trade between this country and Pakistan has been steadily declining ever since the Partition, notwithstanding the several trade agreements concluded between the Governments of the two countries, as the following figures will testify:

	India's exports to Pakistan	India's imports from Pakistan	Balance of trade
Fiscal year			
1948-49	77.00	109.30	-32.30
1951-52	45.29	87.48	-42.19
1952-53	32.12	21.86	+10.26
Calendar year			
1953	7.62	19.41	-11.79
1954	10.09	17.82	-7.73
1955	8.71	25.08	-16.37
1956	8.08	20.91	-12.83
1957	6.77	13.40	-6.63
1958	7.16	6.27	+0.89

It may be noted here that there was a trade agreement in August 1952 for a year. This was followed by a limited type of agreement, covering only jute and coal, again for one year. Prolonged talks in 1955 led to the signing of another trade pact, again for only one year, which came into force on 1st September of that year. After a short gap, the agreement currently in force was signed on 15th January 1957 and brought into effect from 1st February of that year. This was undoubtedly a more comprehensive agreement than all the previous ones, covering all aspects of trade, including the border trade. What led to this understanding was the Suez episode. The closure of the Suez Canal induced the authorities in Pakistan to realise the advantage of depending on India for its requirements rather than on distant countries. But even this agreement has not brought about any improvement in the trade between these two countries. It is true that both 1957 and 1958 were years of severe foreign exchange hardship for both the countries and both of them had to cut their imports drastically. Additionally, the political instability in Pakistan increased during these years, with frequent changes in ministries finally culminating in military dictatorship in October last. Further, India was fortunate enough to have a bumper jute crop in the 1958-59 season just ended. This enabled it to reduce imports of Pakistan jute from 636,000 bales in the previous year to a mere 175,000 bales. This explains the small favourable balance of trade of a few lakhs of rupees with Pakistan for the calendar year 1958. But for the political revolution in the last quarter of that year which disturbed the flow of goods from Pakistan, even this nominal surplus in favour of India would not have emerged.

It is not with the trend of trade in the two immediately preceding years, however, that one is concerned, but with the trend over a period of years. During the last ten years, imports of both India and Pakistan have expanded markedly, and yet the trade between the two have actually shrunk. This is the result of each country trying to be independent of the other. And the fall in the trade between them clearly shows that they have succeeded in their attempts to a very considerable extent. It is no longer true to say that the economies of India and Pakistan are complementary and interdependent. They were so at the time of Partition, but not now. Whether they will be so in future will depend on the state of political relations between the two countries, as well as on the ability of Indian heavy industries and consumer durables to compete effectively with others in Pakistan markets. Unlike India, Pakistan does not possess the natural resources necessary for the establishment of heavy industries. It should, therefore, be possible for India to develop its trade with Pakistan in the products of these industries, but this is a future possibility.

The complementary character of economy that existed between India and Pakistan shortly

after Partition was bound to disappear, because of the extreme sense of nationalistic feelings. It would be unrealistic to assume that Pakistan would have been content to produce food and raw materials and export them to India in return for manufactured goods. Surely, India would not have done that were it to be in Pakistan's position. What has hastened the economic separation of the two countries is the political animosity between them. The credit goes mainly to this rapid transformation such a discriminatory trade policy towards India self-sufficiency in raw jute and raw cotton and were being imported from both West and East end in these spheres during the past ten years, it seems to us that all that was a blessing in disguise and that neither country need be sorry for it, for it is inconceivable that India could afford to go on importing raw jute and raw cotton worth Rs. 50 or 60 crores of foreign exchange or that Pakistan would be in a position to import cloth and other consumer goods of equivalent value. The plans for the economic development of both these sovereign independent countries would simply not permit the continuation of such a situation.

Instead of being complementary, the economies of India and Pakistan have become independent and competitive. Pakistan does not need any of India's principal exports, namely, tea, cotton textiles and jute manufactures. On the contrary, it has a surplus of all these goods and it is challenging India in the foreign markets with them. Similarly, India does not require any of Pakistan's principal export commodities, namely, raw jute, raw cotton, raw wool, cotton and jute manufactures and tea. It is an exporter of all these items of merchandise, even including raw jute. Pakistan, of course, needs India's coal and India requires some of Pakistan's fine raw jute. There is some scope for expanding the trade in these two items, more for exporting coal to Pakistan than for importing any sizable quantity of fine raw jute from it. But even this trade is unlikely to expand to a marked extent. Pakistan is still expanding its jute goods industry and has succeeded in establishing markets abroad for the bulk of its raw of India's jute manufacturing industry. As for exports of coal to Pakistan, the prospects only with other coal exporting countries but also with oil, which is a more convenient fuel. The trend all over the world is to switch over from coal to fuel and Pakistan is unlikely to be so old-fashioned as not to copy the rest of the world.

Some seem to think that there is good scope for export of stone boulders, limestone, timber, pig iron, cement and chemicals to Pakistan. That may be so, but even if all of them is put together, the foreign exchange to be earned will not be appreciable. Rocks and stones do not yield much. In any case, Pakistan officials who came to New Delhi are reported to have said that they do not need India's pig iron nor its chemicals. As for consumer goods, Pakistan is still following a policy of strict import controls, because its foreign exchange position is not yet comfortable, though distinctly better than six or nine months ago. In any case, it is the policy of Pakistan to achieve self-sufficiency in present Government has given a series of concessions to promote domestic savings and their investment in industries. It was only the Mr. Bhutto, described the import trade as a "dying business." Then, there remains the border trade, especially between East Pakistan and Assam-West Bengal. But the Pakistan Government has already nullified the carefully worked out provisions of the 1957 agreement pertaining to this trade and, with border frictions which it has been encouraging for for such trade. It is significant that the 'to India's suggestion for reviving the border summation as milk, fruits, vegetables, eggs, kerosene, betel leaves, fodder and firewood, the denial of which must be a serious hardship to the population living on both sides of the border. This shows a deplorable lack of human consideration on the part of the Pakistan Government, a bent of mind not conducive to happy trade relations. Thus, taking all things into consideration, it is clear that there is not much room for any stable improvement in Indo-Pakistan trade for some years.

MARKET GOSSIP

AFTER the shock administered by the T.I.S.Co.'s dividend announcement, the share markets have tended to steady up. Tata Ordinaries touched a low of Rs. 172.8 early this week; they have now improved a little to stand at Rs. 174. Indian Irons are showing resistance to selling pressure at Rs. 24, though, following the T.I.S.Co.'s lower dividend, some doubt has now arisen whether this Company too would be able to repeat last year's dividend. Knowledgeable circles, however, do not attach much credence to this doubt. Textile scrips have evoked good response at lower levels and several of them have scored quite a few points. This, coupled with the fact that most of the investment shares have been able to hold their ground without any appreciable setback, shows that the basic bullish sentiment of share markets has not been seriously impaired. The shake-out during the last three weeks has given the markets the much needed correction and made them look a little healthy.

It will not be fair to put all the blame for the drop in equity values during the past week on the T.I.S.Co. dividend. If the fall has been precipitous, it mainly reflects the extent to which speculators had pushed them up in their anxiety to get rich quick. There is no doubt that the market had been rigged up by them, taking advantage of the absence of selling by investors. Even the strong probability of the Government insisting on the new issue of the T.I.S.Co. being at a premium was ignored by them. Among other factors responsible for the retreat of equities are profit-taking by the Life Insurance Corporation in some selected, albeit leading, counters and the Communists' threat to disturb peace in Bombay and Calcutta in the event of their Government in Kerala being dismissed by the Centre. The fall in prices would, perhaps, have continued but for the extremely easy money conditions and the bankers' move to lower the ceilings for interest rates on deposits fixed under the inter-bank agreement.

T.I.S.Co. Dividend

A delegation of shareholders of the T.I.S.Co. is reported to have met the management of the Company in order to express the disappointment caused by the marked reduction in the dividend and to plead for restoration of at least a part of the cut. It is, however, extremely unlikely that the Directors and the management will change their decision. It is common knowledge that ordinary dividends are liable to fluctuations and no genuine investor will unduly bother himself about such changes, provided the companies in which he has invested are soundly managed and their future is bright. Now, the T.I.S.Co. is undoubtedly one such company. It has just completed the doubling of its productive capacity from a million to two million ingot tons. If, in the implementation of such a large expansion programme, there are more teething troubles than had been bargained for, it is nothing unusual. Those investors who have patience will find themselves well rewarded in course of time. Be that as it may, it is strange that some shareholders should have gone on a deputation to the management of the Company to ventilate their grievance, when the appropriate forum for it is the forthcoming annual general meeting of the Company. They have themselves to thank if the public associates them in its mind with the speculators who were badly caught by the dividend announcement.

It is also a moot point whether it was prudent and necessary for the management of the T.I.S.Co. to have received such a delegation, especially as the directors' report and statement of accounts of the Company for 1958-59 had not been circulated to the shareholders and are not out even at the time of writing. It will be pertinent to recall, in this connection, that, at the last extraordinary general meeting of shareholders called for approving the proposed increase in the capital of the Company, some shareholders voiced their misgivings about special meetings held by the management of the Company with the so-called representative shareholders.

State Loans

The terms of the loans announced by a dozen State Governments, details of which are recorded elsewhere in this issue, fully reflect the prevailing comfortable conditions in the money market and the gradual fall that has taken place in yields on Government securities over the year. As will be seen from the table below, the interest amount sought to be raised by these States is higher than those a year ago, though it is not the highest raised so far.

(Amount in crores of rupees)					
Year	No. of States	Amount of issue	Amount antedated	Cash	Conversion
1958	15	64.00	74.23	66.63	2.18
1957	2	9.00	12.62	8.88	1.33
1956	11	80.90	65.84	49.18	6.34
1955	12	57.50	...	...	...

As in the past, the States have reserved to themselves the right to retain subscriptions upto 10 per cent. in excess of the notified amount. Since most of them have invariably exercised this option in the previous years and since the state excellent money and gilt-edged markets suggest a good response to the loans now offered, it is quite on the cards that the total borrowings will amount to Rs. 63.25 crores, which will fall short of the record of Rs. 63.25 crores, which was raised by 15 States by indeed, that record would

have been broken had the Kerala Government not decided to postpone its programme by a few months. It is strange that the Communists should have so easily been carried away by the decision of banks in their State to boycott its loan. This is a strategic blunder. They should have actually tried and seen whether at least the Reserve Bank, the State Bank, and the L.I.C. would take up the Kerala loan or not. By deciding to stay away from the market, the Kerala Government has obliged these Central-Government-owned institutions and saved them from an embarrassing situation.

Of the 12 States that have approached the capital market now, eleven had borrowed last year, the additional State being Assam. Mysore is borrowing the same amount as last year, while Bombay has substantially reduced its offer. All the others are raising more than they did last year, with Madras and Uttar Pradesh offering as much as Rs. 8 crores each.

All the loans are of uniform maturity—12 years, which is the same as last year. The rate of interest is 4 per cent. less at 4 per cent., as against 4½ per cent. last year. The issue prices, however, are unchanged, except in the case of Bombay which is offering only one type of loan at par (12 years), instead of two types (12 years at par and 13 years at Rs. 99.75) as in 1958. Excepting Bombay, all the other States are issuing their loans at a slight discount, ranging from eight annas to one rupee. As compared with the existing 4½ per cent. loans maturing in 1970, the yields available on the 1971 loans now offered are uniformly favourable to the lender. And, to make them even more attractive, the Reserve Bank has pushed up the prices of most of the State loans by the Central Government loans through appropriate open market operations.

Larsen & Toubro

The ordinary shares of Larsen and Toubro are ruling steady, in the face of a general setback in the share market. After a drop from Rs. 22.80 to Rs. 22.12 on Friday last, they have now recovered to touch Rs. 21.20 ex-div. (dividend: Re. 1.25 per share). This is due to the optimistic note struck by the Chairman of the Company, Mr. H. Holck-Larsen, at the annual general meeting of the Company held last week. As pointed out in the review of the Company's affairs in our issue dated 27th June 1959, the Company is vigorously developing its manufacturing facilities in various directions. It has already added new lines of engineering products, notably within the material handling field, to its production schedule and encouraging orders have been secured. One of the major schemes pertains to the manufacture of electrical switchgear and motor starters. The Company has obtained the necessary manufacturing licence as well as import licence for the machine tools required. Production is expected to commence towards the end of the current year. Good progress is reported in the implementation of the scheme for the assembly and progressive manufacture of petrol dispensing and metering pumps in collaboration with one of the leading U.S. manufacturers. Under licence from and in agreement with a British firm, the Company will shortly commence manufacturing a special design of industrial cooling towers. Orders for the first of these large towers have been received and are under execution. In addition, the Company has submitted applications to the Government of India for various other manufacturing schemes. When these schemes materialise, they will add substantially to the Company's earning capacity.

The Company has a number of contract jobs also on hand, some of which are making good progress. The erection of the complete blast furnace plant and the steel structures for the rolling mill plant at the Rourkela steel works is going ahead satisfactorily and is expected to be completed within the next twelve months. The Company is participating in the work of extending the Madras Harbour, a job of considerable magnitude, which will extend over a period of two to three years. It has also secured a valuable contract from the Mangalore Fertilisers for the construction of a water treatment plant. Tenders have also been submitted for a few other major contract jobs.

Referring to the outlook, Mr. Holck-Larsen said:

"The Company believes that its future is closely linked with the indigenous production of engineering goods and that, within a foreseeable future, this will become the mainstay of the Company's business. It is an indication of the Company's good reputation that many foreign machinery manufacturers are approaching the Company with suggestions for collaboration in the manufacture of their products in India. There is naturally a limit to the number and to the variety of manufacturing schemes which the Company can take on, but, as mentioned previously in this speech, we have plans for adding several new products to our production schedule.

"The present development of projects and industries in this country has created an important field for large-scale contracting work. The Company is capable of carrying out such contracting work and intends to take advantage of the present opportunities to the greatest possible extent. We have already satisfactorily completed the execution of various major erection and construction contracts and the Company has acquired a good reputation as a reliable and efficient contractor."

The further development of the Company's manufacturing activities requires additional finance and, as is already well known, the Directors propose to issue new shares to the tune of Rs. 20 lakhs within the next few weeks.

Pak Cotton

If the reduction in export duty on Pakistani cotton by Rs. 10 on Deshi varieties and Rs. 5 on staple styles, announced this week, did not cause the customary stir in export circles in this country, it is because, in the context of the price and trade pattern and supply and demand position presently obtaining in both the countries, this move is considered as unlikely to have any effect on exports of the corresponding varieties of Indian cotton. Even after the reduction, the rate of duty in Pakistan is considerably higher than in India. As against Rs. 40 per bale on Deshi and Rs. 35 per bale on staple cotton in Pakistan, the duty in this country is only Rs. 25 per bale on all permissible export varieties.

It can, of course, be argued that the cut will make Pakistan cotton more competitive than would otherwise have been the case and that, to that extent, India is at a disadvantage. But even this probable advantage seems to have been offset by the rise in price by Rs. 15 to Rs. 20 per candy which immediately followed the announcement, so that India can still compete effectively with Pakistan. Further, as stocks in that country are small—and that is the reason why prices there have gone up—the spur the duty reduction may give to exports of Pakistani cotton is unlikely to be appreciable. Moreover, the cotton trade in Pakistan is completely disorganised, with the futures market still remaining closed at normal commercial practices yet to be restored. India is therefore in a favourable position vis-à-vis Pakistan.

Thus, although Indian cotton stands in the danger of any immediate serious competition from Pakistan, some exporters feel that the duty change has implications for the future. These circles point out that reduction in duty has been met with an eye on the new crop and that it is a subtle move to boost exports in the season commencing September next. Even so, it is, however, felt that, unless trading is brought back to normalcy and that country is blessed with a bumper crop, Pakistan may not pose any serious threat to our exports. Nevertheless, export circles urge the Government of India should make an early announcement of the export quota for the coming season, so that the trade will be in a position to make forward sales of cotton whenever conditions are favourable for doing so.

Cotton Imports

There is welcome news for importers of foreign cotton. The Cotton Textiles Consultative Board which met in the City yesterday under the chairmanship of Mr. Kanungo, Union Minister for Commerce, has recommended that, considering the trend of production, stocks, exports and prices of made-up cotton cloth, the annual import of 600,000 bales (of 400 lbs. each) of foreign cotton should be permitted for the next three years. The Board is also understood to have suggested that a quota for the balance of 140,000 bales, required to bring up the overall quota for the present season to 600,000 bales, should be released forthwith. This quantity, it has been suggested, should comprise 80,000 bales of 1 1/16" staple and 60,000 bales of 1 1/16" and above but below 1 3/16" staple. The trade and industry are quite pleased with these recommendations and it is hoped that the Government of India will readily accept them. The hardship caused to the mills and trade as a result of the way in which import quotas have been issued and allocation made in the past are well known. These have little relation to the needs of mills, the trend of prices abroad and the movement of the crop. To cite only one instance of the haphazard way in which import policy is handled, the authorities have not so far been in a position to clarify the payments procedure in respect of import of Egyptian cotton. The whole question is still steeped in a maze of confusion.

Forward Trading

Yet another unique conference on the regulation of forward trading, sponsored by the Forward Markets Commission, was held in the City this week. The conference brought together for the first time the nominated Directors of a recognised associations concerned with forward trading in different commodities in the country to discuss questions of mutual interest. It may be recalled that, early last May, the Commission convened a similar meeting of the Presidents of recognised associations, with the same objective in view. Such meetings enable not only exchange of views and experiences but also promotion of better understanding and a healthy spirit of co-operation between those who are directly engaged in forward trading and those who are responsible for its regulation. The Commission, particularly its Chairman, Mr. W. R. Natu, deserves to be complimented for organising such conferences which can yield nothing but beneficial results.

Mr. Natu, in his welcome speech, explained why the Government thought it necessary to nominate Directors to the Boards of the recognised associations conducting forward trading. The object was to ensure a hearing in the boards of directors of such associations for the views of consumers, growers and other sections of the community which would otherwise have gone unheard. Since the nominated Directors are drawn from three fields, namely, universities, banks, and the technical departments of State Governments and since they have no immediate personal interest at stake, they are in a position to take an impartial view of things and look beyond the immediate situation in the market. Commenting on the role played by the nominated Directors during the last five years, the Chairman said:

"Nominated Directors have rendered distinct service not only by giving impartial and wise counsel on the items coming before them for discussion but also by their presence in the market."

EQUITIES DROP HEAVILY

TEXTILES, HOWEVER, RECOVER

(From Our Own Correspondents)

BOMBAY, 30th July

THERE was a debacle in the share market early in the week under review, initiated by the disappointing dividend announcement late on Thursday last week by the Tata Iron and Steel Company, Ltd., for the year ended March 1959. The Directors have recommended a distribution of Rs. 6.80 per share on the old and new shares, as against Rs. 8.25 per share paid for the previous year on the old shares and Rs. 7.56 on the new ones. As the proposed distribution fell below even the worst expectations of the market, prices collapsed headlong on Friday. Fears that the present margin rules might be made stringent gained strength, following the notification by the Stock Exchange authorities asking members to submit their daily outstanding positions in some leading scrips like Bombay Dyeing, Century, Kohinoor, National Rayon, Bombay Burmah, Hindustan Motor, Premier Automobile, Tata Locomotive and Premier Construction. This, together with settlement considerations, also affected sentiment. There was a further setback on Monday, when the new account opened. The market, however, ruled steady during the last three days on support at lower levels and prices staged a recovery. The improvement was more marked in textile counters and, in fact, many of them disclosed gains over the week. This was due to reports that the cloth position had improved considerably. The highlight of the week's trading was, however, provided by automobile shares (with the exception of Telcos), which continued to attract good attention.

The representatives of the Bombay Shareholders' Association have made a representation to the management of the Tata Iron and Steel Company, expressing the shareholders' discontent over the dividend and requesting a reconsideration of the dividend policy.

In the steel section, Tata Ordinaries slumped from Rs. 190.75 to Rs. 172.50 before closing at Rs. 174. Despite the proximity of dividend announcement, Indian Irons crept down from Rs. 24.08 to Rs. 23.96, after recovering to Rs. 24.20, they closed lower at Rs. 24.08.

Among textiles, Bombay Dyeings drifted lower early in the week from Rs. 65.20 to Rs. 64.20, but subsequently gathered strength to close at Rs. 65.60. Centurys gave way from Rs. 546.50 to Rs. 531.50 before recovering to Rs. 543. Contrary to the general trend, Kohinoors shot up early in the week from Rs. 296 to Rs. 307. Subsequently, reports that L.I.C. had sold a sizable part of its holdings of these shares brought them down to Rs. 291. Towards the close, however, they recovered to Rs. 298.25 and finished at Rs. 295. Central Indias gained over the week Rs. 2 to Rs. 99 and Finlays Rs. 6.50 to Rs. 280. Indu Ordinaries were marked up by 72 p.p. to Rs. 8.24. Despite a cut in the dividend for the year 1959 from Rs. 6 to Rs. 5, Indore Malwas put on Rs. 1.50 to Rs. 92. Morarjee Mills improved by Rs. 2 to Rs. 257, while Podars shed Rs. 4 to Rs. 148. Shree Niwas Cottons gathered Rs. 5 to Rs. 176. Simplex were placed at Rs. 162.50 ex-right, as against Rs. 180 cum-right a week ago. Standards advanced by Rs. 12 to Rs. 570. Svadeshis by Rs. 5 to Rs. 243 and Tata Mills by Rs. 2.50 to Rs. 44.50.

A sharp rise in Killick group shares were a feature of trading in the electricity section. Ahmedabad Electrics shot up by Rs. 2.40 to Rs. 94.10, Bombay Suburbans by Rs. 4.25 to Rs. 112 and Surat Electrics by Rs. 2.25 to Rs. 109.75. Tata Hydros were a shade quiet at Rs. 119.50. Andhra Valleys were steady at Rs. 117.75. Tata Powers recorded a rise of Rs. 2.50 to Rs. 1,245. Poona Electrics, however, suffered a fall of Rs. 9 to Rs. 111.

Bank shares were featureless, but steady. State Banks had business at Rs. 386.25. Barodas (B) changed hands a fraction higher at Rs. 49.25. Central Banks gained 30 p.p. to Rs. 50 and their 'A' shares Rs. 1.50 to Rs. 53. Bank of India were steady at Rs. 118, while their 'A' shares lost Rs. 3.50 to Rs. 119. United Commercial were, however, unchanged at Rs. 61.50.

In the insurance section, New Indias dropped heavily from Rs. 61.50 cum-div. (dividend, Rs. 2 per share) to Rs. 56.50 ex-div. and their 'A' shares from Rs. 62 cum-div. to Rs. 57.30 ex-div. Industrial and Prudentials, however, gained Re. 1.50 to Rs. 29.75.

Sugar shares ruled quiet. Belapurs dropped from Rs. 312 to Rs. 304.50, before recovering to Rs. 308. Bhopals lost 20 p.p. to Rs. 24.04 and Phaltans 25 p.p. to Rs. 100.25. Walchandnagars moved down by Re. 1.25 to Rs. 308.75. Cement shares fared no better. Associated Cements receded from Rs. 153 to Rs. 151.25. Digvijays lost Re. 1 to Rs. 152 and Orissa Cements 20 p.p. to Rs. 16.48.

In the engineering and mining group, Alcock Ashdowns were marked down by Rs. 4 to Rs. 253. Tata Locomotives gave way from Rs. 216.25 to Rs. 204.50. Premier Construction were, however, conspicuous with a rise of Rs. 3 to Rs. 351. Larsen and Toubros were done at Rs. 21.20 ex-div. (dividend, Re. 1.25), as against Rs. 22.80 cum-div. a

week ago. Mahindras were placed 58 p.p. lower at Rs. 21, while Coppers Engineers rose by Rs. 6 to Rs. 139.90 and Brady Engineers by Re. 1 to Rs. 85. Shivrapurs picked up Rs. 2.50 to Rs. 84. Indian Coppers were better at Rs. 4.12.

Scindias were erratic, moving between Rs. 17.96 and Rs. 17.52. The closing was done at Rs. 17.76. Great Easterns were marked down by 36 p.p. to Rs. 21.60. Bharat Lines, however, picked up 72 p.p. to Rs. 14.12. Premier Automobiles maintained their upward trend with a further gain of Rs. 3 to Rs. 131, as also Hindustan Motors which rose by 28 p.p. to Rs. 10.96.

In the miscellaneous section, Bombay Burmahs (old) suffered an early setback from Rs. 537 to Rs. 519.50, but soon gained ground to Rs. 528.50. The closing was, however, done at Rs. 526. The partly-paid lost over the week Rs. 7.50 to Rs. 182.50. National Rayons gave way from Rs. 341.50 to Rs. 335. After improving to Rs. 347.50, they finished lower at Rs. 342.50. Gwalior Rayons picked up 28 p.p. to Rs. 21.52. Tata Chemicals shed 52 p.p. to Rs. 17.32. There was a sharp fall of Rs. 9 to Rs. 104 in Dhrangadhra Chemicals. Polychems lost Rs. 2 to Rs. 106, while Amar Dyes were unchanged at Rs. 170. Tata Oils were steady at Rs. 68.50, but Voltas were a shade quiet at Rs. 167.75. Wincos lost Rs. 2.50 to Rs. 204 and W. H. Bradys Re. 1 to Rs. 385. Ceat Tyres dropped by Rs. 8 to Rs. 168.

Calcutta Stock Exchange

CALCUTTA, 29th July

Lower advices from Bombay in the wake of the announcement of a lower dividend of Rs. 6.80 per share for the year 1958-59, as against Rs. 8.50 for 1957-58 for Tata Ordinaries, and fears about the financial loss that shareholders were likely to suffer on account of the abolition of the "grossing" of dividends as from the current financial year led to selling pressure on the Calcutta Stock Exchange during the week under review, and widespread losses were recorded. It was realised in market circles that shareholders stand to lose 46 per cent. of their income. Dividends could be raised to compensate this loss, at least partially, in view of the abolition of the wealth tax on companies and the excess dividend tax, and of the reduction of corporation tax from 51 per cent. to 45 per cent. However, some of the dividends announced by banking companies have been disappointing. Among the non-banking companies, Burn & Co. has announced a dividend of 28.5 per cent, subject to tax, as against 20 per cent. for the previous year, tax free. This was considered satisfactory, as the increase would make up the loss of shareholders. For the moment, however, investors are keenly awaiting further dividend announcements. All the same it is feared that not all companies would be able to compensate the shareholders for the tax they would have to pay on dividends. Investors have, therefore, become extremely cautious, and it is stated that a good portion of this week's selling was due to the fear of reduction in their returns. In sympathy with the weaker trend, speculative Indian Irons moved down; and there was an eagerness to await the forthcoming dividend announcement. Although production in Indian Irons had been interrupted due to the progress of expansion plans, output was still of such a scale as to maintain a dividend of 10 per cent.

Coals were neglected, and the decline in prices followed fears if New Delhi would after all sanction the increase of Rs. 3.50 a ton in coal prices asked for by mining companies to make up the loss in output costs and to provide the incentive for collieries to increase production. There were some good corporate reports this week. The bright future as painted by Mr. B. P. Singh Roy at the annual meeting of Jessop & Co. was noted. The highly satisfactory results of Bengal Papers and the increase in dividend to 22 per cent. from 12.5 per cent. contributed to improved sentiment in shares of paper mills for a time. Jutes were about firm following the good business done in the export goods market.

Textiles tended extremely quiet this week. Kesorams after fluctuating between Rs. 15.94 and Rs. 15.25 closed at Rs. 15.37. Dumbars changed hands at Rs. 166, as against Rs. 167 previously. Elgin Mills declined from Rs. 14.12 to Rs. 13.62.

Coals searched lower levels for the reason mentioned earlier. At Rs. 24.62, Amalgamated Coals lost by more than one point. From Rs. 18, Burrakurs moved down to Rs. 17.37. New Beerblooms declined to Rs. 20.69. Raneeguns declined to Rs. 17.56 from Rs. 18.12. Equibales at Rs. 31.75 were, however, fractionally better.

Among jutes, Howrabs were weak at Rs. 23.12, as against Rs. 24 earlier, despite the announcement of a dividend of 50 p.p. (against nil previously), because it fell below market expectation. Birlas were earlier steady at Rs. 22.19 following maintenance of dividend at 10 per cent. Anglo-India lost Rs. 17.56 from Rs. 18.12. Equibales at Rs. 31.75 were, however, fractionally better.

In sugars, Carews recovered to Rs. 12.44 from Rs. 12.06, while Belunds declined to Rs. 13.25 from

Rs. 13.31 and Ramnugger Canes to Rs. 20 from Rs. 21.87.

Among papers, Bengals were earlier steady at Rs. 96.50, India Pulp, after realising Rs. 24.75, gave way to Rs. 23.12. Titaghurs receded to Rs. 42.75 from Rs. 44.

Indian Irons, in engineering, opened at Rs. 24.97 and after hardening to Rs. 25.03, closed 28 p.p. to Rs. 21.60. Bharat Lines, however, picked up 72 p.p. to Rs. 14.12. Premier Automobiles maintained their upward trend with a further gain of Rs. 3 to Rs. 131, as also Hindustan Motors which rose by 28 p.p. to Rs. 10.96.

A weaker tendency was recorded in miscellaneous shares. Rohas Industries were at one time as low as Rs. 21.09, but closed better at Rs. 21.69. Indian Coppers were quiet at Rs. 4.05. Phillips moved down to Rs. 21.50 from Rs. 23.44 previously, following news of recommendation of dividend of 81 per cent., as against 10 per cent. paid previously. Hindustan Motors closed at Rs. 10.70 after being lower at Rs. 10.31. Indian Cables were quiet at Rs. 31.44, as against Rs. 32.31 earlier. National Rollings were lower at Rs. 15.87.

Madras Stock Exchange

MADRAS, 29th July

The easy trend noted on the Madras Stock Exchange last week continued unabated during the week under review. Selling was quite persistent, while fresh buying support was lacking. The Life Insurance Corporation was reported to have sold certain shares held by it. Advices from the Bombay market were discouraging, following the sharp cut in dividend of the Tata Iron and Steel Company, announced on Thursday last. Plantation shares suffered a distinct setback. Tea shares were particularly depressed on reports that Indian tea was losing ground in overseas markets as a result of competition from Ceylon and East Africa. In sympathy with teas, coffees were dull. Rubbers too, encountered selling, despite rumours regarding an early announcement of the upward revision in prices of raw rubber. Textiles failed to evoke enquiries, although offtake of yarn and piecegoods was said to be quite large. Sugar and miscellaneous industrial rules easy, barring a few select counters which firmed up on investment support.

In the sugar section, Cauverys dropped Rs. 1 to Rs. 114. E.I.D.s fell by Rs. 1.38 to Rs. 38.30. Decans receded by 10 p.p. to Rs. 11.85. Travancore declined by 40 p.p. to Rs. 12.10. Mysore were dull at Rs. 49.50. Kiriampudis, however, were well favoured and gained Rs. 3 to Rs. 80. United Breveries advanced by Rs. 2 to Rs. 459. Indias picked up 5 p.p. to Rs. 12.25.

Among tea shares, Kil Kotagiris and Unites Nilgiris lost 15 p.p. each to Rs. 8 and Rs. 20.35 respectively. Oucherlonys were marked down by 14 p.p. to Rs. 5.38. Twyford's shed 10 p.p. to Rs. 16.90. Halieburys eased by 5 p.p. to Rs. 19.10. Peermades shed a little, amount to Rs. 19.10. Chembras softened by 1 p.p. to Rs. 19.40. They were unchanged at Rs. 4, as also Nonsuch Teas at Rs. 27.50 and Balanors at Rs. 18.75 ex-div. against Rs. 20.25 cum-div. In the coffee group, Cauverys were pushed down by 30 p.p. to Rs. 6.00. Consolidated Coffees reacted by 40 p.p. to Rs. 21.80. Coffee Lands dropped 15 p.p. to Rs. 23.95. Oosoor to Rs. 3.67 and the latter to Rs. 3.53. Annaparai were quiet at Rs. 3.55 cum-div. and Babudins at Rs. 18.50. Among rubbers, Rajagiris came in for selling and receded by Rs. 10 to Rs. 17.40. Valukaras declined by 15 p.p. to Rs. 27.40. Valukaras to Rs. 19.50. Highlands and Teekoy's lost 10 p.p. each to Rs. 12 and Rs. 7.60, respectively. Thirumbadals shed 9 p.p. to Rs. 1.93 and Cochi Malabars 8 p.p. to Rs. 6.70 cum-div. Kalpetta were neglected at Rs. 12.60. Valukandas, however, gathered 15 p.p. to Rs. 27.40 on special support.

In the textile section, Radhakrishnas retreated by Rs. 3.50 to Rs. 119. Buckinghams fell by Re. 1 to Rs. 188.50. Rajalakshmis lost Re. 1 to Rs. 6. Virudhnagars 50 p.p. to Rs. 42 and Trichinopolis Rs. 179. Cannanores at Rs. 152 cum-div. were quiet. Cottons at Rs. 142, Coimbatore Pioneers at Rs. 28, Dhanalakshmis at Rs. 197.50 and Venkatas support, although a higher dividend of 6 per cent. for the year ended March 1959 has been a year, as against 8 per cent. has been a year. The quotation for this scrip stood by Re. 1.50 to Rs. 373. Premiers rallied from Rs. 165.50 to Rs. 169.50 cum-div.

In the miscellaneous section, Textools slumped by Rs. 6 to Rs. 178. Aluminium Industries creased by 65 p.p. to Rs. 21.20. Dalmia Cement by 30 p.p. to Rs. 16.30. Standard Motors suffered a similar loss to close at Rs. 15.70 today. Ash Leylands, F.A.C.T.s and Parrys dropped 20. Ash each to Rs. 7.25, Rs. 9.55 and Rs. 4.05, respectively. India Cements were unchanged at Rs. 6.45 cum-div. Indian Steel Rollings at Rs. 15.75 and Myx Chemical Manufacturings at Rs. 20.25. Rail Western India Plywoods rose by Rs. 4 to Rs. 173.50. Andhra Cements gathered 5 p.p. to Rs. 10.15. Mettur Chemicals were unchanged at Rs. 13.45. The Directors of the Company announced the final dividend of 4.40 per cent. making a total of 8.80 per cent. for the year and March 1959, as against 8.75 per cent. for the previous year.

NEWS IN BRIEF

FRESH export quota of 10,000 tons of linseed oilcake has been released, without any restriction on maximum shipment by individual shippers.

The Government of India has granted recognition to the Kanpur Oils and Oilseeds Exchange to deduct futures trading in rapeseed and mustard seed at Kanpur for a period of three years.

The Geological Department of the Madras Government has commenced a comprehensive investigation into the occurrence of iron ore in the oonoor area of the Nilgiris.

The management and the workers' union of a National and Grindlays Bank have accepted the nomination of Mr. V. K. R. Menon, Director, International Labour Office, India Branch, to mediate in a dispute between the two parties.

The Central Government has decided to send six-member team of experts to China (leader: r. K. Ramiah, Special Officer, Rice Development, Bangalore) for an on-the-spot study tour of agricultural techniques, particularly in relation to rice.

Ten Soviet experts have arrived in New Delhi to discuss with the Government of India and the heavy Engineering Corporation the project report already submitted on the erection of the coal-lining machinery plant at Durgapur.

A cotton centre to publicise Egyptian cotton to Indian and other Asian buyers is proposed to be set up in Bombay by the Government of the United Arab Republic. The Centre is expected to exhibit films on the growth and production of Egyptian cotton and its qualities.

The annual requirements of technical personnel during the third Plan period is roughly estimated at 15,000 degree holders and 30,000 diploma holders. The Government of India proposes to increase the intake capacity of the existing engineering colleges and polytechnics to meet this growing demand for technical personnel.

The view that there is scope for setting up some small steel plants with modern small-scale blast furnaces and side-blown converters in India has been expressed by the Indian steel delegation which visited China for about three weeks in March-April 1959 in its report submitted to the Government.

The Hindustan Machine Tools Factory, Bangalore, has started manufacturing a low-priced lathes in technical collaboration with Batignolles of France. The prices of these lathes range from Rs. 13,250 to Rs. 29,000, as against Rs. 15,000 to Rs. 31,000 for imported ones. The factory claims to be in a position to manufacture 74 types of machine tools.

The Government of Bombay has decided to give subsidy to the Central financing agencies which sanction loans from their own funds to industrial co-operatives for the development of small-scale and cottage industries. The proposed subsidy will be equal to the difference between the rate of interest at which the agencies borrow funds and other industrial co-operatives, subject to the maximum of 3 per cent.

A scheme to guarantee minimum prices to agriculturists in respect of important foodgrains, namely, wheat, rice, jowar and bajra, is being worked this, Mr. S. G. Kazi, Minister for Civil Supplies, stated the other day that the producers of foodgrains would be asked not to sell their produce at a rate below what had been laid down in the price structure and that, if the usual trade channels did not purchase the foodgrains at the prescribed price, the Government would purchase the same.

The production target for jute under the third Plan has been fixed at 6.6 million bales, as against 5.5 million bales in the second Plan. The decision was taken at a meeting of the representatives of the various jute growing States, except Assam, held at New Delhi last week. The meeting emphasised the need for introducing intensive cultivation of jute. A review of the progress so far revealed that only West Bengal had attained the target of 2.6 million bales.

An assessment of the requirements of craftsmen and technicians for the Third Plan will be made by the Committee on Craftsmen Training and Technical Education at Secondary Education Level, set up by the Planning Commission's Working Group on Technical Education. The Committee will also draw up a programme for craftsmen-training during the third Plan which will be later considered by the Working Group on Technical Education. The Working Group is expected to finalise its report by the middle of this month.

Under the Industrial Disputes Act, the Conciliation Officer, in disputes arising in non-public utility concerns, has the discretionary power to admit or not a dispute for conciliation. A ruling on this effect was given by the Bombay High Court on 23rd July while dismissing a petition filed by the East Asiatic and Allied Companies' Bombay Staff Union, challenging an order of the Conciliation Officer that the dispute between the Union and Dumex Private Ltd. was a fit dispute for conciliation.

The Committee of Direction on Land Reforms (President: Prof. D. R. Gadgil) constituted by the Planning Commission, is expected to finalise two comprehensive schemes for the evaluation of the progress of land reforms at its meeting in New Delhi on the 11th inst. One of them seeks to conduct an

PERSONAL

MR. P. N. Kaul of the External Affairs Ministry has been appointed India's Consul-General at Lhasa.

Mr. Muller, U.S. Under-Secretary of Commerce, has been nominated by President Eisenhower to succeed Mr. Strauss as Secretary of Commerce.

Prof. Humayun Kabir, Minister for Scientific Research and Cultural Affairs, returned to New Delhi on Thursday after a three-week tour of the U.S.S.R.

Mr. L. S. Lulla, I.A.S., has assumed charge as the General Manager of the Bombay State Road Transport Corporation in place of Mr. N. D. Dattary.

Sir Edwin McCarthy of Australia and Mr. G. S. Bishop of Britain have been elected Chairman and Vice-Chairman, respectively, of the International Wheat Agreement for the crop year 1959-60.

Mr. Vendor Oord, an E.C.A.F.E. expert, has arrived in Jaipur to advise the Government of Rajasthan on the possibility of navigation in the Rajasthan Canal, now under construction.

Mr. R. G. Lund, a member of the International Wool Secretariat, representing Australian Wool Bureau, and New Zealand and South African Wool Boards, has been appointed Chairman of the Secretariat for the ensuing year.

Mr. K. T. Satarawala, Joint Secretary (Foreign Trade), Ministry of Commerce and Industry, has been appointed Chief Controller of Imports and Exports vice Mr. Bilgrami, who has been appointed Joint Secretary in charge of Export Promotion.

with \$3,472 million. In terms of total assets, however, the largest company was, as in 1957, Standard Oil of New Jersey.

The world's first atomic-powered passenger-cargo ship, the *Savannah*, was launched last week in the U.S. by Mrs. Eisenhower. The ship is, however, not expected to go into full service until 1961. The 9,990-deadweight tons ship will carry 80 passengers and 9,500 tons of cargo at a speed of 20 knots. One charge of uranium fuel will last three years and will propel the ship for over 300,000 miles. Heat to generate the turbines will be provided by an atomic reactor housed in a large containment vessel built into the ship.

The Government of Pakistan has decided to retain the minimum export price for long jute on the basis of £90 per ton for export first c.i.f., the U.K. and the Continent. But the minimum export prices for all varieties of cuttings as well as the export of long jute cuttings have been discontinued with effect from 1st July 1959. The present rates of export duty on jute and jute cuttings, however, remain unaltered. The current season's jute crop is estimated at 5.8 million bales, together with the carryover of 900,000 bales, gives a total supply of 6.7 million bales.

A simple and inexpensive method of plastic-coating galvanised sheet metal, claimed to be the first of its kind in the world, has been evolved by a Swedish firm, Messrs. Gavle Verken, Gavle, and the Stockholm paint and lacquer specialists, AB Wihl. Becker. The product is primarily intended for roofing purposes, and is available in three standard colours. The new product has not been tested long enough to ascertain its length of life, whereas the plastic-coating has been exposed to severe outdoor tests for six years without showing any signs of deterioration. Messrs. Gavle Verken has recently opened an automated mill where the coated metal is rolled in strips 60 metres (200 ft.) long. The entire plant is operated by one man alone. The output is worth Kr.1,500,000 (£98,500) per annum.

A third American Trade Mission is coming to India to tour the principal cities in the South. Like the two earlier missions, this one also will participate in the U.S. Trade Exhibition and Agricultural Fair, to be opened in Madras in September. The first mission, it may be recalled, toured the Delhi area and Northern India; the second, Calcutta and Eastern India. There will be a fourth mission next spring which will tour the Bombay area and Western India. The group coming to South India has already left Washington. It is composed of five business men and industrialists with wide experience in foreign trade and American markets. With them will be an international trade expert from the U.S. Department of Commerce.

It was announced jointly by the heads of the Canadian and Indian delegations to the Commonwealth Education Conference, at Oxford, last week, that agreement had been reached between the two countries to approve, in principle, the use, for educational purposes, of counterpart funds generated under the Colombo Plan. These funds, up to the value of Canadian \$10 million, or approximately Rs. 5 crores, are to be used for the development in India of higher technological institutes and polytechnic schools. While final approval of the proposal will be subject to detailed agreement being reached between the two countries on individual projects in this field that are being put forward by the Indian authorities, the agreement nevertheless represents an example of the way in which Commonwealth countries can co-operate for the achievement of practical results in the field of education, and suggests also the effectiveness of direct bilateral agreements among Commonwealth members. The counterpart funds were generated through the disposal by the Government of India, of gifts of Canadian wheat and other commodities, including non-ferrous metals, under the Colombo Plan.

From Abroad

An official trade delegation from the United Arab Republic, led by Mr. K. T. Diab, Director of the Economic Department Organisation, is on a tour of Ceylon, exploring the possibilities of purchasing tea.

The first synthetic rubber plant to begin production in Japan has been formally opened. Kawasaki by the officials of the B. F. Goodrich Company and Japan Geon, Tokyo. Set up at a capital outlay of \$1.3 million, the plant has a capacity to produce 8,400 tons of synthetic rubber per annum.

Raw jute exports from Pakistan declined by 178,468 bales to 4,384 bales during the jute season ended June 1959. This decline is attributed mainly to the fall in purchases made by India from 638,351 bales to 174,938 bales. Shipment of raw jute to other overseas buyers, however, was higher by 282,945 bales at 4,219,452 bales.

The British House of Commons has approved of the Government motions authorising the three schemes for reorganising the cotton industry. The schemes are part of the Government's £30-million plan to modernise the industry over a period of five years by cutting down surplus capacity and putting new equipment into the remaining mills.

Thirty-four foreign countries spent \$7,605,263 in the U.S. last year to operate 55 information and tourist offices. This was an increase of about \$300,000 over the preceding year. The U.K. continued to hold the first place in tourist promotion work in the U.S., with an expenditure of \$2,091,179. France came next, spending \$1,054,955.

There is at present too large a supply of uranium in the world, and the oversupply is likely to last for some years, according to the U.K. Atomic Energy Authority. The uranium requirements of the free world's current military and civil programmes, it is felt, can be met by mines already in production and adequate orders may not be available to keep all the existing producers in operation during this period.

The Agricultural Development Corporation and the Industrial Development Corporation of Ghana propose to erect a sugar factory in the country. Experts from Holland are making a general survey. The preliminary investigation of cane cultivation has already indicated favourable prospects for the factory. The two corporations will be investing \$2½ million in agricultural machinery, an industrial processing plant and the refinery.

The British Atomic Energy Authority has decided to replace Zeta—the atom fusion machine designed to harness the H-bomb for peaceful purposes—by a new machine, more expensive and only one of its kind in the world. The new machine, known as I.C.S.E. (the intermediate current stability experiment), will be an experimental apparatus, on which basic scientific principles could be established and which would help the scientists understand better the working of Zeta.

