In spite of such limitations, the evidence does indicate that the total output of workers will decrease in most industries if the work-day is increased beyond 8 or 10 hours. Experiments with the effect of hours reduction upon output have been made by various agencies in various countries, which have clearly established that the number of hours worked has a remarkable effect on the efficiency of the workers. From the social point of view, also, the increased sickness, injuries, and mortality resulting from longer hours would also have to be taken into account in determining whether shorter hours were economical. There is another factor to be considered. Reduced hours may produce more unemployment for machinery or, in some circumstances, reduction of hours may increase the employment of capital equipment. A change from an eight-hour shift to two six-hour shifts increases the use of capital equipment from eight to twelve hours a day whereas a change to one six-hour shift would reduce by two hours the daily use of such equipment with its consequent results.

Old and New Motives

Throughout the history of the movement for shorter hours of work, the same motives constantly recur, even in changing economic and social conditions. In the first place, there is the desire for more leisure. Secondly, there is the desire to achieve job security, coupled with the desire to reduce recurrent mass unemployment in industry by sharing the available work among the largest possible number of

workers by means of a reduction in the number of hours each man works.

Each of these reasons is still put forward by many workers, but, in recent decades, other reasons for seeking a reduction in hours of work have emerged in place of, or in addition to, the traditional ones. One of the new objectives is increased income by means of a reduction in the standard work week but without actual change in the number of hours worked, i.e., by lowering the point at which overtime rates become payable so that a larger proportion of the hours worked are at higher rates of pay. This represents a preference for increased income instead of an increase in leisure.

There are, however, several traditional grounds upon which advocates of shorter working hours usually base their position. They may be said to be of two types, for they approach the question from two different viewpoints, one holding social considerations to be of fundamental importance, the other giving primary consideration to economic aspects of the problem. Those who advocate short hours on grounds of social welfare describe four fairly distinct values to be achieved by short work periods. They regard such limitations as necessary to protect workers' health, to permit leisure and cultural development, to stabilise family life and to permit more intelligent participation in the functions of citizenship.

Brief attention may be given to each of these claims since none is seriously challenged. The first, which holds that long hours endanger workers' health and that this hazard can be reduced only by short working periods, may certainly be true for a large part of all industry. Workers require opportunity for relaxation and change and, if hours are so long as to limit such activities unduly, serious health hazards may readily develop.

The second contention, that shorter hours will permit greater leisure and thus encourage more extensive cultural development, has been attacked on the ground that increased leisure would be wasted rather than utilised profitably. There is obviously no certain answer as to what use workers would make of increased leisure.

Finally, it is urged that additional leisure is necessary for intelligent participation in the privileges and obligations of citizenship. If workers are to familiarise themselves with community affairs, if they are to understand social needs and assist in the solution of society's problems, they must have time to give attention to these matters.

Now, as regards the unions, in their drive for shorter hours, the most significant single factor influencing the unions has been the desire to minimise unemployment when it threatens as a result of either economic or technological developments. On the other hand, where an industry has provided year-round full employment, the unions' attention has been directed almost entirely towards gaining wage increases and welfare benefit improvements. It seems clear, then, that the employment problem will continue to influence strongly the unions' efforts to obtain reduction in hours.

Arguments for shorter hours that are based on economic grounds are urged with equal conviction. They insist that (1) shorter hours are necessary as a means of spreading existing employment, (2) shorter hours alone can provide adequate leisure in which to consume the products of modern industry, and (3) shorter hours represent a certain means of securing and maintaining higher wages so that reduction in hours have the effect of increasing wages.

The Case Against

It is interesting to note that opposition to shorter hours is almost entirely limited to that based on economic considerations. It holds that (1) shorter hours increase labour costs and (2) increasing costs, attributable to higher wages, limit sales, employment, earnings, and living scales of both workers and other consumers.

As already pointed out, there is a conflict of opinion as to the effects of hour reduction on labour costs. It is precisely because no general and all-inclusive statement of this relationship can be made that so much confusion and conflict arises out of this issue. The fact is that hourly efficiency of workers varies under varying lengths of work-day and work-week. Moreover, these variations are different in different

occupations. The situation in one job or position may be graphically portrayed in some such manner as indicated below:—

In this figure, it will be noted that, if hours are longer than about eight in this particular case, efficiency falls off. Similarly, if they are reduced below six, there is a lowering of hourly productivity. Studies of individual occupations have disclosed a variety of such relationships. In some cases, if hours are shortened, labour costs are decreased; if, however, they are shortened further, labour costs per unit are advanced. The only points that can be made with certainty are: (1) shortening cannot proceed indefinitely without passing the point of maximum efficiency, after which labour costs invariably rise; (2) extensive, sudden or drastic change must almost certainly result in higher labour costs, because it takes time to adjust production to any far-reaching change whether in hours or in technology.

Hours and Employment

Attention may now be given to another controversial point which concerns the necessity of short hours as a means of providing adequate employment. The solution of this problem depends upon the assumption with which it begins. If it is assumed, for instance, that hours are to be reduced but hourly wage rates are to remain fixed, then it might be concluded that labour costs would not be influenced and employment would simply be spread over a large number of workers at the expense of those originally employed. The change may, however, affect labour costs by changing labour productivity. If it reduces costs; then it is entirely possible that demand for the products may be thus increased in which case employment will tend to expand. If, on the other hand, the change reduces labour efficiency, then labour costs may be advanced, demand reduced, and further shortening of hours made necessary by the lessened demand for labour.

These possible alternatives are not greatly changed, if the original assumption holds that daily or weekly wages are to be maintained in spite of hour reductions. Labour costs may be increased or reduced, in either of which cases employment cannot but be affected. Because of the popular assumption that shorter hours must necessarily increase employment, it is worth noting, however, that hour reduction may and frequently does exert exactly the opposite effect. If, by reducing labour efficiency or failing to increase it in proportion to the increase in weekly wages, the change raises labour costs, then the ultimate effect on employment depends entirely upon the elasticity of demand for the product. In the vast majority of cases, however, demand is elastic, and increased prices may readily result in such a reduction in demand as to force extensive unemployment and thus completely counteract the original change. Thus hour reduction may readily increase rather than decrease unemployment.

Labour has long believed that shorter hours are somehow inextricably related to higher wages. The famous trade union couplet:

Whether you work by the piece or the day,
Decreasing the hour increases the pay,
is widely quoted and it must be admitted that labour has some historical evidence to justify its position.

On the other hand, the fact that wage increases have accompanied hour reduction does not necessarily mean that they have been caused by the shorter hours nor that further reductions would continue the rise in wages. Obviously, if that were true, highest wages might be available with the abolition of work. It is likely, therefore, that the fundamental weakness in this type of analysis arises out of its failure to recognise and take into account the continued increase in productivity during the period under

(Continued on page 443)

SHOULD THERE BE COMPULSORY EXPORTS? WOULD IT INCREASE EXPORT OF TEXTILES?

By Chinoobhai C. Javeri

IN order to boost up exports, a scheme of compulsory exports has been mooted in certain responsible quarters to cover those items whose overall figures of export in value and volume show no rise in spite of the incentives, or where the manufacturers are found not playing the game and lack the initiative and drive necessary for promoting exports. Such an extreme measure could be thought of only in respect of commodities which are in excess of the home demand and marketable abroad; and the main criterion of the marketability of goods in the world markets is the standard of quality and the competitive position in regard to price.

Raw materials have been the traditional items of our exports. While raw materials will continue to be the mainstay of our exports, it is the manufactured goods which provide potentialities for developing the country's export trade. Diversification of our exports is vitally necessary, because it is only by diversifying them that the overall exports can be boosted. A higher degree of economic development is usually associated with a more varied production. And where exports are highly diversified, they consist largely of manufactured goods.

India manufactures a great number of exportable articles which, due to enormous home demand, find a ready market locally, realising higher prices. Some sort of encouragement is, therefore, essential to induce manufacturers to sell their goods for export. Besides, our goods are priced out in the world markets and their quality does not compare favourably with the international standard. These are the stumbling blocks in our export drive.

Incentives on Textiles

Among manufactured goods, cotton textiles constitute one of the major items of our export. Of late, there has been a sharp fall in their export due to non-competitive prices as a consequence of the higher prices of Indian cotton used in their manufacture in relation to the world parity. There are other factors which also account for our high prices and they need not be discussed here. In addition, the quality of our cloth in general has not been equal to that of other foreign countries, because our textile machinery is outmoded.

To meet the challenge, incentives are given to balance the adverse effects of this anomalous position. While incentives as a temporary measure are necessary in the present context to neutralise the price disadvantage from which our mills are suffering, they will have to be continuously and proportionately increased to maintain exports, as the disparity between the cost of our production and the international prices goes on widening. But a continuous and too large a dose of incentives would prove disastrous, since it would tend the manufacturer to lean more and more on these crutches and he would find it difficult to do without them.

Thus, if the incentives were to be increased, we would never succeed in removing the basic

weakness which is our inability to manufacture quality cloth at a competitive price, the reason being the use of obsolete machinery in our mills. What is really needed is the rationalisation of the industry.

The blame for the fall in our exports is often laid at the door of the mills accusing them of not playing the game. A census shows that only 125 out of 475 mills sell for export. This emphasises the need for more mills actively to participate in the export drive. But actually mills are apathetic to sell for export, unless there is sufficient inducement. It is true that incentives have worked well but the performance is not upto expectations. Does that justify the introduction of compulsory exports? Would it serve the purpose? Will it enable the industry to turn the corner and accomplish the end in view? These points are worth examining from all aspects.

Implications of Compulsion

There are several mills whose cloth, being sub-standard in quality, are not exportable nor are they conversant with the requirements of the export market. If these mills were to be compelled to export their cloth, it would invite complaints which will give India a bad name and foreign buyers would be prejudiced against Indian cloth in general. In order to sell their cloth in competition, the non-exporting mills will be tempted to lower the quality and quote relatively lower prices. The sales of mills which are already exporting cloth will be affected and they too will be forced to reduce their prices. This will lead to competition among Indian mills, instead of competition with foreign manufacturers. Further, foreign buyers, when they come to know that mills are compelled to sell their production for export, would squeeze the mills and make capital out of them by procuring their requirements at unfair prices.

Pre-shipment inspection of cloth may be prescribed to prevent export of sub-standard material. What will happen when this is done? Most of the cloth being unable to stand the test will be rejected and declared unfit for export. Thus, in spite of their preparedness, the mills will not be able to export and on that score will be penalised for no fault of theirs, since the obsolete machinery with which they work cannot manufacture the standard quality cloth as required. A stage will come when mills which are already working under loss would prefer to close down rather than suffer further losses.

The field for expansion is further limited, because the import of greys, which constitute the bulk of our export of textiles, is either regulated or restricted by the importing countries. On the other hand, in foreign countries, the demand is growing for prints and quality cloth and India's export in these items is insignificant. It is by catering to these varieties that the field of our export in cotton textiles could be broadened. It is the export of these varieties that needs stepping up and not that of the greys and the cheaper sorts which the scheme of compulsion

would stimulate, since greys are manufactured by most of the Indian mills. It is on account of the unfavourable prices, quality and finish that it is difficult to sell our prints and quality cloth in the world markets. All these emphasise the need for research, rationalisation and installation of automatic looms.

The worse aspect of the compulsory export scheme is that other countries will use it as a plausible handle to agitate against import of Indian cloth on the plea of uneconomic prices. Actually, many countries are already agitating to ban or restrict, by either legislation or higher tariffs, the imports of cloth from Japan, Hong Kong, Pakistan and India, since these imports are a bane to their local industry.

These are some of the arguments against the enforcement of compulsory exports in respect of textiles. For other items there might not be the same danger and implications. Nevertheless, the achievement of the objective under any scheme of compulsory exports for any item will not be worth the price.

Remedies

Against this background, it seems that the suggested remedy of compulsory exports might prove worse than the disease. It might raise new issues and create more complications. Even as an experiment in respect of any commodity, such a scheme should be launched and tried only after taking into full account its consequences.

The root of our inability to compete in the world market lies in the high cost of production of our goods. In pursuance of the Government policy, manufacturers are required to use in their manufacture indigenous raw materials, component parts and accessories whose prices are excessively high. Items which enter into the manufacture of finished products are further loaded with imposts. Wages are also high, being unrelated to production. All these factors render our goods too expensive to compete in foreign markets. The problem has got to be squarely and effectively tackled, so that the production cost of our goods is rationalised and brought down.

The vexed problem is that of inducing mills to sell for export—an objective which can be achieved only by making export sales more profitable than sales in the domestic market. A comprehensive scheme may be formulated under which export sales may be granted incentives, on the one hand, and exemption from various imposts, on the other. A levy may be imposed category-wise on the basis of value or yardage on the total sales of the entire industry barring exports sales; and the fund so created may be utilised for granting special incentives on the export of prints as well as on our exports to countries which are highly competitive.

Speaking generally, prompt and adequate measures should be taken to rationalise the industries. In regard to textiles, installation of automatic looms should be allowed freely and unconditionally. Yet, only a compact and efficient blanket scheme of modernisation can help the industry to make headway.

The upshot of the whole problem of our export trade is the pressing need for a reorientation of the policy. Unless complacency is shed and a bold, dynamic, and an unorthodox policy pursued, we will land ourselves in greater unforeseen difficulties. Fundamentally, there should be maximum of freedom with minimum of State interference.—All Rights Reserved.

ORISSA CEMENT LIMITED

P. O. RAJGANGPUR (Dist. Sundergarh, Orissa State)

Managing Agents: DALMIA AGENCIES PRIVATE LTD.,
are now ready to serve your needs with all types of high class

"DALMIA REFRACTORIES"

for

IRON, STEEL & METALLURGICAL WORKS, CEMENT KILNS, CERAMIC & OTHER INDUSTRIES

In all qualities of

Fireclay, Silica, Magnesite, Chromite, Chrome Magnesite and Insulating

in all sizes and intricate shapes with different types of

MORTARS

Manufactured in collaboration and under guidance of

Dr. C. OTTO & COMP. G.M.B.H., BOCHUM-DAHLHAUSEN, WEST GERMANY

Notices

THE VELLORE ELECTRIC CORPORATION, LIMITED

Registered Office: MADRAS-1.

NOTICE OF THE THIRTIETH ANNUAL GENERAL MEETING OF THE SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 30th Annual General Meeting of the Shareholders of THE VELLORE ELECTRIC CORPORATION, LTD., will be held at the Registered Office of the Company at No. 20, Second Line Beach, Madras-1, on Monday the 5th October, 1959, at 1 p.m., to transact the following business, viz.

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st March, 1959.
2. To declare a Dividend on Preference and Ordinary shares for the year 1958-59.
3. (a) To appoint a Director in the place of Sri V. Ananthakrishna Chetty who retires by rotation.
(b) To appoint a Director in the place of Sri M. Subbaraya Aiyar who retires by rotation and to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution of which a Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, has been received by the Company.

"RESOLVED that the age limit under Section 280 of the Companies Act, 1956 shall not apply to Sri M. Subbaraya Aiyar who is aged 74 years and that he be appointed a Director of the Company by this Special Resolution as required under Section 261 of the Companies Act, 1956 notwithstanding the fact that he is an Associate of Messrs. Chandrie & Co. (Private) Ltd., who are the Managing Agents of the Company."

4. To appoint Auditors for the year 1958-59 and fix their remuneration.
5. To transact any other business that may be brought up before the meeting.

The Share Transfer Books of the Company will remain closed from 28th September, 1959 to 5th October, 1959, both days inclusive.

By Order of the Board,
OF CHANDRIE & CO. (PRIVATE) LIMITED,
S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS-1, 23rd August 1959.

Note.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

2. The Dividend when sanctioned will be paid on or after 5th October, 1959 to those members whose names stand on the Register of Members on the 27th September, 1959.

3. The Explanatory Statement concerning the Special Resolution referred to in item 3(b) above has been posted to the members individually.

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the 68th Ordinary General Meeting) of the shareholders of the Company will be held at the Registered Office of the Company, 15 Taratola Road, Alipore, Calcutta-27, on Tuesday the 29th September, 1959, at 10-30 a.m., for the following purposes:—

To receive and consider the report of the Directors and to pass the audited accounts for the year ending 31st March, 1959, declare a Final Dividend, elect Directors, appoint Auditors and fix their remuneration.

As Special Business to consider and, if thought fit, to pass with or without modification the following resolutions:—

1. (As an Ordinary Resolution.) "Resolved that subject to the approval of the Central Government the Company hereby approves of the amendment of the agreement dated 23rd May 1957 made

between the Company of the one part and Mr. K. Julian Scott of the other part whereby the pension payable to Mr. K. Julian Scott is increased in terms of the draft of the Supplemental Agreement placed before the Meeting and initialled by the Chairman for identification, and the Board is hereby authorised to execute the said Supplemental Agreement on behalf of the Company and to purchase such Annuity Insurance Policy as the Board may think fit and to pay the premia thereon."

2. (As an Ordinary Resolution.) "That approval be and is hereby accorded to the appointment of Messrs. Parry & Co. Ltd., a Company incorporated under the Indian Companies Act 1913 and having its registered office at "Dare House," Parry's Corner, Madras, as the Sole Selling Agents of the Company for India including Pondicherry and the Andaman and Nicobar Islands in respect of biscuits manufactured by the Company with effect from the 1st April 1959 on the terms and conditions contained in the Company's letter of agreement dated 1st April, 1959 and addressed to Messrs. Parry & Co. Ltd., and confirmed by the said Messrs. Parry & Co. Ltd., by its letter to the Company dated 15th June, 1959."

The Share Transfer Books of the Company will be closed from the 22nd September to 29th September 1959, both days inclusive, and warrants for such Dividends as may be declared will be issued directly to the Registered Shareholders or their Mandatees, whose names appear in the Company's Book on the 29th September, 1959.

By Order of the Board,
A. P. CHANDA,
Secretary.

15, TARATOLA ROAD,
CALCUTTA, 28th August, 1959.

Note:—(i) The Directors have recommended the payment of a Final Dividend on Ordinary Shares at 10 per cent. without deduction of tax, making, with the 4 per cent. interim dividend already paid on Ordinary Shares, 14 per cent. for the year.

(ii) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

(iii) The Explanatory Statements as required by Section 173 of the Companies Act 1956, in regard to the Special Business under Item No. 5 of the Notice have been issued to each of the Shareholders of the Company.

THE MEGNA MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of THE MEGNA MILLS COMPANY, LIMITED, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Tuesday, the 29th day of September, 1959, at 3 o'clock in the afternoon, for the following purposes:—

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1959, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolution which will be proposed as a special resolution:

5. That consent be and is hereby accorded to Sri Rajendra Bajoria, who is a relative of Sri C. L. Bajoria, a Director, within the meaning of Section 6 of the Companies Act, 1956, being appointed to and holding an office or place of profit under the Company.

The Share Transfer Books of the Company will be closed from 18th September, 1959, to 29th September, 1959, both days inclusive.

By Order of the Board,
J. A. IRONS,
Secretary.

16, STRAND ROAD,
CALCUTTA, 1st September, 1959.

Note:—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

(Pursuant to Section 173(2) of the Companies Act, 1956)

Under Section 314 of the Companies Act, 1956, no relative of a director of a company may without the previous consent of the company accorded by special resolution hold any office or place of profit under the company other than certain offices specified in that section. Sri Rajendra Bajoria is a son of Sri C. L. Bajoria, a Director of your Company, and it is proposed to appoint him as a Personal Assistant to the Directors on a remuneration of Rs. 2,000 per mensem.

In order to comply with the requirements of Section 314, Resolution No. 5 as set out in the convening notice is to be considered at the annual general meeting.

No Director of the Company except Sri C. L. Bajoria has any personal or fiduciary interest in the proposed resolution.

THE INDIA JUTE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of THE INDIA JUTE COMPANY, LIMITED, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on TUESDAY the 29th day of September 1959, at 3-15 o'clock in the afternoon, for the following purposes:

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1959, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 18th September 1959 to 29th September, 1959, both days inclusive.

By Order of the Board,

J. A. IRONS,
Secretary.

16, STRAND ROAD,
CALCUTTA, 1st September, 1959.

Note:—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

GOVERNMENT OF INDIA MINISTRY OF RAILWAYS (Railway Board)

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to purchase from established and reliable producers, the following items of Steel Track materials:

- (a) Rails ... 1,50,000 tons
- (b) Fishplates ... 5,300 "

The tender documents including drawings and specifications can be had on payment of Rs. 15 per set (or equivalent) from any of the following offices during working hours:

1. The Director, Railway Stores, Ministry of Railways (Railway Board), State Entry Road, New Delhi,
2. The Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London W. 3, and
3. The Director, India Supply Mission, 2536 Massachusetts Avenue, N.W. Washington 8, D.C.

Tender will be received by the undersigned upto 12.00 hours on the 28th October 1959 and opened in the office of the Railway Board on State Entry Road, New Delhi, at 15.00 hours on the same day.

DIRECTOR, RAILWAY STORES,

INCREASE IN WORLD OIL OUTPUT RECOVERY IN CONSUMPTION

A **NOTABLE** feature of world petroleum output is that it is increasing at a steady rate year by year. In the current year—the Centenary year of the petroleum industry—production is expected to cross the 1,000-million-ton mark, at which level it would constitute a new record. Last year, world oil production aggregated 905 million tons, as against 882 million tons in 1957. The consumption of oil is also rising this year, though it is expected to grow less steeply than output. This suggests that the stocks at the end of the year may turn out to be slightly higher than at the beginning of the year.

The broad pattern of world oil production is not likely to change appreciably in the near future. As is well known, the free world accounts for the major share in the world output of oil. Last year, the free world accounted for 776 million tons or 85.7 per cent. of world production, the shares of the major producers in world output being U.S. 36.3 per cent., Canada 2.4 per cent., Latin America 19.1 per cent., Middle East 23.7 per cent., W. Europe 1.4 per cent. and Africa 0.2 per cent. Communist areas accounted for a mere 129.2 million tons or 14.3 per cent. of world output. Among the latter, the only two important producers are the U.S.S.R. (113.5 million tons) and Rumania (11.5 million tons). Russia, however, has a programme for increasing its output to 135 million tons in 1960 and to 230-240 million tons by 1965. It is also noteworthy that Russia has announced its plans for a 2,500-mile underground oil pipeline from the Soviet Union to Poland, East Germany, Czechoslovakia and Hungary. This programme is regarded as one of the most spectacular moves for integration of the Communist countries. By 1960 alone, Russia's export potential is expected to increase to about 25-30 million tons. Last year, it exported 9.1 million tons of crude oil and 9 million tons of oil products.

Consumption

It is somewhat difficult to forecast the level of consumption which, statistically speaking, is less easy for assessment. But it is known that, in the free world, consumption is rising steadily. In the U.S., which accounts for almost half of world consumption, demand rose by six per cent. in the first half of the current year. For the whole of the current year, demand may rise by about 4.5 per cent. In the rest of the free world, consumption of oil is expected to rise by about 8 per cent. Taking into account the current trends, it is believed that free world consumption will rise by 7 per cent. over last year. It may be mentioned here that, last year, consumption in the free world was 739 million tons, as against about 700 million tons in 1957. Thus, the rate of increase in 1958 was of the order of 5½ per cent., at which level it was somewhat less than the long-term average of seven per cent. recorded in the past. The main influence restraining the growth of world consumption last year, according to the *Petroleum Press Service*, were the tail-end of the U.S. economic recession, and the mild recession in W. Europe. These general economic factors held back oil consumption in these two main consuming regions. They were also the principal cause of the widespread falls in commodity prices and consequently in the export earnings and economic activity of some underdeveloped regions. It is, however, noteworthy that inland oil consumption in the underdeveloped regions rose last year by nearly seven million tons or 7½ per cent.

Production

Many oil producing and consuming regions have their own plans for increasing production. It is true that not every consuming region has the capacity for increased production. In fact, it may not be a producer at all. But prospecting operations are taking place in many parts of the world. Although reliable figures are not available, it is computed that about two million wells have been drilled for oil. The search for oil has taken men to diverse parts of the world. By far the most exciting adventure is perhaps the prospecting for oil in the French Sahara. Those who might have wondered whether it would not end in a misadventure have noted with agreeable surprise the fact that Sahara oil is now a distinct possibility. The total output is expected to be of the order of 8 million tons in 1960; rising to 25 to 30 million tons five years later.

In search of oil men have gone not only to a desert like the Sahara, but also to the depths of the seas. Undersea exploration for oil has increased rapidly in the last four or five years,

spreading to many new areas. Spurred by the growing cost of finding oil onshore in the U.S., offshore exploration in the U.S. Gulf Coast region has been undertaken on a scale not surpassed by undersea exploration in any other region. Till now, it is estimated that some £710 million has been spent by more than 75 companies. It is true that the cost of drilling offshore is nearly four times the comparable cost onshore. But, by comparison with the cost of drilling onshore in a remote region like Alaska or New Guinea, offshore costs appear less onerous. Indeed, drilling offshore it is stated, may be advantageous over onshore work in such an area, since there are no locations to level, no access roads to build and no expenses of assembly and dis-assembly in moving from location to location.

New Uses

Apart from its well-known uses as fuel, petroleum is finding several new applications. The rapid growth of petro-chemical industry will lead to increase in the consumption of petroleum. Since the early 1950's, the production of petro-chemicals in the free world has more than doubled, and is expected to double again by mid-1960's. In the U.S. and Canada the industry began to assume major commercial significance, during the Second World War, and in W. Europe, only in the current decade. Yet, within this short space of time, it has become a highly important component not only of the petroleum and natural gas industries but also of the chemical industry as a whole. In many other areas, the industry is not well developed. Progress in this field, it is stated, is governed by complex economic, social and technical factors, such as population, general industrialisation, finance, technological skill and the relative locations of raw materials, process plants and principal markets. Nevertheless, in the future, the industry is bound to become an increasingly important factor in the consumption of petroleum.

RODENT ATTACKS

The production of various rubber and plastic insulated wires and cables has shown a rapid increase in recent years and so has the number of cable failures and fires of "unknown" origin but presumably caused by rat attacks on the soft materials. The Swedish cable manufacturing firm, Sievert Kabelverk and the Royal Veterinary College, Stockholm, have carried out an investigation to determine the extent of rodent attacks and to clarify the possibilities of making rubber and plastic insulated cables resistant to rats. The results are reported on in the latest issue of the L. M. Ericsson house organ *Ericsson Review*.

The experiments were carried out in the rat laboratory of the Veterinary College, using albino rats. In all experiments the animals were given fresh water and a standard diet, which had been used for many years in the laboratory and was known to fulfil the requirements for normal growth and reproduction of the rats. The animals were kept in their cages which were made of galvanised wire netting. Parallel tests were run on individual rats and on rats in groups. The cylindrical samples used in some of the tests were moulded from compounds mixed in a laboratory plastics mill. In the course of the experiments ten female rats—females being found more voracious than male rats—were left in a cage with 18 different cord and cable samples. After two days all samples with an outer sheath of soft rubber or plastic material were severely attacked and the copper wiring visible. A nylon cord was altogether consumed. Only two samples covered with steel and aluminium remained intact, though aluminium did not seem to be as effective as steel. Other tests showed that the hardness of the compound, and the type and quantity of P.V.C. resin and plasticizer, made it more difficult for the rats to attack, but it did not hinder the animals from gnawing.

Samples prepared with commercial rat repellents, rubber accelerators earlier considered to have some rat-repelling effect and some other substances chosen at random were also tried. None of the additives tested could be considered to have the desired rat-repelling effect. The compound Z.A.C. (a complex of cyclohexylamine and zinc dimethyl-dithiocarbamate) had a certain effect but offered no complete protection.

The investigators arrive at the conclusion that rats, being playful and inquisitive animals, attack materials which have no function as food or which can be used as teeth-sharpeners. No soft rubber or plastic materials are likely to resist attack, though rigid types in thick sections will probably be damaged only to a small extent. At present only cables with metal sheathing other than lead will give full protection.

The report ends with a challenge to the chemical industry to tackle and solve this intriguing problem since it has been shown that a decreased attack by rodents can be achieved by using certain additives in the compounds and it seems probable that chemicals of far greater efficiency can be found.

OIL INDUSTRY

Farm work that required 58 man-hours 10 years ago can now be accomplished in less than four, according to *Oil Progress*, quarterly Caltex publication. The magazine explains that this and other advances have come about through the oil industry's contribution to mechanisation. This year is the 100th anniversary of the discovery of oil in Western Pennsylvania that started the modern petroleum industry. Tracing the story of Edwin Drake, a former railroad conductor and discoverer of the first well, *Oil Progress* points to differences the years have brought. "Consider the sorry state of transportation one hundred years ago" the magazine suggests. "Movement was by steamship or railroad or, for shorter overland trips, by horse-back or stagecoach. Travelling from 12 to 16 hours, the stagecoach could cover about 40 miles a day in summer and perhaps 25 in winter. Until replaced by the railroad, the coach trip from London to Edinburgh, a distance of 400 miles, took from 10 to 12 days, forcing the hardy traveller, bruised and aching, to put up each night at a different inn." It adds: "Streets in larger cities were paved with granite blocks, or with the new crushed stone, compressed by roller, that had been introduced in England in 1815 by John Loudon McAdam. Country roads were inches deep in dust during the summer and quagmires during rainy periods. Often winter snows made them all but impassable for weeks at a time."

"In July 1840, the *Britannia* first of the Cunarders," the magazine says, "made the choppy trip from Liverpool to New York in 14 days, 8 hours—a new record for transatlantic travel. Railroads, for the most part, were powered by wood-burning steam locomotives, and operated on Schedules that had more of caprice than regularity in their execution. The wooden cars, indifferently heated by stoves, were uncomfortable, stuffy and dirty." Commenting on these trends, it observes: "However, in taking this backward glance at life in the mid-nineteenth century, it is not implied that petroleum by itself, has changed everything for the better. To be sure, it has played a major and perhaps indispensable role in the development of the automobile and airplane. But, in a broader sense, in making an ever-wider range of fuels and lubricants available, it has unquestionably fostered the development of more and more efficient industrial machines. These, in turn, have increased many-fold the productivity of each worker—the only real basis for improved living standards. In so doing, petroleum as a source of power has helped to reduce the length of the working day, providing working people everywhere with added leisure time for recreation and widened spheres for self-development." It adds: "Caltex looks forward to even broader opportunities as it stands on the threshold of the jet era, a period in which the traveller, released from the confines of his stuffy, creaking stage-coach, may soon even beat the sun to his destination."

REAR-ENGINE MOTOR COACH

The first luxury double-deck long-distance motor coach with its engine at the rear has been introduced by Ribble Motor Services Ltd., of Lancashire, England. With all the amenities of a modern airliner, including refreshments served on route, a well-appointed toilet compartment, adjustable reclining seats, modern heating and ventilating system, and individual reading lights, the new coach represents a development that may well revolutionise coach travel in this country and abroad. The vehicle, named the "Gay Hostess" is an Atlantic rear-engine model produced by Leyland Motors Ltd. with a 50-seater coach body built to the design and layout of Ribble's Engineer-engine Department by Metropolitan-Cammell-Weymann Ltd.

Ribble plan to operate these new style double-decker coaches on long-distance express services such as those from Lancashire to London, Scotland, Bristol and Torquay, by day and night, and eventually on the motorways that are now being constructed. From a technical point of view, the Leyland Atlantic chassis employed has a number of superior features. It has air suspension for the front axle consisting of double convulsions bellows used in conjunction with light leaf springs and torsion bar stabiliser; semi-automatic Pneumo-Cylic gear-box with electro-pneumatic gear selection; automatic clutch of a centrifugal type; only two control pedals, brake and accelerator; and an automatic lubricator which feeds oil to 25 chassis points whilst the vehicle is on the move.

B.O.A.C.—QANTAS

Qantas Boeing 707 jet airliners will start operations on the Kangaroo route between Australia, India and Britain on 5th October and B.O.A.C. Comets will be introduced on the same route on 4th November 1959. The joint fleets will provide eight jet services each week on the whole route between London and Sydney which is operated by the two airlines in partnership.

The jets will reduce the end-to-end journey to as little as 33 hours. They will replace the present Qantas Super-Constellations and B.O.A.C. Britannias which takes 63 and 48 hours, respectively, for the 12,000-mile run.

Qantas Boeings will operate three times a week and B.O.A.C. Comets five times a week. A ninth service per week will be operated by a Comet from London to Singapore and from there by a Super-Constellation to Sydney.

The combined fleets will provide 640 seats weekly in each direction. They will between them serve all the present points of call on the Kangaroo route, including Calcutta and Bombay. Calcutta will be linked with Australia seven times a week and Bombay once a week.

On 3rd November 1959, an express Super-Constellation all-cargo service will start between Sydney and London. With a capacity of 12 tons, the aircraft will cover the 12,000 miles in 58 hours.

NEW PRODUCTS AND PROCESSES

New Ayurvedic Treatment for Eye Diseases

PUNARNAVA, a herb, found commonly all over India, has proved efficacious in eye-diseases that were regarded incurable so long. Yet, the herb is so cheap that four seers of it would not normally cost more than an anna. In many cases, it has made the use of glasses, whether having plus or minus power, unnecessary. The application of the herb, it is claimed, has disproved the existing belief that glasses, especially of the convex variety, once adopted, can never be eliminated. In a large number of such cases, normal vision has been restored by the use of the herb. The Ayurved Research Council, Delhi, experimented with a large number of preparations for treating eye troubles during 1958 but *Punarnava* proved the best of the lot. Its juice is to be applied to eyes after soaking it in the powder of another herb known as Vimal Joti.

The A.R.C. is planning to open centres in the big cities where the specific will be distributed free. Many important ophthalmic hospitals of the country such as Pendra Road Sanatorium, Jalan Free Eye Hospital, and Sant Parmanand Blind Relief Mission are re-examining the therapeutic value of the herbs. The U.P. Government, it is said, is planning to use the herbs in State Ayurvedic Hospital, Lucknow, and the Bharat Sewak Samaj, Muzaffarnagar, is arranging to distribute it in their various centres.

Dihydrojasmone

Jasmone, the main odorous constituent of the jasmine concentrate, is difficult to obtain in quantity either from the natural sources or by synthetic routes. Dihydrojasmone is a suitable substitute for jasmone and can replace it in most preparations. It is widely used abroad as a component in the preparation of high grade perfumes. Several methods for the synthesis of dihydrojasmone are described in literature. The method developed by Frank using Leavulenic ester and the Grignard reagent of hexylbromide is, by and large, used for industrial preparation. The yields by this method, however, are not too satisfactory.

A new four-stage method for the synthesis of dihydrojasmone (overall yield 67 per cent.) based on easily available raw materials derived from castor oil, has been developed in the National Chemical Laboratory, Poona. The method is claimed to be superior to other methods so far described in literature. The reactions involved are said to be simple and can be carried out easily with the help of equipment normally available in any laboratory. Dihydrojasmone obtained by this method has been evaluated both in India and abroad by expert perfumers and pronounced to be of an excellent quality.

Water Shielding Reduces Reactor Cost

A major reason for the high cost of nuclear power is the need for protection in case of reactor breakdown. For a boiling-water reactor, beyond lead and concrete to contain radioactivity, an outer steel shell is required which has sufficient strength to protect against a burst of boiling water at high pressure. Cost of such a shell in the U.S. runs from 15 to 35 dollars per kilowatt of installed capacity. A possible cheaper protection method now under test is based on the idea that surrounding the reactor with cold water could permit use of a much less expensive shell since any escaping high-pressure boiling water would become mixed with the cold water, leading to a marked reduction in pressure. Tests are being conducted in the U.S. utilising an insulated steel drum holding 9,000 lbs. of boiling water at a pressure of 600 lbs. per square inch (which simulates a containment shell). In one test, boiling water escaping through a 12-inch rupture in the inner steel drum mixed with cold water to produce a pressure of only 3 lbs. per square inch against the outer shell. Thus far, the tests are said to have indicated that cold water absorption might reduce the cost of containment shells by one-half.

Executive Indicator

A new Executive Indicator, designed by Hadley Telephone and Sound Systems Ltd., Staffordshire, Britain, supersedes the old "in-out" board. The system comprises 12 panels—one "entrance" panel, one each for ten executives and one for the firm's telephone operator (larger systems also provided). Executives see at a glance on their own panels if colleagues are on the premises or not. The executive, upon arrival, presses the appropriate button on the "entrance" panel and immediately his light glows on every other panel. When leaving, the same button cuts out that light. The telephone operator can see at a glance who is in—or out, and in addition, can by pressing a button, flash any particular light as a "wanted" signal and can also sound a buzzer. If an executive is out and his light is not showing, the operator can cause it to "wink" so that on his return he knows that he is wanted urgently.

Long Life Car Silencers

A ceramic coating process which is said to make possible corrosion-resistant motor-car mufflers or silencers that could carry a 100,000-mile lifetime guarantee has been developed by a U.S. company which previously has developed similar methods for protecting jet engine parts.

Test mufflers made by the new method have been submitted to major U.S. car makers. They would, it is claimed, cost no more than presently available mufflers with less than half their lifetime. A three to four thousandth of an inch thick integrated "skin" of ceramic coating is fused at very high temperatures on to the surface steel of the muffler. It is said to be impervious to shock, corrosion, and 1,500-degree Fahrenheit temperatures.

NEW THINKING ON INDUSTRIAL EXPANSION

A NOVEL METHOD OF INCENTIVE SUGGESTED

By J. M. Lobo Prabhu, I.C.S. (Retd.)

THE Union Minister for Industry and Commerce, Mr. Lal Bahadur Shastri, recently made a speech which was both conciliatory and constructive. In an undeveloped economy, every one has to bear a share if human and material resources are to be capitalised. Socialist ideas have to be implemented not only in giving to each according to his needs but by taking from each according to his means. The problems listed by the Minister deserve to be examined accordingly. In essence, the problems listed by the Minister are, first, developing the machine-building capacity, second, increasing the manufacture of basic intermediates, third, decentralising industries, particularly through manufacture of components, fourth, reducing cost of manufacture and fifth, improving and increasing exports—all for the basic purpose of reducing the adverse balance of foreign exchange.

Machine Building

There is no doubt that machine-building capacity should be increased. The cost of import of machinery, excluding electrical instruments, has risen from Rs. 59 crores in 1946-48 to Rs. 202 crores in 1957. In fact, it is one of the serious defects in our planning that machine-building capacity was not established in advance of our steel capacity or at least alongside of it, which could have been done even if some more steel had to be imported on account of it. We are now likely to be in the position of having steel for a considerable part of which there may be no use. The Minister announced that the heavy machine plant and the foundry forge project at Ranchi, would be taken up at once, that detailed project reports for a heavy machine plant and a plate and vessels works would be shortly in hand and the mining machinery project at Durgapur would be enlarged. The questions that arise are, first, when these projects will fructify and, second, how efficient will they be. Unfortunately, on the record of State enterprises so far, there is no ground for optimism. A suggestion which I have been pressing not only in my book, *New Thinking*, but in many articles which I have written in the last three months, that part of the investment in State enterprises should be open to the public, seems at last to have been recognised, as the Prime Minister has just stated that he favoured the running of State enterprises as semi-independent concerns to promote incentive. There is immediately an opportunity to interest the public in the enterprises announced by the Minister.

Imports

The second question is whether the capacity developed will be adequate to reduce imports and to meet the increasing needs of the future. The inference is that it covers only a small part of our requirements for which reason private enterprise deserves to be encouraged. The Minister admitted that industrial investment had dried up and that the funds with the Industrial and Refinance Corporations were idle for want of balancing funds with private industries. He suggested that a larger proportion of the profits of existing industries should be reinvested without realising that reduction of the attenuated profits would further depress public investment. The truth is that industries have suffered first from the irresponsible statements by political leaders of their expropriative intentions, second, Government taxations and loans, and third, the Government's partiality to organised labour which has increased costs and prices to the general consumer, inducing a contraction of the markets.

It is possible that the private sector will be encouraged by the assurance given by the Prime Minister that the Government was guided by a pragmatic approach and there was a wide field for private enterprise. At the same time, in respect of enterprises like machine tools, the production of which is difficult and expensive and the market for which is undeveloped and uncertain, we could follow the practice of the West German Government of not only giving loans but subsidies in the form of tax certificates, related to the new labour employed. There is no danger of inflation from such subsidies as they can be used immediately only for payment of taxes due to Government. It is surprising that though I made the suggestion to try this system some four months back, it has so far not caught

on, in spite of the fact that it had a miraculous effect in West Germany.

The second problem listed by the Minister is the manufacture of basic intermediates like dyestuffs and drugs. Actually, the cost of imports of dyes and colours has fallen since 1946. However, self-sufficiency is desirable and for the more difficult projects, subsidies through tax certificates could be tried.

Decentralisation

As regards the third problem of decentralising industries, I have regarded it as the basic solution not only for industry but for the rural problems of the country. Although there is a Development Wing in the Industries Ministry, it has not so far planned or publicised either the potentials of the industries or of different localities. If decentralisation is being left to private initiative, the least that can be done is to increase the number of industrial estates in suitable places. Another difficulty is that the Government is thinking of decentralisation only in terms of components for larger industries while what the country requires is lines of industries for producing consumer goods, the imports of which are now banned. The Deputy Minister for Industries who has reached a better understanding of the position after his recent world tour now favours foreign collaboration. The climate could change if the private sector was not persecuted and if the public was encouraged to spend their earnings in the improvement of their standard of living. This requires a change from the attitude of austerity to that of prosperity. Again, it postulates fuller employment as the 45 millions now unemployed potentially represent not only increase in the wealth of the country but greatly enhanced purchasing power, which industrialisation requires. Finally, for the more difficult of the consumer goods industries, the Government may offer subsidies through the tax certificate system.

So far as the fourth problem—that of reducing the cost of manufacture—is concerned, the Minister overlooked the fact that, according to a recent assessment of the U.N.E.S.C.O., the cost of labour and management in manufacturing costs is the highest in India, being 53 per cent. while the Philippines and Pakistan, not to speak of highly industrialised countries, have a percentage below 30. The question is whether

Government cannot secure a cut in this cost till a more economic proportion is reached. The management and labour will sacrifice equally either voluntarily or through a form of special taxation, the proceeds of which may be reserved for a pool to subsidise exports of the industry concerned. This is not only a practical measure to help exports but also to improve productivity which will become a vital interest of both labour and management as they will be personally touched. The suggestion is pragmatic in the sense the Prime Minister was thinking. It should not be administratively difficult if each industry concerned is asked to declare for special assessment all payments to management and labour in excess, say, of 40 per cent.

Labour and Management

The fifth problem is of export. The suggestion, made above, to reduce cost of management and labour, could to a great extent make our exports competitive in the world market. If labour feels it is being sacrificed, it must remember it is getting at least four times as much as the landless labour in the villages from which it is drawn. If management has the same grievance, it has to compare itself with their opposite numbers in the public sector who have neither the same scales of pay nor the same bonuses or profits. The important thing is that such a burden will remain only till increase in productivity makes our prices competitive in the world market.

The problem cannot be solved only by improving quality and reducing prices, on the one hand, and by increasing internal prices for subsidising external prices on the other. In the first place, it is necessary to eliminate the debilitating and irritating effects of State trading. It should be clear by now that State trading lacks, first, intelligent self-interest, which is not natural to officials, and second, capacity for risk bearing and for resilience arising from personal investigations and contacts, which are features only of private enterprise. The competition of State trading with private trade and monopoly in some instances are adversely affecting both the purchasing and selling ends of exports. State trading, therefore, requires to be reorientated to supplement and not to supplant private trade. Secondly our policy must look a little before and after, in respect not only of exports but of imports. Food imports constituted one-fourth to one-fifth of the import bill in the last three years. In the current year, when the total food production is estimated at 71 million tons, imports worth Rs. 150 crores are being planned. The controls tried since 1957 can explain the artificial scarcity, which the new powers of acquiring stocks at statutory prices can defeat, if the Government does not vacillate, as it appears to be doing. If grain dealers are sequestering the stocks in villages, requisitioning should be applied there also, so that normal movements are resumed. This would wipe out a big gap in our foreign exchange. Imports of steel which in 1957 reached the total of Rs. 146 crores should be naturally reduced as steel required for steel factory construction will not figure while our own steel factories, if they produce according to anticipations, will have steel for all other purposes.

Government Help

On the export front, the policy for production should include more substantial Government help. For instance, the production of cashew kernels could be doubled if the Government itself planted its own and private lands. Similarly, vacancies in tea estates which reduce not only quantity but quality should be made the responsibility of the Forest Department, which can plan, advise and even subsidise in deserving cases. In respect of textiles also, loans and subsidies in the form of tax certificates may be justified where modernising cannot be done otherwise. In India, State help is much less than what England is currently giving for modernising its textile production. It is sound economics to help private enterprise if it results in gain to the country also.

The prospects for industrial expansion are bright, if the second Five-year Plan eliminates the necessity for grain and steel imports and the third Plan creates purchasing power for a fuller range of consumer goods industries. Much, however, will depend on what Ministers say. Just at present, they are showing some appreciation of the role of the private sector, which has created a new sense of confidence. Even silence after this will be a sign of maturity. It will demonstrate that the Government is thinking more in terms of creating results, rather than impressions.

PROTECTION FOR CONSUMERS

AN ACCOUNT OF STEPS TAKEN IN BRITAIN

IT is often said that, in a free enterprise economy, the consumer is the king. This is, no doubt, true to the extent that the types of consumer goods and services produced, and their price, quality and quantity, are determined mainly by the consumer's choice. In other words, production tends to follow the pattern set by demand. Nevertheless, the bewildering variety and complexity of goods on the market make it difficult for consumers to choose wisely, unless they are sufficiently informed about the technicalities and performance of the products on sale, and also of alternative goods. Again, high-pressure advertising may result in a divergence between consumer's demands and their needs. Moreover, consumers, being generally unorganised, cannot protect themselves against artificial price-fixing by monopolies or oligopolies, and against fraud, misrepresentation and other malpractices by a minority of less scrupulous traders and producers. Various measures are taken in advanced countries to solve these problems. A stimulating account of how the interests of consumers are safeguarded in Britain is given in a brochure, entitled *Consumer Protection and Guidance in the U.K.*, published by the U.K. Government Overseas Information Services.

A committee appointed by the British Government is currently investigating the whole question of consumer protection in that country. Many forms of consumer protection are provided by legislative action, that is, by Acts of Parliament and regulations. Again, there are several organisations entrusted with the task of consumer guidance, some of them receiving financial support from the Government, and some others independent. In addition, consumer councils and consumer committees have been constituted for the nationalised sector of the economy and for producer marketing schemes. As highlighted in a recent article by Mr. John Kingsley, a well-known British commentator on economic and financial affairs, some people hold strongly that there should be a great deal more in the way of informative labelling and similar devices for protecting the shopper, while some others argue that the multiplication of information of this sort is merely confusing. In view of this controversy, the findings of the aforesaid Committee are awaited with interest.

Uniform Weights

It will not be out of place in this context to examine the various steps taken in that country to protect and guide consumers. The need for evolving uniform weights and measures for use throughout the country, in order to provide a common language of quantity between buyer and seller, was recognised as early as in the thirteenth century. Indeed, the *Magna Charta* contains a provision to this effect. Besides, there are legislative measures designed to secure control over all weighing and measuring equipments (Weights and Measures Act 1878). Bread was first required to be sold by weight in 1822 and coal in 1889, and, in 1926, the Sale of Food (Weights and Measures) Act, 1926, extended the protection against short weight or measure to cover all sales of pre-packed food and retail sales of other food. Under the provisions of the Pre-packed Food Regulations, 1957, the packages of a large number of pre-packed foods are required to be marked with the minimum quantity of food contained in them.

In 1948, the Government set up a committee (Chairman: Sir Edward Hodgson) to review the then existing weights and measures legislation, with a view to bringing it in line with the changed relationships between the seller and the customer during the course of the Second World War and thereafter. In the Committee's report, published in 1951, the main conclusion was that the existing principles of weights and measures law were soundly based and stood in no need of fundamental revision. It suggested, however, that the existing legislation required codification and consolidation and recommended a considerable number of changes and extensions to its scope; some of these could be implemented under existing powers. One of the Committee's recommendations was that the existing requirement, whereby certain articles of food must be sold retail by weight, should be extended to cover (by weight, measure or number as appropriate) sales of a wider range of groceries and provisions, certain fresh fruit and vegetables, fish, chocolate and sugar confectionery, a number of non-food commodities

in everyday household use, and nearly all alcoholic liquors. The Committee also suggested that fresh powers should be taken to apply these requirements in general to cover any sale of any commodity, whether retail or wholesale, which takes place on the basis of weight, measure or number. Among the Committee's other recommendations was a controversial proposal that the Government should, in concert with the Governments of the rest of the Commonwealth and the United States, abolish the imperial system of measurement in favour of the complete adoption of the metric system over a period of about twenty years. It was announced in 1952 that the Government could not accept this recommendation.

In order to ensure that trade marks and trade descriptions applied to goods for sale are both honest and accurate, the Merchandise Marks Act was passed in 1887, extending the scope of a similar Act passed in 1862. This Act is still in force. The new Act, *inter alia*, required all goods manufactured in foreign countries, which bore a name or trade mark which was, or might be taken to be, the name or trade mark of any manufacturer, dealer or trader in the U.K., to bear an indication of the country in which the goods were made.

Hire-purchases

The Sale of Goods Act, 1893, seeks to codify the law relating to the sale of goods and lays down rules to be applied in civil disputes in cases of alleged breaches of contracts concerned with the sale of goods. There are also legislative measures, as also voluntary associations, which seek to eliminate malpractices in advertisements for consumer goods. Another legislative measure relates to hire-purchase agreements. In England and Wales, under the provisions of the Hire-purchase Act, 1938, as amended by the Hire-purchase Act, 1954, each hire-purchase agreement within the scope of the Acts has: (1) an implied warranty of quiet possession of the goods; (2) an implied condition that the owner shall have a right to sell; (3) an implied warranty that the goods shall be free from any charge; and (4) an implied condition that the goods (except secondhand goods) are of merchantable quality (i.e., saleable or marketable). If the hirer should specify the purpose for which goods are required, there is a condition that they are reasonably fit for the purpose.

Except in the last case, the above warranties and conditions are implied notwithstanding

fabrication.

INDIAN OXYGEN LTD

any agreement to the contrary. The Act also provides that the hirer can know the cash price of the goods before entering into an agreement and can ascertain from the agreement the full extent of his liabilities, and the major protection which the Act gives. It entitles him to determine the agreement at any time before the final payment falls due, and, in this event, they limit his liability for payment in respect of periods subsequent to the determination (broadly speaking, to a total of 50 per cent. of the hire-purchase price). The hirer is also protected by the Acts from seizure of the goods, except by an order of the Court, once one-third of the hire-purchase price has been paid. In Scotland, hire-purchase agreements are regulated by the Hire-purchase and Small Debt Act (Scotland), 1932; in Northern Ireland, they are regulated by the Hire-purchase Act (Northern Ireland), 1955. The Advertisements (Hire-purchase) Act, 1957, which applies to England, Wales and Scotland, regulates the information to be included in advertisements displayed or issued in connection with hire-purchase or credit sale.

For food and drugs, there are special safeguards, in addition to those provided by the Weights and Measures Acts and the Merchandise Acts. The composition, labelling, advertising, purity and hygiene of food and drugs are controlled under the Food and Drugs Act, 1955, in England and Wales; the Food and Drugs Act (Scotland), 1956, in Scotland; and the Food and Drugs Act (Northern Ireland) 1958, and the Marketing of Milk Products Act (Northern Ireland) 1958, in Northern Ireland. These Acts, *inter alia*, forbid the sale of any food or drug which differs in substance, nature and quality from that demanded by the purchaser and makes it an offence to use false or misleading descriptions either on labels attached to goods or in advertisements. They also make it an offence to offer for sale any food which is unfit for human consumption, or which is injurious to health by reason of some addition, abstraction or process. In addition to these general provisions, the Acts enable the Ministers concerned to make regulations controlling the use of chemical additives, and laying down standards of composition and labelling requirements for foods. Ministers are advised by the Food Standards Committee on the need for such regulations to control the composition, description, labelling or advertising of foods.

Monopolies

Since the Second World War, a considerable amount of legislative action has been directed to the investigation of monopolies and restrictive trade practices, and the application of remedial measures, wherever necessary. On this question, the brochure observes as follows:

"Under the Restrictive Trade Practices Act, 1956, agreements on a wide range of restrictive practices affecting the supply of goods, including agreements on prices and conditions of sale have to be entered on a public register, and provision is made for the judicial examination of these registered agreements by a new Restrictive Trade Practices Court, prescribed over by a High Court judge, which has power to determine whether such agreements are in the public interest. The Act puts the onus on industry to justify restrictive practices contained in the registered agreements. To survive, the agreement has to pass, in effect, two tests. It has to be shown, in effect, of the court, that the restriction does some good—or prevents some harm—in ways specified in the Act. Secondly, it has to be shown that the restriction does not operate to an unreasonable extent to the detriment of consumers or would-be entrants to the trade, or otherwise to the public at large.

"Where the court finds the agreement to be against the public interest, the agreement is void, and moreover the court can make orders to prevent the agreement, or any other like it, from being continued or enforced. Monopolies which are not within the scope of the court may be referred by the Board of Trade to the Monopolies Commission for investigation and report. Government production departments (that is, departments acting as the main points of contact between the Government and particular industries and services) take appropriate action on the basis of these reports. The Restrictive Trade Practices Act, 1956, also makes unlawful collective action to enforce retail price maintenance by boycott or stop-list. Prior to the passing of the 1956 Act, a number of industries were investigated by the Monopolies and Restrictive Practices Commission which was established under the Monopolies and Restrictive Practices (Inquiry and Control) Act, 1948."

Nationalised industries, such as coal, electricity, gas, transport, and also post offices, have set up their own representative Consumers' Councils or consultative committees to consider complaints and suggestions made to them, and to advise the Board or the Minister on the changes they think desirable. Moreover, provision has also been made for the representation of consumers' interests in the operations of statutory agricultural marketing schemes, that is, producers' co-operative organisations set up

under the Agricultural Marketing Acts, 1931-49 (consolidated by the Agricultural Marketing Act, 1958), with compulsory powers to regulate the marketing of specific agricultural commodities.

Advisory Services

Apart from these legislative measures for consumer production, there are various advisory services which seek to provide consumers with objective and unbiased information to enable them to make a satisfactory choice between competing products. The principal institutions of this type are the British Standards Institution and the Consumers Association Ltd. The B.S.I. lays down standards for consumer goods, after a very careful scrutiny of consumer preferences and other technical requirements. It has organised another body called Consumer Advisory Council, which publishes a quarterly bulletin, *Shoppers' Guide*. The bulletin contains results of laboratory tests or practical trials (under ordinary domestic conditions) on many kinds of goods, expressed in non-technical language with factual comparisons of different 'makes' and brands. The Consumers' Association Ltd., set up in 1957, is a non-profit-making body, which aims at providing its members with factual and unbiased assessments of named brands of consumer goods and services. Its membership is open to any member of the public, or any organisation, on payment of an annual subscription of £1. As at the end of April 1959, its paid-up membership aggregated over 125,000. The Association buys goods from shops, subjects them to laboratory and other tests by qualified experts and independent research organisations. The results of this investigation are issued to members through the Association's monthly bulletin, along with other information and a summing up of the relative merits of different makes. The Association tries, whenever possible, to recommend particular brands in the order of best value of money. Supplementing the activities of these institutions for protecting the consumer are the Council of Industrial Design, consumer research conducted by Government Departments, broadcasting and press and other miscellaneous services rendered by such bodies as the Good Housekeeping Institute, Retail Trading Standards Association, British Electrical Development Association, Women's Gas Federation and Council of Scientific Management in the Home.

STORES PURCHASE PROGRAMME

A feature of Government's stores purchase programme in India has been the growing emphasis laid on the procurement of indigenous goods, with a view to encouraging their production. The total value of purchases made by the Director-General of Supplies and Disposals amounted to Rs. 205 crores in 1958-59. Out of this, Rs. 161 crores, or about 80 per cent. of the aggregate expenditure on stores, were spent on indigenous goods. This compares favourably with the figure for 1953-54, when indigenous industry accounted for Rs. 41.80 crores, representing 58 per cent. of the total stores purchased in that year. The Union Minister for Works, Housing and Supply, Mr. K. C. Reddy, revealed at a meeting of the Central Purchase Advisory Council held at New Delhi on 31st August 1959, that D.G.S. and D. had also entered into long-term arrangements with manufacturers, in order to enable them to reserve capacity and expand production with confidence and had rendered assistance to them in obtaining raw materials that were in short supply. The policy, according to Mr. Reddy, had led to the production of a wide range of goods imported till now.

A criticism often levelled against the Government's purchase programme is the lack of uniform policy among the different State Governments and the Union Government and other official agencies. Mr. Reddy pointed out that, with a view to improving the situation, it was proposed to call shortly a conference of representatives of the buying agencies of the Union and State Governments.

On the question of purchases made by the Ministries of Railways and Defence from abroad, Mr. Reddy observed that the purchases by Railways were limited only to such items as were not manufactured in the country and of which adequate indigenous capacity did not exist. As regards the Defence purchases, only specialised stores representing essential defence equipment and in most cases proprietary stores were imported. Efforts were being made, he averred, to establish and encourage manufacture of even these imported items in the country.

As regards the complaints that post-tender negotiations were resorted to even though the Stores Purchase Committee had recommended that no negotiations after the opening of tenders and that no re-invoicing to tenders should be made, Mr. Reddy felt that such negotiations were inevitable where *prima facie* the prices tendered were on the high side or competition had been non-existent or lethargic, or the stores offered did not strictly comply with the specifications, or no valuation of tenders was possible because of diverse terms and conditions. In such cases, he pointed out, the discretion must rest with the purchasing authority to decide whether negotiations were necessary or not. He was of the opinion that negotiations were also

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED

CHAIRMAN, MR. K. A. P. VISWANATHAM'S SPEECH

ADDRESSING the Annual General Body Meeting of the South Madras Electric Supply Corporation Limited held at Tiruchirappalli on 31st August 1959, Mr. K. A. P. Viswanatham, the Chairman, referred feelingly to the loss suffered by the Corporation in the demise of Mr. S. Vaidyanatha Iyer, former Board Chairman, and Mr. V. Seshasayee, Managing Director, Managing Agents. Welcoming the members to the meeting and seeking the co-operation and guidance in the conduct of the affairs of the Company, the Chairman observed:

"For reasons of paucity of finance, the expansion programmes this year have not been as good as we had hoped. Though, with some strain on our finances, we invested Rs. 10.5 lakhs this year also and electrified 21 villages, we are far short of our usual progress. The expected loans from the State Government or the Electricity Board did not materialise, and we had to resort to borrowing even to fulfil this programme.

Rural Extensions

"There is, however, a very big demand for rural extensions. Accordingly, your Directors have decided to issue Rs. 14 lakhs of share capital, making up a total capital of Rs. 1 crore, which is our authorised capital, and to invest the proceeds in works. This will help in a small way to catch up with our pending commitments.

"We are still hoping that, in the coming years, we may secure loan finances with the assistance of the Government to enable us to do intensive power distribution.

"You would also have noticed from the Directors' report and the balance-sheet that, to keep up a 9 per cent. dividend on the equity shares, we had to draw on the reserves to some extent. This has been mainly due to the losses that resulted in the power restrictions in the first three months of the accounting year and the increase in our income-tax rates.

Tariffs Raised

"As the increase in tax rates will now be a permanent feature and as, also, our own purchase tariffs have been substantially increased by the Electricity Board, we have been perforce compelled to increase all our tariffs to the consumers to take care of these extra burdens. The increased tariffs are kept as closely as possible to those offered by the Electricity Board to its own customers. In a few cases, they are slightly higher. But I would explain that the Company pays more than Rs. 3 lakhs to Government as electricity duty and another Rs. 5 lakhs by way of taxes, neither of which burdens fall on the Electricity Board, I am, therefore, sure you will appreciate the reasons for our having to enhance the tariffs. I would like to assure you that, in the event of the Government and the Electricity Board giving any relief to us on any of the factors, we shall certainly share such benefit with our consumers.

"Another feature of the accounts to which I would like to draw your attention is the revised taxation policy of the Government. In the future accounting years, the Company has to pay a tax of 45 per cent. on its ascertained income and this tax will not go to the benefit of shareholders. A 30 per cent. tax has to be deducted on the dividends declared and this deduction alone will be available to the shareholder for his income-tax purposes. With the limitation placed by the Electricity Supply Act and this compulsory deduction of tax on the

inevitable in the case of items where indigenous manufacture was of recent development.

Referring to delays in payments, Mr. Reddy observed that it might not always be possible for the Government to adopt commercial practices if the interests of the taxpayer were to be fully safeguarded and losses avoided. He believed that, as a result of the recommendations of the Stores Purchase Committee and the Central Purchase Advisory Council, appreciable improvement had already taken place. Action had recently been taken to liberalise the terms of payment, for example, "on account" payments for raw materials, balance 10 per cent. payment where consignees default, waiver of liquidated damages and extension of delivery periods for stores in short production. Mr. Reddy added that the working of the Finalisation Wing had again come in for criticism by trade and industry. He disclosed that, during the last two years, the Finalisation Wing had finalised about 12,000 cases and a sum of Rs. 7.3 crores had been paid to the suppliers.

declared dividends, the actual receipt of dividends in your hands will be substantially reduced, but the tax authorities will adjust the 30 per cent. deduction made, promptly each year and you will get your refunds without having to wait for long."

Continuing, the Chairman referred to the retirement of Mr. Moolji Ramjee and Mr. A. Ganapathi Iyer who had been associated with the Board ever since the inception of the Company and who had decided not to seek election, having attained the age of 65. "I would like to convey to both these gentlemen on your behalf and on behalf of myself, our sincere appreciation of their services to the Corporation," he added.

Settlement With Labour

The Chairman also referred to the settlement that had been arrived at with labour. "A unique feature of the settlement," he observed, "has been a direct negotiation between an elected representative body of the staff and labour and the management. By this negotiation, the labour received satisfactory salary and dearness allowance benefits, some added amenities to the tune of about Rs. 2.25 lakhs per annum." He added that a grievance settlement procedure had also been evolved.

Continuing, the Chairman said that staff had been working loyally and well. He also expressed the hope that, with the proposed new issue of capital, the Corporation would give a greater measure of satisfaction and that all ranks of staff concerned would do their best by hard, enthusiastic and efficient work.

In closing, the Chairman made a reference to the proposal for the starting of an engineering college in the City in the name of Mr. V. Seshasayee and expressed the hope that, in the next academic year, the College would begin to function.

N.B.—The above summary of the speech does not purport to be the report of the proceedings of the Nineteenth Annual General Meeting of the Company held on 31st August 1959.

COTTON

(Concluded from page 426)

"Mill demand is up, and growing in every market of Western Europe and Asia. There has been a general rise in living standards and therefore a better demand for cotton goods may be expected. The fact that cotton stocks are generally depleted should enable the U.S. to enjoy a good export volume."

COTTON CONFERENCE IN VIENNA

The General Assembly of the International Federation of Cotton and Allied Textile Industries will be held in Vienna, Austria, from 21st to 26th inst., at the invitation of the Austrian Cotton Spinners' and Manufacturers' Association. The meeting will be opened by Mr. Alfred B. Lohner, President of the Austrian Association. The President of the International Federation, Dr. W. T. Kroese (Netherlands), will be in the chair. More than 100 delegates from Western Europe, the United States, the United Arab Republic, Japan, and an observer from Australia will attend.

A heavy work programme is scheduled and there will be several sub-committee meetings throughout the week. The Raw Cotton Merchants' Committee will discuss progress in the establishment of rules for arbitration on the basis of Micro-naire readings. It will consider the problem of export taxes and other trade practices regarding raw cotton exports, as adopted by certain cotton growing countries. The recent move of several cotton growing and exporting countries to examine ways and means of stabilising world cotton prices will also be considered, and the Committee will discuss possibilities for promoting and facilitating futures trading.

The Committee for Man-made Fibres will submit recommendations regarding the terminology, trade marks, labelling and standards for man-made fibres.

The Committee for European Affairs will discuss latest developments regarding the European Economic Community (Common Market) and the proposed European Free Trade Association. The special problems, presented by the creation of these two integrated areas within Western Europe to the cotton and allied textile industries, will be studied in detail.

Technical items on the agenda include the standardisation of the terminology and methods of describing cloth construction and the progressive reduction in the number of cloth widths. The Federation will also examine possibilities for the legal protection of textile designs.

IMPERIAL TOBACCO'S PROFIT DOWN FOR THE THIRD TIME DIVIDEND CUT—TAXES AND COSTS HEAVY

THE ordinary shares of the Imperial Tobacco Company of India Ltd. (Chairman: Mr. G. H. J. Clarke, Calcutta) are one of the industrial equities that have failed to serve the function of a hedge against inflation. In the past one year, the index number of prices of equities of manufacturing industries has gone up by 14 per cent., but the price of the Company's share (Rs. 10 paid up) at Rs. 11.87 is actually a shade lower than that a year ago. Over the past two years, the index number shows an appreciation of no less than 24 per cent., whereas the value of the Company's share is down from Rs. 12.87 or by about 8 per cent. A glance at the accompanying comparative table of the Company's financial results for the four years ended 31st March 1959 will explain this phenomenon. It will be seen that, during this four-year period, there has been a consecutive fall in profits, accompanied by a reduction in the dividend as well as in the amounts set aside to reserves. The gross profit has come down from Rs. 415.71 lakhs for 1955-56 to Rs. 333.35 lakhs for 1958-59 (the year under review), a drop of Rs. 82.36 lakhs or nearly 20 per cent. The net profit has fallen even more sharply, from Rs. 186.71 lakhs to Rs. 114.98 lakhs, a decline of Rs. 71.73 lakhs or 38.5 per cent. The rate of dividend has been pruned from what was already a modest rate of 8 per cent. per annum, absorbing Rs. 121.28 lakhs to a poor 6 per cent. per annum, requiring Rs. 90.96 lakhs, a cut of one-fourth. The annual additions to reserves in the latest year are only Rs. 23.42 lakhs, as against Rs. 65.60 lakhs four years earlier.

All this setback has occurred, despite the increase in sale proceeds from Rs. 30.36 crores to Rs. 34.20 crores and of a little over Rs. 10 lakhs in other income or a total increase of nearly Rs. 4 crores. The reasons are simple. Customs and excise duties paid by the Company have shot up by Rs. 2.10 crores and so also expenses (including raw materials consumed and the cost of cigarettes and tobacco purchased and sold) by Rs. 2.87 crores. Thus, the indirect taxation and expenses have together increased to a greater extent than sale proceeds, resulting in a shrinkage in the margin of profit. Although the assessable profit has declined markedly, there has been only a small reduction in the direct

losing ground to them. It is, however, not clear as to why this should happen. After all, this Company is bigger than the others in every respect. It will be interesting to see what explanation the Chairman has to offer on this point.

A comparison of the results for the year under review with those for 1957-58 shows the same trend. The gross profit for 1958-59 has gone down by Rs. 23 lakhs, mainly because of the sharp rise in expenses and in customs and excise duties paid. The provision for depreciation has been maintained, while that for taxation is less by only Rs. 7.38 lakhs, notwithstanding the perceptible contraction in assessable profit. The dividend has been cut to 6 per cent. per annum, after having been maintained at 7 per cent. per annum for two years and at 8 per cent. for 1955-56. The transfers to reserves have been lowered from Rs. 27 lakhs to Rs. 23.42 lakhs, of which Rs. 17.50 lakhs are to fixed assets and stock replacement reserve and Rs. 5.13 lakhs to development rebate reserve. The importance given to the former reserve is due to the continued high level of prices of fixed assets and raw materials.

A disquieting feature of the Company's financial results is the fall in profit despite the spending of large sums on fixed assets year after year. During the four years 1955-56 to 1958-59, the Company has incurred a capital expenditure of Rs. 365.56 lakhs, in order to maintain the productivity of its works at a high level. Of this amount, the share of plant and machinery alone is Rs. 184.29 lakhs. It is true that, during this period, the Company has also been withdrawing and transferring fixed assets, the total of such deductions being Rs. 118.20 lakhs, of which the share of plant and machinery is Rs. 40.03 lakhs. Even then, the net increase in capital expenditure is Rs. 247.36 lakhs, the share of plant and machinery in it being Rs. 144.26 lakhs. Nevertheless, these additions have not benefited the shareholders in any positive sense; the chief beneficiaries seem to have been the Government and the workers.

The following synopsis of the balance-sheet at 31st March 1959 will show at a glance the latest financial position of the Company:

LIABILITIES	Rs.	ASSETS	Rs.
Paid-up capital ..	15,16,00,000	Gross block	6,08,53,800
Reserves and		Less—Depreciation ..	2,47,39,240
surplus ..	9,23,37,285		
Current liabilities ..	2,70,75,985	Net block ..	3,56,14,560
		Goodwill and trade	4,90,85,815
		marks ..	87,23,970
		Investments ..	10,81,50,854
		Stock-in-trade ..	4,40,59,477
		Book debts ..	3,04,31,574
		Cash ..	27,10,16,250
			Rs. 27,10,16,250

Three features of the Company's financial position are clearly evident from the aforesaid summary. First, the entire current liabilities are more than adequately covered by cash balances alone. Secondly, the entire reserves and surplus are in current assets; indeed, the stock-in-trade alone is in excess of the reserves and surplus. And, thirdly, the paid-up capital is far in excess of the block account, including the goodwill and trade marks. In other words, the Com-

pany seems to be overcapitalised. Herein lies another main explanation for the low rate of dividend on the Company's shares.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 11.81, at which level the latest dividend means a yield of a little over 5 per cent. per annum.

CONCORD OF INDIA INSURANCE COMPANY

The audited accounts of The Concord of India Insurance Company (Managing Director: Mr. K. G. McLeod) for the year ended 31st December 1958 disclose a modest rise in the aggregate net premium income from Rs. 58.17 lakhs in 1957 to Rs. 60.25 lakhs during the year under review. The increase was shared by all the three departments, namely, fire, accident and miscellaneous and marine. Despite the higher premium and the lower expenses of management, net profits registered a decline to Rs. 2.74 lakhs from Rs. 3.24 lakhs in the previous year, thanks to the higher claims ratio. Thus, claims ratio in the fire, accident and miscellaneous and marine departments increased from 38.89 per cent. to 50.94 per cent. and 75.54 per cent. in 1957 to 45.60 per cent., 60.81 per cent., and 88.62 per cent. in 1958, respectively. Nevertheless, the dividend has been maintained at last year's level of 20 per cent., that is, Re. 1 per share of Rs. 5 paid-up, free of tax.

The following table indicates the salient features of the working of the Company during the three years ended 31st December 1958:

	1958	1957	1956
Fire—			
Premium ..	32.42	32.04	32.24
Claims ..	14.78	12.46	12.31
Commission, expenses, etc. ..	14.56	17.82	18.61
Fire fund ..	16.21	16.02	16.12
Accident and miscellaneous—			
Premium ..	14.72	13.83	12.49
Claims ..	8.95	6.79	6.22
Commission, expenses, etc. ..	4.92	4.57	4.68
Accident, etc. fund ..	7.92	6.68	6.35
Marine—			
Premium ..	13.11	12.80	13.87
Claims ..	11.62	10.67	9.53
Commission, expenses, etc. ..	3.58	3.21	3.07
Marine fund ..	13.11	12.81	13.86

Net premium in the fire department amounted to Rs. 32.42 lakhs. Claims paid and outstanding aggregated Rs. 14.78 lakhs. Expenses of management together with commission, foreign taxes, and bad debts written off, amounted to Rs. 14.56 lakhs. After providing Rs. 16.21 lakhs as reserve for unexpired risks, being 50 per cent. of premium, a sum of Rs. 2.90 lakhs has been transferred to the profit and loss account.

In the accident and miscellaneous department, net premium aggregated Rs. 14.72 lakhs and claims paid and outstanding amounted to Rs. 8.95 lakhs. Expenses of management and commission, foreign taxes, etc., accounted for Rs. 4.92 lakhs. After earmarking Rs. 7.36 lakhs to the reserve for unexpired risks, being 50 per cent. of premium, sum of Rs. 14.93 has been transferred to the profit and loss account.

Net premium in the marine department worked out to Rs. 13.11 lakhs while claims paid and outstanding amounted to Rs. 11.62 lakhs. Expenses of management, commission, etc., aggregated Rs. 3.58 lakhs. After setting apart Rs. 13.11 lakhs to the reserve for unexpired risks, the account shows a deficit of Rs. 2.39 lakhs.

The underwriting profit, after making good the loss in the marine department, aggregated Rs. 65.321 which, together with the income from interest, dividends, and other sources aggregating Rs. 4.94,046, gave a total of Rs. 5.59,367. After setting apart Rs. 2.40 lakhs as provision for taxation and providing for other expenses, there is a net profit of Rs. 2,73,907 which, along with a net balance of Rs. 1,13,250 brought in from the previous year, makes available Rs. 3,87,157 for distribution. The payment of dividend of Re. 1 per share will absorb Rs. 2.70 lakhs, leaving Rs. 1,17,157 to be carried forward.

The Company has a capital of Rs. 13.50 lakhs, and general reserves and surplus of Rs. 48.18 lakhs.

UNIVERSAL FIRE AND GENERAL INSURANCE COMPANY

The audited accounts of The Universal Fire and General Insurance Company, Ltd. (Secretary: Mr. G. M. Desai), for the twelve-month period ended 31st December 1958 disclose a year of fairly satisfactory working. The total net premium income recorded a handsome improvement from Rs. 31.88 lakhs in 1957 to Rs. 35.45 lakhs in 1958, representing a rise of Rs. 3.57 lakhs. The claims experience too was more favourable than in the previous year, except in the marine section. Nevertheless, only the fire department yielded a profit whereas, the miscellaneous and marine departments showed losses, thanks to the need for strengthening of reserves in both departments and the adverse claims experience in the marine department. The net profit, however, increased sharply from Rs. 89,925 in 1957 to Rs. 1.65 lakh during the year under review. This has enabled the Directors to step up the dividend to Re. 1.25 nP per share of Rs. 10 paid-up (12½ per cent.), free of tax, as against Re. 1 (10 per cent.) paid last year.

Total net premium income in the fire department aggregated Rs. 22.20 lakhs. Claims paid and outstanding were of the order of Rs. 7.53 lakhs, representing 33.95 per cent. of premium, as against 42.78 per cent. in 1957. After providing for commission and expenses of management and earmarking Rs. 11.10 lakhs, being 50 per cent. of the premium, as reserve for unexpired risks, a profit of Rs. 2.98 lakhs has been transferred to the profit and loss account.

In the accident and miscellaneous department, despite a substantial increase in net premium income from Rs. 9.16 lakhs in 1957 to Rs. 11.83 lakhs in 1958 and a slight reduction in claims ratio from 51.40 per cent. to 49.93 per cent., the year's operations resulted in a loss of Rs. 1.86 lakh. The reserve for unexpired risks has been maintained at Rs. 5.92 lakhs, 50 per cent. of premium.

In the marine department net premium, after deduction of reinsurance, amounted to Rs. 1.42 lakhs, as against Rs. 1.00 lakh in the previous year. Claims paid and outstanding amounted to Rs. 63,690. The loss ratio, therefore, works out to 44.97 per cent., as compared with only 35.42 per cent. in 1957. The higher loss ratio was due mainly to the unfavourable claims experience of the business received by the Company from the Indian Insurance Companies' Association Pool. After meeting the expenses of management and commission and providing for reserves for unexpired risks at 100 per cent. on hull premium and 15 per cent. on cargo premium, as against 100 per cent. and 55 per cent. respectively, in 1957, the accounts show a loss of Rs. 22,315.

After making good the loss in the accident and miscellaneous and marine departments from the surplus in the fire department, there is a net profit of Rs. 1.65 lakh which, together with Rs. 9,621 brought in from the previous year's account and Rs. 4,767 being the balance of the shareholders' compensation payable account, gives a total of Rs. 1.80 lakh for distribution. Out of this Rs. 75,000 has been set apart as reserve for taxation. The dividend of Re. 1.25 per share will absorb Rs. 82,234 leaving Rs. 22,412 to be carried forward.

TRANS WORLD AIRLINES

The Trans World Airlines has reported the best quarterly earnings in the Company's history, with net income before taxes of \$8,129,000 for the quarter ended 30th June 1959, in contrast to the loss of \$864,000 for the corresponding three months in 1958. Despite the traditional first quarter's loss of \$3,778,000 this year, T.W.A.'s about face for six months was equally impressive. In 1958, the Company sustained a net loss through June of \$1,923,000, as compared with the earnings of \$3,972,000 this year. After reserving \$2,408,000 for income-taxes payable in future years, the T.W.A. had net earnings of \$1,564,000 for six months in 1959 or \$9.23 per share. The loss per share last year was \$1.59.

Taking into account the 1958 first six months' losses and the 1959 first six months' earnings, the profitability spread over T.W.A. in the period of one year was \$18,895,000. The month of June 1959 alone produced net earnings before taxes of \$5,203,000, as compared with \$2,165,000 in June last year. Many factors contributed to T.W.A.'s notable recovery. These included the public acceptance of Boeing 707 jets which have been operating on the T.W.A.'s domestic system since 20th March, with an overall average load factor of 94 per cent. and an on-time departure record of better than 70 per cent. The T.W.A. now provides jet service to ten principal cities in the United States with more to be added within the next few weeks.

Another important factor in the T.W.A.'s new look is a reorganisation of the Company for more effective use of routes, manpower and equipment with tighter management control over expenses. As an example of the latter, Mr. Charles S. Thomas, President of the T.W.A., points to the Company's twelve months' earnings performance for the year ended 30th June 1959. During that period, the Company's expanded sales and service programme increased the total revenues from \$280,497,000 for the twelve months ended 30th June 1958 to \$307,451,000, while expenses were held virtually stationary at \$298,000,000.

CONTROL ON CAPITAL ISSUES

The Government of India has accepted three of the four recommendations of the Advisory Committee on Control of Capital Issues, according to the Union Finance Minister, Mr. Morarji Desai. The fourth recommendation is under Government's consideration. The first suggestion has been accepted with the modification that the exemption limit should be raised to Rs. 10 lakhs, instead of Rs. 15 lakhs. The necessary notification has been published.

The four suggestions of the Committee for relaxation of control are: (1) The exemption limit should be raised from Rs. 5 lakhs to Rs. 15 lakhs in twelve months. (2) A balance of 1:3, as between equity capital plus free reserves, on the one hand, and fixed dividend bearing securities, on the other, might be adopted as a healthy requirement. (3) In considering applications for issue of bonus shares, the 20 per cent. residual reserves test should not be rigidly enforced and relaxations should be made, wherever necessary, and (b) the test of under-capitalisation should be liberalised to the extent of permitting an increase in capital upto the amount of capital employed by the company. (4) The condition imposed in the consent orders to the issue of bonus shares that the shares shall be issued only in a year, in which the company has assessable income, operates harshly and it is not for the Capital Issues Control to impose such conditions.

The Deputy Minister of Finance, Shrimati Tarakeshwari Sinha, confirmed in the Lok Sabha the other day that the Government had taken a decision on the recommendations of the Estimates Committee that all public enterprises should have a common financial year. Replying to a question, she said that steps were being taken towards this end, except in the case of the Export Risk Insurance Corporation and certain financial institutions like the Reserve Bank of India, the State Bank of India, the Life Insurance Corporation, the Industrial Finance Corporation and the Rehabilitation Finance Administration, which stood on a different footing and were governed by special regulations and provisions.

HOURS OF WORK AND LABOUR EFFICIENCY

(Concluded from page 432)

consideration. When that increase is regarded, it appears at least equally plausible that, in many cases, increased wages have appeared, in spite of, rather than because of, shorter hours.

It may also be worthwhile to distinguish effects of hour reduction in a single plant or industry from hour reduction imposed by law on all or a large proportion of all industry. Results within an industry have been already discussed above. Effects of general hour reduction legislation, if such laws force hours below the most efficient relationship, are more direct and simple. They merely tend to reduce consumption and real wages throughout society as a whole, exactly as any other restriction on output does.

Effects on the National Economy

The most probable effect—and one in which the trade unions are directly interested—is that a reduction in standard working hours could tend to minimise labour displacement during a period of rapid technological change and rising productivity and during periods of inadequate demand for the growing volumes of goods and services. Reduced standard hours, without an accompanying reduction in workers' purchasing power, are a means of adjusting the national economy to such changed conditions.

It is asserted by some that a reduction in working hours would cause a decline in total output or a substantial decline in the rate of increase in national production. Although this has happened in the past, it is impossible to make precise predictions on this score. Some critics consider that the reduction of working hours in the coming years will create labour shortages and could be disastrous. But, in the next few years, the effects of a rising birth rate since 1939 will bring an increasing number of young people into the labour markets. With reduced hours of work, it is likely that there will be a growing participation of women and of older workers in the labour force. In addition, some workers would undoubtedly attempt to obtain a second job if such jobs were available.

A further reduction in working hours may bring additional changes in living standards and habits. With these changes, there may well be enhanced demands for existing products and for new goods and services. Shorter working hours in the past have been accompanied by continued economic growth and there is no reason to believe that economic growth will be arrested by further progress in this direction.

No simple, all-inclusive statement can, however, be made as to what length of work-day or work-week is most healthful, politically desirable or economically efficient. Conditions vary in different industries, occupations, processes and periods of time. Also, it is quite possible that effective labour organisation in some occupations might limit hours and force their marginal productivity and wages to unusual heights. Such action is not essentially different from that of any monopoly which, having secured control of a commodity or service, proceeds to force the public to pay dearly for that value. Just as modern societies have found it necessary to regulate other monopolies, they may be justified in regulating labour monopolies, especially if their powers are used to enforce severe sacrifices on the public. At the same time, however, there is a real social interest in the effects of unduly long hours and their resulting ill-health, increased accidents, and inactive citizenship. Society must balance these conflicting interests and its intelligent action requires an understanding of both aspects of the conflict. —All Rights Reserved.

	(6%)	(7%)	(7%)	(8%)
Carry forward ..	24.64	24.05	25.06	24.94

N.B.—Of the total expense, raw materials consumed account for Rs. 11,01.72 lakhs in 1958-59, Rs. 9,97.74 lakhs in 1957-58, Rs. 9,95.35 lakhs in 1956-57 and Rs. 9,84.24 lakhs in 1955-56.

taxes payable by the Company. Over the four-year period, the annual provision for taxation is less by only Rs. 7.68 lakhs at Rs. 172.20 lakhs; this reflects the increase in the incidence of corporate taxation which it must be conceded is heavier than it ought to be for a developing economy such as that of India.

It will be interesting to note from the table that, in 1958-59, the total amount absorbed by both direct and indirect taxation is as high as Rs. 15.41 crores which is equivalent to about 45 per cent. of the sale proceeds. Another interesting feature is that expenses account for more than 50 per cent. of sale proceeds.

In fine, heavy taxation, coupled with cost inflation, has crippled the Company's profit-earning capacity and robbed its shares of one of the qualities generally associated with industrial equities and referred to at the outset. Apparently, the Company has not been able to pass on in full to the consumer the enhanced tax burden and the increase in production costs. Last year, the Company's Chairman attributed this inability to growing competition in the country. It seems to us from the trend of profits of other cigarette and tobacco companies that this Company is

MONEY DULL AND EASY

(From Our Own Correspondent)

BOMBAY, 9th September

This has been an uneventful week for the money market. The supply of funds is plentiful, while borrowers are scarce. Conditions are, therefore, pretty easy. Inter-bank call money rate is unchanged at 1½ per cent. among Indian banks and Exchange banks and 2 per cent. among small Indian banks. House money at seven days' notice is quoted at 3 to 3½ per cent. and one to six months' deposit at 3 to 3½ per cent. Most of the business is, however, taking place at the higher rates, which, as was mentioned in this column last week, are the revised ceilings under the inter-bank agreement.

The results of the Government of India 91-days Treasury Bills are in consonance with the aforesaid easy money conditions. The total amount offered was Rs. 2 crores and the total amount subscribed was Rs. 2.50 crores, the corresponding figures for the previous week being Rs. 3 crores and Rs. 3.05 crores, respectively. The average rate of accepted tenders has gone down for the fourth week in succession; it is 2.448 per cent. per annum for this week, as compared with 2.519 per cent. per annum in the past week. Tenders for Rs. 2 crores of these bills have been invited for next week also. Sales of intermediate Treasury Bills from 1st September to 5th September 1959 amounted to Rs. 1.29 crore, in striking contrast to none at all in the previous week. These bills are to be sold on tap from 9th September to 12th September 1959 at 2.376 per cent. per annum, as compared with 2.456 per cent. per annum in the period ended 5th September 1959.

Notes in circulation have gone up by Rs. 14.70 crores during the week ended 4th September 1959, according to the Reserve Bank's statement for that week. As against this rise, there has been a contraction of Rs. 16.15 crores in notes held in the Banking Department, so that the total notes issued show a net fall of Rs. 1.45 crore only. This has been offset on the assets side of the Issue Department by a contraction of a similar amount in rupee coin. There is no change in foreign securities held by this Department. But, in the Banking Department, balances held abroad show a small rise of Rs. 97 lakhs, bringing up the total foreign assets to Rs. 184.23 crores. On the liability side of the Banking Department deposits of the Central Government are fractionally higher by Rs. 1.86 crore, but all other deposits are substantially lower. Thus, other Governments' balances have fallen from Rs. 33.78 crores to Rs. 23.82 crores and those of banks from Rs. 86.03 crores to Rs. 70.19 crores. The only notable variation on the assets side of this department is a contraction of Rs. 17.12 crores in investments.

The Scheduled Banks' statement for the week ended 28th August 1959 shows a modest rise of Rs. 5 crores in demand deposits and of Rs. 2.94 crores in time deposits, the total net deposits being Rs. 1,786.39 crores, as against Rs. 1,538.49 crores a year ago. Borrowings from banks are up by Rs. 6.20 crores, but borrowings from the Reserve Bank and the State Bank are lower by Rs. 11.13 crores and Rs. 5.12 crores, respectively. Advances have gone down by Rs. 11.13 crores, and bills purchased and discounted by Rs. 70.78 lakhs. The total bank credit amounts to Rs. 938.09 crores, as against Rs. 866.40 crores a year ago. Investments are higher by Rs. 11.60 crores at Rs. 735.46 crores; a year ago, they stood at Rs. 571.99 crores. Total cash balances are better by Rs. 3.89 crores at Rs. 123.14 crores; this time last year they were at Rs. 136.85 crores.

Distinctly firm conditions have been prevailing in the gilt-edged market, with the prices of 3 per cent. medium and long-dated loans going up by 15 nP over the week. The Reserve Bank, which has been a seller of these loans for some weeks now, is reported to have practically exhausted its stocks. The State Bank of India also is believed to have unloaded quite a sizable part of its holdings. There are strong reports that, before the end of this month, the Government of India will make a fresh issue of some of its new loans; the amount involved is likely to be Rs. 40 crores.

The State loans have been fully steady, with turnover greatly restricted for want of sellers. 4 per cent. 1970 Bombay loan has appreciated by 15 nP and so also 4 per cent. 1971 by 5 nP. There has not been much change in the rates of other state loans.

Despite higher interest rates in the U.S., pound sterling has been remarkably steady. Spot sterling in New York is quoted at 280.26-280.29 cents and three months forward at 280.54-280.57 cents. Locally, banks' selling rate for ready T.T. on New York is 25 nP higher at Rs. 477.75 per \$100. A similar increase has taken place in their buying rate also which is now at 474.25 per \$100. In other words, as compared with last week, the rupee is a shade quiet vis-a-vis the U.S. dollar, even though the pound sterling has been steady.

KIP ARRIVALS SMALL

(From Our Own Correspondent)

MADRAS, 7th September

There was no appreciable change in the kip market this week. Arrivals were small. Shippers were active and prices ruled a shade weak. U.K. demand was slow, as importers were trying to bring down kip prices in line with their market demand but at last prices. Cow hides, 10-12 lbs. inferior firms were taken up at slightly increased prices by importers, as stock available were small. Buffalo cow calf and buff calf remained firm, as they were in short supply. Shippers to the U.S.A. were in the market for buffalo hides at unchanged prices.

SILVER FIRM, GOLD QUIET

(From Our Own Correspondent)

BOMBAY, 9th September

Silver in the bullion market ruled firm during the week under review, while gold was quiet. The firmness of silver was engendered by anxiety over political situation which induced fresh support and short covering. A leading operator from Calcutta was said to have made sizable purchases of the metal yesterday. The rising tendency in prices of commodities, especially cotton, also imparted strength. Gold, however, was quiet on easy advices from upcountry centres. There was some recovery yesterday, but this was due more to paucity of offering than to emergence of demand. Today, again, the metal encountered selling and drifted lower.

September settlement in gold receded from Rs. 123.2 at the close of last week to Rs. 121-8 on Saturday and, after recovering to Rs. 123-1 subsequently, finished at Rs. 122-13. The net loss over the week was As. 5. October settlement declined from Rs. 123-7 to Rs. 121-13, but improved to Rs. 123-3 yesterday. It was a shade easy at Rs. 123-3 today. The carry forward rate in September settlement was in favour of bears to the extent of As. 5 till yesterday when it rose by an anna.

Ready gold began the week at Rs. 122-6, as against Rs. 122-14, and dropped to Rs. 121-4 on the following day, that is, Saturday the 5th inst. After recovering to Rs. 122-14 yesterday and today, it wound up the week at Rs. 122-11. The daily average arrivals and offtake of gold were 3,300 tolas and 3,600 tolas, respectively. The floating stocks of gold are estimated at 36,000 tolas.

September settlement in silver evoked good buying orders and advanced in the course of the week from Rs. 203-11 to Rs. 204-7. Towards the close, it was a shade easy at Rs. 204-5. October settlement fluctuated between Rs. 203-15 and Rs. 205-1 before finishing at Rs. 204-15. The carry forward rate for September settlement continued to be against bulls, the rate actually rising from As. 6 last week to As. 10.

Ready silver, which stood at Rs. 203-9 on Wednesday last week, moved up to touch Rs. 204-3 today. The closing rate was lower by As. 2. The daily average arrivals of silver were 32 bars, while the offtake was 13 bars. The floating stocks of silver are reported to be around 450 bars.

There was no change in the quotations for both ready and forward silver in the London bullion market during the week; the former stood at 78½d. per ounce and the latter at 78½d. Silver in New York, however, eased from 91.825 cents to 91.375 cents per ounce. Ready gold in London ruled steady during the week, thanks to the persistent strength of the pound sterling vis-a-vis the dollar. The rate moved up a little from 250s. 2½d. per ounce to 250s. 9d. but finished at 250s. 7½d. The latest available rate for dollar gold in London is \$35.11-\$35.13, as against \$35.10-\$35.12½ per ounce last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	9-9-59	Highest	Lowest	2-9-59
GOLD				
Ready (90 fine Mint)	122 11	122 14	121 4	122 14
Forward	122 13	123 1	121 8	122 5
SILVER				
Ready (900 fine Mint)	204 1	204 8	202 9	203 9
Forward	204 5	204 7	202 13	203 11
NEW YORK				
Gold (100 fine)	78 ½	78 10	78 6	78 8
Silver (100 fine)	91 375	91 825	91 375	91 825

* 17th September settlement. † 18th September settlement.

LINSEED STEADY

(Messrs. A. Bradley and Co.)

CALCUTTA, 7th September

The tone of the linseed market was firm throughout the week and little business was reported with sellers generally reserved. Seeds advanced, whilst availability continued to be limited. There was a slightly larger turnover in the forward market and prices advanced; a steady tone prevailed throughout.

The oilcake section did not show any change. There was a small daily turnover at prevailing prices, but shippers remained out of the market with overseas buyers pausing.

There was a notable advance in the oil section, following a sudden rise in overseas quotations to £108. No fresh business was done with local quotations slightly above this level.

The latest quotations are: Ready-September Rs. 24, October-November Rs. 24.25, September Futures Rs. 24 and May futures Rs. 23.12 per maund.

Inquiries for tanned goat skins broadened, though at 3d. to 6d. lower than last sales; and E.I. tanners were briskly buying the available raw goat skins at full prices. Tanned sheep market was steady.

Shipments during the month of August were: To the U.K.: 3,834 bales tanned cow hides, 292 bales cow calf, 4 bales buff, 182 bales buff calf, 876 bales goat, 527 bales sheep skins. Continent: 354 bales cow hides, 114 bales cow calf, 64 bales buff calf, 689 bales goat, 235 bales sheep. U.S.A.: 6 bales cow calf, 163 bales buff, 93 bales buff calf, 138 bales goat, 13 bales sheep. Japan: 1 bale goat and 214 bales sheep.

COTTON FUTURES FLARE UP

(From Our Own Correspondent)

BOMBAY, 9th September

The cotton futures market displayed exceptional strength during the week under review. The main influencing factor was reports of excessive rain in Vidarbha, Gujarat and the Punjab areas which adversely affected crop. Considerable damage was also feared to have been done to the standing crop. This news touched off extensive spot house support and large-scale short-covering. The sustained firmness of the spot market, consequent on keen mill demand, and the improved outlook for textiles imparted further strength to the market. Under pressure of heavy buying orders, futures values flared up, with the Jarilla March contract crossing the Rs. 700 mark to quote at Rs. 703.25 today, the highest level of its career. The market seemed to have completely ignored the deterioration in Indo-Chinese relations caused by Chinese violation of India's territory in N.E.F.A.

I.C.C. Mogai Jarilla March 1960 opened the week at Rs. 687.75 and steadily improved to Rs. 697.50 yesterday. Opening at Rs. 701 today, the contract firmed up to Rs. 703.25 before closing lower at Rs. 701.50. The net rise over the week works out to Rs. 15.25.

Activity in the spot market was brisk. Mill demand broadened further. Prices were very firm and showed a rise of Rs. 20 to Rs. 25 per candy over the week. New crop Berar, Khandesh, 0394, 197/3 met with sustained buying, especially by Southern mills. Current crops also found buyers. Bombay and Ahmedabad mills evinced interest in current crop Laxmi, Surji, Jaydhar, 197/3, etc.

The export front was lively. Renewed demand was reported from Japan and the Continent. Shippers bought sizable quantities of Bengal Deshi, both old and new crop. Moderate business was also done in zoda and yellow pickings.

Exporters are optimistic about exhausting the recent export quota for 75,000 bales of Bengal Deshi, although the recent drop in Deshi prices in Karachi is said to have attracted the attention of Japanese buyers to Pakistan.

Details of the licensing procedure in regard to the export quota of 75,000 bales of Bengal Deshi cotton released on 31st August have been announced. A part of the quota would be earmarked for distribution among co-operative societies and the balance would be licensed on a first-come-first-served basis, subject to an individual quantitative ceiling of 10 per cent. of the quantity allowed. Co-operative societies should apply for their licences through the Registrar of Co-operative societies in their respective States, on or before 30th September 1959. Licences will be issued to them on the recommendation of the respective Registrars. Co-operative societies can also participate in exports of cotton on the first-come-first-served basis, but only after their own individual quotas are exhausted.

Business in foreign cotton was mostly confined to East African and Egyptian varieties. Southern mills were interested in E. African B.P.52 and some popular Egyptian varieties. Some business was reported in these varieties. Mills showed interest in higher grade Sudan.

The basis of allocation of the one lakh bales earmarked for non-user mills out of the quota of 140,000 bales against applications to be submitted before 15th September, has been fixed as Rs. 10 in value per licensed and installed spindle actually working on 1st July 1959. This quota will command a premium of 10 per cent. under the export incentive scheme. Those mills who surrender the quota will get a premium of 10 per cent. since re-allocations of such surrenders are to be made at 20 per cent., including 10 per cent. under the export incentive scheme.

Importers are disappointed that they have been left out of the picture. Details of the pattern of allocation of the balance of 40,000 bales have yet to be known. It looks as though the announcement would take some time since it is felt that the authorities will probably like to have an idea of the magnitude of the quotas surrendered before finalising the details.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal Deshi 700; Berar Jarilla 765; Khandesh 875; Laxmi 990; Jaydhar 860.

Firm conditions continued to prevail in the Karachi cotton futures market during the week under review. Values improved further on extended mill buying and firm trade support. N.T.R.G. January hardened by 12 annas to Rs. 63-12. The March contract firmed up by 7 annas to Rs. 64-6. The spot section was, however, quiet and values tended to ease. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Punjab Deshi 67; 4F Punjab Roller 70; S.G. 71-8; L.S.S. Punjab Roller 71; S.G. 72; N.T. Roller 71; S.G. 72-8; 288F Punjab Roller 71-8; S.G. 73-8.

The Alexandria cotton futures market suffered a sharp setback during the week, thanks to large-scale liquidation and heavy hedge pressure. The reaction was attributed to the strict ban on barter transactions imposed by the Ministry of Economy. Barter arrangements, it may be noted, have played a significant role in moving Egyptian cotton into export channels. The abolition of export duty on all varieties of cotton, except Ashmouni, would have induced a recovery, had the export price discount not been reduced from 29 per cent. to 23 per cent. last week, (not 28 per cent. as appeared in these columns last week) and further to 22½ per cent. this week which offset the effect on prices of the duty abolition. The spot section also ruled weak. The following are the latest available quotations—in tallars per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: November 70.55 (72.10); January 70.85 (71.95). Ashmouni: October 61.75 (65.42); December 61.80 (64.85).

The Liverpool cotton futures market ruled quiet. Trading interest was at a low ebb. The majority of operators were inclined to await the September crop forecast in the U.S. Values moved in a narrow range in slow dealings. Hedge selling and liquidation in distant delivery months were absorbed in small trade covering and scattered investment buying. Futures values remained more or less unchanged at last week's level. In Sudan contracts, the pattern of trading was dull. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 21.80; December-January 21.75; March-April 21.95; May 22.25.

American cotton mixed growth contract: October-November 22.10; December-January 22.05; March-April 22.25; May 22.25.

Sudan: September-October, November-December, January-February 29.75.

The U.S. Department of Agriculture, in its September forecast, estimated the current season's (1959-60) cotton crop at 14,678,000 bales of 500 lbs. This estimate is 137,000 bales less than the previous forecast of a month ago of 14,815,000 bales and compares with last season's 15,512,000 bales and the ten-year (1947-57) average of 14,046,000 bales. The yield per acre was estimated at 470 lbs., as against 474 lbs. last August and last season's yield of 466 lbs.

In anticipation of the crop forecast, the New York cotton futures market witnessed a dull pattern of trading. Turnover was limited and price movements narrow. Values tended to look down thanks to the lower mid-August parity price of 37.93 cents per lb., as against the mid-July parity of 38.05 cents per lb. The lower crop forecast, however, imparted some strength to the market which improved slightly towards the close.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	8-9-59	31-8-59	25-8-59
Spot	33.10	33.25	33.15
October	32.41	32.31	32.20
December	32.25	32.23	32.22
March	32.67	32.65	32.65

ART SILK YARNS EASY

(From Our Own Correspondent)

BOMBAY, 9th September

The art silk yarn section of the yarn market presented a distinctly easy trend. The easiness was due to reports that the performance on the art silk fabric export front continued to be none too encouraging as compared with the position obtaining at this time last year. Offtake from consuming centres, as a consequence, was limited. In contrast to art silk yarns, staple fibre yarns ruled firm. Enquiries from Punjab and one or two other consuming centres were quite good. Cotton yarns also continued to be well supported. It was said that stocks of yarn in the City were scarce, thanks to large exports of certain types to Indonesia and Burma in recent weeks. Demand for yarns from handloom weavers and powerlooms, as well as hosiery manufacturers, was encouraging.

Cupressa Bamberg yarn (60x2) October delivery was subjected to heavy selling pressure and climbed down from Rs. 1.689 to Rs. 1.652. Spot Cupressa dropped 3 nP to Rs. 7.47. Among imported art silk yarns, 120 Italy fell by 6 nP to Rs. 4.75. 150 Italy declined by 3 nP to Rs. 4.65. 150 Japan lost 2 nP to Rs. 4.69. 120 Japan was quiet at Rs. 4.75. Among indigenous yarns, National Rayons 120 bright cones first grade receded from Rs. 4.62 to Rs. 4.53. 150 bright cones first grade lost 2 nP to Rs. 4.18.

Staple fibre yarn (40x2) October contract met with good buying support and spurred by Rs. 14 to Rs. 670. Spot City registered a rise of 7 nP to Rs. 3.53. Kohinoors rose by 6 nP to Rs. 3.72. Among imported yarns, 80x2 Paramounts hardened by 15 nP to Rs. 7.84. Fujis improved by 6 nP to Rs. 8.50.

Cotton yarns tended to move up, with the exception of eighty counts which suffered a setback. Ten counts Moderns advanced by 25 nP to Rs. 15. Podars were fully maintained at Rs. 14.50. Twenty counts Moderns strengthened by 25 nP to Rs. 18.25. Forty counts Minaxis put on 6 nP to Rs. 25.62. Moderns were firm at Rs. 26.25. Sixty counts Raghuvanshis and Finlays were fully steady, the former at Rs. 56.50 and the latter at Rs. 63. Eighty counts, however, came in for selling. Finlays fell by a rupee to Rs. 82. Mahendras and City declined by 50 nP each to Rs. 73.50 and Rs. 68.50, respectively. Moderns were dull at Rs. 79.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday as compared with those a week before:

	9-9-59	2-9-59
Art silk yarn—		
60/1 Cupressa Bamberg October (100 Kg.)	1.652	1.689
60/1 Cupressa Bamberg spot (per lb.)	7.47	7.50
120 Japan (per lb.)	4.69	4.75
150 Japan (per lb.)	4.65	4.71
120 Italy (per lb.)	4.75	4.81
150 Italy (per lb.)	4.65	4.68
Staple fibre yarn—		
40x2 October (per case of 200 lbs.)	670.00	650.00
40x2 Kohinoor (per lb.)	3.72	3.66
40x2 City	8.53	8.48
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	15.00	14.75
20s Modern	18.25	18.00
40s Minaxi	25.62	25.50
60s Finlay	63.00	63.00
80s City	68.50	69.00

SEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, 9th September

Buoyant conditions prevailed in the oilseeds market during the week under review. This was induced mainly by the revival of fresh export demand following upward trend in world markets for seeds and oils. In a bid to promote exports, the Government of India has decided to extend further the validity period of the current quotas of groundnut oil up to the end of October 1959, according to an announcement made by the Joint Chief Controller of Exports on Friday last. It may be recalled that on 1st July last, this period was extended up to end of August. The announcement adds that the Government has further decided to grant a third repeat quota of groundnut oil to those established shippers who have completed the shipments against current quotas. Besides, it has been decided to allow exports of 34 tons of groundnut oilcake (expeller variety) by established shippers of groundnut oil for every ton of groundnut oil exported by them till the end of October this year against contracts concluded during August-September 1959. Export of groundnut oilcake (expeller variety) under this scheme will be allowed up to the end of November next. This measure has been generally welcomed.

The groundnut section was particularly cheerful, thanks to revival of overseas enquiries for oil, especially from such countries as the U.K., Poland, Rumania and Burma. The oilcake, too, was keenly sought after. Groundnut February 1960 contract spurred from Rs. 163.75 last week-end to Rs. 168.37 today. Bold ready rallied by Rs. 2.25 to Rs. 39. Oil ex-mill closed higher at Rs. 20.50, as compared with Rs. 19.62 last Wednesday.

Distinctly firm conditions prevailed in the castorseed section as well. Fresh buying enquiry for castor oil was the main feature in this section. Castorseed September 1959, which closed last week at Rs. 147.75, gradually moved up to Rs. 150.62 to day. May 1960 contract rose from Rs. 151.50 to Rs. 153.37. Ready Madras gained a rupee to Rs. 30.37. Oil B.S.S. was higher by 75 nP at Rs. 16.75.

The improved export prospects for linseed oil led to fresh enthusiasm in the linseed section. The disparity in Indian and foreign prices for linseed oil is getting reduced. Good business is reported to have been transacted with the U.K. and Continental countries. Poland bought sizable quantities of oilcakes. Traders are fully optimistic about Australian tenders. Linseed September 1959, which wound up last week at Rs. 31.62, was pushed upwards subsequently to close higher at Rs. 32.62. May 1960 contract improved by Rs. 1.25 to Rs. 33.50. Linseed oil rose by Rs. 1.72 to Rs. 16.87.

Cottonseed too, firmed on good speculative support. The firmness in the cotton market helped the sentiment. Cottonseed rose from Rs. 135.75 to Rs. 138 and the February 1960 contract from Rs. 114 to Rs. 117 over the week.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	9-9-1959	2-9-1959	25-8-1959
Groundnut			
February 1960	168.37	163.75	165.75
Bold ready	39.00	38.75	37.50
Coromandel ready	39.25	37.87	38.50
Rhandesh quality	39.25	37.62	38.50
Oil ex-mill ready*	20.50	19.62	19.87
Railway receipts*	20.12	19.31	19.58
Castorseed			
September 1959	150.62	147.75	150.87
May 1960	153.37	151.50	153.12
Ready Madras	30.37	29.37	30.12
Ready Kanpur	29.37	28.87	28.84
Oil B.S.S.	16.75	16.00	16.25
Oil commercial	15.81	15.12	15.25
Linseed			
September 1959	32.62	31.62	32.50
May 1960	33.50	32.25	32.82
Bold ready	39.25	37.87	38.50
Oil ready	16.87	16.50	16.06
Cotton seed			
September 1959	138.00	135.75	137.00
February 1960	117.00	114.00	114.50
Niger seed	30.50	30.50	31.25
Kandi seed	22.50	22.50	22.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ A.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 60 lbs., except in the case of cotton seed, for which it is 764 lbs. Spot quotations of seeds are for per cwt. and those for oil per quart.

SUGAR STOCKS LOW

(From Our Own Correspondents)

BOMBAY, 9th September

Arrivals of sugar into the City by rail and road during the week continued to be small, being about 10,000 bags, as against 7,000 bags in the previous week and 14,700 bags in the week preceding it. Consequently, the position in respect of sugar stocks was tight. Nevertheless, supplies were freely available in practically all retail centres at the officially fixed prices. The following are the whole-sale ex-godown rates (per bag) for the four representative grades of sugar:

A grade: Rs. 115.21; B grade: Rs. 114.08; C grade: Rs. 112.02; D grade Rs. 111.

The Government of Bombay has urged the management of joint-stock sugar factories and the concerned trade to maintain the normal trade channels and trade pattern, is also to assure normal supplies at the agreed price to all areas, especially to areas which are far away from the factories. In a Press note issued, the Government points to the many complaints that the normal trade pattern has not been maintained and that the agents of the factories or their bulk purchasers are appropriating a large portion of the margin between the agreed ex-factory price and the wholesale price.

Stating that this is contrary to the informal agreement with the factories and the trade, the Government warns: "Government is keeping a watch and would not hesitate to take over a part or whole of this quota also for canalising through Government or Collector's nominees, if the normal arrangement is seriously disturbed and the distribution is jeopardised." As regards co-operative sugar, the Press note says: "It is being allotted to districts and the Collectors arrange for lifting it through co-operative agencies and for distributing it through co-operative retailers and fair price shops, as far as possible. It appears that this arrangement has given an impression that the Government has less confidence in co-operative sugar factories than in private sugar factories and, therefore, is giving directions to the co-operative factories alone regarding the delivery of sugar to specific areas and specific wholesalers. There is absolutely no basis for this misunderstanding. The arrangement of canalising co-operative sugar through co-operative wholesalers and co-operative retailers and fair price shops has, on the other hand, led to assured supply of at least some quantity of sugar to the consumers. Government and the public have appreciated the attitude of the co-operative sugar factories and their Sangh in this regard."

HAPUR, 7th September

Sugar continued to rule steady, due to shortage of supplies and shrinkage of open market in sugar following the enforcement of total ban on despatches by factories in Northern India. The Government of India announced the release of 175,000 tons of sugar for sale, but there would be no free sale releases from factories in the Punjab, North Bihar and the U.P. Demand was fairly dwindling in the market and stocks were fast. That the problem of shortage of sugar was likely to grow more acute in the coming months preceding the commencement of the new season. Arrangements to supply sugar through ration cards were still incomplete. The latest prevailing prices here were:—Rs. 123 to Rs. 125 per bag, in retail Re. 1.19 per seer, as against the controlled price of 97 nP.

Sugar in Muzaffarnagar also ruled steady as stocks with the trade were meagre. The latest prevailing prices were:—spot delivery small grain Rs. 123 per bag; bold crystal Rs. 124; retail controlled 98 nP per seer; open market Re. 1.12 per seer.

Sugar at Kanpur remained steady during the week, due to scanty arrivals. Spot was around Rs. 125 per bag.

Khandasari ruled quietly steady. The festival season demand for boora was brisk. The prevailing prices were:—Khandasari Re. 35 to Rs. 41; superior Rs. 41 to Rs. 42.50; boora Rs. 40 to Rs. 42.50 a maund.

Ready gur was quietly steady. The stocks left were meagre and there were still about two months for the new production to start. Demand from consuming areas was mostly met from the South where new production had started. Local prices were:—gur panpara dry best Rs. 21.50; dry-wet Rs. 21; kotha mixed dry-wet Rs. 20.25; kotha wet Rs. 19.25 a maund.

Gur improved slightly in the Muzaffarnagar market where stock position had become weak. Demand was fair and prevailing prices were:—Chaku dry Rs. 25; kotha wet Rs. 21; kotha mixed dry-wet Rs. 23; shakker dry Rs. 21 to Rs. 23; Khandasari Rs. 35 to Rs. 42.25 a maund.

Gur futures recorded sharp gains on support influenced by paucity of rains for the cane crop in this area. Fugun delivery opened at Rs. 13.78 on Monday last and, after touching the lowest of the week on the same day, namely, Rs. 13.68, spurred later to Rs. 14.12 on Saturday. It was quoted at Rs. 14.05 today.

TEAS WELL SUPPORTED

[Messrs Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 4th September

About 1.125 million lbs. of tea were offered in sale No. 33 held on 1st September 1959. The quality of high-grown teas offered was well maintained, while medium and low mediums showed a slight decline in quality and there were a number of plain liquoring teas under this category. The sale opened to a good general demand from both exporters and internal buyers. There was keen competition from internal buyers for plainer descriptions which sold at 5 to 10 nP above brokers' valuation. Mediums were only in fair enquiry at easier rates. However, teas with improved quality, particularly high-grown, were well supported and these were quoted dearer. Clean black leaf grades continued in demand and were firm to dealer. Whole leaf grades met with better enquiry than of late and were steady. There was a useful support for a small selection of tippy teas. The quotations were:

	1959	1958
	Rs.	Rs.

Dust Sale 'W'—Just over 525,000 lbs. were offered in sale 'W' held on the 3rd inst. There was strong general demand. Prices were fully firm to dealer for all descriptions, with the exception of good liquoring high-grown which were easier following quality. Clean black types met with strong support at dealer rates. There was a strong enquiry for a few lines of C.T.C. dusts which were the strongest feature of the sale.

London Market: Sale of 31st August 1959.—Good teas dearer, following quality. Others steady.

Sale of 1st September 1959: Strong to dearer, particularly B.O.P. fannings. Others irregular.

Colombo Market: Sale of 31st August 1959.—Strong demand. Dimbula Dickoya quality generally declined. Best available steady. Others appreciably lower. U.V.A. quality improved. Active demand irregularly dearer. Following quality, useful liquoring colour mediums active, substantially dearer. Low-grown firm. Sale of 1st September 1959: Improved U.V.A.s very strong. Demand generally dearer. Other sorts irregular, inclined lower.

Calcutta Market: Export.—Sale 12:—62,000 chests. Demand continued strong and general for plain B.P. and fannings. Orthodox Assam B.O.P.s slightly easier. C.T.C. again easier.

Export Quota.—At present, there are sellers at 2½ nP, with probable buyers at this price. A fair amount of business has gone through at 2½ nP during this week.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 34 was held on the 8th inst. Offerings aggregated 900,000 lbs. Good general demand. Best liquoring irregularly 30 to 40 nP dearer. All black leaf and whole leaf very strong and dearer. Others, particularly fannings, fully firm to dealer."

BETTER DEMAND FOR JUTE

(From Our Own Correspondent)

CALCUTTA, 8th September

Although demand for jute during yesterday's export sales improved, prices eased. Such a trend was in sharp contrast to the stronger conditions in evidence in yesterday's sale in Mincing Lane, London, where Doars and Assams recorded substantial addition to prices. The internal sale could not be held here last week on account of the civil disturbances. During the week, in an otherwise dull freight market, a good portion of the shipping space available was taken up by tea.

Note was taken of the dearer trend for African teas at the London auctions held last week. North Indians were only firm, but second flush quality was higher. Trade circles wondered how, with increased competition from other producing countries, especially from African producers, India would be able to maintain its markets. Already, cost of production was increasing, and the Government of West Bengal recently raised the minimum wage for tea plantation workers in the Terai and Doars by As. 2. It was expected that the wages of workers in Darjeeling district would undergo a similar revision. Meanwhile, the West Bengal entry tax on tea has not been withdrawn. The suspension of a similar tax in Assam, it was feared, would not bring in much relief to most gardens in Assam.

During yesterday's export sale, offerings aggregated 65,590 chests. Initially, there was good demand which, however, petered out as the sale progressed. Orthodox B.O.P.s and O.F.s eased by 20 nP while keen competition was offered to clean fannings recording a dearer tendency on occasions. A small increase in prices was recorded in B.P.s and fannings of a medium type, C.T.C. B.P.s lost 20 to 30 nP, and non-with Doars by 4 to 6 nP. In whole leaf grades, the best varieties were firm but others lost 20 nP. Darjeelings eased, but tippy teas were about firm on good support. The quotations exclusive of excise duty were: Best Assam C.T.C. fannings Rs. 2.80 to 3.20; clean black pekoe Rs. 1.90 to 1.94; plain B.P. Re. 1.82 to 1.88; plain fannings Rs. 1.98 to Rs. 2.08; medium B.P. Re. 1.98 to Rs. 2.08; medium fannings Rs. 2.10 to 2.24; best Assam C.T.C. B.P. Rs. 2.40 to 2.50.

In the sale held at Chittagong on the 2nd inst., well-made orange fannings were popular with buyers and rose by As. 3 to As. 4. The offerings amounted to 9,581 chests. Generally, the demand was fair. Less-cut fannings and B.O.P.s and P.F.s eased, but leaf teas and broken pekoes commanded prices above valuations.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 7th September

Quietly easy conditions prevailed in the foodgrains market during the week. Owing to timely rains in west U.P., kharif crop prospects were reported to be excellent. Contrary to trade expectations, no change in the basic policies in food was decided by the National Development Council. Effective steps, however, would be taken to hold the price level. An early decision was expected to be taken regarding procurement prices for next crop and arrangements concerning food distribution and procurement would be maintained on a continuing basis. The policy for State trading would continue.

Wheat at Hapur registered a fall of about 50 nP to 75 nP per maund during the week, in line with the easy trend in coarse grains. The prevailing prices on Monday were:—wheat dars quality Rs. 17.28 and farm quality Rs. 18.40 a maund. The daily arrivals of wheat in the open market were scarce, but wheat was reported to be reaching in larger quantities on private account, as producers withholding the stocks were now anxious to part with their stocks on expectations of bumper kharif crop in west U.P. The State Government continued its wheat levy scheme at the controlled price of Rs. 13 to Rs. 15 a maund, but purchases on this account were nominal. It was hoped that, with the next harvest in the market, conditions still with producers would come to the market.

Rice recorded a fall of about Rs. 1 per maund the week, thanks to better supply position. The prevailing prices were:—wheat basmati Rs. 32 to Rs. 34; basmati Rs. 24.50; malabar Rs. 24; 50 nP a maund.

Gram continued to be depressed during the major part of the week on easy Punjab and Madras advices and poor demand in west. The face of comfortable stocks. Arrivals continued from the Punjab and local stock was heavy at about 65,000 maunds. New maize arrivals were gradually increasing and prices drifted lower. The week-end, however, marked a steady trend in coarse grains, with better demand at lower levels. Barley and bejhar also, after an early fall, registered modest gains towards the week-end. Jowar and guwar were listless and week-end prices (in rupees per maund) were:—gram 11.62 to 11.81; barley 11.87; bejhar 10.87 to 11.25; new maize 11.87 to 12.12; jowar 13 to 14; guwar 11 to 14; bajra 13.

Better demand at lower prices and steady advices from Madras accounted for modest gains in peas prices towards the week-end. Arhar stayed quiet. Arrivals of peas were small, at an average of 50 to 100 maunds daily, while those of arhar were almost nil. Other pulses were mostly unchanged during the week. The prevailing prices on Monday (in rupees per maund) were:—peas dars 10.25 to 10.37; peas dal 11.25; peas white farm 10.87; arhar 14.50 to 14.75; arhar dal 18.50 to 20; urd 16 to 19; moong 16.50 to 19; masoor 13.75 to 16.

JUTES DEPRESSED

(From Our Own Correspondent)

CALCUTTA, 8th September

With widespread civil disturbances in the City and its suburbs and with work in offices and factories affected on account of the depleted transport facilities, conditions in the jute and jute goods market during the week under review were depressed. Heavy goods receded, while hessians were maintained. It would be remembered that, in the recent rise in prices, hessian constructions had not participated. The highlights of the week were a Government order for 14,000 bales of B. twills, moderate inquiries from Burma and Indonesia for heavy goods for shipment between now and November, fair business with Australia in sacking (ready and near delivery positions), and issue of import licences for 50,000 bales of Pakistani cuttings.

It looks as though India would import a larger quantity of cuttings from Pakistan this year than last year. According to Dacca reports, in the month of July, cuttings exported aggregated 70,000 bales, as against only 22,000 bales in July 1958. This phenomenal improvement was attributed to the removal of the minimum export price on cuttings. Although exports of raw jute had not made a good beginning in Pakistan, there were hopes that exports in the current season would reach last year's level of 4.5 million bales. However, trade opinion, here was not prepared to share this view. For it was stated here that, with a higher crop this year, India would naturally aim at exporting a fair portion of the crop or that portion which was not needed by the mill industry. If the mills here consumed more cuttings imported from Pakistan this year, naturally consumption of indigenous jute would be affected. Even taking into consideration the increased fibre needs of the mills following the recent unsealing of looms, trade circles thought that India would increase exports. In the season ended June, the export ban was in force in the earlier part of the year, while, this year, efforts at exports throughout the year would be reflected in the total exports. The recent purchases of the fibre by China were stated to be at the cost of the Pakistani fibre. Against this background, it was felt here that Pakistan should offer stiffer competition in world markets, if it were to maintain its markets.

This week's fall in heavy goods did not come as a surprise. For the rise had been as abrupt as the fall. The fall should be considered welcome as foreign buyers felt that the increased demand was being exploited to push up prices. Also, considering the stability of fibre prices and the prospects of a higher crop surpassing the bumper crop of last year, heavy goods should not have moved up so much. It would be noted that there had been no heavy purchases on foreign account after the recent Chinese orders. So, there was every justification for the impression that foreign buyers were postponing entering into commitments in view of the abnormal rise in prices. There was the realisation that, if the increased demand for heavy goods should be maintained, prices should be more reasonable than at present. Considering this, this week's recession has been a development in the right direction. It should be remembered that Pakistan is gradually expanding its mills capacity.

On Tuesday last, there was very little activity in the futures market, causing prices in the read market to move within narrow limits. At closing time, hessian 40" 10 oz. was fractionally higher at Rs. 40.50, as were B. twills at Rs. 105.65. Business passing was extremely limited, but on Wednesday there was a small improvement in activity in the futures market. Prices of ready goods also improved, with B. twills at Rs. 106 and hessian 40" 10 oz. at Rs. 40.80. At this stage, foreign buyers showed interest, and scattered business was put through. However, the quantity involved was too small to attract market attention and the declining trend in prices of heavy goods when the market reopened on Friday after the "enforced" holiday on Thursday, B. twills declined to Rs. 105.30, while hessian 40" 10 oz. was unchanged at Rs. 40.80. Over the week-end, the depression took deeper roots and, apart from Government order for 14,000 bales of B. twills, delivery in this month and in November, the market was featureless. The futures market was under bearish influence, which affected sentiment in ready goods. Thus, B. twills sagged Rs. 104.60. For a time, hessian resisted the downward trend, but, towards the close, gave way fractionally to Rs. 40.65. Easier conditions were in evidence also yesterday, as foreign buyers were disinclined to enter into fresh commitments. B. twills Rs. 102.50 touched the lowest level of the week and hessian 40" 10 oz. fell to Rs. 40.10 in sympathy.

Raw jute prices gave way fractionally. Mi showed only limited interest and that in low grades of the fibre only. Earlier in the week, licences were issued for the import of 50,000 bales of cuttings from Pakistan, and it was believed that this year's import from that country would be higher. This report caused some anxiety to stockists. However, it was felt that this development would not affect prices here in view of a port demand for the Indian fibre. New dars bottoms was unchanged at Rs. 24.25, while Assam bottoms declined to Rs. 22.75 from Rs. 23.25 a northern bottoms to Rs. 22.50 from Rs. 22.75. The latest quotations for the new crop are as follow:

	Middle	Bottoms	Delivery

MARKET GOSSIP

(Concluded from page 415)

tinuous fall in the previous two months, moved irregularly in the succeeding two months, but again rose steadily to touch 115.7 by the end of June, as against 110.7 early in January. Food articles and industrial raw materials showed the largest percentage increase, while, in manufactures, the rise was not marked. Thus, while the price index for food articles rose from 113.3 in December 1958 to 118.6 in June 1959 and from 112.5 to 120.1 for industrial raw materials, that for manufactures rose by less than a point from 108.3 to 109.1. It is noteworthy that the rise in the index of food articles was accounted for by the rise in items other than cereals and pulses. The index for the latter, on the other hand, declined during the period.

Nevertheless, it is true that the higher food-grains production in 1958-59 has not been fully reflected in prices. According to the latest annual report of the Reserve Bank of India, this phenomenon suggests—that this is also borne out by ad hoc inquiries—that the inflow of supplies to the market has been affected to some extent by the announcement of the introduction of State trading in foodgrains. Bank finance, according to it, has hardly played any role in the matter, the increased stocking of rice and wheat being either privately financed or self-financed, that is, reflecting the increased holding power of farmers. A part of the increase in output may also have gone to replenish the depleted stocks of foodgrains, owing to the poor harvest of the previous year.

The price trend of the principal agricultural commodities taken individually fits into the general pattern. Thus, the index of raw cotton prices rose from 99 in the last month of 1958 to 105 in June, and that of groundnut spurted from 105 to 135, of jute from 110 to 115 and of gur from 121 to 165 and tea from 160 to 179 during the same period. The index of sugar prices was, however, unchanged throughout the six-month period at 121. As regards foodgrains, while the index for rice rose from 98 in December 1958 to 102 in June, that for wheat declined from 114 to 93, after going up to 125 in January 1959.

The trend of the all-India working class consumer price index number generally followed the movement of the wholesale price index. Thus, from 119 in December 1958, the all-India consumer price index number (1949=100) rose to 121 in June and further to 123 in July, representing a rise of four points. In certain centres, however, the rise has been even more marked. Thus, in Bombay, the index (base: 1934=100) rose from 396 in January to 413 in June and 418 in July, a rise of 22 points, that is, by 5.5 per cent. As a result of the rise in index, the cotton mill industry, which sets the pattern for all the other industries in the City, will be required to pay a total dearness allowance of Rs. 180 crore for August 1959 which is Rs. 13 lakhs more than the amount paid in January last.

Since the beginning of July, prices of the principal commodities have shown a tendency to decline, thanks to better crop prospects. The record foodgrains production in the season just ended would appear to be gradually making its effect felt on prices, although the reluctance of farmers to part with stocks has prevented prices from falling to the extent warranted by the marked increase in supplies. Oilseeds prices have receded during the past two months, owing to encouraging news from the growing regions. For instance, new crop groundnut February 1959 contract, which was quoted around Rs. 170 early in July, has come down to Rs. 164.00. Castorseed May 1960 has eased from Rs. 156 to Rs. 151.87. The decline in prices is said to have considerably improved the export prospects for seeds, especially because the trend overseas is the exact opposite. Supplies in most of the producing countries are reported to have been considerably reduced on account of the smaller crop. The price parity has, therefore, moved a little in favour of India.

Cotton has been an exception to the general trend. The tight supply position, with little prospect of it being relieved this season, is exerting an upward pressure on prices. Reports of adverse weather and damage to crop have imparted considerable strength to cotton market. Sustained mill and investment buying has resulted in a spurt in raw cotton prices of late, with the Jarilla March 1959 contract flaring up to Rs. 703 yesterday and further to Rs. 705 today, as compared with Rs. 687.00 a week ago and Rs. 668.75 a month ago. This trend is expected to persist, unless, of course, the crop situation improves owing to better weather in the coming months. Chances of a reversal of the upward trend are, however, remote, because the offake of cloth and yarn has perceptibly improved and the order books of several mills are getting filled up.

LATEST REVIEW OF SECOND PLAN

(Concluded from page 423)

Planning Commission for the National Development Council's meeting held in November 1958, it was felt that the aggregate outlay over the second Plan period could be only Rs. 4,220 crores. The Council, however, decided that efforts should be made to work up to an outlay of Rs. 4,500 crores. In order to achieve this target, it decided upon several measures. Deficit financing on any significant scale could be contemplated only if food production increased substantially and food prices were maintained at stable levels. Therefore, it was decided that co-operatives should be organised on the basis of the village as the primary unit for increasing agricultural production, mobilising local manpower and other resources and generally for rebuilding the rural economy. The State should also take over wholesale trade in foodgrains. For achieving economy in construction costs, fewer buildings should be constructed than originally contemplated, and such buildings as have to be constructed should be at a cheaper basis.

question of saving steel was of special importance, the purposes for which steel may be used should be specified. The question of introducing schemes of compulsory savings was also to be examined carefully.

During December 1958 and January 1959, the Planning Commission held a series of discussions with the State Governments for deciding the allocations for 1959-60, keeping in view the decision that efforts should be made to ensure that the total outlay for the second Plan period did not fall below Rs. 4,500 crores. The discussions indicated that the resources available to the State Governments in 1959-60 aggregated Rs. 237.3 crores, as compared with the earlier estimate of Rs. 198.1 crores. Taking into account the Central assistance, the aggregate size of the State Plan for 1959-60 was fixed at Rs. 472 crores. At the Centre (including Union Territories), the 1959-60 Budget provides for a Plan outlay of Rs. 620 crores. Thus, the aggregate Plan outlay for the Centre and the States for 1959-60 works out to Rs. 1,092 crores.

The broad assessment made by the Planning Commission shows that the actual outlay likely to be incurred during the first four years of the Plan would be about Rs. 3,550 crores. The expectation now is that the outlay in the five years will reach, if not exceed somewhat, the total of Rs. 4,500 crores envisaged by the National Development Council.

The document gives a list of important projects included in the second Plan under industry, transport, irrigation and power on which expenditure during the first four years is likely to be comparatively small or nil. Broadly, these are the projects which are likely to be affected on account of the detailed vigilance to which the Plan has been subjected, although, in the case of some of these projects which have not yet begun, some work might be taken in hand during the last year of the Plan.

PICTURE OF INDIAN ECONOMY

(Concluded from page 428)

was lowest among illiterates (one in 50 in general population and one in 13 in the labour force). The figures jumped to one in 12 (of the total population) and one in five (of the labour force) in the case of non-matriculutes. It is, however, among the matriculates that unemployment has been highest (one out of four). Among the intermediates one out of five was unemployed, and the incidence was also high (one out of seven) in respect of persons having higher educational qualifications.

Sombre Situation

The three surveys between them have presented a sombre picture bearing on important characteristics of the working population, leaving to the social reformer, the politician, the administrator and the industrialist the problem of finding solutions. The participants in the great debate now taking place over the formulation of the targets to be achieved during the third Five-year Plan period have all accepted the overwhelming need for State policies to promote employment opportunities. However, opinions begin to differ as to the means of the generally accepted goal being reached quickly.

The enthusiast for State enterprise sees quicker progress in large-scale expansion of the State's role as a promoter of industries, especially the heavy ones. The industrialist and the entrepreneur who rightly claim credit for sponsoring and developing some of India's major industries visualise greater potentialities in the unfettered growth of industries in the corporate sector. The orthodox politician brought up in the Gandhian school of economics swears by the process of developing a decentralised economy which would permit healthy functioning of self-sufficient communities in rural and semi-urban areas, which account for the bulk of the population. All are sincere in their approaches, and each has a large measure of merit.

Nevertheless, the economic and human problems associated with large-scale underemployment and chronic unemployment have defied solutions and, planning notwithstanding, these tend to go out of control primarily because of the explosive rise in the population. It is true that time also is getting short because of the expectations engendered in the minds of the vast mass of underprivileged population. But is time factor so desperate as to force one to overlook the advantages in consolidating every forward step taken? Are there not sufficient built-in safeguards in the traditional household (both urban and rural) to absorb the uncertainties and restlessness pending the economy working up to the stage of take-off?

The basic answer to all these forebodings would appear to be that there can be no short-cut solutions to problems inherent in traditional societies attempting to reach economic prosperity. In other words, there can be no substitutes for co-ordinated sustained hard work, and wisdom lies in State policies being attuned to promote such effort.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 10th September, 1959.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."

William Blake.

VOL. XCIX. No. 2530

BOMBAY, 19th SEPTEMBER 1959

PRICE: Rs. 2

AN UNWISE MOVE BY U.P.

THE latest report from Lucknow about sugar industry is ominous. The Chief Minister of Uttar Pradesh, Dr. Sampurnanand, has told the State Planning Board that the State Government would shortly appoint a sub-committee of the Board to consider a proposal for nationalisation of sugar mills in the State during the third Plan period. The sub-committee, it is stated, would consist of experts, industrialists, representatives of sugarcane growers and others interested in the industry. One of the members of the sub-committee has already been chosen; he is Mr. Genda Singh, a Praja Socialist leader, who organised the abortive cane growers' strike in February this year in an attempt to get the price of sugarcane raised. Mr. Singh has done everything possible to encourage inefficiency among cane-growers and made a significant contribution to the fall in sugar production in Uttar Pradesh. He has been agitating for nationalisation of sugar for long and has renewed the suggestion before the State Planning Board.

The rationale of Dr. Sampurnanand's decision is not clear. We never thought that, of all the Congress leaders, he would either advocate nationalisation or entertain a suggestion for nationalising a consumer industry like white sugar, for we do not remember to have come across any occasion when he voiced any such left ideas. Even now, he seems to be alive to the implications of bringing this industry under State ownership, because he is said to have pointed out that the issue involved inter-State and all-India considerations, as there were sugar mills outside U.P. Nationalisation of sugar industry will undoubtedly be harmful to the industry and interests of the country, in general, and U.P., in particular. Surely, Dr. Sampurnanand, with all his rich experience of administration and appreciation of the value of free enterprise, must be aware of this. He should have, therefore, straightaway rejected Mr. Genda Singh's suggestion, instead of deciding to refer it to a sub-committee. This decision implies that he sees some merit in the suggestion for nationalisation, whereas there is none in it. By entertaining the proposal for study, he is needlessly causing misunderstandings and a sense of uncertainty among industrialists and the investing public. If it is not the intention of the U.P. Government to nationalise sugar industry, the appointment of a sub-committee will be a waste of time, taxpayers' money and administrators' talent, all of which can be usefully employed for productive purposes.

The countenance given by the U.P. Chief Minister to the proposal for nationalisation of sugar industry may be the result of the Congress Party's decision to prepare the third Plan in consultation with all the parties. This approach itself is unsound, if it is to be seriously taken, for it amounts to being a case of too many cooks spoiling the broth.

Suffice it to say that, of all the States, U.P. is the least eligible to embark on such a costly venture. It has miserably failed to secure a rise in the efficiency of its sugarcane growers, despite the strong sugarcane producers' co-operatives. The average yield of sugarcane even in the development zones in U.P. is only 15.92 tons per acre, as against 43.30 tons in Bombay, 30.00 tons in Mysore, 32.49 tons in Andhra and 39.44 tons in Madras. We have no doubt that the other sugar-producing States, which now account for about 55 per cent. of India's total sugar production, will not prefer to follow the lead taken by the U.P. Government.

It is to be feared that the people of Uttar Pradesh will suffer more by this latest unwise move of their Government than the people in the rest of India. It is not our intention to exaggerate the consequences, but facts must be squarely faced. First, it was only about a month ago that the Government of India decided that the sugar industry must consider plans for expansion even before the finalisation of the third Plan and that the question of licensing extension of existing factories and establishment of new factories should be given high priority. By lifting the sword of Damocles, the U.P. Government has thrown a spanner in the works. Unless this mischief is quickly undone by the Central Government, progress in achieving its objective will be retarded. This will be much more so in Uttar Pradesh. Secondly, the sugar mills in U.P. are in more urgent need of modernisation than the mills in other States. Dr. Sampurnanand, by his latest action, is discouraging them from investing money for this purpose. Thirdly, his failure to protect the interests of private enterprise in sugar industry will check investments in other industries also in his State. At least two new giant projects are scheduled to be established in Uttar Pradesh. These are aluminium and synthetic rubber industries, each requiring about Rs. 12 crores. With great difficulty and after much persuasion, the promoters of these industries have secured the co-operation of U.S. private capital and one of them is due to approach the investors in this country in a few days. It was very unwise on the part of Dr. Sampurnanand to have announced to the public at this juncture that his Government had decided to appoint a sub-committee to consider the issue of nationalisation of sugar industry. Such an unprovoked attack on sugar industry is not calculated to inspire confidence in both foreign and domestic investors. If the prospects of industrialisation of Uttar Pradesh are not to be marred, he should immediately withdraw his proposal.

INDIA'S FOREIGN TRADE

IN the last three years, nothing has attracted so much public attention as India's foreign trade deficit. Till recently, "foreign exchange crisis" was on everyone's lips. The position has no doubt eased in the last few months. But India is not yet out of its foreign trade woods. This should not, however, be a matter for surprise, though it is one for concern. There is a tide in the affairs of a nation's foreign trade to be followed by an ebb; each may extend over a year or a period of time. Not even the highly industrialised countries, with all their built-in stabilisers, have been able to avoid altogether serious fluctuations in their exchange reserves. It is scarcely to be wondered at that India is unable to escape a similar fate, considering it has an export trade confined to a few staple commodities which are peculiarly subject to changes in prices and demand, and an import trade dominated by costly items of plant and machinery which it needs for its economic development programmes. Indeed, one should be surprised that its difficulties are not greater than what they have been. The credit for arresting further deterioration in the country's foreign exchange position must go to the Government for its courage in imposing politically unpopular austerity standards for imports and to the many friendly foreign countries which have made available to India generous assistance in cash as well as in kind.

The review of recent trends in India's foreign trade, which formed part of the speech of the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, shows that, although the position has improved, there can be no justification for complacency. During the first half of the current year, exports improved by Rs. 4 crores to Rs. 266 crores, as compared with the corresponding period of 1958. But imports were also higher at Rs. 446 crores, as compared with Rs. 390 crores in the first half of last year. Thus, the deficit during the January-June 1959 period worked out to Rs. 180

crores, as against Rs. 128 crores in the first half of 1958. If figures for July 1959 were added, the total exports in the first seven months of the current year would be Rs. 317 crores, as against Rs. 305 crores. Thus, there is some improvement in export trade. But, as Mr. Shastri himself stressed, "since the first half of 1958 was itself a very bad period from the point of view of export performance, the fact that we have bettered it leaves no room for complacency."

The break-up of the foreign exchange gap during the first five months of 1959, for which such data are available, shows that India's deficit with the sterling area was of the order of Rs. 1½ crore. The position here seems to be better than in the recent past, for, in 1958, the deficit with the sterling area was of the order of Rs. 44 crores. India, however, had a surplus of Rs. 1½ crore in its trade with East European countries. It may, however, be wrong to set much store by this surplus—welcome as it is—in view of the fact that many countries have found that trade with countries with centrally planned economies always carries an element of uncertainty. Mr. Shastri said that the Government was conscious of the fact that "the bulk of our trade is still with the countries of the West, especially the U.S. and the U.K. who have been our chief trading partners all these years." He added: "We shall, therefore, continue to stress to the utmost to maintain and to increase our trade with them." There is certainly both need and scope for expanding the trade with W. Europe, the U.K. and the U.S.

It is somewhat disconcerting to note that India's trade with the U.S., contrary to the favourable experience of several other countries in their trade with that country, was adverse to India to the tune of Rs. 30 crores in the first five months of 1959, as against Rs. 65 crores for the dollar area as a whole in 1958. Although the position is thus bad enough, its impact on the overall balance of payments position has been softened by the large credits India has received from the U.S. But by far the worst aspect of India's trade deficit is the fact that its exports to the O.E.E.C. countries aggregated only Rs. 22 crores in the first five-month period of 1959, as against an import of Rs. 93 crores from these countries; the trade deficit was thus of the order of Rs. 71 crores. Surely, this is a development which calls for special investigation. Mr. Shastri, on his part, attributed it to the heavy import duties and certain discriminatory import restrictions which the West European countries have imposed on imports of goods. He promised to send a deputation to W. Europe which would examine the possibilities of expanding India's trade with these countries.

To turn now to the commodity-wise breakdown of India's export trade. Such an analysis reveals a somewhat disturbing trend. It shows that India is losing ground in its traditional exports. Clearly, in our anxiety to diversify the pattern of our trade, we should not lose sight of the traditional items of our export trade which, for a long time to come, will form the bulk of our exports. During the first half of 1959, India's exports of the four staple items of export trade—tea, cotton piecegoods, jute goods and manganese ore—aggregated only Rs. 109 crores, as against Rs. 121 crores in the first half of 1958 and Rs. 150 crores in the first half of 1957. In contrast to this trend, there has been a steady expansion in the export of engineering and other goods from Rs. 130 crores in January-June 1958 to Rs. 157 crores. This is a most gratifying feature. India has been able to find a steadily growing market for a wide range of goods in which it commenced production only recently. These goods include sewing machines, steel furniture, electric fans, confectionery, plastics and art silk fabrics. It is particularly encouraging to note that India has been able to export these consumer durables even to such highly industrialised countries as the U.S. and the U.K.

Several notable suggestions for increasing export trade were put forward by those who participated in the meeting of the Export Promotion Advisory Council. These suggestions included additional incentives for the exports of tea and cotton piecegoods, fiscal relief for exporters and inclusion of additional industries, such as soap and plywood, under the scheme for the entitlement of import licences for raw materials on an annual basis. Mr. Shastri revealed that the question of affording common tea some tax relief was already under active consideration. As regards cotton textiles, he felt that total exports might reach 750 million

yards this year, as against 617 million yards last year. He also suggested that special efforts should be made to export fine and superfine goods which at present constitute only 4 per cent. of total exports. Since these goods are largely manufactured out of imported cotton, the Government should not delay the issue of adequate quotas for cotton imports. In view, however, of the keen competition in overseas markets for these goods from several textile producing countries, it is necessary to bear in mind that, in the absence of appropriate fiscal and other incentives, India will find it extremely difficult to step up its exports of fine and superfine goods. Confidence in the jute industry is reviving. This is evident from the fact that the Indian Jute Mills Association has unsealed more looms. So far as vegetable oil-seeds and oils are concerned, the chief difficulty in increasing their exports is that, generally speaking, their prices are relatively high. Further, since edible oils are the only source of fat for the bulk of India's population, the Government is understandably anxious to ensure that excessive exports are not permitted. The situation can be remedied only through an increase in the production of oilseeds, for which there is wide scope in the context of their low per-acre yield in this country.

Besides certain fiscal concessions, the Government's export promotion measures include special import facilities for exporting industries and reorganisation of Export Promotion Councils. Mr. Shastri revealed that the Export Promotion Directorate was being strengthened; three more sections were being added to it. The commercial section of the Embassies was also being strengthened. The Union Minister urged the Federation of Indian Chambers of Commerce and Industry to establish some offices of its own, at least two or three offices in East Africa and the Arabic-speaking world. It is to be hoped that this suggestion will commend itself to the Federation. Another suggestion he made was that export houses should be formed by exporters. An export house is being organised by the All-India Exporters Chamber. Perhaps, experience in the working of this house will pave the way for extension of the system.

So far as India's import trade is concerned, Mr. Shastri's analysis of the problem, which he presented at the meeting of the Import Advisory Council, shows that the scope for further reduction in imports is strictly limited. During the first six months of 1959, capital goods formed 16 per cent. of total imports, industrial raw materials 60 per cent., foodgrains 15 per cent. and consumer goods (other than foodgrains) 9 per cent. Any scope for reduction in imports must be sought only through increasing the production of food, cotton and oilseeds. The alternative is a reduction in the imports of capital and industrial goods, but this will mean a slower rate of industrial progress. This does not mean that there is no need to keep imports under scrutiny. Surely, it should be possible to stimulate production of some varieties of capital and industrial goods within the country. But this is a development which will take sometime to achieve and has to be preceded by a certain amount of foreign exchange expenditure.

It is gratifying to note that the aid from friendly countries has made it possible to achieve some improvement in imports of capital goods. But the situation, as Mr. Shastri pointed out, is not without its limitations. In the first place, priority is being given only to industries which can import capital goods and save foreign exchange through increased exports or elimination of the need for imports. Secondly, there are some restrictions over the areas in which the foreign exchange can be spent. Thirdly, the Government is "not anxious today to encourage the import of capital goods on conventional deferred payment terms, as there is a fairly heavy load of repayments which we have to make throughout the third Five-year Plan period." These limitations, irksome as they are, are the logical outcome of the situation in which the import requirements have been outweighing actual exports. Since the situation is bound to remain practically unaltered in the foreseeable future, the only hope of any improvement lies in stimulating the inflow of foreign investment. But this solution is bound up with the large questions of national economic policy which is the concern of the Government, as a whole, rather than of any single Ministry. Unfortunately, on this question, there has been a considerable amount of unco-ordinated and muddled thinking.

MARKET GOSSIP

THERE have been no outstanding developments in City markets this week, except for the hardening of cotton and oilseeds prices. Equities have been moving in an erratic fashion, but the trend is rather quiet. Neither the Russian hit at the moon nor the momentous visit of Mr. Khrushchev, the top leader of the Communist world, to the U.S., the most powerful Capitalist country in the world, has had any impact on our share markets. Even the persistent refusal of Communist China to vacate its aggression on our Himalayan borders has not caused any perceptible effect. Reports from New Delhi indicate that this hostile attitude of China towards India will lead to an increase of Rs. 40 to 50 crores in the Central Government's Defence budget. If this is true, there is little prospect of any relief in taxation; on the contrary, the chances of an increase in the tax burden are distinctly greater than before. One way of keeping down this burden would be to take the help of friendly countries for strengthening India's Defence forces. But the Government of India has made it clear beyond doubt that it would do nothing of that sort and that its policy of non-alignment would be scrupulously adhered to. The Government has proved its intentions by once again sponsoring the resolution for seating Communist China in the United Nations, though its move has failed for want of adequate support.

Although the share markets have ignored the implications of Chinese threats, they are in a less cheerful mood than they were a week ago. Steel shares are quiet for want of fresh support. Textiles have lost their glamour, apparently because of the spurt in raw cotton prices and the possibility of a scarcity of cotton in the latter half of the current season. Some scrips in the miscellaneous section have gone up. This is attributed to buying by interested parties and paucity of sellers.

Commodity markets have been swayed by reports of excessive rains and floods. Last week, the crop estimate for cotton was 4.8 to 4.9 million bales. The current estimate is 4.5 to 4.6 million bales. A downward revision of oilseeds crops is also reported. Food production also must have suffered, as the rivers in Bengal, Orissa, Andhra Pradesh and Bombay have been in spate, submerging crops in vast areas. It is, however, too early to get a clear picture of the damage done to any of the crops, though there is good reason to feel perturbed. It would, indeed, be a great misfortune to this country if agricultural production were to suffer in the current season, for the progress of economic development would be greatly retarded. This will be clear from a perusal of our article on foreign trade appearing on the facing page.

The money market is colourless. In view of plentiful supply of funds and scarcity of borrowers, the trend is easy. The Bombay Municipality has announced its borrowing programme, details of which are given on the next page. It is offering four issues for a total sum of Rs. 5 crores, all carrying interest at 4 per cent. and repayable at par after 12 years. The issue price is Rs. 99.75. These terms are distinctly in favour of the borrower, as compared with what it had to pay last year. Although the amount it sought to raise then was only Rs. 4 crores, it paid 41 per cent. for 12 years and the issue price was lower at Rs. 99.25. Thus, this year it has not only lowered the rate of interest by ½ per cent. but has raised the issue price by ½ per cent. Nevertheless, it will get all the money it wants on these terms and also much more, so that it may even be in a position to exercise its option to retain excess subscriptions up to 10 per cent. It may be interesting to note here that, last year, the Corporation did not include this condition in its announcement.

Money Hardens Elsewhere

While interest rates in India have gone down, they are hardening elsewhere in the world, especially the Western world. Last week, we referred to the rise in West German Bank rate from 2½ per cent. to 3 per cent. Since then, the Federal discount rate in the U.S. has been put up from 3½ per cent. to 4 per cent. The Canadian Bank rate, which is left to float with the 91-day Treasury Bill rate, touched a high of 6.01 per cent., as against 5.58 per cent. a fortnight before. There has been no change in the Bank of England rate at 4 per cent. since 20th November 1958, but British commentators hint that any further rise in interest rates in the U.S. might necessitate an increase in the British Bank rate also.

At 4 per cent., the Federal Reserve discount rate in the U.S. is the highest level to be witnessed since early 1932, the year of the Great Depression. This increase follows the rise in the U.S. commercial banks' "prime" lending rate for unsecured loans on 1st September from 4½ per cent. to 5 per cent., the highest in 28 years. The banks found it necessary to raise their lending rates (the prime rate is the basis for all interest charges by banks) because of the large demand for money, partly seasonal and partly the result of general expansion in business and of growth in capital expenditure. Instead of issuing long-term bonds or raising new capital, several business concerns have resorted to bank loans, as they are cheaper and in the hope that, after some time, long-term interest rates will come down. These borrowings will now be discouraged.

It is stated that the Federal Reserve Board was very reluctant to raise the discount rate, because of the steel strike now in the ninth week. Apparently, it did not want business conditions to become more difficult. But the general tightness of the money market and the continued loss of gold to foreign banks were the compelling factors.

Shellac

The biggest single problem of shellac industry in India continues to be one of stabilising prices. For, notwithstanding all the stress laid by the authorities and the interests concerned, the marked fluctuations in shellac prices have still not been checked. Pure T.N. shellac at Calcutta, which stood at Rs. 65 per maund in December 1958, advanced to touch Rs. 74.50 in March 1959, but receded thereafter to Rs. 62 in June. After spurring to Rs. 79 on 28th August, it has since moved down again, the latest available quotation being Rs. 72. These movements are, of course, on a smaller scale than they used to be before concerted efforts were made by the Government to organise the export trade in this commodity. Nevertheless, they are still wide enough to hamper exports. Shellac, it may be noted here, is one of the staple earners of foreign exchange; in 1958, it fetched nearly Rs. 6 crores. India no doubt enjoys a near world monopoly in this commodity, but gone are the days when this position can be exploited to its advantage. Thailand is coming up as a big exporter and is offering stiff competition. Further, there is a shift in the use of shellac from synthetics to those of shellac in several countries. Unless, therefore, price stability is ensured, Indian shellac may be priced out of world markets in future. The need for stability is no less imperative to maintain a good domestic market for shellac, because the users of shellac in this country also are very much concerned over the frequent and wide price changes, inasmuch as they upset their normal cost calculations and pricing policies of products made of shellac.

Viewed thus, the latest move of the Indian Lac Exporters Association to consider the question of fixing maximum export selling prices for shellac is to be welcomed. As readers are aware, there is already a minimum price, fixed on the basis of Rs. 70 per maund for pure T.N. shellac. The fixation of minimum and maximum export prices will go a long way towards building up confidence among overseas buyers. The importance of a ceiling is all the greater in the present context when foreign enquiries for Indian shellac are quite encouraging. The exporters are said to have booked sizable orders with the U.S., China and Continental countries, and further orders are expected. To quote a recent report:

"China has been an exceptionally heavy buyer this year of shellac, as of other Indian produce. Although the U.S. and the U.K. buyers have tended to sit back since July and are waiting to see if the rise would be maintained, some orders have come through recently from New York at prices well above the Indian minimum export levels which, for a long time, acted in effect as the maximum levels as well." The U.K. strategic stockpile of shellac has now all been sold."

While foreign demand is quite good, there has been a setback to production in India, the current year's *bysakhi* crop being estimated at 650,000 maunds, as against the average annual drop of 717,000 maunds in the past ten years. Besides, the quality of the product is also reported to have deteriorated and it is feared that there may be a shortage in supplies of a few grades, as, for instance, bleaching seedlacs. In view of all these considerations, it is desirable to fix a ceiling so that the upward trend may not take up the prices to levels that will give a fresh stimulus to the competitors of Indian shellac.

Blended Vegetable Protein

Food is agitating the minds of both politicians and planners in India today. Although in the public discussion of the food problem, it is the quantitative shortage that figures prominently, its qualitative deficiency is none the less important. Improvements in the quality of food can help to make good, to some extent, the shortage in quantity. Much research on this subject has been undertaken in this country and more is being done. These have proved, if any proof was at all required, that the diet of the masses is deficient in proteins. But it is one thing to define a problem, quite another to solve it. No sooner the scientist turns from the laboratory where he has collected valuable data on how to improve nutrition, to put them into practice than he finds himself confronted with a series of problems—of production, habit, religion, custom, etc.—all of which have a bearing on nutrition. The general raising of dietary standards is largely an economic problem but not entirely. While the problems of food production are amenable to scientific tackling, those arising from habit and custom do not lend themselves to a rational solution. Food habits are made up of a vast complex of taboos, prejudices and preferences, developed through ages and sanctioned by custom and usage.

Food taboos are no doubt tending gradually to disappear. But they still remain a powerful obstacle to improvement in nutritional standards. The most important, from the nutritional point of view, concerns the consumption of animal protein. India has one of the biggest livestock population of the world, 306.5 million according to the 1958 livestock census. Still Indian food lacks essential food elements like proteins and fats. The diet of

the masses is still predominantly vegetarian, with a high cereal content and little else.

It is, therefore, happy news that a British firm, the British Glues and Chemicals, has developed a new process for making edible proteins from plants. The product is known as impulse process protein because of the method used. This was invented by Mr. I. H. Chayen, Assistant Managing Director of the firm. It relies on impulses generated by a mechanical beater in a liquid stream for breaking down the cell walls of plants and releasing the protein. These impulses are not sufficient to emulsify the cell contents and they are, therefore, readily separable. Ordinary peanuts were processed at a demonstration held in London and the products shown were peanut oil, peanut meal and peanut protein which has a low fat content. A pilot plant for the production of such blended proteins was demonstrated in London last week. The plant has an input capacity of one ton per hour, about 4½ cwt. of protein being obtainable from peanuts and about 1½ cwt. from grass.

One ounce of the protein is roughly equivalent to that contained in one pound of steak. It is, however, said that its food value will depend upon its careful blending with non-processed vegetable or animal material so that vitamins and other vital substances can be added to it.

The new process, it is said, is ten times more efficient than cattle for converting vegetable plants into edible protein. In addition to protein, certain valuable by-products such as vitamin A in the form of carotene and vitamin E are also said to result from the process.

The invention has sparked interest far and near. The Government of India is already reported to have shown much interest. Trial human consumption of the plant protein produced thus has, however, yet to be carried out. It is believed that production of proteins by this process will be economically attractive.

Pointing out that the new invention has overcome the difficult problem of separating the indigestible materials from the proteins and oils in a centrifuge, the *Economist*, London, makes the following interesting observation:

"Probably the biggest problem with an invention like this, which finds its most likely application in the underdeveloped countries, is that of exploitation. Fortunately, the plant is simple and can be economic in small sizes; it may, therefore, be practicable to establish factories in the countries where the protein is needed and where there are also adequate supplies of suitable vegetable materials. British Glues and Chemicals intend to grant licences to any who wish to use the process; there has already been much interest in it. They hope that companies operating in the underdeveloped countries will use it—seed crushers, for whom this process may have interesting implications, would seem obviously suited—or that the Governments of the countries concerned will set up their own plants. By-products of the process should help to make it a commercial proposition."

U.K. Textiles in U.S.

There is growing evidence to suggest that the world trade in textiles will be on a severe competitive basis in the next few years. The competition will be not merely from the Communist countries, Japan and Hong Kong, but also from Britain which has now embarked upon a giant programme for streamlining and re-equipping its cotton industry to put it on a really sound basis to go out and sell. A clear indication to this effect has been given by no less a person than the Minister of State at the U.K. Board of Trade, Mr. Vaughan-Morgan. The Minister declared at London the other day that the British textile industry would undoubtedly continue to show that it is very much a force to be reckoned with in world markets for a long time to come; although competition was getting stiffer, British companies would hold their own in future expositions. And he added: "Given a fair chance, the British industry can increase its sales of high quality textile goods in the U.S. and other overseas markets."

As it is, British goods have proved very popular in the U.S., which, as is well known, is the largest market in the world for high quality textiles. Out of the 80 gold medals awarded to exhibitors at the International Fabrics Exposition at Sacramento, California (U.S.), recently, British firms, numbering 22, bagged as many as 37 medals.

Hong Kong Textiles

The one issue now being most hotly debated upon in Hong Kong centres round the distribution among shippers of the second year's quota of textile exports to Britain under the three-year pact with Lancashire commencing from February last. A few days ago, the Hong Kong Government proposed that the quota be based almost entirely on past performance basis during the first year, that is, the year ending February 1960, with only 2.0 million square yards set aside for new entrants. Out of the first year's quota of 118 million square yards of piecegoods, 70 million yards are allocated according to past performance and 48 million yards for free competition. The whole question was discussed by the representatives of millowners and exporters for over a week recently, but no agreement emerged, owing to the marked divergence of opinion between the two. The Department of Commerce and Industry convened a meeting of the textile interests on the 10th inst. At this meeting, the weaving section of the textile industry voiced strong objection to the Government's proposal and urged that the quota for 1960-61 be divided equally between "past performance" and "free competition." Some even wanted a "quota holiday." A final decision on the whole issue is expected to be taken at another meeting convened by the Government for the 18th inst.

SHARE MARKET EASY MANY SCRIPS MARKED DOWN

(From Our Own Correspondents)

BOMBAY, 17th September

AFTER last week's firmness, the share market developed a sagging tendency again during the week under review, with many scrips suffering a distinct setback in their values. Although there was no new bearish factor with the exception of Mr. Nehru's remarks on Chinese aggression at his latest monthly Press conference, some operators were somewhat inclined to reduce their holdings and fresh buying support was lacking, except in some selected counts in the cash section.

Steels

Steel shares were subdued, thanks to easy advices from Calcutta. There were rumours that the Dalhousie Holding Company had sold about 50,000 shares of the Indian Iron and Steel Company. Tata Ordinaries moved down from Rs. 162.50 to Rs. 158.75 today, before finishing at Rs. 159.25 *ex-right* and *cum-dividend*. The net loss over the week was Rs. 3.25. Indian Irons declined in the course of the week from Rs. 24.96 to Rs. 24.48; at one time today, they were lower still at Rs. 24.40.

Textiles

Despite the fall of 25,000 bales to 383,000 bales in the stocks of piecegoods lying with mills during the month of August and reports of encouraging production performance in several units, textiles encountered selling on fears that the profits of mills in the current year would be lower as a result of the marked rise in payment of dearness allowance to workers, following the increase in cost of living. Kohinoors were particularly depressed, the quotation receding by Rs. 10.50 to Rs. 306.50. Svadeshis fell by Rs. 8.25 to Rs. 242.75. Khataus dropped Rs. 7.50 to Rs. 235, notwithstanding the announcement of higher dividend of Rs. 11.20 for the year ended 30th June 1959, as against Rs. 11 for the previous year. Finlays eased by Rs. 7 to Rs. 273 and Morarijs by Rs. 6 to Rs. 276. Central Indias and Gokaks dropped Rs. 4 each to Rs. 105 and Rs. 159, respectively. New Greats eased by Rs. 2.75 to Rs. 172.50. Standards lost Rs. 2 to Rs. 570. Tata Mills shed a like amount to Rs. 44.50. Both Simplex and Indores suffered a fall of Re. 1.50, the former closing at Rs. 148.50 and the latter at Rs. 91.50. Bombay Dyeing opened the week at Rs. 64.30, as against Rs. 64.60, and, after improving to Rs. 65 on Tuesday, declined thereafter to Rs. 63.70 before recovering to Rs. 64.50 today. Centurys, however, provided a bright spot and spurted by Rs. 3.50 to Rs. 568.50 on reports that the management was preparing a new scheme for raising capital. The decision of directors to declare an interim dividend (taxable) of Rs. 8.05 for 1959 was received with a sense of satisfaction.

Electrics

Activity in the electricity section was restricted, with prices generally drifting lower. Even rumours that the Government of India had favourably considered the plea of the industry for treating the dividend tax as part of the deduction for taxes in profit and loss account had no effect. Tata Powers declined by Rs. 8.75 to Rs. 1,182.50. Andhra Valleys eased by Rs. 5 to Rs. 1,145. Tata Hydros shed 50 nP to Rs. 117.50 and Bombay Suburbans 25 nP to Rs. 105.25.

Banks and Insurance

Bank shares were a shade easy. State Banks climbed down by Rs. 6.25 to Rs. 368.75. Bank of Indias fell by Rs. 2 to Rs. 112. Central Banks receded by Re. 1.25 to Rs. 48.75. 'A' shares retreating from Rs. 52.80 to Rs. 51. Barodas lost a rupee to Rs. 102.50 and 'B' shares dropped Re. 1.75 to Rs. 43.25. Unions lost 8 nP to Rs. 6.92. Punjab Nationals, however, were well favoured and rose by 76 nP to Rs. 21.76. Jaipurs gained 50 nP to Rs. 40 and Denas 30 nP to Rs. 52.80. Insurance shares generally changed hands at higher prices. New Indias improving by 40 nP to Rs. 58.80 and British India Generals by 24 nP to Rs. 14.24.

Sugars

Selling pressure was in evidence in the sugar section. Operators feared that return from investments would be lower with the introduction of rationing in sugar in Bombay. Phaltans receded by Rs. 4 to Rs. 150. Belapurs declined by Rs. 3.50 to Rs. 309.50, after being lower still at Rs. 308.50 on Monday. Walchandnagars shed Re. 1.25 to Rs. 322.50. Changeos lost 50 nP to Rs. 27. Bhopals, however, were better by 32 nP at Rs. 24.12.

Cements

Cements were irregular. Associated Cements began the week at Rs. 145, as against Rs. 145.25, and moved down the same day to Rs. 143.25. After recovering to Rs. 147.25 on Tuesday, they declined to Rs. 145.25 today, before closing a rupee higher. Digvijays declined by Re. 1 to Rs. 143. Jaipur Udyogs receded by 24 nP to Rs. 10.28. Orissas shed 8 nP to Rs. 14.68 and Dalmias 4 nP to Rs. 10.52.

Engineerings, Minings and Shippings

There was a sharp decline in prices of engineering company shares. Premier Constructions fell by Rs. 12 to Rs. 341.50. Tata Locomotives moved down from Rs. 194 *ex-div.* to Rs. 183.50 today; towards the close, they were a shade better at Rs. 184. Alcock Ashdowns dropped Rs. 4.50 to Rs. 247. Voltas receded by Rs. 2.25 to Rs. 166.75. Cooper Engineerings by Re. 1 to Rs. 154. Larsen and Toubros by 36 nP to Rs. 22.80 and Mahindras by 4 nP to Rs. 21.84. In the mining group, Shivrappurs declined by Rs. 2.50 to Rs. 88. Indian Coppers eased by 8 nP to Rs. 4.02. Among ship-

plings, Scindias softened by 40 nP to Rs. 16.92, but Great Easterns picked up 56 nP to Rs. 19.96.

Bombay Burmahs came in for selling and retreated from Rs. 527 to Rs. 511. National Rayons fell by Rs. 8.50 to Rs. 342. Gwalior Rayons were in keen demand and moved up from Rs. 24.12 to touch a high of Rs. 26 on Wednesday, but finished a shade lower at Rs. 25.30. The turnover in this scrip was, however, small, owing to absence of sellers. Wimcos declined by Rs. 4.50 to Rs. 214.50. Tata Oils by Rs. 3.50 to Rs. 61. Poly Chems by Rs. 2 to Rs. 127 and B.I.Cs by 44 nP to Rs. 4.96. West Coasts were quiet at Rs. 151. India Dye-stuffs, however, met with excellent buying support and advanced by Rs. 18.75 to Rs. 278.75. Operators viewed with satisfaction the Chairman's references to the implementation of the expansion scheme. Kemps were also well favoured, the quotation hardening by Rs. 12.50 to Rs. 255. New India Industries strengthened by Rs. 10 to Rs. 395. Automobiles were subjected to selling. Premiers receding by Rs. 6 to Rs. 129.75 and Hindustan Motors by 32 nP to Rs. 12.56.

Madras Stock Exchange

MADRAS, 16th September

Equities on the Madras Stock Exchange generally drifted lower during the week under review, barring textiles which were well maintained on renewed reports of enlarged offtake. Tea shares were easy, despite strong demand for teas at the recent Cochin auctions. In sympathy, coffees were subdued. Rubbers were quiet, although some scrips met with good support induced by hopes of increase in production. Sugars moved irregularly with the undertone remaining distinctly easy. Trading in the miscellaneous section was characterised by wide-

spread selling pressure, with values suffering a setback.

Among sugars, Kirilampudis dropped Re. 1.50 to Rs. 81. Deccans sagged by 14 nP to Rs. 12.14. Travancores shed 5 nP to Rs. 12.30. Indias and Mysores were neglected at Rs. 13.10 and Rs. 49.50, respectively. E.I.Ds, however, rose by 70 nP to Rs. 39.50 on special support.

In the tea section, Twyforde declined by 20 nP to Rs. 16.60 *ex-div.* Haileyburias and Kill Kotagiris eased by 10 nP each, the former to Rs. 18.40 *ex-div.* *cum-right* and the latter to Rs. 4.15. Periakaramalais shed 4 nP to Rs. 3.97. Chembras lost 3 nP to Rs. 3.95 *ex-div.* and Ouchterlony 2 nP to Rs. 5.33. Nilgiris were dull at Rs. 7.80 and Nelliampathys at Rs. 2.88. Among coffees, Coffee Lands moved down by 25 nP to Rs. 23.75. Consolidated Coffees receded by 20 nP to Rs. 21.80. Wartyhulls by 10 nP to Rs. 3.75 and Ossors by 5 nP to Rs. 3.80. In the rubber group, Midlands gathered 10 nP to Rs. 12.10. Kailas picked up a like amount to Rs. 4.80.

In the textile section Bangalore Woollens spurted by Re. 1.50 to Rs. 183. Cannanores and Rajalakshmis improved by a rupee each to Rs. 141 and Rs. 63, respectively. Metturs put on 50 nP to Rs. 372.50. Buckingham was fancied at Rs. 189. Coimbatore Pioneers were fully steady at Rs. 285. Dhanalakshmis at Rs. 200. Trichinopolys at Rs. 38. Vasantas at Rs. 211 and Virudhunagars at Rs. 38.

Among miscellaneous industrials, Western India Plywoods were hammered down from Rs. 200 *cum-div.* to Rs. 191.00 *ex-div.* Indian Steel Rollings suffered a setback of 70 nP today's closing rate being Rs. 13.20. Spencers lost 25 nP to Rs. 20. Aluminium Industries by 20 nP to Rs. 21.75. Orissa Cements and Travancore Cements dropped 5 nP each to Rs. 16.45 and Rs. 10.20, respectively. India Cements were a shade lower at Rs. 6.53. F.A.C.Ts eased by 8 nP to Rs. 9.15.

NEWS IN BRIEF

THE Government of Bombay is currently examining the State Trading Scheme, with a view to exploring all possibilities of implementing it after the next *kharij* harvest.

The Tariff Commission's public enquiry into the question of continuance of protection to the non-ferrous metal industry was held on Thursday the 17th inst.

The capacity of the streptomycin plant to be set up by the Hindustan Antibiotics Limited will be about 45 tons per year, which is roughly the current demand.

Oil exploration in India during the third Five-year Plan will require Rs. 85 crores, as against Rs. 30 crores in the second Plan, according to Mr. M. S. Thacker, Secretary of the Union Ministry of Scientific Research and Cultural Affairs.

The Government of India has decided to license the establishment of one re-rolling mill each in the States of Andhra Pradesh, Kerala, Assam and Bihar, according to Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel.

A *harijana* cow of the *Gaurakshmi Gaushala*, Khurja, U.P., with a yield of 41.08 lbs. of milk in 24 hours, has won a cash prize of Rs. 2,000 and a certificate of merit in the All-India Milk Yield Competition, organised by the Central Council of *Gosamvardhana* during 1958-59.

The Working Group on Co-operative Farming (Chairman: Mr. S. Nijalingappa) is expected to submit its report by the end of next month. It has already toured all the States and is expected to interview some members of Parliament before assessing the views of various bodies and experts.

Literacy in India has gone up from 16.60 in 1951 to 40.7 per cent. at present, according to a limited survey conducted this year to pre-test the questionnaire prepared for the 1961 census. Women's literacy has risen from 7.9 per cent. of population to 28.8 per cent. and men's literacy from 24.9 to 51.7 per cent.

Air-India International is considering a proposal for pooling the revenue and sharing it with the British Overseas Airways Corporation and Qantas Empire Airlines. This was revealed by Mr. B. R. Patel, General Manager of the Company, who has returned from London after holding preliminary talks in this connection.

A two-member delegation of the Government of India has proceeded to London to negotiate details of an agreement for the manufacture of Rolls-Royce aero engines in this country. These engines will be used in the 'Avro-748' aircraft which is expected to replace the Dakotas in the Indian Air Force.

Under an agreement signed at Moscow between the representatives of the Indian and U.S.S.R. Governments, the U.S.S.R. will grant a credit of 1,500 million roubles to help finance India's third Five-year Plan, and expand trade between the two countries. The terms of the agreement are similar to those governing the previous Indo-Soviet credit agreements.

The Minister for Commerce, Mr. Nityanand Kanungo, stated in the Rajya Sabha last week that the import of consumer goods was allowed only to the extent absolutely necessary. The percentage of such imports had been gradually brought down from 18.6 in 1955-56 to 10.0 in 1958-59. He added that, except for imports of a few consumer goods for non-development purposes, which could not be dispensed with, all other imports could be roughly taken to be for developmental purposes.

The first public sector wrist watch factory in India will be established at Bangalore as a subsidiary of the Hindustan Machine Tools Factory, Jalahalli. Disclosing this at a meeting of the Mysore Chamber of Commerce at Bangalore, Mr. Manubhai Shah, Union Minister for Industry, stated that the proposed factory was likely to produce annually 500,000 wrist watches, of which half would be ladies' types. The factory would be set up in collaboration with the Japanese Citizens' Watch Company. It would employ about 1,000 to 2,000 persons, most of them women.

The Central Government has provided financial assistance to State Governments on a 50:50 basis for the development of lac cultivation. In order to meet the scarcity of brood lac, 35 brood lac farms have already been set up in the various States, as against the second Plan target of 50 farms. The Lac Exporters Association proposes to create a buffer stock for lac to iron out wide fluctuations in prices. Besides, the Export Promotion Council for Lac is taking measures to promote exports of lac by publicity in foreign countries, market surveys, quality control, etc., in addition to encouraging research work on lac to find out new applications for this commodity.

The Government of India is not considering at present any proposal for writing off a sum of Rs. 47 crores out of the income-tax arrears. A review of the tax arrears outstanding in the Income-tax Departmental books for a long period has, however, shown that there are several instances where, owing to the absence of assets, there is no possibility of recovering any portion and there are also cases in which the available assets are heavily encumbered with prior mortgages or there are legal difficulties in enforcing recovery. A rough estimate of the amount which may ultimately be found to be irrecoverable out of the

PERSONAL

MRS. Vijayalakshmi Pandit, Indian High Commissioner in the U.K., who was on a brief visit to India, has left for London.

Mr. Henry Endicott Stebbins has been nominated as the U.S. Ambassador to Nepal. At present, the U.S. Ambassador in India is Ambassador to Nepal also.

Mr. J. M. Rijhwani, a former Chief Engineer of the Central Public Works Department, has been appointed Development Commissioner, Kandla Port, in succession to Mr. P. N. Saxena.

Dr. C. Chandrasekharan, Director of the Demographic Training and Research Centre, Bombay, has left for Thailand to participate in the Asia-Statisticians' Conference to be held at Bangkok next week.

Mr. K. R. P. Aiyangar, until recently Joint Secretary, Department of Company Law Administration took over the chairmanship of the Tariff Commission on the 14th inst. from Mr. C. Ramasubban, who has retired.

Mr. M. Chatterji, Public Relations Manager, Standard-Vacuum Oil Company, has left Bombay for the U.S. to attend the 12-day conference of public relations advisers of all the Stanvac areas, scheduled to begin at White Plains, New York, on 19th October.

Mr. Morarji Desai, Union Finance Minister, left Bombay for a six-week foreign tour. He will attend the forthcoming Commonwealth Finance Ministers Conference in London and the annual meetings of the Boards of Governors of the World Bank and the I.M.F. in Washington.

Mr. Upendranath Barman, M.P., has been appointed Chairman of the Committee on Public Accounts for the remaining portion of the term of the Committee ending 30th April 1960, vice Dr. P. Subbarayan, who has become Union Minister for Transport and Communications.

of the Government and formulate proposals. Sir Jeremy Raisman, a former Finance Member of the Government of India and now Vice-Chairman of Lloyds Bank Ltd., is one of the members of this Committee.

A group of 24 executives, representing British consumer goods, is currently exploring the possibilities of promoting the sale of their products in the U.S. and Canada. For a month, these executives will serve across the counter and work behind the scenes in several department stores to get a first-hand knowledge of consumer preferences. This group forms the second and the largest British party sent under a scheme sponsored by the Exporters' Council to study North American buying tastes and trends.

The production of steel in W. Germany is going up. The daily output continued to rise in the month of August to 56,390 tons from 55,705 tons in the previous month. During the seven months of the current year, the production of steel was higher by 0.6 per cent. at 10,548,769 tons, as compared with the corresponding period of 1958. The rise in production is the result of the stimulus to demand caused by the return of economic expansion, the working down of inventories and the indirect effects of the U.S. steel strike.

The Government of New Zealand has decided to permit all the major oil companies operating in the country to participate in the refinery project, proposed to be established shortly. It is said that 40 per cent. of the capital of the refinery will be contributed by local investors, so that the refinery may not be wholly foreign-owned. When the scheme was first announced in May last, Shell alone was expected to participate. The other companies, now permitted to join the venture, are British Petroleum, Caltex, Standard-Vacuum, Atlantic Union and Europa.

The recovery in steel output in the U.K. that began early this year is gathering momentum. The total production rose by 13 per cent. in August, as compared with less than 2 per cent. in the previous two months. There has been a marked increase in demand for lighter products such as bars, rolled strips, wire rods and tubes for building and engineering. The demand for sheets and tinplate from automobile and domestic appliances industries is well maintained. Only in the heavy steel sector, normally associated with capital investment, is demand hesitant, though even here a slight improvement is seen mainly in orders for sections.

The U.S. Senate has adopted a concurrent resolution to enable the U.S. to join other interested countries in a study of South Asian economic requirements and anticipated development programmes. The South Asian countries named by the resolution are India, Afghanistan, Burma, Ceylon, Nepal and Pakistan. The resolution expresses the view of the Congress that the President should explore with other free and democratic nations and appropriate international organisations the advisability of such a study. It may be recalled that, in February last, Senators John F. Kennedy and John Sherman Cooper had introduced a similar resolution, calling on the U.S. to invite other friendly nations to join in a mission to consult India on the possibilities for joint action to help fulfil its economic plans. Subsequent amendment expanded the resolution to include the other nations. A report accompanying the resolution points out that the study is merited, because South Asian economic development during the next 10 years is likely to have a profound effect on the concept of individual freedom and hence will be of vital concern to the United States. The measure now goes to the House of Representatives for consideration.

BOMBAY MUNICIPAL CORPORATION LOAN NOTIFICATION 4 PER CENT LOANS 1959 - REPAYABLE ON 28th SEPTEMBER 1971

- Rs. 300 LAKHS BOMBAY MUNICIPAL LOAN OF 1959 FOR FINANCING CAPITAL WORKS PERTAINING TO BUDGET 'A',
- Rs. 125 LAKHS BOMBAY MUNICIPAL LOAN OF 1959 FOR FINANCING CAPITAL WORKS PERTAINING TO BUDGET 'D',
- Rs. 50 LAKHS BOMBAY MUNICIPAL LOAN OF 1959 FOR FINANCING CAPITAL WORKS PERTAINING TO BUDGET 'E', AND
- Rs. 25 LAKHS BOMBAY MUNICIPAL LOAN OF 1959 FOR FINANCING CAPITAL WORKS PERTAINING TO BUDGET 'F'.

1. Issue Price Rs. 99.75 per cent.
2. Each loan will bear interest at the rate of 4 per cent per annum from 28th September 1959. Interest will be payable half-yearly on 28th March and 28th September and will be subject to tax under the Indian Income Tax Act, 1922.
3. Subscriptions will be received from 10-30 a.m. on 28th September 1959 and the lists will be closed on the 30th September 1959 or earlier as soon as it appears that the requisite amounts have been received either by private negotiations or through public applications. The Municipal Commissioner reserves the right to accept applications for subscriptions received in excess of the sum of Rs. 500 lakhs upto 10 per cent.
4. Sinking Fund will be set aside annually and invested in such manner as may be authorised by the Government from time to time.
5. Interest will be paid in Bombay at the Head Office of the State Bank of India, Bombay, or such other Agent or Agents as may be approved by the Corporation from time to time in that behalf.
6. The loans are raised on the security of the general revenues of the Bombay Municipal Corporation pertaining to Budgets 'A', 'D', 'E' and 'F' respectively, subject in each case to any prior charges in respect of the balances of previous loans not yet fully paid off.
7. The loans will be issued in the form of debentures.
8. Applications for the loans must be for Rs. 500 or for a multiple of that sum and will be received at the office of the Chief Accountant, Bombay Municipal Corporation, Municipal Head Office Building, Fort, Bombay.
9. Copies of the Notification and Application form may be had at the Office of the Chief Accountant, Bombay Municipal Corporation, Bombay-1.

V. L. GIDWANI,
MUNICIPAL COMMISSIONER'S OFFICE,
BOMBAY, 15th September 1959.

V. L. GIDWANI,
Municipal Commissioner
for Greater Bombay.

LUNIK II

A MAJOR turning point in man's history was reached on the 14th inst. when Russia's cosmic rocket Lunik II hit the moon's surface. Launched on Saturday the 12th inst., the rocket, which sped at a speed of more than 7,000 miles an hour, took nearly 34 hours to reach its destination, some 233,600 miles away; at its last stage, the rocket weighed some 3,324 lbs. The world's scientists have rightly hailed the journey as an achievement of great significance. Generous tributes to Soviet scientific genius have been paid by all leaders of world opinion. Professor A. C. B. Lovell, Director of Radio Telescope at Cheshire (U.K.), said that Lunik II's journey was "a brilliant demonstration of the advanced stage of Russian science and technology." Mr. Kenneth W. Gallard, Vice-Chairman of the British Inter-planetary Society, said: "It is an historical moment for mankind. Clearly, this is an extremely great achievement, unparalleled in the history of rocketry." Some idea of the immense skill which this achievement implies will be clear from the fact that, in order that a rocket may hit the moon, it is necessary that the entire guidance system must be accurate and the cut-off velocity of the rocket must be held within 75 feet per second out of 35,000 feet per second needed to propel the rocket; the injection angle (the path of the rocket) should not deviate more than one half of a degree.

An immediate result of the hit, it is stated, is the possibility of acquiring information on the moon's magnetic field and the nature and density of particles between the earth and the moon. Measurements made with the rocket, it is stated, will be crucial for studying the intensity of cosmic rays and the atomic composition of the inter-planetary gas and meteoritic particles. It is to be hoped that Russian scientists will share this knowledge with the rest of the world.

It is, however, noteworthy that Soviet scientists have declared that there will be no territorial claim on the moon. This must set at rest the speculation over the possibility of such a claim which has arisen out of the delivery by Lunar II to the surface of the moon of the pennant with the coat of arms of the Soviet Union and the inscription "Union of Soviet Socialist Republic, September 1959."

But the much larger and, in a sense, more immediate, question is the strategic implication of this magnificent achievement. After all, a level of scientific knowledge and skill, which could result in the delivery of a rocket to the moon with such great precision, could be easily pressed into service for the release of missiles with nuclear weapons. The destructive potentialities of the nuclear arms which the world's chief powers now possess and the rapidly growing science of rocketry together indicate that, in the event of a conflict, there will be an end of not only all that the world holds dear but of the world itself. This consideration, more than anything else, underlines the need for converting the rivalry between the free world and the Communist countries into an enduring and beneficial competition for the achievement of higher levels of human welfare.

U.S. FOOD AID TO INDIA

No country has given such massive assistance to India in the task of solving the food problem as the U.S. Since the first Public Law 480 Agreement was concluded between the two countries a little over three years ago—in August 1956, followed subsequently by two more Agreements—the U.S. has delivered to India more than 7.0 million tons of wheat, in addition to many hundred thousand tons of rice, milo, corn and powdered milk. This was disclosed by Mr. William T. Turner, Consul General for the U.S. in Bombay, speaking at a luncheon-meeting of the International Forum held in the City on Sunday the 13th inst. Mr. Turner revealed that another (the fourth) P.L. 480 Agreement for the supply of 3.0 million tons

of wheat was being discussed between New Delhi and Washington.

A special feature of the P.L. 480 Agreements is that the agricultural products are sold to India against rupee payment, thus obviating the need for spending foreign exchange. What is more, out of the rupee proceeds from the sale, as much as 80 per cent, is set aside for use by India in the form of grants and loans for economic development. Mr. Turner estimated the total amount available to India under this arrangement for meeting the investment requirements of the second Five-year Plan at over Rs. 236 crores (\$500 million), which represents 5.6 per cent. of the aggregate Plan outlay in the public sector. Thus, as he rightly said, while the sale of foodgrains to India may be regarded as an ordinary commercial transaction in one sense, in a more important sense, it is not an ordinary transaction, because payments for the most part remain in this country to be used for the benefit of the people. The total value of wheat, rice and other agricultural commodities sold to India under P.L. 480 loans so far comes to Rs. 312.6 crores.

India's food needs are also being met to some extent by voluntary agencies which in Bombay are the Catholic Welfare Conference, the Church World Service and the C.A.R.E. Since 1951, these agencies have distributed about 250,000 tons of dried milk and other food-stuffs valued at Rs. 56 crores "as gifts of the American people to needy people in various parts of the country."

Besides helping India to meet the deficit in food supply by supplying large quantities of wheat, rice, etc., the U.S. has also been actively aiding the country in stepping up the production of food and other agricultural crops. The assistance is being given under several official aid programmes operating through such 'instruments' as the Technical Co-operation Mission, the Development-Loan Fund and the Export-Import Bank, as well as under programmes operated by private agencies like the Ford Foundation and the Rockefeller Foundation.

Since the U.S. Technical Co-operation Mission has been making significant contribution to the development of agriculture, Mr. Turner did well to explain at some length the operation of this programme. His analysis shows that, since the programme began to operate in January 1952, hundreds of Indo-American projects have been undertaken. The U.S. Government provides the dollars for the foreign exchange component and pays for the services of experts and advisers. The Indian Government pays the rupee costs. Among the T.C.M. projects which help to solve the food situation, special mention may be made of imports of fertilisers, soil and fertility testing surveys, fisheries development, water resources surveys, ground water irrigation and tube well construction, agricultural machinery training, agricultural education and research, building of storage facilities for foodgrains, crop production and development, locust control, cattle improvement, poultry improvement, dairy development. The total amount of the American contribution to the agricultural sector of the T.C.M. programme from 1952 is about Rs. 43.7 crores (\$92 million).

It is thus evident that the assistance rendered by the U.S. to India in the sphere of food and agriculture is very substantial and liberal, unsurpassed by any other country. In rendering such assistance, the U.S. has certainly been guided by the belief, to quote Mr. Turner, that "adequate food supplies are essential to survival of democracy, because freedom from hunger is necessary in order to enjoy other freedoms."

MR. GAITSKELL'S WARNING

Mr. Hugh Gaitskell's 40-minute speech to the British Trade Union Congress at Blackpool was a remarkable exception to the general run of election speeches that we in this country are accustomed to hear on the eve of general elections. As the leader of the Labour Party which will rule the country for the next four years if the electorate wills it—and this will be decided on 8th October 1959, when the general election takes place—Mr. Gaitskell did not appear to relish the prospect of having to eat his own words, should his party be called upon to form the Government. He, therefore, summoned enough courage to do some plain speaking to trade unions on whose support the Labour Party depends for its very existence, not to speak of its success. He told them that they would not get any privileges, if the Labour Party were elected. On the other hand, he added, a planned economy, which the party seeks to promote, will demand unaccustomed moderation from unions. He told a silent

Congress, attended by 1,000 delegates: "If we are to get industrial expansion in a planned economy, the trade unions cannot contract out of it. . . . The trade union movement has a choice here between co-operating with a Government determined to carry out industrial expansion in a planned way without inflation, or it will be driven to take a negative role, not wielding any serious influence in the community but doing only the very minimum that is necessary."

It must be borne in mind that these words were uttered to a Congress which had rejected only a short while before "any form of wage freeze," declared its intention to seek ways and means of achieving a shorter working week and had committed the General Council of the T.U.C. to "informing the Government, industrialists and all employers of its grave concern in this pressing problem." An astute politician that he is, Mr. Gaitskell offered some compensatory attractions in return for moderation on the part of unions. He promised that a Labour Government would reduce taxation at the lower income levels or, as he put it, "for those who really earn their money properly in the ordinary, decent way, by the sweat of their hands or by their brains." On the other hand, it will impose a tax on capital gains, stop evasion of death duties and abolish the "expense racket."

Mr. Gaitskell's example should serve as an object lesson to politicians in this country who, in their mad scramble for votes, make all sorts of fantastic promises to the electorate, thereby raising false hopes, only to be followed inevitably by disillusionment and discontent.

BHAKRA DAM

After a three-week period during which the country was sorely exercised over the damage to the Bhakra dam, it is some comfort to learn that a gate has been successfully dropped in the cable gallery, thereby stopping the flow of water to the power house. Although the technical causes of the damage have not been known and must await the investigation of the expert committee, appointed last month, there is no doubt that the mishap, which occurred in the Rs. 170-crore Bhakra dam project, is the most serious of its kind in the history of India's multi-purpose projects. Some technical mistakes have no doubt been made elsewhere and many avoidable items of intractable expenditure incurred. But at no time in the past has the country witnessed a grave flaw in a project of Bhakra's magnitude. With refreshing candour, the Punjab Government admitted, in the course of its Press note, that the damage was the "worst setback" the Bhakra project has suffered and "represents the nature of a considerable calamity and disappointment for the State and workers engaged on the project."

The immediate cause of the damage to the Bhakra project was the structural failure of the hoist chamber which is a temporary reinforced concrete structure, specially constructed for regulating irrigation release through the right diversion tunnel. As a consequence of the damage water from the diversion tunnel entered the gallery system and flooded the left power plant. The cost of the damage has been assessed at Rs. 55 lakhs, though no great accuracy has been claimed for this figure. There are, however, two heartening features. In the first place, the accident, though officially described as "grave and unfortunate," will not "jeopardise the safety of the main dam," nor is any threat to the power plant feared. Secondly, the mishap, it is stated, will "cause no appreciable effect on the final schedule of the completion of the dam." The construction work on the dam is expected to continue concurrently with the repair work. The date of power generation is, however, likely to be delayed by a few months, though even this delay is not expected to affect the supply of power to the Nangal fertiliser factory now under construction. The irrigation authorities, it is stated, are also confident that there will be no material reduction in the irrigation benefits which will result from partial storage next year. It is particularly gratifying to note that the position, as stated at the outset, has eased through the insertion of a gate in the cable gallery. The gate has virtually stopped the flow of water into the power house. The flow from the cable gallery has now been diverted into the spillway through two side openings made earlier. The water level in the power house is reported to be below the generator floor.

In view of the country-wide concern expressed over the damage to the Bhakra project, the authorities will do well to investigate fully the causes of the mishap and take appropriate

measures not only for the prevention of similar accidents in future but for the speedy execution and completion of the project. A question which has come up for consideration is whether the technical consultants and experts have adequate powers to deal with accidents of the kind which occurred in the Bhakra dam. The American expert, Mr. Harvey Slocum, who is the technical consultant for the project, insisted on more powers for himself. Referring to this demand, the Union Deputy Irrigation Minister, Mr. J. L. Hathi, is reported to have said: "He is a consultant and will remain a consultant." Clearly, Mr. Slocum's insistence on larger powers did not stem from personal vanity. All that he implied was that, in an emergency in a project site, procedural formalities should be overlooked in the larger interests of the project. As Mr. Slocum himself stated at a Press interview, his suggestions were not "motivated by personal considerations." "Their only aim," he said, "is to see the expeditious implementation of the work." He added: "This can only be done, if the irritating restrictions like those inherent in present procedures are done away with." Surely, Mr. Slocum's suggestion does not merit the curt reply it received from the Deputy Minister. The authorities owe it to themselves and the country to ensure that some machinery exists whereby prompt decisions, based on expert technical knowledge, are taken and speedily implemented. The Bhakra episode calls for a reappraisal of the procedures in project administration designed to place larger powers in the hands of technical men.

TIN FABRICATION INDUSTRY

The pressure of demand on the tin containers industry is bound to increase in the context of rapid industrial and agricultural development envisaged under the Five-year Plans. This is so, particularly because containers are used for packaging such a variety of goods as tea, coffee, sweets, biscuits, butter, oil, jams, peas, barley, fish, powder, vegetable oil, kerosene and petrol. Admittedly, the development of containers industry, as Mr. B. L. Goenka observed at the second annual general meeting of the Tinplate Fabricators Association held at Calcutta on the 11th inst., is an index of general industrial development of the country and the standard of living of its people.

One of the limiting factors in the development of tin fabricating industry is the inadequate supply of tinplates. Until recently, there was only one producer of tinplate in India, namely, the Tinplate Company of India (Private) Ltd. Its present annual capacity is estimated at 80,000 tons. Another factory, with a capacity of 10,000 tons, has recently gone into production near Calcutta. The total indigenous capacity is, thus, 90,000 tons. According to Mr. Goenka,

the actual annual production has been no more than 75,000 tons, which is expected to go up to 80,000 tons in 1959. As against this, the current demand is assessed at 140,000 tons.

It is thus evident that India has to depend on imports for as much as 40 per cent. of its present requirements of tinplate. In the face of a restrictive import policy, the supply position has turned out to be very uncomfortable. Mr. Goenka wanted a modification in the existing system of granting import quota for tinplates in order to improve this situation. The import quota of individual fabricators under the existing import policy is being determined on the basis of actual consumption of the material by each unit in 1957. Mr. Goenka urged the authorities to compute the requirements of the individual factories on the basis of consumption in 1956, 1957 and 1958, whichever has been the best year, instead of a single year 1957, when production was at a low ebb.

Mr. Goenka called upon the Iron and Steel Controller and the manufacturers of tinplate to supply tinned strips to all quota holders on a *pro rata* basis. He rightly insisted that manufacturers should now give due attention to the diversification of their products and improvement of the quality of the containers. The Government, on its part, will do well to give every facility to the manufacturers for importing and installing new and up-to-date machines for replacing the worn-out ones in order to attain this objective.

EMPLOYEES' STATE INSURANCE

The very fact that the Government of India felt it necessary to appoint Dr. A. L. Mudaliar as a one-man committee to review the working of the Employees' State Insurance scheme indicates that it is not satisfied with the functioning of the scheme. While the need to draw the attention of the Government and the public to the defects of the scheme is beyond question, it is hard to see what useful purpose is served by painting a dark and dismal picture as some members of Parliament did during the debate on the annual report of the Employees' State Insurance Corporation for the year 1958-59. Mr. G. L. Nanda, Union Minister for Labour, did well to ask members who had criticisms and suggestions to offer to place them before the Mudaliar Committee, so as to enable it to do its job better.

The debate, however, served to focus attention on some major deficiencies in the working of the scheme. There was general agreement that the scheme was sound in principle and beneficial to workers. It was, however, criticised on the grounds that the progress of coverage was slow, that hospital facilities under the scheme were hopelessly inadequate, that dispensaries were not function-

ing properly and that hospital construction was not progressing at the desired speed due to alleged shortage of cement and steel. The administration of the scheme was also criticised as being slack. The determination of the rate of benefit took an unduly long time and the payments were not prompt.

The progress of the scheme even in respect of coverage has been rather slow. At the end of March 1959, only 1.41 million workers in 79 centres in 12 States and the Union Territory of Delhi had been covered. The number of additional employees covered during the year 1958-59 was 78,000. Despite this slow progress, it was decided to extend the benefits of the scheme to the families of insured persons also. Mysore has the credit of being the first State to take the step. Other States soon followed and, in the course of the year, medical care under the scheme was made available to 326,000 family units, that is, to 633,000 additional beneficiaries, in seven States, namely, Andhra Pradesh, Assam, Bihar, Madhya Pradesh, Mysore, Punjab and Rajasthan. Thus, hardly 1.5 million out of a total of about 15 million eligible employees have been covered by the scheme so far. It is doubtful whether the proposed extension of the scheme to cover 8.67 million employees and their families by the end of the second Plan period will be accomplished, unless the scheme is rapidly extended to areas still remaining uncovered.

The criticism that the entire cost of the scheme fell on workers cannot be sustained. It is true that there are cases of non-payment of employers' contribution and non-submission of contribution cards. Defaulters are punishable under law and a number of employers have been convicted and punished. This, however, is no reason for increasing the rate of contribution and penalising honest employers. At the same time, considering that the scheme has to meet its cost and that the Corporation should be financially strong, there is no case for reducing the rate of contribution of workers. As Mr. Nanda rightly pointed out, simply because the Corporation had some reserves it was no argument for reducing the workers' contribution. Only if the financial position is strong can the Corporation plan its future programmes with greater confidence. It is noteworthy in this connection that the valuation report of the Corporation covering the quinquennium 1949-54 revealed that the financial position of the Corporation was sound. In the absence of any reliable morbidity statistics, the scheme had to be framed on certain assumptions whose validity could be tested only by valuation. The valuation report has confirmed that the original assumptions erred on the side of safety. It is better to err in this direction in the initial years, for that will create hidden reserves which could cushion the impact of such possible contingencies as epidemics at some later date.

THE WORLD LOVES INDIAN GOODS

... but competition's brisk and much depends on the way you deliver the goods! Take advantage of Air-India's frequent flights, both East and West, (plus a special weekly cargo service to the U.K. and Europe for heavy, bulky or lively goods).

You'll be enjoying the selling plus of being first on the market; you'll cut down on your transit risks and costs; you'll be freeing 'idle' capital; getting faster turnover, bigger profits! Above all, you'll rest easy—knowing your cargo with Air-India is in the best of hands!

NATIONAL INCOME DATA FOR 83 COUNTRIES

USEFUL U.N. PUBLICATION

THE world's total income, measured by the volume of goods and services produced, reached an all-time peak in 1957, with most countries contributing to this record achievement, according to information published in the second edition of the *United Nations Yearbook of National Accounts Statistics, 1958* which contains estimates for 83 countries and territories. Statisticians at U.N. Headquarters noted that global output fell off slightly in 1958, mainly as a result of a 3 per cent. decline in the combined output of the United States and Canada.

The gross national product (in constant prices) of Western Europe as a whole increased at an annual rate of nearly 5 per cent. between 1951 and 1957. The corresponding increase on a per capita basis amounted to about 4 per cent. as a consequence of population growth. The highest rate was achieved by the Federal Republic of Germany, where the gross national product increased at an average of 7.5 per cent. per year during this period (6.5 on a per capita basis).

The performances of some other western European countries are indicated in the following table showing the average annual rate of growth of gross national product (at constant prices) during the period 1951-57:—

	Aggregate	Per capita
	%	%
Austria	8.1	5.9
Belgium	2.8	2.1
Denmark	2.5	1.7
France	4.7	3.8
West Germany	7.5	6.5
Ireland	1.5	1.7
Italy	5.5	4.1
Netherlands	5.2	4.1
Norway	3.6	2.5
Sweden	4.6	3.9
Switzerland	4.6	3.5
United Kingdom	2.4	2.3

An important addition to the present Yearbook is the publication of national income figures for mainland China and the countries of eastern Europe. Estimates for the U.S.S.R. were not available.

In commenting on this data, United Nations' statisticians cautioned that the concepts governing the national income estimates for these countries differed considerably from those employed in most other countries. In mainland China and the eastern European countries, national income is restricted to the measurement of output of goods and productive services, that is, only those services directly associated with the production of goods. In most other countries, the concept of national income relates to the value of all goods and services produced.

Communist Nations

The official estimates for mainland China, which are available up to 1956 only, show a rise of 13 per cent. in the volume of goods and productive services produced in 1956 in comparison with 1955; annual increases of 6 per cent. and 7 per cent. are reported for the two previous years.

Among the eastern European countries, the national income of Poland, measured in constant prices, increased steadily between 1951 and 1957, averaging approximately 10 per cent. per annum during the period. The biggest gain was in 1957, when the total volume of goods and productive services exceeded that of 1956 by 13 per cent. Between 1951 and 1957, almost four-fifths of the national income of Poland was in the form of consumption goods, the remainder in investment goods.

The annual average rate of growth of national income was identical in eastern Germany and Czechoslovakia between 1951 and 1957—averaging about 7 per cent. per annum—with output in both countries fluctuating sharply from year to year.

The estimates for Hungary also indicate a rather uneven trend in the growth of its national income. In 1952, 1954 and 1956, the volume fell below the levels of the immediately preceding years by 2 per cent., 4 per cent. and 12 per cent., respectively. For the years 1951-57 as a whole, the growth rate averaged 4 per cent. per annum. The year-to-year fluctuations were equally sharp in Rumania, but the rate of growth was more rapid, averaging 8 per cent. per year, between 1951 and 1957.

The production record appears to be considerably more mixed for the less developed areas of the world, according to the estimates published in the Yearbook. With few notable exceptions (Belgian Congo, Burma and Brazil, for example), the gross national product at constant prices grew less rapidly in most of the less developed countries of the world and, because of higher growth rates in their population, per capita increases in product were even less. In Argentina, in particular, gross product increased at an average rate of 1.6 per cent. per annum between 1951 and 1957, while per capita product declined slightly. The following table shows at a glance the average annual rate of growth of gross national product (at constant prices) for certain countries during 1951-57:—

	Aggregate	Per capita
	%	%
Argentina	1.6	-0.4
Belgian Congo	4.3	2.0
Brazil	4.7	2.0
Burma	6.0	4.8
Chile	2.8	0.5
India*	3.9	1.5
Pakistan	3.0	1.5
Thailand*	3.6	1.7

*Average 1951-56.

Other pertinent facts which come to light from the statistical information in the current Yearbook are briefly noted below:

Investment: Annual gross investment in housing, plant, other construction, machinery and equipment, and in stocks accounted for 20 to 25 per cent. of the gross product in industrial countries, with the exception of France, the United Kingdom and the United States, where it ranged from 15 to 20 per cent. between 1950 and 1957. The ratio of investment to gross product diminishes to 10 to 15 per cent. in a few instances to below 10 per cent., as one moves from the industrial to the less economically developed countries.

Investment in industrial countries is generally financed almost exclusively from domestic sources—from savings and from funds set aside for capital depreciation. But in Asia, Africa and the Middle East, such investment is to a much greater extent dependent on borrowing from abroad. In some countries, external borrowing accounted for more than 40 per cent. of the funds used for financing capital formation (Greece, Israel, Jamaica and Puerto Rico).

Personal consumption: In nearly half of the countries from which data were obtained, expenditures for food, clothing, recreation, etc., accounted for between 50 and 80 per cent. of the total available goods and services (domestic production plus imports). This percentage as a rule is found to be lower in countries with the high per capita incomes and, conversely, higher in countries with low per capita incomes.

Government taxation: In about one-third of the countries for which such data are available, Government taxes accounted for between 15 and 24 per cent. of the gross national product in recent years. The ratio of taxation (not including capital levies) to gross national product is shown for a selected number of countries in the following table, the figure being the average for the years 1951-1957:—

30 per cent. and above	15-19 per cent.
Austria	Belgian Congo
France	Burma
West Germany	China (Taiwan)
Luxembourg	Greece
	Panama
	Portugal
	South Africa
25-29 per cent.	
Finland (1954-1957)	
Netherlands	
New Zealand	10-14 per cent.
Norway	Colombia
Sweden	Costa Rica
United Kingdom	Ecuador
United States	Jamaica
	Peru
20-24 per cent.	
Australia	Under 10 per cent.
Belgium	India
Canada	Korea (South)
Denmark	(1953-57)
Ireland	Philippines

The publication of the Yearbook (containing 283 pages and priced at \$2.50) is in response to the growing demand by Governments and private bodies alike for integrated statistical information relating to the structure and changes of individual national economies. The present issue contains many statistical measurements relating to the economies of 78 countries and territories, including detailed estimates of the composition of national expenditure and income: the product by source of industry; investment by type of capital goods, industrial use and purchaser; the financing of investment; the composition of personal consumption; the accounts of households and general government. There are also estimates of the balance of payments with the rest of the world. In order to facilitate country comparisons, the estimates for most countries are set out in standard tables and conform to the international definitions in this field. The tables are documented with explanatory notes and source information.

LONDON LETTER

ECONOMICS AND THE ELECTION

ELECTORATE TREATED IN A CHILDISH FASHION

(From Our Own Correspondent)

LONDON, 12th September

THE Labour Party have estimated their chances in the coming Election at winning or losing 50 seats either way; their agents are on the whole highly confident and say they will win, provided they can get all their supporters to the poll. But they know that they are fighting the Election on about as difficult a ground as possible—for a party whose main distinction is originality in facing economic problems it is awkward to have no outstanding economic problems to face.

Production is rising steadily and with it employment. Foreign affairs are quiet, with the Government able to take credit for a steady move towards a Summit conference. There has been and still is a fine summer to maintain a spirit of optimism. Agriculture is prosperous and not smarting under any adverse price review. And the stock markets are booming to show their confidence.

The issue is being presented to the electors by the Tory Party as one between controls and free enterprise. For months now, the steel industry (denationalised) has been spending money on advocating the merits of private enterprise. But the Government Party know of course that nationalisation—except for steel which is a matter of principle—is no longer a Socialist platform plank; they know that the foreign policies of the two parties are almost identical. They know that the Labour Party has no objective in applying controls to industry, unless there is any economic crisis to face (and the Radcliffe Committee was satisfied that controls other than monetary had a part to play in time of crisis) and that indeed the heaviest blow against free enterprise which a Labour Government might strike would be at the expense accounts of business firms!

Less Impressive

The Government Party have also got a programme on welfare, youth and education. But, in this, they are less impressive than their rivals who have been studying these matters for a great deal longer. They are also helped by the fact that public opinion has, as a result of recent unofficial strikes, tended to turn against trade unionism and the Labour Party naturally suffers from its associations with Trade Unions as a result.

In these circumstances, it is somewhat surprising that the Government Party should not stick to its initial advantages, but should stoop instead to a policy of denigrating its rivals. Quite unworthily, it has tried to make them out as villains bent on controlling people's private lives simply for the sake of being officious. In doing this, the Tory Party may be making a mistake which could conceivably cost it the Election. It will be remembered that, when, in 1945, Mr. Churchill, as he then was, suggested that the Labour Party was Gestapo-minded, he swayed masses of voters against him. The same could happen again, because, in spite of the childish manner in which the British electorate tend to be treated by newspapers and radio, they are a good deal more adult than they are given credit for, and, if a serious issue is in the air, they like to see their leaders take it seriously.

The Labour Party is, of course, aware, and so indeed are the Unions themselves, that irresponsibility by Union members can give a bad name to the whole Union movement by irritating a public who are put to inconvenience as a result. The Unions have indeed just decided to co-ordinate their industrial policies, so that they should appear to have a more common and comprehensible policy, but this action will not, of course, be in time for the Election. Labour, who rely not only on getting the maximum number of its supporters to the poll, but on the sound, if slightly unambitious, social programme which it has put forward. If the Tory publicists overplay their hand, they will make the uncommitted public suspicious and Labour could then win.—All Rights Reserved.

AMERICAN LETTER

STEEL STRIKE CAUSING ANXIETY WILL GOVERNMENT INTERVENE?—INTEREST RATES GO HIGHER

From Our Special Correspondent

NEW YORK, 10th September

TWO events and developments dominate thinking in the United States at this writing. One is the steel strike and the other President Eisenhower's trip abroad and the visit of Premier Nikita Khrushchev of the Soviet Union.

One thing is certain, the steel strike will not be over before 15th September, although the Governors of six States of the U.S. have sent a petition to President Eisenhower for Federal intervention. The joint paper argues that the walk-out has produced serious repercussions in the six States, economically, and that an end of the strike, presumably at whatever price, will be in the national interest.

Steel management was afraid of such an intervention right along. Under previous Administrations in Washington, interventions were made by both Presidents Roosevelt and Truman and always at the expense of management and in favour of labour so far as the final results were concerned.

There may be a mild prodding from the White House this year, too. But the setting is different. There is determination by the Government leaders and by managements to stem inflation. As stated in previous despatches, foreign steel competition has had a field day during the two months' old strike.

Indeed some of the domestic and foreign markets of the U.S. steel industry may be lost permanently as a result. This could have profound implications on employment in the long run. Unfortunately, labour leaders do not see that far ahead. They are merely concerned with securing immediate advantages for their membership which will keep them in their well-paid jobs.

Labour no longer enjoys its favourable position of yesteryear. Senate investigations have brought out abortive practices and abuses on the part of some labour leaders of trade union funds. As a result, a strong and constructive labour reform Bill is finally emerging in the present session of Congress.

Labour Leaders' Threat

Those who are subject to reform by law are, naturally, never happy about it, be they the oil companies, public utilities, the stock exchanges or the labour unions. But trade union leaders at this time are most intemperate in their reaction to the new law. They are attempting to brand the new Bill as a killer law, punitive and anti-labour. In fact, they are threatening to go all out to purge every member of Congress who voted for it.

This battle-cry of the trade union leaders is an old one. But the fact of the matter is that the labour leaders have never been able to "deliver" the votes of their membership on election day. In free and secret elections, the voter in a closed booth votes precisely as he or she wants regardless of statements or forced promises he may have made previously. Otherwise, President Eisenhower would never have been elected nor re-elected.

It is an irony that, in the middle of all these labour disturbances, most of the important trade union leaders have announced their refusal to meet with Premier Khrushchev when he gets here on 15th September. It could be most instructive for the Soviet leader if he would meet with them and see their "capitalistic" ways of life based on salaries of, say, \$50,000 a year plus lots of "fringe benefits." There is considerable opposition from other quarters also to the Soviet visit here. No doubt, there will be all sorts of demonstrations, displaying sympathy for the enslaved nations behind the Iron Curtain and their dead victims.

In the meantime, the psychological success of President Eisenhower's visits at Bonn, London and Paris have been a tonic to American nerves and to those in N.A.T.O. countries. Perhaps, the President's warm receptions were due, in part, to his previous role as liberator of Europe, but they were extraordinary, nevertheless.

So far, President Eisenhower's request for elimination or increase in the 40-year-old ceiling on interest of Treasury securities maturing in five years or more, has been side-tracked in Congress. It is not likely to be considered in this session. This will make it necessary for the Treasury to place more emphasis again on short-term financing, which is more inflationary than long-term issues.

Otherwise, a summer lull prevails in the U.S. economy superimposed on the steel strike. It has been extremely hot and humid in most parts of the country. Retail sales have been off, but the tourist and vacation businesses have been booming. Manufacturers' sales were down, but construction awards in August were 51 per cent. ahead of last year.

In closing, it may be interesting to note that an international graphic arts exhibition has just opened at New York. The last such show was held in 1950 at Chicago. The exhibits cover technical advances such as more speed, better appearance, more colour, improved pictorial reproduction and a host of other improvements.

Some 150,000 persons linked in one way or another to the graphic arts industries are in attendance here.

Printers are seeing new marvels in electronic methods of printing, in the use of film, in advanced techniques of typing on tape here and printing there.

Shown also are new methods in colour engravings, speedy production of a printing plate from a photograph and other methods unheard of even a few years ago. Among the innovations is a new high-speed type setting machine which is tape-operated and has no keyboard. The U.S. printing and publishing industry turns out products valued at more than \$10,000 million a year not taking into account the value of advertising. Some 40,000 concerns are engaged in the craft here.—All Rights Reserved.

*Since this report was written and despatched, the discount rates of seven Federal Reserve Banks have been raised from 3½ per cent. to 4 per cent., the highest level since early 1932.

Announcement

Consequent on the enlargement of the scope of their business, T. I. Cycles of India Limited will, with effect from 16th September 1959, function in the name of

TUBE INVESTMENTS OF INDIA LIMITED

at No. 52/53 Jehangir Street, Madras 1

Tube Investments of India Limited are the Proprietors of the following units which will function separately:

T. I. CYCLES OF INDIA
Manufacturers of cycles and cycle components

TUBE PRODUCTS OF INDIA
Manufacturers of ERW Steel Tubes and cold rolled strips

THE WRIGHT SADDLES OF INDIA
Manufacturers of cycle saddles

RURAL CREDIT AND CO-OPERATION RESERVE BANK'S CONTRIBUTION IMPRESSIVE

THE Reserve Bank of India has certainly been acquitting itself creditably in playing the crucial role assigned to it by the Rural Credit Survey Committee in December 1954, in regard to rural credit and co-operation. The magnitude of the Bank's accommodation to the co-operative sector, according to the annual report of the Reserve Bank's Central Board of Directors for 1958-59, has risen substantially, the aggregate outstanding short-term advances at the end of June last being as much as Rs. 56.27 crores, as against Rs. 8.57 crores five years before (end of June 1954). Apart from meeting the growing short-term needs of the co-operative sector, the Bank has made a significant contribution to the formulation of schemes for the reorganisation of the co-operative credit structure in the different States. Further, the Bank has been spending much money and effort on the training of co-operative personnel which, as is well known, is one of the most effective ways of ensuring the success of the co-operative movement. Viewed thus, there is no exaggeration whatever in the epithets "active" and "constructive" used by the Board to describe the Reserve Bank's work in the development of co-operative movement.

A brief reference may first be made to the financial assistance rendered by the Reserve Bank to foster the development of co-operatives during the year ended June 1959. In that year, the Bank sanctioned loans amounting to Rs. 5.92 crores (as against Rs. 6.04 crores in the previous year) from the National Agricultural Credit (Long-term Operations) Fund to 13 State Governments, in order to enable them to contribute to the share capital of co-operative credit institutions; of this amount, Rs. 5.74 crores (Rs. 5.83 crores in 1957-58) were actually availed of. The amounts to the credit of this Fund and the National Agricultural Credit (Stabilisation) Fund as on 30th June 1959 stood at Rs. 30 crores and Rs. 4 crores, respectively, after the fourth annual contributions of Rs. 5 crores and Rs. 1 crore were made to them from the Bank's profit for 1958-59.

Agricultural Credit Rises

The year under review witnessed a further increase in the volume of credit provided by the Reserve Bank to State co-operative banks for financing seasonal agricultural operations and marketing of crops. Eighteen State co-operative banks were sanctioned credit limits to the tune of Rs. 65.43 crores which compared very favourably with Rs. 48.24 crores sanctioned to 16 State co-operative banks in 1957-58. The interest charged continued to be at the concessional rate of 2 per cent. below the Bank rate of 4 per cent. In addition, credit limits aggregating Rs. 3.06 crores granted to a bank in the previous year were also operative for 1958-59. Following the continued large-scale financial assistance thus, the outstandings of Reserve Bank loans to State co-operative banks stood substantially higher at Rs. 56.27 crores at the end of June 1959, as against Rs. 40.47 crores a year before and Rs. 23.32 crores two years before.

The following are the details of the other specific types of credit given by the Reserve Bank to co-operatives:

Co-operative sugar factories: A credit limit of Rs. 2 crores was sanctioned to the Bombay State Co-operative Bank at the Bank rate for meeting the needs of working capital of six co-operative sugar mills. The Bank drew only Rs. 60 lakhs for financing two sugar co-operatives. The loans were fully repaid during the year itself.

Medium-term loans: Nine State co-operative banks were sanctioned, at the concessional rate of 2 per cent. below the Bank rate, medium-term loans out of the National Agricultural Credit (Long-term Operations) Fund, amounting to Rs. 4.52 crores, as compared with Rs. 7.72 crores sanctioned to 12 State co-operative banks in 1957-58. From the same Fund, the Kerala Co-operative Central Land Mortgage Bank was sanctioned for one year a loan of Rs. 16.47 lakhs at Bank rate against the guarantee of the State Government to enable the bank to pay off the debenture-holders of the former Travancore Credit Bank (under liquidation) whose assets and liabilities are being taken over by the Kerala Co-operative Central Land Mortgage Bank.

Rural debentures: The Reserve Bank made up the shortfall in public subscription to the extent of about Rs. 24.0 lakhs, Rs. 19.5 lakhs and Rs. 2.0 lakhs, respectively, in the case of three issues for Rs. 50 lakhs, Rs. 35 lakhs and Rs. 5 lakhs made by the Saurashtra, Andhra and Orissa Central Co-operative Land Mortgage Banks.

Weavers' co-operative societies: Credits aggregating Rs. 2.79 crores were sanctioned to 12 State co-operative banks at 1½ per cent. below the Bank

rate for financing the production and marketing activities of weavers' co-operative societies.

Commercial transactions: Rs. 90 lakhs were sanctioned to two co-operative banks at the Bank rate for financing bona fide commercial or trade transactions.

The Reserve Bank also endeavoured to assist the progress of warehousing and other related aspects of credit and marketing. It exempted, for instance, the advances given by scheduled banks against warehouse receipts issued by warehouses of the State Warehousing Corporations from the purview of its directives restricting advances against foodgrains, as well as the advances against pledge of warehouse receipts of the Central and State Warehousing Corporations from the directive restricting advances against groundnuts.

Field Studies

With a view to examining the pattern of the present sources and use of funds by urban co-operative banks and their working, a study covering a sample of 100 urban banks spread over 10 States and one Union Territory was undertaken jointly by three departments of the Reserve Bank, namely, the Agricultural Credit Department, the Economic Department and the Department of Statistics. The field work was completed by the middle of March 1959 and the report is under preparation. Field studies such as those of credit needs of the coir industry in Kerala and the leather industry in Agra, which the Reserve Bank undertook in pursuance of an arrangement reached with the Government of India during 1957-58, were made in respect of the leather industry in Madras and the fishery industry in Bombay, Kerala and Madras. The reports on these industries are under preparation.

The inspection of co-operative banks on a voluntary basis was continued during 1958-59, although the number of banks actually inspected was lower at 178, as against 240 in 1957-58. The fall is attributed mainly to two factors: (1) the special ad hoc inspections conducted in the previous year with applications for loans from State Governments for contributions to the shares of co-operative credit institutions; and (2) the preoccupation of most of the regional offices with the survey of co-operative urban banking. The total number of inspections carried out by the Agricultural Credit Department of the Reserve Bank upto June 1959 was 618, of which Central Co-operative banks alone accounted for 545. Four new regional offices of the Department were opened (at Indore, Patna, Lucknow and Bangalore), bringing the total number of such offices to eight.

Training of Personnel

The scheme for training of co-operative personnel made further progress during the year. In the various courses conducted by the Central Committee for Co-operative Training at its Regional and Block Level Co-operative Officers' Training Centres, 83 senior officers, 215 officers for co-operative marketing and 80 officers for land mortgage banking were trained during the year. In addition, 4,846 junior co-operative officers were trained in institutions which were run by the State Governments and were supervised, for purposes of grants-in-aid, by the Central Committee. With a view to effecting qualitative improvement in training programmes, the study of extension of methods and business management was introduced in the curricula of the training courses.

The foregoing account reveals that the contribution made by the Reserve Bank to foster the development of co-operative movement is quite impressive. Nevertheless, some doubts are expressed in certain circles as to whether the pace of expansion of agricultural credit through the co-operative system can remain the same as in the last few years, because of the changes suggested by the National Development Council in regard to the degree of viability of the primary unit and the extent of its owned funds, both of which are important considerations from the point of view of lending institutions. This is indeed a very pertinent question and the Reserve Bank's Central Board has done well to raise it. Although the question has been debated upon fairly extensively in the Press and on the platform for quite some time now, no final decision has so far been taken. The Board hopes that "satisfactory solutions will be found for enabling the co-operative credit structure, with the help as far as appropriate to the Reserve

Bank, to play its due part in the provision of short-term and other credit for agricultural production and marketing." And it rightly stresses that "if the Reserve Bank's role in this context is to continue to be as significant and progressive as in present, it will be necessary to ensure that loans are, in fact, utilised for production, fully recovered and promptly paid back."

SUPERVISION AND REGULATION OF BANKS

There was a notable acceleration in the pace of inspection of commercial banks by the Reserve Bank of India during the twelve months from July 1958 to June 1959, as compared with the preceding twelve months. The actual number of inspections was 66 scheduled banks and 251 non-scheduled banks, as against 48 and 122, respectively, in 1957-58. After examining the comments of the banks concerned on inspection reports, the Reserve Bank called for monthly progress reports from 171 banks in respect of the rectification of defects pointed out to them and asked 144 other banks to submit quarterly reports in this regard. Wherever necessary, it also invited the representatives of banks concerned for informal discussions, with a view to bringing to their attention the more important defects in the working of their institutions and impressing upon them the need for taking expeditious steps to improve their affairs. Again, the Reserve Bank issued suitable conditions and directives in cases where the findings of the inspection called for a stricter control over the affairs of banks; at the end of June 1959, 18 scheduled banks and 28 non-scheduled banks were working under such conditions and directions.

Five more banks held licences during the year, the total number at the end of the year being 62. The deposits of these 62 banks, together with those of the State Bank and five State-associated banks which do not require a licence, account for about 94 per cent. of the total deposits of all scheduled Bank refused licences to 12 small banks during the year, bringing the total number so far refused licence to 129.

WORLD BANK REPORT ON THAILAND ECONOMY

In its report entitled *A Public Investment Programme for Thailand*, just published, a World Bank General Survey Mission has stressed that increased revenues and improved economic administration would be required if the growth of real output of the Thai economy were to be maintained at the "satisfactory" average annual rate of about 5 per cent. for the period 1952-58. The Mission has recommended a programme which is designed to be flexible enough to meet changing world conditions, of Thailand achieved in the past. In its opinion, the increased size of public investments, especially in power, agriculture and education, now requires a more co-ordinated allocation of priorities, a concerted effort to obtain more resources and a more careful husbanding of natural resources.

The report of the Mission was presented to the Thai Government in March 1959, following a year's research by it in that country. Several of the Mission's recommendations have already been implemented. Of these, the most important ones relate to the establishment of the National Economic Development Board and the formulation of a new policy for attracting foreign capital to investment in industry which has met with initial success. The National Economic Development Board, established in August, co-ordinates development proposals into a pattern designed to maximise growth. During its stay in Thailand, the Mission carried on its work in close association with an ad hoc Planning Committee and its staff appointed by the Thai Government. The group of Thai officials who had this planning experience are now associated with the Development Board.

The report is the sixteenth prepared under the sponsorship of the World Bank at the request of as blueprints for development; rather, they describe the essential characteristics of the economy and define the direction of maximum growth and the suggested order of investment priority.

REFINANCE CORPORATION

The Reserve Bank's annual report for 1958-59 gives up-to-date information about the progress of the Refinance Corporation, which was registered on 5th June 1958. Its account is worth reproduction here, as many banks will be interested to know about the Corporation's working:

"The Refinance Corporation started receiving applications only from September 1958, the initial two months or so being taken up with essential preliminaries, including the issue of share capital, settling the procedure for the provision of refinance to member-banks and entering into agreement with the Government of India for obtaining loans from the U.S. counterpart funds. The current resources of the Corporation amounted to Rs. 7.50 crores, comprising its paid-up capital of Rs. 2.50 crores, and a loan of Rs. 5 crores granted by the Central Government. Upto 30th June 1959 the Corporation had received 14 applications for refinance from five member-banks for a total sum of Rs. 31.3 lakhs, cotton textiles, cement, ferro-manganese, chemical chemicals, acids and pharmaceuticals, pharmaceuticals, electrical manufacturing and engineering. Of these, 13 applications for an amount of Rs. 304 lakhs, representing 98 per cent. of the amount applied for (that is, Rs. 309 lakhs) were sanctioned. The remaining application for a sum of Rs. 6 lakhs was under consideration. Out of the sanctioned amount, a sum of Rs. 50 lakhs was disbursed to two member-banks in respect of applications from the ferro-manganese industry."

KALINGA TUBES

FIRST TO MANUFACTURE
STEEL TUBES AND PIPES IN INDIA
NOW FIRST TO EXPORT

We take pride in announcing that we are entering the highly competitive International Market and have commenced exports of our water and gas tubes to East and West Asian countries.

Our immediate target is to build up total exports to the value of Rs. 5 million in the first year and we hope to beat the Rs. 10 million mark next year.

Quality guaranteed comparable with the best pipes and tubes produced anywhere in the world.

RAISING EFFICIENCY OF COTTON MILLS WORKING GROUP TO SUGGEST STEPS FOR EARLY AND THOROUGH MODERNISATION

AS was briefly mentioned in these columns last week, the National Industrial Development Corporation (N.I.D.C. for short) has appointed a Working Group, with Mr. D. S. Joshi, I.C.S., Textile Commissioner, as Chairman, to recommend measures for "an early and thorough modernisation" of the cotton textile industry. The terms of reference of the Group are three-fold: (1) to examine the extent of finance necessary for modernisation, with particular reference to the assessment of the portion of foreign exchange required and the quantum of finances which will be forthcoming from the industry itself; (2) to indicate how the balance of the needs may be met from public or private financing agencies; and (3) to consider the question of augmenting the resources of public financing agencies like the N.I.D.C. Incidentally, the Group may send out some of its members to visit countries such as the U.K., the U.S., Japan and Switzerland where the progress towards modernisation of cotton textile industry has been remarkable. The Group, it is said, will complete its work by 30th November next.

The findings of the Working Group and the decisions taken thereon by the N.I.D.C. will greatly influence the future of the Indian cotton mill industry. Although the need for modernising this industry has been felt and emphasised for quite a long time now, the actual pace of progress continues to be disquieting, thanks to the none too happy financial position in which most mills find themselves, the shortage of foreign exchange required for purchasing the requisite machinery and equipment, and the unhelpful official policy. A large majority of the machines in existence today was installed more than forty years ago and the machines have outlived their usefulness. If these machines are not replaced at an early date, the effect, as the Textile Enquiry Committee (1958) clearly warned, would be felt, as it has been felt in the case of marginal and sub-marginal units in the form of low production, bad quality of products, unemployment to large numbers of workers, and high cost of production.

Need Most Urgent

Never before in the history of the textile industry was the importance of modernisation so urgent as it is today. In the face of the growing competition in the world textile markets, especially from Japan, Hong Kong and China which have thoroughly equipped themselves with up-to-date productive equipment in their cotton mills, India cannot certainly afford to keep quiet. Britain has already taken the lead in this direction by introducing an integrated scheme for transforming its cotton industry into one of the most efficient in the world. India must join the battle for markets by enhancing the competitive capacity of the industry through modernisation. The need for modernisation is no less imperative from the point of view of stimulating domestic consumption also.

The need for ensuring speedy rehabilitation of the cotton mill industry with a determined effort during the next Plan period was forcefully urged by Mr. Manubhai Shah, Union Minister for Industry, while speaking at the inaugural meeting of the Working Group on modernisation held in the City on the 6th inst. Mr. Shah called upon the Group to suggest concrete schemes and measures of assistance, special attention being paid to the foreign exchange requirements. He visualised that some kind of "block assistance" might have to be sought from abroad, without impinging the Plan resources. He wanted an "automatic device" to be introduced by which flexibility is obtained by the industry looking after its rehabilitation and modernisation without outside assistance. It is, however, not clear what, exactly, is meant by this suggestion. He, however, gave the welcome assurance that the Government and the N.I.D.C. would approach the problem with utmost sympathy, so that the profitability of the industry was not unduly impaired by the burden of financial assistance.

The Industry Minister made a special reference to the indigenous textile machinery manufacturing capacity and said:

"The Group must study the problem in all its aspects, so that the textile industry may be dovetailed with the future requirements, and the foreign exchange component for rehabilitation and replacement is progressively reduced. The Group

has also been entrusted with the work of examining the economic size of a textile mill which may be fixed in the context of the developments which have taken place and are taking place in the set-up of the textile industry elsewhere in the world. I hope that it (the Group) will make positive recommendations in regard to this aspect, considering the need for stepping up the capacity wherever it is less than the optimum."

Mr. Shah dealt with the question of closed mills in the country, some of which are found not worth reviving. He drew the attention of the Group to study this problem as part of its general lines of inquiry and suggest measures, including legislation as might be necessary, to solve the problem.

At its first meeting, the Working Group finalised a self-contained questionnaire covering the various points on which detailed information is required from individual textile mills and their associations, including the Indian Cotton Textile Mills Federation.

As regards the assistance rendered by the N.I.D.C. to the cotton textile industry, although nearly five years have elapsed since the N.I.D.C. came into being, the actual amount of loans sanctioned to mills so far has been only a few crores of rupees, as against the industry's colossal rehabilitation requirements of Rs. 400-500 crores. The Working Group will do well to find out the causes responsible for this poor rate of assistance by the N.I.D.C. and suggest the means by which the rate can be raised substantially. Further, the cotton mills should be enabled to have annual surpluses from which they can raise their own finances or pay the instalments due on loans. Such surplus can be ensured, as this journal has stressed on more than one occasion, only through a more helpful fiscal policy and a proper adjustment of wages to productivity.

SOVIET TEXTILE INDUSTRIES

Soviet Russia would be producing by 1965 over 11,592 million yards (10,600 million metres) of cotton, woollen and silk textiles per annum, excluding knitted fabrics, as against the present output rate of 7,655 million yards (7,000 million metres). If the expansion programme now undertaken were successfully implemented, the projected rise of nearly 4,000 million yards, cotton cloth will account for 2,187 million yards, the balance being the shares of silks and woollens. The estimated production of woollen cloth in 1965 is put at about 5,468 million yards, which, it is claimed, will represent a rise of 80 per cent. as compared with the current annual rate of output in the U.S.

The production pattern of the different textile products is expected to undergo a change in the next seven years. Thus, according to Mr. V. Dikov, the share of artificial fibre will register a steep upward curve. The output of textiles manufactured from a mixture of cotton and artificial yarn will go up sixfold. Nearly all the silk and wool manufacturing industries will be using viscose, kapron and other synthetic fibres. There will also be production of unweaved textiles based on the ability of chemical fibre to glue to natural fibre. New trends of textiles which are cheap, washable, unfading, unshrinkable and waterproof (when necessary) will appear in the market. The majority of thirty textile mills to be established will specialise in the manufacture of staple textiles for suits, a new kind of synthetic fabrics "which are just as good as woollens but cost only one-third or one-fourth."

The development programme for textile industries lays special emphasis on the improvement of equipment at enterprises already in operation through installation of highly efficient looms, mechanisation of production processes, and automation of spinning and finishing operations. To quote Mr. V. Dikov:

"Spinning automatic transfer machines will be used; all processes of loosening, scutching, hackling and roving will be done automatically. Such a transfer machine, consisting of 78 units, is being installed at a factory near Moscow. Cotton to another until it comes out as finished product. The system of spinning will be shortened. Scutching and hackling will be done in one unit which will be part of an automatic transfer machine. The finishing of textiles will be done in stream-line fashion with automatic control of manufacturing processes and continuous bleaching and dyeing. Automatic processes will be introduced into the manufacture of silks including cocoon-reeling."

"New ready-made clothes factories will be built, especially in Kazakhstan, the Urals, Siberia and the Far East. The gluing method of making garments will be introduced. Garments will be made quicker and cost less."

With the setting up of new textile mills, reconstruction of the existing units and introduction of latest technical devices, the per capita output of textiles (including knitted fabrics) in Soviet Russia will reach 61.24 yards (56 metres), as against 43.74 yards (40 metres) at present. Before the Revolution (1917), Russia was producing annually only 2,734 million yards of textiles or a per capita output of 20.34 yards (18.6 metres).

A NEW BULKED FILAMENT YARN

The Imperial Chemical Industries (U.K.) has just concluded an agreement with Cheslene and Crepes of Macclesfield to purchase the British patent rights of an entirely new bulked filament yarn to be trade-marked Crimplene. The agreement includes the right to license the use throughout the world of yarns made by six British processors licensed by I.C.I. to produce Crimplene. It is said, is a completely new development particularly suited to the manufacture of bulked yarns made from terylene polyester fibre and, on products where the process is applied to mark of Crimplene. The new yarn, we are told, combines a high degree of bulk with an exceptionally low degree of stretch, which makes it the ideal material for home-knitting wool and for use in hand knitted fabrics. The yarn is specially designed for use in the production of garments made from Crimplene will be soft, warm and easy to wash—even in a washing machine, without the problems of felting, shrinking and loss of shape. Terylene, can be dyed to any shade and is moth- as a singles yarn or circular and warp knitting, the production of new types of woven fabrics will be possible in the near future.

BENGAL-NAGPUR MILL

The Bengal-Nagpur Cotton Textile Mill at Rajnandgaon in Madhya Bharat has closed down with effect from the 5th inst. resulting in unemployment to about 3,000 workers. The closure is attributed to the loss of Rs. 1.5 lakh suffered by the Mill every month. The management had requested the State Government to permit a reduction of 22½ per cent. in the wages of workers as a condition for running the Mill. But the Government pointed out that it could not be a party to a cut in wages without any enquiry or without amicable settlement. It had accordingly advised enquiry by the Union Government. The advice was of no avail.

The Centre is expected to constitute a committee shortly to investigate the financial and economic position of the Mill. Disclosing this the fact that the Government would have to await the report of the committee before deciding on the next issue.

The steps necessary to ensure adequate supply of woollen yarn to hosiery industry were discussed by the Textile Commissioner with the representatives of the Woollen Yarn Manufacturers' Association at Bombay recently. The general trend of the production of different types of yarn was also reviewed at this meeting. It was decided that, although it was not possible to augment the supplies of woollen yarn for hosiery by importing additional quantity of raw material on account of shortage of foreign exchange, the supply of larger quantities of yarn could be ensured to this industry by requiring the centage of the various kinds of yarn out of the imported raw material made available to them.

TWO-THIRDS OF SPINDLES AND LOOMS TO BE SCRAPPED OUT OF USE NO REDUCTION IN EMPLOYMENT STILL

From A Special Correspondent

MANCHESTER, 8th September

AN assurance that the Lancashire cotton trade would still be able to provide employment for large numbers of workpeople, in spite of the drastic scrapping of machinery planned under the Government's £30,000,000 reorganisation scheme, has been given by Lord Rochdale, Chairman of the Cotton Board. Commenting on statements which he said, "seriously exaggerated" the effect on employment of the scheme, he declared: "About two-thirds of the number of spindles and looms to be scrapped are already out of use and, to this extent, no reduction in employment should result. In other cases, many of the people displaced will be found employment in other mills belonging to the same firm. The output of the industry I am glad to say, shows every sign of continuing to increase, and I sincerely believe that the demand for labour will be such as to provide work for most of the remainder in an industry whose prospects are better now than they have been for a long time."

MANCHESTER LETTER

In the four days since the end of the 5 per cent. bonus offered to millowners submitting machinery for scrap, there were no further applications, the Special Committee of the Cotton Board, dealing with the scheme announced at the end of last week. As anticipated, the rush to register plant for disposal has been halted and it is not expected that large quantities of machinery will be added to the list during the rest of this month, although the scheme is still open for applications until 30th September. The Committee does not intend to make any further announcement before that date, unless there is a substantial change in the figures. By the end of August, plans had been submitted for the scrapping of 12 million spinning spindles, 95,500 looms and nearly 500,000 doubling spindles.

In True Perspective

Final details of the scrapping contemplated must await the completion of the schemes at the end of this month. It is obvious, however, that a large proportion of redundant plant has already been registered to secure the bonus offered during August. To put the current position in reasonable perspective, the amount of stopped machinery during the first half of the year must be borne in mind. Assuming for the sake of argument that all idle plant has been submitted for dismantling, the following position in the three sections emerges:—

In spinning: Mule equivalent spindles in place amounted to 24 million, of which some 16 million were running during the first half of the year. Stopped machinery, therefore, amounted to 8 million spindles and the scrapping programme indicates that 12 million spindles will be dismantled. The result is that the number of running spindles

to be scrapped aggregates 4 million out of 16 million—a straightforward 25 per cent.

In weaving: Looms in place numbered approximately 240,000, of which 179,000 were running, leaving 61,000 machines stopped. The latest scrapping figure of 95,500 indicates that 34,500 running looms will be dismantled out of 179,000—rather more than one-fifth of the trade.

In doubling: The number of spindles in place was 1,945,000 during the second quarter this year, of which 1,386,000 were running. Stopped machinery, therefore, amounted to 559,000 spindles, while the total registered for scrapping so far is slightly below 500,000 spindles. The doublers are thus the only branch in which the machinery offered for disposal is less than the plant already standing idle, but the revival in this section of the trade during recent months undoubtedly has a bearing on this situation.

The projected closing of mills in particular districts where employment is largely dependent on the cotton trade has stimulated cries for help and possible deputations to the Cotton Board. However sympathetic the sponsors of the scheme are to such appeals, the decisions have been made by the particular firms concerned. It should not be forgotten that workers who are displaced will receive compensation, whereas, both before and after the operation of the scheme, no such cash payment would be available except as a gift from the management.

Impact of Shifts

The full effect on the labour situation of what must be regarded as the "1959 revolution" in cotton cannot be forecast for several months at least. The response to shift-working both at union and mill level will have a considerable bearing on the outlook. Requests for the introduction of double-day shifts are being regularly submitted to the trade unions and some of the calls for labour indicate the intention of the employers to operate under these conditions.

The social changes caused by shift-work in an industry staffed mainly by women must be very considerable. With the challenge of a third shift on the horizon there are those who believe that the cotton trade of the future will not only be more compact, smaller and more efficient—but will gradually become more of a male preserve.

The experience of an electronics firm, which built a factory four years ago near Blackburn, is perhaps of interest in this connection. According to the *Board of Trade Journal*: "The company have been very satisfied by the adaptability of the labour they have been able to recruit in this traditional textile district. Work in the factory necessitates three shifts. Shift-work in this area of Lancashire was not common. The company found that, in the first few months of starting production, there was a large turnover of labour, due, in the main, to the difficulty for personnel to settle down to shift-work. In a short period, however, the labour force settled down and now labour turnover is very low."

More positive action by the Government to steer new industry to the cotton towns of North-East Lancashire, which fear a heavy increase in unemployment as a result of widespread mill closures under the reorganisation scheme, has been called for by leaders of the North-East Lancashire Development Committee. Alderman William Bannister, Committee Chairman, said that the number of mills which had decided to close down was greater than had been expected. It was now thought that redundancy among North-East Lancashire cotton workers in the next two years might range up to 50 per cent.

The district is already scheduled as a Development Area and a number of new industries with products as varied as television tubes and tyres are already established there or are in the process of establishing themselves. "Unfortunately, they have not been sufficient to meet the decline which has taken place in the number of insured workers," Alderman Bannister stated.

The meeting was called to announce the completion of a 50,000-word independent survey of prospects for the economic development of North-East Lancashire. This, it is hoped, will be valuable to industrialists in providing them with a completely impartial guide as to what they can expect, if they decide to set up factories in the area. Leaders of the Development Committee made it clear that they took the view that, since the Government is primarily responsible for the cotton contraction scheme, it must also accept responsibility for providing alternative jobs. Although the Committee wants more Government assistance in building new factories in the area, it also feels that many of the cotton mills soon to become empty, as the looms are stripped out could well be adapted to suit the needs of a range of light industry.

Shrinkage Problem

Because British people are taller and heavier today than 50 years ago, new sizing standards for industrial clothing are needed, according to a Working Party which has issued its report on Shrinkage Problems in Clothing. "The average height and weight of children leaving school has increased greatly since 1905," the report states. Marked differences arise between geographical areas and between occupations. Average height in the South-Eastern region and the North of Scotland is nearly an inch higher than in Lancashire, Yorkshire and Wales.

More people in the middle classes are using overalls for leisure wear, the report adds, causing a significant change in the average size of garments required. Among many recommendations to manufacturers, garment makers, distributors and laundries, the report urges the housewife to avoid complete drying of cotton clothes and garments in domestic tumble driers. This tends to increase shrinkage and the Working Party urges that articles should be taken out and ironed damp.—All Rights Reserved.

The All-India Handloom Fabrics Marketing Co-operative Society, Bombay, is currently running handloom emporia at Aden, Bangkok, Colombo, Kuala Lumpur and Singapore. The Society has been participating in overseas exhibitions and trade fairs, either directly or by supplying fabrics to the All-India Handloom Board, as well as in international trade fairs and exhibitions held in India. The Central Government has given the Society a loan of Rs. 10 lakhs towards working capital and a grant of Rs. 1.75 lakh, representing 50 per cent. of the establishment charges for running the emporia for one year.

FREE WORLD COTTON PRODUCTION CONSIDERABLE INCREASE IN PROSPECT

THE current cotton season, that is, 1959-60, may well mark the beginning of a new trend in the world cotton situation. During the last three years, considerable progress has been made in the liquidation of surplus cotton. Stocks, which on 1st August 1956 had reached a peak level of 22.1 million bales of 478 lbs., have now declined to 17.2 million bales made up of 9 million bales in the U.S., 4.7 million bales in net importing countries and 3.7 million bales in net exporting countries in the free world outside the U.S. With the passage of the Agricultural Act in the U.S. last year, which gives more freedom for farmers to produce cotton, it is thought world cotton may again be heading towards a situation of surplus.

According to the International Cotton Advisory Committee, Washington, production potential during the present season is by no means as great as many people thought. What is even more significant, according to it, is that any increase in production is likely to be offset to a greater or lesser extent by increased domestic and export offtake.

Acreage and production of cotton in the U.S. will no doubt be higher than in the last season. The September report of the crop reporting board of the U.S. Department of Agriculture estimates production during the season at 14.67 million bales which compares with 14.81 million bales estimated a month ago and last season's final output of 11.51 million bales. The yield per acre has been put at 470 lbs., as against 474 lbs. forecast a month ago and last season's yield of 466 lbs.

Yield in U.S. Higher

Acreage in several of the other major producing countries during this season is expected to be lower than in 1958-59. Preliminary estimate of acreage planted to cotton in Mexico this season is 1.8 million acres, as compared with 2.5 million in 1958-59. This reduction of 28 per cent. in acreage affects all the main producing areas with the exception of Laguna. Total production in Mexico is provisionally estimated at over 1.7 million bales, as against 2.34 million bales in 1958-59.

Cotton production in Central American countries is sensitive to price changes but, in common with other countries, where cotton is a relatively new crop, the investment already made in cotton seems to assure that cotton will continue to be an important crop in the seasons to come. In Nicaragua, cotton actually surpassed coffee last year as the major earner of foreign exchange and has increased in importance in El Salvador and Guatemala. Nevertheless, cotton production in these countries in 1959-60 is likely to be significantly affected by lower prices. In fine, there will be a sizable reduction in production in Central American countries even if there is some offsetting improvement in yield per acre.

Production in the Middle East is also likely to be somewhat lower in 1959-60 than in 1958-59. Preliminary estimates put acreage in Egypt at 1,827,000 acres, as against 1,877,000 acres in 1958-59. Area sown to Karnak has been cut by nearly one-half. In contrast, the area sown to the other extra-long staple variety, Menoufi, will in all probability increase. In the Syrian region of U.A.R., cotton plantings were damaged by unfavourable weather at the beginning of June but subsequently crop progress has been good. Cotton acreage in Turkey during recent years has been stabilised round 1.5 to 1.6 million acres and production potential depends, to a large extent, on the yield per acre.

India and Pakistan

Acreage in India is at the maximum, temporarily at least, and production, therefore, depends very much on what happens to yield per acre. As only 13 per cent. of the area under cotton is at present irrigated, production prospects are vitally dependent on the monsoons and weather conditions generally. Production in 1958-59, at 4.8 million bales, fell far short of the target of 5.7 million bales (400 pounds each) fixed under the Five-year Plan. The target for 1959-60 is 6.1 million bales.

The target for distribution of improved seed during 1959-60 is around 1.7 million maunds (82 lbs. each), as against 0.8 million maunds actually distributed in 1958-59. Some 69 per cent. of the total area was planted with improved seed in 1958-59. The Indian Central

Cotton Committee has introduced a scheme for seed multiplication and it is expected that, within the next five or six years, improved seed will be available for the entire country. The quantity of fertilisers planned for distribution in 1959-60 is 54,070 tons, as compared with actual distribution of 15,061 tons in 1958-59.

The adoption of plant protection measures is limited by the availability of equipment and chemicals. The use of improved agricultural implements, line sowing, spacing and time of sowing are some of the matters considered under the cotton extension scheme sponsored by the Government in order to increase the yield per acre.

Plan Target

The production target for the third Five-year Plan proposed 8 million bales by 1965-66 which is proposed to be achieved primarily by raising yield per acre. India is also aiming to become self-sufficient in longer staple cottons and in this respect work on several strains has shown promising results.

In Pakistan, the need to grow more food and existing irrigation facilities impose limits on any expansion in acreage and efforts to step up production are, as in India, concentrated on ways and means of increasing yield. In view of cotton's importance to this country both to supply the expanding needs of the local textile industry and as a major source of foreign exchange, steps have been taken to obtain a larger crop, including the sale of improved quality cotton seed and the continuance of the subsidy on the sale of fertilisers.

With about 90 per cent. of the total crop grown under irrigation, production in Pakistan is largely dependent on adequate water supply, particularly during planting time. Unfavourable weather during last season resulted in the

water-supply being inadequate and acreage and production were the lowest for several years. Reports on the 1959-60 crop, however, show that weather was favourable to sowing in June and planted acreage may, therefore, increase although floods have adversely affected the crop.

Total acreage in the Sudan this season rose to a record 886,000 with most of the increase occurring in the extra-long staple areas. The completion of the first phase of the Managil Extension added about 66,000 acres to the area under extra-long staple cotton with the balance occurring in the Gash and Tokar Deltas. The second phase, which is scheduled to be completed this year, will add an equal area, or slightly more, to the extra-long staple acreage. Under normal circumstances, the 1959-60 acreage could set a new record of over 900,000 acres. Completion of phases 3 and 4 of the Managil Extension, originally expected to be completed by 1960 and 1961 respectively, may be delayed for some time. A fundamental change in Sudan's production policy is likely to take place in 1960-61 when it is hoped that over 200,000 acres from the existing extra-long staple areas will be put under medium staple cotton.

In Uganda, acreage in 1958-59 rose sharply to over 2 million acres. To some extent this was offset by a reduction in yield per acre but production, nevertheless, was at a near record of 330,000 bales. The production potential of this country during the present season will probably be around 350,000 bales.

Acreage in Europe

In Western Europe, in recent years, roughly a million acres have been devoted to cotton and production is now of the order of half a million bales annually. In South America, too, output is likely to be higher. In Brazil, growers are switching over more to cotton and the Government is actively promoting cotton production to ensure adequate supplies to the domestic industry and increased export earnings. In Argentina, the situation is one of the shortage and a larger cotton crop in 1959-60 becomes imperative in

M/V JAG LAXMI

DE LAVAL OIL SEPARATORS...Keep oil clean and engines running smoothly

Even the highest grade of fuel oil contains large quantities of fine dirt, a considerable portion of which is of a very abrasive character and naturally causes excessive wear on fuel pumps and injection nozzles. If the oil contains water, this causes incomplete combustion and accumulation of soot on the exhaust valves.

The centrifugal separator is an ideal instrument for purification of oil as by means of centrifugal force, without affecting the composition of the oil it removes all free water and all impurities bigger than 2-3 microns and which are of such size that they can be harmful for the engines.

Centrifugal separation of oil is as a matter of fact so efficient that it is possible to use boiler oil as fuel for diesel engines

If the oil is properly purified in the De Laval Separator, giving a high saving of fuel cost.

For steam turbines which for continuous operation and ultimate life, entirely depend upon the efficiency of the lubricating system, De Laval Turbine Oil Purifier Units will maintain lubricating oil in perpetual first-class condition, so that it can be used indefinitely.

Also in diesel engines a continuous separation of the lubricating oil enables the use of the oil for a very long time without affecting the detergents in the oil and the separator installation is paid off in a very short time.

A complete range of spares for all types of De Laval Units are readily available from stocks in India.

SUGAR SITUATION IN SOUTH INDIA FRESH BID TO ENSURE MORE SYSTEMATIC DISTRIBUTION

CONSUMERS of sugar in the four Southern States of Andhra Pradesh, Kerala, Madras and Mysore must have felt gratified at the successful outcome of the discussions on sugar distribution held at New Delhi last week. The meeting was attended by the representatives of the Central and State Governments, as well as the South Indian Sugar Mills Association. Mr. B. B. Ghosh, Secretary to the Union Ministry of Food and Agriculture, presided over the meeting. The discussions centred round arrangements for a more systematic distribution of sugar in the Southern States. There was general agreement on the question that the monthly release of sugar produced by the factories in the four States should be equitably distributed among those States on the basis of past consumption figures. In order to ease the situation in Kerala, the Government of India agreed to make available 1,500 tons of sugar from factories in Uttar Pradesh for distribution in that State under arrangements made by the State Government. The Sugar Mills Association was urged to arrange for the retail distribution of sugar at fixed prices in Kerala and Madras, the respective State Governments exercising supervision over the distribution. The official spokesmen for Andhra Pradesh and Mysore gave the assurance that they would review the distribution arrangements in their areas and take steps to ensure proper supervision by their district officers. An important outcome of the meeting was the willingness of the Association to reduce the sale price of sugar by a rupee per bag.

The convening of the New Delhi conference was a sequel to the continuously upward trend of sugar prices in the four States, although the States taken together are self-sufficient in sugar in normal circumstances. Replying to a short-notice question in the Lok Sabha two days before the conference was held—that is, on the 4th inst.—Mr. A. M. Thomas, Union Deputy Food Minister, revealed that the total requirements of the four States were estimated at about 27,500 tons per month and that the Government had been releasing 28,000 tons per month. Normally, this release, the Minister said, should be sufficient to meet the requirements of all the four States. According to him, the South Indian Mills Association had represented to the Government that, in view of the increased demand, the monthly requirements would be something more than those indicated in June last, namely, 27,000 tons; the Association had, therefore, asked for additional allotment from the North. Mr. Thomas pointed out that the sugar position in the North was also tight. Replying to another question earlier, he admitted that there had been an increase in the price of sugar in Madras State. He attributed this increase to two factors: (1) hoarding tendency among both the sugar trade and the consumer, and (2) inadequate supplies from Andhra Pradesh. Asked as to what steps the Government proposed to take to check the price of country sugar and jaggery which had gone up because of sugar scarcity, the Minister declared that it was not possible to control the prices of country sugar and jaggery.

Sugar in Madras

The difficult sugar position in Madras figured prominently during question-hour in the State Legislative Assembly on the 4th inst. Two members asked the reasons for the sudden scarcity in sugar supplies, the sudden spurt in its price, and the steps taken by the authorities to make sugar available to consumers in sufficient quantities at a fixed price. The reply given by Mr. M. Bhaktavatsalam, Home Minister, reveals that there has been a fall of 10,000 tons in the production of sugar in the States of Andhra Pradesh, Kerala, Madras and Mysore. Owing to the imposition of the Sugar (Movement Control) Order, 1959, by the Central Government on 27th July 1959, the usual flow of about 3,000 tons from the North Indian mills has stopped. Further, the western regions in Andhra Pradesh are getting their supplies mainly from Bombay and this source is also not available to Madras now. Again, imports from Andhra have been curtailed on account of increased demand in that State. As a result of these factors, the price of sugar in Madras has gone up in recent weeks; an initial slight rise in the price has resulted in some kind of a psychological panic

which in turn has led to a further advance in price. The South Indian Sugar Mills Association has opened nearly 6,200 fair-price shops in the various districts of Madras State to make sugar available to the public at the fixed price of Rs. 1.63 per viss.

One of the Madras Assembly members raised a question as to what steps were being taken to establish new sugar mills. In his reply, Mr. Bhaktavatsalam disclosed that the Union Government had agreed to permit the starting of some more factories in the State. The State Government, he added, would investigate the possibility of setting up new mills either by private bodies or by co-operative agencies.

The need for expanding the production capacity of the sugar industry in Madras State is urgent. This State is deficit to the tune of 35,000 tons per annum. It may be noted here that, out of the expansion of 88,956 tons in the daily cane crushing capacity envisaged for the whole of India in the first and second Five-year Plans, Madras accounts for just 6,700 tons. This is being achieved to a great extent by the establishment of seven new units with a total cane-crushing capacity of 6,500 tons, the balance of capacity representing the expansion of the existing one unit. Of the new units, four are private or joint-stock companies and three are co-operative units.

With the completion of this programme, there will be in Madras 13 sugar mills together accounting for a daily cane-crushing capacity of 11,300 tons. On this basis and taking the duration of the crushing season as 170 (1957-58) days, and average recovery percentage as 9, the

annual rate of sugar output will work out to about 172,890 tons. The actual output in 1957-58 was only 67,961 tons. In other words, this means that not only the deficit in supplies (now about 35,000 tons) will be wiped out but there will actually be a surplus. If, in spite of this, the Government of Madras is anxious to have more sugar mills established in the State, it has perhaps in mind the expanding consumption of white sugar.

Before giving permission for the setting up of more sugar mills, the authorities will do well to take note of the poor quality of sugarcane grown in Madras. The average recovery of sugar in cane grown in that State has been very low—it was just 8.69 in 1957-58 as compared with the all-India average of over 10 per cent. and the recovery of 11.15 per cent. obtained in Bombay and 10.28 in Mysore.

"KHANDSARI" IN U.P.

The Central Government's decision to ban movement of *khandsari* from the U.P. to other States was criticised by some members in the U.P. State Assembly as having led to considerable hardship to producers. In his reply, the Chief Minister stated that the above decision was not final and that it might be modified. He, however, said that, even if the decision was not revised, there was little ground for the fear that the *khandsari* industry would face the problem of piled-up stocks. In support of this contention, he gave the following reasons:

Uttar Pradesh produces normally 6.85 to 8.14 million maunds of *khandsari* sugar annually, of which barely 900,000 maunds are exported from the State. According to an official estimate, the unsold stocks at the moment come to about 1.01 million maunds. There is no reason why this meagre quantity should lie unconsumed in a State which consumes annually 6.40 to 6.50 million maunds, particularly when *khandsari* sugar is cheaper than crystal sugar, the market rate ranging from Rs. 31 to Rs. 32 per maund, as against the minimum price of Rs. 36 for crystal sugar.

In view of this position, the Chief Minister pointed out, there was no cause for anxiety. He made it clear that the State Government was not considering any proposal to buy the unsold stocks of *khandsari* at a reasonable price.

Beginning with only a small machine shop in 1939, NSE expanded rapidly and today it operates three major engineering factories, each engaged in producing vital equipment, covering the gamut of the country's

developmental needs. Through engineering skill and technical knowledge garnered over the past two decades, NSE has earned the confidence of the various industries it serves.

Powai...
... a beehive of industrial activity!

Busy sounds fill the beautiful valley of Powai as L & T factories keep up with the ever-increasing national demand for industrial products.

Established in India many years ago, Larsen & Toubro Limited have developed from one of the country's leading suppliers of imported plant and equipment to manufacturers of machinery. Their range of manufacture extends from electrical switchgear to production of machinery and equipment for the dairy and refrigeration, chemical, pharmaceutical and food processing industries.

This machinery will meet the essential needs of many of our national projects & help save precious foreign exchange.

At Powai, near Bombay, Larsen & Toubro Limited have established a unique manufacturing and servicing organisation that is, today, as always, contributing vitally to the country's industrial development and progress.

THE DECLINING DOMINANCE OF COAL OIL IS BECOMING A MORE ATTRACTIVE FUEL

A DRASTIC reassessment of official forecasts of coal demand is now under way in Western Europe. In the U.K., the National Coal Board has reduced its forecast of domestic and export demand in 1965 to only 200-215 million tons from the previously foreseen 240 million. In France, coal production is to be cut back in favour of domestic (including Saharan) oil and natural gas. In Western Germany, the necessity for a long-term reduction in coal producing capacity is now widely accepted. And in Belgium, the concentration of production in the more efficient pits and at a lower level is being carried through.

This new view of the future for coal springs immediately from the sudden and quite unexpected change in its current supply/demand position during the past year or so. It had become widely accepted that Western Europe's indigenous coal production would continue to fall short of demand indefinitely, as throughout the post-war years. But in sharp contradiction of this view, in the past year or so, demand has been at lower levels than expected and has been lagging persistently behind supply (including some continuing imports). Pit-head stocks have risen to alarming proportions in each of the main producing countries and are likely to overhang the market for several years.

These developments in Europe have been paralleled to some extent in Japan. And even in the United States there was a sharp reduction last year in the demand for coal, which has only partially recovered so far this year. Together, the hard coal production of Western Europe, of Japan and of the United States constitutes practically 90 per cent. of the total output of all non-communist countries. The difficulties have been associated closely with the recent economic recession. And there has been until recently some tendency to assume that with the recession ended, there would be a swift recovery in the coal industries' fortunes.

Importance

However, coal demand is continuing to lag, despite the general economic recovery, whereas, on the other hand, demand for fuel oil continues strongly upwards. It would be a mistake, of course, to underestimate the potentialities of coal, especially where sufficient capital can be made available for extensive mechanisation and modernisation of production, handling and transport, to lower costs and increase output. Coal is still the biggest single source of energy if road transport is excluded. However, after the contraction of production capacity and mining labour now planned in Western Europe, it would be very difficult to initiate expansion again. And there are a number of factors at work which hinder any general expansion of demand for coal, while encouraging demand for other forms of energy, for the present mainly oil. One of these factors, incidentally, is the cumulative influence of example, which makes

E.C.S.C. and U.K.: Hard Coal and Fuel Oil Consumption and Coal Stocks

(c) Not available.
(d) Production + Imports — Exports + Stock changes.
(e) Inland.
(f) Inland excluding refinery use.

oil increasingly attractive because it is seen to be benefiting those already using it. We seem, in fact, to be witnessing a structural change which will leave coal with a permanently smaller role in meeting our energy requirements. If imported liquid methane also becomes available cheaply in Western Europe, Japan and elsewhere, this will add significantly to the competition facing local high-cost coal. And a further new competitor is in the offing when atomic energy ultimately becomes available at low costs.

It is significant that, during the recent recession in Europe, the demand for fuel oil continued to grow rapidly, with the exception only of the bunker trade. Thus, inland consumption of heavy fuel oils in Western Europe as a whole, excluding refinery use, jumped last year

by eight million tons or nearly 20 per cent. By contrast, the aggregate consumption of hard coal in the Community countries and in the U.K. dropped by 43 million tons or about nine per cent. This continued increase in demand for fuel oil reflects the well-known fact that in a very wide range of uses, consumers are turning to oil rather than coal. The effect of this is that in a trade recession the plants most likely to be kept in full use, because they are the most modern and efficient, are frequently oil-fired plants. Likewise, if a new installation is made despite the recession, the odds are that oil-fired or dual-fired equipment will be installed. Thus even in recession, the attractions of fuel oil carry it forward at the expense of coal in continuation of the trend of many years past.

Remarkable Contrast

Over the past 20 years or so, the contrast between the growth of fuel oil and of coal is remarkable. Since 1938, the consumption of hard coal in the non-communist countries other than the U.S.A. has remained virtually static in the neighbourhood of 700 million metric tons. But, over this same period, the consumption of fuel oil in these countries, including ocean bunkers—a market from which coal has been virtually ousted—has quadrupled. It rose from 33 million metric tons in 1938 to nearly 149 million last year (excluding refinery use; including bunkers loaded at U.S. ports). The aggregate market outside the U.S.A. for coal and fuel oil together, in terms of coal equivalent, rose during the 20 years by some 20 to 30 per cent. Thus, if fuel oil had continued to meet only the same proportion of demand as in 1938, its sales too would have grown by only 20 to 30 per cent., that is by about eight million tons, as compared with the actual increase of 116 million.

The advance of fuel oil has occurred, despite the fact that, from the producer's point of view, it is a low-priced product and that, except in periods of surplus, refiners have not been overanxious to promote its growth. The growth has come about through the inherent advantages of the product itself, which in Western

Europe has been coupled in recent years with growing competitiveness. It is significant that, in the U.S.S.R. also, where primary reliance has hitherto been placed on coal, a rapid switch is now being made to oil and natural gas. In the United States, the picture is somewhat different, because coal is so much cheaper than in Europe and in most other coal producing regions. But, in the United States, coal has had to face very severe competition—as also has oil—from cheap natural gas. U.S. coal consumption has fluctuated widely during several decades without so far establishing any persistent upward trend. Last year, at 350 million metric tons, it was lower than in any other year in the past 38 years, with the exception only of two years during the slump of the early 1930s.

The stagnation of coal demand almost everywhere in contrast to the progress of oil is due mainly to basic physical differences between solid and liquid fuels. Oil is produced by natural energy or by very highly mechanised means—pumping, injection of fluids, etc. As a liquid, it is more easily handled than coal at all stages of production, transport and distribution, right through to the time of its final consumption. Skill, knowledge and much capital are needed, but comparatively little labour. Coal, on the other hand, demands much dirty, dangerous physical effort underground, followed by labour-consuming handling through to its final consumption. Modern labour-saving devices have reduced the labourious element in coal recovery and handling, but the fundamental differences between a solid and a liquid fuel remain. The coal industry is essentially labour-intensive in an age when labour costs are rising relatively to costs and prices generally, and when it is becoming increasingly costly to induce workers to undertake hazardous and unpleasant, underground work. The U.S. coal industry, however, favoured by thick seams, shallow mines and extensive scope for surface mining, has, to a large extent, met these difficulties by large-scale investment in the mechanisation of mining, loading and transport.

The natural advantages of oil in its production, transport and distribution are paralleled by similar advantages to the consumer of ease of handling, convenience, cleanliness, etc., and

PROBLEMS OF HOUSING IN URBAN AREAS

BOMBAY SEMINAR'S PLEA FOR TAX RELIEF

THE widespread interest evoked by the Seminar on Urban Housing, held in Bombay last week under the auspices of the Bombay branch of the Indian Institute of Public Administration, is a measure of the magnitude of the problem of housing in urban areas and the importance which the public attaches to it. It is being increasingly realised that, unless massive efforts were made, the housing situation in urban areas would prove more and more difficult in the years to come. Indeed, it has been computed that, if the current pace of housing construction were not stepped up, the housing situation by 1961 would be twice as acute as at the beginning of the second Five-year Plan. Clearly, the need for devoting maximum attention to the housing problem on the part of all the authorities concerned—the Central and State Governments, local authorities, private builders and co-operative institutions, cannot be overemphasised.

Although no precise data about the paucity of housing facilities in major urban centres have been collected, nor any attempt made to assess the likely increase in demand for houses in each of these centres, it is known that the situation is pretty difficult in all premier industrial towns. From this point of view, the report of the Study Group (Chairman: Mr. S. G. Barve), appointed by the Bombay Government, is a significant document. The Group, which investigated the housing situation in Bombay City, found that there was a net deficit of 250,000 to 300,000 tenements in the city. The slums alone cover an area of 877 acres and a population of over 400,000. Nearly 75 per cent. of the schools are housed in rented buildings without any adequate compound or playground. The Group suggested a massive programme of public housing, involving the construction of 25,000 tenements a year at an annual expenditure of Rs. 16 crores and the implementation of three giant schemes to reclaim 5,000 acres of land to relieve congestion and concentration of industry on the island. Among the other suggestions made by the Group are the decentralisation of industries, creation of satellite townships in close proximity to Bombay and development of suburbs on town-planning lines. A similar report on some of the major towns and cities deserves to be prepared in the interests of assessing the urban housing development.

Private Builders

To revert to the Seminar. It is noteworthy that many participants in the Seminar recognised that private building activity has a definite place in housing development schemes in urban areas. Too often, the public is made to believe that Governmental and institutional effort (whether co-operative or otherwise) alone can relieve housing shortages. There is no doubt that such effort has made significant progress. Considerable contribution has been made by the five major schemes of the Government of India—subsidised industrial housing scheme, the housing scheme for low-income groups (with incomes less than Rs. 6,000 per month) and the schemes for housing slum dwellers, the plantation workers and rural population in selected villages; a new scheme has been initiated this year for the benefit of the middle-income group (for persons within the income range of Rs. 6,000 to Rs. 12,000). Despite the implementation of these schemes and construction of houses by co-operative housing societies, the fact remains that the housing situation would be worse than what it is today if private builders had not chosen to make their contribution to the relief of housing shortage. And yet, it is a pity that the authorities have not considered what suitable fiscal reliefs would encourage private house building activity.

However, there is some evidence to show that they are becoming alive to this aspect of the housing problem. Thus, at a meeting of the representatives of the Central Working Group on Housing and Urban Development and the representatives of the Governments of Bombay, Andhra and Madhya Pradesh, held in Bombay last week, it was urged by the State Governments that, *prima facie*, the existing incidence of taxation appeared to be rather heavy. They stressed that the problem should be examined by a team of experts. It is to be hoped that the examination of the question will not be delayed, for fiscal relief for house building will provide much necessary impetus for constructional activity. For, as Mr. B. P. Patel, Managing

Director of the State Bank of India, pointed out at the Bombay Seminar, the housing problem in Bombay City has assumed serious proportions on account of the heavy burden of taxation on house property. This criticism is true in respect of the housing situation in all major towns and cities in India. Mr. K. L. Punjabi, a former Chief Secretary to the Government of Bombay, suggested that certain restrictive provisions in the Rent Control Act should be suitably modified to enable the Municipal authorities to collect taxes on the basis of services provided or on net return after payment of statutory charges rather than on gross rental value which, in the case of new constructions, would naturally be high. He urged house building societies, local authorities and housing boards to construct houses for sale on hire purchase basis. He deplored that banks did not accept ownership flats as property in the matter of providing loans. In the U.S., he said, special legislation had been undertaken to treat ownership flats as property. He hoped that similar legislation would be undertaken in India. These and other suggestions made at the Seminar deserve to be considered by the authorities and interests concerned with housing.

Construction Costs

So long as construction costs remain on the high side, it would be difficult to bring the houses within the means of the low-income groups. Indeed, as Mr. V. L. Gidwani, Bombay's Municipal Commissioner, pointed out, a subsidy is an inescapable proposition "if we are to provide houses to the poor and middle class people." Such a subsidy could be reduced to a minimum if construction costs could be brought down. Mr. W. X. Mascarenhas rightly pointed out that the houses should aim at utility, simplicity and cheaper cost. The problem of reducing costs of construction resolves itself into the twin issues of augmenting the production of building materials and research in the use of less costly equipment in building construction. Among building materials, the priority given to steel production is bound to result in the relief of steel shortage in the near future. The position in respect of cement is also not likely to create serious difficulties in the near future.

There is need for sustained research which much be so designed as to ensure reduction in construction costs. In this connection, it is gratifying to note that the National Buildings Organisation of the Union Ministry of Works, Housing and Supply has made several suggestions for bringing down the costs of construction of buildings. The Organisation has found that in most residential buildings of two-storeyed construction, a 9-inch wall would be enough instead of a 13½-inch one in ground floor. Economy, it is stated, can be achieved by the use of prestressed concrete, if high-tensile wire is available. The price of high-tensile wire is nearly double that of M.S. bars, but the quantity required is nearly one-fourth. The use of high-tensile wire, however, depends upon the availability of foreign exchange for its import.

Since timber and bricks constitute important elements in construction costs, any attempt to reduce the cost of these two items will mean considerable economy. It would appear that, as against five primary species of timber now employed in buildings, 70 secondary species could be used after seasoning and preservation treatment. A seasoning plant is being set up in the Hindustan Housing Factory at New Delhi. But more such plants should be

set up in different parts of the country. It has been found that 70 to 80 per cent. of a tree, felled for timber, is now wasted. There is scope for converting the waste into hard boards and utilised for furniture, doors and panels. A factory for producing wire-bound reed boards is being set up in U.P. Similar factories could be installed in other parts of the country. Other suggestions made by the N.B.O. for reducing construction costs include the indigenous manufacture of roofing sheets out of asphaltic material and manufacture of lightweight aggregates (to replace stone aggregate) from silt available near Calcutta. As regards the manufacture of bricks, the Union Ministry for Works, Housing and Supply, according to the Secretary to the Ministry, Mr. M. R. Sachdev, has worked out a scheme for the establishment of mechanised brick plants for making perforated bricks which will not only reduce the amount of clay used but also coal needed for burning.

The battle for reduction in building costs must thus be fought on two fronts. In the first place, concerted efforts should be made to increase the production of building materials. Secondly, research into alternative building materials and their economic utilisation should be undertaken. Further, the results of this research should be frequently brought to the notice of building organisations. Even now, there is a wide divergence in the construction costs of co-operative housing institutions even when allowance has been made for the difference in the costs of acquisition of land. Perhaps, the State Governments or the financing institutions could devise some technical advisory service for the benefit of co-operative and private builders. This should go some way towards the achievement of economy in construction costs.

AVRO-748

A vigorous defence of the agreement between the Government of India and the Hawker Siddeley group for the manufacture of Avro-748 aircraft was put up by the Union Defence Minister, Mr. V. K. Krishna Menon, in the Lok Sabha last week. The two main criticisms against the agreement were that the Government had gone in for an untried aircraft and that the offer of another aircraft manufacturer—the Lockheed Aircraft Corporation—had not been considered. As regards the first criticism, Mr. Menon said that the manufacture of aircraft which was already in the secondary one with obsolete planes. Hence, they had to go in for a type which other countries did not have. Regarding the second criticism, he said that the Government had contacted the Lockheed Aircraft Corporation. He added that the Lockheed had no specific offer to make and had suggested that, if the Defence Ministry gave them the specifications they would send the designs in three months; examination of the designs would have taken another nine months in India.

The grounds on which the Defence Minister justified the agreement with the Hawker Siddeley group were: (1) the aircraft (Avro-748) was the best type designed to meet military transport for other types, (2) the incidence of royalty was half that of other types, (3) no royalty on spares, and (4) India had the right to sell the aircraft and the spares to other countries in Asia. Mr. Menon said that India's Air Force technicians were conversant with Avro-748 was not only a satisfactory plane but also "the right plane for us to have." The specifications, the simplicity of construction, and the design of the aircraft to meet multiple needs of military transport were the factors which had induced the Defence Ministry to go in for this aircraft.

Mr. Menon revealed that the cost of the aircraft would be between Rs. 22 and 25 lakhs each which would be less than the price of a Dakota; it about 100 units were produced, the cost would be Rs. 22 lakhs each. Additional equipment for the Kanpur military depot, where it would be manufactured, would cost Rs. 130 lakhs. The Defence Ministry would be able to place the aircraft at the disposal of the Indian Airlines Corporation by the end of 1961. If the Corporation required new aircraft before that date, it could buy in the world market of the I.A.F. was chosen for the manufacture of the aircraft in preference to the Hindustan Aircraft Factory at Bangalore, Mr. Menon said that the latter unit had no surplus capacity because it had undertaken the programme for the production of Gnat aircraft and fighter planes.

DC-7C'S FOR CARGO SERVICE

Pan American World Airways has awarded a contract for approximately \$2,800,000 to Lockheed Aircraft Service, Inc. for conversion of 10 DC-7C's to cargo aircraft with an option for conversion of an additional 10 aircraft of the same type. The head's base at Ontario, California, is scheduled to carry 16 tons on a transatlantic flight or almost five tons more than a DC-6A, the cargo aircraft currently in use in the route. The DC-7C's will have usable cargo space of 5,253 cubic feet, will cruise at 300 miles per hour compared to 250 miles p.h. for a DC-6A and are capable of non-stop east-bound transatlantic flight; the DC-6A makes a fuel stop on the same flight. Introduction of DC-7 Pan American's long-range programme to develop volume international cargo at reduced rates. The DC-7C's, it is stated, will for several years be the fastest, most modern aircraft in cargo service.

NEW PRODUCTS AND PROCESSES

Panoramic Camera

AN optical instrument factory of the Netherlands has developed a camera which photographs practically the whole of the surroundings in a single instantaneous exposure. The lens of this camera is not at the front of the apparatus but arranged at the top. It is composed of a hemisphere embedded in a spherical casing without a top. The upper part of the lens is closed. Light entering at the side when the shutter is open is divided into beams by thin sheets. These beams are bent in the lens so that they arrive in the camera underneath the lens. Here they pass through a round, ground glass corrector round which the film is conducted. Thus the special feature of the camera is that light enters at an angle of 360° and the film (at a somewhat lower level) is mounted around the lens at an angle of 360°. Owing to the necessary presence of two small guide rollers it is only over an angle of 5° that no exposure is obtained. Since it would not be practical to employ an ordinary shutter between the lens and the film, the camera has a thin aluminium shutter around the lens which is fully tilted during exposure. The thin sheets arranged radially about the object glass take the place of the diaphragm. The shutter speeds are 1/25, 1/50, 1/100 and 1/250 of a second; the F number of the lens is 8. The focal length is 102 mm. (4 ins.) The camera is suitable for an ordinary miniature film 30 metres long. Since the image is 24.5 x 630 mm. some 45 photographs can be taken with one film. The camera can be operated both manually and automatically and even fully automatically (when used in aircraft). The dimensions of the camera are length 356 mm., width 254 mm. height 193 mm. The weight is about 11.3 kg. (24.9 lbs.).

Diesel Cylinder Pressure Indicator

It has been difficult to register accurately peak and initial cylinder pressures in Diesel engines without complicated adjustments, because few pressure indicators have been fitted with a dial for visual reading. The latest addition to the Dunedin Engineering Company's range of Diesel engine service equipment is a pressure indicator known as the Diesindicator which provides immediate visual reading by means of a gauge with a dial. It is suitable for low, medium, and high speed Diesel engines, where access to the combustion chamber is provided, and can be used either in vertical or horizontal position. As there is no piston or damper, inertia is minimised and deposits of carbon are greatly reduced, leading to effective operation over long periods without maintenance. Similar instruments require cleaning after a few applications, but the new instrument can be used from 75 to 100 times without becoming sooted-up. When, finally, the internal cartridge has to be cleaned, this, it is claimed, can be done with ease and speed. The instrument is constructed from special heat, shock, and corrosion resisting materials. Its 2,000 lb. gauge, graduated both in lb./sq. in. and kg./sq. cm., is housed in a steel case fitted with a special Bourdon tube.

New Skin for Old

Five hundred patients in a hospital in New Orleans, U.S.A., have literally traded old skin for new. The patients are elderly, with wrinkled skin, mottled with large brown spots that doctors call "senile keratosis"—spots that sometimes become cancerous. In the current experiment at Tulane University's School of Medicine, Drs. James W. Burks, John M. Brewer and Marvin Chernosky, "planned" off the old skin—in most cases, skin off the face and hands—in a simple operation. They chemically froze the skin, then ran a rapidly rotating wire brush over it. The results date back four and a half years. The doctors report that the new skin has remained soft, pliable and pink in contrast to the wrinkled, mottled skin of before. Some patients had their entire face or hands treated. Others, only the lesion and a wide margin around it.

Patients free of cancer were used in the test. According to the American Cancer Society, the clinical results indicate that pre-cancerous skin conditions can be removed safely and replaced by healthy new skin growth. Further, the new skin has a youthful texture.

Cheaper Welding

A development which, it is claimed, will reduce costs and speed up the welding of steel by the electric arc process has been announced by the British Welding Research Association. These advantages spring from the closer degree of control said to be attained in a method of welding which uses bare wire in conjunction with carbon dioxide gas instead of conventional coated welding rods. The carbon dioxide shields the molten weld during its formation from the surrounding air—a function usually performed by the flux coating of coated welding electrodes. Advantages claimed are higher welding speeds, saving of time spent in changing rods, and absence of slag.

Epi-tar

Giving a coating which is six to eight times as thick as normal paint and yet has a high rate of coverage, the latest addition to the firm of Corrosion's of the United Kingdom plastic based heavy-duty protective paints should prove of value to those trades which require a material with above-average protective properties and which can be applied whatever the weather. It is a coal tar epoxy coating, called Epi-tar, which will not only protect surfaces from attack by acids, alkalis, petrol and Diesel fuels, and oils, but also resists both hot and salt water.

CREeping INFLATION—IV BRITAIN SHOWS THAT GROWTH WITHOUT INFLATION IS POSSIBLE

[This is the fourth instalment of the series of articles on the inter-relationships between economic growth, the general behaviour of prices and public economic policy, particularly monetary policy. In this article, the developments in Britain are reviewed by the Federal Reserve Bank of New York in its latest issue of *Monthly Review*. The article was prepared before the report of the Radcliffe Committee on Monetary Policy was published.—Ed.]

THE problem of achieving reasonably rapid economic growth, without generating an inflation that jeopardises prospects for further growth, has confronted not only the United States but virtually the entire world, both primary-producing and industrial countries alike. In Britain, where the problem has been given increasingly close attention in recent years, the Chancellor of the Exchequer recently observed that the reconciliation of growth with price stability is "one of the most important and intractable economic problems with which the modern world is faced." This article reviews Britain's problems in attempting to achieve this reconciliation in the past and the views of British observers as to how it might better be achieved in the future.

To an American, one of the most significant aspects of these views is the absence of any serious suggestion that "creeping inflation" holds an answer to the problem of economic growth. The pitfalls of a prolonged—even though gradual—rise in prices have become painfully clear to British observers. Price inflation has obviously not been the only factor in Britain's post-war difficulties, but it contributed to the 1949 devaluation of sterling, to the squeeze on pensioners and others with fixed incomes, to ever-increasing wage demands as workers sought to maintain the purchasing power of their incomes, to complications in the management of the Government debt and, consequently, in the maintenance of monetary control, and to periodic bouts of speculation against sterling. The last of these speculative attacks, in August-September 1957, gained such intensity that it was stopped only by drastic fiscal and monetary measures, including the increase in September 1957 in the Bank of England's discount rate to 7 per cent., the highest since 1921. Out of this experience and the subsequent strong revival of confidence in sterling, accompanied as it has been by a degree of price stability unknown in Britain since the thirties, has come a sober discussion of the problem of achieving growth without setting off inflation. It is accepted that there is need for deeper understanding of the workings of the economy, for re-examination of existing policies, and perhaps also for the development of new techniques by which existing policies could be strengthened. The public has been encouraged to discuss the issues and to face up to hard decisions. Above all, there is a growing recognition that the problem is tough, and persistent, and that, in dealing with it, there can be no easy or single answer.

Experience Before World War II

The problem, of course, is not wholly new for Britain. Although upward pressure on prices was by no means as persistent in the inter-war years as it appears to have been since World War II, the tendency for Britain's rate of economic growth to lag behind that of many other countries has long been a subject for comment. In part, this lag merely reflected a catching-up process in which other countries were covering ground already traversed by Britain in the eighteenth and early nineteenth centuries. It also reflected the inevitable adjustment of the British economy to the rest of the world's economic growth, which had been fostered by heavy British foreign investments. Helped by these investments, foreigners adopted the techniques on which Britain's early industrial supremacy was based. The exportation of British machinery and technical know-how gradually put many of Britain's major customers in a position to supply for themselves products that formerly had been imported. Frequently, the development of such competing industries overseas was fostered by tariffs and other protective devices. It thus became increasingly difficult for Britain to sell its traditional exports, and, while economic growth abroad opened up new market possibilities, Britain could take advantage of these only if its management and labour remained alert and progressive in their industrial and commercial techniques.

The pace of Britain's adjustment to overseas economic change was given a serious setback by World War I and its aftermath. Overseas countries, whose access to British supplies was cur-

tailed during the war, accelerated the development of their own resources. The need for Britain to adjust was thus increased during a period when its ability to do so was severely limited by the overriding requirements of the war and, after the end of hostilities, by the heavy taxation that was the legacy of war finance. Moreover, British industry:

"came out of the war and post-war boom in poor financial condition, and demand for its products was weak. Excess capacity, overcapitalisation, heavy fixed charges made it difficult for iron and steel, cotton, coal, and shipbuilding even to set aside sufficient reserves for depreciation, let alone to finance a comprehensive programme for scrapping and rebuilding. The credit of these industries was low. . . . Here was a vicious circle of competitive weakness, because of their failure to recognise, bringing financial weakness, and financial weakness in turn making it impossible to attract the capital necessary to effect reorganisation."

The adjustment problem was aggravated and the resumption of growth delayed during the twenties, because the authorities—being determined to restore sterling to an exchange rate at which it was overvalued in terms of other major currencies—were obliged to pursue a deflationary credit policy of a kind that has not been experienced in the United States. Only after 1931, when Britain left the gold standard, was credit policy eased. However, by that time, the flexibility of the economy was being hampered by a proliferation of restrictive practices which had been adopted by both management and labour as a defence against the difficulties of the twenties, and which were to complicate further the process of growth and adjustment in the years ahead.

Lag in Growth Since the War

Although World War II created new handicaps for the British economy, its aftermath contrasted sharply with that of World War I. The world economy, supported by a heavy flow of United States' aid and long-term capital, expanded at a rapid pace, and Britain benefited accordingly. The rise in its national income (measured in constant prices) in the 1948-57 decade was about as large as in the two decades of the inter-war period. However, in comparison with most major industrial countries Britain's growth, even on a *per capita* basis, continued to lag, while (judging by the available indexes) the rise in its prices was exceeded only in France and Japan.

The reasons for these post-war difficulties are, not surprisingly, a subject for controversy among British observers. On several points, however, there is no dispute. They agree that the growth lag is to some extent associated with the fact that Britain's industries not only suffered less war damage than those of France, Germany, Italy, and Japan, but had made a good start at reconstruction even before hostilities ended. Britain, therefore, started the post-war period from a base that was little, if any, lower than in 1938, whereas its major competitors—apart from the United States—started almost from scratch. Thus, as in the earlier period, a part of the more rapid rate of growth abroad merely reflected a catching-up process from a very low base. In this process, moreover, another circumstance also contributed to the more rapid growth of the severely war-damaged countries. The latter's growth was closely aligned to the special requirements of the post-war period: production of electrical machinery, machine tools, chemicals, passenger cars, and trucks all surged rapidly ahead of other products that were in less vigorous demand. Output of the newer lines also expanded rapidly in Britain, but the considerable weight that such traditional and relatively declining industries as coal, textiles, pottery, and leather goods still bore in the British economy helped to retard the rise in its overall industrial production.

While such considerations explain part of the lag in Britain's economic growth, British observers are generally agreed that other factors also played an important role. In particular,

A. E. Kahn, *Great Britain in the World Economy*, New York, Columbia University Press, 1946, pages 75-76.

Britain has usually invested in its domestic economy a smaller proportion of its gross national product than other major industrial countries in the free world. Essentially this has been because other claims on Britain's resources were given higher priority, especially in the earlier post-war years. The proportion of Britain's resources devoted to defence has been higher since the war than in any of its competitors, except the United States. Moreover, many resources that might otherwise have been utilised for domestic investment were actually employed to repay overseas indebtedness and increase foreign investment. Finally, the proportion of output devoted by Britain to personal consumption (including Government services) has been generally higher than in other major industrial countries. It is true that, in recent years, the authorities have at various times taken steps to stimulate domestic investment and that the proportion of the gross national product devoted to this purpose has in fact increased significantly. Nevertheless, the other heavy demands made upon Britain's resources continued until the 1957-58 recession severely to limit the scope for domestic investment, which was consequently kept subject to more or less strict official guidance until as late as February of this year.

Upward Pressure on Prices

As regards the factors behind the persistent upward pressure on British prices since the war, there also is a wide, though by no means complete, range of agreement among British observers. Since Britain is considerably more dependent on imported raw materials than most other major industrial countries, it was more affected by the post-war rise in international commodity prices. These prices rose sharply immediately after the war and again at the time of the Korean conflict. The impact of the "Korea" price rise was especially severe, because it aggravated the upward thrust that had been given to prices in Britain by the September 1949 devaluation of sterling.

Little pressure on British domestic prices has emanated from imports since 1951, but it is generally agreed that the gradual removal of the controls and subsidies, that had partially suppressed the symptoms of inflation during the forties, contributed to the price rises shown in the published indexes during the fifties. Thus, the 1952 removal of certain food subsidies is estimated to have raised retail prices by around 2 per cent. The abolition of the bread subsidy and the reduction of the milk subsidy in 1956, and the relaxation of rent control in 1957, seem to have had a similar impact. Moreover, these measures, like the earlier rise in import prices, doubtless had secondary repercussions since wage and salary earners sought—more aggressively than in certain other European countries—to increase their earnings to compensate for the higher cost of living.

Beyond this area of agreement, however, differences begin to appear in British diagnoses of the factors behind the upward pressure on prices. The opposing views fall into two broad categories that have become familiar in the United States. The first category places the prime emphasis on the extent to which power and management—representing both labour and profits. The second emphasises that, in attempting to achieve too many objectives at once, Britain has expanded its spending faster than domestic production, and that the resulting imbalance has led not only to recurrent balance-of-payments difficulties but to a rising wage-price spiral.

The first—or cost-push school, as it is often called—maintains that, in certain key industries, competitive conditions have so weakened as to give management and labour significantly increased control of profits, prices, and wages. Management—it is argued—has been able to maintain its selling prices even in the case of falling raw material cost, or to pass on to the consumer increases in labour costs, or to raise its prices in order to finance internally the acquisition of new plant and machinery. Firms are also said to be reluctant to reduce their labour force even in periods of relatively slack demand because of fears of labour shortage when prosperity returns. At the same time, labour unions are held to exert continuous upward wage pressure with little more than token resistance by management.

The second—or demand-pull school—accepts much of the foregoing analysis, but places the major responsibility for Britain's post-war price inflation on an abnormally high level of aggregate demand for goods and services maintained for an abnormally long period of time. In this

view, which finds its most authoritative expression in the reports of the Council on Prices, Productivity, and Incomes, Britain has pursued a number of objectives which, taken by themselves, are desirable but which have made greater demands on the industry and thrift of its citizens than they have had the power or the will to satisfy. The translation of these demands into a persistently high rate of spending, it is argued, was facilitated in the early post-war period by the abnormally large holdings of liquid assets with which both firms and individuals emerged from the war, as well as by the relatively low levels at which interest rates were maintained, and by the related expansion of the money supply. Even during the fifties when monetary policy came into more active use and the increase in the money supply was curbed, the Government's "full employment commitment acted both to limit the vigour of the authorities' anti-inflation measures and to sustain public optimism and spending. Business men in particular are said to have taken this commitment as an indication that there would be no serious weakening of demand for their products, and were thus encouraged to maintain levels of capital expenditures that—while still relatively low, as compared with other major countries—were in excess of the economy's voluntary savings.

The demand-pull school finds support for its views in two significant labour market developments. First, throughout most of the post-war period the number of reported vacancies in industrial employment has considerably exceeded the number of registered unemployed, the excess having been greatest when spending rose to its peaks in the "Korea" and the 1954-55 booms.

Secondly, in periods of rapidly expanding demand, the rise in average earnings has tended to exceed the rise in wage rates set in national agreements and awards. The reasons for this admittedly include increased overtime but among the numerous other factors involved is the tendency for certain firms, in periods of high demand, to attract labour by bidding up wages to levels well above the agreed rates.