General Motors retained its place as the largest corporation in the U.S. last year with total sales amounting to \$9,920 million. The Standard Oil of New Jersey retained second place with \$7,544 million and the Ford Motor third with \$4,130 million. The General Electric rose from fifth to fourth place with sales of \$4,121 million. The U.S. Steel slipped from fourth to fifth place

SUGAR SITUATION

MR. S. K. Somaiya, the retiring President of the Deccan Sugar Factories Association, certainly did not cry "wolf" when he declared, in his speech at the Association's annual meeting held in the City on Monday last, that the sugar situation during the coming season (November 1959-October 1960) would be even worse than that in the current season. The current season will end with a carryover of no more than 80,000 tons which will be just sufficient to meet the domestic consumption requirements for a fortnight. Before the new season's sugar output begins to flow freely into all markets, many parts of the country may experience an acute scarcity of supply, resulting in an appreciable rise in prices. The authorities will, therefore, do well to be prepared to meet a more difficult situation. Stressing this aspect, Mr. Somaiya urged the Government (1) to remove price control on sugar in Northern India, or enhance minimum cane price to at least Re. 1.75 per maund, as an alternative, (2) to take vigorous steps to discourage diversion of cane supplies to *gur* and *khandasari* manufacture, and (3) to give incentives to factories, in the form of rebate of excise duty and cane cess, in order to induce them to commence production earlier than the usual date; he wanted this concession to be confined only to the production undertaken prior to 15th November 1959.

While the adoption of the measures indicated above will bring about an increase in the production of sugar, the actual extent of the increase will depend on the size and quality of the sugarcane crop; it is rather premature to estimate the crop now. In fact, indications point to the possibility of a shortage. Even if it is assumed that sugar output during the coming season will be 2.1 million tons (1.90 million tons in 1958-59), the total supply available (production+carryover stocks) will be only about 2.19 million tons, as against the estimated requirements of 2.23 million tons. The prospects thus are far demand to outstrip supply.

In view of this tight supply position, Mr. Somaiya did well to call upon the Government to ban further exports. This is a belated suggestion; in any case, the Government has already stopped all exports, except the small quantity to which this country is firmly committed. Mr. Somaiya should have opposed exports even when the idea was mooted for the first time. Not only did he not do so; he now advocates an import of 150,000 tons of sugar. This suggestion will hardly commend itself to the authorities. The foreign exchange situation continues to be disquieting and the country can ill-afford to spend precious external finance on sugar imports, especially when several industries are experiencing considerable difficulty in procuring adequate supplies of raw materials and spare parts for want of exchange. If the consumption requirements of sugar are higher than the supply available, the solution lies not in imports but in keeping down consumption through a country-wide system of rationing, if need be, till such time as output expands sufficiently. The choice is between rationing of sugar and buying something more vital for the country's economy—say, for instance, ships—this journal would certainly prefer the latter. There is, of course, the danger of consumers being compelled to pay much higher prices for sugar, but the danger can be averted if the authorities, particularly at the State level, are vigilant enough to see that no section of sugar industry and trade indulges in unsocial activity such as hoarding and blackmarketing.

Another ill-conceived advice of Mr. Somaiya pertains to the price of sugarcane. With great difficulty and for very sound reasons, the Centre has resisted the pressure from U.P. and Bihar for a higher sugarcane price. But the erstwhile President of the Deccan Sugar Factories Association wants the price to be raised. Nothing can be more retrograde than this suggestion. He is also not on firm ground when he argues that failure to pay a higher price for cane will divert land to other crops. There are several ways in which a larger supply of sugarcane can be ensured, if only the authorities have the will to enforce them. In any case, to offer a

higher price for sugarcane without relating it to recovery is to perpetuate inefficiency in sugarcane cultivation.

A permanent solution to the problem of sugar shortage is higher production which cannot be achieved, unless energetic steps are taken, alongside of expansion of existing factories and establishment of new ones, to augment productivity of cane-growing fields. It is, indeed, ironical, as Mr. Somaiya remarked, that, notwithstanding the work of such august bodies as the Development Council, the Central Sugarcane Committee, the State Sugarcane Committees and the National Sugar Institute, the per-acre yield of sugar has not only not improved but actually tended to decline. The explanation for this phenomenon lies in the fact that the authorities have failed to provide sufficient irrigation facilities and fertilisers. No amount of research work on paper and in model farms or appointment of committees will be of any avail, if there is no proper planning for translating the experiments and advice into actual practice. If more water, more fertilisers and more of improved types of seed cane were supplied, there would certainly be a marked increase in sugarcane production.

FOUNDRY INDUSTRY

The Institute of Indian Foundrymen, the annual meeting of which was held in Calcutta last week, continues to render great service to the foundry industry. Guided by India's leading metallurgical scientist, Dr. B. R. Nijhawan, the Institute, which is the premier professional body of foundry technologists, has done significant work in dissemination of technical knowledge and also started a training centre for foundry. There is no doubt that the Institute will be called upon to play an increasingly important role in future, thanks to the development programmes for heavy engineering, foundry and iron and steel industry which are contemplated under the successive Five-year Plans.

In his address at the annual meeting of the Institute, the Union Minister of Steel, Mines and Fuel, Sardar Swaran Singh, reviewed the progress of steel industry. He pointed out how the existing iron and steel works in Jamshedpur, Burnpur and Bhadravati were being expanded, in order to reach a target of three million tons of ingots, while the three new steel plants in Rourkela, Bhilai and Durgapur would produce a million tons each; the first blast furnaces of Rourkela and Bhilai had gone into production and, by the end of this year, three more blast furnaces would have commenced production, one each in Rourkela, Bhilai and Durgapur. The Minister said that India was already self-sufficient in foundry pig iron and some pig iron had actually been exported. The Government, as is well known, is engaged in a study of the expansion programmes under the third Five-year Plan. Sardar Swaran Singh revealed that "current thinking is in favour of production of ten million tons of steel and 1,500,000 tons of pig iron by the end of the third Five-year Plan."

The importance of castings to general engineering industry arises from the fact that they are the most economic way of producing a component, whether it is only a few ounces in weight or as heavy as 200 tons per single piece. The Union Minister stated that, while private enterprise had been allowed to have its own iron and steel foundries, the Government had felt it necessary to establish foundry capacity to meet certain specialised needs. In Ranchi, the Government, in collaboration with Czechoslovakia, is establishing a foundry, capable of producing, at the first stage, 25,000 tons of iron castings and 30,000 tons of steel castings; it will ultimately be capable of casting single grey iron pieces of 100 tons and steel castings of 150 tons. Referring to this project, the Minister said: "This foundry and forge is really a part of the heavy machine building complex which is being created at Ranchi. This complex will go to make the country independent, as far as possible, of imports of plant and equipment for the maintenance requirements of the existing steel works and for the construction of our new steel works."

In conclusion, Sardar Swaran Singh emphasised the importance of continuous research in the field of metallurgy. He paid a well-deserved tribute to the National Metallurgical Laboratory for its research efforts, in general, and its invention of nickel-free stainless steel, in particular. The Laboratory has made significant contributions towards the solution of problems of foundry sands and hard coke. It would appear that steady progress is being made in the direction of building a good design organisation. Design sections are being developed as part of

the manufacturing complexes at Ranchi and Bhopal. A design section is also being organised in the Hindustan Steel Limited, with a nucleus of thirty men. This section is expected to be able to design, in course of time, steel works, using plant and equipment made within the country. The Central Fuel Research Institute is engaged in developing blends of coal to produce metallurgical coke. The success of this research effort, as the Minister himself pointed out, will serve to reduce the strain on the limited reserves of metallurgical coal in India.

SALES TAX IN BOMBAY

Much prodigious effort and painstaking enquiry have gone into the Bombay Sales Tax Bill which will come up for discussion in the Bombay Legislature, scheduled to meet next week. Few States have faced greater difficulties in fiscal integration than Bombay. On the reorganisation of States, Bombay inherited no less than five sales tax systems. Besides the system which prevailed in the original Bombay State, the State Government had to administer the sales tax systems in areas like the merged Indian States, Saurashtra, the merged areas of the C.P. and Marathawada region. The task of integrating them into a new system which would also take into account the numerous complaints against the rigour and complexity of the original system fell to the Sales Tax Enquiry Committee (Chairman: Mr. Babubhai J. Patel). The Committee, which submitted its report to the Government last year, brought to bear upon the question much practical insight into the commercial problems of this premier industrial and commercial State. It is noteworthy that the new Bill is substantially based on the recommendations of the Committee.

The system now proposed under the Bill is an eclectic one, combining single-point system and double-point system and exempted categories. The exempted items include, among others, fertilisers, kerosene, products of village industries defined under the Khadi and Village Industries Commission Act, cattle, ready-made garments costing not more than Rs. 5 each, sugar, sugarcane, tobacco and newspapers. A single-point levy is proposed at the first stage of sale of 75 items, some of which are generally classified as luxury goods, such as motor cars and iron and steel furniture, and some of which have domestic and industrial uses like soaps, machinery. The rate of tax varies from 1 per cent. leviable on cotton yarn to 45 per cent. leviable on liquors. A single-point tax at the goods, including gold and silver articles, cotton and cloth waste, hides and skins, jute, oilseeds, raw wool and *gur*. The rate of tax varies from 1 per cent. to 6 per cent. Other goods will be taxed at two stages of sale. These include cakes, biscuits, floor and wall tiles, suit cases, saris and other personal wear and stainless steel. The rate of tax is 3 per cent. (except in certain cases for which the rate ranges from 4 to 8 per cent.) on first sale, and a uniform levy of 2 per cent. on the last sale.

It is noteworthy that the rates of tax generally follow the recommendations of the Enquiry Committee. A departure from the Committee's suggestions has, however, been made in respect of lubricants which will carry a levy of 2 per cent. and of solvent oil (10 per cent.), as against the levy of 5 per cent. for all petroleum products as the Committee suggested. Again, where, cent. on X-ray apparatus and jewellery, the Bill imposes only 7 per cent. and 6 per cent. respectively. A retail tax at the rate of 1 per cent. has been imposed on the sale of goods which are liable to the levy of tax at both the first and last stages of a sale. A dealer who does not hold a licence will alone be liable for this levy. The minimum limits of turnover of sales or purchases laid down in the Bill for attracting in the case of importers and manufacturers and Rs. 30,000 in the case of other dealers.

A welcome innovation under the Bill is the provision for a commission agent's permit. Commission agents, who have a turnover of more than Rs. 30,000, are eligible for such a permit on the strength of which they, acting on behalf of their principals inside or outside the State, can effect purchases free of tax or at reduced rates as the case may be. This is a provision which deserves to be built into the sales tax statutes in all States.

As regards the administration of sales tax, the Commissioner of Sales Tax will be assisted by Deputy and Assistant Commissioners and Sales Tax Officers. Provision has been made for enlarging the membership of the Sales Tax

Tribunal. The powers of search of premises and seizure of documents which are contained in the present law have been retained. A slight change in the appellate procedure has been made in that an aggrieved party can, instead of following the normal procedure of appeals to the next higher authority, make an appeal to the Commissioner or the Tribunal direct; if the party chooses to go to the Commissioner, they will have no further remedy in proceeding under the sales tax law. A commendable provision is the one which places chartered accountants on a par with legal practitioners in the matter of appearance in sales tax proceedings.

WAREHOUSING

Ever since the Royal Commission on Agricultural storage and warehousing facilities as an integral part of organised agricultural marketing, the problem has commanded a good deal of attention. A concerted and co-ordinated attempt to tackle the problem, however, was not made until 1954, when the All-India Rural Credit Survey Committee recommended the establishment of Central and State Warehousing Corporations. These suggestions were designed not only to ensure storage facilities to farmers, but to render these institutions as the virtual link between co-operative credit and marketing. In order to give effect to these recommendations, the Agricultural Produce (Development and Warehousing) Corporations Act was passed in 1956 and the National Co-operative Development and Warehousing Board came into existence in November 1956. The Central Warehousing Corporation set up subsequently works under the policies framed by this Board.

The scope for warehousing corporations in this country is now fast expanding, probably in directions which were never dreamt of by the Rural Credit Survey Committee. The Government now proposes to separate the Central Warehousing Corporation from the National Co-operative Development Organisation. A Bill is expected to be introduced in the coming session of Parliament in this connection. The introduction of State Trading in foodgrains and the proposals to develop co-operatives as the exclusive channel for routing the marketable surplus are bound to influence the nature and progress of warehousing organisations in the country. This point was stressed by Mr. B. B. Ghosh, Secretary, Department of Food, Union Ministry of Food and Agriculture, who is also Chairman of the Central Warehousing Corporation, in his address at the annual general meeting of the Corporation at New Delhi last weekend. As a result of the new policies for the development of rural areas, the demand for warehousing facilities by the Central and State Governments and co-operative societies will increase, while that by individual producers will tend to decline. Some of the State Governments have already been taking advantage of the State Warehousing Corporations for undertaking storage of grains procured by the Government.

Although the Central Warehousing Corporation is still in its infancy, it has acquired itself satisfactory. Mr. Ghosh pointed that the stocks of agricultural commodities stored in the nine Central Warehouses which were functioning during 1958-59 increased over the year from 13,000 maunds to 163,000 maunds. Since then, stocks have gone up further to about 329,000 maunds. The warehouses have accepted for storage, besides cereals, pulses and oilseeds, such commodities as turmeric, *gur*, ginger and pepper which require special care for preservation. The Corporation, we are told, proposes to open warehouses at new centres in almost every State.

The State Warehousing Corporations have also been making steady progress. Although the year under review was practically the first year of the working of most of the State Corporations, they have already set up as many as 42 State Warehouses. Mr. Ghosh recognised the important role of the Central Warehousing Corporation, not only in setting up its own warehouses and raising its resources thereupon, but in extending maximum support to the programme of the State Warehousing Corporations.

CONSUMER PRICES

The demonstration that greeted Mr. S. G. Kazi, Bombay's Minister for Civil Supplies, when he visited Ahmedabad this week is an understandable, if crude, exhibition of the growing discontent among the common people caused by the mounting prices of essential items of consumption. The cost of living in Bombay City, for instance, soared to a record high in June last, with the working class cost of living

index (base: 1934=100) shooting up by seven points from 406 in May to 413 in June, as compared with 395 in June last year. The index has risen during the first half of the year by 17 points, representing a rise of almost 4.3 per cent. From a peak of 407 in July 1958, the index had progressively declined to 398 in December. Since then, barring the month of April, the index has been rising. The trend gathered momentum in May and June, as noted above.

Higher consumer prices are not a phenomenon confined to Bombay alone. Other industrial centres in the State and the major cities of the country, for which figures are available, disclose a similar trend. The all-India consumer price index (Base: 1949=100) for the month of May, the latest month for which figures are available, was 119 which is two points higher than the previous month's figure and compares with 113 reached in the same month of the previous year. But this is in striking contrast to the trend in some of the foreign countries such as the U.K., the U.S., Canada and Japan. In these countries, the consumer price index during the four-month period January to April, for which figures are available, has either declined or been stationary. Thus, the index (Base: 1949=100) declined from 153 to 152 and 126 to 125 in the U.K. and Canada respectively whereas in the U.S. and Japan it was unchanged at 122 and 132, respectively.

The rise in the index is due to the rise in price of food and miscellaneous items. Mr. Kazi attributes the higher prices of food in Bombay to five causes: (1) faulty zonal system, (2) inadequate import of foodgrains by the Centre, (3) increase in population, (4) improved health, and (5) changing dietary habits. It may appear strange that prices should go up at a time when a bumper foodgrains crop is expected. It only shows that, however good the crop, the demand still outstrips supply. It is imperative that effective measures should be taken to curb the rise in price by augmenting supplies and keeping down inflation. Increased prices will not only affect the standard of living but also have deleterious consequences on industry and exports. In Bombay City, the rise in index in June will boost the dearness allowance bill of the textile mills alone by Rs. 10 lakhs to Rs. 1.80 crore. This will naturally push up the cost of production of yarn and cloth which means that the domestic consumer will have to pay higher prices and the industry's competitive capacity in foreign markets will be further adversely affected. As is common knowledge, it is difficult to sell the products of a high-cost economy in foreign markets.

"OUTER SEVEN"

Everything seems to be going well with regard to the formation of the "Outer Seven" free trade area, comprising the United Kingdom and six other West European countries, namely, Austria, Denmark, Norway, Portugal, Sweden and Switzerland. The Ministerial Conference of the "Outer Seven" held at Saltsjoebadan (near Stockholm) on 20th and 21st July 1959 approved, with scarcely any amendment, the draft plan drawn up by the Working Party of officials early in June last. The Conference also instructed the senior officials of the member-countries to draft a convention using the draft plan as the basis and to present a text at the meeting of Ministers scheduled to be held on 31st October next. The officials, it was decided, should be constituted as an official committee to advise Governments on questions regarding other countries arising from the establishment of the "Outer Seven" free trade area and, in particular, to study the problem of future negotiations for the setting up of the 17-member European Economic Community. In order to facilitate relations with the Common Market, all the countries expressed their desire to accredit representatives to the Market; Denmark has already taken action to this effect.

The salient features of the draft plan as approved by the Ministerial Conference are given below:

In respect of industrial products, the plan includes rules for abolishing tariffs and quantitative restrictions, ensuring fair competition, and identifying the goods which should move freely between the members. The immediate objective is to reduce tariffs by 20 per cent. on 1st July 1960.

There should be a special agreement on agriculture. This will set out agreed objectives of agricultural and food policy, provide, where appropriate, for consultation, and facilitate expansion of trade between members, having regard to the need to achieve a sufficient degree of reciprocity between them.

Fish and other marine products will be treated as an independent problem, separately from agriculture. Proposals for a special agreement to achieve freer and increased trade in these products

have been made, and these will be given careful consideration. There will be a further discussion of this problem between the Governments.

The institutional arrangements should be as simple as possible. The governing body will be a Council of Ministers. All decisions involving new obligations will be taken by unanimity. Provisions for majority decisions in certain defined cases not involving new obligations are envisaged.

The Stockholm conference was unanimously of the view that the object of the "Outer Seven" free trade area would be to strengthen the economies of its members by promoting expansion of economic activity, full employment, a rising standard of living and financial stability. Nevertheless, it assured that "it would be their purpose to facilitate early negotiations both with the European Economic Community (the Common Market) and also with the other members of the Organisation for European Economic Co-operation, who have particular problems calling for special solutions." The negotiations, it was clearly stated, would have as their object removal of trade barriers and establishment of a multilateral association, embracing all the members of the O.E.E.C.

The reaffirmation by the "Outer Seven" countries of their faith in the enlarged European free trade area and the public pronouncements made openly by the official spokesmen in West Germany, Italy and Holland, the three Common Market countries, have revived hopes of an early resumption of talks for an economic association of all the seventeen O.E.E.C. countries. It remains to be seen whether the hopes will materialise and the enlarged European free trade area will, in fact, come into existence, what with the stiff attitude of France. This much, however, can be said: For sometime at least, the six-member Common Market and the "Outer Seven" free trade area will be functioning side by side simultaneously. The following table gives an idea of the total value of trade covered by the two economic blocs:

(In million \$)			
	Common Market	Outer Seven	Total
Common Market:			
Imports	6,784	3,637	22,044
Exports	6,963	4,048	22,783
Outer Seven:			
Imports	5,207	3,084	18,862
Exports	5,692	2,622	10,240

Note.—The figures relate to the calendar year 1958.

The foregoing figures indicate that the six Common Market countries together enjoy a favourable balance of trade with the "Outer Seven." This position may undergo a change after the "Outer Seven" free trade area actually begins functioning. Some fear that a part of the Common Market export trade with the "Outer Seven" will be hit, following an expansion in the trade between the seven countries. It is, therefore, felt that the Common Market may be forced to come to terms with the "Outer Seven." It may be mentioned here that, while both the blocs aim at freeing trade by eventually eliminating tariffs and quotas within their own areas, there is one fundamental difference between the two: The Common Market countries will have a common tariff against the outside world, whereas the "Outer Seven" will keep their own tariffs against outsiders.

Meanwhile, speculation has arisen as to the attitude of Finland with regard to the "Outer Seven" scheme. This country did send a representative to the Stockholm Conference (Mr. Ahti Karjalainen, Minister for Trade Industry). When invited to make a statement, Mr. Karjalainen referred to Finland's participation in the Nordic plan for close economic co-operation and also drew attention to the economic interest and significance for Finland of the free trade association plan. He pointed out that his country would, in this connection, only make agreements on tariffs and trade in a way consistent with its declared foreign policy based on existing international agreements and with its traditional trade relations, including trade based on bilateral agreements.

The negotiations for a common Nordic union, comprising Finland, Norway and Sweden (the position of Denmark in this union is not clear) have already reached an advanced stage. The draft plan was submitted to the ministerial meeting held at Kungälv (Sweden) on 11th and 12th July. The meeting was of the opinion that the plans for Nordic economic co-operation ought to be adapted to the proposed "Outer Seven" area.

It is evident from the above review that there will be three trading blocs in Western Europe—the Common Market, the "Outer Seven" and the Nordic Union. It will be interesting to watch as to how these three blocs will ultimately be integrated into a single free trade area.

PATTERN OF EXPANDING TRADE

EXPORTS TO STERLING AREA DECLINE

From Our Own Correspondent

LONDON, 24th July

WITH the publication by the Board of Trade this week of the details of Britain's external trade in the month of June, it is possible to study a complete and clear picture of the pattern, whereby Britain's overseas trade has been expanding in the first half of this year. Imports in the first half of 1959 totalled £1,924 million, an increase over a year ago of 5 per cent. (there was a dock strike last year and, if allowance is made for this, the increase is assessed at only 4 per cent.) for the period. Import prices which were falling in the first four months of this year, though they have since turned upwards, were about 14 per cent. less than in the first half of 1958, so that the volume of goods coming into the U.K. certainly rose by not less than 5 per cent. This rise was well spread through the different categories of trade: food imports went up by 6 per cent. (evidence of increased purchasing power) and petrol and manufactured goods both rose by 17 per cent.—only raw materials were down by 6 per cent.

Exports

Exports f.o.b. in the first half-year totalled £1,636 million, which was 3½ per cent. over those for the first half of 1958, though less after allowing for the dock strike, since export prices have been stabilised throughout the period, the rise entirely represents a rise in volume. The table which follows compares the first half of this year with the first half of last, by the principal categories of goods:

Monthly Averages

(In million £'s)

	1958	1959	1958	1959
Food, drink, tobacco	118½	126	14½	14
Raw materials	74½	72	9	11
Fuel (oil)	34½	40½	11	10
Manufactures	75	82	228½	227½
Total	304½	320½	263	272½

In addition, re-exports have averaged £12 million a month in the first half of 1958, falling slightly to £11 million a month this year. The overall picture, therefore, is of an excess of imports of £37 million a month, as against £29 million in 1958; that is, the total deficit this year was £223 million against £175 million last year. As the Board of Trade notes, "in view of the exceptionally favourable conditions of last year, the increase is a comparatively small one. A deficit... running at anything below £40 million a month implies, with the usual net invisible earnings, a substantial surplus on the balance of payments current account."

Area-wise

If one now turns to the movements of trade by area, the deterioration in the visible trade deficit of £8 million per month is accounted for oddly enough by a deterioration of £15½ million in the deficit with the sterling area, offset by an improvement of £7½ million in the deficit with the non-sterling world. The table which follows shows how exports and re-exports were divided in the first half of this year, as compared with the first half of last year:

Monthly Averages

(In million £'s)

	1958	1959
North America	39	48
Latin America	13	13
Europe	81	85
Other	21	23
Non-sterling	154	170
Sterling	122	114
Total	276	284

Thus, exports to the sterling area dropped 6½ per cent. in 1959, as compared with the first half of 1958, although they increased to India (6½ per cent.), Pakistan (15 per cent.) and Ceylon (25 per cent.). Nearly everywhere else throughout the Commonwealth and the Sterling Middle East, other than Ghana, exports suffered a reduction.

Among the exports to non-sterling area, there was a large increase in shipments to North America (25 per cent.) and indeed total exports to the U.S.A. were 3 per cent. higher than in the first half of 1958, mainly as a result

of increased exports of cars and commercial vehicles. On the import side, imports from the sterling area were 6½ per cent. higher this year. The increase included India (3 per cent.) and Pakistan (41 per cent.), but there was a reduction in imports from Ceylon (5 per cent.).—All Rights Reserved.

ENGINEERING MATERIALS AND DESIGN EXHIBITION

Engineering materials and design, embracing practically every industry in the world, is the subject of an exhibition to be held early next year in London (Earls Court, 22nd to 26th February). The first of its kind in Britain, it will be devoted solely to materials and components in engineering design, and is expected to attract thousands of engineering designers from every industry at home and abroad. It will have the largest and most varied selection of materials and components ever assembled for engineering designers in every sphere of constructional activity.

Engineering materials today include minerals, plastics, textiles, inorganic materials, rubber, adhesives, refractories, ceramics, and numerous sintered products and compositions, as well as timber, cement, and metals and alloys of all kinds, many of which are new or under active development. Associated with the Engineering Materials and Design Exhibition will be a conference for engineering designers held at the same time and in the same building.

ALUMINIUM TRUNKS FOR AIR-FREIGHTING FISH

Fish trunks of aluminium produced by a British firm (Heston Equipment Company, Ltd., London, S.W. 1) are helping delivery of fresh sea fish to dinner tables in the African tropics a thousand miles from the sea. Watertight, lightweight, and almost everlasting, the trunks were developed by the Heston Equipment Company to enable an African company to fly fish at economic rates to markets far inland in the Belgian Congo. This has resulted in sales of 60 tons in 1951 going up to nearly 5,000 tons in 1957.

Lacking the necessary chain of freezing-plants across the country, it was impossible to freeze the fish for the slow rail journey inland in the tropical climate. The alternative was air-freighting, but the handicap here was the high cost using conventional packing, and the need for trunks that were watertight. Heston Equipment produced the answer by manufacturing a trial shipment of the aluminium trunks so light that they added little to the freight charges. Now the African company uses 2,000 of the trunks to fly the fish as far as

1,000 miles into the Belgian Congo. Heston has since sent 10,000 of the trunks to Uruguay, 3,000 to Newfoundland, and others to South Africa and Iceland.

NYLON CONVEYOR BELTS FOR COLLIERIES

Nylon figures prominently in new types of conveyor belt which are now being bought by Britain's National Coal Board. Under a new scheme designed to encourage the development of belts incorporating man-made fibres, the Board has started to grant "limited approval" to selected types of belts. The majority of the belts in the first batch are made partly from nylon.

As a result of work carried out during the past two or three years, the Board believes that judicious use of man-made fibres will make it possible to increase the service life of conveyor belting by 50 per cent. or even more. In order to provide manufacturers with incentive to produce such belts, the Board has introduced a limited-approval scheme under which quantities of about 50,000 ft. to 100,000 ft. of promising-looking belts will be bought and tried. After operational experience has been obtained, the new belts will be considered for full approval.

MAKING STOCKINGS OF CONSTANT SIZE

A simple automatic control which will enable circular hose machines to produce stockings with Britain's Hosiery and Allied Trades Research Association in Nottingham. Without control, stocking lengths vary considerably and have to be hand-sorted into matching pairs before they can be sold. The new unit, known as the positive-feed system, ensures that exactly the same length of yarn is knitted into every stitch.

On circular hose machines, variations in length are usually the result of yarn, knitting, or finishing influences, with the major irregularities arising during knitting. The control unit eliminates this factor, leaving only the minor causes. Setting does not depend on board measurements, counting of courses, etc., but on a single mechanical setting of the control mechanism.

The U.K. Government has agreed to lend £15 million to Nigeria for financing its current development programmes. The programmes call for a total expenditure by the Federal and Regional Governments of £153 million for the period ending 1962. The U.K. loan of £15 million will help close the gap of some £32 million remaining after taking into account the revenue from local resources, £10 million from the World Bank and some £6 million representing the balance of Colonial and Welfare grants.

Only YOU can cash your Bank of Baroda Travellers Cheques

Even if you lose your Bank of Baroda Travellers Cheques, your money is safe because only you can cash your cheques! That's why Bank of Baroda Travellers Cheques are the safest, most handy way of carrying money when travelling. When you make your next trip, buy Bank of Baroda Travellers Cheques... from any of our many offices throughout the country. For complete information, write in for our FREE booklet.

BRITISH OVERSEAS AIRWAYS CORPORATION

THIS IS A YOUNG FIRM

but with some of the oldest business houses for its clients!

Four years ago, acbi was founded upon two ideals; first, absolute sincerity with our clients; second, absolute objectivity in our approach to problems, including those of labour-management relations.

Surprisingly, if significantly enough, we found that this approach was welcome to managements. Indeed our forthrightness has made more friends for our firm than we thought it possible!

Well, we have grown—not spectacularly, perhaps—but, then, we are still growing! And we are proud of the fact that our roster of clients includes some of the best and oldest business houses in the country.

acbi is currently assisting reorganisation of industries in both the public and private sectors.

Let acbi assist you in finding answers to your problems. We specialise in problems relating to labour-management mediation; job evaluation; work study; office reorganisation; production control; waste control; stores control; incentive schemes; layout and material handling; and budgetary control.

FEDERAL RESERVE BANK OF NEW YORK SOME IMPRESSIONS OF A BRIEF VISIT

By Dr. K. C. Chacko, New York

AFTER visiting one of the leading commercial banks in New York City, which was discussed in my last article, I undertook a similar study of the Federal Reserve Bank of New York. As soon as you enter the Liberty Street building of the Reserve Bank you notice a distinct difference from that of a commercial bank. In the main lobby, you see armed guards in uniform. In fact, you see the guards all over and outsiders cannot enter many departments without permission. Although they are dressed in uniform, they are friendly and polite. One soon realises that the presence of the guards is necessitated by the fact that the Bank keeps in its vaults over \$8,000,000,000 worth of gold bars, most of which belong to foreign central banks, and many billion dollars worth of securities, currency and coin.

The Reserve Bank, by the very nature of its functions, is different from a commercial bank; it is a bank for bankers and also for the Government, but not for the general public. Naturally, its objectives and operations are very different from those of a commercial bank.

Foreign Department

As a foreigner, my first interest was to know more about the Foreign Department, and I spent several days there. It is this department that maintains the gold, dollar and investment accounts of foreign central banks free of charge. The advantage of foreign central banks keeping gold with the Federal Reserve Bank is that when one foreign central bank wants to sell or transfer gold to another foreign central bank, all it has to do is to request the Federal Reserve Bank of New York to make the transfer in its vaults. This avoids the problems of shipping gold whenever a central bank wants to transfer it to another country. Similarly, when a foreign central bank wants to make payment to another central bank, the Federal Reserve Bank can easily do it by debiting the account of one bank and crediting that of the other. Although these foreign accounts are maintained with the Federal Reserve Bank of New York, the other eleven Reserve Banks in the United States also participate in such accounts.

The foreign central banks keep only a limited amount of dollar balance in cash with the Federal Reserve Bank, and the size of this varies according to the importance of the country and its foreign trade. Whenever the balance of a foreign bank exceeds a certain amount, it is invested in short-term U.S. Government securities or bankers' acceptance, thus enabling the foreign bank to earn some interest on its excess balance.

The Reserve Bank also acts as a banker to the World Bank, the Monetary Fund, and the International Finance Corporation. When new dollar bonds are sold by the World Bank, they are issued through the Federal Reserve Bank.

Centre of World Finance

The expanding activities in the Foreign Department are a reflection of the rapidly increasing importance of New York as the centre of international finance. The Federal Reserve Bank is not only a central bank to the domestic commercial banks, but is becoming more and more a banker to foreign central banks. At present, it has correspondent relationships with about 78 foreign central banks or Governments.

When commercial banks maintain accounts with the central bank of the country, the latter provides loan facilities to the commercial banks. The same is true when small country banks keep accounts with large city banks. The question is, therefore, raised as to why not the Federal Reserve Bank, acting as a banker to foreign central banks, provide similar overdraft and loan facilities, if needed. Only then can the Federal Reserve Bank be called a real "central bank" to central banks. Perhaps the answer to this is that it is the function of the International Monetary Fund to make such loans to

Dr. Chacko is the author of the *Monetary and Fiscal Policy of India*, published by Vora and Company, Bombay. Recently he spent several weeks at the Chase Manhattan Bank and the Federal Reserve Bank of New York. Here he offers some comments on the central banking in the United States as reflected in the Federal Reserve Bank of New York. A similar article on his visit to the Chase Manhattan Bank was published in the 18th July issue of this journal.

foreign central banks. Also, the foreign business of the Federal Reserve Bank is still only a small part of its total activity.

Banker to Commercial Banks

The Primary function of the Federal Reserve Bank is to act as a banker to domestic commercial banks. Unlike in India, there are twelve independently chartered Reserve Banks in the U.S., each having jurisdiction over a designated territory. Thus, the Federal Reserve Bank of New York, which is the most important of the twelve banks, acts as a banker to 531 commercial banks in the New York district. The Board of Governors of the Federal Reserve System in Washington, D.C., consisting of seven members appointed by the President of the United States for 14-year terms, is the supreme monetary authority of the country. The Board not only formulates policies, but also supervises and co-ordinates the activities of the twelve Reserve Banks.

Of the more than 13,000 commercial banks in the United States, about 6,300 are members of the Federal Reserve System, but deposits in such member-banks constitute about 85 per cent. of total deposits of all commercial banks.

In the United States, both the Federal Government and the State Governments can issue charters of incorporation to establish commercial banks. All national banks (with charters issued by the Federal Government) are required to be members of the Reserve System, while State banks may or may not become members. All member-banks have to keep with the Reserve Bank of their district a legal reserve, and thus, maintain a deposit account with it. However, non-member banks may also maintain a small clearing balance with the Reserve Bank for making use of Reserve Bank's cheque clearing facilities.

Clearing of cheques is one of the major functions of the Reserve Bank. Cheques drawn on any part of the U.S. may be cleared through the Reserve Bank free of charge. The cheque clearing department works 24 hours a day and handles about \$1,500,000,000 worth of cheques on an average day. The free cheque clearing system has stimulated greatly the cheque-using habits of the people. It is estimated that more than 90 per cent. of all transactions in the U.S. in dollar value are handled by cheques, and only less than 10 per cent. by cash. This large-scale use of cheques has reduced greatly the "external drain" on reserves, enabling the banks to make greater use of their resources.

Lender to Banks

As a central bank, the Federal Reserve Bank of New York makes loans and discounts to member-banks within its district. There are many kinds of commercial paper which commercial banks may rediscount with the Reserve Bank. The concept of eligibility for purpose of rediscounting has been so liberalised that now most of the commercial paper which banks usually carry in their portfolio is acceptable to the Reserve Bank. In spite of this, there is practically no rediscounting of commercial paper at the present time. The commercial banks prefer loans to rediscounting, for it is much more convenient to borrow from the Reserve Bank against Government securities as collateral rather than rediscount commercial paper. Most country banks keep a large share of their Government bonds and other securities in the Reserve Bank vault for safekeeping. Large city banks also keep some Government securities with the Reserve Bank. Therefore, if a member-bank wants to borrow from the Reserve Bank, it can use these securities held by the Reserve Bank for safekeeping as collateral, and arrange a loan within a few minutes. These loans are usually given for a period of 15 days, but may be renewed, if necessary, or repaid before the 15-day limit. The large city banks prefer not to borrow from the Reserve Bank, if they can possibly meet their requirements by borrowing federal funds in the money market. If, however, the market is tight, they do borrow from the Reserve Bank using Government securities as collateral.

Open Market Operations

The most fascinating section of the Reserve Bank is the one dealing with the open market operations—buying and selling of securities with

a view to influencing the reserves of the commercial banks and thereby the money supply. The supreme authority on open market policy is the Federal Open Market Committee, which meets in Washington once every three weeks. However, the daily open market operations are left to a small team of experts, headed by the Manager of the System Open Market Account at the Federal Reserve Bank of New York. It is in the "Trading Room" of the Bank, to which only a small number of the staff has access, that the decision to buy or sell securities is arrived at every day. The Trading Room has a 'U'-shaped desk which has direct wire connections with security dealers. From 9.00 in the morning till about 3 p.m., the telephones are always busy, trying to keep in touch with the latest development in the money market.

As soon as the Manager comes into the Trading Room in the morning, he and his staff study the latest money market statistical data and projections on factors affecting bank's reserves prepared by the Research Department. They analyse the Treasury balance, the reserve position of commercial banks, the quotation for federal funds, price trend of Government and corporate securities, etc., and discuss with representatives of security dealers in New York, and the Treasury and Board of Governors in Washington, the latest money market developments. Usually by noon, after talking with Washington on the phone, the Manager would have decided on the day's policy. At present, buying and selling is restricted to short-term securities, mainly treasury bills, and, to a very limited extent, to bankers' acceptance.

In this technical operation, the open market authorities study the available statistical data, which may be several days behind, and also projections prepared by the research staff. However well prepared these projections may be, the Manager and his team cannot take action based on projections alone, because there are several variable factors which cannot be anticipated with accuracy. Thus the "feel" of the market, based on years of past experience of the staff, their exposure to the very latest money market developments, and their keen observation of market developments as reflected in the Trading Room, play an important part in arriving at a decision. It is actually the combination of both—the projections as modified or confirmed by the "feel" of the market—which provides the basis for the operation of the open market team. This seems to support the familiar observation that central banking is an art rather than a science.

The major objective of the daily open market operations is to assure that the commercial banks have sufficient funds to meet the productive requirements of a growing economy in keeping with a sound monetary policy.

Bank Relations Department

The effectiveness of a central bank depends, to a great extent, on its relations with the commercial banks. Realising this, the Federal Reserve Bank of New York has set up a strong Bank Relations Department, the purpose of which is to promote harmonious relations with member-banks and to help them when necessary. The Reserve Bank periodically sends out representatives to inform member-banks on Reserve Bank policies and operations. These representatives, when they return to the Reserve Bank, report to the higher officers the current economic trend and financial problems of member-banks, thus establishing a two-way contact between the Reserve Bank and its members.

The member-banks can seek the help of the Technical Assistance Division of the Reserve Bank in finding out ways and means of improving the efficiency and operation of the banks. These services are usually rendered free of charge by the Reserve Bank and are in great demand, especially by the smaller banks who cannot afford to maintain the services of costly specialists.

Thus, the Reserve Bank, in the true sense of the term, is a banker's bank. It makes loans to member-banks when needed, and that without any charge, it clears cheques and transmits U.S.; collects bills on behalf of the member-banks; safekeeps securities for the member-banks and collects interest on them; renders technical assistance, particularly to the smaller banks; supplies the banks with currency and coins when needed. In general, the relation between the Reserve Bank and member-bank is friendly and cordial.

In addition to all this, the Federal Reserve Bank also performs the important function of being a banker to the Government.—All Rights Reserved.

SPAIN DEVALUES ITS CURRENCY BRAZIL DEFIES INTERNATIONAL MONETARY FUND

TWO developments of importance to the economy of Spain took place last week. First, the country fixed a new exchange rate for its currency, peseta, at 60 per U.S. dollar, as against the basic rate of 42 per \$ which had prevailed since April 1957 for all commercial and private transactions. This amounts to a devaluation of about 43 per cent. It may be noted here that Spain had not fixed any par value for its currency, though it has been a member of the I.M.F. for the last one year. The second development is its admission as a full member of the O.E.E.C., thus bringing the total membership of this organisation to eighteen.

In terms of sterling, the new exchange rate of Spain is 168 pesetas to the £. The new rate also works out to 12.60 pesetas to the rupee, as compared with 8.82 pesetas hitherto. This is the second time in the last twenty-seven months that Spain has had to devalue its currency; the previous occasion was in April 1957, when the basic exchange rate in terms of the U.S. dollar was changed to 42 pesetas to the \$ from 30.42 pesetas, a rate which had remained unchanged since 1952. The net rate of 60 pesetas per U.S. dollar has also been declared as the par value under the I.M.F. regulations. It also marks the unification of Spain's foreign exchange structure which hitherto embodied a multiplicity of rates. They were:

For principal exports ...	42 pesetas to the \$
" other exports ...	31 to 50 "
" principal imports ...	42.27 "
" other imports ...	52.27 to 126.27 "

The new par value has been approved by the I.M.F.

The latest devaluation of the Spanish currency has not come as a surprise; it was being expected for some time past. For the last two years, the economy of the country has been under a severe strain. It became evident towards the close of last year that at the then exchange rate of 42 pesetas to the U.S. dollar, the Spanish currency was highly overvalued and needed a drastic correction. This was the result of the inflationary pressure brought about by the ambitious capital development programme launched by the Government a few years ago when the country was brought within the scope of American aid. The country's exports were being priced out of the world markets and consequently the foreign exchange earnings began to dwindle. Thus, the index number of export prices (base 1953=100) rose from 96 in 1954 to 286 in 1958, while the index of import prices moved up from 98 to only 115 between these years. While the earnings from exports increased only slightly from \$482 million in 1953 to \$486 million in 1958, imports shot up from \$596 million to \$849 million. The growing adverse balance of payments position could not be corrected by the aid received from the U.S. There was, therefore, a rapid depletion of the foreign reserves. The data relating to the reserves for 1958 are not available, but the figures for 1957 show that the foreign reserves had dwindled from \$224.55 million at the end of 1955 to \$105.80 million.

The Spanish Government knew full well that the extreme step of devaluation was inevitable, but it had been postponing this drastic measure for sometime past. Presumably, it wanted to adopt it as part of the general reform of the economy, which it had to undertake if it were to receive substantial aid from the I.M.F. and other countries. In fact, when the country sought the help of the Fund and applied for membership of the O.E.E.C., a probe into its economy was made and among the measures suggested to retrieve the country's position was the adoption of a more realistic parity for the peseta. This step was made conditional for any aid from the Fund and the member-countries of the O.E.E.C.

Following this advice, the Government of Spain undertook a comprehensive economic stabilisation programme, which includes internal fiscal and credit measures, trade liberalisation, membership in the O.E.E.C., a reform of foreign exchange system and the establishment, in agreement with the I.M.F., of an initial par value of the Spanish peseta. It is in keeping with this undertaking that the aforesaid change in the foreign exchange value of the peseta has been effected.

The devaluation of the peseta, it is needless to add, would help stimulate Spain's trade with others by making its products cheaper abroad and by restraining excessive imports.

\$200 million. Of this amount, \$130 million will come from the U.S. Government and the balance from private banks. It is expected that some more aid will be given by the U.S.

The liberalisation of trade will involve a relaxation of Spanish restrictions, with a reduction in the degree of discrimination in trade and payments. Quantitative restrictions will be removed from the import of most raw materials and foodstuffs, and certain semi-processed goods, capital equipment and spare parts. Bilateral payments arrangements with the member-countries of the O.E.E.C. will be discontinued and Spain will participate in the European Monetary Agreement. To promote the country's economic development, the Spanish Government is preparing legislation that will relax current restrictions on participation of private foreign capital, including provisions for the remittance of profits and repatriation of the capital invested. A basic travel allowance for Spanish tourists will be introduced.

The domestic part of the Spanish Government's programme is intended to eliminate inflationary pressures and to give greater flexibility to the economy. This will entail, among other things, measures to increase tax revenue, to curtail Government expenditures, and to restrain the expansion of bank credit; effective use will be made of interest rate changes as an instrument of credit policy. In

4 PER CENT. STATE GOVERNMENTS LOANS 1971

Name of State	Amount	Issue Price per cent.
(1) Andhra Pradesh	Rs. 600 lakhs	Rs. 99.50
(2) Assam	Rs. 250 lakhs	Rs. 99.00
(3) Bihar	Rs. 300 lakhs	Rs. 99.50
(4) Bombay	Rs. 600 lakhs	Rs. 100.00
(5) Madhya Pradesh	Rs. 300 lakhs	Rs. 99.00
(6) Madras	Rs. 800 lakhs	Rs. 99.50
(7) Mysore	Rs. 500 lakhs	Rs. 99.50
(8) Orissa	Rs. 350 lakhs	Rs. 99.00
(9) Punjab	Rs. 200 lakhs	Rs. 99.00
(10) Rajasthan	Rs. 350 lakhs	Rs. 99.50
(11) Uttar Pradesh	Rs. 800 lakhs	Rs. 99.50
(12) West Bengal	Rs. 700 lakhs	Rs. 99.50

All the State Governments reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 19th August 1971.

The loans will open for subscription on 19th August 1959 and close on 25th August 1959 or earlier without notice as soon as subscriptions approximate to the amount of each issue.

All the loans will bear interest from 19th August 1959.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3 per cent. Madras Government Loan 1959 will be accepted AT PAR for conversion into the new loan of that Government; interest at the rate of 4 per cent from 21st June 1959 upto and including 18th August 1959 will be paid on the securities of the 3 per cent Madras Government Loan 1958 tendered for conversion.

Applications for all the loans will be received at the Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras and New Delhi.

Applications will also be received at places within the respective States as follows :—

- At the office of the Reserve Bank of India at Nagpur in the case of the Bombay loan.
- At the branches of the State Bank of India and at Treasuries and Sub-treasuries in the case of Andhra Pradesh, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan and Uttar Pradesh loans.
- At the branches of the State Bank of India in the case of Assam and West Bengal loans.
- At the branches and Treasury Pay Offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Bombay loans.
- At the branches of the Bank of Mysore Ltd. (except at Bangalore), the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering their applications at the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, New Delhi and Madras will, in the event of oversubscription, be given the option of transferring their cash refunds to any of the other State Government loans which may not be fully subscribed provided they complete the SPECIAL OPTION FORM copies of which are obtainable on application from any of the abovementioned offices of the Reserve Bank of India.