Policies for Growth Without Inflation

Just as there is some common ground in the diagnoses of Britain's problem of achieving growth without inflation, so there is a considerable range of agreement on how to deal with this problem. Already much is being done to increase understanding of the economic system and to supply data on its operations previously either lacking or published only after considerable delay. Practices on the part of management that tend to limit competition are being dealt with by the Monopolies Commission and the Restrictive Practices Court, and there is considerable discussion on the means of dealing with various rigidities that have grown up among the trade unions. Labour mobility is being increased through the retraining of unemployed workers from lagging industries for transfer to expanding industries. Frequently, firms are officially urged, as regards pricing policy, to seek enlarged profits by expanding the volume of their sales rather than by increasing their margins; and, as regards dividend payments, to take account of the tendency of the trade unions to use increases in such payments as a basis for enlarging their wage claims beyond the rate of increase in average productivity. In addition, as part of its policy of economic liberalisation, the Government has for some years been cutting

restrictions on imports and this has acted to stabilise domestic prices, to stimulate efficiency in domestic industry, and to subject the economy generally to the salutary disciplines of the balance of payments.

As the weight of British opinion in favour of price stability has increased, the implications of such stability for the structure of wages have been spelled out and, at least in principle, widely accepted. It is clearly recognised that, if Britain is to maintain price stability as well as an adequate balance-of-payments surplus, total income can increase no faster than total output. Within this framework, it is held that needed shifts in the distribution of labour force would be facilitated by incentives in the form of larger-than-average wage increases in expanding industries, coupled with wage stability or smaller-than-average increases elsewhere in the economy. Such differential rises in wage rates need not be tied to changes in output per man in particular occupations. Rather, it is argued that labour could be attracted to those sectors, such as manufacturing, where output per man increases most rapidly even though their wage rates were to rise less rapidly than productivity. By the same token, labour could be drawn away from those sectors—such as the service industries—in which the increase in productivity is small, even though wages increased more rapidly than productivity. Such a pattern of wage increases, it is held, would be compatible with declining prices, for example, of manufacturing products and rising prices for services—the different trends averaging out to overall price stability.

Having recognised that price stability can be maintained in the long run only if output

BONUS TO WORKERS REVIEW OF THE CONCEPT IN LAW AND IN VOLUNTARY AGREEMENTS

By Dr. S. D. Mehta

THE essentials of the legal concept of bonus are fairly well settled today. A bonus is not an ex-gratia payment, dependent on the goodwill of the employer and as such incapable of being made a subject of adjudicational proceedings. It is not a deferred wage. And, in a strictly legal sense, it is not a share in profits, although it tends to rise or fall (not *pari passu* necessarily) with the volume of profits.

More positively, the tribunals of the country have felt that bonus is a payment, out of the profits of the particular year, made to workmen and other employees who have contributed to the productive effort which has resulted in the profit so as to bridge the gap that exists between the fair wage and the living wage. It is realised that concepts, and therefore calculations, of fair and living wage will change—naturally upwards—in time and that for all practical purposes therefore a case for bonus will always exist, provided, of course, there is a profit, or to be more precise, if there is a residuary surplus on the basis of the available surplus formula as evolved by the Labour Appellate Tribunal.

Five Prior Charges

Under the "available surplus" formula, five prior charges must be first allowed for from the profits, which are themselves defined as (i) profits of the year and (ii) as profits arising directly. Thus, past losses are not to be taken into account; and also, income from outside investments is to be excluded.

The five prior charges are:

- Depreciation according to income-tax rates;
- income-tax;
- fair return on capital;
- fair return on reserves utilised as working capital; and
- additional amount, if any, in excess of depreciation required for the purpose of rehabilitation, modernisation and replacement of machinery.

The employer has to prove, by leading appropriate evidence, the prior charges claimed and the onus of proving that an available surplus exists is on the workers.

The amount distributed as bonus has hitherto not exceeded 50 per cent. of the surplus available. And, at the same time, courts and tribunals have felt that the bonus should only be a multiple of the wage, not something which will go to multiply it or even double it. Another factor tending to limit the quantum of bonus is the possibility of unusual bonuses in one unit or industry creating unrest among the workmen in neighbouring units or industries. Again, the very fact that bonus is not profit-sharing will limit the extent to which higher profits can be allowed to be matched by larger bonus.

Three Types of Approach

Generally, as in all wage matters, the tendency has been to adopt a region-cum-industry approach in regard to bonus as well. In actual practice, this has meant three types of cases—(i) centre-cum-industry as in Bombay or Ahmedabad cotton mills; (ii) region-cum-industry as in the case of Saurashtra cotton mills; and (iii) cases where the bonus is for the only firm in an industry in a centre or region or wherever that happens, because the financial results of the largest firm dominate and colour the financial picture for a few other, usually smaller, units in the region.

Cases falling in category (iii) above bear a higher incidence of bonus payment in the case of the more profitable units than similar units in categories (i) and (ii), because, in these latter cases, the bonus calculations are based on the diluted financial picture which emerges when the results of the good and indifferent units—the bad, that is, the losing ones are excluded by definition—are added up. The converse is also true, of course.

There are also other cases, as in the cotton mill industry in Delhi, where bonus rates are different and separately settled for units under different managements.

U.P. Sugar Industry

The region-cum-industry principle finds application in a different manner in the sugar industry in U.P. Each year, sugar mills are arranged into a series of categories according to their volume of production and a bonus rate,

rising progressively, is determined for each such category, in terms of so much per maund of sugar produced. The total amount of bonus payable by a factory is arrived at by multiplying its entire actual production by the rate for the relevant volume of output category and is distributed on the basis of total earnings of each employee in the same ratio as the "total earnings" bill for the factory bears to the aggregate bonus amount determined as stated earlier. This is subject to a maximum of three months' bonus and loss-making units are entitled to apply for exemption from the obligation to pay bonus to a committee set up for this purpose. The scheme of bonus rates is embodied in a State Government notification.

Voluntary Agreements

The most dramatic changes in the concept of bonus as evolved in industrial case law are embodied in recent voluntary agreements. Four broad types of agreements have been concluded.

First, there are agreements of the Bombay or Ahmedabad type where a minimum bonus, irrespective of loss, is payable by every unit in the cotton mill industry. On the other hand, no mill shall have to pay a bonus higher than three months' basic wages. There are provisions for "set-on" and "set-off," provisions which bring into the determination of current bonus rates the effects of financial results in previous years. Also the calculations are made, according to the available surplus formula, for each unit separately. And, of course, there is the overall effect in each agreement of making it, as it were, a contractual obligation.

The Tata Iron and Steel Company Ltd., have entered into an agreement which lays down a more complex basis of determining bonus, partially relating the level of bonus to aggregate production (though not specifically to individual or sectional productivity) and partially relating it to the volume of profits.

A third type of agreement is the one entered into between the representatives of the workers and the management of the Delhi Cloth Mills and Swatantra Bharat Mills, Delhi. Here the bonus amount is calculated as a fixed percentage of the total of the net profits of the year and the statutory depreciation as certified by the auditors of the Company, the total amount being distributed to each employee according to his basic wage/salary in the same proportion that the total basic wage/salary bill bears to the total bonus amount.

A Unique Example

Finally, there is the complete divorce of profit and bonus embodied in the bonus clauses of the agreement between their workers and the Indian Aluminium Company. Two bonus schemes running concurrently, are envisaged—monthly production bonus and annual productivity bonus. Technical norms are laid down for monthly production performance and performance higher than the norms is rewarded by a

bonus, expressed as a percentage of the total earnings, which rises with each higher slab of technical performance. Within the slab, the bonus rate rises uniformly as performance improves. But the bonus is payable at different rates to different, clearly defined groups of workers—is the lowest for non-productive workers and for productive staff; higher for some specified categories of non-productive workers; and the full rates for productive workers.

The annual productivity bonus of the Indian Aluminium Company is payable to every employee and is determined from a straight-line graph with two co-ordinates—"total bonus year's output" in tons and "annual bonus in percentage of total bonus year's earnings"—formed by joining two fixed points: (a) bonus of 8.33 per cent. at output of 6,000 tons and (b) bonus of 16.63 per cent. at output of 9,000 tons. The line extends both ways, upto a point denoting 5,000 tons as the minimum and a point denoting 10,000 tons as the maximum. There is a saving clause, guaranteeing bonuses of 8½ per cent. of the total earnings where production falls, but is not lower than 6,000 tons in the year, due to factors beyond the control of the workers or the union.

Better Deal to Workers

In fact, every one of the voluntary agreements goes beyond the requirements of legal decisions and is a product of collective bargaining. The employers seem to have been guided, in each case, by the need for avoiding the annual unrest and frictions, by the advantage of knowing with a reasonable amount of certainty the size of their liability on account of bonus, and, in one case, by the overall consideration of a huge-scale expansion programme. Employees seem to have been guided by the desire to avoid annual friction and negotiations, on the one hand, and by the avoidance of large time-lags that used to be common.—All Rights Reserved.

TWO MORE PRODUCTIVITY TEAMS ON TOUR

Two more Productivity Teams—one on management organisation and training and the other on coal mining—sponsored by the National Productivity Council under the T.C.M. aid have left on a study tour abroad. The Management Organisation and Training team will visit West Germany, the U.K. and the U.S.A. In addition to visit France. The Management Organisation and Training team, in the course of its six weeks' tour, will study management, organisation, structure, methods and extent of delegation of responsibility and authority, and techniques of systems of other subjects which the team will study are implementation, policies and techniques adopted for recruitment, promotion, training and incentives of top and middle management personnel, role of professional management consultants, educational institutions and Government in improving management methods and arranging management training programmes for executive development and management.

The Coal Mining team, in the course of its eight weeks' itinerary, will examine contributory factors leading to higher productivity in coal mines, both underground and opencast, with particular reference to methods of working, types and extent of mechanisation in underground working, organisation for major repair and preventive maintenance of equipments, standardisation adopted in the organisation and management, system of general payment, including incentive method, means employed for fixation of wages, measures adopted for safety, training and welfare of women and their effect on productivity.

FUNCTIONS OF SECRETARIES OF FORWARD MARKETS

MR. W. R. NATU OUTLINES THEM

THE first conference of Secretaries of the recognised associations engaged in futures trading in the various parts of India was held in Bombay on the 10th inst., under the auspices of the Forward Markets Commission. With this conference, the programme arranged by the Commission to bring together the important functionaries of the associations for a frank exchange of views on the working and problems of recognised forward markets has been completed. It may be recalled that the conference of Presidents of these associations was held in May last and of the Nominated Directors in July. There are at present 23 recognised associations all over the country, operating 39 markets in 13 commodities. As many as 22 Secretaries attended the conference, inaugurated by Mr. W. R. Natu, Chairman of the Commission, and presided over by Mr. M. A. Mulki, Secretary to the Commission. The subject discussed at the conference pertained to the duties and responsibilities of the secretaries, the organisational set-up of the recognised associations, and the problem of illegal trading. The organisers of the conference, however, have not taken the Press into confidence on the gist of the discussions on the last two subjects.

The first subject formed the central theme of Mr. Natu's inaugural address to the conference. He cited a formidable list of the duties and responsibilities of the Secretaries, as will be seen from the following account of his address:

Those who are at the helm of affairs of an association, particularly the Secretaries, have an important role to play in ensuring sound business practices. Since the primary machinery of regulation lies with the association itself, the position of its Secretary is of crucial importance, since he is the only permanent element in the organisation of the association. While the membership of the association, the composition of the Board of Directors and the office of the President are all liable to change from time to time, the Secretary is alone able, because of his accumulated experience, to bring the history of the past to bear upon the problems of the present and to mould the shape of things to come in the future. Moreover, the Secretary is the only person who could tackle problems with detachment, being precluded from participating in the operations in the market.

Conflicting Loyalties

The duties of the Secretary call for integrity of a high order, initiative, tact and judgment. They are also manifold, complex and involve, to some extent, a conflict of loyalties. He is employed by the association that he serves and at the same time he is answerable to the Forward Markets Commission also. The membership and Board of the Association consists of traders who often take opposite positions in buying and selling a particular commodity. He has to cater to the needs of all these interests.

The duties of Secretaries described by Mr. Natu fall into four distinct categories. They are: (1) to the members of the Association, (2) to the Directors of the Board, (3) to the President of the Board, and (4) to the public in general, as set out by the Forward Contracts (Regulation) Act, and represented by the Commission.

The members of the general body together form the association. It is the duty of the Secretary to collect and disseminate among these members the market intelligence regarding commodity traded without any delay. For this purpose, every association should have a well-equipped intelligence section which could prepare charts and issue periodical reports. The Secretary is also expected to see that the work of survey and arbitration is discharged with maximum speed. Since stocks change hands rapidly and prices fluctuate from minute to minute, disputes must be settled quickly, if commitments are to be discharged without loss. The Secretary should also see that the representations made by members to the Board or to the President receive sympathetic and urgent consideration.

The duties of the Secretary to the Board of Directors are to give them adequate notice of meetings, circulate the agenda well in advance, maintain the minutes of meetings accurately and in sufficient detail and implement the deci-

sions of the Board without delay. The Directors of the Board are busy persons engaged in trade on their own account. They do not have much time to spare for the details of the association's work. So, the Secretary has to put up notes on important items on the agenda, setting out facts of the case, the pros and cons, the implications of different courses of action, the bearing of the Articles of Association and By-laws on the issues involved, and the previous precedents and rulings. These would facilitate arriving at quick and correct decisions and reduce prolonged discussions at the Board meetings.

Impartiality

Another quality required of the Secretary is the highest degree of impartiality. Explaining this point, Mr. Natu said:

"As the chief executive officer of the association, the Secretary must keep himself aloof from trading activities of any kind whatsoever, and remain outside all group and sectional policies. This might occasionally involve him into conflict with persons with influence on the Board or its President, and he might, therefore, be tempted to show favour to them in the hope of some temporary benefit. In the long run, however, it is the confidence which he can generate among the members at large that will determine his tenure with the association. The Secretary is in possession of vital information of various kinds. The members submit statistical returns to him pertaining to their trading operations. It is essential that the information contained in these returns does not leak out to other members, including members of the Board of Directors and the President. Communications pass between the Secretary and the Forward Markets Commission, bearing upon such crucial issues as the imposition of special margins and the fixation of maximum and minimum prices. He must ensure that such communications are disclosed to all the members of the Board and, where necessary, to all the members of the association, simultaneously, so that no one could gain any unfair advantage over another. Where necessary, he should persuade the Board to frame rules for the safety of statistical returns and privileged communications."

Apart from these functions, the Secretary owes a duty to the public. It is for him to see that no illegal trading takes place in the ring or in the premises of the association outside official hours. Such trading not only exposes the persons concerned to prosecution and penalties but also reduces the income of the recognised associations, deprives the State of

Agents: The Bombay Company Private Ltd., Madras-1
R. C. Abrol & Co. (Private) Ltd., New Delhi-1

SYNOPSIS OF COMPANY REPORTS

Jaipur Metals and Electricals Ltd.

The directors of the above Company (Managing Agents: Messrs. Poonamchand and Brothers Private Ltd., Jaipur) submit the audited accounts of the Company for the year ended 31st December 1958.

The profits for the year amount to Rs. 9,76,663 (Rs. 5,29,029) to which is added the balance brought forward from the last year's account of Rs. 3,296 (Rs. 5,338) and income-tax refund of Rs. 12,701 (Rs. 5,353) making a total of Rs. 9,92,660 (Rs. 5,34,902). Out of this amount, the following appropriations have been made:—To provision for depreciation for the year of Rs. 2,46,651 (Rs. 1,94,824), to development rebate reserve Rs. 1,75,276 (Rs. 73,349), to managing agents' commission Rs. 81,291 (Rs. 45,000), to provision for wealth tax for 1956 and 1957 Rs. 4,402 (Rs. 7,500), to provision for taxation including Rs. 13,100 for wealth tax for 1958 Rs. 3,20,000 (Rs. 86,000), to additional bonus for the year 1957 Rs. 28,874 (Rs. 25,438) and to gratuity reserve Rs. 25,000 (Rs. 10,000) leaving a balance of Rs. 1,11,166 (Rs. 92,791). From this amount the directors recommend the payment of dividends at 6 per cent. on cumulative preference shares (less tax) absorbing Rs. 32,880 (Rs. 32,880) and on ordinary (equity) shares at 6 (5) per cent. free of tax absorbing Rs. 67,938 (Rs. 56,615) leaving a balance to be carried forward to next year's account of Rs. 10,348 (Rs. 3,296).

The operations for the Meter division actively improved during the year under review. 87,909 house service meters have been produced during the year as compared to 69,420 during the last year. This would show that there has been an increase of about 27 per cent. The demand for house service meters continues to be high with the implementation of the power projects under the second Five-year Plan, which is still likely to go higher in the third Plan. The Company is constantly endeavouring to increase the production.

The working of the Metals division was satisfactory. Production for the year under review has been maintained at the same level as last year. It may be noted that this achievement is in spite of the difficulties experienced in getting adequate raw materials due to foreign exchange difficulties. The reduction in overall turnover is due to drop in the price of copper which is main raw material, but production and sales have been maintained on quantity basis. Efforts are also being made with the concerned Government authorities to obtain adequate raw materials.

The directors are pleased to report that negotiations were being conducted with Messrs. Siemens-Schuckertwerke Aktiengesellschaft of West Germany for the manufacture of Siemens type house service meters, which in the last annual report, have not been finalised. The necessary agreement has been entered into which has been duly approved by the Central Government. The Company has also got necessary industrial licence and import licence for this scheme from the Government of India. For implementing the agreement arrived at with Messrs. Siemens for the manufacture of house service meters, order for machineries worth about Rs. 20 lakhs has been placed and necessary preparations at the Works are being carried out as per programme. Their technical delegation visited the factory for settling important details which were satisfactorily settled. The Company's personnel are already receiving training in the Siemens' Works in Germany so that production could be started without undue delay.

New wire drawing machinery was received from Germany and the same has been put into operation. This will give improved quality and greater efficiency. The matter of diversifying the production to keep the Company's plant and machinery profitably engaged on account of raw material difficulties, is engaging due priority.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	21,32,300	Gross block	44,35,051
Debitures	10,00,000	Less—Depreciation	15,57,799
Reserves	6,91,576		
Provision for taxation	4,45,000	Net block	28,77,252
Liabilities	28,40,871	Plant, machinery, etc. in transit	68,667
Profit and loss account (surplus)	10,348	Stock-in-trade	23,49,023
		Stores etc.	6,08,006
		Debits, deposits and advances	7,97,503
		Investments	2,50,393
		Cash	1,89,251
	Rs. 71,20,095		Rs. 71,20,095

Estrela Batteries Ltd.

The directors of the above Company (Managing Agents: Messrs. Choonilal Manilal Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March, 1959.

The working of the year has resulted in a profit of Rs. 7,13,367 (Rs. 5,20,214). With the balance brought forward from the last year amounting to Rs. 10,086 (Rs. 21,558) there is an amount available for disposal of Rs. 7,23,433 (Rs. 5,41,772). The directors have recommended the following appropriations of the above amount:—

To depreciation Rs. 1,26,838 (Rs. 1,16,967), to development rebate Rs. 18,483 (Rs. 77,739), to managing agents' remuneration Rs. 31,993 (Rs. 42,034), to provision for taxation Rs. 1,90,000 (Rs. 1,53,257), to bonus to employees Rs. 1,85,000, to payment of a dividend of Rs. 2.50 per share on 19,947 5 per cent. cumulative preference shares, free of income-tax absorbing Rs. 49,868 (Rs. 49,868),

to payment of a dividend of Rs. 3 (Rs. 3) per share on 29,947 ordinary shares, free of income-tax absorbing Rs. 89,841 (Rs. 89,841) and to payment of a bonus dividend of Rs. 0.50 (nil) per share on 29,947 ordinary shares, free of income-tax absorbing Rs. 14,973 (nil), leaving a balance to be carried forward of Rs. 16,437 (Rs. 10,066).

Although the sales and production have further advanced, thus creating a new record, the upward trends in the prices of raw materials, stores, spare parts and increase in the cost of living index, which resulted in paying higher dearness allowance, has affected the ultimate profit to a certain extent. However, the directors have great pleasure in appreciating the efforts of those who have contributed in bringing about this remarkable results against very heavy odds.

The agreement with Messrs. Burgess Battery Co., the Company's Technical Collaborator, has been signed by the directors in August during the year under review. While the provision of taxation liability which the Company will have to bear under the terms of the agreement has been included under the head of Royalty. The directors regret to inform, that during December in the year under review, the Burgess Battery Co. was sold to another company which had a very heavy accumulation of losses, which position if accepted might have resulted in increasing the cost of Technical collaboration. Hence the directors have again started negotiations with them, so that the Company's interest might not be adversely affected.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	24,97,680	Gross block	34,27,150
Reserves	4,80,479	Less—Depreciation	21,85,078
Provision for taxation	2,13,004	Net block	12,42,072
Liabilities	17,15,455	Stock-in-trade	15,72,453
Profit and loss account (surplus)	16,437	Stores, etc.	3,91,141
		Work-in-progress	5,29,100
		Debits, deposits and advances	10,92,410
		Investments	4,196
		Cash	1,01,683
	Rs. 49,23,055		Rs. 49,23,055

Mysore Stoneware Pipes and Potteries, Ltd.

The directors of the above Company (Managing Agents: The Mysore Industrial Development Co., Bangalore) present the audited accounts of the Company for the year ended 31st March 1959.

The surplus available for the year is Rs. 1,51,900 (Rs. 1,24,712) after providing Rs. 62,864 (Rs. 88,473) towards depreciation, development rebate according to income-tax rates and Rs. 1,68,123 (Rs. 1,43,178) towards income-tax, super-tax, surcharge, and wealth-tax. Including a sum of Rs. 6,037 (Rs. 1,324) brought forward from last year, the total sum available for distribution is Rs. 1,57,937 (Rs. 1,26,036). The directors recommend to dispose of this amount as follows:—

To declare a dividend of 7½ (7½) per cent. and a bonus of 2½ (2½) per cent. or Re. 1.00 (Re. 1.00) per share free of income-tax on 60,000 shares of Rs. 10 each absorbing Rs. 60,000 (Rs. 60,000), to transfer to general reserves Rs. 15,000 (Rs. 50,000), to transfer to reserves for replacement and rehabilitation of plant and machinery Rs. 50,000 (nil), to transfer to income-tax refund fund Rs. 15,000 (nil) and to carry over to next year Rs. 7,937 (Rs. 6,036).

Production and sales during the year were the highest so far. There has been increase in the cost of production due to higher prices of materials, railway freight charges and repairs to plant and machinery. However, it is gratifying to note that by larger sales and output a greater profit has been secured. The demand for the Company's products continues to be keen. Output and sale of firebricks have been increased during the year.

The programme of expansion for increasing the output of stoneware pipes and firebricks mentioned in the last report is well under way. An import licence for Rs. 1.23 lakh of rupees has been obtained to secure plant and machinery from U.K. and U.S.A. The first instalment of machinery has been received and installed at the Works and arrangements have been made for the construction of necessary buildings.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	6,00,000	Gross block	10,81,708
Reserves	5,07,658	Less—Depreciation	7,20,552
Provision for taxation	1,73,020	Net block	3,61,156
Provision for wealth-tax	3,500	Stock of finished goods	96,308
Liabilities	5,24,675	Raw materials	51,451
Profit and loss account (surplus)	7,937	Stores and spare parts, etc.	1,69,720
		Debits, deposits and advances	4,50,748
		Investments	1,59,267
		Cash	5,28,140
	Rs. 18,16,790		Rs. 18,16,790

Indore Malwa United Mills, Ltd.

The directors of the above Company (Chairman: Mr. K. L. Seksaria, Bombay) submit the audited accounts of the Company for the year ended 31st December 1958.

The profit for the year 1958 without providing depreciation amounts to Rs. 34,109 (loss of

Rs. 11,77,234). Deducting therefrom the development rebate for the year 1958 of Rs. 1,10,000 (nil) the loss for the year comes to Rs. 75,891. Adding thereto the balance of loss brought forward from the previous year's account of Rs. 11,77,234 the net deficit is Rs. 12,53,125.

Although there is no profit for declaring a dividend, the directors are of the opinion that the same should be declared out of the general reserve and have for this purpose transferred a sum of Rs. 2,50,000 (Rs. 3,00,000 from dividend equalisation account and out of the same they recommend a dividend of Rs. 5 (Rs. 6) per share, without deduction of income-tax, for the year ended 31st December 1958.

No depreciation for the year 1958 has been provided for. Also no provision has been made for taxes. The Company's income-tax and wealth-tax assessments have been completed upto the year 1957. Appeals preferred by the Company in respect of some of them are pending and refunds are expected after their disposal. The directors are of the opinion that the existing provision is sufficient to meet the tax liabilities of today, if any.

The difficulties through which the textile industry passed in 1957 considerably increased during the year under review. The structure of production cost became more rigid, due to the persistently rising trend of wages, prices of stores and fuels and railway freight charges, etc. The count of dwindling off-take and hand to mouth financial position of several mills and particularly of most of the mills manufacturing coarse and medium cloth situated in the interior of the country was severely strained and the resources of a number of mills were greatly depleted. Consequently, quite a few mills had to close down and several went on short time working, thereby production of mill cloth registered a fall in the year 1958. Despite this, the total supply of cloth available for domestic consumption was higher than in 1957 being as much as 7,128 million yards as against 6,844 million yards in 1957, due to three factors, viz., huge opening stocks, rise in production in the decentralised sector of the textile industry such as Handloom, Powerloom and Khadi and low level of exports.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	50,00,000	Gross block	1,64,45,371
Reserves	4,76,698	Less—Depreciation	1,21,08,899

		Stores, etc.	17,07,675
		Debits, deposits and advances	19,95,503
		Investments	26,09,072
		Cash	3,30,781
	Rs. 1,85,03,750		Rs. 1,85,03,750

Churalia Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Helgers and Co. (Private) Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

The profit and loss account after providing for all charges, after making provisions of Rs. 57,182 (Rs. 3,438) for taxation and Rs. 1,800 (Rs. 3,300) for wealth tax and after transferring profit of Rs. 20,672 (Rs. 20,620). To this is added the balance brought forward from the previous year of Rs. 10,537 (Rs. 4,240) making a total available balance of Rs. 31,209 (Rs. 40,597) including Rs. 6,677 being refund of income-tax. The directors propose to dispose of this amount as follows:—

By payment of a dividend at the rate of 5 (5) per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 30,000 (Rs. 30,000) and by carrying forward Rs. 1,209 (Rs. 10,537).

The Karanpura Mining Syndicate.—During the year ended 31st December 1958, 180,082 tons of coal were raised and 180,627 tons were despatched. The managing contractor continues to raise and sell coal from Religara Colliery and this arrangement continues to work satisfactorily.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	6,00,000	Investments	6,76,030
Reserves	1,54,088	Debits, deposits and advances	1,77,114
Provision for taxation	48,376	Cash	1,31,132
Provision for wealth-tax	3,282		
Liabilities	1,77,321		
Profit and loss account (surplus)	1,209		
	Rs. 9,84,276		Rs. 9,84,276

Borrea Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Helgers and Co. (Private) Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

Raisings and Despatches.—1,71,109 tons of coal were raised and 1,74,148 tons despatched during the year, compared with 1,52,270 tons raised and 1,51,308 tons despatched during 1957. The output

improved steadily in accordance with the planned expansion programme, most of the increase in production coming from the Aralgoria area.

The profit and loss account, after providing for all charges, after making provision of Rs. 1,45,109 (Rs. 29,085) for taxation, Rs. 13,000 (Rs. 26,100) for wealth tax and Rs. 72,707 (Rs. 80,626) for depreciation, shows a profit of Rs. 1,66,618 (Rs. 1,21,328). To this amount is added the balance brought forward from the previous year of Rs. 28,931 (Rs. 19,553) making a total of Rs. 1,95,549 (Rs. 1,40,881). And from this is deducted the amount transferred to statutory development rebate reserve of Rs. 66,120 (Rs. 12,975 for development rebate reserve), leaving a balance of Rs. 1,27,429 (Rs. 1,09,181) after transferring Rs. 18,725 to tax contingency reserve. The interim dividends declared on 27th November 1958, without any deduction for income-tax payable by the Company on preference shares absorbed Rs. 13,000 (Rs. 13,000) and on ordinary shares absorbed Rs. 37,500 (nil) leaving a balance of Rs. 76,929 (Rs. 96,181). From this amount there has been transferred to reserve for equalisation of dividend Rs. 25,000 (nil) leaving a balance available of Rs. 51,929 (Rs. 96,181). The directors propose to dispose of this amount as follows:—

By payment of a final dividend on the preference shares making 6½ per cent. per annum without any deduction for income-tax payable by the Company, absorbing Rs. 13,000 (Rs. 13,000), by payment of a final dividend on the ordinary shares at 2½ (7½) per cent. [making a total of 7½ (7½) per cent. per annum for the year] without any deduction for income-tax payable by the Company absorbing Rs. 18,750 (Rs. 56,250) and by carrying forward Rs. 20,179 (Rs. 28,931).

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	11,50,000	Gross block	49,61,177
Reserves	24,88,188	Less—Depreciation	28,34,991
Provision for taxation	26,174	Net block	21,26,186
Liabilities	8,61,580	Work-in-progress	1,06,480
Profit and loss account (surplus)	20,179	Stock-in-trade	18,542
		Stores etc.	1,58,441
		Debits, deposits and advances	10,37,691
		Investments	7,94,905
		Cash	3,03,866
	Rs. 45,46,121		Rs. 45,46,121

Kalapahari Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 28th February 1959.

The accounts show a profit, after charging all expenses, of Rs. 1,57,958 (Rs. 1,38,559) the debit balance brought forward from the previous year was Rs. 1,79,352 (Rs. 3,17,911) leaving a debit balance of Rs. 21,394 (Rs. 1,79,352). The directors have transferred to development rebate reserve Rs. 9,540 (nil) leaving a total debit balance to be carried forward of Rs. 29,934 (Rs. 1,79,352). Wealth tax in respect of the year, estimated at Rs. 2,500, has been provided for by transfer from capital reserve.

Raisings for the year amounted to 92,617 tons compared with 85,907 tons in the previous year, whilst despatches totalled 85,203 tons as against 78,602 tons. Depilating in the Ghusick "A" Seam was discontinued in November 1958 pending further investigation into the quality of the full section of this seam; and consequently raisings which have been confined to development only have been at a reduced level since that time.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	3,50,000	Gross block	15,24,791
Reserves	5,41,422	Less—Depreciation	7,79,269
Provision for taxation	4,000	Net block	7,45,522

Liabilities	4,05,657	Stores and spare parts	78,045
		Debits, deposits and advances	1,71,834
		Cash	26,016
	Rs. 13,01,222		Rs. 13,01,222

* Reserves are shown after deducting Rs. 29,934 being the debit balance in the profit and loss account.

Ondal Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Helgers and Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The profit and loss account after providing for all charges and after making provision of Rs. 1,54,788 (Rs. 46,068) for taxation, and Rs. 3,650 (Rs. 6,675) for wealth tax, shows a profit of Rs. 50,982 (Rs. 55,197) to which is added the balance brought forward from the previous year of Rs. 41,941 (Rs. 37,244). The directors propose to dispose of this amount by payment of a dividend on the preference shares at the rate of 6½ per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 13,000 (Rs. 13,000), by payment of a dividend on the ordinary shares at the rate of 5 (5) per cent. per annum without any deduction for income-tax payable by the Company absorbing Rs. 37,500 (Rs. 37,500) and by carrying forward Rs. 42,423 (Rs. 41,941).

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	9,50,000	Gross block	3,97,666
Reserves	15,80,815	Less—Depreciation	2,47,665
Provision for taxation	1,45,663	Net block	1,20,000
Provision for wealth tax	6,858	Investments	21,58,086
Liabilities	1,18,876	Debits, deposits and advances	2,55,243
Profit and loss account (surplus)	42,423	Cash	3,11,300
	Rs. 28,44,655		Rs. 28,44,655

Periakaramalai Tea and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Peirce, Leslie & Co., Ltd., Calicut) submit the accounts of the Company for the year ended 31st March 1959.

After providing for depreciation and all charges except taxation, the accounts show a profit of Rs. 16,44,392 (Rs. 17,14,272) to which is added the balance brought forward from last year of Rs. 1,12,619 (Rs. 1,22,173) and refund of income-tax on previous year's account of Rs. 42,258 (Rs. 1,12,612) making a total of Rs. 17,99,269 (Rs. 19,49,257). After deducting from this transfer to taxation reserve of Rs. 670,000 (Rs. 10,42,812), transfer to development rebate Rs. 58,731 (Rs. 42,538) and transfer to general reserve Rs. 2,00,000 (Rs. 1,71,800) there remains a balance of Rs. 8,70,538 (Rs. 6,92,107). From this amount the directors recommend payment of a dividend of 12½ (10) per cent. absorbing Rs. 7,24,360 (Rs. 5,79,488) leaving a balance to be carried forward of Rs. 1,46,178 (Rs. 1,12,619).

Tea.—A total crop of 48,74,543 lbs. was harvested during the season at an all-in-cost of 146 cents per pound as compared with the previous season's figure of 49,06,154 lbs. at an all-in-cost of 138 cents per pound. The average net price realised for the season was Rs. 1.78 per pound compared with Rs. 1.69 per pound for the previous season. The unsold stock has been valued at Rs. 2.15 per pound. The 1959-60 crop is estimated at 47 lakhs pounds to be harvested at an all-in-cost of 148 cents per pound.

Coffee.—A crop of 9,954 metric tonnes was harvested and delivered to Coffee Board. This has been valued at Rs. 2.12 per cent.

Cardamoms.—A crop of 2,326 lbs. was harvested. The average price realised is Rs. 7.91 per pound.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital	57,94,880	Gross block	1,06,78,375
Reserves	27,01,269	Less—Depreciation	31,56,780
Provision for taxation	4,22,000	Net block	75,21,595
Liabilities	15,98,029	Work-in-progress	7,501
Profit and loss account (surplus)	1,46,178	Stock-in-trade	18,30,170
		Stores, nursery stock etc.	7,72,056
		Debits, deposits and advances	2,57,850
		Investment	65,356
		Cash	1,98,819
	Rs. 1,06,62,356		Rs. 1,06,62,356

Parry's Confectionery Ltd.

The directors of the above Company (Managing Agents: Messrs. Parry and Co., Ltd., Madras) present the audited accounts of the Company for the year ended 31st March 1959.

The net profit for the year, before providing for taxation, was Rs. 7,30,710 (Rs. 7,65,710) upon which taxation amounts to Rs. 4,06,644 (Rs. 4,40,150) leaving a net profit after taxation of Rs. 3,22,066 (Rs. 3,45,560). To this should be added the surplus brought forward from last year amounting to Rs. 74,706 (Rs. 71,146) making the profit available for appropriation of Rs. 3,96,772 (Rs. 4,16,706). Out of this amount the following appropriations have been made or are recommended by the directors:—

To capital reserve Rs. 10,000 (Rs. 22,000), to general reserve Rs. 1,50,000 (Rs. 1,70,000) and to payment of a dividend, free

CREEPING INFLATION—IV

(Concluded from page 475)

expands as rapidly as income, it is hardly surprising that virtually all British observers go on to stress the need for increased investment as a means of enlarging productive capacity. But, while there is agreement on this need, the means of attaining it are subject to debate. Some members of the cost-push school hold that, given a relatively high level of income and employment, a policy of rapidly expanding investment would require a correspondingly rapid increase in savings, which in turn would require fairly severe restraints on personal consumption at least in the initial stages. Since there is doubt whether such restraints would be accepted voluntarily, it is held that fiscal policy—or, bluntly, increases in taxation and/or reductions in Government expenditure—should be brought into play to achieve the necessary balance between savings and investment. Moreover, it is argued that this policy could get off the ground only with the active co-operation of all segments of the economy and especially of the trade unions, which would be asked to accept a "full" wage increases for a period set by one commentator at not less than two years. By thus holding costs stable during a period when productivity per man would be rising rapidly, the economic base for further growth would be expanded and workers could thereafter expect to obtain wage increases that might otherwise have been inflationary. Thus, according to this view, progress would be made toward the reconciliation of a rapid rate of economic growth with the price stability needed to sustain further growth on into the future.

This approach is generally rejected by the demand-pull school, apparently on the ground that, if severe restraints were placed on consumption, market indicators as to the appropriate direction of investment would be lacking and that, if the needed rise in investment were to be attained at all, it would only be by the Government itself or as a result of extensive official intervention. Since most members of the demand-pull school favour maximum reliance on the mechanisms of the market, they hold that, ordinarily, an increased rate of investment cannot precede but only follow a rise in consumption. This is said to be especially true at present, when many British industries have considerable excess capacity; output in many lines would have to rise significantly before firms would undertake new investment to expand capacity further. As to the means by which to provide the additional savings to finance the rise of investment, the demand-pull school, while by no means eschewing fiscal policy as an instrument for maintaining economic balance, gives existing monetary policy instruments a major role.

While most commentators rely on an acceleration of investment to achieve the reconciliation of growth with price stability, a few start, as it were, from the opposite direction. They hold that the Government should commit itself to keeping a suitably constructed index of the prices of domestically produced goods from rising above a precisely defined ceiling, and that this new obligation should constitute a limitation on the Government's existing commitment to maintain aggregate demand at a "full employment" level. To control spending and thus prevent the pressure of demand from pushing the price index above the ceiling, the Government would subject all incomes to a new levy, the rate of which could be varied frequently and promptly, as circumstances might require, by a stabilisation committee responsible to the Chancellor of the Exchequer. In addition, an independent expert body would publish periodic estimates of the average increase in per capita earnings that it considered compatible with the preservation of full employment with stable prices, while various arbitration boards (with a view to maintaining an appropriate distribution of labour) would settle disputes as to whether workers in a particular industry should obtain increases appreciably above or below that average.

One essential feature of this proposal is, of course, the variable levy on incomes that would serve as a regulator of aggregate demand. Apart from the numerous political and administrative problems surrounding such a device, a levy on income is subject to the economic criticism that, in so far as its impact is absorbed merely through changes in savings, it has little or no effect on spending. Hence, some observers hold the view that a variable tax on expenditure would be more effective both in exercising general control over inflationary or deflationary tendencies and in securing an

appropriate distribution of resources between consumption and investment. In this view, the entire existing tax system would be replaced by two new taxes, one on personal expenditure, the other on capital expenditures. Variations in the latter would limit or encourage investment as circumstances might require, while variations in the former would keep spending for consumption within the limits imposed by the requirements of both investment programmes and price stability.

Conclusion

As this is being written, Britain is emerging from a mild recession. The lifting of controls on instalment credit in the autumn of 1958 and the reduction in income and purchase taxes in the April (1959) budget have stimulated personal consumption. The investment programmes of the public authorities have been accelerated, and special tax incentives for private investment have been strengthened. House building has been rising, and exports have not only recovered all the ground lost in the 1957-58 recession but have climbed to a new peak. The pace of economic activity is consequently quickening. At the same time, the rise of wages and prices has been checked partly because of declines in British import prices. This spring, indeed, the retail price index dropped for the first time since the war below the level of a year earlier. Moreover, the conditions exist for continued price stability. The rise of investment in recent years has greatly increased both the capacity and the efficiency of industry. Hence, there is room for a considerable rise in total output and in productivity per man, which would in turn act to stabilise or perhaps even to reduce unit costs of production.

The stage may thus be set for Britain to reap some benefits from the clarification of methods and objectives that has resulted from the post-war discussion of its most "intractable" economic problem. With the Government already having used drastic means to demonstrate its determination to maintain the value of sterling, labour and management may now be in the process of modifying some of the wage, price, and other practices followed in the past. And, having achieved the requisite price stability, the Government has moved rapidly toward facilitating economic re-expansion. Actually, Britain should now have much less trouble in supporting levels of spending for personal consumption, public welfare, and defence, which, in earlier years, had acted as a limitation on capital formation and as a threat to its balance of payments. Today, with its enlarged productive capacity, such spending should not be incompatible with the maintenance of an adequate balance-of-payments surplus and with a further substantial rise in the proportion of its gross national product devoted to domestic investment. There is, therefore, firm ground for hope, if the lessons of the post-war years have been learned as well as now seems indicated, that Britain may in fact be on the threshold of a period of sustained growth without inflation.

COTTON

(Concluded from page 466)

order to avoid having to import cotton for internal use. Acreage in Peru is expected to be the same as in previous seasons, namely, close to 600,000 acres.

To sum up. Acreage and production in the U.S. will be higher, while elsewhere they are, in all probability, likely to decline. The only major reductions in acreage which will have any significant effect on the world situation will occur in Mexico, the Central American countries, the U.A.R. and Greece where preliminary estimates show that acreage may be lower by a million acres. The presumption is, therefore, that production will decline significantly in these countries.

There are indications that variations in acreage in other major producing countries will be much less important. With small crops last season and an expanding demand India and Pakistan, which together account for nearly half the total cotton acreage outside the U.S., will probably aim to maintain acreage at last season's level.

A preliminary conclusion is that total acreage outside the U.S. will be somewhat less than the 1958-59 record of 47 million acres but will probably be larger than in either of the two previous seasons. Including the U.S., however, total acreage will probably increase from 59 million acres in 1958-59 to around 61 million acres.

If so, acreage would be at about the same level as in 1956-57 but still much lower than in the earlier post-Korean period.

No prediction can be made on yields. The estimate in the U.S. put yield at 470 lbs., as against 466 lbs. last season. Elsewhere, the reduction in acreage has taken place in relatively high-yield countries. In Mexico, for example, yield per acre in recent seasons has been about double the world average while yields in Central America are now the highest in the world—well over a bale to the acre. Egypt has traditionally been a high-yielding country and, after a lapse a few years ago, yields seem to be on the increase again. During the 1958-59 season, over 4 million bales or almost a quarter of the total production outside the United States, came from these three countries and the reduction in acreage, therefore, must inevitably affect crop prospects next season. There may be offsetting factors, however. By virtue of the vast acreage planted to cotton in India each year—well over 40 per cent. of the total acreage outside the United States—yield in this country is always a vital influence on the level of world production. Average yield in 1958-59 at 93 lbs. per acre was much lower than the recent average of 103 lbs. (1953-58). Yields in North Brazil, Uganda, Syria and Argentina were also much lower than average and under normal circumstances, therefore, the production potential for 1959-60 in all these areas should be higher than in 1958-59.

EASY MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 16th September

There is precious little to say about the money market this week. There has been no change in its state of affairs, described in these columns last. The trend is extremely easy, with a surfeit of funds and lenders. On Tuesday, some demand was reported for payment of taxes. But this had no visible effect on the state of the market. Inter-bank call money is still at the self-same rate of 1½ per cent. among big Indian banks and Exchange banks and 2 per cent. among small Indian banks. The rate for house money at seven days' notice is 3 to 3½ per cent. and for one to six months' deposits 3 to 3½ per cent.

The response to the Government of India 91 days' Treasury Bills was greater, the total amount offered being Rs. 2.64 crores, as against Rs. 2.50 crores in the previous week, the amount invited and accepted remaining unchanged at Rs. 2 crores. Naturally, the average rate of accepted tenders has gone down further from 2.448 per cent. per annum to 2.440 per cent. per annum. This is the fifth continuous week to witness a fall in this rate. Tenders for another Rs. 2 crores of bills have been invited for the next week. Sales of Intermediate Treasury Bills during the four days ended 12th September 1959 amounted to Rs. 1 crore, that is, Rs. 29 lakhs less than the sales during 1st September to 5th September 1959. The offer of these Bills on tap is being continued from 17th September to 19th September at the same rate as in the week under review, i.e., at 2.376 per cent. per annum.

There are no outstanding variations in the statement of the Reserve Bank for the week ended 11th September 1959, as compared with that for the preceding week. Notes in circulation are up by Rs. 5.37 crores at Rs. 1,670.28 crores, but notes held in the Banking Department have fallen by an almost identical amount. There is no change in foreign securities held in the Issue Department, but balances held abroad in the Banking Department have risen by Rs. 2.02 crores, with the result that the total foreign assets are better to that extent and stand at Rs. 186.26 crores. Deposits of the Central Government, as also those of other Governments, are lower by Rs. 8.53 crores and Rs. 3.34 crores, respectively. Reflecting the continued easy money conditions, the deposits of banks are larger by Rs. 10.58 crores at Rs. 81 crores. Loans and advances to Governments have gone up by Rs. 2.44 crores; similarly, other loans and advances have also moved up by Rs. 1.19 crore, their respective totals being Rs. 19.02 crores and Rs. 74.15 crores. Investments show a fall of Rs. 3.78 crores and also Government Treasury Bills by Rs. 1.38 crore.

The statement of scheduled banks for the week ended 4th September 1959 discloses a drop of Rs. 10.33 crores in demand deposits and a rise of Rs. 8.47 crores in time deposits. Borrowings from banks have declined by Rs. 2.18 crores. The changes in borrowings from the Reserve Bank and the State Bank are small but in the downward direction. Under bank credit, advances have shrunk again, this time by Rs. 4.59 crores. Bills purchased and discounted, however, show a rise of Rs. 1.57 crore. Consequently, the total bank credit is down by a little over Rs. 4 crores. Investments have registered a substantial rise of Rs. 12.04 crores, which has taken their total to Rs. 747.51 crores. Money at call and short notice has improved by Rs. 1.04 crore, but total cash has fallen by Rs. 11.01 crores to Rs. 112.13 crores.

The gilt-edged market continued to rule firm during the week under review, but the turnover was small again for want of sellers. The demand from such institutions as provident funds, which are compulsorily required to invest from time to time led to a further rise in prices. Thus, 3 per cent. 1963-65, 1964 and 3½ per cent. 1968 and 1969 were all marked up by 10 nP. A rise of 20 nP was recorded in 3 per cent. 1966-68 and of 5 nP in 3 per cent. 1970-75, 3½ per cent. 1962, 3½ per cent. 1965, and 3½ per cent. 1967. The 3 per cent. 1986 Conversion loan, however, was lower by 10 nP at Rs. 74.20.

With the singular exception of 4½ per cent. 1970 Andhra loan, which declined by 10 nP to Rs. 101.80, most of the other State loans were steady but unchanged. In fact, a 10 nP rise was seen in the 4 per cent. 1971 of Madhya Pradesh loan.

In the foreign exchange markets of the world, the pound sterling ruled fully steady. In the New York market, spot sterling was a shade higher at 280.31-280.34 cents per £. This was true of three months' forward also which was quoting at 280.71-280.74 cents at the time of writing.

HIDES AND SKINS STEADY

(From Our Own Correspondent)

MADRAS, 14th September

There was no change in the kip market and conditions remained unaltered. Sellers at present are holding firm, though price resistance by U.K. importers is marked and genuine.

There was good demand for tanned goat skins light weights and lower grades of 11/12 lbs. up and prices improved to a small extent. Continental buyers were showing interest in shipment business and the market is steadier.

Inquiries for tanned sheep were steady and prices were unchanged.

In the last London public sales, which commenced on 31st August, prices of tanned goat skins advanced 12d. to 18d. over June level and sheep 6d.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 16th September

Distinctly easy conditions prevailed in the bullion market during the week under review. Offtake of both gold and silver continued to be slack, while arrivals of *kutchi* metals were quite large. The operators preferred to await the emergence of seasonal influences exerting pressure on demand. Even firm advices from commodity markets were of no avail.

Gold was subjected to selling in the earlier sessions on rumours that sale of Kolar gold would be resumed. Although the rumours were later found to be unfounded, buying support was lacking. Today's closing rates for both the metals were lower than those on Wednesday last.

September settlement in gold came in for selling and fell from Rs. 122-13 to Rs. 121-8 on the opening day of the week, that is, Thursday the 10th inst. After recovering to Rs. 122-12 in the subsequent sessions, it receded again to Rs. 121-13 today, before finishing at Rs. 121-14-6. The net loss over the week was As. 14-6. October settlement declined in the course of the week from Rs. 123-3 to Rs. 122-6; at one time on Thursday, it had touched a low of Rs. 121-13. The carry-forward rate in favour of bears in September settlement widened from As. 6 last week to As. 7-6 today.

Ready gold moved down from Rs. 122-11 to Rs. 121-9 on the opening day. Thereafter, it fluctuated narrowly and touched Rs. 122-11 on Monday. It began at Rs. 122 today and, after easing to Rs. 121-14, closed at Rs. 122-1. The daily average arrivals and offtake of gold were both 3,250 tolas. The floating stocks are reported to be around 50,000 tolas.

September settlement in silver began the week at Rs. 203-9, as against Rs. 204-5, and retreated to Rs. 202-10 today, before finishing at Rs. 202-11-6. The net loss over the week was Rs. 1-9-6. October settlement sagged during the week from Rs. 204-15 to Rs. 203-11. The carry forward rate for September settlement continued to be against bulls, the rate actually rising from As. 10 to As. 15-6. Business in November settlement commenced at Rs. 204-4 today. Towards the close, it was quoted at Rs. 204-5.

Ready silver encountered selling and suffered a setback. Today's closing rate was Rs. 202-10, as against Rs. 204-1 on Wednesday last week. The daily average arrivals of silver were 46 bars, while the offtake was six bars. The floating stocks of silver are estimated at 400 bars.

Both ready and forward silver in the London bullion market recorded a gain of ½d. during the week, yesterday's quotations being 79d. and 78½d. per ounce, respectively. Silver in New York, however, was unchanged at 91.375 cents per ounce. Ready gold in London, after improving from 250s. 7½d. to 250s. 8½d. on the 11th inst., eased to 250s. 8d. on Monday. The latest available rate for dollar gold in London is \$35.11-\$35.134 per ounce, as against \$35.11-\$35.13 last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	10-9-59	Highest	Lowest	9-9-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Gold				
Ready (99.9 fine Mint)	122 11	122 11	121 9	122 11
Forward	121 14½	122 12	121 8	122 13
Silver				
Ready (99.9 fine Mint)	202 10	204 2	202 8	204 1
Forward	202 11½	204 8	202 10	204 15
London Silver Ready	78½	79½	78½	78½
London Forward	78½	79½	78½	78½
London Gold	250s. 8½d.	250s. 8½d.	250s. 7½d.	250s. 7½d.
New York Silver	91.375	—	91.375	—

* 17th September settlement. † 18th September settlement.

TIN EXPORT QUOTA RAISED

(From Our Own Correspondent)

CALCUTTA, 15th September

Conditions in the metal market during the week under review were steadier, in contrast to the easier trend last week. A notable development of the week was the announcement by the International Tin Council raising the export quota of tin of producing countries in the fourth quarter ending December to 30,000 tons from 25,000 tons at present. The Council's decision is aimed at relieving the existing shortage in consuming countries. During recent weeks, the Buffer Stock Manager had been selling tin at £800 per ton, and his stocks have now fallen below 10,000 tons which is the minimum required to tide over any shortage that might develop. As such, he is unlikely to release further quantities to the market. On the London Metal Exchange, tin opened at £793 per ton and after declining to £792½, recovered to close at £793. In the local market, tin gained to Rs. 584 from Rs. 581 per cwt. on firmer advices from the Far Eastern markets. There was fair demand from consumers.

The demand for copper declined slightly during the week, although the metal continued to be in short supply, following the news that established importers would soon be issued import licences for copper scrap. Utensil scrap was quoted at Rs. 225 per cwt. In London, copper opened at £2363 per ton and gave way to close at £2333, thanks to a decline in demand on European account. Electrolytic zinc hardened from Rs. 106 per cwt. to Rs. 107½ following better demand and higher Bombay advices. Virgin lead was unchanged at Rs. 74.

STRIDENT RISE IN COTTON

(From Our Own Correspondent)

BOMBAY, 16th September

The firm trend witnessed last week in cotton futures gathered further momentum during the week under review. Reports of heavy rains in Berar, Khandesh and Ujjain-Indore regions and the consequent damage to the standing crops both in respect of quantity and quality, touched off a wave of panicky buying. Those who had gone short rushed to cover their outstandings. Mills also made heavy purchases fearing that new crop movement will be delayed. The sustained firmness of the spot section where many new varieties were knocking against the ceiling, some even piercing it, imparted further strength to the market. Futures values consequently made a strident advance. Profit-taking, as and when emerged at bulges, was swiftly absorbed. The Jarilla March contract was rigged up to a peak of Rs. 719.50 on Monday, although the closing was a shade lower at Rs. 718. The market was closed yesterday and today on account of *Anant Chaturdashi* and *Id-e-Milad*, respectively. The trend in kerb trading continued to be firm.

I.C.C. Moglai Jarilla March 1960 opened the week at Rs. 702, as against the previous day's closing rate of Rs. 701.50 and after declining to Rs. 698.50 the next day, flared up to Rs. 619.50 on Monday before closing at Rs. 718. The net gain over the week was Rs. 16.50.

In the spot section, hectic activity was reported. New crop cotton was keenly sought after by mills. There were fears that, due to the unfavourable weather, the crop would be considerably less this season. Reports from Saurashtra indicated that the crop in the region would be 25 per cent. less than that in the last season. CO2 crop was also said to be smaller. Many varieties were priced at or near ceiling. Some even pierced the ceiling. Thus, Khandesh 27/32" was done at Rs. 885 per candy, as compared with the official ceiling price of Rs. 840. Vijay 13/16" changed hands at Rs. 1,020 as against the ceiling of Rs. 945. Kalyan 24/32" rose Rs. 20 above the ceiling of Rs. 760 per candy. Thus sharp rise in price of cotton—as much as Rs. 20-Rs. 30 within a fortnight of the beginning of the new season—caused anxiety among spinners. Some mill interests are reported to have approached the Government with a request for introducing some kind of distribution control so as to ensure supplies of cotton to mills at reasonable prices.

The following are the spot quotations—in rupees per candy of 78½ lbs.—for some other varieties of cotton prevailing at Sewri:

Bengal Deshi 690; Berar Jarilla 785; Hubli Laxmi 980; Hubli Jaydhar 877; Manavadar 745.

Export demand for both old and new crop was slack. Routine business was reported in Bengal Deshi. Zoda and yellow pickings were in moderate demand.

Demand for foreign cotton was confined to Egyptian Karnak, Giza 30 and higher grade Sudan. Selected U.S. growths also evoked interest.

The Karachi cotton futures market, after ruling distinctly firm early in the week, eased slightly towards the close. The earlier firmness was due to hectic purchases by mills and exporters. N.T.R.G. January and March, which had closed at Rs. 63-12 and Rs. 64-6 respectively last week-end, spurred to Rs. 65-8 and Rs. 66 respectively on the 12th inst. The higher level of prices induced profit-taking. The contracts declined to close at Rs. 64-9 and Rs. 64-15. The spot market was active. Values ruled fully steady. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind Deshi 78; Punjab Deshi 67; 4F Punjab Roller 70; S.G. 71-8; L.S.S. Punjab Roller 71; S.G. 72; N.T.R.G. 78; S.G. 82; 289F Punjab Roller 71-8; S.G. 73-8.

Cotton futures in Alexandria staged a partial recovery during the week. The low levels reached last week attracted fresh buying and values slowly moved up. The latest available quotations—in tallars per lb.—are as under:

Karnak: November 71.10; January 71.70. Ashmouni: October 62.05; December 62.07.

Quiet conditions continued to prevail in the Liverpool cotton futures market during the week under review also. Values moved in a narrow range in slow trading characterised by inter-month switching and light hedging operations. Over the week, prices showed very little change. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 21.80; December-January 21.80; March-April 21.85; May 22.20.

American cotton mixed growth contract: October-November 22.25; December-January 22.20; March-April 22.30; May 22.30.

Sudan: September-October 29.75; November-December 29.75; January-February 29.75.

The New York cotton futures market depicted a divergent trend. While the near delivery months were somewhat firm on buying attributed to the decline in certified cotton stocks, the distant months eased, reflecting lack of incentives and dull conditions in the piecegoods market. In the spot market prices ruled firm, thanks to shortage of supplies.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	14-9-59	8-9-59	31-8-59
Spot	...	32.90	33.10	33.25
October	...	32.58	32.41	32.31
December	...	32.21	32.25	32.23
March	...	32.66	32.67	32.65

SEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 16th September

For the second week in succession, the oilseeds market ruled firm. The week was a short one with only four trading days, market having been closed yesterday and today. During this short period, barring perhaps linseed, which lacked fresh buying support, all other seeds and oils improved on revival of bright prospects for export, particularly for groundnut oil, H.P.S. and groundnut extractions. Bullish weather reports from the major producing areas and restricted offerings imparted further strength. Traders welcomed the decision of the Government of India to increase excise duty rebate on exported vegetable non-essential oils from Rs. 104 per ton to Rs. 110 per ton with effect from the 12th inst. This applied to non-essential oils other than linseed oil, castorseed oil and tobacco seed oil, for which the full rebates of excise duty of Rs. 112 per ton is already admissible. According to a Press note issued by the Joint Chief Controller of Exports, the Government of India has decided to allow export of four tons of groundnut oil cake (expeller variety) up to the end of November by shippers of salad oil for every ton of the oil exported up to the end of October, against contracts concluded during August-September.

Firm conditions prevailed in the groundnut section. Following the extension of the incentive scheme for exports of groundnut oil last week, sizable business is reported with foreign countries, particularly Burma, the U.K. and some countries of the Communist bloc. Shippers are optimistic because foreign prices for groundnut oil have tended to move upwards, following reduced Nigerian offerings and pronounced strength for coconut oil in world markets. Besides, extractions are keenly sought after. In these conditions, groundnut February 1960, which had wound up last week at Rs. 168.37, rallied to Rs. 170.75. Bold ready improved by as much as a rupee to Rs. 40 in the face of tight supply position. Both Coromandel ready and Khandesh quality spurred by Re. 1.50 each to Rs. 40.75 each. Oil ex-mill, finished today fully steady at Rs. 20.25, after fluctuating between Rs. 20.75 and Rs. 21 over the week.

Castorseed, in sympathy, depicted cheerful conditions. Traders expect the U.S. to enter the Indian market for castor oil in the near future. Offerings, too, were limited. Castorseed September 1959, which had closed last week at Rs. 150.62, rose to Rs. 151.50, after moving between Rs. 150.75 and Rs. 151.75 over the week. Ready Madras picked up 25 p to Rs. 30.62. Oil B.S.S. was higher by 12 p to Rs. 18.87.

The linseed section, on the contrary, was subdued on account of some profit-realising and lack of encouraging export demand. Bulls were cautious because of fear of tenders against the maturing contract. Linseed September 1959, which closed last week at Rs. 32.62, went up to Rs. 32.69 on the following day, but it was subsequently pushed down to Rs. 32.25. May 1960 contract lost 6 p to Rs. 33.44. Bold ready was lower by 37 p to Rs. 32.75. Oil retreated by 47 p to Rs. 16.40.

Cottonseed, however, continued to be firm, particularly on account of the marked strength in the raw cotton market. Cottonseed September 1959 contract and February 1960 contract staged a smart rally from Rs. 138 and Rs. 117 to Rs. 140.50 and Rs. 121, respectively.

The following table shows the closing prices of oilseeds and oils on the 14th, as compared with those on the two previous weeks:

	14-9-1959	9-9-1959	2-9-1959
Groundnut	Rs.	Rs.	Rs.
February 1960	170.75	168.37	168.75
Bold ready	40.00	39.00	38.75
Coromandel ready	38.25	38.00	37.82
Khandesh quality	40.75	39.25	37.62
Oil ex-mill ready*	20.50	20.50	19.62
Railway receipts†	20.25	20.12	19.31
Castorseed			
September 1959	151.50	150.62	147.75
May 1960	157.00	155.37	151.50
Ready Madras	30.62	30.37	29.37
Ready Kanpur	28.37	28.37	28.37
Oil B.S.S.‡	18.87	18.75	18.00
Oil commercial§	15.90	15.81	15.12
Linseed			
September 1959	32.25	32.62	31.62
May 1960	33.44	33.50	32.25
Bold ready	32.75	33.12	31.60
Oil ready¶	16.40	16.87	16.50
Cotton seed			
September 1959	140.50	138.00	135.75
February 1960	121.00	117.00	114.00
Niger seed	31.50	30.50	30.50
Kardhi seed	22.75	22.50	22.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ B.S.S.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 50 lb. except in the case of cotton seed, for which it is 75 lb. Spot quotations of seeds are for per cwt. and those for oil per quarter.

ALLOCATION OF INDIGENEOUS ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 16th September

Two important official announcements pertaining to the allocation of indigenous art silk yarn and import of foreign yarn were made this week. The Textile Commissioner has announced that the allocation of art silk yarn from indigenous sources to the art silk powerlooms for the three months ending December 1959 should be made on the basis of the average number of looms worked during the quarter ended June 1959. The allocation will be made only to those units which have been regularly submitting their production returns in the prescribed form to the Commissioner. This decision is in accordance with the

recommendation made by the Development Council for Art Silk Industry. The primary objective is to give the art silk industry a basic minimum quota for working one shift. The balance of requirements for the working of more than one shift is to be earned by the industry by way of exports of manufactured fabrics. In addition to the indigenous or import yarns allocated, staple fibre yarn will be freely available to the industry for augmenting production. The quantity of yarn now being produced is considered to be quite adequate to work another shift. The quantity of indigenous yarn to be allocated per working loom will be on the flat basis of 200 lbs. per loom for the quarter. It may, of course, be possible to allocate some additional quantity from imported yarns. The art silk mills and powerloom units are required to apply to the Textile Commissioner for the issue of licence cards giving particulars in the prescribed form. The members of the associations of various art silk manufacturers are asked to submit their applications direct to the association concerned.

As regards imports of art silk yarn, the Government of India has decided to extend the validity period for actual users' licences issued for imports during the licensing period October 1958 to March 1959 by a period of three months from the date of expiry in respect of 24 per cent. of the face value of licences. During the aforesaid licensing period, it will be recalled, a condition had been imposed on licences granted to actual users for import of art silk yarn according to which 24 per cent. of the face value of import licences was to be utilised for imports through the State Trading Corporation from countries with which rupee payment arrangements had been made. As a result of the representations received from the trade to the effect that most of the actual users do not expect to utilise this portion of their licences within the validity period already allowed, the position has been reviewed and the validity period extended by three months, as already stated.

The above announcements induced some selling in art silk yarns and there was a setback in prices. Demand from weaving mills was at a low ebb. Staple fibre yarns were dull in the absence of encouraging reports from consuming centres. Cotton yarns, however, were firm. It was reported that the floating stocks of yarn were scarce, owing to restricted production and large export sales made by some units in recent weeks to Indonesia, Burma and other markets. Demand for cotton yarns from hosiery factories was tending to rise. The market remained closed yesterday (Jain holiday) and today on account of Id-e-Milad.

Imports of art silk yarn into Bombay port continue to be small. The quantity actually imported during the month of August 1959 was 2.48 million lbs., as against 2.12 million lbs. in July and 3.94 million lbs. in June. During the same month, 172,953 lbs. of synthetic yarn, 10,371 lbs. of staple fibre yarn and 20,198 lbs. of cotton yarn were imported. Exports of cotton yarn from Bombay port during the month amounted to 931,630 lbs.

Cupressa Bamberg yarn (80 x 2) October delivery were subjected to continued heavy selling pressure and were marked down from Rs. 1,652 to Rs. 1,614. Spot Cupressa fell from Rs. 7.47 to Rs. 7.25. Imported yarns were dull, 120 Japan being quoted at Rs. 4.75, 150 Japan at Rs. 4.69, 120 Italy at Rs. 4.75 and 150 Italy at Rs. 4.65. Among indigenous yarns, National Rayons 120 bright cones first grade dropped 3 p to Rs. 4.50. 150 bright cones first grade shed 2 p to Rs. 4.16.

Staple fibre yarns (40 x 2) October contract declined by Rs. 5 to Rs. 665. Spot Kohnhoors and Centurys, however, were higher by 3 p to Rs. 3.56 and Rs. 3.75, respectively. Among imported yarns, 80 x 2 Paramounts lost 1 p to Rs. 7.81. Fujis were unchanged at Rs. 8.50.

In the cotton yarn section, ten counts Podars were well supported, the quotation rising by 12 p

to Rs. 14.62. Moderns were fully maintained at Rs. 13. Twenty counts Moderns were firm at Rs. 18.25. Forty counts Moderns strengthened by 25 p to Rs. 26.50. Minaxis were fully steady at Rs. 25.62. The quotations for sixty and eighty counts remained more or less at last week's levels. The latest available quotations are: Sixty counts: Raghuvamshis Rs. 55.50; Finlays Rs. 63.80; eighty counts: Mahendras Rs. 73.50; Moderns Rs. 79; Finlays Rs. 82; Citys Rs. 68.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted on Monday as compared with those a week before:

	14-9-59	9-9-59
Art silk yarn—		
60/1 Cupressa Bamberg October (100 Kg.)	Rs. 1,614	Rs. 1,662
60/1 Cupressa Bamberg spot (per lb.)	7.25	7.47
120 Japan (per lb.)	4.75	4.75
150 Japan (per lb.)	4.69	4.69

	68.50	68.50

KEEN DEMAND FOR TEAS

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 11th September

A quantity of 900,000 pounds was offered in sale No. 34 on 8th September 1959. The quality improvement particularly among high-grown teas offered in this sale showed a general improvement particularly among high-grown teas. The interest in better liquoring high-grown teas was irregularly dealer by 30 p to 40 p according to quality. Low mediums and mediums, in and were firm to dealer. There was strong competition for all clean black leaf grades suitable for the Middle East, and these were the strongest tea good competition at dealer rates.

The quotations were:

	1959	1958
Low medium	1.60 to 1.70	Rs.
Medium	1.75 to 1.85	1.50 to 1.45
Good medium	2.10 to 2.20	1.75 to 1.95
Quality	2.30 to 3.55	2.00 to 2.25

Dust Sale X.—Sale No. X held on 10th September 1959 aggregated 300,000 pounds. A quantity of dusts were offered in this sale. The market met with a very strong demand and prices advanced irregularly 10 to 15 p for all black grainy dusts which sold at much higher rates than last. C.T.C. dusts continued in demand at dealer rates.

London Market: Sale of 7th September 1959.—Market firm to dealer all round. Strongest features best Assams and leg-cut Doors. Sale of 8th September 1959: Firm to dealer.

Sale of 9th September 1959.—Dearest tendency throughout.

Colombo Market: Sale of 7th September 1959.—Active general demand western districts. Quality improved. Dimbula Dichoya broken sub. Improved U.V.A.s active demand considerably. Mediums active 20 to 30 cents dealer. Low-grown good demand, firm.

Sale of 8th September 1959.—On-grades active demand generally dealer, particularly U.V.A. fannings. Broken-mixes substantially dealer.

Calcutta Market: Export—Sale 13, 66,000 packages. Continued good general demand. Com. Assam C.T.C. 10 to 20 p easier. Best

Internal.—Sale 12.—21,800 packages dust. Good demand. Orthodox Egyptian types firm to dealer. Medium C.T.C. 10 to 15 p easier. Best C.T.C. upto 20 p easier. Sale 13.—22,700 packages dust. Good demand black Egyptian types 4 to 6 p dealer. C.T.C. irregularly easier.

Export Quota.—The market has been rather quiet with last business being transacted at 24 p. At present there are sellers at 24 p with buyers

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 35 was held on Tuesday, 9th September 1959. Strong active demand, particularly all B.O.P.s 5 to 10 p higher but similar fannings sometimes advanced 25 p. Best liquoring very strong and considerably higher according to quality."

(From Our Own Correspondent)

CALCUTTA, 15th September

Good demand was maintained during yesterday's export sale, and the feature during last week's dency in exportable types.

During the week, tea was prominent in the freight market, and, of the available space to the United Kingdom, a good portion was claimed by tea. The U.K. tea stocks for the week ended 4th September was unchanged at 111 million lbs. At the auctions in Mincing Lane during last week, teas were keenly sought after. The low level of stocks in the U.K. should prove a favourable factor for the maintenance of prices at the higher level. In the sales held in Colombo last week, the demand

for good quality teas was steady with medium breakers rising by 20 to 30 cents per lb.

Two internal sales were held last week, one, the usual, and another, which had to be postponed a week in view of the disturbed political conditions leading to riots. Dusts on offer amounted to 21,673 chests in one sale and 22,505 in the second sale. Demand was good in both the sales and keen attention was paid to black leaf exportable types, the prices of which rose by 4 p. Leg-cut Doors and medium orthodox Assams registered higher prices, while an irregular trend was recorded in Darjeelings. Medium C.T.C.s eased by 10 to 15 p, while powdery teas were about steady. The stronger liquoring powdery teas were firm to dealer, and the very best grainy C.T.C.s eased by 20 p. Quotations of both the sales are given below one after the other against each description: Best Assam C.T.C. Rs. 2.55 to Rs. 2.80, same; medium Assam C.T.C. Rs. 2.00 to Rs. 2.10, same; medium Doors Rs. 1.82 to Rs. 1.90, Re. 1.86 to Re. 1.94; and medium Assams Re. 1.78 to Re. 1.90, Re. 1.84 to Re. 1.90.

Leaf on offer amounted to 577 chests in one sale and 463 chests in the subsequent sale. There was good demand, but green teas eased.

Opening quietly, the export auction held yesterday met with increasing demand, and prices hardened. Offerings aggregated 59,798 packages. Clean black fannings appreciated in price with the medium fannings and, in particular, the brighter liquoring medium following suit. Medium B.P.s eased but plain B.P.s were fully firm. C.T.C.s were in better demand and the best lots were fully firm. However, medium and good mediums lost by 10 to 20 p. The cheaper varieties were about firm. The non-withdrawal of orthodox B.O.P.s also met with better demand. An easier trend led to a number of withdrawals of medium orthodox B.O.P.s also eased, but the teas possessing brighter liquoring received good attention. Whole leaf grades tended to be irregular although demand was fair. Tippy teas and Darjeelings were easier. The quotations, exclusive of excise duty, were: best Assam C.T.C. fannings Rs. 2.70 to Rs. 3.10, best Assam C.T.C. B.P. Rs. 2.30 to Rs. 2.70, medium fannings Rs. 2.16 to Rs. 2.26, clean black pekoe Re. 1.94 to Re. 1.96, medium B.P. Rs. 1.94 to Re. 2.04, plain fannings Rs. 2.00 to Rs. 2.10, and plain B.P. Re. 1.84 to Re. 1.86.

Export quota was quoted at 24 p buyers and at 24 p sellers. No business took place.

JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, 15th September

Prices of jute goods fluctuated within narrow limits during the week under review. The closing levels were only fractionally higher on balance. Foreign demand for gunnies was only normal, but the feature was the acceptance by Sudan of tenders for a good quantity of heavy goods for delivery in October and November. In order to clear the recent purchases made by China, a ship was placed for loading of heavy goods to that country. In raw jute, prices hardened following more interest shown by mills. Business passing was fair. The widespread rains in the past week in West Bengal caused concern in the market, but initial reports indicated that no visible damage had so far been caused to the crops that yet remained to be harvested. On the other hand, the rains have raised the water level in tanks and canals and retting facilities are now more satisfactory.

As anticipated in market circles, stocks as at the end of August announced in the week disclosed a satisfactory decline. Sacking goods at 45,800 tons were lower by 8,300 tons and compared with the stock of 38,400 tons a year ago. Such a fall as occurred in the last month was due to good demand from China. Hessian fell by only 1,300 tons to 24,700 tons, and miscellaneous constructions at 10,600 tons were fewer by 2,100 tons. The total decline thus amounted to 11,700 tons. The largest since July 1958. The total stock amounted to 81,100 tons, the lowest since December 1957. Such a low stock resulted even after increased production. And that fully revealed the wisdom of mills in unsealing more looms, thereby reducing the sealed looms to 10 per cent. from 134 per cent. However, it remains to be seen if the increased demand for heavy goods would be maintained in the coming months. Great anxiety was felt in market circles at the strained relations between India and China. It was the big purchase made by China in August that made all the difference to the course of the market trend. Usually, in the months of July and August, the export market is active, and by November most countries would have completed purchases. It was this consideration which led the Indian Jute Mills' Association to keep in operation the 24 per cent. of the looms unsealed in August up to January 1961 only. No doubt, mills would review the position periodically.

Meanwhile, it was noted that hessian constructions exported in the jute season ended 30th June were higher than the previous year. The figure at 45,800 tons represented a rise of 50,500 tons. The total of jute goods bought for export and internal consumption was 1,074,000 tons, showing a rise of 44,300 tons. The rise was accounted for by higher exports of hessian, and this indicated that the demand for sacking in the period was in fact lower. However, in the last month, the demand for sacking improved, but statistical records do not indicate if this higher nature of demand would be maintained. The U.S.A. has not yet entered the market in a big way for hessian, and as and when it does so, sacking looms would have to be transferred again to hessian. For, the current stock of hessian is equivalent only to about two weeks' production.

On Tuesday last, prices fell following a bearish trend in the futures market. Also, overseas buyers kept away from the market, as they were desirous of buying only after prices stabilised. Ready B. twills declined to Rs. 101.25 from Rs. 102.50 and hessian 40" 10 oz. to Rs. 40.25 from Rs. 40.40. On the following day, the stock figures

as at the end of August were announced, and the market reacted by a sharp rise in prices. However, at higher levels, selling pressure brought down the rates after the rise. Hessian 40" 10 oz. was at Rs. 40.45 and B. twills at Rs. 101.50. On Thursday, there was the news of the placement of a steamer for loading heavy goods for China, and B. twills scored to Rs. 102.15, hessian 40" 10 oz. remaining firm at Rs. 40.45. Selling pressure at the higher levels soon developed and, on Friday, B. twills receded to Rs. 101.70, while hessian 40" 10 oz. fractionally gained to Rs. 40.50. Over the week, ready B. twills closed lower at Rs. 101.65 and hessian 40" 10 oz. at Rs. 40.35. During yesterday's trading ready B. twills eased to Rs. 100.85 and hessian 40" 10 oz. to Rs. 40.25.

Mills showed greater interest in raw jute, and a fair quantity changed hands. Assam bottoms gained to Rs. 23 from Rs. 22.50 and northern bottoms to Rs. 22.50 from Rs. 22.25. Latest quotations for the new crop for immediate and/or new delivery are:

White:	Middles Bottoms:
	Rs.
Upper Assam	25.50
Lower Assam	25.25
Northern	25.25
Desal	24.50

Bihar, Jungli & U.P.	23.50
Tossa:	
Ordinary Daisee	26.00
Murshidabad	25.25
Assam-Agartala	26.75
Mesta:	
Daisee	24.00
Jungli	23.50
Bimli f.a.q.	Rs. 21.00
Pucca Bales:	
First marks Rs. 168.00 per bale.	

SUGAR SUPPLIES LESS

(From Our Own Correspondent)

HAPUR, 14th September

Sugar prices continued to rule steady due to shortage of supplies. Demand was reported modest. Although no sugar has been allotted for free sale, it was being sold openly in the market at Re. 1.19 per seer, as against the controlled price of 97 p per seer. Prices per bag improved by Rs. 2 during the week to Rs. 126 per bag. New sugar production is likely to commence some time in November.

Sugar prices at Muzaffarnagar hardened during the week under review. Although outside demand was poor, prices advanced by 50 p to Re. 1 per bag. Fast dwindling stocks and poor supplies were responsible for the rise in prices. Latest available prices were:—crystal spot delivery small grain Rs. 123 to Rs. 123.50, bold crystal Rs. 124 to Rs. 125, retail controlled 98 p per seer, open market Re. 1.12 per seer. Sugar prices continued firm in the Kanpur market on persistent outside demand. Spot sugar was quoted at Rs. 126 to Rs. 127 per bag.

Khandasari prices were quietly steady on good demand. Following the export ban from U.P., about 10 lakh maunds of khandasari were lying unsold in the State and producers are naturally anxious to sell stocks before the advent of the new season. The State Government has asked interested parties not to install new crushers for manufacture of khandasari in mill areas as the entire matter relating to the control of sugar supplies was under Government's consideration. Ruling prices of khandasari were: Rs. 35 to Rs. 41, Boora Rs. 40 to Rs. 42 a maund.

Ready gur prices continued steady and superior gur improved fractionally as stocks with trade were small at about 8,000 maunds. New season will commence in mid-October and due to scanty rainfall, cane crop prospects are bleak. Prevailing prices were: gur best Rs. 21.50, dara Rs. 21, kotha mixed dry-wet Rs. 20.25, wet Rs. 19.25, shakker Rs. 20.50 a maund.

Gur prices were easy in the Muzaffarnagar market, owing to poor demand from Gujarat and Madhya Pradesh, which is being met from South where new production of gur has commenced. Prevailing prices were: Chaku dry Rs. 23.50, kotha dry-wet Rs. 20 to Rs. 23, kotha wet Rs. 19.50, shakker dara Rs. 20 to Rs. 22, khandasari desi Rs. 35 to Rs. 42, boora Rs. 40 to Rs. 42 a maund.

Gur futures moved both ways in heavy speculative activity, mostly influenced by weather reports. Gur jagun having opened at Rs. 13.95 last Monday, touched the highest in mid-session at Rs. 14.44 and receded to finish at Rs. 14.17.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 14th September

Steady to firm conditions prevailed in the food-grain market during the week under review. Traders were greatly disappointed at the latest decision of the National Development Council to maintain the status quo in food policy. Grain prices, which had eased just after the resignation of Mr. Jain, Union Food Minister, on expectations of drastic change in food policy, recorded a hardening trend this week. Kharif crop prospects, which were reported bright earlier, are now said to be poor, following scanty rains in most parts of U.P. This too has acted as a bullish factor. The Union Food Minister, Mr. Patil, has, however, said that there was no shortage of food in the country and it was a man-made shortage, and with the co-operation of all the business community, the producers and consumers—the Government would be in a position to solve the food problem.

Wheat prices at Hapur registered a gain of about Re. 1 per maund during the week and is quoted now at Rs. 18 per maund for average

quality and upto Rs. 19.50 for farm produce, as against the lowest level touched just after the resignation of Mr. Jain, namely, Rs. 16.25 to Rs. 18 per maund, respectively. Arrivals in the open market have again gone down and consumers are finding it difficult to get wheat even at higher prices. The Government controlled price for wheat under the wheat levy scheme is Rs. 13 to Rs. 15 a maund and total purchases on Government account by the end of July were only 21,000 tons. Rice prices ruled quietly steady during the week. Reports of extensive damage to standing paddy and muni crops due to absence of rains have been received from many parts of the State. The ruling prices on Monday were: *seia basmati* Rs. 32 to Rs. 35, *mainpuri* Rs. 24, *rainunia* Rs. 24.25, *ramajwayan* Rs. 24.50 and *gadda* Rs. 22 a maund.

Gram recorded handsome gains during the week on firm advices from Punjab and Madras. Arrivals from Punjab side met with demand and local stock was almost unchanged at about 65,000 maunds. Arrivals of new maize crop in the market are increasing, but prices registered fractional gains during the week on good consumers' demand. Barley and *bejhar* prices also registered a sympathetic rise, although trading in these grains was slack. *Jowar* and *guar* prices were steady. Week-end prices (in rupees per maund) and local stocks on Monday were:—gram 12.50 to 12.50, maize new desi 12.50, barley 11.87, *bejhar* 11 to 11.25, *jowar* 13 to 14, *guar* 11 to 14, *barja* 13.25. Stocks (in maunds): gram 65,000, barley 5,000 *jowar* 7,500, *bejhar* 2,000.

Peas prices improved slightly during the week on good outside demand. Arrivals of peas were at an average of 100 to 150 maunds daily. As outflow to outside destinations was fairly good, local peas stocks declined by four *khatties* during the week to 51 *khatties*. Prices of arhar and other pulses also recorded sharp gains during the week. Prevailing prices and stocks on Monday were:—peas *dara* Rs. 12.75, *arhar* Rs. 15.75 to Rs. 16.12, *arhar dal* Rs. 20 to Rs. 21, *urad* Rs. 17 to Rs. 20, *moong* Rs. 16.50 to Rs. 19, *masoor* Rs. 13.75 to Rs. 16 a maund. Stocks: peas 51, *arhar* 30 *khatties*.

The oil and seed market was quietly depressed in the absence of new incentives and weak advices from ports. Week-end prices were:—sarsun Rs. 25, oil Rs. 67, cake Rs. 10.25, groundnut *desi* Rs. 18, oil Rs. 60.50, cake Rs. 11.25, cottonseed Rs. 13.75 to Rs. 14.75 and tara Punjab Rs. 19.75 a maund.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 14th September

Firm conditions prevailed in the linseed market, throughout the week and prices continued to advance strongly touching Rs. 24.31 on Friday, but a slight reaction developed towards the close. Crushers showed keen interest.

The futures market followed the same pattern and the highest levels reached were Rs.

MISCELLANEOUS COMPANIES

Dividends.—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

BOMBAY, 26th SEPTEMBER 1959

THE move to establish a new financial institution, already named as the International Development Association, will figure prominently at the annual meeting of the International Bank for Reconstruction and Development—World Bank for short—due to be held at Washington on Tuesday, the 29th inst. The credit for taking the initiative in this direction goes to the United States of America. The idea was first mooted by Senator Monroney, with the object of helping underdeveloped countries seriously engaged in the task of raising their living standards, and won the approval of President Eisenhower later. For the first time, in August last, Mr. Eisenhower gave public expression to his support to the I.D.A. He included it as one of the three proposals for raising international liquidity and directed the Administration to study the feasibility of its implementation in co-operation with the members of the International Monetary Fund and the World Bank. The first two proposals pertained to a general increase in the quotas assigned to member-Governments of the I.M.F. and in the authorised and subscribed capital of the World Bank. Approval of the members for the latter two proposals was obtained at the last annual meetings of the Bank and the Fund held at New Delhi. They have now been practically implemented, so that only the idea of I.D.A. remains to be fulfilled.

No official information on the I.D.A. has so far been made available by any of the member-Governments of the World Bank. Nor has the World Bank Secretariat issued any Press release. One has, therefore, to go only by the reports in the Press. It is, of course, well known that the idea of establishing the International Development Association is to help the underdeveloped countries by giving them what is generally described as "soft loans." By "soft loan" is meant a loan carrying a low rate of interest, even if it is uneconomical to the lender, and repayable after a fairly long period; the bulk, if not the whole, of repayment will be in the currency of the borrowing country. In other words, the loans will be something similar to those now being made available by the U.S. Development Loan Fund; indeed, if Senator Monroney's idea were to prevail, they should be more favourable than even the loans from the D.L.F. It is also well known that the I.D.A. would be an affiliate of the World Bank. That at any rate is the proposal of the U.S. Government. Mr. Eisenhower said, in August 1958, that the I.D.A. would be affiliated to the World Bank and could usefully supplement the lending activities of the Bank for accelerating the pace of economic development in the less-developed member-countries of the Bank. No opposition to this proposal has been discernible from the official side of any member-country.

Some economists of international repute, however, have been opposed to the I.D.A. being a part of the World Bank. They are of the view that the Bank should be kept out of it, as the provision of "soft loans" would impair the good work that is being done by it. They feel that Gresham's Law will operate in this sphere also. The soft loans imply a large element of subsidy to the borrowing countries. The doling out of such subsidies, they argue, is a politician's function and cannot be satisfactorily dealt with by an institution like the World Bank run on business principles and sound economics. They are afraid that soft loans will encourage the receiving countries to indulge in inflationary policies and undermine their economic stability. They say that a loan is a loan and not a gift; since it implies repayment, there cannot be a fine distinction between a soft loan and a hard loan. They are not opposed to donations being

given to deserving projects of deserving countries. Only, they want a spade to be called a spade. They feel that a better proposition would be to encourage private enterprise in underdeveloped countries by establishing international investment trusts which, in turn, can give local currency loans and build revolving funds. They favour this course, because they think that it would lead economic development on sound lines.

In arguing thus, these sound-money theorists are clearly ignoring the political factors operating in underdeveloped countries. Although it must be conceded that there is a lot of force in what they say, they are not realistic in their approach, in that one cannot overlook considerations of political feasibility. Statesmanship demands that efforts should be made to devise a scheme whereby the aspirations of underdeveloped countries can be satisfied, without necessarily sacrificing sound economics and without trying to impose on them an economic dichotomy which they are not prepared to follow. It is not surprising, therefore, that the aforesaid arguments have not carried much conviction to either the U.S. Administration or the top officials of the World Bank. Mr. Eugene Black, President of the Bank, would not have entertained the proposal to have the I.D.A. as an affiliate of the Bank had he reasons to feel that it cannot be worked on sound lines. It is obvious that Mr. Black must be of the view that, by having the I.D.A. under the wing of the World Bank, it would be easier to ensure that "soft loans" were given to finance only sound and essential projects than would be the case if the Association were in the hands of some other U.N. agency. It is true that the I.D.A. is meant to supplement the financial efforts of the World Bank, but that does not necessarily mean that the development projects in underdeveloped countries not taken up by the World Bank are all economically unsound. There are several State-owned industrial projects in India, as, for instance, the steel plants, fertiliser factories, heavy machine building plants and machine tool factories, for which the World Bank is not prepared to give a loan as a matter of policy. Surely, these are economically sound projects and there is no reason why the proposed I.D.A. should not finance them. Failure to do so will only compel the underdeveloped countries to lean more and more on the Communist countries for help. Then, there are several other projects for creating "social capital," such as construction of roads, bridges, slum clearance and urban development, the return on which is small and can be had only after a long time. These, too, are projects fit enough to be aided by the I.D.A. By participating in these projects, the I.D.A., under the auspices of the World Bank, can easily influence the borrowing countries to follow sound economic policies. The underdeveloped countries, on their part, will do well to realise that the loans taken by them from the I.D.A., though soft in terms, are still loans and not grants and that they will have to be gradually repaid after some years. This implies that they will have to use these loans in a manner which will be productive and ultimately lead to a surplus of wealth necessary to repay the interest, as well as the principal. Unless their representatives effectively create this impression among the leaders of Western countries attending the Fund-Bank meetings next week, the spokesmen of sound money theory school may succeed in putting a spoke in the wheel and delay the fructification of the I.D.A.

If the establishment of the I.D.A. meant supplanting, instead of supplementing, the existing sources of foreign aid to underdeveloped countries, or if it means a reduction in the scope for obtaining long-term credits through bilateral negotiations, there is surely no chance in it. To take the case of India alone. The country's foreign exchange needs for the third

VOL. XCIX. No. 2531

**INTERNATIONAL
ASSOCIATION**

THE move to establish a new financial institution, already named as the International Development Association, will figure prominently at the annual meeting of the International Bank for Reconstruction and Development, World Bank for short—due to be

held at Washington on Tuesday, the 29th inst. The credit for taking the initiative in this direction goes to the United States of America. The idea was first mooted by Senator Monroney, with the object of helping underdeveloped countries seriously engaged in the task of raising their living standards, and won the approval of President Eisenhower later. For the first time, in August last, Mr. Eisenhower gave public expression to his support to the I.D.A. He included it as one of the three proposals for raising international liquidity and directed the

Administration to study the feasibility of its implementation in co-operation with the members of the International Monetary Fund and the World Bank. The first two proposals pertained to a general increase in the quotas assigned to member-Governments of the I.M.F. and in the authorised and subscribed capital of the World Bank. Approval of the members for the latter two proposals was obtained at the last annual meetings of the Bank and the Fund held at New Delhi. They have now been practically implemented, so that only the idea of

Not much was said or done at the New Delhi meetings of the Fund-Bank about the I.D.A. For practical considerations, the U.S. delegation to these meetings did not take up the issue. It believed in the wise saying: "Do one thing at a time and do it well." It thought that it was better to get the increases in the capital of the Fund and the Bank first approved by the legislatures of member-countries, before confronting them with the demand for subscription to the capital of a new body. With the U.S.

to the capital of a new body, with the U.S. continuing to lose gold in favour of European countries, there was a misgiving whether the U.S. Congress would give permission for the I.D.A. also. Although the postponement of the idea caused some disappointment to the representatives of underdeveloped countries, it was doubtless a wise move. Apart from the consideration just mentioned, the Governments of several Western countries were not quite clear in their minds whether or not the I.D.A. should be supported. Even a few of the underdeveloped countries themselves were having a misgiving

that the new move would adversely affect the prospects for receiving bilateral aid; they were, therefore, uncertain whether it was worth while supporting the move. Since then, however, the climate for the I.D.A. has distinctly improved. The U.S. Administration has come out strongly in favour of it and the Congress seems to be inclined to give its approval. The Governments of the U.K., India, and Pakistan have also expressed their willingness to support the idea in principle. The reactions of other Governments are not yet known, but the Com-

midweight as a whole may be expected to rally behind it. Several Continental countries, notably France, West Germany, Belgium and the Netherlands, may still be having reservations—last year they were not very enthusiastic about it. Even they, however, may relent under persuasion from the U.S. They have all accepted as a matter of principle, the idea that the interests of the free world will be best served if the underdeveloped countries get external

Who else must sweat and toil**

BOMBAY, 26th SEPTEMBER 1959

**DEVELOPMENT
TION**

No official information on the I.D.A. has so far been made available by any of the member-Governments of the World Bank. Nor has the World Bank Secretariat issued any Press release. One has, therefore, to go only by the reports in the Press. It is, of course, well known that the

idea of establishing the International Development Association is to help the underdeveloped countries by giving them what is generally described as "soft loans." By "soft loan" is meant a loan carrying a low rate of interest, and even if it is uneconomical to the lender, and repayment after a fairly long period; the bulk, if not the whole, of repayment will be in the currency of the borrowing country. In other words, the loans will be something similar to those now being made available by the U.S. Development Loan Fund; indeed, if Senator Humphrey is correct, they should be

Monroney's idea were to prevail, they should be more favourable than even the loans from the D.L.F. It is also well known that the I.D.A. would be an affiliate of the World Bank. That at any rate is the proposal of the U.S. Government. Mr. Eisenhower said, in August 1958, that the I.D.A. would be affiliated to the World Bank and could usefully supplement the lending activities of the Bank for accelerating the pace of economic development in the less-developed member-countries of the Bank. No opposition to this proposal has been discernible from the many member-country.

Some economists of international repute, however, have been opposed to the I.D.A. being a part of the World Bank. They are of the view that the Bank should be kept out of it, as the provision of "soft loans" would impair the good work that is being done by it. They feel that Gresham's Law will operate in this sphere also. The soft loans imply a large element of subsidy to the borrowing countries. The doling out of such subsidies, they argue, is a politician's function and cannot be satisfactorily dealt with by the World Bank nor by any other international

by an institution like the World Bank run on business principles and sound economics. They are afraid that soft loans will encourage the receiving countries to indulge in inflationary policies and undermine their economic stability. They say that a loan is a loan and not a gift since it implies repayment, there cannot be a fine distinction between a soft loan and a hard loan. They are not opposed to donations being

given to deserving projects of deserving countries. Only, they want a spade to be called a spade. They feel that a better proposition would be to encourage private enterprise in underdeveloped countries by establishing international investment trusts which, in turn, can give local currency loans and build revolving funds. They favour this course, because they think that it would lead economic development on sound lines.

In arguing thus, these sound-money theorists are clearly ignoring the political fac-

tors operating in underdeveloped countries. Although it must be conceded that there is a lot of force in what they say, they are not realistic in their approach, in that one cannot overlook considerations of political feasibility. Statesmanship demands that efforts should be made to devise a scheme whereby the aspirations of underdeveloped countries can be satisfied, without necessarily sacrificing sound economics and without trying to impose on them an economic dichotomy which they are not prepared to follow. It is not surprising, therefore, that the

afore said arguments have not carried much conviction to either the U.S. Administration or the top officials of the World Bank. Mr. Eugene Black, President of the Bank, would not have entertained the proposal to have the I.D.A. as an affiliate of the Bank had he reasons to feel that it cannot be worked on sound lines. It is obvious that Mr. Black must be of the view that by having the I.D.A. under the wing of the World Bank, it would be easier to ensure that "soft loans" were given to finance only sound and essential projects than would be the case if they were in the hands of some

if the Association were in the hands of any other U.N. agency. It is true that the I.D.A. is meant to supplement the financial efforts of the World Bank, but that does not necessarily mean that the development projects in underdeveloped countries not taken up by the World Bank are all economically unsound. There are several State-owned industrial projects in India, as, for instance, the steel plants, fertiliser factories, heavy machine building plants and machine tool factories, for which the World Bank is not prepared to give a loan as a matter of policy. Surely these are economically sound

projects and there is no reason why the proposed I.D.A. should not finance them. Failure to do so will only compel the underdeveloped countries to lean more and more on the Communist countries for help. Then, there are several other projects for creating "social capital," such as construction of roads, bridges, slum clearance and urban development, the return on which is small and can be had only after a long time. These, too, are projects fit enough to be aided by the I.D.A. By participating in these projects, the I.D.A., under the

auspices of the World Bank, can easily influence the borrowing countries to follow sound economic policies. The underdeveloped countries, on their part, will do well to realise that the loans taken by them from the I.D.A., though soft in terms, are still loans and not grants and that they will have to be gradually repaid after some years. This implies that they will have to use these loans in a manner which will be productive and ultimately lead to a surplus of wealth necessary to repay the interest, as well as the principal. Unless their representatives effect

If the establishment of the I.D.A. means supplanting, instead of supplementing, the existing sources of foreign aid to underdeveloped countries or if it means a reduction in the

Plan are estimated at \$5,000 million. The whole of this, or even a substantial part of it, cannot be met by the I.D.A., which is expected to have a capital of only \$1,000 million, contributed by the members of the World Bank in the same proportion in which they have done to the Bank's capital. It cannot, therefore, be the idea of the promoters of the I.D.A. to curtail the scope and extent of aid now being given by them to India and other underdeveloped countries. There is also no convincing reason why they should do so. After all, on the proposed basis of contribution to the I.D.A.'s capital, the share of the U.S. Government will be no more than \$332 million. The U.K. will be contributing only \$136 million, West Germany a little less than \$100 million and Canada about \$80 million. It is inconceivable that these and other Western countries, which are in a far more enlightened mood now than before, think that their obligations to help the underdeveloped countries in their economic development can be fulfilled merely by making these contributions to the capital of the I.D.A. This does not necessarily mean that the Governments of underdeveloped countries can smugly assume that all they have to do is to negotiate with their counterparts in the U.S., the U.K. and other developed countries for large low-interest-bearing loans, repayable in easy instalments, and big grants. They have to realise that there is, particularly in the U.S., a growing opposition to such Government-to-Government assistance, the stress being increasingly on the export of private capital and loans repayable in hard currency. They have, therefore, to make some allowance for this trend in their calculations and revise the economic policies to facilitate a larger inflow of private capital. In the U.S., there is a serious move to encourage private capital investment in foreign countries through tax concessions. The Governments of underdeveloped countries should reciprocate this move by making suitable concessions in their policies. This will also encourage other developed countries to emulate the U.S.

THE THIRD PLAN

IN retrospect, it will be generally admitted that the public discussion which preceded the second Five-year Plan was less animated than what the subject deserved. Perhaps, both the public and the Government were overwhelmed by the relative success of the first Plan into a sense of complacency, though, when the draft actually appeared, there were several voices of protest against the assumptions implicit in the Plan. The third Five-year Plan is, however, in no danger of inadequate preparation and advice. For one thing, the ground for it has been well prepared by the fact that the second Plan has been appraised and re-appraised. Secondly, the approach to the third Plan, by reason of the experience gained by the Government and the public in the implementation of the second Plan, has evoked lively discussion in many quarters. Among these expressions of opinion, a notable contribution is the one made by the Federation of Indian Chambers of Commerce and Industry.

In its memorandum, entitled *The Third Five-year Plan—A Tentative Outline*, the Federation has set forth the broad principles which should guide the next Plan and also the priorities which should govern the emphasis on different projects. The chief merit of the publication lies not so much in the arithmetical calculations in the outline but in the entire approach to the question of development. Thus, there is no disposition to over-emphasise the need for a conservative Plan, under the pretext of economic realism, which may well degenerate into a cloak for a policy of inactivity. Nor is there an exhibition of enthusiasm for a rate of progress which takes no note of what is practicable. An overall target of net investment at Rs. 10,000 crores has been set. This is a figure which has been most frequently mentioned in connection with all discussions in the Plan. But it is when it comes to the actual pattern of expenditure and the economic policy that should guide it that the Federation makes out a convincing case for a sense of moderation. Economic development, in general, and such development in underdeveloped countries, in particular, according to the Federation, is a matter for evolution and adaptation to changing social and economic requirements. Economically desirable results, it is stressed, cannot be ensured by forcing the pace of institutional changes on doctrinaire grounds; disruption of traditional channels could hold up development programmes. This is a sensible approach. Only, the Government does not always listen to the voice of reason.

Yet another general principle which deserves support is the emphasis on agriculture and consumer goods. It was all too readily assumed on the eve of the second Plan that agriculture could be safely relegated to a secondary, if not inferior, status and that all that the country needed was a bold programme of industrialisation. The country now faces the prospect of falling between two worlds—the world of agriculture, languishing, if not dead, and the world of industry, powerless to be born. Increase in foodgrains production has not kept pace with the increase in demand, whereas the pace of industrial production has shown distinct signs of slackening. The Federation rightly points out that the "emphasis on industry should in no way detract the attention of planners from the need to give sufficient consideration to the projects and administration for improved agricultural production." Again, it insists, in effect, that an exclusive preoccupation with austerity and savings and production of capital goods would be wrong. It argues that production has to be maintained by purchasing power and sustained by savings. Further, capital goods industries deserve encouragement. But equal attention should be given to the production of consumer goods and consumer durables. The Federation rightly observes: "This has to be emphasised, because the products of this group of industries are a direct evidence to the people regarding the results and objectives of planned development." Whatever may be the economic wisdom of concentration on producer goods industries in the centrally planned economies, the fact remains that this policy cannot be implemented in a democratic community which will not lightly sacrifice visible signs of prosperity at the altar of some vague concepts of building an enduring economic base.

To turn now to the investment pattern proposed by the Federation. The overall net outlay of Rs. 10,000 crores is sought to be distributed among the public and private sectors in the ratio of 55 : 45. This gives a slightly larger share to the private sector than the allocation in the second Plan in which the original proportions of the public and private sectors were 61:39. By 1960-61, national income, it is computed, will rise to Rs. 12,800 crores. On the basis of a capital output ratio of 2.5:1, national income is expected to rise to Rs. 16,800 crores by 1966. Between 1961 and 1966, population will have increased from 410 million to 445 million and per capita income from Rs. 310 to Rs. 375. The proposed breakdown of the total outlay (in percentages), with corresponding figures in the second Plan, is: agriculture and rural development 12(9); irrigation and power 16(14.5); industries and mining 40(24.5); transport and communications 11(22); social services 14(23) and miscellaneous 7(7). While investment in agriculture and rural development and irrigation and power are being maintained almost at the same level as in the first Plan, there is much greater emphasis on industries and mining in the third Plan. But it is not clear whether transport has not been unjustly treated, though the percentage proposed will give it a total allocation of Rs. 1,100 crores. So far as the impact of investment on employment is concerned, it has been computed that the total outlay will, on the basis of Rs. 7,000 per job, create 16 million new job opportunities.

The basic considerations and industrial priorities for the third Plan, on which the Federation lays emphasis, are: (1) increased production of fertilisers, both organic and inorganic, so as to relate industrial development to the primary need of bringing about a 30-40 per cent. rise in the production of foodgrains and substantial increase in cash crops; (2) the attainment of a level of near self-sufficiency in heavy machine building, as also of other types of industrial machinery, including machine tools, tractors, etc.; (3) sufficient emphasis on the processing and consumer goods industries which are the basic ingredients of a rising standard of living; these industries also need a high priority as a safeguard against inflation; (4) development in the small-scale sector; (5) considerable expansion in producer goods industries, including steel, chemicals and coal; (6) greater emphasis on the exploration, extraction and production of such raw materials as are making a large draft on foreign exchange such as exploration and exploitation of mineral oil, production of virgin non-ferrous metals, wood-pulp and chemical pulp, etc.; (7) modernisation of various industries, with special emphasis on export industries. A study of this list of priorities shows how balanced the Federation's approach is to the problem of industrial development.

Among the somewhat uncertain factors—no plan can fully insure against all uncertainties—which lie at the basis of the Federation's Plan, mention must be made of the feasibility of the target of Rs. 3,000 crores set for investment by the private sector. The Federation recognises that this is a high figure and admits that, "with existing conditions, the private sector may not even be able to muster investment resources of even half this amount." Given the better fiscal climate, for which the Federation pleads, it may be possible to make a near approach to this figure. The share of internal financing is kept at about 33 per cent. of the total outlay. This will be impossible of attainment, without a "taxation structure which positively assists ploughing back of corporate earnings." Liberalisation of certain restrictions imposed by the industrial finance institutions, the formation of unit trusts as in the U.K. and the U.S. and the creation of a proper climate for inflow of foreign capital are among the measures suggested by the Federation. Nevertheless, it may be wondered whether, barring the event of a remarkably favourable trend in the inflow of foreign private capital and management, the private sector will be able to make the contribution set for it in the Federation's outline of the third Plan.

As experience in the implementation of the second Plan has abundantly made clear, any inadequate appraisal of foreign exchange resources may well land all economic programmes in serious difficulties. The Federation rightly assumes that the paucity of foreign exchange will persist in the third Plan. It assesses the foreign exchange requirements at Rs. 2,400-2,500 crores, made up of foreign exchange needed to make repayments of past commitments (Rs. 550-600 crores), foreign exchange requirements of the Plan itself—on the basis of 20 per cent. for industrial investment and 10 per cent. for the rest—(Rs. 1,500 crores) and foreign exchange to meet a reasonable level of essential imports (Rs. 300 crores). The net total requirements, it is expected, will be reduced to the extent of Rs. 350-400 crores which will be carried over from the various credits in the second Plan. Discussing the question of inflow of foreign capital in relation to the foreign exchange requirements under the Plan, the Federation observes:

"It should also be generally recognised that it would be imprudent to depend upon an unduly high proportion of loans and aid from foreign countries. The burden of repayment in such cases is bound to be cumulative and the various complications pertaining to repayment may mean increasing difficulties regarding foreign exchange budgeting. It has also been our experience in the past that the availability of such loans and grants fluctuates from year to year and much depends upon the vagaries of the political situation in each of those countries which desire to allow such financial accommodation to us. Even otherwise, most countries have to budget these funds on the basis of one financial year at a time and to base a long-term plan like ours on anticipations regarding such grants and loans would be somewhat insecure. It is for this reason that greater attention needs to be paid to the inflow of private foreign capital and various steps of policy and procedure which would be necessary to establish a climate which will ensure a steady and sufficient supply of foreign exchange resources in this form."

Little exception can be taken to the reasoning which has been set forth above in an effort to present the inflow of foreign capital in its national and international perspective. The Federation rightly holds that foreign capital is primarily attracted by the profitability of the enterprise with which it might associate itself. This is obviously related to larger fiscal and other questions. In this connection, the Federation makes a number of constructive suggestions. In the first place, the cumbersome procedures for licensing of enterprises involving foreign capital will have to be given up. Secondly, fiscal policies—personal as well as corporate—must provide incentives for investment. Thirdly, controversy and sweeping statements regarding the roles of public and private sectors should not be allowed to disturb the general economic climate. Fourthly, the vast opportunities available to foreign investors within the various lines open to the private sector should be more clearly indicated. To these suggestions, which deserve to commend themselves to the attention of the authorities, must be added the supreme importance of making the foreign investors feel that they are "wanted," for that alone will ensure a steady inflow of such capital.

MARKET GOSSIP

THE share markets are in a buoyant mood again. The bulls have become active, particularly in textiles and miscellaneous industrials. The Life Insurance Corporation is reported to have sold a few scrips, but this has been quietly ignored. The sudden revival of their enthusiasm is inexplicable. The spectacular rise in the profit of Khatau Makanji Mills for the year ended 30th June 1959 might have raised hopes that the well-managed cotton mills would be in a position to show a handsome profit for the current year. There is also a feeling that the Government will take prompt measures to check the upward trend in raw cotton prices by arranging import of U.S. cotton under P.L. 480 to take care of the shortfall in domestic cotton production. Another factor that has imparted strength to share markets is the growing belief that the Government cannot but help giving more opportunities to the private sector for establishing new industries and expanding the existing ones. Shares of well-known companies flare up on rumours, let alone reports, that the companies have decided to put up a new industry or to raise their productive capacity. The sizable rise in Bombay Dyeing this week is due to a rumour of this nature. Anil Hardboards and Alkali Chemicals have gone up on reports of expansion in their productive capacity. The assumption in these two cases is that, sooner or later, these Companies will have to issue additional capital either at par or at a small premium.

The successful working of the existing rayon spinning mills and the high premium commanded by their shares have induced several people to go in heavily for the shares of new rayon spinning companies. A typical instance is provided by Baroda Rayon, which is yet to receive even the licence for establishing the factory. It is not even known when the prospectus will be published. Nevertheless, several investors are reported to have even paid deposits (without interest, of course) to the agents of promoters for getting a firm allotment. The craze for capital appreciation has become so tremendous that many investors do not seem to care to find out as to how long the industry in which they are investing will take to pay even a modest maiden dividend. Strictly speaking, they cannot be regarded as genuine investors. They are, in share market parlance, stags, because they are all hoping to cash their capital profit as early as possible after the issue is subscribed and allotted.

Bullion Weak

While commodity markets are firm, with a further rise in prices, the bullion market is distinctly weak. The spot rates are well below the forward and the bulls who were extracting *buddi* from the bears till recently are now paying the bears for carrying forward their commitments. This development has falsified the expectations of those who thought that, in view of the continued inflation, the Chinese threat and the fall in the flow of smuggled metals, the usual slack season will have no effect on the trend of prices. Unfortunately for these bulls, there has been a perceptible rise in the floating stocks of both gold and silver. While the demand is poor, as is usually the case in the slack season, arrivals are large. It is feared by some that the devastation caused by floods in several parts of India will not only cause a shrinkage in demand for these metals but also bring about distress sales. The *jari* industry in Surat is an important consumer of silver and also gold to some extent. The heavy damage suffered by it as a result of floods last week is bound to cause a fall in offtake, at least for some time to come. The first instalment of India's contribution in gold towards the increase in its quota to the I.M.F. has been made by buying gold from its sterling balances. This has been responsible for the drop of Rs. 3.21 crores in the foreign assets of the Reserve Bank during the week ended 18th September 1959. The Government's intention, it is stated, is to buy gold from the sterling area's central reserve for the other instalments also. It would, however, be risky to infer from this action that Kolar gold and the contraband gold confiscated by the Customs authorities would be sold in the domestic market. The country's need for foreign exchange is so heavy and pressing that the Government is unlikely to dispose of any of this gold.

Mr. Ruia's Contradictory Speech

Elsewhere in this issue are published the salient points made by Mr. Madannohan Ruia, President of the Cotton Buyers' Association, in his address to the annual general meeting of the Association held on Monday. Mr. Ruia should be commended for drawing the attention of the authorities to the urgent and immediate necessity of ensuring adequate supplies of cotton to mills and suggesting ways and means of doing so. He did well in urging the Government to show the same solicitude to the primary producers of cotton which it was showing to the domestic textile industry. He asked the Government to take more active interest in raising cotton production by the provision of adequate monetary incentives to the primary growers.

Mr. Ruia, however, seems to have missed the whole point of his own contention when he urged the Government to pay adequate monetary incentives to primary producers. Monetary incentives for production, whether it be of agricultural commodities or manufactured goods, means better price. Does Mr. Ruia mean that raw cotton prices are now unduly high to induce farmers to raise more crop? His own observation in the next sentence contradicts this. To quote him:

"Whilst this (that is, providing adequate monetary incentives) is a long-range solution to the problem of raising the domestic cotton production, the immediate alternative, in my opinion, of meeting the prevailing shortage of cotton supplies at home is to liberalise imports. This is the only natural remedy which would arrest the rising trend of our domestic prices which, if unchecked, would make our exports of cotton very difficult, apart from rendering exports of cotton piecegoods practically impossible due to fierce resistance from other competing countries."

Mr. Ruia's suggestions for increasing cotton production and easing the present tight supply position contradict each other. If, as he argues, imports are liberalised, which, in the context of the present foreign exchange situation, is difficult—and Mr. Ruia has not pointed out in what way more cotton could be brought in—will they not, by exerting a downward pressure on domestic price level, act as a disincentive to production in the short and long run? Monetary incentives, in the form of higher prices for cotton, will defeat the very purpose of growing more cotton which is to ensure adequate supplies to mills at reasonable prices for the production of cheaper cloth.

As Mr. Ruia, with his intimate knowledge of trade and industry, fully knows, production of cotton in this country is not merely a matter of monetary incentives. Incentives certainly have a role to play. But not all the incentives can make the production of a single bale of cotton possible if the wherewithals of production are not placed at the disposal of the farmer. The Indian farmer still depends upon an indulgent nature for his prosperity. And nature has been extremely unkind to him of late. As Mr. Ruia himself pointed out, the last season bore ample testimony to remind us of this pathetic dependence of the grower on nature. What is urgently required for producing more cotton is, therefore, not higher prices but more irrigation facilities, better seeds, better and more manure, adoption of improved farming methods, provision of marketing facilities, transport and credit at a fair rate of interest. An equally important factor is a reasonable, not necessarily high, price. The farmer, it must, however, be noted, is concerned more with the total income he gets from his farm than with the price he realises on a bale of cotton or a bushel of grain.

The history of cotton production in this country shows that price as such is not the main factor for securing more output. Good crops in the past seasons were the result not of high prices for cotton in the preceding season but of fine weather. Thus, in the 1954-55 season, which was preceded by a season of comparatively low prices with the index number of cotton prices (1952-53=100) standing at 104, there was a bumper crop of 5.30 million bales (official estimate), whereas, in 1957-58, which was preceded by a year of high cotton prices with the index rising to 111, the crop turned out to be no more than 4.7 million bales (official estimate). It is not suggested that the price factor does not influence production. It undoubtedly does. The fact that, in 1957-58, when the crop was 4.7 million bales, the area sown to cotton was 19.9 million acres, as against 18.6 million acres in 1954-55 (when the crop was 5.3 million bales) is an instance of the effect of higher prices. If a fancy price is paid, a larger area will be sown and a bumper crop will follow, provided nature is not unkind. But that surely is not the right way of securing higher production, especially for a country like India, with limited land resources and a leaping population. Further, the price of Indian cotton cannot be very much above world parity, as it will affect its exports of both cloth and cotton. The monetary incentive for the grower has to be reconciled with the need for making cotton competitive. Far more important are measures that will raise the yield per acre. Unless the yield is improved, the strange paradox of the country, with the world's largest sown acreage, being starved of cotton will persist. It is true that efforts are being made to distribute better seeds and manures and to extend irrigation facilities. But they have not been on a sufficiently large scale to bring about a distinct improvement in the yield per acre.

World Coffee

Last year, India exported about 15,000 tons of coffee. This year, it wants to export even more. The quantity actually allocated for export from the 1958-59 crop of about 47,000 tons is 17,000 tons, estimated to yield about Rs. 12 to Rs. 13 crores of foreign exchange. Considering the importance of coffee as a foreign exchange earner thus, it is but natural that India should be keenly interested in the outcome of the International Coffee Study Group's discussions, now being held at Washington, on the ways and means of stabilising the conditions in the world coffee market which continues to rule depressed. The latest available quotation for Uganda Robusta grade coffee in London is 190s. per cwt., as against 200s. a week ago and 266s. a year ago.

Although the meeting of the International Coffee Study Group commenced twelve days ago on Monday, the 14th inst.—after the preparatory sessions of various committees, no information is yet available as to what has transpired at the meeting and how long it will continue. The magnitude of the problem facing the Group is pretty big, because of huge accumulations of stocks hanging on the world market. The total of these stocks is now put at 36 million bags (1 bag=291 lbs. or 132 kilos)—the current world coffee season is due to end on the 30th inst. The stocks are expected to increase considerably in the ensuing season,

what with the forecast of a record exportable production amounting to 56 million bags, 16 million bags more than the anticipated world exports. One estimate places the carryover at the end of 1959-60 at more than 50 million bags. The actual world production of coffee in the current season (1958-59) is put at 59.1 million bags, as against 53.4 million bags in 1957-58. The increase is accounted for entirely by Brazilian production which has risen from 24 million bags to 29 million bags.

The country most worried about the colossal world surplus of coffee is Brazil which is holding as much as 24 million bags, representing 67 per cent. of the total world stocks. To quote a London report: "Without harvesting next year's crop, Brazil could meet a year's home and export needs and still have a large stock." For a long time, Brazil and other Latin American countries have been urging international action to raise world coffee prices by limiting exports from all producing countries under a quota scheme. The export quotas suggested by them are: Latin America: 30.5 million bags; Africa: 8.3 million bags; Asia: 1.2 million bags. The current season's production (in million bags) in these regions is 45.9, 9.6 and 2.6.

The plea of Latin American countries has not, however, found favour with the African producers, who even feel that the solution to the coffee problem lies in limiting production, the root of the trouble, rather than exports. They even allege that "Brazil has been forcing the world market down deliberately in order to encourage the African producers to join an export quota scheme." At the Washington meeting of the Study Group, the African producers are reported to have pressed, in accordance with a decision taken at their meeting in London early this month, for a thorough investigation into the world coffee position, though they are willing to accept an export quota scheme for a trial period of a year, as a preliminary to a more comprehensive plan.

In view of the basic difference in the approach between the Latin American and African coffee producers, doubts are expressed about the success of the Study Group's efforts. Even supposing that a compromise short-term formula will be worked out, it is obvious that stability in world coffee trade can be ensured only through a simultaneous three-pronged attack: regulation of production, control on exports and intensive drive to step up consumption.

Instant Tea

Among the soft beverages consumed in the U.K., tea has been holding pride of place. Of late, however, coffee has been finding more adherents than before. Several are the reasons for this change, but one of the most important is the ease with which a cup of coffee can be prepared by using instant coffee. All that one has to do is to mix this soluble coffee powder in a cup of hot water and add milk and sugar to taste. This advantage has a great appeal to consumers, as it saves a lot of labour, a very important consideration, in people in countries like the U.K. and the U.S., where domestic servants are expensive and difficult to be had owing to full employment. Following constant research, the quality and flavour of instant coffee have also improved considerably, thereby offering an additional incentive to consumers of beverages to prefer coffee.

Producers of tea who are worried by the growing competition from coffee will be glad to hear that instant tea has now been introduced in the British market by that enterprising firm, the Nestle Company. Called "Nes'ia" the new tea is the soluble product (in powder form) obtained from a blend of Assam, Ceylon and other selected teas. Instant tea, of course, is not a new thing. It has been on sale in the U.S. and Canada, as well as on the Continent, for nearly a decade now, but fifteen years of research were necessary before the Nestle Company felt that instant tea was sufficiently developed to be offered to the more discriminating British tea market.

The chances of "Nes'ia" proving very popular among the consumers in the U.K. are quite bright, for two reasons. One, this tea is claimed to retain the flavour of the most popular brands of tea sold in Britain, though it is a little paler in colour as compared with the normal leaf tea. Two, the price of "Nes'ia" is much lower than that of ordinary leaf tea; the currently fixed retail rate is 2s. 10d. per glass jar which, we are told, would be sufficient to make 35 cups of tea, if the recommended measure of half a teaspoon is used.

The introduction of an instant tea in the British market is quite significant. Britain, as is well known, is the largest tea-drinking country in the world, accounting for well over 45 per cent. (519 million lbs. in 1958) of world consumption aggregating 1,144 million lbs. (1958). On an average, every Britisher consumes more than 10 lbs. of tea per annum or 0.44 oz. per day. The per capita (annual) consumption of tea in India, it may be noted here, is less than a lb. 10 oz., to be precise (1957-58).

U.S. Investments in Holland

An extensive, well-documented review of U.S. industrial establishments in the Netherlands has been written by Mr. S. W. Kann, Editor of the American periodical *Industrial World*. His report is based on a personal visit to the Netherlands and the U.S. firms established there. He obtained his information from the proper authorities and the works managers of the firms visited. Of all the countries on the European Continent, the Dutch, according to him, have been the most successful in attracting foreign investments for the establishment of new industrial enterprises. Since the war till mid-1959, 302 foreign industrial establishments (Continued on page 536)

SHARE MARKET FIRM TEXTILES STRONGLY FAVOURED

(From Our Own Correspondents)

BOMBAY, 24th September

THE easy trend noted in the share market last week abated during the week under review. In fact, the market ruled distinctly firm, especially after the start of the new accounting period on Monday, the 21st inst., with all-round handsome rise in values. Although there was no new encouraging development, the operators would appear to take an optimistic view about the future of industries. Such a view was apparently based on hopes of a possible revision in the new scheme of company taxation in the light of the heavier burden on shareholders as reflected in the dividends declared by many companies, as well as on expectations of the planners envisaging increased participation of the private sector in the third and subsequent Five-year Plans.

Textiles were particularly buoyant, thanks to continued reports of higher cloth prices, good export business and decline in stocks held with mills. Even the persistently rising tendency in raw cotton prices was ignored. Steels were well favoured despite reports of a dispute on bonus in the Tata Iron and Steel Company. Indian Irons evoked some support induced by the assurance given by the Company's Chairman that the sales of Dalhousie Holdings shares "would be effected in such a manner as to cause the least disturbance to the market." His statement that the Company had not applied to the Government for the issue of any right shares was noted by shareholders, but this did not have much effect. Sugars attracted good attention, the buying fervour having been fanned by expectations of better return from investment, notwithstanding all controls and rationing. Cements, engineering and miscellaneous industrialists met with buying enquiries. Electrics, however, proved an exception; they were generally subjected to selling pressure and drifted lower.

Steels

In the steel section, Tata Ordinaries opened the week at Rs. 159.50, as against Rs. 159.25, and advanced to touch Rs. 161.75 yesterday. At this level, some profit-taking set in and the quotation receded to Rs. 160. Today, however, the shares firmed up again and stood at Rs. 161 towards the close. Indian Irons recorded a gain of 20 nP over the week, today's closing rate being Rs. 23.68 ex-div., as against Rs. 24.20 on Thursday last.

Textiles

The highlight of trading in the textiles section was the rise of Rs. 87 to Rs. 637 in Standards which followed excellent bull support induced by unconfirmed reports that the Company would take up new manufacturing activities. Katatus responded to the highly satisfactory earnings figures and jumped up by Rs. 32.50 to Rs. 267.50. Swans spurred by Rs. 25 to Rs. 415, Finlays by Rs. 16.50 to Rs. 289.50 and Svadeshis by Rs. 11.25 to Rs. 254. Morarjes and Centurys advanced by Rs. 11 each to Rs. 287 and Rs. 579.50, respectively. Gokaks strengthened by Rs. 9 to Rs. 168. Shreenivas by Rs. 6.50 to Rs. 213.50. Podars by Rs. 6 to Rs. 149 and Central Indias by Rs. 5 to Rs. 110. Bombay Dyeings rallied from Rs. 64.50 to Rs. 68.30. Tata Mills gained Rs. 3.50 to Rs. 48 and Simplex by Rs. 2.50 to Rs. 151. Kohinoors, however, encountered selling and dropped Rs. 3.50 to Rs. 303.

Sugars and Cements

Sugars and cements scored handsome gains during the week, as is indicated below:

	17th September Rs.	24th September Rs.	Net rise Rs.
Sugars			
Belapur ...	309.50	324.50	15.00
Phaltan ...	159.00	165.00	6.00
Walchandnagar	322.50	327.50	5.00
Chanddeo ...	24.12	27.00	2.88
Cements			
A.C.C. ...	146.25	149.00	2.75
Digvijay ...	145.00	147.00	2.00
Orissa ...	14.68	15.32	0.64
Jaipur Udyog	10.28	10.32	0.04
Dalmia ...	10.60	10.68	0.08

Banks and Insurance

Bank and insurance shares were a shade better. Among the former, Centrais hardened by 25 nP to Rs. 49, 'A' shares recording a rise of 60 nP to Rs. 51.50. Barodas 'A's' rose from Rs. 45.25 to Rs. 45.50 and Indias from Rs. 111.25 to Rs. 111.50. Unions gathered 8 nP to Rs. 7. State Banks, however, receded by Rs. 2.50 to Rs. 366.25. Among insurance shares, New Indias picked up 50 nP to Rs. 59.30. British India Generals were firm at Rs. 14.24.

Engineering, Minings and Shippings

Engineering company shares met with sustained buying support. Premier Constructions spurred by Rs. 15.50 to Rs. 357. Alcock Ashdowns advanced by Rs. 7 to Rs. 254. Tata Locomotives rallied from Rs. 184 to Rs. 191.75, before finishing at Rs. 190. Cooper Engineering strengthened by Rs. 6 to Rs. 160. Voltas hardened by Rs. 4 to Rs. 170.75. Mahindras gathered 16 nP to Rs. 22. Larsen and Toubros gained 12 nP to Rs. 22.22. Among minings, Shivrajpur rose by a rupee to Rs. 89. Indian Coppers picked up 8 nP to Rs. 410.

In the shipping group, Great Easterns advanced by 44 nP to Rs. 20.40. Scindias improved from Rs. 16.92 to Rs. 17.16, but declined later to the original level.

Electrics

Electrics, as already stated, were generally subjected to selling. Tata Powers fell by Rs. 52.50 to Rs. 1,130. Hydros declining by Rs. 4 to Rs. 113.50. Andhra Valleys dropped Rs. 42.50 to Rs. 1,102.50. Ahmedabads, however, rose by Rs. 3 to Rs. 96. Bombay Suburbans gathered 75 nP to Rs. 106.

Miscellaneous

The star feature in the miscellaneous section was provided by Anil Hardboards which forged ahead from Rs. 217.50 to Rs. 439, or a rise of Rs. 212.50 over the week, on news that the Central Government had decided to purchase 100,000 tons and installation of a 6,000-ton capacity plant to manufacture insulation board. Bombay Burmahs climbed up by Rs. 27 to Rs. 536. National Rayons advanced by Rs. 17.50 to Rs. 359.50. India Dyestuffs rose by Rs. 11.25 to Rs. 290. Tata Oils by Rs. 3.80 to Rs. 64.80. Wimbos by Rs. 3.50 to Rs. 218. Polychems by Rs. 3 to Rs. 130 and West Coasts by Rs. 2 to Rs. 153. Gwalior Rayons put on 40 nP to Rs. 25.70. Among automobiles, Premiers gathered Re. 1.75 to Rs. 131.50, while Hindustan Motors shed 12 nP to Rs. 12.44.

Calcutta Stock Exchange

CALCUTTA, 23rd September

With restricted buying, dull conditions were in evidence on the Stock Exchange during the week under review. There were more sellers than buyers. The decision of the food agitators to continue their campaign, followed by disorderly scenes in the Assembly on Monday, and the arrest of students on Tuesday brought in a fresh wave of selling. The recovery on Monday proved difficult but was again in evidence yesterday on better Bombay advices. Further, in view of the fact that some of the recent dividends announced had curtailed the net return to the shareholder, it was being taken for granted that the provisions of the Finance Act of 1959 would adversely affect the shareholder. There was extreme caution, and buyers showed a preference for shares of those companies the profit margin of which is greater. Cash needs for the forthcoming Pooja festival season were also a factor which led to more selling. In view of the general dullness, the improvement in economic conditions went unnoticed. There were a few developments for the latter inference. First, the foreign trade results for July were encouraging, inasmuch as the deficit was only Rs. 12 crores, as against Rs. 35 crores in June. Secondly, there were satisfactory reports from Berne and Paris of prospects of substantial help from there for the third Plan following the visit of Mr. Morarji Desai.

Among coals, Equitables advanced from Rs. 33.06 to Rs. 33.87. Bengals were earlier lower at Rs. 296, but recovered to Rs. 300. Pench Valleys changed hands at Rs. 25, as against Rs. 24.94 previously. Burrakurs were quiet at Rs. 16.25 and Western Bengals were unchanged at Rs. 6.25. Raneegungs declined from Rs. 17.25 to Rs. 16.75.

Selected features were recorded in the jute section. On interested support, Orients at Rs. 184 were higher by three points. Another feature was New Centrais which hardened from Rs. 17.75 to Rs. 18.06, but Lansdownes were unchanged at Rs. 137. Kelvins changed hands at Rs. 174, as against Rs. 179, with Ballys slipping to Rs. 221 from Rs. 224. Agaparas found buyers only at Rs. 12.75, as against Rs. 13.81. Nationals being unchanged at Rs. 23.50.

Engineering shares eased following lack of interest. Indian Irons opened at Rs. 23.62 and after improving to Rs. 23.55, eased to Rs. 23.29. At this stage, recovery set in to push the rate up to Rs. 23.62. Texmacos were fractionally lower at Rs. 23.70, while Indian Standard Wagons at Rs. 85 improved by Rs. 3. Jessop and Cos. were quiet at Rs. 28.75, as were Kumardhubs at Rs. 6.69.

Among miscellaneous industrials, Alkali and Chemicals met with unsatisfied demand and improved from Rs. 22 to Rs. 23.37, following the plan to install an organic chemicals plant. Money amounting to Rs. 2 crores would be found from the Company's own resources, and, therefore, there is no need for a public issue. National Cables rose to Rs. 39.12 but closed at Rs. 39.62. Indian Cables at Rs. 31.56 were better while Duple Rubbers eased from Rs. 34.19 to Rs. 33.62. Indian Coppers were unchanged at Rs. 4.03.

Madras Stock Exchange

MADRAS, 23rd September

The Madras Stock Exchange ruled steady during the week under review. A few select scrips registered sizable improvement in prices under the impetus of investment support and some others tended to move up owing to scarcity of floating stocks. Textiles elicited good enquiries on renewed reports regarding domestic offtake and export business. Teas were well favoured, thanks to firmness of tea prices at Cochin auctions and rumours that the Government of India was considering further relief for common teas. Coffees moved in sympathy. Rubbers were active, following rumours that

the Government was contemplating to increase replanting subsidy. Sugars were fully steady. Transactions put through in the miscellaneous section were limited, with values moving narrowly.

In the sugar section, K.C.P.s elicited good buying enquiries and spurred by Re. 1.25 to Rs. 16.75. Cauverys improved by 50 nP to Rs. 118.50. E.I.D.s hardened by 25 nP to Rs. 39.75. Travancores picked up 5 nP to Rs. 12.35. Indias were fully steady at Rs. 13.10. Andhras at Rs. 20.25 and Mysore at Rs. 49.59. Kirlampudis, however, suffered a setback, the quotation declining by a rupee to Rs. 80.

Among tea shares, Nonsuch Teas advanced by 25 nP to Rs. 28.75. Coonoors gathered a similar amount to Rs. 23.25. Halcyonias rose by 10 nP to Rs. 18.50. Be Bes gained a like amount to Rs. 3.00. Periakaramalais were a shade higher at Rs. 3.98. Nilgiris were steady at Rs. 7.90. Nelliampathys at Rs. 2.88 and Chembras at Rs. 3.93. Twyford, however, came in for selling and moved down by Re. 1.40 to Rs. 13.50. Oucherlonys declined by 13 nP to Rs. 5.40. Kil Kotagiris shed 10 nP to Rs. 8.05. Among coffees, Osoors and Wariyullus were marked up by 10 nP each at Rs. 3.90 and Rs. 3.85, respectively. Anaparas were fully maintained at the last week's level of Rs. 3.10. Consolidated Coffees at Rs. 21.80 and Mysore Coffees at Rs. 4.25. The directors of the latter company have maintained the dividend at 15 per cent. for the year ended March 1959. But Coffeelands dropped 35 nP to Rs. 23.40 and Cawcoodys 5 nP to Rs. 6.20. Among rubbers, Highlands spurred by 35 nP to Rs. 13. Vaikundams gathered 12 nP to Rs. 27.62. Midlands gained 10 nP to Rs. 12.20.

In the textile section, Premiers staged a smart rally of Rs. 4.50 to Rs. 172. Cannanores and Metturs improved by a rupee each, the former to Rs. 142 and the latter to Rs. 373.50. Cambodias rose by 60 nP to Rs. 12. Cauvery Spinnings strengthened by 15 nP to Rs. 12.50. Several others were steady. Dhanalakshmis being quoted at Rs. 200. Rajalakshmis at Rs. 63. Trichinopolys at Rs. 10.90. Vasantas at Rs. 211. Venkateshas at Rs. 113. Virudhunagars at Rs. 39. Coimbatore Cottons at Rs. 143 and Coimbatore Pioneers at Rs. 285. Trimurhys, however, fell by Rs. 6 to Rs. 108. Bangalore Woolens and Buckinghamss dropped Rs. 4 each to Rs. 179 and Rs. 185, respectively.

Rallis in the miscellaneous section came in for selling and retreated by 50 nP to Rs. 77.50. Andhra Cements, Travancore Cements and Dalmia Cements fell by 10 nP each to Rs. 9.40, Rs. 10.10 and Rs. 10.50, respectively. India Cements shed 6 nP to Rs. 6.47. But Orissa Cements were steady at Rs. 16.45. Ashok Leylands eased by 5 nP to Rs. 7.75.

INSURANCE DEPARTMENT

We received the following interesting letter from a reader in Coimbatore just before going to press:

"The Insurance Department of the Government of India at Simla has no useful work now worthy of qualified statisticians are there and they services better utilised. After the nationalisation of life insurance, the Department does not appear available to this Department now is very little. Hence even a closure may be considered."

"The general insurance business need no check from the Government. The Code of Conduct, a recent addition to the Insurance Act, could not be enforced by the Department in its real spirit and the illegal rebate problem could not be checked. The Department could not eradicate the evil of rebating in the past and this is impossible to do so in future also. The trade may be left free to take its own shape. No public funds are involved, as in the case of life insurance, and the Government's interference in this business is unnecessary."

"There are hardly about 50 per cent. of Indian insurance companies in sound state of affairs whilst the existence of the rest is a danger to its investors and to the society. The Department is recklessly and carelessly renewing their re-ignition yearly, without taking into consideration the continuous faults committed by the concerned authorities may be directed to take care of this Department immediately."

TEXMACO'S NEW ISSUE

The new preference shares offered by the Textile Machinery Corporation Ltd.—vide page 515—are an attractive investment to those who are on the look out for a sound fixed yield, with prospects of a small capital appreciation. These shares carry a fixed dividend of 6 1/2 per cent., tax-free, cumulative, and are to be redeemed after five years. As many as 100,000 shares of Rs. 100 each raised being Rs. 1 crore, the amount sought to be holders are entitled to this issue first, they are share for every 19 ordinary shares and 10 such shares for every 19 preference shares. The whole issue is underwritten by the Central Bank of India Ltd. It is possible that non-shareholders may get a chance of receiving some allotment, if right shares. It is also possible that several of the existing shareholders may apply for additional shares. The new capital now being sought will be used for financing a number of profitable development schemes, which have already made good progress. The Company's financial position is satisfactory; its prospects are promising; and its existing shares are quite popular with investors. The chances of the whole of this new issue being taken up by investors are bright.

NEWS IN BRIEF

THE Government of India has decided to continue free licensing of export of maize grit obtained as a residue in the process of starch manufacture through the wet milling of maize (provided the commodity is called "maize residue" obtained in starch manufacture) upto the end of September 1959.

The Government of India proposes to set up an export promotion council for sea-food industry in the country. While the total world trade in fish is estimated at Rs. 300 crores a year, India's share does not exceed Rs. 6 crores at present. The annual production of fish in India is about 1.3 million metric tons, of which exports account for no more than 50,000 tons.

A three-man delegation from Aeroflot, led by Mr. V. M. Danilechev, Head of the International Department of Aeroflot of Soviet Russia, arrived in Bombay from Moscow on 22nd September 1959 to review the working of the commercial agreement between Air-India and Aeroflot. The Commercial Agreement between the two airlines has been in effect since June 1958. It has been found necessary to simplify certain procedures originally agreed to in the light of experience gained.

The total sugar production during the 1958-59 season upto 31st August 1959 was 1,907,000 tons, as against 1,972,000 tons in the corresponding period of the previous season. The offtake of sugar from factories during the month of August 1959 was 166,000 tons, as compared with 184,000 tons in the same month of 1958, bringing the total despatches upto 31st August 1959 to 1,743,000 tons, as against 1,705,000 tons in the same period last season. The total closing stock of sugar with factories as on 31st August 1959 was 506,000 tons, as against 696,000 tons on the same date last year.

The draft proposal for the fixation of ceilings on land in Bihar varying from 30 to 90 acres has been approved by the State Cabinet. It is proposed to divide the agricultural lands into five categories, canal irrigated lands (the ceiling per family is fixed as 30 acres), tube-well irrigated lands (45 acres), lands without irrigation facilities (60 acres), diara lands—riverbank lands which are subject to erosion and flooding (75 acres) and hilly lands (90 acres). Compensation for the lands acquired in excess of the ceilings will be paid in interest-bearing negotiable bonds.

The Tamilnad Electricity Workers' Federation, claiming to represent 40,000 workers in public and private electricity undertakings in Madras State, has urged the setting up of the first atomic power station in Madras State. In the course of a resolution adopted at its first annual conference held at Madurai last week, the Federation pointed out that the statement of the Chairman of the Atomic Energy Commission that an atomic power station could help areas where coal was not readily available justified the claim of Madras for an atomic power station.

The Indian Airlines Corporation has started granting fare concessions to air travellers undertaking circular journeys on its services, with effect from the 21st inst. A circular tour, for the applicability of this concession, will be a journey taking in an unbroken chain of air sectors, commencing and ending at the same station. The fare chargeable for these trips will be the sum of half the round trip fare for each of the sectors forming part of the continuous chain. For instance, a person holding a circular tour ticket for Delhi-Bombay-Hyderabad-Bangalore-Trichy-Madras-Calcutta-Delhi will have to pay Rs. 842, as against the normal rate of Rs. 989.

All yellow nickel brass one-anna and half-anna coins will cease to be legal tender when the Demonetisation Order of the Government of India comes into effect on 1st January 1960. While these two coins will cease to be legal tender with effect from the new year, they will continue to be accepted till 30th June 1960 at all offices of the Reserve Bank, at all agency banks of the Reserve Bank conducting Government business and at Government treasuries and sub-treasuries. During this period, they will also be accepted at railway offices and post offices in payment of dues. Even after this date, until further notice, these coins will continue to be accepted by the offices of the Issue Department of the Reserve Bank.

The Government of India has appointed a joint Indo-American team (Chairman: Dr. M. S. Randhawa, Additional Secretary, Union Ministry of Food and Agriculture) to evaluate the progress of agricultural education, research and extension made in the past five years and to suggest measures for improvement, with special reference to the third Plan. The team has been asked to review the "sisterhood arrangements" conducted in 1955 with the five land grant universities in the U.S. under the Indo-U.S. Technical Co-operation programme, in order to find out the extent to which they have helped the development of agricultural education, research and extension programme in the country. The team is expected to submit its report by the end of January 1960.

A Bill to provide for the regulation of warehousing of certain goods in Bombay State has been published in the Bombay Government Gazette dated the 4th inst. The object of the Bill is to unify the laws relating to warehouses which are in force in different parts of the State, namely, the Bombay Warehouses Act 1947, the Central

PERSONAL

MR. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation, left for London last week on a month's visit to the U.S. and Europe.

Lord Heyworth, Chairman of the British company, Unilever, and Vice-Chairman of the Dutch company, Unilever N.V., will retire from the Boards of both the Companies in April next.

Mr. M. Ct. Muthiah, a prominent industrialist of Madras and Chairman of the Indian Overseas Bank Ltd., has been re-elected Director of the Industrial Finance Corporation of India, representing the Scheduled Banks' constituency.

Mr. C. L. Jhunjhunwala and Mr. H. C. Chatterjee have been elected President and Vice-President, respectively, of the Calcutta Stock Exchange for the year 1959-60. Messrs. N. D. Bangur, B. C. Seal, Eric Gregory, J. L. Esplen, Aban Ganguli, Matadin Khaitan, M. L. Pyne, A. V. Sheth, C. L. Haridas, S. Dasgiri, Bhagirath Murarka, H. P. Dhanuka, Sitaram Datta and C. L. Khandelwal have been elected members of the Committee.

Mr. K. S. Vaidyanathan, of Messrs. Patterson and Co., has been elected President of the Madras Stock Exchange for the year 1959-60, vice Mr. V. Natarajan, who has retired. Mr. C. S. Natarajan and Mr. V. Rangachari have been elected Vice-President and Treasurer, respectively. The members of the Council are: Messrs. V. Natarajan, H. Subramaniam and J. V. Somayajulu. Mr. P. S. Nadkarni and Dr. J. S. Raj are the Government nominees on the Council of Management.

and the plan of disposal will seek to avoid a disruption of the market.

A Japanese optical concern has developed a combined camera-radio set, called *Ramera*. The gadget is a combination of a 16 mm camera and a six-transistor portable radio. It is equipped with loudspeaker and earphones and the makers claim that it can run 30 hours on one battery. The camera has an f. 3.5 lens and a shutter speed of 1/200 secs. The rate of production is estimated at 6,000 units per month.

The view that British industry, trade and also Government can save at least £20 million annually by adopting the encouraging the system of "suggestion schemes" was expressed by Mr. P. Clavell Blount, while addressing a meeting under the auspices of the British Productivity Council held last week. He advocated the establishment of an organisation similar to the American National Association Suggestion Systems. He revealed that the American organisation had grown from a membership of about 20 in 1941 to over 1,250 at present.

The Commercial Bank of Scotland and the National Bank of Scotland have merged themselves to form the National Commercial Bank of Scotland. The new bank is the largest among the Scottish banks, accounting as it does for about 30 per cent. of the total deposit business. About 37 per cent. of its "A" shares are held by Lloyds Bank Ltd.

An £800,000-copper pyrites refining plant is proposed to be set up in the Haifa area of Israel. The planned capacity in the first stage is 30,000 tons of pyrites annually, which will be trebled subsequently. Equipment for the plant, scheduled to start in 1961, is expected to be ordered from West Germany and the U.K. The plant will be set up by joint Israeli-Cypriot interests and the pyrites will be obtained from Cypriot mines owned by Bardis, which is associated with the scheme. A special company, called the Israel Ore Processing Company, has already been set up to proceed with the scheme.

The World Bank has sent a mission to Venezuela, at the request of the Government, to make a general survey of the economy and to assist in the formulation of a programme of economic development. The mission began its field work in Venezuela on the 21st inst. and expects to be there for about three months. In close co-operation with Venezuelan Government officials, the mission will examine key sectors of the economy, appraise the potentialities for further growth, and make an assessment of the country's prospective financial resources.

Authorisations have been issued by the U.S. Agriculture Department for purchase by the United Arab Republic of \$25 million worth of U.S. wheat and wheat flour. Payment will be in U.A.R. currency. The authorisations form a part of an agreement announced in July, whereby the U.A.R. will purchase with its own currency some \$57 million worth of U.S. wheat and wheat flour. The U.A.R. currency proceeds from the sales may be used for economic development activities within the U.A.R. as mutually agreed between it and the U.S.

The representatives of the Pakistan Government and a consortium of four British and U.S. oil companies have signed an agreement for the establishment of an oil refinery in Karachi. The proposed refinery will have an initial capacity to refine 1.5 million tons crude oil, which will be expanded to 2 million tons later. The capital cost of the refinery will be Rs. 15.5 crores, of which Rs. 11 crores will be in foreign exchange. The refinery will be completed within about two years. The consortium comprises Burmah-Shell, Caltex, Standard-Vacuum and Shell Petroleum.

From Abroad

The number of overseas tourists who have visited Paris since January 1959 is estimated at 1.5 million.

The U.S.S.R. has resumed direct buying of Australian wool, after an interval of six years through agents of communist bloc countries.

Japan proposes to double its port facilities within the next few years, in order to cope with the estimated increase of about 100 per cent. in traffic in the Pacific.

A leading Japanese manufacturing concern, Asanitsu Industry of Tokyo, plans to set up a \$50-million assembly plant for cars, motor cycles and scooters in Singapore. This is the first Japanese factory to be established in that country.

The Japanese Government has removed restrictions on imports from the U.S. of scrap steel, scrap copper alloy, soya beans, lard, tallow, cattle, hides, abaca fibre and gypsum. These items are now included in the automatic approval system.