NATURE OF MODERN INFLATION FOR ENCOURAGING CONSERVATIVE POLICIES BY CENTRAL BANKS

[In the context of the ever-mounting inflationary pressure in many countries, the following illuminating article on the long-range threat of inflation by Dr. Alfred Schaefer, Chief General Manager, Union Bank of Switzerland, will be read with interest. The author, who sounds a warning against the dangers of modern inflation, argues that sound money, full employment and ever-increasing wages cannot go together. He emphasises the need for conservative and courageous policies by central banks, free of all political pressures—Ed.]

THE inflationary consequences of the French Revolution and of the First World War were destructive but short, and could be cured by appropriate drastic measures. The creeping inflation of our days is more dangerous, because the economic power of the State and the volume of circulating money have increased enormously. Modern inflation is not only an ethical and social problem—it seems to be embedded in the free economy, like a managerial disease. Like a sick organ in the human body, there is in the economy an organ which shows this cancer: the weakening money. No solution can be based only on technical measures. The reconciliation of stable money and full employment is an unsolved problem, and full employment with perpetually rising wages is certainly the most risky experiment of our so-called free economy.

Possible Remedies

The public is unorganised, inadequately informed, generally apathetic, confused by the disputes of economists and advisers (Prof. Slichter). It could elect to public office men recognising the value of stable money, ready to fight for it—but this is a pious hope. Everybody agrees on the social, individual and international perils of too rapid an inflation. But too many believe that inflation is here to stay as part of modern life, that a 2 per cent. annual loss in the purchasing power of money is not so bad, forgetting that this means 50 per cent. in one generation and that sooner or later business will have to pay a correspondingly higher rate of interest. It is true that until now long-term bond financing has gone on, that through custom and inertia "wolf" has been cried so often that when the real "wolf" appears few take any notice. This dangerous acceptance of slow inflation helps to create or intensifies the very consequences it fears. Sooner or later the little man will realise these consequences, and then we could have accelerated currency troubles. The signs are increasing—even in the U.S.A.—and we are all under warning: Soaring prices for shares, stock options as the only incentive to management, buying "growth" instead of "yield", interest for South African gold mine stocks, high interest rates for bonds, preference for index-based bonds, flight into seemingly more stable money. Investors, pension funds, trust funds are all investing 30 per cent. and more of their capital in stocks and other property—often regardless of the price. Soon there could be too little real saving or more negative saving through instalment credits and higher taxation.

No buying strike of the unorganised public against high prices for consumer goods seems possible, not even against the probably politically necessary, but economically scandalous world-wide agricultural price supports through subsidies and stockpiling.

Slow Inflation

There is too much lip service paid to the goal of monetary stability. Management partly accepts slow inflation and adjusts its plans accordingly. A slow increase in prices, i.e., a fall-off in the value of money, seems the best attainable result in the long run for many producers. Increased costs are corrected by increasing prices or avoided by labour-saving machinery, but too quickly increasing capital expenditures create more inflation.

Like the public, management is not much frightened any more about a slump—the welfare Governments will help. During the last recession nobody dared to let the slump ride itself out, to accept a really corrective shake-out of the weaklings or a strike of the labour unions—everybody asked for subsidies, relief, Government orders, cheap money, tax reductions, credit injections. We are therefore already half-way between a pure market economy and a centrally planned economy, in an economy which depends on the decisions of the State, of large-scale firms, groups and other economic units.

We are all sinners against the very roots of our capitalistic society. We psychologically expect and accept the annual round of wage increases as our fate, we would consider ourselves as Shylocks if we did not grant a little increase

in salary or in fringe benefits to everybody every new year. Kindness is a human quality, softness is an economic mistake.

Wages are the most important, the crucial problem of the capitalistic world of free enterprise. Wages are linked to retail prices, industrial prices to wages, farm prices to industrial prices, retail prices to farm prices—a rigid circular viciousness of prices and earnings making true the saying of Fréd. Bastiat a hundred years ago: "La grande fiction à travers laquelle tout le monde s'efforce de vivre aux dépens de tout le monde." ("The great fiction through which everybody tries to live at the expense of everybody else.") The responsibility for inflation is passed from one interested group to another, from employers to labour, and vice versa.

The compensation of workers in money has increased in the last ten years at least twice as much as productivity. Wages resisted even recessions. It should be borne in mind that, generally speaking, wage increases cannot reasonably be based on increases in the productivity of particular industries. Rather, they must be limited, at the most, to the average rise in productivity of the economy as a whole. In estimating the latter, it is well to remember that both agriculture and the service industries, particularly the latter, in the last ten years have had average productivity growth rates of some 4-1 per cent. only.

Wages and Productivity

Even in an especially progressive industry, wages paid should not be geared to changes in productivity of that industry. Such practices would almost force other industries, whose productivity has risen less, to grant similar wage boosts lest they lose workers lured away by the higher incomes earned in the rapidly advancing industry. Escalator clauses in contracts—introduced on a large scale by the biggest industrial company in the world—set the pace for seemingly sacrosanct increases following every possible increase in the index of living costs, regardless of productivity. Nobody therefore is much interested in fighting inflation, because he will soon catch up with higher prices. High and prolonged unemployment compensation relieves the pressure on the individual to find another job or on the unions to reduce their excessive demands. The labour unions are in danger of pricing their members out of the market, especially in the U.S.A. (hourly wage rate of steel workers \$3, vs. \$1-1.25 in Switzerland, 80-90 cents in Germany). Results: rationalisation speeded up too quickly; more people out of work; more productivity and boom begets recession.

Too much political power is in the hands of union leaders, but partly because management did not dare to resist the excessive wage demands which set in motion the whole inflation-

ary spiral—from fear of losing out to the competition of other firms—nobody dared to face a real showdown, to accept a prolonged strike.

State and the Central Banks

In the long run no help from outside can re-establish a sound monetary balance. Higher taxes mean compulsory saving and are no remedy, because they will be spent by Governments and finally passed on to the consumer in the form of higher prices—but the consumer will not accept a lower standard of living. Since the war, Government expenses have everywhere increased through programmes for housing, social security, highways, armament, atomic science, etc. Pressure groups push the expansion of their own plans. Everywhere there is a super-state with a super-budget, super-taxation, super-welfare—we cannot increase it without approaching dangerously near the Russian system.

Tax reforms are needed. The fiscal elephantiasis has partly destroyed the efficiency of the interest rate as an essential weapon for securing an equilibrium between money and goods. The interest rate as a factor in cost is less important than the tax burden. It is an absurdity that the tax angle is very often more important than any other consideration. The consequence is a progressive enfeeblement of the efficiency of central bank discount policy. Every increase of the rate hurts Government because it has too great an amount of Treasury Bills in the market which cannot be consolidated easily—one more important possible factor for inflation.

The policies of the central banks are necessarily, but perhaps too much, influenced by political pressure groups. A serious restriction of money and credit and an increase of rates are immediately criticised—one has only to remember the accusations during the last few years, when the tightening of the money supply was in reality a very appropriate but feeble measure against an exaggerated credit expansion. And in order to make the policy effective, money must be made not only dear, but also short.

Conclusions

It is bad form to use the word "deflation." Economists call it "disinflation." Since the thirties, the fear of unemployment haunts everybody. But full employment gave the labour unions their exaggerated bargaining power, brought the wage inflation as a new and real seat of danger. The war-time dams against inflation broke and only courageous measures of the State, the central banks, and self-discipline of economic groups and labour unions could help. The direct cause of inflation, the continuous increase in the supply of money and the credit, the swelling of the stream of money and a rate faster than that of the stream of goods and services must be stopped. Individual savings and insurance, which produce the bulk of much needed investment capital, must be based on the confidence that the value of money will remain more constant than it has been in the last 15 years. Otherwise inflation will strike at the roots of the economy of the free world, and our grandchildren perhaps could go hat in hand to Moscow.

What is the best immediately necessary measure? Switzerland has not relied on the printing press, has no great surplus in the balance of payments, no budget deficit, no big raise the question why of all nations Switzerland, whose large foreign trade strongly exposes her economy to price developments abroad, in her cost-of-living index got away with a relatively modest rise to 106 (1953=100), while in Germany, 121 in England, and 128 in France. It is practically beyond doubt that this favourable development must primarily be ascribed to moderation on the part of labour unions, many of whose leaders—and sometimes even rank-and-file members—often possess a remarkable understanding for the needs of the economy as a whole. What small inflation Switzerland has had, has been the consequence of higher-priced import goods and of a world-wide softening of the will to resist, of a tendency to work less and earn more.

We must make up our mind: Sound money and full employment and ever-increasing wages cannot go together. We can count on and policy of the central banks, free of all political pressures. We must accept eventually a period of higher interest rates—dictated by the market—and we must insist on a balanced Government budget. But most of all should we frankly and

COTTON INDUSTRY PLAN ACTIVELY DEBATED BY MANagements

COMPENSATION TO SMALL UNITS TO BE GENEROUS

From A Special Correspondent

MANCHESTER, 21st July

DEVELOPMENTS in the Lancashire cotton industry have followed each other thick and fast within the past year; so much so that readers have never been short of talking points. None of the topics, however, has caught the imagination to the same extent as the current discussions on the reorganisation plans which are now being actively debated by mill managements in every centre where cotton and the synthetic fibres are spun or woven. In the week

MANCHESTER LETTER

since the terms of the schemes applying to the spinning, doubling and weaving sections were announced, all concerned have had time to digest the implications of the highly complicated documents which have been in their possession. Accountants and others with a technical knowledge of taxation procedure and the legal aspect have been busily at work indicating to individual millowners their position in the event of a decision to close completely or partially their plant.

Some aspects of the schemes, as now presented, have only become apparent on a closer perusal of the terms and conditions. For instance, it has been established that the combines, and any other firm which controls more than one producing unit, cannot obtain the premium rate of compensation for scrapped machinery, unless they take the somewhat unlikely step of withdrawing completely from the industry. There is no means of shutting down a subsidiary and describing it as a firm in order to secure these more favourable terms. Every incentive is certainly being given to the small unit to wind-up by offering generous compensation. A major factor is that such a payment will not only be at the premium rate, but will be free of tax, whereas those firms which retain a stake in the industry will not only have to pay a levy on their remaining plant, but will be subject to tax on the compensation they obtain according to the written-down value of the machinery which is to be scrapped or dismantled.

Stopped Plant Payment

Surprise have been expressed in some quarters at the facilities offered to firms which have had machinery standing idle for a length of time to obtain compensation for plant which must be largely obsolete. The eligibility to compensation under this clause rests on whether the machines could be brought back into production "without undue difficulty and expense." Otherwise, it has been pointed out, machinery now in use could be scrapped at the standard rate of compensation and idle plant could be re-employed.

Opinions must obviously differ widely as to whether the schemes are generous in their

various rates of compensation. At first sight, many traders contend that the terms provided for the weaving section are more favourable than in the other branches, but the complication arising from the disposal of preparatory machinery in spinning makes it difficult to assess the situation without reference to a particular case. In any event, the sponsors of the proposals probably realised that the elimination of a substantial number of small weaving units could only be accomplished by offering a real inducement to encourage their owners to close down completely.

The draft orders having been laid before Parliament, the schemes do not actually come into operation until later this week. Applications will then be received and considered by the special committee of the Cotton Board, established to carry out the detailed organisation of the plan. At this crucial early stage in the schemes, the large combines have a very important part to play. It has already been explained that the groups cannot secure the premium rate of compensation, but, unless they set a smart example by notifying the authorities of substantial quantities of plant they intend to register as redundant, the smaller firms may not be eager to join in. Despite some rather dismal forecasts, the minimum targets for disposal should be secured, but the sooner the Cotton Board can make an announcement to this effect the sooner a stimulus will be added to encourage "the small man" to take part in the scheme.

The dilemma of an individual firm can be imagined. If a decision is made to close down, however closely guarded is the secret, some news invariably leaks out locally. The work-people inevitably drift away and customers are deterred from putting down fresh business. If, by the end of September, the particular sectional scheme has not gone through, the firm has no recompense and would be in serious plight. Such thoughts must be going through the heads of many concerned who are accustomed to trade on fairly small resources. All this uncertainty can be removed if sufficient machinery is put down for dismantling as soon as possible. Once the schemes are declared unconditional, the response from the waverers can be expected to increase enormously.

Who Shall Decide?

How far these important decisions should rest on the management or on the shareholders is a point being widely discussed at the moment. There are numerous cases where those at the top are in a highly invidious position. The unit where the chairman, managing director, salesman and secretary are all actively engaged in the day-to-day operation of the mill and have a proprietary interest in keeping the firm in being is liable to create an anomaly, if, from the general trade viewpoint, it would be better if

the machinery was scrapped and the assets distributed to the shareholders. In such cases, there is ample justification for the calling of a meeting of members for open discussion on which course it would be best for the company to adopt.

Two central funds will be administered by the Cotton Board for the separate payment of compensation to the firms which register redundant plant and the operatives who are displaced as a result of the schemes. To finance the projects, the Government is, of course, providing two-thirds of the cost of the elimination of surplus capacity, but the remainder will be supplied by the firms still in the trade, on the basis of the spindles and looms in place at the date of the imposition of the levies. It is, as yet, impossible to assess the extent of this payment and the period during which it will be raised. Both will be settled when the response to the schemes can be accurately gauged.

In spite of the uncertainty surrounding this point, it is being suggested in some quarters that the addition to overhead costs will mean an increase of up to 1d. per lb. on medium yarns. Recognising this probable rise in selling rates, certain influential consumers have lately purchased bigger supplies than might have been anticipated. The spurt of business which took place some weeks ago cannot be directly attributed to such foresight, but anticipatory orders had a bearing on the offtake. Eventually, if all goes well, the elimination of obsolete and redundant plant should enable producers to operate more efficiently and thereby prune their costs, but for the time being a firmer trend in prices, disregarding movements in raw cotton values, must be expected.

In Japan Too

To the man in Lancashire at the moment, there is only one reorganisation scheme, coupling the problem of redundancy with the subsequent phase of re-equipment which should follow the concentration of output within the industry. Abroad, however, rival producers are facing similar situations and are adopting not dissimilar measures for coping with their own over-capacity. Lancashire's plan is on a voluntary basis, dependent for its success on the response from millowners in each section. In Japan, the Minister of International Trade and Industry has instructed spinners to take action under the Textile Industry Equipment Law, with a view to removing about 1,280,000 idle spindles off the production line. Reference to this project was made at the annual meeting of the All Japan Cotton Spinners' Association by the retiring President, Mr. Kojiro Abe, well known in the international textile sphere. "Existence of redundant capacity has always been a daunting threat to the stability of the industry," he told the meeting. "The existing capacity of 9,020,000 spindles, combined with the recent improvement in production per spindle, is obviously excessive as compared with reasonably foreseeable demand for cotton goods for several years to come."

The Japanese programme aims at storing unwanted machinery for the first time in the history of this expanding industry. The major difference between this scheme and Lancashire's plan is that, in Japan, a programme of "moth balling" cotton spindles is to be adopted, while

CHINESE COMPETITION IN MALAYAN TEXTILE MARKET

INDIA, THE WORST SUFFERER

THE Chinese trade offensive in South-East Asian countries has been so pronounced in recent years that it has seriously affected the prospects for Indian cotton textile exports to this region. The two countries where such a disquieting situation is in marked evidence are Malaya and Indonesia, which were for a long time among the principal markets for India's cotton goods. The two markets are complementary, in that Singapore still acts as an entrepot port for much of the Indonesian Republic. The quantity of cotton fabrics actually exported by India to Pan-Malaya during the calendar year 1958 was no more than 24.5 million yards, as against 45.2 million yards in 1956, while that shipped by China was substantially higher at 36.8 million yards, as against 15.9 million yards. Similarly, exports to Indonesia in 1958 were worth just 24 million rupiahs (Indonesian currency), as compared with 178.4 million rupiahs in 1955, whereas Chinese exports were of the order of 94 million rupiahs (221 million rupiahs in 1957), as against Rs. 70.6 million rupiahs in 1955. An attempt is made here to examine in some detail the inroads made by Chinese textiles in Pan-Malaya. The review of the Indonesian market will be made in our next issue.

Over the past three years, China has nearly trebled its share of the Pan-Malayan cotton fabrics market at the expense mainly of India but also to a lesser extent of Japan and "others," as the following table shows:

(In million square yards)				
	1958	1957	1956	
India	24.5 (19)	40.8 (24)	45.2 (27)	
China	36.8 (25)	22.5 (13)	15.9 (9)	
Japan	71.9 (47)	82.4 (49)	86.9 (51)	
Others	17.9 (12)	23.2 (14)	25.4 (15)	
Total	150.2 (100)	169.2 (100)	178.1 (100)	

Figures in brackets relate to percentage share in the total.

The Chinese entry in the fabrics market has been emphatically on the lower-quality, lower-priced side. The table below gives the percentage of the Malayan market (in terms of value) held by the principal suppliers:

	1958	1958
	Per cent.	Per cent.
India	12	82
China	25	17
Japan	40	27
U.K.	7	2
Hong Kong ..	4	2
U.S.	2	2
Others	5	16
Total	100	100

Since 1953, China has increased its earnings in Malaya by nearly M\$20 million (about U.S. \$7 million), though the total value of the market itself fell by more than that amount. In contrast with this gain, India has lost \$26 million in the same period.

Varieties Exported

An idea of the different varieties of cotton fabrics exported from India and China to Malaya during the year 1958 as compared with 1957 can be had from the table given below:

Items	Quantity ('000 sq. yards)		Value (M\$ '000)	
	1958	1957	1958	1957
Woven, dyed—				
India	5,255	8,040	8,880	6,443
China	14,041	9,880	9,077	6,541
Dyed, dyed—				
India	390	382	468	483
China	..	..	..	..
Woven, printed—				
India	661	8,099	365	1,412
China	11,553	1,671	5,989	1,080
Woven, unbleached—				
India	735	8,112	826	1,447
China	1,890	61	712	88
Dyed, grey—				
India	911	489	814	474
China	14	28	26	61
Woven, unbleached—				
India	5,918	9,947	1,994	8,870
China	2,508	1,731	1,288	811
Dyed, white—

China	6,908	2,732	3,431	1,266

Cotton fabrics are thus the most successful field for China's textile offensive in Malaya. During the period 1953-58, its financial share of the total textile market rose from a mere 2 per cent. to 9 per cent., while its share of the important cotton fabrics market went up from less than one per cent. to as much as 21 per cent. Out

of every four square yards of fabrics purchased by Malaya in 1958, one square yard was Chinese; in 1956, one square yard in ten square yards was Chinese. It is in this field that India has lost the most ground, its percentage share of earnings from fabrics exported to Malaya declining from 32 to 12, as against the percentage fall in earnings from all textiles from 23 to 16.

Here is a full description of the position of the principal types of woven fabrics in the Malayan textile market and the advance made by China in this branch of cotton textile business:

(1) **Dyed woven fabrics:** China for the first time topped the list of suppliers to Malaya last year, with 34 per cent. of the physical market and 27 per cent. of the earnings. During the three years, its exports rose steadily from 9.3 million square yards to 14.0 million square yards (from \$6.5 million to \$9.1 million). Japan—now relegated to the second place—and Hong Kong were the only other major suppliers to increase their share of the market over this period. India dropped 10.7 per cent. of its share of the physical market, 9 per cent. of its share of the earnings, although it remained in its place as the third supplier. Czechoslovakia, the U.S. and the U.K. each lost substantially, although they were never more than minor players.

The significant thing is that, in the two years 1957 and 1958, only two suppliers consistently and substantially reduced their prices—Hong Kong and China, each by about 8 to 10 per cent. In the result, with a small increase in the Indian price and a larger one in the Japanese price, the average Chinese cloth in this category was last year selling at 89 per cent. of the Indian, 71 per cent. of the Japanese and only 41 per cent. of the U.K. product. This, of course, does not mean that these prices correspond to identical qualities. They almost certainly do not. They merely show the extent to which China (and Hong Kong) have displaced other countries in supplying the low-quality end of the market.

(2) **Printed woven fabrics:** China has not succeeded, interestingly enough, in toppling Japan from its place as the leading supplier of printed woven fabrics, although these are cheaper than its share of the market. In the past three years, from 3 per cent. (volume and value) to 22 per cent. (volume) and 18 per cent. (value). During a period when the total Pan-Malayan imports dropped by over 15 million square yards, China sold a further 10 million yards and replaced India as the second supplier. The Indian share by volume dropped from 5 per cent. to 1 per cent. and the Japanese from 82 per cent. to 67 per cent. The price comparison table shows, curiously, that the Russian product (fourth most popular last year after Japan, China and the U.K.) is the cheapest by a long way. In 1958, the Chinese price was only one cent a yard below Hong Kong and 2 cents below India. But the pattern of the Chinese price over the last three years is significant. In 1956, it was the highest of the "cheap" suppliers outside Europe and North America, and only just below the average price for all suppliers.

(3) **Bleached woven fabrics:** Cheaper yet is the bleached woven fabrics, where China's progress has not been so spectacular, though this is a market worth some \$20 million to \$25 million annually. In the past three years, Peking has increased its share only from 6 per cent. to 7 per cent. by volume. Ironically, China's modest promotion from the third to fourth place in the suppliers' list was at the expense of Czechoslovakia. India, with 26 per cent. of the physical market (against 39 per cent. in 1956), has the cheapest average price, identical with the Russian (which has 2 per cent. of the market, making the U.S.S.R. fifth supplier). The Chinese average price last year was 17 per cent. higher than the Indo-Russian level but 2 per cent. below Hong Kong, 16 per cent. below Czechoslovakia. Throughout the three years, it remained around 13 per cent. lower than the average for all suppliers.

To sum up, of the rise of 21 million square yards (\$10 million) in the exports of Chinese woven fabrics to Malaya between 1956 and 1958, printed cloth accounted for 10 million square yards (\$5 million), dyed fabrics for 5 million square yards (\$3 million) and bleached varieties for 4 million square yards (\$2 million). The share of coloured and unbleached piecegoods was 1 million square yards each. In other words, the greatest advance of China was in a field (printed woven fabrics) which is relatively unimportant for India and its second major success, namely, in dyed fabrics, was in a sector in which India's earnings dropped slightly less than throughout the whole cotton fabrics field (from 45 per cent. to 40 per cent.). Commenting on this trend, a report says:

"Nevertheless, in spite of these indications that, some of the time at least, Peking is beating India to the post in newly expanding markets rather than simply replacing India in a static market, it cannot be gainsaid that, under normal free trade—and assuming continuance of Peking's export volumes and prices—India must resign herself to taking third place below Japan and China in cotton fabrics. But Japan and other former suppliers will be almost as resentful as India of the Chinese expansion in this market (Malaya)."

With regard to cotton clothing (underwear, nightwear and outer wear), exports from India to Malaya receded from 35 million dozen units in 1953 to 26 million dozen units in 1958, while those from China went up from 6 million dozen units to 124 million dozen units. The bulk of Malaya's clothing imports comes from Hong Kong, amounting to as much as 1,465 million dozen units, representing 85 per cent. of the total. In terms of value, the aggregate value of imports during 1958 was \$53 million, of which Hongkong alone accounted for 40 per cent., the percentage share of India, Japan, and China being 20, 15 and 7, respectively.

Cotton Clothing

Although China has made a relatively small inroad into Malaya's market for cotton clothing, it has risen to the position of second biggest supplier, overtaking Japan, India and others. Its advance which brought it an additional \$1 million over the five-year period 1953-58, was almost entirely in underwear and nightwear; the average price of these in 1958 was the cheapest of the competitors, 17 per cent. lower as compared with the next cheapest source, Japan. China reduced the prices of unknitted underwear and nightwear considerably last year, but the average of the reduced price was twice the Japanese price. In outerwear, China made little advance, though it established itself as the second largest supplier of knitted garments in 1958, with 180,000 units.

Cotton handkerchiefs are an important area of Chinese success; the number actually exported moved up from a bare 108,000 in 1956 to 823 million (worth \$3 million) in 1958, increasing its share of the market from 1 per cent. to 46 per cent., beating Japan which was the leading supplier.

China has also been offering stiff competition in the Malayan "other" textiles market. It was, for instance, the largest supplier of impregnated fabrics and felts (excluding linoleum) as well as household linen, its percentage share of the total being 36 and 62, as against 10 and 43, respectively, in 1956. China has made great strides with tulle fabrics, cornering 22 per cent. of the total yardage in 1958, as against just one per cent. in 1956. It may be noted here that India does not export any tulle fabrics to Malaya. In the case of yarn and thread, the percentage share of China in the total imports into Malaya advanced from 3 in 1953 to 13 in 1958, whereas that of India fell from 13 to 5, the value of exports declining by \$1.1 million. Taking cotton yarn and thread alone, China doubled its share of the Malayan physical market from 7 per cent. in 1956 to 15 per cent. in 1958 at the expense more or less equally of India, Pakistan and the U.K.

In the field of silk and fabrics, China replaced Japan as the leading supplier to Malaya in 1957, its percentage share in the total being 42, as against 31 in 1956. Japan's share dropped from 38 per cent. to 24 per cent. Exports of Chinese synthetic fabrics to Malaya in 1958 were negligible being 1.8 million yards, as against 174.6 million yards from Japan, 15.87 million yards from India, 8.10 million yards from the U.S. and 4.35 million yards from W. Germany.

THIRD PLAN TARGETS FOR WOOLLEN INDUSTRY

At its meeting held on 7th July, the Development Council for the Woollen Industry agreed that the third Plan target for wool cloth should be set at 30 million yards a year. Present production is over 19 million yards and it was considered possible that the second Plan target of 20 million increased exports of wool cloth were still to run, as well as a greater consumption within the country carpets—was expected to reach 45 million lbs. as lion. The meeting thought that it would not be necessary to install more looms or spindles to now running on wool would have to be worked for cloth. At present, there are 192,000 spindles of Indian woollen and worsted mills. By running target, it was felt, would be reached.

3,000 ADDITIONAL AUTOMATIC LOOMS

The Government of India has decided to permit the installation of 3,000 additional automatic as an export promotion measure. Broadly, the conditions for allotment of such automatic looms will be as under:

(1) The entire production of the automatic looms will be exported. (2) 50 per cent. of the exports in any of the three calendar years, 1954, 1955 and 1956, should be maintained in addition. (3) These two conditions will be enforced by a simple bond.

The mills which wish to install such additional automatic looms, are requested to apply immediately in the prescribed form to the Textile Commissioner on or before 31st August 1958.

PROGRESS OF CONTROL ON SUGAR

U.P. GOVERNMENT INTRODUCES RATIONING

IT looks as though sugar will soon become a commodity subject to full-fledged control, from the producer to the consumer, all over the country. Indeed, it is already so in some parts of India. Close on the heels of the assumption of powers by the Union Food Ministry to allocate the entire sugar production of mills directly to dealers and the introduction of the system of licensing genuine dealers in sugar by the State Governments, the Central Government has announced (vide notification dated 16th July 1959, referred to in our sugar market report last week) that control is now being exercised on the prices that can be charged by dealers to whom direct allocations of sugar are made by the Central Government. According to the notification, every dealer who is allotted sugar by the Government is required to sell at a price not exceeding the aggregate sum of (1) the fixed ex-factory price, (2) the transport charges incurred by him, (3) any octroi or other tax paid or payable by him, and (4) a sum not exceeding Re. 1 per maund for his profit and any incidental charges; the actual price is, of course, to be fixed by the District Magistrates. The margin of Re. 1 per maund allowed to wholesalers works out to about 2½ per cent. This is quite liberal, as compared with only Re. 1 per bag (or about 1 per cent.) allowed by the Government of Bombay to wholesalers in this State. Since wholesale merchants voluntarily agreed to this figure, they must be quite content with it.

Just a week after the above notification was issued—on Friday the 24th inst.—the Government of Uttar Pradesh, which accounts for nearly 50 per cent. of sugar produced in India, assumed "full control" over the distribution of sugar throughout the State, as against the previous arrangement of sales not only through fair-price shops at controlled prices but also through the "free" market without any check on the retail prices. As a result of this decision, card-holders in all the major towns of the State where partial rationing was in force are now assured of a supply of 1½ seer per unit each month at the fixed rate of 97 nP per seer.

Uttar Pradesh and Punjab

The State's entire monthly quota of 25,000 tons is being turned over by the Centre to the State Government for distribution through its chosen wholesalers and retailers; nothing is left for the "free" market. Out of this quantity, 8,495 tons are to be distributed in 31 towns which have a population of more than 50,000. While the wholesale distribution will be done through the Provincial Co-operative Federation, the main retailers will function as the fair price shops. The small towns, rural areas, bakers, confectioners, hotels, hostels, and restaurants will be given a monthly sugar quota of 2,500 tons (representing 10 per cent. of the Central quota allotted); the District Magistrates will decide who should be the retailers in these areas. The quota for the small towns will also be released to licensed wholesale dealers by the Centre on the recommendations of the District Magistrates. The Government's decision was announced by Mr. Jagmohan Singh Negi, the U.P. Minister for Food and Civil Supplies. The justification given in support of the decision is this: The price of sugar in the State rose sharply, apparently without any reason, in May last from the officially fixed price of Rs. 36 a maund to Rs. 50. Efforts to reduce this price have yielded so far almost negligible results. At the State capital, sugar sells at Re. 1.19 a seer.

U.P., a surplus State, has thus fallen in line with the Punjab, a deficit State, where the State Government had taken over the distribution of sugar and introduced rationing a few days earlier. It is significant that, even though U.P. produces 50 per cent. of the all-India production, in the matter of distribution, it is treated like all other States. This is undoubtedly one of the benefits of industries, unlike agriculture, being under Central control. In the case of foodgrains, each State tries to secure its full requirements first and only the surplus is made available for distribution elsewhere. It is common knowledge that, in the past, U.P. used to charge high rates for the surplus foodgrains sold to Madras, thereby creating some ill-feeling between the two. This state of affairs prevails even today in regard to certain other States and its absence is a refreshing feature in sugar.

The Punjab Government, it will be recalled, has fixed not only the retail price of sugar sold through fair-price shops at Re. 1 per seer but

buy at one seer per head (infant, child or adult) per month. The distribution of sugar in urban areas is on the basis of grain distribution cards and, in villages, it is sold through co-operative societies in association with village *panchayats*. The Centre has agreed not to supply sugar to any dealer.

Bombay

The Bombay Government also has imposed practically full control on sugar, with the exception of stipulating the maximum quantity that can be purchased by an individual at any given period of time. Thus, the ex-mill price has been fixed at Rs. 111 per bag in Greater Bombay (a slightly higher price is allowed for other areas) and retail price at 51 nP per lb. for the City (and 52 nP per lb. for other areas). Movement of sugar outside the State is banned, while that outside the City of Greater Bombay is regulated.

The industry and the wholesale trade in Bombay are working in close collaboration with the State Government. The movement of sugar has so far been smooth. The initial scare of shortage which was prevalent early this month has disappeared, thanks to the commendable efforts of the trade and the mills. Despite the slender margin of profit allowed to them, the principal wholesale dealers gave wide publicity, through advertisements in the daily papers at their own cost, to the fair ex-mill, wholesale and retail prices and assured the public and retail dealers that adequate sugar was available for all. The mills also co-operated with them in this publicity campaign. These voluntary efforts are clear proof of the anxiety of the trade and industry, as well as of the State Government, to avoid rationing.

South India

With the aforesaid moves of the Governments of Uttar Pradesh, Punjab and Bombay, extensive controls have now come to be imposed on as much as 68 per cent. of the total quantity of sugar produced in India. The balance, too, is subject to some sort of control. Thus, through a private arrangement by the South Indian Sugar Mills' Association (S.I.S.M.A.), sugar is controlled in the States of Andhra Pradesh, Madras, Mysore, Kerala and Orissa which together account for about 15 per cent. of the aggregate output. The total annual consumption requirements of the five States are estimated at 330,000 tons. Mysore is more or less self-sufficient and Andhra Pradesh has surplus sugar, while Madras and Kerala are deficit. It is in these two States that the S.I.S.M.A. has taken steps to make sugar available to consumers at a fixed price. These steps are summed up below:

The normal sugar consumption requirement of each district is taken into account on the basis of which each month's release is apportioned. The quota thus fixed is sent in one or more lots to the distributor or distributors in the district. On the basis of an allotment of one to five bags per week per fair-price shop, the required number of retailers is selected for each district in consultation with the distributor. In order to qualify for running a fair price shop, the retailer must have dealt in sugar regularly in the past and he must give a written undertaking that he will sell at Re. 1.63 per viss or 53 nP per lb. and display a 12"×18" board to this effect. The list of approved fair-price

shops is sent to the distributor who should issue sugar according to the cards and make entries therein. The distributor's selling price is fixed at not more than Rs. 114 per bag of 2 cwts. at the shop, which works out to a commission at the rate of 87 nP per Rs. 100. The existing number of fair-price shops is 1,618 in Madras State and 765 in Kerala State. More such shops are being opened; the ultimate target in the two States is 2,000 and 1,500, respectively.

A separate quota is reserved for supply from the distributor direct to hotels, restaurants, mill canteens, co-operative stores, etc. Cards have been or are being issued to these consumers also. Bulk allotments of sugar are made direct from factories to certain district co-operative marketing societies or Central stores which undertake distribution through their primary stores and retail dealers of their own choice.

In certain districts, small wholesalers are given 50 to 150 bags lots at Rs. 113 per bag, but, at the same time, they are given a list of retailers among whom they should distribute the entire allotment at Rs. 114. These retailers have given an undertaking to sell at 52 nP per lb.

Politicians to Note

It will thus be seen that, as in Bombay, so also in the South, the mills and the trade are doing their best, in co-operation with the authorities, to ensure that the consumer gets sugar at fair prices. It is to be hoped that the politicians who miss no opportunity to malign the business community, in general, and the middlemen, in particular, will take note of this wholehearted co-operation from that community. They will also do well to reflect a little and find out for themselves as to who has been responsible for the emergence of a shortage in sugar. In order to help them, we may recall, even at the cost of repetition, the events leading to the present situation. It was the Central Government which first made the mistake of interfering with the normal market forces of supply and demand by fixing the ex-factory prices of sugar for North India, reserving a fairly large part of the current season's output for distribution through official agencies and trying to increase sugar exports. On their part, the State Governments, particularly the U.P. Government, failed to take any timely steps to regulate manufacture of *khandasari* and *gur*, with the result that the producers of these commodities competed with the sugar mills for sugarcane.

Thanks to the bungling of the Centre and the States thus, sugar production in the current season (1958-59) has suffered a distinct setback. The quantity actually produced is no more than 1,904,000 tons, as against 1,979,000 tons in 1957-58. This, together with the reduced carryover stock of 336,000 tons (as against 435,000 tons), brings the total supply to 2,240,000 tons. Excluding the frozen export quota of 25,000 tons, the quantity available for internal consumption comes to 2,215,000 tons, which compares very unfavourably with 2,378,000 tons in 1957-58 and 2,418,000 tons in 1956-57. While the supply is less, the consumption requirements of the country have gone up, the estimate for 1958-59 being 2.12 million tons. Even this, in our opinion, is an underestimate. Consequently, the stocks of sugar with mills at the end of the current season (31st October 1959) are expected to be negligible.

Considering the tight statistical position of sugar and the all-round increase in commodity prices as a result of inflation, sugar prices, too, naturally tend to rise. Instead of appreciating this position and taking steps to help sugar mills maximise output, the Central Government adopted a negative policy as was indicated before, under the pretext that the millowners and wholesalers were profiteering greatly by putting up prices. This was certainly a wrong judgment and the consumers of sugar in many parts of the country are now compelled to undergo the rigours of rationing once again.

Since the above article was prepared, the Government has promulgated an order prohibiting movement of sugar from one State to another in the Northern region, except under an allotment order issued by the Central Government. This step, it is said, has been taken to ensure that allotments made to each State are available for consumption in that State. There will, however, be no restriction on movement within the Southern region comprising the States of Andhra Pradesh, Madras, Mysore, Kerala and Pondicherry. Announcing this new control, along with a release of 180,000 tons of sugar for sale, the Union Food Ministry Press note dated 27th July says:

"This time, there will be no free sale release from factories in the Punjab, Uttar Pradesh and North Bihar, except a small quantity which will be released to each factory for sale to its employees. Sugar will be allotted from factories in the Punjab, Uttar Pradesh, and North Bihar either in accordance with special arrangements made by the State Governments or, where such arrangements have been made, to licensed dealers according to the needs of different areas. The allotments will be made at prices fixed under the notification of 22nd December 1958."

The reason given for exempting the Southern

PACE OF WORLD ABSORPTION OF TEA SLOWS DOWN

NEED FOR INCREASING CONSUMPTION IN INDIA

IS the world supply of tea outstripping consumption and, if so, is it so much as to call for a revival of International Tea Agreement for regulation of exports? Tea planters in India have often expressed their anxiety over the trend of world supply of tea and have called for the revival of the Agreement. Statistics relating to world tea position upto the end of 1958, published by the International Tea Committee in its *Annual Bulletin of Statistics*, June 1959, show that the misgivings are not wholly unfounded. Though the trend of world absorption is upward, the increase during 1958 was much less than that in the total supply. It was also very much lower than the rise in consumption during 1957, so that there was an overall surplus of 74 million lbs. at the end of the year under review.

The total world supply of tea, which was 1,362 million lbs. in 1954, has successively risen to 1,490 million lbs. in 1958, an increase of 128 million lbs. in four years. During the same period, the aggregate absorption has expanded by 208 million lbs., that is, from 1,286 million lbs. to 1,494 million lbs., as will be seen from the comparative table published at the foot of this column. Nevertheless, at the end of the year, there was still a surplus as already noted. What is more, the rate of expansion in world consumption is tending to slow down. It is probably feared that, at this rate, the supply may once again outstrip the demand to a considerable extent. The pace of increase in consumption in the four leading exporting countries (India, Pakistan, Ceylon and Indonesia) during the past year was particularly not very encouraging, having gone up by no more than 3 million lbs. to 334 million lbs., as against a rise of 76 million lbs. noted in 1957. Separate figures of consumption for India and Pakistan are not available for 1958. The consumption in Ceylon is, however, said to have gone up by 1 million lbs. to 25 million lbs. and that in Indonesia by a little less than 1 million lbs. to 19 million lbs. India and Pakistan together, therefore, account for the balance of 1 million lbs. The consumption of tea in the U.K., which had dropped from 507 million lbs. in 1954 to 478 million lbs. in the following year, has since then been maintaining an upward trend. The African countries have recorded a sharp rise, while the rise in consumption in the U.S.S.R. during 1958 does not compare favourably with that in 1957.

On the supply side, India, Pakistan, Ceylon and Indonesia together account for 90 per cent. of the total world supply, of which the share of India alone is nearly 48 per cent. Even with this leading position, India is not able to command a sellers' market. This is because, while its share in world supply has declined a little in recent years, owing to competition from other countries, the domestic consumption is not in keeping with the mounting population. Though over a period of years, the trend of consumption in India shows a rise, it is rather erratic. Planters are, therefore, worried as to

what might happen, if in a particular season markets are not able to absorb all that the industry produces as is the case with coffee now. It may pertinently be asked, in this connection, as to why India should not restrict its production. An answer to this question is provided by Mr. E. J. C. Menzies, Chairman, Anamalai Planters' Association. Addressing the annual meeting of the Association held on the 25th ultimo, he said:

"Under the present conditions of uncontrollable and ever-increasing costs, our only answer to the problem is to increase production, so that the increased costs may be spread over a larger output. So, increased output is becoming a compulsive feature of plantations' economy."

The solution to the Indian tea industry's problem, therefore, lies in actively promoting internal consumption. Referring to this point, Mr. Menzies observed:

"Either the people have the means and the inclination to drink tea or they don't. This leads us to the important question of market promotion—the organised and systematic method of inducing people to buy and drink tea. The internal market has responded well to the long and sustained work of the Tea Market Expansion Organisation of the Tea Board and its predecessors. From about 90 million lbs., out of a total output of 440 million lbs., in 1939, the internal market has increased its off-take to 235 million lbs., out of a production of 710 million lbs. in 1958. On the other hand, if internal consumption remains at present levels, while we plan increased production under the third Five-year Plan, the industry will

be faced with a very serious problem. Internal propaganda must, therefore, be continued with full vigour. It is thus clear that a third of India's tea production can safely be marketed in India without in any way diminishing our export effort."

While acknowledging the Government's gesture in reducing the export and excise duties to a small extent, Mr. Menzies pointed out that the industry was still bearing a crushing burden of taxation, in addition to the heavy financial commitments under the Plantations Labour Act and other legislations. From a short-term point of view such large collections from the industry might prove beneficial to the country, but Mr. Menzies was doubtful whether it would be so in the long run. In this connection, he cited the example of China, which in the 1800's followed a similar policy resulting in the extension of the tea industry to India and Ceylon and in its tea being priced out of the market.

A somewhat similar sentiment was expressed by Mr. M. W. Hoare at the annual general meeting of the Nilgiri Planters' Association held last week. He said:

"I can only repeat my warning of last year that new burdens of taxes and amenities, not to speak of the cost of supplies and services needed by the industry, cannot go on being added to our cost of production in the hope that we can find means to bear them. Nothing can be more dangerous than this trend of thinking. The tea industry has borne a bigger share of the tax burden than any industry in India—particularly any agricultural crop. So, we are not strangers to the idea of heavy taxes on our crops. But there is a prudent limit. To go beyond this is to undermine the stability of this great industry."

It is clear from the foregoing analysis that, unless a substantial relief in tax burden is given and a marked increase in domestic consumption is brought about through intensive propaganda, the Indian tea industry is in for difficult days.

INSIDE FACTS REVEAL

Stator Core
"Pre-built" before pressing into frame. Machining of the bore avoided by special assembly tooling.

Cooling Fans
Large fans draw air from the back and shield only. Air flow through the stator and fan shields, and thus keep away heat-dust.

Terminals
Avoiding stiff single-core leads, heavy multi-stranded flexible cables are used to make working easier and lead brittle.

End Shields
Ventilating windows below the horizontal axis make the motor drip-proof.

Stator Coils
Heavy grade polyvinyl covered wires into mica-insulated slots and impregnated with fully polymerising formaldehyde varnish.

Rotor
Pressure die cast with aluminium and dynamically balanced. Rigidly supported on over-sized ball bearings with ample grease capacity.

TACK

PERSONAL SALES TRAINING

means more sales at less cost...

Sales managers of large and small companies—marketing every kind of product and service—have found that TACK Sales Training contributes positively to solving their major sales problem: How to increase turnover without raising costs...

whatever the product or service!

Mr. T. R. Shields, Sales Director of Indian Oxygen Limited, says:
"Now that Tack Sales training courses are being held in India I can ensure that all our sales staff receive the benefits of this training and I am convinced that no organisation in India which has a progressive sales policy can afford to miss the opportunity of using Tack sales training now being provided through the British Institutes in Bombay."

Mr. D. K. Desai, Sales Manager of Dumex Private Limited, says:
"...I found the three-day Sales Training Course a refreshing one... Your approach, technique and emphasis on courtesies and human relations are really absorbing. I have no hesitation in saying that your Course would do a world of good both to the young and old, irrespective of the line of merchandise they are in to sell."

★ Tack Course in Salesmanship and Human Relations—3 days
★ Tack Course in Sales Management—2 days

Tack Training can help your Company

DEVELOPMENT OF SUBSIDIARY FOODS—II PROBLEMS AND SOLUTIONS

IN the previous issue of *Commerce*, it was stressed that the production of subsidiary foods (potatoes, sweet potatoes, tapioca, bananas and papaya) should be increased at least sixfold to meet the needs of a balanced diet and to reduce dependence on cereals. There are large possibilities of increasing the production of these crops in this country. As the Subsidiary Foods Production Committee stated, it is possible to extend, within a short time, the cultivation of subsidiary food crops without an undue pressure on the resources of the country. There are vast areas which are climatically suitable for the cultivation of these crops. Potatoes can be grown in most parts of North India in cold weather. In the Peninsula, too, they can be grown in cool areas of sufficient elevation. There can be two potato crops in an area, the summer crop and the winter crop. Potatoes require rainfall or irrigation, but not so much as rice does, since too much water is rather harmful. One of the greatest obstacles to the extension of potato cultivation in the past has been the lack of sound healthy seeds in adequate quantities at the right time and at reasonable prices. This problem has been largely overcome now.

The scope for increasing the cultivation of sweet potatoes is even greater. Sweet potatoes can be grown from stem cuttings, so that the seed problem which has been an obstacle to the extension of potato cultivation does not arise. Its demands as regards soil, manure, and water-supply are also not exacting.