Industrial production in the U.S. in August 1959, the first full month of the steel strike, dropped by 4 per cent. from the record June level, the index of production (base: 1947-49=100) for the month standing at 149, as compared with 155 in June and 153 in July.

The Premier of Ghana, Mr. Nkrumah, has requested Mr. Edgar Kaiser, President of Kaiser Industries, to take the initiative in setting up a consortium of aluminium companies to build an aluminium smelter at Tema. Mr. Kaiser visited Accra recently.

The U.S.S.R. will introduce a seven-hour working day for all factory and office workers, with effect from 1st October next. Miners and other technicians working underground will have to work for only six hours a day. The revised schedule has been in existence, since last year, in the steel and coal industries.

The number of people engaged in scientific and technical research in Norway increased from 750 in 1946 to 3,000 at the end of last year. In 1959, official grants to research amounted to £225,000; this year, the figure is £4.8 million. In addition to this, £7.42 million of the profits of the State football pool company have been used for research purposes since 1949.

The U.K. Government has commenced discussions with the Governments of the principal rubber-growing countries on the disposal of rubber from the British stockpile. The stockpile, which amounts to about 100,000 tons, is said to be no longer required for strategic purposes. Disposal of the rubber will be spread over a number of years,

PLANTATIONS IN CEYLON

MANY underdeveloped countries have an almost pathetic faith in nationalisation. In their anxiety to avoid some of the pitfalls in highly industrialised economies, they attach considerable importance to State initiative in economic affairs. They all too easily equate State capitalism with socialism. The result is that nationalisation is raised to the status of an economic dogma which exercises a fatal fascination for its votaries. Until recently, Ceylon, too, was an uncritical worshipper of this new philosophy. A little over a year ago, the Ceylon Parliament unanimously adopted a resolution favouring early nationalisation of plantation industry. Wiser counsels, however, have come to prevail now. This unexpected development calls for not merely notice but praise. Its socialist Prime Minister, Mr. Bandaranaike, declared on 18th inst. that the Government would not nationalise plantations for at least another ten years.

It is not so much this assurance of immunity from nationalisation as his general views on nationalisation itself that will evoke widespread support from uncommitted public opinion. He said that while any Government with a socialist outlook—like his own—must necessarily consider schemes of nationalisation, it was no magic wand which could solve all the country's economic ills. This commendable, though qualified, attitude is so different from the somewhat unhelpful and doctrinaire attitude in certain other South-East Asian countries, notably Indonesia, which tends to restrain the flow of foreign private capital from the Western world to this region.

Mr. Bandaranaike rightly preferred to apply the pragmatic standard in arriving at a decision on nationalisation of industries and services. After emphasising that his Government took a practical view of the question of State ownership, he said that it had taken over bus services and the ports, as they were not being run satisfactorily under private ownership. But he conceded that nationalisation of plantations was a somewhat different matter, for the Government had to consider whether tea and rubber plantations would function more efficiently after nationalisation. By this standard, plantations should be regarded as peculiarly unfit for State ownership. Being an agro-industrial enterprise, plantations call for a certain personal element in organisation which only private ownership can possess. They are, therefore, best left in the hands of owners, who, after decades of service in the fields, have brought them to their present high level of efficiency.

LIFE INSURANCE

It is, indeed, reassuring that the Life Insurance Corporation of India, under the energetic chairmanship of Mr. P. A. Gopalkrishnan, has successfully got over the vast medley of complex problems of administration and organisation that confronted it from its very inception and is now well set on the road to further expansion of business and more efficient service to policyholders. The Chairman, in his address to the 42nd meeting of the L.I.C., convened to consider the draft annual report of the Corporation for the year 1958, gave a very satisfactory picture of the working of the Corporation during the year and the results thereof.

In respect of new business, the Corporation was able to show a creditable record in 1958. The number of policies issued and the sum assured increased from 795,000 and Rs. 281.90 crores in 1957 to 935,000 and Rs. 343.07 crores in 1958. The total business in force increased to 6,230,000 policies, assuring a sum of Rs. 1,681 crores, at the end of 1958, as compared with 5,683,000 policies, assuring a sum of Rs. 1,473 crores, at the end of 1957.

It is also noteworthy that the net lapse ratio, that is, the ratio of the sum assured lapsed less the sum assured revived, to the mean business in force, declined from 6.4 per cent. in 1957 to 4.5 per cent. in 1958, indicating that the

rise in new business was not the result of doing rush business to produce an impressive record. The renewal expense ratio too has declined, though fractionally, from 15.89 per cent. in 1957 to 15.46 per cent. in 1958. The Corporation hopes to bring down the ratio further, as, indeed, it should, in 1959. Tight budgetary controls are said to have been already instituted for this purpose.

1959 is the first year of the Corporation's Five-year Plan which aims at securing new business of Rs. 1,000 crores in the fifth year of the plan, that is, in 1963. If the trend of new business during the first eight months of 1959 is any indication, and provided it is maintained, it is quite likely that the Corporation will hit the target of Rs. 415 crores fixed for the current year. During this eight-month period, new business completed amounted to Rs. 148.16 crores, representing a rise of 23 per cent. over the figure for the corresponding period of last year.

The figures quoted by the Chairman show that the investments of the Corporation in the public sector steadily increased from year to year whereas investments in the private sector progressively declined. Thus, while investments in the public sector rose from 77.4 per cent. of total investments in 1957 to 78.3 per cent. in 1958 and 78.6 per cent. by the end of July last, investments in the private sector dropped from 22.6 per cent. in 1957 to 21.7 per cent. in 1958 and 21.4 per cent. by the end of July 1959. Though the Corporation is willing to maintain the flow of investment to the private sector, it is said to be finding it increasingly difficult to do so, thanks to comparative shortage of sound scrips. This deficiency is sought to be made good by the grant of loans on mortgage of properties. A decision favouring this has been taken by the Corporation recently. The difficulty presented by shortage of good shares can be partly got over if the Corporation goes in for scrips of comparatively young but promising ventures which may not at present qualify themselves to be on the Corporation's list. This, however, would require a change in the Corporation's investment policy.

The Chairman referred to the need for training the staff, selection and strengthening field force, opening of new offices, market surveys and publicity, etc., to attain the Corporation's Five-year Plan target. These efforts, if well directed, could prove highly fruitful. The Corporation should also ensure that its proposed building programmes for office and staff quarters, the importance and urgency of which the Chairman dilated upon at some length, have a direct bearing on the production of more and better business and efficient servicing of policyholders.

SOAP INDUSTRY

The organised sector of soap industry continues to make efforts at maintaining as high a level of output as possible. Actual production is said to be currently running at an annual rate of 120,000 tons—it was, in fact, higher at 123,456 tons—which compares favourably with 83,146 tons produced in 1951, a rise of 45 per cent. The increase in output has followed a notable expansion of capacity, from 182,000 tons in 1951 to 253,272 tons now (calculated on the basis of single-shift working and 300 working days a year). Although the production performance is quite encouraging, there is nevertheless a lot of idle capacity, to the extent of nearly 53 per cent. Such huge idle capacity has persisted for a number of years. What is it due to? This is a pertinent question, and it is somewhat surprising that Mr. B. Maitra, the retiring President of the Indian Soap and Toilettries Makers' Association, should have failed to explain the reasons for it, when he addressed the twenty-fifth annual meeting of the Association held at Calcutta on Monday the 14th inst. It is to be hoped that the issue will receive due consideration at the Association's silver jubilee proposed to be celebrated sometime during the cold weather.

Mr. Maitra, however, held out bright prospects for the soap industry. "It is my belief," he said, "that, with the growth of population, coupled with the additional purchasing power expected through the heavy development expenditure under the several Five-year Plans, there shall be greater sales of consumer goods." He alluded to the targets for soap production suggested by the sub-committee of the Soap Panel appointed by the Development Council, namely, 539,700 tons to be reached in 1966 (organised sector: 206,000 tons and unorganised sector: 333,700 tons), as against 377,300 tons

(144,000 tons and 233,300 tons, respectively) in 1961 and 291,000 tons (111,000 tons and 180,000 tons) in 1957.

The successful realisation of this target will depend on many factors. In particular, Mr. Maitra mentioned four. First, the requirements of oils, caustic soda, soda ash, salt, rosin, silicate, etc., will be large and the soap industry must get them without much difficulty. Mr. Maitra wanted the manufacturers to utilise as much as possible non-edible oils and poor quality fats which will release the edible and high period fats for food purposes. Secondly, the requirements of essential oils and aromatic chemicals will also be large. The industrialists must take up their manufacture. The establishment of coal tar by-products, intermediates and organic chemicals industries will greatly supply the basic raw materials of the soap industry. The Government should be approached for exempting natural essential oils from import duty. Thirdly, sales tax is still a major headache. This tax must be collected at the source. Also, the sales tax must be combined with excise duty. Finally, soaps are practically subject to double taxation. Oils for the manufacture of soaps should be exempted from excise duty.

The need for encouraging higher production of soaps—both toilet and washing—cannot be stressed too strongly. The demand for the commodity has gone up quite substantially—the actual consumption of soap in 1956 was 240,000 tons, as against 173,400 tons in 1951, a rise of 38 per cent. in five years—and will continue to rise in the coming years. The soap industry must endeavour to meet this rising demand, quantitatively, qualitatively, and at a reasonable price. Mr. Maitra did well to urge the importance of constant research in the field of production, so as to improve the quality of soaps and toilettries, as well as market research, including product studies to evaluate consumer reactions to particular products, consumer studies (why consumers buy and what they like), and advertising studies.

AIR-INDIA'S EXPERIMENT

India's enterprising national airline, Air-India International, in conjunction with the resourceful Bank of India, is trying a new experiment in popularising air travel by bringing it within the reach of the man of modest means. It has announced this week a new scheme of hire-purchase so common in Western countries in the sale of consumer durables—a practice which is gradually getting into vogue in India also. The "travel-now, pay-later" scheme is new to this country, though many other international airlines have it. Air-India itself is no stranger to it, for it too sells its service on hire-purchase basis in some foreign countries such as the U.K., Australia and Greece.

Under the new scheme, which will come into effect on 2nd October next, a passenger, if he wishes to avail of it, will be required to make a down payment of only 20 per cent. of the air passage fare. For the balance, the Bank of India, after the necessary inquiry into the financial status of the passenger, will sanction a loan covering upto 80 per cent. of the fare which will be repayable in 15 convenient monthly instalments from the date of grant of the loan. Interest at one per cent. per month will be charged on the loan. This works out to a little over 9 per cent. per annum.

If a passenger wants to fly from Bombay to London, a tourist class ticket will now cost him Rs. 1,854. If he takes advantage of the new scheme, he is required to make a cash payment of only Rs. 370.80, that is, 20 per cent. of the fare. The balance of Rs. 1,483.20, that is, 80 per cent., will be loaned to the passenger by the Bank of India. The scheme will be put into effect in areas where the Bank of India has its offices. It will also be simultaneously implemented in Aden, Dar-es-Salaam, Jinja, Kampala, Mombasa, Nairobi, Singapore, Tokyo, and Osaka.

This scheme is likely to meet with encouraging response. It will tap new categories of traffic and would also help bring the benefit of fast, convenient air travel (Air-India will operate jet aircrafts next year) within the means of those who are not at present in a position to travel by air. It will be beneficial particularly to students wishing to go abroad for higher studies, but who cannot afford to pay the entire air fare in cash at one stroke. Students, in addition, will get a 25 per cent. concession in fare. But, considering the restriction on the amount of foreign exchange that

a person can take with him, it is doubtful whether the new scheme will, in itself, be a sufficient inducement to travel for those who merely want to go abroad for a holiday. The success of the new scheme will, therefore, depend on the extent to which the Government is prepared to relax this restriction.

INDIAN SHIPPING

Several specific suggestions for the expansion of Indian shipping were made by Mr. C. R. Srinivasan, Chairman, The Bharat Line Ltd., in the course of his speech at the annual meeting of the Company, held this week at Bhavnagar. Mr. Srinivasan felt that the present was a most opportune time for acquiring additional tonnage, thanks to the decline in the prices of ships. But before Indian shipping companies could turn this circumstance to their advantage, there are quite a few conditions which must be fulfilled. Clearly, they cannot go in for new ships, if their earning capacity is restricted or if they do not get the necessary capital resources. In this connection, Mr. Srinivasan deplored that the Government should compel the shipowners to carry State-owned cargo at somewhat unfavourable rates. Broadly speaking, his charge was that the Government wanted to have the best of both the freight worlds. It offered liner rates when the market rates were above them and reversed the process when world market rates slumped. Since the cargo which the Government controls is an increasingly expanding quantum of overseas trade, it is obvious that, unless it gives economic rates to Indian shipowners, they will find themselves in financial deep waters.

Among other suggestions made by Mr. Srinivasan, three deserve special attention from the authorities. In the first place, he suggested that Section 51 of the Merchant Shipping Act 1958 should be so amended as to eliminate the necessity for the foreign creditors of Indian shipping companies to approach the High Court in this country for recovery of their money. Such an amendment would make ships an attractive collateral security for purposes of borrowings. Secondly, he pleaded, in effect, for proper administration of the Shipping Development Fund. Although the Fund had

been set up, it had not yet commenced functioning effectively. He also supported the plea made by Mr. G. L. Mehta for the setting up of a counterpart fund in foreign exchange to the Shipping Development Fund. Thirdly, he emphasised the need for fiscal relief. In particular, he drew the attention of the authorities to the burden of capital gains tax and the operation of the balancing charge in respect of depreciation. Further, he suggested that either the tax paid in a foreign country should be treated as an expenditure, or once the profits have been taxed in a foreign country, they should not be added to the profit made in India. This suggestion merits special consideration, because relief from double taxation is particularly essential for the shipping industry which, by its very nature, is international in its operations.

TOBACCO

The warning against unrestricted and uncontrolled production of tobacco, given by Mr. Lal Bahadur Shastri while addressing a conference of tobacco growers at Guntur (Andhra Pradesh) this week, is both timely and pertinent. Growers of tobacco must get a reasonable return commensurate with the time, energy and money spent on its cultivation. It is true that prices of tobacco have registered a marked rise of late, the all-India wholesale price index (base: 1952-53=100) for the week ended 29th August 1959 standing at 97.6, as against 88.8 a year before. But the rise has not helped the growers, because of the continued heavy accumulations of stocks, despite the appreciable decline in production from 687.52 million lbs. in 1955-56 to 564.48 million lbs. in 1957-58. The quantity of *natu* (country) tobacco at present lying unsold with growers is put at as much as 20-23 million lbs., of which 10 million lbs. are reported to have been damaged.

The crisis that has overtaken the market for tobacco is certainly unfortunate and must be solved. Tobacco, as is well known, is an important commodity from the point of view of both internal consumption and exports; the average annual foreign exchange earned is about Rs. 16-17 crores. It is encouraging to note that Mr. Shastri announced that the Central Government would appoint, in consultation

with the State Governments, an enquiry committee to examine carefully all the problems relating to the tobacco industry. He struck a note of realism when he urged that both short-range and long-range plans had to be devised for improving the prospects for tobacco.

As short-range plans, Mr. Shastri urged increased purchases of tobacco through different business firms and marketing societies. He called upon the big companies like the Imperial Tobacco Company of India and the National Tobacco Company to take more interest and give substantial assistance by purchasing some more stocks. These companies, however, may legitimately point out that taxation on tobacco products is excessive, making heavy inroads on their resources. Mr. Shastri also stressed the need for stepping up tobacco exports. He revealed that the State Trading Corporation was evincing special interest in the matter; the talks with Japan had resulted in releasing 1.5 million lbs. of *natu* tobacco and the S.T.C. was in the midst of negotiations with other countries. With regard to long-range plans, Mr. Shastri pointed out that, since every year surplus stocks of about 20 million lbs. were remaining unsold with either traders or growers, new markets should be found and the quality must be improved. He promised to get the question of starting a cigarette factory in Andhra examined carefully by his department. He also promised to persuade the Food and Agricultural Ministry to provide fumigation facilities in one or two ports. These assurances of Mr. Shastri are quite welcome. Equally reassuring is his statement that the Railway Board is prepared to give priority for the transport of unmanufactured tobacco for export on the recommendation of the Export Promotion Directorate.

The National Coal Development Corporation has drawn up a scheme for training of over 400 mining engineers and officers in foreign countries. So far, 15 officers have been sent abroad—13 to the U.K. and one each to the U.S. and West Germany. Another 42 trainees are expected to be sent shortly under different foreign aid programmes. Four training schools have also been set up by the Corporation to meet the demand for junior technical personnel. The schools were opened in 1958 with an annual recruitment of over 400 students.

BUILDING UP COMMONWEALTH'S LIVING STANDARDS ROLE OF ECONOMIC CONSULTATIVE COUNCIL

By Stanley Godfrey

LONDON, 21st September

PAPER plans for easing the world's ills are easy to produce. It is harder to find the money to carry out these plans. And one of the hardest problems that has to be solved is how to make the best use of what money is available for world programmes for aid and development. There are major problems of co-operation between the various monetary regions—the sterling area, for example, the dollar area, and the regions controlled by the Soviet economy.

At the Commonwealth Trade and Economic Conference in Montreal, Canada, last year, the Finance Ministers declared: "It remains our objective that sterling should be made fully convertible as soon as the necessary conditions have been achieved." As a major move towards this end, it was decided that, with effect from 29th December last year, all restrictions on the free transfer of current-account sterling held by non-residents of the sterling area were to be lifted.

The Ministers also decided to support the initiative taken by the United States for consideration of a substantial increase in the resources of the International Bank for Reconstruction and Development (I.B.R.D.).

During the year since that decision was made, steps have been taken to increase I.B.R.D.'s resources by the doubling of subscriptions and of the International Monetary Fund by a 50 per cent. increase in quotas. The United Kingdom has already made both contributions, and other Commonwealth nations have either completed, or are in the process of making, the necessary legislative arrangements. The matter will be reviewed at the forthcoming meetings of I.B.R.D. and the Fund in Washington, and it is hoped that formalities in all member-countries will be completed this year.

Besides discussing the question of economic aid in the world as a whole, the Commonwealth Finance Ministers, at their current meeting in London will also review the needs of the less-developed nations within the Commonwealth family. It was agreed at Montreal last year that the Commonwealth nations would do all they can, "even to the extent of some sacrifice, to assist in a solution of these vital problems."

To this end, a Commonwealth *ad hoc* advisory group met in London in July of this year to give further study to means of mobilising resources to finance schemes of Commonwealth development.

The Ministers are also expected to consider the proposal for an International Development Association which will be further discussed at the forthcoming meetings of I.B.R.D. and the Fund.

So far as the United Kingdom Government is concerned, this question of aid to underdeveloped nations of the Commonwealth has always been of major concern. The United Kingdom representative told the Montreal conference last year that Britain was intending to make Commonwealth assistance loans available from United Kingdom Exchequer funds.

Under this programme, the United Kingdom Government has agreed to make Commonwealth assistance loans of £28,500,000 to India, £10,000,000 to Pakistan, and £12,000,000 to Nigeria after she attains independence during the coming year. They have also agreed to Exchequer loans, under the Colonial Development and Welfare Acts of 1959, of £3,000,000 to Nigeria before independence, and have also undertaken to make available £4,000,000 to British Guiana.

Hand in hand with the need for hard cash to carry out Development plans goes the need for skilled technicians and experts to carry them through. It was with this in mind that the Montreal conference agreed "on the great importance of education and training as an indispensable condition of development," and said that Commonwealth nations should help each other "as much as lies in our power."

These themes were at the basis of the Commonwealth Education Conference held in Oxford last July, where plans were worked out for 1,000 Commonwealth scholarships and fellowships. Other recommendations adopted aimed at more effective pooling and development of educational

resources within the Commonwealth, particularly in improving the supply and training of teachers.

Communications play an important part, too, in improving co-operation within the Commonwealth. The "penny-a-word" special rate for press cables within the Commonwealth has been an important factor in keeping member-nations informed of each other's affairs.

It was agreed in principle at Montreal that communications could be bettered by the establishment of a round-the-world Commonwealth coaxial-cable telephone system. A conference between Britain, Canada, Australia, and New Zealand will open in Sydney on 28th September 1959 to begin the planning of the Pacific section of this round-the-world telephone link.

The Commonwealth Economic Consultative Council meeting in London will cover much wider ground than the Commonwealth Finance Ministers have done in the past. It will be the first meeting of the Council at ministerial level. At the official level, a meeting of senior Commonwealth economic officials took place in London in May. There was also held, in July, a meeting of Commonwealth officials to consider the balance-of-payments position and a meeting of an *ad hoc* advisory group on Commonwealth development.

All in all, it has been a busy year, and from the progress already made it is safe to say that, in the coming years, the Commonwealth Economic Consultative Council will play an increasingly important role in building up the standard of living within the Commonwealth of Nations and demonstrate to the world that membership of the Commonwealth, besides its traditional ties of friendship, possesses economic advantages not to be found in any other grouping of nations.

ALUMINISED CLOTH—A NEW KIND OF FABRIC

British textile experts have developed a new kind of cloth which will keep people cool in summer and warm in winter. It is aluminised cloth and its development—at the Shirley Institute, Manchester—took two years. According to Mr. W. Howard Rees, senior research officer at the Institute and leader of the team that made the new fabric, it was evolved by bonding a film of aluminium on one side of a piece of ordinary rayon cloth, the principle being that the layer of aluminium will serve as an impediment to the transfer of radiated heat. The aluminium looks like the silver paper in a cigarette packet.

Worn with the aluminium on the outside, the cloth will reduce the radiation of heat from a person's clothing and thus would be a more effective insulator than ordinary cloth. Worn on the inside of the material, the aluminium will help keep a person cool in situations where direct sunlight or some other source of heat was falling on it. Thus emerges the prospect of reversible suits.

One of the major difficulties of developing a fabric of this kind was that it was necessary to ensure that it remained porous to the atmosphere, so that water vapour could escape from the layer between the fabric and a wearer's body. In order to provide reversible insulation, it was also necessary to coat only one side of the fabric. This meant sticking the aluminium to the cloth in the form of powder, and it has, as yet, not been possible to estimate the durability of this coating. Mr. Rees is hopeful that better adhesives will become available, so that a tendency for the aluminium to rub off would be diminished.

Only 10 yards of the material are now in existence, but, in two years' time, the fabric may be in commercial production. The invention has been patented as the Shirley Metallized Fabric. One likely use for it is as battle-dress for soldiers and firemen, as the aluminium will, it is claimed, bounce off heat from fires and explosions. And it will make a lightweight mackintosh as warm as a heavy overcoat.

ANOTHER WORLD BANK LOAN TO ITALY

For the first time since its inception 13 years ago, the World Bank has announced a loan for the development of nuclear power. The loan, amounting to \$40 million, has been granted to an Italian Government agency, the Cassa per il Mezzogiorno, for the construction of a 150,000-kilowatt atomic power plant by the Società Elettronucleare Nazionale (SENN) to which the proceeds of the loan will be re-lent. The total cost of the project is estimated at the equivalent of \$66.4 million. The World Bank loan will cover about 60 per cent. of the total cost and the remainder will be provided by SENN's shareholders.

The Bank's loan is for a term of 20 years and bears interest of 6 per cent., including the 1 per cent. commission which is allocated to the Bank's Special Reserve. Amortisation will begin on 15th February 1964. The loan is guaranteed by the Republic of Italy.

NOTES FROM WEST GERMANY

THE FIRST TEN YEARS SPECTACULAR ECONOMIC GROWTH

(From A Special Correspondent)

COLOGNE, 18th September

THIS month marks the tenth anniversary of the Federal Republic of Germany. In September 1949, her parliamentary bodies assembled for the first time. The first—and now retired—President, Professor Heuss, and the first—and still active—Chancellor Dr. Adenauer, were elected, and the first Government of the young Republic were sworn in.

Though there is not much ado about this anniversary in the public, people are aware that an important chapter of German political and economic history has been written in these ten years. The Federal Republic became a full and equal partner in many organisations created after the war for European and world-wide economic integration. The young Republic joined O.E.E.C., the European Payments Union, the European Coal and Steel Community (E.C.S.C.) established in 1951, and the European Economic Community in 1957. She also became a full-fledged member of international bodies such as the International Monetary Fund, the World Bank, G.A.T.T., U.N.E.S.C.O., etc. Along with the process of consolidating the political position of the Federal Republic, the limitations originally imposed on her sovereignty were successively removed. Such limitations were completely abolished when the Federal Republic joined the Western European Union and N.A.T.O. in 1955.

During the last ten years, economic and financial relations with the countries of the free world became more and more normal. German and European production increased at an impressive and steady rate, contributing to a world-wide growth of foreign trade. The Federal Republic's foundation ten years ago may now well be judged in the perspective of an unprecedented economic growth and drive for integration. W. Germany has used her growing economy and her financial resources for a new and very active partnership in solving the economic problems of the free world. The return to economic freedom and to political independence has, therefore, benefited not only Germany herself, but economic prosperity of the world at large.

German industry is fully aware of its heavy responsibilities towards the free Western world to which the Germans are firmly linked by tradition and common cultural heritage. German industry, whose representatives co-operate in many important private and public international bodies and organisations, knows that it has to bear its full share in solving the problems this world still faces, especially those linked with the developing countries. Its readiness to help and to co-operate also is a sign of its gratitude for the assistance and encouragement the Federal Republic has been given in the past by the family of free nations. In this sense, the tenth anniversary of the Federal Republic is also seen as a symbol of her devotion and commitment to the principles of liberty and integration under the banner of freedom, which, the Germans hope, will one day apply to unified Germany, too.

The following data, compiled from official statistical sources, provide some insights into the economic and social record of West Germany during the period 1949-59:

Gross National Product: At current prices, it rose from 97,200 million DM in 1950 to 222,300 million in 1958, an increase of 129 per cent. At 1954 prices, the increase was 77 per cent.

Industrial Production: In 1949, the index stood at 89 per cent. of the country's 1936 level, the last normal pre-war year. In June 1959, it had climbed to 249 per cent. Annual production figures for cars rose from 216,000 in 1950 to 1,181 million last year, for wrist watches from 2.96 million to 7.21 million, for nylons from 23 to 177 million, for cameras from 1.89 to 3.07 million and for TV sets from nil to 1.49 million.

Consumption: Per 100 households there are now 21 refrigerators (vs. 2 in 1953), 20 washing machines (vs. 9 in 1953), 52 vacuum-cleaners (26), 30 electric shavers (5), 12 kitchen machines (1), 15 lbs. in 1948-49 to 35.2 lbs. in 1957-58, that of 206.6 pints, of eggs from 45 to 201, and of citrus fruit from 3.3 lbs. to 41.36 lbs. Per-head consumption of beer doubled from 1950 to 1958 (149.9 pints (1,135 last year), that of cigarettes almost trebled (6.44 lbs.), and that of German champagne-wine more than five times (1.22 pints).

Labour and Wages: Total labour force mounted up from 13.6 million in September 1949 to 19.6 million (Continued on page 536)

The steelworks at Durgapur are helping to build a great new India

Today in Durgapur, 120 miles from Calcutta, nearly thirty thousand Indian men and women and a number of Britain's most famous engineering companies are building the steelworks that will soon be the pride of India. From Durgapur, a million tons of pig iron and steel will pour out every year to be used in India's colossal industrial programme. It will create employment for many thousands of people all over the country. Durgapur will help

to create a better life for everyone.

BRITISH COMPANIES WORKING FOR INDIA

RESOURCES OF WORLD BANK AUGMENTED OVERWHELMING RESPONSE FROM MEMBERS

ALL countries which are in need of large-scale external assistance for economic development, more especially the undeveloped and underdeveloped nations, have reason to feel gratified at the excellent response to the World Bank's move last year to augment its resources. At their last annual meeting held in New Delhi in October 1958, it will be recalled, the sixty-eight Governors of the Bank's Board (each representing one member-Government) directed the Executive Directors "to consider the question of enlarging the Bank's resources through an increase in the Bank's capital." The Directors, in turn, recommended that the authorised capital of the Bank be raised, the rise becoming effective on receipt, by the Bank, of \$7,000 million (\$7 billion) in new subscriptions by 15th September 1959. The member-Governments voted overwhelmingly in favour of the rise, and the amount of increase in subscriptions required by the aforesaid date was surpassed by a large margin—as much as \$1,800 million (\$1.8 billion).

The fresh capital subscriptions from member-Governments actually received by the World Bank upto the 15th inst. aggregated \$8,801.4 million, of which \$62.52 million will be paid, the balance being subject to call to meet the Bank's obligations. Forty countries have taken steps to raise their subscriptions to the Bank's capital and others are expected to follow. Out of the total additional subscriptions amounting to \$8,801.4 million, the share of the U.S. alone comes to \$3,175 million, followed by the U.K. with \$1,300 million. West Germany accounts for \$681 million, France for \$525 million, Canada for \$415 million and India for \$400 million.

Additional Subscriptions

By far the larger part of the increases, it is said, consists of a doubling by member-Governments of their subscriptions. A good many members have also made special additional subscriptions, over and above their 100 per cent. increases, as a means of making their capital participation in the Bank more proportionate to their economic growth in recent years. The Governments of 17 countries, including Canada, Japan and West Germany, have made, or indicated their intention to make, such special additional subscriptions.

The principal objective in enlarging the World Bank capital is to strengthen its ability to borrow funds for financing loans for economic development, by increasing the portion of members' subscriptions remaining on call. Prior to the latest action by the members, the subscribed capital of the Bank was \$9,556.50 million. Of this amount, \$1,911.3 million had been paid in and \$7,645.2 million were subject to call to meet the Bank's own obligations in the event of it not being able to do so from its other resources. With the increase in subscriptions received to date, the subscribed capital of the Bank will rise to \$18,357.90 million, of which \$1,973.82 million will be paid in and is usable in the ordinary operations of the Bank. The balance of \$16,384.08 million will be on call, serving as a guarantee fund for the Bank's bonds and other obligations. With effect from the 16th inst., the authorised capital of the Bank has been stepped up from \$10,000 million to \$21,000 million.

The following table shows the effect of increases in capital on the callable liability of the first six large shareholders of the Bank:

(In million U.S. dollars)

	Prior to increase in subscriptions	Amount of increase	After increase in subscriptions
United States	2,540	3,175	5,715
United Kingdom	1,040	1,300	2,340
W. Germany	264	681	945
France	220	525	745
India	320	400	720
Canada	260	415	675

It will be seen from the above figures that India which held the fourth position in the rank of subscriptions to the World Bank has now been relegated to the fifth place. The fourth place is now held jointly by France and West Germany.

Now that its resources have been augmented in a large measure, the World Bank is in a position to extend its lending activity quite substantially. Since the World Bank opened its

door for business thirteen years ago—25th June 1946, to be precise—and up to the end of August 1959, its aggregate loan commitments amount to \$4,604.3 million. Of this sum, \$585.3 million have been sold by the Bank to other investors, \$274.0 million repaid to the Bank and \$112.3 million cancelled or refunded.

The total of the Bank's outstanding funded debt as on 31st August 1959 stands at \$1,905 million. The major portion of this amount—as much as \$1,591 million—is denominated in U.S. dollars, the remaining \$314 million in Belgian francs, Canadian dollars, Deutschmarks, Netherlands guilders, pound sterling and Swiss francs. Roughly half of the ownership of the Bank's issues is accounted for by institutional investors in the U.S. and the other half by investors in forty or more other countries.

The reserves of the Bank aggregate \$433.5 million (as on 31st August 1959). This is made up of (1) a supplemental reserve for losses on loans of \$291.3 million, all of which is derived from net earnings, and (2) a special reserve securing the Bank's obligations amounting to \$142.2 million, derived from the 1 per cent. annual commission charged on all outstanding and disbursed loans of the Bank. During the fiscal year ended on 30th June 1959, the net earnings of the Bank credited to the supplemental reserve were of the order of about \$46.5 million and the commissions credited to the special reserve amounted to \$24 million.

CURB ON BANK CREDIT IN JAPAN

With a view to curbing an undue expansion of bank credit, the Government of Japan has imposed a reserve deposit system on private banks, with effect from the 11th inst. The ordinances providing for such a system were drafted as long ago as in May 1957, but they had been kept in abeyance. The new system requires the city banks with deposits aggregating more than £20 million to keep as a reserve 1.5 per cent. of demand deposits and 0.5 per cent. of fixed deposits; the corresponding percentages of reserve to be kept in the case of bank with less than £20 million deposits are 0.75 and 0.5, respectively.

The above measure followed the warning given by the leading Japanese financial experts that the country's economy had become 'overheated.' Since the beginning of this year, the experts had pointed out, industrial production had been rising at an average rate of 5 per cent. per annum. The rise

had encouraged the industries to begin investing at a rate approaching that of 1956-57 which resulted in a \$500-million foreign exchange deficit in the first half of 1957. Justifying the latest measure, the Finance Minister of Japan, Mr. Eisaka Sato, said recently that it in no way represented the imposition of a tight money policy; rather it was a preventive step against anticipated excesses in economic activities.

Inasmuch as private banks have been trying to augment their reserve deposits over the last year or so, the effect of the new requirement is expected to be more psychological than practical. But, if the move is not effective, the Central Bank of Japan, it has been made clear, will consider the raising of the official bank rate. Commenting on this new restriction on Japanese banks, the Tokyo Correspondent of the *Financial Times*, London, observes:

"The measure is particularly interesting at this time, because it reinforces the feeling in many Japanese financial circles that the Government is strengthening its control over the nation's economy through financial measures rather than trade or tariff measures. This approach will be made easier by a revision of the law governing the Bank of Japan which has just been made public. This is believed to be in line with the Government's attempts to centralise Japanese financial policy to a far greater extent than it is at present. Frequently, economic policies put forward as official Government policies are frustrated by conflicting measures from such agencies as the Finance Ministry and the Economic Planning Agency."

The Government of Japan is also contemplating to have more control over the Central Bank of Japan, so that it may co-ordinate economic measures far more effectively than is possible at present. The proposed draft revision of the Bank of Japan Law, we are told, is now being studied by a special committee consisting of representatives of both the Government and private financial circles. The draft revision is expected to come before the Diet (Japanese legislature) in the ensuing ordinary session beginning in December next.

FOREIGN CAPITAL TO JAPAN

The pace of influx of foreign capital into Japan is expected to be accelerated considerably in future, as a result of the new system put into effect by the Japanese Government. The system envisages that approval for the induction of capital, which may directly or indirectly contribute to the steady development of the Japanese economy or improve the country's international balance of payments, is granted more easily. At the same time, the remittance of compensation, profit and principal will be permitted to such an extent as is consistent with the need for preserving Japan's foreign currency reserves. Remittances may be postponed temporarily. If Japan's currency situation becomes unfavourable, and will be permitted as soon as possible after the situation improves again. The Government firmly believes that it is unlikely that permission for remittances will ever be suspended even for a very short period. The details of the "Approval System" are given below:

1. Conditional approval in accordance with the Foreign Capital Law means that approval will be based on Article 14 of the Law; it will be granted subject to the condition that the remittance of compensation, profits or principal may be temporarily suspended when such remittances shall cause any difficulties with regard to Japan's foreign exchange situation.

2. Approval of remittances (authorisation system) under the Foreign Exchange Control Law is designed to allow foreign investors, who, in concluding agreements for acquiring shares or for rendering technical aid, receive authorisation from the appropriate Minister to transfer compensation, profit or principal, remit such funds automatically by means of simple procedures so long as such remittances do not adversely affect Japan's foreign currency position. The application for such authorisation is to be submitted to the appropriate Minister through the Bank of Japan and will be handled along similar lines to procedures taken in accordance with the Foreign Capital Law.

With the introduction of the new system of conditional approval, the granting of authorisation for the induction of foreign capital into Japan, it is claimed, will be made easier and quicker.

I.F.C.'s INVESTMENT IN VENEZUELA

The International Finance Corporation has just announced a commitment to invest up to U.S. \$1.25 million in Refractories General-Vikora de Venezuela, C.A. (GREKORA), a new Venezuelan corporation, to manufacture refractory bricks and materials. GREKORA will be owned by the General Refractories Company of Philadelphia and the Corao family and associates in Venezuela which have operated a refractories plant in Caracas since 1932. The project includes the construction of a new refractories plant at Barquisimeto with an initial capacity of about 5 million bricks a year on an eight-hour shift basis; modernisation and expansion of an existing plant in Caracas doubling its capacity; and purchase of fire-clay deposits to provide raw materials for both plants. The refractory bricks and materials are used in kilns, glass, ceramic, sugar, and other industries. The total cost of the project is about \$3.4 million, of which \$2.1 million is being invested by the project sponsors. The I.F.C.'s investment will be represented by U.S. dollar notes, maturing by 1967, and bearing interest at 7 per cent. in dollars and addition, the I.F.C. receives an option on shares, without payment.

ANNUAL MEETING OF BHARAT LINE LIMITED CHAIRMAN, C. R. SRINIVASAN, ON GOVERNMENT'S FREIGHT POLICY PLEA FOR TAX RELIEF AND MORE ATTENTION TO DEVELOPMENT OF PORTS

ADDRESSING the Thirteenth Annual General Meeting of The Bharat Line Ltd., held at Kundan Kunj, Bhavnagar, on Wednesday, 23rd September, 1959, the Chairman of the Company, Mr. C. R. Srinivasan, said that the present time offered an excellent opportunity for acquiring additional tonnage for Indian shipping. But he felt that the Government's freight policy did not encourage the shipowners to go in for new tonnage. He pleaded for adequate tax relief and increased attention to the development of ports.

The following is the text of Mr. Srinivasan's speech:

"GENTLEMEN,

"I am happy to extend to you a cordial welcome to this thirteenth ordinary annual general meeting of the Company. The audited statement of accounts for the year ended 31st December 1958, and the Directors' report thereon have been in your hands for sometime now, and I hope I have your permission to take them as read.

"It is a matter for regret that the working results of the year under report have not been as satisfactory as that of the previous years. In spite of utmost economy and fullest utilisation of available resources, owing to various factors which have been referred to in the Directors' report, there has been a rather sharp decline in the earnings.

Freight Rates

"In their report, the Directors have stated that one of the factors which contributed more preponderantly to the unsatisfactory results than any other was the fixation of low and uneconomic rates for the transport of rice from Burma ports to Indian ports. The fixation of rates for Government-owned cargoes involves issues of fundamental importance. When the charges for sea transport are allowed to enjoy the free play of the world market conditions, it would be reasonable for the Government to pay the market rate whether the rates rule high or low. The present policy of the Government would, however, appear to be to demand liner rates when the world market rules in the upper register, and to insist that their cargoes be carried at world market rates when these are low without regard to the peculiarities of the trades concerned or the disabilities of Indian owners who may often have to arrange ballast voyages for positioning their ships.

"In these days of foreign exchange crisis, the large foreign exchange expenditure on shipping freights, particularly on the transport of foodgrains, has been a matter of great concern for the nation. It has been felt that the country should increase its mercantile marine so as to reduce this expenditure as rapidly as possible. The present is an excellent opportunity to acquire suitable secondhand tonnage at most reasonable rates. This is possible because the tonnage market in consonance with the freight market, is passing through slump conditions. Unfortunately, the Government's policy in regard to fixation of freights does not encourage the shipowners, willing as they are, to go in for additional tonnage on a significant scale. The importance of Government utilising the immeasurable advantage of controlling a large volume of cargo moving on their account for the development of shipping has been emphasised in various quarters. It is to be hoped that Government will evolve a freight policy which will be satisfactory both to them and to the industry and at the same time promote more rapid increase of the national tonnage.

Shipping Act

"The year under report has been a historic one so far as the Indian shipowning community is concerned. The Merchant Shipping Act, 1958, which provides for the first time for a separate Indian Register, was placed on the statute book. In my speech last year, I had referred to a Special Committee of the Indian National Steamship Owners' Association, who had submitted a memorandum on the Bill, and had hoped that the recommendations of the Committee would register in the right quarters. I am happy to

note that the definition of the 'Indian ship' has been modified on the lines proposed by the Indian shipowners. Unfortunately, however, in the battle for the 'Indian ship,' it would appear, it has not been possible to give adequate consideration to the rest of the recommendations made by the Association. Amongst a number of recommendations which have thus been overlooked I am sure there are many which could be resurrected to the benefit of all concerned. Today, however, I would like to make a special plea in the case of one provision of the new Act, which if brought into force, might make it difficult for Indian shipowners to obtain foreign exchange loans. I refer to Section 51 of the Act, which lays down that if a mortgagee desires to recover his dues, he can only do so through a High Court. So far such intervention of the High Court was not required. The provisions of Section 51 would make an Indian ship an unattractive proposition as a collateral security against loans. I hope it will be possible to amend this section of the Act so that the mortgagee has not to approach the High Court for permission to recover his dues.

"In spite of the anxiety of Government and the industry, the pace of expansion of Indian shipping has been slower than was hoped for. Whether the industry will expand rapidly, or will remain static, will depend upon the evaluation of various deterrents and disincentives which beset the industry today. Primarily the industry lacks capital resources. Although the Shipping Development Fund has been statutorily established, it has not commenced functioning effectively, and as a consequence, loan facility available to the industry is of a very meagre order. To add to this, there is now a chronic dearth of foreign exchange resources. I hope the suggestion of Mr. G. L. Mehta to have a counterpart Fund in foreign exchange to the Shipping Development Fund will meet with the response from the authorities which it deserves.

Taxation

"Proceeding from capital resources to taxation, I would like to invite the attention of the Government to the heavy burdens the industry is compelled to carry in the shape of the capital gains tax, and the operation of the balancing charge in respect of the depreciation as laid down in Section 10(2) (vii) of the Income-tax Act, both of which deprive the industry of valuable funds, which could be usefully ploughed back. Moreover, mostly all the Indian shipping companies do not get the benefit of double taxation relief since they have no assessable income because of accelerated depreciation, etc., granted to them. I would, therefore, suggest for the earnest consideration of the authorities that either the tax paid to a foreign country be allowed as expense, as actually it is an expenditure incurred in earning freight from that country, or, in the alternative, profits earned in a foreign country and taxed by that country be not added to the profit made in India.

"So far as the coastal tonnage is concerned, it has remained static, and I shall be very much surprised if, in the existing conditions, it does not dwindle further instead of reaching the target of 412,000 tons laid down by the Rail-Sea Co-ordination Committee. The foreign exchange position has practically rendered additions to the fleet impossible. Besides, the competition of the railways, on the basis of their freight policy in respect of bulk commodities like coal and salt, as also in regard to other commodities, is not conducive to expansion of coastal tonnage. If, therefore, in the interest of the nation, a coastal fleet is considered desirable, the recommendations of the Rail-Sea Co-ordination Committee submitted to the Government as early as 9th April 1957, should be accepted and implemented without further loss of time, so that the nation is assured of a coastal fleet commensurate with its requirements and the shipowners are assured of regular gainful employment in the trade for the tonnage employed by them.

"On the overseas sector, what is required is not only provision of cargoes, but also the fixation of economic rates. On the latter subject I have already spoken earlier at length. As re-

gards provision of cargoes, it was a happy augury that the Government of India established a Shipping Co-ordination Committee in the Ministry of Transport. The Committee was to have a full-time Secretary with necessary staff under him, and was

"(i) to act as a clearing house of information in regard to the availability of Government-owned cargo and shipping space in Indian ships with a view to making the most effective use of the available Indian tonnage;

"(ii) to advise on the best and the most economical shipping arrangement possible for the movement of Government-owned cargoes when Indian shipping is not available, i.e., whether non-Indian vessels should be chartered and, if so, whether on time basis or voyage basis;

"(iii) generally to co-ordinate and advise on all policy matters relating to shipping, including the development of Indian shipping.

"Although the Committee exists today, I am afraid no secretariat has been formed till date, neither has it functioned in the other capacities for which it was initiated. Recently an assurance was given on behalf of Government that they would undertake a review of the working of the Shipping Co-ordination Committee and effect necessary improvements. It is to be hoped that Government will take early steps to ensure that the Committee effectively performs the functions for which it was established.

"The third Five-year Plan is taking shape. The Special Ad hoc Committee appointed by the National Shipping Board under the chairmanship of Sir Ramaswamy Mudaliar will chalk out plans for the shipping industry. I hope the suggestions I have made in this connection will receive due consideration not only from this Committee, but also from the Government.

Ports

"At a time when the country is thinking in terms of increased industrialisation, increased all-round production and export promotion, it is a matter for grave concern that Calcutta, one of our foremost ports, is deteriorating, and that too at a rapid rate. Temporary solutions like the Anchorage at Haldia are of limited value, and an attempt to solve the problem piecemeal, I am afraid, will not serve the purpose. If the country's eastern gateway is to be preserved and restored to its rightful position and usefulness, it is essential that improvement plans should be laid and executed on a war-time footing. Government should also press on with the schemes for the development of the other major ports.

"For a country with a large coastline like ours, and a growing economy and an expanding foreign trade, the existing number of ports would require to be augmented. I am, therefore, happy to learn that the Government of India have set up the Intermediate Ports Enquiry Committee. I hope the Committee would be able to select ports which would serve the growing needs of their hinterlands, and also be capable of being developed into major ports, if and when the circumstances so demand.

Personnel

"Ships do not run themselves. They require men to sail them. I am happy to note that the welfare of seafarers is being paid increasing attention to. I hope the National Welfare Board will bring their deliberations to a successful close in the very near future. The Board is also considering the subject of social security for seafarers, and I would like to suggest that in this respect it would be advisable if they are treated on the same footing as any other Indian national. Service conditions and welfare aspects apart, there can be no possible justification for differentiating between Indians, seafarers on the one hand and workers employed in other industries on the other, in regard to the measure of social security to be enjoyed by both.

"I am afraid I have taken up much of your time, and before I conclude I should like to take this opportunity of thanking the Ministry of Transport, the Director General of Shipping and their officers and staff for their whole-hearted assistance. My grateful thanks are also due to my colleagues on the Board for the close co-operation I have received from them. I should also like to thank the officers and staff of the Company, ashore and afloat, for their good work on behalf of the Company."

EXPANSION OF TEXTILES IN THIRD PLAN

F.I.C.C.I.'S SUGGESTIONS

THE reference to the cotton textile industry made by the Federation of Indian Chambers of Commerce and Industry in its outline of the third Five-year Plan is rather brief. Thus, the Federation has merely indicated the broad approach to the problem and endorsed the piece-goods production target of 9,600 million yards fixed for 1965-66 by the Committee of the Indian Cotton Mills Federation vide its memorandum submitted to the Planning Commission and published on pages 342 and 343 of *Commerce* dated 29th August 1959. This target, it will be recalled, represents an increase of 1,600-1,700 million yards as compared with the revised target of production expected to be achieved by the end of the second Plan period (1960-61). The Federation has not indicated how the allocation of the extra production should be divided as between the mill sector and the handloom and powerloom sectors. All that it says is that it must be on a rational basis.

Of the production target of 9,600 million yards, domestic requirements are taken to be 8,800 million yards (the Federation's draft puts this figure at 8,100 million yards, apparently a printer's error for 8,800 million yards), the balance of 800 million yards being the quantity needed to meet the export demand. The estimate of the domestic requirements of 8,800 million yards is based on the anticipated per capita consumption of 20.3 yards for a projected population of 434 million at the end of the third Plan. The per capita consumption is calculated on the assumption that the increase in consumption of cloth is just equal to the rise in consumption expenditure, that is, "assuming that the elasticity of demand for cloth is unity." The Federation, of course, admits that, in case the demand in the internal or the external markets shows a rise, or, alternatively, if the population at the end of the third Plan is more than what has been estimated by the industry, it is likely that the target may have to be stepped up to about 10,000 million yards. The per capita consumption is expected to be 17.5 yards in 1960-61, as against the actual figure of 16.7 yards in 1958 and the Planning Commission's original estimate of 18.5 yards. It will be of interest to note here that the average quantity of cloth consumed by an individual every year in the United States is as high as 60 yards, that in Japan and Soviet Russia being 35 yards and 29 yards, respectively.

Modernisation and Rationalisation

The Federation has drawn special attention to the general decline in world textiles trade and to the fact that the cotton mill industry is suffering from a rather high cost structure, resulting from the high prices of raw materials as well as low productivity per man-hour. It accordingly lays emphasis on modernisation and rehabilitation of plant, rationalisation of labour, and overall increase in productivity and efficiency during the remainder of the second Plan and the entire third Plan. "Attention must be paid," it declares, "to giving a fillip to the schemes of modernisation such as by raising the proportion of automatic looms from about 5 per cent, at present to 30-35 per cent, by the end of the third Plan." For implementing these schemes, as also for setting up additional units, including ancillary and processing industries, the investment required is tentatively estimated at Rs. 100 crores.

The Federation is, however, more liberal in fixing a target for raw cotton production than the Committee of the Indian Cotton Mills' Federation. Thus, it has put forward a target of 7.5 million bales, as against the latter body's figure of 6.6 million bales. It feels that, with the prospects of increased production in the current year, the second Plan target of 5.5 million bales is likely to be achieved. This assumption, however, is unlikely to prove correct, as the latest crop estimates place the production at between 4.6 and 4.8 million bales. In this connection, the Federation observes: "It must be kept in view that the country at present is in a position to meet the entire requirements of cotton but for a few finer varieties. More efforts should be made to produce within the country long-staple cotton of the finer variety."

As regards cotton textile machinery in the third Plan, the Federation has suggested a total capacity of Rs. 35 crores worth of machinery and equipment per annum which, it is said, has been arrived at on the basis of new installations, replacements and the desired increase in the percentage of automatic looms.

The investment target for this industry is put at Rs. 25 crores. The domestic requirements of cotton textile machinery are expected to be about Rs. 17 crores annually by 1960-61, while the indigenous capacity attained by that time is estimated at no more than Rs. 10 crores, so that a sizable gap in requirements will be carried over into the third Plan. During 1958, India imported over Rs. 10 crores worth of cotton textile machinery.

Art Silk Fabrics

Turning to art silk fabrics, the Federation has favoured the attainment of a production target of 700 million yards, with a sufficient margin of capacity. The target is considered to be sufficient to meet the expected rise in domestic per capita consumption from 1 yard at present to 1.5 yard in the third Plan and also cater to exports at an annual rate of 25 million yards. The investment outlay on expansion of capacity and modernisation of plants is put at Rs. 25 crores. While formulating the second Five-year Plan, the planners did not provide for any additional capacity, as the production at 230 million yards per annum was much below the installed capacity of 470 million yards on single-shift basis. The actual output in 1958 was 290 million yards, which is expected to expand to 400 million yards by the end of the second Plan.

The revised target for viscose and acetate rayon under the second Plan is 100 million lbs. While most of the schemes for viscose rayon are expected to be completed by 1960-61, the expansion programmes for acetate rayon have not made substantial progress. The shortfall as a result of delay and setbacks is expected to be of the order of 20 million lbs. The distribution of capacity attained by the end of the Plan, according to the Federation, should be about 72 million lbs. for viscose and 8 million lbs. for acetate rayon. As regards staple fibre, the capacity and production are expected to reach 32 million lbs., as against the estimated demand for 40 million lbs. On the basis of six yards of cloth for one pound of rayon, the Federation says that the requirements by the end of the next Plan will be of the order of 150 million lbs. of viscose and acetate rayon. The invest-

ment outlay required for rayon and staple fibre together will be of Rs. 30 crores. For the development of chemical pulp required for the manufacture of viscose rayon, an investment outlay of another Rs. 10 crores will be needed.

The Federation has not prepared any estimate of the likely increase in the country's requirements of woollen textiles, nor has it recommended a production target. Only it has estimated the investment requirement of the woollen textile industry at Rs. 15 crores.

SUBSIDY TO HANDLOOMS

An idea of the colossal subsidy in the form of rebate on sales of cloth which is being extended by the Government of India to the handloom industry can be had from the following figures furnished recently in the Rajya Sabha:

Year	Amount sanctioned Rs.	Expenditure reported by States Rs.
1953-54	84,71,950	3,48,164
1954-55	4,18,490	54,61,193
1955-56	92,98,126	1,69,08,063
1956-57	2,30,25,243	2,23,23,992
1957-58	2,13,18,879	2,59,35,499
1958-59	1,72,69,000*	3,20,68,383
	7,98,01,688	10,30,45,294

*The amount of Rs. 1,72,69,000 sanctioned during 1958-59 was intended only to meet the arrear claims pending with the State Governments upto 31st March 1958. No separate amount for expenditure on rebate was sanctioned for 1958-59 to meet the expenditure on the scheme incurred by State Governments in 1958-59, as this was included in the total grant assistance of Rs. 2,58,28,000 sanctioned to various State Governments.

SPUN ORLON

Spun Orlon textured by the Taslan process has been developed by du Pont in America and is commercially available there from Taslan licences. The resultant yarn is claimed to have greater bulk and loft and, therefore, lower weight with higher covering power; in addition, the development is stated to offer versatility in finishing techniques and increases styling opportunities.

Long-staple spun Orlon in yarn form is subjected to a continuous stream of air which forms loops in individual fibres and raises fibre ends. High bulk or 100 per cent. relaxed (regular) yarns, may be used in a variety of deniers, denier blends, yarn counts and plies to achieve different textured effects, du Pont says. The yarns are usually textured before dyeing either in skein or piece. Development work to date has been connected with socks and sweaters, but numerous applications are foreseen in almost all forms of knitted outer-wear. No knitting problems have been encountered with the new yarns.

For top grade Industrial Chemicals

Monsanto works constantly to develop new, better chemicals—and to improve those chemicals you already use. In every industry, whether it be agriculture—automotive—aviation—ceramics—chemical processing—cosmetics—electrical—foods—insecticides—mining—oil—paint—paper—rubber—soaps and detergents, there is a Monsanto chemical that will help to improve production and quality.

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

POLITICAL PARTIES AND COTTON INDUSTRY

WAGE RATES CONTINUE TO RISE

From A Special Correspondent

EVERY few years the heat of the political battle in Britain reaches boiling point with the advent of a General Election. In the intervening periods, there are moments when the views of one or other Party have a direct bearing on industrial affairs, and the intervention of Govern-

MANCHESTER LETTER

ments into industry in the twentieth century makes it exceedingly difficult to escape occasional clashes on points of policy.

During the weeks before 8th October, many conflicting statements will be made by the politicians about their plans for the future. The cotton trade, to its detriment, has been in the cockpit of party politics ever since the end of the war. The present reorganisation scheme is so much in the public eye that its effect will be quoted by the participants in the Election as a means of furthering their own cause. Whatever the final result at the polls, however, the plan will go through and it can be assumed that no last-minute changes in its administration will be permitted.

The two major political parties have stated their case for cotton. The Government's programme for immediate redundancy and aid for re-equipment until 1964 is already established. Labour's plans stop short of full-scale nationalisation, but various controls are envisaged, including a return to State buying of raw cotton and a Commission to govern the importation of foreign cloth.

Liberal View

The Government's £30-million plan for reorganising the cotton industry was condemned in a statement issued in Manchester by a group of eight prospective Liberal candidates for textile constituencies. The policy on cotton was causing chaos, the Liberals declared, and was "too late, ill-conceived, ill-considered, badly managed, injurious to workpeople and to morale generally and without long-term possibility of success." The proposed closures, according to the statement, often affected good mills and, in many cases, only the interests of the shareholders had been considered. At the same time, the Labour alternative of nationalisation was rejected completely.

The future of the industry, according to the Liberal view, depended on the extension of firms having several processes under one roof or management. "We believe the structure of the industry to be wrong and that financial aid should be given to encourage vertical integration," the statement added.

The candidates urged that mill closures should be phased over a longer period than six months, to allow new industries to take their place. The Government should take steps to set up re-training centres immediately to offer alternative employment to displaced workers and the unions should allow entry of redundant

cotton operatives into other semi-skilled or skilled industries in appropriate cases. A new wage structure should be negotiated between the cotton trade employers, the statement added, to cover shift-working and management should be given the opportunity to be competitive. In its new form, the industry should be able to use male labour as far as possible, avoiding the economic necessity of women having to work "to make ends meet."

"Generous" To Employers

A comparison between the terms of compensation offered to millowners and operatives in the cotton industry under the reorganisation scheme is made in the current quarterly report issued by Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation. "In our view, the employers have been provided for very generously indeed," he declares, "particularly in the case of machinery which ceased to operate before 24th April, where it was well-known that there was never any intention to restart production."

The union leader added that it was reasonable to ask that in the administration of the scheme, the employers' representatives would be as generous in their interpretation as the Government had been in the provision of compensation for scrapped machinery. The shareholder, he added, would be able to re-invest the proceeds of the closure immediately it was received, while the workman would have to take the risk whether he could obtain other employment. In most cases, Mr. Schofield went on, the reduction in wage would be a permanent one, whereas the value of the shareholders' investment would have appreciated very considerably. The same improvement in capital values would also apply to the shareholders of the firms which intended to remain in business.

Canadian Tour

A team of two Lancashire cotton experts flew to Canada last week to study the market in an effort to stimulate sales of Lancashire-made cotton goods. The Cotton Board said that the visit was one of a series of market surveys which had been arranged on behalf of the industry.

The mission is composed of two members of the Cotton Board's staff, Mr. H. E. Wadsworth and Mr. A. H. Fruin, who will study outlets in the wholesale, retail, garment making and mail-order sections of the trade, in Montreal, Ottawa, Toronto, Winnipeg and Vancouver. Their programme has been prepared in consultation with U.K. Trade Commissioners in Canada and the Dollar Exports Council.

Higher Wage Rates

Latest Ministry of Labour returns analysing wage rates throughout the country show a further continuation of the upward movement which has persisted for more than the past decade. Average earnings of nearly 7,000,000 workers in the final pay-week in April this year was £11 2s. 6d., a rise of 5s. 2d. as compared

with October last and an increase of 8s. 4d. over the twelve months.

The appropriate returns affecting cotton and kindred workers are shown below, and indicate the improvement in business which has been experienced at the time; the October 1957 figures represent the peak of former earnings:

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers
<i>Cotton Spinning</i>					
October 1957	219 9	129 2	130 0	109 4	162 2
April 1958	209 4	121 7	131 1	104 4	155 8
October 1958	205 0	120 1	129 11	105 3	153 9
April 1959	209 11	120 7	135 1	108 6	157 10
<i>Cotton Weaving</i>					
October 1957	220 7	119 4	142 6	103 5	167 5
April 1958	219 2	114 10	141 9	102 2	166 1
October 1958	218 2	118 1	142 9	108 3	167 7
April 1959	221 9	117 11	144 7	102 10	169 5
<i>Total Cotton</i>					
October 1957	220 1	126 9	138 9	107 3	164 5
April 1958	213 8	119 5	135 11	103 6	160 1
October 1958	210 7	119 5	135 3	105 7	159 8
April 1959	215 1	119 8	139 1	106 6	162 8
<i>Rayon Weaving</i>					
October 1957	235 2	110 10	144 0	99 6	178 11
April 1958	229 0	108 2	141 10	98 11	175 11
October 1958	230 7	113 10	144 6	99 9	178 6
April 1959	239 11	112 0	149 1	99 2	184 4
<i>Textile Finishing</i>					
October 1957	231 9	113 6	120 5	89 9	193 11
April 1958	229 6	113 8	121 0	89 7	192 7
October 1958	235 2	116 2	125 4	93 6	197 11
April 1959	239 10	118 1	129 4	92 10	201 2

Anomalies in the above figures are still apparent, illustrating that weaving remains a more remunerative employment than spinning despite the improvement of 4s. 1d. in the average payment in the spinning branch over the half-year. Oddly enough, the differential between the earnings of juveniles in the two sections has widened, particularly in the case of girls under 18, whose average pay is now over 5s. less in weaving than in spinning. In autumn, 1958, the curtailment of output in the industry was reflected, in the shorter working week in operation. The survey now shows an average throughout the cotton industry of 43.5 hours against 42.6 hours in October last. In weaving, the figure was 43.7 hours, as against 43.3 and, in spinning, 43.4, as against only 42.1. The hours worked in textile finishing were practically identical with six months previously at 47.3.

Far Eastern Trade

Reference to the vulnerability of Lancashire textile exports to the increasing inroads from many foreign sources leads directly to the report covering the recent mission to Australia and New Zealand by representatives of the local trade. The situation in this area is reflected in the sharp decline which has already occurred this year in shipments of cotton and rayon fabrics to this part of the world. Australia, for example, in the first seven months of 1959 took less than 32 million yards of Lancashire cotton cloth, as against over 42 million yards in the previous year; exports to New Zealand fell from nearly 21 million yards to barely 15 million yards. In the case of man-made fibre piece-goods, the relative position was even more disturbing, as shipments to Australia over the seven months amounted to 4,200,000 yards, as against 7,300,000 yards and to New Zealand were barely 5 million yards, as against 7,700,000 yards.

Such losses in markets which have for so many years been a mainstay in Lancashire's overall export trade indicate the seriousness of the position. No attempt is made in the report of the mission to minimise the threat arising from the conclusion of the Japanese agreement with Australia.—All Rights Reserved.

RAISING COTTON PRODUCTION BIGGER INCENTIVES ADVOCATED

THE annual address delivered by Mr. Madan-mohan R. Ruia, President of the Cotton Euyers' Association, Bombay, contained, in addition to the customary review of the main developments of the 1958-59 cotton season just ended, some suggestions for increasing cotton production in the country, stepping up exports and facilitating imports of the required type of cotton. Mr. Ruia singled out the drop in production, the rise in mill consumption and the improvement in the textile situation, the increase in production of long-staple cotton and larger exports as the noteworthy features of the past season. The decline in indigenous production of cotton to 4.8 million bales (of 400 lbs.) from the earlier estimate of 5.4 million bales and last season's output of 5.1 million bales, according to him, not only indicated that nature was still unkind to the country but also underlined the fact that there was still a long way to go before reaching the second Plan target of 6.5 million bales. This could only be achieved, according to Mr. Ruia, by the authorities showing the primary producers of cotton the same solicitude which they were showing the domestic textile industry, that is to say, by taking a more active interest in raising cotton production through the provision of adequate monetary incentives to producers.

Imports

While this was a long-range solution to the problem of raising cotton production, the immediate alternative, Mr. Ruia observed, was to meet the prevailing shortage of cotton by liberalising imports. This, he felt, was the only natural method for arresting the rising trend of domestic prices which, if unchecked, would render exports of those varieties of cotton which could be spared and also of cloth difficult. Mr. Ruia fully recognised the foreign exchange implications involved in his proposal. But, in the prevailing circumstances, any other alternative, he said, was unthinkable.

The President of the Association readily conceded that, during the past season, the Government showed better understanding and appreciation of the problems of the textile industry. While welcoming this helpful and realistic attitude, Mr. Ruia made the following suggestions to enable mills to get adequate supplies of cotton and to arrest the rising trend of prices in the domestic market:

"By the very nature of the export incentive scheme, it takes a good deal of time in working out the actual allotments to individual mills whenever import quotas are issued. This will be evident from the fact that, even in respect of import quota of 140,000 bales announced three weeks back, certain calculations have yet to be completed and it is clear that this would take some more time before the actual allotments are in the hands of spinners. I, therefore, strongly suggest that an import quota of 200,000 bales, out of the target fixed, be issued in advance to the actual and regular users, whose consumption particulars are already available with the office of the Textile Commissioner, so that it would, in the first instance, give immediate relief to needy mills and, secondly, help to arrest, to some extent, the rising trend of prices in the domestic market."

Exports

As regards exports, the performance during the last season, having regard to the aggressive selling policies followed by other competing countries, was, according to Mr. Ruia, by no means discouraging. The export quotas issued during the season 1958-59 aggregated 500,000 bales, of which 250,000 bales were for Bengal Deshi, 200,000 bales for 3/4" cotton and 50,000 bales for cotton below 3/4". These large quotas were issued on the basis of early estimates of ample supplies of cotton during the season. By doing so, the Government not only helped ensure continuity of supplies to foreign buyers but also imparted a measure of stability to domestic prices during the season. The actual shipments in 1958-59 amounted to 385,000 bales, as against 292,000 bales in the previous season. Bengal Deshi, as usual, found a regular outlet in world markets at rising prices. This was, however, not the case with 3/4" cotton, which, as the season progressed, was increasingly difficult to sell in the overseas markets, since, in the first instance, the improved local demand pushed up prices to levels which were out of parity with competing styles from other cotton growing countries and, in the second, the demand was either invariably for Bengal Deshi or for cotton stapling above 25/32". Consequently, a substantial part of the

quotas issued remained unutilised at the end of the season.

Commenting on the export prospects for the current season, Mr. Ruia observed that the Government of India, having now been convinced of the need for maintaining the continuity of supplies to spinners abroad, had been prompt enough to announce an initial export quota of 75,000 bales of Bengal Deshi on the eve of the new season. The announcement was very timely, since it coincided with active demand, especially from Japan, and to some extent from the Continent.

He also welcomed the retention of the policy of "first come first served" followed last season which had been fully justified not only from the point of view of earning foreign exchange speedily but also from the point of view of providing opportunities to as many shippers as possible. He, however, suggested that the issue of export quotas to co-operative societies should be modified. These societies were provided with a share of 15 per cent. out of the quota of 500,000 bales issued in the last season. In view of their very poor performance, such special treatment to co-operative societies, Mr. Ruia rightly pointed out, served no particular purpose. It only resulted in reducing exports and foreign exchange earnings. He, therefore, felt that it was advisable that these societies should be either treated on par with other shippers or be provided with a smaller share of the quotas issued. In case the share thus provided remained unutilised, it might be distributed on shippers' account.

It is clear from the foregoing account that the suggestions put forward by Mr. Ruia take full cognisance of the difficult foreign exchange situation, the need to step up exports of cotton and to ensure adequate supplies of foreign cotton to mills.

U.S. COTTON EXPORTS TO ASIAN COUNTRIES

SUBSTANTIAL RISE PREDICTED

OPINION is gaining strength in the United States that exports of raw cotton from that country during the current (1959-60) cotton season will rise to five to six million bales, that is, the "fair historical share" of U.S. in world market. This optimism, entertained in both official and non-official circles, is based on the assumption that conscious efforts will be made to achieve this end and that world market conditions and the stock position in cotton importing countries are such as to make a rise in exports much more than a possibility. For instance, U.S. prices are said to be more competitive now than they were a year ago and stocks in net importing countries, estimated at 4.7 million bales on 1st August, are lower than at the beginning of the three previous seasons.

Not only are exports expected to increase in the current season but also its flow and direction are likely to show significant changes. According to Mr. G. A. W. Schilling, Marketing Specialist of the Foreign Agricultural Service of the U.S. Department of Agriculture, exports to Asia and Australia in 1959-60 would constitute a larger proportion of total U.S. exports. Shipments of U.S. cotton to these destinations during 1956-57 and 1957-58, aggregating 2,580,000 bales (of 500 lbs.) and 1,269,000 bales, respectively, were about 33 per cent. of the total U.S. export of 7.6 million and 5.72 million bales during these years. During the first eleven months of the 1958-59 season just ended, exports to these continents amounted to 1,269,000 bales representing about 45 per cent. of the total estimated exports of 2.82 million bales. Mr. Schilling attributes this percentage rise in exports despite the fall in total exports, to the fact that exports to this area declined much less than to other parts of the world. Shipments to Korea, the Philippines and Formosa were actually higher than in previous years. They were, however, down by half to Japan and by 40 per cent. to India and Australia.

Total U.S. exports in 1959-60 are expected to be greatly above those in 1958-59. Shipments to Asia and Australia would also show further gains, possibly reaching two million bales. Whether this figure will be reached, however, will depend, according to Mr. Schilling, on whether Japan will absorb one million bales of cotton or more. With competitive U.S. cotton prices this, he maintains, should be possible, barring adverse factors such as trade agreements with other countries. Mr. Schilling also points to the possibility of some shifting of cotton exports from countries now exporting textiles to other Asian countries which are building up their textile industry. Commenting on this, he observes:

"The present trend in Australia and in countries of Asia—except for Japan, India and Pakistan—is to expand the cotton textile industry materially. All countries are trying to become self-sufficient in cotton textiles, and eventually to become net exporters of textiles. This trend, which was reported in firsthand marketing studies in 1956 and 1957, is continuing in 1959 and will be intensified for several years to come in less developed countries. This will mean a shifting of cotton exports from countries now exporting textiles to Asia to other Asian countries developing their own cotton textile manufacturing industries. Countries like Korea, Formosa, the Philippines and Indonesia will continue to depend almost entirely on U.S. aid programmes to obtain American cotton. The other countries in the area will buy cotton with their own foreign exchange."

Analysing the country-wise export prospects for U.S. cotton, Mr. Schilling sees the possibility of a rise in exports to Japan while, in the case of India, the position, according to him, is not likely to change materially from the 1958-59 season, although India may absorb more U.S. cotton financed by the aid funds.

Japan should under normal circumstances be expected to provide a market for one million bales of U.S. cotton. In 1956-57 and 1957-58 it absorbed as much as this. In the current season, competitive U.S. prices should help in achieving this goal. In its import budget for the first six months (April to September) of the current fiscal year Japan has made provision for 811,500 bales of cotton to be imported from the dollar area which includes U.S., Mexico and Central and South America, except Brazil. Assuming that during the second half of the fiscal year the import allocation is as large as that in the first, U.S. exports of a million bales to Japan is, Mr. Schilling maintains, within the realm of possibility. Japan's trade agreements

(Continued on page 530)

BIHAR-U.P. SUGAR CONTROL BOARD MEETS INCREASE IN SUGARCANE PRICE DEMANDED

TWO important but controversial suggestions were put forward by the Bihar-U.P. Sugar Control Board at a meeting held at Patna on Wednesday the 16th inst. Dr. S. K. Sinha, Chief Minister of Bihar and Chairman of the Board, presided. One was to the effect that the minimum price of sugarcane for the crushing season 1960-61 should be fixed higher at Re. 1.75 per maund, as against the present price of Re. 1.44; even the price for the ensuing season (commencing on 1st November next), which is "inadequate", must be fixed at Re. 1.75. The other was that there should be control on sugar throughout the country and not merely in North India.

The plea for an upward revision in cane prices has been opposed by this journal on more than one occasion. It was only in our issue dated 22nd August 1959 (vide page 300) that we had discussed the question at some length. It is, therefore, unnecessary to discuss the issue again in detail. Suffice it to say that such a move will not only render the incidence of cane cost—this is already heavy at 40 per cent. of the cost of sugar production—heavier still and thereby give further impetus to price inflation in the country but also result in diversion of land from food crops to sugarcane. After all, the price of Re. 1.44 per maund for cane is only the minimum and nothing prevents any sugar mill to pay a higher price for cane, depending, of course, on the quality of the cane supplied. It is regrettable that, instead of opposing the Board's decision for a rise in cane price, the representatives of sugar industry were agreeable to it, provided a consequential increase in the price of sugar was allowed, ignoring the interests of consumers.

Good Monetary Yield

The existing statutory minimum price of cane, namely, Re. 1.44 per maund, seems to be offering a good monetary yield to agriculturists. Otherwise, it is difficult to explain the appreciable expansion in the area sown to sugarcane crop in Uttar Pradesh during the past four or five years. Since 1953-54, the percentage of area under cane to the total cropped area has gone up from 4.0 to over 6.0, whereas that under wheat has risen only from 18 to 18.6, paddy from 17.7 to 17.9 and oilseeds from 1.9 to 2.2. The following table gives the areas devoted to the cultivation of different crops during the year 1957-58, as compared with 1956-57, 1955-56 and 1953-54.

(In thousand acres)				
Items	1957-58	1956-57	1955-56	1953-54
Sugarcane	8,017	3,066	2,720	1,973
Wheat	9,727	9,980	9,965	9,230
Paddy	9,687	9,531	9,298	9,053
Other foodgrain crops	24,575	25,234	25,143	25,898
Total food crops	46,956	47,811	47,126	46,152
Oilseeds	5,768	6,051	6,042	5,800
Cotton	196	148	141	140

If the State Governments themselves, which are supposed to be the guardians of the people as a whole and follow such policies as are designed to ensure a sound economy, were to put forward proposals that would only aggravate the price inflation, there is hardly anything that could be done about it, except to touch their commonsense. It is, however, nice of the U.P. and Bihar Governments to say that they are insisting on a higher sugarcane price only from the 1960-61 season. This gives the Central Government plenty of time to examine the demand and come to right conclusions.

The recommendation of the Bihar-U.P. Sugar Control Board for clamping down nation-wide controls on the commodity appears to be justified by the present supply and demand situation. If controls are to be had, it is better to have them all over India. There is certainly no logic in punishing producers in North India alone with controls, leaving their confreres in the South scot-free. In any case, this discussion is only of academic interest, in that total controls have already come to prevail practically all over the country. Since all available indications are that the supply position in the 1959-60 season will be no better than that in the current season—if anything it may be worse—one cannot see how controls can be avoided. The objective, however, should be to free the country from sugar controls as early as possible. The only way to do it is to increase the production of white sugar.

sugar economy? It is true that the Governments have provided here and there better water facilities for cane cultivation, supply of improved types of cane seeds, fertilisers and implements, and construction of roads, bridges, etc., in cane-growing areas. But the benefits actually conferred are not commensurate with the colossal sums of money derived by the Governments of U.P. and Bihar in the form of sugarcane cess—Rs. 35 crores and Rs. 10 crores, respectively, during the eight years ended 1958-59. Since the cess collections in U.P. continue to be credited to the general revenues, it is not possible to say how much money has, in fact, been spent on cane development work. In the case of Bihar, out of the Rs. 10 crores raised, about Rs. 6 crores are believed to have been spent.

Despite all the continued loud talk by the powers-that-be about intensifying cane cultivation in the two States, the progress actually achieved is not much. Over the past eight years (1950-51—1957-58), the average recovery per cent. of sugar in cane has declined from 10.26 to 9.91 in Bihar, while it has risen only negligibly from 9.81 to 9.93 in U.P. As regards the per-acre yield of sugarcane, the average has fallen from 11.58 tons to 10.12 tons in U.P.; in Bihar, it has, of course, increased from 7.51 tons to 8.46 tons but the improvement is woefully inadequate to make sugar-making an economic proposition. Even in the development zones in U.P., the average yield of cane is, as we stated in the course of an editorial only last week, a bare 15.92 tons per acre, as against 43.30 tons in Bombay, 39.44 tons in Madras, 32.49 tons in Andhra and 30.00 tons in Mysore. It must not doubt be admitted that the sub-tropical climate of North India is less suitable for cane development than the tropical conditions of South India. Even so, there is no gainsaying the fact that a much larger quantity of cane with richer sucrose-content could be raised even in U.P. and Bihar, if the Governments were to launch a more vigorous drive for intensifying cane development and if the price of cane were linked to sugar recovered from cane instead of to the weight of cane alone as at present.

INDIAN CHAMBERS FEDERATION ON SUGAR INDUSTRY

The aim of planners should be to fix a production target of at least 3.0 million tons of white sugar in the third Plan, with the installed capacity being raised to 3.25 million tons. This is the view expressed by the Federation of Indian Chambers of Commerce and Industry in its publication, *The Third Five-year Plan—a Tentative Outline*. In support of this view, the Federation makes the following observations:

"The consumption of sugar in the country has been steadily increasing, with the rising standard of living of the people. The per capita consumption of white sugar is at present in the region of 11.4 lbs. per year which is nearly half what can be regarded as desirable from the point of view of nutrition. Taking note of the expected increase in population, rise in standard of living and the progressive tendency towards urbanisation, the consumption of sugar will go up considerably during the third Plan period."

Since the investment required for the expansion of existing units is about 50 per cent. of that required for new installation, the Federation urges that favourable consideration be given for schemes of expansion. According to it, the overall investment required for the creation of additional capacity by expansion, as well as for the establishment of new units, together with the cost of rehabilitation and modernisation of existing plants, will be at least Rs. 80 crores.

The targets of installed capacity and actual production for sugar industry in the second Plan, as readers are aware, are 2.50 million tons and 2.25 million tons, respectively. The Federation notes that the pace of licensing was fairly brisk in the early part of the Plan, but, in view of certain difficulties, including competition from khandisari and restrictions on import of machinery, the target of capacity is not likely to be fully reached, in spite of the recent decision to license further capacity. Nevertheless, the Federation opines that it is reasonable to expect that "the production envisaged in the second Plan would be reached by 1960-61, if some of the difficulties encountered by the industry are removed."

The Federation has stressed the importance of a further expansion in sugar machinery manufacture, in order to reduce the country's dependence on imports. It is suggested that machinery worth Rs. 10-12 crores per annum will have to be produced by 1965-66, if the entire requirements of sugar industry—a considerable volume of demand arising from needs of replacement and sufficient demand from new sugar mills to be licensed in the next Plan period—are to be met. The total investment considered necessary for this purpose is Rs. 6 crores. The present organisation of the industry includes firms which produce complete sugar plants and those engaged in the manufacture of a series of individual items. The value of sugar mill machinery actually produced in 1958 was Rs. 171.50 lakhs, whereas imports of plant and machinery amounted to Rs. 726 lakhs. The production target (in terms of value) fixed for 1960-61 is Rs. 250 lakhs.

DIRECTORY OF INDIAN ENGINEERING EXPORTERS

THIRD EDITION

We are glad to announce the publication shortly of the Third Edition of the above Directory.

Advertisements from bona fide manufacturers/exporters of engineering goods will be accepted for inclusion in the Directory. Advertisement rates are as follows:

PRODUCTION AND PRICE OF RUBBER GROWERS' REPLY TO MANUFACTURERS

CONSIDERING that rubber is a strategic material in which the country has still a long way to go to attain self-sufficiency and that rubber growing is a labour-intensive industry, there is sufficient justification for giving it a high priority in any scheme of planning in the country. India's current production of natural rubber—the manufacture of synthetic rubber is still in the stage of planning—is of the order of only 25,750 tons, while consumption is as much as 55,250 tons, leaving a gap of 30,500 tons which is being filled up by imports. If, in spite of the fact that certain regions of the country in the South are blessed with the climatic and soil conditions well suited to rubber growing, rubber production has failed to catch up with the rise in consumption, it is not because our planters are not sufficiently enterprising or are ignorant of the art and science of planting. The reason should be sought elsewhere.

Not only has the Government, until very recently, treated rubber as a Cinderella, but it has actually been the victim of ill-informed policies foisted upon it. Time was, in the not too distant past, when rubber trees were cut down to make room for other paying crops, because rubber was a totally unsaleable commodity and the yield from it was not even sufficient to pay the land revenue. The Second World War brought home to the Government the folly of its policy in respect of a commodity having great industrial and strategic importance. Even after the advent of Independence, things did not change for the better for a very long time. If only the National Government had promptly approved of the plans for expansion submitted by the spokesmen of the industry, the supply of natural rubber today would have been very near the demand. It was only a few years ago that the Government woke up from its slumber and tried to do something for helping the expansion of this industry. Since a rubber tree takes nearly a decade to yield, it will be some years before the results of this change in the Government's attitude can be seen. At the same time, it is necessary to add that, since the Government has not given encouragement to rubber growers to the extent and in the manner necessary for yielding full results, no spectacular achievements should be anticipated.

IR.I.A.'s Charges Against Planters

While this is the story in brief of Government help to natural rubber, the Indian Rubber Industries Association (I.R.I.A.), Bombay, representing the manufacturers, seems to be cavilling even at this. In a memorandum submitted to the Ministry of Commerce and Industry, Government of India, the Association wants the Rubber Board to be reconstituted, with the rubber manufacturing industry being given greater representation than now. The Association submits that, since only a minor portion of the rubber consumed by the industry is produced inside the country, the Rubber Board, which is meant "to deal with the various aspects of production and distribution of raw rubber in this country, should have in its fold members of the rubber manufacturing industry in a majority over the members of the planting industry." The Association pleads that, while a majority representation may be fully achieved at a later stage, at least an equal representation should be given to the consuming industry in the reconstituted Rubber Board.

Looking to the immediate future, that is the coming year, when rubber consumption is expected to increase to 60,000 tons, and to five to seven years ahead when consumption is expected to be 100,000 tons, the Association adds:

"With all the replanting schemes and all attempts to increase production per acre, it is hardly conceivable that the planting industry can ever catch up with such increasing requirements of the manufacturing industry. At least until the present set-up of the Rubber Board, wherein the weightage to the rubber planting industry continues, there is no chance even for the beginning of the reversal of the process of import of rubber necessitated by conditions."

Referring to the question of price of rubber, the Association points out that manufacturers are definitely of the opinion that there must be a graded reduction in the controlled price in course of time which alone, according to it, can save foreign exchange and put the rubber manufacturing industry on a sound footing. This can be achieved, it maintains, by the increased association of the rubber manufacturers with planters through the Rubber Board.

The Association has also pinpointed the question of rubber price as an important factor affecting the future of rubber manufacturing industry, particularly from the point of view of exports. The price of rubber, it points out, is now fixed after taking into account the cost of production of even the most inefficient unit of production, thereby guaranteeing a margin of profit even to the least efficient producer. It also suggests that planting of new areas with unapproved seeds should be made an offence.

Holding that rubber planters have forfeited their claim for continued protection because they have failed to fulfil the conditions of protection, the Association observes:

"When the Tariff Board fixed the prices of raw rubber last time, accepting the principle that the rubber planting industry should be protected and given a price to include the cost of production plus reasonable margin of profit, it was specially stipulated that the planting industry should undertake replanting of rubber so that the cost of production may be brought down. A special rehabilitation allowance was also fixed in the price for this specific purpose. We much regret to have to point out that no action had been taken by the planting industry to replant the rubber estates and agitations were continued to increase the prices of raw rubber without consulting the manufacturing industry or further enquiry into cost of production."

"In order to further encourage replanting, a replanting subsidy had been offered, but in spite of this further inducement, replanting work had been very slow and this is a very sad state of affairs as far as the planting industry is concerned. Usually, protection to any industry is given for a definite period so that it can stand on its own legs by stabilising itself during such period. The planting industry has enjoyed such a protection for a sufficiently long time and there is no case for the continuation of such a protection any more. If the industry has not been able to stand on its own legs then it must try to find the reasons at its own end and investigate what is holding up its progress and try to correct the same instead of penalising the manufacturing industry. Unless the manufacturers are able to make their voice felt on the Rubber Board, we doubt whether any substantial and real progress may be made in replanting."

U.P.A.S.I.'s Defence

The United Planters' Association of South India, Coonoor (U.P.A.S.I.), in a letter addressed to the Secretary, Ministry of Commerce and Industry, has answered, point by point, the criticisms raised by the Association. The U.P.A.S.I. admits that the rubber planting industry cannot, under the prevailing conditions, fulfil all the requirements of the manufacturing industry. But it feels that it is possible to increase both yield and production, provided the necessary facilities are given. It adds:

"The planted area of rubber up to the end of 1958 is reported to be 286,000 acres. Taking the 1959 figures, the total area may be 300,000 acres. If we can, therefore, increase our acreage to 500,000 acres with an average yield of 450 lbs. or, if in the course of the next seven years we can take steps to see that the average yield per acre is raised to about 750 lbs. we may certainly ensure a supply of 100,000 tons and more. Given the necessary facilities, the probabilities are that the area will exceed 500,000 acres in extent and the average yield will come up to about 600-700 lbs. per acre in the course of the next 10 or 12 years."

Refuting the charge of the manufacturers' body that planters want to maintain minimum production to avoid overproduction and to

obtain a premium in price, the U.P.A.S.I. observes that the history of replanting since 1938 will tell a different story. Practically all organised units in the industry have been steadily replanting since 1938 and till the end of 1958 as many as 21,591 acres have been replanted, replanting since 1952 alone being 10,494 acres. As regards new plantings, the U.P.A.S.I. observes:

"The total planted area at the end of 1952 was only 172,786 acres, whereas at the end of 1957, it was 261,998 acres (51 per cent. increase) and if the estimate of the present area at 300,000 acres is more or less correct, the increase in planted area in the last seven years has been 73 per cent. This certainly could not be the result of an effort to maintain production at its lowest. As regards the alleged desire of producers to see that there is no overproduction, producers can surely realise the significance of the gap between the existing 25,000 tons and the prospective 100,000 tons for 1966."

Reduction in Controlled Price

Commenting on the Association's plea for a graded reduction in the controlled price of rubber, the U.P.A.S.I. adds:

"Producers will certainly agree that, once production has reached the target fixed, the question of a fair price should be considered, but they fail to see the need for a graded reduction in the price of rubber. Is it to assure a graded increase in the profits of manufacturers who cannot otherwise make it? If it is in the national interest, the question should be considered on its merits. The price of rubber today in the world market is higher than the Indian price and, at least during certain periods after the war, the world prices were more than three times the Indian price. It is not understood how the reduction in internal prices will save foreign exchange. On the other hand, to stimulate maximum production in the minimum number of years will either decrease or stagnate production and when demand increases import will be the only remedy (apart from any production of indigenous synthetic rubber). This certainly will be a severe strain on the country's foreign exchange. The best means of ensuring maximum production is by giving an incentive price and other forms of liberal assistance to the growers."

The U.P.A.S.I. has also answered the charge that the special rehabilitation allowance has not been properly utilised by the planting industry and that actual replanting has not been on the scale desired. It says:

"Rubber is an agricultural enterprise and it takes 7 to 10 years for it to begin to yield and 10 to 15 years to reach maximum yield. The results of the 105,000 acres of rubber planted since 1952 can only be felt from now on. To judge the production results of the plantation industry by standards of manufacturing industry (which can show 50 per cent. or even 100 per cent. increase in production in one or two years) would not be proper and fair. If the idea of rehabilitation was greater production, the 105,000 acres planted since 1952 should be taken as the surest indication of the growers' desire for greater production. If there have been mistakes in the method of new planting, it is for the Rubber Board, who are issuing the licence, to correct them. A nominal new planting subsidy is now being considered by the Board who can correct any mistakes in new planting methods. Programmes for assistance and education in correct planting methods as well as proper supervision by Board officials would pay dividend, whereas coercion or punitive measures as the U.P.A.S.I. have suggested will only defeat the purpose."

"If actual replanting has been less than expected, the blame should not be on the producers. Many of the smaller units may not have needed replanting or could not have afforded to cut away all expectations."

Unwarranted Criticism

Alluding to the manufacturers' contention that the protection given to the planting industry should be withdrawn without penalising manufacturing industry any further, the U.P.A.S.I. retorts as follows:

"The implications are that there is protection which is unwarranted and that the manufacturing industry is being penalised. We are afraid that the history of the so-called protection of the planting industry is being forgotten. The planting community, in the first place, did not ask for protection. During the years 1929 to 1934 when rubber was practically unsaleable, nobody seems to have come forward to protect the rubber planting industry in India. During the war years, when import of rubber was cut off, producers were asked to slaughter tap in order to produce more and more rubber for national needs (incidentally, during those years) and were given an assurance that the rubber planting industry would be compensated, encouraged and protected. Even after the war, producers asked for the removal of all controls and the giving of a free market. But because of the undervaluing of the war years and of rubber being a commodity of strategic importance, the Government decided to develop the rubber industry under its control. If the figures regarding Indian and world prices of rubber are collected for the war years and after, they may show that the balance of advantage has been with the manufacturers. If, however, the section of the manufacturing industry that section, that is no reason why the rubber growers should be criticised."

The rubber manufacturers' plea for majority representation on the Rubber Board on the

INDIAN COPPER CORPORATION LIMITED

SPEECH OF CHAIRMAN, MR. PATRICK E. G. W. PARISH, AT ANNUAL MEETING

MINING COSTS ARE LIKELY TO INCREASE

THE Indian Copper Corporation is now mining at a deeper level where costs are naturally higher. This was revealed by Mr. Patrick E. G. W. Parish, Chairman of the Company, when he addressed the Company's Annual General Meeting held on Wednesday, the 23rd inst. Mr. Parish stated that it was not possible to foresee any reason to believe that costs in the future could be reduced; on the contrary, they were likely to increase. Alluding to the project to manufacture electrolytic copper, he disclosed that it would be taken up after the final approval of the Government was received. He expected that the outlay of £700,000 on the project would be met from the Company's own resources.

The following is the full text of Mr. Parish's speech at the meeting:

"GENTLEMEN,

"The Directors' report and accounts for the year ended 31st December 1958 have been in your hands for some time. I welcome this opportunity of giving you some further information and comments on the results of the working of your Company during the year.

General Review

"The price at which your Company's products are sold is, naturally, closely in line with the world price of metal, at which price imports of copper into India have, of course, to be purchased. It is, therefore, necessary to consider the trend of world copper prices during last year.

"March 1956 saw the peak at £436 10s. per ton on the London Metal Exchange and, from then until December 1957, the price gradually fell to under £180. In 1958, the price during the first six months fluctuated between £161 and £200 and then rose gradually to £261 in November, declining to about £220 at the end of December. Since the beginning of this year, prices have again risen to over £250 and, during the past month or so, have been steady at around £230.

"A further reduction in price due to world overproduction has only been averted recently by strikes in various producing countries. It seems to me that, when these strikes are settled, it will be necessary for the big producers to curtail production, as they have done in the past; otherwise, overproduction will inevitably result in a downward trend in prices to unremunerative levels.

"So far as India is concerned, of course, we produce only a part of the country's total requirements and, therefore, there is no question of curtailment of output by us. On the contrary, it is our intention to increase production as much as possible within the limits of our capacity.

"You will see from the Directors' report that, on average, all your Company's products have been sold at prices rather below the previous year and this has naturally affected the Company's results.

Working Review

"In 1957, copper production was a record at 7,848 tons. This year, although the ore milled rose from 440,671 tons to 442,088 tons, the amount of copper produced was seven tons less than last year. Total sales amounted to 10,966 tons, as against 10,301 tons last year.

"The demand for our products remains firm, though one cannot help expressing some anxiety lest, owing to foreign exchange difficulties, import licences for zinc, which is the complementary metal used for the manufacture of brass, may not be issued as freely as required.

"During the year, prospecting was continued throughout our leased area in an endeavour to locate other economic ore bodies to replace those which are rapidly becoming depleted. It

is too early yet to say whether these prospecting operations can be considered successful and more work will have to be done before any final conclusion can be drawn. It is satisfactory, however, that the ore reserves at the end of the year stood at 4,034,174 short tons, as against 3,850,757 short tons at the end of 1957.

"As regards costs, we are now mining at a deeper level where costs are naturally higher, and it is not possible to foresee any reason to believe that costs in the future can be reduced. On the contrary, they are likely to increase.

"I am glad to say that, during 1958, on the whole, relations with the workers remained fairly good and, as a result, production during the year has been comparatively unaffected by labour disputes. It cannot be said, however, that the situation is entirely satisfactory, as demands by unions, of varying hues, continue to cause tension, not only to us but to many other industrial concerns on this side of India.

Kyanite

"Sales of kyanite during 1958 amounted to 14,649 tons, as compared with 18,267 tons in 1957. The price has had to be reduced slightly in order to compete with synthetic materials produced in consuming countries which threaten the future of kyanite exports. It is hoped that sales can be maintained at roughly this level again in the present year, and every effort is being made to preserve our present markets and to find new outlets.

"I have no doubt that some of you have read in the newspapers about the suits in regard to your Company's kyanite leases, which have recently been decreed in favour of the Bihar Government on appeal in the High Court after the original suits had been decreed in the Company's favour. The position now is that the Company has applied to the Court for leave to appeal to the Supreme Court. I cannot, therefore, say more about this matter at present, except that it is the opinion of our legal advisers that we have a good case.

Electrolytic Plant

"Last year, your Chairman told you that the Company has had under consideration for some time, in consultation with their technical consultants, a project to manufacture electrolytic copper. Negotiations have reached an advanced stage and application has been made to Government for the release of the necessary foreign exchange. As matters now stand, we are waiting for the final approval of Government, on receipt of which the whole project will be put in hand. A considerable sum of money, amounting to approximately £700,000, will be required to finance this scheme, but it is expected that this can be provided within the Company's own resources.

Accounts

"As you will see from the accounts which are before you, the profit for the year, before providing for taxation, depreciation and reserves, amounts to £997,848. Your Directors have decided to place £150,000 to depreciation and £125,000 to general reserve. Income-tax and super-tax on profits for the year amount to £439,856.

"The Directors recommend that the dividend of 18 per cent. should be maintained involving further taxation on this dividend of £27,428. It is proposed that £71,312 should be carried forward.

"I think you will agree that, on the whole, we have had another satisfactory year and I am sure that I speak for you all in thanking Mr. N. A. B. Hill, the General Manager, and all his staff, for the excellent services they have rendered to the Corporation throughout the year."

CIVIL AVIATION IN INDIA

PROGRESS IN FIRST HALF OF 1959 ENCOURAGING

ALL-ROUND progress in civil aviation took place in the first half of 1959, the two participants in it being the Air-India International (A.I.I.) and the Indian Airlines Corporation (I.A.C.). During the period under review, the A.I.I. flew 6,061,607 kilometres and carried 44,333 passengers, 1,169,062 kg. of cargo and 473,068 kg. of mails, as against 5,118,197 kilometres, 37,831 passengers, 710,897 kg. of cargo and 354,164 kg. of mails in the first half of 1958. The overall load factor was 55.3 per cent., as against 55.6 per cent. in the first half of 1958. On its scheduled services, the I.A.C. flew 14,026,749 kilometres and carried 327,685 passengers, 15,884,674 kg. of cargo and 2,929,526 kg. of mails, as compared with 14,063,475 kilometres, 316,437 passengers, 21,704,346 kg. of cargo and 2,586,785 kg. of mails in the January-June period last year. The overall load factor was 68.8 per cent. as compared with 72.8 per cent. in the first half of 1958. At the end of June 1959, the number of aerodromes controlled and maintained by the Civil Aviation Department was 85, including the new airport at Kandla.

At the end of the first half of 1959, in addition to the A.I.I. and the I.A.C., there were 14 subsidised flying clubs and six air transport companies which held permits for non-scheduled services. Two other transport companies held permits for joy-rides. On non-scheduled services, Indian air carriers are estimated to have flown 3,640,520 kilometres, carrying 38,265 passengers and 15,128,008 kg. of cargo in the first half of 1959, as against 3,991,577 kilometres flown and 65,211 passengers and 18,759,034 kg. of cargo in the first half of 1958.

Trained Personnel

The future of aviation in India depends on the availability of trained personnel. The chief training centre in India is the Civil Aviation Training Centre at Allahabad, which comprises flying, aerodrome, engineering and communication schools with an allied repair and overhaul organisation. During the period under review, 22 candidates completed the flying course and 21 candidates the course in air traffic control while 12 aerodrome operators and 19 fire service personnel took refresher courses. At the communication school, 19 trainees completed radio operators' advanced refresher course and 15 candidates completed radio technicians' advanced refresher course. At the engineering school, training was imparted to 13 aircraft maintenance engineers. At the end of June 1959, there were 103 trainees on the rolls of the Training Centre.

Flying clubs, as is well known, have been established in several centres for imparting training in flying. There are 14 subsidised flying clubs, with their headquarters at Delhi, Bombay, Calcutta, Madras, Nagpur, Patna, Jullundur, Bhubaneswar, Jaipur, Bangalore, Indore, Begumpet, Gauhati and Lucknow (with satellite centres at Allahabad, Kanpur and Varanasi). These clubs trained 115 'A' and 5 'B' pilots during the half-year under review. The Government Gliding Centres at Allahabad, Bangalore and Poona and the Delhi Gliding Club continued to provide facilities for glider flying; they trained 22 pilots during the period under review. The number of persons holding Pilot 'A' licences increased from 1,033 at the end of December 1958 to 1,130 at the end of June 1959; the corresponding figures for those holding Pilot 'B' licences were 552 and 579 and for those holding licences as aircraft maintenance engineers were 1,034 and 1,075.

Two new aeronautical communication stations—one at Banihal and the other at Kandla—were established during the period under review, raising the number of such stations to 78. They provide 130 navigational aids and 496 telecommunication facilities. A point-to-point telecommunication circuit was established at Banihal for providing meteorological data required by air services on Delhi-Jammu-Srinagar route. After extensive trials, a Duplex radio teletype circuit was established between Calcutta and Karachi. Other improvements included the installation of a public address system at Mangalore and the establishment of VHF air-ground radio telephone channels for aerodrome control at Cooch Behar.

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The formal Prospectus dated 17th September, 1959 has been delivered to the Registrar of Companies, Calcutta, for registration as required under Section 60 of the Companies Act, 1956. Copies thereof can be had from the Registered Office of the Company or from the Banks and Brokers named below.

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913)

ISSUE OF

1,00,000 – 6½ per cent. (Free of Income-tax) Cumulative Redeemable Preference Shares of Rs. 100/- each at par.

Payable Rs. 50/- per share on application and Rs. 50/- per share by one or more calls as may be made by the Directors by giving three calendar months' notice of each call.

REDEEMABLE AT PAR ON 31st DECEMBER, 1970.

SHARE CAPITAL

AUTHORISED	Rs. 5,00,00,000
SUBSCRIBED AND PAID UP:	
15,00,000—Equity Shares of Rs. 10 each	Rs. 1,50,00,000
10,000—5½ per cent. (Free of Tax) Cumulative Preference Shares of Rs. 100 each	Rs. 10,00,000
30,000—5½ per cent. (Subject to Tax) Cumulative Redeemable Preference Shares of Rs. 100 each (Redeemable at the option of the Company at 3 months' notice)	Rs. 30,00,000
	Rs. 1,90,00,000

LOAN CAPITAL

The Company has 4,000—6 per cent. Debentures of the face value of Rs. 40 lacs secured against fixed assets. They are redeemable on 31st December, 1960. The Company has cash credit arrangements with the State Bank of India, Calcutta, and has also obtained unsecured loans and advances from other banks.

Fixed Assets and Reserves

The written down value of the fixed assets as on 31st December, 1958, amounts to Rs. 2,19,34,595. As at the said date the Reserves of the Company (including Development Reserve of Rs. 22,90,000) amount to Rs. 51,20,855.

Profits

Report of the Auditors of the Company shows that the average profit of the Company for the five years 1954 to 1958 inclusive, before depreciation and taxation, amounts to Rs. 70,18,688, and the average net profits (after depreciation and taxation) amount to Rs. 26,20,657.

Dividend Paid

The Company has paid dividends on Equity Shares as under during the last five years:

Year	Rate of Dividend
1954	Re. 1/- on 6,00,000 Shares.
1955	Re. 1/- on 6,00,000 Shares.
1956	Re. 1.25 nP. on 15,00,000 Shares.
1957	Re. 1.50 nP. on 15,00,000 Shares.
1958	Re. 1.50 nP. on 15,00,000 Shares.

PROSPECTUS AND APPLICATION FORMS

Copies of the Prospectus, on the terms of which alone applications will be considered, and Application Forms may be obtained from the Registered Office of the Company or from the following Banks at their Calcutta, Bombay, Delhi and Madras Offices or from the following Brokers or from the Underwriters at their important branches.

BANKERS

THE STATE BANK OF INDIA, 3, Strand Road, Calcutta.	THE UNITED COMMERCIAL BANK LTD., 2, India Exchange Place, Calcutta.	THE UNION BANK OF INDIA LTD., 6, Clive Row, Calcutta.
THE CENTRAL BANK OF INDIA LTD., 33, Netaji Subhas Road, Calcutta.	THE BANK OF BARODA LTD., 4, Brabourne Road, Calcutta.	

BROKERS

Messrs. PLACE, SIDONS AND GOUGH, 6, Lyons Range, Calcutta-1.	Messrs. MAHADEVIA BROTHERS, Stock Exchange Building, Dalal Street, Bombay-1.	Messrs. PATERSON & CO., 22, Errabalu Chetty Street, Post Box No. 48, Madras-1.
Messrs. G. M. PYNE, 14, India Exchange Place, Calcutta-1.	Messrs. BATLIVALA AND KARANI, Union Bank Building, Dalal Street, Bombay-1.	Messrs. HARBANS SINGH MEHTA & CO., 33, Regal Buildings, New Delhi-1.
Messrs. NAVALCHAND T. SHAH & CO., 120, Stock Exchange New Building, Dalal Street, Bombay-1.	Messrs. HARKISONDASS LUKHMIDASS, 5, Hamam Street, Fort, Bombay-1.	

SUBSCRIPTION LIST

The subscription list will open at the commencement of banking hours on 30th September, 1959, and will remain open until the close of banking hours on 20th October, 1959.

TEXTILE MACHINERY CORPORATION LTD.

BELGHARIA, 21st September, 1959.

DEVELOPMENT OF VEGETABLE OILS INDUSTRY

HIGH COST OF PRODUCTION, THE MAIN HANDICAP

By S. G. Rao

VEGETABLE oils are useful and important both as food and as raw materials in industries like *vanaspati*, refined oils, soaps, paints and varnishes, lubricants, etc. The vegetable oils industry is one of the important industries of India. In 1956, the organised sector of the industry, comprising factories employing 20 or more workers on any day and using power, accounted for a capital investment of about Rs. 43 crores and an employment of about 59,000 persons, whose wages, salaries and benefits amounted to Rs. 4.6 crores. The value of its input and output was Rs. 162 crores and Rs. 173 crores, respectively, the value added by manufacture being Rs. 11 crores.

The demand for vegetable oils both as food and as industrial raw materials has been expanding and is likely to grow still further with the increase in the standard of living of the people as well as with the rapid expansion of the industries based on such oils. The Chairman of Messrs. Hindustan Lever Ltd., in his address at the annual general meeting of the Company in April last, estimated the available net supply of vegetable oils in 1957 at 1,800,000 tons, of which over 900,000 tons or over 50 per cent. of the total net supply was accounted for by groundnut oil alone. Out of the available net supply of 1,800,000 tons, about 300,000 tons of vegetable oils were estimated to be used in *vanaspati*, 200,000 tons in soaps and paints, 200,000 tons for body and hair, nearly 100,000 tons as lubricants and illuminants, leaving a balance of about 1,000,000 tons for liquid edible oil for about 394 million people or about 5.8 lbs. per capita per annum. He has also estimated that the country would need an additional quantity of about 4,500,000 tons of oilseeds in another 20 years and emphasised the need for planning accordingly.

India has not only a great domestic market but also a wide and substantial foreign market in vegetable oils. She exported vegetable oils and hydrogenated oils and fats valued at Rs. 12 crores in 1957 and Rs. 8 crores in 1958.

More Production of Seeds Needed

As is well known, the export trade of India even in her traditional items has been facing severe competition and suffering a serious decline in the recent past. In the context of our planning and development, the growth of both our industry and trade is important. There has no doubt been considerable expansion in our vegetable oils industry in recent years during the first and second Plans, especially in the edible hydrogenated oils (*vanaspati*) whose production rose from 170,000 tons out of an installed capacity of 320,000 tons (53 per cent.) in 1951 to 290,000 tons out of an installed capacity of 440,000 tons (67 per cent.) in 1958. The unutilised installed capacity is still substantial. It is, however, felt that, even at the end of the second Plan, that is, 1960-61, the per capita consumption of edible oils and fats will remain far below the requirements of a well-balanced diet. Therefore, both from the point of view of internal requirements of food and industry and from that of the need for expanding the export trade, the development of vegetable oils industry in the country and the expansion of the production of oilseeds are of paramount importance. It is in view of this importance that a target of 7,600,000 tons for the production of the five major oilseeds (groundnut, sesamum, castor, linseed and mustard) has been fixed by the end of the second Plan, i.e., in 1960-61.

It is evident that considerable attention is being given to the development of this important industry and its raw materials. It will be useful to study the recent trends in the growth of this industry, so that its future development can be considered in the light of the data available and the tendencies revealed. It is also generally believed that even our most important industries are unable to sustain, much less develop, foreign markets because of their high cost structure. It is, therefore, necessary to study this aspect also, in particular, with regard to this industry. If there is great need to develop this industry, there is even greater need to develop it on sound and economic lines.

Figures in respect of the large-scale sector of this industry are available since 1946 in the annual censuses of manufactures. In Table 1

below are shown the aggregates of the capital investment, employment, salaries, wages, etc., value of output and input, and the value added by manufacture in this industry during the period 1946-56. Table 2 shows certain important characteristics revealed by the ratios such as capital to employment; capital to output; value added to capital; output to employment; value added to employment; salaries, wages, etc., to output; salaries, wages, etc., to value added; value added to input; and input to output.

It will be seen from Table 1 that, between 1946 and 1956, the productive capital increased from Rs. 23 crores to Rs. 43 crores or by 89 per cent.; employment rose from 36 thousand to 59 thousand or by 64 per cent.; salaries, wages, etc., went up from Rs. 1.9 crore to Rs. 4.6 crores or by 142 per cent.; value of output increased from Rs. 60 crores to Rs. 173 crores or by 189 per cent.; value of input advanced from Rs. 52 crores to Rs. 162 crores or by 209 per cent.; and the value added by manufacture rose from Rs. 7.5 crores to Rs. 11 crores or by 48 per cent. It will be noticed that relatively conspicuous increases occurred in input and output, and in salaries, wages, etc. The value added by manufacture, which is the income created in this sector of the industry, increased only by 48 per cent.

Costs Rising

The facts that emerge from Table 2 are more revealing. Between 1946 and 1956, there was an increase of 15 per cent. in the productive capital employed per person; a fall of 35 per cent. in the productive capital employed per unit of output; a fall of 22 per cent. in the value added by manufacture per unit of productive capital; a rise of 76 per cent. in the value of output per person; a fall of 10 per cent. in the value added by manufacture per person; a fall of 17 per cent. in the ratio of salaries, wages, etc., to output; a rise of 63 per cent. in the ratio of salaries, wages, etc., to the value added; a fall of 52 per cent. in the ratio of value added to input; and an increase of 7 per cent. in the ratio of input to output. The figures reveal unmistakable signs of increasing labour and material costs in this industry, with the result that the net addition to the value added by manufacture does not seem to be commensurate with the appreciable visible expansion in the industry. It is to be feared, therefore, that the high cost structure of this industry is likely to affect its future growth on sound and economic lines and thereby its capacity to hold its own in a competitive world market.

The prosperity of this industry largely depends on several internal factors such as the domestic demand, prices and Government controls, besides the international factors. The industry has been subject to rather considerable fluctuations in its progress in recent years. The future health and strength of this industry and its capacity to hold its own in internal and external markets depend greatly on the extent to which reasonable reductions can be effected both in material and labour costs in future. The future prosperity of this industry would therefore seem to be essentially linked up with

a substantial reduction in material and labour costs. And this in turn basically depends upon an efficient, economic and expanding production of the major oilseeds in the country and a similar efficiency in the extraction of the oils and manufacture of other products from them. It is well known that both the yield of oilseeds per acre and the yield of oils from the seeds are low in the country, as compared with her competitors in the field. According to the figures available in the publication *Oilseeds in India, 1951-52 to 1955-56* issued by the Directorate of Economics and Statistics, Ministry of Agriculture, Government of India, the average yield per acre in India in respect of major oilseeds is much below the world average (excluding U.S.S.R.): in groundnut 683 lbs. as against 785 lbs. (1954), in sesamum 205 lbs., against 298 lbs. (1954), in castorseed 172 lbs., against 640 lbs. in Brazil (1952), in rapeseed 346 lbs., against 477 lbs. (1953), and in linseed 264 lbs., against 415 lbs. (1954). Similarly, the yield of oils from oilseeds is also low in the country, due to the rather poor and inefficient techniques of crushing. It has been estimated that about 29 per cent. of the total production of the major oils (groundnut oil, sesamum oil, castor oil, linseed oil and mustard oil) is by the village *ghanis* and the rest by the power mills. That the productive efficiency even in the power mills, which account for over 70 per cent. of the total vegetable oil production in the country, is none too satisfactory is evident from the figures analysed above. It is also necessary to add that the rate of oil extraction from the crushed seeds is not appreciably higher in power mills than in the village *ghanis*, the respective rates ranging from 30 to 40 per cent. of the seed crushed in the power mills and from 30 to 35 per cent. in the village *ghanis*.

Although it is obvious, it is necessary to emphasise that an efficient industry based on an efficient agriculture only can give a reasonable assurance of prosperity; nothing less can. It should also be a matter for earnest consideration in a country with scarce capital and abundant labour whether the village *ghanis*, and more and more improved varieties of the same, should not be employed in a greater measure in future than at present, although it need not necessarily be at the expense of the future expansion of the power mill industry.

West Germany's volume of trade with Near and Middle Eastern countries continued mounting during the first half of 1959. Its exports to these areas rose by 85 million to 1,370 million DM. and its imports shot up by 181 million to 1,120 million DM. on last year's first half. Its best customers were Turkey (231 million DM. +41 million), followed by the U.A.R. (193 million DM. +33 million), Iraq (191 million DM.), Saudi Arabia (176.8 million DM.) and Kuwait (72 million DM.). Of the total, W. Germany imports from this area mineral oil worth 682 million DM.

Research and development budgets of nearly 600 U.S. corporations are 12 per cent. higher this year than the record outlay in 1958, according to a survey released by the American Management Association. As much as 64 per cent. of the firms studied increased their budgets for the development of new products and processes, 8 per cent. were unchanged, and 28 per cent. reduced budgets. Among the 23 industry groups studied, automobiles led with a 32 per cent. increase over last year. Three other industries had budget increases of over 20 per cent.: electrical machinery, 23.8 per cent.; instruments, 29.7 per cent.; and metal working machinery, 21.7 per cent. Only one group, namely, miscellaneous machinery and parts, showed a decline.

ALL INDIA GENERAL INSURANCE COMPANY

WORKING RESULTS SATISFACTORY

A **SIZABLE** jump in net premium income is disclosed by the audited accounts of the All India General Insurance Company, Ltd. (General Manager: Mr. Indulal B. Mehta) for the year ended 31st December 1958. Despite keen competition in the field of general insurance and the none too happy claims experience, the Company's underwriting results for the year showed an improvement as compared with the previous year. Despite underwriting losses in two departments, namely, marine and miscellaneous, the year's operations have resulted in net profit of Rs. 8,338, as against a loss of Rs. 7,224 in the previous year, thanks to the profit made by the fire department.

As regards the working of individual departments, the net premium in the fire department amounted to Rs. 7.90 lakhs and the net claims paid and outstanding aggregated Rs. 2.69 lakhs. Commission and expenses were of the order of Rs. 4.11 lakhs. After setting apart Rs. 3.32 lakhs as reserve for unexpired risks, being 42 per cent. of the premium income for the year, and making an additional reserve of Rs. 15,804 bringing up the total reserve to Rs. 3.48 lakhs, a sum of Rs. 28,511 has been transferred as profit to the profit and loss account.

Marine Department

In the marine department, net premium amounted to Rs. 1.10 lakh and the net claims paid and outstanding to Rs. 46,851. Commission and expenses were of the order of Rs. 45,367. After providing a sum of Rs. 87,819 as reserve for unexpired risks, being 80 per cent. of the premium income, and an additional reserve of Rs. 5,488, bringing up the total reserve to Rs. 93,308, a sum of Rs. 23,853 has been transferred as loss to the profit and loss account.

The net premium in the miscellaneous department amounted to Rs. 3.96 lakhs and the net claims paid and outstanding to Rs. 2.26 lakhs. Net commission and expenses amounted to Rs. 2.13 lakhs. After earmarking a sum of

Rs. 1.66 lakh as reserve for unexpired risks, being 42 per cent. of the premium income, and providing for an additional reserve of Rs. 7,930, bringing up the total reserve to Rs. 1.74 lakh, the account shows a loss of Rs. 44,001.

After crediting interest and dividend of Rs. 39,313 and other miscellaneous receipts amounting to Rs. 33,364 to the profit and loss account and crediting the profit of the fire department and debiting the loss from the marine and miscellaneous departments and expenses of management not applicable to any particular fund and other miscellaneous disbursements including capital gains tax paid on compensation received from the L.I.C., a net profit of Rs. 8,338 has been transferred to the profit and loss account which, together with Rs. 4,060 brought in from last year, leaves Rs. 12,398 as profit.

The capital and funds of the Company as on 31st December 1958 aggregated Rs. 19.27 lakhs. The details are as follows:

	Rs.
Capital paid-up	10,00,000.00
Fire fund	3,47,701.20
Marine fund	93,308.20
Accident and miscellaneous fund	1,74,476.41
Capital reserve account	2,196.55
Investment reserve account	2,96,596.95
Profit and loss appropriation account	12,398.67
Total	Rs. 19,26,677.98

Chairman's Review

Reviewing the main events of the year which affected the business and results of the Company's working, the Chairman, Mr. Pannalal Bansilal Pitty, observed, in the course of his speech at the Fifteenth Annual General Meeting of the Company held on 14th September, 1959, as follows:

"The Directors' report and the audited statement of accounts for the year ended 31st December 1958 have been in your hands for some time now, and with your permission I shall take them as read.

"Before moving the resolution for the adoption of the report and accounts, I shall make a few general observations about the Company's working during last year.

"The total gross Indian premium income written by the Company amounted to Rs. 14,44,176 in 1958, as against Rs. 11,57,245 in 1957. The total expenses of management incurred during last year was Rs. 5,88,033, as against an expenditure of Rs. 5,18,418 in the previous year.

Accounts

"Turning now to the departmental accounts, you will notice from the fire revenue account, that there was an increase of over Rs. 1,62,480 in the net fire premium written by the Company.

"In the marine department, an increase took place in the net premium income, but underwriting conditions were difficult; there were heavy claim settlements, especially from the Government business, which we were getting from the Indian Insurance Companies Association Pool, where the experience in the past was favourable.

"The adverse trend in the underwriting results in the accident department continued even in 1958. While there was some improvement in the claim experience in respect of motor business written in this country, our experience in Ceylon showed further deterioration. Efforts are now being made to curtail our motor portfolio in Ceylon until such time that there is an improvement in the situation.

Rise in Reserves

"You are aware that in the past we have been providing 40 per cent. reserve for unexpired risks in the fire and accident departments and 75 per cent. in the marine department. As a result of the undertaking given by your Directors to the Executive Committee of the General Insurance Council, it has become necessary to increase gradually the reserves from 40 to 50 per cent. in the fire and accident sections and from 75 to 100 per cent. in the marine department. You will notice from the accounts now before you that there is a provision of 44 per cent. in the fire and accident departments and 85 per cent. in the marine department. As a result of this additional provision and the rise in the premium income, there is an increase of about Rs. 1.3 lakh in the reserve for unexpired

NEW LIFE BUSINESS LIKELY TO REACH RS. 415 CRORES THIS YEAR SCARCITY OF SOUND SCRIPS MAKES INVESTMENT DIFFICULT

MR. P. A. GOPALKRISHNAN REVIEWS L.I.C.'S PROGRESS

ADDRESSING the Forty-second Meeting of the Life Insurance Corporation of India, held in Bombay, on Monday, 21st September, 1959, on the occasion of the completion of three years of its working, the Chairman of the Corporation, Mr. P. A. Gopalakrishnan, I.C.S., stated that, on the basis of the current trends in new life business, the L.I.C. should be able to complete Rs. 415 crores in the current year, as against Rs. 343 crores in 1958 and Rs. 281 crores in 1957. He stressed that, in order to reach the new business target of Rs. 1,000 crores per year, which the Corporation had set for itself, further recruitment and training of staff were necessary. He indicated that the L.I.C. had maintained an investment rate of Rs. 10 lakhs per day but the Corporation had found it "increasingly difficult to make investments other than in Government and approved securities owing to the comparative short supply of sound scrips in the stock markets of the country."

The following is the full text of Mr. Gopalakrishnan's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all to the third anniversary meeting of the Corporation. We are meeting today mainly to consider the draft annual report and audited accounts for 1958. These have already been circulated to all the members of the Corporation.

"I may briefly summarise here the salient points in the report. New business in 1958 has increased to 9.35 lakhs of policies assuring a sum of Rs. 943.07 crores, as compared with 7.95 lakhs of policies assuring a sum of Rs. 281.90 crores in 1957. The total business in force has increased to 62.30 lakhs of policies assuring a sum of Rs. 1,681 crores as compared with 56.83 lakhs of policies assuring a sum of Rs. 1,473 crores at the end of 1957. The net lapse ratio, i.e., the ratio of the sum assured lapsed less the sum assured revived in the year 1957 to the mean business in force during the year was 6.4 per cent. Statistics of lapses for 1958 have been received from all zones except one. The available statistics indicate that the lapse ratio in 1958 was of the order of 4.5 per cent., showing a significant reduction over the ratio for 1957. The Life Fund has increased to Rs. 447.81 crores from Rs. 410.41 crores in 1957. The renewal expense ratio has fallen from 15.89 per cent. in the previous accounting period to 15.46 per cent. in 1958. These are indicators of the progress made by the Corporation during the year as well as of the economy achieved in the expenses of management. Tighter budgetary control, which has been introduced from 1959, will not only enable the Corporation to bring down the expense ratio within the statutory limit but progressively lower it in future years.

New Business

"For the first eight months of 1959, the new business completed amounts to Rs. 148.16 crores representing an increase of 23.0 per cent. over the corresponding period of last year. If this rate of progress is maintained during the rest of the year, the Corporation should have no difficulty in realising its target of new business of Rs. 415 crores fixed for the first year of its Five-year Plan.

"As you are aware, the Corporation aims at securing a new business of Rs. 1,000 crores in the fifth year of its plan, viz., 1963. This involves further recruitment and training of officers and staff, selection and strengthening of the field force, opening of new offices beginning from branch and sub-offices upwards, market surveys and publicity and various other organisational improvements without which the Plan will merely remain on paper. All these details have now been worked out and will be presented to you for your consideration in the near future.

Rural Areas

"Meanwhile, whatever possible with the existing organisation is being done to open out rural areas for the expansion of our business. Fourteen branch and 68 sub-offices were opened in different parts of the country in 1958 and one divisional office, 10 branch and 3 sub-offices have been opened during the current year. Some of

these new offices are in remote corners of the country and field officers and agents attached to these offices are now working in inaccessible places which have hitherto not heard of life insurance at all. Besides, rural insurance in intensified form has been undertaken in certain selected Community Development Blocks of Rajasthan and Bihar. With the blessing of the State Governments concerned, the Block Development Officers are co-operating with the Corporation in this experiment and the rural panchayats, who are working as agents of the Corporation in these areas, utilise the commission received for development purposes in the villages. This experiment has been recently extended to some Community Development Blocks in Andhra Pradesh and Assam and the results of these experiments will be useful in intensifying the insurance programme in the rural areas of the country.

"Most of the major staff problems of the Corporation have already been solved, including the categorisation of senior officers, the question of bonus to the clerical, subordinate and supervisory staff and the categorisation of field officers. The conclusion of a five-year agreement regarding bonus with the representatives of the administrative employees was one of the main achievements of the Corporation during the first eight months of this year. Agents who remain on our books without producing any business are gradually being weeded out and new agents with the requisite qualifications are being recruited. The quality of the agency force is thus being continuously improved.

Personnel

"As I have already remarked, in order to cope with the increasing business of the Corporation, an increasing number of trained personnel is necessary. The Corporation has already started 10 training centres which have so far trained 1,500 field officers. Instructors are being sent out to visit the various branches and sub-offices to give short-term training to the agents attached to these offices. Preparations are also being made for opening training centres for administrative personnel, including officers and clerical staff, and these training centres are expected to be started during the next two or three months. With more and more trained staff becoming available, it will be possible for the Corporation to offer better service to its policyholders.

"Allied to the programme for the expansion of the Corporation's business is the building programme for the Corporation's offices and staff quarters. Accommodation for our divisional offices is totally inadequate in many of our divisions and, even in divisions where it is at present adequate, it will become inadequate in two or three years. The Corporation has to speed up the construction of buildings with accommodation to meet the needs of expanding business for the next few years. Similarly, the construction of staff quarters has to be speeded up as without proper housing, it would be difficult for the staff to carry on. The Corporation's decision to grant loans to co-operative housing societies of employees at a concessional rate of interest has not produced any good response. For various reasons, employees find it difficult to form co-operative societies. Firstly, they are liable to transfer from place to place. Secondly, those who are serving away from their homes are not interested in owning houses at the places where they work. Thirdly, procedural delays are taking place in the formation of co-operative societies. After taking all these factors into account, I would urge that the Corporation should go ahead with the construction of staff quarters, wherever they are needed, whether co-operative housing societies are formed or not. If and when they are formed, the quarters can be handed over to them on agreed terms. I would like to emphasise the fact that unless our building programme keeps pace with the expansion of our business, our service to the policyholders is bound to suffer.

Investments

"Turning to the investment activities of the Corporation, the investment rate of over a million rupees a day was maintained during the

year and, in fact, improved upon. Investments are being made in accordance with the investment policy approved by the Government in August 1958. On 31st December 1957 the investments in the public and private sectors were 77.4 per cent. and 22.6 per cent. respectively. At the end of December 1958, these percentages were 78.3 and 21.7 respectively. On 31st July this year, these percentages were 78.6 and 21.4 respectively. It is becoming increasingly difficult to make investments other than in Government and approved securities owing to the comparative short supply of sound scrips in the stock markets of the country. With the Corporation's recent decision to revive the grant of loans on the mortgage of properties, it should be possible to offset, to some extent, the shrinkage of investments in the private sector.

"You will see from the report that the rate of interest realised on the mean life insurance fund in 1958, after deduction of income-tax at source and including the refund of tax received during the year, was only 3.52 per cent. as compared with 3.74 per cent. during the previous accounting period. The reason for this fall is that we have yet to receive a considerable amount by way of refund of tax relating to the year. Taking the anticipated refund into account, the rate of interest earned during the year would very nearly be the same as in the previous accounting period.

Valuation

"Lastly, I would like to say a word about the first valuation completed by the Corporation during the current year. The working out of differential bonuses on the policies issued by the old companies and those issued by the Corporation after the 'appointed day' presented innumerable difficulties. It is a matter for satisfaction that the differential bonuses declared and the quantum of the bonus in the different cases were generally welcomed by the policyholders.

"Summing up, I may mention that by and large the Corporation's efficiency has improved, most of the major staff problems have been solved and the stage has been set for further consolidation and progress towards realising the targets fixed in the first Five-year Plan of the Corporation."

ALL INDIA GENERAL INSURANCE COMPANY

(Concluded from previous page)

risks as compared with last year. You will also notice from the accounts that the profit from the fire department shows a slight improvement upon 1957, but the increase in the premium in the marine department has turned a trading profit into an underwriting loss, after making provision for the unearned premium reserve. I am sure our underwriting results for the year 1958 show a considerable measure of improvement and taking everything into account, they may be considered to be satisfactory.

Fire Premium Rates

"Last year, I referred to the proposed cut in the rates for fire premium, as a remedy to cure the industry of the evil of rebating. It is now reliably learnt that the authorities have decided to make an overall reduction of ten per cent. in the rates. In view of the fact that not only there is no underwriting profit in the marine and accident sections, but they have also to be subsidised by the fire department, it would have been better if some minor adjustment had been recommended instead of a general reduction in the rates. Let me, however, hope that the proposed reduction will not materially affect the working of small and medium size insurers.

"Another important subject that is at present engaging the attention of the trade is Insurance Rule 17E in regard to the provision of the limitation of expenses of management of insurers. I can only hope that the rule will be revised in such a way that there will be no scramble for writing direct business by insurer as at present.

"The year under review has again been a difficult one; the markets generally remained highly competitive and the business which we get from Ceylon has become unprofitable. In spite of these difficulties, we have been trying to expand our business gradually, and with increasing industrial activity under our development plans, there will be scope for us to develop on sound and healthy lines."

NEW UNIT FOR MAKING ALUMINIUM TO BE SET UP AT RIHAND CHEAP ELECTRIC POWER VITAL TO ECONOMIC PRODUCTION

ALTHOUGH India does not possess large deposits of non-ferrous metal ores, it is fortunately endowed with plentiful supply of bauxite, the chief raw material for aluminium industry. There is need for expanding India's aluminium industry, in view of the rising demand for this metal. Last year, India produced a little over 8,000 tons, as against its total consumption of the order of 26,500 tons of primary aluminium; the excess of demand over actual production had to be met through imports. Production in the current year, however, will be more than double that of last year. There are now two producers of aluminium in India: the Indian Aluminium Co., Ltd., associated with the world-renowned Aluminium Ltd. of Canada, and the Aluminium Corporation of India, a J.K. concern. Of these two units, the former alone has doubled its capacity, with its current production running at the rate of 16,000 tons per annum. Thanks to this large expansion programme, successfully completed by Indian Aluminium, production this year will be well over 18,000 tons. At the same time, the demand for aluminium, it has been computed, is likely to rise by at least 5,000 tons a year. It is likely to reach 44,000 tons by 1961 itself. It is, therefore, gratifying to note that the situation, arising out of the deficit in supply, will be partially corrected by further expansion by the Indian Aluminium Company by another 10,000 tons and by the establishment of a new aluminium producing unit at Rihand in Uttar Pradesh. This unit, which will be owned by the Hindustan Aluminium Corporation Ltd., will have an initial capacity of 20,000 tons and is expected to commence production in 1962, if not a little earlier.

Demand

In India, the structure of the demand for aluminium is already undergoing changes, indicating the metal's increasingly important industrial applications. There has thus been a marked decline in demand for aluminium utensils. But this is being offset by the increased requirements of aluminium for industrial uses. The Tariff Commission, in the course of its report on the continuance of protection for the industry, observed that "according to present indication, there is a large potential for increased off-take in several industries, particularly in the manufacture of A.C.S.R. and A.A.C. for use in electrical industries, aluminium sheets for transport industries, aluminium structural for engineering and building industries and aluminium foils for use in packing, etc." Indeed, this is the direction in which its use has expanded in all industrial countries. This explains why world consumption of aluminium has doubled every 10 years. Last year, world output of primary aluminium aggregated 3.8 million tons, the leading producers being the U.S. (1.56 million tons), Canada (0.64 million tons), U.S.S.R. (0.55 million tons) and Japan (0.09 million tons).

The chief technical advantage of aluminium, which makes it so versatile a metal, lies in the fact that it is light and can be rendered sufficiently strong through suitable combination with other metals. Thus, aluminium is only one-third the weight of steel or copper. But, when it is alloyed with other metals, it can become stronger than structural steel. Further, the metal has other technical qualities. It is a good reflector of light and radiant energy. It is highly resistant to corrosion. Besides possessing good thermal and electrical conductivity, it can be easily fabricated and joined.

Even though many of these properties of aluminium were recognised and appreciated several centuries ago, commercially-produced aluminium was not accomplished easily. Aluminium comprises about eight per cent. of the crust of the earth, but it is never found in its natural state. To put the metal to use, four major steps must be taken: bauxite, the prime ore for the industry, has to be mined; a white, powdery aluminium oxide or alumina must be obtained by refining the bauxite; the alumina must be electrolytically reduced to pure aluminium; and the aluminium must be fabricated into the desired and workable forms.

The mining of bauxite, except where underground mining is required, is not particularly complicated. Power shovels usually are utilised in open pit mines. The mined ore then is

washed, crushed and dried. In the second step, the ground ore is mixed with lime and soda ash and heated under steam pressure. Aluminium oxide is dissolved, but the many impurities remain suspended, and can be separated by settling and filtration. The alumina, brought out of the solution by cooling and agitation, emerges as a crystalline solid similar in appearance to salt. The crystals then are washed to remove further impurities, and subjected to intense heat to drive off the water. The pure, granular alumina is thus obtained, and this is the basic raw material used in the reduction of aluminium. To reduce metal from the powdery alumina, the oxygen must be removed. This takes place in the smelting furnaces, or "pots"—shallow steel tanks lined with carbon. Cryolite and sodium aluminium fluoride are introduced into the pots, and heated to a molten state. After the alumina is added, electricity, applied through carbon blocks, immersed in bath liberates the oxygen and releases the pure aluminium metal.

Hindustan Aluminium

To revert to the Hindustan Aluminium project now rapidly underway. This project, which is being sponsored by the House of Birla, will derive its bauxite ore from the mines in Madhya Pradesh. The necessary mining lease covering an area of about 1,236 acres has already been obtained. Power and water required by the factory will be supplied from the Rihand dam. The Company proposes to acquire 1,000 acres of land in the vicinity of Rihand dam site for the factory building, housing and other construction. The authorised capital of the Company is Rs. 20 crores, consisting of Rs. 10 crores of equity capital (in shares of Rs. 10 each), Rs. 2½ crores of cumulative preference shares (Rs. 100 each) earning a tax-free dividend of 6.3 per cent. and the balance of Rs. 7½ crores in unclassified shares. The preference shares are redeemable after a period of 20 years. The Directors propose to issue at present Rs. 8.35 crores, made up of Rs. 5.85 crores of ordinary shares and Rs. 2½ crores of cumulative preference shares. Out of this issue, Rs. 1.5 crore of equity capital is reserved for their technical collaborators, Kaisers and their friends, and another Rs. 2.13 crores will be taken up by Birla Gwalior Private Ltd. and its Directors and friends. The remaining equity capital of Rs. 2.1 crores and the whole of Rs. 2.5 crores of preference capital will be offered to the public in a few days.

The Company's American collaborators, the Kaiser Aluminium and Chemical Corporation, are leading manufacturers of aluminium and a wide range of industrial equipment in the U.S. and Latin America. The Corporation is one of the three major aluminium producers in the U.S., with an annual production of 600,000 tons. It is part of the Henry J. Kaiser group of companies which are active in other areas of Indian economic development, including an interest in Mahindra and Mahindra Ltd., manufacturers

of Willys jeep, and the expansion programme of the Tata Iron and Steel Company, Ltd. They are also exploring possibilities of manufacturing cement in India in partnership with Indian capital.

The Kaiser Aluminium's interest in Birla's aluminium enterprise will be approximately 27 per cent. of the equity capital. It will help build the project which is expected to begin operation in 1962. Much interest attaches to this collaboration, for it represents the largest single U.S. private investment so far in a joint venture with an Indian firm. Mr. G. D. Birla has expressed the hope that the successful launching of this venture might bring many similar investments in its wake.

The availability of bauxite and of cheap electric power determines the location of aluminium industry. Of these two considerations, even the availability of bauxite is subordinate to that of cheap power, for there are several countries, such as Canada, which manufacture aluminium out of imported bauxite and sell the metal at competitive prices, thanks to abundant supply of cheap power facilities. The importance of cheap power to an aluminium enterprise will be evident from an estimate made by the Tariff Commission. According to the Commission, a variation in the cost of electric power by one naya paisa per kw.—a 10,000-ton unit will consume about 26,000 kw.—will give rise to a variation in the price of aluminium metal by about Rs. 260 per ton. From this point of view, the recent controversy in Uttar Pradesh over the price at which power is to be supplied to Hindustan Aluminium will be widely deplored. In the U.P. Vidhan Sabha, several members alleged that the State Government had agreed to sell power to the Company at a loss.

Power Costs

Apart from the fact that a wise State Government, anxious to promote industrialisation, will be prepared to face even a loss, the charge levelled against the U.P. Government is not true to facts. In the course of his closely-reasoned defence of the Government's decision, the Chief Minister of the State, Dr. Sampurnanand, pointed out how the price quoted by the Government was Rs. 150 per kw. whereas the cost of power production in the Rihand dam was estimated at Rs. 148 per kw. There is thus a margin of Rs. 2 per kw. Again, there is a fair prospect of a decline in the cost of power production, which would increase the margin of profit for the Government. It must be remembered that the rate to which the Government has agreed will apply only to the power used to extract aluminium from bauxite while power used for other purposes will be charged at higher rates. Further, the agreement is for a period of only eight years—in case of emergency, it may be terminated even earlier—at the end of which the rate would be revised.

Above all, the other States are willing to offer power at rates lower than the rate at which the Hindustan Aluminium will get power from the Rihand dam. Thus, Kerala is willing to supply power at Rs. 113 per kw. and Orissa at Rs. 135 per kw. In view of these considerations, it was singularly unwise on the part of the members of the U.P. Vidhan Sabha to carry on a controversy over the U.P. Government's agreement with the Company. Apart from the fact that the criticism of the agreement is based on an incorrect reading of the facts, it ignores the vital consideration that the agreement has paved the way for the establishment of a new industry in the State and also for a host of other ancillary industries of great benefit to its people.

FIFTY YEARS OF NORWEGIAN SHIPPING

The Norwegian Association of Shipowners has just celebrated its 50th anniversary. The Association was founded in September 1909, and its first President was Shipowner Christian Michelsen who as Prime Minister became one of the most prominent personalities in recent Norwegian history. During these years, Norwegian shipping has undergone a fantastic development and expansion. In spite of two World Wars, each of which reduced the Norwegian fleet by half, the tonnage is today five times greater than in 1909. At the end of the last war, in which 3,650 Norwegian sailors lost their lives on active service and 2.4 million gross tons went down, the tonnage remaining was 2.7 g.t. Already by 1950, the pre-war tonnage figure had been surpassed, and today 1,533 ships with a total of 9,950,000 g.t. at an overall value of 15,000 million kroner (£750 million). (The whole Norwegian merchant fleet adds up to 10.4 million g.t., and is the third largest in the world.)

The shipping industry has been the third biggest contributor to the national product in post-war years, and has earned Norway a net amount—that is, less investments in new tonnage—of 14,000 million kroner (£700 million).

NEW PRODUCTS AND PROCESSES

Moisture Meter for Textiles

THE Shri Ram Institute for Industrial Research, Delhi, has developed SRI Electronic Moisture Meter, a device to determine accurately the moisture content of materials, such as textiles and paper, etc. The instrument, a significant improvement on imported products, gives steady and accurate results; there is no drift in the meter readings even after prolonged use. It is also capable of being used for determining moisture content of materials in bulk like CMC, pulp, soils, grain, etc., by suitably modifying the plates of the electrodes. Moisture content in textiles, paper and similar materials plays an important role because the amount of residual moisture has an important bearing on the physical characteristics such as elasticity, rigidity and swelling. The measurement and control of moisture content is, therefore, of fundamental importance for textile, paper and other similar industries. For measuring moisture content, the material is introduced between the plates of electrode system forming a condenser, resulting in a change in the capacity which in turn affects the resonant frequency of the crystal oscillator resulting into variation in the reading of the indicating meter. As the instrument has already been calibrated and a linear relationship obtained between the moisture determined by oven drying method and readings on the indicator, the moisture content can be directly read from the scale. The instrument has been tried in leading textile mills and results obtained are said to compare favourably with the performance of imported meters.

Off-shore Discharging of Oil

A new system for connecting off-shore tankers and other ships, with tanks, water supplies, etc., on land and vice versa has been evolved by a Swedish consortium, AB International Marine and Oil Development Corporation, Stockholm. The system is based on the use of a buoy, called the Imodco Buoy, connected with the land by pipeline, which has been tested with good results by the Swedish Navy. The first buoy was built at the Helsingborgs shipyard, and world patents are being applied for. The test unit has a diameter of 4.5 m. (15 ft.) and weighs 6 tons (in air). It is designed for use by vessels of 2,000 tons. However, it can be made to specifications of from 3.5 to 12.5 m. diameter. The largest size should be able to serve vessels of the 100,000-ton size. The Imodco Buoy can be used as an intermediary when discharging any type of liquid cargo, or loading of supplies such as bunkers, fresh water, etc. It can also be used for discharging spill-oil and is adaptable for certain types of cargo in solid form.

A heavy crow-foot is applied to the buoy from the vessel, whereupon the discharge or supply pipes are connected. Special swivel-mooring arrangements make it possible for the ship to turn round it in order to be constantly facing the wind or current in the right way. Among the advantages of the new system may be mentioned first of all the ease with which it can be placed at any desired position without depending on existing quays or depth of the harbour to be served. Costs for unloading and reloading arrangements on land are eliminated, waiting time in busy ports can be shortened, the danger of fire and explosion are lessened, oil contamination in port can be avoided, etc. The inventors claim that there should also be great possibilities of using the buoy when tapping new oil fields before adequate harbours have been built. Normally, the ship's own pumping installation ought to be able to handle the unloading or loading, but in the other cases pumping stations on land, or the utilisation of existing height of fall might be resorted to.

Television Camera

A remotely-controlled television camera developed by the B.B.C.'s engineering division has been taken over by the B.B.C. television service for experimental trial. The camera is in a TV interview studio near Broadcasting House, London, but all its functions can be controlled from a news studio at Alexandra Palace, about six miles away. At Alexandra Palace is a control console from which, via cable circuits to the central London studio, the camera can be switched on, panned, tilted, focused, and doimed as required. Alternatively, for interviewing, the control can be taken over by the interviewer in the London studio. It is intended to use this new technique for news and interview studios. An extension of the plan would enable the control to be extended over longer distances.

Plastic Industrial Fans

A standard range of industrial fans made of plastic is to be sold in the U.K. They will be four bladed and range from 6 to 14 feet in diameter in increments of 2 feet. A set of hollow plastic blades may be fitted either to an auto-variable hub, which enables the pitch of the blades to be altered pneumatically while in motion, or an adjustable pitch hub which requires the fan to be stopped while a simple manual alteration of pitch is made. On both hubs the angle of pitch can vary between minus 15 degrees and plus 30 degrees. The blades are made of woven glass cloth and pigmented epoxy resin laminated as a one-piece moulding. They are corrosion and heat resistant. They will not shatter or fragment and, being hollow, are extremely light. A set of blades for a ten-foot-diameter fan weighs 55 lbs.

The aerofoil section of the blades has been designed to give optimum performance characteristics. Fan blades of the same size are readily interchangeable as all blades are balanced to a standard value.

MUST FIRE INSURANCE RATES BE REDUCED? REPERCUSSIONS OF CONTEMPLATED MOVE ANALYSED

By "Arby"

A REDUCTION in fire tariff rates is contemplated and may take place in the latter part of the year or positively early next year. General insurance companies are extremely worried on this score, as will be evident from the fact that chairmen of practically all insurance companies have been dealing at length with this point in their speeches to the shareholders at their annual general meetings. This is as it should be, for a reduction in rates affects all the companies to a considerable extent. As it is the duty of the Board of Directors of companies to review before the shareholders the prospects for the current and ensuing year, and as the reduction in rates is undoubtedly going to diminish the future profits of companies, this matter must be placed before the shareholders in its true perspective.

As the matter concerns the shareholders and the public at large, it is essential to examine as to what has prompted this move on the part of the authorities, whether the step is justified and also as to what effect it is likely to have on the future working of companies.

It is well known that, at present, the most important problem facing the insurance trade and the Controller of Insurance is the eradication of the evil of rebating. Many steps have been taken in the past to curb rebating but they have not been entirely successful.

The reduction in rates was one of the measures contemplated some years ago to stop the granting of illegal commissions. The Controller of Insurance was forced to try this solution, as he found that, in spite of paying substantial rebates to the public and the agents, the companies continued to show handsome profits. It was his firm belief that only due to there being sufficient margins in the fire rates that this practice was freely in vogue and that once the companies started showing reduced profits or even losses managements would be compelled to find out ways of restoring the profits to their original levels. They would thus be forced to cut the rebates that they were paying to the insured.

It was with this idea that in 1954 it was decided to cut fire premium rates at an interval of every three years and to bring the rates down to a level at which the loss ratio would be, on an average, 40 per cent. A beginning was made in this direction in June 1955. Unfortunately, however, the approximate 10 per cent. reduction in rates made during that year had very little effect on the evil of rebating. The next reduction in rates was to have taken place in 1958. Since then the trade and the Government authorities have been examining the question seriously and are trying to decide the quantum of reduction. The insurers in general are, however, vehemently opposed to the reduction in rates.

The grounds on which the insurers are opposing the reduction appear to be extremely sound. They state that the Controller of Insurance is trying to reduce the rates only with one idea in view, namely, to curb rebating. They contend that to look at the fire rates only from that angle would be disastrous. The fire rates are computed after taking into account the following four items:

- (1) Loss ratio,
- (2) Provision for conflagration hazard (increase of reserves).
- (3) Office and procurement expenses, i.e., office and field salaries, stationery, rent, commission to agents, etc.
- (4) Profits.

The insurers maintain that the Controller of Insurance is only taking into account one of the four essential items constituting fire premium rates.

The position prevailing in insurance today, regarding each of the four items mentioned earlier, is as follows:

Loss Ratio

It is agreed by all that, during the past few years, the claim experience has been favourable. But it is argued by the insurers that the

current favourable experience cannot be considered as a permanent factor. Insurers have been free from catastrophic or series of losses for some time now. But, in case some untoward calamity occurs, the profits will go tumbling down and will affect the profits for a number of years. An example is cited of the riots that took place a couple of years ago in Bombay and Ahmedabad. That year the loss ratios of various companies went up considerably. Fortunately, the companies mostly affected were sound ones and as such, with their resources and treaty arrangements, they were able to face the situation without much difficulty. If such a repetition of riots were to occur in the various parts of the country, the resulting profits of insurance companies would be seriously affected. The stability of the country today is not what it was a few years ago. With the various labour, language and political issues in the air, there is every chance of rioting and destruction of property taking place at any time. There is no exaggeration in this argument, as witness the riots that took place in Calcutta only a fortnight ago. The insurers must be prepared to face such eventualities and come out with flying colours. It is only when such disasters as the Calcutta riots that the necessity for, and the value of, insurance is appreciated. Leaving aside the political and other troubles, we have also to consider that, with the advancement of industrialisation, there is bound to be an increase in the claims ratio. This will be evident from the fact that loss ratios in highly industrialised countries are usually quite high. With each Five-year Plan completed, the industrialisation of our country will progress in all directions and the insurers will be required to cover complex risks.

In line with the experience of such industrialised countries as the United Kingdom and Sweden, our claims experience in the coming years is bound to become more adverse than what it is at the moment. Another important point is that these foreign countries are very well equipped to fight industrial fires. Unfortunately in our country, leaving aside a few big cities, the fire-fighting services are inadequate.

Reserves

Keeping the remarks made above in mind, it becomes essential that insurers must be ready to face adverse times by building up sufficient reserves. Insurers must be given every opportunity to build up reserves and an incentive for this purpose must be provided by the authorities concerned. A suggestion put forward is that the reserves equal to the insurer's paid-up capital should not be taxed and the Insurance Act must be amended for this purpose. Simultaneously, the Controller of Insurance must, by legislation, force the companies to build up reserve every year by a specified per-

centage. Only if the Indian companies have substantial reserves will they have any chance of being able to operate in foreign countries.

Another important factor which necessarily must be taken into account while considering the question of reduction of rates pertains to the ever-increasing expenses coupled with the fact that the premium income has been relatively stationary for the past few years in spite of the increasing economic activity. Everyone is aware that the cost of running an office today is much higher than what it was a few years ago. The salaries of the staff, the benefits payable to them, e.g., provident fund, bonus, etc., are on the increase every year, irrespective as to whether the concerns are making profits or not. Further, the efficiency of the staff today is not as high as it was, with the result that a larger number of staff is required for the same amount of turnover than some years ago. It will be apparent that, with the increased awareness of the staff for their so-called rights, the expenses are bound to grow in future. The cost of stationery, printing, rent, advertisement, etc., is also on the increase and there is no chance of their going down in the near future. Thus, the office expenses are positively going to increase in the future.

Profits

The last item which is taken into account while determining the rates is profits. Naturally, the reduction in rates, if implemented, would seriously affect the profits of companies. The net premium written by the Indian insurers was about Rs. 20 crores in 1956. Out of this amount, a small sum of only Rs. 18 lakhs was available for distribution of dividends. The statistics further show that, out of the 101 companies operating in 1956, only 50 companies were able to declare dividends. Out of these 50 companies, as many as 18 companies were in a position to pay only less than 6 per cent. dividend. If a further analysis of the companies declaring dividends is carried out, it would reveal that they were able to declare dividends not due to any underwriting profits but mostly on account of interest, dividends and rents earned on their capital. In some cases, where the claims experience was unsatisfactory, the earnings on the capital were also swallowed up by the losses. As such, it can safely be deduced that a reduction in rates, if carried out, would completely upset the financial stability of insurers. Even as things are at present, the shareholders of companies today are not satisfied with the returns on their investment and, if the proposed reduction in rates is in fact implemented, 90 per cent. of the companies would be showing losses.

Besides the importance of the four items mentioned earlier, there are some additional points which have an important bearing on the aspect of the revision in rates.

It is well known that, at present, the fire department of companies is the only department on which companies can depend to show regular and substantial profits. The marine and miscellaneous departments cannot be relied upon for adding to the profits of companies to any appreciable extent.

The following table in which the working of the fire, marine and miscellaneous depart-

In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

100 years of service to the nation marks the famous leading House of JUGGILAL KAMLAPAT. Founded in the middle of last century, this illustrious house by steady and consistent progress has become a gigantic institution of its type in India—a truly national concern having in its fold multifarious manufacturing and commercial lines

J.K. ORGANISATION
KANPUR — BOMBAY — CALCUTTA

By setting up factories all over India of such goods as were imported from abroad & K Industries have planted India's feet firmly on the road to adult self-sufficiency and material prosperity. The trade mark of this House is your guarantee of quality.

NON-FERROUS METALS INDUSTRY PROGRESS MADE UNDER TARIFF PROTECTION

THE view that the non-ferrous semi-manufactures industry had registered "considerable progress" under the shelter of protection enjoyed by it for more than a decade was expressed by Mr. K. R. P. Aiyangar, Chairman, Tariff Commission, when he opened the public inquiry into the question of continuance of protection to the industry, held last week, in Bombay. It may be recalled that the industry was first granted protection in 1948 and, since then, it was successively extended upto 31st December 1957. In that year, the Commission undertook a fresh investigation into the claim of the industry for the continuance of protection and recommended that protection to lead and zinc sheets and strips and brass and copper sheets, rods, pipes and tubes be continued upto 31st December 1959. The present inquiry, which is limited to semi-manufactures of non-ferrous metals, is intended to examine the continuance of protection beyond the end of the current calendar year.

Demand

The estimates of demand for different items of non-ferrous semi-manufactures vary widely. In respect of copper sheets, strips and circles, estimates of current demand range from 2,500 tons (commercial) and 500 tons (industrial) to 2,800 tons (commercial) and 800 tons (industrial). The estimate of demand in 1960-62 also varies from 2,500 tons (commercial) and 600 tons (industrial) to 3,400 tons (commercial) and 1,000 tons (industrial). Again, in respect of brass sheets, strips and circles, the estimate of current demand varies from 24,000 tons (commercial) and 3,000 tons (industrial) to 28,000 tons (commercial) and 4,000 tons (industrial), while the estimate of demand in 1960-62 varies from 24,000 tons (commercial) and 5,000 tons (industrial) to 36,000 tons (commercial) and 6,000 tons (industrial). The Development Wing places the current demand for zinc sheets and strips at 4,000 to 4,200 tons and future demand at 6,000 tons and current demand for lead sheets at 500 tons and future demand at 700 to 800 tons.

The following table gives the availability of semi-manufactures of non-ferrous metals (that is, production plus imports minus exports) in 1958:

Non-ferrous Semi-manufactures (1958)

(In tons)	Production	Imports	Exports	Availability
Copper				
Sheets, strips and circles	3,007	400	17	3,390
Rods other than electrolytic	254	7	..	261
Tubes and pipes	53	569	..	622
Brass				
Sheets and strips	19,030	199	62	19,167
Circles	3,180	..	2	3,178
Rods	1,822	..	..	1,760
Tubes and pipes	7	665	..	672
Lead				
Sheets and strips	649	37	..	686
Zinc				
Sheets, strips and plates	2,081	647	..	2,728

At the end of the last inquiry, the Commission had received information about installed capacity from 25 units. The Commission has received such information only from 19 units now. The capacities claimed by these units are:

Capacity
(Single Shift Basis)
(In tons)

	No. of units	Installed capacity
Sheet rolling—		
(a) Cold	5	6,023
(b) Hot	12	21,890
Strip rolling, including rod rolling (copper and brass)	4	3,792
Zinc sheet rolling	1	1,000
Zinc strip rolling	1	2,148
Lead sheet rolling	8	2,600
Lead strip rolling	1	50
Extrusion—		
(a) Solid	1	2,200
(b) Hollow	1	300

The principal raw materials required by the industry are copper, zinc and lead. The demand for these metals is met chiefly through imports. On the basis of domestic production and imports, the total consumption (in tons) of these metals in 1958 with figures in 1957 indicating consumption in 1957 within brackets was: copper 57,874 (52,363), zinc 57,339 (48,008) and lead 14,510 (17,023). During the January-April period in 1959, total consumption of copper was 17,136 tons, of zinc 15,274 tons, and of lead 8,554 tons. In view of the fact that India has to depend largely on imports for its requirements of these three non-ferrous metals, it is clearly

necessary to examine whether fresh sources of supply can be located in India. In its understandable anxiety to locate new sources of petroleum, the Government should not lose sight of the importance of prospecting for non-ferrous metals. Perhaps, the Commission and those who are participating in the inquiry will do well to review briefly the existing mining operations in the sphere of non-ferrous metals and suggest what further measures are indicated in order to give a fillip to these operations.

Refining

As regards the facilities for refining non-ferrous metals, the Indian Copper Corporation is the only unit with capacity for producing fire refined copper; its installed capacity is 7,200 tons. This Company has been granted licence to set up a plant with a capacity of 8,400 tons a year for the manufacture of electrolytic copper. Kamani Bros. (P.) Ltd. had also a proposal for the manufacture of electrolytic copper from imported blister copper with an installed capacity of 15,000 tons per annum. The Hindustan Transmission (Products) Private Ltd., New Delhi and G. D. Binani, Calcutta, have also plans to manufacture electrolytic copper and fire refined copper respectively, from imported blister copper. The position in regard to the manufacture of indigenous lead and zinc remains the same as at the time of the last inquiry. The Metal Corporation of India Ltd. is the only unit engaged in the production of virgin lead with an annual capacity of 6,000 tons. In the absence of smelting facilities for zinc, the firm exports zinc concentrates produced by it to Japan on toll basis and brings back metallic zinc. The firm has already on hand a scheme to set up a smelter with a capacity of 15,000 tons of electrolytic zinc per annum, and expects to complete it by the end of 1960. It also proposes to install a lead smelter having a capacity of 12,000 tons.

Quality

As regards quality of non-ferrous manufactures, it would appear that the Commission has received no complaint about the quality of commercial brass sheets and strips. The Commission had observed in its last report that the quality of industrial sheets and strips required considerable improvements. Two types of complaints specifically mentioned were: (1) the chemical composition was not controlled according to specifications, and (2) articles were of uneven quality and lacked finish. The manufacturers have now informed the Commission of the various steps taken by them to improve the quality of their products. They claim to have received practically no complaints from the consumers. Important consuming industries like Indian Telephone Industries Ltd., Bharat Electronics Ltd., etc., have, however, represented to the Commission that the domestic products continue to have the same old defects. These defects relate, among others, to surface finish, surface defects, internal defects, traces of injurious elements like phosphorus and bismuth.

In this connection, the industry, being a protected one, has a certain responsibility to ensure that the quality of its products is maintained. After all, a protected industry, as the

Chairman himself indicated, owes a "duty to the community at whose expense it enjoys protection to strive continuously to improve the quality of the products and to reduce the costs of production." The Commission, it is stated, is handicapped in its investigations by the absence of reliable cost data. The industry will do well to remedy this defect.

WORLD RICE TRADE

World trade in rice was 6 per cent. less in 1958 than in 1957 and prices paid in 1959 were moderately below those of 1958, according to the Food and Agriculture Organisation in Rome. F.A.O.'s monthly bulletin of Agricultural Economics Statistics makes three points about the international trade picture. In the first place, mainland China's known exports, at nearly 700,000 metric tons, were "easily the highest on record." No information was available on exports to the Union of Soviet Socialist Republics; there was a "pronounced fall" in exports to the U.S.S.R. other than those from mainland China. Secondly, other eastern European countries imported 170,000 tons, an average quantity for recent years. Thirdly, there was less governmental control over the international rice trade than at any time since the Second World War. The note says that a total of 5.4 million metric tons of rice was exported last year. The figure is 250,000 tons less than that of 1957 and a 1/2 million tons lower than that of 1956, when exports hit their post-war peak. International prices of lower grades of rice have fallen well below the level of last year. In the case of broken rice, the note points out, the prices have decreased steadily since early this year and by mid-1959 had returned to the levels existing in 1956 and 1957. Prices of superior varieties, both in the free market and in Government-negotiated deals, fell less than those of lower qualities.

INDO-BRITISH TRADE

During the first seven months of 1959, the U.K. imported from India £71.2 million worth of goods, as against £69.1 million in the corresponding period of 1958. The U.K.'s exports to India in the same period aggregated £97.4 million, or £5.2 million higher than in the first seven-month period last year. The following table gives the breakdown of Indo-British trade in the seven months ended July 1959, in the corresponding period of 1958 and in the year 1958:

U.K.'s Trade With India

	1958	7 months January-July 1959	1958	1959
Total—All exports	158,936	92,227	97,444	
Of which:				
Machinery other than electric	45,042	26,002	30,868	
Electric machinery	18,708	11,070	11,322	
Chemicals	12,228	7,221	9,485	
Road vehicles and aircraft	26,825	17,282	16,189	
Total—All imports	130,422	60,081	71,217	
Of which:				
Tee	74,120	20,895	24,082	
Tobacco and manufactures	9,266	7,584	7,621	
Leather and manufactures	9,975	5,578	7,075	
Miscellaneous textile manufactures	11,468	6,326	6,996	

HOLLAND SUPPLIES THAILAND WITH ICE FACTORIES

A Dutch firm has obtained an order for the supply of 8 ice factories to Thailand. This country intends to build a weir with the aid of moneys from the Development Loan Fund; in order to carry out this project, it requires ice factories for supplying the fine crushed ice used to keep concrete cool during hardening. As there is a great demand for block-ice in tropical countries, plants were sought which could produce crushed ice during the construction of the weir and block-ice afterwards. Grasso's fully automatic ice generators were particularly suitable for this purpose, because, by the turn of a switch, crushed or block-ice can be produced as required. Thus, when the weir in Thailand is completed, the country will have 8 ice factories, each with a capacity of over 15 tons of block-ice per 24 hours. The first ice factory will be shipped to Thailand before the end of the year.

COMPANY LAW SUPPLEMENT

(Monthly Journal)

Main object, to keep the readers informed on all aspects of company law, contains among other matters Queries on problems relating to company law and their answers, amendments of company law, notifications, articles of general importance, digest of cases, etc.

Edited by Messrs. JOHN & ROW, Advocates, Madras,

authors of Ready Reference on the Indian Companies Act, 1956, and other publications on company law.

Annual subscription: Rs. 24.

GOOD RISE IN PROFIT OF INDIA PAPER PRODUCTION MARKEDLY HIGHER—DIVIDEND SAME—RESERVES ENHANCED

THE downward trend in the profit of the India Paper Pulp Company, Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) noted in 1957-58 has been reversed. The gross profit for the year ended 31st March 1959 is markedly higher at Rs. 27.97 lakhs, as against Rs. 14.57 lakhs for 1957-58 and Rs. 18.22 lakhs for 1956-57. This gratifying improvement of 92 per cent. in profit is not the result of any fall in cost of production or in taxation or of a rise in the price of paper. It is the outcome of expansion in production brought about by a large increase in capacity, involving heavy capital expenditure of about Rs. 105 lakhs. The Company's third paper making machine came into operation in June 1958, nearly doubling the capacity. Its production of paper is now running at about 11,500 tons per annum, as against 6,000 to 6,500 tons before.

The higher profit has, however, not been followed by an improvement in the return to shareholders. It will be recalled that the dividend for 1957-58 was cut to 10 per cent. per annum from 14 per cent., a rate that had been consistently maintained since 1953-54, notwithstanding the doubling of paid-up capital in 1955-56. This cut has not been restored and the shareholders get only 10 per cent. (including the interim dividend of 5 per cent.) for the year under review. The Directors seem to have decided to follow this cautious policy for two reasons: (a) the proposed increase in paid-up capital, with the new shares ranking for dividend *pari passu* with the existing shares from the current year itself; and (b) the heavy provisions for depreciation and development rebate reserve.

Readers will get a clear idea of the Company's results for 1958-59 and the manner in which the gross profit has been allocated from the comparative table below:

	For the year ended 31st March			
	1959	1958	1957	1956
Sales of paper	1,54.75	1,05.88	99.10	93.85
By-products and other income	0.89	1.89	2.33	1.27
Closing stocks	11.02	3.72	4.54	5.49
Manufacturing expenses	62.93	37.02	39.54	36.62
Salaries and wages	30.29	26.56	25.04	23.85
Other expenses	21.49	14.06	12.71	7.79
Excise duty	20.20	14.55	9.47	9.15
Gross profit	27.97	14.57	18.22	18.48
Managing Agents' commission	2.02	1.18	1.75	1.36
Provision for—				
Depreciation	14.70	5.47	4.30	5.60
Taxation	0.74	4.05	6.25	5.85
Net profit	10.50	3.86	5.92	5.87
Transfer to—				
Development rebate reserve	11.50	6.30	6.82	6.82
Dividend	(10%)	(10%)	(14%)	(14%)
Drawn from reserves	7.64	2.39	3.08	0.99
Carry forward	0.55	0.29	0.33	0.14

It will be noted that both revenue and expenditure have gone up. Sales moved up by Rs. 49 lakhs, in round figures, and stocks by Rs. 7.30 lakhs. At the same time, manufacturing expenses and salaries and wages also went up by Rs. 25.96 lakhs and Rs. 3.63 lakhs, respectively. Other expenses, too, were larger by Rs. 7.43 lakhs. Similarly, excise duty paid was higher by Rs. 5.65 lakhs. In short, there was no relief to the Company from any of the adverse factors it suffered in 1957-58. The price of paper also remained unchanged at the unremunerative level determined by the Government. A year has passed since the question of fair selling prices for the different varieties of paper made in India was referred to the Tariff Commission and its verdict is not yet known. While the Government is in a hurry to get prices fixed when it is the chief beneficiary, it takes its own time when ex-factory prices are to be determined. Paper, coal, steel and cement are some of the major industries which have been suffering on this score.

The transfer to depreciation, as will be seen from the above table, has been raised from Rs. 5.47 lakhs to Rs. 14.70 lakhs. Because of the large capital expenditure incurred during the year and the accelerated depreciation provisions, the Company has had no assessable profit, and, consequently, the provision for taxation is small. Of the sum of Rs. 74,000 shown in the table, Rs. 64,000 is for wealth tax and the balance relates to the preceding year. Since the net profit is not sufficient to meet the dividend at 10 per cent. and also provide in full for development rebate reserve, which is a compulsory provision under our tax laws, the Directors have withdrawn from reserves as much as

Rs. 7.64 lakhs. Nevertheless, there has been a net addition of Rs. 4 lakhs to the reserves, in refreshing contrast to the continuous withdrawals since 1954-55. The total depletion in the previous three years aggregated Rs. 6.46 lakhs.

The additions to block account during the year were Rs. 38.55 lakhs. The gross block as at 31st March 1959 stands at Rs. 232.07 lakhs, as against which depreciation provided amounts to Rs. 103.24 lakhs, so that the net block is Rs. 128.83 lakhs. It will be interesting to note here that, of this net block, the additions made during the three years ended 1958-59 alone were no less than Rs. 118.09 lakhs. This means that the fixed assets of the Company have been well depreciated.

As against a paid-up capital of Rs. 63 lakhs (all in ordinary shares of Rs. 10 each), the reserves and surplus, including the share premium account, aggregate Rs. 65.47 lakhs. Current liabilities amount to Rs. 94.36 lakhs and current assets at Rs. 94.44 lakhs are just sufficient to cover them.

The expansion programme has been financed from the Company's own resources as well as from loans. Naturally, its liquid funds have been greatly strained. Since the net block account is twice as large as the paid-up capital, there is a clear case for raising the capital structure. This was obvious even last year and the Directors had stated that the question was receiving their attention. They now say that they have decided to raise new equity capital, in preference to debentures. They propose to issue 252,000 new ordinary shares of Rs. 10 each, at a premium of Rs. 2.37 per share, in the proportion of two shares for every five old shares. This will yield the Company a sum of Rs. 31.17 lakhs which will be utilised to repay the loan from the Managing Agents amounting Rs. 26.79 lakhs as at the end of March last.

The Rs. 10 paid-up shares are currently quoted at Rs. 25.75. On ex-right basis (Rs. 22.14), the yield on the shares at the present dividend is 4.6 per cent. Apparently, the share market is assuming that, in future, the Company should be able to raise the rate of dividend. Such an assumption is not unreasonable.

(Concluded from next column)

way of additions to fixed assets, the great bulk of which has been on plant and machinery. As already stated, this is the secret of the Company's success during the year under review. It is, however, a different question whether the profit earned by the Company is adequate in terms of the heavy capital expenditure incurred by it.

The gross block of the Company now stands at Rs. 353.00 lakhs, on which depreciation provided is Rs. 254.17 lakhs, leaving the net block at Rs. 98.82 lakhs. Since the paid-up capital is Rs. 63 lakhs (Rs. 29.92 lakhs in 4½ per cent., tax-free, cumulative preference shares and the balance in equity capital of Rs. 100 each), it can be stated that the capital and block accounts are fairly well balanced. The reserves and surplus aggregate Rs. 61.34 lakhs. Current liabilities, including secured and unsecured loans (of Rs. 66.55 lakhs and Rs. 31.81 lakhs, respectively), amount to Rs. 200.92 lakhs which are more than adequately covered by current assets of the order of Rs. 253.27 lakhs. The quantum of liquid assets is, of course, small, but this is understandable in view of the huge capital expenditure in recent years. Indeed, the Company seems to be still buying new machinery; it has placed fresh orders for Rs. 26.35 lakhs worth of machinery for replacement and renovation, the delivery of which is expected to take two years to complete.

The Rs. 100 paid-up ordinary shares of the Company are now being quoted at Rs. 247.50 *cum*-dividend, giving a net yield of 4.75 per cent.

The directors of Kemp & Co., Ltd., have recommended a dividend of Rs. 17.50 plus a bonus of Rs. 2.50, thus making a total distribution of Rs. 20 per share of Rs. 200 each for the year ended 31st March 1959. This compares favourably with the dividend of Rs. 15 for the previous year. It might be noted that the dividend which was Rs. 20 for the years 1953-54 and 1954-55. For the subsequent three years, namely, 1955-56, 1956-57 and 1957-58, the dividend was stepped up to Rs. 15 per share.

KHATAU MILL REPORTS RECORD RESULTS SHARP JUMP IN PROFIT

THE Khatau Makanji Spinning and Weaving Company, Ltd. [Agents: Messrs. Khatau Makanji & Co., (Private) Ltd., Bombay] has sprung a pleasant surprise by reporting a record profit for the year ended 30th June, 1959. It is, of course, true that the Company's financial year under review coincides with a period of relatively fair trading conditions in the piece-goods market as compared with the two preceding years. Nevertheless, it would be no exaggeration to say that none had expected the Company to show a profit beating all previous records by an impressive margin. Apparently, the steps taken by the Company to modernise its plant and machinery and push up the sale of its products by country-wide scientific advertising and sales promotion have yielded unexpected results. Sale proceeds have gone up from Rs. 470.49 lakhs in 1957-58 to Rs. 490.00 lakhs. Gross profit has jumped up by more than 100 per cent., from Rs. 29.12 lakhs to Rs. 62.96 lakhs, which is a record in the Company's history. A good part of the rise has been eaten up by taxation; a sum of Rs. 18.90 lakhs, as against a mere Rs. 5.50 lakhs for 1957-58, has been earmarked for this liability. The provision for depreciation has been raised by a little over a lakh of rupees to Rs. 14.73 lakhs. The Managing Agents' commission works out to Rs. 4.82 lakhs, as compared with Rs. 1.55 lakh last year. The net profit has nearly trebled, from Rs. 8.44 lakhs to Rs. 24.51 lakhs. The dividend to ordinary shareholders has been raised from 10 per cent. tax-free to 16 per cent. taxable, in the sense that the tax will be deducted by the Company at the prescribed rates. Even after making allowance for this deduction, the net dividend (Rs. 11.20) compares quite favourably with that for the previous year.

The results for the year under review are highlighted in the comparative table below against the background of those for the three previous years:

	For the year ended 30th June			
	1959	1958	1957	1956
Sale proceeds	4,90.00	4,70.49	4,26.57	4,28.54
Closing stocks	75.03	75.11	98.54	77.24
Raw materials and stores consumed	2,41.58	2,36.06	2,42.62	2,21.81
Wages, establishment and other expenses	1,86.58	1,84.28	1,67.92	1,58.92
Gross profit	62.96	29.12	40.45	50.54
Agents' commission	4.82	1.55	2.47	4.33
Depreciation	14.73	13.63	12.59	15.98
Taxation	18.90	5.50	22.59	15.98
Net profit	24.51	8.44	11.24	17.28
Transfer from reserve	13.28	1.74	9.00	8.90

* Subject to taxation.
† Additional dividend on ordinary shares at Rs. 4.25 per share, for the year ended 30th June 1954.
‡ Additional dividend on ordinary shares at Rs. 2.00 per share, for the year ended 30th June 1955.

It would be appropriate to quote here the Directors' observations on the state of the cloth market and working conditions, so that readers may have the requisite background information:

"The conditions in the cotton piecegoods market were a little better during the course of the year and the stocks began to move. The overall stock position improved. The substantial sums that have been ploughed back in recent years in renovating and replacing the machinery of the Company and installing plants to improve the finished products and quality of processing have resulted in improved demand for the Company's fabrics.

"Restriction on imports of cotton continued during the year. Due to the introduction of the Export Incentive Scheme, the cost of imported cotton will be enhanced by 20 per cent. during this year.

"The considerable increase in value of dyes and chemicals consumed during the year is due to a substantial increase in the prices of dyes, colours and chemicals."

A point that needs to be appreciated is that the Directors have not distributed the entire increase in net profit in the form of dividends but have also set aside a substantial amount to reserves. The dividends in fact account for less than half of the net profit, the balance having been ploughed back. Of the sum of Rs. 13.28 lakhs transferred to reserves, Rs. 5.28 lakhs are conserved in the form of development rebate; the remaining Rs. 8 lakhs have been credited to general reserve.

In recent years, the Company has been spending large amounts on rehabilitation and modernisation of its productive assets. During the five years 1954-55 to 1958-59, the Company has invested no less than Rs. 166.14 lakhs by

(Continued in previous column)

Points From the Chair

Development of Shipping

"IN spite of the anxiety of Government and the industry, the pace of expansion of Indian shipping has been slower than was hoped for. Whether the industry will expand rapidly, or will remain static, will depend upon the evaluation of various deterrents and disincentives which beset the industry today. Primarily the industry lacks capital resources. Although the Shipping Development Fund has been statutorily established, it has not commenced functioning effectively, and as a consequence, loan facilities available to the industry is of a very meagre order. To add to this, there is now a chronic dearth of foreign exchange resources. I hope the suggestion of Mr. G. L. Mehta to have a counterpart Fund in foreign exchange to the Shipping Development Fund will meet with the response from the authorities which it deserves."

C. R. SRINIVASAN,
Bharat Line Ltd.

Outlook for Cotton Mills

"The stocks with the mills have recently declined considerably and the latest position as at the end of August 1959, is estimated at 383,000 bales as against the all-time record of 660,000 bales at the end of 1957 and 582,000 bales at the end of 1958. Cognisance should, however, be given to the fact that the production too has been running at a lower level. So far as the outlook for the current year is concerned, conditions till middle of the year continued more or less to be the same, but the sentiment very recently witnessed in the cloth market seems to have undergone a radical change for the better. Demand for cloth for internal consumption as well as export markets seems to be again gone to the extent of raising alarm in visualising cloth famine in the near future. Although I share optimism with the trade, I would view the prospects for the industry with caution and restraint. Despite the increase in the price of cloth, the point that remains to be seen is whether at the end of the year there will be enough profits with the mills. The rigid cost structure still continues to sap the profitability of the industry. Prices of raw cotton are shooting up high and with the commencement of the new season already most of the varieties have pierced their ceiling rates. Where it will lead to, none can forecast. But, lest the situation may be rendered more difficult, it is advisable that New Delhi takes adequate measures to enforce control over indigenous cotton or augment supplies by increased imports. Similarly, the cost of other items of expenditure including prices of other materials, dyes and chemicals, wage costs, etc., are also progressively increasing. It is in the context of such an inflationary and rigid cost structure that I would like you to view the prospects of the industry."

KUDILAL GOVINDRAM SEKSARIA,
Indore Malwa United Mills, Ltd.

L.I.C. Investment Policy

"The investment policy of the Life Insurance Corporation is governed by the Government Notification in August 1958 which made Section 27A of the Insurance Act with certain modifications specified therein applicable to the L.I.C. The Finance Minister also has made statements from matter of time on the floor of the Lok Sabha in the notification and the policy enunciated by the Finance Minister, it should be possible for the Investment Committee of the L.I.C. to take a more direct interest in equities, preference shares, debentures and also State loans, electricity bonds, etc., that are quoted on this market. The investments of the Corporation are now being made on headquarters in Bombay, and buying and selling operations are carried on mostly from that centre. One of the main difficulties experienced by our members has been the execution of limit orders given by the L.I.C. from time to time. Invariably, the limits given are at the market rate or below, and in most of the cases the orders prove unworkable and get time-barred. It is contended that the brokers concerned could give counter offers to the L.I.C. but this takes a long time, and by that time the order with the broker either lapses or the market goes against him. If therefore, becomes necessary that there should be a proper person, basis of agreed policies and decisions, at least in the principal cities like Calcutta and Madras, where there are well-organised Stock Exchanges."

V. NATARAJAN,
Madras Stock Exchange Ltd.

Prosperity Again

"Although later developments took place in 1958, I think it is of interest and importance to report that finer counts have been progressively introduced and markets established for them. The mill is now spinning a full range of counts from 10s to 80s and attention is being directed towards the consistent production of the highest quality yarns in each count. This has not been a simple process as no time has been available for leisurely development, but progress and development continue and there is a very satisfactory demand for our yarns at remunerative prices. Our large export sales in 1958 were, at the time, primarily a means of disposing of our excess production of coarse counts. However, by a fortunate combination of circumstances, the great majority of the when the Export Incentive Scheme had been introduced. As a result, a windfall amount of Rs. 58,000 in cash was received in March 1959, and of imported cotton. This we took in the form of 185 bales of Sudan cotton which has just arrived and has accelerated our progress towards a finer average count. We are continuing to concentrate on export sales of our coarser counts in order to ensure regularity of supplies of cotton for our finer

JAIPUR METALS AND ELECTRICALS LTD.

CHAIRMAN, MR. R. H. KAMANI, OPTIMISTIC ABOUT THE FUTURE

THE hope that the Jaipur Metals and Electricals Ltd. could look to the future with pride was held out by its Chairman, Mr. R. H. Kamani, in his speech at the Fifteenth Annual General Meeting of the Company held at Jaipur on Saturday, 19th September 1959. In support of this hope, he referred to the increasing use of indigenous components in the manufacture of products and to the scheme for doubling the Company's output in collaboration with Siemens Schukertwerke A.G., the well-known house of electrical manufacturers in West Germany.

The following is the text of Mr. Kamani's speech:

"It gives me great pleasure to welcome you on behalf of my Directors and myself to the 15th annual general meeting of Messrs. Jaipur Metals and Electricals Ltd. Before starting my speech, may I request you all to join me in paying our humble and respectful tributes to the late Shri M. G. Purohit who was a Director of the Company and who passed away on 24th April 1959.

"The Directors' report and audited profit and loss account and balance-sheet for the year ended 31st December 1958, which shows a profit of Rs. 9,76,663 after taking depreciation, development rebate, taxation, managing agents commission, etc., allows to distribute 6 per cent. (as against 5 per cent. in the previous year) to ordinary shares and 6 per cent. to preference shares. With your permission, I shall take them as read. There has been, as you would observe, an increase of profit of Rs. 4 lakhs for the year as compared to the profit of last year. This is a remarkable achievement, especially in view of the fact that the value of the overall total annual turnover is slightly less. Due to difficulties in foreign exchange position and consequent restrictions upon the import of essential raw materials, we could not increase our output and turnover to a desired level.

"The working of the Company has been satisfactory during the year under review. There was a marked increase in the production of house service electric meters, which was as much as about 25 per cent. higher than the previous year. Production of the metals division was maintained almost at the level of the previous year, in spite of the difficulties in the way of important raw materials.

"Consistent with the Government policy, allocation of foreign exchange was based on the second Five-year Plan giving top priority to the products required in fulfilment of the same. This had its own impact on the manufacturing industry with very limited foreign exchange available for the import of the essential raw materials and, with the tax burden added, the industrial output in 1958 on a national scale came to an all-time low for the past five years. In the light of this situation, the progress made by your Company is encouraging and cheering.

"The nation is busy shaping the third Five-year Plan and it should cheer you to know that, with our progressive outlook, we are resorting to more and more indigenous components for our products, which should enable us to look to the future with pride.

"The production of house service electric meters components is undertaken progressively. During the year under review, considerable progress has been made in the manufacture of indigenous components and the percentage of imported components has been reduced to the minimum.

"I have the pleasure to state that we have entered into collaboration with Siemens Schukertwerke A.G., the well-known house of electrical manufacturers in West Germany, for the manufacture of house service electric meters according to their patents and designs. This will be in addition to our present activity and thus it would aim to double the production."

counts of 60s and 80s. The process of raising the average count is not by any means complete yet, and I feel confident that we can now look forward to a rising curve of prosperity. It is significant in this context that the changes introduced have been rendered possible only by our extensive modernisation programme. Thus, the reward for this heavy expenditure is now beginning to be earned in increasing measure."

W. E. NORTHEY, M.B.E.,
Coimbatore Mills Ltd.

COMPANY MEETINGS AND DIVIDENDS

NAGAISUREE TEA Co., LTD. Annual General Meeting, Calcutta, 28th September 1959. Dividend: 5 per cent. or Rs. 5.00 per share. Transfer books remain closed from 19th to 28th September 1959, both days inclusive.

HANTAPARA TEA Co., LTD. Annual General Meeting, Calcutta, 28th September 1959. Dividend: 8 per cent. or Rs. 8.00 per share. Transfer books remain closed from 16th to 28th September 1959, both days inclusive.

ETHELHARI TEA Co., LTD. Annual General Meeting, Calcutta, 28th September 1959. Dividend: Nil. Transfer books remain closed from 22nd to 28th September 1959, both days inclusive.

KELCOTT TEA Co., LTD. Annual General Meeting, Calcutta, 29th September 1959. Dividend: 7½ per cent. or Re. 0.75 per share. Transfer books remain closed from 19th to 29th September 1959, both days inclusive.

DISHERGARI POWER SUPPLY Co., LTD. Annual General Meeting, Calcutta, 29th September 1959. Dividend: Rs. 7.50 per ordinary share. Transfer books remain closed from 15th to 29th September 1959, both days inclusive.

HOOLUNGOREE TEA Co., LTD. Annual General Meeting, Calcutta, 29th September 1959. Dividend: Rs. 17.50 per share. Transfer books remain closed from 23rd to 29th September 1959, both days inclusive.

MANABARIE TEA Co., LTD. Annual General Meeting, Calcutta, 29th September 1959. Dividend: Re. 0.50 per share, free of tax. Transfer books remain closed from 23rd to 29th September 1959, both days inclusive.

TEESTA VALLEY TEA Co., LTD. Annual General Meeting, Calcutta, 30th September 1959. Dividend: Nil. Transfer books remain closed from 20th to 30th September 1959, both days inclusive.

NEW CHUMTA TEA Co., LTD. Annual General Meeting, Calcutta, 30th September 1959. Dividend: 10 per cent. or Re. 1.00 per share. Transfer books remain closed from 20th to 30th September 1959, both days inclusive.

VELLORE ELECTRIC CORPORATION LTD. Annual General Meeting, Madras, 5th October 1959. Dividend: 10 per cent. or Re. 1.00 per share, tax-free. Transfer books will remain closed from 28th September to 5th October 1959, both days inclusive.

GANGES MANUFACTURING Co., LTD. Annual General Meeting, Calcutta, 6th October 1959. Dividend: Nil.

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, 20th October 1959. Dividend: 15 per cent. Transfer books will remain closed from 6th to 20th October 1959, both days inclusive.

BOMBAY CYCLE AND MOTOR AGENCY LTD. Annual General Meeting, Bombay, 22nd October 1959. Dividend: Rs. 2.00 per share, payable on and after 27th October 1959. Transfer books will remain closed from 8th to 22nd October 1959, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING Co., LTD. Annual General Meeting, Bombay, 23rd October 1959. Dividend: Rs. 11.20 per share, payable on and after 26th October 1959. Transfer books will remain closed from 28th September to 24th October 1959, both days inclusive.

COORLA SPINNING AND WEAVING Co., LTD. Annual General Meeting, Bombay, 9th November 1959. Transfer books will remain closed from 27th October to 10th November 1959, both days inclusive.

KINNISON JUTE MILLS Co., LTD. Final dividend of Rs. 5.00 per ordinary share, for the year ended 31st March 1959, (making a total of Rs. 10.00 per ordinary share, for the year), without deduction of income-tax paid by the Company.

AUCKLAND JUTE Co., LTD. Final dividend of Rs. 15.00 per ordinary share, for the year ended 31st March 1959 (making a total of Rs. 20.00 per ordinary share, for the year), without deduction of income-tax paid by the Company.

SYNOPSIS OF COMPANY REPORTS

Sone Valley Portland Cement Co., Ltd.

The directors of the above Company (Chairman: Mr. A. K. Jain, Calcutta) present the audited accounts of the Company for the year ended 31st December 1958.

The year's working after meeting all expenses of operation and management shows a surplus of Rs. 12,71,007 (Rs. 11,84,511). From this amount is to be deducted depreciation on fixed assets amounting to Rs. 5,19,022 (Rs. 4,84,871), provision for bonus Rs. 1,65,000 (Rs. 1,46,000), provision for wealth tax Rs. 48,000 (Rs. 39,000) and transfer to reserve for development rebate Rs. 1,30,000 (nil) leaving a net profit of Rs. 4,08,985 (Rs. 4,64,440). To this is added the balance brought forward from last year of Rs. 18,721 (Rs. 4,287) making a total of Rs. 4,27,712 (Rs. 4,68,727). Out of this sum, the directors have transferred Rs. 4,00,000 (Rs. 4,50,000) to general reserve No. 2. The balance of Rs. 27,712 (Rs. 18,721) is proposed to be carried forward.

The directors recommend payment of dividend for the year ended 31st December 1958 to the shareholders as on 30th September 1959 at the rate of 30 (30) p.p. per share, i.e. 6 (6) per cent. (with-out deduction of income-tax) amounting to Rs. 4,50,000 (Rs. 4,50,000) out of general reserve No. 1 constituted out of profits taxed in previous years.

The year's production and despatches have been as under:

	1958	1957
Clinker production ...	1,91,713 Tons	1,75,073 Tons
Cement despatches ...	2,07,010 Tons	1,73,640 Tons
Coal raisings at Hutar ...	25,143 Tons	18,360 Tons

In view of the slackness in demand experienced by cement industry in general, the expansion plans of this Company have been kept in abeyance. The element of rehabilitation allowance included in the price of the Company's cement by the Tariff Commission last year is inadequate to meet the large expenditure on the plant. Steps are being taken for gradual rehabilitation.

The production cost of the Company's cement is higher than that estimated by the Tariff Commission for determining the retention price currently in force. The Company is making suitable representation in this regard to the Government of India.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	75,00,000	Gross block	2,24,78,421
Reserves ...	18,50,000	Less—Depreciation	1,59,97,746
Provision for taxation ...	2,55,320	Net block	64,80,675
Liabilities ...	61,84,937	Stock-in-trade	1,45,612
Profit and loss account (surplus) ...	27,712	Stock-in-process	1,21,871
		Stores and spare parts	44,05,129
		Raw materials	7,07,625
		Other assets	50,084
		Debits, deposits and advances	25,10,243
		Investments	5,26,374
		Cash	6,56,704
		Miscellaneous expenditure	2,13,652
	Rs. 1,58,17,969		Rs. 1,58,17,969

Bagalkot Cement Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Tendulkar Industries Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st December 1958.

After meeting all expenses of operation and management, and after providing for depreciation, wealth tax and bonus to employees, the working of the Company shows a profit of Rs. 7,91,680 (Rs. 6,43,211) which, by adding Rs. 779 (Rs. 10,568), being the amount brought forward from last year's account comes to Rs. 7,92,459 (Rs. 6,53,779). The directors recommend that the following appropriations be made:

To provision for proposed dividend at 7 (6) per cent. without deduction of income-tax on the paid-up capital of the Company as at 31st December, 1958, absorbing Rs. 5,90,000 (Rs. 5,03,000), to provision for part repayment of guaranteed dividend account to the Government of Bombay Rs. 1,50,000 (Rs. 1,50,000), to provision for wealth tax 1957 balance Rs. 1,544 (nil), to preliminary expenses written off Rs. 35,641 (nil) and to exploratory expenses written off Rs. 14,128 (nil) leaving a balance to be carried forward of Rs. 1,146 (Rs. 779).

Production and despatches.—Production of clinker and cement during the year corresponded with the rated capacity of the plant, namely, 1,01,004 tons of clinker and 1,01,011 tons of cement, against 1,00,027 tons and 1,04,530 tons, respectively, in the previous year. The despatch of cement amounted to 1,00,494 tons, against 1,05,129 tons in the previous year. The fall in the production and despatch of cement during the year was due to limited storage capacity and suspension of work of Government projects during the monsoon period.

Expansion.—All the machinery ordered to extend the Company's cement manufacturing capacity at Bagalkot by another 100,000 tons a year has been received at Bagalkot. Two German erectors sent by Messrs. Krupp, the machinery suppliers, have been engaged in the erection work since April 1959. The directors expect that the new kiln may be put into commission before the end of the current year.

Tariff Commission.—The Government of India agreed to implement the recommendations made

by the Tariff Commission in regard to fixation of prices to individual cement manufacturing units. The Government expressed their inability to make this increase in prices with retrospective effect, as the Tariff Commission had recommended. This meant that this Company would get the benefit of price increase of Rs. 3 per ton only for a period of six months of the year under review. The effect of the price increase, therefore, has been reflected in the profits of the Company to the extent of only six months' operations.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	84,40,816	Gross block	1,90,39,819
Reserves ...	42,000	Less—Depreciation	24,56,957
Provision for wealth tax	40,000	Net block	1,65,82,862
Liabilities	1,24,09,368	Stock-in-trade	5,38,506
Profit and loss account (surplus)	1,146	Stores, spares and loose tools, etc.	17,31,674
		Debits, deposits and advances	14,12,168
		Investments	8,122
		Cash	86,863
		Miscellaneous expenditure	5,73,635
	Rs. 2,09,33,830		Rs. 2,09,33,830

Mysore Electrical Industries Ltd.

The directors of the above Company (Managing Director: Mr. N. G. Ayyangar, Bangalore) present the audited accounts of the Company for the year ended 31st March 1959.

After providing for all expenses and payment of bonus to staff, depreciation provision of Rs. 1,09,829 (Rs. 1,04,286) and writing off Rs. 1,989 (Rs. 4,702) for obsolete and discarded assets and adding Rs. 4,321 (Rs. 29,044) being last year's profit brought forward, the total amount available for appropriation is Rs. 5,68,429 (Rs. 5,90,342). The directors recommend appropriation of this amount as follows:

To provision for income-tax Rs. 3,20,000 (Rs. 2,40,000), to dividend at 15 (11) per cent. per share free of income-tax on 9,050 shares Rs. 1,35,750 (Rs. 99,550), to development reserve Rs. 62,867 (Rs. 29,348), to general reserve Rs. 30,000 (Rs. 47,000), to donations to educational institutions, etc. Rs. 15,000 (Rs. 20,000) and carry forward a balance of Rs. 4,812 (Rs. 4,321) after providing Rs. 36,623 to reserve for development rebate and appropriating Rs. 23,500 to Industrial Finance Corporation loan redemption fund).

The production of various products of the Company, both low tension and high tension has been maintained at a high level during the year. However, a trend for a shift in demand from the light L.T. Motor Control Gear to heavier L.T. Gears and to High Tension Gears probably due to a number of small scale manufacturers entering the light motor control gear field is noticed. The Company is in a happy position to meet such shifts due to the diversity of the products it manufactures.

To enable expansion of production, machine tools to the value of Rs. 51,468 were added and applications for the import of special machine tools not manufactured in the country have been made and are awaiting sanction of import control authorities. Manufacture of components required were continued to be farmed-out to small factories round about Bangalore and other places to a much larger extent than in the previous years. Land required for the expansion of the factory as explained in the directors' last report has now been acquired. This land is situated on a main arterial way. The layout of the factory has been finalised and the economical design of the buildings, etc., is now in progress. The finances to the extent of Rs. 11 lakhs approximately required for these expansions is proposed to be met partly by borrowings and partly by raising new capital to the extent of Rs. 5 lakhs by the issue of equity shares.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	9,05,000	Gross block	12,14,622
Reserves ...	3,88,838	Less—Depreciation	5,16,828
Provision for taxation ...	3,33,444	Net block	6,97,793
Liabilities	16,89,759	Stock-in-trade	2,76,288
Profit and loss account (surplus) ...	4,812	Raw materials, stores and tools, etc.	7,97,570
		Debits, deposits and advances	15,46,979
		Cash	3,123
	Rs. 33,21,753		Rs. 33,21,753

Britannia Biscuit Co., Ltd.

The directors of the above Company (Managing Director: Mr. K. Julian Scott, Calcutta) present the audited accounts of the Company for the year ended 31st March 1959.

After providing Rs. 5,65,903 (Rs. 5,98,034) for depreciation and reserving Rs. 16,23,000 (Rs. 11,80,000) for income-tax and super tax, and Rs. 55,000 (Rs. 89,848) for wealth tax the profit and loss account shows a net profit for the year of Rs. 13,35,604 (Rs. 10,36,359). To this must be added the amount brought forward from the last year of Rs. 2,18,164 (Rs. 1,84,683) making a total of Rs. 15,53,768 (Rs. 12,21,042). The directors have transferred to reserve for taxation contingencies Rs. 1,00,000 (Rs. 2,00,000), to general reserve Rs. 2,50,000 (Rs. 2,50,000), to debenture redemption reserve Rs. 3,00,000 (nil) and to development rebate reserve Rs. 43,000 (nil) leaving a balance of Rs. 8,60,768

(Rs. 7,71,042). The half-yearly dividend on preference shares and an interim dividend of 4 (3) per cent. on ordinary shares paid in January 1959 absorbed Rs. 1,84,499 (Rs. 1,38,529). It is recommended that the balance of Rs. 6,76,269 (Rs. 5,32,513) at the credit of the profit and loss account be dealt with as follows:—

To payment of a dividend on preference shares without deduction of income-tax absorbing Rs. 618 (Rs. 618) and to payment of a final dividend of 10 (9) per cent. with-out deduction of tax (making 14 (12) per cent. for the year) on ordinary shares absorbing Rs. 4,59,702 (Rs. 4,13,731) leaving to be carried forward a balance of Rs. 2,15,949 (Rs. 2,18,164).

A review of the accounts for the year ended 31st March 1959 shows a satisfactory increase in the value of sales, but the additional profit on turnover was to a considerable degree absorbed by a further rise in manufacturing costs, wages and income-tax.

The increase in sales from Rs. 1,84,64,000 to Rs. 2,04,35,000 creates a new record in the annals of the Company. The figures establish that the demand for the Company's products continues to grow and the directors look forward to the future with sober confidence. Quality is the keynote of this Company's policy and particular attention is paid to maintaining and improving the recognised standards. The selection of the finest ingredients available guarantees the superior taste and keeping quality of the outstandingly popular products.

A few years ago the directors decided to install Automatic Packaging Machines. In the period that has elapsed the demand for biscuits in packets has substantially increased and the Company is eager to encourage this trend in order to ensure that the biscuits are delivered to consumers in the best possible condition at competitive prices.

The implementation of the plant replacement and modernisation programme remains severely curtailed owing to current import restrictions. The Company has nevertheless, managed to fabricate its workshops and to obtain from indigenous sources several items of ancillary equipment, but the acquisition of major capital plant remains a serious obstacle in the path of future expansion.

The Company's strenuous efforts to develop export markets continue. In spite of intensified foreign competition and extremely unfavourable trading conditions, indents have been secured from overseas, although it has been necessary to establish an unremunerative price structure in order to achieve these results.

If the Company is to expand its export sales, it is essential that import licences should be granted for special plant and machinery which is unavailable in India. It is also important to allow sufficient imports of ingredients and packaging materials for which there are no satisfactory substitutes available locally.

Several years ago this Company commenced manufacturing bread at the Delhi Factory and the directors are pleased to report that the project has proved extremely successful. Consumer demand has fulfilled the directors' expectations and they have recently increased the installed production capacity.

Accounts in brief are as under:—

	Rs. 1,48,36,306		Rs. 1,48,36,306

India Jute Co., Ltd.

The directors of the above Company (First Director: Mr. C. L. Bajoria, Calcutta) submit the audited accounts of the Company for the year ended 31st March 1959.

The accounts show a profit of Rs. 25,25,469 (Rs. 23,69,693) including Rs. 5,43,530 (Rs. 9,51,177) as dividends from the Megna Mills Co., Ltd., which is an increase of Rs. 5,83,423 in trading profit over that of the previous year.

The year's working shows a trading profit of Rs. 19,81,939 (Rs. 14,18,516). Adding thereto dividend for the year from investments in The Megna Mills Co., Ltd. of Rs. 5,43,530 (Rs. 9,51,177) there is a total of Rs. 25,25,469 (Rs. 23,69,693). Deducting provisions therefor for depreciation of Rs. 5,41,855 (Rs. 4,75,746), for income-tax Rs. 10,39,859 (Rs. 3,82,500) and for wealth tax Rs. 74,115 (Rs. 79,693) there is left a profit of Rs. 8,69,640 (Rs. 14,31,754). To this amount is added the balance brought forward from the pre-vious years of Rs. 84,575 (Rs. 94,993), items relating to previous years of Rs. 5,385 (Rs. 1,392) and (nil) making a total of Rs. 1,10,99,600 (Rs. 1,50,000) including Rs. 789 being income-tax on interest on forfeited dividends paid Rs. 46 (Rs. 1,978) and transfer to development rebate of Rs. 1,81,500 (Rs. 51,474) leaving a balance of Rs. 9,28,054 (Rs. 11,75,476) including after transferring interim dividend for the year ended 31st March, 1959, declared by the Directors on 7th November 1958, at 62 (Rs. 3.75 per share absorbed Rs. 4,33,008 (Rs. 2,61,900) leaving an available balance of Rs. 4,95,046 (Rs. 8,13,574).

From this amount the directors recommend payment of a final dividend on 6,98,400 (69,840) ordinary shares at 62 (Rs. 11.87 shares of Rs. 125 paid) Naye Paise per share for the year ended 31st March 1959 absorbing Rs. 4,33,008 (Rs. 2,61,900) leaving a balance to be carried forward of Rs. 62,038 (Rs. 84,575).

In accordance with The Indian Jute Mills Association working time agreement, the Mills worked 48 hours per week with 124 per cent. of the total complement of looms sealed up to the 28th February 1959, when the Association decided to seal a further 14 per cent. in an attempt to stabilise the gunny market and reduce the accumulated stocks of heavy goods. This decision followed that reached on the 16th February 1959, to freeze the balance of accumulated loom hours. The effect of these measures was reflected in the unsealing of the above 14 per cent. as from the 22nd June 1959, when the stock position showed signs of improvement. Now the Association's latest decision to unseal a further 24 per cent. looms as from the 24th August 1959, though for a restricted period up to 2nd January 1960, means that the Industry's production will reach its highest peak since the end of 1956.

The modernisation of the Preparing and Spinning Departments from the Company's funds and The National Industrial Development Corporation Private Ltd.'s loan has progressed satisfactorily and the scheme will soon be completed.

On the 18th March 1959, it was decided to close No. 3 Mill due to uneconomic working and arrangements are being made to transfer the productive capacity to No. 2 Mill. Subsequently the directors agreed to sell No. 3 Mill comprising approximately 65,815 sq. ft. of land and buildings thereon.

The Company has recently purchased a Cotton Mill, Shree Radheshyam Mills Ltd., which has been standing idle for some time. Arrangements are being made to commence manufacture of Cotton Fabrics.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	87,30,000	Gross block	1,52,85,168

	Rs. 1,77,87,497		Rs. 1,77,87,497

*Includes wealth tax amounting to Rs. 76,115.

Hasimara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport and Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

Except for drought conditions until mid-April weather was more or less seasonable but the attack of red spider was severe in almost all estates and a crop of 67,524 (54,11,891) maunds was made against an estimate of 73,300 maunds for the season.

The total net average sale price obtained per pound of tea was Re. 1.95 (Re. 1.82) for Hasimara Division and Rs. 3.43 (Rs. 3.32) for Tumsong Division. Total working cost per pound of tea produced was as follows: Hasimara Division Re. 1.75 (Re. 1.62) and Tumsong Division Rs. 2.94 (Rs. 2.94).

The gross profit for the year is Rs. 12,39,685 (Rs. 10,40,053) and after allowing for provision for bonus to labour Rs. 1,38,000 (Rs. 1,50,000) for taxation Rs. 9,80,192 (Rs. 5,37,079) and development rebate reserve Rs. 15,286 (nil) and writing off Rs. 5,17,803 (Rs. 4,63,808) for renewals, replacement and depreciation of assets and the other adjustments shown in the profit and loss account there is a net profit of Rs. 1,43,809 (Rs. 2,50,929) after transferring Rs. 3,25,000 to general reserve which together with the balance brought forward from 1957 gives a total available on this account of Rs. 5,08,980 (Rs. 6,26,371) which the directors propose to deal with as follows:—

To pay the preference dividend at 7 per cent. free of income-tax for 1958 absorbing Rs. 21,000 (Rs. 21,000), to pay a dividend of 74 (74) per cent. free of income-tax on the ordinary shares absorbing Rs. 2,40,000 (Rs. 2,40,000) and to carry forward to 1959 Rs. 2,47,980 (Rs. 3,65,371).

Estimates for 1959 have been based on a crop of 69,900 maunds of tea at a total cost of Rs. 97,69,000.

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	35,00,000	Gross block	1,10,67,827
Reserves ...	55,83,253	Less—Depreciation	54,90,898
Provision for taxation ...	5,00,648	Net block	55,76,929
Liabilities	37,55,618	Stock of tea	35,29,535
Profit and loss account (surplus) ...	2,47,980	Stores and spare parts	18,65,468
		Debits, deposits and advances	13,06,896
		Investments	8,62,977
		Cash	4,45,692
	Rs. 1,35,87,497		Rs. 1,35,87,497

Gillapukri Tea and Seed Co., Ltd.

The directors of the above Company (First director: L. C. Kanoji, Esq., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

Crop.—A crop of 7,49,907 lbs. of tea inclusive of 9,985 lbs. in wastages, etc., was secured in the season against 6,56,148 lbs. in 1957. This crop was disposed of as follows:—

By a total internal and with export quota rights sales effected both at Calcutta and in foreign markets 4,28,500 lbs. and by staff consumption, shortage on sampling and handling and tea waste being destroyed for which no price was obtained 9,985 lbs. Thus a closing stock remained in hand as on 31st December 1958 for sale in 1959 amounting to 3,11,422 lbs. The directors estimate that the production for the year 1959 should be more or less the same as that of the year under review.

The accounts show a revenue profit of Rs. 2,71,803 (Rs. 2,85,633) on which provision for taxation absorbs Rs. 1,29,000 (Rs. 1,32,000) leaving a balance of Rs. 1,42,803 (Rs. 1,53,633). Adding to this the balance brought forward from last year of Rs. 16,110 (Rs. 17,708) and the previous year's adjustment of Rs. 6,689 (nil), the total comes to Rs. 1,65,602 (Rs. 1,71,341). The directors propose to transfer to general reserve a sum of Rs. 20,000 (Rs. 27,247) leaving an amount for disbursement to the shareholders of Rs. 1,45,602 (Rs. 1,44,094). From this the directors recommend a tax-free dividend for the year 1958 at Rs. 2.50 (Rs. 2.50) per share of Rs. 10 each absorbing Rs. 1,25,940 (Rs. 1,25,940) leaving a balance to be carried forward to 1959 of Rs. 16,110 after adjustment in respect of previous year amounting to Rs. 2,044).

Accounts in brief are as under:—			
LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	5,03,760	Gross block	16,03,422
Reserves ...	6,02,614	Less—Depreciation	5,76,961
Provision for taxation ...	5,61,981	Net block	10,26,461
Liabilities	14,38,565	Stock of tea	4,85,984
Profit and loss account (surplus) ...	19,662	Stores, etc.	30,016
		Debits, deposits and advances	6,88,502
		Investments	8,67,829
		Cash	27,790
	Rs. 31,26,582		Rs. 31,26,582

Birpara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1958.

The accounts disclose a working profit of Rs. 2,82,339 (Rs. 1,46,094). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 5,96,356 (nil) from depreciation reserve there is a balance at credit of the profit and loss account amounting to Rs. 8,15,264 (Rs. 1,83,350), of which the directors have transferred Rs. 50,000 (Rs. 50,000) to revenue reserve, Rs. 5,96,000 (nil) to buildings and machinery reserve and Rs. 10,000 (nil) to development rebate reserve.

The directors recommend that dividends of 8 per cent. on the preference shares and 124 (74) per cent. on the ordinary shares, both for season 1958, be declared at the annual general meeting, leaving Rs. 38,764 (Rs. 47,850) to be carried forward.

Tea crop was 12,67,475 lbs. as compared with 11,23,916 lbs. in 1957. The average selling price realised was Rs. 2.06 per lb. as against Rs. 2.04 per lb. in the previous year.

Estimates for 1959 provide for a crop of 12,80,000 lbs. at an outlay of Rs. 23,20,665, including inland freight and sale charges.

Planted area is now 1,346.48 acres after the abandonment of certain unproductive areas.

Notices

THE MYSORE SPINNING AND MANUFACTURING COMPANY, LTD.

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Sixty-sixth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Tuesday, the 27th October, 1959, at 4-30 p.m., for the purpose of transacting the following business:—

MINISTRY OF RAILWAYS (RAILWAY BOARD)

TENDER NOTICE

Manufacture of Cast Iron Sleepers

TENDERS ARE INVITED FROM ESTABLISHED foundries in India, having experience in the manufacture of Cast Iron Sleeper Plates for supply, by 31st December 1960, of about 2,50,000 Tons of Cast Iron Sleeper Plates both B.G. and M.G. Tenderers may quote for any small quantity according to their capacity.

2. Railway Board would recommend to the Iron and Steel Controller the issue of Pig Iron according to the requirements of the supplier up to a maximum of 100 per cent. of the quantity of sleepers ordered on the firm. The firms are expected to make up the melting losses under their own arrangements.

3. Applications for tender documents should be made to the Director, Railway Stores, Railway Board, State Entry Road, New Delhi. Tender documents embodying conditions of contract, relevant drawings, etc., will be supplied at Rs. 10 per set and will be available for sale during office hours.

4. Tenders will be received upto 12.00 hours on the 6th November, 1959 and opened in the office of the Railway Board on State Entry Road, New Delhi, at 15.00 hours on the same day.

DIRECTOR, RAILWAY STORES.

NEW DELHI,
Dated 14th September 1959.

THE NATIONAL NEWSPRINT & PAPER MILLS LIMITED, NEPANAGAR (M.P.)

NOTICE TO SHAREHOLDERS

TO COMPLY WITH THE PROVISIONS OF section 619 (5) of the Companies Act, 1956, the Annual General Meeting fixed for 28th September 1959 at Nepanagar is postponed to a future date which will be notified later on.

By Order,
S. L. VISVANADHAN,
Managing Director.
NEPANAGAR, 17th September 1959.

COTTON

(Concluded from page 510)

with Central and South American and Asian countries could, of course, upset this calculation. Cotton consumption in Japan is more or less fixed by the cotton import budget which has been raised during this fiscal year by about 270,000 bales. This, Mr. Schilling infers, indicates that the position of the cotton textile industry is fairly good and that, in the near future, cotton is not expected to lose markets further to man-made fibres. Also, according to him, except for the \$30 million loan recently obtained from the U.S. Export-Import Bank, Japan will not need any U.S. aid in financing purchases of U.S. cotton as its foreign exchange position has improved materially during the past twelve months.

As regards India, Mr. Schilling hopes that the status quo will be maintained in respect of cotton imports. Import of U.S. cotton in 1959-60 may, however, increase with India importing 150,000 bales, as against less than 90,000 bales last season, practically all with U.S. aid funds.

U.S. exports to Australia might be larger in 1959-60 than in the last season and be equal to 75,000 bales, thanks to the present competitive position of U.S. cotton.

It is recognised that export demand for U.S. cotton depends to a large extent, upon how competitive U.S. prices are, except in the case of those countries that rely exclusively on U.S. aid programme. Holding and expanding markets for U.S. cotton will, Mr. Schilling concludes, be largely influenced by the price level.

MUNICIPAL LOAN EXPECTED TO BE OVERSUBSCRIBED

(From Our Own Correspondent)

BOMBAY, 23rd September

In the absence of any fresh developments, there is nothing new to say about the money market this week also. The Bombay Municipal loan was announced shortly after this column was written last week, but the notification came in time to be recorded on an earlier page in that issue. The list for this 4 per cent. 1971 Rs. 5-crore issue opens next Monday, the 28th inst. Market circles are confident that this loan will be heavily oversubscribed, as most of the banks are sure to apply for it, in order to be in the good books of the Municipality. It is common knowledge that, in view of its large commercial undertaking—the B.E.S.T.—in addition to the usual functions of a municipal corporation, the Bombay Municipality is a very valuable customer to a bank. And every bank tries its best to get some business from this Local authority. It is said that even Exchange banks, which were not hitherto investing in this loan, will be evincing some interest this year.

Last week, that is, on the 17th inst., the Madras State Electricity Board floated a 4½ per cent. 1971 loan at par. The amount required was Rs. 3 crores, but within half an hour of the opening of the list, the issue was oversubscribed, by nearly a crore of rupees. There is one more instance of the large surfeit of funds with institutional investors.

As can be understood from the opening sentence of this report, the short-term money market continues to be easy and dull. In the absence of any variations in interest rates and with weekly statements of the Reserve Bank and scheduled banks lagging behind a week and a fortnight, respectively, it is not possible to say, with any degree of precision, whether money is more easy or less easy now than a week ago. Almost all banks, however, are willing to pay for one-week house money and short-term deposits the maximum rates allowed under the inter-bank agreement. These are 3½ per cent. for one-week deposits and 3½ per cent. for one to six months' deposits. The rates generally quoted are 3 to 3½ per cent. for one-week house money and 3 to 3½ per cent. for one to six months. In either case, the lower rate rarely prevails. Inter-bank call money fetches 1½ per cent. among the big Indian banks and Exchange banks and 2 per cent. among the smaller banks.

The 91-day Treasury Bill results show a mixed trend. While sales of Bills on tap were as much as Rs. 2 crores between 16th and 19th September 1959, as against only Rs. 1 crore in the corresponding period of the previous week, the response to Bills by tenders was somewhat lukewarm. Thus, the amount offered was no more than the amount invited, namely, Rs. 2 crores, and the average rate of accepted tenders remained unchanged at 2.44 per cent. per annum. In the previous week, offers for these Bills were Rs. 2.64 crores, that is, Rs. 64 lakhs in excess of the amount invited. Sales of both intermediate Bills and Bills on weekly tenders are being continued in the coming week.

A reduction of Rs. 12.47 crores in notes in circulation and an increase of Rs. 3.82 crores in notes held in the Banking Department are disclosed by the statement of the Reserve Bank for the week ended 18th September 1959, as compared with that for the previous week. The total notes issued are down by Rs. 8.65 crores and this has been balanced on the assets side of the issue Department by an influx of Rs. 1.26 crore in rupee coin and reduction of Rs. 9.92 crores in rupee securities. There is no change, again, in the foreign securities held in this department, but balances abroad, in the Banking Department, are lower by Rs. 3.32 crores, thereby bringing down the total foreign assets to Rs. 163.04 crores. On Central Government's deposits, the Reserve Bank has Rs. 7.51 crores and so also those of banks by Rs. 4.40 crores. Deposits of other Governments have shown a minor fall of Rs. 50 lakhs. On the assets side, besides the fall in the balances held abroad as noted above, the only notable variation is a rise of Rs. 6.69 crores in other loans and advances.

The latest available statement of scheduled banks is for the week ended 11th September 1959 which, as compared with that for the preceding week, reveals a rise of Rs. 7.87 crores in demand deposits and of Rs. 2.82 crores in time deposits. With these increases the total deposits of scheduled banks are short of the Rs. 1,800-crore mark by only Rs. 4.77 crores. As regards inter-bank borrowings, while those of demand nature have declined by Rs. 1.06 crore, those of time nature have gone up by Rs. 3.39 crores. There is not much change in the borrowings from the Reserve Bank but lakhs. Advances and bills purchased have contracted further by Rs. 8.70 crores to stand at Rs. 928.70 crores. Investments have advanced by Rs. 9.38 crores, money at call and short notice by Rs. 1.84 crore and total cash by Rs. 5.06 crores. All these variations are fully in consonance with that week.

There has been a further hardening of rates for the Central Government securities, thereby imparting more firmness to the gilt-edged markets. Over the week, a rise of 15 nP is seen in the rise of 5 nP has taken place in 3½ per cent. 1967, 3½ per cent. 1968, 1967 and 1964. These increases are mainly the result of a stepping up in the selling rate of Reserve Bank. There has been no worthwhile change in the loans of State Governments.

Pound sterling continues to rule firm. In the New York market, spot sterling is a shade better at 280.69-280.72 cents per £. Similarly, three

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 23rd September

The bullion market moved irregularly during the week under review. Thus, it put on a dull appearance in the first three sessions and, after staging a distinct recovery on Monday, developed a sagging tendency again thereafter. Early in the week, both gold and silver were depressed, thanks to fears of reduced demand following damage to crops on account of heavy rains and floods in several parts of the country. Professional interests were inclined to reduce their commitments. There were also stopless offerings by option dealers. Consequently, prices of both metals tended to decline. On Monday, the sentiment of the market improved, owing to consistent buying from Calcutta and Delhi operators, firmness of commodities, and encouraging advices from the share market. These factors induced a recovery in prices. The recovery, however, abated yesterday when the market experienced long liquidation and professional offerings which persisted today too. Over the week, gold was markedly lower, but silver was higher.

October settlement in gold moved down from Rs. 122-6 to Rs. 120-12 on Friday and, after recovering to Rs. 122-5 on Monday, receded to Rs. 121 today, before finishing at Rs. 121-3-6. The net loss over the week was Re. 1-2-6. September settlement ran off the board of the Exchange at Rs. 121-3-6 on the opening day, that is, Thursday, the 17th inst., as against Rs. 121-14-6 on the previous day.

Ready gold was subjected to selling earlier in the week, the quotation declining from Rs. 122-1 to Rs. 120-6. It recovered subsequently to Rs. 121-13 on the 21st inst., but fell again to Rs. 120-8 today. Towards the close, it was As. 3-6 better. The daily average arrivals of gold were 3,200 tolas, while the offtake was 3,900 tolas. The floating stocks of gold are estimated at 60,000 tolas.

September settlement in silver went off the board at Rs. 202-6 on Friday, as against Rs. 202-11-6 on Wednesday last week. October settlement gave way Friday at Rs. 203-11 to Rs. 202-7 on Friday. After recovering to Rs. 205-12 on Monday, it receded again to touch low Rs. 204-4 yesterday. Opening at Rs. 204-15 today, it finished easy at Rs. 204-11. November settlement fluctuated between Rs. 203 and Rs. 206-4, before closing at Rs. 205-3 today.

Ready silver began the week at Rs. 202-13, as against Rs. 202-14 last week-end, and dropped on selling pressure to Rs. 201-11 on Friday. After improving to Rs. 204-12 on Monday, it moved down again to Rs. 203-7 today. The closing rate was As. 4 better. The daily average arrivals and offtake of silver were 26 bars and 8 bars, respectively. The floating stocks are reported to be around 400 bars.

Both ready and forward silver in the London bullion market remained unchanged during the week under review, the former at 79d. per ounce and the latter at 78½d. Silver in New York was also unaltered at 91.375 cents per ounce. Ready gold in London eased from 250s. 8d. to 250s. 4½d., owing to the firmness of the pound sterling vis-à-vis the dollar. The latest available rate for dollar gold in London is \$35.11½-\$35.13½ per ounce, same as last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	23-9-59	Highest	Lowest	16-9-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (100 fine Mint)	120 11 1/2	121 13	120 6	122 1
Forward	121 3 1/2	122 5	120 12	122 6
Sovereign	78 4	78 4	78 0	78 4
Ready (100 fine Mint)	203 11	204 12	201 11	202 10
Forward	204 11	205 12	202 7	203 11
London Silver Ready	21-9-59	—	—	14-9-59
London Forward	78 1/2	—	—	78 1/2
London Gold	240s. 4 1/2	240s. 4 1/2	239s. 4 1/2	240s. 4 1/2
New York Silver	91.375c.	—	91.375c.	91.375c.

KIPS WELL SUPPORTED

(From Our Own Correspondent)

MADRAS, 21st September

The kip market ruled steady. Arrivals were small and were taken up briskly by exporters. Shipment business was selective, considering that U.K. inquiries were for special lines and marks. Importers were trying to force prices down which tanners resisted because of their inability to cover replacement costs in the raw centres.

There was good demand for low grade cow hides for inland trade and prices ruled firm. Tanned cow-calf and buff calf were in short supply and the market was firm.

There was good call for tanned goat light weights and prices touched 20s. for Run-5 per cent. above Korean levels. Tanners expect better demand for other lines, as also for middle class sheep from October onwards.

Months' forward is quoted at 281.05-281.08. A week ago, the rates for spot and months' forward sterling were lower by 0.38 cent. and 0.34 cent., respectively. Following the continued strength of sterling, the rupee also has improved in terms of U.S. dollar. The banks' selling rate for ready T.T. has come down from Rs. 477.50 to Rs. 477 per 100 dollars. Similarly, their buying rate has fallen from Rs. 474.25 to Rs. 473.50.

IMPRESSIVE RALLY IN COTTON

(From Our Own Correspondent)

BOMBAY, 23rd September

The cotton futures market, after having ruled subdued during the first two days of the week, staged an impressive rally in subsequent sessions. The earlier weakness was attributed to profit-taking and speculative selling prompted by the report that earlier fears of damage to crop in Berar, Khandesh and Vidharbha areas were exaggerated. The much-needed clear and sunny weather was said to have set in in these regions. Operators were inclined to think that however extensive the damage done by adverse weather, the crop this season would not turn out to be smaller than last season's 4.8 million bales. Persistent selling induced by these considerations brought down the Jarilla March contract from the opening level of Rs. 713 on Thursday to Rs. 711.50 the next day. This level attracted extensive short-covering and renewed bull support. Shortage of supplies in the ready section and the sustained mill demand for practically all varieties of cotton imparted further strength to the market. Under pressure of large-scale buying Jarilla March contract spurted to Rs. 723.75 yesterday. The firm trend continued till the close today.

I.C.C. Moglai Jarilla March 1960 opened the week at Rs. 713 and, after declining to Rs. 711.50, improved to Rs. 723.75 yesterday. Opening at Rs. 719 today, the contract rallied to Rs. 723.25 before finishing lower at Rs. 722.25. The net gain over the week was Rs. 9.50.

In the spot section, brisk activity was reported. Spinners made extensive purchases of new crop. Over two lakh bales of new crop were reported to have been booked so far for December-January delivery. The varieties which attracted the special attention of mills were 197/3, 0394, Berar, etc. There were practically no sellers for new crop Vijay and Digvijay. Southern and Ahmedabad mills, in particular, bought sizable quantities of new crop. Old crop, too, found favour, thanks to the fear of shortages of supplies.

Export demand slackened. Nevertheless, enquiries were reported from Japan for superfine Bengal. Business done was, however, small, thanks to small offers. Continental countries were also interested in Bengal Deshi. Routine business was done in zoda and yellow pickings.

Interest in foreign cotton was subdued. Spinners were on the look out for high grade Sudan and selected East African growths. U.S. cotton also attracted some attention. Turnover was, however, limited. Mr. Rula's plea at the annual meeting of the Cotton Buyers' Association for liberalisation of imports was greatly welcomed by the trade which hoped that the Government would give due consideration to it.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal Deshi 700; Berar Jarilla 790; Hubli Laxmi 990; Jaydhar 885.

The easy conditions witnessed in the Karachi cotton futures market towards the close of last week gathered momentum during the week under review. Values receded on profit-taking and lack of support. Export demand was subdued. N.T.R.G. January came down from Rs. 64-9 last week-end to Rs. 64-7. The March contract dropped As. 3 over the week to Rs. 64-12. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind Deshi 78; Punjab Deshi 67; 4F Punjab Roller 70; S.G. 71-8; L.S.S. Punjab Roller 71; S.G. 72; N.T. Roller 78; S.G. 82; 289F Punjab Roller 71-8; S.G. 73-6.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. The quotation for both the long-staple Karnak and medium-staple Ashmouni contract declined on hedge pressure and liquidation. Foreign demand was weak while crop news was encouraging. The export price discount was reduced by 4 per cent. to 22 per cent. on Monday. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 70.50; January 70.82. Ashmouni: October 60.03; December 59.60.

Cotton futures in Liverpool suffered a setback during the week, thanks to hedge selling, and Commission House liquidation which were only partly absorbed in short covering. The large-scale scrapping of machinery in the textile industry under the redundancy scheme led to fears that demand for raw cotton would fall. This discouraged buying support. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one-inch staple contract: October-November 21.60; December-January 21.65; March-April 21.70; May 22.05.

American cotton mixed growth contract: October-November 22.00; December-January 21.95; March-April 22.10; May 22.15.

Sudan: September-October, November-December, January-February 22.75.

New York cotton futures market ruled fairly firm. Values advanced on trade buying and mill support which was influenced by the increased activity in the yarn and piecegoods market and the shortage of cotton for immediate shipment. Reports that rains had delayed cotton harvesting favourably affected sentiment. The near delivery months were, however, a shade easy.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	22-9-59	14-9-59	8-9-59
Spot	...	32.90	32.90	33.10
October	...	32.50	32.58	32.41
December	...	32.38	32.21	32.25
March	...	32.83	32.68	32.67

ART SILK YARN FIRM

(From Our Own Correspondent)

BOMBAY, 23rd September

Art silk yarns and staple fibre yarns ruled distinctly firm during the week under review, while cotton yarns were somewhat easy. The firmness of art silk yarns was aided by reports that the Continental manufacturers had raised prices of yarn by 2d. to 3d. per lb. and that they were trying to revive the cartel which existed a few years ago with a view to maintaining prices at high levels. A section of local traders are, of course, sceptical about the success of the proposed move, as they think that several Continental producers secretly undersell art silk yarns at lower prices without the knowledge of the proposed cartel. Even the marked shrinkage in demand from Surat and other weaving centres as a result of the heavy rains and floods had no effect on the market. The rumours of heavy arrivals of imported yarns against licences granted under the Export Promotion Scheme for art silk fabric, too, failed to have any effect. In sympathy with art silk yarns, staple fibre yarns also tended to look up. Cotton yarns, however, were easy, despite firmness of raw cotton prices. The easiness was due to slackness in inquiries from handlooms and powerlooms, especially in the northern part of Bombay State.

An official announcement says that it is now permissible to import all types of art silk yarns by actual users against rupee payment quota from East Germany, Hungary and Egypt. It will be recalled that the State Trading Corporation had earlier made arrangements for the import of only viscose art silk yarns on rupee payment from the aforesaid sources. The prospective importers are now asked to book orders for import of art silk yarn through the authorised agents of the foreign suppliers concerned against 24 per cent. of their quota licences. The orders will be subject to observance of the face value restrictions on imports of certain special types of yarn such as viscose, acetate, and a few deniers of synthetic yarn.

Cupressa Bamberg yarn (60X2) October contract jumped up from Rs. 1,614 to Rs. 1,632. December position improved from Rs. 1,646 on Friday, the 18th inst., to Rs. 1,655 today. Spot Cupressa recorded a gain of 3 nP, today's closing rate being Rs. 7.28. Among imported yarns, 120 Japan spurted by 19 nP to Rs. 4.94. 150 Japan rose by 9 nP to Rs. 4.78. 120 Italy advanced by a like amount to Rs. 4.84. 150 Italy put on 6 nP to Rs. 4.71. Among indigenous yarns, National Rayons 150 bright cones first grade gained 3 nP to Rs. 4.19. 120 bright cones first grade were steady at Rs. 4.49.

Staple fibre yarns (40X2) October contract rallied from Rs. 665 to Rs. 678. December contract was firm at Rs. 668 today, as against Rs. 649 early on Friday. Centuries increased by 10 nP to Rs. 3.72. Citys hardened by 3 nP to Rs. 3.59. Kohinoors were fully maintained at Rs. 3.75. Among imported yarns, 80X2 Paramounts and Fujis strengthened by 6 nP each to Rs. 7.87 and Rs. 8.56, respectively.

In the cotton yarn section, ten counts Podars came in for selling and dropped 12 nP to Rs. 14.50. Twenty counts Moderns were dull at Rs. 18.25. Forty counts Moderns fell by 25 nP to Rs. 26.25. Minaxis rose by 12 nP to Rs. 25.50. Sixty counts Raghavamsis were neglected at Rs. 56.50, as also Finlays at Rs. 63. Eighty counts Mahendras declined by 25 nP to Rs. 73.25. Moderns eased by a like amount to Rs. 75.75. Finlays and Citys were both quiet, the former at Rs. 82 and the latter at Rs. 68.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those eight days before.

	22-9-59	14-9-59
Art silk yarn—		
60/1 Cupressa Bamberg October (100 Kg.)	Rs. 1,632	Rs. 1,614
60/1 Cupressa Bamberg spot (per lb.)	7.28	7.25
120 Japan (per lb.)	4.94	4.84
150 Japan (per lb.)	4.78	4.69
120 Italy (per lb.)	4.84	4.75
150 Italy (per lb.)	4.71	4.65
Staple fibre yarn—		
40 X 2 October (per case of 200 lbs.)	678.00	665.00
40 X 2 Kohinoor (per lb.)	3.75	3.75
40 X 2 City	3.59	3.56
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.50	14.02
20s Modern	18.25	18.75
40s Minaxi	25.50	25.62
60s Finlay	63.00	63.00
80s Mahendra	73.25	73.50

EXPORT QUOTA FOR H.P.S. GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, 23rd September

The firmness noted in the oilseeds market during the last fortnight continued unabated during the week under review. Under the leadership of groundnuts and cottonseeds, all other seeds and oils moved up to higher levels, thanks to better export prospects and reports of damage to crops from floods in the producing areas. An export quota for H.P.S. groundnuts was announced yesterday. The Government of India announced that established shippers of H.P.S. groundnuts will be given second repeat allotment equal to 25 per cent. of their basic year exports after they have completed shipment of H.P.S. groundnut quotas to which they are entitled at present. A trade notice issued by the Joint Chief Controller of Exports in Bombay yesterday further added that co-operative societies will also be given second repeat allotment equal to the quantity admissible to them earlier after they have completed shipment of H.P.S. groundnut quotas. The quota for H.P.S. groundnuts at this time is not viewed with considerable enthusiasm by traders, since a substantial portion of the previous quota remains unutilised.

In the groundnut section, there was a fresh bout of buying enquiries following reports of sizeable business having been done with Burma, the U.K. and some other countries. The upward trend in world prices for groundnut oil was another bullish factor. Supply position continues to be none too comfortable. The reports of heavy rains and damages to crops in the groundnut producing areas led to further keen buying enquiries. Groundnut February 1960, which had wound up last week at Rs. 170.75, gradually rallied to close today at Rs. 174.02. Bold ready improved by 25 nP to Rs. 40.25, after fluctuating between Rs. 38.87 and Rs. 40 over the week. Oil ex-mill rose by 37 nP to Rs. 20.87.

The castorseed section moved up in sympathy with groundnuts. Today, there were some reports of good business in oil with some of the communist countries. But for this, the export front was rather featureless during the week. Castorseed September 1959 contract rallied from Rs. 151.50 to Rs. 154.87, after moving both ways in a narrow groove, over the week. May 1960 contract advanced by Rs. 3.12 to Rs. 160.12. Bold ready picked up 13 nP to Rs. 30.75. Oil B.S. closed today firm at Rs. 16.94, as against Rs. 16.87 last week-end.

The linseed section, too, improved. There were some reports of business in linseed oil, particularly with Australia. Linseed May 1960 contract closed today on a steady note at Rs. 33.81, as against Rs. 33.44 last week-end, after moving between Rs. 33.37 and Rs. 33.69 over the week. Bold ready gathered 25 nP to Rs. 33. Linseed oil was higher by 10 nP at Rs. 16.50.

Buoyant conditions prevailed in the cottonseed section. The firmness in the raw cotton market imparted considerable strength. Cottonseed February 1960 contract spurted by Rs. 6 to Rs. 127.

The following table shows the closing prices of oilseeds and oils on the 23rd, as compared with those on the two previous weeks:

	23-9-1959	14-9-1959	9-9-1959
Groundnut			
February 1960	174.02	170.75	168.37

Oil commercial			
Linseed			
September 1959	—	32.25	32.62
May 1960	33.81	33.44	33.50
Bold ready	33.00	32.75	33.12
Oil ready†	16.50	16.40	16.87
Cotton seed			
September 1959	—	140.50	138.00
February 1960	127.00	121.00	117.00
Niger seed	31.00	31.50	30.50
Kardhi seed	22.50	22.75	22.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwts. A candy is 560 lbs. except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cent. and those for oil per quart.

BLACK PEPPER FIRM

(Messrs. Parekh & Co.)

BOMBAY, 23rd September

Malabar black pepper ruled firm but irregular, in line with black pepper at Singapore, which, after improving from Str.98 to Str.110, came down to Str.105. White pepper at Singapore rallied from Str.158 to Str.176 to drop to Str.167.

Unгарbled at Cochín witnessed hectic activities and touched the highest at Rs. 850, following heavy purchases by exporters who sold about 500 tons to East European countries. Ready garbled at Cochín showed a perpendicular rise from Rs. 133 to Rs. 144, following short-covering and fresh purchases by exporters. There were heavy fluctuations in October delivery, the highest and the lowest being Rs. 148 and Rs. 134, to come down to Rs. 139½ today. December moved between Rs. 128 and Rs. 144½, before finishing at Rs. 139½. Calcutt, after touching Rs. 900, is hovering around Rs. 860.

Spot in New York, after touching the highest at \$0.32½, came down to \$0.31, as grinders refused to follow through. The impending dock strike is reported to have created uncertainty in the market.

At the time of writing, Malabar is reported to be inactive, as both bears and bulls are awaiting development. Bears are not anxious to go short as the position is still not clear and there are more chances for the future improvement in the market, as the crop prospects of Lampung and Sarawak are disappointing.

The stock position at Singapore is very tight, as most of the stock is controlled by the bull syndicate. It is also reported that the bull syndicate in Singapore have purchased about 3,000 tons of Lampung black pepper for October for September-October shipment. If it is so, they who have made big money in their recent manipulations will not let down the market at least for the coming two or three months.

The future of the market depends upon the final outcome of Lampung crop and the selling policy of the Indonesian growers. The political and economical uncertainty in Indonesia is a supporting factor.

New crop of Malabar is estimated at 26,000 tons, but, in view of the light carryover, together with poorer Lampung and Sarawak crop, the prospects for Malabar this year appear to be brighter than those of the previous years.

Ready pepper in the local market is quoted between Rs. 108 and Rs. 112 per Bengal maund according to quality. The demand is not encouraging, owing to dislocation of railway transport, on account of floods.

TEA ADVANCES

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 18th September

In Sale No. 35 held on the 15th inst., 975,000 lbs. of teas were offered. Offerings showed a further improvement and a useful selection of high-grown teas was on offer. Against a strong active demand, prices were irregularly dearer for everything, particularly fannings of all types. Low mediums met with useful enquiry and were dearer by 5-10 nP. Medium broken were well supported and sold at 5-10 nP above last rates, whilst similar fannings, in particular black clean descriptions, were well competed for and, in some cases, prices advanced by as much as 25 nP. There was keen competition for improved quality high-grown teas and these were considerably dearer following quality. A small selection of tippy teas and C.T.C. teas met useful support. Whole leaf grades were quoted fully firm on last week's rates. The quotations were:

	1959	1958
Rs.	Rs.	Rs.
Low medium	1.65 to 1.75	1.55 to 1.70
Medium	1.90 to 2.10	1.80 to 2.05
Good medium	2.20 to 2.35	2.10 to 2.35
Quality	2.40 to 3.95	2.75 to 4.30

Dust sale 'Y', held on the 17th inst., comprised 320,000 lbs. The quality of dusts on offer was well maintained. There was good general keen interest in colour mediums and these were dearer by 5-10 nP. Other types, though they met with useful support, were irregularly easier by 5 nP. Black grainy descriptions continued in demand and were the strongest feature of the sale. C.T.C. dusts evoked useful demand at slightly lower rates than last.

London Market: Sale of 14th September 1959: Firm to dealer throughout. Orthodox Assams fannings strongest feature.

Sale of 15th September 1959: Dearer at top and bottom, steady in the middle.

Sale of 16th September 1959: Fully firm to dealer.

Colombo Market: Sale of 14th September 1959: Active general demand for top UVAS lower. Below best very irregular. Following quality Dimbula Dickyva broken were active and substantially dearer. Following improved quality mediums active and dearer by 15-20 cents. Low-grown teas dearer by 5-10 cents.

Sale of 15th September 1959: Active demand. All liquoring offgrades substantially dearer, particularly UVA sorts.

Calcutta Market: Export: Sale 14: 59,000 chests. Quite good general demand. Plain broken and fannings strong at about last rates. Few best C.T.C.s well supported. Remaining Assam C.T.C.s and orthodox easier by 20-30 nP. Some withdrawals.

Internal: Sale 14: 522,000 chests dust. Good general demand. Orthodox dealer by 4 nP. Medium C.T.C. irregularly easier. Best C.T.C. easier by 10-20 nP.

Export Quota: The market has continued to be rather quiet and some business has taken place at 2½ nP. At present, there are sellers at 2½ nP and buyers at 2 nP.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"Sale No. 36: 1,030,000 lbs. offered. Strong general demand, particularly for all fannings. Plain and low mediums dearer by 5-10 nP. Others irregularly dearer, following improved quality. Whole leaf teas were strong."

(From Our Own Correspondent)

CALCUTTA, 22nd September

Good demand was maintained during tea export sale held yesterday and internal sale of types eased. Quality teas firmed up, while poorer teas eased. The trade noted with disappointment the Union Commerce and Industry Minister's rejection of the plea for abolishing duty on tea, put forward at the meeting of the Export Advisory Council. The Minister referred to the recent readjustment of the export duty and said that frequent revision would create doubts in the minds of exporters and buyers. Mr. Lal Bahadur Shastri claimed that the Government had done all it could not rising to the occasion.

It is regrettable that the Minister's tone was far from helpful; however, industry and trade circles think that the Government should clearly come forward and state how the tea industry qualifies for such "unkindly" remarks. If prices are selling below cost of production, and yet the W. Bengal Government has increased the minimum wage of tea garden workers by Rs. 2 per day in talks, the W. Bengal entry tax on tea continues. The Centre also continues to benefit by its several levies on the tea industry.

During the year ended March 1959, 57.3 million lbs. more tea were exported, bringing to the total an additional foreign exchange of Rs. 18 aggregated 16 million lbs., which was more than double that of the previous year.

At a time when the tea industry is finding it difficult to make both ends meet, it is strongly felt private time to set up a Wage Board for the tea industry. The Government is reconsidering this question following representation from workers. The matter will come up at the forthcoming meeting of the Industrial Committee on Plantations.

During the week, considerable shipping space was taken up by tea. Shipments to the United Kingdom were substantial.

News of considerable importance is the commencement of marketing in London of instant tea by Nestles. The blend, which is new to Great Britain but which has been marketed in the U.S. and the Continent for the past several years, consists of leaf from Ceylon and Assam and other producing countries. It is claimed in London that "Nestea", as the blend is called, is cheaper than ordinary leaf but similar in quality.

At the sale for domestic consumption held on the 16th inst., dusts on offer amounted to 22,051 chests. General demand was good. Exportable kinds were much favoured, the orthodox manufacture hardening by 4 nP. Darjeelings were firm, with a rising tendency in leg-cu. teas. Medium C.T.C.s opened lower by 10 nP and soon declined by 15 to 20 nP. At this stage, interest was revived with the very best C.T.C.s receiving good attention towards the end of the sale. The quotations, exclusive of excise duty, were: Best Assam C.T.C. Rs. 2.50 to Rs. 2.70; medium Assam C.T.C. Rs. 2.00 to Rs. 2.05; medium Doars Rs. 1.90 to Rs. 2.00; and medium Assam Re. 1.88 to Re. 1.96.

Leaf on offer amounted to 901 chests. Green teas eased, while others met with good demand.

In the sale held at Chitagon on the 17th inst., the offerings amounted to 13,363 chests. They met with strong demand. Best liquorings added As. 4 and leg-cut fannings an anna to two. The rates were: O.F. Re. 1-13; P.F. Re. 1-8; and B.O.P. Re. 1-7-6.

There were a few features in the export sale held yesterday, following good general demand. Offerings aggregated 66,970 packages. Plain fannings advanced irregularly, but medium broken and fanning grades eased slightly, despite good support. However, the brighter liquorings sorts were about steady. Teas for price and plain broken were firm. C.T.C.s, after recording a dearer tendency, eased. Although non-wither Doars met with ready support prices were lower. All bright liquorings medium Assam B.O.P.s and O.F.s were unchanged, while the plain B.O.P.s gave way by 20 to 30 nP. Whole leaf grades on lesser demand eased, but clean black pekoes were steady. There were some withdrawals of tippy teas, and Darjeelings met an easier market. The quotations exclusive of excise duty were: Best Assam C.T.C. fannings Rs. 2.70 to Rs. 3.10; best Assam C.T.C. B.P. Rs. 2.30 to Rs. 2.70; clean black pekoe Re. 1.94 to Re. 1.98; medium fannings Rs. 2.12 to Rs. 2.22; plain B.P. Re. 1.86 to Re. 1.88; medium B.P. Re. 1.90 to Rs. 2.00.

Export quota was quoted 2½ nP. No business was done.

NO EXPORT DEMAND FOR JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 23rd September

Following lack of interest shown by overseas buyers, featureless conditions were in evidence in the jute goods market during the week under review. There were hardly few inquiries for shipping space, and the continued silence on the part of exporters for the United States made market circles anxious. Meanwhile, there were inquiries for sacking from Burmese sources for ready delivery. Orders were anticipated; the hopes in this regard were heightened by the inability of Pakistani mills to accept any order for October and/or earlier deliveries. Although business passing through the raw jute market recorded a noticeable decline during the week, prices were maintained, thus completely ignoring the fall in goods prices. This trend was due to the reserve shown by sellers following the disparity between prices in Calcutta and in the mufussil trading centres.

The report of a fall of 4 million yards to 65 million yards in the U.S. burlap consumption disappointed market circles, but it was thought that, the decline being connected with the steel strike in that country, consumption would tend to rise again when once the strike ended and normalcy in industrial relations prevailed. The news, however, did not affect hessian prices which were maintained firm at previous levels. This was due to the low level of stocks here and also to the spot stocks in the U.S. at the end of August having fallen by 7 million yards to 162 million yards, thereby indicating that consumption exceeded imports, and naturally replacement buying must be resorted to. In the month of August, due to more holidays, mills here worked for only 200½ hours, as against 209 hours in the previous month, and accounted for the fall in total production by 2,700 tons to 86,923 tons.

Hessian fell by 2,900 tons to 37,566 tons and miscellaneous goods by 1,800 tons to 7,425 tons. The percentage of decline in comparison was 2 and 1.7, respectively. On the other hand, the stock of sacking goods rose by 2,000 tons to 41,900 tons. These figures showed that the process of transfer of hessian looms to sacking manufacture was continuing, and that most of the 4 per cent. of the looms recently unsealed in two instalments was being concentrated in sacking.

The fact that the increased demand for sacking, which led to the unsealing move, was not being followed up and that the uncertainty about more Chinese orders, which resulted from the Sino-Indian border issue, were matters for worry in market circles. Until it was thought, higher proportion in the manufacture in favour of sacking would continue. So until hessian manufacture became more profitable, sacking stock would tend to increase. In any case, mills are committed to seal off 2½ per cent. of the looms in January next.

In the course of a statement, the Indian Jute Mills Association has explained that its policy is to maintain the maximum level of activity, employment, and foreign exchange earnings, while retaining fair and stable prices for jute goods. Referring to the fall of 11,700 tons in stocks in August, the Association claims that the increased

production has revived the confidence of foreign buyers in the ability of mills to make regular supplies and maintain delivery dates, and that increased production leads to stability in prices.

Although the market was officially closed on Tuesday last, prices were about firm. The news of lower consumption of burlap in the U.S. during August was not noted as being significant against the background of the steel strike there and also the noticeable fall in spot stocks. In fact, ready hessian 40" 10 oz. firmed up from Rs. 40.25 to Rs. 40.35, while ready B. twills fell by 5 nP to Rs. 100.80. At this stage, active conditions returned to the futures market, and bullishness there pushed up ready B. twills to Rs. 101.50 and hessian 40" 10 oz. to Rs. 40.45 on Wednesday. The possibility of a Government order for a substantial quantity of B. twills added to sentiment. There was also some scattered business done with Australia in the futures market continued on Thursday also for some time, but profit-taking soon intervened to lower prices. This was reflected in the ready market by B. twills receding to Rs. 101.00 and hessian 40" 10 oz. to Rs. 40.40. However, activity in the export market was limited to little quantities here and there and, on Friday, B. twills dropped further to Rs. 100.10 and hessian 40" 10 oz. to Rs. 40.25. Towards the week-end, prices were almost unchanged at Rs. 100.15 and Rs. 40.25, respectively. An easier tendency was recorded yesterday, as the export market was neglected. Ready B. twills closed lower at Rs. 100 and hessian 40" 10 oz. at Rs. 40.10.

Despite lower interest shown by mills, raw jute prices were firm and unchanged. Mills accepted some offers, particularly in the lower grade. The firmness in the raw jute market followed the recent heavy rains which brought harvesting operations to a standstill for more than a week. Heavy rains have been followed by bright sunshine in the last two days, and farmers in West Bengal are getting an opportunity to dry their jute before sending the same to the agencies. Complaints of increased moisture content in new arrivals are in the meantime continuing and it is due to the poor nature of stocks the growers and to the biparis have indulged in the practice of adding water willy-nilly. However, with the changed conditions now and a surplus in raw jute, mills may insist on an improvement in the quality of raw jute. The latest quotations for the new crop near and/or immediate delivery are:

LINSEED STEADY

(Messrs. A. Bradley & Co.)

CALCUTTA, 21st September

The linseed market remained steady during the week. Although there was no appreciable change in prices, a bullish sentiment prevailed in sympathy with groundnut and other oilseeds. Trading was slow, with crushers consuming available ready supplies, and sellers reserved for forward delivery.

Linseed oilcake ruled steady. Fresh export business was reported, following an improvement in the U.K. prices to £36 5s.

There was no change in the linseed oil section. With a general firmness prevailing in overseas markets, shippers were active locally and there was a fair local turnover daily.

The latest quotations per maund are: Ready September Rs. 23.69; October-November Rs. 23.87; September futures Rs. 23.75; and May futures Rs. 23.44.

ELECTROLYTIC ZINC BUOYANT

(From Our Own Correspondent)

CALCUTTA, 23rd September

The highlight of trading in the metal market during the week under review was the buoyancy in electrolytic zinc which, on good demand from alloying industries, shot up from Rs. 109 to Rs. 115 per cwt. The metal was in short supply, and the increased demand was attributed to the release of copper against permit. Thus a proportion of zinc was also necessary to be bought for alloying. Moreover, higher advices from Bombay were also received. On the London Metal Exchange, the quotation declined by £1½ to £85 per ton, following a sharp contraction in backwardation. However, a recovery soon set in and the closing rate was at £86½.

During the week, there was a decline in demand for copper scrap, following availability of the virgin material through the permit system. Utensil scrap declined from Rs. 230 to Rs. 225 per cwt. and clean wire scrap from Rs. 242 to Rs. 240. The earlier announcement that advance licences for import of non-ferrous metals would be issued against the six months beginning from 1st October also contributed to a quieter demand, although copper scrap was by no means an abundant commodity.

In London, copper eased from £229½ to £226½ per ton. Although the U.S. steel strike caused the recession, the downward trend should have been more prominent had it not been for some demand from the Continent.

In the local market, tin opened at Rs. 584 and improved to Rs. 589 per cwt. Supplies were limited. Lead was unchanged at Rs. 74.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 21st September

Quietly steady conditions prevailed in the foodgrains market during the week. The Union Food Minister, Mr. S. K. Patil, called for an all-out effort by the State Governments to step up food production during the forthcoming rabi season, by mobilising all the resources and manpower and co-ordinating the

MARKET GOSSIP

(Concluded from page 499)
(subsidiaries and participations) have settled there, including 1.9 from the U.S.

The rush of plants to the Netherlands started some ten years ago. Among the first were the oil companies (Standard Oil, Caltex, Aramco), business machine manufacturers (Remington Rand, International Business Machines, Monroe, Royal McBee, Friden) and machine tool firms (Cincinnati Milling, American Tool Works). Today, U.S. manufacturers operating in Holland are engaged on a wide variety of products in plants greatly differing in size. Sometimes, the industrial enterprises are large, such as that of Royal McBee, with 1,700 employees. A very important establishment ventured early this year is a \$20-million Orton plant of Du Pont at Dordrecht.

U.S. industrial investments in the Netherlands amount to nearly \$250 million in plants employing 20,000 Dutch workers. The output of these plants has added about \$150 million to Holland's industrial exports. Approximately \$110 million of this goes to other European countries, the remainder to other continents, including \$7 million to the U.S.

One half of the U.S. plants in Holland visited by Mr. Kanti was in the midst of expansion programmes; one-third had new plant buildings under construction. The answer was yes whenever Mr. Kanti asked if the management would again select Holland as a plant site. The author mentions nine main reasons why U.S. enterprises establish plants in Holland. These are:

1. Political stability: Expropriation is unknown.
2. Favourable geographical location: The Rhine delta and the North Sea make Holland a natural gateway to Europe.
3. Labour stability: Netherlands labour is productive and loyal; there have been no significant strikes in the last 30 years.
4. Low costs: Wages and fringe costs are lower than in any other Common Market country.
5. The Government's obliging attitude.
6. Commercial know-how: Amsterdam is one of the world's great banking centres; Holland's dependence on export has developed an extensive knowledge of international traffic and foreign markets.
7. A wide knowledge of foreign languages, in particular English.
8. No ownership restrictions: A concern may be 100 per cent. foreign-owned and may be managed by foreign personnel.
9. No limitations on dollar remittance of earnings, nor is there a tax on dividends paid to non-resident stockholders.

Here is something for the authorities in this country to think about the conditions they should offer and the climate that should prevail for attracting foreign private capital.

NOTES FROM WEST GERMANY

(Concluded from page 504)

lion in June 1959, unemployment dwindled from 8.8 per cent. ten years ago to 1 per cent. now, smallest percentage within all E.E.C. countries, in spite of 12.7 million refugees and expellees and in spite of 4 million war victims W. Germany had to care for.

Effectively worked week in industry (paid work week less paid but unworked hours such as holidays, leave and red-letter days) now counts 41.5 hours, as against 45.1 hours in France, 45.3 hours in Britain, 46.8 in Switzerland and 50.2 in Japan.

The average nominal weekly pay packet of an industrial worker rose by 75 per cent. from 61 DM in 1950 to 106 DM in 1958. To earn the price of the following items, an industrial worker had to work:

	1950	1958
Bread (1 lb.)	0 11	0 10
Sugar (1 lb.)	0 25	0 15
Pork chop (1 lb.)	1 31	1 04
Men's suit	81 41	55 16
Men's shoes	19 26	11 53
Bicycle	120 32	74 84
Radio	134 0	92 06
Volkswagen	3,809 31	1,626 36

The tax-free wage allowance moved up: In 1949 a family with two children paid no tax up to 104.24 DM monthly income, today the tax-free allowance comes to 599.99 DM.

Housing: In ten years, 4.7 million new dwellings worth 78,000 million DM were built, that is, about one new building for every fourth household.

PLANTING

(Concluded from page 512)

ground that that would lead to maximum production of natural rubber with minimum cost, has elicited the following reply from the U.P.A.S.I.:

"If the I.R.I.A. could explain how this objective can be achieved by its predominance on the Rubber Board, the matter should be considered by all interests. We suggest that investment in planting companies by manufacturers or opening of large areas by manufacturers may lead to this end. The main function of the Board, according to the memorandum, is to increase production and to distribute raw rubber. We suggest that rubber production and all activities allied to it should be left to a wing of the Rubber Board, where planters have predominance and distribution be left to another wing where manufacturers may predominate."

It is evident from the foregoing account that the U.P.A.S.I. has given convincing replies to the contentions of rubber manufacturers and that the latter's suggestion that protection to rubber plantations should be withdrawn cannot be sustained. There cannot be two opinions—and the manufacturers' association itself seems to admit this—on the need for stepping up raw rubber production. The ways suggested by the Association will certainly not help to achieve this end. Surely, it is in the interest of rubber manufacturers themselves that rubber production is increased. They should not therefore harbour any ideas which tantamount to cutting the nose to spite the face, for, if rubber production suffers for any reason, rubber manufacturers will be one of the worst hit. At the same time, rubber planters should make every effort to step up production.

INSURANCE

(Concluded from page 522)

ments is shown will bring out the position very clearly:

No. of companies registered	Fire	Marine	Miscellaneous
No. of companies showing losses	66	63	176
No. of companies earning less than Rs. 25,000	9	33	30
No. of companies earning more than Rs. 25,000	11	20	25
No. of companies earning more than Rs. 50,000	41	6	16

An examination of the figures given above will show that, in the fire department only 13 per cent. of the total number of companies showed losses, while, in the miscellaneous and marine departments the position is quite discouraging and is as high as 39 per cent. and 52 per cent., respectively. Similarly, 62 per cent. of the total number of companies transacting fire business was able to earn more than Rs. 50,000, while, in the marine and miscellaneous departments, only 9 per cent. and 21 per cent., respectively, were able to earn profits over Rs. 50,000. Further, more than 20 and 25 companies earning less than Rs. 25,000 in the marine and miscellaneous departments, respectively, could easily show losses, if the claims experience became slightly more unfavourable. These figures reveal that more and more companies are depending on the fire department for compensating the losses of their marine and miscellaneous departments. It is pointed out by the insurance companies that they are running these two losing departments solely for giving service to the insuring public.

The reduction in rates will also have a serious effect on the reciprocal business that companies are able to obtain from their overseas friends. The foreign insurers today are out to obtain Indian business only due to the favourable claims experience. The Indian companies in return are able to ask foreign insurers to pass on to them some foreign business in exchange for the Indian business given by them. This exchange of business serves one of the most important principles of insurance, and that is "spread of risks." The Indian market is as yet not so developed as to be able to absorb all the reinsurance requirements of Indian insurers. The insurers have got to approach the foreign companies for obtaining reinsurance cover and, if the companies start showing unsatisfactory claims ratio, many of the excellent reinsurance contracts available to Indian companies today would be cancelled.

The total net fire premiums written by Indian insurers outside India in 1956 was over Rs. 6 crores. This business received from abroad can be from two sources only, one, direct operations abroad, and two, exchange of reciprocal business. As the total number of companies operating directly abroad is very small, it can be safely estimated that more than half of the total business received from abroad is due to reciprocal treaty business. Now, if our Indian business ceases to be advantageous, there is every likelihood of the foreign companies refusing to pass on their business in exchange of ours. The country will thus stand to lose quite a lot of foreign exchange.

The aforesaid observations will show that considerable thought is needed before any final decision is arrived at as to whether the rates should be reduced and, if so, by what extent. It must be borne in mind that it is easy to reduce the rates, but it is extremely difficult to increase them again. The recent controversy over the increase in the rates in the motor department will bear this out.

The insurance trade firmly believes that a reduction in rates will not have any significant effect on eliminating rebating but will spell disaster for several companies. It is to be hoped that only such step would be taken by the trade and the Controller of Insurance as would be beneficial to the insurers and the public alike.

INDIA AND WORLD BANK

WAY back fifteen years ago, when India's participation in the World Bank and the International Monetary Fund was secured by its representatives, prominent among whom were Mr. A. D. Shroff and Mr. C. D. Deshmukh, there were many cynics in this country who doubted their utility. A large number of these cynics was found in the party now in power. As the then Governor of the Reserve Bank, Mr. Deshmukh, continued to follow the traditional policy of not speaking to the public about what the Indian delegation did at the Bretton Woods Conference to ensure for India a prominent place in these institutions, it was Mr. Shroff who did much of the explaining to the public, bringing out the significance of India's membership of the Fund and the Bank. Today, Mr. Shroff is much despised by the powers-that-be for his outspoken criticism of their defective economic policies and programmes. Mr. Deshmukh is out of their company. But they can be proud of the foresight with which they laboured hard to safeguard India's interests. The benefits derived by this country from both the Fund and the Bank are immense, as a reference to their annual reports for 1958-59 will show. Twice during the current decade, the I.M.F. has helped India to minimise its balance of payments difficulties. Far more has been the World Bank's assistance to India in implementing its plans for economic development.

Among the borrowers from the World Bank, India stands foremost, its total borrowings upto the end of June last being \$550.61 million out of a total \$4,521.94 million. No single country has been given loans for such a large amount, the next largest borrower being Australia with a total of \$317.73 million, followed by France (\$302.50 million), Brazil (\$292.09 million), Japan (\$258.90 million), Italy (\$259.63 million), the Netherlands (\$244 million), Mexico (\$205.80 million), South Africa (\$196.80 million), Iran (\$147 million) and Pakistan (\$126.45 million). These figures refer to gross amounts of loans sanctioned by the Bank, but, even on the basis of net amount of loans taken from the Bank, the order of countries that have borrowed is the same, with India far ahead of others. Of the total loans sanctioned to India, more than half—\$300.51 million, to be precise—was in the last two years. In 1958-59, India was granted three loans, \$85 million for railways, \$25 million for D.V.C. and another \$25 for the Koyana hydel project, making a total of \$135.00 million, the corresponding total for 1957-58 being \$165.51 million. Railways, electric power, iron and steel industry, ports, civil aviation and industrial finance have been the recipients of World Bank loans to India. Of the loans sanctioned, \$18.50 million have been cancelled and \$32.02 million have been repaid, so that India's outstanding obligations (including those taken up by private investors but excluding the balance awaiting disbursement) are in the neighbourhood of \$480 million.

There are only two possible grounds on which India can still grumble against the World Bank: one, the loans given are not adequate, and two, the rates of interest are high; they have gone up from 4 per cent. in 1949-50 to 6 per cent. now. The World Bank authorities are fully alive to India's needs, but they are not prepared to depart from policies considered necessary for ensuring the creditworthiness of the Bank at a high level, so that it can continue to attract funds from private investors for expanding its activities. It has, however, tried to help India to tide over its foreign exchange difficulties by arranging for concerted action by the U.S., the U.K., West Germany, Canada and Japan. The undertaking given by the consortium of these countries to see India through its second Plan is well known and does not require to be recounted at length. The World Bank is also actively assisting the U.S. in its efforts to establish the International Development Association for giving soft loans to underdeveloped countries. When this move materialises, it will enable India to get loans on terms less rigorous than those quoted by the World Bank.

India is also being helped by the World Bank in another important direction, namely, solution of the decade-old dispute with Pakistan over the sharing of the waters of the Indus Basin. Although no final solution has yet been arrived at, the Bank has succeeded in bringing both the countries nearer to it. Alluding to this development, the Bank's annual report says:

"The engineering plan on which a settlement would be based involves a system of works estimated to take about ten years to construct, and to require expenditures in

India and Pakistan aggregating about \$1,000 million, partly in foreign exchange and partly in local currencies. Over and above the amounts that would be provided towards the cost by India and by Pakistan, it is envisaged that financial assistance would be forthcoming from the Bank itself and from friendly Governments. The Bank has already opened discussions with representatives of the Governments of Australia, Canada, Germany, New Zealand, the United Kingdom and the United States, and it is believed that other countries may also wish to provide financial support."

The aforesaid plan was discussed in London early this month by the representatives of both the countries with Mr. W. A. B. Iliff, Vice-President of the World Bank, continuing his role as the mediator. It is said that the ground remaining to be covered is small, though important, and that talks are to be resumed again. Describing the pending issues as constituting a narrow gap, Mr. Eugene R. Black, the Bank's President, who specially visited India and Pakistan in May last for promoting a speedy settlement of this dispute, said in Washington on Tuesday this week: "It would be profoundly disappointing, if the gap was not closed. I am confident that we can rely upon the statesmanship of Mr. Nehru and President Ayub to see that it is closed." All right-thinking persons in both the countries of this sub-continent will doubtless endorse these remarks of Mr. Black. If this issue is resolved, as is now hopefully expected, it will reduce the tension between the two countries, thereby enabling them to devote more attention and resources to economic development. It is difficult to evaluate this assistance of the World Bank in terms of money. Apart from the indirect benefit just referred to, an investment of \$1,000 million in the Indus river basin, of which the greater part will be in Pakistan, is bound to yield tangible results of lasting value for the peoples of both the countries.

TARGET FOR COAL

ALTHOUGH details of the deliberations of the Coal Council of India, which met at New Delhi last week, are not available, it is noteworthy that the Council addressed itself to the question of production target for coal in the third Five-year Plan. Being a body, representative of the Government as well as the industry, it is eminently fitted to arrive at right conclusions on the target for the industry. It would appear that the Council has felt that, for purposes of planning, the requirement of coal should be placed at 110 million tons at the end of the third Plan. It is not clear how the Council arrived at this estimate. Clearly, a fuller account of the basis on which the estimate was arrived at would be in the public interest. It may be mentioned here that the Federation of Indian Chambers of Commerce and Industry, in its memorandum on the next Plan, has set the third Plan target for coal at 90 million tons. It is likely that the Federation has underestimated the requirements of coal while the Council has overestimated them. In any case, the question should be adequately examined so that a realistic target, which is well within the capacity of the industry, is fixed.

Appropriately enough, the Council felt that the pattern of production of the additional target should be more thoroughly examined. Accordingly, it decided to set up a small committee, with the Coal Controller as Convener, to examine the question of additional target from each of the coalfields. It also considered the reports of its committees, namely, those on assessment of resources, requirements and utilisation, and production and preparations. It noted the assessment of requirements of mining machinery and equipment in the third Plan period. The view was expressed that the equipment scheduled to be produced at the Durgapur mining machinery plant and other projects should be used in the coal and metalliferous mines. Besides, the owners of coal mines, it was urged, should give necessary guidance to these projects as to the type and quality of various kinds of equipment to be manufactured. This is an eminently thoughtful suggestion to which coal producers will do well to respond wholeheartedly. It will be in their own interest to do so, for the country has to be enabled to go ahead with its plans for the establishment of heavy industries; it has not got sufficient foreign exchange resources to meet its diverse import requirements.

The Council's emphasis on physical equipment necessary for reaching the target of coal production is certainly well-placed, considering

that, in the current Plan period, the paucity of such equipment has been a factor that has held up progress. But no less important are the financial aspects of coal production. This problem is closely connected with the allocation of additional production targets between the private and public sectors. In the second Plan, a somewhat larger role has been assigned to the public sector. Thus, out of the additional production of 22 million tons, the share of the public sector is 12 million tons and that of the private sector 10 million tons. It is now generally believed that it may be difficult to reach the overall target of 60 million tons. Production is now running at an annual rate of 47 million tons. With only eighteen months left for the second Plan to come to a close, there is little likelihood of the leeway in production being made up. It is also widely believed that, whereas the private sector may be able to deliver its share of additional production, it is extremely unlikely that the public sector—though for certain very understandable reasons—may not be able to reach the target fixed for it. In view of this consideration, it will certainly be realistic to assign a larger role to the private sector in the third Plan. The least the Government should do is to see that additional production is divided as between the two sectors on a 50-50 basis, as against the 55-45 basis for the additional coal production programme in the second Plan.

Irrespective of the Government's decision on the precise ratio which will govern the allocation of additional production, it is of the utmost importance that the private sector should be enabled to acquire the financial resources it will need for increasing its production. No reliable estimate of how much the industry will need in order to increase its production is now available. On a rough estimate, the industry may well require about Rs. 280 crores in order to increase its production by 50 million tons over the 60 million-ton target fixed under the second Plan. Assuming that the additional production is divided on a 50-50 basis, the private sector will need something like Rs. 140 crores. It may probably do with less, for, in several units, additional production may be won at relatively less cost than in the public sector. No reliability is, therefore, claimed for this figure which should serve more as a rough guide to financial commitments involved than as a reliable yardstick of measurement.

Is the industry in a position to raise the large finance it will need for increasing its production? All available evidence suggests that the industry will be hard put to it to acquire the necessary finance from the capital market, while its own internal financial position has not been sufficiently strong to permit it to take care of its present requirements and to pay decent dividends necessary to attract fresh capital. The Government has certainly dealt a grievous blow to the industry by granting a mere 50 paise increase in the price of coal per ton, which is a far cry from the demand for Rs. 3.50 which the industry felt justified in putting forward. It may not, therefore, be long before the Government is compelled to reopen the question. There is reason to believe that the Coal Prices Revision Committee, on the report of which the Government's decision is based, has not fully taken into account the question of the immense expenditure which the industry will have to undertake in the cause of larger production. The result is that there is a genuine fear that the resources which are likely to accrue to the industry on the basis of the limited increase in coal price now permitted will be insufficient for providing for rehabilitation and replacement of machinery and for development of new areas.

Finally, it cannot be too strongly reiterated that the training of personnel for manning the new mines that may be opened and supervising the additional production in existing mines should receive high priority. It was once computed that, in order to reach a target of 100 million tons of coal, the industry will need 400 additional geologists, 2,000 drilling engineers and 3,000 mining engineers. The Coal Council, at its meeting, rightly stressed that the question of training junior technical personnel should be pursued with vigour and steps should be taken by collieries in both the public and private sectors to provide adequate facilities for such training. Much good work in the sphere of technical education has been done by the National Coal Development Corporation, but much more remains to be done. Perhaps, it will be wise to undertake a review of the training facilities now available, in order to examine how best they may be augmented to a level at which they can meet the requirements of personnel in the coming years.

MARKET GOSSIP

THERE have been no new developments in Bombay markets. Both gold and silver are unable to make any headway, as demand is slack. The bulls seem to have decided to bide their time, pending the arrival of the usual busy season which is still some four months ahead. Among commodities, cotton is steady to firm, with no signs of a downward trend emerging in the near future. Reports about the new crop are still unfavourable to bears. The upward trend that manifested itself in oilseeds is faltering. Groundnut is distinctly easy, castor seeds erratic, and linseed listless. On the Stock Exchange, steels are quietly steady; textiles are less buoyant than last week; chemicals are strongly fancied; rayons are still in demand; this is true also of engineering, sugar and a host of miscellaneous scrips.

The A.I.C.C. session at Chandigarh was less exciting than was feared by some. Mr. Nehru held both hot and cold at the private sector. A careful analysis of all his observations reveals no change in his basic attitude. He is firmly convinced that the public sector should grow and that the private sector should be allowed to expand only in the small industries sector. He dislikes criticisms of the public sector and accuses the private sector of the charge of trying to throttle the public sector. He wants this controversy between the two sectors to end, but he himself tries to do everything which will keep it alive.

The Prime Minister's demand that the public sector should not be criticised is not fair. Constructive criticisms constitute an essential ingredient of democracy. They are necessary to ensure efficiency and healthy progress. We do not know of any destructive criticisms of the public sector from any responsible quarters. There are, of course, many in this country, including this journal, who have been saying that more encouragement should be given to the private sector, that the State should not take up those industries which this sector is willing to establish, and that mere ownership of industrial undertakings or occupation of strategic heights in the financial world by the State is not real socialism. The Swatantra Party holds this view. It is also held by most of the business men, though they are still supporting the Congress Party. The propagation of this view does not amount to a criticism of the enterprises of the Government; it is a criticism of the Government's basic economic philosophy. In a democracy, this is surely a legitimate function of an opposition party. It is, therefore, unrealistic on the part of Mr. Nehru to expect the protagonists of free enterprise system to remain silent on the issue of the private sector versus the public sector. The only way to silence the critics made will be to make on the resources of the industry to supply the growing needs of petroleum products which are likely to be of the order of 10.5 million tons by 1966, as against approximately 6 million tons at present. It is in this context of growing demand for oil that much interest attaches to the efforts now being made to locate new sources of supply. Time will show how far the present efforts are sufficient and whether they yield results which are expected of them.

As a part of its continuous drive to introduce socialism in this country, the Congress Party has now decided that the managing agency commission should be drastically curtailed from 10 per cent. to 4 per cent. through a slab system. Here is one more curtailment of the facilities given to the private sector. The share market, however, has taken no serious notice of this move. This is understandable, for a reduction in managing agency commission will, other things remaining the same, raise the profit available for distribution to shareholders.

Petroleum Products

A notable feature of fuel consumption in India is the steady increase in the consumption of petroleum and petroleum products. In the last 10 years, the per capita consumption of oil and oil products has increased from 1.74 gallon to 3.60 gallons. Last year, the total consumption rose by 6.1 per cent., a rate of growth somewhat lower than that in recent years. Commenting on this trend, the publication, *Survey of Activities 1958*, issued by the Burmah-Shell Oil Storage and Distributing Company of India Ltd., observes that the "slowing down was brought about primarily by the general restriction on imports and consequent pressures in the industrial sector of the economy in particular." But following the restoration of the cut in imports of oil a few months ago, the pace of growth in oil consumption is gathering momentum again. The publication does not contain the usual section on finance, since negotiations with the Government of India on the price formula are now in progress and the agreement, when it is reached, will have retrospective effect from 1st April 1958.

The rise in the demand for petroleum products, which rose from 2.2 million tons to 6 million tons during the 10-year period 1948-58, has been accompanied by significant changes in the pattern of consumption. Thus, in 1948, kerosene accounted for 23.32 per cent. of total consumption, whereas it now forms 28.37 per cent.; over the past 10 years, kerosene consumption has nearly trebled. The percentage break-down of the consumption in 1958 for different products with similar figures for consumption in 1948 within brackets is: motor spirit 13.60 (21.20); high-speed diesel 16.17 (12.82); light diesel oil 8.63 (12.82); furnace oil 18.18 (21.71) and others 15.05 (16.03). As compared with 1957, trade in kerosene fell by 1 per cent. in 1958 and in motor spirit by 9.1 per cent., whereas the demand for high-speed diesel moved up by 28.9 per cent.; for the first time, in 1958, sales of H.S.D. exceeded those of motor spirit. It is noteworthy that the total sales of bitumen increased by nearly 6.8 per cent. in 1958. Road-making accounts for about 60 to 80 per cent. of consumption of bitumen. It is

estimated that about one-third of all the surfaced roads in the world are of asphaltic construction.

In comparing the level of prices of petroleum and petroleum products in India with those of Western countries, it is well to bear in mind the enormous difficulties of distributing these products in a country of India's continental size, ill-served by modern communications. For instance, kerosene, a common man's daily necessity, has to be transported over long distances to places inaccessible by rail. This adds to the cost of transportation of petroleum products. Even railway capacity is sometimes found insufficient to meet the demand for it. In order to meet this problem, Burmah-Shell has had to transport its products by road. Last year, it operated a fleet of 350 lorries varying in capacity from 600 to 2,400 gallons. These lorries ran nearly 6 million miles during the year. In addition, the Company hired lorries for long hauls to distribute its products to consumers. It has continued to expand its facilities at port installations to meet the country's growing needs of petroleum and, during the year, it increased its tank storage capacity by over 31,000 tons. The new installation at Visakhapatnam is expected to be ready in 1959. At upcountry depots, which now number 590, the Company has increased tankage by 8,000 tons mainly to cater for the country's growing requirements of H.S.D.

Despite the heavy costs of transportation of petroleum products in India, it is noteworthy that the prices of these products have remained remarkably steady. Indeed, they would have shown a welcome decline, if the Government had permitted the producers to pass on to the consumers the reduction in prices to which they agreed in May last year. The holding of the oil price line stands out in contrast to the general price index (base: 1952-53 = 100) which rose from 106.0 in January 1958 to 111.4 in December last. It must be remembered that a large part of the price of petroleum products is represented by Central Government duty and sales tax collected by the State Governments. The following is the breakdown of the consumer prices of motor spirit and H.S.D. as on 31st December 1958:

	Motor spirit	H.S.D.
	Per cent.	Per cent.
Central Government duty ...	47	40
State Government sales tax ...	14	5
Import warfage ...	1	2
Dealer's commission ...	6	5
Company's basic price ...	32	48

Commenting on the prospects for the consumption of oil, the Burmah-Shell's publication forecasts that as India's Five-year Plans forge ahead, demand will be made on the resources of the industry to supply the growing needs of petroleum products which are likely to be of the order of 10.5 million tons by 1966, as against approximately 6 million tons at present. It is in this context of growing demand for oil that much interest attaches to the efforts now being made to locate new sources of supply. Time will show how far the present efforts are sufficient and whether they yield results which are expected of them.

Coffee Agreement

As was anticipated in these columns last week, the International Coffee Study Group has succeeded in formulating a compromise short-term formula to stabilise the world coffee market. The eleven-day session at Washington, culminated in the signing of a new one-year coffee marketing agreement (beginning from 1st October 1959) by all the seventeen participating countries, with the exception of Ecuador and the Dominican Republic which are expected to sign later. The salient features of the agreement are:

1. The total coffee marketing quota covering the 1959-60 crop in the seventeen participating countries is fixed at 32.65 million bags (of 60 kilos or 132 lbs. each), the individual quotas—in thousand bags—being: Brazil 17,431; Columbia 5,969; Costa Rica 694; Cuba 312; Dominican Republic 398; Ecuador 455; El Salvador 1,259; French Community and Camerouns 638; Guatemala 1,083; Haiti 500; Honduras 176; Mexico 1,303; Nicaragua 344; Panama 10; Peru 251; Portuguese Africa 1,165; Venezuela 660. These quotas exclude the domestic consumption of exporting countries.

2. The exporting countries have agreed to supply their traditional markets. Marketing quotas for each quarter will be established. The quota for the first quarter will be worked out and announced sometime late this month. If a country normally exports more in the first half of marketing year, it will be free to do so; in case the normal marketings are heaviest in the second half for certain countries, they also can do likewise. But each country has agreed to stay within its overall quota. Transshipments will, of course, be watched.

3. Any coffee sold to new markets will not be included in the export quotas.

4. There will be a levy of 25 cents per bag on coffee exported from the Latin American countries and of 15 cents per bag on exports from the African countries. The proceeds of this levy will be used to set up a promotional fund for augmenting world consumption of coffee.

Over and above these provisions of the agreement, Kenya, Uganda and Tanganyika are understood to have agreed to withhold from the market a total of 54,000 bags of coffee from the election of 1959. The country who are expected to even a relaxation in the export controls that prevail in all our important cities.

The aforesaid developments have not, however, had any effect on the world coffee market. On the contrary, the prices have declined further, the latest available quotation for Uganda Robusta grade 10 (unwashed) in London being 197s. per cwt., as against 200s. prevailing immediately before the outcome of the Washington meeting of the Coffee Study Group was known, and 266s. a year ago. The continued weakness of the coffee market is not surprising, in view of the heavy surplus and slackness in demand. The total export quotas mentioned above plus the quantity which Kenya, Uganda and Tanganyika have agreed to withhold come to less than 33 million bags of 60 kilos each or 15 million bags of 132 kilos each. This quantity is equal to no more than 38 per cent. of the anticipated world exports (of 88 million bags of 60 kilos each and 27 per cent. of million bags of 132 kilos each) and 27 per cent. of the estimated production for export (of 123 million bags of 60 kilos each or 56 million bags of 132 kilos each) in the current season which commenced on the 1st inst.

It is the markedly wide gap between world supply and offtake of coffee thus that invests the Coffee Study Group's move to establish a nation fund for raising world consumption with utmost significance. To the extent the efforts in this direction meet with success, India, too, will be benefited. Both the coffee growers and the authorities, however, will have to do all they can for enhancing the competitive capacity of Indian coffee in world markets.

A Mundhra in Britain!

The most sensational development in the City of London, since the alleged Bank Rate leakage two years ago, is what is known as the "Jasper affair" which came as a dramatic anticlimax to the hectic season of "take-over bids." The failure of Mr. Harry Jasper, chairman of a group of public limited companies dealing in property business, to pay in full for two companies, namely, Lihang Investments, Ltd., and Ely Brewery Company, Ltd., which were taken over by the Jasper group by outbidding many competitors, created a scare among investors. The shares of a dozen companies controlled by Mr. Jasper declined sharply on the London Stock Exchange, following rumours that the group was experiencing difficulty in paying certain investors who had accepted its bid for Ely Brewery. Pending clarification of the position of each company in the group, the London Stock Exchange Council promptly suspended dealings in the shares and stocks of the companies associated with Mr. Jasper. Meanwhile, the Board of Trade, under Section 165 of the Companies Act, has appointed Mr. Neville Faulks, Q.C., the Recorder of Deal, as an Inspector to investigate the affairs of Mr. Jasper.

It is now alleged that the bids were made not on behalf of the Jasper group but in the name of a private client of Mr. Jasper, Mr. Grunwald, managing director of several companies in the Jasper group, in his personal capacity. It is said that the funds available with him were sufficient for taking over the shares of only one company. Having bitten much more than he could chew and digest, Mr. Grunwald is reported to have quietly left for Israel for a rest cure and none knew his whereabouts for quite some time. Later, he issued a statement from Haifa, accompanied by a medical certificate, that he was suffering from mental strain and shock.

It also came to light that a building society, which is not permitted under law to have large blocks of its funds locked up in one group, had committed nearly 40 per cent. of its assets of £10 million in loans to the Jasper group on first mortgage and that the repayments were in default. Moreover, the funds were also said to have not been employed for the purpose for which they were taken from the building society.

Whatever might be the real truth, and Mr. Faulks may be expected to bring it to light, the affair has brought into disrepute take-over bids which had already been the subject of much criticism in Britain. It has also focussed public attention on the loopholes in the British Company Law. Apparently, the present law, despite the thorough overhauling to which it was subjected in the early post-war years, is not fool-proof to check spurious transactions and indiscriminate financial interlocking. The Conservative Party has stated in its present election manifesto that it would appoint a committee to review the working of the Companies Act in the light of the present conditions. It may be noted here that the British Company Law was found wanting in several respects when two leading American aluminium companies made a bid to get control of the British Aluminium Company.

As the so-called "Jasper affair," which is no very different from the attempts made by Mr. Haridas Mundhra in India to build an industrial empire, came to light on the eve of the election, it was generally thought that it would provide some ammunition for political propaganda by the Opposition. But it must be said to the credit of Mr. Hugh Gaitskell, leader of the Labour Party, that he firmly denied that his party had any intention to make political capital out of it. His statement that "it is important at this critical moment that nothing shall be said by anybody about this particular business which could make things worse" is certainly befitting the responsible statesman that he is. Evidently, he must have realised that any attempt on the part of the Opposition to exploit the incident for political advantage would have caused a scar among investors and a financial crisis which would be injurious to the nation as a whole. Mr. Gaitskell, however, felt that the affair was an inevitable consequence of the Rent Act which took nearly a million homes out of rent control, resulting in a boom in property shares. This, according to him, attracted speculators in a big way. There is no doubt that this explanation would come in handy for those in this country who are opposed to even a relaxation in the rent controls that prevail in all our important cities.

EQUITIES MOVE UP FURTHER

UNDERTONE STILL FIRM

(From Our Own Correspondents)

BOMBAY, 30th September
THIS week's review of the share market covers only four working sessions for two reasons. First, the market was closed on Monday, owing to the death of a member. Secondly, we have to go to Press a day earlier, as our printers have to declare a holiday to their staff to celebrate Mahatma Gandhi's birthday. During this short period, equities continued to maintain the last week's upward trend, though the undertone of the market was relatively less firm. The Prime Minister's statement at the A.I.C.C. session (Chandigarh, Punjab) that the private sector would be allowed to continue to play a prominent part was received with satisfaction by market circles. Some, however, had their own misgivings about the future for industries. It was vaguely feared that the proposed reduction in the maximum limit of profits and commission allowed to managing agents from 10 per cent. to 4 per cent., as revealed by Mr. Lal Bahadur Shastri at the A.I.C.C. session, might be followed by a vigorous control on dividends distributed by companies. But for this fear and reports of L.I.C. sales in certain counters, the gains recorded by many scrips would have probably been more handsome.

Steels

Tata Ordinaries met with some support and advanced from Rs. 161 on Thursday last week to Rs. 162.50 today. At this level, profit-taking set in and the quotation eased to Rs. 162 towards the close. The net gain over the week was Re. 1. Indian Irons began the week at Rs. 23.72, as against Rs. 23.68, and, after declining to Rs. 23.44 yesterday, recovered to Rs. 23.60 today before finishing at Rs. 23.52.

Textiles

Several scrips in the textiles section scored handsome gains during the week. Khataus were particularly in the limelight, the quotation surging by Rs. 12.50 to Rs. 280. Sydeahis advanced by Rs. 5.25 to Rs. 259.25. Shreenivas registered a rise of Rs. 3.50 to Rs. 217. Indores and Kohniores strengthened by Rs. 3 each to Rs. 97 and Rs. 306, respectively. Swans gained Rs. 2.50 to Rs. 417.50, New Greats Re. 1 to Rs. 165 and India Uniteds 36 nP to Rs. 10.24. Apollos were fully maintained at Re. 1.30, Elphinstones at Rs. 36 and Gokaks at Rs. 168. Simplex, however, declined by Rs. 2.50 to Rs. 149.50 for want of follow-up support. Bombay Dyeing, moved narrowly, today's closing rate being Rs. 87.60, as against Rs. 88.30. Centurys eased by a rupee to Rs. 578.50. Morarjis lost Rs. 2 to Rs. 285, Finlays Re. 1.50 to Rs. 288 and Central Indias Re. 1 to Rs. 109.

Sugars

Sugar shares elicited good support. Although the support did not persist throughout, today's rates were generally higher than those at the end of last week. Phaltans were particularly well supported, their quotation climbing up by Rs. 14 to Rs. 179. Belapurs firmed up from Rs. 324.50 to Rs. 329.50 on the opening day, that is, Friday, 25th September. After easing in the subsequent sessions to Rs. 326.50 yesterday, they improved to Rs. 328 today before closing a rupee lower. The net rise over the week was Rs. 2.50. Bhopals rallied from Rs. 24.12 to Rs. 24.52. Chandsons were fully steady at Rs. 27. Walchandnagars rose from Rs. 327.50 to Rs. 328.50 and, after easing to Rs. 326, recovered to finish at Rs. 326.25.

Cements

Cement shares showed a tendency to harden. Associated Cements moved up by Rs. 3 to Rs. 152, thanks to hopes of higher dividend. Digvijays rose by a rupee to Rs. 148. Orissas gained 8 nP to Rs. 15.40. Dalmias were steady at Rs. 10.60. Jaipur Udyogs, however, came in for selling and receded by 28 nP to Rs. 10.04.

Banks

There was an all-round rise in values in the banking section. Barodas picked up Rs. 2 to Rs. 104.50. Centrals gathered 25 nP to Rs. 49.25. Bank of India were better by 25 nP at Rs. 112.50. 'A' shares advancing by Re. 1.50 to Rs. 115.50. United Commercials strengthened by 80 nP to Rs. 62.80 and Unions by 4 nP to Rs. 7.04. Jaipurs were firm at Rs. 40. Among insurance shares, New Indias improved by 40 nP to Rs. 59.70; 'A' shares were unchanged at Rs. 60.

Engineering and Minings

Buying support was generally well sustained in engineering shares. Cooper Engineerings spurred by Rs. 9 to Rs. 169, notwithstanding the reduction in dividend to Rs. 9.10 for the year ended June 1959 from Rs. 10 paid in the previous year. Voltas recorded a rise of Rs. 8.75 over the week, today's closing rate being Rs. 179.50. Larsen and Toubros gained 11 nP to Rs. 23.04. Premier Constructions were fully maintained at the last week's rate of Rs. 357, at one time today, they were higher at Rs. 358.50. Alcock Ashdowns softened by a rupee to Rs. 253. Mahindras lost 40 nP to Rs. 22.52. Mining shares tended to look up, Shivrappurs rising by 50 nP to Rs. 89.50 and Indian Coppers by 4 nP to Rs. 4.14.

Shippings

Shipping shares were irregular. Scindias strengthened by 24 nP to Rs. 17.16. But Great Easterns declined by 12 nP to Rs. 20.28. Indian Steamships eased by 8 nP to Rs. 13.44.

Among electricity shares, Tata Powers put on Rs. 5 to Rs. 1,135. Andhra Valleys improved by Rs. 2.50 to Rs. 1,105. Surats gathered a rupee to Rs. 109.50. Ahmedabad Electrics were firm at Rs. 96, as also Bombay Suburbans at Rs. 106 and Tata Hydros at Rs. 113.50.

Quotations for many miscellaneous industrials firmed ahead, under the impetus of excellent buying support. India Dyestuffs jumped up by Rs. 51.25 to Rs. 341.25. Colour Chems (new) by Rs. 48.50 to Rs. 248. Amar Dyes by Rs. 37.75 to Rs. 229. Kemp and Cos. strengthened by Rs. 30. National Rayons' new shares spurted by Rs. 26 to Rs. 352. Ordinaries rallying from Rs. 359.50 to Rs. 364.50. Polychems hardened by Rs. 16 to Rs. 146. Alembics and Ceat Tyres rose by Rs. 7 each to Rs. 190 and Rs. 170, respectively. Wincos increased by Rs. 4 to Rs. 222. Bombay Burmahs opened at Rs. 537, as against Rs. 538, and firmed up to Rs. 549.50 yesterday but receded to Rs. 540 today. After moving rather erratically, Gwalior Rayons gathered 30 nP to finish firm at Rs. 26. Among automobiles, Hindustan Motors gained 28 nP to Rs. 12.72. Premiers were unchanged at Rs. 131.50, after being higher at Rs. 132. Hardboards, which had registered a rise of as much as Rs. 212.50 to Rs. 430 last week, encountered profit-taking this week and dropped Rs. 75 to Rs. 355.

Madras Stock Exchange

MADRAS, 29th September

The steady trend noted on the Madras Stock Exchange last week gathered further momentum during the week under review. The hopes of sizable financial assistance from friendly countries for India's third Five-year Plan, following the Union Finance Minister's current overseas tour, had a stimulating influence. Textiles continued to be well favoured on renewed reports regarding the export of piecegoods and yarns. Tea scrips also elicited enlarged buying enquiries, induced by pronounced overseas demand for teas. In sympathy, coffees and rubbers tended to move up. Sugar and miscellaneous industrials, too, generally improved, the buying fervour having been fanned by expectations of better corporate news.

In the sugar section, United Breweries advanced by Rs. 2.50 to Rs. 481.50. E.I.D.s and Indias picked up 10 nP each to Rs. 40 and Rs. 13, respectively. Cauverys were firm at Rs. 118.50, as also Kirlampudis at Rs. 80 and Mysore at Rs. 49.50. Travancore, however, dropped 35 nP to Rs. 12, reflecting disappointment of operators over the announcement of taxable dividend of 10 per cent. for the year ended April 1959, as against the tax-free dividend of 10 per cent. distributed in the previous year.

Tea shares changed hands at higher prices. Nonsuch Teas went up by 50 nP to Rs. 29.25. Nelliampathys hardened by 4 nP to Rs. 2.92. Chembras gathered 2 nP to Rs. 3.95. Haileyburias were fully maintained at Rs. 18.50, Kil Kotagiris at Rs. 8.05, Nilgiris at Rs. 7.80 and Twyfordas at Rs. 13.50. In the coffee group, Wartyhullis rose by 5 nP to Rs. 3.90. Anaparis were steady at Rs. 5.10 and Ossors at Rs. 3.90. Coffeelands, however, shed 7 nP to Rs. 23.33. Cowoodys lost by 5 nP to Rs. 6.15. In the rubber group, Vaikundams and Highlanders increased by 13 nP each, the former to Rs. 27.75 and the latter to Rs. 13. Kailasas gained 10 nP to Rs. 4.90. Malankaras were unaltered at Rs. 19. Rajagiris at Rs. 18.70 and Teekoys at Rs. 7.50. Midlands shed 10 nP to Rs. 12.10.

Among textiles, Cambodia provided the brightest spot, the quotation surging by Rs. 3.75 to Rs. 15.75. Following the rapid increase in the value of this scrip, the Stock Exchange authorities have decided to permit only spot transactions in ordinary shares. Cannanores rallied from Rs. 142 to Rs. 148. Dhanalakshmis advanced by Rs. 4 to Rs. 204. Coimbatore Cottons rose by Rs. 2 to Rs. 145. Metturs improved by Re. 1.50 to Rs. 374. Bangalore Woollens and Buckinghams hardened by a rupee each to Rs. 180 and Rs. 186.50, respectively. Venkateshas gained a similar amount to Rs. 114. Coimbatore Pioneers were fully steady at Rs. 285. Rajalakshmis at Rs. 63. Trichinopolys at Rs. 10.90, Vasantas at Rs. 211 and Virudhunagars at Rs. 38.

In the miscellaneous section, Western India Plywoods rose by Rs. 19 to Rs. 210. Textools strengthened by Rs. 5 to Rs. 196. Orissa Cements gathered 55 nP to Rs. 17. Travancore Chemicals were higher by 25 nP at Rs. 13.75. Dalmia Cements recorded a gain of 20 nP to Rs. 10.70. Indian Steel Rollings rose by 10 nP to Rs. 13.30. F.A.C.T.s and Ashok Leylands hardened by 5 nP each, the former to Rs. 9.15 and the latter to Rs. 7.80. Standard Motors were steady at Rs. 17 and Parrys at Rs. 4.24. Travancore Cements, however, dropped 10 nP to Rs. 10 and Andhra Cements 5 nP to Rs. 9.35. Rallis were marked down by 50 nP at Rs. 76.50.

Industrial production in the six European Common Market countries is expected to go up by 6½ to 7½ per cent. in the final quarter of 1959, according to the latest report of the Economic Community Commission. Since the beginning of this year, there has been a steady expansion in the economic activities of these countries. Industrial production was higher by 1.8 per cent. in the first quarter and by 6.4 per cent. in the second quarter, as compared with the corresponding quarters of 1958. The total value of exports was also higher by 11 per cent. in the second quarter of 1959, principally owing to expansion in exports to the U.S. With the exception of coal industry, several industries which were affected by recession last year, particularly steel, textiles, clothing and leather goods, are now said to have entered a new phase of expansion.

NEWS IN BRIEF

EXPORTS of leather meals will be licensed freely without any quantitative restrictions upto the end of September 1962 to all permissible destinations.

The U.P. Government will commence a scheme to establish 10,000 service co-operatives in the State on 1st November next. It is said that the scheme will be completed within two months.

The Calcutta Municipal Corporation has decided not to renew the agreement with the Oriental Gas Company, as it favours the gradual replacement of gas and oil lamps by electricity.

The Heavy Electricals Ltd., Bhopal, has awarded a £125,000 contract to the U.K. firm, Humphreys and Glasgow, for the supply, erection and commissioning of a gas-making plant at Bhopal to be completed early in 1961.

Discussions between the representatives of India and the U.S. on the five-million-ton grain reserve plan, proposed by Mr. S. K. Patil, are expected to commence soon after the five-million-ton P.L. 480 agreement is signed at Washington.

As part of the export promotion drive, the Railway Board has decided to grant a rebate of 50 per cent. on freight on consignments of bicycles and their component parts booked from Sonepat and Bahadurgarh to Amritsar for onward despatch to Afghanistan via Pakistan.