Bananas can be grown in almost every part of the country, particularly Bombay, Madras, Andhra Pradesh, Kerala, Bihar, West Bengal, Assam and Madhya Pradesh, and it is possible to extend its cultivation substantially and quickly. Apart from large-scale cultivation that can be developed in the country, there is vast scope for planting on a small scale in every city and town and also near towns.

Tapioca is, however, confined to the tropics and the zone on both sides of the Equator up to 25° latitude. It cannot stand cold and does not do well even under moderate cold weather. Still there are extensive areas in the country with fair amount of rainfall where its cultivation can be increased both on commercial and small scale.

Papaya thrives well in those areas of Madras, Andhra Pradesh, Mysore, Bombay, Orissa, West Bengal and Bihar where rains are moderate and air is sufficiently humid. Extreme temperatures and stormy winds which are experienced in certain parts of North India are not conducive to its growth. But, in many parts of the North as well, such as U.P., upper parts of Madhya Pradesh, Punjab and Rajasthan, papaya can be grown on a small scale.

There is also vast scope for cultivating bananas, papaya and tapioca as kitchen-garden crops. Thus there are no insurmountable obstacles in the way of rapid expansion of these subsidiary crops. In many areas, crops like potatoes and sweet potatoes can be grown as second crops after paddy and not instead of paddy.

Major Obstacles

As indicated in the previous issue, the production of bananas and papaya has shown little progress in the past decade. There has been some improvement in the case of root crops, but considering the needs of the country, the rate of progress has been inadequate and has to be greatly stepped up. One of the main causes of slow progress has been the lack of a properly conceived and sufficiently large-scale development programme in the first and second Plans. Several other factors have hampered the growth of production and consumption of these foods. First, there has been lack of interest, knowledge and initiative on the part of producers. The subsidiary food crops in many areas have not been introduced, because the growers are not fully acquainted with the technique of their production, or are not fully conscious of the great advantage of these crops from the point of view of farm incomes. A large section of the growers does not have the necessary initiative to take to these crops.

Secondly, many farmers are not able to extend the area under these crops or cultivate intensively for want of resources, such as irrigation facilities, seeds or other planting material, manures and fertilisers, finance, etc. Though these crops do not require much more resources than does rice, their needs of water, manures and labour are more than those of millets.

Thirdly, absence of marketing facilities has been one of the important limiting factors. Subsidiary food crops are highly perishable. For want of adequate and cheap cold storage facilities, the markets for these crops lack such elements as large wholesalers and stockists which are found in the markets of foodgrains and commercial crops. Therefore, the marketing of subsidiary food crops, is based on current demand of the local population or of people of connected areas. The result is that, whenever there is some increase in the production of these crops, it is not matched by increased demand for them and this leads to a sharp slump in prices in the local markets. This factor has discouraged the expansion of productive activity in regard to subsidiary food crops.

Transport Facilities

Fourthly, transport facilities for subsidiary foods on the required scale and of the required type from producing areas to the rest of the country are very often not available. Even when they are, the heavy bulk and weight of these crops make transport very costly. This has proved a serious obstacle to an increase in the demand for subsidiary foods in areas where they are not produced. Similarly, inadequacy of village communications have stood in the way of desired progress. Unlike foodgrains and commercial crops such as jute and cotton, subsidiary food crops have to be transported to the market immediately after being gathered. The outturn of these crops is much larger in weight than of other crops, and many of these crops are gathered more than once on any particular piece of land. Therefore, the requirements of transport from the field to the market are much greater and more frequent, but these are often not matched by availability of suitable village roads and means of transport to mandis.

Fifthly, processing facilities have been lacking. It is obvious that, if subsidiary foods are taken in fresh form, they can be consumed mainly in the producing season. Over the rest of the year, their consumption is severely limited. For promoting the consumption of these foods throughout the year, it is necessary that there should be facilities for their dehydration and further processing, so that they can be stored at low cost and consumed over the off-season. Similarly, dehydration and processing is necessary for promoting consumption in the non-producing areas. Moreover, in their fresh form, subsidiary foods, such as potatoes, are taken as vegetables, while vast scope for increase in their consumption lies in their being used as substitute for cereals, for which their dehydration and further processing into flour, synthetic grain and other forms is necessary. In the absence of dehydration and processing, these foods have remained as of seasonal and local importance and the expansion of their consumption and production has been greatly hampered.

Lastly, subsidiary foods have suffered on account of high marketing costs. Due to difficulties and expensive character of storage and transport and also due to existence of too many intermediaries, the grower's share in the consumer's rupee spent on subsidiary foods has been highly inadequate. High marketing costs have, on the one hand, discouraged consumption and, on the other, denied the growers the necessary incentive to expand production.

Production Programme

The above analysis of the factors hampering the growth of subsidiary foods, makes it clear that the question of these foods has to be tackled simultaneously in regard to production, transport, marketing, storage, processing and consumption in a closely co-ordinated way. So far as production is concerned, no production targets or development programmes for subsidiary foods were laid down in the first Plan. In the second Plan, too, no targets for specific subsidiary foods have been fixed, though a beginning

has been made in the direction of developing fruits and vegetables in general. Rejuvenation of about 500,000 acres of existing orchards and planting of about 150,000 acres of new orchards has been envisaged for the second Plan period. For vegetables, a scheme to increase production from the existing area through supplies of vegetable seeds of guaranteed performance and purity is in force. In addition, research work to evolve new and better varieties of seeds and to determine suitable cultural and agronomic practices is being carried out. The Central Potato Research Institute is also carrying on research and development work in respect of potatoes and some other tuber crops.

It needs hardly any mention that the programme for development and research in respect of subsidiary foods has to be greatly enlarged. The main elements of the production programme should be—

1. Provision of irrigation facilities, including the sinking and repairing of wells, tube-well construction, installation of pumping sets, etc., in areas suitable for subsidiary foods.
2. Multiplication of improved seeds, setting up of seed nurseries, distribution of seeds and other planting material for large-scale production as well as for production in kitchen gardens.
3. Distribution of fertilisers, mixtures, oil-cakes, etc.
4. Launching of an intensive manuring campaign including the preparation of compost manure so essential for the production of subsidiary foods; holding manual demonstrations, etc.
5. Distribution of improved implements, keeping in view the special requirements of subsidiary food crops.
6. Popularising the cultivation of subsidiary food crops by demonstration of methods of cultivation, by setting up model farms and through propaganda and publicity.
7. Campaign for double cropping by inducing farmers to grow subsidiary foods not in place of paddy or other foodgrains but as second crop after foodgrains.
8. Provision of plant protection facilities, including equipment and insecticides.
9. Research in agronomic and agro-climatic aspects of subsidiary foods, including evolution of improved strains, disease control, field trials, drawing up of suitable manual schedules, soil surveys, etc.
10. Training of horticulturists and extension workers in subsidiary foods.

Dehydration

As already mentioned, most of the items of subsidiary foods are highly perishable but by suitable measures of preservation and processing it is possible, in order to make available the surplus of the season of plenty for consumption during the lean period, or to move the surpluses from producing areas to distant consuming areas. Dehydration in one form or another has been one of the common methods used from ancient times in India for preserving perishables. Dehydrated vegetables can be stored for cooking in the lean season, while dehydrated potatoes, sweet potatoes, tapioca, bananas, etc., can be converted into flour for consumption as substitute for cereals. This process, besides enhancing the availability of foods in the right form, would also provide a large amount of employment in rural areas. For the purpose of dehydrating and milling into flour, it would be necessary to organise and promote cottage industry for dehydration under village conditions, consisting of chipping on simple hand-driven machines and drying under the sun, with chemical treatment wherever necessary. In some cases, it would be necessary to organise and promote the setting up of ovens or hot air chambers. For converting the dehydrated material into flour, it would be required to organise and promote the industry for milling through stone chakkies, or in some cases iron mills. In some cases, it may be enough simply to provide pestles and mortars for powdering. As far as possible, this work of dehydration and milling should be organised on co-operative lines.

Consumption

Side by side with the programme for increasing the production of subsidiary foods, it is necessary to take steps to promote their larger consumption and better utilisation. Food habits are part of social and cultural traditions and cannot be altered abruptly even when changes are practicable and desirable. Considerable effort would have to be made to bring about the desired changes in the pattern of consumption implied in larger production of subsidiary foods. The drive for promoting larger consumption is to rely on making these foods properly balanced, adequately nutritive, palatable, easily digestible and cheap.

Subsidiary foods can be taken by themselves in fresh form or after being dehydrated and converted into flour. But foods like potatoes, sweet potatoes, tapioca, bananas, etc., being

largely carbohydrate foods, deficient in proteins, it is necessary to blend them with protein-rich foods, so as to make them wholesome and balanced foodstuffs. The edible oilcakes are rich in proteins and are at present not being used for human consumption. Their blending with subsidiary foods would serve the dual purpose of augmenting the total availability of food for human consumption and making them properly balanced. Gram and wheat are other sources of protein. The Indian Central Food Technological Research Institute has evolved composite *atta*, consisting of a major portion of wheat and certain proportions of tapioca and groundnut meal. This is one of the many types of mixtures that can be evolved from subsidiary foods like potatoes, sweet potatoes, tapioca, bananas, oilseed meals, gram and wheat, keeping in view the need for low cost, palatability, nutritive value and regional availability.

In some areas, it is easier to promote the consumption of subsidiary foods in suitable mixtures as explained above, if they are offered to the consumer in the form of grain similar to the cereals to which they are accustomed. For this purpose, it is desirable to manufacture synthetic grain from subsidiary foods. The Central Food Technological Research Institute has already got an experimental plant producing synthetic rice. A project for setting up of a commercial plant with 20-ton capacity is under way. The production of synthetic rice deserves to be considerably expanded during the third Five-year Plan period. However, the main reliance on promoting larger consumption of subsidiary foods would have to be placed on composite flours which would be considerably cheaper than synthetic grain produced from those flours.

Subsidiary foods can be used in bakery products like bread and biscuits and various types of snack preparations. The All-India Women's Food Council, which was set up by the Government of India in 1950, has been carrying on a drive for encouraging the consumption of subsidiary foods through various snack preparations in its canteens and cafeterias, in addition to organising propaganda, publicity and

demonstrations. This work needs to be further pushed up.

Flours, mixtures or synthetic grains produced from subsidiary foods can be fortified and enriched with minerals, vitamins and amino acids, etc., to make them more nutritive and digestible.

The following measures would be necessary to promote larger consumption and better utilisation of subsidiary foods:

1. Organising and promoting the setting up of plants for the preparation of oilseed meals by special process so as to make them fit and palatable for human consumption.
2. Organising and promoting arrangements for the preparation of various types of composite *atta* as described above.
3. Organising and promoting the installation of plants for the manufacture of synthetic grain.
4. Promoting the use of subsidiary foods in bakeries and for snack preparations in hotels, *annapoomas*, etc.
5. Organising and promoting arrangements for the fortification and enrichment of subsidiary foods.
6. Subsidising the consumption of subsidiary foods in the various forms described above for certain period, wherever these foods are not sufficiently cheaper than cereals.
7. Setting up a machinery for publicity and propaganda for the popularisation of various types of subsidiary foodstuffs, through films, pamphlets, advertisements and through an extension organisation.
8. Organising research in the science of nutrition, including the evolving of formulas for preparing mixtures from subsidiary foods, devising recipes for subsidiary food preparations, methods of enrichment of subsidiary foods, etc.
9. Organising consumer trials to know the acceptability of different formulas and recipes by the people and the effect on their health and efficiency.

Marketing, Storage and Transport

As already explained, a major hurdle in the way of development of subsidiary foods is the lack of adequate marketing facilities. The main problems of marketing are:

1. Difficulty of movement of the produce in fresh form from the field to the nearby mandi and from there to a distant consuming area.

PLA-152

FACILITIES FOR SHIP REPAIRS ALAGESAN COMMITTEE'S SUGGESTIONS

THE paucity of repair facilities for Indian ships and foreign ships which visit Indian ports is a deficiency which has naturally attracted considerable attention in recent years. The problem is bound to become more and more acute as and when India augments its shipping tonnage. Even now, the absence of sufficient facilities for the repairs of ships compels ship-owners to look to foreign countries for repair services. Apart from the direct foreign exchange expenditure involved in getting Indian ships repaired elsewhere, there is a potential loss of such exchange in that, if the necessary facilities were available in India itself, foreign ships plying between India and its close neighbours would certainly be willing to get the repairs to these ships effected in this country. Appropriately enough, the Ship Repair Committee (Chairman: Mr. O. V. Alagesan, former Deputy Minister of Transport and Railways), the summary of the report of which was made available last week, has urged the Government and Port authorities to accept the principle that it is part of their responsibility to provide for the requirements of the ship repair industry.

It may be recalled that the Government of India appointed the Committee in January 1958. Its terms of reference were:

(1) To enquire into and report on the existing ship repair facilities in Calcutta, Bombay, Madras, Visakhapatnam, Cochin, Kandla and at such other places where in the opinion of the Committee, the problem needs looking into; (2) To recommend what improvement and expansion is required in such facilities in order to meet adequately the requirements of the developing merchant shipping of India as well as of non-Indian shipping which may require repairing facilities at Indian ports; (3) To report particularly whether facilities for dry docking available at present are adequate and, if not, what improvements/additional facilities are required and at which places; (4) To report whether materials, stores, etc., required for ship repairing are available adequately within the country or whether the country is deficient in this respect; if the latter is the case, to recommend what steps should be taken for reaching self-sufficiency in this field as far as possible; and (5) to consider and recommend the steps which are to be taken by the Government and the private sector for securing such improvement and/or expansion in the ship repairing facilities.

The Committee has emphasised that the ship repair industry has an important place in the general economy. Besides providing employment for many people, it builds up and supports a skilled labour force for various categories of work, is a useful adjunct to the general engineering industry and supports several subsidiary industries. The Committee observes: "It would be unwise for any country to rely on another country for the provision of repair facilities and in times of emergency such reliance may prove dangerous." It, however, recognises that the ship repair industry should be so organised as to be able to survive competition. This is because ship repair costs form an important part of the total operational costs of a ship so that an uneconomic ship repair industry would adversely affect the competitive strength of national shipping.

Repair Costs

It is computed that Indian shipping companies incur an expenditure of Rs. 24 crores per year on repairs. This figure, it is stated, may double itself by the end of the third Five-year Plan, thanks to the contemplated increase in shipping tonnage. Further, a well-organised ship repair industry would be able to offer its services to foreign lines. Taking this factor into account, the Committee places the total turnover of the industry at Rs. 10 to 15 crores annually. It says: "The possibility of attracting more work from foreign lines, however, depends on the provision of better overall repair facilities in Indian ports so as to enable the industry in India to make competitive quotations." It would, however, appear that ship repair costs are rising in India. This will naturally lead to diversion of repair work from Indian to foreign ports. The Committee rightly emphasises that "the various deficiencies which now contribute to higher costs in India should be removed." Since many of these are beyond the control of ship repairers, it is necessary that the Government and the various authorities concerned should consider each of such factors with a view to finding appropriate solution for them. The Committee feels that the provision of facilities for ship repair work, where no separate facilities exist, is as much a part of the legitimate functions of the port as the provision of cargo berth, crane, water and bunker-

ing facilities and dredging. There will be no real solution for the problems of the ship repair industry, it is stated, until this is recognised by Government and the port authorities. The Government has been urged to clarify its policy on this matter. "The problems of the industry," it says, "have become urgent and it is important that there should no longer be any ambiguity regarding this matter."

The basic requirements of the ship repair industry, according to the Committee, are well-organised workshops on the water front, preferably near the docks, adequate provision of dry docks, suitable repair berths in protected waters and availability of essential spares and materials. The Committee also emphasises the need for an efficient and trained labour force and simpler customs procedures. The ideal condition, according to the Committee, would be that the complex of workshop, dock and repair berth facilities should be under unified ownership or control to ensure ready availability. This is the case in many foreign ports. Even when the facilities are controlled by different authorities, it should be seen to that each of them is adequate to meet all demands.

Dry Docks

As regards the provision of more dry docks, the Committee states that, if its recommendations for provision of facilities and better management of dry docks in Calcutta and Bombay are implemented, there will be no need to consider the construction of additional dry docks for merchant ships in these two ports at present. It, however, recommends that new dry docks should be constructed, preferably at Visakhapatnam and Cochin, which would also help make the industry more broad-based. The target for repairing berths, it is stated, should be the provision of 12 fully equipped berths for both Calcutta and Bombay. In the ports of Visakhapatnam, Madras and Cochin, one of the new berths should be equipped as a repair berth and should be available for repairs whenever required. The port authorities must provide essential facilities at the dry docks controlled by them and also at the berths earmarked for ship repairs.

Emphasising the urgent need for undertaking modernisation of privately owned workshops, the Committee suggests that the Government should encourage such modernisation, if necessary with a scheme of financial assistance on favourable terms. Private workshops should be encouraged to develop facilities for various items of repair work which could not at present be carried out in India and the Government should give such assistance as may be required. The Indian Naval Dockyard should make its dry docks available to merchant ships for routine dry docking to the extent their own work permits. The facilities of port workshops at Visakhapatnam, Madras, Cochin and Kandla, according to the Committee, should as a matter of policy be made available to merchant ships requiring repairs. The Hindustan Shipyard has been urged to extend its activities to ship repair work and should take early steps to equip itself fully for this purpose.

A notable feature of the Committee's report is that it has stressed the need for a policy designed to ensure progressive manufacture in India of ship repair facilities and shipping stores. Till this stage is reached, the Government should take a liberal view of applications for import of materials which the industry may need. Ship repair workshops, it is suggested,

should undertake subsidiary work, such as small-size vessels, structural and general engineering activities, and manufacture of auxiliary equipment and spares for ships and for general engineering industries. The initiative for preparing necessary schemes for development of such subsidiary work must obviously come from the workshops themselves. The Government should, however, adopt a policy of assistance and encourage Government departments to place orders for small crafts, structural and general engineering items and the like with these workshops.

Finally, the Committee feels that it is necessary to form an all-India organisation of ship repairers and ship-builders. The Government should encourage the formation of such an organisation and give recognition to it. Further, it recommends the setting up of an all-India advisory body with representatives of ship repairers, ship-builders, ship-owners, major ports and the Government departments concerned. This body, which may be presided over by the Union Minister of Transport and Communications, should advise the Government on all matters pertaining to the industry as a whole. Until ship repair facilities are improved at other major ports, there is scope for local committees only at Calcutta and Bombay. These committees, it is stated, should deal with such specific issues as improvements in repair facilities, repair berth and dry dock programmes and shortage of materials.

U.K. ATOMIC ENERGY AUTHORITY

The U.K. Atomic Energy Authority "continued to collaborate with the Indian Atomic Energy Commission (I.A.E.C.) in tackling the problems of a young and rapidly growing atomic-energy project," says the Authority's fifth Annual Report (for the year ended March 1959), just published in London. This was done by lending specialist staff for short-term visits and for extended attachments, the report points out. There were also discussions with leading members of I.A.E.C. on their plans for introducing nuclear power into India. In its general review, the report notes steady progress in the development of civil applications of atomic energy in the United Kingdom. On the civil side, the chief aim has been to ensure the successful construction and operation of the first nuclear power stations now being built in Britain. Apart from this, extensive resources have been devoted to the development of more advanced types of reactor in order to provide progressively cheaper sources of nuclear power.

Lord Plowden, Chairman of the Authority, told a Press conference, last week, that by the late even with conventional stations on generating costs. It was also announced that a new machine to study some of the basic problems revealed by the Z.E.T.A. project had been designed by a Harwell team under Sir William Penney. This will be known as I.C.S.E. (Intermediate Current Stability Experiment).

Sales of radioisotopes rose again during last year, from £550,000 to £800,000. Sixty per cent. of these sales were in exports to 55 countries. More and more firms are turning to radioisotopes to provide them with continuous and accurate measurement of the thickness of sheets of material in welds and castings by gamma rays in new standard practice, and the logging of strata of boreholes in oil prospecting is greatly assisted by using radioisotopes.

Another example of development is the ability of radioactive cobalt to kill germs. This property is being put to effective use in Australia, where the first industrial gamma-ray sterilisation unit in the world is now being built. This will sterilise animal fibres to safeguard against the possibility of spreading anthrax, a killing disease.

Major events during the year under review included the agreement with the United States in July last year for exchange of a wide range of nuclear defence information; the production of the 1,000,000th uranium fuel rod; and the agreement with 11 other European countries to build in Britain an experimental high-temperature, gas-cooled reactor.

ELECTRA

KLM Royal Dutch Airlines' Electra is the first international model of the prop-jet transport to fly 188C, its fuel capacity has been increased by 970 gallons, giving the aircraft a 3,500-mile range as compared with the domestic Electra's 2,750 miles. version of seating arrangement from 60 to 99 extra toilets at the rear of the cabin. Flight deck has full navigator's station with over-water and radio-communication equipment. KLM's will be the first of the international models to be delivered. Other Model 188C buyers include Tasman Empire Airways, Qantas Empire Airways and Garuda Indonesian Airways.

The contract for building Australia's first 200,000-kilowatt steam turbo-alternators has been awarded to the English Electric Company, Limited. The turbo-alternators will be installed at a new power station, situated 70 miles north of Sydney and when complete, it will be the largest in the southern hemisphere with a capacity of 1,500,000 kilowatts.

JESSOP AND COMPANY LIMITED

SIZABLE INCREASE IN PRODUCTION ENVISAGED

SPEECH OF SIR BIJOY PROSAD SINGH ROY AT ANNUAL MEETING

THE Twenty-seventh Annual General Meeting of Jessop and Company, Ltd., was held at Calcutta on 24th July 1959. Addressing the shareholders on the occasion, Sir Bijooy Prosad Singh Roy, K.C.I.E., Chairman, Board of Management, said that the Company had been assured of further orders to keep its new works fully occupied. He also envisaged a larger increase in the Company's production by 1960-61 as the supply position of steel was expected to be much easier by then.

The following is the full text of Sir B. P. Singh Roy's speech:

"GENTLEMEN:

"It gives me great pleasure to welcome you today to the twenty-seventh annual general meeting of your Company.

"At the previous annual general meeting held in September last year, I told you that the new works set up for the manufacture of metre-gauge passenger coaches and electric multiple unit broad-gauge coaches for the Calcutta Electrification Project had gone into production, but output had been restricted by shortages of steel and components. As you will have read in the Press, the Railway Minister, Shri Jagjivan Ram, presided at the inauguration ceremony of the handing over of the first electric multiple unit coach on 6th June 1959. This is indeed a landmark in the history of your Company, because it has established a new industry in India, and will save the country valuable foreign exchange.

"The Company has been assured of further orders to keep this new Works fully occupied, and I hope this will make considerable contribution towards the prosperity of your Company.

"For many years we have manufactured metre-gauge passenger coach shells which have been furnished by the railways, but your Company was recently requested by the Railway Board to undertake the complete furnishing of these coaches. I am pleased to inform you that your works have now commenced production of furnished coaches and hope to build up to a full output within the course of the next two or three months.

Another Important Development

"Another important development is that we have had to make a major change in the main line of wagon manufacture in your works. For the last 30 years we have received from the Railway Board orders for large numbers of four-wheel covered goods wagons, and as demand increased, your wagon works was organised for production of these wagons at the rate of 15 per day. In 1958, the Railway Board decided that manufacture of the four-wheel

general service goods wagon should be discontinued, and that its place should be taken by a heavy bogie vehicle of entirely new design.

"Prototypes have been made, but details of design are still under discussion with the Railway Board, and because of shortages of steel and components, it will be about the end of this year before the works will be able to commence production of the new B.O.X. wagon in quantity.

"This new wagon needs considerable amount of welding for which entirely new procedures will have to be evolved, but I am fully confident that the technicians and workmen at Dum Dum will successfully overcome the teething difficulties which are inevitable with any new line of production.

"The demand for our diesel road rollers continues at a very satisfactory rate, but the shortage of steel and imported components has prevented your works from increasing output to its rated capacity of 200 rollers per year. Once adequate supplies of materials are available, the works should be able to meet the present demand without difficulty.

Shortage of Materials

"You will note that I have more than once referred to shortage of materials, and this acute shortage has inevitably affected the financial results. At the annual general meeting last year I had referred to the fact that your works were being seriously affected by the shortage of steel which was being increasingly felt throughout the engineering industry, and I had also mentioned that, while results for the year ending in October 1958 would be satisfactory, they would certainly not be as good as they would have been, if production had not been hampered by shortage of raw materials. The accounts now in your hands show that the material shortage to which I referred has, in fact, restricted production to such an extent that the output from the works was Rs. 91 lakhs less than that during the previous year. The reduction in output has caused a small fall in profits, but in view of the difficulties caused by shortage of materials I think you will agree that the results for the year are quite satisfactory.

"This shortage of raw materials still continues and production of wagons and other products in the works is still on a restricted scale, but fortunately, with the commissioning of the new coach works, we have not had to retrench workmen, and it is hoped that we shall be able to continue at the present rate of production until adequate supplies of steel are available from the new rolling mills at Rourkela, Bhilai and Durgapur.

"In view of the continued shortage of raw materials the results for the current year ending in October 1959 may not be as good as those for the year ended in October 1958, but it is hoped that materials will be more plentiful in 1960 and once supplies are readily available the output from your works should increase considerably.

"The findings of the Fifth Engineering Tribunal were announced on 6th December, and one of the immediate effects of the award was an increase of Rs. 5 in dearness allowance to every workman at the Dum Dum Works. Several points in this award required clarification, and were referred back to the Tribunal. We understand that a decision will be announced within the course of the next few weeks. The effect of this award will be a substantial increase in the wage bill at Dum Dum, but this is in keeping with the country's objective to raise the general standard of living. I hope it will also be helpful to increased output by the workmen.

Export Markets

"The country is most anxious to find export markets for engineering goods, and your Company has constantly borne this in mind. A preliminary survey of

last year by one of the members of the Board of Management, and this survey has clearly shown that, if we are to obtain export business we must quote firm prices and guaranteed delivery times, but unfortunately supplies of steel have been so irregular during the last eighteen months that it has not been possible to submit quotations which would be considered. Your Company is fully alive to the vital necessity of engineering exports, and when raw material supplies are readily available every effort will be made to secure markets for its well-known products.

"It is indeed a matter of gratification to those of us who are associated with the management of your Company that it has at last been possible for the Board of Management to recommend payment of a dividend of 6 per cent. on the ordinary shares of the Company. It is by no means a high return on the capital invested, but I hope that you agree with me that the fact that it has been possible to recommend a reasonable dividend after providing for the heavy losses suffered by the Company in 1955-56 and 1956-57, is a matter of great satisfaction and relief to all concerned.

Outlook

"We visualise a larger increase in production with availability of steel by 1960-61. This will naturally require a much larger working capital than ever before. Thanks to the help that the Company has received from Government, to whom we are indeed grateful, it has been possible to meet the Company's financial requirements during the last one year. It should, however, be appreciated that, in order to implement the expanded production programme, it is necessary to improve the Company's financial resources and to build up a substantial reserve. For this purpose a cautious and conservative financial policy is not only desirable but essential. I do sincerely hope that the Board of Management will receive the full support of the shareholders in this respect.

"I may inform you that the Board of Management has now obtained legal opinion on the losses suffered by the Company in 1955-56 and 1956-57, due to certain speculative transactions of very doubtful nature, and has already submitted the opinion to Government for their consideration.

"Gentlemen, before I conclude I feel sure you will like to join me in expressing our thanks to the workmen and staff who at all levels have worked so devotedly to produce the excellent results.

"I would also like to express the Board's appreciation of the valuable services rendered by Mr. S. D. Srinivasan as member of the Board of Management till the end of May 1959 when he was transferred to Bombay. His place has been taken by Mr. A. L. Dutta."

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

PROVIDENT FUND DEDUCTION FROM "TOTAL EARNINGS" EMPLOYERS' CRITICISMS OF NEW PROPOSALS

WHILE the question of raising the provident fund contribution from the present statutory minimum of 6.25 per cent. to 8.33 per cent. is still under consideration, the Government of India has proposed another amendment to the Employees' Provident Funds Act and the scheme framed thereunder, with a view to permitting provident fund deductions on "total earnings" of workers as against on "basic wages" and dearness allowance only as at present. The amendment would bring within the scope of the term "basic wages" such allowances and bonuses as retaining allowance, holiday with pay allowance, festival or paid holiday allowance, incentive pay, incentive bonus, retainers' allowance paid in the sugar and other seasonal industries, night duty allowance, overtime allowance, shoe allowance, servant allowance in plantations, and production bonus.

Employers, as one of the parties directly concerned, have been asked to submit their views on the proposed amendment. They are in the dark as to what is going to happen to the proposal to raise the rate of provident fund contribution. Naturally, they wonder whether the present proposal is a substitute for the previous one or whether it is in addition to it. Apparently, it is the latter and not the former. In any case, they object to the proposal to permit provident fund deductions from total earnings on grounds of principle and practice. The Millowners' Association, Bombay, in a communication addressed to the Employers Federation of India embodying its view, submits that the proposal is not acceptable to it on the following grounds:

M.O.A.'s View

1. The employers had originally agreed that provident fund should be on basic wages only and not on dearness allowance. However, when the Government of India issued an ordinance it ignored the agreement reached at the Tripartite Conference and included dearness allowance.

2. Basic wages and dearness allowance are well defined and deductions have so far been made without any trouble.

3. If the aforesaid allowances are included, it will involve a considerable amount of calculations on the part of management and stricter supervision on the part of the provident fund administration. It is doubtful whether the change desired is worth the trouble involved.

4. The acceptance of the proposal is not likely to make any appreciable difference in the provident fund accumulations of a large majority of workers in the various industries of the country in which the Employees' Provident Funds Act has been applied. The employers are at present paying to Government, inspection charges and administrative charges and the inclusion of these allowances in basic wages would mean higher clerical cost to Government and, therefore indirectly to the employer.

5. There would be a tendency on the part of the workers to ask for certain allowances, so that, if they secured them through the tribunals, they would automatically get employers' provident fund contribution thereon.

In any case, according to the Association, it would be wrong in principle, to calculate provident fund on items designed to cover actual expenses or on items of non-recurring nature like bonus. In view of the fact that the proposal to enhance the rate of contribution from 6.25 per cent. to 8.33 per cent. is under consideration, the Government should be persuaded not to canvass seriously for the proposal, because it will involve a considerable amount of clerical and administrative work without appreciably benefiting employees.

Stand of Chamber of Commerce

The Bombay Chamber of Commerce is also strongly opposed to the proposal. In principle, the Chamber considers it ill-advised and unfair to ask employers to comment on the proposal, when the already much discussed proposal to raise the rate of contribution under the Employees' Provident Fund Act from 6.25 per cent. to 8.33 per cent. is still in abeyance. It is impossible to give a fair comment on the proposal regarding the replacement of basic wages with total earnings as a basis for the calculation of deductions until such time as Government has made clear what the policy is to be in connection with the proposed increase in the rate of contribution. In any case, the Chamber is opposed to both proposals.

Secondly, the Chamber is strongly of the view that any increase in benefits provided under the Employees' Provident Funds Act and the scheme would only serve to widen the already appreciable gap in the benefits available to industrial workers and workers in smaller industrial, commercial and agricultural units of the economy. It is thought that there is more need to broaden the spread of benefits to cover a much wider range of workers than to enrich still further the benefits of the industrial worker, who, at any rate, as far as provident fund is concerned, is already well provided for.

The experience of industry is that where additional deductions are made from cash payments to be made to workers, the immediate reaction is a demand for an increase in wages to take care of the additional deduction. The Chamber is not convinced that the workers would welcome the proposal, nor that it will necessarily promote industrial peace.

Practical Difficulties

The Chamber is convinced that the proposed scheme will be extremely difficult if not impossible to implement. The allowances which it is proposed to include in the basic wages for purposes of calculation are generally of a kind which fluctuate from one period to another, depending on the time worked or the production achieved. This means that the amount to be deducted each month may well vary from one month to the next and separate calculations in the case of large numbers of workers may be involved.

The resulting inconvenience and cost to employers will not be inconsiderable and there will be many opportunities for dispute regarding the amount calculated, if only because several of the allowances are not specific, and it will be very difficult to define them in such a way as to make it clear whether allowances at present provided are or are not to be included.

Apart from administrative inconvenience and additional cost of administration, the Chamber finds it hard to understand why it has been thought advisable to add allowances of one kind or another to basic wages for purposes of calculations of provident fund deductions. Allowances are by nature given for specific purposes and are intended to represent appropriate compensation or reward for particular effort. For this reason, it seems illogical to deduct a part of such allowances for purposes of calculating provident fund contributions. Moreover, it is considered wrong in principle to base deductions for provident fund on forms of emolument which are not paid regularly month after month and which are not consistent in the amounts payable.

Strongest Objection

These two memoranda sum up the main points of criticism against the proposal. The strongest objection to the proposal, as far as the employers and the general public are concerned, is the increase it will involve in the wage bill. There is no exaggeration in the observation of the Bombay Chamber of Commerce that it is just proposals of this kind which, in their cumulative effect, inhibit the production of quality goods at low prices and which in turn adversely affect the country's exports. It is common knowledge that labour welfare legislation enacted in recent years, especially since Independence, besides changing the entire structure of wages, has resulted in considerable enhancement of the cost of labour to management. The policy has been one of relating wages not to the market value of labour but to the elastic and ambiguous concept of the "physical and social needs of workers as human beings." The result is a succession of imposts on industry which have had no relation whatsoever to productivity. In addition to the cost of direct changes in wages, a series of non-wage labour costs, including provident funds, housing and other amenities, have been piled up on it. There are also quite a few fringe benefits for industrial workers, whose cumulative financial incidence is not only large but increasing. It has been estimated that the ratio of fringe benefits to salaries and wages in 28 important industries during the period 1946-56 has moved up from 3.3 to 5.4 per cent. The effect of these measures has been to make the financial burden on industries heavier and to widen the gap between the benefits available to industrial workers and other sections of the working class. The burden will increase, if the proposal to include a large number of allowances under provident fund were implemented.

One wonders whether the Ministry of Labour has ascertained whether the industry has sufficient capacity to bear the additional burden involved in the present proposal. The Ministry does not seem to have taken into account its probable impact on costs and prices. In any case, it is difficult to see any compelling economic reason behind the proposal. The only plausible justification for it, as far as one can see, is to please workers. The Labour Ministry, by bringing forward this proposal, has only laid itself open to the charge that it is the vote-getting wing of the Government, and that its policies are designed as instruments in electioneering.

A word of advice to employers. It is by now clear that the Government's labour policies are influenced more by political than economic considerations. Let it then face the consequence of directing the ship of economics with the radar of politics. Past experience shows that, however convincing or logical the reasons produced against specific policies, the Government will ultimately have its own way. Those who criticised them have been dubbed as reactionaries and as being unfriendly to labour. Why should they needlessly incur this odium. As the latest proposal is undoubtedly unwelcome, they should tell the Government that they have no objection to a straight increase in the rate of contribution to the provident fund, provided the Government will let them pass on the resulting increase in the cost promptly to consumers. By doing so, the employers can maintain friendly relations with their workers and let the responsibility for keeping up the wage-price spiral to be owned by the Government. If the Government insist on policies which will add momentum to the wage inflation, let it have them. One who sows the wind will surely reap the whirlwind.

F.A.C.T.'S AGREEMENT WITH WORKERS

Fertilisers And Chemicals, Travancore, Ltd. (F.A.C.T.), belongs to that class of enterprises in Kerala which has a good record of cordial labour-management relations. The reason for the existence of such islands of industrial peace in a sea of labour unrest in this country is to be found in the progressive policies of the management, the enlightened leadership of workers by the F.A.C.T. Employees' Association and the mutual recognition by each of the rights and responsibilities of the other. Both the Company and the workers have benefited from the attitude of co-operation: the Company has earned better profits and the workers have obtained a larger bonus. For the year ended 31st December 1958, the workers will get a bonus equivalent to 96 days' salary inclusive of D.A. which is more than three times the highest bonus declared by the Company, namely, 28½ days' salary inclusive of D.A., declared in 1955.

A new agreement reached between the management and the workers on 23rd April 1959 is a feather in the cap of both. Details of the agreement, which is to be in force for three years, are printed in a small booklet (*Memorandum of Settlement between the F.A.C.T. and F.A.C.T. Employees' Association*, issued by the Fertilisers and Chemicals Travancore Ltd., Udyoga Mandal, P.O. Kerala State).

A notable feature of the settlement is that the Association and the Company have agreed not to resort to strikes or lockouts for solving any dispute. Another is that the agreement provides for the constitution of a Joint Council of Management with equal representation for workers and management. The main function of the Council is to promote increased productivity, to engender among workers a better understanding of their role and importance in the working of the Company and to satisfy the urge of employees for self-expression. The provision governing bonus lays down that 15 per cent. of the Company's net profits will be paid as bonus.

PRODUCTION BONUS NOT PART OF WAGES

In a dispute between Messrs. Singh Engineering Works Ltd., Kanpur, and its workmen regarding payment of production bonus, the Industrial Tribunal (General), Uttar Pradesh, has held that production bonus was also a kind of bonus and that it could not, therefore, be treated as part of wages. The facts of the case are as follows: Messrs. Singh Engineering Works Ltd., Kanpur, was paying *ex gratia* production bonus to its workmen. During 1958, the workmen in its rolling department raised a dispute and contended that the existing scale of payment of production bonus was arbitrary and irrational and not commensurate with the stress, strain and hazard involved. Consequently, a revision in the rates of production bonus was asked for with the claim that this bonus should form a component of wages. The employers contended that the payment of production bonus was voluntary and that no Tribunal, or authority had power to order such payment. The Tribunal, citing a decision of the Supreme Court, held that production bonus was also a kind of bonus and was payable in those circumstances in which ordinary bonus was paid. It, therefore, held that a claim for production bonus could be entertained. But, unlike wages, it was not payable irrespective of the fact whether there was profit or not, and it could not be treated as a part of wages.

The Tribunal also rejected the workers demand for revision of the rate of production bonus as, in its opinion, workers could not substantiate their allegation that the existing scheme was arbitrary and irrational.

Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need—jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

UMESH YOGA DARSHAN (First Part)

SHRI YOGIRAJ UMESHCHANDRAJI

In Four Languages: English, Hindi, Gujarati and Marathi.

(Author: SHRI YOGIRAJ UMESHCHANDRAJI)

An excellent treatise on the true meaning of Yoga, which explains to you how to control your digestive, nervous, respiratory, urinary and other body systems. The book is fully illustrated with 108 real Asana Photographs and explains to you about their efficacy in attaining complete remedy of various ailments or disorders through the medium of Yoga, Naturopathy, Chromopathy, Psycho-Therapy, etc.

Useful for men and women alike, young or old, healthy or unhealthy. Deserves a rightful place in every home, hospital and library.

PRICE: Rs. 15/- Plus Postage Rs. 2/- extra.
No V.P.P. sent.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: Rs. 2.50 including Postage, to be sent by M. O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

RAMTIRTH BRAHMI OIL Special No. 1. Registered.

An Invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices: Rs. 4/- for big bottle and Rs. 2/- for small. Available everywhere.

TWO MORE TARIFF ENQUIRIES

AUTOMOBILE LEAF SPRING—COTTON AND HAIR BELTING

THE Tariff Commission is currently engaged in investigating the question of extending protection to a series of industries beyond the end of this year. The latest to be taken up by the Commission are (i) automobile leaf spring industry and (ii) the cotton and hair belting industry. In his introductory speeches at the opening of the enquiries, Mr. C. Ramasubban, Chairman, Tariff Commission, gave a brief survey of their position and progress since the previous inquiries. A short account of these industries is given on this page on the basis of the information given by Mr. Ramasubban.

In pursuance of the recommendation of the Tariff Commission in 1957, imports of automobile leaf springs are assessed to a customs duty of 50 per cent. *ad valorem* (standard). The automobile leaf spring industry, under the shelter of protection for the last five years, has given a good account of itself. Production has gone up considerably. Besides, the quality of the domestic product has been found, by and large, to be acceptable to consumers.

At the time of the last inquiry in 1957, there were six producers of leaf springs in the organised sector of the industry, namely, (i) Metropolitan Springs Private Ltd., Bombay; (ii) Canara Workshops Ltd., Mangalore; (iii) Premier Automobiles Ltd., Bombay; (iv) Tata Locomotive and Engineering Co., Ltd., Jamshedpur; (v) Bombay Motor Trading Co., Kapurthala, and (vi) Auto Pins (India) Regd., Faridabad. Besides, two new units, namely, Indian Liggett Company Private Ltd., Bombay (formerly Mahindra and Mahindra Ltd.), and Deepak Industries, Delhi, were granted licences to undertake the manufacture of leaf springs. These firms have, however, not yet gone into production. Two more licences have been issued for the manufacture of leaf springs, one to Fateh Chand Madan Gopal, Delhi, and the other to Canara Workshops Ltd., Mangalore. The sanctioned capacity being 2,400 tons a year for each of these units. Fateh Chand Madan Gopal is understood to have already made arrangements to import the necessary equipment and expects to commence production in about a year's time. Canara Workshops Ltd. has plans to establish a new unit either at Kalyan or Nagpur.

Installed Capacity

The combined annual capacity of the six units named above is about 9,530 tons on single shift, as against 8,000 tons in 1957. Production has also gone up from 5,945 tons in 1957 to 7,047 tons in 1958. During the first quarter of 1959, the output of the units aggregated 2,068 tons, or an annual average of over 8,200 tons.

In addition to the organised sector, there are many small-scale units engaged in the production of leaf springs and spring leaves. The figures are available for about 25 units; their annual capacity is estimated at 10,424 tons on a single-shift basis. In 1958, these units produced 3,554 tons of leaf springs and spring leaves, as against 2,143 tons in 1957. Besides, there are many cottage units undertaking repairs and which also produced loose leaves of small sizes, the data for which are not available.

As for the demand, in 1957, the Tariff Commission estimated it (exclusive of defence requirements) at 406,450 springs composed of 107,600 springs for original equipment and 298,850 springs for replacement purposes. In terms of weight, the total of these two worked out to 13,550 tons, on the basis of a conversion ratio of 30 springs to a ton. The Commission expected the demand to go up by 15 per cent. over the following two years. The present estimates of demand by various parties range from 312,000 to 541,000 springs for the current year and from 413,000 to 666,000 springs for 1961. In addition, the demand for spring leaves for replacement purposes during these two years is variously estimated at 1.40 million to 2.01 million units and 1.68 million to 2.41 million units, respectively.

The principal raw material required by the industry is spring steel of the following types, namely, (i) silico-manganese, (ii) chrome-vanadium and (iii) chrome-silicon. The other materials required are mild steel flat bars or strips and plates, phosphor bronze bushes, steel tubes for bushes, centre bolts, clip bolts, nuts and rivets. All the raw materials, except spring steel flats,

are reported to be available in the country in sufficient quantities. All the manufacturers of leaf springs import spring steel flats, but due to the difficult foreign exchange position, imports are allowed only to meet about 80 per cent. of their installed capacity. One of the units in Bombay procures a part of its requirements of spring steel flats from Guest, Keen, Williams Ltd., Calcutta, which manufactures them from billets supplied by the Iron and Steel Controller. The industry has complained that the supply of spring steel flats has been inadequate.

The quality of the leaf springs manufactured by the large-scale units, we are told, compares favourably with the imported ones. But the quality of springs manufactured by the smaller units was stated to be comparatively inferior. Some of the manufacturers of automobiles, however, complained of a few defects, such as variation in the size of spring eye and improper reaming, slackness in the rivets fixing the spring clamps to plates, non-uniformity in the rate of deflection and breakages during the course of operation. All the six units claim that they have necessary equipment for checking the quality of raw materials and finished products and have taken necessary remedial measures whenever specific defects were brought to their notice. The poor performance of the small units is attributed to the use of inferior material and poor technique of production.

Like many others, the automobile leaf spring industry has also benefited from the restrictive import policy. The following table shows the recent trends in imports:

Year	Leaf springs		Spring leaves	
	Quantity	Value	Quantity	Value
1957	1,309.8	17.55	88.7	1.68
1958	311.0	3.72	120.7	0.67
1959 (January and February)	201.9	1.84	23.5	0.14

The bulk of imports of springs and leaves came from the U.K.

Cotton and Hair Belting

The cotton and hair belting industry has been enjoying protection for the last eleven years. Nevertheless, its progress has been halting. It is still fighting against heavy odds. On the one hand, it is faced with stiff competition from rubber ply belting and 'V' belts. On the other hand, the industry is very much handicapped by the inadequate supply of suitable quality of hair yarn, one of the important raw materials.

UCOBANK'S RUPEE TRAVELLERS' CHEQUES

SAFE AND CONVENIENT MEANS OF CARRYING YOUR TRAVEL FUNDS

- ★ Instantly accepted
 - ★ Refunded if lost or stolen
 - ★ Spendable like cash
 - ★ Issued in convenient denominations

THE UNITED COMMERCIAL BANK LTD.