Nearly 150 highway experts from India and foreign countries will gather in Bombay towards the end of this month to carry out a scientific study of the problems of safety on highways. The study is organised by the Government of India under the auspices of the United Nations Economic Commission for Asia and the Far East and in collaboration with non-official organisations interested in road transport and highway safety.

The Hirakud Dam Project will be transferred to the Orissa Government and its administration will be taken over by the State Government from the Government of India with effect from 1st April 1960. The financial arrangements between the Central and State Governments for this purpose are at present being worked out and are expected to be completed before the date of the transfer of the project.

The Geological Survey of India has tentatively estimated the iron ore deposits at Redi Central Block in the Ratnagiri District of Bombay State at 25 million tons. The nature and mode of occurrence of these deposits are said to resemble those of Goa which have been mined on a comparatively large scale by mechanised means. The Ratnagiri deposits have the advantage of being favourably located for export trade because of their proximity to the port.

A Joint Management Council consisting of equal number of the representatives of labour and management has been set up in the Hindustan Insecticide Factory at Delhi. The second of its kind in the public sector projects—the first Joint Management Council was set up in the Hindustan Machine Tools Ltd., Jalahalli in June 1958—the Council will enable workers to participate actively in management and promote harmonious labour-management relations. The Council was formally inaugurated on Wednesday this week.

The Central Government is understood to have approved of the project report and specifications for the establishment of a clay washing plant at Neyveli, prepared by the Neyveli Lignite Corporation. According to the report, china-clay is available in large quantities on the Neyveli project site. When washed, it will be of excellent quality, suitable for the manufacture of ceramics, particularly high and low tension insulators, sanitaryware, crockery, etc., as well as for use in the textiles, rubber, paper and chemical industries.

The working of the 16 Development Councils and nine panels was reviewed at a meeting of the Councils' chairmen held at New Delhi on 25th September. A working group was set up to suggest measures for reorganising the Councils, in order to cope with the increasing tempo of industrial development in the third Plan. Presiding over the meeting, Mr. Manubhai Shah, Union Minister for Industry, suggested that the Development Councils should concentrate their attention on various aspects of indigenous production and internal prices, with a view to competing in the world market. He also stressed the importance of industrial designing.

The Government of India has decided to fix the production targets for steel at 10 million tons in terms of ingots and at 1.5 million tons for pig alloy and special steels under the third Five-year Plan. It is proposed to erect two new steel plants, one with a capacity of one million tons at Bokharo in Bihar and another with a capacity of 500,000 tons at Neyveli in Madras. The public sector of the existing public sector projects will be expanded from 3.0 million tons to 5.2 million tons. Besides, the Tata Steel Company and the Indian Iron and Steel Company will be permitted to expand their capacities further. Some private industrialists will be offered facilities to set up a network of about two dozen electric blast furnaces in the different parts of the country.

The Government of Bombay proposes to fix the minimum rates of wages payable to workers employed in public motor transport in the Marath-

PERSONAL

MR. A. M. H. El Feki, United Arab Republic's Ambassador-designate for India, arrived in Bombay last week.

Mr. Raj Krishna Tandon, Chief of Protocol and Joint Secretary in the Ministry of External Affairs, has been appointed Ambassador of India to the Netherlands.

Mr. Vijayananda Dahanayake, until recently Minister for Education, Government of Ceylon, was sworn in as Prime Minister of Ceylon on 26th September, vice Mr. S. W. R. D. Bandarnaike, who was assassinated.

Mr. J. R. D. Tata, Chairman, Messrs. Tata Sons Ltd., left for Japan on Sunday last to attend the annual general meeting of the International Air Transport Association, of which, he is the President. The meeting is scheduled to commence on the 12th inst.

Mr. L. J. Evans, Managing Director, Technicon Instruments Co., Ltd. (of London), will be arriving in Bombay on the 8th inst., to see the possible users of the Technicon range of equipment, including their auto-analyser. He will be in the City till the 12th inst. The Technicon auto-analyser is a new system for continuous chemical analysis which is used in various industrial processes and in hospital laboratories.

The Board of Directors of The First National City Bank of New York, in anticipation of the retirement of Mr. Howard C. Sheperd, Chairman, on 1st November 1959 and the retirement of Mr. DeWitt A. Forward, Vice-Chairman, on 1st October 1959, announced on 29th September 1959 the following appointments to take effect on 1st November 1959:

Mr. James S. Rockefeller, formerly President and Director, becomes Chairman of the Board and Chief Executive Officer; Mr. Richard S. Perkins, formerly Vice-Chairman and Director, becomes Chairman of the Executive Committee and Director; Mr. George S. Moore, formerly Executive Vice-President and General Manager of the Overseas Division, becomes President of the Bank and Director; Mr. Walter B. Wriston, Senior Vice-President, Europe, Africa, and Middle East District, Overseas Division, will assume general supervision of the entire Overseas Division. Mr. Wriston is currently travelling in the Far East and is expected to visit Bombay and Calcutta from the 4th to 8th inst.

per cent. higher. Larger deliveries for electricity stations were the major factor in the rise. Motor spirit consumption, at 3.35 million tons, rose by 8½ per cent. Further expansion of the domestic use of fuel for heating appliances resulted in a rise of about 10½ per cent. for the half-year.

The total world production of raw wool in the 1959-60 season is provisionally estimated at 5,460 million lbs. (greasy basis), which represents a rise of 3 per cent. as compared with the previous season. Free world output alone is expected to go up by 2 per cent. to 4,420 million lbs. The rise is accounted for entirely by Australian clip. On a clean basis, free world production is placed about 2 per cent. higher at 2,450 million lbs., a new post-war record. Wool output in Communist countries is expected to go up by 6 per cent.

An agreement has been signed at Warsaw between the Imperial Chemical Industries (U.K.) and the Polish foreign trade enterprises, the Polimex and the Textilimport. The agreement covers purchase by Polimex of production know-how and a licence to enable a plant for polyester fibre to be built in Poland. It also covers the purchase by Textilimport of polyester fibre which the I.C.I. will supply to Poland during the years 1960-64. It is expected that the plant producing the Polish polyester fibre under the name of Elana, will be commissioned in 1963.

The Indonesian bank notes of 1,000 rupiahs and 500 rupiahs, which were devalued by 90 per cent. of their face value last month, will be withdrawn from circulation from the beginning of next year. The Indonesian Government has also instructed all Dutch companies, now under its control or nationalised, to put their deposits or accounts in State banks or Government-controlled banks. The Dutch companies still having credit relations with non-Government banks will, however, be allowed to continue their business with these banks until the end of their obligation to repay credits.

The total outlay of Pakistan's second Five-year Plan, scheduled to begin next year, has been fixed at Rs. 1,800 crores, including Rs. 650 crores in the private sector, by the panel of economists, appointed by the Government of Pakistan. The major part of the outlay, to the tune of Rs. 1,150 crores, is proposed to be met by mobilising domestic savings and the balance of Rs. 650 crores from foreign aid. The share of agriculture alone is put at Rs. 200 crores. The Plan seeks to raise national income by 20 per cent. and per capita income by 10 per cent. The panel has emphasised the need for achieving self-sufficiency in food by stepping up agricultural production by 20 per cent. It has also suggested a long-term programme to achieve full employment in the country at the end of the third Plan. Further, the panel has urged the removal of existing price and profit controls, which, according to it, discourage private investments and production, encourage consumption and reduce Government's income.

ADVERTISING

THE role of advertising in economic development was admirably brought out by the Union Minister of Industry, Mr. Manubhai Shah, as well as by Mr. Chinubhai Kilachand, the President of the Indian Society of Advertisers, at a meeting of the Society, held this week in Bombay. Mr. Shah commended the Society's campaign, entitled "Why We Advertise," which is intended to educate public opinion in the relevance of advertising to national economy. He rightly declared that advertising was part of "our national movement of productivity." He added: "Modern methods of mass production are in a way advantageous, in that they bring about a progressive reduction in the cost. In a country like ours with a lower living standard as compared to other countries of the world, it is necessary that we have products which are relatively cheap to meet the requirements of our people. Advertising can help to sell those goods better." A similar view was expressed by Mr. Chinubhai Kilachand who, after pointing out that all modern economies were based on the assembly line technique of mass manufacture, averred that "scientific and purposive advertising served to create new demands."

There is no doubt that advertising and mass production go hand in hand. Together, they determine the level of consumption. The consumer benefits from the higher volume of production and sales which implies lower cost per unit. But advertising serves to extend the area of the market for a product, which, in the rapidly shrinking world of ours, is international, rather than merely local or even national in scope. From this point of view, the campaign for advertising, which the enterprising Indian Society of Advertisers has undertaken, is all to the good. In India, there has undoubtedly developed a healthy awareness of the importance of advertising among manufacturers. There are, however, quite a few among them, who are inclined to allot a lower order of priority to advertising, presumably in the belief that their goods are bound to sell by themselves. The fact must be brought home to them that, if a manufacturer does not care to advertise his goods, the official auctioneer will be soon doing it for him. Nor is the manufacturer alone in need of education in the importance of advertising. The average consumer remains a doubting Thomas, for he is often weighed down by an uncomfortable feeling that he is being made to pay heavily for the advertising efforts of the manufacturer whose products he buys. It is necessary that he should be told that, far from his having to pay more for the advertised goods he buys, he is actually paying less. For, in the absence of advertising, the market would shrink and the unit cost of the product would rise; the consumer would thus lose rather than gain through inadequate publicity. In the first of the series of advertisements, under the title "Why We Advertise," the well-known industrialist, Mr. Dharamsey Khatau, observes: "My own experience in industry has convinced me that advertising not only assists the manufacturer in the development of his business. It also brings many very real benefits to the consumer—to you." Advertisement, as Mr. Khatau says, is a "great power for good, a tremendous educative force."

There are three aspects of advertising which deserve special notice in the context of Indian conditions. In the first place, it is wrong to think that advertising, by itself, can sell goods. In the final analysis, it is price and quality that will appeal to the consumer. Mr. Chinubhai Kilachand did well to emphasise that "it is only the producer of quality goods that creates confidence in the minds of consumers." Given this basic factor, advertisement can do much to promote sales. Secondly, it is not always true—in fact, it is seldom true—that the manufacturer or producer can manage all his advertising himself. Advertising is at once a great art and a great science, which demands much intricate knowledge of the markets and of the consumers, as well as of the best means of reaching them. Referring to the increasing volume of advertising by the public sector, Mr. Kilachand stressed that such advertising was best left in the

"hands of professional men." This is true of all advertising, whether by the Government or the private manufacturer. The professional advertising agent is an indispensable element in modern market economy. Because of his special insight into problems of marketing, and of the fact that he is free from the day-to-day problems of production by which the manufacturer is generally overwhelmed, the advertising agent can do a better job of advertising than the producer.

Finally, there is need for greater emphasis on co-operative advertising, particularly in the sphere of export advertising. In this connection, as Mr. Manubhai Shah himself suggested, the example of Swiss manufacturers of watches is worthy of emulation. Advertising by a whole industry benefits all the units in it and carries a special appeal to the consumers. Co-operative advertising does not, however, "override" advertising of brands by individual companies. But, by cutting much wasteful expenditure involved in competitive advertising, co-operative publicity builds up better goodwill at a smaller cost than unplanned individual advertising efforts. There is a large field, nearer home as well as abroad, where Indian producers can co-operate in advertising and sales promotion.

I.F.C.'S NEW MOVE

The Industrial Finance Corporation of India—I.F.C. for short—has been authorised by the Central Government to relax some of its lending rules, in order to give rupee loans to industrialists who import machinery and equipment under foreign credits obtained by the Centre from such sources as the U.S. Export-Import Bank, the Development Loan Fund, other foreign Government banks and credit institutions. Accordingly, the I.F.C. will now follow a flexible policy in these cases. Addressing a Press conference at New Delhi last week-end, Mr. K. R. K. Menon, Chairman of the I.F.C., said that he would not insist on the normal 50 per cent. margin against the value of a scheme before making a loan. No floor has been fixed, we are told, and the I.F.C. "will operate in these cases as flexibly as is necessary to make the facility effective."

On the face of it, this move of the Central Government appears to be a gesture of "help" to the private sector for making use of long-term foreign exchange facilities that are available from the aforesaid sources. But, really speaking, the gesture is not so generous. A principal cause for the private sector's slow pace of absorption of foreign credit, such as that offered by the Ex-Imp Bank, has all along been the Government of India's insistence on down payment in rupees to the full value of goods imported under foreign credits. The industrialists are now no doubt enabled to make this down payment by obtaining a loan from the I.F.C., but they have to pay a high rate of interest, namely, 7 per cent. (a rebate of 1 per cent. is, of course, allowed for payment of interest and repayment of instalments of principal on due dates), as against the lower rate of interest of 5½ per cent. at which the Government obtains loans from the Ex-Imp Bank and Development Loan Fund. If the Government really wants to help the industrialists to reap the benefit of foreign credits, it must itself extend to them the credit element by accepting rupee payments for the imported goods in easy instalments and charging the same rate of interest as that charged for foreign credits, namely, 5½ per cent. Even by doing so, the Government can make some extra money, by utilising the funds deposited by the industrialists for financing its own projects. Representations to this effect have been made by the industrialists and it is regrettable that the Government has rejected them. What it has now done is only to make the I.F.C. benefit in the form of interest on loans granted to finance imports of machinery and equipment under foreign credits.

Further, there are doubts as to whether the industrialists' response to the I.F.C.'s offer of loans will be encouraging. As readers are aware, the conditions in the capital markets are quite comfortable, with a surfeit of funds and lenders. It is not surprising that the total number of loan applications (26) received by the I.F.C. and the aggregate amount of loans applied for (Rs. 11.17 crores) during the year ended on 30th June 1959 were both less than in either of the two preceding years—48 applications covering Rs. 14.89 crores in 1957-58 and 67 applications wanting Rs. 21.36 crores in 1956-57. In view of easy money conditions, industrialists may prefer to meet their requirements of funds from banks and others, instead of from the

I.F.C. which charges such a high rate of interest as 7 per cent. The response to the I.F.C.'s offer would, perhaps, have been encouraging if the offer had been made immediately after the Ex-Imp Bank and Development Loan Fund credits had been announced, that is, nearly two years ago.

In his Press conference, the I.F.C. Chairman disclosed that he was taking up with the Central Government the question of the I.F.C. being authorised to subscribe directly to the equity and preference shares of industrial concerns, as this would be a profitable line of investment for the I.F.C.'s surplus funds. He said: "Such participation in equity capital should also be possible through the exercise of the right to convert loans into equities. Besides these facilities for profitably employing its funds, the Corporation should in future be able to share the profits of a concern financed by it—the method of sharing being negotiated along with the terms of a loan."

Evidently, the I.F.C. has taken the cue from the International Finance Corporation which participates in future profits and growth of the business in the form of (1) a right to convert the loan or some part of it into some type of share capital or an option to subscribe to share capital or (2) a right to some additional income related to earnings, or (3) both. Few would underrate the importance of earning power and balanced capital structure for the Industrial Finance Corporation of India. But a scheme of this nature is not very popular with Indian entrepreneurs. It is also outside the objectives of the I.F.C. The Corporation was meant only for providing loan capital and for underwriting new issues, in which direction it has done precious little so far. It would be better if the I.F.C. were to specialise in this branch of business for which conditions are now propitious, rather than try to break new ground.

Not many business concerns would like to have a State-dominated, and practically State-owned, financial institution in their register of shareholders. There would always be a fear of the Government stepping into their show through the back door. In the case of loans from the International Finance Corporation, it may be noted, no attempt is made to secure representation on the board of directors of the borrowing company nor are any conditions imposed in regard to distribution of dividends. Will the Industrial Finance Corporation of India agree to similar conditions? We wonder.

There is, however, no harm in trying the new approach. Maybe, if the I.F.C. is prepared to give long-term credit with the right to participate in profit on more favourable terms than it does at present for non-participating loans, some entrepreneurs and investors may come forward to avail themselves of the facility, especially for capital-intensive industrial ventures which are difficult and take a long time for yielding a return on investments. This would, however, mean that the I.F.C. must be permitted to hold shares of borrowing companies for a period longer than seven years, the maximum period specified under its Charter. Mr. Menon is, of course, aware of this need. He said that he would try to get the Act amended for this purpose. That should be easy, for the Government rarely says "no" to any proposition which gives it more control over the private sector.

PLANTATIONS IN KERALA

Much confusion and apprehension have been caused by certain provisions of the Kerala Agrarian Relations Bill which is now awaiting the approval of the President. These doubts and fears arise from the vagueness of some of the clauses of the Bill and, therefore, are liable to various interpretations. There are also clauses that are patently unfair in their effect on plantations. Attention to some of these aspects of the Bill was drawn by Mr. J. N. A. Hobbs, Chairman of the Chembra Peak Estates Ltd., in the course of his address to the twenty-seventh annual general meeting of the Company held at Calicut on the 9th September. Mr. Hobbs said that the effects of the Bill, as passed by the Kerala Assembly, had not been fully realised nor was it appreciated just how far-reaching the effects would be if the Bill received Presidential assent. He pointed out that the general impression that plantations were exempted from the provisions of the Bill was not correct, though it was very difficult to say where the line would be drawn and what the actual effects of the Bill would be as far as plantations, and plantation companies in particular, were concerned.

As an example of one of the most confusing provisions of the Bill, Mr. Hobbs referred to

Section 59 which placed a limitation on the reserve land that might be retained by a plantation. This was fixed at 20 per cent. of the land lying contiguous to such plantations. It could be inferred from this, he added, though the Bill did not make the point explicit, that any land in excess of 20 per cent. or not lying contiguous to a planted area would have to be surrendered, unless specifically exempted by the Government under the provisions of Section 57(2). Naturally, it would take considerable time to notify such exemptions and, by this time, the reserve lands would have been surrendered and distributed.

To what lands these provisions would apply was also not clear. It was true that the Bill exempted uncultivable waste lands, but who was to decide what was cultivable and what was not? Commenting on this provision, Mr. Hobbs said:

"Whether such land might be deemed to be surplus and be available for distribution to outsiders is a possibility which is fraught with danger. The implications are that we would either have to surrender our plantable reserves or else accept the likelihood of outsiders being given plots and parcels of land in the middle of our planted areas."

Section 58 provided among other things, that, in calculating the land ceiling for a family or adult unmarried person, the shares held in a company shall be taken into account and that such shares shall be deemed to be the extent of land which would be allotted to such family or person, had the lands owned or held by such company been divided or partitioned on the date of coming into force of Section 59. If, on such calculation, it was found that such family or person owned land in excess of the ceiling, such excess land would have to be surrendered. This would appear to contemplate the possibility of a shareholder surrendering land owned by the company. This, of course, was contrary to the existing law but, according to Mr. Hobbs, it was possible to foresee a great deal of confusion and litigation resulting from these provisions. Carried to the extreme, this could lead to the possibility of shareholders causing dismemberment of the company's estates.

In another respect also, according to Mr. Hobbs, the Bill discriminated against shareholders of plantation companies. Section 59(2) allowed a normal family to own or hold plantations up to an extent of 30 acres. In case they owned plantations in excess of this, their ownership of other lands would be reduced to 50 per cent. of the normal ceiling. In calculating his plantation holdings, all estate lands attributable to his shareholding would be deemed to be included in the lands held by him. Thus, a person's holding of shares in any plantation companies might affect his entitlement to hold other lands.

Moreover, there was the implication that, since shares held by a shareholder in a plantation company were supposed to represent a proportionate share in the land held by the company, it might be deemed that his shares were subject to the provisions of Section 60 of the Bill, which prohibited voluntary transfers of land by persons holding land in excess of the ceiling with effect from 18th December 1957 and, by implication, it might be deemed that even the transfers of shares which had been effected by such person since that date would be deemed to be transfers calculated to defeat the provisions of the Bill and would be treated as null and void.

In Mr. Hobbs's view, the provisions in regard to compensation for lands surrendered were harsh. He also felt that Section 3(iii) of the Bill, which denied fixity of tenure to plantations of above 30 acres, when one of the avowed aims of the Bill was to give fixity of tenure to persons who hold land under various kinds of leases or licences, was discriminatory.

Mr. Hobbs is convinced that the Bill, if approved in its present form, will have a very serious effect on the development of plantation industry in Kerala, a major source of gainful employment in the State. It will also frustrate the objects of three Central legislations, namely, the Tea Act, 1953, The Coffee Market Expansion (Amendment) Act 1955, and the Rubber Production and Marketing (Amendment) Act 1955, all of which are aimed at developing the plantation industry under the control of the Central Government. If implemented, the Bill will, in fact, result in the control of the plantation industry in Kerala passing entirely into the hands of the Kerala Government. In view of the widespread fear and concern expressed by planters on many occasions, the Union Government will do well to see that the necessary changes are made in the provisions of the Bill before it becomes a fait accompli.

AUTOMOBILE INDUSTRY

The illuminating address delivered by Mr. Lalchand Hirachand, President of the Automotive Manufacturers' Association of India, at the annual general meeting of the Association held in Calcutta on the 29th ultimo, should dispel all doubts regarding the industry's past performance and its ability to deliver the goods in future. Mr. Hirachand pointed out that the phased production programmes of the various units of the industry, laid down by the Government on the recommendation of the Tariff Commission, showed satisfactory progress. The rated installed capacity for the industry was already reaching the target of 65,000 vehicles a year and it was expected to exceed the target by the end of the second Plan. The indigenous content of automobiles was also increasing. In respect of passenger cars, it was as high as 73.4 per cent. in certain cases and, in the case of trucks, 64.4 per cent. Mr. Hirachand was confident that, if the necessary Governmental assistance were forthcoming, the industry would be able to attain the target level of 80 per cent. indigenous content by 1960-61. The ancillary industry also was making commendable progress.

Considering the restrictive policy in respect of imports of components, the progress made by the automobile industry is certainly creditable. This, no doubt, was made possible, to a large extent, by the assistance provided by the Tariff Commission and the greater appreciation by the Government of the importance of the industry. But there are still several problems facing the industry which deserve urgent attention from the Government. The first, according to the President, is insufficient foreign exchange allocation. He said that foreign exchange shortage had adversely affected the production programmes of the various units in the industry. The total annual output of vehicles, after showing a healthy increase in recent years, had declined of late. Thus, production of motor cars, lorries and jeeps which was of the order of 32,138 in 1956, after rising to 33,058 in 1957, declined to 26,788 in 1958.

Mr. Hirachand observed that a section of the industry producing passenger cars was badly affected by the foreign exchange shortage and was subject to much public criticism on that score. It was not realised that shortage of cars was not due to any increase in demand and want of manufacturing capacity but was the result of restriction on imports of certain essential components and parts. In the import programme for automobiles, the emphasis was on components of commercial vehicles in view of the priority given to them in the Plan. Even the loans available from the Development Loan Fund and the Export-Import Bank were earmarked for road carriers. This was because passenger cars were still considered a luxury. Mr. Lalchand felt that manufacture of passenger cars should be encouraged and that, in no case, the priority for passenger cars should be sacrificed in the interest of the truck section of the industry.

Assuming that production would increase as a result of freer imports, the main problem of the industry, according to Mr. Hirachand, would be to find ways and means of bringing about a reduction in production cost and stimulating demand. The industry was in a vicious circle. The low rate of motor vehicles production in the country was directly linked up with the low rate of consumption which was again linked up with the high cost of production. The low standards of living and lack of sufficient purchasing power made demand sluggish. In the circumstance, unless the income levels of the people were substantially raised, there was no prospect of any appreciable improvement in demand.

Mr. Hirachand was not very optimistic of the possibility of producing low-cost cars—a question which is now being examined by an ad hoc committee presided over by Mr. L. K. Jha, Additional Secretary, Ministry of Commerce and Industry. The limited character of the Indian market for automobiles and the prevailing heavy burden of taxation on motor vehicles, he said, made the problem of manufacturing a low-cost car for the common man in the price range of Rs. 5,000 to Rs. 7,000 difficult of solution. He quoted the following observation of the Tariff Commission in support of his contention:

"The Indian automobile industry has so developed that it is impracticable at this stage to plan the production of a baby car on the basis of the largest possible volume. In our view, the development of automobile industry should not be allowed to follow the law of the survival of the

fittest, but should be so planned as to avoid, as far as possible, any difficulties in the way of the smooth implementation of the projects already approved. We consider that it would be inconsistent with this principle to grant approval to any new project for the manufacture of a baby car...."

The Commission was also of the view that the commitments already undertaken in respect of small cars precluded any prospect of a low-cost car being produced in India in the near future, unless one of the existing units showed potentialities for achieving such cost. The position, Mr. Hirachand maintained, had not materially altered since then. He, however, made one suggestion in this regard. One way of achieving production of a car at a lower cost was to allow the present manufacturers to increase their production. This would help reduce the cost, thereby obviating the necessity for a low-cost car. A low-cost car could not be produced, unless production was on a decent volume of not less than 10,000 vehicles. Further, the production of this car would have to be started from scratch and would involve a good deal of foreign exchange, let alone rupee capital. If all the available foreign exchange were utilised for increasing the production of the existing models, it would certainly bring down prices.

DISPOSAL OF INDUSTRIAL WASTES

As industrialisation makes headway in this country, the problem of disposal of industrial wastes and effluences assumes considerable importance. Indiscriminate disposal of certain industrial effluences, such as those found in the manufacture of chemicals, sugar or leather, will be harmful from the point of view of public health. Some of the gases formed in the process of manufacture are often poisonous in nature. The availability of appropriate outlets for disposing of wastes, therefore, is a factor that has to be taken into account in the location of industries. A familiar way of doing away with solid or liquid wastes is to discharge them into rivers. This pollutes the water. Besides rendering such water unsuitable for drinking purposes, it may adversely affect the fish in the water and also make the water less suitable for irrigation. Scientific research is therefore essential to determine the nature and extent of the problem and to suggest measures for eliminating any possible deleterious effects of unplanned disposal of wastes. This will also make it possible to devise ways for the economic utilisation of certain recoverable materials from the wastes. Much useful work is being done by the various units of the Indian Council of Medical Research in this connection. At a recent meeting of the Bihar Regional Committee of the Council held at Ranchi, some valuable results of the investigations conducted by the regional research unit were disclosed.

The Bihar unit is currently engaged in investigating the problems connected with the disposal of wastes from the Rottas Industries group at Dalmianagar, comprising a paper factory, a chemical factory and a sugar factory. These factories discharge their wastes into the Sone river. It has been found that, during the dry season, that is, from November to June, the pollution spreads to a distance of 40 miles downstream and has a marked toxic effect on the fish in the river. There is hardly any such problem during the flood season, since at this time the effluents get so diluted that they cease to be obnoxious.

The unit carried out an experiment by constructing a large settling tank in the bed of the river with sand walls. The liquid part of the wastes filters through the sand and becomes harmless, whereas the solid wastes left behind in the tank, consisting mostly of fibres from the paper factory, are recovered and used again. One drawback in this process is that any sudden flooding of the river due to rain in the dry season destroys the tank. Further investigations are under way to improve upon the method.

The unit has also discovered that green algae would be useful in purifying sugar factory wastes. It has also discovered a medium on which green algae grow profusely. Pilot experiments have shown that discharging sugar factory wastes in a tank covered with green algae is highly efficacious. The unit proposes to adopt this method on a large-scale, in order to purify wastes in a number of sugar factories. We commend the work of this research unit to other States. It is to be hoped that similar work will be undertaken in other parts of the country, so that the problems of disposal of industrial wastes, peculiar to each region, may be studied with a view to formulating appropriate solutions for them.

AMERICAN LETTER

WORKERS IGNORE MR. KHRUSHCHEV STEEL STRIKE PERSISTS—GOVERNMENT MAY INTERVENE

From Our Special Correspondent

NEW YORK, 24th September

THE last few weeks and days have been exciting ones in the United States, politically and economically. Taking the latter sphere first, the rising interest rate curve has produced a setback in all bond markets, notably in the Treasury sector.

The re-discount rate in all 12 Federal Reserve districts is now at 4 per cent., while the prime lending rate of commercial banks is at 5 per cent. This means that most borrowers who are not "prime" have to pay considerably more. Yet, the new high yields for bonds are attracting buyers away from the stock market which has been turning in poor performances of late.

The visit of Nikita S. Khrushchev, Soviet Prime Minister, psychologically, was another depressing factor. I have watched foreign dignitaries arrive at Washington and New York since 1924 and I must say that the reception to Mr. Khrushchev by the people who lined the streets was the coolest and most sceptical I have yet encountered here and abroad.

Comrade Khrushchev blew hot and cold. He waved and smiled and he threatened. His greatest asset, perhaps, was his wife Nina who disarmed everyone by her simple charm and naturalness. The Prime Minister had a rough time during the question and answer period, both at the National Press Club at Washington and at a dinner of the Economic Club of New York. On the latter occasion, he threatened to walk out, because he resented being interrupted when he did not answer a question why United States' publications were banned in Russia while Russian journalists enjoyed every freedom in the U.S. The Soviet Prime Minister was generally held to be a very intelligent man, a great actor who can turn on charm and scorn at the occasion warrants.

Workers' Cold Reception

Like other Soviet leaders who were here, they did not seem to understand just what American labour represents. Mr. Khrushchev speaks frequently of the "toilers" who produce the wealth of any country. He assumed automatically that every toiler in the world—and who isn't?—must love him automatically. Yet, when he rode through New York's garment district and along the waterfront, the workers, with very few exceptions, just stared at him silently.

In Washington, the Soviet Prime Minister and President Eisenhower rode together in an open car. The New York City police, conscious of all the racial minorities and refugees from Iron Curtain countries, did not take that chance. They placed Mr. Khrushchev in a closed car and, with a very heavy motor-cycle escort, whisked him through the streets which had been cleared beforehand.

The top Soviet leader also insisted on seeing the largest Negro district of New York—Harlem. Apparently, he expected to get a tumultuous welcome. Yet, there was hardly anyone on the streets when he was driven through the area.

Former President Truman declined an invitation by former Governor Harriman to join him in a reception for Mr. Khrushchev. Mr. Truman said he had a previous date with his daughter and son-in-law. Also, the top labour leaders refused to meet with the leader of the Kremlin. Against their wishes, though, five Presidents of San Francisco trade unions did invite the top Communist to meet with them.

The final show-down between President Eisenhower and Premier Khrushchev is to occur at Camp David outside of Washington. It is a secluded military establishment assuring absolute privacy. The final outcome of these meetings, outside of the official communiques, may not be known for some time.

Some 600,000 steel workers are still on strike at this writing. Another contingent of hundreds of thousands of workers have been laid off in other industries as a result. It is a bitter strike. The combined American Federation of Labour and the Congress of Industrial Organisations, at their annual convention at San Francisco, agreed to raise \$15 million a month to help the steel workers.

In the meantime, the chances are that, sooner or later, the Taft-Hartley Act will be invoked by the Government. This Act provides for a cooling off period during which work is to be resumed whenever a national emergency is deemed to exist. It is a pity that Mr. Khrushchev cannot see the inside workings of this steel walkout, in which one group of capitalists strikes against the other without a revolution.

Indeed, the steel strike has caused just a ripple in the economic indices. Employment which usually improves in August fell 353,000. Layoffs in the automobile industry caused by early model changeovers were mostly responsible for this fall. Strikers, statistically, do not count as unemployed, unless they actively seek employment elsewhere.

In the middle of September, auto production started again on the 1960 models. Included in the new line will be a number of small cars in competition with European autos which have been enjoying increasing sales for a number of years.

Business spending plans have continued to increase, despite the steel strike. Expenditures for new plant and equipment this year are now projected at \$33,300 million which is \$700 million above the Department of Commerce estimates three months ago. Officials of the Department and of the Securities and Exchange Commission predicted the total may be boosted still further if the steel strike is settled soon.

It may be of interest to readers in India to quote from the *Monthly Review* of the Federal Reserve Bank of New York. "The impact of the strikes in the steel and copper industries had a relatively minor effect on the nation's economy at the end of August," the Bank said. It was noted, however, that reports of cutbacks and prospective cutbacks were "becoming more frequent."

Radio-Isotopes in U.S. Mining

Scientists report that successful experiments have been completed in the use of radio-isotopes in the extraction of essential metals from ore, such as cobalt, iron, nickel and beryllium. The experiments are centered in the U.S. Department of the Interior Research Center at Salt Lake City, Utah.

Atomically "tagged" substances are prepared for bombarding the metals in an atomic reactor. These substances do not differ chemically from their non-radioactive counterparts. They can be detected, though, with radiation counters. A radio-isotope, Cobalt 60, for example, can be mixed with material containing ordinary cobalt, then followed step by step through an extraction process with Geiger counters, scintillometers or similar instruments.

Process control systems for commercial milling and refining operations are also being benefited by this work. Still more important, radio-isotopes seem to lead scientists to more efficient metallurgical techniques, permitting utilisation of materials which cannot be processed economically by present methods. Isotopes already are used widely by some industries in tracer and control operations, also in medicine and agriculture for exploring biological processes.—All Rights Reserved.

WORLD BANK LOAN TO PAKISTAN

The World Bank has made a loan equivalent to \$10 million to the Pakistan Industrial Credit and Investment Corporation (P.I.C.I.C.). Like an earlier bank loan of \$42 million to P.I.C.I.C., the latest loan will be used to meet the foreign exchange requirements of projects financed by the Corporation. The loan is for a term of 10 years, and amortisation will begin in October 1962. Provision has been made to extend the term of the loan by another four years, if particular projects require a longer repayment period. Each part of the loan allocated for a particular project will carry its own interest rate, which will be the Bank's current rate of interest at the time the project is approved for financing. The loan is guaranteed by the Republic of Pakistan.

The P.I.C.I.C. may be noted, was established in September 1957 by Pakistan, British, Canadian, American and Japanese private investors to promote the growth of private industry in Pakistan. It makes loans and equity investments and helps industry to obtain managerial, technical and administrative services and advice. By May 1959, it had approved 87 loans for a total of Rs. 5.60 crores (\$11 million) and, in conjunction with some of its larger credit operations, had acquired small amounts of equity participations and option rights.

LONDON LETTER

LABOUR PARTY'S MANIFESTO

From Our Own Correspondent

LONDON, 19th September

"TWO worlds, one white, well-fed and free, the other coloured, hungry and struggling for equality, cannot live side by side in friendship"—so says the Labour Party in its election Manifesto "Britain belongs to You." And it claims that a Labour Government would be far more understanding of the needs of colonial peoples than a Tory would be. Similarly, in the field of foreign policy, Labour can put forward a case that it might do better than its opponents whom, it says, it has pushed slowly along towards a summit conference.

But, necessarily, the main weight of the Labour Party's propaganda is on the home front, where Mr. Gaitskell and his men put their emphasis on the social services. They propose an immediate rise in old age pensions and then a gearing of these pensions to the cost of living index. Then they have put forward a more ambitious superannuation scheme than their opponents—financed as to 80 per cent. by employee-employer contributions proportionate to earnings and as to 20 per cent. out of taxation. The idea is to provide half pay on retirement for the average wage-earner and rather more for the low paid worker.

Better Education

Labour promises better education, but is not specific when the improved standards will be attained; they promise better housing and more hospitals and even without being specific it is clear that these social services represent a priority for the Party. On the other hand, there is to be no tenderness towards business men, who are to have stiffer hurdles to clear before their expense accounts are passed, who will suffer tax on Stock-Exchange capital gains and on compensation paid to directors when they lose office after a take-over bid. But it is not pretended that the revenue the Exchequer may gain from such additional taxation will pay for all the schools, hospitals and pensions that Labour want.

"The chief way of raising the finance," says the Manifesto, "will be through planned expansion"—and that is the new catch-phrase, planned expansion. The case is that the Tory damper on production held on after the danger of inflation had passed cost the country £1,700 million in 1958 "of which the Exchequer would have received £450 million." With such additional income, Mr. Gaitskell argues that the nation could afford not only the additional expenditure but enjoy a reduction of taxation as well. Clearly, this is an attractive programme—a painless financing of a desirable policy plus tax remissions.

No Confidence

The Tory Party men counter that by saying that their conduct of affairs produces the best climate for business men to do their own expanding without any planning. They will improve the social services and remit taxes through the natural processes of a free economy. Unfortunately, past experience gives one no confidence that the natural processes will always work the right way (they worked the wrong way between 1955 and 1958 when production did not expand at all). But then neither can one understand "planned expansion" without specific elaboration.

What more then does the Manifesto tell us? First, on nationalisation we are told that steel and road haulage will go back to public ownership but that beyond that nationalisation is only to be considered where an industry is "failing the nation." There is to be "a high rate of investment as the basis of raising productivity, an energetic application of science in all phases of our economic life; a favourable balance of payments, including the development of Commonwealth trade; and a strong pound." Such then are the aims of the Labour Party but the only clue to "how?" is that only a Labour Government "is ready to use the necessary controls and able to win full co-operation from the unions." And there is the rub: will the unions in fact play? Will they sacrifice immediate benefits because a Labour Government says it is in the national interest? And it is on this slender thread that the economic case of Labour hangs.—All Rights Reserved.

This is GOOD going: 0 to 50 mph in just 18 seconds!

Because of the NEW O.H.V. Engine—the latest power unit with amazing performance!

That burst of speed that you need so critically for safe overtaking and for manoeuvring through heavy traffic, is there, at the tip of your foot! And that's not all.

Now, the BIG Ambassador with the NEW OHV Engine gives you all that you look for in a car: excellent performance; luxurious accommodation and amazing economy!

WORLD ECONOMIC SITUATION DISTINCTLY BETTER I.M.F.'S ENCOURAGING SURVEY

THE most encouraging impression one gets from a perusal of the latest annual report of the International Monetary Fund (I.M.F.), that covering the year ended 30th April 1959, is that there has been a distinct improvement in the world economic situation. Reflecting this improvement are the general expansion in business activity, the greater international flow of funds, the consolidation of monetary gains achieved since the second war, and the strengthening of the financial structure of the world economy. In 1958-59, the following events were particularly outstanding:

1. Sharp upswing of industrial production in the U.S., together with indications of renewed expansion in other industrial countries.
2. Increase of more than \$3.5 million in the gold and foreign exchange reserves of West European countries.
3. Adoption, in December 1958, of external convertibility by 14 European countries and the complementary steps taken by 15 other countries to adjust their exchange controls to the new conditions thus established.
4. Proposal made at New Delhi in October 1958 and the agreements subsequently reached to augment the financial resources of the Fund and the Bank.
5. Steps taken by many primary producing countries to withstand inflationary pressures and introduction of comprehensive stabilisation programmes in some cases.

It is certainly heartening to hear from the I.M.F. that by far the largest part of world trade is now being carried on in convertible currencies, so that the exporting countries are generally free to use their export proceeds anywhere in the world. This development, as the Fund rightly says, is of both psychological and technical importance to countries applying multiple rate practices. There is already an increased willingness to discard such practices in favour of unitary rates. Commending non-resident convertibility of currencies achieved by the European countries, the I.M.F. observed:

"... the road has been opened to the elimination of discrimination in trade and payments practised on balance of payments grounds. That improvement in reserves and in balance of payments positions which made possible the move to non-resident convertibility itself also facilitated a greater freedom of trade. It was, therefore, natural that the move should be associated in some countries with a further liberalisation of trade, and it is to be expected that countries will be able to make further progress along these lines. The Fund intends to continue its study of the remaining restrictions—and especially the remaining discriminatory restrictions—and, in the meantime, it is urging its members to eliminate discrimination as rapidly as is feasible."

Three Notable Points

In this connection, the I.M.F. has stressed three notable points. One, increasing care will have to be taken to maintain, by appropriate policies, internal stability and the external value of the currency. Two, the importance of external financial assistance to the less developed countries today has become even greater than before. Three, such measures as would lead to a sound monetary situation must be adopted in the less developed countries, thereby making it easier for the countries concerned to arrange for long-term funds for economic development.

The year 1958 witnessed an improvement in the reserve positions of many industrial countries. The total official gold and foreign exchange reserves held by national monetary authorities (excluding the U.S.S.R. and the countries associated with it) rose by \$975 million to \$54,860 million during 1958, as against an increase of \$800 million in 1957 and \$1,300 million in 1956. Of this rise, gold reserves accounted for \$715 million and foreign exchange reserves (mainly U.S. dollars and sterling) for \$260 million; the actual figures of reserves held in these two forms at the end of 1958 were \$38,070 million and \$16,790 million, respectively. The proportion of the world's reserves held in the form of foreign exchange was practically unchanged at the previous year's level of 30.7 per cent, as against 32.0 per cent. in 1956. Although the total of official foreign exchange and gold reserves held at the close of last year was higher, they afforded a lower level of cover to imports (c.i.f.). Thus, the percentage of official reserves to imports, which had steadily fallen from 63 in 1955 to 59 in 1956, to 55 in 1957, dropped fur-

ther to 53. But the percentage of these reserves of countries other than the U.S. improved from 36 to 39, though it was lower than the 1955 level at 43. In fine, the liquidity of countries outside the U.S. registered a significant improvement.

Thanks to the improvement in the reserve positions of many industrial countries, there was an appreciable increase in the repayment of credits taken by them from the I.M.F. from \$86.81 million to as much as \$537.32 million. At the same time, there was also a marked fall in their borrowings from the Fund from \$665.73 million to \$263.52 million. The total of repurchases at the end of 30th April 1959, namely, \$537.32 million, were substantially higher than the total purchases from the fund aggregating \$263.52 million. Indeed, the year 1958-59 was a record year for repurchases, both the number of members repurchasing and the amount repurchased being greater than in any previous year. The stand-by arrangements in force as on the aforesaid date was equivalent to \$1,257.13 million, as against \$1,500.03 million a year before.

The volume of I.M.F. transactions in 1958-59, it is stated, was smaller than in the two preceding years when the total was dominated by a few large transactions which gave valuable support to several currencies, particularly sterling, French franc, guilder, yen and Indian rupee. While there were no comparable critical conditions in the year to cause such large demands on the Fund's resources, as many as 20 countries borrowed from the Fund or entered into stand-by arrangements with it.

Resources Strengthened

At the end of April 1959, the I.M.F. held \$2,500 million in gold and U.S. dollars, but, of this, only \$1,400 million were uncommitted, as compared with \$3,500 million at the end of September 1956—before the recent "active period" began. It will be recalled that, in order to ensure that the I.M.F. would be in a position to meet the demands which might properly be made upon it, action was initiated at the last annual meeting at New Delhi for securing a substantial increase in the Fund's resources. It was decided with the concurrence of all member-Governments that there should be a 50 per cent. general increase in members' quotas and that, in addition, a special increase should be effected in the quotas of W. Germany,

Interest Rates in Industrial Countries

Canada and Japan in keeping with the improvement in their position in world trade. When these decisions are fully implemented, the Fund's resources will increase by the equivalent of \$5,100 million, including \$1,300 million in gold. Its holdings of gold and U.S. dollars will be doubled, from \$2,300 million to \$4,600 million, and its holdings of gold and six currencies so far drawn from \$4,700 million to \$8,200 million. Commenting on this development, the I.M.F. report says:

"The significance of this increase in the Fund's resources is not to be measured only by the extent to which these new resources are drawn upon. A stand-by arrangement that is not followed by use of the Fund's resources is as important as a stand-by under which a drawing has been made; and, in the same way, the increase in the Fund's resources may still have great importance, even if for some time to come, drawings on the Fund do not reach substantial amounts. The essential objective is, above all, the creation of a feeling of confidence among Fund members that, even if the reserves directly under their control are considered not adequate to meet every eventuality, they can safely make their decisions with respect to the freedom of payments and trade without having to pay undue regard to such temporary balance of payments difficulties as may from time to time occur."

World Economy—Main Trends

To revert to the I.M.F. review of world economic situation during 1958. The review reveals the following features:

Industrial production: World industrial production (outside the Centrally planned economies) was lower by 2½ per cent. as compared with 1957, because recession in the U.S. was accompanied by slower growth or mild decline elsewhere. The decline in investment demand, which characterised the recession or the temporary cessation of economic growth, was due to the appearance of surplus capacity in many countries and hence to a reduction in the anticipated profitability of new investment, as well as to a rise in the cost and decline in the availability of investible funds.

Employment: In the U.S., both the fall in industrial employment during recession and the rise during recovery were less marked than the corresponding movements of industrial production. In other industrial countries, employment in manufacturing was lower than, or about the same as, in 1957.

Prices: While wholesale prices moved down a little, or remained fairly stable, the cost of living, wage rates and even money wage costs per unit of manufacturing output were generally higher.

Trade: The value of world trade in 1958 was 5 per cent. less than in 1957, being \$94,300 million, as against \$99,400 million. More than half of this decline reflected a fall in prices. The average price (unit value) received by countries exporting primary products declined by 5 per cent. and the average price of their imports (c.i.f.) by 4 per cent., so that their terms of trade deteriorated again by 4 per cent. The volume of trade fell by 2 per cent. in contrast to a rise of 10 per cent., 8 per cent. and 6 per cent. over the three preceding years, respectively.

Balance of payments: The principal changes in world balance of payments relations during the year under review were the re-emergence of a large payments surplus of the rest of the world with the U.S., a rise to unprecedented levels in the aggregate surplus of other countries exporting manufactures, and an increase in the total deficit of countries exporting mainly primary products. In 1958, the surplus of the rest of the world in transactions with the U.S. as measured by transfers to official holders, amounted to \$2,900 million, in distinct contrast to a deficit of \$1,400 million in 1957.

The I.M.F. has made special mention of the net flow of capital and grants (excluding credits intended to finance projects) received by primary producing countries other than Venezuela. The flow during 1958 was a little smaller than in 1957. Some decline in the U.S. direct investment was largely offset by increased loans from Government agencies. The net flow of capital from the U.K. to the sterling area was slightly less. Disbursements to primary producing countries by the World Bank amounted to nearly \$500 million, about \$125 million more than in 1957. Of the aggregate \$1,400 million deficit of these countries (including Venezuela), \$475 million would appear to have been financed by official borrowing (as against \$130 million in 1957), \$125 million (\$350 million) by net borrowing from the I.M.F., and \$800 million (\$800 million) by drawing on reserves.

Correcting Payments Disequilibrium

The I.M.F. next refers to the measures taken by countries to deal with payments disequilibrium. According to the survey, in most of the manufacturing countries, improvement in payments position was such as to enable them, without risk of serious pressure on the balance of payments, to lessen the severity of fiscal and monetary restraints, while the falling tendency of market and official interest rates helped to counteract the slackening of external demand

and economic activity. With regard to primary products exporting countries, those which had sizable exchange reserves continued to draw upon them substantially in 1958; there was also an increase in official borrowing to finance deficits caused by declining earnings from exports. However, shortages of reserves and limited borrowing capacity compelled many primary producing countries to adopt other measures to reduce external disequilibrium. In most of these countries, the measures took the form of adjustments of exchange rates or taxes which raise exporters' returns and importers' costs in domestic currency; some countries reimposed or tightened import controls. These measures were combined, as a rule, with some degree of restraint on domestic credit creation. Few countries, however, have found it possible to make use primarily or solely of fiscal and monetary measures to establish equilibrium.

Industrial Countries

The I.M.F. refers next to the domestic financial developments and policies in the industrial and primary producing countries. The most "overt manifestation" of anti-recession policy noted in the industrial countries during 1958-59 was widespread, though mostly moderate, reductions in discount rates. While these reductions were generally preceded by downward revisions in market interest rates, they were also a signal for reductions in the rates paid and charged by commercial banks, with possible reactions on domestic investment and international capital movements. The table in the previous page gives the market interest rates in selected countries.

In addition to reducing discount rates, many industrial countries relaxed restrictions on bank credit in 1958, though slowly and selectively. In a few countries—the U.S., West Germany, Austria, Switzerland, South Africa and New Zealand—legal reserve requirements for commercial banks were altered. The other monetary measures included relaxation of restrictions on hire-purchase transactions in the U.K., France and the Netherlands; encouragement to private investment in Italy; aiding of large increase in new capital issues by reductions in maximum rates on time and savings deposits in West Germany; removal of certain restrictions on bank advances in the U.K. and France; and easing of regulations governing commercial bank lending activities in Norway.

The recessionary tendencies appearing in many industrial countries in 1957-58 were to some extent counteracted by the "built-in stabilisers" of the fiscal system. While Government revenues tended to decline, expenditures on unemployment benefits increased automatically. Both tendencies helped to sustain private expenditures. New tax measures designed to combat the slackening in activity were generally selective rather than sweeping, and frequently aimed not only at maintaining demand but also at supporting some particular sector or enhancing the efficiency or competitiveness of the economy. On the other hand, in many countries, there was a more than normal increase in Government expenditures, though there was no large-scale recourse to public works.

Primary Producing Countries

In the case of primary producing countries, many, according to the I.M.F., have permitted money and credit to expand much faster than current real output in the endeavour to accelerate the growth of their productive resources. To quote it:

"The urge for rapid economic growth, of which these inflationary tendencies are often a by-product, is very powerful in many parts of the world today. Some of the less developed countries have made substantial progress, even in a few cases when hampered by the distortions created by inflationary pressures. In others, however, inflationary pressures have resulted in little more than an appearance of feverish activity, while real output and income were actually stagnating, or were expanding only at an unsatisfactory rate. Experience has shown that one of the foremost problems that confronts such countries is the establishment of financial stability, both internal and external, as a necessary—although not a sufficient—condition for sound and accelerated economic development."

The I.M.F. has also taken note of the steps taken by developing countries to hold the strain on their external resources caused by their large development expenditure and continued adverse terms of trade. These included: scaling down of development expenditure in several countries (India and the Philippines, for example); efforts to soften the impact of declining prices on domestic producers by cutting export duties in a number of countries (such as India, Peru and the Sudan); upward revision in

ECONOMIC TRENDS IN WESTERN EUROPE SUBSTANTIAL IMPROVEMENT

BUSINESS activity in Western Europe is again on the upgrade. This fact is important in appraising two key questions about future developments, says the *Report on Western Europe* issued by The Chase Manhattan Bank, New York, U.S.A., last week. First, can the European economy regain the rapid rate of growth which has characterised the post-war period? Second, will the move towards free trade continue to gain momentum and eventually embrace not only the Common Market nations but also the "Outer Seven"?

The fact of recovery in Western Europe has been obscured by the lack of a sharp and dramatic turnabout along the U.S. pattern. However, it is important to remember that the impact of the 1958 recession was much sharper in the U.S. than in Europe.

U.S. industrial production turned down in late 1957, dropped 13 per cent. in seven months, regained its previous high in February 1959 and moved 7 per cent. ahead of that high by mid-1959.

In contrast, Western Europe's industrial production merely levelled out in 1958. Output actually moved ahead, though at a slower pace than in earlier years, in France and Western Germany.

In this perspective, the recovery in Western Europe is fully as significant as that in the U.S.

Industrial production in Western Europe is now showing substantial gains over 1958. Latest figures (for May) show an overall 6 per cent. increase for the Common Market and the U.K. The recent strength in European home construction, steel exports and consumer durables indicates that the summer months will also show sizable increases.

Unemployment is falling. In France, the number of unfilled jobs rose 23 per cent. during June, while job applications fell 14 per cent. British unemployment is now down to 1.9 per cent. of the labour force. Germany may be facing an acutely tight labour market for the first time since the end of the war.

All in all, recent trends point to a continued and rapid economic recovery in Western Europe. The future rate of advance may not match that of the earlier post-war period, when reconstruction requirements lent an unusual urgency to investment in new plant and equipment. Yet the impetus towards growth in Western Europe is strong. The rate of investment is relatively high in most nations, and the demand for consumer goods (particularly autos and other durables) is vigorous. Thus, the conditions for rapid economic growth—at a rate possibly above that in prospect for the U.S.—would appear to be present in Western Europe.

The "Outer Seven"

It now seems likely that the so-called "Little Free Trade Area (F.T.A.)" will come into being. In July, ministers of the seven nations—Britain, Switzerland, Sweden, Norway, Denmark, Austria and Portugal—agreed at Stockholm on the details of the new trading bloc. A formal agreement, to be ratified by the respective Parliaments of each country, is expected this fall.

Under the plan, the seven countries will start cutting internal tariffs and increasing quotas next July. All internal trade barriers will be eliminated by 1970. In this regard, the Little F.T.A. closely parallels the Common Market.

More important is how the Little F.T.A. is unlike the Common Market. There are three main differences:

The Little F.T.A. would not have a common external tariff and trading policy towards the outside world.

The Little F.T.A. do not plan to match the Common Market's close integration in agriculture, anti-trust matters, nuclear energy, mobility of labour and capital, harmonisation of tax and social legislation.

The Little F.T.A. would not be a political agreement. This is, perhaps, the most fundamental difference between the plan of the Outer Seven and the Rome Treaty of the Six. In the eyes of its founders, the Common Market is an economic community whose new institutions represent the first step towards a federal system of "European" government.

(Continued in previous column)

(Concluded from next column)

The Little F.T.A. plan is non-political—and eminently suited to Britain and her Commonwealth ties, on the one hand, to politically neutral Switzerland, Sweden and Austria, on the other.

These basic differences between the two groups remain unsettled. The challenge to both sides is to prevent them from dividing Europe permanently into two trading camps. Germany has an especially great stake in this, since she now exports more to the Outer Seven than to her Common Market partners. Similarly, the Outer Seven as a group export more to the Common Market than they do to one another. In view of these mutual interests, the pressure for some agreement between the two blocs will be strong—undoubtedly much stronger than with only the Common Market in existence.

This pressure for a *modus vivendi* in European trade is the constructive side of the Little F.T.A. plan. Seen in its full perspective, the plan represents a tactical move to strengthen the bargaining position of the outside countries vis-a-vis the Common Market. Such a change opens up the possibility for a new approach to solving the problem of Europe's trading relationships. And Europeans on both sides would agree that the old wrangle over the "Big" Free Trade Area versus the Common Market was simply getting nowhere.

WORLD GOLD PRODUCTION, MOVEMENTS AND PRICES

RECENT TRENDS REVIEWED

[The chapter on gold production and prices in the Annual Report of the International Monetary Fund for the fiscal year ended 30th April 1959 is informative, giving a compact account of all the main developments pertaining to this metal. In view of the paucity of information on this important subject in this country and in accordance with our customary practice, the Fund's review is published on this page.—Ed.]

TOTAL world production of gold, defined as excluding output in the U.S.S.R. and countries associated with it, increased by nearly 3 per cent. in 1958, to 30 million fine ounces or about 800,000 ounces more than in 1957. Valued at US\$35 per ounce, output in 1958 was \$1,049 million, as compared with \$1,021 million in 1957, \$980 million in 1956, and \$945 million in 1955. Production in 1958, which was a post-war high, was about 9 million ounces more than the 1945 post-war low, but it was about 17 per cent. (or 6 million ounces) less than the all-time peak attained in 1940, when production was valued at \$1,264 million.

About 78 per cent. of the increase in total output from 1957 to 1958 was due to the continued expansion of gold mining in the Union of South Africa. Output in that country in 1958 was 17.7 million ounces (\$618 million), the highest ever recorded, and accounted for about 59 per cent. of total world production. In 1957, South African output had been 17.0 million ounces (\$596 million) and in 1951, 11.5 million ounces (\$403 million). The increase in 1958 was about half that recorded in each of the four preceding years; further moderate increases may be expected as the new mines in the Orange Free State and on the Far West Rand develop. The grade of ore is higher in these newer mines than in the older mines on the Witwatersrand, so that the yield per ton of ore mined has risen steadily in recent years, from 4,553 dwt. in

† All-time peak production.

1956 to 5,000 dwt. in 1957 and to 5,228 dwt. in 1958. This increase, together with the steady expansion of the native labour force, which reached 329,000 at the end of 1958, helped to make 1958 an outstanding year in the history of gold production in the Union of South Africa.

In Canada, output increased in 1958 by \$4.1 million, to \$158.8 million, about the same as the post-war high of 1955. Increases of about \$1.5 million were recorded in Ghana and the Philippines, of about \$0.6 million in Australia, and of about \$0.5 million in Southern Rhodesia. Small increases elsewhere in 1958 were approximately equal to the small decreases recorded in India and Mexico.

Cost of Production Still High

High production costs continue to be a matter of concern to the gold mining industry in most major gold producing countries. Where possible, mines have shifted from the production of lower grade to that of higher grade ore; some mines are unable to make this shift, and therefore have had difficulty in maintaining a reasonable margin of profit. In South Africa, indeed, the rise in working costs in 1958, from 45s. 4d. per ton of ore milled to 46s. 11d. was not so great as in 1957, and the total profits of South African gold mining again increased. In 1950, South African working costs had been 29s. 7d. per ton and in 1956, 42s. 11d. The average working profit from gold per ton of ore milled, which had been 14s. 4d. in 1956 and 17s. 6d. in 1957, rose to 18s. 10d. in 1958. Likewise, the combined working profits from gold and uranium, which had risen from £73.1 million in 1956 to £91.1 million in 1957, increased further, to £99.1 million, in 1958. Working profit from gold rose by £3.5 million, to £61.4 million, and profit from uranium by £4.4 million, to £37.7 million. Dividends paid by all producers of gold and uranium during 1958 amounted to £43.4 million, compared with £37.6 million in 1957 and £29.1 million in 1956.

The high dividend yields on gold shares, as well as the generally favourable tax status accorded by South Africa to foreign investors, encouraged further foreign investment in the industry. But, while the total profitability of the gold mining industry in South Africa reached an all-time peak in 1958, 21 of the 32 non-uranium producers had working profits smaller than in 1957. The South African Minister of Mines stated in Parliament last year that his department regarded 14 mines as being in fact marginal mines. These mines employed roughly one quarter of the total labour force of the industry, both European and native.

Subsidy to Producers

The gold subsidy programmes of the Governments of Australia, Canada, and Colombia, discussed in previous Annual Reports, are still in operation. During the past fiscal year of the Fund, Canada modified its subsidy programme, and the Government of Fiji adopted measures to give relief to its only gold producer. The Fund deemed both of these programmes, described below, to be consistent with the objectives of its statement of 11th December 1947 on gold subsidies.

In August 1958, the Government of Canada amended the Emergency Gold Mining Assistance Act to extend the subsidy authorised by that Act through the calendar years 1959 and 1960, and to provide for a 25 per cent. increase in the amount of assistance for the years 1958, 1959 and 1960. The basic structure of the subsidy formula remained unchanged. Under this formula, the subsidy provided for eligible mines is equal to two-thirds of the excess of the costs of production over Can\$26.50 per ounce, up to a maximum of Can\$12.33 per ounce. The subsidy applies to two-thirds of the output of the assisted producers. The increase of 25 per cent. in the amounts payable to individual mines is intended to offset a continuing rise in production costs and the effects of the free exchange rate of the Canadian dollar. The subsidy is paid to mines that produce only gold and that have production costs high enough to justify assistance; it is not payable to base metal mines which produce gold as a by-product. Gold mines ineligible for assistance and base metal mines are permitted to sell their gold on the free market. Mines receiving assistance are required to sell their output to the Royal Canadian Mint for the equivalent in Canadian dollars of US\$35 per fine ounce. Since the Canadian dollar has been at a premium over the U.S. dollar in recent years, the price paid by the Mint for gold has been proportionately reduced; during 1958, it fluctuated between Can\$33.58 and Can\$34.62 per fine ounce. The total amount of subsidy paid for the year ended 31st March 1959 is estimated at Can\$11.6 million, as compared with Can\$8.6 million for the previous year.

The United Kingdom, which has accepted the Fund's Articles of Agreement in respect of Fiji, consulted the Fund in February 1959 with regard to a plan of financial assistance to Fiji's only gold producer, under which the amount of subsidy would be related to the economic need of the mine. An annual subsidy of £150,000 is to be paid to the mining company in each of the years 1958-59, 1959-60, and 1960-61, on condition that the company shall carry out capital development, costing an equal or greater amount, on mine buildings, plant, and underground workings (exclusive of staff or employees' housing) during the period of the subsidy; the company shall be required to refund to the Government all sums received by way of subsidy in excess of the cost of such capital works; and in the event of production in any one year falling below 75,000 ounces, the subsidy shall be reduced below £150,000 at the rate of £2 per ounce of the shortfall.

The Fund has approved similar plans involving subsidy payments to individual mines, where the assistance was related to the economic need of the mines and the object of which was to sustain a volume of production close to the current production and not to stimulate increased output. Fund members considering the introduction of subsidy schemes to prevent a reduction in gold output, as well as those which desire to amend existing subsidy programmes,

have an obligation to consult with the Fund on the measures to be introduced.

Gold Reserves

As regards, the important shifts which took place during 1958 in the distribution of the world's gold reserves, the outstanding developments were the increase of \$3.1 billion in the gold holdings of the major industrial countries of Western Europe, and the decline of \$2.3 billion in U.S. gold holdings, with the rest of the Western European accumulation coming from new production and sources other than the United States.

The stock of gold held by the monetary authorities in the world (excluding the U.S.S.R. and the countries associated with it, but including the Fund and the Bank for International Settlements as well as the European Fund, the successor to the European Payments Union) is estimated to have increased during 1958 by about \$740 million, as compared with increases of about \$735 million in 1957, \$550 million in 1956, and \$215 million, a post-war low, in 1951. Gold sales in Western European countries by the U.S.S.R., estimated at about \$210 million, were equivalent to more than one-fourth of the increase in 1958. Since the value of last year's gold output outside the U.S.S.R. was \$1,049 million, the total increase in the amount of gold that became available to the rest of the world was thus about \$1,260 million. The amount of gold absorbed by the arts and industries or by private hoards in 1958 may, therefore, be estimated at about \$570 million, which is not very different from the estimate for 1957.

At the end of 1958, world monetary gold reserves—as defined above, and without taking account of the adjustment of B.I.S. holdings—amounted to approximately \$39.9 billion, \$5.2 billion more than at the end of 1948 and \$13.9 billion more than at the end of 1938, an increase of about 53 per cent. during the twenty-year period. Of the increase between 1938 and the end of 1958, about \$6 billion went to the United States, \$4 billion to Continental European countries, \$1 billion to Latin American countries, \$900 million to Canada, and \$200 million to the United Kingdom and other sterling area countries. Of more significance are the shifts in the actual holdings of individual countries and in the proportions held by them of the total gold reserves of the world. The distribution of gold holdings between 1938 and 1948 and between 1948 and 1958 is shown in the table below. The holdings of the United States increased from \$14.6 billion (56.1 per cent. of the world's monetary gold) at the end of 1938 to \$24.4 billion (70.3 per cent.) at the end of 1948, but declined to \$20.6 billion at the end of 1958; at 51.6 per cent., the U.S. percentage of the world's total holdings was then slightly less than in 1938. The holdings of Continental

European countries, which had declined by \$2.6 billion during and after World War II, rose by \$6.5 billion during the second ten-year period, to about \$10.1 billion at the end of 1958 (25.2 per cent. of the world's monetary gold, compared with 23.5 per cent. in 1938). While the holdings of the United Kingdom and other sterling area countries rose by \$1.4 billion during the second ten-year period, their percentage of the world's gold stocks declined from 13.1 per cent. at the end of 1938 to 9.1 per cent. at the end of 1958. The share of the "Rest of the World" declined from 3.8 per cent. to 2.6 per cent. during the twenty-year period. The aggregate gold holdings of Latin America doubled during the first ten-year period, to \$1.6 billion at the end of 1948, and increased during the second ten-year period by about \$110 million. Substantial reductions in the gold reserves of Argentina and Cuba during the second ten-year period were more than offset by large increases (Continued on page 567)

BOARD OF TRADE PRESIDENT ON COTTON INDUSTRY'S REDUNDANCY SCHEME

TEXTILE PRICES MOVING UP

From A Special Correspondent

MANCHESTER, 22nd September
IN view of the widespread discussion which is taking place in the Lancashire cotton trade concerning the extent of the current redundancy programmes, a suggestion that the scheme is not going far enough has created much interest.

This idea was put forward in an article in the Financial Times, which contended that the scrapping of stopped machinery would only clear out the "dead wood" and that

the volume of running plant likely to be dismantled was relatively small in relation to the remainder, particularly if shift-working was widely introduced. The writer managed to create the illusion of only a minor programme of readjustment, working on the assumption that all the remaining machinery in the trade would eventually be turned on to shift-working. The article did not delve deeply into the various problems surrounding this complicated reversal of past methods of operating the plant. Although the system may be far more widely adopted in the future than it has been, it is unlikely that its use will become universal in a short time.

In little more than a week, the full quantity of machinery to be scrapped under the redundancy schemes will be known and for the moment only an interim judgment can be passed on the response. The latest official returns to the end of August indicated a maximum of 12 million spindles being available for operation, as against approximately 16 million running earlier in the year. Those advocating the complete introduction of double-shift working, therefore, contend that another four million spindles should be consigned to the scrap-heap; if three shifts are to be worked, additional plant needs to be eliminated.

Social Aspect

Similar figures can be produced to show that the present plans for the weaving section are equally inadequate, but there is no mention of the human and social aspects of this fundamental change in the industry's structure. Costing experts would no doubt agree that a reduction of overheads would be achieved by the adoption of shift-working in many areas, but the predominance of women in the mills makes such a procedure by no means as simple as it looks on paper.

Another theoretical argument encourages the transformation of the manufacturing branch by the complete installation of automatic looms. Again, such a policy appears attractive on the surface, but, irrespective of the cost, the type of specialist fabric frequently produced in Lancashire weaving sheds is more suitable for manufacture on the traditional non-automatic machines.

There is, of course, ample scope for the much wider use of automatics and, clearly, this trend will continue, but it is not long since Lancashire was being exhorted to concentrate on specialities and leave long runs of standard cloths to her competitors. A significant feature of the current confusion in which both producers and distributors find themselves is that customers are growing exceedingly anxious about the flow of supplies of certain goods which have been made to special order in the past. The interference with such contracts involving unusual constructions is a matter for much concern. When the producing firms are going out of business, much fresh sampling will be required before alternative sources of supply can be found.

Levies and Margins

The present political campaign has been instrumental in providing preliminary details of the probable extent of the compensation levies shortly to be imposed on those firms remaining in the industry. Sir David Eccles, President of the Board of Trade, possibly "jumped the gun" a little in estimating the figures before the closing date for applications to participate in the redundancy scheme. In the course of a short visit to the cotton towns, he was at pains to dispel ideas that payment of the levies would bring higher prices for finished textiles, as had been freely forecast in some directions. Pending final arrangements being made, Sir David said that the length of the levy would range between 7 and 10 years. He obviously regarded the amount involved as a very small sum, but it yet remains to be seen whether the imposition of perhaps £5,000 a year on the debit side of a spinning mill's accounts will be easily passed on to customers. His suggestion was that a 100,000-spindle mill would have to find a total levy of about £35,000 over the period.

The rising trend of prices for yarn and cloth has already materialised. In some cases, sellers have raised their quotations to cover the anticipated levy, while, in others, the natural laws of supply and demand have governed the movements. A firm which finds that a backlog of orders is being built up and that customers cannot apparently secure goods from alternative sources either in this country or abroad is lacking in business acumen, if it fails to obtain rather better margins, particularly after a period in which the profits gained have been comparatively narrow. The critics and the economists may storm and object, but there is precedent in plenty for such an attitude.

Cost of Re-equipment

After his brief tour of one or two mills and research and productivity centres, Sir David appeared optimistic enough about cotton's prospects. He tended to make light of the displaced worker problem, pointing to the frequent advertisements for labour in local papers. More

mobility in travelling to work will be required under the new regime.

The price situation is still something of a paradox. If firms provide transport for operatives to come from a distance, their overheads will be raised. The shorter working week insisted upon by the unions in cases where shifts are adopted also has a distinct bearing on costs. Additionally, there is the prospect of heavy expenditure on modernisation.

Agreed that, in the long run, all these efforts to improve the efficiency of the trade should result in economies and more competitive prices, but, in the meantime, there must be a fairly lengthy phase of rising values. The President of the Board of Trade blandly stated: "One of the objects of re-equipment is to get prices down by using new and more effective machinery."

The Government is prepared to subsidise 25 per cent. of the mill modernisation plans approved during the next three years and for installation within five. Sir David estimated expenditure of between £60,000,000 and £80,000,000, "if all goes well." Millowners in Lancashire and surrounding areas will, therefore, be expected to find up to £60,000,000 within this period—a sizable sum. Attempts will surely be made to pass on at least a part of this expenditure in the shape of higher margins.

Yarn Up: Cloth and Manpower Down

July production returns are always affected by the holidays in the weaving centres, so that cloth output invariably shows a marked reduction as compared with the previous month. This year, the weekly average of 24,880,000 yards showed a 50 per cent. fall on the June figures and was nearly 3,000,000 yards a week lower than in July 1958. In spinning, however, single yarn output exceeded the weekly average in July 1958 by more than 1,000,000 lbs. This improvement was achieved in yarn spun from both cotton and man-made fibres. Production in July was 13,130,000 lbs. weekly, as against 14,480,000 lbs. in June and 12,110,000 lbs. in the same month last year.

In view of the possible reaction on employment of the redundancy schemes, forthcoming labour statistics will be watched with more than usual interest. The June return was remarkable in that it showed an upward movement in manpower for the first time for many months. The gain as only 50 spread over spinning and weaving, but the long and often heavy decline had apparently been halted. Subsequent weeks, however, belied this cautious optimism. Despite a further gain in the labour force for doubling, a net loss over all sections of 1,100 workers was incurred. By the beginning of last month, the number on the books of employers had shrunk to 200,420, a drop of 20,000 as compared with a year previously.

Harrogate Assembly

Only a fortnight after the final figures relating to redundancy are totted up, delegates from all sections of the industry will once again be assembling at Harrogate to discuss the trade's affairs at the annual Cotton Board conference. With the General Election barely completed, the gathering this year will be shorn of the political characters which have sometimes predominated in the past.—All Rights Reserved.

TEXTILES IN THE THIRD PLAN NEED FOR EARLY ANNOUNCEMENT OF PRODUCTION TARGETS FOR THE VARIOUS SECTORS

By A Special Correspondent

ACCORDING to the current line of thought, the size of the third Five-year Plan is likely to be three times that of the first Plan and about one and a half times that of the current one. In what form the Plan will finally emerge, it is too early to say, but every effort will undoubtedly be made to raise the living standard of the common man in a more effective manner than at present. Since food, cloth and housing are the basic indicators of a country's economic well-being, it is time that some earnest thought was given to the place that should be assigned to the cotton textiles in the third Plan.

The plea for an early discussion and decision on the subject is well supported by the cotton mill industry's unfortunate experience during the current Plan period. Among the several factors that have contributed to the crisis that has overtaken this sector since the closing months of 1956—a crisis from which it cannot be said to have yet emerged—failure to make a judicious allocation of production targets to the three sectors of the industry was the major one. In spite of the obvious increase in the demand for cloth, the ban on the expansion of the weaving capacity of the mills was not relaxed in the hope that such a course of action would ensure the unhampered growth of the handloom sector. The expectations entertained about the latter's capacity to give increased output on the required scale, however, proved illusory, thus forcing the Government to adopt drastic fiscal measures to obviate the threatened imbalance between the supply and demand for cloth towards the end of 1956. The enhanced excise duty, brought into effect from 1st September of that year, marked the beginning of the travails of the mill sector.

"Per Capita" Availability

It is, therefore, imperative that such miscalculations which have brought ruin to a number of marginal units, should not be allowed to recur when formulating the production programme for textiles under the third Plan. According to the Planning Commission, the per capita income at the end of the second and third Plans will be Rs. 331 and Rs. 396, respectively, while the consumption expenditure per head will be Rs. 295 and Rs. 343 respectively. The per capita availability of cloth over a period of years has been as indicated below:

1952, 14.4 yards; 1953, 15.2 yards; 1954, 15.2 yards; 1955, 16.1 yards; 1956, 16.6 yards; 1957, 16.5 yards and 1958 16.7 yards.

The Government of India's consumption target of 18.5 yards, to be realised at the end of the second Plan, was revised by the Textile Enquiry Committee (July 1958), which put the figure at 17.5 yards. Since the increase involved on the basis of present consumption is only 0.8 yards per capita, it may be confidently hoped that the modified target will be reached.

Cloth Requirements

Similarly, it is within the bounds of reason to anticipate that the cloth requirements of the country will be 20.3 yards per capita or 8,810 million yards per annum for a population of 434 million at the end of the third Plan. These calculations are based on the assumption that the demand for cloth will increase in proportion to the rise in the per capita consumption, namely, 16 per cent. Assuming that India's annual export commitments will be 800 million yards, the three sectors of textile industry will be called upon to produce 9,600 million yards per annum. On the basis of an estimated production of 7,900 million yards to 8,000 million yards in 1961, the industry will have to achieve an annual output of 1,600 to 1,700 million yards of additional cloth, in order to meet both the country's domestic needs and the export target.

The point for consideration is how best the task of producing the extra volume of cloth should be assigned to the different sectors of the industry. The following table shows their annual output during the years 1952 to 1958:

	(In million yards)	Handlooms	Powerlooms
1952	4,598	1,109	204
1953	4,878	1,200	221
1954	4,998	1,318	243
1955	5,094	1,480	273
1956	5,306	1,509	278
1957	5,317	1,643	303
1958	4,927	1,798	331

Before we proceed to consider what can appropriately be regarded as an equitable target for the mills, it would be pertinent to assess the capacity of each of the non-mill sectors to meet the clothing requirements of the community by fulfilling the twofold criteria of quality and cheapness.

A Warning

Perhaps, the greatest claim of the handlooms for their continued existence consists in the fact of their antiquity and their ability to offer employment to a large section of the population, especially in the rural areas. In a country like India, where the incidence of unemployment is heavy, the policy of granting preferential treatment to labour-intensive enterprises is unexceptionable, but recognition of this fact does not, *ipso facto*, lead to the conclusion that the inefficient instruments of production should be fostered till the end of time. It would be reasonable to suggest that they should be given sufficient time and opportunities to adapt themselves to modern conditions. The *Framework of the second Five-year Plan*, published in July 1955, while recognising the importance of cottage and small-scale industries, urges that they "must not be thought of in terms merely of traditional techniques and traditional types of products." The document warns that, if these industries are not rehabilitated betimes, "the emphasis on capital-saving methods may well land us between two stools—the large-scale capital-using methods may get discouraged without other methods filling in the gap." In view of the adverse developments in the cotton mill industry during the last few years, no doubts can be cast on the essential soundness of this observation.

One year before the Planning Commission made these weighty remarks, the Kanungo Committee had arrived at a similar conclusion concerning the handlooms. In its Report dated September 1954, the Committee recommended that this sector should be rendered "technically more efficient by converting the handloom either into a semi-automatic loom and/or into a powerloom." It suggested that the reform should be properly phased, in order to avoid unemployment, and felt that the retention of a small proportion of traditional handlooms for purposes of turning out specialised types of cloth would fully meet the requirements of the situation. The scheme was evidently acceptable to the Government of India, which, in its announcement of June 1956, envisaged the installation of 35,000 powerlooms in the handloom sector, with a view to producing 200 million yards of cloth on them under the textile programme for the second Plan period. The decision was a bold and statesmanlike one, but it has so far yielded no results.

Large-scale Spoon-feeding

Whatever may be the reason for the tardiness on the part of the Government in enforcing an essential reform, it should at least ensure that the already numerous handlooms do not proliferate and thus aggravate the problem of their modernisation. Even as it is, a heavy price has to be paid, in order to keep this sector from disintegration and eventual dissolution under the pressure of modern conditions. Annually, a sum of about Rs. 7 crores is being collected from the mills for financing the handlooms. Apart from the various concessions granted to the latter, the rebate on the sale of their products alone amounts to a big sum of money, as the following figures given in Parliament in September 1959 bear out:

	Amount sanctioned	Expenditure reported by States
	Rs.	Rs.
1953-54	84,71,950	3,48,164
1954-55	4,18,490	54,61,192
1955-56	92,98,128	1,69,08,063
1956-57	2,30,25,243	2,23,23,991
1957-58	2,13,18,879	2,59,35,499
1958-59	1,72,69,000	3,20,68,382

Such large-scale spoon-feeding of this sector has become necessary, because the labour of the persons engaged in it can only yield a minimum level of subsistence income, thus making it incumbent upon the Government to subsidise it heavily. Discussing the implications of rendering financial assistance to labour-intensive

small-scale industries, the Karve Committee, which reported in October 1955, says that such help would, in effect, "involve relief of the unemployed through public funds." Obviously, it is not in the best interests of the country to perpetuate such patently uneconomic enterprises.

The Indian Cotton Mills' Federation, which has given a good deal of thought to the question of the role that should be assigned to the different sectors of the cotton industry in the third Plan, has arrived at the conclusion that the allocation of 2,500 million yards per annum as the target for the handlooms would be the most equitable arrangement. No injustice is involved in this recommendation, because the handlooms will be called upon to raise their output from an estimated total of 2,100 million yards in 1961 to 2,500 million yards at the end of the third Plan. If further expansion is desired and if such a project is feasible, it should be sought more in terms of increased exports than in those of making a larger volume of handloom fabrics available for domestic consumption. There is a large and lucrative foreign market, especially in America, for such cloth.

The cottage powerlooms, whose growth has been alarmingly rapid, present an entirely different set of problems. Enjoying immunity from the various statutory and financial obligations which weigh upon the mill sector so heavily, and being burdened with none of the infirmities that afflict the handlooms, the powerlooms have, as the Federation so aptly observes, the best of both worlds. Such a happy position has led to a large increase in the number of unauthorised powerlooms, whose unreckoned output, besides vitiating the accuracy of the statistics relating to textile production and consumption, poses a menace to the other two sectors. Firm action on the part of the Government in bringing all the powerlooms within the co-operative fold alone will eliminate this danger. Meanwhile, the Federation considers that the sector should be given a production target of 500 million yards under the third Plan.

The Ambar Charkha is a newcomer and the high hopes built upon it as a big source of employment and income have not yet come true. The announcement of June 1956 prescribed for it an annual production of yarn equivalent to 300 million yards of cloth—to be attained by the end of the current Plan. The wide disparity between expectation and realisation is borne out by the following figures given by the Government from time to time in Parliament. The Union Minister for Commerce and Industry stated in the Lok Sabha on 29th November 1958 that 4.67 million pounds of Ambar yarn and 20.96 million square yards of Ambar cloth were produced from 1956-57 to 1958-59 (upto 30th September 1958). The same authority declared later that the output of Ambar yarn and Ambar cloth in 1958-59 was 2.93 million pounds and 19.80 million yards respectively.

The total amount spent by the Khadi and Village Industries Commission on the Ambar Charkha programme during that year was Rs. 177.75 lakhs as grants and Rs. 680.23 lakhs as loans. This help excluded payment on account of the rebate of 19 nP per rupee on retail sales of Ambar cloth. The amounts sanctioned by the Government for the Khadi and the Ambar Charkha programmes in the earlier years are shown below:

	Rs.
1956-57	11.59 crores
1957-58	10.92 "

On one occasion the Minister disclosed that the average monthly income of a wholetime Ambar Charkha spinner was Rs. 19, that is, if he worked eight hours a day and 25 days in a month. In a subsequent statement, he disclosed that these earnings varied from Rs. 9 to Rs. 15 per month. In spite of the manifest limitations of the Ambar Charkha programme, the organised sector has urged that the production of cloth with Ambar yarn during the third Plan should be fixed at 300 million yards.

The apportionment among the non-mill sectors of the task of meeting the additional demand for cloth that is likely to be generated during the third Plan period is thus not only equitable but generous. There should, therefore, be no hesitation in allowing the mills to undertake the responsibility for increasing their output from an estimated Rs. 5,200 million yards in 1961 to 6,300 million yards per annum by the end of the next Plan. To enable them to attain this target, they should be given every opportunity both to expand their equipment and to replace the present outmoded and wornout machinery by modern ones.

The lighting-up of the Coke Oven battery No.1 marks a new stage in the progress of the Durgapur steelworks

With the lighting-up of the Coke Oven battery No. 1 on 24th August, the Durgapur steelworks of Hindustan Steel Limited enters a new stage. ISCON is proud

to announce that work on this battery has been completed nearly ten weeks ahead of schedule.

When the process of gradually heating up the battery to operating temperature is completed, the Coke Ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

BRITISH COMPANIES WORKING FOR INDIA

THIRD PLAN TARGET FOR COTTON

COTTON COMMITTEE SUGGESTS 7.2 MILLION BALES

THE eightieth meeting of the Indian Central Cotton Committee was held in Bombay on the 26th September at a time when heavy damage was feared to have been done to the cotton crop by excessive rains and floods in many parts of the country. The flooded Tapi and Godavari washed away the crop in extensive areas in Surat and Andhra Pradesh. The crop prospects for this season are none too bright and much will depend upon the course of weather hereafter.

The experience of the past season, that is 1958-59, once again demonstrated that weather continued to be the determining factor in cotton production. It was perhaps the full recognition of this pathetic dependence of cotton production on the fickle weather that has prompted the Committee to recommend a lower production target for cotton under the third Plan than that suggested by the National Development Council. The Council had earlier proposed 8 million bales as the target which was revised, at the recent meeting of the State Ministers, to 7.8 million bales. The Committee has suggested a target of only 7.2 million bales which itself is considered to be on the high side.

Targets and Performance

Reviewing the main developments during the 1958-59 season, Dr. M. S. Randhawa, President of the Committee, observed, in the course of his address to the meeting, that production during the season fell short of the target by 600,000 bales to 5.1 million bales. It may be mentioned here that the trade estimate places the crop at only 4.85 million bales. The Committee, according to him, had been relying on three factors to increase cotton production, namely, improved seed, fertilisers and provision of irrigation. While the distribution of seed and fertilisers fell short of targets during 1958-59, in respect of provision of irrigation, the target figures were exceeded. Thus, out of a target of 1,494,950 maunds, 773,211 maunds of seeds were distributed. So also, out of a target of 44,650 tons fixed for fertilisers, only 15,708 tons were actually distributed, thanks to the shortage of fertiliser supplies. In respect of irrigation, on the other hand, 334,178 acres were brought under irrigation, as against the target of only 291,811 acres. Total area under irrigated cotton in India in the 1958-59 season was 2.4 million acres, representing 12 per cent. of the total sown area. In the Punjab, over 93 per cent. of total area was irrigated, in U.P. 83 per cent. and in Madras 28 per cent.

Dr. Randhawa suggested that, in view of the untimely rains generally experienced in September-October, farmers should be encouraged to grow cotton and groundnut together in alternate rows. While cotton gets damaged, rain during this period was very beneficial to groundnut which was as much a valuable crop as cotton. This, according to him, would be a good crop insurance and deserved to be adopted in the States of Punjab and Rajasthan, in particular.

Improving Punjab Cotton

Proceeding, Dr. Randhawa referred to the fall in output and the deterioration in quality of cotton in recent seasons in the Punjab, one of the country's leading cotton-growing regions. The President said that an expert sub-committee appointed by the Central Committee came to the conclusion that this was due to two factors. First, the increased rainfall received for a longer period of four to five months from June to October in practically all the districts, and second, the heavy incidence of jassid attack to which even the improved strains succumbed under adverse environmental conditions.

The Sub-committee also found that the cultivation of American cotton was originally confined to areas with assured drainage. Owing to the high prices the extension of cultivation of American cotton had gone on without proper consideration of the suitability of the land, with the result that the farmers grew it on lands where the water-table was initially high and became higher as a result of floods and heavy rainfall in recent years. The committee had, therefore, recommended that the cultivation of cotton on lands where water level was within the range of 0' to 5' should be generally discouraged and that the Department of Agriculture should demarcate such areas with higher water-table and conduct a campaign against the cultivation of cotton in such areas.

that research should be initiated at the Agricultural Research Station, Jullundur, for evolving new strains tolerant to September-October rains, and that arrangements for undertaking plant protection measures should be strengthened by supply of insecticides and sprayers to cotton growers at subsidised rates. Another recommendation was that some of the re-selections and new strains already available, which were found to resist jassid attack to a high degree, should be tested for their fibre properties and, subject to their being found suitable, might be multiplied and distributed. Dr. Randhawa pointed out, in this connection, that, since Punjab cotton production would greatly affect the achievement of the targets, it was necessary that the State Department of Agriculture should implement the above recommendations in the current season itself.

Self-sufficiency

Dealing with the question of attainment of self-sufficiency in respect of cotton currently imported, Dr. Randhawa observed that the evolution of Indo-American 170-Co.2 and 134-Co.2-M, MCU-1 and 2, LL-54 and M.A.5, as also the development of Sea-Island 'Andrews' and hybrid cottons, which could be utilised by the textile industry in partial replacement of some of the styles imported from Egypt, Sudan, U.S.A. and East Africa, constituted important landmarks in the progress of cotton research in this country. Further work for isolating still better and finer types were going apace under the three schemes in operation in the Punjab, Bombay and Madras. The Working Group constituted by the Ministry of Commerce and Industry to examine the question of the development of extra long-staple cottons had recommended certain incentives for the speedy development of these cottons. The floors and ceilings for these cottons had now been fixed in accordance with the recommendations of the Committee. The Sea-Island and hybrid cottons having superior staple than these have been kept outside the price control. Dr. Randhawa felt that the production of cotton of 1" to 1½" staple might even exceed the target of 840,000 bales fixed by the working group since they would be replacing those already grown in the areas concerned.

The Sea-Island cotton, Dr. Randhawa pointed out, was gradually attaining commercial status as a result of the efforts made under the Committee's scheme which had been reorganised on a State-wise basis. The total quantity of lint of this cotton produced during the 1958-59 season amounted to 208 bales which fetched high prices at the various auctions. Despite this, the expansion during the third year for which a target of 20,000 acres had been fixed, could not be achieved owing to delay in onset of monsoon and heavy rain in June-July which completely upset the programme. Another reason was delay in the appointment of survey and extension staff in the States of Kerala and Mysore. However, the total area covered during the year was 3,955 acres, as against 1,049 acres harvested in the previous season.

Sea-Island Cotton

This cotton was grown on marginal lands in the States of Mysore and Kerala and the impression spread that it was largely a waste land crop. This impression, Dr. Randhawa said, must be corrected and farmers should be impressed that this cotton required the best land and careful manurial treatment. Hence the decision taken that it should be cultivated on irrigated land in Mysore was welcome. This would enable early sowing and would thus ensure the success of the crop. It was also desirable, according to him, that the crop should be cultivated on compact blocks and not spread out too much on small holdings over a large area. It was further decided that, for the present, Sea-Island cotton may not be extended to Assam, where the emphasis should be on improvement of harsh staple Comilla cotton.

While the extension of Sea-Island cotton and hybrid cotton may contribute, to some extent, in attaining self-sufficiency in extra-long staple cottons, it was cottons possessing 1" to 1½" staple, capable of spinning 40 counts and over, that would largely contribute to the attainment of self-sufficiency in regard to imported varieties. Dr. Randhawa suggested that, in view of this, the cultivation of acclimatised Egyptian varieties being grown in Mysore, namely, Giza 7 and Giza 12, should be raised to remunerative

levels, especially as a summer crop in Babbur areas in Mysore. He hoped that the Mysore Government would take a greater interest in the matter.

Research

The organisation of agricultural research Dr. Randhawa observed, was taking a concrete shape. The co-ordinated research stations at Coimbatore, Sirsa and New Delhi had already started functioning where others were expected to be commissioned very soon. The question of establishing a centre for the foreign region was under consideration.

Dr. Randhawa referred to the problem of mixing of cotton in ginneries. All the care taken in raising the crop, manuring, irrigating, weed ing, picking, etc., would be largely wasted if ginning was not done properly. The Bombay Millowners' Association had brought to the notice of the Committee serious lapses in the process of ginning and the admixture of foreign matter. Since this, in addition to giving a lot of trouble to spinners, also brought into disrepute Indian cotton in foreign markets, the State Governments should enforce the legislation in this respect strictly.

U.S. TEXTILE MILL PRODUCTION AND PROFITS

Textile mill production and profits this year may reach their highest points since the Korean War, reports *Textile World*, a McGraw-Hill publication. Mill production hit 119 (1954 equals 100) on the magazine's index in August, two points below the May, 1953 high of 121, and two points above the 1955 high of 117. Present mill commitments were almost certain to carry production well above the 1953 high this fall, the magazine said. The index point reached 129 at the height of mill activity during the Korean War.

In the first half of this year, profits rolled in at a more satisfactory rate than in any other year since the Korean War, and total 1959 profits may double 1958 profits, the publication predicted. Seven companies, accounting for about 12 per cent. of the total industry sales, showed net profits of 28,676,268 dollars in the first half of this year (one three months), as compared with 14,584,403 dollars in the same period last year.

With total industry sales running about 15,000 million dollars this year, industry profits should run between 450 million dollars and 500 million dollars for the year, a level that has not been reached since 1957, the magazine estimated. Last year, industry profits were 212 million dollars.

LONG-STAPLE COTTON

A considerable excess of supply over demand for long-staple cotton during the current season is forecast by a special Sub-Committee of the International Cotton Advisory Committee, Washington, in a report published a week ago.

This report was issued after a five-day meeting recently held in Alexandria which was attended by representatives from the United States, the United Arab Republic and Sudan, and observers from Peru, Brazil, the United Nations Food and Agricultural Organisation and the World Bank.

The report observed the fall in prices for long-staple cotton since 1957 had reduced the living standards of the producing countries and retarded their economic development. To meet the situation, the Sub-Committee recommended that cotton prices should be made as stable as possible at competitive levels so that spinners' risks in using long staple would be reduced.

This would involve return to free market practices, as soon as possible, greater effort by the main producers both to match production to demand and diversify agricultural production and reducing dependence on cotton as the main cash crop.

U.S. IMPORTS OF WOOL TEXTILES

The Chairman of the U.S. Wool Manufacturers' Council, Mr. Roger Rimwade, has described the State Department decision to re-negotiate American wool fabric tariffs, at Britain's request, as "the opening gun of another war on the textile industry." He told the Northern Textile Association annual meeting that the State Department had acceded to the British request, despite a recent Senate report of a decline in the domestic wool textile industry in the face of rising imports. He went on: "If the State Department succeeds in present quota, then all of us have been defeated, and hopes for cotton and man-made fibre textiles have been snuffed out. We have no choice but to fight," Mr. Grimwade declared.

FOREIGN EXPERT TO ADVISE ON COTTON YIELD

The Indian Central Cotton Committee has decided to invite a French expert from West Africa under the technical assistance programme for advising on the ways and means of improving cotton yields in India. The low yields of cotton in West Africa are said to have been stepped up considerably by the adoption of the methods suggested by the expert.

It was also decided that a delegation consisting of two experienced scientists should be sent to the Tashkent, U.S.S.R. to study the agronomic technique employed in that country to enhance cotton yield and that students of Agricultural College should also be sent to Tashkent for studying the different techniques employed in boosting yields with a view to adapting them to Indian conditions.

WHAT IS DIFFICULT SUGAR SUPPLY SITUATION DUE TO?

MR. A. M. THOMAS'S EXPLANATION NOT CONVINCING

THE Union Deputy Minister for Food, Mr. A. M. Thomas, has very conveniently explained away the present difficult sugar supply situation as a case in which man has no control. Inaugurating the joint convention of the Sugar Technologists Association of India and the Deccan Sugar Technologists Association held at Poona on Friday last week, Mr. Thomas is reported to have declared: "The difficult sugar supply situation has not been due to any incorrect assessment of future consumption trends or defective planning. I would rather describe it as a case in which man has no control. Sometimes, certain circumstances jeopardise the Government's well meant efforts which it cannot help. Considerable fall in the area under sugarcane in Uttar Pradesh and the diversion of cane from white sugar to gur and khandsari accounted for the shortfall in the targeted production. Besides, foreign exchange difficulties delayed completion of some licensed schemes."

The explanation of Mr. Thomas is not at all convincing. The area sown to sugarcane in Uttar Pradesh during the 1958-59 season was no doubt smaller as compared with the previous season, but the actual extent of the decline was not "considerable" as Mr. Thomas described. The official second estimate of the cane crop in this State places the total area at 2,943,000 acres, as against 2,962,000 acres, a fall of just 19,000 acres. Taking the average per-acre yield of cane as 11 tons, the decline in the production of cane comes to no more than 210,000 tons. In terms of sugar, this means a shortfall of about 20,000 tons, which is equal to about one per cent. of the output in the preceding season. Further, the fact that there had been a reduction in the acreage under cane in Uttar Pradesh was known many months prior to the commencement of crushing operations in mills. What is more, continued fears of diversion of cane supplies from mills to gur and khandsari manufacture had been expressed by millowners ever since the crushing operations began in the 1957-58 (that is, in November 1957) season.

Government's Mistake

Although the State Government's attention was repeatedly drawn to this aspect, the Government failed to take effective steps to check such diversion by controlling the manufacture of gur and khandsari, in general, and in the factory areas, in particular. The Central Government also paid no heed to the warning until as late as in March 1959—that is, nearly one and a half seasons after the warning had been given and production of white sugar had been drastically affected. It was only after much damage had been done that the Union Finance Minister came out with his proposal to levy an excise duty on khandsari. Even this levy gave, and continues to give, a sizable tax advantage to the khandsari producers vis-a-vis white sugar manufacturers; the difference between the incidence of taxation on white sugar (Rs. 13.16 per maund) and that on khandsari (Rs. 4.64 per maund) is as much as Rs. 8.52.

It is thus clear that, if the State Government had adopted effective measures to regulate khandsari manufacture and if the Centre had subjected this commodity to a heavier load of taxation, the production of white sugar would have been more—to the tune of about 100,000-150,000 tons in 1957-58 and 200,000-250,000 tons in 1958-59, or a total of 300,000-400,000 tons. This quantity, it must be emphasised again, represents the loss of sugar suffered in extraction and is, therefore, not made good by a corresponding rise in the supply of khandsari and gur. It is a total loss to the country. As readers are aware, sugar recovered from cane in the form of brown sugar is nearly a third less than the sugar obtained when the same cane is used for making white sugar. How, then, can Mr. Thomas say now that the difficult sugar supply situation is a case in which man could have no control over the circumstances?

Mr. Thomas, however, talked some sense when he referred to the subject of expanding the capacity of sugar industry to take care of the country's growing needs. He was quite right when he said that the additional capacity in sugar industry should necessarily be set up in areas where adequate supplies of good

quality cane are available. He had naturally in mind the States of Bombay, Andhra Pradesh, Mysore and Madras. Since these States have tropical climate, they are much more suitable for cane development than Uttar Pradesh and Bihar which have sub-tropical climate. It is not surprising that both the yield per acre and the recovery per cent. in the cane grown in these States are higher than those in Uttar Pradesh and Bihar, as the following figures relating to the 1957-58 season show:

	Average yield per acre (Tons)	Average recovery (Per cent)	Output of sugar per acre (Tons)
Bombay ...	27.10	11.15	3.02
Andhra Pradesh ...	27.30	9.70	2.65
Mysore ...	24.10	10.28	2.48
Madras ...	25.70	8.69	2.23
Uttar Pradesh ...	10.10	9.93	1.00
Bihar ...	8.04	9.91	0.83

While nature is doubtless favourable for growing sugarcane in the Bombay Deccan and South India, this advantage can be exploited for increasing sugar production only if more irrigation facilities are made available and land laws are framed in such a way as to permit

Pretty as a Picture

because she wears Rayon saree
made of **TRAYONS** yarn

Yes, TRAYONS yarn makes even low priced dresses look gorgeous and because it is cool and moisture-absorbent, it is comfortable for our tropical climate.

TRAYONS yarn has other special properties too. It's extremely strong and easy to dye, blends and processes well with other fibres.

Travancore Rayons, the pioneers of rayon manufacture in India, produce yarn in bleached and unbleached varieties in 100, 120, 150 and 300 deniers. They also make coloured yarn, being the first to introduce it in India.

sugarcane-growing on a commercial-plantation scale. Mr. A. M. Thomas and our planners should pay attention to these questions, if their scheme for raising sugar production is to succeed.

Although the level of sugar production is always influenced greatly by the actual availability of cane and its quality, much also depends on the efficiency of the cane crushing machines. Mr. Thomas did well to urge the sugar technologists to help in the production of more sugar by reducing losses and extracting the maximum sugar out of the available supply of cane. "There is," to quote him, "considerable room for improvement in the milling of cane." It may be mentioned here that most of the sugar plants in Uttar Pradesh and Bihar were installed twenty-five years ago and several plants were second-hand ones. What is immediately needed is renovation and modernisation of machinery, as well as standardisation of the crushing capacity of mills at economic levels. This would be possible only if the authorities were to give due encouragement to the mills through adequate relief in taxation and sufficient financial assistance.

Expansion of Sugar Industry

A brief review of the position in regard to expansion of sugar industry was made by Mr. Thomas. His review reveals that out of the 54 new mills so far licensed, 27 have already gone into production. In the case of licences for expansion granted to 69 existing units, 28 factories have completed their programme and six more units are expected to do so during the ensuing season (commencing on 1st November next).

In his speech, Mr. Desh Raj Narang, President of the joint convention, stressed that India should plan for substantially increased production of sugar in the third Five-year Plan. He described the record of sugar industry in the first Plan as "quite commendable," the actual sugar output of 1,861,837 tons in 1955-56 exceeding the targeted figure of 1,500,000 tons. He also expressed his confidence that the production target of 2.25 million tons fixed in the second Plan would be reached by next year. Mr. Narang made two notable points. First, the Indian sugar mills should advance on Hawaiian lines by increasing their capacity through installation of automatic devices. Secondly, sugar controls do not suit India.

Speaking on the occasion, Mr. V. S. Shirgaokar, President of the Deccan Sugar Technologists Association, called upon the State Governments to spend a portion of the large amounts of cane cess collected by them on starting cane breeding stations. This is certainly a valuable suggestion. If more sugar is to be produced from a given area of cane, it is imperative that adequate attention must be paid to the proper breeding of cane on which depends so largely that actual quality of the cane harvested. It must be remembered that sugar is made more in the ground than in the factories.

A NEW SUGARCANE PLANTER

The Indian Institute of Sugarcane Research, Lucknow, has developed a bullock-drawn cane planter which, it is claimed, will reduce plantation costs to a minimum. The implement, worked by a pair of bullocks and three men, can plant two acres in eight hours, whereas, under the present practice, two pairs of bullocks and 24 men are required to plant 2½ acres in eight hours. What is more, the new implement is said to be capable of performing in one run all the three operations involved in planting.

Planting is perhaps the most expensive operation in the cultivation of cane. In most cane-growing countries, planting is done by machines. In India, however, the land holdings being generally small, plantation of cane is done mostly by manual labour. The usual practice for planting involves opening out furrows about 4 inches deep, with a bullock-drawn ridge plough. After applying the fertiliser in these furrows by hand, the cane sets are placed horizontally at the bottom of the furrows, the set's being covered up by the field is finally levelled. This practice involves considerable expenditure.

The new implement consists of two units, a fore-carriage and a trailed ridger hinged to the fore-carriage. The fore-carriage carries a seat for one operator and two seed boxes, one on either side. The trailed ridger which makes furrows has a chute for dropping cane sets into the furrows and a fertiliser distributor. A prototype of the implement has been tested extensively and has given satisfactory results. Fabrication of the implement can be taken up at places where ordinary workshop facilities are available.

The parties desirous of undertaking the commercial development of the implement are invited to correspond with the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1.

DEVELOPMENTS IN NATIONAL TAX LAWS

BUREAU OF FISCAL DOCUMENTATION ON NEED FOR PROPER PSYCHOLOGICAL CLIMATE

THE growth in world trade and the increase in the flow of private capital from the highly industrialised countries to the underdeveloped regions have together served to emphasise the need for a study of international tax problems. A foremost institution engaged in such a study is the International Bureau of Fiscal Documentation. Established in 1938, the Bureau commenced its function on a very modest scale. Since then, and more especially in the post-war years, the Bureau has become an important clearing house of international fiscal information. From its many member-countries have come questions on various aspects of national tax laws and their relevance to other countries. The Bureau has rendered great service not only in answering those questions but also by publishing from time to time its own reviews of fiscal developments in different parts of the world.

During the first ten years of its life, the Bureau functioned as a 'daughter' of the International Fiscal Association. In 1948, the Bureau became an independent organisation, so that the relationship between the two bodies is now as between two 'sisters'. The Bureau, in its annual report for 1958, recalls how at the time it was founded, international fiscal law had already become a subject of study. However, it was some years later that the League of Nations undertook its pioneering work by setting up a number of committees to deal with the problems. Linked with the League of Nations' work in this sphere are such names as G. W. J. Bruins, Luigi Einaudi, R. A. Seligman and Lord Josiah Stamp. Other names are: Enno Becker, Ottmar Buhler, Benvenuto Grizotti, Ernst Elumenstein and P. J. A. Adriani. The League, on its part, adopted two model conventions on double taxation, those of Mexico and London, in 1943 and 1946, respectively.

Double Taxation

Although the consideration of double taxation and property taxes continues to form an important part of international tax law, the latter now devotes more and more attention to other taxes, such as sales taxes and excise duties. Double taxation conventions did not exist in great numbers before the Second World War. Switzerland, however, has made an important contribution to the solution of the vexed problem of double taxation—even before 1939, it had made such contribution—thanks to the fact that the Swiss Constitution [Art. 46(2)] forbids double taxation. Since the war, the number of agreements on double taxation has increased. Indeed, this has created a new problem. In each country, there is a tendency to resolve the same problem in accordance with the various wishes of the countries with which it concludes fiscal agreements. This results in the introduction of a variety of solutions of the same problem in the country's tax law.

Not only has there been, according to the Bureau, an ever-increasing interest for the study of international tax law itself but there have been fundamental changes in the concepts and object of it as well. It was the view of the Comité des Savants of the League of Nations

that the creditor country and not the debtor country should have the right to levy tax. Nowadays, it is usual, in international agreements, to concede the right to levy taxes to countries which are in the process of developing. In this connection, propositions are upheld to adopt the tax exemption method, instead, even in cases in which as a result of tax facilities in the countries of source *de facto*, no double taxation occurs. Reference may be made here to unilateral and bilateral double taxation relief provisions. In the first case, the country of residence—in which the beneficiary resides—bears all the tax reduction. In the latter case, the right to levy taxes is divided between the contracting countries. The most satisfactory solution seems to be a combination of the method whereby the right to tax is divided and the tax exemption method, whereby income from sources which are to be taxed by the country where the income is derived from is exempt in the country where the beneficiary resides.

Measuring Distortions

The Bureau observes that the formation of Benelux, the Coal and Steel Community, the O.E.E.C. and the Common Market has resulted in efforts being made to measure the distortions caused by the differences in tax burdens borne by commodities, circulating within the enlarged areas, and the effects of these distortions on the freedom of competition in these areas. As regards the Coal and Steel Community, a detailed report was produced in 1953 on this problem by a committee under the chairmanship of Prof. J. Tinbergen, the members of which are among the foremost experts from those countries. The problems which arise in this connection can only be solved by calling in the aid of general theories underlying the science of taxation. Examples of the problems are: incidence of taxation, uniformity and equality of the tax burden, the composition and effectiveness of the national tax systems and many others.

Till now a certain distinction—even in a way a separation—has been made between the so-called direct and so-called indirect taxes. The development as regards the first group in international tax law has resulted in rules which divide the right to tax between the two countries, where the production on the one hand and the consumption on the other take place. As regards the latter group of taxes, many countries leave the right to taxation *de facto* exclusively to the country where consumption takes place. The twin ideas underlying this attitude are that only inland consumption may be taxed and export should be exempt from tax, and that imported commodities should be subjected to the same tax burden as commodities produced in the country. They arise from the notion that only indirect taxes influence the price of a product, in contrast to direct taxes, which are considered as being neutral in this respect. The Bureau recalls that more than once it has uttered a warning against looking at one single tax or group of taxes, without taking into account other taxes, which either influence the price of a product, because they can be passed on to cus-

tomers, or adversely affect them where they cannot be so passed on. In considering fiscal co-operation within the framework of the Common Market, the fact that, in some countries, direct taxes and in other countries, indirect taxes provide the bulk of the revenue should never be lost sight of. In harmonising taxes, attention, it is stated, should not be limited to one of these groups.

Reviewing the changes in tax policies in different countries in 1958, the Bureau notes that income-tax was increased in several countries including Algeria, Argentina, Chile, Cuba, France, Kenya, Malaya, Pakistan, Peru and the Philippines and that sales tax was increased in Chile, Greece, Pakistan and Thailand. Income-tax has been reduced in Austria, Canada, Switzerland and the U.K. and sales tax in Australia and the U.K. Measures to stimulate investment were adopted in Cambodia, Ceylon, Malaya and Singapore; in India, the liability to income-tax of foreign enterprises was restricted. Agreements on double taxation relief have been concluded by Belgium with Canada, by France with Finland, Italy and Luxembourg, by Sweden with Pakistan, by Switzerland with India (air navigation). In the German Confederation, differential rates for distributed and undistributed profits were adopted. Again, in that country, the special surcharge levied on the sales tax payable by integrated enterprises in connection with the equalisation of competitive conditions has been declared contrary to the Constitution. It is proposed to revert to the system of treating inter-company sales between member-companies of a combine as though they were (untaxable) transfers between branches of one legal entity for the purpose of taxation of the sales (or turnover) tax, despite the fact that the sales are inland sales between two legally independent entities.

Among the questions referred to the Bureau for advice, mention must be made of the Common Market which was the subject of many inquiries. Several members wanted to know the precise meaning of double taxation conventions. The Bureau points out that great difficulties often arise in the interpretation of these conventions which "are frequently not very clearly drawn up." It would appear that several questions on death duties were referred to the Bureau.

Bonus Issues

Again, many enterprises, which wanted to embark upon capital reorganisation, referred to the Bureau the question as to how they would be affected in different countries. In many cases, the tax reductions granted in the country in which the company was registered would have been counteracted by the additional taxation which the reorganisation would have forced their foreign shareholders to pay, owing to the fact that any shares issued under such a scheme of reorganisation would in the foreign shareholders' country be taxed as income in the normal way. Foreign shareholders, the Bureau points out, are not likely to assent to schemes so inimicable to their interests. It stresses that the general problem of taxation of bonus shares may also be considered in this connection, particularly in regard to its effects in Common Market countries. The fact that in a number of countries special taxation reliefs on the issue of bonus shares are being proposed is another reason for giving the problem serious attention.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr. G. H. J. Clarke, at the Forty-eighth Annual General Meeting of the Company on the 25th September 1959.

LADIES AND GENTLEMEN:

I have much pleasure in welcoming you to this the Forty-eighth Annual General Meeting of the Company.

The Notice convening this meeting, the Report of the Directors and the Accounts have been circulated, and with your approval we shall take them as read. I will now ask the Secretary to read the Report of the Auditors.

Board of Directors

At the end of May 1959, Mr. J. K. Hill retired from the Board. Mr. Hill first joined the Company late in 1926, and his long service ended with nearly four years on the Board. We wish him health and happiness in a well-earned retirement.

Accounts

The Balance Sheet and Accounts have been in your possession now for some time and I hope are largely self-explanatory. However, you may welcome comment on some of the more important items.

On the Assets side of the Balance Sheet, you will see that the value of Fixed Assets less depreciation shows a slight reduction this year. Details are given on pages 16 and 17 of the Report, from which you will see that the net additions to Fixed Assets are only Rs. 33 lakhs. Last year the comparative figure was Rs. 76 lakhs, and although this reduction reflects partly the fact that the Company's modernisation programme is nearly complete, it also highlights the stringency of import control on capital goods.

During the year, Rs. 40 lakhs of the Company's holding in Government paper matured and this accounts for the reduction in Investments.

The stock of Raw Materials shows an increase of Rs. 67 lakhs. This represents increased stocks of leaf tobacco, a large part being American tobacco purchased under American Public Law 480. Such purchases are paid for in rupees, no foreign exchange being involved.

The reduction in stocks of Manufactured Goods has been brought about by increased use of road transport, the more expeditious delivery enabling us to reduce stock holdings and at the same time ensure that the consumer receives fresh stocks.

On the Liabilities side of the Balance Sheet, you will see that a further sum of Rs. 17½ lakhs has been added to the Fixed Asset and Stock Replacement Reserve. There is a reference to this transfer in the Directors' Report and I would add only that the need to retain in the business sufficient funds to cover the present cost of replacing fixed assets and stocks at today's higher prices is becoming increasingly widely recognised.

Turning now to the Profit and Loss Account, you will see that the value of sales shows an increase over last year of nearly 5%, though the increase in volume was only a little over 1%. You will recall that, in December 1957, Sales Tax on tobacco products was withdrawn and replaced by additional Excise Duties. The effect of this, which applied only to three months of the previous year but to the whole of the year under review, was of course to inflate the value of sales to the extent to which it was possible to pass on this additional taxation to the consumer.

The last items of the Accounts to which I shall make reference are the profit for the year and the rate of dividends—the items with which I know you are most concerned. You will have seen that the profit has dropped from Rs. 132 lakhs to Rs. 115 lakhs. This has been caused mainly by increased costs of Raw Materials and increased Excise Duties. You will all be aware of the continued upward trend of costs, and the materials which we use for making and packing our products are no exception. In certain instances, it was deemed wise to absorb part of the Excise increases rather than risk loss of volume of business by increasing retail prices by the full amount.

Your Board remains firmly of the opinion that dividends should be paid only out of current profits, after setting up adequate reserves. We have, therefore, transferred to Fixed Asset

and Stock Replacement Reserve Rs. 17½ lakhs, which we consider no higher than prudence dictates, and recommended the payment of a final dividend of 2%.

Raw Materials

When I addressed you last year, I stressed the fact that the Company relied on Indian resources for most of its leaf tobacco and all its requirements of cigarette paper, printing board and papers, aluminium foil and packet wrappings. We are now going further and are considering extending the manufacture of spare parts and encouraging the manufacture in India of fibreboard containers.

In addition to the commodities I have mentioned, we are also encouraging the erection of a factory in India to produce cigarette filters. Throughout the world, the filter-tipped cigarette is gaining in popularity and there are now some filter-tipped cigarettes on the Indian market. The filters are imported, just as they were when your Company first made such cigarettes in this country some years ago. If, as we hope, our plans fructify, our previous experience will enable us to give the Indian consumer a quality cigarette of this type without any appreciable use of foreign exchange.

Competition

This has been a year of exceptional activity throughout our industry and competition has been intense. Repeated increases in Excise Duties, and consequently in prices, in recent years have to some extent upset the established pattern of consumer preference, not always in favour of your Company's products, and some competitors have benefited thereby. The building up of consumer loyalty to new products is expensive of both time and money but provided no further adverse circumstances supervene, we are confident that your Company will maintain its leading position in the trade.

Exports

Your Company's main contribution to India's balance of payments position has hitherto been the form of conservation of foreign exchange by the substitution of indigenous for imported raw materials. We are making every effort to find an outlet for exports of tobacco goods and a member of our staff has recently made an extensive tour of West Asian countries to this end. Although, in the last two months, we have been able to make some modest export shipments, it would be wrong to raise false hopes. The export of manufactured tobacco goods from one country to another continues to decline throughout the world as one country after another establishes its own industry and raises tariff walls to protect it, as this country has effectively done, and though we anticipate obtaining a share of any export business which offers, we cannot reasonably expect to obtain from this source either important additional profits or any major contribution to the country's foreign exchange.

Staff Training

On pages 6 and 7 of our Report, we have reproduced photographs of our residential training centre near Calcutta. This venture is proving of great benefit and during the year under review, 105 members of the staff attended residential courses. In addition to these training courses, senior members of our staff have attended sessions at the Administrative Staff College of India at Hyderabad, of which the Company is a patron. Where necessary, special tours for technical duty abroad are arranged in order that our staff can keep abreast with the latest developments in the industry.

Labour Relations

During the year, the Company has, in co-operation with the Union, experimented at one of its factories with Workers' Participation in Management. It is a little early to draw any conclusions but there are indications that this scheme is creating better understanding between workers and management. As a further step towards promoting mutual understanding, the Company is arranging a number of industrial tours for its workers to enable them to see at first hand some of the developments taking place in this country as a result of the 5-year plans.

The Company's terms and conditions of service for its workpeople are among the best in the country; the wage scales are scientifically based and the dearness allowance scales are linked to published cost of living indices. Together they provide an adequate level of reward in present day conditions.

Production and employment at all your Company's cigarette factories has been reasonably satisfactory except at Monghyr. The Monghyr operation has been unsatisfactory for a number of years, due largely to the labour force being greater than was justified by the output required for this factory. This position is likely to deteriorate further in the coming year if, as expected, orders for Nepal, which represent an important proportion of Monghyr production, are lost because that country becomes self-sufficient and ceases to be a customer. We are anxious to avoid a complete shut-down and there is still a hope, provided the full co-operation of all is assured, that a future can be given to this factory, albeit a limited one.

Although on occasion there has been some difference of outlook between management and workers, I am certainly not unmindful of the hard work put in by the Company's employees during the year, and once again I should like to thank them for their co-operation.

Taxation

When I addressed you last year, I expressed the hope that further imposts on the tobacco industry would not be forthcoming. The 1959 Budget shattered those hopes by imposing a further burden on the industry in the form of substantially increased Excise Duty. As a result, the Company had to make further changes in its selling prices, this being the fourth change in two years. As I have already indicated, such changes have a disrupting influence on trade and cause a number of smokers to look elsewhere for their favourite brands. This incidence of taxation is probably the greatest single factor which handicaps the private sector at the present time. The general rise in prices of raw materials and services is usually gradual and part of a nation-wide tendency affecting all industry alike. Changes in Excise are arbitrary and may affect one section of industry alone. They cannot be foreseen and are therefore the more difficult to deal with when they occur. When this form of taxation constitutes the largest single element in the cost of production, as in the cigarette industry, you will readily understand the magnitude of the difficulties which face the Management when the Government decides to revise the rates of Excise.

These difficulties are further enhanced by the continued and increasing activities of municipalities in raising revenue from tobacco products by octroi and terminal taxes. The effect of these is that either retail prices are forced higher in some places than in others, with a deleterious effect on the flow of trade, or your Company has often to contribute towards these taxes with a consequent immediate reduction of your profits.

In the field of direct taxation, we welcome the removal of Wealth Tax on Companies and Super Tax on excess dividends announced in the last Budget. We also welcome the simplification in the system of dividend taxation, coupled with a revised rate of Income Tax and Super Tax on Companies, but it should be noted that the implied rate of a total tax on Company profits of 45% will not be confirmed until the 1960 Budget is passed, and does not affect the accounts under review.

Prospects

The Company's sales during the five months to August 1959 show an improvement in total volume over the same period last year, but I must tell you that the general trend continues whereby there is a decline in the return to shareholders in relation to volume of sales. I therefore cannot anticipate with confidence an improvement in the final results in the coming year. Your Board, however, felt justified in declaring an interim dividend of 2½% subject to tax, in respect of the year to 31st March 1960.

(Note.—This is not a report of the proceedings of the Annual General Meeting).

ENGINEERING INDUSTRIES IN THIRD FIVE-YEAR PLAN

F.I.C.C.I. DRAWS UP TENTATIVE PROGRAMMES

THE need for ensuring that the Indian economy attains a firm base of basic and producer goods industries in the period of the third Five-year Plan has been emphasised by the Federation of Indian Chambers of Commerce and Industry in its memorandum, entitled *Third Five-year Plan*. Although the Federation stresses that high priority should be given to processing and consumer goods industries, since increased availabilities of consumer goods are the very *sine qua non* of development in underdeveloped economies and are also a safeguard against inflationary pressures, it insists at the same time that the third Plan should be "machine building and fabrication industry oriented." Accordingly, it allocates Rs. 2,265 crores to what might be called mining and engineering industries. The break-up of the allocation is: coal Rs. 175 crores; petroleum Rs. 300 crores; iron and steel Rs. 400 crores; ferro-manganese Rs. 15 crores; others, including non-ferrous metals, Rs. 200 crores, heavy machinery Rs. 500 crores; other industrial machinery (including machine tools) Rs. 225 crores; railway rolling stock Rs. 125 crores; steel fabrication, automobiles, etc., Rs. 200 crores and electrical and electronic industries Rs. 225 crores.

The increase in demand for coal is expected to come from expanding industries such as steel, fertilisers and chemicals. Demand is expected to go up to 90 million tons. In order to meet this demand, Rs. 175 crores will be needed to develop coal industry. Similarly, in order to meet the increased demand for the important fuel, petroleum, a capacity of 10 million tons should be created. Including the costs of exploration, the target of expenditure for petroleum is fixed at Rs. 300 crores. So much for these two basic fuels.

Steel

The demand for steel is expected to go up in the third Plan period. It is suggested that the third Plan should aim at a total capacity of 9 million tons of steel ingots, so as to attain a production of 6.75 million tons of finished steel. The production of steel during 1958 was 1.30 million tons, as against the total consumption of 2.5 million tons; steel output is expected to go up to 4.5 million tons by 1960-61. The achievement of the target proposed for the third Plan, it is stated, is dependent on the development of the steel fabrication and other industries, which sustain the demand for steel. Such industries include the second shipyard, heavy machinery plant and railway and locomotive industries. Among non-ferrous metals, the Federation lays considerable emphasis on increase in aluminium production. If the various plans taken up in the second Five-year Plan come through, India will have a total capacity of 22,300 tons by 1960-61, plus another 20,000 tons. The demand for aluminium is expected to increase to 75,000 tons by the end of the third Plan; for this, a capacity of 80,000 tons should be aimed at.

The mechanical engineering group of industries consists of automobile industry, agricultural tractors, machine tools, textile machinery, sugar mill machinery and cement machinery. The demand for motor vehicles is expected to go up to 75,000 by the end of the third Plan; the level of demand will, however, be determined by the place assigned to such schemes as the development of road transport. By the end of the second Five-year Plan, the industry is likely to produce 65,000 automobiles, consisting of 20,000 cars, 40,000 trucks and 5,000 jeeps and station wagons. The investment required for achieving the increase in capacity envisaged is Rs. 30 crores, including ancillaries. In this connection the Federation emphasises that in order to enable optimum production, it will be necessary for the policy makers to ensure that this capacity is used to the maximum and various facilities which might become necessary for such economic operation should be given. This type of policy will also suitably encourage expansion of capacity and production in the course of the third Five-year Plan. This would mean a judicious and prompt release of foreign exchange for essential components and capital equipment and avoidance of steps which might restrict the demand particularly of commercial vehicles. Much will also depend upon the concurrent development of ancillary industries which have been developed admirably in the past.

Till recently, the agricultural tractor industry limited itself to the assembly of imported parts of foreign makes. In view of the expanding demand for tractors which will be essential for any sizable increase in the national agricultural production, units are being licensed for the manufacture of tractors of specified horsepower. One estimate of the current demand for tractors is about 3,000 per year. Against this, the total capacity licensed so far is about 3,000 tractors per annum. If, however, mechanised farming by groups of farmers is recognised as a good method for accelerated yield of agricultural products throughout the country, these targets will have to be revised considerably upwards. The Federation, therefore, suggests a land reclamation target of at least one million acres and employment of tractors on about one million existing farms during the next Plan period. On this basis, the total requirements of tractors will be at least around 75,000 to 100,000, implying an average annual demand of about 15,000 to 20,000 tractors. It may be difficult to visualise the attainment of this rate against the perspective of the present demand, supply and production situation. But if the need for this kind of agricultural policy is firmly recognised, the establishment of such units should not be difficult. The investment required for a unit with a capacity of 40,000 tractors per annum is estimated at Rs. 20 crores; for the production indicated above the total investment outlay might, therefore, be of the order of Rs. 8 to 10 crores.

Machine Tools

The pace of expansion both in capacity and production of machine tools in recent years has been satisfactory. Thus the annual production of machine tools during 1958 was over 10,000 of the value of over Rs. 3.9 crores. The total projected annual capacity in the industry is expected to be about Rs. 10.7 crores by the end of the second Plan. However, the share of the indigenous machine tools industry in meeting the total requirements is still very low. Even at a very conservative estimate the annual rate of imports by the end of this Plan would be about Rs. 20 crores. The industry is at present undergoing considerable difficulties with regard to raw materials and arrangements regarding capital as well as foreign collaboration. The proposed entry of the Hindustan Machine Tools factory into the cheaper varieties of machine tools is also viewed with considerable anxiety. It is, therefore, necessary that these difficulties should not be allowed to become chronic problems, if the massive needs of the third Five-year Plan are to be fulfilled. The demand for machine tools will be positively correlated with the consumption of steel in the country. In terms of value, it may be suggested that a capacity of machine tools worth Rs. 35 to 40 crores by the end of the third Five-year Plan should be aimed at. This would cover the estimated annual average of Rs. 20 to 25 crores plus the domestic production of Rs. 10 crores. Machine tools industry is of necessity capital-intensive. The variety and range of machine tools will also have to be

considerably increased and at a rough estimate investment worth Rs. 100 crores may perhaps be adequate.

The Federation next deals with the group of machinery-making industries. These industries, namely, textile machinery, sugar mill machinery and cement machinery, as is well known, have made considerable progress in recent years. In 1958, India produced textile machinery worth Rs. 7.3 crores and imported Rs. 13.8 crores worth of such machinery. The development of jute mill machinery, it is stated, has been "comparatively satisfactory in terms of import substitution." The requirements of cotton textile machinery are expected to increase to Rs. 17 crores annually by 1960-61, as against which indigenous capacity may go up to Rs. 10 crores. By the end of the third Plan, a total capacity of Rs. 35 crores of machinery may be necessary. On this basis, an investment target of Rs. 25 crores has been proposed. The annual requirements of jute machinery are placed at Rs. 4 to 6 crores during the third Plan period; this would require an additional investment of about Rs. 3 to 4 crores. The total production of sugar mill machinery in 1958 was Rs. 1.7 crore, whereas imports were Rs. 7.2 crores; the second Plan target is for Rs. 2.5 crores. By 1965-66, India may need Rs. 10 to 12 crores worth of sugar mill machinery; for this, an investment of Rs. 6 crores will be necessary. Last year, India produced cement machinery worth Rs. 65 lakhs; imports were valued at Rs. 58 lakhs. The target set for the second Plan, namely, Rs. 2 crores of cement machinery, is not likely to be entirely fulfilled. In the next Plan, the capacity of the industry, it is stated, should be increased to Rs. 3.5 to 4 crores a year.

Turning to electrical engineering industries, the Federation urges the allotment of Rs. 10 crores to electrical motors industry, in order that it may reach a capacity of 2.4 to 2.5 million h.p. by the end of the third Plan; the second Plan target was 1.2 million h.p., though capacity by 1960-61 is likely to be only 0.7 million h.p. The target set for transformers in the third Plan is 3.5 million k.v.a., requiring an investment of Rs. 8 crores; by 1960-61, India's transformer capacity is likely to reach 1.5 million k.v.a. Last year, India's dry battery industry produced 166 million cells. The industry may not reach the second Plan target of 275 million cells. By 1965-66, its capacity should be increased to 330 million cells at a cost of Rs. 2 crores. The demand for storage batteries—last year, the industry's capacity was 316,500 units and production 343,000 units—is bound to increase in the third Plan. It may also be possible to find export outlets for them. The capacity for storage batteries should be increased to 600,000 by the end of the third Plan at a cost of Rs. 3.5 crores.

Radio Receiver

Finally, the Federation has made tentative estimates for radio receiver industry. The installed capacity for radio receivers was 240,000 in 1958. Production exceeded 215,000 sets, if one were to take into consideration the production of small units and assemblers of radio receivers whose capacity has been estimated roughly at an additional 30,000 units. The total demand by the end of the second Plan has been estimated at 300,000. Against this, the licensed capacity in the organised sector is expected to reach 290,000. Together with the production of 20,000 to 25,000 units in the small-scale sector, the target is likely to be fulfilled. The manufacture of components has also progressively developed and the indigenous content of radio receiving sets is increasing rapidly. The demand for radio sets increased by 60 per cent. in the course of the first Plan and is expected to increase by 100 per cent. during the second Plan. Assuming an annual average increase of 20 per cent. in demand, the capacity to be achieved by the end of the third Plan should exceed 700,000. The additional investment which might be required for achieving this expansion can be estimated at around Rs. 10 to 12 crores.

I.A.T.A. COMPLETES FORTY YEARS

The International Air Transport Association (I.A.T.A.), the world airline organisation, celebrated its fortieth anniversary on 28th August. Six fledgling European companies, B.O.A.C.'s ancestors among them, met at The Hague on that date in 1919 to organise what has since become the International Air Transport Association, comprising 90 airlines from many parts of the globe. The 1919 airliner was an 85 m.p.h. transport vehicle with a 300-mile range and an 800-lb. payload. It could only work 300 hours a year and in six months of winter did virtually no flying at all. Today's fleets operated by I.A.T.A. members number more than 3,200 aircraft, the largest and newest of which cruise at up to 600 m.p.h., can carry a payload of

40,000 lbs. over ranges of 4,500 miles, and can put in 3,000 or more hours per year.

During those 40 years, I.A.T.A. has worked to eliminate barriers of language, law, currency, commercial practice, technology and of economic regulations, and to weld the individual routes of the airlines into a viable world-wide system.

Some interesting comments on the technological revolution brought about by the application of jet power to civil air operations are contained in B.O.A.C. staff news. They were made by Sir William Hildred, Director-General of the International Air Transport Association, at the annual meeting of the British Association for the Advancement of Science. Sir William pointed out that scheduled airlines of the world carried a few million passengers in 1948 and 90 million passengers last year. They flew 900 million kilometres in 1948 and 3,000 million last year.

Maximum cruising speeds had increased from between 190 and 230 m.p.h. to more than 550 m.p.h.; passenger capacity had increased from 22 or 44 to up to 160 and still air range had been raised to over 5,000 miles.

Direct operating costs were the normal yardstick by which the commercial desirability of an aircraft was assessed. Though the calculations for large jet aircraft varied in degree, they all showed one trend; the direct operating costs per ton-mile were significantly reduced. This was why the airlines had turned to the jet. The operator produced and sold a public service, the passenger seat-mile and the cargo ton-mile. The only way to keep ahead of the rising cost of materials and services was to improve productivity and expand the market.

Since the price of the jet and its operating cost per mile were high, the airlines had been criticised for paying an excessive amount for speed. The fact was that the speed was virtually incidental: the jets carried more seats and what the airlines were buying was the lower cost per seat-mile. This was the present position of the industry. The technology of air transport dictated that, in order to keep one jump ahead of the airlines' own costs, they must use more efficient and more economical aircraft. That meant aircraft of much greater productive capacity, which must be filled with a larger payload.

"We must get passenger fares and cargo rates down still further," Sir William continued. "The fares are like a dam on a little river. Lower the height of the dam even a little and a very large volume of water will flow over. Raise it and the overflow stops. It is the task of the Conference to recognise these facts of the life about us and come up with fares and rates which Governments can approve and which the public will find too attractive to ignore."

POWER SITUATION IN EUROPE

Under the adverse economic climate of Europe in 1957-58 and a consequent slackening in use of primary energy, electric power consumption continued to advance by 7 per cent. and to replace directly-used primary fuels. This is stated in a study, *The Electric Power Situation in Europe in 1957*. (Published by United Nations Economic Commission for Europe: Geneva, 1959; 80 pages. Price \$0.50.) This report has a twofold purpose, namely, to provide a survey of the main facts and present tendencies affecting the industry, and to draw the attention of the E.C.E. Committee on Electric Power to salient questions of European interest which may require consideration. The present document points to a number of basic features of the situation in Europe, including:

The importance of certain industries, such as metal-manufacturing and chemicals, and of household consumers, in maintaining a high growth of consumption even in the face of recession; the progress planned in interconnection of the various European countries so that all except three that are adversely placed geographically will, in a few years, be able to import and export electric power across their frontiers; the high rates of construction foreseen in the immediate future for hydro, thermal and nuclear power plants and extra high voltage transmission lines; the greatly increased economic feasibility of combined power and heating plants in Europe due to increases in size and to other factors of technical progress; and a notable technical advance in automatic power frequency regulation that now allows groups of adjoining countries to maintain complete flexibility in parallel working and easy interchange of electric energy at short notice.

OIL PIPELINE FROM VOLGA TO ELBE

In keeping with the spirit and aims of the Mutual Economic Aid Council, the U.S.S.R. is helping member-countries that do not have their own oil by supplying them increasing quantities of oil. The cheapest means of delivering oil products is by pipeline; transportation by pipeline costs one-sixth to one-seventh of the shipment cost by rail or sea. This, coupled with the big economic tasks confronting the socialist countries and the great growth in oil consumption they involve, prompted the Mutual Economic Aid Council to adopt a decision on the joint building of a trunk pipeline from Kuibyshev in the Soviet Union to Poland, the G.D.R., Czechoslovakia and Hungary. The new trans-European underground trunk line is to be over 4,000 km. long and pass through the greater part of Europe.

The Mutual Economic Aid Council and its permanent committee on the oil and gas industry studied the problems involved in the construction of the pipeline, and decided that the master plan of the pipeline be drawn up in the Soviet Union by the pipeline designing institute of the gas industry. The master plan which will serve as a basis for designing the pipeline sections that pass through the territory of the interested countries, has now been completed.

NEW PRODUCTS AND PROCESSES

Automatic Sampling

ONE of the problems in the preparation of tonic water and other similar liquids is to maintain precisely the ratio of concentrate to water. In order to facilitate production of such beverages, Schwepes has recently installed a specially designed and constructed automatic titration analyser in its Hendon bottling plant. The apparatus, which was designed and made by Electronic Instruments of Richmond, Surrey, England, automatically and continuously monitors the final stages of manufacture by taking periodic samples from the production line and titrating these to a pre-set end point. In this way it not only releases the laboratory staff from having to carry out a tedious and the time-consuming operation, but it also provides a continuous graphic record of the tonic water stream and gives immediate warning if changes in concentration occur. The equipment is said to be so flexible that it can be adapted to suit almost any plant conditions including titrating to single, or double end points. It can be used for many other automatic sampling presses in the food manufacturing industry.

Push-button Watch

A Swiss watchmaking factory has just put on the market a watch which will certainly please all those who wish to possess a time-piece which keeps exact time, in spite of all external circumstances. It is a well-known fact that however accurate may be the watch and however good the quality of its timing, the temperament of its wearer and the difference in temperature, in altitude, in pressure can all affect it and cause a variation in its movement. The absolutely new conception of the "Correctomatic," which can be timed without opening the case, now makes it possible to do away with all these factors of inaccuracy. The "Correctomatic" possesses, in addition to the usual winding and setting-crown, two push-buttons. When the first of these is used, the hands of the watch which have been set at the approximate time, within two minutes, will, when the button is pressed at the exact signal for a quarter hour period (at any 15-minute interval: 15, 30, 45, or the hour), move instantly to the right place, and the watch will start going. Exactly 24 hours after setting, button No. 2 is pushed for automatic correction, which thus takes place if the loss or gain in time does not exceed two minutes. A variation of more than two minutes could only be the result of an accident and would therefore require the attention of a watchmaker.

Welding Apparatus for Packing Textiles

A Netherlands commercial firm markets a welding apparatus with which a maximum width of 90 cm can be packed tightly and attractively in polyethylene or heat-sealing cellophane. The apparatus is provided with a thermostat and a thermometer to ensure exact temperature control. Since a roll is used in the operation textiles of different thickness can be packed without loss of material.

The apparatus has a 100-cm built-in element covered with Teflon, a glass fabric. It is therefore possible to make a good longitudinal weld, especially in the case of polyethylene. By taking wider packing material on the sides to be put into the cardboard cases of the textile rolls in order to obtain dustproof packing.

This welding apparatus can weld 400-600 rolls per hour with a maximum roll width of 110 cm.

Continuous Colorimeter

A Netherlands instrument factory has designed and taken into production a new colorimeter for continuous measuring or recording. Colour intensities of liquids; concentration of components in liquids showing selective light absorption; concentration of components in liquids which after exposure of specified reagents show light absorption proportional to the concentration of these components. This colorimeter is based on the principle of the illumination of two sets of photocells by the same lamp. The photocell currents are measured by means of a galvanometer via a potentiometer connection, or measured and recorded by means of a Brown recorder. The advantages of the measuring arrangement with two photocells are that mains voltage variations have practically no effect on the degree of accuracy of the measurement, the measuring range is arbitrary and the cup may be so adapted that the fullest benefit is derived from the highest degree of accuracy afforded by the apparatus.

Swiss Amplifier

A Swiss concern has invented a transistorised amplifier which has some very remarkable qualities. Actually, this is the smallest and lightest amplifier now on the market, with the enormous output-power of 45 watts. Weighing approximately 8.85 pounds, small in construction and using very little current, this small amplifier can be transported and installed very easily; it can be connected instantly and operates anywhere. It is particularly suited for use in publicity, parades, sports events and can also be used by the police and the army, on building sites, in railway stations, and so on. There is even a special type for fire brigades.

Colour-change Floodlighting System

A new system of floodlight illumination has just been demonstrated in Aberdeen, Scotland, by The General Electric Company. The firm illuminated three types of building—a college, a theatre, and a hotel. Known as "Anilume," the system is a simply operated modern technique for the floodlighting of all types of buildings. It involves colour changes which can be effected by remote radio-control, "changing the visual impact of modern and ancient architecture" and bringing "a new versatility into this realm of lighting." It also meets a criticism of floodlighting—that, after the first switch-on, spectator appeal is short-lived.

MERCANTILE BANK LIMITED

THE ENFIELD INDIA LIMITED

A YEAR OF SIGNIFICANT PROGRESS

MR. K. R. SUNDARAM IYER'S REVIEW

PRESIDING over the Third Annual General Meeting of The Enfield India Ltd. held on Wednesday, 23rd September 1959, at Tiruvottiyur, Madras, Mr. K. R. Sundaram Iyer, Chairman of the Company, said:

"LADIES AND GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to this third annual general meeting of the Company. The Directors' report and the statements of account for the year ended 31st December 1958 have been with you for sometime and, with your permission, I shall take them as read.

Results of the Year

"You would have seen from the report and accounts before you that the Company has made significant progress in its activities during the year. The production of the Company was higher by about 50 per cent., as compared with last year and the sales during the year were higher by nearly Rs. 27 lakhs over 1957. You would have noticed also that the Company made substantial additions to its building, plant, machinery and equipments and the gross block stands at Rs. 39.40 lakhs, as against Rs. 22.65 lakhs at the end of the previous accounting period. The Company increased its issued capital to Rs. 25 lakhs and I am glad to inform you that it stands fully subscribed. We have also fully availed of the loan of Rs. 11 lakhs sanctioned by the Industrial Finance Corporation of India.

"The profits of the year amounted to nearly Rs. 5 lakhs, as against Rs. 1.5 lakhs for the previous year, before providing for depreciation. A significant portion of the expenditure incurred during the year was of an anticipatory character in the sense that your Company has had to incur, and will continue to incur upto 1960, expenditure that will facilitate manufacture of new components in your factory in accordance with the phased programme. I had occasion to give you an indication of this type of expenditure in my last year's speech. Further, owing to acute shortage of foreign exchange, workers, plant and machinery had necessarily to work considerably below capacity, as sufficient raw materials could not be fed into the machines. I hope you will consider the performance satisfactory and encouraging at this early stage of the Company's working. In pursuance to the provisions of the Finance Act of 1958, your Directors consider it necessary to transfer to the development reserve a sum of Rs. 1,99,926. It has, therefore, been possible to recommend only the dividend on the preference shares, carrying forward the balance to the next year's account.

Progress Towards Self-sufficiency

"In industrially advanced countries, the automobile manufacturer is able to obtain a substantial portion of the components from ancillary industries. Though it has been the policy of your Company to obtain from ancillary industries as many items as possible, due to the fact that such industries have not yet developed sufficiently in our country, we have been obliged to undertake the manufacture of a number of components in our own factory which should normally be undertaken by ancillary industries. It is interesting to note that your U.K. collaborators are not themselves making such components in their own factories.

"In spite of this, you will be glad to hear that your Company has been able to maintain the pace of progress in raising the indigenous content in our products and we can reasonably hope to complete the phased programme of all the components during 1960 according to the original schedule, barring, of course, the proprietary items. However, the inadequate number of ancillary industries has necessitated the installation of additional plant and machinery. For this purpose, an application has been made to the Industrial Finance Corporation of India for a further loan of Rs. 9 lakhs. At the same time, steps are being taken to promote a number of small-scale ancillary industries which are desirable in the national interest, apart from these being in the interest of your Company from the long-term point of view.

"Your Company is grateful to the Government of India for allotting to it foreign ex-

change under quite difficult circumstances, but for which it would not have been possible to achieve the increase in the number of vehicles produced. Even so, the Company's production capacity could not be fully utilised. The increased outlay on the manufacture of components and parts for the reasons stated earlier, and the difficulty in stepping up output to full capacity have naturally led to heavier working expenses. We have, however, taken care to ensure that the consumer got his motor cycle at reasonable prices. I am glad to say that our prices compare quite favourably with those charged for similar motor cycles when imported from the U.K. It is hoped that, as a result of the more liberal policy pursued by our Government, it would be possible for us to obtain the required additional foreign exchange which will enable this industry to utilise its production capacity to a greater degree. Our plant capacity is capable of meeting not only the country's present needs but also the likely increase in the demand for motor cycles for some years to come. It is needless to say that a reduction in price to the consumer can be achieved with an increase in our output. Further, without full utilisation of the plant capacity and spread of overheads, it will be difficult to establish markets for our products outside India.

"Production during 1959 is expected to increase well over 1958. As a result of the larger exchange granted recently, still further increase in production is bound to be registered during 1960, although it will be below your Company's production capacity.

General Engineering Department

"I mentioned at the last year's annual general meeting that the Company had commenced undertaking general engineering work orders to make use of its unutilised plant capacity. Your Selling Agents, The Madras Motors Private Limited, were able to secure good orders, a substantial portion of which was executed during the year. We can expect a steady increase in such orders that will result not only in additional revenues but will assist in spreading the overheads over a larger area of production—overheads which are now being borne by the main departments.

Sales Promotion And Service After Sales

"During the year, apart from organising various other sales promotion activities, your Selling Agents, The Madras Motors Private Limited, continued to bestow their attention in developing further sales and service points, whose number has increased by 21, making a total of 91 sales and service points all over India. The shareholders will be pleased to note that the important aspect of service-after-sales continued to receive the constant attention of the Company and is being vigorously implemented through the Selling Agents and their dealers and sub-dealers all over the country. Bi-annual training courses are being conducted to train more and more personnel of the dealer and sub-dealer firms. In addition, the Selling Agents have made arrangements to station qualified and trained engineers in the various regions in the country to guide and assist the service departments of the dealers and sub-dealers.

Labour-Management Co-operation

"During the year, the Company's relations with its employees continued to be cordial, though I cannot say that there was not occasional cause for anxiety in this regard. But, the basic goodwill that has characterised labour-management relations in your Company has, I am glad to inform the shareholders, helped to surmount problems so familiar in this context. The management carried on negotiations with the employees for settlement of their demands commencing from the later part of 1958 and I am happy to inform the shareholders that, in May 1959, a three-year agreement was reached. It is my sincere hope that they would appreciate that the Company, though comparatively young, has agreed to wages and salaries that compare favourably with those in longer established industries. This has naturally been done with a view to ensuring the utmost harmony and cordiality in labour-management relations and your management think that the expenditure involved is worth it. Apart from the financial

benefits, the agreement provides for a scheme of joint consultation between labour and management to improve productivity and on matters of performance standards, job evaluation and employees' grievances. Your Company is also considering the introduction of an incentive scheme. I have every hope that the trade union movement in your Company will develop on healthy and correct lines to the mutual benefit of the employees and the Company; that the employees will realise that their prosperity is linked inseparably with the prosperity of the industry, towards which they should contribute their utmost by better productivity and discipline.

"The Government of India and the State Government have continued to give their active assistance and guidance and I take this opportunity to convey our gratitude to them.

U.K. Collaborators

"Your U.K. collaborators, The Enfield Cycle Company Limited, have given us their utmost co-operation during the year and this has contributed not a little to the success of the programme of manufacture. I convey our thanks to the collaborators.

"I take this opportunity to thank the selling agents, the dealers and sub-dealers all over the country for their active co-operation during the year. The workmen, staff and officers of the Company have put in a great deal of work which has contributed to the satisfactory results I have already referred to and I take this opportunity of recording our appreciation of the same."

Note: This does not purport to be a record of the proceedings of the above annual general body meeting.

DEVELOPMENTS IN NATIONAL TAX LAWS

(Concluded from page 556)

It would be a great advantage if the countries concerned could co-ordinate their legislative proposals they intend to pass into law.

Finally, several questions were asked by enterprises as to whether, and if so, where they could emigrate, in order to avoid what they consider excessive taxation. There was, of course, no question of defrauding the revenue authorities. Only, the questioners wanted to take advantage of the opportunities open to them by the national tax laws and the double taxation conventions. In this connection, the Bureau says: "The question whether anything can be done about the state of affairs that produces this desire to emigrate will not be discussed here, although it would be prudent for the Governments concerned to pay keen attention to this phenomenon."

Emphasising the need for the maintenance of a proper psychological climate in the fiscal sphere, the Bureau avers, in effect, that the Governments in several countries do not fully realise the importance of adequate publicity of their intentions in levying taxes. This results in a tendency on the part of the persons who pay taxes to "resort to every device and artifice to avoid taxation, which causes friction between the revenue authorities and the taxpayer." The enterprises also emigrate to foreign countries to the detriment of their nation. Again, some underdeveloped countries try, on the one hand, to attract foreign capital and levy, on the other hand, high taxes which make the fiscal climate "very unhealthy." Appropriately enough, these considerations have induced the Bureau to stress that the psychological effect of taxation should receive increasing attention in all countries.

The Damodar Valley Corporation has constituted a study team to survey the water resources of the Valley and to recommend how best these could be utilised for the economic development of the region. The terms of reference of the team include study of the present and future water requirements of the region for agricultural, industrial, navigational and other purposes, and the need for augmenting the flood control capacity of the D.V.C. The team will further examine the effect of the Tilaiya, Konar, Malhotra and Panchet Hill dams on the Damodar and Barakar rivers, as well as on the lower reaches of the Damodar and Rupnarayan rivers and the Hooghly as they affect the Port of Calcutta. The possible repercussions following construction of additional dams and the availability of stowing sand for collieries will also be considered. On the basis of these studies, the team will make recommendations regarding the construction of one or more dams at Aiyar, Bokaro, Belpahar, Bermo or at other suitable places. The team will keep in view the question of submergence of any coal-bearing areas while selecting suitable sites for additional dams in the valley.

PROMOTING INDIA'S EXPORTS EXPERIENCES OF A MANUFACTURER

By D. M. Desai

MANAGING DIRECTOR, HINDCO LIGHTING INDUSTRIES (PRIVATE) LTD.

DURING my 20,000 miles whirlwind study tour of most of the countries of W. Europe, British East Africa and Egypt, I had the opportunity of coming in contact with some Indian Consulates and import houses with whom I discussed today's vital problem of promoting India's exports. In view of the many anomalies and shortcomings that exist in the working of both the exporters and the Government, I am of the opinion that concerted and positive steps need to be taken immediately by both these sections, if we are not to lose vast business potentialities, particularly in the newly developing countries.

I shall first deal with the misdoings of Indian manufacturers and export houses. It is very regrettable that this group of people have failed to see beyond their noses, and have exported non-standard goods; even samples and supplies have been different. I shall quote only a couple out of scores of examples which came to my notice during my tour abroad. When I walked into an electrical importing firm owned by an Indian in Nairobi, British E. Africa, I was courteously received and offered a seat. But when I mentioned that "I came from India and we have a manufacturing unit," he suddenly lost all patience and was not even interested in knowing what I manufactured. He abused me in the worst possible language and asked me to clear out. He did not know me from Adam or Eve, nor did he know what we manufactured, but he was, perhaps, waiting to meet any Indian coming from India to express his resentment towards his countrymen, arising out of foul play of Indian export houses. He immediately asked his servant to bring wooden blocks used for electrical installations and lay them on the table. I observed that no two pieces were of identical shape or size, the wood used was of third rate quality, and partly eaten up in some places. I guess some old lady with poor eyesight and trembling hands must have applied the varnish to these blocks, and, due to her physical failings, there were two coatings at some places and none at all at others. This poor Indian in Nairobi had imported a single consignment worth Rs. 40,000 and, in a crying tone, he said that he could hardly realise Rs. 6,000 to Rs. 8,000 for this in a decade or so.

At another place, an electrical importer placed a dozen electric switches on the table, opened them out and displayed that the two holes that are there in each switch for fixing it on the wooden block had different dimensions in all the switches and hence he would have to buy individual sized screws to fit each of them. At yet another place, an importer said that he would consider marketing my products, provided I did not fix the label "Made in India" on them. What a pity?

All these Indians in E. Africa expressed great nationalist sentiments and said that, after India achieved independence and began industrialisation, they had decided to encourage products "Made in India," with patriotic feelings and were even willing to work on a lower margin than what they would get on goods of other countries. But they were there to do business, earn their living and maintain their families, and could hardly afford to lose their capital due to raw deals given by Indian export houses and manufacturers.

Indian Consulates

About Indian Consulates abroad, there is an equally sorry tale to tell. In the list of addresses supplied in April-May 1959 by Indian Consulates in E. Africa and Egypt, some names of parties not dealing in electrical goods were given. Some firms, only grocers, using two naked bulbs in their shops were listed as electrical importers in E. Africa. In Egypt, too, out of the 20 addresses given for Cairo, over a dozen firms had closed down at the time of the Suez Crisis in 1956. Is it not a sad commentary on the operation of the Indian Consulate that they had not corrected their lists for three years, knowing fully well what had taken place at the time of the Suez crisis? One is naturally tempted to ask whether the officers and staff of these Consulates are on a holiday at the cost of the Indian taxpayer.

On inquiring about the *modus operandi* of compiling these lists, I was informed that they were obtained from local Chambers of Commerce and from local Directories published from time to time. If this is the way our Consulates

obtain addresses and information in various countries, may I ask whether there is any need to incur colossal expenditure in foreign countries by maintaining large staffs? This simple work can be done by 20 clerks and 2 officers in a hutment in Delhi. They could as well write to all the Chambers of Commerce and purchase local Directories and make out such lists in Delhi.

Some Suggestions

While as an Indian I consider it my duty to highlight our shortcomings and offer criticism, I firmly believe that the matter should not end with making criticisms only. Constructive and positive suggestions should be made by all right-thinking men to remedy our drawbacks. In this spirit, I venture to make following suggestions:

1. In view of the greatest need to maintain higher standards of quality and to check malpractice and cheating by some Indian manufacturers and exporters, there is an urgent need to establish organisations similar to the Better Business Bureau, popularly known as B.B.B. in the U.S.A. Such organisations may be voluntarily established by men in industry and business.

2. The Indian Standards Institution must enlarge their staff and quicken their speed in formulation of standards for all goods having large potential export market. This must receive top priority.

3. The Government of India should: (a) strengthen the staff of Consulates abroad; (b) avoid frequent transfers from each country, because, very often, before an officer begins to pick up the threads in a country, he is transferred; (c) provide staff conversant with local languages in each country to enable these Consulates to have market research and correct records; (d) increase the allocation of funds to such Consulates where great export potentialities exist; (e) em-

ploy staff with experience and background of business as far as possible; (f) co-ordinate the activities of various Export Promotion Councils and obtain maximum benefits by avoiding duplication of efforts and expenditure and thus effect economy; (g) encourage sending more trade delegations and give all possible assistance to those going abroad for the purpose of export promotion; (h) organise more exhibitions of Indian goods in foreign countries; (i) open showrooms in important centres displaying Indian goods.

4. There appears to be an urgent need for spring-cleaning in the methods of working and approach in the Indian Consulates abroad. It would pay them to study the methods employed by the Consulates of highly industrialised and export-conscious countries like the U.S., U.K., Germany and Japan, and adopt such systems to their advantage. I would recommend (a) preparation of forms to be filled in by importers in each country giving details about their name, organisation, financial status, lines of business, bank and trade references, agencies held, etc.; preparation of a standard form by the Ministry of Commerce and Industry, Government of India, to be utilised by all Consulates abroad is recommended; (b) to eliminate the instances of, say, grocers, getting into the list of electrical importers, a field staff knowing local languages be appointed who should go round the markets, meet each importer, get details from him about his organisation and make cross references and checks from others in the same trade. This is being done by American and British Consulates in India and Indian Consulates abroad could usefully adopt this procedure; (c) some of the importers in those countries complained about lethargy and delay in attending to their complaints lodged with the Indian Consulates, and it is imperative that an efficient machinery be set up to attend to such complaints expeditiously.

5. Indian manufacturers and exporters should (a) take it upon themselves as a national duty and honour not to export sub-standard goods and endeavour their best to supply in accordance with samples and/or specifications; (b) as far as possible, visit foreign countries and study the market trends and consumer preferences personally, and/or appoint influential local agents having proper organisations and set-

"UMESH YOGA DARSHAN"

(FIRST PART)

In Four Languages: English, Hindi, Gujarati and Marathi.

(Author: SHRI YOGIRA) UMESHCHANDRAJI)

An excellent treatise on the true meaning of Yoga, which explains to you how to control your digestive, nervous, respiratory, urinary and other body systems. The book is fully illustrated with 108 real Asana Photographs and explains to you about their efficacy in attaining complete remedy of various ailments or disorders through the medium of Yoga, Naturopathy, Chromopathy, Psycho-Therapy, etc.

Useful for men and women alike, young or old, healthy or unhealthy. Deserves a rightful place in every home, hospital and library.

PRICE : Rs. 15/- Plus Postage Rs. 2/- extra. No V.P.P. sent.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices : Rs. 4/- for big bottle and Rs. 2/- for small. Available everywhere.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price : Rs. 2.50 including Postage, to be sent by M.O. only.

YOGIC CLASSES are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

WORLD GOLD PRODUCTION, MOVEMENTS AND PRICES

(Concluded from page 548)

in Mexico and Venezuela and smaller increases in some other countries.

The decline of \$2.3 billion in U.S. gold reserves during 1958 contrasted sharply with the increase of \$1.1 billion during the preceding two years. It was the largest outflow of gold from the United States in any single post-war year, the second largest, \$1.7 billion, having been recorded in 1950. Other countries whose gold reserves declined in 1958 were Argentina, Canada, Cuba, Egypt, Mexico, Peru, Spain, and Sweden, the aggregate decrease in these countries amounting to about \$250 million. E.P.U. gold stocks fell by \$128 million, to \$126 million, which was turned over to the European Fund when the European Monetary Agreement became effective in December 1958. The largest increase in monetary gold reserves during 1958 was in the United Kingdom, where gold holdings increased by an estimated \$1,250 million, to about \$2,850 million. This increase exceeded by about \$510 million the estimated total increase in the official gold holdings of the world as a whole. The second largest increase was in Italy, where gold stocks rose by \$634 million, to \$1,086 million, after having increased by \$114 million in 1957. Other increases in 1958 were \$355 million in Belgium, \$306 million in the Netherlands, \$207 million in Switzerland, \$97 million in Germany, \$91 million in Austria, \$36 million in Australia, \$32 million in Portugal, \$31 million in Japan, \$14 million in Iraq, and \$10 million in Colombia. The increase of \$152 million, to \$1,332 million at the end of 1958, in the gold holdings of the International Monetary Fund was mainly the result of repurchases, subscriptions, and charges paid in gold by Western European countries and, to a smaller extent, by other members of the Fund.

The decline in U.S. gold reserves continued during the early months of 1959. From 1st January to 30th April, it amounted to \$224 million, most of which corresponded to substantial increases in Japan and in Western European countries. On 30th April 1959, U.S. gold holdings amounted to \$20.4 billion, or about 51 per cent, of the world's monetary gold stock.

Foreign Holdings in U.S.

Of the total gold holdings at the end of 1958 of the monetary authorities of the world (as described above), \$29.2 billion, or about 75 per cent, was physically located in the United States. Gold held under earmark by the Federal Reserve Bank of New York for the account of foreign central banks and Governments and international banking institutions rose by \$2 billion during the year, to about \$8.5 billion. Many central banks and Governments find it to their advantage to have a portion of their gold reserves in the United States to meet current and future requirements, since the United States is prepared to buy and sell gold for official monetary purposes at a fixed price in unlimited amounts. Transfers on official account in 1958 between earmarked gold accounts held by the Federal Reserve Bank of New York amounted to approximately \$4.1 billion. In addition to purchases from and sales to the United States, there were movements of gold between foreign accounts as a result of monthly E.P.U. settlements and of gold transactions facilitated by the services of the Bank for International Settlements and the Fund. The volume of gold movements between official accounts negotiated in the London market was again considerable, though it was probably less than in 1957.

Gold Markets and Gold Prices

In 1958, the increased demand for gold by central banks exceeded by a wide margin the supply available from new production and from sales by countries other than the United States. The difference was made good by purchases from the United States, where during most of the year the price was lower than in London. The demand in the London market was met, for the most part, by sales of newly mined gold. In view of the strength of sterling, it was not necessary as in previous years for the Bank of England to sell gold to acquire U.S. dollars; instead, it was a net buyer of substantial amounts of gold. Thus, the dollar price of bullion on the London market (converted at the sterling-dollar rate of exchange at the time of the daily fixing) remained above \$35 per fine ounce during nearly the whole of 1958 and in the early months of 1959. From May through December 1958, the monthly average dollar price of gold in London was above the U.S. selling price of \$35.0875 per fine ounce. From time to time, however, central banks bought gold in

London, especially when gold was available in both London and New York at the same price, or when the London price was less than the U.S. selling price. These periods were short, and, during the greater part of the year, substantial purchases of gold were made in New York. Some new arrangements have been made to facilitate purchases of gold by private citizens; in Canada, for example, one commercial bank offered for fixed fees its facilities for storing gold against which the bank issues "gold certificates," and the Toronto Stock Exchange announced that gold bullion would be listed for trading as from 3rd February 1959.

Restrictions Relaxed

During the past financial year, several countries took further measures to relax restrictions on the sale of gold and the movement of gold through their territories. The most significant steps were taken in connection with the adoption of external convertibility by 14 European countries in December 1958. At that time, the United Kingdom announced that, as from 29th December 1958, dealings in gold would be permitted against "external" sterling or any foreign currency. On 20th March 1959, restrictions on forward dealings in gold were removed. Previously, any transaction that was not a spot transaction, that is, with delivery and payment within two working days, required the approval of the Bank of England. It is understood that, for the time being, the pre-1939 practice of having a daily fixing of forward gold prices, as there is for spot transactions, will not be revived.

In June 1958, a new Government loan was offered in France, carrying interest at 3½ per cent. and with repayments, which will begin in 1970, related to movements in the Paris market price of the napoleon. At the same time, in order to encourage the repatriation of foreign assets, the law of 1948 which prescribed a fine of 25 per cent. on reimported capital was abrogated, provided that repatriation took the form of gold which was to be promptly offered for sale on the Paris gold market. It has been estimated that, through these operations, the Bank of France acquired approximately 140 tons (4.5 million fine ounces) of gold and that, of this amount, some 3 million fine ounces came from discharging in France.

In the Federal Republic of Germany, the last limitations on domestic trade in uncoined gold and gold coins were removed on 26th January 1959, and the import and export of gold and gold coins were made completely free. However, purchases and sales of gold, other than by the monetary authorities, are still subject to the general 4 per cent. turnover tax. In April 1959, the Minister of Finance of the Union of South Africa announced that the South African Reserve Bank would sell gold bars to private purchasers outside the sterling area at a price corresponding to that on the London market. The bars to be sold are of the regular standard size of 400 fine ounces each, and the minimum individual purchase is fixed at 25,000 fine ounces. The Minister also stated that these sales were intended to encourage private ownership of gold, and that buyers may either leave the gold for safekeeping with the South African Reserve Bank or have it shipped to any country.

London Market

London bullion dealers continued to engage in gold transactions on a world-wide basis during the year. The Union of South Africa and other sterling area producers, together with the U.S.S.R., continued to be the main source of most of the fresh supplies in the London market. When the price of gold exceeded \$35 per fine ounce, most of the monthly E.P.U. settlements were made in dollars and no longer contributed substantially, as they had done in previous years, to the market turnover of gold. Private operators purchase gold in London for export to the Middle East and the Far East; the estimate of the net absorption of gold by the arts and industries and by private hoarders in 1958 suggests that purchases on private account by non-residents of the sterling area must have been on a comparatively small scale. The increased central bank demand for gold, together with the strong demand from the Middle East which was associated with the political uncertainties in that area, caused the price to remain firm when supplies were short in London. The price of bar gold in sterling at fixing increased from 249s. 2½d. per fine ounce on 1st May 1958 to 250s. 11½d. on 18th July 1958. It did not fall below 250s. per fine ounce until 8th January 1959, after which a downward tendency was maintained, with the price falling to 248s. 11½d. on 3rd April 1959. At the end of April it was quoted at 249s. 3½d., equivalent to \$35.094 at the day's dollar exchange rate. The fixing price in London rose to the equivalent

of \$35.14 per fine ounce on 8th October 1958, the highest dollar equivalent at the fixing since the reopening of the London market in March 1954. When supplies became more plentiful, partly as a result of U.S.S.R. sales in late 1958 and early 1959, the price at fixing declined below the equivalent of the U.S. selling price at the end of the year, and on 18th March, 1959 fell to \$35.04½. Subsequently, it rose to \$35.10 on 20th April as a result of renewed central bank demand.

The prices at which bar gold is traded directly for U.S. dollars in other markets deviated by only a few cents from the London dollar price during the year under review. In Zürich, for example, it was usually quoted a few cents per fine ounce above the London price, moving between the high of \$35.17½ on 17th July 1958 and the low of \$35.06½ on 16th-17th March 1959. On 30th April 1959 the price was \$35.11½ per fine ounce.

In Paris, the price of bar gold began to fall early in 1958, following the anti-inflationary measures adopted in December 1957, and this movement continued throughout most of the year, partly in response to the actions taken in June 1958, which have been described above. The rate quoted on 13th October 1958 was F.512,000 per kilogram. At the time of the devaluation of the French franc, the price of bullion advanced sharply, and on 19th January 1959 it was F.573,000 per kilogram. From 21st January to 30th April 1959, the price of bar gold remained within a narrow range, between F.568,000 and F.563,000 per kilogram, compared with F.555,000, the equivalent at the par value. During the period 1st May-27th December 1958, the U.S. dollar equivalent price of bullion fluctuated between a high of \$36.72 per fine ounce on 19th May and a low of \$35.85 on 27th August. After the devaluation of the franc, this price remained within a narrower range of the London dollar price, moving between a low of \$35.09 per fine ounce on 29th December 1958 and a high of \$35.86 on 19th January and 27th April 1959. On 30th April 1959, it was equivalent to \$35.74.

In Brussels, the U.S. dollar equivalent price of gold remained within a narrow range of the price in London from 1st May to 31st December, 1958, moving between \$35.37 and \$35.14. In January 1959, it fluctuated more widely because of market technicalities; and from 2nd February to 30th April 1959, it moved between \$34.94 and \$35.25 per fine ounce. In Milan, the price was slightly higher, fluctuating between \$35.20, the price in the last week of August 1958, and \$35.77 in the middle of January 1959; at the end of April, it was \$35.33 per fine ounce. Because of the political unrest in Lebanon, the U.S. dollar equivalent price of bullion in Beirut fluctuated more widely and at a slightly higher level than in the previous year. On 30th April, it was quoted at \$35.19 per fine ounce. In Hong Kong, the U.S. dollar equivalent price of gold increased from a low of \$38.03 on 6th June 1958 to a high of \$38.68 on 7th April 1959; at the end of April, it was quoted at HK\$252.50 per tael (equivalent to \$38.65 per fine ounce at the day's T.T. Hong Kong dollar rate for the U.S. dollar).

In India

In view of the rigid restrictions imposed on imports and exports of gold in India, the price of gold on the Bombay market is determined principally by local supply and demand conditions and is subject to wide fluctuations, depending upon the interplay of various economic forces and, to some extent, political and other factors. The price of gold rose from a low of Rs. 104.19 per tola (equivalent to \$58.35 per fine ounce at par value) on 10th July 1958 to a new high of Rs. 125.31 per tola (\$70.17 per fine ounce) on 30th April 1959, which exceeded the all-time peak of Rs. 121.00 (\$97.78 per fine ounce at the predevaluation rate of Rs. 3.3 per U.S. dollar in August 1948).

In the markets for gold coins, the prices of the sovereign and the napoleon continued in 1958 the gradual decline that began in 1957. The decline in the price of the sovereign is attributed to the release by the United Kingdom during 1958 of a substantial quantity of sovereigns for sale abroad. At the end of April 1959 the price of the sovereign in Paris and Brussels was lower by about \$0.90 and \$0.20 per fine ounce, respectively, than at the end of April 1958; in Beirut it was about the same as a year earlier, and in Milan it was about \$0.30 higher. In Paris it was equivalent to about \$40.20 per fine ounce, in Milan to \$40.85. From the end of April 1958 to the end of April 1959, the price of the napoleon declined in Paris by the equivalent of about \$7 per fine ounce, to about \$38.70; in Milan, by \$4.50, to \$39.50; and in Beirut, by \$2.00, to \$39.20.

Notices

THE MORARJEE GOCULDAS SPINNING & WEAVING CO., LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 88th Annual General Meeting of the Company will be held at its Registered Office at Suparibaug Road, Parel, Bombay 12, on Tuesday, the 3rd November 1959, at 4 p.m. (I.S.T.), to transact the following business:—

1. To adopt the Directors' Report and Audited Statements of Accounts for the year ended 30th June, 1959.
2. To declare a dividend on Preference and Ordinary Shares.
3. To elect a Director in place of Shri Motilal Tapuria who retires by rotation under Article 140 of the Articles of Association of the Company, but being eligible, offers himself for re-election.
4. To appoint a Director in place of Shri Basudeo Kanoria who retires by rotation and being eligible offers himself for re-appointment and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and is hereby given to the members:—

"Resolved that Shri Basudeo Kanoria who retires by rotation and who is an Associate of Messrs. Piramal Sons Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an Ex-Officio Director to the Board) be and is hereby re-appointed a Director of the Company."

The reasons which make this Special Resolution necessary are fully set out in the Resolution itself and in the Explanatory Statement annexed to this Notice.

5. To appoint Auditors for the current year and to fix their remuneration.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

The Share Transfer Books of the Company will be closed from Friday, the 9th October 1959, to Tuesday, the 3rd November 1959, both days inclusive.

By Order of the Board,
For PIRAMAL SONS PRIVATE LTD.,
GOPIKISAN PIRAMAL,
Director,
Agents.

BOMBAY, 14th September 1959.

The Dividend, if sanctioned, will be payable from Monday, the 9th November 1959, to those Shareholders whose names stand on the Register of the Company on 8th October 1959.

Dividend Warrants will be posted in due course to the Registered Addresses of the Shareholders. Change of address, if any, should be notified without delay.

An Explanatory Statement in respect of the above item of special business is herewith annexed.

EXPLANATORY STATEMENT

Under Section 173 of the Companies Act, 1956, and Annexure to the accompanying notice.

Shri Basudeo Kanoria is a Director of the Company who retires by rotation and is eligible for re-appointment. A Special Notice has been received from a Member proposing the appointment of Shri Basudeo Kanoria as a Director in accordance with the provisions of Section 261 of the Companies Act, 1956. Shri Basudeo Kanoria has been a Director of the Company for some years and it is in the interest of the Company to receive the benefit of his advice as a member of the Board. As set out in the Special Notice received by the Company, the reasons which make it necessary to have a Special Resolution are as follows:—

- (a) The Managing Agents of the Company are authorised by its Articles and its Managing Agency Agreement to appoint a Director on the Board.

- (b) Shri Basudeo Kanoria is liable to retirement by rotation of Directors.
- (c) He is an associate of the Managing Agents.

By Order of the Board,
For PIRAMAL SONS PRIVATE LTD.,
GOPIKISAN PIRAMAL,
Director,
Agents.

BOMBAY, 14th September 1959.

(b) The Dividend when sanctioned will be paid on or after the 28th October 1959, to those Members whose names stand on the Register of Members on 20th October 1959.

The Explanatory Note concerning item 3(b) above is being sent to the Members individually.

PROMOTING INDIA'S EXPORTS

(Concluded from page 566)

ups; (c) pay greater attention to proper packing and labelling in conformity with modern trends and local requirements; (d) make suitable modifications and/or alterations in their products as may be required in each country.

Government Policies of East Africa and Egypt
All Government, Municipal, and semi-Government purchases in British East Africa are channelled through London, and it appears that there is not much scope for supplies to them, because of their policy to buy "Made in England" goods. The market left open for exports, therefore, is the consumer market. There are no currency restrictions and, in recent months, even dollar currency has become easy. Hence, there is keen competition from all over the world.

In Egypt, there is an acute shortage of foreign exchange, including Indian currency, and the only currency easily available to them is from the Communist countries. In the past three years, bulk of the imports were, therefore, channelled through Communist countries. Thanks to the recent Indo-Egyptian Trade Agreement, there are some hopes of doing business with Egypt, but the stipulation to get the contracts between Indian manufacturers and exporters with Egyptian firms registered with the State Trading Corporation is likely to be a deterrent, because of the high percentage of margin of profit demanded by the S.T.C. At a time when manufacturers are required to tighten their belts and work at low or no margin of profit, the compulsion to have S.T.C. as an intermediary and load the prices cannot be understood. I would strongly recommend to the Government that Indian manufacturers and exporters be allowed to enter into direct contracts with Egyptian firms, and thus help to be more competitive. Otherwise not much business will materialise.

In Egypt, a new consciousness for industrialisation of the country is gathering momentum and all protection and encouragement are being given by the Government to those who set up new industries. Their plans are ambitious and Egypt aspires to be a strong industrial nation as well.

Since our popular Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, has evinced keen interest in export promotion and adopted a number of constructive measures, I am sure that he will take effective steps to remedy these shortcomings in the Government of India and the Indian Consulates abroad. I would also appeal to my brethren in Indian industry and commerce to raise their ethical standards, realise their responsibility to the country and not support or co-operate with those who fail them. Such persons do not deserve any mercy.

MONEY EASY AGAIN

(From Our Own Correspondent)

BOMBAY, 30th September

Thanks to the Bombay Municipal Loan, the list for which opened and closed on Monday the 28th inst., there was some activity in the inter-bank section of the money market. At one time on Monday, the rate for inter-bank call money went up to 3 per cent. Subsequently, it came down to 2 to 2½ per cent., but today, conditions became distinctly easy, again, following the return of money to the banking system from the Municipality. Today, the inter-bank rate for day-to-day money was the same as that a week ago, namely, 1½ per cent. among the big Indian banks and 1½ per cent. among the smaller Indian banks was 2 per cent., after having gone up to 2½ per cent. earlier in the week.

The response to the Bombay Municipal loan was, as anticipated, excellent. Although no official communiqué on the results of this issue has so far been issued by either the Municipality or its bankers, it is stated that the total amounts tendered by investors was well over Rs. 9 crores as against Rs. 5 crores invited and that the list closed within 30 minutes of its opening. It is believed that the Corporation must have exercised its option to take up 10 per cent. more out of the excess subscriptions.

The Central Government 91-day Treasury Bill results show an appreciable change, as compared with last week. For the second week in succession, the total amount offered was the same as the amount invited, namely, Rs. 2 crores. The average rate of accepted tenders remained unchanged at Rs. 2.440 per cent. per annum. All this shows that the Bills must have been taken up by special quarters. Nevertheless, tenders for Rs. 2 crores of bills have been invited for the next week also. Sales of intermediate Treasury Bills between 23rd September and 26th September 1959 fetched Rs. 85 lakhs, as compared with Rs. 2 crores in the corresponding period of the previous week. These Bills have been offered again at the same rate at which they were sold during the week under review.

The Reserve Bank's statement for the week ended 25th September 1959, as compared with that for the previous week, shows a contraction of Rs. 15.81 crores in notes in circulation and a rise of Rs. 16.52 crores in notes held in the Banking Department. The difference of Rs. 71 lakhs in the total notes issued is balanced by a rise of Rs. 59 lakhs in rupee coin and of Rs. 12 lakhs in rupee securities. Foreign securities in the Issue Department are unchanged at Rs. 163 crores, but balances held abroad in the Banking Department have declined further by Rs. 213 crores, taking the total of foreign exchange reserves down to Rs. 180.91 crores. The other changes in the Banking Department are of a minor nature, the only notable variation being a drop of Rs. 9.06 crores in the deposits of banks.

The decline of Rs. 4.72 crores and a rise of Rs. 10.56 crores are the major variations in the statement scheduled banks for the week-ended 18th September 1959. Borrowings from the Reserve Bank show a rise of Rs. 5.70 crores, of which Rs. 1.79 crore is against usance bills. There has been a small increase of about Rs. 1.84 crore in bank credit and of Rs. 2.96 crores in investments. Money at call has risen by Rs. 1.20 crore and so also total cash by Rs. 5.20 crores.

The gilt-edged market was firm, with a broadening of turnover. Prices of both Central and State Government loans improved by 5 to 10 nP. Much of the activity was due to buying by the L.I.C.

A notable development of the week in this section was the announcement of a loan of Rs. 5 crores by the Industrial Finance Corporation of India. This loan, in the form of bonds, carries interest at 4 per cent. and is repayable after 12 years. The issue price is Rs. 98.75 per cent. In other words, the terms are identical with those of the Bombay Municipal Loan referred to above. The list will open on 5th October and close on 12th October 1959 or earlier as soon as the issue is fully subscribed. The Central Government has guaranteed the repayment of the principal and payment of interest. The bonds are, therefore, approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act. They are also eligible securities for purposes of advances to scheduled banks by the Reserve Bank of India and the State Bank of India.

In the foreign exchange market, as sterling was a shade quiet in relation to the U.S. dollar, the rupee-dollar rate moved up from Rs. 477 per \$100 to Rs. 477.75 for banks' selling T.T. The banks' buying rate also was higher by 50 nP at Rs. 474.25. In the New York market, spot sterling and three months forward lost 0.50 cent over the week. The rate at the time of writing is 280.25-280.28 cents for spot sterling and 280.56-280.59 cents for three months forward.

KIPS CLEARANCE GOOD

(From Our Own Correspondent)

MADRAS, 28th September

Arrivals of kips in the market were moderate and clearances good. Prices ruled unchanged. U.S. buying was small, because importers were trying to buy at 1d. to 2d. lower than the levels last established. E.I. farmers were not keen to take higher prices, considering that the raw markets had been small. There were several inquiries for but few arrivals of cow calf and pig. Prices were small. There were several inquiries for but few arrivals of cow calf and pig. Prices were small. There were several inquiries for but few arrivals of cow calf and pig. Prices were small.

The market for tanned goat 5½/6 lbs. and 8/9 lbs. was firmer and sellers were quoting high prices. Tanned sheep middle class was also in good demand and prices hardened though other types were steady.

BULLION PRICES FINISH LOWER

(From Our Own Correspondent)

BOMBAY, 30th September

The bullion market exhibited a firm trend during the major part of the week under review, but staged a retreat today. The firmness was engendered by scarcity of fresh offerings in both gold and silver, as well as expectations of an early revival of demand. The continued rising tendency in commodity prices also imparted some strength. Consequently, the two metals registered an improvement in values. Today, however, selling was in evidence, thanks to fears regarding resumption of silver coin imports from Tibet and reports of inflow of contraband gold. Moreover, in silver, the earlier expectations that the bull clique might take delivery in the maturing contract (19th October settlement) turned out to be somewhat baseless, as was evident from the widening of the carry forward rate for October settlement from As. 8 last week to As. 10 yesterday and As. 13 today.

October settlement in gold began the week at Rs. 120-15, as against Rs. 121-3-6, and moved up to touch a high of Rs. 122-6 yesterday. After declining to Rs. 122-0-6 today, it finished half an anna higher. The net gain over the week was As. 13-6. Business in November settlement commenced at Rs. 122-3 on Saturday. The settlement advanced to Rs. 122-12 before closing at Rs. 122-7.

Ready gold was well supported, the quotation spurring from Rs. 121-11-6 to Rs. 121-15 yesterday. It encountered selling today and receded to Rs. 121-10. As in the past week, it continued to be at a discount under the forward position. The daily average arrivals and offtake of gold were 3,000 tolas and 3,200 tolas, respectively. The floating stocks are reported to be around 70,000 tolas.

October settlement in silver rallied from Rs. 204-11 on Wednesday last week to Rs. 205-13 yesterday, but fell to Rs. 204-8. November settlement, after rising from Rs. 205-3 to Rs. 206-7, finished lower at Rs. 205-8.

Ready silver, which stood at Rs. 203-11 last week-end, met with good support and improved to Rs. 204-15 yesterday. Today, it receded to Rs. 203-12. The daily average arrivals of silver were 30 bars, while the offtake was 7 bars. The floating stocks of silver are estimated at 700 bars.

There was no change in the quotations for ready and forward silver in the London bullion market during the week under review also; the former stood at 78d. per ounce and the latter at 78½d. Silver in New York, too, was unaltered at 91.375 cents per ounce. Ready gold in London, firmed up from 250s. 4½d. to 250s. 8½d. per ounce, owing to the easiness of the pound sterling vis-à-vis the dollar. The latest available rate for dollar gold in London is \$35.12-\$35.14 per ounce, as against \$35.11-\$35.13 last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	30-9-59	Highest	Lowest	23-9-59
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (99 fine Mint)	121 10	121 15	120 8	120 11½
Forward	122 1	122 6	120 15	121 3½
SILVER	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (99 fine Mint)	204 15	204 15	203 14	204 11
Forward	205 3	206 7	203 14	204 11
30-9-59				
London Silver Ready	78½	78½	78½	78½
London Forward	78½	78½	78½	78½
London Gold	250s. 8½d.	250s. 8½d.	250s. 8½d.	250s. 8½d.
New York Silver	91.375	91.375	91.375	91.375

* 17th October settlement. † 19th October settlement.

METALS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, 29th September

The proximity of the import policy announcement for the six months beginning from 1st October and the expectations of increased allotment of foreign exchange for import of virgin metals and scrap depressed the metal market during the week under review, and prices gave way. Stocks were far from being nervous, as they thought that it would not be before weeks any liberalisation in the import policy would have its effect on supplies. Meanwhile, it was noted here that, in overseas markets, excepting for copper, other base metals recorded a weaker trend during the week. Such a trend was attributed to slackness in demand.

Copper scrap prices here recorded a further recession despite shortage for the metal. Clean wire scrap eased from Rs. 240 to Rs. 238 per cwt. and utensil scrap at Rs. 222 was lower by Rs. 3. Elec. rolytic copper on the London Metal Exchange opened firm at £224½ per ton and gradually rose to close at £229, following greater demand in the face of a decline in warehouse stocks. A firmer trend was also reported from New York. The higher trend was attributed to the strike negotiations in Kennecott bearing no fruit.

Electrolytic zinc was subjected to speculation, following low level of stocks in the market; however, the price gave way, thanks to anticipations of a more liberal import policy. From Rs. 115 per cwt. the metal gave way to Rs. 110. In London, the price was earlier at £244 per ton to close higher at £251.

Tin closed here at Rs. 586, as against Rs. 587 earlier in the week. There was fair demand, but the stock position was good. Lead was quiet at Rs. 73.50 per cwt.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, 30th September

The cotton futures market, after a firm start, turned easy in subsequent sessions. The earlier firmness was due to reports of rains in Punjab and fear of damage to the crop. The sustained mill demand for spot cotton aided sentiment. The Jarilla March contract firmed up to Rs. 629.50 on Thursday. The trend of the market changed for the worse since then, and barring occasional rises, the contract steadily moved down. Rumours of the imminence of a large import quota and reports from the growing regions that the weather was taking a turn for the better induced some nervous bull liquidations and values declined. The fall in price would have been more marked but for the fact that spot prices of most varieties remained at the ceiling, some even pierced it. It was, therefore, considered not unwise to hold on to long position.

I.C.C. Moglai Jarilla March 1960 opened the week at Rs. 719 as against the previous close of Rs. 722.25 and, after rising to Rs. 729.50, declined to Rs. 724 yesterday. Commencing today at Rs. 723, the contract, after improving fractionally, declined to Rs. 718. The finish was, however, a shade higher at Rs. 719.

In the spot section, there was sustained mill demand early in the week. Both old and new crop were much sought after. Ahmedabad mills were keen buyers of old crop CO 2, Laxmi, Rajapalayam and 0394. Of the new crop, Berar 0394, 197/3, and Punjab 320F were well favoured. Towards the latter half of the week, however, activity subsided. Bills were seen keeping off the market in anticipation of an import quota.

Export demand continued to be weak. No fresh inquiries were reported. Some routine business was done in Zoda and Yellow pickings and Bengal Deshi.

Business in foreign cotton was restricted owing to the uncertainty about the import quota. Mills evinced some interest in Egyptian and Indian varieties.

The allocation to non-actual users and needy mills out of the quantity of 100,000 bales, reserved for them out of the recent quota has not been made. The announcement regarding the balance of 40,000 lbs. is also awaited.

Meanwhile, the Indian Cotton Mills Federation, in a telegram sent to the Government of India, stated that "traditional users of foreign cotton had almost completely exhausted their stocks and unless the Government took immediate measures, we apprehend partial or full closure of some of the mills and further deterioration of cotton supply position." The Federation has appealed to the Government to expedite the allocation of foreign cotton to mills out of the 140,000 bales recently released for import and to permit further imports of 300,000 bales for the period September 1959 to February 1960.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market:

Bengal Deshi 695; Berar Jarilla 790; Hubli Laxmi 985; Jaydhar 890.

Cotton futures values in Karachi declined further during the week. Export demand continued to be weak. Mill buying was on a very restricted scale. The N.T.R.G. January contract receded on profit-taking from Rs. 64-6 last week end to Rs. 63-9. The March contract gave way to selling and declined from Rs. 64-11 to Rs. 63-15. The spot section ruled subdued. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind Deshi 77; Punjab Deshi 80; 4F Punjab Roller 60; S.G. 70-8; L.S.S. Punjab Roller 70; S.G. 71; N.T. Roller 76; S.G. 80; 289F Punjab Roller 72; S.G. 75.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. Export demand continued to be small. Spot premiums also weakened, thanks to lack of support.

Export sale of new crop up to the 15th inst., aggregated 148,432 bales (of 720 lbs.), while shipments up to the 16th inst. amounted to 3,228 bales. As regards crop, both in Upper and Lower Egypt new crop ginnings were reported to be in full swing. First arrivals of new crop Karnak were said to be of good staple and quality.

The following are the latest available quotations—in tallars per lb.—from Alexandria:

Karnak: November 70.25; January 70.62.

Ashmouni: October 60.25; December 59.68.

Cotton futures in Liverpool made modest gains during the week on trade buying and mill fixations. Selling was light and was merely in the nature of hedging. Turnover was limited and price movements narrow.

Liverpool brokers are becoming somewhat impatient of the persistent stability of the cotton futures market. Since the beginning of August, when dealings in the new season's U.S. crop began the market has shown an overall fall of only 10 points, while, for the last few weeks, prices have hardly varied at all. Dealers now feel confident that the market will remain firm throughout the next few months.

The latest available quotations—in pence per lb.—from Liverpool are given below:

American cotton one inch staple contract: October-November 21.60; December-January 21.70; March-April 21.85; May 22.10.

American cotton mixed growth contract: October-November 22.10; December-January 22.05; March-April 22.30; May 22.30.

Sudan: September-October, November-December, January-February 29.75.

Dull conditions prevailed in the New York cotton futures market during the week. Squaring

Maana.

Points From the Chair

Electricity Industry

"MOST of you have doubtless considered in your own minds the implications of the impending scheme of taxation whereby all future dividends will be subjected to deduction of tax at source at the prescribed rate of 30 per cent. As one who is very closely associated with the electricity supply industry, I should say that the position of electricity companies is generally much more complicated than other companies, in that electricity companies come under the dual, and often conflicting, provisions of the Income-tax Act and the Electricity (Supply) Act, 1948. The profit-earning capacity of an electricity supply company is governed by the exhaustive financial principles embodied in the Sixth Schedule to the Electricity (Supply) Act, and while there has been some divergence of opinion as between the authorities and the industry over certain aspects of detail of these financial principles, there is no doubt that the scheme of the legislation intends that the permitted fair return should be a net return, free from all taxes. The investors in this industry, in general, and certainly those such as yourselves, who have been used to obtaining some 'grossing-up' of dividends in your hands, will be adversely affected in, determining the clear profit under the Electricity (Supply) Act, the amount of tax deducted from dividends and paid to Government under the revised scheme of taxation, is not admitted as a charge to the consumers. Representations have already been made by the industry to the Government of India impressing upon it the legitimacy of reckoning the amount of tax deductible from dividends as an expense in computing the clear profit in the same way as income-tax is allowed. I do hope that this effort will bear fruit in the near future, as it is only reasonable that just as the benefit of all tax concessions redound to the consumers in the case of our industry, any addition to tax liability should also reasonably be to their account."

P. D. C. R. CLARK,
Surat Electricity Co., Ltd.

Taxation on Plantations

"Taxation, of course, continues to swallow up a disproportionate slice of the fruits of our labours, and the reliefs so far granted have gone hardly any way to affording us relief. The reductions in excise duty have helped a little. The reductions in the Central taxation on companies have given us negligible relief, since our liability for Central tax is relatively small; at the same time, however, we shall, hereafter, have to deduct full tax at source from the dividends. Export duty, agricultural income-tax, and sales tax continue to be penal in extent, and add not a little to our administrative labours. There is talk of including tea and coffee among the commodities whose sales tax is consolidated into excise duty. I would regard this as a most welcome step and, since the Centre has assured the States that they will not be losers thereby, commend the proposal most strongly for acceptance by all the Governments concerned. It was slightly encouraging to hear the Finance Minister, Mr. Morarji Desai, saying at Coonoor, recently, that he would make sure that the planting industry would not be taxed out of existence. Perhaps, his visit to the U.P.A.S.I. Conference will have given him a better understanding of our problems, and a realisation that, unless some real relief is given soon, the goose will continue to moult, and lay less and less of those valuable eggs which are so important for the country's bill of fare. It may be said that we protest too much. Unfortunately, we can no longer get on with the job, and suffer in silence. Nowadays, the time and minds of those who guide our destinies are so fully occupied with diverse affairs—ideological as well as practical—that we in this industry must continue to make our protests, lest it be thought that they are don't ask, don't want. There are vague signs that our voices are beginning to be heard above the general clamour, and that, in course of time, we shall be allowed to concentrate our energies on the essentials of producing more of those goods on which the country's future depends."

J. N. A. HOBBS,
Chembra Peak Estates, Ltd.

Enthusiasm for the Job

"I am very ready to get away from my work on a Friday. I am very lucky to be able to go into the country, to hear the birds singing and to smell the country smells and breathe the country air. Time was when I thought myself lucky to be away from my office by Saturday afternoon; but things change—and I am glad they do. It is a good thing to have leisure for oneself and to give it to others. But my word on Monday morning I am like a kid at a school treat. I rush back to the office with eager expectation as to what awaits me on my desk. The thrill of business and what it brings makes every Monday an exciting day. Now we in management try our best to instil into every one of our colleagues at office desk or factory floor the same enthusiasm for their job, the same enjoyment in their work. We fail sometimes. But when we succeed—and we believe we do succeed quite often—the results give us infinite joy."

SIR GRAHAM CUNNINGHAM,
Triplex Holdings Ltd., London

Tea Export Duty in Ceylon

"The export duty, which for some long time has been levied to the extent of 70 cents per lb., has now been abolished and, in its place, a new export duty of 35 cents per lb. has been introduced coupled with a complicated *ad valorem* tax based on the price at which tea is sold. This *ad valorem* tax applies to all teas sold over Rs. 1.85 per lb. and therefore low and mid-country teas are unlikely to have to pay much of it and the main burden would appear to fall on the estates growing high quality teas. If the Government is to get out of

this tax the same income as it did from the 70 cents levy it seems that producers of high-grown teas will have to provide an undue proportion of the revenue desired by the Ceylon Government. In addition to this export tax there is cess on all tea exported, in order to provide a subsidy to assist the replanting of tea areas with approved high-yielding material. The subsidy will cover only part of the cost of replanting. Our Company will participate in this scheme and a limited programme of replanting will be undertaken in the interest of still greater efficiency and a larger production in the future. In common with others in Ceylon, progressive and efficient agriculture has always been our aim and, indeed, the tea industry in Ceylon has been described, even by the authorities themselves, as the most highly organised and efficient agriculture in the world. Even the most severe critics will admit that British capital and enterprise have contributed a very large share in the past, and are still contributing to the well-being of Ceylon."

FRANCIS W. DOUSE,

Anglo-Ceylon & General Estates Co., Ltd.

Braithwaites in India

"Braithwaite & Co. (India) Ltd., in which the home company holds approximately 23 per cent. of the share capital, has again had a very successful year. Its associated company, the Braithwaite Burn and Jessop Construction Company, Limited, has also had a successful year. The Ganga Bridge Construction Company, Limited, also an associate, recently completed an important bridge over the River Ganges—a project of major importance to the Indian economy."

J. HARVEY HUMPHREYS,
Braithwaite & Co. (Engineers) Ltd., London

Notice

THE MYSORE COFFEE ESTATES LIMITED

18, Second Cross Road, Shankarapuram,
BANGALORE-4.

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Annual General Meeting of the Shareholders of the MYSORE COFFEE ESTATES LIMITED, will be held at Madras Woodlands Hotel, No. 5, Sampang Tank Road, Bangalore, on Monday, the 16th November 1959, at 4 p.m., to transact the following business:—

- To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st March 1959 with the Auditor's report thereon.
- To declare a Dividend.
- To elect Directors in place of:—
 - Sri S. M. Ramakrishna Rao who retires by rotation and being eligible, offers himself for re-election.
 - Sri Dharmaprakasam M. V. Veerappa who retires by rotation and being eligible, offers himself for re-election.
 - Sri K. H. Srinivasan who retires by rotation and being eligible, offers himself for re-election.
- To appoint Auditors for the year 1959-60 and to fix their remuneration. Messrs. Sankaran and Raman, Chartered Accountants, Madras, retire and are eligible for re-appointment.
- SPECIAL BUSINESS:—To consider and if thought fit to pass with or without modification, the following Resolution which will be proposed as an Ordinary Resolution notice of which with the Explanatory Statement is sent to Shareholders individually.

"Resolved that the Board of Directors be and is hereby authorised to sell Gundikhan Estate, a small fractional part of the undertaking of the Company at the best price possible by receiving offers."

The Share Transfer Books of the Company will be closed from 1st November 1959 to 16th November 1959 (both days inclusive).

By Order of the Board,
PAVAN & CO., PRIVATE LIMITED,
Managing Agents.

BANGALORE, 21st September 1959.

Note:—The Board of Directors have recommended a Dividend of 15 per cent. on the Paid-up Capital of the Company, which when declared will be made payable on and after 25th November 1959 to those Shareholders whose names stand on the register as on 1st November 1959.

Shareholders are requested to notify immediately any change in their address for incorporation in the Books of the Company.

A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Such proxy should be registered with the Company at least 48 hours before the time fixed for the meeting.

when the whole system comes up for renewal next year. The Commission, it may be noted, consists of non-officials representing all sections of the public. The Government, true to its earlier promises, has agreed to accept the Commission's recommendations. The schedule itself, as stated at the outset, does not imply any excessive loss of income to the managing agency firms. Being based on a slab system, the schedule will be less burdensome than a straight percentage cut or a step system. On the lower ranges of income, the reduction is bound to be negligible. It is true that, on an average, the rate worked out to about 6.6 per cent, in the case of managed companies, the net profits of which are Rs. 1 crore. There are not many companies of this size at present. And, in the case of most of such companies, the rate of managing agency remuneration is even now only 7.1 per cent. It must also be remembered that the companies under the management of several large managing agency houses are markedly expanding their production. This is bound to lead to a large increase in the profits of managed companies, which may be depended upon to cushion the restrictive effect of the new schedule. Further, quite a good number of managing agency houses themselves are directly entering the manufacturing field, which in itself is a desirable trend from the country's point of view.

There is also another point to be borne in mind. It is that, while the proposed new rates are for general application, the Government has powers to vary them in special cases, where the services rendered by managing agents warrant such a course. The variation can be in both downward and upward directions; in either case, it can be done only in consultation with the Advisory Commission. If the services rendered by a managing agent to any one of his managed companies are of a costly nature and the general rates are found insufficient, the Government has power to enhance them up to the maximum rate specified in the Act. There is thus plenty of room for flexibility to accommodate hard cases.

Now that the schedule of remuneration has been revised in a downward direction, the Government will be well advised to see that no new restrictions are placed on the managing agency system. For a socialist Government, like the one that India has today, the pace of its reform of company law has been commendably evolutionary, rather than revolutionary. It would be in keeping with this tradition, if the Government refrained from making frequent changes in company law or corporate financial administration. The proposal that the period of managing agency should be reviewed every five years for industries which are well established has no merit, unless the idea is to evolve a political device to keep the managing agents perpetually under the thumb of the ruling party. A few bad sheep in the corporate sector here and there cannot be made an excuse for large-scale interference with company managements. In any case, the Government and the shareholders have ample powers to check mismanagement; to cite one provision in company law, shareholders, with no more than one-tenth of the voting power, may compel the Government to institute an enquiry into their company. Indeed, this and other powers granted to shareholders, if they are intelligently and wisely used, must be sufficient to ensure the maintenance of high standards of corporate rectitude. It is better to help spread a wider awareness of company finance and administration among shareholders, existing and prospective, than to seek new legal remedies.

DEVELOPMENT OF PORTS

THE problem of developing ports which has attracted considerable attention in recent years is a subject that calls for constant attention and vigorous action, in view of the importance of ports to the country's economic progress. It is true that foreign exchange difficulties have been among the factors which have prevented the authorities from giving the subject the attention it deserves. But this reason—if it is wrong to call it an excuse—cannot be pleaded for long, considering that inadequate port development may itself be a potent cause for foreign exchange difficulties. After all, a well-developed system of ports, covering the economic regions in the interior of a country, is a valuable aid to export trade. Again, unless the ports are efficient and well equipped, they cannot promptly clear the imports. Hold-up of ships in ports costs a tremendous amount of money and thereby adds to the cost of imports. Port development is thus an important source of foreign exchange earnings as well as savings.

From this point of view, it is gratifying to note that some encouraging information about the progress of development schemes for Indian ports was given by the Minister of State in the Union Ministry of Transport and Communications, Mr. Raj Bahadur, in the course of his speech at the eighth meeting of the National Harbour Board, held at Calcutta last week.

Since the Calcutta port has caused the greatest concern to the Government as well as to commercial interests in this country and abroad, the authorities have given their earnest attention to remedying the many shortcomings which hamper the wider use of the port. The development programme of Calcutta port includes the provision of additional harbour craft and equipment, diversion of railway lines in the Budge-Budge area, reconstruction of the Majerhat bridge, expansion of the marshalling yard, construction of two general berths in King George's dock, construction of a new warehouse for tea and improvement of ship repair facilities.

The chief problem of the Calcutta port, however, is the one caused by the river Hooghly, which has deteriorated fast, so that the maintenance of adequate depths in the navigable channel from sandheads to jetties remains a continual struggle against nature. Mr. Raj Bahadur discussed the development programme in its three chief aspects—intensive dredging, river training and restoration of adequate headwater supply. It would appear a new suction dredger has been ordered; it is expected to be available for service in about 15 months. Meanwhile, efforts have been made for the purchase of a secondhand dredger. Since even this may take time, the authorities have decided to overhaul their dredger *Ganga*, in order that it may remain in service for another ten years. At the same time, global tenders have been called for in order to locate parties who may be willing to take up dredging on a contract basis. The World Bank has agreed to finance the dredging project by a release of Rs. 2.50 crores of foreign exchange, out of the loan of Rs. 14 crores it has sanctioned for the development of the Calcutta port. River training continues to engage the attention of the authorities. Success in this sphere has necessarily to be preceded by careful model experiments. The Poona Research Station has undertaken to conduct investigations into such aspects of river training as will be relevant to the Calcutta port. The authorities, on their part, have already undertaken the execution of the Futla project.

While the work undertaken so far in respect of the development of Calcutta port is in the right direction, it is necessary to emphasise that the entire programme should be speeded up. Nor should the authorities slow down their efforts designed to develop a subsidiary port to Calcutta. As Mr. Raj Bahadur briefly pointed out, it is not likely that Calcutta port will ever be able to take vessels more than 26 feet draft, whereas modern shipbuilding trends point towards the construction of larger ships. It is gratifying to note that, at the anchorage set up at Haldia, near Calcutta, all arrangements have been made for the offloading of foodgrains ships. Port facilities should be promptly augmented at Haldia, so that it could relieve the burden on the Calcutta port.

Considerable progress has been made by the Kandla port. In 1958-59, the traffic handled by the port crossed the one-million-ton mark. Its revenue aggregated Rs. 68 lakhs, as against Rs. 48 lakhs in 1957-58 and Rs. 30 lakhs in 1956-57; the surplus amounted to Rs. 28 lakhs, Rs. 11 lakhs and Rs. 12 lakhs, respectively. It may be recalled that, at the time of sanctioning the project, the port was expected to earn an annual net revenue of only Rs. 12 lakhs. The project has thus more than fulfilled the planners' expectations. Kandla's importance will increase when Ahmedabad is brought within its economic hinterland through the provision of a broad-gauge link between Kandla and Jhund. Kandla, however, has its problem. The deterioration in the depth of the entrance channel has been engaging the Government's attention. It is proposed to purchase a new dredger for the port. The long-term remedy, however, lies in appropriately training the channel.

Among the other major ports, Madras has embarked upon an ambitious project, known as the "wet dock" scheme which is intended to add to its berthing capacity, while Cochin has a programme for the construction of four additional wharf berths in the Ernakulam channel. Visakhapatnam has come into greater prominence in recent years, thanks to the fact that it is becoming an increasingly significant outlet for the export of iron ore. It is proposed to con-

struct in this port four additional berths—two for ore and two for general cargo—at an additional cost of Rs. 4.5 crores. Long-term repairs to the breakwater in the port are also engaging the Government's attention.

It is not clear why the equally urgent problem of the Bombay port did not figure prominently in the Board's deliberations. The scheme for the modernisation of the port, as is well known, has had to be modified in the light of restricted availability of finance. The authorities have, however, concentrated on the modernisation of Prince's and Victoria docks. This scheme, which has come to be known as the minimum scheme, is expected to cost Rs. 4.30 crores. It is to be hoped that at least this scheme will be implemented without delay. The Board, on its part, has recommended that a suitable scheme for additional deep draft berths in the Bombay port should be prepared for inclusion in the third Five-year Plan.

Expenditure on the development of major ports during the first three years of the second Plan aggregated Rs. 24 crores, as against the total provision of Rs. 78 crores. This is by no means a very creditable record, though there are certain obvious limitations on increasing the level of expenditure, arising chiefly out of paucity of foreign exchange for importing the necessary equipment. The Board has done well to stress the importance of expediting the development schemes in the next two years. So far as the third Plan is concerned, all the major ports will be called upon to cater to an expanding volume of traffic. At the end of the second Plan itself, such traffic is expected to increase from 31 million tons to 40 million tons. It is bound to increase further in the third Plan. Clearly, much careful thought and preparation must precede the formulation of programmes of port development to be incorporated in the third Plan. The Planning Commission has advised the Board to take into account the acute shortage of foreign exchange and the difficulties of internal finance. Perhaps, the authorities will do well to consider whether some equipment, which all the ports need, may not be jointly owned or owned by the Government and lent to ports from time to time. In any case, consistent with the availability of foreign exchange, maximum allocations should be made to major ports, so that they are enabled to play their role effectively in the execution of the third Plan.

The development of intermediate and minor ports also leaves much to be desired. The report of the Intermediate Port Development Committee, which is expected to be submitted shortly, will be awaited with interest. The Union Minister himself referred to the "unsatisfactory" progress in the execution of development programmes for certain minor ports. He said: "It is, indeed, an irony that, while, on the one hand, the Board has been asked to reconsider the question of a port development fund with the specific object of finding resources for carrying out the development schemes of minor ports, some State Governments are not in a position to utilise fully the resources already made available to them in the form of loans." During the first three years of the second Plan, the expenditure on the development of minor ports aggregated Rs. 2.9 crores, as against Rs. 5 crores provided under the Plan. The chief bottleneck in the speedier development of minor ports, it is stated, is lack of trained personnel.

Two decisions taken by the Board are worthy of notice from the point of view of their significance to the future development of ports. In the first place, the Board has recommended the acceptance of the suggestions of the Ship Repairs Committee, subject to the comments of the Government. The provision of facilities for ship repairs at the major ports is certainly an important factor in the development of these ports. Secondly, the Board has accepted a proposal to constitute a cadre of consulting engineers in India; the scheme proposed by the Union Ministry of Transport will be examined further and a decision is expected to be reached soon. For all technical advice, the ports are now largely dependent on firms of foreign consultants. The senior staff of these consultant organisations, who advise Indian port authorities, include men who are retired from employment in India itself. What is now proposed is to build up a body of consultants from retired experts or specialists in such fields as harbour engineering, dredging, navigation and traffic. There is no doubt that, through this approach, it will be possible to achieve, in the not distant future, virtual elimination of dependence on foreign firms for technical advice.

MARKET GOSSIP

ALTHOUGH at the time of writing industrial equities are a shade below the best levels recorded a little earlier, they show handsome gains over the week. Steels and Tata Locos, which were sluggish for some days now, have returned to the limelight. The buoyancy in textile shares persists, despite reports of profit-taking by the L.I.C. in a few leading scrips. Sugar shares are active, following fresh interest taken by some operators. Led by Belapur, the shares of Deccan sugar companies have advanced by a few points, ignoring the fact that the production of almost all of them in the 1958-59 season was lower. It is true that prices realised by them must have been a little better than in the previous season, but the improvement could not have been so much as to offset the fall in production. Buying fervour has reappeared in several of the miscellaneous and engineering counters, even though the yield in the case of many of them is in the neighbourhood of 4 per cent only. All first class tax-free preference shares are in keen demand and they are commanding a sizable premium now.

A significant feature of the present upward trend in equities is the large turnover. We are told that prices have been rising, although large blocks of shares are bought and sold. Another feature is the increasing tempo of business in the cash section. Shares of new companies are being bought at high premiums ranging from 50 to 100 per cent, even with the knowledge that their maiden dividends may not be forthcoming for another two or three years. The low yield on the shares of well-established dividend-paying companies and the high premium commanded by the scrips of new companies which are yet to join the dividend list or have just joined by declaring a modest maiden dividend are coinciding with the finalisation of the endeavours of some business men for establishing new industrial units or for expanding their existing units. Almost all of them have a sizable element of foreign capital participation. Conditions are, therefore, quite favourable for them to get their requirements of indigenous capital. Banks are so flushed with funds that a number of them is courageously coming forward to underwrite new issues, mainly preference shares and debenture capital.

How Long Will It Last?

The continuance of bullish trend in shares is a puzzle even to staunchest bulls and a dismay to confirmed bears. They are unable to explain it. They say that this cannot go on for ever. They said so before, but a setback that came was quickly absorbed and the markets are on top form again. Several brokers and operators are now saying that the markets will boom during Diwali and that, if investors miss that opportunity to book profits, they will not get another for a long time to come. They are, however, unable to give any rational explanation for taking that view. Barring the general statement that the bull cycle has gone on for a long time now and has to stop at some stage.

Leaving out such blind surmises, the position may be briefly outlined thus:

The international tension has eased considerably. Even Communist China may tone down its aggressive designs against India and South-East Asian countries. Indo-Pakistan relations are improving. Domestically, though the Congress Party talks in terms of full socialism, no serious assault on the private sector is likely. The next budget may not contain any new direct taxation. The Communists are on the defensive, after their defeat in Kerala and West Bengal and the Congress move to divide the Bombay State.

The world economic situation is one of steady improvement. Inflation is under control in most of the countries. Full employment is being maintained. Production in West Europe, East Europe and Russia is upward. The big coal strike in the U.S. is over. The accumulation of supplies in these countries. Consumer demand is strong everywhere. Capital expenditure is being kept up. Balance of payments position is comfortable and the surplus available for investment in outside countries is gaining in size. Only in the U.S. there is a menacing strike of steel workers, while elsewhere employer-employee relations are in good shape.

In India, too, industrial production is improving. Almost all industries are doing well. Deficit financing has slowed down, thanks to substantial Government borrowings and growing P.L. 468 funds. Conditions in the money market are still comfortable. The deposits are continuing their upward trend and there is ample room for banks to borrow from the Reserve Bank to cover their requirements of funds during the coming busy season. Excepting for any unforeseen developments, the chances of an appreciable increase in interest rates in the 1959-60 busy season are remote. Labour position is cordial, with Mr. Gulzarilal Nanda trying to follow a policy designed to avoid any serious conflict. Capital expenditure is being kept up, several new industries such as aluminium, synthetic rubber, plastics, tyres, chemicals, pulp and paper are being established in the private sector. Efforts are being made by the Government to woo foreign private capital and these may be attended by modest success. A treaty with the U.S. for avoiding double taxation is ready for the approval of the U.S. Congress and the Government of India.

In short, so far as one can see, there are no factors that can seriously upset the share markets in the near future. There may develop a critical shortage of raw materials and food on account of

the damage caused by the recent floods. The exact position in this respect is not clear, but it is a fly in the ointment. As for the medium-term (two to three years) and long-term prospects, it is hardly possible to say anything worthwhile. General elections fall due in 1962. It is too early to say whether it will be preceded by economic shocks of the type the investors experienced during September 1956 to June 1957. Nor can one tell how strong the Communist Party will have become by then. No useful purpose will be served by speculating on these issues. One must have faith in the future.

I. D. A.

The U.S. Government's proposal for establishing a new international agency for helping underdeveloped countries has been unanimously approved by the Board of Governors of the World Bank. As many as 34 speeches were made by the representatives of member-countries of the World Bank, extending full support to the U.S. move. The relevant resolution requests the Executive Directors of the Bank to formulate the articles of agreement of the new institution, having regard to the views expressed by member-countries and considering the broad principles on which it should be established. Thus, the seed for the International Development Association has been sown and, since the ground has been well prepared and the climate is congenial, it may be confidently expected to germinate early next year. By giving their consent to this act, the representatives of developed countries, which will be the major contributors to this billion-dollar association, have provided an impressive evidence of their willingness to aid economic development of the less fortunate countries in the free world. It is true that some speakers expressed certain reservations in regard to the manner in which the I.D.A. should function, but the fact that all of them consented to the creation of the I.D.A. itself is another major advance in the sphere of international economic co-operation.

All members of the World Bank have now agreed that the I.D.A. should be an affiliate of the World Bank; there was hardly anyone at this meeting to voice the view of the hard-money school that this organisation should be kept out of the Bank's purview and reared as a separate U.N. agency. They have also agreed that the capital of the I.D.A. should be \$1,000 million, not a small amount as some critics in this country have tried to make out. The point has been made that, whereas the International Finance Corporation was brought into existence in order to strengthen private enterprise in underdeveloped countries by obviating the need for Government guarantee, which is necessary for loans from the World Bank, the I.D.A. is being planned to help the public sector in these countries by giving loans to those projects which are not bankable with the World Bank. From this thought proceeds the interesting description that, whereas the I.F.C. was brought in to strengthen the right flank of the Bank, the I.D.A. is being created to lend strength to the left flank.

The third point on which all member-countries are agreed is that the I.D.A. should be looked upon as a proposal to increase the total flow of development capital to the less developed areas and not as a substitute for bilateral assistance from the industrialised countries. The representatives of both the U.S. and the U.K., in particular, explicitly made this point. This understanding should be particularly welcome to India, as it had doubts on this issue earlier. It must, however, be noted here that the very idea of establishing the I.D.A. led to the postponement of the plan for a Commonwealth Development Bank. There is now a little prospect of this plan materialising. This country can, however, have some consolation from the fact that the U.K. has announced its decision to pay the balance of its cash subscription to the World Bank (generally described as the 18 per cent subscription) much earlier than was originally planned. Its share of subscription to the Bank in pounds sterling is £38.6 million, of which the balance due was £21 million. Of this balance, it has just paid £10 million and promised to pay the remainder in January next. The significance of this development to Commonwealth countries is that they can avail themselves of more sterling loans from the World Bank.

Of the I.D.A.'s capital of \$1,000 million, three-fourths are expected to be the share of the developed countries, including Japan. The U.S. has agreed to provide \$320 million. The U.K. has announced that it will contribute \$140 million. Thus, these two countries themselves will account for nearly half of the I.D.A.'s capital. While the U.K. Government has clearly stated that its subscription will be in united form, the position in regard to the U.S. share is not that clear. Some reports from Washington have hinted that, in view of the continued deterioration in the balance of payments position of the U.S., the contribution from that country may not be in convertible dollars, that is to say, the U.S. may allow its quota of cash to be spent only on American goods and services. There is, however, no indication in the speeches of U.S. officials at the World Bank to infer such a possibility, even though it is true that the U.S. balance of payments situation is pretty difficult. The amount involved is so small that it is to be hoped that the U.S. Government will not find it necessary to tie its contribution to purchases in America only. The placing of such a condition will mean a two-fold disadvantage to countries which are sought to be helped through the I.D.A.

First, it may induce other developed countries also to follow suit, though, as things are today, they will not be morally justified in doing so, because almost all of them are enjoying a favourable position and accumulating dollars and gold. Secondly, in many cases, the cost of U.S. capital goods and technical services is higher than elsewhere. In some cases, they may not suit the exact needs of certain underdeveloped countries.

On the terms and conditions of loans from the I.D.A., the views of some of the developed member-countries of the World Bank, particularly the U.S. and the Continental nations, seem to differ from those of the would-be borrowers. Some say that they differ from the views of even the U.S. The assumption here is that the latter is for terms more liberal than those which the West European countries are prepared to concede. All countries are, however, agreed that the I.D.A. should lend on terms which will be easier than those of the World Bank and for projects which are not eligible for the Bank. The differences of opinion pertain only to the extent to which the I.D.A. loans should be soft. The underdeveloped countries, India included, would like to repay the bulk of the I.D.A. loan in the currency of the borrower. The U.S. seems to be sympathetic to this suggestion, though it may not be ready to go the whole hog with them. The U.K. and other European countries, however, do not consider that repayment of even a part of the I.D.A. loan in the currency of the borrowing country will be in keeping with sound international lending. They seem to have some reservations even in regard to the concessionary rates of interest on I.D.A. loans. This means that the only concession they are prepared to make is in regard to the period of repayment; they have no objection, it is said, to spread the repayment of the loan over a longer period than is allowed by the World Bank. In fine, they are not for soft loans, but only for loans that are slightly less hard than the loans of the World Bank. If this is their attitude, the U.S. and World Bank authorities will have to persuade them to soften it considerably, for it is not in keeping with the original ideas of the authors of the I.D.A. These are: the loans are to be for a pretty long period, carrying a low rate of interest and repayable in whole or in part in the currency of the borrower. Since a loan is a loan and has to be repaid, there is, we feel, room for accommodating the European countries on the question of its return in local currency, provided they agree to the repayment being spread over a long period of, say, thirty to forty years, and to keep the rate of interest at a low level, say, two per cent per annum.

Tax on Gratuity

It is not clear what considerations prompted the Union Ministry of Finance to reject the perfectly valid plea for exemption from income taxation of retiral gratuities at the hands of recipients made by the Bengal Chamber of Commerce and Industry some time ago. Surely, it is somewhat unjustifiable stand for the Government to take on a question which is of the essence of a welfare State. It would appear that the Chamber addressed the Ministry of Finance recommending that consideration should be given to the grant of exemption to retiral gratuity schemes instituted by employers in private industry and commerce. The Chamber pointed out that exemption from taxation had already been conceded in the case of contributions made to recognised provident funds. It suggested that the Government should frame rules whereby retiral gratuity schemes might be submitted to Commissioners of Income-tax for recognition. It was thought that such rules could embody simple safeguards to ensure that there was no loss of revenue to the Government. The Chamber's suggestion was modest in that it said that the benefits could be confined to employees whose total emoluments, including allowances, did not exceed Rs. 1,000 per month. Indeed, the Chamber should have urged the exemption of gratuities for all employees, irrespective of the level of salaries drawn by them.

Here is a perfectly justifiable plea for tax relief. After all, gratuity is a lump sum payment which, together with provident fund, constitute the chief source of livelihood in the evening of a man's life, the best years of which he will have spent in working for his employer. Apart from this human consideration, which, by itself, would justify the grant of exemption from tax to retiral gratuity, there are two other grounds which lend weight to the Chamber's plea. In the first place, the contributions made to recognised provident funds are exempt from tax. If provident fund contributions are exempted from tax on the ground that they are an important source of income for a retired man, there is no reason why a similar treatment cannot be accorded to gratuity schemes which, like provident fund schemes, are intended to make life less difficult for a retired person. Secondly, the Government has granted relief from tax to death-cum-retirement gratuities paid to all employees of not only the Central and State Governments but also to those of Government-owned corporations, without any restrictions related to the level of salary drawn by the employees at the time of retirement. Thus, when an officer of the State Bank of India retires, no deduction for tax is made from his gratuity, even though the total amount may run into several thousands. But, when an officer of a commercial bank retires, tax will be deducted from his gratuity at the full rate applicable to his total income. It is manifestly unjust, and, from the point of view of Constitutional injunction about equality of persons before the law, clearly wrong, that employees of the private sector should suffer a fiscal disadvantage as compared with employees in the public sector.

A strong protest against this gross discrimination was made by the Indian Banks' Association also, but nothing came out of it. It is very likely

EQUITIES BUOYANT SHARP RISE IN TELCOS

(From Our Own Correspondents)

BOMBAY, 8th October

THIS week's review of the share market covers again a short period of three sessions, as a result of the closure of the Stock Exchange on the 2nd inst., on account of *Gandhi Jayanthi*, on the 3rd, it being the day following the fortnightly settlement, and on the 5th as a mark of respect to the late Mr. Bhaidas Maganlal Dalal, Vice-President of the Exchange, who died on the 3rd inst. During these three sessions, equities were buoyant on account of a fresh bout of heavy buying and short-covering. Prices touched new high levels in the recent upward movement. Despite reports of sale by the L.I.C. of some textile shares, particularly Centurys this section gained strength. Higher levels however, attracted profit-taking and closing rates were well below the week's peak. The announcement of a higher final dividend of 13 per cent. (as against 12 per cent.) by the Bombay Burmah Trading Corporation for the year ended 31st May 1959, making a total distribution for the year of 19 per cent., as compared with 18 per cent. for 1957-58, was greeted by the market with a sharp jump in its scrip. What is more, the dividend for 1958-59 is tax-free, as the Company's assessment year is 1959-60 and the provisions of the Finance Act 1959 in respect of deduction of tax on dividend at source do not apply. Secondly, the announcement of the final dividend came close on the heels of the payment of the interim dividend on 28th September 1959 and much earlier than usual.

Although the earlier reports about curtailment of managing agency commission had led to some misgivings and a disquieting effect on the market, the clarification by Mr. D. L. Mazumdar, Secretary, Company Law Administration, of the proposed scheme of slab system of commission at a Press conference held in Bombay on the 1st inst. was received with satisfaction. Any setback to confidence caused by this report was quickly repaired, as Mr. Mazumdar clearly showed that the Government's move would be beneficial to shareholders.

Under the proposed scheme, the managing agency remuneration, which would be 10 per cent. on the first Rs. 10 lakhs of net profit, would gradually decline to 4 per cent. on profit of Rs. 1 crore and over. The new schedule is as follows:

	Per cent.
On the first Rs. 10 lakhs	10
On the next Rs. 10 lakhs	9
On " " "	8
On " " "	7
On " " "	6
On " " Rs. 25 lakhs	5½
On " " " "	5
On profit of over Rs. 1 crore	4

It will be seen from the aforesaid figures that, on a net profit of Rs. 1 crore, the total remuneration works out to Rs. 6,82,500 or an average of 6.82 per cent., as against a maximum of 4 per cent. as made out in earlier reports. An official notification on the new schedule may come any time now.

To revert to the trend of the share market. In the steel section, Tata Ordinaries rallied from Rs. 162 to touch Rs. 165.25 today, before profit-taking at the higher level brought them down to Rs. 164.25 at the close. Indian Irons hardened from Rs. 23.52 to Rs. 24.24 but finished a shade lower at Rs. 24.08.

Among textiles, Centurys advanced from Rs. 578.50 to Rs. 589. After a lapse to Rs. 579.50 today, presumably due to sales by the L.I.C., the scrip gained back to Rs. 583. Bombay Dyings shot up from Rs. 67.60 *cum-div.* to Rs. 68.60 *cum-div.* before closing at Rs. 68.10 *ex-div.* (interim dividend 70 p). Kohinoors recorded a gain of Rs. 13.50 at Rs. 319.50; the highest level touched for the week was Rs. 324.50. Central Indias moved up by Rs. 8.50 to Rs. 117.50. Finlays by Rs. 7 to Rs. 295 and Gokaks by Rs. 5 to Rs. 173. *Indu Ordinaries* improved by 92 p to Rs. 11.16. A rise of Rs. 5 to Rs. 170 was recorded in New Greas and of Rs. 9 to Rs. 226 in Shree Niwas Cottons. Simplex advanced by Rs. 3.50 to Rs. 152. Standards by Rs. 3 to Rs. 137 and Svadeshis by Rs. 2.75 to Rs. 262. Tata Mills gained Rs. 1.50 to Rs. 49.

Sugar shares continued to attract attention. Belapurs firmed up from Rs. 327 to Rs. 344 before closing at Rs. 340. Phaltans recorded a rise of Rs. 3 to Rs. 182 and Walchandnagars Rs. 5 to Rs. 331.25. Bhopals were taken up 73 p higher at Rs. 25.25. Maharashtra Sugars changed hands at Rs. 16 higher at Rs. 247.

Good support was accorded to engineering shares among which Tata Locomotives provided the highlight with a spurt from Rs. 192.50 to Rs. 206. Alcocks jumped up by Rs. 13 to Rs. 266. Hindustan Constructions by Rs. 23.50 to Rs. 380.50 and Larsen and Toubros by 44 p to Rs. 23.48. Mahindras were done 92 p higher at Rs. 23.44. Cooper Engineerings gained Rs. 2 to Rs. 171. Mukund Irons were marked up by Rs. 1.44 to Rs. 21.56. Mining shares were docile. Shivrajpurs rose by no more than 50 p to Rs. 90, while Indian Coppers were a shade quiet at Rs. 4.04.

In the miscellaneous section, Bombay Burmahs were a bright feature with a rise from Rs. 327 to Rs. 344. The closing was, however, lower at Rs. 340. National Rayons shot up from Rs. 364.50 to Rs. 380.25, but profit-taking pruned the gains and the shares closed at Rs. 375.50. Tata Oils were picked up Rs. 2 higher at Rs. 65. Tata Chemicals were quiet at Rs. 17.04, following the disappointment over the cut in dividend for the year ended

June 1959. The Directors have recommended a dividend of 75 p per share, subject to deduction of tax, on the old shares and a dividend of 33.542 p and interest of 38.333 p, making a total of 71.875 p per share on the new shares. The net dividend on the old shares works out to 52.5 p per share, as against a tax-free distribution of 75 p made for the previous year. Alembic Chemicals moved up by Rs. 2.50 to Rs. 192.50 and Dhrangadhra Chemicals by Rs. 5 to Rs. 134. Seat Tyres hardened by Rs. 10 to Rs. 180, while Killick Industries looked down from Rs. 138.75 to Rs. 131. Voltas improved by Rs. 3.25 to Rs. 182.75 and Wimcos by Rs. 6 to Rs. 228.

Madras Stock Exchange

MADRAS, 7th October

Equities on the Madras Stock Exchange scored handsome gains during the week under review. The proposed reduction in the managing agency commission was interpreted to mean an enhancement of the profit available for distribution to shareholders, provided, of course, other things remained the same. There was, therefore, a perceptible revival of buying activity. Textiles were particularly well fancied, thanks to reports of the continuously upward trend in domestic offtake and export business in cotton piecegoods and yarn. There were expectations of a fresh sale of cotton yarn to Burma following the visit of a three-man trade delegation from that country now touring India.

In the sugar section, Cauverys spurred by Rs. 6.50 to Rs. 125. E.L.D.s rose by Rs. 2 to Rs. 42. Mysore hardened by 62 p to Rs. 49.62. Deccans moved up by 52 p to Rs. 12.60. Travancore gathered 30 p to Rs. 12.30. Indias put on 18 p to Rs. 12.18. Kiriampudis were fully steady at Rs. 80 and United Breweries at Rs. 461.50.

Among teas, Oucherlony and Nelliampathys strengthened by 8 p each, the former to Rs. 5.45 and the latter to Rs. 3.00. Nilgiris picked up 5 p to Rs. 7.75 and Chembras 3 p to Rs. 3.98. Non-such Teas were maintained at the last week's level of Rs. 29.25, as also Kil Kotagiris at Rs. 8.05. Halleyburies changed hands at Rs. 16.37 *ex-right*, as against Rs. 18.50 *cum-right*. In the coffee group, Consolidated Coffees strengthened by 20 p to Rs. 22.15. Coffee Lands improved by 17 p to Rs. 23.50. Wartyhullys gained 5 p to Rs. 3.95 and Ossors 3 p to Rs. 3.93. Among rubbers, Highlands advanced by 75 p to Rs. 13.75. Vaikundams hardened by 50 p to Rs. 28.25. Kailas gathered 22 p to Rs. 5.12. Middlands were higher by 5 p to Rs. 12.15.

In the textile section, Coimbatore Pioneers elicited excellent support and forged ahead from Rs. 285 to Rs. 320. Premiers jumped up by a like amount to Rs. 212. Dhanalakshmis spurred by Rs. 21 to Rs. 225. Metturs and Vasantas advanced by Rs. 9 each to Rs. 383 and Rs. 220, respectively. Bangalore Woollens rose by Rs. 8 to Rs. 188. Coimbatore Cottons and Rajalakshmis increased by Rs. 4 to Rs. 170 and Rs. 67.50, respectively. Buckinghams increased by Rs. 3.50 to Rs. 190. Radhakrishnas by Rs. 2 to Rs. 28.75. Virudhunagars by Rs. 1.50 to Rs. 39.50 and Janardanas by Rs. 1.00 to Rs. 61.

In the miscellaneous section, Textools advanced by a rupee to Rs. 197. Mysore Papers improved by 23 p to Rs. 21.85. Western India Plywoods were done at Rs. 234 *cum-right* today, as against Rs. 210 last week-end. India Cements rose by 12 p to Rs. 6.60. Travancore and Dalmia Cements gathered 10 p each to Rs. 10.10 and Rs. 10.80, respectively. Travancore Chemical Manufacturings rose by 25 p to Rs. 14. Indian Steel Rollings gained 10 p to Rs. 13.40 and Leylands 5 p to Rs. 7.85. Central Scientifics were unchanged at Rs. 6.55. The directors of the Company have declared a final dividend of 5 per cent. for the year ended March 1959, same as that paid in the previous year. Rallies, however, lost 50 p to Rs. 76. Spencers eased by 25 p to Rs. 19.90.

Calcutta Stock Exchange

CALCUTTA, 7th October

Equities on the Calcutta Stock Exchange were buoyant during the week under review, thanks to the good investment support at lower levels, which led to impressive gains in all sections. Miscellaneous industrials were a particular favourite of small investors, and several features were recorded in this section. Steadier conditions on the eve of the *Puja* holidays marked a departure from the traditional caution and poor performance on the Exchange, but this only reflected the definitely improved capital market and the increase in the number of small investors. As one operator put it, there is evidence of a spread of savings habit which leads to subsequent investment in equities. The payment of annual bonus by several industrial and trading concerns at this time of the year to their employees is also a factor which has led to more investment support. Had it not been for widespread rains and flooding, which have caused much havoc in several parts of West Bengal, conditions would have shown further improvement.

The support from the more prudent investors was guarded for another reason also. They were watching as to the nature of the return on capital following the change in taxation of dividend and the official edict to deduct the tax at source of payment in respect of dividend falling in the financial year 1959-60.

The Calcutta Stock Exchange will remain closed from the 7th to 18th inst. (both days inclusive) on account of *Puja* holidays.

Among cottons, Kesorams continued to rise, and touched Rs. 19.12, as against Rs. 18.12 earlier. Elgin Mills, at Rs. 16.62, were fractionally higher. Cawnpore realised Rs. 5.45, as against Rs. 5.30 earlier.

A strong feature in the coal section was provided by equitables which, on interested support, gained to Rs. 34.50 from Rs. 33.87. Western Bengals improved by a rupee to Rs. 7.00, before closing lower at Rs. 6.81, while Katras Jherriahs were pulled down to Rs. 70 from Rs. 75.25 previously and Pench Valleys to Rs. 23.00 from Rs. 25. Burrakurs were unchanged at Rs. 16.31.

Prominent features in the jute section included the impressive rise in Indias from Rs. 15.50 to Rs. 16.25. On reports of improved prospects, Kankannarhs jumped to as high as Rs. 128 from Rs. 114. On considered support, New Centrals scored a point to Rs. 19.56. Barnagores were pushed up to Rs. 177 from Rs. 166. Kamarhattys hardened by four points at Rs. 210. Agaparas closed steady at Rs. 13.44 after rising to Rs. 13.62 from Rs. 12.94. Ganges changed hands at Rs. 10.06, as against Rs. 9.50 earlier, and Birlas at Rs. 25.37, as against Rs. 24.06. Fair interest was shown in Budget Budgets which, as a result, strengthened to Rs. 163 from Rs. 156. Ballys advanced to Rs. 250 from Rs. 231, while Champdany declined to Rs. 134 from Rs. 136, and Alliances were unchanged at Rs. 130.

Fair interest was shown in engineering. A strong feature was the persistent support accorded to Jessop & Co., which rose to as high a rate as Rs. 33.25 from Rs. 30, on expectations of a rights issue. Indian Irons were pushed up to Rs. 24.10 from Rs. 23.46 following expectations of increased retention prices. On continued buying, Indian Steel and Wire Products closed higher at Rs. 41.12 after opening at Rs. 40.62. Texmacos rose to Rs. 24.20 from Rs. 23.70. Kumardhubis were fully steady at Rs. 7, as against Rs. 6.69 earlier, and Braithwaites were firm at Rs. 24.94.

Paper mills received more attention on improved prospects. Orients recovered to Rs. 38.40 from Rs. 37.75. Sirpurs, at Rs. 16.62, were fractionally higher, as were Titaghar Papers at Rs. 45.50. Bengals received attention at Rs. 107, as against Rs. 105.50 previously.

Several features were recorded in the miscellaneous industrials section. On interested buying National Pipes advanced steadily to Rs. 19.75 from Rs. 18.19. At Rs. 29.50, Indian Oxygens gained one point. Indian Aluminiums hardened to Rs. 22.91 from Rs. 21.19 following proposals for expansion of the alumina plant at Muri and the Bellur Rolling Mill, and for the installation of a new extrusion press in Alupuram. On news that the National Carbon Company has applied for official sanction to issue ordinary rights at a premium of Rs. 2.50 per share in the proportion of two to every five existing shares, the scrip was a favourite among buyers and that accounted for the firmness at Rs. 38. Dunlop Rubbers reached Rs. 35.12 from Rs. 34.87 following reports of an expanding market for its products. Alkali and Chemicals reached a new high of Rs. 24.12 as the plan for production of rubber chemicals was believed to have made satisfactory progress. Indian Cables were firmer at Rs. 32, as were Rohtas Industries at Rs. 26.06.

MANDYA NATIONAL PAPER MILLS

The capital issue of the Mandya National Paper Mills Limited (incorporated on 7th November 1957) has just been announced. The details of the announcement are published on pages 602 and 603 of this issue. It will be seen therefrom that, out of the total issued capital of Rs. 2,000 crores, a sum of a little over Rs. 1,000 crore has already been taken up by the promoters, their American collaborators (Messrs. Parsons and Whittemore Lyddon Organisation), Directors and their friends. The balance of Rs. 99,68,110 is now offered to the public for subscription. This amount is made up of 396,941 ordinary shares of Rs. 10 each (Rs. 39,69,410) and 59,987 7 per cent. tax-free redeemable cumulative preference shares of Rs. 100 each (Rs. 59,98,700). The preference shares are redeemable after 15 years from the date of allotment. The list for public subscription will open on Monday, the 12th inst., and close on Saturday, the 24th inst.

The Company will set up a factory near the Krishnarajasagar Dam in Mysore State for manufacturing high-grade printing and writing papers, using sugarcane bagasse as the primary raw material. The initial production capacity of the factory will be about 35 tons per day.

The above project is a sound venture and should yield satisfactory results given efficient management. The factory is assured of a ready market for its product. The demand for high-grade printing and writing papers is quite good at present and will increase substantially in the coming years, what with the economic development of the country and the spread of literacy. The other notable features of this project are:

1. The paper produced by the factory may be expected to be of high quality. The factory, we are told, will be equipped with first class, most modern plant and machinery. In addition to supplying the equipment, Messrs. Parsons and Whittemore Lyddon Organisation and their associates have agreed to supply technical services and to supervise the erection and start-up of the factory. They have also guaranteed the due performance of the plant.

2. The cost of producing paper from bagasse is claimed to be lower than that manufactured out of bamboo. Ample quantities of bagasse will be made available by the Mysore Sugar Company, Ltd., which has a supply of 100,000 tons of bagasse in a normal crushing season. As against this supply, the requirements of this paper factory are of the order of 72,000 tons.

3. The promoters feel that the Company will be able to commence payment of dividends after the first three years of operation.

NEWS IN BRIEF

A PROPOSAL for the manufacture of plastics, with alcohol as the base, by the Mysore Sugar Mills at Mandya has been approved by the Government of Mysore.

The Central Government has issued a licence to the Greater Mysore Rayon Grade Pulp and Paper Mills Ltd. for setting up a rayon pulp manufacturing plant in collaboration with U.S. firm in the North Canara District of Mysore State.

India had a favourable balance of trade to the tune of Rs. 204 lakhs with Australia during the first half of the current year, as against Rs. 195 lakhs in the same period last year. Exports declined from Rs. 996 lakhs to Rs. 877 lakhs and imports from Rs. 801 lakhs to Rs. 673 lakhs.

A six-member Polish trade delegation, headed by Mr. T. Olechewski, Director, Department of Foreign Trade, has arrived in New Delhi to review the working of the existing trade agreement between the two countries and also to hold discussions in connection with the formation of a trade plan for the next year.

The U.S.S.R. has offered to invite 10 teams and 45 trainees annually from the National Productivity Council of India to train them in the various methods of increasing industrial production. Czechoslovakia has also agreed to invite five to seven teams and 25 trainees every year.

The erection of the second blast furnace at the Rourkela Steel Project has been completed in record time, thanks to the successful co-operation of the West German and Indian engineers. Pre-heating of this furnace and the hot blast stoves prior to putting them into commission is in progress.

The Government of India is considering the desirability of reintroducing a Prize Bonds Scheme, designed to encourage small savings drive, particularly in the rural areas. The proposed scheme envisages floating of prize bonds once every six months in denominations of Rs. 5 and Re. 1, subject to a maximum of 10,000 bonds per holder.

The Government of India has removed the restrictions on the export of *khandasari* sugar from the State of Uttar Pradesh, with effect from the 1st inst. Restrictions on export of *khandasari* sugar from other States, however, will continue under the Sugar (Movement Control) Order, 1959. There will be no restrictions in the import of *khandasari* sugar from Uttar Pradesh into any State.

A two-stage scheme to manufacture the small car Fiat 600 entirely in this country has been submitted by the Premier Automobiles Ltd., Bombay, to the Automobile Enquiry Committee, which is currently studying the possibility of building low-cost cars in India. The proposed car is expected to be sold at Rs. 7,226 at Bombay, exclusive of taxes. It is estimated that an additional capital of Rs. 54 crores will enable the Company to manufacture the Fiat 600 entirely indigenously. The firm is already producing the Fiat 1100.

Recent geological investigations have disclosed the occurrence of rich deposits of copper in various parts of the country. On the basis of drilling, it is officially estimated that the copper ore deposits in a small block of the Khetri belt in Rajasthan amounts to 28 million tons. A Polish mining team will shortly visit the site and discuss with the Central Government the question of technical assistance, including provision of equipment. In the meantime, the search for copper is being intensified at Darjeeling in West Bengal, Kurnool in Andhra Pradesh and Singhbhum in Bihar.

The national income of India in real terms recorded a rise of 6.9 per cent. in 1958-59, as compared with the previous year, according to the "quick estimates" prepared by the Central Statistical Organisation on the basis of trends disclosed by the current available data. Of this increase, 5.1 per cent. was contributed by agriculture alone and 1.8 per cent. by the other sectors. The net rise in national income in real terms during the first three years of the second Plan, namely, from 1956-57 to 1958-59, was of the order of 10.4 per cent. The corresponding rise in the per capita income was 6.3 per cent.

The Government of India has decided to introduce the metric system, with effect from 1st April 1960, for the purpose of levy and collection of customs duties. The sugar industry will adopt the system from the beginning of its next crushing season on 1st November 1959. The *vanaspathi*, over to the soap industries will also switch the coir industry with effect from next April and recalled that the metric system has already been introduced in certain specified areas and selected industries such as cotton textiles, jutes, iron and steel, cement, paper, salt, engineering and coffee.

The first motor tanker for India under the 5-billion-yen credit programme of the Japanese Government for the development of Indian shipping is due to arrive at Visakhapatnam shortly. The 11,200-ton 13-knot tanker, named *Desh Deep*, has been built at a cost of Rs. 112 lakhs by the Harima Shipbuilding and Engineering Company, Ltd. in Japan. The tanker, with a total cargo capacity of 515,000 cubic feet, is designed to carry three different grades of oil simultaneously in 21 tanks. It has been acquired by the Western Shipping Corporation and chartered to Caltex India Limited, mainly for the movement of its products from the refinery at Visakhapatnam.

PERSONAL

MR. F. Sheed Anderson, Chairman of the International Wheat Council for the last ten years, has retired.

Mr. Justice Jayantilal C. Shah, a Judge of the Bombay High Court, has been appointed a Judge of the Supreme Court of India.

Mr. A. D. Pandit, Chief Commissioner of Delhi, is expected to be appointed adviser to the Planning Commission. He may be succeeded by Mr. Bhagwan Sahay, Indian Ambassador to Nepal.

Gen. S. M. Srinagesh, former Chief of the Army Staff and at present Principal of the Administrative Staff College, Hyderabad, has been appointed Governor of Assam.

Mr. Samarendranath Sen, Joint Secretary in the Ministry of External Affairs, has been appointed High Commissioner for India in Australia and concurrently accredited as High Commissioner to New Zealand.

Mr. L. K. Jha, Special Secretary in the Union Ministry of Commerce and Industry, will leave for Tokyo on the 15th inst. to assist the Union Finance Minister, Mr. Morarji Desai, who is scheduled to be in Japan then to hold discussions regarding further Japanese aid to India.

Mr. K. C. Lall, Director, Standardisation (Mechanical), in the Research, Design and Standardisation Department of the Union Ministry of Railways, has been appointed General Manager of Chittaranjan Locomotive Works vice Mr. K. Ramachandran, who has gone on leave preparatory to retirement.

Mr. W. R. Natu, Chairman of the Forward Markets Commission, left Bombay for Rome on the 10th inst. to take over his new assignment as a consultant to the Food and Agricultural Organisation in the appraisal of agricultural development programmes in selected countries in the East. He has also been invited by the United Nations to serve as a member of the Expert Group appointed to review the U.N. Pension Fund. Mr. Natu's services have been loaned by the Government of India for three months.

The U.K. spent over £30.3 million on advertising in the Press during the second quarter of 1959, an increase of 11 per cent. over the previous quarter and 13 per cent. over the second quarter of 1958.

Tourist traffic in the U.K. is expected to touch an all-time peak of 14 million during 1959, a rise of 11 per cent. as compared with 1958, according to Mr. Arthur Morse, Chairman of the British Travel and Holidays Association. It is estimated that the tourist revenue will amount to £220 million, including £86 million U.S. and Canadian dollars.

The Government of Turkey proposes to open a Foreign Capital Investments Office attached to the Prime Minister's Office to provide potential investors with detailed and reliable information, among others, on current industrial capacities, raw materials supply position, customs charges, foreign trade regulations and availability of local finance.

Free Saturdays every two weeks have been found to be the most popular way of adapting the reduction of the working week from 48 to 45 hours, which was brought into effect in Norway in March this year. As many as 42.2 per cent. of workers affected now have a long week-end every second week, while 18.3 per cent. work half an hour less every day. A five-day week has been introduced for 4.7 per cent. of workers and for 11.4 per cent. of workers no change has taken place as they were already having a 45-hour week.

The U.K. Government has agreed to grant a loan of £2 million to Malaya to be repaid by the end of 1969. This loan is being made in accordance with the policy on Commonwealth assistance loans announced at the Montreal conference in September 1958. Subject to the acceptance of the loan being approved by the Parliament of Malaya, the Malayan Government has decided to apply it to the purchase of telecommunications equipment. The loan, details of which have still to be completed, will be made available through the Export Credits Guarantee Department.

The Commonwealth Development Finance Company and the Colonial Development Corporation will both subscribe to the first issue of the Investment Company of Nigeria, proposed to be established shortly. The Nigerian company will seek to encourage the development of industries by meeting a part of the necessary funds and providing technical advice. The authorised capital of the Company will be £5 million, of which £1 million will be raised in the first issue some time this month. The bulk of this sum is expected to come from private sources in Nigeria and the U.K.

In a report on vegetable oils and oilseeds published in London, the Commonwealth Economic Committee has estimated the world supply of vegetable oils from crops harvested in 1957-58 at 15.7 million tons, about one per cent. less than the record quantity available in the previous year. The Commonwealth countries accounted for about 22 per cent. of the estimated world supplies of vegetable oils—much the same as in the preceding year. Both India and Nigeria had record groundnut crops in 1957-58. The Commonwealth is of outstanding importance as a producer of groundnuts, accounting in the five years 1952-53 to 1956-57 for no less than 48 per cent. of world output. India, the Committee says, is not only the leading Commonwealth producer of groundnuts, but also the largest world producer.

CODE OF EFFICIENCY AND WELFARE

MR. G. L. Nanda, Union Minister for Labour, was at pains to expound, in some detail, the role and ramifications of the proposed code of efficiency and welfare in his address to the National Productivity Council last week. Mr. Nanda perhaps felt constrained to do so, because, unlike the code of discipline, which found ready acceptance, the code of efficiency and welfare has met with some resistance. Employers are of the view that the adoption of another code, when the one relating to discipline is still in the experimental stage, would only complicate matters and that it would, therefore, be advisable to watch the latter's progress before committing employers and workers to a new one. Moreover, they are of the view that the code of discipline is sufficient in itself to achieve the objective set for the code of efficiency and welfare, provided it is observed in letter and spirit by both the parties.

The Labour Minister apparently did not agree with this line of argument. Tracing the genesis of the idea of the code, Mr. Nanda said that it was provoked by the constant complaint of leaders of industry that the level of the Indian worker's efficiency was very low and that industry had consequently to bear a disproportionate burden, on account of cost of wages and other labour charges. He urged the employers to specify their complaints, so that the workers' representatives could then be called upon to make their position clear in this respect. This, according to him, had to be done in any case, because, on the workers' side, there was acute discontentment regarding the present scale of remuneration and demands were being repeatedly made for higher wages. These claims, Mr. Nanda felt, would only continue as irritants without being realised, unless productivity was raised and the cost of production brought down.

When workers were confronted with the demand for increased efficiency, they would point to certain impediments which, according to them, were created by the management. They would ask for improvements in several directions to enable them to make their best contribution. This would have reference to working conditions, amenities and even living conditions, especially housing. The Minister was, therefore, convinced that, if any real progress in the direction of efficiency was desired, the question of welfare had to be brought within the scope of the discussion of efficiency and should form a part of an overall settlement.

Mr. Nanda emphasised that there was nothing sacrosanct about the code either in its name or contents. If employers and workers sat around a table to consider their rights and obligations, as they had so often to do, and if the discussions proceeded on healthy and constructive lines, some positive conclusions should emerge which would more or less be a kind of code, whether it was called so or not. The importance of evolving a code lay in the fact that it proceeded systematically to define the obligations of the parties, to secure acceptance by their representatives and to make provision for implementation and follow up. When these things were set down in this form, the parties were brought face to face with realities. Calling upon employers and workers to take a constructive approach to the problem, Mr. Nanda said:

"If employers were not to remain content with their slogans of efficiency, they would have to face and discharge their responsibilities and if the workers ever could hope to obtain a high degree of welfare and adequate wages, it would only happen when they had done their part well in the struggle for higher levels of productivity."

The code, he maintained, gave certain firmness and reality to the talks about productivity. Although there were no codes as such in foreign countries, their ingredients had been built up there in course of a long history of collective bargaining and agreements. Indeed, many collective agreements, he pointed out, contained provisions which were sought to be generalised in the code. Emphasising the need for bringing about an awareness and understanding of the

needs of the situation and mutual obligations, Mr. Nanda observed:

"This applied both to the employees and employers. The broad ideas which were incorporated in the code in the first instance would be propagated on a wide scale as they entered into the consciousness of those who had to do their jobs on the spot. This helped to create a favourable climate for the introduction of concrete steps which must follow. It was common ground amongst those whose business was to promote productivity, that the outlook and attitude of workers constituted the major determinant of success of any scheme or programme for raising productivity. More important than any clause of the code was the concept itself, the acceptance of which, was bound to create a new psychological impact."

Dismissing the objection to the code on the basis of what he called "some notions" about the code of discipline as of no validity, Mr. Nanda asked why anyone should be in such haste to proclaim whether the code had succeeded or not. Where lakhs of workers and hundreds of employers were involved how much time did it require for new ideas and spirits to seep down to the level of the unit, he asked. He urged employers to remember that what was at stake was not a document of a few clauses but a whole approach and avenue of peaceful progress of industry, the alternatives to which were only more legislation and more conflicts.

The Minister has, no doubt, convincingly argued out the case for the code. There need not be any objection to the code in principle. The fear of employers that, in practice, it may involve additional financial burdens for them, unaccompanied by any compensatory increase in productivity, is understandable. The emphasis should, therefore, be as much on the efficiency aspect as on the welfare aspect of the code. Care should be taken to see that, in course of time, welfare, as in the fable which tells of a tiger which agreed to give a lift to a lady and returned with the lady inside, does not swallow up efficiency. The acceptance of the code by employers, even if it does not result in any immediate *quid pro quo*, will surely have a new psychological impact on workers, a development of no mean consideration in an atmosphere ridden with strife and mutual mistrust. The new code should be viewed not in isolation but as part of what Mr. Nanda rightly called an integrated process of which the code of discipline, and the scheme of workers' education and participation in management are vital and interdependent elements.

UNFAIR INTERFERENCE

But for the objection raised by Canada and Australia, an agreement on the supply of American wheat (about three million tons) and cotton (together worth Rs. 140 crores or \$280 million) to India under P.L. 480 would, perhaps, have been signed by now by the Governments of the two countries. The objection by Canada and Australia is on the score that a sale of three million tons of wheat by the U.S. to India for payment in rupees would adversely affect the market for the Canadian and Australian wheat in India and thereby make the problem of disposing of their own surplus wheat difficult. The two countries have complained to the U.S. that India is placing its normal requirements of heat at a low level, while inflating its abnormal requirements, that is, those necessitated by crop failures, so that they could be covered under the P.L. 480 programme. These countries have drawn special attention to the fact that American farm surpluses can be sold abroad only for local currency to supplement and supplant a country's normal purchases from its regular suppliers. The U.S. Government, it may be recalled, has given an assurance that, in disposing of its farm surpluses, it will bear in mind the need for not disturbing the normal market trends.

The U.S. Government is rather in an embarrassing position. It is quite anxious to conclude the agreement with India as early as possible for two important reasons: (1) to assist India not only to meet the difficult food situation but also to enable it to go ahead with its economic development programmes, and (2) to dispose of the large-scale surplus wheat hanging on the domestic market. At the same time, the U.S. Government does not want to strain its relations with the two wheat-producing allies, that is, Canada and Australia. Under the pressure exercised by these allies, the American Administration proposes to write into the proposed agreement a condition that India should buy during the coming year 400,000-500,000 tons of grain from normal sources.

No one will dispute the fact that Canada and Australia have been regular suppliers of wheat to India. Nor will anyone in this country forget the assistance rendered by these countries to India in the task of economic development. Only last year, it will be recalled, Canada gifted to India 127,000 tons of wheat and Australia 9,450 tons under the Co-ombo Plan; the former also agreed to supply 543,000 tons of wheat worth 33.8 million dollars (Canadian) on deferred payment terms. But it is difficult to appreciate their contention that India should purchase 400,000-500,000 tons of wheat from normal sources. The purchase of such a quantity would involve the spending of precious foreign exchange to the tune of as much as Rs. 15 to 19 crores which the country can ill-afford at present. India just does not possess the wherewithal to pay for the additional wheat which these two Commonwealth countries insist on selling to it. Even the reported willingness of the Indian Government to buy from the normal market sources (mostly Canada and Australia) the same quantity of wheat that was bought last year, namely, 230,000 tons, involves an expenditure of a fairly large amount of foreign exchange, estimated at Rs. 8-9 crores.

Surely, Canada and Australia would evoke the praise of all in India, if they were to view the problem more from a humanitarian angle than from a purely commercial perspective. They are rich enough to supply the additional 200,000 to 300,000 tons of wheat to India on the same terms on which the U.S. is willing to do. If they do not wish to do so, they should at least refrain from placing obstacles in the way of a poor fellow member of the Commonwealth getting assistance from one who is willing to oblige. The Governments of Australia and Canada should ponder as to what they would do, if they were faced with a position confronting the Government of India now.

WOOLLEN INDUSTRY

India spends every year fairly large amounts of foreign exchange on imports of raw wool and wool tops; the actual value of imports in 1958 was Rs. 10 crores. This is due to the fact that the bulk of the raw wool produced within the country is of a quality which can be used in the manufacture of only rough blankets and carpets. Indeed, the worsted and woollen sections of the wool industry are dependent on imported raw materials to the extent of 100 per cent. and 90 per cent., respectively. Considering the continued shortage of foreign exchange and scarcity in raw material supplies, Mr. R. K. Birla, the retiring President of the Federation of Woollen Manufacturers in India, certainly did well to stress, in his speech at the Federation's annual meeting held in the City last week, the importance of making attempts to find out if indigenous wools could be consumed progressively in the manufacture of fabrics. At the same time, Mr. Birla warned that, unless the indigenous breed of sheep was improved to the extent that the fibre of raw wools might be such as to enable the spinners to spin yarn for the manufacture of worsted fabrics, there would not be much scope for greater utilisation of indigenous wools by the worsted industry. In this connection, he revealed that schemes were afoot for establishing two wool combing plants—one to be sponsored on co-operative basis at Ludhiana and the other to be set up by a joint Indo-British venture. Pending the improvement in the quality of wool, Mr. Birla pleaded for some relaxation and adjustments in the Defence and Civilian specifications for woollen goods, which, he said, would encourage the industry to use more of indigenous raw wool.

Alongside measures to improve the quality of indigenous raw wool, steps must also be taken to raise the efficiency of woollen-worsted goods manufacture. How important is this aspect will be evident from the following remarks of Mr. Birla:

"... a large part of the machinery and equipment of the mills is so very old that it requires complete replacement by the very latest machinery. During my recent tour of the U.K. and the Continent of Europe, as well as my visit to the International Textile Machinery Exhibition at Milan, I had the opportunity of seeing undreamt-of machinery which is nothing short of a revolution. Our competitors abroad are now using these latest four processes, instead of the conventional eight or nine. The quality of the yarn and the cloth manufactured by such machinery is so very superior to ours, that, if we do not have such machinery here, we shall not have the slightest chance against our competitors abroad."

These are, indeed, very pertinent observations. But there are two chief obstacles in the

way of modernising the woollen mills, namely, paucity of foreign exchange and none too happy financial position of many units. It is somewhat disquieting to hear that, notwithstanding the several representations to the Government by the Federation, no arrangements have still been made to finalise any scheme for advancing "rehabilitation loans" to the woollen industry, unlike in the case of cotton textile and jute industries. There is certainly no exaggeration in the statement of Mr. Birla that, unless such loan facilities and facilities for import of the required machinery are provided, the woollen industry will "not have the ghost of a chance to compete with the advanced nations of the world." Top priority, he urged, must be given to the question by the concerned Department of the Government and a well-formulated scheme conceived to serve the woollen industry and help it to develop more vigorously.

Four other notable suggestions were put forward by Mr. Birla and all these deserve the consideration of the authorities concerned. First, a standing committee of persons representing the Federation, the office of the Joint Chief Controller of Imports and the Textile Commissioner, must be constituted to go into the question of imports of spare parts and accessories of woollen mills. Secondly, the Government should keep a strict watch on the quality control of the indigenously produced shuttles, bobbins, reeds, healds, pickers, etc. This is necessary to ensure manufacture of perfect and high-quality woollen-worsted goods. Thirdly, a joint standing committee consisting of the representatives of the Government Departments concerned and the Federation should be set up to evolve a suitable scheme for ensuring adequate supply of imported dyes, chemicals and other auxiliaries. Finally, no excise duty or excess should be charged on goods that are sent as samples against either Government tenders or civilian demands, irrespective of the size of the samples, for such samples are not meant for sale and are not sold, and the cess should be levied on the net yardage of fabrics.

ANTIBIOTICS IN INDIA

The production of antibiotics, a principal component in the drugs and pharmaceuticals group, is of recent origin in India. The credit for manufacturing them goes to the Hindustan Antibiotics Limited, Pimpri, Poona. Established in 1952, the Company commenced production by 1956-57. Since then, it has made great strides of progress. This public sector project is claimed to be the biggest of its kind in Asia, barring China. The factory is producing penicillin since last July at an annual rate of 40 million mega units, or more than four times that in the first year of production. The value of turnover stood at Rs. 321.07 lakhs in 1958-59, as against a mere Rs. 57.80 lakhs in 1956-57. One of the important factors responsible for the large increase in production is the import of some quantities of first crystals of penicillin G, in order to augment penicillin supplies from indigenous sources. With the present demand in India estimated at 85 million mega units, the factory is capable of meeting about two-thirds of it.

It may be recalled that the U.N.I.C.E.F., the W.H.O. and also the U.N. Technical Assistance Board extended liberal economic and technical assistance to put through the Penicillin project in India. The Company was registered as a private limited company, with an authorised share capital of Rs. 4 crores. Its subscribed and paid-up capital is Rs. 2.46 crores. All the shares are held in the name of the President of India and his nominees. The Company had taken a loan of Rs. 70 lakhs from the Government of India, which has now been fully repaid. Though the factory suffered some losses in the beginning, it is now well established. It is estimated that the excess of income over expenditure will be over Rs. 1 crore in 1958-59, as compared with Rs. 33.43 lakhs in the previous year, and a loss of Rs. 10 lakhs upto March 1956.

The price policy of the Company is designed to bring about price reduction in such a way that the benefit is passed on to the consumer directly and, at the same time, to enable the unit to build up sufficient reserves for financing its plans for production of other antibiotics. The Company has been able to reduce the prices of its products substantially from Rs. 1.25 per mega unit of penicillin (in bulk) to 60 p.p. per mega unit. This has been made possible by technological improvements and lower production costs. While his reduction in prices is welcome, even the reduced price is very much above the world price. It may be noted here that the international price for penicillin has come down from over Rs. 1.25 in 1952 to about Rs. 0.30 per mega unit.

The Indian price can be brought down further only through the adoption of new and more efficient techniques.

Among the major expansion programmes of the Company, mention may be made of its plans to manufacture other important antibiotics such as streptomycin and dihydrostreptomycin, which have proved an effective cure for tuberculosis. The value of India's imports of these two items amounts to over Rs. 1 crore per year. A Rs. 1.7-crore plant is being set up at Pimpri to manufacture about 40,000 to 45,000 kg. of these two antibiotics; it is expected to go into production by 1961. A consultant service agreement has been signed with Messrs. Merck and Company of the U.S. for the implementation of the scheme. Another project for the production of 25 tons of broad-spectrum antibiotics of the tetracycline group at an estimated cost of Rs. 1.3 crore is also under consideration. When all these schemes materialise, this factory will be producing antibiotics of the value of Rs. 4 crores annually and will rank among the big antibiotics-producing units of the world.

MORE ON COAL TARGET

The Coal Council of India, as we pointed out last week (vide page 538), has fixed the target of coal to be reached by the end of the third Five-year Plan at 110 million tons. This target is 20 million tons higher than the one envisaged by the Federation of Indian Chambers of Commerce and Industry. Information that became available after we wrote on this subject last week shows that, in determining the target thus, the Coal Council has proceeded on the basis of anticipated rise in the demand for coal, arising out of expansion of activities by the major consumers of coal. The railways, for instance, are expected to carry 245 million tons of freight by the end of the third Plan, the steel industry is expected to produce 10 million tons (ingot) and thermal power production will rise to 5.5 million kw. The total demand for coal from these and other consumers on these assumptions is calculated to rise to 110 million tons by 1965. The break-up of this demand with figures in

brackets representing demand in 1960-61 is as under:

(In million tons)

Railways 26.0 (16.5); iron and steel 22.6 (9.5); thermal electricity 13.0 (6.8); cement 6.0 (3.0); paper industry 2.25 (1.02); textiles 2.50 (2.41); refractories and glass 3.0 (1.18); sugar and chemicals 2.20 (1.09); foundries and re-rolling mills 2.00 (0.58); bunker and export 3.50 (2.88); domestic use 6.0 (3.5); others 21.00 (11.74). Total 110.00 (60.20).

The target of 110 million tons represents an increase of about 50 million tons over the target of 60 million tons set under the second Five-year Plan. The increase in production in the third Plan period is expected to come chiefly from Jharia, Raniganj, Karanpura and Bokaro coal-fields. The break-up of the target in respect of the chief coal producing regions with figures in brackets giving the respective targets fixed under the second Plan is:

(In million tons)

Jharia 26.22 (16.72); Raniganj 28.87 (18.67); Karanpura 13.05 (7.05); Bokaro (including Kathara) 9.41 (4.41); Chanda 0.45 (0.35); Korea 9.42 (4.32); Bishampur 3.0 (—); Jhilmil 2.0 (—); Korba 5.1 (1.60); Pench Valley-Kanhan Valley 2.5 (2.0); Singareni 7.2 (3.0); Orissa 2.05 (1.05); Assam 0.54 (0.54); Singuruli 2.5 (—); others 0.44 (0.44). Total 112.75 (60.35).

An important factor on which the future of coal production depends is the availability of technical personnel. It is believed that there is no danger of the output of coal or other mines being held up for want of technical men. Indeed, there is fear that more technical men may chase too few jobs. Thus, it has been computed that, by the end of the third Plan, coal and metal mines will need some 750 graduate engineers; actual supply of engineers will exceed double this number. Again, these mines are likely to need 2,250 mine managers with diplomas in mining or other appropriate qualifications, whereas the number of such men will exceed 2,400. It is, therefore, feared that there will be a scramble for jobs in the mining sector. If these calculations are correct—we have no means of knowing the true position—technological institutions will do well to take note of this development in planning their annual intake of candidates for mining education. Young men will also be well advised to ascertain the prospects carefully before deciding to take mining as their career.

BIGGEST AIR CONDITIONING NEWS

The new WORTHINGTON 5-ton Packaged Air Conditioner

now made in India by BLUE STAR.

Supreme comfort for the home, office or shop! The new WORTHINGTON Packaged Air Conditioner incorporates all the most recent advances in complete packaged units: new compactness and beauty, greater silence, minimum maintenance, handy controls for fresh, clean air at all times. With optional accessories, it can even be used for heating purposes, in cold weather.

LONDON LETTERS

STRENGTH OUT OF SEASON INDUSTRIAL PRODUCTION UP—STERLING FIRM—RESERVES STILL RISING

From Our Own Correspondent

LONDON, 3rd October

WAS there ever a September like this before? September—traditional crisis month; month which saw the first ever devaluation of the British pound twenty-eight years ago, the second devaluation ten years ago and crises in every other year since then. In that sequence, this September was due for the next crisis and, with a general election in train, a Stock Exchange upset over take-overs, and interest rates now fallen below the New York levels, the stage was properly set for the bi-annual gold drain to reinforce a seasonal weakness on commercial account. Instead, we have the Stock Exchange share index (*Financial Times*) jumping over eight points in the past week to a new high level of 262 which is thirty per cent. over the level of a year ago; a Treasury Bill rate which barely moved over the 3½ per cent. level in spite of New York attractions; and, most surprising, a jump up in the gold reserves by £13 million to the highest level for eight years.

Financial factors apart, the pound tends seasonally to be weak just now when heavy dollar payments are made. But such is the current strength of the pound based on an active balance of payments that the net demand for sterling exceeds the supply. In the past quarter, the gold reserves have indeed gone up by £40 million and over the year to date by £77 million. And this in spite of payments by way of subscription to the International Monetary Fund and the European Fund of £60 million. Thus, the true gain has been of the order of £137 million. But, of course, even at their present level of £1,173 million, they are still £200 million below the post-war peak reached in June

1951 and, at the present rate of striking, it would still take two years to climb back to that level.

As for the financial factors usually at work in a time of electoral uncertainty, they are bidding their time on the argument that, if the Government is returned to power, the market will shoot up still further, while, if it is not, they will sell out quickly and buy in again as soon as the slump has reached about the bottom. In any event, the strength of British industry—with a production index which has climbed every month since the spring—is such that a post-election reaction is likely to be only short-lived, though a reaction there is bound to be if Labour are returned to power.

This unseasonable strength of sterling is based on the strongly favourable trend of the balance of payments, of which the second quarter figures have just been published. These figures are all the more encouraging, in that they are issued after a downward reassessment of British shipping earnings which has knocked off no less than £40 odd million from the estimated surplus for the first quarter of this year. Firstly, on the import/export visible balance, the expected adverse figure in the first quarter ran at the rate of £21 million per month, which dropped in the second quarter to £8 million per month (less than an annual rate of £100 million); secondly, the first quarter, the invisible income (mainly shipping) netted £33 million per month—giving an average monthly surplus of £12 million; while, in the second quarter, the invisible income rose by £10 million per month—giving an average monthly surplus of £36 million. Taking the two quarters together, the total invisible income was £142 million—an annual rate of perhaps £250 million—allowing for the lower monthly income to be expected in

the autumn. But, then, such is the strength of British exports as well as invisibles at present, that the annual rate might well rise to £300 million which makes a very favourable comparison with the figure of £350 million which was reached in 1958 and then regarded as phenomenal. Such figures as these provide for an investment surplus (after allowing for a steady addition to the gold and dollar reserves) of between £100 million and £200 million to flow into the Commonwealth and the undeveloped territories—all of which are steadily increasing their claims for capital.

THE JASPER AFFAIR

LONDON, 28th September

Take-over bids have become a commonplace of City activity over the past two years, but the latest of these scrambles after capital gain looked last week as if it might become a significant item in the forthcoming Election. So far all take-over bids have gone through to their completion in an orderly, if sometimes expensive, fashion, the accepting shareholders getting their money and their capital gains without question or delay. But the latest one, known as the Jasper affair (because the bidding was conducted through the merchant banking firm of Messrs. Jasper) or the Ely Brewery affair, was a novel departure from the accepted course of events. The bidders had just taken over a property-owning organisation called Lintang Investments (though its properties were not in Malaya but in London) and then some of the major shareholders found that there was a hitch in getting paid. At the same time, the Ely Brewery Company had accepted a bid and the shareholders then found it could not be implemented. In short, the would-be takers-over had overbid their hands. The upshot has been an investigation into the affairs of Messrs. Jasper and the group of companies for which they have been acting, which were the would-be takers-over in this case.

The Opposition has always been resentful of the technique of take-over bids, with the evidence they have offered of very large tax-free capital gains being made by a very few people. Its spokesmen have denounced the system as one of the shadier aspects of capitalism

ELECTRIC WIRES AND CABLES TO BE MADE IN INDIA

by

HENLEY CABLES INDIA LIMITED

Henley's, cable manufacturers for more than 120 years, have been associated with India since 1863 when W. T. Henley, Founder of the Company, laid the 1,615-mile long submarine cable in the Persian Gulf for the Government of India. Henley's organisation in India, instituted over 40 years ago, has continued to play a vital role in this country, supplying and installing Electric Cables, Wires, Accessories and Distribution Equipment.

Last June a new company, Henley Cables India Limited, was formed in conjunction with the Investment Corporation of India Limited (a Tata concern) for the manufacture of a range of Henley cables in India. They will be distributed by Voltas Limited, whose Electrical Department has for many decades supplied, installed and serviced a wide range of electrical equipment.

INDUSTRIAL FINANCE CORPORATION RECORD HIGH PROFIT—IMPORT RESTRICTIONS, HOWEVER, HAMPER PROGRESS

THE year ended 30th June 1959 proved to be the most satisfactory period so far for the Industrial Finance Corporation of India, in that its gross income, for the first time, exceeded Rs. 2 crores and its profit (before taxation) touched a new peak of Rs. 73.08 lakhs, representing an increase of Rs. 14.83 lakhs over that for 1957-58. This improvement has taken place notwithstanding the fact that the number of industrial concerns seeking long-term financial assistance and the amount of loans sought for and disbursed continued to show a decline. Thanks to the sizable improvement in earnings, the Corporation has been able not only to dispense with the subvention from the Central Government for the third year in succession but also to increase the amount of repayment on account of subvention received in earlier years from Rs. 5.45 lakhs (in 1957-58) to Rs. 10 lakhs. What is more, it has also raised the transfer to the general reserve from Rs. 11.50 lakhs to Rs. 14.12 lakhs and declared the guaranteed dividend of 24 per cent. to the shareholders out of its own earnings for the third year in succession.

As in the previous year, no provision for doubtful debts has been made, as the percentage of defaults in the payment of instalments of principal showed a decline from 6.1 per cent. in 1957-58 to 5.4 per cent. in the year under review. Further, none of the defaults is said to be of a nature that warrants any fresh provision. Another feature of the year's working is the further drop in the percentage of administrative expenses to gross income, thus bringing it down from 15.65 in 1955 to 5.11 in the year under review.

Results Compared

The main features of the Corporation's financial results for the past four years are compared in the following table:

	For the year ended 30th June			
	1959	1958	1957	1956
Interest earned ..	2,00.05	1,54.36	95.93	67.19
Other income ..	3.83	0.54	0.40	0.43
Interest paid ..	1,15.75	88.85	44.17	26.99
Other expenses ..	10.29	9.08	8.96	7.82
Depreciation ..	0.12	0.14	0.13	0.13
Profit ..	78.08	58.25	48.06	32.68
Provision for—				
Taxation ..	37.71	25.21	8.59	10.18
Doubtful debts ..	..	..	22.25	22.50
Discount and brokerage on bonds written off ..	4.64	4.83	..	..
To reserve for contingencies ..	..	..	1.00	..
„ general reserve ..	14.12	11.50	..	..
Subvention from Government ..	..	..	..	11.25
Subvention returned to Government ..	10.00	5.45	..	..
To dividend ..	11.25	11.25	11.25	11.25
	(24%)	(24%)	(24%)	(24%)
Loans applied for ..	11,10.57	14,88.50	21,36.25	27,70.02
Loans sanctioned ..	3,79.00	7,78.50	11,90.75	18,18.00
Loans disbursed ..	7,47.71	8,33.35	9,77.50	2,20.23

As stated earlier, the number of applications for loans, as well as the amount sought for and sanctioned, has declined. Out of 26 applications for an aggregate sum of Rs. 11.16 crores (as against 48 applications for Rs. 14.88 crores in 1957-58), 19 loans for a sum of only Rs. 3.79 crores were sanctioned, the corresponding figures for 1957-58 being 22 loans for Rs. 7.78 crores. The actual disbursements amounted to Rs. 7.48 crores, as compared with Rs. 8.33 crores in the previous year. There has been an increase in the applications which have been treated as lapsed or withdrawn, while loans for Rs. 11.71 crores were under consideration as at the close of the year. This setback in the main activity of the Corporation is not due to paucity of resources, but to the impact of the severe restrictions on imports of capital and other goods from abroad. The total amount of loans sanctioned since the inception of the Corporation up to the end of the year under review is Rs. 66.69 crores, of which the amount disbursed aggregated Rs. 42.32 crores.

As in the past few years, the bulk of the loans sanctioned by the Corporation are for new undertakings, that is, those which went into production after 15th August 1947. Thus, out of the sum of Rs. 3.79 crores sanctioned during 1958-59, as much as Rs. 3.24 crores were granted to new undertakings.

An industry-wise classification of loans sanctioned during the year shows that food manu-

facturing industry (mainly sugar) continues to top the list, followed by cement and textiles, as will be seen from the following table:

Manufacturing industry	Amount sanctioned		
	Upto 30th June, 1958	During the year ended 30th June, 1959	Total
Food (except beverage) ..	19,27.00	1,45.00	20,72.00
Textiles ..	9,07.75	65.00	9,72.75
Artificial fibres ..	1,10.00	..	1,10.00
Wood and cork (except furniture) ..	30.00	..	30.00
Paper and paper products ..	5,71.50	..	5,71.50
Rubber products ..	50.50	..	50.50
Basic industrial chemicals ..	7,66.00	..	7,66.00
Vegetable and animal oil and fats ..	11.00	..	11.00
Miscellaneous chemical products ..	77.25	..	77.25
Glass and glass products ..	1,27.50	..	1,27.50
Pottery, China and earthenware ..	64.25	..	64.25
Cement ..	5,07.00	1,10.00	6,17.00
Iron and steel ..	1,17.00	..	1,17.00
Non-ferrous metals ..	2,57.50	33.00	2,90.50
Machinery (except electrical) ..	1,42.50	..	1,42.50
Electrical machinery, appliances, etc. ..	1,75.70	6.00	1,81.70
Rail-road equipment ..	50.00	20.00	70.00
Motor vehicles and ancillaries ..	1,68.00	..	1,68.00
Bicycles ..	80.50	..	80.50
Miscellaneous manufacturing industries ..	43.90	..	43.90
Electric light and power ..	82.75	..	82.75
Total ..	62,90.00	3,79.00	66,69.00

Co-operative societies, particularly sugar co-operatives, continued to receive the Corporation's special attention. Thus, of the nine loans for an aggregate sum of Rs. 1.70 crores given during the year under review, eight for Rs. 1.45 crores were for co-operative sugar factories and the remaining one for Rs. 25 lakhs to a co-operative spinning mill. This brings the total amount of loans sanctioned to co-operative sugar factories up to the end of June 1959 to Rs. 14.68 crores. All these loans, it may be noted here, are guaranteed by the State Governments concerned.

A State-wise analysis of the loans sanctioned, given in the table below, reveals that Bombay State has received the largest amount, Madras comes second with less than half the sum granted to Bombay.

State	Up to June 1958		Up to June 1959	
	No. of units	Amount (Rs. lakhs)	No. of units	Amount (Rs. lakhs)
Bombay ..	58	18,89.65	56	19,49.85
Madras ..	19	8,57.00	22	9,47.00
West Bengal ..	27	6,53.50	27	6,58.50
Uttar Pradesh ..	14	5,80.00	15	5,80.00
Myore ..	17	4,80.00	17	5,08.00
Bihar ..	12	4,77.75	12	4,97.75
Kerala ..	6	4,27.50	6	4,27.80
Orissa ..	5	2,94.00	5	3,77.00
Andhra Pradesh ..	10	3,10.50	10	3,10.50
Punjab ..	11	2,96.60	11	3,01.80
Rajasthan ..	3	74.50	3	74.50
Assam ..	1	45.00	1	60.00
Delhi ..	1	20.00	1	20.00
Madhya Pradesh ..	1	3.50	1	3.50
Total ..	185	62,90.00	190	66,69.00

The ways and means position of the Corporation has considerably improved, thanks to the two successful issues of bonds in November 1957 and in 1958 each for Rs. 4 crores. As in the case of the 1957 issue, the last issue was for a period of ten years, but the rate of interest offered was 1 per cent. less, at 4 per cent. Unlike the previous two issues, last year's issue was open for public subscription and subscriptions received aggregated Rs. 8.39 crores, as against Rs. 4.56 crores subscribed for the 1957 issue, despite the lower rate of interest offered. A sum of Rs. 4.38 crores was retained by the Corporation, bringing the total amount of bonds outstanding at the close of the year under review to Rs. 16.75 crores. This week, the Corporation offered 12-year bonds for Rs. 5 crores carrying interest at the rate of 4 per cent., a further reduction of 1 per cent. from last year. The bonds were oversubscribed, total subscriptions amounting to Rs. 6.53 crores.

Thanks to the improvement in resources, the Corporation springily availed of borrowings from the Reserve Bank. It also repaid during the year Rs. 5 crores towards loans taken from the Central Government. Subsequently, it borrowed Rs. 3 crores from the Govern-

ment, leaving the outstanding loans at Rs. 13 crores at the end of the year. The borrowings from the Government, it may be noted, continue to carry interest at 4½ per cent., whereas the rate of interest charged by the Reserve Bank is only 4 per cent. and the Corporation itself has been able to borrow from the public at 4½ per cent. last year and at 4 per cent. this year. The Corporation's lending rate to industries is 7 per cent. with a rebate of ½ per cent. for payment of interest and instalments of principal on due dates. It is the intention of the Corporation to use the proceeds of the loan raised from the public this week for repaying a part of the borrowings from the Central Government and thereby effect a saving on interest charges.

A new field of activity entered by the Corporation in December 1957 was the guaranteeing of deferred payments, on behalf of industrial concerns, to foreign manufacturers of capital goods. During the first six months of its entry, the Corporation received applications for such guarantee for an aggregate sum of Rs. 5.24 crores, of which applications for Rs. 3.96 crores were sanctioned. While applications for guarantee for Rs. 16.51 crores were received during the year under review, the applications sanctioned were for no more than Rs. 35 lakhs. Applications withdrawn or lapsed amounted to Rs. 5.14 crores, while those pending aggregated Rs. 12.30 crores. These large withdrawals and outstandings were mainly the result of severe import restrictions on imports based on deferred payment terms, in view of the cumulative strain that is likely to be caused thereby on the country's foreign exchange position a few years hence.

Underwriting

While lack of foreign exchange resources proved to be a handicap to the Corporation in the matter of sanctioning fresh loans and guaranteeing deferred payment credits, it is gratifying to note that the I.F.C. has been successful in underwriting of capital issues by industrial concerns, a function which it was supposed to perform right from its inception, but was undertaken only in 1957-58. During the year under review, the Corporation underwrote a preference share issue for Rs. 50 lakhs, in which its share of commitment was Rs. 37.50 lakhs. The issue was oversubscribed and the Corporation was, therefore, not called upon to take up any shares. Another application for underwriting an issue of Rs. 50 lakhs in preference shares was sanctioned by the Corporation, subject to the approval of the Government; this has since been received. These bring the total amount of underwriting approved by the Corporation to over Rs. 1.68 crores.

U.S. EX-IMP BANK

The Export-Import Bank of Washington has just completed 25 years of its activities; it was established in 1934, in the wake of the Great Depression of the 1930's. During this quarter of a century, the Bank was authorised to use \$10 billion of U.S. taxpayers' money for the purpose of giving loans to support trade between the U.S. and other nations, to assist Americans to sell goods and services abroad and to improve the living standards of people in 69 countries.

When the Bank was established with the object of financing and facilitating exports and imports and the exchange of commodities between the U.S. and any other foreign country, it had only \$11 million to lend. In the initial stages, it financed exports of locomotives and rail, road-building equipment, machinery and tractors, equipment for steel mills, cotton and other agricultural commodities. Early in 1945, the Bank's lending authority was increased to \$200 million, in order to enable it to make reconstruction credits to Finland after the Russo-Finnish war. In September of that year, the lending authority was again raised to \$700 million, specifically to help Latin American countries, which were cut off from their normal outlets and sources of supply in Europe. One of the first uses to which this money was put was to assist Brazil in setting up an integrated steel industry. This was born out of the first basic projects for economic development of a so-called less developed country. The Bank also financed whatever capital goods could be released by the U.S. to serve its Latin American allies.

With the end of World War II, the U.S. Government's attention was diverted to the devastated countries of Europe. The problem of reconstructing the European countries was taken up and the Export-Import Bank was assigned the job. In July 1945, the Bank was made by statute as a fully independent U.S. agency and its lending authority was increased to \$5.5 billion. The problem of reconstruction in the European countries was so enormous that it was found that dollar repayable loans by the Export-Import Bank could not be increased by Europe in the amounts needed to do the reconstruction. In 1948, the U.S. therefore, embarked upon the Marshall Plan.

Following this, the Export-Import Bank turned its attention to the rest of the world. The last twelve years, particularly the past three, constituted the most active period for the Bank. Loans have been granted for a variety of purposes, including the overcoming of a critical foreign

IMPACT OF STEEL STRIKE IN U.S. BUSINESS MEN OPTIMISTIC OF FUTURE

THE steel workers' strike in the U.S. is now in the thirteenth week and there are yet no signs of it coming to an early end. Over a million American workers have been rendered idle, of whom 500,000 are steel employees. The impact of this prolonged strike on the U.S. economy—the keystone of the free world—is discussed in the October issue of the *First National City Bank Monthly Letter* as part of its survey of general business conditions. The following is an extract from it:

"The steel strike, now dragging into its twelfth week, is beginning to pinch. Durable goods fabricators, braced for a long strike, had maintained a high rate of operations out of inventories through mid-September. In the latter part of the month, however, reports of layoffs, shortened work weeks, and shutdowns were more frequent. On 25th September, the union, referring to the companies' resistance to employment cost increases as a 'farfetched filibuster,' withdrew from the bargaining table. President Eisenhower, concerned with the threat of spreading steel shortages to industrial activity, has declared that he will 'use every conceivable personal and official influence available' to break the impasse. The obvious recourse is to invoke the emergency powers provided under the Taft-Hartley Act.

"Despite the crippling of one of the nation's chief industries and the spreading impact of steel shortages, the economy, as Mr. Khrushchev might have noted in his recent tour, has been strong and vigorous. Retail trade is well sustained. Business, counting on renewed growth to new heights after major labour disputes are settled, has stepped up plans for new plant and equipment outlays. Symptomatic of potential overstrain on the nation's productive capacity, and on the savings supply, credit has tightened and interest rates have risen further.

"Industrial activity apparently slipped a bit further in September as a result of steel shortages, strikes in non-ferrous metals industries, and the continuing model changeover in the automobile industry. The latest Federal Reserve index of industrial production (seasonally adjusted, 1947-49=100) declined four points in August to 149. Including the dip of two points in July, overall production dropped 4 per cent. from the record June level. Excluding the primary metal and automobile industries, however, all other types of manufacturing combined were somewhat higher in July and August than in June. Producers of non-durable goods, operating at record levels in August, are looking optimistically towards the fall season.

Stalemate in Steel

"Steel stocks have lasted longer than many anticipated. The trickle of steel available from mills still operating, together with imports, swaps, and special purchases, helped business men fill thin spots in their inventories. With every week that passes, however, supplies are getting smaller and more unbalanced. Even after the strike ends it will take time to get furnaces repaired and back into production and to restore finished steel shipments to prestrike levels.

"Considering the way in which incomes and consumption have been sustained, the main impact of the strike so far has been to work off abnormally high steel stocks and to push demand ahead to a later time. However, should layoffs because of steel shortages begin to snowball in a wide range of industries, there is the danger of sales losses which will not be recouped.

"The Executive has been provided by the Taft-Hartley Act with a legal means of dealing with such situations. When, in the opinion of the President, a strike imperils the national health or safety, he may, after receiving a report from a board of inquiry, direct the Attorney General to obtain a federal injunction suspending the strike for 80 days. If a settlement has not been reached by the end of 60 days, the fact-finding board's report is made public, and the National Labour Relations Board must then take a vote of the workers on management's last offer. If the issues continue unresolved beyond the 80-day period and the strike resumes, the President may submit recommendations to Congress.

"Neither party has favoured invoking the Taft-Hartley procedure. The steel workers union, although resisting an approach which would restore for a Government-appointed fact-finding commission with power to recommend a settlement. Steel management feels that a contract should be reached by the process of free collective bargaining without Government intervention.

"Complicating the situation is the fact that wage negotiations in a number of industries are ment is known. Metal fabricators and aluminium producers are foremost among those seeking to use the steel pact as a yardstick. In addition, strikes meat packers and copper mines and smelters. Important contractors with West and Gulf Coast long-shoremen run out 15th September and those with railroad brotherhoods expire a month later. With all these negotiations in the balance, a truly non-inflationary settlement for steel is critically essential.

"Payroll losses caused by the strike have made only a slight dent in overall consumer spending power. During the first half of this year, the seasonally adjusted annual rate of personal income was an average of \$3.8 billion per month to \$3.94 billion in June. Despite the payroll cuts caused by the strike, the momentum of rising incomes in other

lines kept the total at record levels in July and within one per cent. of its peak in August.

"Consumers have been spending freely out of these high incomes on both durable and non-durable goods. Their confidence in the outlook has been convincingly expressed in the increased volume of major purchases—automobiles and appliances particularly—and in their willingness to commit their future income through credit purchases. The expansion in consumer instalment credit during the five months ended 31st July (latest data available) was the sharpest since the 1955 credit boom. The net growth in instalment credit outstanding has added half a billion dollars a month to consumer spending power during this period. Nearly two-thirds of this credit expansion has been in automobile paper.

"Despite the rapid rise in debt, there is little indication that consumers are taking on more debt than they can comfortably handle. For the past year, the rising level of instalment credit repayments has roughly kept pace with the rise in disposable income. In fact, the proportion of current income earmarked for instalment debt repayment so far this year has been consistently below that prevailing in 1957.

"Business men have also demonstrated that uncertainties of the steel situation have had little effect on their long-range plans. A survey taken by the Securities and Exchange Commission and the Department of Commerce about a month after the strike started showed that business spending on new plant and equipment is being enlarged. Such outlays are now expected to total \$33.3 billion in 1959, up 9 per cent. from 1958. By the fourth quarter of this year, the annual rate of capital expenditures is scheduled to reach \$35.3 billion, 18 per cent. higher than in the corresponding 1958 quarter and within 7 per cent. of the third quarter 1957 peak of \$37.8 billion. Available information on machinery orders, industrial building contracts, and new capital appropriations by corporations indicates a further increase in business fixed investment in 1960.

"In the past, plant and equipment expenditures have tended to respond after a lag of six months or so to an increase in the flow of funds available for such purchases, notably depreciation charges and undistributed profits. Any business man knows of capital projects which he might undertake if he had the money. When profits are rising and the

outlook is favourable, he is in a mood to go ahead with such projects. Similarly, a reduced flow of profits usually provokes second thoughts about further plant and equipment purchases. Thus, the peaking out of retained earnings and depreciation charges in the fourth quarter of 1956 was a clue to the topping off of the rise in capital spending in the third quarter of 1957. The upturn in undistributed profits in the second quarter of 1958 was followed by recovery in plant and equipment outlays in the fourth quarter. Similarly, to the extent that the resurgence of activity widely anticipated after settlement of the steel strike is accompanied by rising profits, it will give a further impetus to capital spending.

"Fundamentally, this dependence of capital spending programmes on profits trends underlines the basic role of profits in underwriting economic growth. Profits supply the means for payment, the creditworthiness for borrowing, and the incentive for expansion.

Tightening Money

"With all the confidence that business will surge forward again once the steel strike ends, the question is raised with increasing frequency as to whether a new boom can long endure in the face of rapidly tightening money and capital markets. Better business, sustained home building, and enlarged auto sales will need more credit.

"Some people have used the word 'crisis' to describe the deterioration of bond prices. This is too harsh a word for a situation where money rates and bond yields are barely rising into the range which was normal for prosperous years prior to 1930. On the other hand, the rate of advance over the past fifteen months has created acute tensions in the market as well as difficulties for the Treasury in designing new securities that people will want to buy.

"Save for warnings to banks not to rely on continuous borrowings to supplement loan resources, the Federal Reserve has taken no action to intensify credit tightness. . . . The stringency has developed naturally out of excessive pressures of demands for borrowed money in an environment where inflationary fears lead investors to demand higher interest rates.

"The effects of tight money are not easy to appraise. It is generally agreed that it has considerable impact on the mortgage market and home construction. But the timing of its restrictive impact elsewhere in the economy is more uncertain. The expansive forces in the economy may well prove strong enough to continue to make progress, though at a slower rate, in the face of tight money. The desirable outcome would be a pace of advance which can be sustained."

T. I. CYCLES OF INDIA
now manufacture
BRAMPTON
cycle fittings

We have just commenced production of the world-famous Brampton cycle fittings. These will be supplied, for the present, to the assembler manufacturers.

Soon we expect to be able to supply to the trade, to serve the replacement needs of cycle owners everywhere.

T. I. CYCLES OF INDIA, MADRAS

INDO-U.K. TEXTILE AGREEMENT SIGNED CEILING ON EXPORTS FIXED AT 175 MILLION YDS.

At long last, a final understanding has been reached in regard to the volume of cotton piecegoods shipments from India and Pakistan to Britain. An official announcement to this effect was made in Manchester by the Cotton Board on Tuesday, 29th September. The details of the agreement and the views expressed thereon by some persons (including those representing the cotton industry, the labour and the Government) have been given fairly wide publicity in the British Press. But, in India, the Indian Cotton Mills' Federation and the Cotton Textiles Export Promotion Council, the two organisations which jointly conducted the negotiations, have chosen to remain silent on the agreement, without giving any information whatever. Enquiries made by us reveal that the two bodies are not at all aware of the details of the agreement. This is certainly surprising, if not intriguing. Further, while the trade unions in Lancashire have taken an active part in the developments that led to this agreement, the trade unions in this country have evinced little interest. Here is an instance to prove that the trade unions in India are taking a narrow view of their responsibilities to its members.

The agreement now concluded, according to the Cotton Board's announcement, fixes the ceiling on cloth imports to Britain for retention in the home market at 175 million square yards per annum for India and at 38 million square yards for Pakistan. The agreement will be in force for a period of three years with effect from 1st January 1960 and is subject to the Lancashire-Hong Kong pact continuing.

Does Not Apply to Re-exports

The aforesaid ceilings, it must be clearly noted, applies only to exports of cloth consumed in Britain and not to those re-exported. Accordingly, if, in any year, the U.K. exports X million yards out of the cloth imported from India, then India can ship to that country 175 million plus X million yards. It is, however, not yet known how the quantity of cloth re-exported will be ascertained and the necessary adjustment in the ceiling made.

The upper limits for cloth exports from both India and Pakistan to Britain, namely, 175 million yards and 38 million yards, respectively, it is said, are higher than the present levels of exports, estimated at 144 million square yards and 14 million square yards. The total quantity of cloth actually shipped from India to Britain for both retention in the home market and re-export during the first eight months of 1959, aggregated 106.50 million square yards from India, as against 79.67 million square yards in the corresponding period of 1958. The corresponding figures—in million square yards—for other countries were: Hong Kong, 91.75 and 67.93; other Commonwealth nations, 15.26 and 0.76.

Imports Into Britain

In this context, the following table showing the U.K.'s annual imports of cloth from India and Hong Kong for the past five years will be found interesting:

(In million square yards)			
	Total imports into U.K.	From India	From Hong Kong
1954	267.17	127.76	18.12
1955	299.47	130.28	48.76
1956	306.83	127.48	55.86
1957	416.35	182.09	71.10
1958	386.76	120.95	116.08

Sources: *Tattersall's Cotton Trade Review.*

N.B.—While total imports into the U.K. shown in the table include all varieties of cotton cloth, imports from India and Hong Kong refer only to grey, unbleached. Separate figures for others are not available. It will be noted that India's actual exports of grey, unbleached alone to the U.K. in 1957 were in excess of the ceiling of 175 million yards. While figures for Pakistan are not available, its exports to the U.K. were of the order of six million yards in 1956 and 1957; currently, they are said to be at 14 million yards per annum.