Head Office: CALCUTTA

G. D. BIRLA
Chairman

S. T. SADASIVAN
General Manager

Since the last tariff enquiry in 1956, the demand for cotton and hair belting has shown some decline, as is shown in the following table:

Year	Cotton belting	Hair belting	Total
1956	Tons 289	Tons 575	Tons 864
1957	252	483	735
1958	302	481	783

The fall in the offtake of cotton and hair belting would have been much more pronounced but for the fact that they are still preferred to rubber ply in a few cases where drives involve more arduous duties under hot, steamy, wet or oil conditions and where horsepower over 200 or very heavy shock-loads are used.

At present, eight units are engaged in the manufacture of cotton and hair beltings. Seven of them are located in and around Serampore near Calcutta and one at Madurai, Madras. Another unit is expected to go into production at Calcutta shortly. The present annual capacity of the existing units is 1,363 tons on single shift for both cotton and hair beltings. There is a considerable surplus capacity in the industry, as is evident from the following table, which indicates the recent trend in production:

Year	Cotton belting	Hair belting	Total
1956	Tons 289	Tons 575	Tons 864
1957	245	458	703
1958	322	450	772
1959 (January-April)	82	142	224

Cotton and hair yarn are the principal raw materials for the industry. Except for a small quantity of hair yarn, the raw materials are available within the country. The industry has complained to the Commission about the inadequate supply of both indigenous and imported hair yarn, and about poor quality and high prices of indigenous hair yarn.

The sub-standard quality of indigenous cotton and hair belting is attributed by the manufacturers to the inferior quality of raw materials. The manufacturers, it is said, are taking measures to improve the quality of their products. While imports of cotton belting have been completely banned since 1949, those of hair belting came to be severely restricted since 1956.

FLOUR MILLING INDUSTRY

Since the flour milling industry caters to processing of staple food products of the country, its fortunes are bound up with the pattern of, as well as policies governing, agricultural production and distribution. Although food production has gone up, the flour milling industry is still working under onerous restrictions imposed by the Government. Besides, the inadequate supplies of wheat, in particular, will hamper the industry. It is feared that State trading in foodgrains will, instead of easing their difficulties, lead to a further deterioration in the availability of foodgrains. This is the impression that one gets after reading the speech of Mr. G. D. Jatia, President of the West Bengal Flour Mills Association, at the fourth annual meeting of the Association on Wednesday the 28th inst.

The production of cereals in 1958-59 is expected to be 61 million tons, as against 53 million tons in 1957-58. This improvement is attributed to record yields in Madhya Pradesh, Punjab, Uttar Pradesh and Rajasthan. And yet the milling industry is not receiving adequate supply of grains, particularly wheat. The procurement programme for wheat in U.P. has received a severe setback. Purchases so far have been below expectations and arrivals have remained meagre. This has naturally created a serious situation in the matter of availability of wheat for flour mills. The anxiety of Mr. Jatia is understandable, since West Bengal being a deficit State in food, will be hard hit in the event of reduced marketable surplus in the State which are its principal sources of supply.

While the supply of wheat in West Bengal is thus none too satisfactory, the demand for wheat products has been increasing, owing to a general rise in the purchasing power of the people and in the population. Consequently, the flour milling industry is not in a position to meet the growing demand by maximising its production. According to Mr. Jatia, the present allocation of 800 tons of wheat per day to the roller flour mill in Calcutta, fixed sometime in 1956, is highly inadequate. This is particularly so, considering that the mills in Calcutta have to cater to the needs of Assam State as well. As the existing allocation of 800 tons per day covers only 66 per cent. of the requirement, the working of the mills is also rendered uneconomic. Accordingly, Mr. Jatia urged the Government of India to allot to the mills in Calcutta sufficient foodgrains that would keep them engaged upto 100 per cent. of their capacity, as is the case with the flour mills in Bombay.

Mr. Jatia further pointed out that his industry was confronted with a monthly surplus of wheat that there were good prospects for exporting wheat and that the Government should liberalise the restrictions on its export.

PROGRESS OF "TELCO" ENCOURAGING ALL-ROUND EXPANSION IN ACTIVITIES—GROSS PROFIT AT A NEW RECORD

THE Directors' report and accounts of the Tata Locomotive and Engineering Company Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay) for the year ended 31st March 1959 make encouraging reading. They disclose that the substantial capital expenditure made by the Company during the last few years has been yielding good results. The steady upward trend in activities was maintained in all the divisions of the Company's works during the year under review. There was an all-round increase in the output of locomotives, truck and bus chassis, products of steel and alloy iron foundries, as well as various welded and fabricated items of equipment. The sales of the Company's own products were also higher than those in 1957-58. In consonance with this trend in production and sales, the gross profit of the Company for the year under review also recorded a sizable rise from Rs. 245.08 lakhs to Rs. 284.55 lakhs. This higher profit has been achieved, despite the reduction in prices of spare parts for automobile vehicles and the actual loss in the locomotives and boiler division.

This is the second year in succession for which the gross profit has shown an improvement, such having gone up in 1957-58 by Rs. 43.41 lakhs. With the rise of Rs. 82.88 lakhs in two years, the gross profit of the Company has set up a fresh record in the year under review. Notwithstanding a substantial capital expenditure during the year, the provision for depreciation has been lowered by over Rs. 16 lakhs to Rs. 113.06 lakhs. Explaining this, the Directors observe in their latest report:

"The double normal depreciation allowance under the Income-tax Act having been withdrawn since 1st April 1958, the Company has set aside only normal depreciation for all assets other than the plant and machinery of the automobile division, for which depreciation has been provided on a fixed instalment basis in accordance with the assumed life of the assets. The provision made in respect of such plant and machinery exceeds the depreciation allowed under the Income-tax Act by about Rs. 11 lakhs."

The provision for taxation has been raised from Rs. 6.49 lakhs to Rs. 13.25 lakhs. This includes a sum of Rs. 6 lakhs for wealth tax, as against Rs. 4.30 lakhs provided a year ago. After these two statutory allocations, the net profit stands at Rs. 141.28 lakhs, representing an increase of Rs. 48.33 lakhs over that (Rs. 92.95 lakhs) for the previous year. The appropriation of the net profit discloses a change from last year's pattern. While the allocation to the development rebate reserve has been raised from Rs. 26.87 lakhs to Rs. 74.62 lakhs, no additions have been made to the general reserve No. 2 and reserve for excess dividend tax, which had received Rs. 54 lakhs and Rs. 1.50 lakh, respectively, last year. The Directors have, however, transferred Rs. 10 lakhs to the deferred taxation reserve. After these appropriations, the Directors had drawn last year a sum of Rs. 41.85 lakhs from the general reserve No. 1 (created out of the taxed profits), in order to enable them to pay a tax-free dividend of 9 per cent, whereas this year, no such withdrawal has been made to pay the same dividend on a higher capital raised during the year under review by a three-for-five rights issue.

The following comparative table provides an idea of the Company's progress in recent years:

(In lakhs of rupees)				
For the year ended 31st March				
	1958-59	1957-58	1956-57	1955-56
Sale of products and services ..	26,44.80	26,94.37	21,44.87	11,98.06
Sale of miscellaneous goods ..	...	...	...	...
Stores ..	...	...	...	...
Other income ..	...	...	...	...
Raw materials and stores consumed ..	19,50.00	19,34.95	17,54.70	7,79.52
Other expenses ..	5,26.45	5,68.22	2,68.11	2,02.48
Gross profit ..	2,94.55	2,45.08	2,01.87	2,45.71
Manufacturing Agents' remuneration ..	18.99	16.34	15.11	15.60

Ordinary ..	49.82	45.00	37.43	25.85
1% preference (taxable) ..	...	...	...	...
Carry forward ..	1.95	1.76	1.76	1.90

* Including all arrears since the date of issue of preference capital in 1950.

From the above table, it may appear that the turnover has suffered a drop of Rs. 49 lakhs, that is, from Rs. 26.94 crores to Rs. 26.45 crores.

It must, however, be noted that last year's figure included a substantial amount in respect of heavy trucks and other vehicles wholly imported from Germany. If this special element were excluded, the turnover in 1958-59 would have been actually higher than in 1957-58.

The following points from the Directors' report give an idea of the Company's progress in its various lines:

(1) The output of locomotive and boiler shops was 103 complete locomotives and 1 spare boiler, exceeding the previous year's output by about 15 per cent. Pending the Arbitrator's award on locomotive prices, the Company has taken into account only the provisional prices received from the Government for the locomotives and boilers delivered to it.

(2) In the automobile division, the total output of vehicles and spare parts, as well as the proportion of the parts and components of each vehicle made in the Company's own works exceeded the schedule laid down under the approved programme. The demand for Tata-Mercedes-Benz vehicles continues to exceed supplies. The main factors restricting the output of vehicles are the shortage of foreign exchange, the slow growth of ancillary industries and delays and difficulties in securing supplies of essential raw materials.

(3) New welding and fabricating facilities were brought into production during the year under report. Besides numerous items of welded equipment required by various industries, two ammonia stills, each weighing about 40 tons, were manufactured for a chemical works.

(4) The steel foundry made good progress during the year under report. The rate of production of castings continued to rise and the high quality of the products was maintained.

(5) The alloy iron foundry went into production in October 1958 and has commenced the supply of high grade alloy iron castings to the Company's automobile division. The rate of production has been progressively increasing.

In pursuance of the programme of continued expansion, the Company spent during the year under review Rs. 4.44 crores on additions to the fixed assets. This is on top of Rs. 5.32 crores in 1957-58 and of Rs. 4.47 crores in 1956-57. This brings the total capital expenditure up to the end of March 1959 to Rs. 20.50 crores. The depreciation provided so far on this gross block is Rs. 7.80 crores, so that the net value of the block account stands at Rs. 12.70 crores. The other assets amount to Rs. 18.84 crores. The total secured loans (including the 5 per cent. debenture loan of Rs. 3 crores issued to the public and repayable in 1960-65) aggregate Rs. 10.69 crores and unsecured loans Rs. 1.76 crore. The other current liabilities and provisions amount to Rs. 7.59 crores. These liabilities leave a net asset of Rs. 11.49 crores, represented by a paid-up capital of Rs. 9.99 crores and reserves and surplus aggregating Rs. 1.50 crore.

The outlook for the Company is promising. In response to the Government's invitation, the Company, among others, has submitted proposals for the manufacture of diesel hydraulic locomotives of the type made by its technical associates, Messrs. Krauss-Maffei A.G. and equipped with Mercedes-Benz heavy diesel engines which the Company would also be prepared to manufacture at Jamshedpur under licence from Messrs. Daimler-Benz A.G.

The Government of India has sanctioned the expansion of the Company's automobile division to produce 12,000 vehicles per annum and the manufacture of cabs and bodies for Tata-Mercedes-Benz vehicles. The supplementary manufacturing programme for the additional output is scheduled to be completed by January 1961. The Government has also sanctioned a scheme for the manufacture of pulp and paper making machinery, in collaboration with the well-known Swedish firm, Messrs. A. Johnson & Co., Stockholm. Subject to the satisfactory settlement of certain points regarding the terms of collaboration to meet the requirements of the Government, the project may be started before the end of this year.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 215 cum-div., after having touched a high of Rs. 233.50 on the 8th inst. Early this year, they stood at Rs. 155.25 and a year ago at Rs. 173 which included the rights also. On an ex-div. basis and at the current rate of dividend, the yield on the shares is 4.4 per cent. per annum.

BENGAL PAPER STEPS UP DIVIDEND SHARP RISE IN PROFIT

THE recommendation of the Directors of the Bengal Paper Mill Company, Ltd. (Secretaries and Treasurers: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) to raise the dividend on the ordinary shares of the Company for the year ended 31st December 1958 from 12½ per cent. to 22 per cent. is in consonance with the good performance of the Company during the past year. For the Company's output of paper recorded an expansion as a result of the increase in the number of working days and the production of certain industrial papers. Sales also rose by over Rs. 55 lakhs. The gross profit, therefore, has jumped up by Rs. 19.32 lakhs to Rs. 40.89 lakhs, probably a record in the history of the Company. This is the second consecutive year for which the dividend has been stepped up; it will be remembered that last year it was raised from 10 per cent. paid for 1956 to 12½ per cent., following a 50 per cent. rise in gross profit from Rs. 14.31 lakhs to Rs. 21.57 lakhs.

The successive rise in the gross profit of the Company during the last two years has more than made good the steep fall which had occurred in 1956 from Rs. 33.46 lakhs to Rs. 14.31 lakhs. While the provision for depreciation for the year under review has been slightly reduced from Rs. 4.03 lakhs to Rs. 3.45 lakhs, that for taxation has been more than doubled from Rs. 8.67 lakhs to Rs. 17.67 lakhs, leaving a net profit of Rs. 17.01 lakhs, which compares very favourably with that of Rs. 8.86 lakhs for the previous year. As in the previous year, the realisation on redemption of 100 debentures of the Ukhara Farming Corporation, namely, Rs. 10,000, has been added to the capital reserve, while the addition to the general reserve has been increased from Rs. 1 lakh to Rs. 4.09 lakhs. A sum of Rs. 1.14 lakh has also been utilised to create a development rebate reserve.

The salient features of the Company's profit and loss account for the last four years are compared in the following table:

(In lakhs of rupees)				
For the year ended 31st December				
	1958	1957	1956	1955
Sale proceeds ..	2,69.31	2,07.80	2,02.87	1,95.60
Closing stocks of finished goods ..	4.81	2.14	3.06	4.68
Raw materials and stores consumed ..	1,04.34	80.61	90.74	78.78
Excise duty ..	34.86	25.85	19.42	13.85
Other expenses ..	87.29	79.39	76.93	78.66

(22½%) (12½%) (10%) (10%)				
Carry forward ..	0.92	0.67	0.06	2.02

A drawback in the Company's Directors' report, as in the case of many others, is that it does not give the data relating to its capacity and actual production each year. The provision of this information will give an idea of the operational progress of the Company and lead to a better understanding of its financial results. In addition the Directors would do well to give details of the various kinds of paper manufactured by the Company. A mere statement, as the present one, that production was higher is not sufficient.

The latest balance-sheet of the Company shows that its financial position is quite satisfactory. The paid-up capital of Rs. 71 lakhs (made up of 180,000 ordinary shares of Rs. 25 each, 4,000 7 per cent. preference shares of Rs. 50 each, 4,000 7 per cent. 'A' preference shares of Rs. 100 each and 20,000 6 per cent. redeemable preference shares of Rs. 100 each) is supplemented by reserves and surplus amounting to Rs. 42.18 lakhs. The 4½ per cent. debenture loan stands reduced from Rs. 1,31,500 to Rs. 83,500 and other bank borrowing from Rs. 17.21 lakhs to Rs. 5.64 lakhs. The other current liabilities and provisions aggregate Rs. 64.76 lakhs, having risen from Rs. 50.35 lakhs. There has been an addition of Rs. 6.98 lakhs to the gross block during the year bringing the total cost up to the end of the year to Rs. 220.92 lakhs. This has been well written down to Rs. 57.58 lakhs. The capital expenditure on fixed assets under construction amounts to Rs. 13.19 lakhs. The current assets, including trade investment, at Rs. 113.64 lakhs, provide a

substantially large cover to the current liabilities and provisions.

The Rs. 25 fully paid-up ordinary shares of the Company are firm at Rs. 96.50 ex-final dividend, as against Rs. 81 a year ago. At this rate and on the basis of the dividend for 1958, the shares provide a yield of 6 per cent. per annum, free of income-tax.

POLYCHEM TO PAY MAIDEN DIVIDEND

The ordinary shares of Polychem Ltd. (Chairman, Board of Directors: Mr. Ramdas Kilachand, Bombay) have been a firm feature for some weeks past, at Rs. 90, having risen from Rs. 93 at the beginning of July, on expectations of good results and a maiden dividend for the year ended 31st March 1959. These hopes have since materialised, for the Directors have recommended a modest dividend of 6 per cent., after paying the 7½ per cent. (taxable) preference dividend for the fifteen months ended March 1959. The announcement was greeted in the share market with a further jump in the value of the Company's shares to Rs. 108 last week. The payment of a maiden dividend within a period of two years affords the Company commenced business is a commendable performance. The Company has indeed done well enough during the year under review to justify such a distribution, though, of course, it has yet to build up a reserve.

The gross profit of the Company for the year under review amounts to Rs. 24.77 lakhs, which is more than three times that (Rs. 7.94 lakhs) earned in the previous fifteen months. Out of this profit, the Directors have made a provision of Rs. 3.93 lakhs (as against Rs. 3.47 lakhs) for depreciation and of Rs. 3.75 lakhs (Rs. 47,000) for taxation, leaving a net profit of Rs. 15.09 lakhs, which compares favourably with Rs. 4.04 lakhs for the previous fifteen months. After writing off Rs. 60,000 out of brokerage on shares account and Rs. 1.20 lakh out of underwriting commission account, the Directors have added Rs. 7.21 lakhs to the plant development rebate reserve fund, which had received a mere Rs. 12,000 a year ago. They have utilised Rs. 1 lakh to write down the value of polymerisation technique and know-how formulae obtained from the Company's foreign technical collaborators, namely, the Dow Chemical Company. The 7½ per cent. taxable preference dividend requires Rs. 5.22 lakhs and the ordinary dividend Rs. 2.40 lakhs, leaving a small surplus of Rs. 18,183 to be carried forward.

As a result of the recent expansion, the Company's plant has reached an output capacity of 12 million lbs. per annum. The demand for the Company's polystyrene is said to be growing rapidly and increased production depends on the availability of raw material. The Company has made representations to the Government for giving it adequate licence to import Styrene Monomer to meet the demand fully. Meanwhile, the Directors are considering the question of producing this important raw material in this country. The possibility of exporting Polystyrene is also being examined, but this will be possible only if the plant is allowed to work at its full capacity.

The installation of the distillation plant for distilling Styrene Monomer was completed in March 1959 as scheduled. The sheeting plant was also installed and commissioned during the year under review to meet the growing demand for plastic sheets. It could not, however, be operated to full capacity due to scarcity of raw materials. The Company is installing a rubber dissolving unit for manufacturing an improved quality of high impact Polystyrene which has a great demand in this country. The working of this unit also depends on the availability of raw material.

SIMPLEX MILLS

The proposal of the Simplex Mills Ltd. to raise fresh capital to the extent of Rs. 8.40 lakhs by the issue of 18,800 equity shares of Rs. 50 each at par to the existing shareholders in the ratio of one share for every five was approved by the shareholders at an extraordinary general meeting held on 23rd July 1959. The Company also proposes to raise, as indicated in these columns last week, a debenture loan of Rs. 60 lakhs and the prospectus will be issued in the first week of September.

Addressing the shareholders at their annual general meeting held on 22nd July, the Chairman of the Company, Mr. F. H. Kemple, felt sorry for having to record a loss, for the first time in many years. He, however, assured them that the Board and Managing Agents were doing everything possible to get the mills back to a profitable basis once again. He went on to add that the working of the mills during the first three months of the current year (ending March 1960) had been better than in the latter part of 1958 and the first part of 1959. "I am hopeful," he said, "that our results will still further improve, as there has been considerable progress in the working efficiency of the mill and our new qualities, especially, processed sorts, are now getting better known in the markets. We are doing our best to improve the sale of Belting Duck and to take advantage of yarn markets, where this is to our benefit. We are endeavouring to go finer and obtain the best use we can from the new spinning machinery that has been installed."

The Directors of the Coonoor Tea Estates Co., Ltd., propose to raise additional capital by issuing 18,800 new ordinary shares of Rs. 10 each at par and offer same, in the first instance, to the holders of the existing ordinary shares as on 24th August, 1959 (with a right to renounce in favour of a person or persons approved by the Directors) in the ratio of one new ordinary share for every two existing ordinary shares held by such holders respectively. The new ordinary shares are not entitled to any dividend declared for the Company's financial year ending 30th September 1959.

COMPANY MEETINGS AND DIVIDENDS

SHAW WALLACE & CO., LTD. Annual General Meeting, Calcutta, 3rd August 1959. Dividend: 10 per cent. or Rs. 1.00 per share. Transfer books remain closed from 25th July to 3rd August 1959, both days inclusive.

AMBKA SILK MILLS CO., LTD. Annual General Meeting, Bombay, 6th August 1959. Dividend: Rs. 12.00 per share. Transfer books remain closed from 31st July to 14th August 1959, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 7th August 1959. Dividend: 22 per cent. or Rs. 3.50 per share (includes interim dividend of 9 per cent. or Rs. 2.00 per share). Transfer books remain closed from 24th July to 7th August 1959, both days inclusive.

PORT GLOSTER INDUSTRIES LTD. Annual General Meeting, Calcutta, 11th August 1959. Dividend: Rs. 20.00 per share. Transfer books remain closed from 28th July to 11th August 1959, both days inclusive.

MURHULANI (ASSAM) TEA CO., LTD. Annual General Meeting, Calcutta, 12th August 1959. Dividend: Rs. 2.00 per ordinary share and Rs. 2.50 per preferred ordinary share. Transfer books remain closed from 30th July to 12th August 1959, both days inclusive.

ARVIND BOARDS AND PAPER PRODUCTS LTD. Annual General Meeting, Antalia, Bilimora, 14th August 1959. Transfer books remain closed from 1st to 14th August 1959, both days inclusive.

(Concluded from next column)

of claims settlement and rendering quick services to the insuring public. The loss ratios given above show that the underwriting policy of your Company has been selective and discriminating as to entertaining sound and remunerative business only.

"The resources of the Company have been highly liquid, inasmuch as 94 per cent. of the tangible assets of the Company are invested in Government of India securities, shares of first grade corporate bodies of the country and held in cash or in call and short-term deposit with Class A1 Scheduled banks of the country.

"Your Company occupies a high position under the Code of Conduct regarding the solvency test, whereunder the Company has a surplus of Rs. 14,61,896 and fully satisfies the solvency test under the Code of Conduct. I am also glad to inform you that the working of the Company for the first six months of the current year discloses that the next annual report would show still better business and income and profits."

ADVANCE INSURANCE COMPANY, LTD.

SPEECH OF MR. NARAYANLAL BANSILAL

THE Sixteenth Annual General Meeting of the Advance Insurance Company, Ltd. was held in Bombay on 27th July 1959. The following are extracts from the speech of the Chairman, Mr. Narayanlal Bansilal, delivered on the occasion:

"With the nationalisation of life insurance business, the insurance companies carrying on general insurance business have now before them a restricted field of business operations, but the same is also a specialised type of business and they can wholeheartedly devote their energies for the development of the general insurance business on such sound footing which will place the structure of industry as a whole on such a strong basis that it will be in a position to render valuable services to the country as a whole.

"It is very essential to prepare the insurance industry here and now so as to enable it to render full service to an industrialised and fully developed nation. In order to make the present foundations of the industry still stronger, I have to place my humble suggestions for consideration by the industry as a whole and the authorities at all levels.

"There is a general complaint of alleged malpractices prevalent in the insurance business and ways are being devised by the authorities to control these malpractices. One of the ways suggested is reduction of tariff rates. I very much doubt whether reduction of tariff rates would eliminate malpractices. I am of opinion that imminent reduction of premium rates would not add to the strength of the industry. The reduction of tariff should, however, be effected after taking into account the expenses of management, which are every day increasing, providing adequate reserves against unforeseen risks, reasonable returns to the shareholders and the claims arising from losses. The last item has to be considered from long range. All types of losses have to be taken into account, namely, normal and unusual. I suggest that the Insurance Act should permit the creation of reserves without being taxed to the extent of the present paid-up capital structure of the companies. This fund should be invested in Government of India securities and such securities be deposited with the Reserve Bank of India or State Bank of India so as to eliminate the doubts entertained by financial institutions about the soundness of the business of insurance companies.

"I would appeal to the Government not to adopt any stringent measures or policy without taking the industry in confidence. The Government should, for the healthy development of the industry, permit tax-free reserves to meet unforeseen calamities. I would also appeal to the banks and financing institutions not to require insurance companies to submit to extraordinary conditions before dealing with them.

"Now coming to the working results of your Company, I have to draw your attention to the comparative figures of net premium income as follows:—

Net Premium Income			
For the year			
	1957	1958	
	Rs.	Rs.	
Indian ..	78,727.00	134,477.00	
Foreign ..	Nil	2,34,915.00	
Total ..	78,727.00	156,732.00	

"Your Company started doing business in marine, motor, workmen's compensation insurance and miscellaneous insurance departments during the year 1958. You will be pleased to observe that your Company's foreign business during the very first year in this direction has amounted to Rs. 2,34,915, which is 15 per cent. of the total net premium income of your Company.

"Coming to the claim ratio in the various departments you observe that the same in relation to the net premium income is as under:

	Per cent.
1. Fire insurance department ..	17
2. Workmen's compensation insurance department ..	3
3. Miscellaneous insurance department ..	10
4. Marine insurance department ..	71

"Your Company has earned the goodwill of its constituents by adopting expeditious methods (Continued in previous column)

SYNOPSIS OF COMPANY REPORTS

Shree Digvijay Cement Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shree Laxmi Agents Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The profit and loss account (subject to provisions of depreciation, taxation and development rebate reserve) shows a profit of Rs. 41,02,351 (Rs. 47,50,171) to which is added the amount transferred from general reserve of Rs. 8,00,000 (nil) and the balance brought forward from last year's account of Rs. 2,23,855 (Rs. 3,41,614) making a total of Rs. 51,26,209 (Rs. 50,91,785). This amount the directors recommend to be disposed of as under:—

To development rebate reserve Rs. 6,90,082 (nil), to provision for depreciation Rs. 20,43,363 (Rs. 26,85,057) and to provision for taxation Rs. 7,25,000 (Rs. 3,25,000). Payment of dividends on 79,940 5 per cent. cumulative preference shares at Rs. 5 per share (free of income-tax) absorbs Rs. 3,99,700 (Rs. 3,47,940) and on 1,34,443 (1,34,437) ordinary shares at Rs. 9 (Rs. 9) per share (free of income-tax) absorbs Rs. 12,09,987 (Rs. 12,09,933) leaving a balance to be carried forward to next year's account of Rs. 58,077 (Rs. 2,23,855 after transferring Rs. 3,00,000 to general reserve).

The difficulties of adequate supply of raw materials and power have continued during the year under review. The Bombay State Electricity Board have completed the installation of additional turbine and boilers in the current year and the supply of power is now adequate. There was a considerable slackness in demand during the latter part of the year when for sometime the full production could not be maintained due to paucity of workable orders. All these factors have adversely affected production.

The Company has been making efforts ever since the slackness in demand developed to do some business in the export markets and the directors are glad to inform that they have been able to sell more than a lakh of tons cement to different countries, out of which 18,738 tons were exported in 1958 and 65,982 tons from 1st January 1959 to 22nd June 1959.

The Government of India announced their decision on the recommendation of the Tariff Commission with regard to cement prices under which the Company has secured an increase of Rs. 3 per ton in price of unpacked cement from July 1958. The Tariff Commission have based the price for the Company on the estimate of the output at full rated capacity and also did not entertain the claim of rehabilitation allowance. The Company since then has been making representations to the Government with regard to these important matters.

Apart from the output being lower than the rated capacity the increase in the price of coal, railway freight and dearness allowance have also affected adversely the working results for the year.

The Company's relations with labour have as usual been most cordial. The question of revision in the dearness allowance pending for adjudication before the Industrial Tribunal was amicably settled. The Company has with a view to boost the output. The Public Hearing of the Central Wage Board for Cement Industry constituted by the Government of India has been recently concluded.

The construction of the paper project of the West Coast Paper Mills Limited has been completed and the factory has gone into production with full capacity recently.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	2,14,45,550	Gross block	3,98,45,032
Reserves	56,41,792	Less—Depreciation	1,49,32,404
Provision for taxation	8,86,395	Net block	2,49,12,628
Liabilities	2,06,38,398	Plant, etc.	11,37,496
Profit	58,077	Stock-in-trade	3,20,214
		Stores, etc.	49,24,421

		Work-in-progress	17,49,706
		Debts, deposits and advances	66,88,819
		Investment	52,33,988
		Cash	1,55,584
		Miscellaneous expenses	75,000
			Rs. 4,86,91,212

Walford Transport Ltd.

The directors of the above Company (Manager: Mr. R. R. Aiyer, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

After writing off Rs. 54,636 (Rs. 64,134) for depreciation and setting aside Rs. 2,50,921 (Rs. 5,17,650) for taxes, the available profit for the year would be Rs. 3,33,896 (Rs. 4,28,336) including Rs. 1,35,400 (Rs. 1,66,613), brought forward from last year's account. It is recommended that this sum be dealt with as follows:

To payment of a dividend of 12 (12) per cent. per annum, free of income tax, on 2,10,900 preferred ordinary shares, absorbing Rs. 25,224 (Rs. 25,224), to payment of a dividend of 14 (14) per cent. per annum, free of income tax, on 8,40,800 ordinary shares, absorbing Rs. 1,17,712 (Rs. 1,17,712), to transfer to contingency reserve, Rs. 50,000 (Rs. 1,50,000) [thereby bringing it to Rs. 10,00,000] and to carry forward the balance of Rs. 1,40,960 (Rs. 1,35,400).

The total turnover for 1958 was Rs. 1.52 (Rs. 2.22) crores representing a drop in volume of 31.6 per cent. compared to the previous year, as against which profit before taxes declined by 46 per cent. This drop in profit is explained by the fact that during the first quarter of 1957, the dealer margin was more than what it was for the corresponding period in 1958. As previously reported, the dealer margin was reduced on Government directive. The tax burden continued to be heavy, having eaten up more than 61 per cent. of the current earnings, thus restricting the scope for dividend and provision for expansion. The dividend recommended represents 89.2 per cent. of current net earnings during the year.

The paid-up capital of the Company as compared to turnover in 1958 represented 6.9 per cent. in spite of which it was possible to handle a reasonably respectable volume by utilising the reserves you built up with forethought in previous years and supplemented by bank over-draft. The gradual strengthening of reserves proved beneficial and allocations have been made with the above objective in view, although the amount recommended for reserve in 1958 shows a steep drop compared to previous years.

Throughout the year under review, factory releases showed gradual decline compared to 1957. Supplies during 1958 as compared to 1957 dropped by 44 per cent. unitwise. Indications are the same trend may continue through 1959.

As reported last year, the Siliguri Branch of the Company has now been firmly established. It commenced operations in October 1958 and the progress is satisfactory. The shareholders will also be happy to hear that the Company has been able to secure the Leyland franchise for Assam effective 1st July 1959.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	10,51,000	Gross block	12,83,452
Reserves	19,51,702	Less—Depreciation	8,75,376
Provision for taxation	4,21,062	Net block	4,08,076
Provision for obsolescence	1,57,975	Stock-in-trade	22,78,902
Sales tax provision	1,09,693	Stores	21,151
Liabilities	10,96,643	Goodwill	1,86,510
Profit	1,90,980	Work-in-progress	49,293
		Debts, deposits and advances	15,60,307
		Investments	1,27,080
		Cash	3,47,716
	Rs. 49,79,035		Rs. 49,79,035

Nizam Sugar Factory Ltd.

The directors of the above Company (Managing Agents: Industries (I.F.) Department, Government of Andhra Pradesh, Hyderabad) present the audited accounts of the Company for the year ended 30th June 1958.

The accounts show a net profit of Rs. 40,43,444 (Rs. 22,38,481) after making provision of Rs. 11,09,702 (Rs. 12,04,249) including development rebate of Rs. 1,12,491 for depreciation, Rs. 9,87,270 (Rs. 9,62,804) for bonus to employees, Rs. 24,50,499 (nil) for extra cane price, Rs. 7,74,876 (Rs. 9,47,422) for interest on loans, Rs. 3,81,584 (Rs. 2,64,039) for contribution to employees' provident fund, Rs. 7,96,507 (Rs. 6,18,696) for managing agency commission and Rs. 29,00,000 (Rs. 29,91,000) for taxation and taking credit of Rs. 3,49,165 being the interest recovered from the ryots on contract advances of previous years which was held under current liabilities and provisions in the balance sheet, now taken to profit and loss account and taking credit of Rs. 1,24,652 being the value of the material issued to sub-stores in previous years and charged off to consumption not utilised now taken back to Main Stores.

The above profit added to the balance of Rs. 1,01,803 (Rs. 6,522) brought forward from the previous years, makes up a total of Rs. 41,45,247 (Rs. 22,45,003) which the directors propose to appropriate as under:

To dividend on five per cent. cumulative preference shares at the rate of Re. 1.25 (Re. 1.25) per share of I.G. Rs. 25 fully paid, free of income-tax absorbing Rs. 60,000 (Rs. 60,000), to dividend on four per cent. cumulative preference shares at the rate of Re. 1 (Re. 1) per share of I.G. Rs. 25 fully paid, free of income-tax absorbing Rs. 96,000 (Rs. 96,000), to dividend on ordinary shares, including bonus shares at Rs. 12 (Rs. 12) per cent. at the rate of Rs. 3 (Rs. 3) per share of I.G. Rs. 25 fully paid, free of income-tax absorbing Rs. 13,24,800 (Rs. 13,24,800), to bonus on ordinary shares including new bonus shares at Rs. 6 (Rs. 6) per cent. at the rate of Re. 1.50 (Re. 1.50) per share of I.G. Rs. 25 fully paid, free of income-tax absorbing Rs. 6,62,400 (Rs. 6,62,400), to provision for contingencies Rs. 2,00,000 (nil) and to transfer to general reserve Rs. 17,00,000 (nil) leaving a balance to be carried forward to the next year of Rs. 1,02,047 (Rs. 1,01,803).

The directors have sanctioned payment of an interim dividend of the five per cent. and four per cent. cumulative preference shares of I.G. Rs. 25 fully paid, at the end of December 1958 and an interim dividend of twelve per cent. on the ordinary shares including bonus shares of I.G. Rs. 25 fully paid at the end of March 1959. Now the bonus dividend on ordinary shares including new bonus shares of I.G. Rs. 25 fully paid at Rs. 6 per cent. only remains payable to the shareholders, which the directors recommended for payment.

The year under review was a remarkably good one for the Company and the directors are pleased to report that the Company has made a

gross profit of Rs. 88,51,713, which is the highest so far achieved by the Company in any year. An amount of Rs. 24,50,499 has been provided for payment of extra price for cane in this year's profit and loss account which has not featured in the past two years. This gives an extra price of Rs. 4.75 nP per ton of cane to the cultivators. Another notable point is that the directors propose to transfer a sum of Rs. 19,00,000 in the profit and loss appropriation account to the reserves of the company, i.e. Rs. 17,00,000 to general reserve and Rs. 2,00,000 to the provision for contingencies. There have been no transfers to the reserves in the past two years and the amount of Rs. 19 lakhs is the highest ever transferred to the reserves in any financial year.

During the year under report 529,420 tons of cane were crushed and 55,987 tons of sugar produced at 10.66 per cent. recovery. During the previous year 5,72,790 tons of cane were crushed and 54,047 tons of sugar produced at 9.51 per cent. recovery.

The Factory farms produced 2,44,803 tons at 46.94 tons per acre. Previous year the yield was 229,809 tons at 45.90 tons per acre.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	1,45,77,275	Gross block	2,92,70,375
Reserves	85,57,288	Less—Depreciation	1,76,39,063
Share suspense account	31,939	Net block	1,16,31,312
Provision for taxation	1,27,54,354	Plant, etc.	519,366
Provision for contingencies	5,11,032	Other assets	1,64,653
Liabilities	3,45,59,698	Stock-in-trade	2,91,61,387
Profit	1,02,047	Stores and shares	44,45,319
		Cane plantation in progress	62,62,234
		Debts, deposits and advances	1,64,02,452
		Investments	3,44,808
		Cash	21,62,102
	Rs. 7,10,93,633		Rs. 7,10,93,633

United Provinces Sugar Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 30th September 1958.

The net profit of the Company after providing for depreciation and other usual charges amounts to Rs. 5,88,986 (Rs. 6,72,708). From this has been deducted provision for Central and State Taxation amounting to Rs. 3,53,000 (Rs. 4,05,000) leaving a balance of Rs. 2,35,986 (Rs. 2,67,708) to which falls to be added the credit balance brought forward from last year of Rs. 29,751 (Rs. 32,042) making available for distribution a sum of Rs. 2,65,737 (Rs. 2,99,751). This amount the directors recommend, should be dealt with as follows:

By payment of a dividend at 10 (7½) per cent. for the year ended 30th September 1958 absorbing Rs. 1,60,000 (Rs. 1,20,000), by transfer to development reserve Rs. 50,000 (Rs. 1,50,000) and to development rebate reserve Rs. 5,427 (nil) leaving a balance to be carried forward to credit of profit and loss account Rs. 50,290 (Rs. 29,751).

Season 1957-58 Production: The crushing during the year started on 22nd November 1957 and finished on 7th April 1958, with a total crush of 29,52,615 (28,11,566) maunds of cane at recovery being 10.89 (9.97) per cent. which was highest in the whole of U.P. and Bihar. Of the total cane crushed, 2,41,250 maunds were supplied from lands cultivated by the Company.

The cane price continued at the rate of Re. 1.44 nP per maund at the factory gate and Re. 1.31 nP at outstations. Cane cess and Cane Co-operative Societies' Commission remained at 19 nP and 9 ples per maund respectively.

Estates: There was a small profit in the Estate profit and loss account for the year 1957-58. There was no major item of capital expenditure during the year. Some 20 acres of land which were considered uneconomical were sold away. One new tractor was purchased and one tubewell was installed at Bubnowlie.

Season 1958-59 Prospects: This season's crush at 40,21,387 maunds, the highest during the last twenty-five years with recovery at 10.26 per cent. is considered to be quite satisfactory. The results for the current year are, therefore, expected to be fair.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	16,00,000	Gross block	35,64,066
Reserves	9,72,016	Less—Depreciation	27,87,195

MANCHESTER LETTER

(Concluded from page 177)

the local object is to scrap redundant plant. The readjustment of productive capacity in Japan also includes the spinning sections of the wool, rayon staple and synthetic fibres industries.

Like a number of other Chairmen, Mr. W. T. Winterbottom was unable to give stockholders details of how the Fine Spinners and Doublers group intended to take advantage of the redundancy plans when he prepared his annual statement. No doubt he will have something to add about the combine's views at the meeting next week. His comments on the trade position, however, invariably make interesting reading and in a lengthy review of the situation his remarks included the following quotes:

"It seems highly desirable that the Commonwealth should set up some consultative machinery for considering cases where developments in one member-country seem likely to cause serious disruption in others and for suggesting appropriate remedies. The limit on the Hong Kong trade represents nearly 15 per cent. of the total home market and this is increased to 25 per cent. if the present volume of imports from India and Pakistan is included. This figure is so big that nobody can feel any great satisfaction with the situation. Moreover, the arrangement only covers piece-goods and some made-up goods; in particular, cotton yarn is excluded.

"The United States raw cotton policy of ensuring a high domestic price level by means of a loan and of assisting exports by a subsidy contains an inherent dilemma. If the subsidy is too small, it fails to achieve its object, but, if it is flexible, it creates uncertainty. In either case, forward buying is inhibited and the hesitant, haggling trade which follows reduces efficiency and satisfies nobody.

"The time has clearly come when all firms in the industry must review their position and aims. In the long run, it does no good to anybody to continue to use resources of men, money, machinery or buildings to produce something which consumers are not prepared to buy at fair prices to the producer. It is equally futile to try to conceal this truth by committing further resources which could be more profitably used elsewhere."

DEVELOPMENT OF SUBSIDIARY FOODS—II

(Continued from page 183)

2. Lack of organised adequate cold storage facilities (coupled with lack of organised dehydration and processing), as a result of which a major part of the produce has to be sold for consumption in fresh form leading to wastage and wide price variations.

An essential requirement for removing these difficulties is the organisation of co-operative marketing-cum-processing societies for subsidiary foods. These societies which may deal in one or more of the subsidiary foods should collect the produce from the growers, market in fresh form whatever portion is considered desirable, the balance being dehydrated and processed into flour or suitable mixture preparations. The processing may be done in the villages or at the mandi or other points wherever considered feasible. Marketing-cum-processing co-operatives have developed in this country in the case of such commodities as sugarcane, jute, cotton, oilseeds, etc., but progress towards co-operativisation of marketing and processing of subsidiary foods has been very poor.

Other measures that would be necessary for improving the market facilities for subsidiary foods are:

- (a) Regulation of markets for subsidiary foods.
- (b) Standardisation and grading of subsidiary foods, wherever feasible.
- (c) Improvement of village communications.
- (d) Assistance to growers to buy bullock carts or other vehicles.
- (e) Provision of more ventilated wagons and refrigerated transport.
- (f) High priority in the allocation of wagons for perishable subsidiary foods.
- (g) Development of cold storage facilities.

The Subsidiary Foods Production Committee recommended that production of subsidiary foods should be based on guaranteed here should be the same as that of State trading in foodgrains, namely, "to maintain price levels which are fair to the producer and to the consumer, and to reduce to the minimum the spread between the prices received by the farmers and the prices paid by the consumers." The ultimate be the channelling of the produce at all levels price and market guarantees may be necessary on some occasions in certain areas. The best would, however, be to promote the demand, as outlined above, sufficiently to keep pace with the increase in production.

(Concluded)

TERMS OF NEW STATE LOANS ANNOUNCED

(From Our Own Correspondent)

BOMBAY, 29th July

An event of importance to the money market this week is the announcement of the States' borrowing programme. Twelve States propose to raise an aggregate sum of Rs. 57.50 crores. All the loans will carry a uniform rate of interest at 4 per cent. and will mature in 1971. The amount and issue price vary from State to State. Except Bombay, which is issuing its loan at par, all other States are offering at a discount. The details of each loan will be given presently in this review. The list will be open for public subscription on 19th August and will close on 25th August, or earlier. All the States reserve the right to retain subscriptions up to 10 per cent. in excess of the notified amount. Only one State, namely, Madras, has offered conversion facility. The uncashed portion of the 3 per cent. 1959 loan, which had matured on 21st June last, will be accepted at par. In terms of an earlier announcement, this loan carries interest at 4 per cent. from 21st June upto and including 18th August.

The timing of the issues is propitious, in that the short-term money market has become distinctly easy. There has been a further drop in interest rates this week. Inter-bank call money is being offered at 4 per cent. among the Exchange banks and big Indian banks and at 1½ per cent. among the small banks, but there are no borrowers. House money at seven days' notice is, however, unchanged at 3½-3¾ per cent. and short-term deposits at 3¼-4 per cent.

There has been a sizable decline in the 91-day Treasury Bill rate this week, the average rate of accepted tenders at yesterday's sales being 2.545 per cent. per annum, as against 2.717 per cent. last week. The amount offered was larger at Rs. 3.35 crores in response to the invitation for Rs. 3 crores, as compared with Rs. 3.90 crores a week ago as against Rs. 2 crores invited. Despite this encouraging response, the tender amount for next week is unchanged at Rs. 3 crores. Sales of Intermediate Treasury Bills during the period 22nd to 25th July were also larger at as much as Rs. 7.25 crores, those in the corresponding period of the previous week being Rs. 1.19 crore.

There has been a contraction of Rs. 24.74 crores in notes in circulation during the week ended 24th July 1959. Disclosing this, the Reserve Bank of India statement for that week also shows a rise of Rs. 1.99 crore in notes held in the Banking Department. The total notes issued are thus lower by Rs. 22.75 crores. As against this, there is a decline of Rs. 5 crores in foreign securities and of Rs. 19.91 crores in rupee securities. Rupee coin, however, shows a rise of Rs. 2.16 crores. The fall of Rs. 5 crores in foreign securities has, however, been made good to some extent by an increase of Rs. 2.32 crores in balances held abroad (in the Banking Department). Deposits of the Central Government have gone up by Rs. 15.05 crores, while those of other Governments have dwindled by Rs. 11.46 crores, as also of banks by Rs. 1.84 crore. Loans and advances other than to Governments have also declined by Rs. 2.01 crores, mainly due to the repayment of advances to Scheduled banks against usance bills to the tune of Rs. 2.67 crores. Investments have increased further by Rs. 3.71 crores.

The Scheduled banks' statement for the week ended 17th July 1959 disclosed a further rise of Rs. 9.64 crores in time deposits (to a peak of Rs. 1,040.26 crores). Demand deposits have, however, shrunk by Rs. 7.35 crores. Inter-bank borrowings are higher by Rs. 1.67 crore, while borrowings from the Reserve Bank stand reduced by Rs. 3.04 crores. Advances have gone down by Rs. 7.29 crores and bills purchased and discounted by Rs. 1.08 crore, while investments have risen by Rs. 1.83 crore, cash balances by Rs. 13.54 crores and money at call and short notice by Rs. 1.37 crore.

The details of the proposed State loans are:

State	Amount (in crores of Rs.)	Issue Price (Rs.)
Andhra	6.00	99.50
Assam	2.50	99.00
Bihar	3.00	99.50
Bombay	6.00	100.00
Madhya Pradesh	3.00	99.00
Madras	8.00	99.50
Orissa	3.50	99.00
Punjab	2.00	99.00
Rajasthan	3.50	99.50
U.P.	8.00	99.50
West Bengal	7.00	99.50

The Kerala State has kept out of the market for the present, in view of the present anti-Government agitation in the State and the decision of the Travancore-Cochin Bankers' Association and the Kerala Bankers' Association not to co-operate with the Government in its borrowing programme. The State has decided to put off the issue to December.

Meanwhile, the gilt-edged market continues to be buoyant, thanks to the persistent good demand for all dated loans. There has been a sharp rise in values of some of the short-dated loans, ranging up to 25 nP. The Reserve Bank of India has again put up its selling rate for the 3½ per cent. 1969 by 5 nP to Rs. 98.95. The Bank continues to offer 4 per cent. 1979 at the unchanged rate of Rs. 100.05. State loans too are firm and the prices of 4 per cent. and 4½ per cent. loans have hardened by 5 to 15 nP.

A 3 per cent. 1986 Conversion loan continues to be on offer and has declined by 20 nP to Rs. 73.80. 3 per cent. 1970-75 has, however, gained 10 nP to Rs. 92.10. 3 per cent. 1968-69 has hardened by 10 nP to Rs. 95. 3 per cent. 1964 by 20 nP to Rs. 97.40 and 3 per cent. 1963-65 by 25 nP to

RECOVERY IN BULLION

(From Our Own Correspondent)

BOMBAY, 29th July

The bullion market ruled distinctly steady in the first three sessions of the week under review. Both silver and gold evoked good buying enquiries which lifted up their prices. There was, however, a setback on Monday and yesterday. The yellow metal was more depressed, due to reports of heavy arrivals of contraband gold in Calcutta. There were also speculative offerings by some local interests. In sympathy with gold, silver remained subdued. But today, the market again picked up some strength, with both the metals showing a hardening tendency. The recovery was, of course, not marked enough to make up for the previous losses, so that today's closing rates were generally lower than those at the end of last week.

August settlement in silver opened firm at Rs. 196-8, as against Rs. 195-2, and advanced gradually to touch a high of Rs. 197-5 on Saturday. At this level, profit-taking set in and the settlement declined to Rs. 196-9 yesterday. It, however, recovered to Rs. 197-3 today. September settlement moved up from Rs. 195-14 to Rs. 196-15 on the 25th and, after easing to Rs. 196 yesterday, it finished higher at Rs. 196-14 today.

Ready silver, which stood at Rs. 197-10 on Wednesday last, gradually receded in the first few sessions and touched a low of Rs. 195-15 yesterday. Opening at Rs. 196-8 today, it spurted to finish at Rs. 196-13. The daily average arrivals of silver were 19 bars, while the offtake was 11 bars. The floating stocks of silver are reported to be around 400 bars.

August settlement in gold was well supported on the opening day of the week, the quotation moving up from Rs. 118-4 to Rs. 118-11. Thereafter, it tended to decline and stood at Rs. 116-10 yesterday. After recovering to Rs. 117-4 today, it closed an anna lower at Rs. 117-3. Business in September settlement commenced on Monday, with the starting rate fixed at Rs. 117-4. It encountered selling yesterday and declined to Rs. 116-10. Today, however, it was firm at Rs. 117-5 before finishing at Rs. 117-3.

Ready gold hardened from Rs. 118-2 to Rs. 118-10 on the opening day and, after receding to Rs. 116-7 yesterday, it wound up the week at Rs. 117-1. The daily average arrivals and offtake of gold were 3,600 tolas and 2,800 tolas, respectively. The floating stocks of gold are estimated at 40,000 tolas.

Both ready and forward silver in the London bullion market registered further gains during the week under review, the former rising from 78½d. to 78¾d. per ounce and the latter from 78d. to 78½d. Silver in New York was unchanged at 91.375 cents per ounce. Ready gold in London, after improving by ½d. to 249s. 11½d. per ounce on the 24th, receded thereafter and touched 249s. 9½d. Yesterday, owing to the firmness of the pound sterling vis-à-vis the dollar. The latest available dollar rate for gold in London is \$35.124-\$35.144, as against \$35.13-\$35.15 a week before.

The following comparative table shows at a glance the trend of the market during the week under review:

	20-7-59	Highest	Lowest	22-7-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (999 fine Mint)	117 1	118 10	116 7	118 2
Forward	117 8	118 11	116 10	118 4
Silver	77 14	78 2	77 12	78 2
Ready (999 fine Mint)	196 13	197 9	195 15	197 10
Forward	197 8	197 5	196 4	196 6
London Silver Ready	78½d.	78¾d.	78¼d.	78½d.
London Forward	78½d.	78¾d.	78¼d.	78½d.
London Gold	249s. 11½d.	249s. 11½d.	249s. 9½d.	249s. 11½d.
New York Silver	91.875c	91.875c	91.375c	91.875c

* 20th August settlement. † 21st August settlement.

LINSEED ADVANCES

(Messrs. A. Bradley & Co.)

CALCUTTA, 27th July

There was a sharp advance in linseed which reached its peak during mid-week when ready and forward deliveries were quoted at Rs. 23.50 and Rs. 24, respectively, and September futures touched Rs. 23.61. This rise was not maintained and was followed by a quiet tendency. Millers were inactive on the whole, owing to poor demand for both oil and oilcake, and also to unprofitable crushing margins. The oil section was mostly dull, with neither shippers nor local buyers showing much interest. Although prices advanced earlier in sympathy with seeds, absence of enquiries caused a reaction towards the close.

The latest quotations are: Ready-July Rs. 23.12 Aug.-Sept. Rs. 23.37 and Sept. futures Rs. 23.25 per maund.

Rs. 97.45. 3½ per cent. loans are all well held at previous week's levels, except 3½ per cent. 1967 which has put on 5 nP to Rs. 99.55. 3½ per cent. 1974 has advanced by 10 nP to Rs. 99.50.

The rupee is ruling steady in terms of the U.S. dollar, but the rates are unchanged. Banks continue to sell U.S. dollar T.T.'s at Rs. 476 per \$100 and buy them at Rs. 472.75 per \$100. In New York, spot sterling has gained from 281.14-281.17 cents to 281.17-281.20 cents. Three months' forward is, however, unchanged over the week at 281.08-281.11 cents.

COTTON FUTURES QUIET

(From Our Own Correspondent)

BOMBAY, 29th July

The cotton futures market ruled quiet during the week under review. Values moved in a narrow range in slow dealings. Turnover was small. Operators were in a hesitant mood. Earlier in the week, the trend of price of the maturing August contract was mainly influenced by speculations about the tendering differences which were fixed on Monday. Towards the close, attention was focussed on the meeting of the Cotton Textile Consultative Board scheduled to be held today.

A section of the trade was expecting that, considering the firmness of ready prices, the tendering differences would be favourable to bulls. Speculative buying based on this consideration pushed up the contract to Rs. 702.25 on Monday. Trading differences fixed by the Special Committee on Monday, however, turned out to be not as favourable as this section had earlier anticipated. This prompted liquidation by weak bulls and values fell. The general feeling among traders was that the rates were reasonable. Judging from the rates, tenders against the August contract were not expected to be much. The price pattern of the new crop contract Jarilla March 1960 was influenced more by reports from the growing regions than by the trend of the August contract or of the spot market or the supply position. But for occasional sympathetic rises, the contract showed a generally sagging trend. Over the week, both the August and March contract declined, the former by Re. 1.50 and the latter by Rs. 2.

I.C.C. Moglai Jarilla August 1959 opened the week at Rs. 698, as against the previous close of Rs. 701.25, and after rising to Rs. 702.25 on Monday declined to Rs. 695.50 yesterday. Opening at Rs. 700.50 today, the contract improved fractionally to Rs. 701 but receded to Rs. 699. It, however, rose towards the close of the session and finished at Rs. 699.75.

I.C.C. Moglai Jarilla March 1960 commenced the week lower at Rs. 667.25 and fluctuated between Rs. 669 and Rs. 664.25 till yesterday. Opening at Rs. 660 today, the contract rose to Rs. 665 before declining to Rs. 665.50. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	29-7-59	High	Low	22-7-59
I.C.C. Moglai Jarilla August 1959	699.75	702.25	695.50	701.25
I.C.C. Moglai Jarilla March 1960	666.50	669.00	664.25	668.50

In the spot section, normal activity was reported. Prices maintained a more or less steady trend. Good quality cotton found ready buyers. Some mills were regular buyers of Kalyan, Laxmi and Jayadhar. Other varieties such as Rajapalayam, 0304 and CO2 also evoked attention.

In the export section, following the reduction in export duty on Pakistan *Deshi* cotton from Rs. 50 to Rs. 40 per bale and on staple varieties from Rs. 115 to Rs. 75, there was mild reaction in prices. Prices, however, recovered following good inquiries from Japan for old and new crop Bengal. The reduction in duty in Pakistan was not expected to affect Indian exports much as prices in Pakistan went up as soon as the reduction in duty was announced. Yellow pickings were also in moderate demand.

The ceiling fixed in respect of export of Bengal *Deshi* cotton on a first-come-first-served basis as per the announcement made on 19th November 1958 has been reached. No further allotment letters will, therefore, be entertained.

Interest in foreign cotton was subdued. Some stray business in lower and higher grade Sudan cotton was done by some Bombay and Ahmedabad Mills. It is reported that a more simplified system of payment for cotton imports from Egypt is under consideration by the Ministry of Commerce. Importers in future will get invoices in rupees and they will not have to face the problem of converting Indian currency into Egyptian pounds.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 700; Berar Jarilla 725; Khandesh 860; Laxmi 995; Jayadhar 930.

Cotton values in Karachi firmed up during the week. The reduction in export duty on *Deshi* varieties from Rs. 50 to Rs. 40 per bale and from Rs. 115 to Rs. 75 per bale on staple varieties prompted fresh buying in anticipation of export demand. Consequently, prices hardened. Mill demand was fairly good.

Firm conditions prevailed in the Alexandria cotton futures market during the week under review. Futures values advanced on good support from shippers and local traders. Supplies of good quality cotton were scarce. New crop evoked keen interest. Karnak July contract expired on the 27th inst. at 73 talars. The first official estimate put acreage under cotton in the new season at 1,760,278 feddans, as against the current season's 1,904,949 feddans. The following are the latest available quotations—in talars per lb.—from Alexandria:

Karnak: November 78.65. *Ashmouni*: August 69.25. November 68.64.

Cotton futures values in Liverpool suffered a setback during the week on renewed hedge pressure by trade and Commission Houses. Weak advice from New York accelerated the downward trend. Sudan contracts, however, were quietly steady, thanks to continued firm advice from Khar-toum and news of good bidding at the auctions. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July-August 22.40; October-November 21.15; December-January 21.05; March-April 20.90.

American cotton mixed growth contract: July-August 22.80; October-November 21.65; December-January 21.30; March-April 21.35.

Sudan: July-August, September-October, November-December 29.25.

New York cotton futures market was in a hesitant mood. Traders were generally inclined to watch crop developments and weather. Prices moved in a narrow range. Reports of heavy rains in Texas and good demand for new crop prompted speculative buying towards the end of the week. Futures values consequently improved.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	28-7-59	21-7-59	14-7-59
pot	...	33.85	34.40	34.95
uly	...	...	...	34.88
October	...	32.37	32.32	32.17
December	...	32.31	32.32	32.22
March	...	32.62	32.58	...

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 29th July

Dull conditions prevailed in the yarn market during the week under review. Business put through was very much restricted, with values moving narrowly. The art silk yarn section was devoid of any development. Operators preferred to watch the actual working of the revised Export Promotion Scheme for Fabrics. The general tendency of prices was, of course, upward. Staple fibre yarns were subdued, notwithstanding Surat and other important centres, as a result of the Export promotion Scheme. The market was closed today, owing to the death of one of the Directors of the Bombay Yarn Merchants' Association and Exchange Ltd.

Cupressa Bamberg yarn (60x2) October delivery gained a rupee to Rs. 1,736, while August delivery declined by Rs. 3 to Rs. 1,699. Spot Cupressa recorded a rise of 6 nP, yesterday's closing rate being Rs. 7.56. Among imported art silk yarns, 120 Japan hardened by 6 nP to Rs. 4.87, 150 Japan improved by 5 nP to Rs. 4.83, 150 Italy rallied from Rs. 4.71 to Rs. 4.78. 120 Italy strengthened by 4 nP to Rs. 5. Among indigenous yarns, National Rayon 150 bright cones first grade put on 6 nP to Rs. 4.31. 120 bright cones first grade gained a naya paisa to Rs. 4.76.

Staple fibre yarn (40x2) August contract was dull at Rs. 674. October contract came in for selling and dropped Rs. 4 to Rs. 669. Spot City eased by 3 nP to Rs. 3.50. Kohinoors lost 2 nP to Rs. 3.64. Centurys were quiet at Rs. 3.62. A notable feature of trading in this section was the distinct improvement in prices of imported yarns (80x2). Fujis firmed up by 50 nP to Rs. 8.81. Paramounts spurted from Rs. 7.81 to Rs. 8.22.

In the cotton yarn section, ten counts Podars and Moderns were dull at Rs. 13 and Rs. 13.75, respectively. Twenty counts Hinds increased by 3 nP to Rs. 18.75. Moderns were neglected at Rs. 17. Forty counts Minaxis met with good support, the quotation spurring by 32 nP to Rs. 25.44. Moderns were easy at Rs. 26. Sixty counts Raghuvamshis were dull at Rs. 57, as also Finlays at Rs. 63. Eighty counts Mahendras shed 25 nP to Rs. 72.25. Moderns and Finlays were quiet at the former at Rs. 77 and the latter at Rs. 81. Cities, however, elicited special support and advanced by 25 nP to Rs. 66.75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday as compared with those six days before:

	28-7-59	22-7-59
Art silk yarns—		
60/1 Cupressa Bamberg August (100 Kg.)	1,699	1,736
60/1 Cupressa Bamberg spot (per lb.)	7.56	7.50
120 Japan (per lb.)	4.87	4.83
150 Japan (per lb.)	4.83	4.78
120 Italy (per lb.)	5.00	4.71
Staple fibre yarn—		
40x2 August (per case of 200 lbs.)	674.00	674.00
40x2 October (per lb.)	669.00	678.00
40x2 Kohinoor (per lb.)	3.64	3.62
Cotton yarns (per bundle of 10 lbs.)—		
10s Podar	13.00	13.00
20s Modern	17.00	17.00
40s Finlay	77.00	77.00
80s Finlay	81.00	81.00
90s Mahendra	72.25	72.50

SEEDS EASY

(From Our Own Correspondent)

BOMBAY, 29th July

A distinctly easy trend was in evidence in the oilseeds market during the week under review. Under the leadership of groundnuts, the other seeds and oils gave way on a fresh wave of selling by local and upcountry bulls. The follow-up support was restricted. At the same time, arrivals were sizable. With the downward drift in prices, crushers and paraspant manufacturers preferred to wait and watch. There are some signs of improvement in the export section; but these, too, were not so pronounced as to check the reaction.

The weakness in the groundnut section was mainly on account of heavy bull liquidation following rumours that substantial delivery orders might be issued against the maturing contract. Although there were some reports of business in oils with Burma, oil prices gave way, particularly in the face of large arrivals of groundnut of the spread variety. The August 1959 contract, which

closed last week at Rs. 195, fell to Rs. 191 today, after fluctuating between Rs. 190.50 and Rs. 190.25 over the week. February 1960 contract declined from Rs. 168.50 to Rs. 165.27. Bold ready lost one rupee to close at Rs. 40. Oil ex-mill shed 75 nP to touch Rs. 20.75 and railway receipts by 94 nP to Rs. 20.37.

The castorseed section, although there were some enquiries from shippers, lost ground. The comfortable supply position and the uncertainty regarding the prospects for exports of oil, particularly from the U.S., dampened the enthusiasm in both seeds and oils. The September 1959 contract, which stood at Rs. 157.75, receded to Rs. 154.75, after moving both ways during the week. May 1960 contract closed today lower by Rs. 4 at Rs. 154.37. Oil B.S.S. reacted by one rupee to Rs. 15.81.

Linseed, too, was weak in sympathy with other seeds. Nevertheless, the rise in overseas prices of linseed oil following reports of smaller U.S. crop and reduced acreage under linseed in Canada aroused new hopes of export business in oil. Besides, oilseeds were quite active on sizable overseas demand. The Government of India announced on Monday the release of a fresh quota of 10,000 tons of linseed oilcake for export by ship without any restriction on maximum shipment by individual shipper up to the end of September 1959. This export promotion measure has been welcomed by the trade, particularly since the previous quota of 10,000 tons of oilcakes is virtually exhausted by now. September 1959 contract, which wound up last week at Rs. 32.81, fell to Rs. 32.56 today. Bold ready, however, was steady at Rs. 32.50. Oil lost 13 nP over the week to Rs. 15.87.

The cotton section toed the line set by the other seeds. Cottonseed September 1959 contract and February 1960 contract, which closed last week at Rs. 137 and Rs. 116, respectively, sagged to Rs. 136 and Rs. 113, after fluctuating within a narrow groove.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	28-7-1959	22-7-1959	15-7-1959
Groundnut			
August 1959	191.50	195.50	191.50
February 1960	165.27	168.50	167.25
Bold ready	40.00	41.00	40.40
Command ready	40.25	41.25	40.75
Ex-mill ready	20.75	21.00	20.75

SUGAR SUPPLY IMPROVES

(From Our Own Correspondents)

BOMBAY, 29th July

The sugar supply position in the City has improved distinctly, thanks to the large arrivals by rail and road, the total of arrivals this week aggregating 16,400 bags, as against 14,900 bags last week. The arrivals are expected to be heavier still in the next few weeks, following the large monthly release of 180,000 tons announced by the Union Food Ministry on Saturday, although the portion of the release allotted to the Bombay-Deccan mills is expected to be slightly smaller than in the previous month. In view of the comfortable supply position, sugar is being sold freely in retail shops at the Government fixed price of 51 nP per lb. There are, however, reports from some areas in the City which suggest that either the quality of sugar sold by certain retailers is very poor or the price quoted is higher. This is attributed to the fact that a large part of the sugar sold in these areas represents the cheap quality sugar produced by co-operatives and a few retailers are trying to dispose of this sugar at the controlled price and selling the good quality sugar produced by joint-stock companies at a premium.

The wholesale rates per bag for the different grades of sugar prevailing today are the same as those prevailing a week before. They are: A grade: Rs. 115.81; B grade: Rs. 114.00; C grade: Rs. 112.02; D grade: Rs. 111.

The working of the scheme of sugar distribution introduced in the State has been clarified by the Bombay Government in a Press note issued yesterday. The Government says:

"When the scheme of distribution of sugar was first introduced sometime back, the maximum retail price of 51 nP for D-29 grade sugar was calculated with reference to Bombay City, where the reasonable wholesale price was calculated at Rs. 111 per bag. In the sugar factory areas, the prices should be much lower, because transport and other charges would be smaller. Government, therefore, expects that the traders would sell sugar in the factory areas at relatively lower prices, both at the wholesale and retail stages.

"In the far-off areas, as compared to the distance of Bombay City, the cost on transport may be somewhat higher. Even then, the margin

between the ex-factory price and the present wholesale price should cover this slight increase in cost. Otherwise, the wholesalers should approach the Collectors and settle the wholesale price under their advice.

"The level of retail prices of 51 to 52 nP per lb. has been indicated after rounding in favour of the retailers. These are the maximum prices and actual sales should be generally at lower prices, especially if large quantities are purchased at a time.

"In most areas of Bombay State, sugar is sold at the retail stage in terms of a standard seer of 80 tolas. A seer is a little over 2 lbs. The equivalent prices of 51 nP and 52 nP per pound in terms of seers should be taken as 104 nP and 106 nP per seer for D-29 grade and corresponding prices for other grades. The details of per seer prices for various grades are being circulated to the retailers by their associations or federations."

The aforesaid clarification, sugar circles believe, will eliminate the chances of profiteering by wholesalers in areas very near to the factories supplying sugar in this State. It is pointed out, for instance, that licensed wholesalers at Ahmednagar could formerly purchase sugar from a factory in the Sahapur or Rahuri District at a price of Rs. 105 per maund. But, in terms of the Rs. 111 and amendment recently announced, the price given to the Collector at Ahmednagar, the wholesalers' profit in Ahmednagar will now be fixed on a reasonable basis.

The Government of Bombay has asked the Sugar Merchants' Association to furnish figures of patches to Bombay City from the joint-stock company factories in the State. It is believed that the Association has not yet submitted these figures to the Government. The ex-mill purchases from members of the said trade body are said to be negligible.

The joint-stock factories have given a good account of themselves and the established wholesalers have endeavoured to make available substantial quantities of sugar. In view of this and not yet been able to finalise allocations among its members of the 15,000 bags allotted to the trade believed that no change in the existing distribution machinery of joint-stock companies in the City is contemplated by the State Government.

HAPUR, 27th July

Ready sugar prices recorded a sharp decline during the week, thanks to the announcement of full the State and the decision to distribute it throughout its chosen wholesalers and retailers, leaving a surplus of income limit would be entitled to get it. Sugar here went down from Rs. 11.50 per bag during the week and sugar in retail was available easily at Rs. 1 per seer.

Khandasari continued to rule steady. Production from galawaty was being continued for some months, but some demand season ended for the festive season. Prevailing prices were reported Khandasari Rs. 38 to Rs. 42.50; boora Rs. 40 to Rs. 42 a maund.

Gur was steady due to brisk outside support and on reports that stocks were fast running down here as well as in other assembling centres. Rain-crop. The week's offake of gur aggregated 10 maunds. Crushing for new season will start in the first week of October and current prices were in the pansera dry best Rs. 21.75; katha mixed dry-wet Rs. 20; shakker Rs. 22 a maund.

BLACK PEPPER CLIMBS UP

(Messrs. Parekh and Co.)

BOMBAY, 29th July

After a long spell of inactivity, Malabar black pepper fared up during the fortnight under review, and Russia. The total business for European countries East Germany, Czechoslovakia, Rumania and the USSR is estimated at more than 1,000 tons. When prices start advancing, it is the usual price with both the growers and the holders of pepper to sell sparingly and ask for a new price at every rise. Such a state of affairs may be slowly developing.

Singapore, after remaining steady for a long time, showed improvement during the week. Malabar spot in New York was quoted at \$0.23 to \$0.29 and Lampong spot from \$0.21 to \$0.27. There are reports that Singapore is repurchasing in New York, as the under production of the stock of Lampong in Singapore is strong hands and New York prices are lower than those of Singapore. Holders are looking to part with stocks except at a price which would leave prospects of coming crop of Lampong as poor as compared with the overall production of Lampong during the year 1958.

It is pretty certain that the U.S.A. will soon come in the market for Malabar to cover their autumn requirements, as the sellers of Lampong from Singapore are reported to be comparatively more reserved than what they were. Ready stock in Bombay is put at 3,000 bags, as against 15,000 bags at this time last year. Ready pepper in the local market improved from Rs. 88 to Rs. 100.

Rains are said to be unusually heavy in some parts of Kerala and Canara. There are rumours of some damage to pepper crop, but it is too early to believe such reports. A newspaper agency reports that rain in Canara is 34" more than the average and that extensive damage has been caused to the arecanut and coconut trees.

At the time of writing this report, however, the pepper market is quiet which is considered to be technically healthy after such a rapid rise. Ready ungarbled is quoted at Rs. 173, ready garbled at Rs. 126, August delivery at Rs. 127 and October delivery at Rs. 125. Reports of uncertain political situation in Indonesia and the recent decrees of Dr. Sukarno imposing heavier punishment for economic and financial offences committed by trade are supporting factors. The political situation in Kerala is also a contributory factor.

The future of the market appears to be promising, but much depends on how New York reacts to the deteriorating stock and crop situation in the primary markets.

DEMAND FOR QUALITY TEAS MAINTAINED

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 24th July

Sale No. 28—8½ lakh pounds were offered in this sale which was held on 21st July 1959. The quality of teas offered in this sale showed a further improvement and there were some useful high grown on offer. The market opened to a good general demand which was maintained throughout the sale. There was a useful enquiry for low medium and medium broken and these were steady on last week's rates. However, similar fannings were occasionally easier. High grown were well supported and prices for these remained steady. Whole leaf grades were firm to dealer following quality. Tippy teas met with a useful demand. The following are the quotations:

	1959	1958
Low medium	1.48 to 1.65	1.60 to 1.75
Medium	1.60 to 1.75	1.75 to 1.95
Good medium	1.85 to 2.10	1.95 to 2.15
Quality	2.05 to 3.00	2.10 to 3.20

Dust Sale "T"—A total quantity of 380,000 lbs. were offered in this sale which was held on 23rd July 1959. A useful selection of dusts were on offer. There was a strong general demand for all types. The market opened to a good general demand. Milled and poorer descriptions sold well and were the strongest feature of the sale.

London Market—Sale of 20th July 1959—Good market for quality. Others irregular and often lower. Price tea fully firm.

Sale of 21st July 1959—Limited demand. Easier.

Colombo Market—Owing CMU strike, sale postponed. Holding sale large breaks only 24th. Balance off grades small breaks probably 27th. Union leaders propose ending strike from tomorrow. General meeting today to ratify.

Export Quota—A small business has been transacted at 2½ nP. At present there are sellers at 3½ nP and buyers at 3 nP.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., write:

"Sale 29—980,000 lbs. Good general demand, particularly low medium and medium sorts which have advanced five to ten nP. Best liquoring high-grown broken neglected. Orange pekoes dearer but other whole leaf easier."

QUALITY TEAS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 28th July

Following a further improvement in quality, steadier conditions were in evidence in the export sale held yesterday, as well as in the internal sale held last week. Note was taken of the London trend last week when buyers keenly followed quality and good quality Assams were well supported. Offerings there still included first flush teas, which tended easier. Trade circles, referring to increased production costs at gardens, believed that, if only internal consumption increased and gardens increased production further, the overall costs of production could be reduced.

Dusts on offer in last week's internal sales amounted to 18,179 chests including 187 chests of the old season's manufacture. The general demand was good, with the teas of orthodox manufacture gaining in price. The quality of C.T.C.s on offer held last week. Note was taken of the London trend last week when buyers keenly followed quality and good quality Assams were well supported. Offerings there still included first flush teas, which tended easier. Trade circles, referring to increased production costs at gardens, believed that, if only internal consumption increased and gardens increased production further, the overall costs of production could be reduced.

Leaf on offer amounting to 386 chests were in good demand and realised improved prices. On 22nd July, an export sale was held in Chittagong. There was good demand for the offerings amounting to 7,898 chests, of which the teas possessing bright clean liquor met with ready bidders. The weaker teas were provided in teas possessing less liquoring qualities and/or with poor appearance. Withdrawals of these amounted to

2,948 chests. In keen bidding, leg-cut fannings improved by As. 2, the whole leaf grades meeting with keen competition. The internal sale was postponed by a week more. The next export sale will be held on 5th August, when offerings will be about 10,900 chests.

Offerings at the export sale held yesterday amounted to 40,205 chests. All teas, excepting Assam thin liquorings, met with good demand, and prices for the good quality teas recorded impressive additions. Strong competition was offered to clean fannings, prices of which rose by 10 to 15 nP. A firmer tendency was recorded by clean broken and "teas for price." Competition again met the best C.T.C.s having bright liquor, which hardened. Plainer C.T.C.s eased by 20 to 30 nP, while the bright liquoring Assam B.O.P.s and O.F.s were fully steady on keen competition. Some withdrawals were recorded in Darjeelings, the demand for which remained at a lower level at reduced rates. On the other hand, tippy teas were in good demand, as were leaf grades. The quotations were: best Assam C.T.C. fannings Rs. 4.00 to Rs. 4.50, best Assam C.T.C. B.P. Rs. 3.40 to Rs. 3.60, medium fannings Rs. 2.10 to Rs. 2.20, medium B.P. Rs. 2 to Rs. 2.10, plain fannings Rs. 1.80 to Rs. 1.90, plain B.P. Rs. 1.70 to Rs. 1.76 and clean black pekoe Rs. 1.92.

Export quota changed hands at 2½ nP with buyers subsequently demanding 3 nP.

SACKINGS STEADY

(From Our Own Correspondent)

CALCUTTA, 28th July

Prices of heavy goods were extremely steady during the week under review. Substantial business was done with overseas countries and there were a good number of enquiries and orders for internal consumption. Hessian was, however, quiet, as business passing was restricted. Prices of raw jute recorded fractional recession following continued reports of good conditions of the crop and the heavy shown by mills in entering into fresh commitments.

A feature of the week was the substantial business done with China in heavy goods. Business was also done with several other countries including the Sudan, the Middle East, Australia, Egypt and Viet Nam. Interest was also shown by the Government of India. Although the stock position of heavy goods continued to be heavy, difficulty was experienced in locating some varieties of heavy goods for near-by diversification. With regard to hessian, some business was done with Argentina, but the quantity involved being insignificant, this did not have any effect on the trend of prices. The news that American consumption of burlap in June was 81.4 million yards to bring the total consumed in the six months to June to 454 million yards, representing a substantial increase over the corresponding previous period, also failed to have any effect on the price trend here. This was due to the hesitancy shown by bag manufacturers in the U.S. in replenishing stocks.

In several jute districts, harvesting is in progress; however, there were reports from some districts, especially from Northern Bengal, of insufficient rains to leading low water level in tanks and canals as to make steeping operations difficult. Raw jute arrivals last month in Calcutta and mill stations amounted to 305,700 bales, representing a decline of 68,000 bales compared to the previous month. This was attributed to poorer demand, in view of the heavy stocks with mills purchased earlier in order to support the raw jute market. The possibility of increased fibre supplies from Pakistan, following the Indo-Pakistani trade talks held in New Delhi, was noted, but market circles hoped that imports from Pakistan would be so timed as not to depress prices for indigenous jute.

Meanwhile, the official announcement in Karachi abolishing the minimum export prices on all varieties of cuttings with immediate effect was noted with satisfaction. The Pakistan announcement also stated that no changes were being made to the existing rates of export duty on jute and jute cuttings. The current crop was estimated at 5.8 million bales which was thought here to be an underestimate having regard to the good weather conditions. The carryover from last season was admitted to be 900,000 bales; the total availability of jute in Pakistan would, therefore, be far in excess of internal and export needs. The announcement also revealed the official decision to retain the minimum export price on first jute on the basis of ₹90 per ton for export first c.i.f. the United Kingdom and the Continent.

On Tuesday last, ready B. twills declined to Rs. 98.20 from Rs. 98.85. This followed reports of the likelihood of a Government order for 1,000 bales of B. twills being placed on a single firm. There was a heavy unloading of heavy goods in the futures market as a consequence, because all those who had bought against covering were disappointed. In sympathy, ready hessian 40" 10 oz. fell to Rs. 40.85 from Rs. 41.25. Trade sources here received with satisfaction the news that the South Viet Nam Government had arranged to release funds for the import into that country of 1.2 million gunny bags for packing rice. All shipments must reach Saigon before 15th September. However, on Wednesday, B. twills were quiet at Rs. 98.10 and hessian 40" 10 oz. declined to Rs. 40.65 from Rs. 40.85. Soon, substantial business was done in heavy goods with the Middle East, the Sudan, and Australia, but the price of B. twills was quiet at Rs. 98.20 due to continuance of bearish activity in the futures market. Hessian 40" 10 oz. declined further to Rs. 40.50. On Friday, however, the price of B. twills spurted to Rs. 99.25 following business done with China. In sympathy, hessian 40" 10 oz. gained to Rs. 40.60. Good business was done with overseas markets in the week-end; however, due to profit-taking, B. twills receded to Rs. 98.50 and hessian 40" 10 oz. to Rs. 40.35. Yesterday, heavy short covering was done in heavy

goods. However, the rise in price was temporary, as the uptrend was soon followed by profit-taking to erase the entire gain. The closing rate for B. twills at Rs. 99.50 was fully steady, as also the rate for hessian 40" 10 oz. at Rs. 40.50.

Mills were reserved in considering offers from sellers of raw jute. For they thought that, as the arrivals of the new crop increased, prices would decline. New northern bottoms fell to Rs. 22.75 from Rs. 23.25 August-September and at Rs. 21.50 old northern bottoms registered a loss of 50 nP. The latest quotations for the new crop are:

	Middle	Bottom	Delivery
Indian:			
Northern	Rs. 22.75	Rs. 22.75	Aug.-Sept.
Upper Assam	25.75	23.25	Oct.-Nov.
Cuttack	27.00	24.25	Oct.-Nov.
Dawal	24.25	21.75	Aug.-Sept.
Murshidabad	23.75	21.25	Aug.-Sept.
Jungli	23.25	20.75	"
Dalasee Ord.	26.15	24.00	Sept.-Oct.
Uttar Pradesh	23.25	20.75	Aug.-Sept.
Dalasee mesta	23.50	21.00	Oct.-Nov.
Himal f.a.q.	23.25	21.00	"
Pucca bales 1st mark	Rs. 17.00	per bale ready.	

METALS HARDEN

(From Our Own Correspondent)

CALCUTTA, 28th July

Although business passing in the metal market was restricted during the week under review, in view of the slackness in demand—a normal feature at this time of the year—prices hardened. The improvement was due mainly to the further gain in copper on the London Metal Exchange. Spot copper opened in London at £219½ per ton and gradually rose to close steady at £222½, owing to rise in demand on European account and reports of a 7 per cent. cut in production by Phelps Dodge. It was believed that other producers would also soon announce similar cutbacks. The price in New York at 29 cents per lb. recorded a small gain during the week. In the local copper scrap market, prices declined following poor demand and large availability of virgin metal. At Rs. 218, utensil scrap fell by Rs. 2 per cwt. and the berry quality was pushed down from Rs. 235 to Rs. 230.

Tin opened at Rs. 573 per cwt. and firmed up to Rs. 576. The improvement was due to the poor stock position as compared with anticipated requirements in the immediate future. However, fresh arrivals would soon reach stockists. The London quotation was steadier towards the week-end at £

MARKET GOSSIP

(Concluded from page 167)

cussion in the Board but also by conveying to the Commission their personal appraisal of the market situation, their reactions to the decisions of the Board and their view in regard to the policies of the Commission. They have also played a significant part in persuading the Board to co-operate in the execution of the decisions taken by Government in the larger economic interests of the country."

Inaugurating the conference, Mr. Nityanand Kanungo, Minister for Commerce, observed that the decisions of the boards of directors of the forward trade associations affected the public interest in many ways, particularly through their impact on the prices of forward contracts. The movement of forward prices influenced the prices in the ready market not only of the commodities concerned but also of other related goods. Commodity prices had such a central place in the economic system that changes therein affected the position of every member of the public, the grower, the processor, the trader and the consumer. Any increase in prices hit hard the consumer, especially when the commodities happened to be food articles like groundnut or essential raw materials like cotton. This was the reason, he explained, why the Government and the Forward Markets Commission were very firm with speculators. But through constant contacts between the associations and the Commission, there had now been a better appreciation of the policies of the Government. This had enabled the Commission to relax its controls, at least in the case of well-established and more experienced associations.

Proceeding, Mr. Kanungo said that, while the Government was anxious to provide every scope for legitimate trading activity, it would deal with anti-social traders with a heavy hand. It is true, as the Minister pointed out, that the nominated Directors are in a position to assist both the trade and the Commission, the former by interpreting to it the general economic climate within the limits of which they must operate and the latter by putting forward their views on the basis of personal knowledge as to the directions in which the Government action needs to be modified or moderated. It would, however, appear from the list of those who attended the conference that there is a pre-dominance of University Professors among the nominated Directors. Bankers and technical men from other spheres, the other two classes of people from whom nominated Directors are supposed to be chosen, are too few in number. The Government's aim of associating impartial and competent persons with the conduct of affairs of the associations will be better served if more persons with practical knowledge of business conditions and practices are chosen as its nominees.

Investment Convention

A serious impediment to the rapid pace of economic expansion in India and other underdeveloped countries has all along been scarcity of resources. Recognising this, several industrially advanced countries have taken steps to encourage investment of capital—private and public—in the underdeveloped areas, besides granting aid through official agencies. But the scale of such investments has been very small in Asia and some parts of Africa, thanks to fears of confiscation and unfair discrimination among investors in capital-exporting countries and apprehensions regarding foreign exploitation, and domination in the minds of some of the recipient countries, of which India is not one. If, therefore, the flow of foreign investment capital into the underdeveloped countries is to be accelerated, it is vitally necessary to foster greater confidence between the capital-seeking countries and the capital-investing countries. It is precisely with this laudable objective that a ten-man all-party commission of British Members of Parliament (Chairman: Mr. A. Creech Jones), appointed by the Parliamentary Group for World Government, has urged the creation of a world convention on international investment. The details of the proposed convention as gathered from reports in the daily Press are summed up below:

The convention, which will cover international private and public investment, will be backed by a secretariat to negotiate suitable agreements between the parties and an arbitration tribunal to deal with disputes. It will lay down broad "rules of behaviour" to be followed by lenders and borrowers; any nation can join the convention. It will give as much attention to the rights of borrowers with fears of foreign exploitation and domination as to lenders with fears of confiscation or unfair discrimination.

The right of Governments to nationalise property is no doubt to be recognised, provided adequate compensation is paid. When disputes arise between the borrowing and the lending countries, they will be taken to the arbitration tribunal. The punishment to the offending country will be only the publication of the Tribunal's findings.

The convention should be administered within the framework of some established international organisation commanding a wide measure of confidence such as the World Bank or the G.A.T.T.

This is not the first time that the need for the right set of conditions stimulating flow of investment capital is stressed. In fact, the Prime Minister of Malaya pleaded for such a convention two years ago in one of the E.C.A.F.E. conferences. Some attempts have already been made to achieve this purpose, as witness the passing of legislation assuring fair treatment to foreign capital in many countries, bilateral agreements which provide for arbitration or resort to the World Court in cases of dispute, investment agreements concluded by the U.S. and the efforts of the World Bank and the International Finance Corporation to facilitate investment. But the attempts have not met with much success, owing to the absence

of a world code embodying general principles which would encourage and guide the drawing up of specific agreements between individual countries. Although the idea of such a code has been supported by several world jurists and international chambers of commerce, the progress actually achieved in giving effect to the idea has been none too encouraging. By reiterating the suggestion, albeit in a new garb, the Commission of British Parliament Members has clearly indicated that, unless some sort of basic rules for treatment of foreign capital are established, the flow of such capital to Asian countries will continue to be tardy.

The convention proposed by the Commission, while it provides for negotiation of suitable agreements governing investment between the countries and arbitration in case of dispute, cannot by itself channel investment where it is most needed, nor will it have any world authority to raise capital or allocate it among the needy countries. The Commission of British M.P.s itself admits that the scheme is a modest one, intended only as a beginning. There is, however, no doubt that the move is a valuable and commendable one. It is yet another instance of the growing awareness in the thinking sections of public opinion in the developed countries of the urgent necessity to help the people of underdeveloped countries. It deserves the support of all the Governments, particularly those of underdeveloped countries. It would be appropriate if India were to take the lead in this matter and try to bring to fruition the initiative taken by some members of the British Parliament.

NATURE OF MODERN INFLATION

(Concluded from page 176)

categorically resist any further automatic wage increases, and abolish any short-term escalator clauses. Higher productivity then will be able to keep prices down and money sound, provided that management will finally feel the moral responsibility to pass technical progress on to the consumer in the form of lower prices.

The U.S.A. has an international responsibility also in this regard. The dollar has become the measuring stick for others. Between \$14 to 16 billion of short-term money are kept by Europe in the U.S.A. Unfortunately, there are some signs that creeping inflation—which continued even during the recession—could go on a little bit faster in the U.S.A. than in Europe. It can anyway be assumed that most of the European industrial nations will not inflate faster than the U.S.A. The American balance of payments is passive, the dollar shortage does not exist any more, some gold has returned to Europe—more could flow out if it knew where it could safely go. American investors buy European stocks, partly because the buying

Notice

HOWRAH MILLS COMPANY LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Thirty-fourth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 11.30 a.m. on Tuesday, the 8th September, 1959, for the following purposes:—

- (1) To receive and consider the Audited Accounts for the year ended 31st March, 1959, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To declare Dividends.
- (3) To appoint a Director in place of one retiring.
- (4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 20th August to the 8th September, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
I. F. MORRISS,
Acting Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, 24th July, 1959.

Note:—A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on the 8th day of September, 1959, or to their mandatees.

power of the dollar is higher in Europe than in the U.S.A.

The U.S. competition abroad is cramped by high prices and wages. Import restrictions cannot be any longer a remedy in a climate of freer international give-and-take. Increased wages for steel workers would put a major milestone on the road to further inflation. A general acceptance of the idea that a creeping inflation of 2-3 per cent. is inevitable (à la Prof. Slichter) would accentuate serious potential risks and endanger the dollar as the yardstick for the world's currencies. Any important wage increase should be refused in the near future—even at the price of a major strike. The vanishing respect for private property is intimately related to our laxity about the integrity on money. A free society can only stand on firm and durable foundations.

BANKING

(Concluded from page 175)

a move towards increased productivity and greater freedom in trade and payments, the Government is abolishing price controls and administrative allocation procedures for commodities, the importation of which will no longer be subject to quantitative restrictions.

The drastic steps that Spain has been forced to take to correct its economy are not unusual. In fact, for over a year now, the I.M.F. has become more and more insistent that member-countries seeking its assistance on a large scale should adopt any economic reforms that it considers desirable before they get a favourable response, even if these reforms are unpalatable to the countries concerned and bring about a distinct change in their economic policies. It is for the countries in distress to decide whether to accept the conditions laid down by the I.M.F. or not. It must be said to the credit of the I.M.F. that the measures suggested by it have helped member-countries recoup their economies to a large extent. So far no country, which has sought the I.M.F.'s advice and aid, has been bold enough to defy the I.M.F. and to refuse its advice.

Brazil

The distinction of having done so now goes to Brazil. Recently, this country sought the help of the Fund to meet the prospective payments deficit in 1959. The I.M.F. firmly held that it could lend its helping hand only if Brazil was prepared to undertake some radical economic reforms, which are aimed at, among other things, strengthening its chronically weak budgetary position. Brazil, however, refused to abide by the advice of the I.M.F. In fact, it is said to have protested that the I.M.F.'s attitude was contrary to the spirit of co-operation and mutual respect that had in the past characterised such negotiations. The Brazilian President is also said to have decided not to carry on any more negotiations with the Fund and that the question of additional credit needs would be discussed on a Government-to-Government level. It appears that Brazil had asked for a credit of \$30 million from the I.M.F. and a package deal credit for about \$300 million through the I.M.F. It now remains to be seen whether Brazil can afford to lose such large assistance without coming to terms with the I.M.F. In the absence of such general aid, it is doubtful whether that country will be able to meet the deficit in its balance of payments and the debt repayment commitments which are due to mature in the next twelve months. But it is just possible that Brazil is banking on the support of the U.S. For political reasons, the U.S. cannot afford to leave this important Latin American country high and dry. It will be interesting to see what the U.S. does, whether it will back the I.M.F. and refuse to give financial assistance to Brazil, unless the reforms advocated by the Fund are carried out, or quietly give it a loan without any such condition.

D.L.F. LENDS TO INDIA

Close on the heels of the two loans for an aggregate sum of \$60 million granted by the World Bank to India a few days ago has come another loan assistance to the tune of \$20 million. This is from the U.S. Development Loan Fund. The loan, which is repayable over a period of 15 years, is to finance purchase of heavy and light structural steel, light rails, plates, wires, black sheets, strips, tool, alloy and special steel and for industrial projects under the second Five-year Plan. A notable feature of the loan is that it involves no drain on India's foreign exchange reserves, because repayment will be in rupees. This D.L.F. the first and second were for \$75 million and \$100 million respectively, granted on 23rd June 1958 and 24th December 1958.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."

FRESH HOPE FOR DEMOCRACY IN INDIA

THE public response which the six-week-old Swatantra Party has so far had, under the inspiring leadership of Rajaji, is quite encouraging and fills one with fresh hope for the future democracy in India. The first convention of the Party, held in Bombay last week-end, was well attended by representatives from all parts of the country and patronised by a large section of the public. It has won the support of some members of Parliament and certain State legislatures. The Statement of Principles drafted by the founders of the Party and unanimously adopted at the convention is in keeping with genuine democratic ideals that animates the members of the Party and constitutes an appropriate basis for opposing the party in power and other left-wing parties which are, really speaking, only satellites of the Congress Party. The principles adumbrated in the 21-clause statement, published in full on page 243 of this issue, are precisely those for which this journal has been fighting ever since the Congress Party started meddling with the Constitution after the first General Elections and began to curtail the freedom of the individual under the guise of socialism. We, therefore, welcome the statement wholeheartedly and devoutly hope that it will gain the support of the vast majority of people in this country.

We are firmly convinced that there can be no democracy without individual ownership of property and without the system of free enterprise. Every family should have property of some kind, that is, savings invested in productive enterprises which will give it a sense of security and independence. It is true that not all the people today enjoy this freedom from want. But it is the desire of all right-thinking persons that everyone should have this freedom as early as is humanly possible and in a manner which will not deny the other freedoms. Today's have-nots have to become the haves of tomorrow. They should have the right to keep what they have won through hard work and to retain the means of their livelihood, unmolested by the State. This is exactly what the Swatantra Party is out to safeguard and to restore the rights guaranteed by the original Constitution but, unfortunately, taken away by the Congress Party through a series of amendments to that Constitution. Even the have-nots, therefore, will ultimately stand to benefit by extending their support to the new Party. They should remember that the policy of expropriation that is now being followed by the party in power and warmly endorsed by all the left-wing parties will, in due course, make the citizens—rich and poor alike—the slaves of the State. Communism and its associate, socialism, are only other names for State capitalism. We have no doubt that the people of this country, with their innate common sense, will quickly grasp the dangerous implications of the socialist philosophy of the Congress Party if they are properly explained to them. It is the good fortune of this country that Rajaji has come forward to shoulder this responsibility, because he knows the art of educating the lay public better than any other leader.

The Swatantra Party is not a party advocating negative policies, as some in high places have chosen to describe it. This will be clear from its Statement of Principles and the speeches delivered at the Party's convention by Rajaji, Mr. N. G. Ranga, Mr. M. R. Masani, Mr. C. M. Munshi, Mr. H. P. Mody and several others. These speeches, incidentally, are full of common sense and economic wisdom and will repay a study by ambitious young men who are at the threshold of their life and wish to join the ranks of the haves by their own initiative and enterprise. They are in refreshing contrast to the swansongs of the socialist pattern.

society of the Congress and the democratic (sic) socialism of the Communists. The Swatantra Party, it must be noted, is not opposed to all planning but only to planning of the Soviet and Chinese types which are inimical to individual initiative and enterprise. It is not opposed to the State starting industries; only, it wants the State to supplement the efforts of private enterprise and to take up the establishment of new industries which is difficult for private initiative. It is clearly against the State entering the field of trade and disturbing the market mechanism and introducing controls and official management, with all their wastefulness and inefficiency. But it certainly is not for *laissez faire*, for, while it stands for the principle of maximum freedom for the individual and minimum interference by the State, it recognises the right of State to prevent and punish anti-social activities, to protect the weaker elements of society and to create the conditions in which individual initiative will thrive along fruitful and beneficial lines.

It is common knowledge that the Congress Party has gone far beyond these limits for State intervention and State activity and has resolved to go still further in this direction. At the same time, it has miserably failed to punish anti-social activities and committed several costly mistakes on the economic front, thereby giving genuine ground for its left-wing opponents to ridicule it before the public. It is highly significant that, ever since the Congress Government took too many economic responsibilities and began placing a tremendous emphasis on policies designed to redistribute wealth, the Communist Party has gained in strength to the detriment of genuine democratic forces both within and outside the Congress Party. The criticism that the Congress Party is becoming communistic in its outlook may appear harsh and exaggerated. There is, however, a large measure of truth in it. Those who doubt the accuracy of this statement are welcome to study Mr. U. N. Dhebar's

notorious note on the approach to the third Plan and the official account of the equally notorious Ooty seminar.

The Swatantra Party's principles on taxation and profits are progressive and consistent with the need for ensuring suitable incentives for initiative and enterprise necessary for achieving higher production on the most economic lines. They are by no means those of die-hard business men or of the so-called vested interests. The Party believes in economic development with stability and wants foreign loans to be limited to the country's capacity to repay. It is against the expansion of the bureaucratic machine, with a hierarchy of officials asked to do functions which are best carried out by citizens and private agencies. These are sound principles. Some, however, may wonder whether these policies will be conducive to speedy economic development which is necessary to catch up with the rapid rise in population and in the ranks of unemployed. Such a doubt is natural to those who have been planning as the Government of India has been doing, with predetermined ideological objectives, as, for instance, the public sector should grow faster than the private sector, and with too much preoccupation with *per capita* income, which gives rise to exaggerated ideas of national needs, as, in arriving at *per capita* income, the whole population is taken into account, including children, adolescents and old people past the stage of work. But to people with practical outlook, the principles outlined by the Swatantra Party will create no such doubt. It is obvious that any plan that ignores the vital consideration of stability, the capacity to raise resources and the availability of the requisite manpower, is bound to run into difficulties of the sort the second Plan has done. Surely, there is no virtue nor wisdom in the party in power holding out prospects that are outside the realms of practicability. Again, the chances of a more rapid rate of economic growth than has been achieved in the second Plan are better under the type of society advocated by the Swatantra Party than under the socialist pattern of the Congress Party. Experience in this country, as well as elsewhere, shows that the cost of economic development through bureaucracy is distinctly greater than through a mixed economy, in which the State will play a relatively minor, though valuable, part of a catalytic agent. It is not a mere cliché to say that a rupee earns more when it is employed by private enterprise than by the public sector.

The Swatantra Party promises a fair deal to workers and is fully alive to the interests of agriculturists. It has given weighty reasons for opposing co-operative farming, ceiling on land and incomes. It believes in peasant-proprietorship, the ideal system for securing the urgently required increase in production. Without co-operative farming, agricultural production in India has recorded a significant increase and, if the increase has not been more, it is because of lack of adequate facilities. Given the advantages that are now promised for co-operative joint farming, agriculture under peasant proprietorship will doubtless give an impressive performance. If the repeated statements by the protagonists of co-operative farming that it will be voluntary has not carried conviction to the leaders of the new Party, it is because they know very well that a reform of this nature will ultimately end in compulsion through coercion and domination by bureaucracy. The trend of discussions and recommendations made at the Co-operative Conference at Mysore last week, favouring large-scale co-operatives and State participation in capital and board of management—in the name of economic viability and need for ensuring efficiency—only serves to confirm the misgivings of those opposed to co-operative farming.

FOOD TECHNOLOGY

THE application of science and technology to production, preservation and processing of food crops has made rapid strides in recent years. Although agricultural science has had a hoary past, the application of technology after the stage at which crops are raised is of relatively recent origin. In India, there is yet little awareness of what science can do to its crops, whether cereals, fruits or vegetables. Processing of food articles has no doubt received a certain measure of commendable research attention. But, by and large, the progress made by food processing, either in research or in application, is limited, especially when it is viewed against the size of the country and its agricultural production. Indeed, the food processing industry itself is only of modest size, mainly because the demand for processed food is small and confined mainly to the principal cities. Although the food habits of the vast majority of the people and their low purchasing power are the chief causes for this state of affairs, conditions are bound to change gradually in favour of this food with continuing economic development and growing urbanisation. The scope for further progress is, therefore, vast. From this point of view, the Regional Seminar on Food Technology for Asia and the Far East, which was held this week at Mysore, has done well to bring out the implications of this science to the farmer and the consumer.

Agriculture sustains nearly 80 per cent. of the people in the South-East Asian region. It is thus the largest single source of employment. Indeed, it is not merely a profession but a way of life for a large majority of people. Nevertheless, as the Union Food Minister, Mr. A. P. Jain, pointed out, in his inaugural address at the Mysore Seminar, the study of food science and technology and the closely allied field of nutrition with the background of modern scientific knowledge and techniques are comparatively new to the countries of the Asian region. Emphasising the role this new science plays in the food economy of the industrially advanced countries, Mr. Jain said that scientific methods had now advanced so much that not only were the various essential nutrients well preserved but also in several cases the processed products were enriched and made more palatable than the fresh products themselves. Citing an instance of how the absence of processing facilities leads to waste of resources, Mr. Jain recalled that, this year a large part of the "gigantic" crop of mangoes grown in U.P. perished for want of specialised transport or processing and storage facilities. This instance lends weight to the economic importance of food preservation industry and processing techniques, to which Dr. V. Subrahmanyam, Director of the Central Food Technological Research Institute, drew particular attention. Dr. Subrahmanyam said that, if food technology could be developed in the South-East Asian region on anything approaching the scale in the West, its food problems would not cause so much anxiety as they do at present.

In its wider sense, food technology covers all operations connected with the preparation and processing of all food articles. Since the chief deficiency in the average Indian diet is the absence of sufficient quantities of protective foods, food technologists in India have necessarily to devote a major portion of their attention to correcting this deficiency. The Indian Council of Medical Research has indicated how nutritionally deficient is the average Indian diet. The daily intake (in ounces) of different food articles which it has recommended (with actual average intake in brackets) is: cereals 14.0 (16.6); pulses 3.0 (2.3); leafy vegetables 4.0 (0.9); other vegetables 6.0 (4.1); ghee and vegetable oil 2.0 (0.9); milk and milk products 10.0 (3.3); meat, fish and jaggery 2.0 (0.7); condiments—(0.4). A study of these figures will show that, except in cereals and pulses, the average Indian diet has to be greatly enriched. Indeed, a slight reduction in these two items could conceivably do no harm, whereas any failure to improve the intake of such protective foods as vegetables, vegetable oil and ghee, milk, fruits and meat and eggs, will certainly condemn this country to remain an ill-fed nation, with little capacity for contributing to increased productivity. As the Chief Minister of Mysore, Mr. Jatti, stated in his speech at the Seminar, while religious sentiment and social taboos have conspired to restrict our choice of foodstuffs, even this limited choice has been further restricted by the low purchasing power of the people; in consequence, the average Indian is incapable of long and sustained effort and it is not surprising that his productive capacity is easily the lowest in the world.

By far the most important task that remains to be tackled is that of changing the food habits of the people. What is necessary is to educate the citizen in the value of supplementary and protective food articles. Since food habits, once they have been firmly set, die hard, it is advisable to concentrate one's attention on the younger generation. The Agricultural Production Team, sponsored by the Ford Foundation, suggested that a general educational programme should be undertaken, in order to change food habits for better nutrition. The educational material should be channelled through a central agency and disseminated through public health nurses, health workers, agriculture and home science workers, *gram serikas* and welfare staff. It should show clearly the results of inadequate diet and the tangible gains accomplished through improved diet. Such publicity should enable the results of research conducted by India's food laboratories to reach the people. Calling attention to the work done by these laboratories and the scope for application of food technology to Indian conditions, the Team observed:

"The technical laboratories in India are conducting many experiments with the preservation of indigenous foods by drying and salting. Bananas, for example, can be dehydrated for use as a sweet or as a substitute for the fresh product. Increased use of groundnuts is encouraged by new methods of cleaning, crushing or roasting of the nuts. Fruits are preserved in glass jars and tins and sold as a sauce or preserve. India has some of the finest fruits in the world and improved processing methods will permit better use of available supplies. This is especially important for varieties which do not ship well, but which can be used to good advantage, if processed and preserved."

Among the many notable results of research of particular relevance to Indian conditions, evolved in our laboratories, mention must be made of improved method of parboiling rice and the preparation of multi-purpose food. It would appear that the new method of parboiling rice makes the product free from the disagreeable odour associated with rice parboiled in the traditional method. Parboiled rice has two additional advantages: (a) it is a more nutritious product than the raw milled rice, and (b) it leads to better recovery of the whole rice. It has been computed that, if all the rice produced in India were parboiled, it would by itself increase the availability of rice by half a million tons. The other result of research is the multi-purpose food, which, when added in small quantities to the ordinary food, serves to make it more palatable and nutritious. If these two products alone were more widely publicised and used—efforts should, of course, be made to manufacture them on a large scale—the nutritional level of the average Indian diet could be greatly increased. There are, of course, many other subsidiary food items which, as the special articles in the previous two consecutive issues of this journal have pointed out, could be manufactured in India with great profit to the farmer and benefit to the consumer.

In considering the many complex issues raised by the application of science and technology to the preparation of food articles for consumption in India, it is well to bear in mind two considerations. In the first place, no scientific technique is of any use, if it implies installation of costly equipment in rural regions or results in a product that is priced at a level above the average means of the consumer. Discussing the scope for food technology in Asian region, Dr. A. G. Van Veen, Chief of the Food Processing and Preparation Branch of the F.A.O., rightly emphasised that "canning, cooling and freezing are by no means cheap and simple ways of processing and are, therefore, of only limited value." He added: "We know that the great masses of population of Asia cannot afford expensive preserves of this kind, popular as they may be in North America and certain parts of Europe." He, therefore, suggested a system of community processing, under which the State or the community provided the factory with enough equipment for preservation of food on a small scale. An experiment on these lines could be of considerable assistance to rural areas. Secondly, it cannot be too strongly emphasised that food technology has only a limited application in a situation in which there is a deficit in the supply of

foodstuffs. Clearly, the production of agricultural and dairy produce must first be augmented before it is processed or treated in any of the many ways indicated by the advances in food technology.

ATOMIC POWER

IN its admittedly highly specialised sphere, the Department of Atomic Energy continues to make steady progress. A notable development has been the fabrication of the first prototype fuel element for the Canada-India Reactor which is scheduled to start operation by March 1960. The Reactor will be fuelled with about 10 tonnes (1 tonne=1,000 kgs.) of natural uranium in the form of some 176 fuel elements. Explaining the importance of this new stage of operations, Dr. H. J. Bhabha, Secretary to the Department, stated in Bombay this week that the fabrication of fuel elements was a "highly specialised technology, mainly because the metallurgical behaviour of the uranium metal is extremely temperamental." Nuclear grade uranium ingots have now been in production at the uranium metal plant at Trombay since February 1959. The fabrication of a prototype fuel element, with effect from 15th June 1959, is said to mark the culmination of an essential phase in the programme for producing nuclear energy. It has been computed that Rs. 50 lakhs a year of foreign exchange could be saved through the fabrication of fuel elements in India.

Dr. Bhabha disclosed that efforts were being made to locate a suitable site in the Bombay-Ahmedabad region for building India's first atomic power station. The erection of the plant, which would cost about Rs. 55 crores, would be entrusted to some agency to be selected through global tenders. Dr. Bhabha believed that the plant which would produce about 250,000 kw. power might be ready by 1964. He estimated the cost of power at 4 naye paise per unit, though, after a period of, say, five to ten years, it might come down to 2.6 naye paise. By the end of the third Plan, it might be possible to generate 500,000 to 750,000 kw. of nuclear power.

While we have no doubt that India should continue to press nuclear science to peaceful purposes, it would perhaps be in the best interests of the country that the whole question of setting up atomic power stations were kept under constant expert scrutiny. For one thing, even some of the industrially advanced nations have been reluctant to think in terms of giving high priority to the production of nuclear energy as a source of fuel. Some of them, like the U.S., are well endowed with other sources of energy like oil or natural gas, which are distinctly cheaper than nuclear power, so that they feel that atomic power is not an urgent economic necessity. The U.K. is, of course, making enormous strides of progress in the setting up of such atomic power stations as Calder Hall. But this is because that country's coal reserves are getting depleted or its coal mining has proved to be an increasingly costly operation and it has no other sources of fuel. Italy and Japan are other examples of countries similar to the U.K. In the Soviet Union, the emphasis has no doubt shifted away from coal, but not so much towards production of nuclear power as towards exploitation of its oil reserves to the fullest extent possible. In fine, countries with alternative sources of fuel are giving high priority to their development in preference to nuclear power, for the simple reason that the latter is relatively more expensive and involves the ticklish problem of disposing of the atomic waste.

These considerations point to the need for a certain degree of caution in India's atomic power plans. Nobody would, or should, object to the many phases of atomic energy development programme, particularly to the research and industrial applications. But the question of setting up more than one atomic power plant should be viewed in the light of comparative advantages of nuclear, thermal and hydel power stations. After all, India has large and extensive coal reserves. Given a sound price policy, it should be possible to augment coal production speedily. Thermal power for a long time to come. India has also not fully developed its water power potentialities. In any case, it is reasonable to expect that the Government should subject the atomic power programme to expert scientific and economic scrutiny before it commits itself too far in that direction. Surely, in the context of India's limited capital resources, it would be wrong to allot, without prior resources, tiny, too high a priority to a capital-intensive programme like atomic power project.

MARKET GOSSIP

AFTER a lot of pother, albeit behind the scenes, the Government of India has finally given up the idea of insisting upon the issue of new ordinary capital of the Tata Iron and Steel Company, Ltd. at a premium and approved of the proposals of the Directors of the Company. Many man-hours of highly paid, senior civilians, busy Ministers and officials of the Company, as well as considerable ink and paper, have been wasted. If well-established companies, with large reserves, good dividend record and assured outlook are not to be asked to raise new equity capital at a premium, the Government should, in fairness to companies which followed the sound policy of collecting a premium on new issues, give up its decision to extend the bonus tax to capitalisation of share premiums also. Indeed, the bonus tax itself deserves to be abolished, because it is an unfair tax; it is the worst form of double taxation. What is more, it results in distortion of the financial picture of companies. Now that the Government has taken away the wealth tax on companies and the excess dividend tax, it will be in the fitness of things if the bonus tax also is removed, without, of course, a countervailing increase in the other taxes on companies. If the Government were to do so, most of the companies would, of their own accord, collect a premium of appropriate amount on their new equity issues.

Given a fair and equitable system of corporate taxation, the issue of new equities at a premium would undoubtedly be a good policy for companies. Fixation of a premium, however, is not a simple task, as it depends on a number of factors, including the state of the capital market, which is a variable factor. The best judges are the directors of each company and not the Controller of Capital Issues. It is an extremely difficult, if not an impossible, task to lay down a formula which can be uniformly applied to all companies. If the Government is to administer a control on this aspect of capital issue, there is bound to be a certain amount of arbitrariness, which is likely to give rise to the impression that the Government is following a policy of discrimination between one company and another. Evidently, this consideration must have weighed with the authorities in coming to the conclusion it did on the T.I.S.Co.'s proposals for raising additional capital. In our issue of 4th July, we stated in these columns that the question of prescribing a premium for the new equity issues of companies raised so many conundrums that it remained to be seen how the Government solved them. Well, it has chosen the simple but the wisest solution of not inviting the trouble.

Kerala Loan

Now that the Communists have been deprived of their power in Kerala, in response to the vociferous agitation of the people of that State, and the administration of the State has been taken over by the President, the Union Government has, with commendable speed, included Kerala also in the list of States which have announced their new loans. The amount proposed to be raised by the Kerala Government is Rs. 4 crores, a crore more than last year. The rate of interest is 4 per cent. and maturity 12 years, same as those offered by all the State Governments. The issue price is Rs. 99, similar to that of the loans of Assam, Madhya Pradesh, Orissa and the Punjab. The list opens along with the loans for the other State Governments, that is, on 19th August.

The entry of Kerala raises the number of States borrowing now to 13 and the total amount to Rs. 61 crores. It is learned that all the banks in Kerala, which had decided not to co-operate with the Communists, have promised the present administration their full support to the loan. Conditions in the money market are now so comfortable that the addition of Rs. 4 crores will be easily absorbed by it.

Industrial Giants

The latest edition of the Directory published by the well-known U.S. journal, *Fortune*, reveals some interesting facts about the 500 largest U.S. corporations. These data are of great relevance to India in the context of the controversy kicked up by the Congress and other leftist parties in this country about concentration of economic power. The *Fortune's* survey shows that General Motors continued to hold its place as the largest corporation in the U.S. in 1958, with total sales amounting to \$9,522 million (\$1,000 million=Rs. 480 crores), while the second place was retained by the Standard Oil of New Jersey, with its sales at \$7,544 million. Considered in terms of the total assets, however, the Standard Oil of New Jersey ranked as the largest company as in 1957. Ford Motors occupied the third place, its sales in 1958 aggregating \$4,130 million. General Electric came next with \$4,121 million, followed by U.S. Steel Corporation with \$3,472 million. It will be interesting to note here that the sales of General Motors were more than twice those of Ford Motors. The disparity is even greater when the fifth ranking U.S. Steel is compared with General Motors. The statistics compiled by *Fortune* also show that the 50 large corporations were more affected by the last general recession than the top 500 corporations as a whole.

As compared with these giants in the U.S., the Tata Iron and Steel Company, Ltd., which is the biggest joint-stock concern in India, had a turnover of Rs. 53.5 crores (approximately \$111 million) and total assets of Rs. 175 crores (about \$360 million). The turnover is less than 1 per cent. of that of the U.S. Steel Corporation and about 1.2 per cent. of that of General Motors. This shows what a pigmy the T.I.S.Co. is when placed side by side with the industrial giants in the U.S. Yet many

of our politicians talk of vast concentration of economic power in a few hands. And what is more, the Company Law Administration describes a company with an authorised capital of Rs. 1 crore as a giant company. How misleading!

An important point to be noted in this connection is that the existence of these giants in the U.S. has not reduced the contents of democracy in this country. Indeed, there is more freedom for the people in that country than there is in this land of Gandhi and Nehru.

The *Fortune* has also listed 100 largest industrial concerns outside the U.S. Of these, the British and Anglo-Dutch groups occupy the first four positions and account for six out of the first ten. We give below the list of first ten giant companies outside the U.S. so that readers may have a comparative idea.

(In million dollars)			
Rank	Company	Sales	Assets
1.	Royal Dutch-Shell (British-Dutch)	5,472.9	7,623.9
2.	Unilever (British-Dutch)	3,535.0	1,926.1
3.	British Petroleum (British)	1,675.2	1,589.2
4.	Imperial Chemical Industries (British)	1,295.5	2,027.4
5.	Nestle (Swiss)	1,238.3	172.7
6.	Philips Gloeilampenfabrieken (Dutch)	946.1	1,099.6
7.	Siemens (Germany)	794.5	607.6
8.	Friedrich Krupp (German)	764.0	N.A.
9.	British Motor Corporation (British)	742.0	338.4
10.	British-American Tobacco (British)	725.0	1,002.0

N.A.—Not available.

Largest Banks

Another American journal, *American Banker*, has compiled data relating to the 500 largest commercial banks in the Western world. According to this study, these 500 banks had, at the end of 1958, an aggregate deposit of \$246,200 million (in terms of U.S. currency). This list included 264 American commercial banks and 236 banks in 39 other countries. The distinction of being the largest bank (measured in terms of deposits) in the world goes to the Bank of America in San Francisco, with deposits aggregating \$10,173 million. The other major banks were the Chase Manhattan of New York with its deposits at \$7,134 million and the First National City Bank of New York with \$6,966 million. The ranking of the "Big Five" in Britain is as follows: Midland Bank—\$4,433 million, Barclays—\$4,430 million, Lloyds—\$3,643 million, Westminster—\$2,761 million and the National Provincial—\$2,418 million. In other countries, there were four banks in Germany with deposits exceeding \$1,000 million (Rs. 480 crores), three in Italy, two in France and five in Japan.

In India, there is not even a single commercial bank of such giant size as listed above. The Central Bank of India, the largest among private commercial banks, had deposits of the order of Rs. 162 crores as at the close of 1958. It is true that the deposits of the State Bank of India amounted to Rs. 479 crores (just about \$1,000 million), but it is a bank in the public sector.

Outlook for Tata Oil

The possibility of the Tata Oil Mills Company, Ltd., approaching the capital market during the current financial year for additional funds to the extent of Rs. 50 to 75 lakhs to finance the Company's modernisation and expansion programme, as well as to provide more working capital, was indicated by Mr. J. R. D. Tata, Chairman, at the annual general meeting of the Company held on Monday this week. Replying to shareholders' queries, he said that some of the Company's machinery was old and needed renewal. He, however, did not give any details about the proposed issue, for the Directors themselves had not discussed any specific proposal for this purpose. He could not, therefore, say in what form the additional capital would be raised, whether by way of debentures or equities, or both. It might be spread over equities and debentures.

The capitalisation of a part of the Company's reserves and issue of bonus shares was ruled out by Mr. Tata, in view of the penal bonus tax of 30 per cent., which has now been extended even to capitalisation of share premium money. If this tax was removed, he said, the Company might consider the proposal, but at the moment there was no such intention.

The new system of grossing up dividends will become operative in the case of the Company from the current financial year onwards. Under this scheme, the shareholders will stand to lose 46 per cent. of their income. They were, therefore, anxious to know what the Company's dividend policy for the current year would be in the circumstances. While, not holding out any promise, Mr. Tata indicated that it would be the management's intention or hope to maintain the present net dividend, that is, pay a gross dividend which, after deduction of tax, would leave in the hands of the shareholders the same net amount as they had received for the past year.

On the outlook, Mr. Tata did not wish to indulge in any prophecies, but he gave sufficient indications, in his speech earlier, of the good prospects for the Company, as will be borne out from the following points from his speech:

"1. Assuming that the organised sector of our industry is spared any further ingenious imposts and disincentives in the years to come, I do believe that, with the growth in our population, coupled with the additional purchasing power pumped into the economy through the heavy development expenditure under the Five-year Plans,

the market for our products will grow in future at a faster rate than the discouragingly slow tempo of the last ten years, and that our sales will continue to show a steady increase.

"2. We do not propose, in fact, to be satisfied with our present share of such an expanded market. We consider that the time has now come when an all-out sales effort, using modern marketing methods, will yield rich dividends for us in the future and enable us to secure a progressively larger share of the total market than today. Steps have been taken to strengthen our sales organisation.

"3. An even more interesting and potentially promising development is the decision to establish a marketing department at the head office in Bombay, which will be apart and distinct from our sales organisation. The department will consist of three sections, to cover the separate functions of market research, advanced sales planning, and sales promotion and publicity.

"4. While we do not expect spectacular results from any of these new measures, we believe that, by strengthening our organisation for adding to the means available to us today to broaden our market and the demand for our products, we cannot but derive benefits as time goes on.

"5. Our Calcutta factory produces only laundry soap, but, with the installation of the new finishing plant there, we are considering the question of erecting a toilet soap unit in Calcutta.

"6. A significant step in the improvement of our plant and methods of soap manufacture was taken during the year, by the placing of an order for a continuous saponification plant. This greatly improved method of making soap by a continuous, instead of a batch, process is being widely adopted throughout the world, and we hope to derive substantial benefit in both improved quality and reduced manufacturing cost when our plant goes into production early in 1960."

World Sugar Pact

When a report appeared in the daily Press a few days ago to the effect that the Executive Committee of the International Sugar Council would be meeting at London from 30th July to 1st August for a review of the sugar situation in the light of low prices prevailing in world markets, hopes were expressed that the Council would decide upon some concrete, energetic steps to improve the tone of the markets. The hopes, however, have been disappointed. The Committee has not taken any such step; it has merely declared that "no new developments have taken place which should lead it to modify the conclusion reached by the Council at its last session—held from 16th to 18th June—that requirements (5.46 million tons) and supplies (5.66 million tons) for the year 1959 are roughly in balance. In its opinion, the price levels recently ruling in the world sugar markets cannot be explained by the overall statistical position. But the Committee, we are told, is considering measures to strengthen the marketing position of member-countries and these "are being recommended to the Council at once." Here is what it says in the *communiqué* issued at the end of the meeting:

"The Committee has had a helpful and comprehensive exchange of views on marketing policy. It has noted with satisfaction the aim of exporting countries to pursue a constructive marketing policy in accordance with the objectives of the Agreement, with a view to restoring confidence in markets. The Executive Committee has discussed what co-operative action might be taken by the Council in furtherance of these objectives, and measures to strengthen the marketing position of member-countries are being recommended by the Committee to the Council at once."

The statement of the Sugar Council's Executive Committee that no new developments pointing to the need for energetic action have taken place is not quite convincing. Despite the application of the maximum quota restriction (20 per cent. of the aggregate export quota of member-countries) provided for in the Agreement, the world sugar markets continue to rule depressed, the current level of prices being the lowest for the past seventeen years. Cuban raw sugar at New York now stands at 2.62 cents per lb. (f.o.b. Cuba)—it had even gone down to as low as 2.55 cents on 21st July—as against 2.87 cents two months ago. Spot sugar in London is quoted at £244 (Rs. 327) per ton, as against £268 (Rs. 352) early in June.

It is thus apparent that the Sugar Council has not succeeded in its efforts to check the downward trend in prices, let alone its reversal. Any further action of the Council depends, as a report from London observes, on the co-operation of Cuba, where most of the current surplus of sugar is to be found. The Cuban Government is said to be somewhat aggrieved over the fact that, of all member exporters, it is only Cuba's sales which are unduly retarded. Only recently, the Cuban Minister for Commerce, Dr. Raul Cepero Bonilla, made it clear that unilateral sacrifice was not the answer to the present sugar situation. He said:

"The controlled expansion of world sugar production, of which the International Sugar Agreement only regulates a small portion (namely, that of member exporting countries), is the disturbing factor this year, as in the past, and the only one responsible for low prices. As long as the Agreement does not control the production of member importing countries by, for example, safeguarding a portion of their consumption increase to member exporting countries and effective means are not used to keep non-member exporting countries away from the free market by measures such as allowing member importers to purchase from non-member exporters, the Agreement cannot be expected to act as an efficient regulator of the market and, by the same token, of prices."

The aforesaid view, it is believed, was reiterated by the Cuban delegation at the meeting of the Sugar Council's Executive Committee last week. How far and to what extent the Council will accept this view and give effect to it remain to be seen. This much, however, can be said now: The coming months will be a critical period for the working of the World Sugar Agreement.

EQUITIES RULE STEADY TEXTILES IN THE FOREFRONT

(From Our Own Correspondents)

BOMBAY, 6th August

THERE was a general improvement in the tone of the share market during the week under review, though the trend of prices was two-sided. The news that the Controller of Capital Issues had given sanction to the Tata Iron and Steel Company, Ltd. for issue of its proposed new capital at par, the encouraging production by the T.I.S.Co. and I.I.S.Co. during the month of July and the recovery in textile shares on reports of good offtake of cloth from foreign countries were the main inspiring factors. Towards the close, however, there was heavy profit-taking which wiped out a sizable part of the earlier gains, induced by the none too encouraging Directors' report and statement of accounts of the T.I.S.Co. for the year ended March 1959. On balance, almost the entire list disclosed only moderate gains.

Following the receipt of the Controller's sanction, the Tata Iron and Steel Company, Ltd., has called for the adjourned extraordinary general meeting of the shareholders to be held on 2nd September 1959 to approve of the proposed ordinary and preference share capital issues. By creating 618,372 new ordinary shares of Rs. 75 each and 375,000 'A' 7½ per cent. second preference shares of Rs. 100 each, the Company proposes to raise its capital from Rs. 30.86 crores to Rs. 39.25 crores. Of these shares, 613,933 new ordinary shares will be issued and offered to the existing ordinary shareholders in the ratio of one share for five and 371,909 'A' second preference shares will be offered to the existing holders of 6 per cent. preference shares and 7½ per cent. second preference shares in the ratio of one 'A' share for every two shares of either class of existing preference shares or one preference share and one second preference share. The full amount of Rs. 75 per new ordinary share and Rs. 100 per 'A' second preference share is payable on application.

The production of saleable steel of the Tata Iron and Steel Company during the month of July 1959 amounted to 98,500 tons, as compared with 88,100 tons in the previous month and 68,600 tons in the corresponding month of 1958. The output of saleable steel by the I.I.S.Co. has gone up from 49,296 tons in June to 55,903 tons in July and despatches thereof from 46,670 tons to 53,507 tons.

To revert to the trend of prices, Tata Ordinaries improved from Rs. 174 to Rs. 179 on Tuesday under the lead of textile shares. On profit-taking induced by uncertainty about the dividend of Indian Irons, they reacted to Rs. 177.50. At this stage came the announcement that the Government had given sanction to the Company's new issue at par. This was greeted by a spurt in the shares to Rs. 182.25 yesterday. Heavy profit-taking, however, pruned the gain and the shares closed today at Rs. 179. Indian Irons shot up from Rs. 24.08 to Rs. 24.88. After a short-lived dip to Rs. 24.72, the shares rallied to Rs. 25.50 on revival of hopes that the dividend would be maintained. At the close, there was a slight reaction to Rs. 24.92.

Centuries provided the highlight of the textile section with a jump from Rs. 543 to Rs. 571. After reaction to Rs. 563, the shares rallied to Rs. 571.50, but there was again a setback to Rs. 562.50 at the close, leaving a net gain of Rs. 19.50 over the week. Bombay Dywids were relatively subdued. After improving from Rs. 65.60 to Rs. 67.10, the shares relaxed to Rs. 65.70 at the close. Kohinoors closed with a gain of Rs. 8.50 at Rs. 308.50, after touching a peak of Rs. 317.50. Central Indias recorded a rise of Rs. 7 to Rs. 108. While Finlays lost a rupee to Rs. 279, Gokaks advanced by Rs. 2 to Rs. 162. Indu Ordinaries rose by a further 28 p to Rs. 8.52. Morarjee Mills were done Rs. 5.50 higher at Rs. 262.50. Osmanabhis improved by Rs. 3.50 to Rs. 40. Podars by Rs. 7 to Rs. 155 and Shree Niwas Cottons by Rs. 5 to Rs. 181.

Sugar shares displayed a hardening tendency. Belapurs advanced from Rs. 308 to Rs. 319 before reacting to Rs. 313.50. Phaltans rose by Re. 1.25 to Rs. 161.50 and Walchandnagars by Rs. 2.50 to Rs. 311.25. Maharashtra Sugars gathered Rs. 7 to Rs. 222. Cement shares were less active. Associated Cements, after gaining from Rs. 151.25 to Rs. 154.50, gave way to Rs. 151.75. Digvijays moved up by Rs. 2 to Rs. 154 and Orissa Cements by 24 p to Rs. 167.2.

In the engineering and mining group, Tata Locomotives were again active, though part of the earlier gains was wiped out towards the close. After a jump from Rs. 204.50 to Rs. 215, the shares reacted to Rs. 209 at the close. Alcocks recorded a gain of no more than a rupee to Rs. 254. Premier Constructions hardened from Rs. 3.51 to Rs. 367. Larsen and Toubros enjoyed good support and rose by 84 p to Rs. 22.04. Brady Engineering shot up by Rs. 4 to Rs. 89. Shivrajpur changed hands Re. 1 higher at Rs. 85. Indian Coppers were steady at Rs. 4.14.

Shipping shares were featureless. Schindls moved between Rs. 18.08 and Rs. 17.80 before closing at Rs. 17.84. Great Easterns were a shade quiet at Rs. 21.52. Automobile shares continued

to be in favour. Hindustan Motors added 20 p to Rs. 11.16 and Premier Automobiles Rs. 3 to Rs. 134.

In the miscellaneous group, Bombay Burmahs (old) were flat. After a sharp rise from Rs. 526 to Rs. 550, the shares gave way to Rs. 538. National Rayons finished with a gain of Rs. 6 at Rs. 348.50, the highest level touched for this week was Rs. 359.25. Gwalior Rayons rose by Rs. 1.18 to Rs. 22.64. Despite the encouraging outlook for the Company, Tata Oils dropped a rupee over the week to Rs. 67.50. Fears of a cut in dividend brought down Tata Chemicals by 36 p to Rs. 16.96. Wincos shot up Rs. 15 to Rs. 219.

Calcutta Stock Exchange

CALCUTTA, 5th August

The last two or three sessions on the Calcutta Stock Exchange witnessed a small recovery aided by brighter Bombay advices and replacement demand. Earlier in the week under review, however, conditions were depressed. It was only too evident that the disappointment over the lower Tisco dividend could not so soon be forgotten, despite the Directors' explanation, which was said to have been accepted by the Bombay Shareholders' Association. However, market circles hoped that the Controller of Capital Issues would permit the proposed rights issue at par, and shareholders would be compensated for the lower dividend. The subsequent news of Government sanction having been obtained was greeted with enthusiasm.

Coals lacked enthusiasm. While Raneegungs were unchanged at Rs. 18, Burrakurs, after opening at Rs. 17.44, sagged to as low as Rs. 17.12. They, however, recovered again to Rs. 17.62. Central Indias closed better at Rs. 8.19 after being lower at Rs. 8.14. Amalgamateds, though unchanged at Rs. 25.25, were firm, as were Bengals at Rs. 309, while South Karanpuras closed better at Rs. 13.75, after opening at Rs. 13. East Indians were pushed down to Rs. 24.12 from Rs. 25.62 previously.

The lower levels which jutes touched earlier provoked subsequent buying on expectations of better working results encouraged by reports of keen export business in goods. Anglo-Indias changed hands earlier at Rs. 251.25, but soon rose to Rs. 260. At Rs. 176, Budge Budge put on Rs. 13.50. Birlas were steady at Rs. 22.75, as against Rs. 22.44 earlier. On interested buying, Barnagores hardened to Rs. 169 from Rs. 160, and for the same reason Kankaranahs advanced to Rs. 97.98 from Rs. 95.

Engineering attracted buying at lower levels on fresh support. Indian Irons opened at Rs. 24.09 and, in accord with easier Bombay advices, lost to Rs. 23.80. Fresh buying developed at this stage, and the rate recovered to Rs. 24.86. From Rs. 23.45, Texmacos recovered to Rs. 24.35. Kumardhubis, after being unchanged at Rs. 6.94, advanced to Rs. 7.06. J.K. Steels closed at Rs. 14.62 after being lower at Rs. 14.31.

In accord with the general trend, miscellaneous industrials recovered later in the week. Indian Cables improved to Rs. 32.37, after opening at Rs. 31.56. Hindustan Motors met with more enquiries to rise to Rs. 11.53 from Rs. 10.69. Dunlop Rubbers were better at Rs. 34, while Balmer Lawries sagged to Rs. 195 from Rs. 199. Indian Coppers, after being lower at Rs. 4.07, closed better at Rs. 4.16. At Rs. 13.06, Sirpur Papers recorded a small gain, with Indian Aluminiums being better at Rs. 22.56.

Madras Stock Exchange

MADRAS, 5th August

The Madras Stock Exchange put on a cheerful appearance during the week under review, in contrast to the easy trend noted in the previous two weeks. There was revival of buying support at lower levels. The sentiment of operators was influenced favourably by reports

that the Investment Committee of the Life Insurance Corporation would be meeting shortly to consider purchase of certain scrips. Textiles evoked good enquiries during the major part of the week, thanks to encouraging advices from piecegoods and yarn markets. Consequently, prices moved up. At higher levels, profit-taking set in and values suffered a setback. A large part of the earlier gains was erased and today's closing rates for many scrips were on a par with those at the end of last week. The planting section ruled active, despite reports of damage caused by heavy rains to tea, rubber and coffee crops, and uncertain political situation in Kerala. Tea scrips were well favoured, following news of steady demand for tea, particularly for high-grown varieties, at the recent Cochin auctions. Coffee shares were also well favoured on expectations of bumper crop. In sympathy with tea and coffees and on rumours that the Government was considering extension of maximum support for the expansion of plantation rubber industry, rubber shares recorded handsome gains. Several sugar and miscellaneous scrips also attracted good attention of investors. Electricity shares, however, continued to be subdued. The Union Irrigation and Power Minister's statement in the Lok Sabha on Monday that the plea for nationalisation of existing electricity undertakings was impracticable at present had no effect.

In the sugar section, E.L.D.s advanced by Rs. 1.13 to Rs. 39.50. Kirlampudis rallied from Rs. 80 to Rs. 81. Deccans hardened by 40 p to Rs. 12.25. Travancores were marked up by 25 p to Rs. 12.35. Indias gained 5 p to Rs. 12.30. United Breweries and Mysore were fully maintained, the former at Rs. 459 and the latter at Rs. 49.50.

Among tea shares, Haileyburias strengthened by Re. 1.40 to Rs. 20.50 following the announcement of a higher dividend of 20 per cent. (tax-free) for the year ended December 1958, as against 15 per cent. distributed in the previous year. Kil Kotagathered 25 p to Rs. 20.60. Ouchterlony's improved by 19 p to Rs. 5.59 and Twyford's by 15 p to Rs. 17.05. Kalassas picked up 12 p to Rs. 4.12. The directors of the Company have declared a higher dividend of 15 per cent. for the year ended March 1959, as compared with 12½ per cent. for the previous year. Chembras gained just a naya paise higher dividend, namely, 15 per cent. (tax-free) for the year ended March 1959, as against 10 per cent. for 1957-58. Periakaralamals, however, sagged for the year ended March 1959 is higher at 12½ per cent., that paid last year being 10 per cent. The feature of trading in the coffee group was the spurt of 65 p to Rs. 22.50 in Consolidated Cottanads were steady at Rs. 16.25. The Directors of the Company have maintained the dividend for the year ended March 1959 at 15 per cent. Lands lost 5 p to Rs. 5.40. Coffee Rajagiris improved by 40 p to Rs. 17.80. Cochin Malabars put on 35 p to Rs. 7.05. Highlands were higher by 50 p to Rs. 12.50.

In the textile section, Premiers spurred by Rs. 4.00 to Rs. 169.50. Bangalore Woollens improved by a rupee to Rs. 180. Buckingham's were steady at Rs. 188.50, as also Colmbatore Cottons at Rs. 142. Coimbatore Pioneers at Rs. 280, Dhanalakshmis at Rs. 197.50, Radhakrishnas at Rs. 119, Rajalakshmis at Rs. 61 and Vasantas at Rs. 211.

Among miscellaneous industrials, Rallis provided the bright spot, its quotation climbing up by Rs. 5.00 to Rs. 75. Ashok Leylands and F.A.C.'s respectively. India Cements hardened by 35 p to Rs. 6.80. Orissa Cements gathered a like amount to Rs. 16.65. Standard Motors increased by 30 p to Rs. 16 and Mettur Chemicals by 10 p to Rs. 13.65.

NEWS IN BRIEF

THE Government of India has released a fresh quota of 1,000 tons of rice bran (Andhra origin) for export upto the end of September 1959.

At its two-day meeting held at Chandigarh last week, the Northern Regional Committee of the Indian Council of Agricultural Research approved, in principle, the establishment of regional stations for vegetable research on crops yielding important protective foods.

A janata hotel to provide inexpensive accommodation for middle and lower middle class visitors to New Delhi is proposed to be set up by the Union Government. The hotel will have dormitories and single and double rooms to lodge about 500 persons at a time.

India's acceptance of the transition period of ten years for the settlement of the Indo-Pakistan Canal waters dispute will not postpone the target date for opening the Rajasthan Canal, namely, 1962, according to the Union Minister for Irrigation and Power, Mr. Hafiz Mohammed Ibrahim.

The geologists of the Bombay Government have located good quality coal deposits, estimated at 1,000 million tons, in a 20-square-mile area in the Kamptee region, near Nagpur, lignite deposits in the Kutch region and a substance resembling sulphur in the Broach District.

The Government of India has agreed to permit the export of 25,000 maunds of sugarcane seed for experimental cultivation in East Pakistan. The seeds are to be supplied from sugar mills and estates in Bihar direct to the East Pakistan Branch of the Pakistan Industrial Development Corporation.

About 35 hectares (2.47 hectares=1 acre) of land have been requisitioned in Durgapur for locating the coal-mining machinery factory. A detailed project report has already been submitted to the Government of India by the Soviet experts. The factory is expected to employ about 4,200 persons.

The bauxite deposits discovered in Kolhapur, Bombay, are now estimated at 5.7 million tons, that is, about 2.2 million tons more than those estimated by the Central Geological Department earlier on the basis of a preliminary survey. An aluminium plant is expected to be set up in this region during the third Plan period.

The National Productivity Council of India has accepted the French Government's offer of 25 scholarships made under the Indo-French bilateral agreements, to train Indians in the field of productive and scientific management. The Council has selected the candidates and the list is being forwarded to the French Government.

The West Bengal Government does not propose to nationalise the bus services outside Calcutta City, except in a small ceded area in the northern part of the State. This was disclosed by Mr. K. N. Das Gupta, West Bengal Works and Buildings Minister, in the course of his speech at a meeting of the Calcutta branch of the Indian Roads and Transport Development Association.

The possibility of developing the ceramic industry in Madras by utilising the good quality china-clay from the cement quarries and the raw materials, such as quartz, feldspar, gypsum and fireclay available in the neighbouring areas, has been outlined in a project report prepared by the Sub-committee of the State's Industries Development Committee.

A five-member Japanese team of experts has arrived in New Delhi to advise the Government of India on the development of small and medium-sized industries. The leader of the team is Mr. T. Iwawake, Director-General for Small Enterprise Agency of the Government of Japan. During its four week stay in the country, the team will visit a number of important centres of cottage and small industries in various parts of the country.

The Canadian Government has agreed to give a grant of \$10 million to the Government of India for the setting up of higher technical institutes and a central polytechnic, according to Dr. Lakshmanaswami Mudaliar, Vice-Chancellor of Madras University, who returned from London last week after attending the Commonwealth Educational Conference held at Oxford recently. The aid comes out of the counterpart fund of the wheat loan to India.

Mr. Lal Bahadur Shastri, Minister for Commerce and Industry, stated in the Lok Sabha this week that 6,625 automatic looms had so far been allotted to 34 mills. He added that allotments under the scheme for installation of 3,000 automatic looms for export purposes only would be considered in due course. He also said that no decision had yet been taken with regard to import or the types of automatic looms to be imported. There was, he disclosed, a proposal to manufacture automatic looms in India.

The Indian Institute of Technology, Guindy, Madras, the third in the chain of four higher technological institutions being established by the Central Government, was inaugurated by Mr. Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs, on 31st July 1959. The Institute has been set up with the aid given by the West German Government. It will have a total enrolment of 1,500 students in the Degree courses and about 500 students in post-graduate courses every year.

The scheme drawn up by the Government of Mysore for the establishment of a Central Workshop and Production Centre to manufacture bicycles

PERSONAL

MR. Mangaldas M. Pakvasa, a prominent member of the Congress Party, has been appointed Vice-Chairman of the State Bank of India.

Mr. Justice Kulada Charan Das Gupta, at present Chief Justice of the Calcutta High Court, has been appointed a Judge of the Supreme Court.

Mr. M. N. Chakravarthi, a former member of the Railway Board, took over charge as Special Officer in the Atomic Energy Commission, Bombay, on the 1st inst. He will be in charge of the atomic power plant proposed to be set up in India.

Mr. O. C. Cochrane, Traffic Inspector (Eastern Routes), British Overseas Airways Corporation, has been appointed Manager, B.O.A.C., Bombay, vice Mr. Gordon Davidson, who has been appointed Sales Manager of the Corporation in South-East Asia.

The merchant fleet of West Germany consists of 1,175 ships, with a total of 4.25 million gross tons. Of these, the number of tankers is 105, with a total of 626,760 Gross Registered Tons. During the first half of 1959, 21 ships, with 196,764 G.R.T., were added to the fleet and 29 ships with 85,571 G.R.T. were sold abroad or broken up or lost.

The French Government has abolished quota restrictions on a few more commodities imported from both the O.E.E.C. and the dollar areas. The commodities include agricultural machinery, tractor engines, electric locomotives, transformers and magnetos, synthetic fibres in bulk, a number of fruits and ball bearings.

West Germany has the highest share of taxation and social security contribution in the Gross National Product of all free nations. Its share in the country's gross national products is 31.6 per cent, followed by the U.K. with 29.4 per cent, France 28.6 per cent, Italy 27.7 per cent, the U.S. 25.9 per cent, and Belgium 23.5 per cent. The share of West Germany's taxes in the national income amounts to 43 per cent.

The Australian motor industry, including the local manufacturing and assembly units, is now claimed to be capable of meeting the entire domestic demand for commercial and passenger vehicles. The total investment in the Australian motor industry exceeded £A100 million, exclusive of development projects now in hand which together account for £A37 million.

The French Government proposes to set up a 50,000-ton steel plant in Bone, Algeria, at a total cost of £60 million. It is expected that £10 million will be contributed by the participating steel companies and £15 million by the Government of Algeria. About £30 million will represent long-term loans raised with Government cover by the steel industry's finance group, the rest being met out of medium-term State credits.

Two big concerns in the U.K. with complementary interests in the textile industry, namely, Tooltals of Manchester and William Hollins of Nottingham, are at present negotiating for a possible merger. Tooltals, set up in 1800, owns several subsidiaries for spinning and weaving plants, besides factories for made-up garments. The other company has concentrated for over 50 years on the production of made-up garments.

The total number of vehicles on the roads in the U.K. at the end of April last was 7.5 million and this figure is believed to have since risen to the record level of 7.8 million. The April figure included 4.6 million cars—one for every three families—1.35 million motor cycles, and 1.25 million vans and lorries. The remainder are public road passenger vehicles, tractors, ambulances and fire engines. In 1938, there were just over 3.0 million vehicles.

The Imperial Chemical Industries (United Kingdom) has decided to expand its manufacturing activity in Argentina by investing £1.5 million in its subsidiary in Buenos Aires, the Industrials Quimicas Argentinas Duperial, for undertaking a £2.35-million major programme of modernisation and development. The expansion of the subsidiary will enable it to reduce substantially the imports from the parent company, which account for about 40 per cent. of its total turnover in Argentina.

The workers of the nationalised Renault car factory in Paris will be eligible for a new form of wage guarantee, following the agreement entered into between the trade union leaders and the management. The workers will receive an average payment of Frs. 165 (2s. 4d.) per hour, if the working week is shortened by four hours, as compared with the normal 45-hour week. If the working week falls below forty hours, the workers will be treated as being on short-time and eligible for State benefit.

Personal incomes in the U.K. during the first quarter of 1959 were 4 per cent. higher than those in the corresponding quarter of 1958. After allowing for tax payments, national insurance and health contributions, personal disposable income was £131 million, or 3 per cent. higher, as compared with that a year before. Although the consumers spent £107 million more than in the first quarter of 1958, there was a slight increase in personal savings from 9.6 per cent. of disposable income to 9.9 per cent. Income from employment as well as gross trading profits of companies increased by 3 per cent. and gross trading profits of public companies by 19 per cent. On the personal spending side, wages and salaries rose by 2 per cent., income from rent, dividends and interest by 1 per cent., and national insurance benefits and other grants from public authorities by 14 per cent.

4 PER CENT KERALA STATE DEVELOPMENT

LOAN 1971

ISSUED AT Rs. 99.00 AND REDEEMABLE ON 19TH AUGUST 1971

The Government of Kerala announce the issue of their new loan for Rs. 400 lakhs bearing interest at 4 per cent. Government reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

The loan will be repaid at par on 19th August 1971.

THE LOAN WILL OPEN FOR SUBSCRIPTIONS ON 19th AUGUST 1959 AND CLOSE ON 25th AUGUST 1959 OR EARLIER WITHOUT NOTICE. THE LOAN WILL BEAR INTEREST FROM 19th AUGUST 1959.

Subscriptions may be in the form of cash/cheque.

Applications will be received at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, New Delhi and at branches of the State Bank of India and treasuries, and sub-treasuries in Kerala State.

Copies of Notification and Application Forms may be obtained at any Receiving Office.

STATE TRADING IN GRAINS

IT is, indeed, unfortunate that the authorities continue to chase the wild-goose of State trading in foodgrains, despite all the warning given by persons with intimate knowledge of conditions in foodgrains trade, including some distinguished economists. How the entry of the State in the field of grains distribution is beset with dangerous consequences was lucidly explained by Mr. M. H. Hasham Premji, President of the Federation of Grain Dealers Associations of India, at a Press conference on Monday last. State trading in grains, Mr. Hasham Premji declared, would involve a very heavy cost to the consumer, on the one hand, and the producer, on the other, without any benefit whatever in the shape of contribution to efficiency and proper handling and distribution of grains. He pointed to the fears in the minds of cultivators generated by the official food policy and warned that, unless these fears were removed, there might be a distinct setback to production.

The warning is not only timely but also quite pertinent. One fails to understand as to why the Government should continue schemes like zonal system and fixed prices for wheat and rice, especially when the supply position in respect of foodgrains is claimed to be very comfortable. The aggregate production of grains in the current season is placed at 73.3 million tons, as against the estimated requirements of 69.5 to 70.0 million tons. If the consumer is to benefit from such comfortable supplies, it is necessary that the normal forces of supply and demand should be allowed to operate in the foodgrains markets. The Government has not only not done this but has actually been interfering too much with the mechanism of the markets. The result is, as the Executive Committee of the Federation rightly stated at a meeting held in the City this week, a complete disruption of the structure of prices of important foodgrains as between the deficit and the surplus areas, leading to a marked diversion—to the extent of at least 10 per cent.—of land under foodgrains to commercial crops. Proceeding, the Committee observed:

"Producer resistance to sell at lower prices in surplus areas and consumer resistance to high prices prevailing in deficit areas are the other consequences of the Government policy. Damage and loss in storage as a result of this policy are only to be expected. . . . The greatest sufferers are the two important industrial States of Bombay and West Bengal, where wheat and rice prices have reached an unbearable level—double the prices prevailing in surplus areas—as a result of the zonal system and the Government policy of purchasing rice and wheat at fixed prices.

"It is unquestionable that large quantities of foodgrains continue to be smuggled across the zonal borders, thereby creating many unsocial problems, somewhat similar to what one sees on the prohibition front. Large resources of the Government in the shape of police and other forces are diverted to watch the zonal borders, adding thereby to the cost of administration, apart from encouraging and increasing the unsocial elements in the country to have full sway in these activities and elimination of all legitimate and honest trade from the food sector.

"The indirect cost to the taxpayer in maintaining this food control and State trading will be readily appreciated, if an account is taken of all these ancillary and other expenses that the Government has to incur in maintaining and pursuing the ideal of State trading. In the State of Bombay alone over 1,500 co-operative societies have gone into liquidation during the last few years due to various causes. Yet the fulcrum of State trading is based on future organisation of the co-operative sector to handle this trade. Apart from the inefficiency this may generate, the cost to the Exchequer of maintaining the co-operative sector, partly by assistance and considerably in the shape of administrative machinery to watch and regulate this sector, will act as a millstone round the food-grain economy of the country for the future, for decades to come."

This is certainly a correct assessment of the whole issue. The Union Minister for Food and Agriculture, Mr. A. P. Jain, himself admitted in the Lok Sabha on Tuesday that the scheme of State trading in foodgrains had run into difficulty in at least two States, Bihar and West Bengal, and procurement operations under the scheme had had to be suspended in order to ensure the flow of adequate supplies in the open market. Considering that the consequences of limited State trading in foodgrains pursued in

some parts of India have been very disquieting, one can well imagine what will be the state of affairs when the scheme of State trading is extended to cover all foodgrains and all regions in the country. Apart from the huge capital investment involved in State trading in foodgrains—as much as Rs. 600 crores, according to Mr. Hasham Premji's estimate and not Rs. 2,000 crores as was grossly exaggerated by a spokesman of the business community a few months ago—and the sacrifice which the consumer will have to make in the form of high prices, the scheme has the danger of diverting Government attention from the more important problem of augmenting food production to distribution. The distributive trade in foodgrains, in particular, involves, as Mr. A. D. Shroff aptly said recently, the use of techniques which cannot be built up overnight; it is the pioneering efforts of our merchants over generations which is mainly responsible for the efficient handling of foodgrains trade. In the opinion of Mr. Shroff, if the 300,000 merchants engaged in this trade were to be asked to hand over their businesses to the State, it would be a violation of one of the fundamental rights under the Constitution.

The Government cannot be unaware of the implications of the scheme of State trading in foodgrains. Why then should it persist in giving effect to it? Evidently, it must have been prompted by profit motive. It is estimated that the implementation of the scheme will yield an additional revenue of at least Rs. 170 crores annually to the Central Exchequer. The estimate is based on the existing difference between the official procuring and selling prices of wheat and rice. The difference is said to work out to nearly Rs. 2 per maund, representing a rate of return of as much as 10 per cent., as compared with the reported average profit margin of 1 to 2 per cent. derived by the private wholesale trader. If this is true, who is exploiting the consumer, the State or the mercantile community?

P. L. 480

Encouraged by the results gained so far, the U.S. Administration has sought a further extension for one year of the U.S. Agricultural Trade Development and Assistance Act, popularly known as P.L. 480. The Act, enacted five years ago, permits the U.S. Government to enter into agreements with foreign countries to sell certain agricultural products that are in surplus in the U.S. for payment in local currencies and make donations of agricultural products to friendly nations as a measure of relief during famine, floods or any other emergency. President Eisenhower, in his semi-annual report, has told Congress that the U.S., by continuing to distribute reserve agricultural commodities to friendly nations, has aided millions of hungry, needy and disaster-suffering people throughout the world. A notable feature of the working of P.L. 480 of late has been that, following the suggestion of the President, agricultural surpluses are increasingly being used as "food-for-peace."

The Administration has also requested Congress for an increase in authorisation of \$1,500 million for Title I and \$300 million for Title II of the Act. Title I, as readers are aware, pertains to the sale of agricultural commodities abroad for local currency while Title II authorises the use of commodities held in stock by the Commodity Credit Corporation to help friendly nations to meet famine or other urgent extraordinary relief requirements. Title III of the Act governs the distribution of food to needy people overseas through non-profit agencies and inter-governmental organisations and provides for barter of reserve commodities for strategic and other materials, goods and equipment.

Some amendments to P.L. 480 aimed at furthering the "food-for-peace" programme have also been proposed. Title I is proposed to be amended so as to permit grant of food for the establishment of national food reserves in underdeveloped countries. Title II would be revised to authorise greater use of commodities to help economic development projects. During the first half of 1959, the value of surplus agricultural products supplied under P.L. 480 aggregated \$803.5 million, raising the aggregate value of commodities supplied since the programme started in July 1954 to \$8,358 million.

Under Title I, the U.S. has signed a total of 158 agreements or supplements, with 38 countries since 1954, involving a sum of \$5,078.5 million. Of this, agreements with India covered a sum of \$658.2 million. During the first six months of this year, agreements to supply \$470 million worth of commodities were entered into by the U.S. under the Act.

Cumulative authorisation for emergency relief and other assistance abroad under Title I aggregated \$546 million, of which \$59.8 million was authorised during the first half of this year. Shipment under Title III through voluntary groups and intra-Governmental agencies aggregated \$2,733.5 million. The recipients include such countries as India, Afghanistan, Ceylon, Egypt, Iran, Iraq, Israel, Jordan, Lebanon, Pakistan, Turkey, and Syria.

A BENEFICIAL TRUST

The fifth annual report of H.E.H. the Nizam Charitable Trust for the year ended 31st March 1959, published elsewhere in this issue, make most encouraging reading. It furnishes a mode of what private charity, if guided by principle of scientific investment, can do to the community. Under the wise stewardship of Mr. C. E. Taraporvala, the Trust has been a creditable financial success, besides being a source of generous help to men drawn from diverse rank of society in Andhra Pradesh. In his work Mr. Taraporvala has been assisted by Mr. S. A. Lal and Mr. V. P. Menon who, incidentally, have charged no fees whatever for their services. Since its inception in June 1954, the Trust (Chairman: Nawab Zain Yar Jung Bahadur) has distributed Rs. 56 lakhs among beneficiaries who include destitutes, sick men, widows and students. Two new commendable proposals of assistance which the Trustees are contemplating are the setting up of an artisans' training centre and the establishment of an orthopaedic hospital.

There are three aspects of the working of the Trust which deserve notice. In the first place, prudent management has enabled the Trust to augment its original resources. The face value of the Trust's assets, which originally stood at Rs. 4.90 crores, has now increased to Rs. 5.59 crores, while their market value has gone up from Rs. 5.11 crores to Rs. 5.94 crores. The income of the Trust has moved up from Rs. 7.68 lakhs to Rs. 34.92 lakhs, an increase of 360 per cent. Secondly, the Trust, despite the increasing calls for assistance made on it, has been managed at a commendably low expense ratio. Expenses thus account for no more than 2 per cent. of the income of the Trust. Thirdly, the Trust, without sacrificing the considerations of security, has been a source of assistance to growing industries. In other words, it has made a significant contribution to India's industrial progress.

In view of the good work the Trust has done so far, it seems strange that it should have had to face some costly litigation, presumably sponsored by men disappointed in their attempts to get assistance from the Trust. After all, no trust can—in fact, it should not—dispense indiscriminate charity. And a trust's funds are necessarily limited, whereas the claimants, ever the most deserving among them, must be legion. It seems sad that a good trust, like the Nizam's Trust, should be exposed to frivolous litigation. The Trustees have drawn attention to this "deplorable confusion" caused by half a dozen laws supposed to govern trusts in the Andhra State. It is time the State's legislature passed legislation which will help eliminate such confusion and also enable the trustees smoothly to carry out the objects of the trusts in the State.

PROVIDENT FUND

Elsewhere in this issue is published a fairly detailed review of the progress and problems of the employees' provident fund scheme. By its very nature, the administration of the scheme is not an easy task. But, as will be more so by some diehards among employers law relating to provident funds. The Annual Report of the Central Board of Trustees relates ployers to evade the Act. Unfortunately, decisions of some High Courts, which have given a of the Act, ignoring the social objectives enshrined therein, have been taken advantage of by some employers to escape the liability for payment of provident fund contributions. An High Court that, on reduction of the employment strength of a factory below fifty, the establishment goes out of the purview of the Act. This decision has not only prompted many employers to claim exemptions from the application of the scheme and refund of provident fund them to deprive the employees of the statutory benefits by splitting up covered factories into smaller units each employing less than 50 persons. There have also been innumerable instances of failure of employers to pay their share of the contributions and submit periodical returns. Such actions on the part of employers have necessitated amendment of the law and also recourse to law courts in an increasing measure.

While one can understand the employers' opposition to any enhancement in the rate of provident fund contribution which does not take into account the capacity of the industry to bear the additional burden, one cannot but condemn any attempt on the part of employers to by-pass the provisions of the Act as being highly reprehensible. The provident fund authorities themselves have been willing to make concessions to employers, who genuinely find it difficult to pay, by allowing them, in deserving case, to remit past accumulations in instalments. Those who deliberately try to deprive the employees of what is justly their due deserve no sympathy and should be severely dealt with. Apart from the fact that the Employees' Provident Funds Act is an important social security legislation, there is also the consideration that, for many employees, such small amounts deducted from their meagre wages are their only savings. It is a pity that there are still employers who refuse to move with the spirit of the times. While the provident fund authorities may well go ahead with their proposals to plug the loopholes in the law, it is necessary that employers and their organisations should come forward to safeguard their names from being sullied by the actions of a few black sheep. We are sure that the majority of employers in this country consider employees' provident funds as an essential and desirable social security measure. The very fact that, even before the provident fund was made a statutory obligation, many establishments had set up their own provident funds and that, even now, many exempted establishments have schemes which offer more liberal terms than the statutory scheme, is proof of this. The employer organisations would do well to evolve a kind of voluntary code of conduct to be followed in respect of provident funds and any employer guilty of violation of the code should be expelled from these organisations and such action brought to the notice of the public in a suitable manner, so that the defaulters may go down in the esteem of the public.

"GUR" AND "KHANDSARI"

Analysing the consumption pattern of the different sweetening agents—sugar, gur and khandsari—we stated a few weeks ago (vide page 987 of Commerce dated 13th June 1959) that one would want to know how much money had already been spent on the development programme for gur and khandsari and how far the improvement envisaged in the programme had been effected. We are glad that these questions have been answered, albeit partly, by Mr. B. S. Murthy, Union Deputy Minister for Community Development and Co-operation, and Mr. A. Bhagavantha Rao, Andhra Pradesh Endowments and Industries Minister. Inaugurating the third All-India Gur and Khandsari Conference at Kakinada, Andhra Pradesh, on Friday, 31st July, Mr. Murthy said: "In spite of the best efforts of the Khadi and Village Industries Commission and State Governments, much progress has not been made in adopting improved techniques in the industry, which is still having inefficient tools, backward methods of production, and also suffering from lack of effective arrangements for storage, packing and standardisation of quality." In his presidential speech, Mr. Bhagavantha Rao observed: "The actual amount received by the Commission being far below the original allotment (Rs. 8 crores) made by the Planning Commission, the States have not received adequate funds to meet their needs. Consequently, the targets fixed under the Plan have not been achieved."

The slow pace at which the development programme for gur and khandsari industry is being implemented is rather distressing. It is common knowledge that the processes of manufacturing these commodities involve considerable wastage; the actual yield of marketable sugar is 25 per cent. less than that in the vacuum pan sugar factories. It is this enormous wastage which imparts urgency to the need for a more vigorous drive to improve conditions in the gur and khandsari industry through introduction of power-driven crushers and improved pans and other equipment on the technical side and measures for bringing about an improvement in keeping quality, proper storage and packing, and standardisation of quality on the marketing side. Mr. Bhagavantha Rao did well to stress this aspect. In particular, he urged adequate finan-

cial assistance, provision of storage facilities, establishment of research stations to improve production (quantitatively and qualitatively), and extensive application of power in the manufacture of gur and khandsari.

While the adoption of the measures indicated above will doubtless raise the efficiency of these cottage industries and afford more employment, it must be admitted that there cannot be any significant rise in the productivity of the industry. Viewed thus and considering the continuing shift in consumer preference from gur and khandsari to white sugar, one wonders whether it would not be advisable to place a greater emphasis on augmenting white sugar output than on encouraging gur and khandsari industry. This point must be specially stressed, because, with the series of improvements effected in the gur and khandsari production and with the distinct tax advantage enjoyed by these commodities over white sugar, the industry will more seriously compete with sugar factories, which constitute a more efficient form of extracting sugar, for the supply of cane in the coming seasons, unless, of course, the sugarcane crops continue to be bumper ones.

POSTS AND TELEGRAPHS

As a large national undertaking, the Posts and Telegraphs Department ranks next only to the Railways. It employs over 316,000 persons and has a capital outlay of Rs. 111 crores. The Annual Report of the Department for 1957-58, the second year of the second Five-year Plan, shows a record of continued expansion of postal, telegraph, telephone and wireless services in the country. The number of post offices increased from 58,871 at the end of 1956-57 to 61,886 on 31st March 1958. The pace of growth of post offices, however, was somewhat slow, in that it fell short of the average annual target of 4,000 new offices set in the second Plan by about 1,000. The progress in the number of telegraph offices, however, was satisfactory; the number rose by 671 to 10,723, as against the Plan target of 1,400, or an annual average of 280. The number of telephone exchanges went up (including P. Xs) from 6,202 to 6,472 and telephones from 309,000 to 335,000. In view of the economic development taking place in the country, the pressure of

NOTES FROM WEST GERMANY

SPECIAL IMPORTANCE ATTACHED TO MANAGEMENT TRAINING

TREND OF LABOUR AND SHARE MARKETS

From A Correspondent

COLOGNE, 31st July

THE necessity for top management training in W. German business was recognised early after the last war. One division of economics taught to students in the Federal Republic's Universities since about 50 years was plant organisation; but actual centres of executive training like Harvard's School of Business Administration did not exist.

A special "Institute for the Promotion of Industrial Management Training" was therefore established in Cologne some years ago. The Institute, the result of careful investigations by German business men, is supported by a "Foundation for the Promotion of Management Training" and maintains a Management School at Baden-Baden. Three times a year, about 30 top management trainees of some 40 years of age gather for a three weeks' period to discuss important problems of management in an exchange of ideas with about 60 to 80 visiting speakers. The training mainly aims at improving the power of judgment and of independent thinking. The trainees selected for such courses are expected to hold positions of responsible leadership.

Some months ago, an association of various European institutes of management was created on a European and co-operative level; "Eurogestion," an organisation for executive training promoted by all member institutes, among which the Cologne Institute is one.

The origin of a systematic training of business leaders by corporations, however, dates back to the twenties of this century. Some companies were guided by the long-term training methods of public institutions, such as the training of higher mining executives, while others had developing methods of their own. Other W. German business leaders graduated in plant organisation, thus having acquired the necessary foundation for clear-cut and successful business thinking. The progress achieved in recent years, however, was mainly based upon a systematic development of concerted programmes of management training, using round-table discussions as well as the "case method" developed by the Harvard School.

The idea of top management training recognises that people occupying positions of higher responsibility should have sufficient time and leisure for an exchange of their precious experience collected at the helm of big and small businesses. Similar thoughts have seemingly motivated President Eisenhower's recent decision to submit to Congress a Bill assuring high ranking Government officials the necessary time for quiet and systematic reflection. It is similarly recognised by German business now that a free and relaxed mind capable of resourceful and creative thinking is indispensable for successful leadership.

Employment Trends

Unemployment in the Federal Republic of Germany has now reached an all-time low, the Federal Employment Administration at Nuremberg counting only 255,400 unemployed, as against 319,500 vacancies. The Federal Republic's labour force is not expected to increase substantially during forthcoming years. The active population (15 to 65 years) will in all probability rise by a meagre 125,000 up to the end of 1965.

A further increase due to immigration should, however, not be overestimated. There is still a substantial influx from the Communist-controlled Soviet Zone, it is true; but it has already diminished and will continue to do so due to political pressure and restrictions exerted by the administration of the Soviet Zone. Other substantial sources of immigration are not available any more; this holds also true of the present influx of Germans from Eastern and South-Eastern Europe. Such an influx is presently organised by the Red Cross within its scheme to unite scattered family members. But only very few people able to work and capable of being efficiently incorporated into the country's speedy industrial activities will become available from that source.

The labour shortage is becoming even more severe due to the shorter work week: weekly

hours paid by industry having declined from 48.8 hours in 1955 to 45.7 hours in 1957; according to most recent figures, a further reduction, from 45.7 in February 1957 to 43.0 in February this year, has been registered.

Production per hour in industry has, however, greatly been stepped up, due to heavy investments for mechanisation, etc.; but the reduction of weekly hours enforced by the trade unions has, at the same time, counteracted about three-fifths of the productivity results from investments.

Women workers, whose share in total employment stabilised at about 34 per cent. since 1955, will hardly become an important source of additional employment, mainly for social reasons and due to the problems connected with increased negligence in the care and upbringing of children.

As a whole, the Federal Republic offers the quaint and rather unexpected picture of an expanding economy; it is staggering along the brink of full or even overfull employment, with all the risks of an inflationary process resulting therefrom. The longer this situation prevails, the more capital and entrepreneurial ingenuity will be required, in order to keep the forces of economic and industrial expansion within reasonable bounds. This is a situation which nobody would have expected even a few years ago.

Shortage of Scripts

The nearly uninterrupted stock market boom in the Federal Republic, which has gained a new momentum in recent months, is mainly due to the fact that a large part of German stocks is owned by people and institutions unwilling to dispose of their holdings. Thus, only a comparatively small part of outstanding stocks is available. This rather small segment is now exposed to a strong demand, not only on behalf of private investors and institutions, but also on behalf of foreigners eager to acquire German securities.

Additionally, the shortage is being aggravated by an extremely severe system of business taxation which makes it highly unattractive for industrial undertakings to cover their financial requirements by issuing equities. The present W. German tax system openly favours the issue of bonds, because interest payments can fully be deducted from taxable profits. Dividends, however, are subject to income-tax. Some reductions of corporate income-tax and of dividend taxation have been granted recently, it is true, but with no obvious advantages, due to the fact that the remaining tax obligations still are high enough to prevent the retaining of profits by corporations.

Due to this confused state of corporate taxation, the volume of new stock issues has continuously declined from 1,600 million DM. in 1955 to 1,100 million in 1958, with a further shrinking during the first half of this year. Since new stocks issued to shareholders at prices below market quotations are subject to special taxation, and since all attempts to eliminate such handicaps by new laws have so far been frustrated, no substantial increase of stock market offerings can be expected in the foreseeable future.

The shortage of supply on W. German stock markets is, therefore, likely to continue for the time being. It should be realised that, of the total stock ownership of all German joint-stock companies in the value of some 20,000 million DM., only 8,600 million are potentially available, whereas nearly 12,000 million DM. worth of stocks are owned by groups unwilling to sell, because they own their stocks, in order to be able to control the management of the undertakings they own. It should further be observed that the annual security requirements of investment funds alone are quickly approaching a volume of 1,000 million DM.

The W. German stock market boom reflects neither inflationary tendencies nor such an exorbitant corporate profitability. It merely reflects the ordinary laws of supply and demand, and a situation in which supply is being suppressed by extraordinary and, in part, undesirable factors.

SURVEY

(Concluded from previous page)

demand for telephones is fast increasing, particularly in the urban areas. The present rate of progress in the number of telephones is certainly not very satisfactory, lagging as it does behind the none too ambitious Plan target of 36,000 a year by as many as 10,000. On the trunk telecommunication network, the length of underground cable was increased from 1,236,340 miles to 1,365,336 miles, an increase of 10 per cent. Carrier and voice frequency telegraph channels rose from 558,363 miles to 597,604 miles and the overhead wire network from 909,798 miles to 953,785 miles.

During the year under review, the total number of postal articles sold went up from 3,262 million to 3,356 million and telephone trunk calls from 20.8 million to 23.1 million. Telegrams (excluding those on P. and T. service), however, registered a decline from 34.5 million to 33.2 million.

The revenues of the Department increased from Rs. 56.8 crores in 1956-57 to Rs. 61.6 crores in 1957-58. The total expenditure, on revenue account, was higher by Rs. 7.40 crores at about Rs. 57.92 crores. The total surplus of the Department fell by Rs. 2.61 crores to Rs. 3.71 crores. Out of the net surplus, an outright contribution of 50 per cent. was made to the General Revenues and the balance added to the Department's surplus (which is also merged in the general revenues), raising the accumulated surplus at the end of March 1958 to about Rs. 24 crores. While the telephone and telegraph branches yielded surplus, the postal and wireless branches recorded an appreciable loss. As regards capital expenditure, the total net amount spent on fixed assets during the year (excluding projects financed from the Telephone Development Fund), after allowing for credit to capital due to sale and abandonment of assets, was Rs. 9.36 crores.

The report records steady progress of Post and Telegraphs projects under the second Plan. Out of an allocation of Rs. 9.75 crores to the Department for Plan projects during 1957-58, a sum of Rs. 9.51 crores was actually spent. Aiming at a larger measure of expansion of telecommunication facilities in the interior of the country, the liberal policy for the provision of telegraph and telephone facilities in the rural and underdeveloped areas continued to be implemented during the year. As part of the modernisation of telegraph working in the mechanised transmission of telegraph messages was installed at Bombay in June 1957. The automation of the Calcutta Telephone system, bringing into commission 15 Automatic Exchanges in Calcutta and its suburbs, with a new scheme for laying coaxial cable between Lucknow, Agra and Patna en route has also been taken in hand.

In the Post Office Savings Bank, 1,315,034 new accounts were opened during the year under review, while 779,658 were closed, the net increase being 535,376, as against 396,445 in 1956-57. The number of active accounts at the end of the year was 6,920,235, as compared with 6,384,959 a year before. The balances in the Bank increased from Rs. 322 crores at the end of 1956-57 to Rs. 340 crores at the end of 1957-58. The average balance at the credit of a depositor, however, fell from Rs. 504.4 to Rs. 490.8.

Side by side with the development of posts and telegraphs services, the report claims that the Department took various measures for increasing efficiency. It is, however, a sad reality should be an increase in the number of complaints registered with the Department during the year under review. The total number from 53,910 in 1956-57 to 60,227 in 1957-58 and 491,470. The Department should see that, as it expands its services, the standard of efficiency does not suffer any fall.

The new three-year International Wheat Agreement has come into force with effect from the 1st this year, authorises the Wheat Council to review the whole world wheat position once a year, including the question of overproduction and the repercussions on world markets. The importing countries instead of buying fixed quantities of wheat at certain specified prices, will buy a specified percentage of total imports from exporting members within the price range of \$1.50 to \$1.90 per bushel.

AMERICAN LETTER

STEEL STRIKE MAY LAST FOR TWO MONTHS

SUPPLY OF BIRTH CONTROL EQUIPMENT TO ASIA FAVOURED

From Our Special Correspondent

New York, 1st August

THE steel strike is still the big economic news. Despite pleas by President Eisenhower to both management and labour, the walkout began on 15th July. The labour angle is that, at this writing, about one half million steel workers are idle and 50,000 employees in other industries, such as railroads and coal which are dependent on the rails in a good many areas.

The President did not choose to invoke the Taft-Hartley Act under which a technical national emergency could have been created. Indeed, there is no national emergency at this point. I know that the *New York Times* sent reporters into the steel regions. They found that the workers are perfectly happy to be idle and without pay, except for a dole from the union.

Most of them, apparently, do not care that it will take them, perhaps, a year or two before they make up their losses. In the meantime, they live on their savings which all of them possess. Instead of invoking the Taft-Hartley Act, the President injected a mild Federal intervention into the steel strike by going back to an elderly law passed in 1888 before the Department of Commerce was established.

This 1888 statute authorised the Commissioner of Labour to investigate disputes. The authorisation was handed down to the Secretary of Labour, James P. Mitchell. The latter announced he was starting a fact-finding study. This study would be different, however, from those conducted in recent years, in that it would not constitute Government intervention which organised labour again demanded.

Workers Not Worried

Mr. Mitchell is to report his findings to the President, but no recommendations are to be made. There is a possibility, though, that the findings may be relayed to the people of the United States, if the situation got bad enough by that time. I can report, I was told last week that steel managements have no intention of resuming negotiations with the unions for the next 30 days. Also, there is no intention of giving a fraction of an inch unless under extreme pressure.

For all practical purposes, this looks like a two-month strike which would mean resumption of work by 15th September. A lot of damage can be done by that time. Conversely, a lot of European and Japanese steel may be imported to cover U.S. deficiencies.

At this time, the people who are most perturbed about getting hurt by the steel strike are retailers. The reasoning here is that, as a basic industry, a standstill could paralyse so many other related lines that as many as a million breadwinners and families may have shrinking pocket books and bank accounts which would not be conducive to a continuation of spending at pre-July levels.

Economic Indicators

Consumer spending has been one of the largest factors in the U.S. recovery from the recession. The latest figures on disposable income, which means after taxes, represented a new record. On a per capita basis which includes non-workers, such as children, it was \$1,888 a year in the second quarter of 1958, as compared with \$1,855 in the first three months and with \$1,799 twelve months previously. The former peak was \$1,850; this was touched in the second half of 1957.

Another report, issued last week, was quite interesting. The gross national product, the sum total of goods and services produced, reached a total \$483,500 million in the second quarter of 1959. Adjusted for inflation, this is an increase of 9 per cent. over a year ago, and unadjusted, it is a boost of 11 per cent. The dollar increase was 13,300 million for the year. By far the largest amount, or \$7,600 million of that, went into consumer purchases. That is why retailers fear they will be hurt by the steel strike and shrinking pocket books.

It may be interesting to note in what areas the balance of higher gross national product

The number of workers for each unit was 58,200. In April 1959 there were 7,022,000 workers in these industries, but the index was at 164 and the workers were 43,800 for each unit.

Population Control

A committee was appointed some time ago by President Eisenhower to study the entire scope of the mutual security programme and of foreign aid. The nine members include former high-ranking Government officials and retired military officers.

That group made a recommendation last week which may be quite controversial. Its chief concern was the constantly rising populations in countries which were, as yet, unable to support the additional number of people. Bluntly, the Committee recommended that the United States should give birth control techniques and aids to countries requesting it.

The Chairman of the committee is Mr. William H. Draper, Jr., who was at one time Assistant Secretary of the Army and later U. S. Ambassador to the North Atlantic Treaty Organisation. The birth control information should be supplied, the Committee said, to help countries "in the formulation of practical programmes to meet the serious challenge" arising from the rapid increase in population. The Committee found that, in many developing countries, the population was outstripping agricultural and industrial capacities.

Foreign Affairs

In the meantime, public opinion here is quite concerned with foreign affairs—the opening of the U.S. exhibition at Moscow, the verbal exchanges between Messrs. Nixon and Khrushchev, the Geneva Conference of Foreign Ministers which does not seem to get anywhere, and the turmoil in the Caribbean which centres around Fidel Castro of Cuba, Francois Duvalier of Haiti and Rafael Trujillo of the Dominican Republic. The U.S. and its Latin American allies are stepping up their efforts to prevent an explosion in population. An effort will be made to stabilise the Caribbean situation on 12th August at Santiago, Chile, where the Foreign Ministers of the 21 American republics are to convene at the call of the Council of the Organisation of American States. The latter was quite successful recently in eliminating serious consequences of an invasion of Panama.—All Rights Reserved.

RELAXATION OF EXCHANGE RESTRICTIONS

I.M.F. REPORTS ENCOURAGING PROGRESS

THE possibility of achieving the full benefits of a multilateral system of world payments is now greater than at any previous time in the history of the International Monetary Fund. This is the heartening conclusion arrived at by the Fund in its tenth annual report on exchange restrictions, made public a few days ago. The conclusion is quite justified, as witness the events that have taken place on the international trade and payments front since the publication of the previous (ninth) report last year. Most countries, for instance, have been increasingly anxious to arrest inflation and establish more stable monetary conditions. Again, several nations have endeavoured their best to promote a free exchange system. Special mention must be made of the establishment of external or non-resident convertibility of the major European currencies. The non-industrialised countries associated in a monetary area with a European country that introduced external convertibility have also participated in the move to external convertibility. Even the countries which have not been associated with any monetary area in Europe have benefited from the steps taken, in that their holdings of currencies that are now convertible for non-residents can be more freely used. Efforts have also been made to substitute multiple currency practices by unitary exchange rates and simplify exchange systems. Further, a good many bilateral payments arrangements have been terminated, reflecting the general trend of the past five years towards reducing reliance on bilateralism. On top of these, several countries have liberalised restrictions on movement of funds of a capital nature.

If the progress made in extending currency transferability has not been more marked than is indicated above, it is because of the persistence of the economic and financial difficulties confronting the less industrialised countries, thanks to the continued downward trend of export receipts, following the general weaknesses of primary products. The problems created by declining export receipts are especially acute when investment programmes call for increased imports of raw materials and machinery and where inflationary pressures often continue to make themselves felt. In many countries, increasing amounts of foreign exchange are required to meet foreign debt service.

Further Progress Expected

These are indeed formidable problems, and it is gratifying to be told by the I.M.F. that, in one country after another, considerable efforts have been made to find solutions to them. Not a few of these countries, it is said, are putting into effect comprehensive stabilisation programmes, including the adoption of unitary rates in place of complex multiple exchange rate systems, and a number of others are taking somewhat less comprehensive measures to achieve a better order internally and in their balance of payments position. Some of these countries, according to the I.M.F., have benefited from an inflow of capital from abroad in the form of direct investments and loans obtained from a private and official account, either directly from Governments or through international agencies. To quote the I.M.F. report: "Although the situation with respect to some commodity prices, continued inflationary pressures and low reserves may, in particular countries, present difficulties not easily overcome, attention is increasingly concentrated on these problems with a view to finding the proper solutions. The idea is gaining ground that economic growth and social welfare cannot otherwise be secured in other parts of the world. This approach, together with the internal and external measures referred to above, provides the basis for expecting that further progress can be made."

A notable achievement of 1958 in the field of exchange restrictions was the decision by as many as thirty countries to permit the transfers of non-resident current earnings of their currencies to the accounts of other non-residents throughout the world at rates within the officialargins. They are: Australia, Austria, Belgium, Burma, Ceylon, Denmark, Finland, France, West Germany, Ghana, India, Iraq, Ireland, Italy, Jordan, Libya, Luxembourg, Malaya, Morocco, the Netherlands, New Zealand, Norway, Pakistan, Portugal, Sudan, Sweden, Switzerland, Tunisia, South Africa, and the U.K. It has become a matter of indifference to the exchange

of discrimination, in particular, the I.M.F. report observes as follows:

"In the first place, the introduction of external convertibility followed the substantial strengthening, during the past years, of the reserve and balance of payments position of the Western European countries taken as a group, and the considerable improvement in the position of exchange developments during the first four months of 1959 have been distinctly favourable—perhaps even more than had been expected—reflecting the fact that these countries have, on the whole, attained a balanced position internally and increased strength in relation to other countries. If the present improvement continues, one country after another should cease to have any balance of payments reasons for continuing to maintain restrictions. This situation would permit the elimination of restrictions introduced during earlier periods for balance of payments reasons and relieve domestic economies and international trade of the distortions which such restrictions are likely to cause. The advent of external convertibility has an even greater significance in relation to discriminatory restrictions introduced for balance of payments reasons. As long as the principal European currencies, especially sterling, were not freely convertible by non-resident holders, it was understandable that countries hesitated to eliminate discriminatory restrictions. With the coming of non-resident convertibility, earnings in one currency can be freely converted into any other currency, including dollars. The Fund is currently examining the questions raised by the remaining discriminatory restrictions, in the light of the developments which have been described in the preceding pages. In the meantime, the Fund is urging members to proceed as rapidly as feasible with the elimination of discrimination, including bilateralism. Finally, not the least significant aspect of the introduction of external convertibility is that the countries concerned have thereby been brought so much closer to the time when the Fund's objective of fully achieving."

Convertibility of current foreign exchange earnings does not necessarily produce a reduction in trade restrictions, but it is noteworthy that the year under review did witness further relaxation of trade restrictions also. Thus, reduced by Australia, France, West Germany, Norway and Britain. Even outside the developed countries there was some relaxation of restrictions on imports, as, for instance, in Burma. A few countries, of course, found it necessary to introduce import licensing or to intensify their restrictions for balance of payments considerations.

Multiple Currency Practices

As regards multiple currency practices, which has been a feature of several Latin American countries and of some European countries, it is comforting to learn from the I.M.F. made in the substitution of unitary exchange rates of multiple currency practices as well as in the simplification of exchange systems. There has also been, we are told, a growing conviction that economic development and rising living standards are best achieved, if they can be built on monetary stability and realistic unitary exchange rates. It is to be hoped that the recent convertibility moves will strengthen this trend and by demonstrating such reforms technically and by pursuing domestic policies which make exchange reform possible.

In the opinion of the I.M.F., the progress made in reforming multiple currency practices has frequently not been directly related to any prior improvement in the balance of payments position of the countries concerned. Economic development programmes, coupled with weakness in the price of major exports, have continued to exert pressure on the balance of payments and, in many countries, have involved in simplifying the rate structure. What was the realisation of the futility of multiple exchange rates system and of the need for adopting more effective economic policy tools to deal with the credit of the I.M.F. that it has generally been in a position to aid these countries in the implementation of their new policies. A brief account of how some countries have simplified their exchange rate structure is given below:

Argentina: The system of many export and import rates has been substituted by a single, fluctuating exchange rate; quantitative import restrictions are abolished.

Turkey: A single rate is applied to all sales of foreign exchange; on the export side, the number of rates has been greatly reduced.

Nicaragua: The multiple rates for exports have been virtually eliminated by applying the official rate to the exports of all commodities (excepting cottonseed 1958-59 crop only) and most invisible transactions.

Chile: The two exchange markets, one for trade and another for capital items, have been merged, so that there is now only one fluctuating rate.

Iceland: The elaborate scheme of export subsidies has been done away with and only three export rates have been introduced in their place.

Yugoslavia: The number of import and export coefficients has been reduced.

Sweden: The "transit dollar" scheme has been discontinued.

Denmark: This country has announced a programme for liquidating the "title to import licence" scheme.

In contrast to the above trend, there are instances where multiple currency practices were extended in 1958. In Spain and Uruguay, exchange systems which already had a large number of rates became more complicated. In Colombia, some simplification had been achieved in earlier years, but, in January 1959, a new arrangement for exports laid the basis for a proliferation of rates. In Pakistan, a multiple currency practice appears to have been introduced in January 1959 in the form of transferable vouchers for exports which permit the import of specified items. This scheme for promoting exports is expected to affect about 15 per cent. of total exports. There has also been increased use of small exchange taxes for fiscal purposes during the past year. At the end of 1957, such taxes were imposed in Afghanistan, Chile, Cuba and Jordan. Since then, a new exchange tax of 2 per cent. has been introduced in Bolivia and, in Chile, the tax has been raised from 1 per cent. to 2 per cent.

It may be added here that, a few days ago, Spain abandoned the multiple rate system in favour of a single rate, vide page 175 of our last issue. It may be added in passing that, surprisingly enough, the I.M.F. has made no reference in this chapter to the adoption of "export incentive schemes" by India, though they are very akin to multiple currency practices.

The I.M.F. has done well to warn that "intervention in economic affairs through the exchange system handicaps economic development and fosters fundamental distortions in the economy." This warning is particularly pertinent to the Ministers in this country, who do not seem to appreciate the need for keeping down the price levels. There is also considerable force in its statement that "simplification of the foreign exchange rate structure, if it is to provide a lasting solution to balance of payments problems, must be accompanied by fiscal and monetary restraints designed to arrest inflation. A fluctuating exchange rate, adopted to facilitate the transition from a complex rate structure to a unitary rate," it goes on to add, "may be temporarily called for until equilibrium is reached, but it cannot be a substitute for proper monetary and fiscal policies."

Elsewhere in the report, the I.M.F. has done well to urge the member-countries increasingly to appreciate that they no longer have a balance of payments need for bilateral payments arrangements and that their longer-run interests are best met by taking full advantage of the existing convertibility facilities to place their payments relations on a normal commercial basis. This piece of advice is, of course, for the industrialised countries in the West and East of this Continent which have been the principal beneficiaries of the \$4-billion increase in gold and dollar reserves outside the U.S. during 1958.

Advance Deposits

A continued disquieting feature in the field of international payments has been the increasing use made by many countries of advance deposits as a prerequisite for obtaining import or exchange licences. Under this system, the Government of a country insists upon advance payment by its domestic importers. The use of deposits has been intensified in Greece, Indonesia, Paraguay, Sudan, Turkey and the United Arab Republic. Bolivia has introduced it but only for import of cars. There are now ten countries which have some advance deposit requirements of 100 per cent. or more, namely, Argentina, Chile, Colombia, Ecuador, Greece, Indonesia, Nicaragua, Paraguay, the Philippines and Turkey. In some countries, the requirements are discriminatory, in that they do not apply equally to imports of the same goods from all countries. Some countries have used advance deposits to restrain excessive import demand. Commenting on this practice, the I.M.F. says:

"This technique has its disadvantages, however, as a longer run exchange or credit mechanism. During a brief period after their introduction, advance deposit requirements may strain the financial resources of importers. Unless monetary policy is very tight, however, some importers quickly arrange financing, sometimes at the expense of other users of credit, and imports tend to return to their previous level. Moreover, because of the contractive monetary effects when advance deposits are rising, the need for fundamental measures to curb the actual source of inflation may be disguised temporarily. Thus, when advance deposits stop rising, the problem of excess credit may emerge again. Fears have been expressed that the elimination of this device would precipitate a flood of imports, but some countries are finding it possible to reduce their advance deposit requirements."

It will be evident from the foregoing survey that, barring some countries which have continued to take recourse to multiple exchange rates, bilateral payments arrangements and use of advance deposits as a prerequisite for obtaining import or export licences, there is a clear trend towards multilateralism in world payments. If, however, the progress already achieved is to be maintained in the coming years, it is imperative that the less industrialised countries, which continue to face economic and financial difficulties, must be helped to reap the full advantages of economic growth combined with domestic stability and external equilibrium.