The ceiling of 175 million square yards for India and 38 million square yards for Pakistan plus the ceiling of 164 million square yards fixed in the Hong Kong give a total of 377 million square yards that will be allowed into Britain (for retention in the home market) from the Far East

countries. This quantity is almost equal to Britain's total exports of piecegoods during the year 1958.

The conclusion of the above agreement has been welcomed by Sir David Eccles, President of the Board of Trade. Sir David said at London the other day: "With the arrangements already in force for Hong Kong, this will assure Lancashire of a period of stability as far as Asian Commonwealth imports are concerned. The success of the negotiations—an outstanding example of Commonwealth co-operation in the interests of all the parties concerned—should add greatly to the confidence with which the cotton industry tackles the problems of re-equipment and modernisation. Production can now be planned ahead with much greater security."

It may be recalled here that, for the last few years, the U.K. Government has been repeatedly placing on record its determination not to limit Commonwealth exports to Britain through Governmental action. The origin of the agreements with Hong Kong, India and Pakistan goes back to 1956 when Sir Anthony Eden, the then Prime Minister of Britain, and Mr. Jawaharlal Nehru, India's Prime Minister, decided that a solution to the problems besetting Lancashire as a result of increased imports of cotton textiles from Asian Commonwealth countries should be sought by the negotiations of voluntary export ceilings.

Views of U.K. Millowners and Labour

While some sections of the Lancashire cotton textile trade have commended the new agreement as a means of providing for stability to the U.K. textile industry, other sections, particularly the trade unions, point out that the ceilings fixed are too high for Lancashire to be of any practical use. Here are the opinions expressed by a spokesman for millowners and a representative of labour:

Mr. J. Michael Grey (Chairman, Cotton Spinners and Manufacturers' Association): "The agreement will help it (the cotton industry in Britain) to carry out its reorganisation plans with better confidence. While the figures are high when taken in conjunction with those from Hong Kong, meaning that a substantial proportion of the home market requirements will be available to Commonwealth suppliers, it is essential that, at this time, the U.K. cotton industry should know where it stands."

Miss Alice Foley (Secretary, Bolton Weavers' Association): "It is going to be difficult to compete with this intake of cheap cloths. I suppose it is better to have an agreement rather than none at all, but I feel the figures are relatively high. Even with concentration and modernisation and a probable extension of shift-working, I think it will be a formidable obstacle for Lancashire."

The reaction of the leading millowners and exporters in Hong Kong to the Lancashire-India-Pakistan agreement is one of satisfaction. However, Mr. John D. Clague, Chairman of the General Chamber of Commerce, who led the Colony's delegation for talks with Lancashire, says that the agreement is not the direct concern of Hong Kong, as the Colony's voluntary undertaking is not conditional upon a similar agreement being reached with India and Pakistan. Of much more immediate concern to Hong Kong, he emphasises, is the question of re-exports of Hong Kong cloth from the U.K. He observes: "Hong Kong has already raised this matter officially through the Hong Kong Government. I am personally quite satisfied that a satisfactory answer to our problem will be forthcoming, now that the Cotton Board has finalised its discussions with India and Pakistan. Our problem does not in any way affect the overall understanding, but is of immediate vital importance to local textile interests."

A recent report from Hong Kong avers that the British Board of Trade is considering the Colony's plea for the exclusion of 15 per cent. re-exports of Hong Kong cotton piecegoods to Britain from the voluntary ceiling. Such an undertaking had been given by the Board prior to the signing of the Lancashire-Hong Kong pact last year. The undertaking was based on the normal re-export figure of 2.2 million square yards each year. As against this quantity, the actual shipment up to the end of August, 1959 was only 542,000 yards. The textile interests of Hong Kong feel that, if Britain were to concede their plea, the current pressure on mills would be relieved to some extent. Meanwhile, the issue of allocating the Colony's textile ex-

port quota next year remains unsettled, as the meeting among the various associations concerned has been postponed several times, thanks to the divergence of opinion among them.

NIGHT SHIFTS IN MILLS

Recently, Mr. S. R. Vasavada, General Secretary of the Indian National Trade Union Congress, suggested that night shifts in cotton mills be discontinued, the workers employed in the shift (estimated at 40,000) being absorbed in the first and second day shifts. This suggestion has, however, been opposed by the President of the Madurai-Ramnad Chamber of Commerce, Mr. T. Manickavasagam Chettiar, in the course of a statement issued to the Press. His opposition is on the following grounds:

While such a step may contribute to better health and family life of workers, it will result in increased unemployment. It is undesirable to adopt a measure that will throw a large number of workmen out of jobs.

The cost of production in the Indian textile industry is already the highest in the world on account of the low workload. The absorption of night shift workers in other shifts will aggravate the situation.

The cost of production during night shifts is not higher than in day shifts, as is alleged.

The expansion of installed capacity as a measure of absorbing workers will not also be immediately possible on account of foreign exchange difficulties.

Discontinuance of night shifts will prevent staggering of power consumption during night hours, while any additional installation will be affected by shortage of power already being experienced during the day time.

In view of all these factors, Mr. Manickavasagam Chettiar feels that discontinuance of night shifts will "prove detrimental to workers, the industry and the national economy as a whole."

RESULTS OF VIENNA COTTON CONFERENCE

One hundred and twenty delegates from Western Europe, the United States of America, the United Arab Republic, Japan and Australia met in Vienna from 22nd to 25th September 1959 for the annual meeting of the International Federation of Cotton and Allied Textile Industries. The meeting was opened by Mr. Alfred B. Lohner, President of the Austrian Cotton Spinners' and Manufacturers' Association, the host organisation. Dr. W. T. Kroese (Netherlands), President of the International Federation, was in the chair. In his opening address, Dr. Kroese referred to structural change which is at present taking place in the cotton textile industries of the world. The setting-up of highly competitive cotton textile industries in developing countries has created difficult problems for the cotton industries in Western Europe and the United States. It will be one of the most important tasks of the future to re-establish equilibrium in the cotton and allied textile industries of the whole world, according to the principle of "live and let live."

The Committee for European Affairs discussed the problems with which the textile industry is faced as a result of Europe's division into two integrated economic areas. This development can cause only great concern to the industry, as it threatens to break the traditionally wide ramifications of foreign trade in textiles for Western Europe. The cotton textile industries of Western Europe, therefore, consider an early association of the European Economic Community with the proposed European Free Trade Association imperative; the foreign trade policies of both integrated areas should also be harmonised as much as possible. One of the technical difficulties is the question of certificates of origin. In this connection, the textile industry can only accept the so-called integrative processing definition, i.e., a textile end-product must be spun, woven and finished in the same country, in order to become eligible for preferential treatment within the area.

The Raw Cotton Merchants' Committee noted the initiative taken by some Latin American producer countries to stabilise raw cotton prices by commodity controls. From the consumers' point of view, such measures must be rejected, as they are neither technically feasible nor economically desirable. Inter-governmental controls over the price formation of raw cotton on the world markets will bring prices to an unrealistically high level, when they will be uncompetitive with the prices of man-made fibres. The International Cotton Federation, in a resolution, urges all raw cotton producing countries to direct their resources into more constructive channels, by supporting endeavours to increase consumption through market research and sales promotion. The removal of the obstacles which are still in the way of the free functioning of futures markets will also contribute to the stabilisation of prices. The Committee also expressed itself on matters pertaining to quality maintenance and improvement of raw cotton of various growths.

The Committee for Man-made Fibres examined problems connected with the terminology and standardisation of man-made fibres. Some concern was expressed regarding the ever-increasing number of labels and trade-marks, which tend to cause confusion among the consuming public. The possibilities of international legal protection of textile designs were carefully examined. In view of the administrative and technical difficulties involved, the protection of textile designs on an international level can only be achieved through moral obligation. The Federation will work out proposals to that effect.

Among the technical subjects discussed at the meeting were the standardisation of the terminology and description of cloth constructions, the

(Continued on page 627)

THREE MORE BIG MILL COMBINES TO SCRAP EQUIPMENT NO CAUSE FOR CONCERN BY CONSUMERS

From A Special Correspondent

MANCHESTER, 29th September

COMPLETED scrapping plans under the Government's £30-million reorganisation scheme for the Lancashire cotton industry were announced last week by three of the biggest mill combines. The statements came within five days of the final date for submission of applications to participate in compensation for redundant machinery. The Amalgamated Cotton Mills Trust has

scrapped, or proposes to dismantle, more than 500,000 spindles, comprising 278,000 mules, 216,000 rings and 19,500 doubling spindles, together with

848 looms. The group proposes to close the Mill Hill Spinning Company, the Haslam Spinning Company, both at Bolton, and the Astley Bridge, Bolton, branch of John Ashworth Ltd. Also eligible to participate in the scheme, but closed before its original announcement, was the plant controlled by the Acme Spinning Company, Pendlebury and the spinning department at Mossley of Robert Hyde Buckley and Sons. The other units which were closed by the combine before qualifying for the reorganisation schemes were the Haslam Weaving Company at Bolton and the Chorley branch of Robert Hyde Buckley and Sons.

The Lancashire Cotton Corporation announced the intention to close the Heron and Orme Mills, both in Oldham. This follows the announcement that the Corporation was to shut the Dowry and Willow Bank Mills at Oldham, and the Waterside Mill at Ashton. In addition, mule spinning will gradually cease at the Newby Mill, Shaw, but output of other yarns will continue. The Directors made it clear in their statement that no further mills will be closed in the group and that similar employment at other units under their control would be offered to the majority of the operatives affected by the closures. "The Corporation is confident that it should be able to satisfy all customers' requirements from units which it is continuing in operation," the Directors added.

Harbens Decision

Courtaulds intends to cease operations at the Harbens plants at Parkside Mills, Golborne, and Daisy Bank Mills, Culcheth, both near Warrington, during the coming six months. At present, production of viscose rayon yarn of textile and industrial types is carried on at Parkside Mills and processing of textile yarn at Parkside as well as Daisy Bank Mills. Altogether, 270 staff and 870 hourly-paid operatives are employed.

Textile yarn production will start to close down at the beginning of December and will have ceased by the end of the year. Industrial yarn production and textile yarn processing are planned to continue until March 1960. Staff and workpeople will be given priority for suitable

vacancies occurring at other Courtaulds' factories and Courtaulds will do what it can to help the resettlement of those who move. In addition to giving ex-gratia terminal payments, the Company will help in finding other employment for those for whom work will no longer be available.

No Shortage

Fears that the scrapping of machinery under the reorganisation plan would lead to a shortage of supplies and a sharp rise in prices were allayed in a statement issued by the special Committee of the Cotton Board, set up under the Cotton Industry Act to administer the scheme. "After full discussion with representatives of the industry, the special Committee are satisfied that there should be no undue interference with supplies as a result of the scrapping of machinery on the scale proposed," the statement declared and added: "The scrapping will be spread over a period of six months, and this should give firms remaining in the industry time to make necessary adjustments to their production programmes to meet any increased demand which may be put upon them."

The Committee disclosed that 13,500,000 spindles will be left after scrapping is completed, as against 16,500,000 spindles operating in April when the scheme was first planned. This represents a reduction of 18.2 per cent. More doubling spindles will remain after the scrapping programme than were actually in use in April, the number left being 1,046,000, as against 1,015,000. The reduction in looms working will be 16.5 per cent., comprising 153,000 looms, as against 183,000 in use in April. About 45,500 of these are automatic machines, of which 7,000 were working three shifts, 20,000 two shifts and 2,500 were idle. It is estimated that only about 1,000,000 spindles were working more than one shift.

On prices, the Committee pointed out that, for some time past, margins in all sections of the industry had been uneconomic. The cost of the levies payable by firms in the industry remaining in business could not significantly affect prices, as it had been calculated that they represented an average of less than 1d. per lb. of production of yarn and a similar amount in the case of woven cloth. "The figures take no account of the saving in costs which it is expected will in due course result from the improved operating efficiency which the reorganisation schemes have been designed to make possible," added the Committee.

Meanwhile, the cotton trade unions are approaching the employers' associations for joint talks to settle details of arguments which have arisen over payment of compensation to displaced workers. Mr. James Milhinch, Secretary of the United Textile Factory Workers' Association, said: "Many operatives are anxious to get other jobs as quickly as possible, but some employers have refused to let them go."

No relief is in sight for the hard-pressed Lancashire textile shipper who has seen his business dwindle so fantastically in the past few years. Each time the monthly returns are issued by the Board of Trade, the screw represented by rising imports seems to tighten more perceptibly on the shrinking export trade in cotton goods.

During the first eight months of the current year, the volume of arrivals of foreign fabric has never dropped below 35 million yards, and on two occasions has been as high as 44 million yards. In contrast, the biggest shipments abroad were little more than 33 million yards in May and only just exceeded the 30-million-yard mark last month. The lowest total has been barely 25 million yards in June. As a result, the situation at the end of August was that imports had outstripped comparable exports by almost 100 million square yards, the totals being 325,727,000 square yards and 227,041,000 square yards. At the same point a year ago, exporters still held the upper hand, having shipped 268,441,000 square yards abroad, while receipts from foreign producers amounted to 253,133,000 square yards.

The reversal of fortunes during the past twelve months is only too obvious from the above figures, which show that imports have increased by over 72 million square yards, while exports have declined by more than 41 million square yards.

The situation here is not yet as depressing as the cloth picture, but, already in eight months of 1959, shipments of yarn have fallen from 18,869,000 lbs. to 15,396,000 lbs., while imports have risen from 8,714,000 lbs. to 13,556,000 lbs. Details of the sources of supply of this yarn are not available, but it will be recalled that the spinners were strongly critical of the Hong Kong agreement when the negotiations disclosed that no understanding had been reached on the subject of yarn imports.

Contrasting Gains and Losses

No slackening has occurred in the persistent arrivals of cotton grey cloth from India and Hong Kong. To the end of August, imports from India were 106,495,000 square yards, as against 79,665,000 square yards in the same period last year. Hong Kong sent 91,753,000 square yards, as against 67,929,000 square yards. Proportionally, the main increase has been from "other Commonwealth countries"; these sources have provided 15,263,000 square yards of cloth this year, as against only 758,000 square yards in 1958.

From Hong Kong reports are to hand of the attitude of the millowners in the Colony at the end of seven months' trading under the voluntary ceiling. During the time, nearly 98 million square yards of cotton goods were despatched to this country and a further 6,500,000 yards were awaiting shipment at the end of last month. Of the total exported, 26 million yards were in made-up goods and 413,000 yards finished goods. Apparently, traders in the Colony are disappointed at the quantity of Hong Kong cloth likely to be re-exported from the United Kingdom during the current year. So far, this only amounts to 2,280,000 yards, according to assurances given to the Board of Trade. Hong Kong anticipated that about 15 per cent. of shipments to Britain would be re-exported and the Colony's Government is already being urged to exert pressure on the authorities in this country to stimulate re-exports.—All Rights Reserved.

COTTON CONSUMPTION RISING SEQUEL TO RECOVERY IN TEXTILE ACTIVITY

TEXTILE activity in many countries has been showing a remarkable recovery of late. Reflecting this improvement, raw cotton consumption has also been picking up. In the United States, cotton consumption in the current season is expected to rise to nine million bales (of 478 lbs. each), as compared with 8.7 million bales in the 1958-59 season which ended on 30th July last. The increase in consumption during the last few months has been quite marked in all the main textile centres in Western Europe. Since the beginning of the year, consumption in India has been running higher than a year ago. A recent upturn is very noticeable in Japan too.

The upturn in textile production during recent months has made it necessary to revise consumption estimates for the last season. Thus, the International Cotton Advisory Committee, Washington, now estimates that aggregate free world consumption during the 1958-59 season was of the order of 28.7 million bales (of 478 lbs.), as compared with the earlier estimate of 28.4 million bales and the 1957-58 figure of 28.5 million bales. Consumption in the U.S. was higher at 8.7 million bales, as against 7.9 million bales in 1957-58 while, outside the U.S., it was down by half a million bales at 20 million bales. Consumption in Western Europe declined by about 600,000 bales and in Japan by 150,000 bales. There was a net increase of 250,000 bales in other countries.

The following table indicates the trend of consumption in the free-world countries:

(In thousand bales of 478 lbs. each)			
Country	1958-59*	1957-58	
United States	8,684	7,999	
Net importing countries—			
Canada	355	330	
United Kingdom	1,275	1,484	
France	1,175	1,407

Other net exporting	450	412	
Total ..	4,725	4,530	
Total (excluding Communist bloc and China).	28,750	28,509	

* Estimated.

The situation in the cotton textile industry in the U.S. is now more favourable than in the past several years. Unfilled orders are large, stocks low and mill margins are the highest since 1956. Cotton yarn and cloth production has, however, been well controlled at the mill level in the expectation that domestic cotton prices would be lower in the current season. According to the International Cotton Advisory Committee, all these factors indicate that the textile situation in the U.S. over the foreseeable future will be favourable and that there will be a further increase in cotton consumption.

Long-term Prospects

As regards the longer-term prospects, there has been renewed pressure from many sectors of the industry in the U.S. for action to protect domestic interest. The latest development has been an appeal by the National Cotton Council for restrictions on imports of cotton textiles and apparel. Action is demanded under Section 22 of the Agricultural Adjustment Act which provides for relief against imports, if they interfere with Government agricultural programme. It is pointed out that, between 1949 and 1958, the excess of exports of cotton textiles over imports dropped from 650,000 bales annually to 6,000 bales. Concern was expressed that this loss of cotton markets would be accelerated in the next few years. The raw cotton price advantage,

which the foreign mills now enjoy, is likely to be increased still further this season by reason of the increased export subsidy. The appeal is directed not only at what might be termed the traditional exporters of cotton textiles but also to several of the lesser developed countries who are planning to develop an export market for surplus domestic production of textiles. The Secretary for Agriculture has promised to undertake a complete review of the problem.

The U.S. is not alone in this respect. Textile industry leaders in several other textile manufacturing countries are also said to be concerned over the rising trend in imports. For instance, the Canadian Textile Association has recently stated that, if imports of textiles from Japan continue at the same rate as during the January-May 1959 period, this would mean an increase in imports of nearly 50 per cent. over last year's rate. The seriousness of the import problem in Canada is illustrated by the fact that the share of domestic mills declined in 1958 to as low as 45 per cent. of the total market for cotton fabrics. The main source of textile imports continues to be the U.S. and such imports continue to increase. Cotton consumption from May till July 1959 showed a sizable reduction from earlier months but the total for the 1958-59 season was about 6 per cent. higher than in 1957-58. In Europe, the Common Market nations have urged strong action against foreign imports and specific recommendations to limit or even exclude imports of low-priced cotton textiles have been made by member-nations to the O.E.E.C. authorities.

Western Europe

The textile outlook in Western Europe has undoubtedly improved in many countries. The textile trade in the U.K., as is well known, is presently preoccupied with the Government's reorganisation scheme which is apparently influencing some customers to cover more than their anticipated requirements. Cotton consumption increased significantly during the third quarter of the past season and indications are that this improvement is continuing. The

future, however, is clouded by the further marked contraction in exports of both cotton yarns and fabrics this year. Imports so far have been considerably larger than a year ago, with the major increase in imports being from India and Hong Kong.

On the Continent of Europe, the improvement is fairly general. The increase in cotton consumption in France is very noticeable, though consumption is still running under a year ago. With order books expanding and a healthier stock position, consumption prospects this season are bright.

Cotton consumption in the Federal Republic of Germany showed a striking rise in April this year and was in fact considerably higher than in the same month in 1958. In Italy, it is hard to detect any real trend. Cloth exports continue to decline but exports of cotton yarn may be ahead of a year ago. In Belgium, the improved offtake of cotton textiles is no doubt related to the upswing in economic activity generally and, since the beginning of the year, consumption has been running much higher than a year ago. In the Netherlands, the reduction in textile stocks at both the wholesale and retail level, allied to an improved demand, has put the industry on a much firmer footing. Yarn consumption is on the increase but orders continue on a hand-to-mouth basis with few longer-term commitments.

Profit Margin

Despite the improvement in the European textile industry, however, profit margins in many countries are still unsatisfactory and this is considered by many to be a limiting factor on any expansion in textile production.

The situation in Japan has changed radically in the last few months. From a low level of 173,000 bales in January, consumption of cotton has risen to over 200,000 bales per month and the trend is still upwards. Production of pure cotton yarn during the first half of 1959 was up by 30 per cent., as compared with the same period in 1958. Furthermore, despite relaxation in production controls, cotton yarn stocks have continued to decline and are now near to what is generally felt to be a normal level, namely, around 400,000 bales (of 400 lbs.). The increase in domestic demand has been

(Continued on page 627)

DURGAPUR

IS GETTING READY

At the Durgapur steelworks at this moment, nearly ten weeks ahead of schedule, the first Simon-Carves coke oven battery is being gradually and carefully heated up to operating temperature.

When this highly skilled process is finished, the coke ovens will be ready to supply coke for the first blast furnace to

produce Durgapur's first pig iron. Simon-Carves, a leading member of the British consortium ISCON which is building the Durgapur steelworks, are privileged to be the first contractors to put their plant into service—plant which is vital to Durgapur's coming production of another million tons a year of Indian steel.

REPAYING INDIA'S EXTERNAL DEBTS

NATURE OF THE PROBLEM AND ITS IMPLICATIONS

ALTHOUGH the objectives and targets of the third Plan have been discussed fairly extensively since the commencement of this year, an aspect of the Plan that has not elicited due attention is that relating to the problem of repaying external debts incurred in the first and second Plan periods. The only point made known is that, out of the total foreign exchange needs of the third Plan estimated at Rs. 2,100 crores, interest on, and repayment of, loans contracted earlier will account for Rs. 600 crores. As this important problem has been dealt with in a cursory manner, the public is not in a position to understand what exactly is the problem and how it is proposed to be met. And many are even greatly apprehensive that the second and third Plans will bequeath to future Plans the legacy of large-scale debts. Viewed thus, the *Tata Quarterly* (July 1959 issue) has done a signal service in putting the nature of India's repayment problem in its correct perspective.

Appropriately enough, the *Tata Quarterly* has prefaced its study by a brief review of the size of external aid authorised during the first and second Plans, if only to emphasise that the repayment of loans even in rupees is a problem and a burden all the same. The table below summarises the position in respect of aid authorisations:

	Aid authorised during			
	First Plan		Second Plan*	
	Amount (Rs. crores)	Percentage to total aid	Amount (Rs. crores)	Percentage to total aid
Loans to be repaid in foreign currency

* Up to 31st January 1960. This table excludes India's drawing on the I.M.F. amounting to Rs. 50 crores.

It will be seen from the above figures that almost 38 per cent. of the second Plan loans to date will have to be repaid in rupees and as such does not create the problem of raising external resources. Nevertheless, the *Tata Quarterly* says that it involves the question of releasing internal resources. To quote it: "As the early years of the second Plan have amply demonstrated, the problem of raising external resources for developmental purposes is by no means easy, particularly in an environment of inflation. . . . But the repayment of loans in rupees is a problem and a burden all the same—a problem which domestic policies will have to cope with and a burden which will reduce the national resources by the extent of the repayment."

Total Burden

The third Plan foreign exchange needs on account of interest on, and repayment of, loans contracted in the first two Plans, as already mentioned, are estimated at Rs. 600 crores, or an average of Rs. 120 crores per annum. The sum includes the servicing charges of foreign loans made to the private sector also but exclude about Rs. 200 crores that will be transferred out of profits by the subsidiary or branches operating in India to their principals abroad. The aggregate repayment burden thus comes to Rs. 800 crores, or Rs. 160 crores per annum. This compares with the average annual export earnings on current account estimated at no more than Rs. 800 crores. In other words, the investment service ratio, that is, the proportion of current foreign exchange receipts absorbed in any given year by the servicing costs of loans and investments, comes to 20 per cent. This is the yardstick normally used to measure the burden of repayment. The *Tata Quarterly* admits that this ratio may not be large as compared with the ratio of other countries during their developmental periods (as, for example, 25.8 for Canada and 30.7 in Australia in 1929-39, 39.5 for Argentina in 1931-41, and 33.5, 39.1 and 54.3 for Venezuela, N. Rhodesia and Iran, respectively, in 1946-49). But it stresses that the more important question is whether it will be large in relation to India's capacity to repay. It is here and

on the basis of existing trends that the *Tata Quarterly* begins to entertain doubts about the capacity to repay. In its opinion, the capacity of the country to bear an investment service ratio of 20 does not seem to be particularly bright. This view is based on the following grounds:

Absence of foreign exchange reserves: The most valuable safety-belt that could be utilised in times of crisis is no longer available; the reserves depleted during the first three years of the second Plan amounted to Rs. 550 crores.

Import quotas and exchange controls: These are already very severe; the slowing-down of the rate of industrial production growth is admitted to be due largely to the rigours of import restrictions.

Foreign capital: So far as loans are concerned, there is no assurance as yet that the foreign needs of the third Plan will be underwritten by foreign Governments and international agencies, while, in the case of private investments, India has given no particular proof that it is more safe and more profitable to invest in India than in other developing countries as well as in the advanced countries themselves. In any case, foreign aid to be really useful will have to be on a very large scale, and absorption of such aid will only compound the repayment problem for the fourth Plan, even though it will ease that of the third Plan.

Two Familiar Solutions

What then is the way out? The *Tata Quarterly* alludes to two familiar solutions, namely, export promotion and import replacement. While on the former, the *Tata Quarterly* points out that there are limits to the country's capacity to promote exports. And it is quite right when it observes: "The stringent import controls, the spate of welfare legislation and, above all, the increasing use of deficit finance or bank credit creation—all promise us a regime of inflation. An inflationary climate is, however, inimical both to increasing exports and to increasing the flow of private foreign capital, the two factors on which we so badly rely to solve or ease our oncoming repayment problem." As regards import replacement, the two general assumptions made are that, during the third Plan period, there would be insignificant imports of food and steel and that the indigenous machine-building capacity would expand substantially. The *Tata Quarterly* feels that these assumptions repeat the past errors of over-optimism. Here is what it says:

"Agricultural production has by no means shown such signs of improvement as to raise hopes of self-sufficiency; and it is difficult to escape the policy-conclusion reached by the Foodgrains Inquiry Committee (Asok Mehta Committee) that, for quite some years to come, food imports of 2 to 3 million tons per year will be necessary. . . . the most destabilising factor in our balance of payments situation is likely to be fluctuations in the marketable surplus of food. This factor lends considerable variability and confusion to our repayment problems. . . . Not only is the third Plan expected to be appreciably larger in size than the second Plan, but its emphasis on heavier industrialisation, with all its complex and correlated needs, is bound to whet its appetite for foreign exchange. Indeed, the very dynamism which the Indian economy will derive from a more adequate flow of iron and steel will itself generate an upward pressure on imports."

There is considerable force in these observations of the *Tata Quarterly*, as also in its statement that India is no longer in a position to reap some of the advantages which it enjoyed in the past. Of these, special mention may be made of four: First, a sizable part of India's commitments consisted of remittances of variable dividends, rather than the repayment of fixed interest charges, and, thus, the transfer burden was adjustable to changes in internal conditions. Secondly, foreign investments tended to boost "through investments" in tea, jute, etc. India's exportable capacity and even the railways, largely buttressed by foreign loans, were oriented towards stepping up exports. Thirdly, remittances abroad varied in the same direction

as export profits. Fourthly, currency convertibility was no problem.

As against the absence of these advantages, there are certain distinctly favourable factors. The country, for instance, is now free from the uncertainty of sudden and sharp withdrawals of capital which, in the past, so much disrupted the economies of capital-importing countries, particularly those of Latin America. Further, the domestic economy is no longer so vulnerable to the traditional dangers of depression as are most other underdeveloped countries. Again, the chances of the country getting sizable outright grants are good, not to speak of the advantage of repaying the loans in rupees. What is more, nearly all the loans taken by India have been geared to development purposes, instead of being frittered away in conspicuous consumption or prestige investment. Excluding the Rs. 52.68 crores to be kept by the U.S. Government in India as part of the P.L. 480 Loan assistance, the total of Rs. 1,370.30 crores (received by India up to January 1959) has been spent on, or has been earmarked for, the following:

Item of expenditure	Rs. crores
Iron and steel (including iron ore)	261.55
Railways	117.99
Irrigation and power	39.60
Ports	20.48
Capital imports and industrial development	117.54
Loans and grants for the above purposes	694.36*
Wheat	106.02
Others	12.76
Total	1,370.30

Three Heavy Burdens

Nevertheless, the question is whether the aforesaid factors will be sufficient to offset what at present appears to be a much heavier list of adverse factors. It is against this background that the *Tata Quarterly* has analysed the implications of the three kinds of burdens involved in repayment—primary, secondary and tertiary—as follows:

The primary burden is a purely quantitative one. The volume of repayment, say 'X', represents a definite reduction in national income, which could have been used for increasing either the consumption or savings of the country. The country obtains nothing in return for the resources it transfers abroad.

The secondary burden is a mixture of both qualitative and quantitative effects, and is, therefore, neither easily diagnosable nor accurately measurable. In order to release 'X' volume of resources for repayments, the repaying country may be forced to follow a number of policies which are in conflict with its other goals of planning or to undertake a number of projects which clash with the criteria of economic productivity.

There is a third set of difficulties connected with the repayment problem. Even after the economy is able to release the resources for repayment, they must be converted into foreign exchange. This tertiary burden does not arise in the case of loans to be repaid in rupees, but it is all-pervading in the case of loans to be repaid in foreign currency, which loans form the majority of den is dependent on a number of factors—the general state of the world economy, the levels of tariffs, particularly in the countries to whom we are repaying, the degree of currency convertibility, the elasticity of world demand for our products, and so on.

The secondary and tertiary burdens, according to the *Tata Quarterly*, will be a multiple of the primary burden. To quote it again: "Herein lies the real crux of the repayment problem. Our repayment of Rs. 600 crores during the third Plan represents merely the primary or the quantitative loss. It by no means measures the true burden of repayment. For this we shall have to be prepared to pay the secondary and tertiary losses also."

The foregoing survey clearly brings out the magnitude of the repayment problem. Any failure on the part of planners to recognise it and make suitable provision for it in the third Plan is to invite serious economic and political troubles later on. If this aspect had been considered carefully when the second Plan was drafted, things would not have been so bad as they are at present. It is to be hoped that the third Plan will not err in the same direction. As the *Tata Quarterly* has very aptly put it, "it may have been difficult for us to be wise before the event, but, now, let us at least be wise after the event."

*This is a miscellaneous group, the exact breakdown of which is not available. In the case of U.S. Development Loans and Export-Import Bank loans, the different industries to which foreign exchange is to be allotted are mentioned, but, except for the iron (Rs. 11.76) of \$40 million to railways, the exact volume of allotment is not stated.

Weighing
the
world
up...

... even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

How much
 $C_6H_{10}O_5$
do you use
in a month?

TITAGHUR PAPER consists like all paper, mainly of cellulose for which the chemical formulae is $C_6H_{10}O_5$. You, the consumer, are now using every month more Titaghur paper than at any time since our Mills were founded 77 years ago. Continuous research during those years has helped us to produce the widest range of quality paper and you can rely on Titaghur to give you the right paper for the job. Today, the Titaghur Mills produce more bamboo pulp and paper than any other mills in the world.

THE TITAGHUR PAPER
MILLS CO., LTD.

QUARTERED BANK BUILDINGS, CALCUTTA-1.

PROMOTING EXPORTS OF JUTE GOODS

I.J.M.A. DELEGATION TO VISIT NORTH AMERICA AND U.K.

YET another delegation of the Indian Jute Mills' Association is due to visit the U.S., Canada and the U.K. this month. The delegation is a small one, consisting of the Association's Chairman, Mr. Kenneth E. Tosh, and its Vice-Chairman, Mr. D. P. Goenka. The visit is in pursuance of the I.J.M.A.'s policy of maintaining close contact with jute goods importers and consumers abroad. The delegation will study the present market position, examine the success of the promotional activities of the Association in North America and consider plans for the future form and scope of these activities. It will, in particular, review the progress made with the research into new uses for jute goods, particularly in industry, and will make recommendations for further development. It will be interesting to note here that the industry has recently enlisted the aid of the Indian Government's commercial representatives overseas for assembling market data for analysis. This will facilitate the work of the Indian delegation to study market conditions at close hand and discuss with the Indian and U.S. Government commercial representatives research and promotional activities.

On the way home, the delegation will spend some time in the U.K., where discussions are to be held with the U.K. Jute Controller and officials of the Board of Trade on common problems and the prospects for increasing trade with that country. It will also meet representatives of large U.K. consumers and of various important overseas consumers with buying agencies in London.

Exports Improve

The proposed visit of the I.J.M.A. delegation to North America and the U.K. is timely, in that it will help the Indian jute industry consolidate and improve upon the recent gains in exports of gunnies, particularly hessian, as the following table of exports during the last three seasons will show:

Country	Hessian			Sacking		
	1958-59	1957-58	1956-57	1958-59	1957-58	1956-57
U.K.	42.8	31.7	39.4	15.0	13.1	10.2
Rest of Europe	28.5	27.9	9.4	12.8	11.0	6.9
Near East	5.8	8.5	1.4	6.9	2.2	7.9
Far East	0.0	8.0	0.0	0.7	68.2	84.3
Africa	13.4	16.8	14.6	60.9	100.2	84.2
U.S.	212.4	199.8	200.1	6.8	5.2	8.2
Canada	27.8	33.8	33.9	..	0.2	..
Argentina	59.5	58.2	55.6	1.7	2.2	0.8
Rest of America	18.0	11.7	19.4	61.2	75.7	68.0
Australia	16.2	14.9	14.9	70.7	68.7	80.7
New Zealand	5.6	6.9	4.1	11.2	10.7	11.8
Others	2.3	4.0	29.3	8.6	19.6	29.2
Total	454.8	387.8	422.1	320.7	376.7	392.3

Exports of hessian during the year ended June 1959, touched the record level since the partition of the country and represented an increase of 67,000 tons over 1957-58. The bulk of this rise was accounted for by the U.S., the exports to which were higher by 42,600 tons. The U.K. took 11,100 tons more and the rest of Europe 8,600 tons more. Canada's intake rose by 4,000 tons. Exports of sacking were disappointing, with a further fall of 66,000 tons during 1958-59, thus sustaining the downward trend since 1954-55. In the course of the last four years, exports of sacking have shrunk by 133,400 tons, that is, from 454,100 tons to 320,700 tons. The decline during 1958-59 is mainly due to the drop of 39,300 tons in exports to Africa and of 15,000 tons to South America.

The industry's performance so far during the current year has been encouraging, thanks to the steady market conditions. If the industry is allowed to work under conditions which will ensure competitive and stable selling prices, there is no reason why it cannot look forward to the future with a measure of optimism. The industry is also in a better position to retain its leading place in the export trade of the country than it was some years ago. In the first instance, it is almost self-sufficient in raw jute. There is, however, need for improving the per-acre yield and quality which are lower as compared with Pakistan. There are many ways by which the yield can be stepped up. First, the use of fertilisers, which is still marginal in most

of the jute-growing areas, should be enlarged and the cultivator should be educated in the use of more scientific method of cultivation. Secondly, improved varieties of seeds should be disseminated from the State seed multiplication farms, and thirdly, better retting facilities should be provided and for this there should be adequate supply of good seeping water.

Modernisation

The second main factor which has improved the position of the jute industry is the large-scale rehabilitation of preparatory and spinning machinery. The programme of modernisation, it is claimed by the spokesmen of industry, has reached an advanced stage and is expected to be completed by the end of the third Five-year Plan. Increased attention is being paid to modern processing techniques on the manufacturing side, with a view to improving the efficiency and reducing the cost. This, together with the closure of uneconomic units and transfer of loom-hours to modernised units, has also improved the mechanical proficiency. The supply of even quality yarn has ensured a general improvement in the quality of gunnies. But there is still scope for further improvement when the quality of raw jute is enhanced through use of fertilisers, improved seeds and better retting facilities.

The industry is also in a position, through the working time agreement and reserve capacity, to regulate output to meet any rise and fall in demand for jute goods and to stabilise their prices.

Position of Sacking

The declining trend in exports of sacking, however, poses a problem. This is due to its high prices, as compared with those of Pakistani manufacture. This, in turn, is attributed to the paucity of cuttings used in its manufacture and the relatively higher prices paid for them. In order to regain the position in respect of sacking exports, it is suggested, in some quarters, that

a quantity of about 400,000 bales of cuttings could be imported from Pakistan and a corresponding quantity of raw jute could be exported. The loss of foreign exchange on account of such imports will, it is said, be more than made good by the earnings from raw jute exports and larger exports of sacking which will result from a reduction in its price.

JUTE INDUSTRY IN PAKISTAN

The jute industry in Pakistan has made very rapid progress during the last eight years. Established in 1951 with a small spinning mill, the industry is now equipped with 7,934 looms which are working double shift. The progress is more heartening when one looks back to the conditions which prevailed when the country attained independence in 1947 and East Pakistan, where the industry is concentrated, was an entirely agricultural province, with hardly any industry.

These eight years did not prove to be a smooth period for the growth of jute industry. The efficiency of labour was low and the cost of power was very high. In addition, the industry had to face severe competition in the world markets. The political insecurity during 1957 and 1958 added fresh problems to the industry, particularly on the labour front. Production would have been drastically cut but for the army coup in October 1958. Thanks to the political change, the industry was able to turn the corner and increase its production by 45 per cent. during the first six months of the military regime, as compared with that in the previous period. Production is now said to be running at the rate of 240,000 tons per annum.

The industry has also been able to compete successfully in foreign markets, thanks to the export bonus scheme introduced in January last. Devised by West German foreign trade experts, this scheme enables industries, such as jute, to retain a specified proportion of their foreign exchange earnings for their own use. This scheme has enabled the jute industry to modernise its units, as well as to install balancing and other machinery, which will enable mills to work on a three-shift basis. Specialised looms for the manufacture of mats, carpets and webbing have been installed. Plans are afoot to add another 4,000 tons during the next five years.

The labour is said to have turned more industrial-minded and, with the completion of the Karnafull hydro-electric project, power will become cheaper. It is expected that the industry will be able not only to reach the target of production of 250,000 tons set for this year but also exceed it by 10 per cent.

WORK OF WORLD ATOMIC AGENCY GENERAL CONFERENCE REVIEWS PROGRESS

It is being increasingly realised that, in the sphere of atomic development, even more than in any other sphere, world co-operation is essential. After all, nuclear radiation knows no national boundaries and its effects cut across all geographical or political frontiers. It is, therefore, of the utmost importance that all countries should co-operate in the interest of safety from atomic radiation and of peaceful uses of atomic energy. Appropriately enough, these topics figured prominently at the meetings held in connection with the General Conference of the International Atomic Energy Agency (I.A.E.A.) held towards the close of last month, at Vienna. At these meetings, the work of the Agency as well as nuclear developments in different leading Western countries were reviewed, with a view to assessing their significance to the rest of the world.

Addressing the plenary session of the General Conference, the Director-General of the I.A.E.A., Mr. Sterling Cole, stressed the "inescapable" need for international action in the fields of atomic assistance, atomic safety and atomic security. He called for firm international agreement to further important steps designed to protect the health and lives of human beings from accidental or intentional damage from the use of atomic materials. It would appear that the Agency has already three panels studying such health and safety problems as the disposal of radio-active wastes into the sea and the international transport of radio-active substances. It is also preparing a manual of safe operation of research reactors in response to problems posed by the growing number of reactors used for research. A draft convention on civil liability for nuclear hazards is under preparation. A manual on the safe handling of radio-isotopes has been adopted.

Atomic Security

In the field of atomic security, Mr. Cole said the Agency had drafted principles governing safeguards against the diversion of fissionable materials from peaceful to military uses, as well as proposals for detailed regulations for the application of the principles. Mr. Cole urged all countries which supply nuclear fuel to demand that the use of the materials should be in accordance with I.A.E.A.'s safeguard procedures. He asked: "How else can we avoid the spectre of eventual atomic weapon production resulting from an initial and apparently innocent transaction involving the sale of uranium as an ordinary mineral carrying no different tag than coal or oil?"

There is no doubt that safeguards are essential in the interest of preventing the diversion of atomic materials to military uses. At the same time, the safeguards should not penalise the innocent out of excessive fear of possible misuses of the material. This, in fact, was the view expressed by India's representative, Dr. H. J. Bhabha. The safeguards now proposed, according to Dr. Bhabha, would make things difficult for countries which were not in a position to manufacture atomic weapons while leaving unaffected those countries which were either manufacturing such weapons or in a position to do so. He argued that the world Atomic Agency was unlikely to become the principal supplier of source atomic materials—so far, the only supply arranged had been that of three tons of uranium metal to Japan—so long as it insisted on a cumbersome system of safeguards. The Agency, he said, should not forget that much larger quantities of atomic materials continued to be supplied by certain countries to others without even the condition as to their peaceful use. Surely, the Agency will do well to consider how best its system of safeguards could be modified so that they could be easily implemented without having any deterrent effect on nuclear progress towards peaceful ends.

Technical Aid

In the course of his speech, the Director-General, Mr. Cole, reviewed briefly the progress of the Agency's technical assistance programme. The Agency has sent, or planned to send, some 50 experts to 20 countries and about 600 students from 42 countries have been selected for training in member States. Studies have been undertaken on the need for an establishment of isotope training centres in Africa and the Middle East. Three large missions and a number of smaller teams have visited countries in the Far East, Latin America, the Mediterranean region and the Middle East to study prospects

for atomic development. Mr. Cole admitted that the programme had been modest so far. He pointed out that the Agency had encountered a difficult problem, in that there was a scarcity of experts able and ready to leave their own laboratories, universities or nuclear institutions, even temporarily, for assignments abroad. He rightly felt that nothing could be "more damaging" to the Agency's efforts than for the Agency to build up hopes of an early sharing of atomic energy only to discover that trained personnel were not available because of national or personal interests.

Fuel Supply

At another meeting, held in conjunction with the Conference, some of the major aspects of the development of atomic energy for peaceful purposes were reviewed by three leading atomic scientists Sir John Cockcroft (U.K.), Dr. H. J. Bhabha (India) and Dr. B. Goldschmidt (France). Reviewing the progress in various fields of atomic science and technology during the past year, Sir John said that the recession in nuclear power programmes was partly due to the changing picture of fuel supply in the world. This appeared to be mainly due to a large-scale switch of industry from coal to oil, resulting in a temporary surplus of coal. Referring specifically to the power programme in the U.K., Sir John pointed out that there had been an increase in the estimated cost of nuclear power and a decrease in the estimated cost of future coal-fired stations. One factor which could favour nuclear power cost was a fall in uranium prices. Some advantage might also be gained from technological improvements. When these factors were taken into account along with the expected rise in power demands, Sir John said, one must conclude that the recession in nuclear power construction could only be a temporary phase. Regarding marine propulsion by nuclear energy, Sir John pointed out that the economic problem still seemed to be difficult and the future would depend on a reduction in capital costs. As for thermo-nuclear stations, the emphasis now was more on an understanding of the behaviour of hot plasmas (super-heated ionized gas in which fusion reactions are expected to take place) than on the design of the reactors.

Economics of Power

Discussing the economics of nuclear power in underdeveloped countries, Dr. Bhabha referred to the wide variations in conditions of different areas in this region. He felt that in view of this factor, no generalisation about the applicability or non-applicability of atomic energy in the underdeveloped areas of the world could be made. Speaking in detail about the situation in India, Dr. Bhabha said that a number of factors that were in operation in India negated "all the generalisations which one might expect to be true about the applicability of atomic energy in underdeveloped areas." Among the special factors, he mentioned the comparatively small reserves of coal, the concentration of coal deposits in a few areas, the consequent necessity of transporting coal over long distances to feed thermal stations and the resulting strain on the country's transport system. He emphasised that, when one talked about the relatively high costs of nuclear power in a country like India, one must also take into account new investment in railways that was needed for coping with the problem of coal transport for conventional thermal stations. He also pointed out that the interest rate charged on capital investment in underdeveloped countries tended to be overestimated by some economists. He said: "The capital investment required by nuclear power is quite comparable with the capital investment we, in India, have been used to making for hydro-projects and is not much higher than the national investment required for thermal power at places remote from coalfields. Bearing in mind the limited reserves of coal and hydro-power in the country which are enough only to see us through the expansion of the next ten or twenty years, it is clear that an important beginning with nuclear power has to be made now so that it may be in a position to take on a progressively greater fraction of the increase after 15 years." He said that the position in other underdeveloped areas might be quite different but felt that the example of India would show that one should "study each problem on its merits and not jump to facile conclusions that nuclear power cannot be economical today in underdeveloped countries."

Dr. Goldschmidt spoke on the role played by chemistry and metallurgy in the development of atomic energy and the applications of radio-isotopes and other radiation sources in industry, particularly in chemical processes. He said no important changes had taken place in these two fields since the Geneva Conference last year. Reviewing the broad lines of development and future possibilities, Dr. Goldschmidt said that attempts were being made to use the kinetic energy of fission products to produce chemical reactions and if these experiments were successful, nuclear reactors might one day be built solely for the purpose of achieving chemical syntheses. He added: "We now have the possibility of using in the chemical industry a new factor, ionisation by radiation, in addition to the conventional factors of temperature and pressure and we see appearing over the horizon a new branch of industrial chemistry—radio-chemistry." He also pointed out that the chemical applications of high level radiation represented only a small part of possible industrial uses which included food preservation, sterilisation of pharmaceutical products, insect control, creation of improved varieties of plants by induced mutations and production of vaccines. He observed: "Thus, a group of new technologies is emerging, the development and exploitation of which entail fewer resources and which will become more widely available, so allowing many more countries to profit from them, in particular those for whom a nuclear power production programme would at present be premature."

Outlook

After the opening statement, the three scientists answered a number of questions from the audience. In reply to a question whether the economic outlook for nuclear power seemed less bright today than two years ago, Sir John said that the increase in costs was likely to be offset by a fall in the price of uranium and the capital costs of nuclear power projects started two or three years hence were expected to be considerably lower than now. Asked if thermonuclear research had reached a deadlock, he said he would not call it a deadlock, but a stage in which the scientists really understood what the problems were. Dr. Bhabha, answering another question on fusion research, expressed a similar view and said that the very change of approach from efforts to achieve dramatic breakthroughs to attempts to gain a sound understanding of the scientific problems, represented progress. Both Dr. Bhabha and Sir John thought it important to continue the research and experiments on thermonuclear fusion. Asked which types of small or medium power reactors would be suitable for underdeveloped areas, Dr. Bhabha said there were three or four which seemed to offer almost equal advantages and it was difficult to make a unique choice. In reply to a question, Dr. Goldschmidt doubted the feasibility of producing heavy water at one half of one-third of the present cost. Asked whether nuclear wastes could be utilised for power generation, he expressed the view that the energy output was too small for economic exploitation.

W. BENGAL'S ROADS

Much concern over the inadequacy of roads in W. Bengal, in general, and in Calcutta, in particular, was expressed by Mr. Anandi Lal Poddar, in the course of his address at the annual meeting of the Bengal Bus Syndicate, held recently at Calcutta. Mr. Poddar said that, whereas the second Five-year Plan for W. Bengal envisaged the construction of 3,600 miles of State roads at a cost of Rs. 26.50 crores, and the revised Plan should ensure the construction of at least 2,340 miles, a shortfall in road construction was now during the first two years of the Plan and in the might be constructed, leaving a balance of at period.

Alluding to the road system in Calcutta, Mr. Poddar deplored that traffic difficulties and jams on chronic. He stressed the need for constructing broader roads and replacing some of the roads which were "mere apologies". In particular, he suggested a 200-ft. wide road from Dum Dum Air-port to Jadavpur. The total travelling population of Calcutta had now increased to 4.5 million a day, of whom some two million used tramways and public buses; a total of at least 200,000 arrived by the two railway stations every day. Pending electric trains, Mr. Poddar stressed the importance of improving the existing roads and construction condition of the Grand Trunk Road and the construction of bridges on all approach roads and construction of a bridge over the Hooghly near Shalimar Point should ease the traffic situation. In conclusion, he urged the preparation of a master plan for improvement of Calcutta and the industrial area around it.

NEW PRODUCTS AND PROCESSES

Catalogue System for Building Materials

BUILDING materials are proliferating at a bewildering rate and it is becoming difficult for the architect and civil engineer to keep up with them, let alone know their application in every instance. The Universal Asbestos Manufacturing Company, of the United Kingdom, which specialises in asbestos cements, pitch fibre, and reinforced plastics used in construction work, has extensively revised, in a novel manner, its catalogue system enabling up-to-date technical information to be easily accessible. Based on a recommended classification system with a standard size of 11.75 in. by 8.25 in., it conforms to five principles believed to satisfy the varied requirements of those with an interest or a potential interest in the company's products, namely, a standard size, a concise presentation of essential information which can be located quickly, a comprehensive presentation of each product in a single catalogue, a uniform system of classification, and a method of keeping the information up to date. The first catalogue issued concerns the Group's standard six asbestos cement sheet. The first page identifies the product and, on the reverse side, the other products of the group are summarised pictorially together with the name, address, and telephone number of the firm whose product is the subject of the catalogue. There is then an index to the various sections with classification numbers and a concise explanation of this index appears on the reverse side. A data sheet with essential physical details appears next and is followed by a section giving standard working details and fittings for vertical cladding. A sub-section on pink paper contains examples of special products suggesting to architects various ways in which to design with asbestos cement. Next comes a section with standard working details of the product's application to roofing. Finally, there are sections devoted to specifications and prices, fixing instructions, component reference sheets, and allowance for information on new developments. The loose-leaf nature of the catalogue enables revised or supplementary sheets to be included from time to time.

Storing Chemicals

A new powder technique for storing chemicals such as anti-oxidants, anti-ozonants and constituents of high-temperature lubricants, has now been developed. It can also be used, the scientists responsible for developing it claim, to store many other types of chemical compounds that are difficult to store under normal conditions. At the same time it can be used very simply to store chemicals

in liquid mixtures under such conditions that they form no part of the mixture until they are released by the use of heat, or by their replacement inside the storage powder by water, or some other liquid compound. The operation of the process depends on the use of special man-made metal-alumino silicate crystals as storage vessels. Each crystal contains thousands of millions of cavities which are connected by channels of constant diameter. The strong surface tension and the uniform size of the channels inside the crystals serve to isolate the chemicals contained inside the cages formed by the channels, so that they are not contaminated by other compounds. Yet the release of the compounds for active use can be precisely controlled for industrial purposes.

Metal Hydraulic Fluid

Hydraulic fluids which are liquid metals having a low melting point are being developed for industrial and military use by a joint Franco-German research team working in France. The liquid metal fluid is said, by the scientists responsible for carrying out the research, to offer a number of practical advantages in terms of performance over conventional chemical fluids used in hydraulic systems. The operation of a system using the new liquid metal fluid would depend on the use of special metal seals. Operating pressures which are being investigated range from one thousand pounds per square inch up to six thousands pounds per square inch. Although the work is still at an experimental stage, tests carried out so far are said to indicate that considerable commercial possibilities exist for the new materials in aircraft and other industrial applications.

Novel Wood Preservative

The foresight of a Scottish firm of timber merchants (Celcure and Chemical Company Ltd.), who, in 1928, saw the need for scientific research, has led to the development of a range of fire-retardant wood preservatives which are now in use in many parts of the world. This side of the business became so important that a subsidiary company was formed. The latest product, which is pressure-impregnated by a special process, is claimed to give complete protection against fungous and insect attack as well as to be flame-retardant.

This is claimed to be an important development for the timber industry, especially at a time when new factory-building regulations are requiring thermal insulation. In addition to the flame-retar-

dant preservative, which is applied under pressure, the Company has developed a flame-proof coating for application by brush or spray.

Drying Plastics

X-Ion Products, of 48, Gillingham Street, London, is marketing a dryer for granular plastics material which consists basically of a cylindrical basket through which electrically heated air is blown. Drying of the materials, which is an essential prelude to the injection moulding or extrusion of many plastics materials, including nylon, is claimed to be effected more quickly and economically than with some conventional drying equipment. The dryer is thermostatically controlled, and use of a second basket enables operations, it is stated, to be made continuous. Its principle is in contrast to some conventional equipment in which granules of material are distributed on a number of shelves prior to drying.

Flexible Plastic

Plastic material that will bend without breaking at temperatures as low as 50 degrees Fahrenheit below zero is now possible by the use of new plasticisers. They are phosphorus-containing compounds called dialkylphosphonates and are made from inedible animal fats. About 35 per cent. by weight of the materials, when added to polyvinyl chloride, is said to keep it soft and flexible, even at between minus 35 and minus 50 degrees Fahrenheit. The plasticisers escape at a much lower rate than any other known low-temperature plasticisers, it is claimed. Uses for the improved plastic are said to include wire coatings, automobile seat covers, galoshes and other protective clothing and articles exposed to a wide range of temperatures. They may also have an important application as lubricants and hydraulic fluids.

Nylon Containers for Liquid Storage

Collapsible containers for the bulk conveyance and storage of liquids such as water, petrol, and diesel oil are now being produced by the Dunlop Rubber Company in Manchester. They can, it is stated, be made to a variety of dimensions to give capacities of as much as 50,000 gallons. The containers are made of nylon fabric, coated on the outside with neoprene, a weather-resistant synthetic rubber, and on the inside with one of several synthetic rubbers according to their contents. When full, the containers are stable in shape (resembling a large pillow) and, in transit, may be secured with roped tarpaulins or by a special nylon harness. They can be folded into compact, flat form when empty and cleaned and sterilised with boiling water without adverse effects.

(THIS IS AN ANNOUNCEMENT TO THE MEMBERS AND NOT A PROSPECTUS AND NEITHER AN INVITATION TO THE PUBLIC OR ANY SECTION OF THE PUBLIC FOR SUBSCRIPTION OF SHARES)

ORISSA CEMENT LIMITED

(A NATIONAL ENTERPRISE UNDER THE PATRONAGE OF THE GOVERNMENT OF ORISSA)

(a) AUTHORISED CAPITAL	Rs. 5,00,00,000
Divided into	
(i) 1,00,000 shares of Rs. 100/- each termed as Preference shares. (ii) 40,00,000 shares of Rs. 10/- each termed as Ordinary shares.	
(b) PRESENT SUBSCRIBED AND PAID-UP CAPITAL	Rs. 1,90,00,000
Divided into	
40,000—4½% Cumulative Preference Shares of Rs. 100/- each	Rs. 40,00,000
15,00,000—Ordinary Shares of Rs. 10/- each	Rs. 1,50,00,000
(c) FURTHER ISSUE OF CAPITAL	Rs. 75,00,000
Divided into	
7,50,000 Ordinary shares of Rs. 10/- each offered at par as a renunciable Right only to the Registered Shareholders whose names appear in the books of the Company as on 30th September, 1959. Full value of the shares is payable on application. The new shares shall be entitled <i>pari passu</i> with existing paid-up capital to participate in dividend for the accounting year 1959 and thereafter.	

CAPITAL ISSUE CONSENT

The consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company at Raipur, Orissa. IT MUST BE DISTINCTLY UNDERSTOOD THAT IN GIVING THIS CONSENT THE GOVERNMENT OF INDIA DO NOT TAKE

ANY RESPONSIBILITY FOR THE FINANCIAL SOUNDNESS OF ANY SCHEME OR FOR THE CORRECTNESS OF ANY OF THE STATEMENTS MADE OR OPINIONS EXPRESSED WITH REGARD TO THEM.

DIRECTORS:

- (1) SRI JAYDAYAL DALMIA (Chairman).
- (2) SRI KAMALNAYAN BAJAJ.
- (3) SRI MOHANLAL GOENKA.
- (4) SRI B. VENKATARAMAN, I.A.S. (Nominee of the Government of Orissa).
- (5) SRI S. VENKATARAMAN (Nominee of Industrial Finance Corporation of India).
- (6) SRI NIHAR CHANDRA ROY (Technical Director).
- (7) SRI VISHNU HARI DALMIA.

The Registered Shareholders as on 30.9.1959 can also apply for additional shares on special application form the allotment of which will be at sole discretion of the Directors out of the unsubscribed shares by Right holders, if any. The last date for receiving application by the Company's Bankers or by the Registered Office against Right shares is 31st October, 1959. The application for additional shares can be made only to the Registered Office of the Company by 31st October, 1959. Fractional Share certificate application can be made only to the Company upto 10th November, 1959.

The Letters of Right and forms of additional share application along with circular of instruction will be posted to all shareholders in such time so as to reach them by 14th October, 1959, along with Dividend Warrant for the accounting year 1958. If any person does not receive these forms in time he should immediately send a complaint to the Company with a request to send him duplicate forms giving an undertaking that if originals are received one set will be returned to the Company unutilised.

WORKING RESULTS

The Company's working results for the last seven years are given below.

Year	Gross block including construction in progress at cost.	Cement production	Refractories production including mortar.	Gross profits before Depreciation, Development Rebate and Managing Agents' Commission.	Depreciation and Development rebate provided.	Dividend per ordinary share.
	Rs.	Tons	Tons	Rs.	Rs.	Rs. n.p.
1952	1,67,78,559	1,32,711	..	24,93,933	63,87,124	..

ORISSA CEMENT LIMITED

NINTH ANNUAL GENERAL MEETING

MR. J. DALMIA FEELS THAT THIRD PLAN TARGET FOR CEMENT IS TOO HIGH

ADDRESSING the Ninth Annual General Meeting of Orissa Cement Ltd., held at Rajgangpur, Orissa, on 30th September 1959, Mr. J. Dalmia, Chairman, expressed the view that, even with reasonable optimism about the increase in cement demand, it was not possible to justify the proposed target of 35 million tons of cement production for the third Five-year Plan. He, therefore, suggested that the industry should be consulted before the Plan is given final shape.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"I welcome you to the ninth annual general meeting of your company. It is a matter of great pleasure that every year we meet once on this occasion to review the working and progress of the Company. The accounts for the year 1958 have been circulated. The Directors' report which accompanies the accounts, gives a brief review of the main features of the working of your Company during the year under report. I need not discuss them, and with your permission, the accounts and the report will be taken as read. I am sure you will regard with satisfaction the working results of your Company for 1958.

Demand Rising

"The production of cement in the country is gradually rising. The plant at Satna in Madhya Pradesh has gone into production. Some other plants are in advanced stage of construction. The expansion programmes of existing factories are also in progress. By 1961 the installed capacity is estimated to touch 9.95 million tons. The demand for cement, which had greatly slackened last year and had entailed curtailment of production, is showing signs of improvement. It is, however, difficult to say how far this improvement would be maintained and keep pace with increasing production. In the case of your works, some difficulties are being experienced presently in maintaining full despatches, but I am hopeful that these will soon be overcome.

"The experience gained during the second Plan period should serve to underline the importance of setting realistic targets of investments and production. Failure to do so leads to lopsided development and can endanger the Plan itself. In the case of cement industry, the production target was revised and placed at 16 million tons. Last year, with an installed capacity of about 7.00 million tons, the industry was faced with the problem of disposal of stocks and several cement kilns had to be slowed down or even closed. As I mentioned earlier, the installed capacity at the end of the second Plan period, it is now estimated, will be 9.95 million tons, as against the target of 16 million tons. The explanation sometime given is that the setback in cement consumption has resulted from shortage of steel and slowing down of various Government projects. This may be true. But in planning all these factors have to be anticipated to a reasonable extent.

Cement Target

"I am surprised, therefore, to learn that a target of 35 million tons cement production is being contemplated for the third Five-year Plan. This would mean a 250 per cent. increase over the capacity which will have been installed by the end of the second Plan period, and will require an additional investment of the order of about Rs. 250 crores. I do not think that, even with reasonable optimism about the increase in cement demand, it is possible to justify the proposed target. I suggest that the industry should be consulted before the plans in this respect are given a final shape. I would also urge that expansion in the capacity should be carefully planned to take place in areas where demand potentials exist or are anticipated.

"In spite of the enactment of the Central Sales Tax Act, the difficulties and uncertainties of sales tax levies have not been fully resolved. Sales Tax Officers of the States come forward with all kinds of ingenious interpretations and

spare no effort to tax even inter-State sales. Recently, the Government abolished sales tax on a few commodities substituting the same by additional excise duties. I would request the Government to extend this system to the cement industry also. Excise duty is already being recovered on cement. The duty can be suitably increased and the additional revenue distributed among the States on any agreed basis. This would stop evasion of sales tax payment as well as double imposition in certain cases. The process of recovery will also be simplified. This suggestion is a convincing example to show that people do not mind paying the taxes if legitimately assessed and recovered.

Illegal Strike

"This year, we have sent a brief note to you about the labour situation at Rajgangpur Works. The strike which was started in March this year lasted for over four months and was ultimately called off unconditionally. The strike was both illegal as also in violation of the Code of Discipline in industry. This Code was accepted by common agreement at the Sixteenth Indian Labour Conference and it is intended to ensure better discipline and peace in industry. Under the Code, certain obligations have been cast upon both management and trade unions. As the Code has no legal sanction and depends for its success on the extent to which it is observed and enforced by the parties, it was agreed by the central organisations of management and trade unions that they would without hesitation censure any violation of the Code on the part of their constituent members. The Central Labour Minister, Shri Gulzarilal Nanda, who sponsored the idea, is also very keen on the acceptance and adherence to the Code. In practice, however, it would appear that the trade unions show scant regard for the Code and their central organisations appear none too anxious to discipline their member unions. Even though the strike at Rajgangpur was prolonged and accompanied by several violent and disruptive activities, it is to be regretted that the central organisation, to which the trade union concerned is affiliated, did not care to condemn the strike.

Piece-rate Wages

"Apart from being illegal, the strike was directed against the payment of wages on piece-rate basis, a system which directly benefits the worker himself, provided, of course, he is willing to do a fair day's work. Incentives were afforded for better outputs. In other words, the workers were given the opportunity to work more and earn more. The importance of relating wages to production both as a means of increasing productivity as also improving standard of living of the working class is being increasingly recognised in our country. At the Fifteenth Session of the All-India Congress Committee, one of the important resolutions stated:

'Wages and salaries should be increasingly dependent on work done and on production and should be related to the conditions existing in India.'

"More recently, the Planning Sub-committee of the A-I.C.C. while dealing with the third Five-year Plan, has observed that 'wages must be linked to productivity. Norms of productivity should be laid down and incentives (such as piece-rates) should be offered to workers to increase their productivity.' The Central Wage Boards set up by the Government of India for some of the major industries in the country have also been specifically asked to bear in mind while recommending a wage structure, the desirability of extending the system of payment by results.

Outside Elements

"No sensible person having the good of workers at heart can possibly oppose the piece-rate system of wage payment which, as I have shown, is beneficial for the worker and accords with national planning and the drive to increase productivity. But, we have often seen, how outside elements forget the interests of the workers and in their selfishness and arrogance, create

discord between labour and managements. The earlier association of outside elements with trade unions is prohibited, the better it will be for the healthy growth of trade union movement in our country and cordial labour-management relations. At the Seventeenth Indian Labour Conference held at Madras in July 1959, this question came up for consideration, but I regret to find that the Conference, allowed status quo to continue, in spite of the recommendation in the second Five-year Plan that a decline in outsiders managing trade unions should be encouraged. A letter which we have received from a shareholder is typical of the reaction in the public mind to the activities of these outside elements in the trade union movement:

'You have done well to distribute with it the leaflet exposing the reprehensible activities of the Company's Mazdoor Sangh and its President. As stated in the leaflet, the latter appears to have incriminated himself more than once, and unless stern and deterrent action is taken at a suitable opportunity against the President, who, according to you, is at the bottom of all the mischief, the Sangh may prove a real menace to the working and prosperity of the Company.'

"As mentioned in the Directors' report, in spite of the long strike, production practically remained unaffected. There are instances, however, in the country of serious losses of production resulting from illegal strikes. In the interests both of discipline and greater and efficient production, illegal strikes should be put down with a strong hand. Those instigating or participating in such strikes should not only be prosecuted but should also be required to pay adequate compensation to the employers for the losses suffered by them as a result of such strikes. Unless this is done, there will be no curb on these undesirable and irresponsible activities which are undermining industrial peace. I am glad that the arbitrators in the recent case of Rohtas Industries Ltd. awarded Rs. 6.90 lakhs to that Company as compensation against the workers for the losses arising from an illegal strike. The arbitrators, who were former members of the Labour Appellate Tribunal, have given a bold decision recognising for the first time that employers, too, need to be protected against the misguided activities of trade unions.

Refractory Industry

"Since I addressed you last year, the refractory industry, under the impact of the increasing demand for high quality and special refractories, has come to realise the need to gear itself to meet the requirements of India's rapidly expanding steel industry. The necessity has been recognised not merely of expansion but of developing and maintaining a positive advance on the technological front. Your Company is fortunately placed in this regard, plant, a certain measure of flexibility which can permit of progressive steps being taken to improve its manufacture and to diversify its scope of production.

"Simultaneously there has been an appreciation of the importance of standardising, as far as possible, the different specifications adopted at the moment by various units in the steel industry for certain refractories so as to allow the refractory industry to cater more effectively to these requirements. It is to be hoped that close collaboration in this field between the steel industry and the refractory industry will lead to a solution of certain problems to their mutual advantage and to ultimate benefit of the country.

"I am glad to inform you that normal conditions now prevail at Rajgangpur Works and I hope this will continue bringing prosperity to all, including the workers.

"I must express, on your behalf and on my own, our thanks and appreciation to the executives, staff, and workers who have worked loyally through the year. It is due to their determined efforts that, despite serious and sometimes dangerous attempts to disrupt it, production was maintained.

N.B.—The above content of the speech does not purport to be the report of the proceedings of the ninth annual general meeting of the Company held on the 30th September 1959.

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN, MR. K. R. K. MENON'S

REVIEW OF PROGRESS

SUBSTANTIAL FOREIGN CURRENCY LOAN WANTED

DESPITE the marked rise of nearly Rs. 29 lakhs to Rs. 115.75 lakhs in interest payments, the net profit of the Industrial Finance Corporation of India for the year ended 30th June 1959 was higher by Rs. 7.17 lakhs at Rs. 35.37 lakhs as compared with the previous year. Characterising this position as "very satisfactory," Mr. K. R. K. Menon, Chairman of the Corporation, declared, in his speech at the Corporation's Eleventh Annual General Meeting held at New Delhi on Saturday, 26th September 1959, that the resources position so far as internal finance was concerned might be said to be comfortable. But the real difficulty in the matter of going ahead with the Corporation's normal function of granting long-term industrial loans, Mr. Menon pointed out, had been lack of foreign currency funds. The solution to this difficulty, in his opinion, lay undoubtedly in the Corporation being enabled, through the good offices of the Government of India, to obtain a substantial foreign currency loan from such financial institutions as the World Bank or from Government-sponsored organisations such as the U.S. Development Loan Fund.

The following is the text of the Chairman's speech at the meeting:

"GENTLEMEN,

"I have pleasure in placing before you the annual accounts of the Corporation and the report of the Board of Directors for the year ending 30th June 1959. Printed copies of the accounts and of the report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read.

"You will observe that, in the year under report, our net profit, after making a provision of Rs. 37.71 lakhs for taxation, amounted to Rs. 35.37 lakhs, as against Rs. 28.20 lakhs of the previous year, even though the interest charges that we had to pay on our loan funds increased from Rs. 86.85 lakhs to Rs. 115.75 lakhs. This very satisfactory position has enabled us to enhance the amount of repayment to the Central Government on account of the subvention received from them in past years for payment of our guaranteed dividends, from Rs. 5.45 lakhs, as it was last year, to Rs. 10 lakhs this year, bringing down our net liability to Government on this account to Rs. 38 lakhs. We have also transferred a sum of Rs. 14.12 lakhs to our general reserve fund this year, as against Rs. 11.50 lakhs transferred last year, resulting in this fund now standing at a little over Rs. 31 lakhs.

Other Satisfactory Aspects

"Some other aspects of our working have also been equally satisfactory. First, our gross income exceeded Rs. 2 crores in the year under report, registering a substantial increase from the previous year's figure of Rs. 1.55 crore, and of Rs. 0.96 crore of the year prior to that. Secondly, the percentage of defaults in the payment of instalments of principal declined from 6.1 in the year 1957-58 to 5.4 in the year under report, and, even in the case of those very few concerns which did default, none of these defaults has been of a nature which has led us or our auditors to consider it necessary to make any fresh provision for bad and doubtful debts in our accounts for the year under report. Thirdly, the percentage which our administrative expenses bore to our gross income in the year 1955, namely, 15.65, has come down to 5.11 in the year under report. Fourthly, the pace of disbursement of loans has continued to remain at the high rate which has been a noticeable feature of the previous two years' working, and interim loans continued to be granted in appropriate cases to a liberal extent.

"Shareholders will no doubt have also noted with satisfaction the very warm response that came from investors to the issue of our bonds in the course of the year. Our resources position, so far as internal finance is concerned, may now be said to be comfortable, but, as and when money market conditions become easy enough to justify our going in for the issue of more bonds, we shall do so in order that we may be able to meet the demands likely to be made on us during the remaining portion of the second Plan and the third Plan period.

"Internal resources, by themselves, have, however, not proved to be a solution to our real difficulties in the matter of going ahead with our normal function of granting long-term industrial loans. Our main difficulty in this matter has been lack of foreign currency funds to meet the situation created by the stringent measures that have had to be introduced by Government during the last couple of years, curtailing the import of capital and other goods from abroad. During this period, we have found that only such industrial concerns as could at least hope to get the necessary import licences from Government, in spite of the severe restrictions imposed in regard thereto, applied to us for long-term loans and, in the result, there was a steep fall in the number of loan applications from 48 of the previous year to 26. The total amount of loans sanctioned in the year also registered an even steeper decline, going down to Rs. 3.79 crores from Rs. 7.79 crores of the previous year. Applications for loans to the tune of Rs. 6.15 crores had to be withdrawn by the applicants concerned in the course of the year, as they could not obtain the necessary import licences which they had hoped to get. In addition, we had on hand at the end of the year loan applications aggregating Rs. 6.30 crores which it had not been possible to take up for scrutiny for want of the requisite import licences which were still awaited by the respective applicants.

The Solution

"The solution to this difficulty lies undoubtedly in our being enabled, through the good offices of the Government of India, to obtain a substantial foreign currency loan from financial institutions like the World Bank or from Government-sponsored organisations like the Development Loan Fund of the U.S.A. We had applied for a loan from the World Bank, but, I regret to say, we have had no success so far. Another proposal that we have recently put to the Government of India is one which will, if it materialises, enable us to participate in the current scheme for the utilisation of the dollar credits placed at the disposal of the Government by the Export-Import Bank of the U.S.A. This scheme, which is now under active consideration by Government, has the advantage that, unlike in the case of deferred payment arrangements, it does not relieve the applicant industrial concern from the necessity of raising the rupee equivalent of the foreign currency portion of the finances required for its scheme. This is specially important, as internal credit institutions like ours have now the means at their disposal for assisting intending applicants with the necessary rupee finance to enable them to obtain foreign currency credits placed at Government's disposal by the Ex-Imp Bank, Development Loan Fund and other such bodies. The proposed scheme involves the acceptance by us of a somewhat smaller margin for our loans, but it is hoped that, in view of the considerable advantage which will accrue under this scheme, Government's approval to this proposal will soon be forthcoming.

"Though, as I have said, lack of foreign currency funds has proved to be a very serious handicap to us in the matter of sanctioning fresh loans, shareholders will, I hope, have noted with satisfaction, from the report before them, that we have commenced making fair progress in a comparatively new line of activity, namely, underwriting of issues in the share market. This augurs well for the future, inasmuch as our success in this new line should enable us eventually to play the fully effective role in industrial financing that institutions like ours fulfil in most other countries.

"Though the particular preference issue that we underwrote in the year under report was oversubscribed, we have not been unmindful of the fact that, in the event of our having been left with any shares, we could not have held them, under a provision which exists in the I.F.C. Act, for more than seven years without the prior permission of the Central Government. This provision, coupled with the fact that we are not authorised, under the I.F.C. Act, to invest directly in the equity or preference capital of any industrial concern has meant the closing to us of a profitable line of

investment for our surplus funds. This has particular significance now in the context of the current difficulties that I have mentioned we are experiencing in the matter of investing our funds in direct loans. A possible solution to this lies in our being enabled to participate in the equity and preference share capital of approved industrial concerns through direct subscription as well as through the exercise of conversion rights. This matter is being examined by me.

"Another comparatively new field of our activities has been the guaranteeing of deferred payments, on behalf of industrial concerns, to foreign manufacturers of capital goods. In the context of the increasing restrictions which have had to be imposed by the Government of India on the issue of cash import licences, this should ordinarily have proved a fruitful field for assistance by us. We have a fair number of applications on hand at present, but, judging from the number of fresh applications coming in, it looks as though we cannot look to this particular line of activity for any considerable expansion in the near future. This is due no doubt to the restrictions that are being imposed by Government on the issue of import licences based on deferred payment terms referred to by me earlier, in view of the cumulative strain that is likely to be caused thereby on our foreign exchange position a few years hence.

"I am glad to say that, taken by and large, most of the concerns which we have financed did extremely well in the quantum of production as well as sales during the year under report. Quite a number of them made very handsome profits too during the year, and were not only able to declare dividends, with our prior permission, in excess of the standard rate of 6 per cent. but also to make successful appeals to the investment market. Shareholders will no doubt have read with interest the review that we have given in an appendix to the annual report of the progress made in the course of the year by the various industries to which we have advanced loans. It is gratifying to note that, generally speaking, most of these industries have thrived, and that the particular units of these industries, whom we have assisted with loans, have contributed their share to making the picture of the industry as a whole as rosy and hopeful as it is.

Assistance to Co-operatives

"Loan assistance to co-operative societies has been a marked feature of our activities during the past four years, and, in the year under report, a sum of as much as Rs. 1.70 crore was accounted for under this head, out of a total amount of Rs. 3.79 crores sanctioned. Our sanctioned loans to co-operative societies alone upto the end of the year under report aggregated Rs. 14.94 crores, out of a total of Rs. 66.69 crores. This sum is distributed among 28 societies all of whom, except one, are engaged in sugar manufacture. Out of the loans we have sanctioned to 27 sugar co-operatives, 24 have already been, or will in due course be, guaranteed jointly by the Central Government and the State Governments concerned. Sixteen out of these 24 societies have actually started manufacturing. We have been conducting periodical inspection of these factories and of their accounts, and we have kept the guarantor Governments fully informed of any special features, in connection particularly with their management and finance that have come to our notice and which we have considered merited the attention of the Governments.

"Industry-wise, the most significant advances in the course of the year under report were made in the sugar and cement industries, these two together accounting for as much as 67 per cent. of the total amount of loans sanctioned in the year. In the case of sugar, the entire amount of loans sanctioned in the year under report was for co-operative societies.

"It is my very pleasant duty, before I conclude, to convey my hearty thanks to my colleagues on the Board of Directors for their very valuable co-operation and wise counsels. Our thanks are also due to the members of our Advisory Committees and also to the non-officials who have functioned on the Boards of our loanee concerns as our nominees for their unflinching assistance and advice. Finally, I have also great pleasure in conveying the thanks of the Board of Directors, as well as my own, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part."

THE GENERAL ASSURANCE SOCIETY LIMITED

MR. B. L. JALAN ADVOCATES HEALTHY CO-OPERATION AMONG INSURERS MINIMUM INCREASE OF TEN PER CENT PER ANNUM IN BUSINESS URGED

ADDRESSING the Annual General Meeting of the General Assurance Society Limited, held at Calcutta, on Wednesday, 30th September 1959, Mr. B. L. Jalan, Chairman of the Company, reviewed the main trends in the economy of the country and pointed out that general insurance business did not expand at a rate commensurate with the rise in industrial production and national income. He suggested that the insurance trade should set for itself an increase of ten per cent. per annum in the volume of business as the minimum target. Mr. Jalan called for mutual co-operation and understanding in the industry and proposed the introduction of some kind of collective self-control to ensure healthy and smooth functioning of the trade.

The following are extracts from Mr. Jalan's address:

GENTLEMEN,
"On the economic front, better and more stable conditions have returned in the world markets and particularly in the United States. While the steel strike has been prolonged, the U.S. economy presents all the signs of good health and vigour. The aggressive and extra-economic market manoeuvres by the Chinese continue but have subsided a little. It may be recalled that the earlier claims of a very spectacular advance both in agricultural and industrial production have been recently discounted officially by the Chinese authorities. How the earlier estimates were arrived at remains a mystery behind the iron curtain. Nevertheless, the new pattern of tactics of the Communist countries to disturb and weaken free economies should be recognised.

"Consistently with the current situation in the world markets, the position of our cotton and jute textile industries has also improved. But the export position does not seem to have improved to the desired extent. Thus, while despatches for exports of jute goods from the mills have improved, they were still low at 91,397 tons in July 1959, as compared with 102,087 tons in July last year. The cotton textile exports improved from 278 million yards in the first half of 1958 to 309 million yards in the same period of this year. If the present improvement is maintained it is expected that exports of cotton textiles will reach a figure of 700 to 750 million yards, as against 587 million yards in 1958. It will still be low, however, as compared with 840 million yards of exports in 1957.

Export Promotion

"The per capita availability of cotton textiles in the country increased by about a yard during the last five years owing to increased production and fall in exports, offset to a small extent by the rise in population. The problem of economic disposal of increased domestic supplies became acute owing to rise in food prices and the consequent fall in the surplus purchasing power available for clothing, etc. While the efforts of the Government in aiding the jute and cotton textile industries to modernise the mills must be greatly appreciated, one would feel that more effective steps will have to be devised to increase the export potential. I would venture to suggest that conditions should be created so that every mill should be able to export at least 10 per cent. of its production, while others which are exporting more are further encouraged. We should achieve the minimum export target of 1,000 million yards a year. Increased exports will help to keep up internal prices by reducing domestic supplies and thus the industry will continue to function in an atmosphere which would ensure prosperity. Exports could be encouraged directly by granting extra quotas for imports of better varieties of cotton, essential stores of the industry or even other commodities against increased exports of individual mills. It is only through increased exports that we would be able to rehabilitate the industry fully and at the same time help cover the country's overall foreign exchange requirements.

"It is indeed, a disquieting feature of our economic operations that while, as a consequence of very substantial restrictive measures,

our imports have shown a downward trend, exports are also declining. While during the last three quarters of 1958-59, the payments position has slightly improved, thanks to the generous credits made available by the World Bank and certain friendly countries, the foreign assets of the Reserve Bank at Rs. 213 crores at the end of March, 1959, had decreased by Rs. 54 crores from Rs. 267 crores at the end of March, 1958. The improvement in recent months has been very negligible and unless the export position improves very substantially, we will have to secure external assistance on a much larger scale as otherwise serious shortages would be created within the country. This is not a happy position in view of our expanding economy. In the face of rising money incomes, shortages would lead to a rise in price levels. At the same time, these will act as a great damper on our industrialisation programmes.

Foreign Exchange Situation

While we are committed to the objective of a more ambitious industrial advance, we should frankly confess that many industrial projects had to be abandoned or postponed owing to non-availability of foreign exchange. A proposed industrial project today has to prove—and prove to the satisfaction of the administration—that it would not involve foreign exchange commitments for a given period and that during the subsequent period it would do so under given limitations. We are fully aware of the absence of producer goods industries in the country. A new industrial project has, of necessity, to depend invariably on foreign supplies of capital equipment and technical know-how. These supplies, it must be recognised, do involve foreign exchange payments, partly now, partly after some time. I am not suggesting or even indirectly implying that these controls are unnecessary or redundant. All that is intended to be expressed is that such conditions are not propitious for an expanding economy and in the context of bolder industrialisation programmes. Let us hope that with better food production, a more tactful handling of the food supply situation and commissioning of the new and expanded steel plants supported by subsidiary machine building and fabrication industries, the position will greatly improve and that conditions will be created so that any proposal acceptable within the framework of the Plan or Plans will not be turned down only because of foreign exchange shortage.

Bold Approach to Problems

"There cannot be two opinions about a bold approach to our problems of industrial and economic growth. The principal points at issue are as to how the requisite resources are to be raised, how they are to be channelled into desired directions and how optimum allocations are to be made between various sectors of the economy. I am afraid while a lot of attention has been paid to certain overall estimates of outlay, the more vital questions of methods of mobilisation of resources have been rather overlooked. There is also too much debate, less warranted than ever before, on the talk of comparative value of different sectors of the economy. This emphasis has generally led to unnecessary and avoidable controversies on vague ideas about the functioning of this or that sector. An attempt has also been made to see that targets fixed for one sector are fulfilled at any cost irrespective of its effects and impacts on other sections of the economy. Thus while the targets for additional revenues through taxation have been exceeded, there have been shortfalls in other sources. The increased doses of taxation have been imposed at a time when major industries of the country were facing crises. I wonder if at this stage it may be possible for us to learn from the economic experiment of Western Germany which achieved such spectacular revival in so short a time. In spite of its wholesale devastation during the war, Western Germany today is by far the strongest economy of West Europe and has emerged as a capital exporting country. This near-miracle has been achieved by Dr. Erhard's policies of restrained administrative expenditure, increased revenues

through lower rates of taxation on expanded production achieved with the aid of economic incentives and fuller and free play of competitive forces and supply of easy industrial finance. While I admit that conditions as prevailing in India today would not be propitious for adopting the German system in its entirety, there does not seem to be a plausible alternative to its basic approach if our desired objective is to achieve an accelerated rate of growth under stable conditions.

General Insurance

"Coming to our own general insurance industry, one has the uneasy feeling that much remains to be improved. A glance over the *Indian Insurance Year Book*, published by the Controller's Office only early this month, shows that the business has not been expanding at a rate which would be commensurate with the increase in industrial production and in national income in the country. Between 1951 and 1957, the gross business in India of all insurers, Indian and non-Indian, increased by less than Rs. 4 crores or by 16 per cent. only while industrial production and national income rose by 37 and 20 per cent. respectively. One would certainly expect that the rate of business in insurance should have far surpassed the rate of growth in the economy owing to adoption of more progressive and modern methods in business and industry and spread of education and social consciousness. I believe that an average annual rate of 10 per cent. increase in volume of business is the minimum target the industry must set for itself. With increasing cost in consequence of more liberal terms granted to employees, voluntarily, as a matter of collective bargaining or by way of liberal awards, it is essential for economic operations of the industry that such rate of increase in business should be secured.

Code of Conduct

"It is also necessary, one would feel, that a stage has come when an assessment should be made of the results achieved by the new Code of Conduct promulgated by the General Insurance Council. I understand that the insurers have generally followed the code. The question which, therefore, arises is, whether the code has achieved the results for which it was introduced. The consensus of opinion is that the same chaotically competitive conditions continue to prevail in the industry today as they did before the new code was enforced. This is a serious question as many marginal insurers are passing through a period of uneasy suspense. How things have deteriorated would be at once evident from a comparison between the rates of marine insurance in 1950 and in 1959. These are also reflected in the consequent deterioration in the claims experience in marine business of all companies, big or small.

"I wonder why this kind of wild competition should not give way to mutual co-operation and understanding in the industry. Such co-operation is not unknown to private business; even in our country, the industry has not hesitated to transfer control and direction of essential functions of individual units to collective guidance. Why can't we follow the example of the working time agreement in the Indian jute and hydraulic press industries and introduce some kind of collective self-control? To me, it appears, that is only such kind of self-government which can ensure healthy and smooth functioning of this industry."

Note: This does not purport to be the proceedings of the annual general meeting.

EXEMPTIONS FROM STATE INSURANCE ACT

The Government of Bombay has exempted the factories situated in the areas in which provisions of chapters IV and V of the Employees' State Insurance Act, 1948, are in force and which are exclusively engaged in one or more of the following manufacturing processes, namely, re-drying unmanufactured leaf, tobacco, rice-milling, cold storage, salt manufacture and oil mills, or connected with any of these processes, or in any other manufacturing process carried on in a seasonal factory, from the operation of the Act, except Chapter V-A thereof, for the period of one year which commenced from 1st October 1959. Chapter IV of the Act, it may be noted, relates to contributions by employers and employees and Chapter V to benefits to employees, while Chapter V-A contains transitory provisions.

In the case of oil mills, however, the exemptions are subject to the condition that the process of oil milling should be subsidiary to any other manufacturing process which is seasonal and the number of employees engaged in oil milling should be less than 50.

of
Management Executives

Vaswani Mansion,
Dinsha Wacha Road, Bombay-1.

I congratulate Mr. K. S. Gupta, Director, Bombay Labour Bureau and his able colleagues for embarking upon a monumental venture—National Directory of Management Executives—ever published in the country. Written in simple, straight-shot, strong man-to-man style, it is a unique standard book of reference which nobody who is somebody in the domain of Industry and Trade could afford to miss. It deserves to be possessed by all company executives, business-houses, industrial undertakings, trade associations in India and abroad.

THIS IS ONLY AN ANNOUNCEMENT REGARDING ISSUE OF PROSPECTUS AND NOT A PROSPECTUS.

No subscriptions are invited on the basis of this Announcement. Intending subscribers are requested to obtain from the Registered Office of the Company or any one of the Bankers or Brokers referred to hereunder, copies of the Prospectus to which are attached forms of application. A formal Prospectus has been filed with the Registrar of Companies, Bangalore. Some of the particulars contained in the Prospectus are set forth hereunder.

Consent of the Central Government has been obtained to this issue of Capital by an order of which a complete copy is open to Public Inspection at the Registered Office of the Company. It must distinctly be understood that in giving this consent the Government of India do not take any responsibility for the financial soundness or for the correctness of any of the statements made or opinions expressed with regard to it.

A Licence has been obtained from the Central Government for the establishment of this new Industrial undertaking of which a complete copy is open to Public inspection at the Registered Office of the Company. It must distinctly be understood that in granting this Licence the Government of India does not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Applications have been made to the Madras Stock Exchange and to the Bombay and Delhi Stock Exchanges for permission to deal in the whole of the issued Preference and Equity Shares and in due course for an official quotation.

The list for Public Subscription will open at 10-30 a.m., on Monday the 12th day of October 1959, and will close on Saturday the 24th day of October 1959.

OBJECTS—The Company was incorporated on 7th November 1957 to set up in Mysore State a Paper Mill having an initial production capacity of approximately thirty-five tons per day and to carry on the business of manufacture of high grade writing and printing paper. The main objects of the Company are contained in the Company's Memorandum of Association which is open to inspection at the Registered Office of the Company.

The balance of Rs. 50 in respect of Redeemable Preference Shares and Rs. 5 in respect of Equity Shares, is payable in such calls as may be determined by the Board of Directors, provided that no calls shall exceed one-fourth of the nominal amount of the Shares and there shall be an interval of at least three months between each call.

The Government of Mysore have given an undertaking to the Company that they would apply for and take up forthwith such portions of the unsubscribed balance of the Equity Share issue of the Company not exceeding Rs. 39,79,270.

The entire issue of 59,987 7 per cent. Tax-free Redeemable Cumulative Preference Shares of Rs. 100 each is underwritten as hereinafter referred to.

RIGHTS OF REDEEMABLE CUMULATIVE PREFERENCE SHARES

The said Redeemable Cumulative Preference Shares shall confer on the holder thereof the right to receive, in priority to Equity Shares, in the Capital of the Company out of the profit of the Company from time to time, determined to be distributed a fixed Cumulative Dividend at the rate of seven per cent. free of Income-tax per annum, on the Capital paid thereon and also the right in a winding-up of the Company in priority to all Equity Shares, to repayment of Capital paid thereon together with the Preference Dividends down to the date of commencement of winding-up, whether accrued or declared or not, but shall NOT confer any further right to participate in the profit or assets. The Preference Shares are redeemable at par at the expiry of fifteen years from the date of allotment.

PROSPECTS—India's present per capita consumption of paper is less than 2 lbs. as against 384 lbs. in U.S.A., 165 lbs. in U.K., 150 lbs. in Sweden and 46 lbs. in Japan. The Planning Commission has estimated the annual demand for paper and paper-board by the end of the Second Plan 350,000 tons. Even with the record production of paper and boards of 250,000 tons in 1958, the need for additional production is obvious. The demand for paper is bound to increase still more during the Third and subsequent Plan periods.

SITE—The Paper Mill will be located near the Krishnarajasagar Dam (Mysore State). The site is adjoining Bangalore-Krishnarajasagar Road and Mysore-Belagula-Mercara main road as well as Mysore-Arsikere railway line.

RAW MATERIAL—High Grade printing and writing papers will be produced using sugarcane bagasse as the primary raw material. Ample quantities of bagasse will be made available at the proposed paper mill by the Mysore Sugar Company, Ltd., Mandya, which yields about one lakh tons of bagasse annually.

PLANT AND MACHINERY—Negotiations have been completed for purchase of first-class, modern equipment and technical services, from Messrs. Parsons and Whittmore, Lyddon Organisation, New York, London, Paris and their Associates and start-up of the Paper Mill and have guaranteed the performance of the plant. In addition Organisation has subscribed Rs. 62,41,500 to Equity Capital, and shares of the face value of Rs. 100 each have been allotted to them in full.

MANAGING AGENTS—With the consent of the Central Government, the Company appoints Messrs. Bedi & Co. Management Private Ltd., a Managing Agency Agreement effective from 2 October 1958.

NOMINATION OF DIRECTORS—The Government of Mysore, and the Mysore Sugar Company Ltd., are each entitled to nominate a Director to the Board of Directors by virtue of their holding in the Share Capital of the Company. The Industrial Finance Corporation of India is entitled to nominate a Director on the Board of Directors.

INTEREST OF DIRECTORS—Sardar Singh Bedi and Sardar Anup Singh Bedi

Mr. H. L. Nathan, Vice-President of Messrs. Parsons and Whittmore, are also Directors in the Managing Agency Company and as such are interested in the Managing Agency Agreement referred to above. Mr. H. L. Nathan is also interested as a Representative of Messrs. Parsons and Whittmore, who have agreed to supply the necessary plant, and machinery and Technical services to the Company.

Save as above, no other Director has any financial or any other interest in the promotion of the Company or in any other property acquired or proposed to be acquired by the Company.

CAPITAL REQUIREMENTS

	Rs.
Land and Buildings, etc.	24,90,000
Plant and Machinery (including freight, insurance, customs duty, erection, technical services, etc.)	2,90,62,000
Preliminary and Administrative Expenses upto start of production	14,70,000
Contingencies	14,78,000
Interest on Deferred Payments	37,00,000
Total Rs.	3,82,00,000

SOURCE OF FUNDS—The total requirements of Rs. 3,82,00,000 will be met as follows :—

	Rs.
(a) By the issue of Equity Shares	1,40,00,000
(b) By the issue of 7 per cent. Tax-free Redeemable Cumulative Preference Shares	60,00,000
(c) Through Deferred Payments arranged with Suppliers of Machinery	1,82,00,000
Total Rs.	3,82,00,000

ESTIMATE OF PROFITS—The Directors expect a substantial margin of profit after meeting establishment charges and Managing Agents' commission on the basis of the normal selling price of paper. The Company will enjoy the special benefits under the Income-tax Act as regards development rebate and depreciation and exemption from income-tax on profit up to 6 per cent. on the capital employed for the first five years of the Company's operation. The Company will not be liable to pay tax for the first three or four years of its operation, and that after providing for depreciation and preference dividends as well as deferred payments on machinery, etc., the Company expects to pay dividends after the first three years' operation of the plant. Copies of all the contracts, made with and by the Company, Memorandum and Articles of Association, Government consent for the issue of capital, Government permission for establishment of the Industrial Undertaking, etc., are all open to inspection at the Company's registered office.

UNDERWRITING—The entire Preference Share Issue has been underwritten, the names of the Underwriters and the number of Shares underwritten by them being as stated below :—

	Preference Shares of Rs. 100 each
The Industrial Credit and Investment Corporation of India Limited	30,000
Life Insurance Corporation of India	15,000
The Union Bank of India Limited	14,987
Total	59,987

The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their obligations.

UNDERWRITING COMMISSION—Underwriting commission at the rate of 2½ per cent. of the nominal value of the shares underwritten is payable to the Underwriters, The Industrial Credit and Investment Corporation of India Ltd., the Life Insurance Corporation of India and the Union Bank of India Ltd., respectively, in accordance with the terms and agreement contained in letters dated 22nd September 1958, from the said Underwriters and the Company's acceptance of each of them of the same date.

BROKERAGE—A brokerage at the rate of 15 nP. per Equity Share and Rupee one per Preference Share will be paid on allotments in respect of applications bearing the stamp of a Bank or a member of a Recognised Stock Exchange. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on allotments in respect of applications made or procured by them, provided that the relative forms of application bear their respective stamps.

Messrs. Harbans Singh Mehta & Co., New Delhi, and Messrs. Batlivala and Karani, Bombay, are the Managing Brokers of this Issue and will be in addition entitled to a brokerage of 50 nP. per Share, on 59,987 Preference Shares offered for Public subscription.

All applications for shares must be made on forms accompanying the Prospectus, copies of which may be obtained from the Registered Office of the Company or from the offices of the Company's Brokers, Bankers or Underwriters. The application form together with the remittance for the amount payable on application must be sent to the Registered Office of the Company at 4/3, Kensington Road, Bangalore 1, or any one of the Bankers of the Company at their Head Office or any of their principal branches.

DALMIA CEMENT (BHARAT) LIMITED

SPEECH OF MR. V. H. DALMIA

S.T.C.'S SURPLUSES COULD BE USED FOR SUBSIDISING EXPORTS

THE suggestion to take advantage of the considerable demand for cement in the neighbouring countries and step up India's exports by bringing down the export price was made by Mr. V. H. Dalmia, Chairman, Dalmia Cement (Bharat) Ltd. in the course of his address at the Seventh Annual Meeting of the Company held at Dalmiapuram on 30th September 1959. He added that surpluses earned by the S.T.C. could be used for subsidising the export of cement.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"I welcome you to the seventh annual general meeting of your Company. As evident from the audited accounts for the year 1958, the working results during the last year received a setback and the profit declined compared to the performance in 1957. The reasons for this decline have been explained in the report of the Directors which, along with the accounts, has already been circulated. During the current year, however, there is improved production and despatches in all departments. I am also glad to inform you that the installation of the third cement kiln is practically complete. Last year, I had indicated that the expansion will be completed in early 1960. The commissioning of the new kiln well ahead of the schedule is a matter of great satisfaction and the credit goes to the officers, staff and workers, whose sustained efforts has made this possible.

"For several years, we have been making efforts in collaboration with influential business friends in Japan to develop the export of very high grade iron ore from the rich and extensive deposits in your Company's mines in the Bellary-Hospet area. As you are, perhaps, aware, the exports of iron ore have since July 1956 been canalised entirely through the State Trading Corporation of India Limited and we have since then endeavoured to the best of our ability to assist the Corporation in such exports. As mentioned in your Directors' report, over one lakh tons of iron ore from our mines have been shipped since December 1958 to Japan and further orders are in process of execution. I would add that our efforts in this matter have been directed essentially towards a target for a long-term arrangement for the additional exports of high grade iron ore over a period of several years and thus towards the furtherance of foreign exchange earnings.

Manufacture of Dead Burnt Magnesite

"I made a mention last year regarding the plant which was then under installation at Salem for the manufacture of dead burnt magnesite. Your Company has entered this business by becoming a two-thirds partner in the firm Messrs. Dalmia Magnesite Corporation, which has undertaken this project. Orissa Cement Limited and Dalmia Cement Limited, two of the former partners of this firm, have retired from the partnership. I am glad to inform you that the plant went into production in January this year. Sales of dead burnt magnesite have commenced and supplies are being made principally to the steel and refractory industries. Some export has also taken place and efforts are being made to develop an export market with a view to possible expansion of the production by installation of a second kiln.

"The announcement about the revision in the ex-works price of our cement is overdue and is expected any time. The increase will not in any way affect the public selling price of S.T.C. When the new price is notified, we might be required to submit supplementary bills to the S.T.C. for the past period in case, as is likely, the increase is allowed by the Government with retrospective effect.

S.T.C.'s Profit

"In my speech last year, I had referred to the surpluses which are being earned by the S.T.C. over the sale of cement. The accounts for the year ended 30th June 1958 show a further surplus of Rs. 4.10 crores, which is reported to

have been remitted to the Government of India. These surpluses should be used for the benefit of the cement industry. We were told once that these amounts will be utilised on the development of national highways. Very little appears to have been done in this respect. These moneys should be available to subsidise the export of larger quantities of cement, which not only mitigate the problem of surplus production but also earn much needed foreign exchange. There is considerable demand for cement in the neighbouring countries, but we have to bring down our export prices if we are to compete in the world market and make headway. I hope every effort will be made to augment the exports of cement. You will be glad to know that your cement is being regularly exported to Ceylon and has established a distinct reputation for itself in that country.

Income-tax Assessment

"There is an important point connected with income-tax assessments, to which I would like to refer. Under the Law, as it is at present, the Income-tax Officer while computing the taxable income has wide powers to hold that a particular expenditure was not commercially expedient and to disallow it for the purposes of tax assessment. This power is being exercised in assessments of business incomes, in a very arbitrary manner causing hardships, as well as harassment to the taxpayer. Whether a particular expenditure is commercially expedient or not can be best judged by the person running the business and there should be no question of the Income-tax Department sitting in judgment over it. The main purpose of the taxing authorities is to check any evasion of taxes and in keeping with this objective, if any expenditure is found to be in the nature of tax evasion, the assessing authority may have the power to question such expenditure. Their authority should be limited to this extent. No expenditure should be disallowed unless the assessing authority clearly comes to the conclusion that the said expenditure is not a bona fide expenditure but a device to evade tax. An amendment of the law is necessary to protect the taxpayer from avoidable harassment and from taking recourse to appeals thus wasting time and money, which can be better utilised in other productive work.

"Numerous instances have occurred where assesses have been subjected to such harassments and in some cases even double taxation

has been resorted to on the same income, once by taxing the amount by disallowing the same in the hands of the payer and at the same time taxing the recipient also on the same amount. This is grossly unfair. Even expenses and arrangements which are accepted by specialised price fixing authorities like the Tariff Commission are disallowed and ignored and the relative amounts added to the income and taxed. Items not forming part of revenue are treated as revenue and taxed. The Finance Minister has recently spoken strongly against harassment of the taxpayer, whether intentional or unintentional. He has also said that where rules and regulations are such that they cause harassment to the taxpayer, such rules should be reconsidered and changed. People do not mind paying the taxes if legitimately assessed and recovered. I hope that the difficulties to which I have referred will be duly considered and the relevant rule suitably revised.

Labour Trouble

"I made a mention at the last annual general meeting about the serious labour troubles in 1957-58 at Dalmiapuram arising from inter-union rivalries. The result has been less production and loss of profits. It is your Company which has suffered most. In 1957, when we entered into a three-year agreement with the labour, we agreed to pay three months' basic wages as bonus for each of the three years 1957, 1958 and 1959 on the understanding given by the union that industrial peace will be maintained. The workers have been demanding that, even though they did not maintain peace, production suffered and the Company was put to heavy loss of profits due to their inter-union conflicts, they should be paid full bonus for 1958. The Company is resisting this demand, which on the face of it is most unfair, and the matter is now pending before the Madras High Court. During the current year, by and large, peaceful conditions have prevailed except for a brief strike in February.

"In the end, I wish to thank you for coming and hope that you will continue to take active interest in the affairs of your Company and give us the benefit of your views and suggestions. The accounts and Directors' report, having been circulated, will, with your permission, be taken as read and the meeting will now proceed to transact the business on the agenda."

N.B.—The above extract of the speech does not purport to be the report of the proceedings of the seventh annual general meeting of the Company held on the 30th September 1959.

The lighting-up of the Coke Oven battery No.1 marks a new stage in the progress of the Durgapur steelworks

With the lighting-up of the Coke Oven battery No. 1 on 24th August, the Durgapur steelworks of Hindustan Steel Limited enters a new stage. ISCON is proud to announce that work on this battery has been completed nearly ten weeks ahead of schedule. When the process of gradually heating up the battery to operating temperature is completed, the Coke Ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

At a time when productivity is a much-discussed topic of national importance, the publication (*Principles and Practice of Productivity* by Mr. R. G. Gokhale, Labour Officer of the Mill-owners' Association, Bombay. Pages 92. Price: Rs. 4.50) lucidly expounding the principles and practice of productivity, comes as a timely addition to the growing literature on the subject. Mr. Gokhale has taken pains to piece together information regarding the technical, economic and human aspects of productivity changes found scattered in various technical books and journals and presented an integrated account of productivity problems. The author has made special reference to the textile industry in Bombay and compared its productivity levels with those of Lancashire. He has also made some pertinent suggestions for improving the productivity of the textile mills in Bombay. Some useful appendices and a bibliography have also been included.

ENCOURAGING PERFORMANCE OF ROHTAS SHARP RISE IN EARNINGS—DIVIDEND RAISED SLIGHTLY

THE Rohtas Industries Limited (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) has done exceedingly well during the year ended 31st March 1959. Its turnover and earnings have both gone up substantially as compared with those for the previous seventeen months ended March 1958 (the Company's financial year-end was changed from October to March). Although there has been a setback in cement output, the overall production in the different manufacturing units shows an improvement. Sale proceeds of manufactured goods have increased from Rs. 14.87 crores to Rs. 15.06 crores. The gross profit shows a marked rise from Rs. 1.96 crores (for the seventeen months ended March 1958) to Rs. 2.90 crores for the year under review. It is more than twice that (Rs. 1.42 crores) earned in the twelve months ended October 1957.

In consonance with the rise in earnings, the remuneration for managing agency has also risen from Rs. 7.34 lakhs to Rs. 15.50 lakhs and the provision for taxation from Rs. 10 lakhs to Rs. 55 lakhs. The provision for depreciation has also been raised from Rs. 83.31 lakhs to Rs. 86.06 lakhs. After making these provisions, the net profit, at Rs. 1.33 crores, is Rs. 38 lakhs more than that for the previous period and Rs. 80 lakhs higher than that for 1956-57. The distribution to ordinary shareholders has been raised slightly from 14.1 per cent. per annum (Rs. 2 per share of Rs. 10 each for 17 months) to 15 per cent. per annum (Rs. 1.50 per share) and this is to be paid on a higher capital raised during the year under review by the capitalisation of Rs. 22.80 lakhs from the reserves. If, however, the Directors have not chosen to recommend a still higher dividend, it is presumably because of the need to conserve the resources to finance the Company's expansion programmes, as also on account of the allocation of a large sum for distribution as bonus to workers including that relating to previous years.

Whereas last year, the Directors had added a sum of Rs. 13.15 lakhs to the development rebate reserve and Rs. 83.12 lakhs to the general reserve No. 2 and paid the dividends on ordinary and preference shares (amounting to Rs. 53.27 lakhs) from general reserve No. 1, there is a slight variation in the appropriation this year. They have transferred Rs. 16.30 lakhs to the development reserve and Rs. 47.27 lakhs to the general reserve No. 1 before utilising Rs. 43.03 lakhs for distribution of dividends. The bonus to employees amounts to Rs. 28.50 lakhs (including Rs. 13.50 lakhs relating to previous years).

The progress in the Company's various manufacturing units is fully reflected in the following comparative table:

	12 months ended Oct. 1956	17 months ended Mar. 1958	12 months ended Mar. 1959	April to July 1959
Paper Tons	22,225	42,308	47,180	17,672
Cement	880,276	895,178	278,157	96,515
Clinker	319,958	419,709	270,416	96,414
Asbestos cement ..	7,626	14,558	10,449	8,349
Sugar* Mds.	322,704	602,458	888,254	31,900
Cautic soda Tons	1,774	2,575	4,092	1,618
Vanaspasi	8,758	11,407	8,876	4,661
Power generated— Million units	98.1	184.6	100.1	81.7

* The figures relate to the accounting year and, therefore, do not tally with those referred to below which relate to the sugar season.

The production of cement, according to the Directors, was affected by the inability of the State Trading Corporation to arrange despatching orders for keeping the plant in full production. There was also a general slackening of demand for cement. The Directors, however, add that the demand since the first quarter of 1959 has picked up and the Company's output also has been increasing. The other adverse factors which affected the cement section was the unremunerative price fixed by the Government and the higher cost of production brought about by the curtailment of output and a rise in railway freight and price of coal.

Thanks to the completion of modernisation and expansion schemes, the Company has been able to achieve production of paper and boards and of caustic soda to the rated capacity. The Company is now the largest producer of papers and boards in the country, accounting for a fifth of the total production of the industry. Efforts are being made by the Company to specialise in

the manufacture of high quality papers, but the Directors feel that the success of such efforts depends to a large extent on the price recommended by the Tariff Commission and to be announced by the Government of India. The Company is also considering the question of increasing further the capacity of the pulp and paper units.

The working of the Company's sugar factory shows an all-round improvement. The quantity of cane crushed, the recovery and sugar produced were all higher during the 1958-59 season at 4,126,602 maunds, 9.84 per cent. and 410,102 maunds, as against 3,740,358 maunds, 9.59 per cent. and 362,238 maunds, respectively, in the 1957-58 season. The crushing during the coming season is expected to be still higher. The interim recommendation of the Central Wage Board for sugar industry to raise the minimum wage from Rs. 55 to Rs. 58 and to increase the salaries and wages of employees does not affect the Company, as the wages and salaries paid by it are already higher than those recommended by the Wage Board.

The Company has spent Rs. 71.20 lakhs on additions to fixed assets during the year under review. This is on top of the huge sum of Rs. 3.44 crores expended in the previous seventeen months, thus bringing the gross value of the block account to Rs. 14.55 crores. The depreciation provided so far aggregates Rs. 5.53 crores, so that the net block as at the end of the year stands at Rs. 9.02 crores. The other assets amount to Rs. 7.16 crores. The Company has a large loan liability; it is of the order of Rs. 6.79 crores. Of this, debentures account for Rs. 2.22 crores, loans from banks for Rs. 3.94 crores and other loans for Rs. 62.65 lakhs. The other liabilities and provisions amount to Rs. 3.63 crores. These leave a net asset of Rs. 5.76 crores, represented by a paid-up capital of Rs. 3.56 crores and reserves and surplus amounting to Rs. 2.20 crores.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 25.94 cum-div. On an ex-div. basis, the shares provide a yield of 6.1 per cent. per annum, free of income-tax.

(Concluded from next column)

Rs. 3.33 crores, of which nearly 50 per cent. (Rs. 1.50 crores) represents investments in the wholly-owned subsidiary, Dalmia Cement Ltd.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 10.60 cum-div. On an ex-div. basis, they offer a yield of 10.4 per cent. per annum, free of tax.

NEW STANDARD ENGINEERING

The New Standard Engineering Company, Ltd., has earned a gross profit of Rs. 6.70 lakhs during the year ended 31st March 1959. This compares very favourably with that of Rs. 1.42 lakh earned in 1957-58. This substantially higher profit, together with the general reserve and surplus amounting to Rs. 3.73 lakhs taken over from the New Standard Engineering Company (Private) Ltd. under the scheme of amalgamation referred to below, has enabled the Company not only to wipe out the previous years' losses (Rs. 4.70 lakhs) brought forward but also declare a maiden dividend. After providing Rs. 1.15 lakh for depreciation, Rs. 1.76 lakh for taxation and Rs. 33.626 for development rebate, the Directors have declared a dividend of 9 per cent. for the year under review.

The Company (formerly known as Burjorji Pestonji and Sons Private Ltd.) was converted into a public limited concern on 20th May 1959. During the year under review, the Company took over the assets and liabilities of the New Standard Engineering Company (Private) Ltd. as from 1st October 1958 under a scheme of amalgamation.

The Company has three factories in Bombay and manufactures structural steels, machine tools, foundry plant, industrial plant, mild steel doors and windows, railway signalling and interlocking equipment and textile machinery. As the existing factories are working to capacity and offer no scope for expansion at their sites, an extensive site has been chosen at Goregaon (Bombay) to set up a heavy manufacturing and processing industry, capable of serving the requirements of the building industry and Indian railways. This will have an initial capacity of 8,400 tons per year. Eventually, this will be raised to 12,000 tons per annum. In order to finance this programme, the Company proposes to issue the unsubscribed portion of the equity capital to the existing shareholders. The authorised capital of the Company is Rs. 1 crore, of which Rs. 22.28 lakhs in equity shares of Rs. 100 each have so far been issued.

SETBACK IN DALMIA CEMENT'S RESULTS SHAREHOLDERS GET LESS

IN distinct contrast to the experience of Orissa Cement Ltd., the performance of the Dalmia Cement (Bharat) Ltd. (another concern in the Dalmia group), during the year ended 31st December 1958 has been disappointing. The earnings have suffered such a sharp setback—the gross profit has dropped from Rs. 57.90 lakhs earned in 1957 to Rs. 38.48 lakhs—that the Directors have been obliged to prune the dividend from 12 per cent. to 10 per cent. on ordinary and deferred shares. This is, however, on an increased capital raised by the issue of 217,788 ordinary shares recently. With the cut in ordinary dividend, the preference dividend has also been reduced from 7 per cent. to 6 per cent. (The Company's preference shares do not carry any fixed interest, but they are entitled to a minimum dividend of 6 per cent. and a maximum of 9 per cent., the variations between these limits depending upon the ordinary dividend.) Even to make this lower distribution, the Directors have had to draw a sum of Rs. 6.50 lakhs from the dividend equalisation reserve.

The decline in earnings has brought the gross profit of the Company to the lowest level since the assets of the Company in Pakistan were separated and a new concern under the present name was formed in 1952. The net profit has nearly halved itself from Rs. 21.13 lakhs to Rs. 11.45 lakhs, which too is the lowest level touched so far. The net profit is supplemented by Rs. 5.76 lakhs drawn from the rehabilitation reserve—this is on top of Rs. 12.74 lakhs withdrawn last year—and Rs. 6.50 lakhs from the dividend equalisation reserve. A sum of Rs. 5.21 lakhs has been transferred back to the rehabilitation reserve and of Rs. 3.30 lakhs utilised to create a development rebate reserve.

The three main reasons for the disappointing results given by the Directors are: (1) the price fixed by the Government of India for the Company's cement is uneconomic; (2) there has been a decline in cement production from 279,360 tons to 233,636 tons, resulting largely from labour strike; and (3) there has been a rise in cost of production due to wage increase and higher fuel and power costs. The Company, however, made a representation to the Government of India for a suitable increase in the price of its cement. The Tariff Commission, which examined the question in the light of the Company's expansion programme which will be completed soon, is said to have submitted its report.

The installation of a third cement kiln with a capacity of 500 tons per day is practically complete, well ahead of schedule. When the new plant goes into full production, the rated capacity for production of cement at the Dalmiapuram works will be 412,000 tons per annum. The Company has been successful in securing substantial orders for the supply and export of iron ore from its mines in the Bellary-Hospet area and, since December 1958, it has shipped over 100,000 tons to Japan, where, on account of the high quality, the Company's ore is said to be in good demand. The Company is making all efforts to develop and expand this business. The demand for the Company's ceramic production continues to be satisfactory. The Company has acquired a two-third partnership in Dalmia Magnesite Corporation at Salem. Production of dead burnt magnesite has commenced and the Directors anticipate a great demand for this product at home and in export markets. In fact, some quantity has already been exported. If the plans for expanding the export market succeed, the Company may install a second kiln.

The Company's paid-up capital as at the end of 1958 is Rs. 2.11 crores. This has since been raised to Rs. 2.33 crores by the issue of 217,788 ordinary shares of Rs. 10 each at par. The Directors propose to raise the capital further by the issue of 327,928 preference shares of Rs. 10 each. These may not, however, be offered to the holders of the existing equity shares, but are likely to be placed privately. The reserves and surplus stand at Rs. 80.09 lakhs. The total outstanding borrowings are of the order of Rs. 1.25 crores and other liabilities and provisions at Rs. 1.25 crores. The gross block of the value of Rs. 136.21 lakhs has been written down to Rs. 86.03 lakhs. Expenses on construction in progress and cost of machinery in transit aggregate Rs. 91.57 lakhs. The other assets amount to

(Continued in previous column)

EXCELLENT RESULTS OF ORISSA CEMENT DIVIDEND MAINTAINED ON HIGHER CAPITAL

THERE has been an all-round improvement in the working of the Orissa Cement Ltd. (Managing Agents: Dalmia Agencies Private Ltd., Rajgangpur, Orissa) during the year ended 31st December 1958. Production of cement has increased further from 286,971 tons to 349,092 tons, the highest level touched since the Company's plant went into production, though due to certain teething troubles, the output was not up to expectations. The demand for the Company's refractories since the fireclay and silica brick sections of the new plant were commissioned in April 1958 was encouraging and, according to the Directors, the pending orders at the end of the year were for over Rs. 1.73 crores. The gross profit shows a sharp rise from Rs. 65 lakhs (in 1957) to Rs. 84.42 lakhs, which again is a fresh record in the history of the Company. Barring a setback in 1956, the gross profit of the Company has maintained an upward trend since 1952.

Thanks to the substantial additions to the fixed assets during the year, the provision for depreciation has been stepped up from Rs. 19.49 lakhs to Rs. 33.10 lakhs. The provision for taxation has also been raised from a mere Rs. 6 lakhs to Rs. 19.87 lakhs, but this includes a sum of Rs. 4.87 lakhs provided against provisional assessment for 1954. The larger allocations have resulted in a drop in net profit from Rs. 33.45 lakhs to Rs. 25.67 lakhs. Out of this, a sum of Rs. 20.90 lakhs has been utilised to create a development rebate reserve. However, with the huge surplus of Rs. 37.56 lakhs brought in from the previous year, the Directors have been able to maintain the dividend on ordinary shares at Re. 1.50 per share or 15 per cent. (tax-free) on a higher capital of Rs. 1.50 crores raised by the issue of 500,000 ordinary shares of Rs. 10 each at par in August 1958. This absorbs Rs. 22.50 lakhs, that is Rs. 7.50 lakhs more than that paid last year, even after which there is a large surplus of Rs. 18.70 lakhs to be carried forward. The Directors' intention in carrying over such a large surplus without creating a general reserve—the Company has no general reserve at all—is not clear.

The progress of the Company in the last few years is fully reflected in the following comparative table:

	For the year ended 31st December			
	1954	1957	1958	1955
Sale proceeds (including interest)	2,81.50	2,82.28	1,38.58	1,34.57
7 consumption ..	25.50	21.50	21.50	21.50
Operating costs ..	1,28.14	94.78	68.30	64.50
Raw materials, stores and provisions ..	15.14	15.11	25.47	25.47
Consumed ..	64.43	65.00	47.78	60.97

The Company is making efforts to overcome its teething troubles in the cement plant. The recent cement grinding capacity of the Company is just sufficient for normal clinker production and there is no reserve capacity to cope with any accumulation of clinker. The Directors are, therefore, considering the question of raising the cement grinding capacity.

On the refractories side, only the fireclay and silica brick sections were commissioned in April 1958. The basic refractories plant was to go into production by the end of 1958. The commissioning of the plant was, however, delayed further by the workers' strike from March to July this year. Notwithstanding the strike, the Directors say, the production of cement and refractories has been maintained more or less at the same level as before the strike.

There have been substantial additions to fixed assets to the tune of Rs. 1.49 crores during the year under review, bringing the gross block account at the end of 1958 to Rs. 4.73 crores. The depreciation written off so far is Rs. 1.50 crores, so that the net block is still as high as Rs. 3.23 crores. In addition, expenses on construction in progress amount to Rs. 61.75 lakhs. The other assets aggregate Rs. 1.92 crores. The paid-up capital stands at Rs. 1.50 crores, supplemented by reserves and surplus amounting to

COMPANY MEETINGS AND DIVIDENDS

JOST'S ENGINEERING CO., LTD. Annual General Meeting, Bombay, 19th October 1959. Dividend: 10 per cent. or Rs. 5.00 per share, free of income-tax, payable on and after 19th October 1959. Transfer books remain closed from 5th to 19th October 1959, both days inclusive.

India Steamship Co., Ltd.

CALCUTTA, 30th September 1959.

The dividend, if sanctioned, will be made payable to those Shareholders whose names stand on the Register of the Company on the 12th November, 1959, and the Dividend Warrants will be posted from 15th December, 1959 onwards.

N.B.—Member entitled to attend and vote is entitled to appoint a Proxy and the Proxy so appointed need not be a member of the Company.

EXPLANATORY STATEMENT

As required by Section 173 of the Companies Act, 1956.

1. In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir B. P. Singh Roy, K.C.I.E., has attained the age of 65 years and hence this needs approval by a resolution of the shareholders in respect of which a Special Notice has been received from a Shareholder in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. Sir B. P. Singh Roy joined the Board of Directors of the Company in 1945. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interests of the Company that the Board should avail itself of his valuable advice which is a great asset to the Company, by retaining him as a Director of the Company.

2. In respect of Item No. 5 of the Notice of the Annual General Meeting, a Special Notice has been received from a shareholder of the Company as required by Section 261, proposing that the appointment of Sir B. P. Singh Roy, K.C.I.E., as a Director, be made and/or be approved in accordance with the provisions of the Companies Act. The Managing Agents of the Company, Messrs. Lionel Edwards (Private) Limited, the Managing Agents of the Company and thereby an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company.

- (6) To appoint a Director in place of The Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, The Rt. Hon'ble Lord Sinha of Raipur who has attained the age of 72 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

- (7) To appoint a Director in place of Dr. S. C. Law, M.A., Ph.D., who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies

Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. S. C. Law, M.A., Ph.D., who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

- (8) To elect Mr. L. T. Gholap, I.C.S., a Director of the Company, who retires by rotation and is eligible for re-election.
- (9) To appoint Auditors and fix their remuneration.

Notice from a Member, notifying his intention to move the resolution as set out in the said item. The Rt. Hon'ble Lord Sinha of Raipur joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interests of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

4. In respect of Item No. 7 of the Notice of the Annual General Meeting, Dr. S. C. Law, who retires by rotation and is eligible for re-appointment has attained the age of 67 years and hence this needs approval by a resolution of the Shareholders in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. Dr. S. C. Law joined the Board of Directors of the Company in 1944. During the long period of his association with the Company he has rendered valuable service to it and it is in the interests of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

THE SINGARENI COLLIERIES COMPANY LIMITED

7. To transact any other business that may be brought forward by the Chairman.

Notes: 1. The Transfer Books of the Company will remain closed for the purpose of Dividend from 14th to 27th October 1959 (both days inclusive).

2. Subject to the Directors' recommendation being accepted, Dividend Warrants will be posted on 27th November 1959.

3. Shareholders are requested to give immediate notice to the Company of any change of address.

4. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote, instead of himself and that such proxy need not be a member.

By Order of the Board,
R. DWARKA PERSHAD,
Secretary,
The Singareni Collieries Co., Ltd.

"MEHER MANZIL",
KHAIRATABAD P. O.
HYDERABAD-DN. (A.P.), 28th September 1959.

MONEY STRINGENT

(From Our Own Correspondent)

BOMBAY, 7th October
The short-term money market has turned stringent again this week following the heavy subscriptions to the Industrial Finance Corporation's bond issue, which opened its list on Monday, the 5th inst. and closed on the same day on being oversubscribed. The total amount subscribed was Rs. 6.53 crores as against an invitation for Rs. 5 crores. The shortage of floating funds in the market has caused a sharp rise in the inter-bank call money rate from 1½ per cent. last week-end to 3½ per cent. among the exchange banks and big Indian banks. The corresponding rate among the smaller banks has hardened from 2 per cent. to 3½-4 per cent. There has been no change in the short-term deposit rates. House money at seven days' notice is being offered at 3 to 3½ per cent. and short-term deposits for one to six months at 3 to 3½ per cent.

The list for the 12-year 4 per cent. Industrial Finance Corporation bond issue for Rs. 5 crores was opened on Monday the 5th inst. and closed on the same day. As already stated, the response was encouraging, in that the subscriptions aggregated Rs. 6.53 crores. This amount is, however, considerably less than that (Rs. 8.39 crores) offered last year for the 4½ per cent. issue for Rs. 4 crores. Subscriptions up to and including Rs. 10,000 will receive full allotment, while other subscribers will receive allotment at about 84 per cent., subject to a minimum allotment of Rs. 10,000.

The 91-day Treasury Bill rate is, however, unchanged at 2.440 per cent. per annum, though the amount offered, at Rs. 2.25 crores, was Rs. 25 lakhs more than that in the previous week, against an invitation for Rs. 2 crores. Tenders have been invited for a further sum of Rs. 2 crores next week. There were no sales of Intermediate Treasury Bills during the period from 30th September to 1st October. These bills are, however, being offered this week at the same rate as last week.

The Reserve Bank of India statement for the week ended 2nd October 1959 discloses a small expansion of Rs. 7.24 crores in notes in circulation and a fall of Rs. 7.31 crores in notes held in the Banking Department. There is no change in rupee securities and foreign securities, but balances held abroad have recorded a further drop of Rs. 1.92 crores, bringing down the total foreign exchange reserves to Rs. 178.98 crores. There has been an increase of Rs. 5.54 crores in deposits of banks and a fall of Rs. 7.80 crores in deposits of other Governments. Loans and advances to Governments are higher by Rs. 2.26 crores and other loans and advances by Rs. 5.07 crores. Investments have shrunk by Rs. 3.39 crores.

A further fall of Rs. 5.18 crores in demand deposits of banks and a rise of Rs. 3.70 crores in their time deposits are disclosed by the Scheduled Banks' statement for the week ended 25th September 1959. Borrowings from the Reserve Bank are lower by Rs. 4.35 crores. Bank credit shows a contraction of Rs. 6.92 crores. There has been a substantial rise of Rs. 24.61 crores in the investment portfolio of banks, of which the State Bank of India alone accounts for Rs. 20 crores. While cash balances have shrunk by Rs. 10.57 crores, money at call and short notice is higher by Rs. 3.58 crores.

The gilt-edged market rules steady. Though there has been no marked rise in prices of securities, except the increase in official buying and selling prices of some issues, the demand from institutional investors for short and medium-dated loans continues. A notable development of the week is the increase in the Reserve Bank's selling rate for 3½ per cent. 1968 and 1969 by 5 nP to Rs. 99.60 and Rs. 99.40, respectively, and its subsequent cessation of the sale of 3½ per cent. 1967, 3½ per cent. 1968 and 3½ per cent. 1967 loans. This action is considered in market circles as a prelude to the issue of two more loans by the Central Government shortly.

3 per cent. Conversion Loan is unchanged at Rs. 74.90, while 3 per cent. 1970-75 has shot up by 35 nP to Rs. 93.10. 3 per cent. 1966-68 has gone up by 10 nP to Rs. 96.05. 2½ per cent. 1961 has hardened by 5 nP to Rs. 98.23. State loans continue to be in good demand, but there are no variations in prices.

There has been a two-sided movement of the rupee in terms of the U.S. dollar, in sympathy with a similar trend in sterling abroad. Banks' selling rate for T.T. on New York, after an initial drop from Rs. 477.75 to Rs. 477.25, has risen to Rs. 477.50. Their buying rate, which had declined from Rs. 474.25 to Rs. 473.75, has again moved up to Rs. 474.25. In New York, spot sterling rose early in the week from 280.25-280.28 cents to 280.46-280.49 cents, but soon fell back to 280.27-280.30 cents. Three months' forward gained from 280.56-280.59 cents to 280.87-280.90 cents before dropping to 280.66-280.69 cents.

TANNED HIDES STEADY

(From Our Own Correspondent)

MADRAS, 5th October
The tanned hides market ruled steady during the week. Importers were not keen buyers and weights were in good demand, as also top selections in other weights, while sellers were only interested in selling all grades together. Trading as a consequence, was slow. There was some demand for buff calf at high prices from the Continent. Tanners sharply increased prices in the raw centres. Buffalo hides ruled quiet, as the U.S. buying was negligible.

Tanned goat superior marks, especially lights and mediums, were in great demand and importers paid 3d. to 6d. advance on selected marks which upset the prices in all the raw centres. Tanned goat 11/12 lbs. up were slow to move.

BULLION STRONG

(From Our Own Correspondent)

BOMBAY, 7th October
A distinctly firm trend prevailed in the bullion market during the major part of the week under review. Both gold and silver met with good buying support induced by expectations of an improvement in offtake in the next few weeks. The continued hardening tendency of commodities also strengthened the tone. Occasionally, there was also some fresh buying in silver from Calcutta operators. Consequently, the two metals registered a rise in values, today's closing rates being higher than those on Wednesday last. The net gains over the week would have been more handsome but for a setback yesterday, following new offerings.

A section of bullion traders is inclined to feel that the prices of gold and silver would appreciate quite markedly in the next busy season. This view is based on four important grounds. First, many persons prefer to keep their savings in the form of precious metals as a hedge against inflation gathering further momentum following the Government's persistent policy of deficit financing. Secondly, arrivals of contraband gold from the Persian Gulf countries and of silver coins from Tibet have virtually ceased. Thirdly, the continued increase in prices of agricultural commodities will lead to enlarged demand for the metals from rural areas. And, fourthly, the volume of profits in black markets has been increasing, thanks to stringent import restrictions and controls on scarce commodities like sugar. A good part of these profits is expected to be invested in precious metals. As against these factors, however, there is one serious limitation, namely, the impoverishment of people caused by the destructive floods in several parts of the country. This development may not only affect the buying capacity in rural areas but also cause distress selling of gold and silver.

October settlement in gold opened the week firm at Rs. 122.3 as against Rs. 122.1, and spurted to touch a high of Rs. 124.3 on Monday, the 5th inst. After declining to Rs. 123.6 yesterday, it recovered to Rs. 123-12.6 today, before finishing at Rs. 123-7. The net gain over the week was Re. 1-6. November settlement, after advancing from Rs. 122-5-6 to Rs. 124-1, eased to Rs. 123-10 today. Towards the close, it was higher at Rs. 123-14-6. The carry-forward rate for October settlement was against bulls throughout the week, the rate actually widening from As. 6 last week to As. 7-6.

Ready gold evoked good demand and moved up from Rs. 121-10 to Rs. 123-14 on Monday. Thereafter, it declined to Rs. 123-1 yesterday. After improving again to Rs. 123-8-6 today, it finished lower at Rs. 123-3. The daily average arrivals of gold were 4,250 tolas, while the offtake was 3,300 tolas. The floating stocks of gold are estimated at 70,000 tolas.

Under the impetus of good buying orders, October settlement in silver strengthened from Rs. 204-8 to Rs. 206-4 on the 5th inst. At this level, some profit-taking set in and the settlement receded to Rs. 205-2 yesterday. After recovering to Rs. 205-8 today, it closed at Rs. 205-14. November settlement fluctuated between Rs. 205-14 and Rs. 207-3 before finishing at Rs. 205-13. The carry-forward rate against bulls in the October settlement widened in the course of the week from As. 13 to As. 15 today. Business in December settlement commenced at Rs. 206-15 yesterday. After improving to Rs. 207-3-6, the settlement finished easy at Rs. 206-7.

Ready silver was well supported, the quotation rising from Rs. 203-12 on Wednesday last week to Rs. 205-10 on the 5th inst. After declining to Rs. 204-9 yesterday, it recovered to Rs. 205 before closing at Rs. 204-6. The daily average arrivals of silver were 28 bars and 9 bars, respectively. The floating stocks are reported to be around 800 bars.

Ready and forward silver in the London bullion market registered notable gains, the former advancing from 79d. to 79½d. per ounce and the latter from 78½d. to 79½d. Silver in New York, however, was unchanged at 91.375 cents per ounce. Ready gold in London eased from 250s. 8½d. per ounce to 250s. 5d. on the 2nd inst., but recovered to 250s. 6½d. yesterday, owing to the easiness of the pound sterling vis-à-vis the dollar. The latest available world price for gold in London is \$35.11½-\$35.13½ per ounce, as against \$35.12-\$35.14 last week.

The following comparative table shows at a glance the trend of the market during the week under review:

	7-10-59	Highest	Lowest	30-9-59
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

* 17th October settlement. † 10th October settlement.

Tanned sheep middle class was firm and others were unchanged.

Shipments during September were: To the U.K.: 2,918 bales tanned cow hides, 220 cow calf, 54 buff hides, 227 buff calf, 517 goat and 477 sheep; To Continent: 211 cow hides, 103 cow calf, 47 buff calf, 559 goat and 318 sheep; To the U.S.: 2 cow calf, 139 buff, 50 buff calf, 95 goat and 38 sheep; To Japan: 171 sheep.

COTTON FUTURES EASE AFTER EARLY FIRMNESS

(From Our Own Correspondent)

BOMBAY, 7th October
The easy trend noted in the cotton futures market towards the end of last week was arrested during the week under review. Under pressure of heavy buying, futures values firmed up in the first half of the week although, towards the close, they again tended to ease. The market seemed to have ignored the fresh import quota for 100,000 bales of cotton 1-3/16" and above staple announced on the 2nd inst. and the release of 80,000 bales out of the previous quota of 140,000 bales. Even the promise that another 200,000 bales of U.S. cotton would be released as soon as an agreement between India and U.S.A. under P.L.480 was finalised was overlooked. The imposition of heavy margins on oilseeds last week also failed to have any effect on the cotton market. After a temporary decline, following the quota announcement, the market rallied as the quota fell short of trade expectations. Operators were of the view that this would not make any substantial impression on spot prices which were ruling at, and in some cases above, the ceiling. The improved tone of the yarn and piecegoods market and the rising mill consumption of Indian cotton—consumption in August at 378,941 bales was higher than that in the previous month by 8,551 bales, making the total for the season (1958-59) 4.6 million bales, as compared with 4.3 million bales in the previous season—indicated the possibility of a further improvement in textile activity in the coming months and better demand for cotton. Investment buying and speculative support prompted by these considerations led to a rise in prices. The Jarilla March contract rallied from the week's opening level of Rs. 722 to Rs. 730.75 on Monday. There was a mild recession thereafter, thanks to profit-taking attracted by the high level. Values moved very narrowly in the subsequent two sessions and closed today on a subdued note.

I.C.C. Moglai Jarilla 1960 opened the week at Rs. 722 improved to Rs. 730.75 on Monday. After declining to Rs. 723 the next day, the contract again rose to Rs. 728.50 today. The finish was, however, lower at Rs. 724.25. The net gain over the week was Rs. 5.25.

Mr. Madanmohan R. Ruia, President of the East India Cotton Association, Bombay, has issued a stern warning against members of the Association indulging in kurb trading. In a strongly-worded circular letter, the President observes that if members wanted longer trading hours they are free to make representation accordingly but that on no account should they resort to unauthorised trading. Failure on the part of members to adhere to the business rules, the circular adds, would make them liable to strict disciplinary action.

In the spot section, demand slowed down slightly. But prices ruled firm. Mills were cautious in their dealings and were generally inclined to await a clearer picture of the crop before entering into firm commitments. Moreover, most of them had covered their immediate requirements and could afford to wait. New crop requirements continued to evoke keen interest although old crop was not as much in favour. Total purchases of new crop to date are estimated at 300,000 bales. Among the varieties which evoked special attention are Punjab 216 F., Wagad and Khamgaon.

Export demand was generally poor. Japan, however, showed some interest in selected varieties and some business was reported in Bengal Deshi. Routine business was also done in Zoda and Yellow Pickings. Satisfactory progress has been made in the utilisation of the recent export quota of 75,000 bales of Bengal Deshi. The quantity registered out of the shippers' share of 67,500 bales is placed at 27,159 bales till the end of September.

The long-awaited import quota announcement has at last been made. A Press note issued by the Textile Commissioner says: Government has decided to release for import immediately 100,000 bales of 1-3/16" staple cotton and above to actual-user mills and hope to release a further quantity of 200,000 bales of American cotton of 1-1/16" and above staple as soon as the agreement under P.L. 480 is finalised which, it is hoped, will be concluded very shortly. Government has also released for import 50,000 bales of 1-1/16" and above from the global area to non-actual-user mills for value on spindleage basis calculated at Rs. 5 per spindle. Government has also released 30,000 bales for import, half of which will be 1-3/16" and above and half 1-1/16" and above but below 1-3/16" in staple from the global area, as retention quota against export entitlement for July-September 1959 quarter under incentive scheme. The trade notices will be issued in due course outlining the procedure for application by mills.

The quota of 100,000 bales of 1-3/16" and above, which is intended to be issued to actual-user mills, is a new quota for the current season. The other 80,000 bales form a part of the quota of 140,000 bales announced a month ago. The announcement was, no doubt, welcomed by the trade although there was disappointment that the quota was smaller than expected.

As regards the varieties that are likely to be imported under the quota for 1-3/16" and above cotton, the impression among traders is that Egyptian cotton stands a good chance of being absorbed, since Egyptian new crop cotton is available for prompt shipment. Sudan may not figure prominently in the picture because the regular Gezira types are reported to have been all sold out and only the comparatively dearer private estate types are available. Some higher grade East African cotton may also be brought in. As regards the 1-1/16" and above cotton permitted, the chances are said to be in favour of selected East African

and Tanganyikan varieties. Some mills, it is said, may also go in for U.S. cotton.

The following are the latest available spot quotations (in rupees per candy of 784 lbs.):

Bengal Deshi 695; Berar Jarilla 795; Hubli Laxmi 990; Jayadhar 895.

The Karachi cotton futures market ruled easy during the week under review. Bearish weather reports and continued slackness of export demand exerted a downward pressure on prices. N.T.R.G. January contract declined further to Rs. 62 from the last week-end rate of Rs. 63-9. The March contract eased by Re. 1-9 to Rs. 62-6. Ready cotton in the spot market was also quoted lower. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind Deshi 75; Punjab Deshi 64; 4F Punjab Roller 69; S.G. 70-9; L.S.S. Punjab Roller 70-1; S.G. 71-1; N.T. Roller 74-9; S.G. 81-1; 289F Punjab Roller 71-9; S.G. 75-9.

Conditions in the Alexandria cotton futures market remained more or less unchanged. Export inquiries were few and far between. Domestic demand was small. Values showed only minor changes over the week. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 70.50; January 71.00. Ashmouni: October 60.50; December 60.09.

Dull conditions prevailed in the Liverpool cotton futures market during the week under review. Values moved in a narrow groove in thin trading. The undertone was, however, steady as mill fixation and local buying found offerings limited. Rise in price was, however, checked by hedge pressure at bulges. Sudan contracts were subjected to selling, thanks to easy Khartoum advices. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October-November 22.00; December-January 21.70; March-April 21.70; May 21.85.

American cotton mixed growth contract: October-November 22.10; December-January 22.05; March-April 22.20; May 22.10.

Sudan: November-December, January-February, May-June 29.45.

Cotton futures in the New York market drifted lower during the week on scattered hedging and liquidation which met with only limited trade support. The selling partly reflected the rapid harvesting of new crop and the reported increase in certified cotton stocks. The more distant positions, however, held steady on spot house support.

The U.S. Department of Agriculture has estimated that U.S. cotton exports this year will be at least 5.5 million bales. Since 1st August, the C.C.C. has sold about two million bales for export but the five million bales held by it on 11th September were said to be still almost two million bales larger than that a year ago.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)	6-10-59	29-9-59	22-9-59
Spot	...	32.85	32.90	32.90
October	...	32.34	32.48	32.50

March	...	32.54	32.64	32.83

IMPORT QUOTA FOR ART SILK YARN RAISED

(From Our Own Correspondent)

BOMBAY, 7th October

Yarn traders have widely welcomed the Government of India's decision to raise the import quota for art silk yarns so far as established importers are concerned from 5 per cent. to 7½ per cent. in the import policy for the current half-year announced on 30th September. The traders have also welcomed the simplification of the procedures governing grant of import licences in certain cases. It is now not necessary for the established importers to submit their applications as before. All that they have to do is to submit their old licences together with the necessary challans. With regard to cotton yarns, the import quota licence remains the same, namely, 7½ per cent.

The enhancement of import quota of art silk yarns and the State Trading Corporation's announcement that it has arranged for the supply of art silk yarns from Yugoslavia on rupee payment, would appear to have had no effect on the market. Instead of staging a retreat, art silk yarns have actually registered a notable rise in prices. The rise is attributed to speculative transactions put through by some interested parties who seem to be having a tight hold on their stocks. In sympathy with art silk yarns, staple fibre yarns have also tended to move up. Cotton yarns ruled fully steady, thanks to firmness of raw cotton and support lent by export houses which are somewhat busy augmenting their stocks of medium counts in which export business with Burma, Singapore and Indonesia were put through recently. There are also reports of encouraging offtake by handlooms and powerlooms in certain areas with a view to meeting the rising festival demand for fabrics. Further, the visit of the three-man trade delegation from Burma has led to hopes of fresh business in cloth and yarn being put through with that country.

The State Trading Corporation, as already mentioned, has arranged for the supply of art silk yarn from Yugoslavia on rupee payment. It will be recalled that the Corporation has already made arrangements for import of yarn from East Germany, Hungary and Egypt. Messrs M. Rane and Sons, Bombay, have been authorised to book orders for art silk yarns as the agent of the Centro-

textil, Yugoslavia. Prospective importers may get in touch with the authorised agent and book orders for their requirements against 24 per cent. of their quota licences. The payment terms in contracts thus entered should specify that the payment for the art silk yarn, whether through letter of credit or payment against shipping documents or otherwise, will be in accordance with the provision made in the protocol in the trade agreement between India and Yugoslavia. The prices are required to be expressed in Indian rupees.

In the art silk yarn section, Cupressa Bamberg yarn (60x2) December contract climbed up from Rs. 1,661 to Rs. 1,675. October contract spurred by Rs. 10 to Rs. 645. Spot Cupressa recorded a rise of 13 nP to Rs. 7.44. Among imported yarns, 150 Japan advanced by 18 nP to Rs. 4.93. 150 Italy rallied from Rs. 4.71 to Rs. 4.81. 120 Japan gained 3 nP to Rs. 5. 120 Italy improved by a like amount to Rs. 4.87. Among indigenous yarns, National Rayons 120 bright cones first grade put on 3 nP to Rs. 4.50. 150 bright cones first grade were fully maintained at Rs. 4.19.

Staple fibre yarns (40x2) October contract met with good support, the quotation hardening from Rs. 700 to Rs. 712. December positions strengthened by Rs. 9 to Rs. 702. Spot Citys and Centurys spurred by 9 nP each to Rs. 3.78 and Rs. 3.81, respectively. Kohnhoors gained a naya paisa to Rs. 3.81. Among imported yarns (80x2), Fujis firmed up by 25 nP to Rs. 8.94. Paramounts rose by 22 nP to Rs. 8.22.

In the cotton yarn section, ten counts Podars were firm at Rs. 14.50. Twenty counts Moderns increased by 50 nP to Rs. 19. Forty counts Minaxis advanced by a rupee to Rs. 26.75. Moderns were unchanged at Rs. 26.50. Sixty counts Moderns and Raghuvamsis were fully steady, the former at Rs. 56 and the latter at Rs. 63. Eighty counts Mahendras rose by a rupee to Rs. 74. Moderns were firm at Rs. 79 and Finlays at Rs. 81.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week before.

	7-10-59	30-9-59
Art silk yarn—		
60/1 Cupressa Bamberg October (100 Kg.)	1,645	1,635
December	1,675	1,661
60/1 Cupressa Bamberg spot (per lb.)	7.44	7.31
120 Japan (per lb.)	4.93	4.78
150 Japan (per lb.)	4.96	4.78
120 Italy (per lb.)	4.81	4.74
150 Italy (per lb.)	4.81	4.71
Staple fibre yarn—		
40x2 October (per case of 200 lbs.)	712.00	700.00

40s Minaxi	26.75	25.75
60s Finlay	81.00	79.00
80s Mahendra	74.00	73.00

GROUNDNUT STEADY

(From Our Own Correspondent)

BOMBAY, 7th October

Traders in the oilseeds market are eagerly awaiting the findings of the Committee constituted by the Board of the Bombay Oilseeds and Oils Exchange last week-end to investigate the alleged inordinate delay in passing on to the market an order of the Forward Markets Commission served on the Exchange regarding the margin on groundnut oil December 1959 delivery, referred to in these columns last week. Though the F.M.C. issued the order on 26th September, it was not announced until detected at the Board meeting on Wednesday. The Secretary of the Exchange was suspended the same day. The Committee, set up by the Board, is reported to have now practically completed its investigations into the affair. A section of the traders feels that the order leaked out to some of the operators, who manipulated the market before others could be aware of the margin order. It is true that prices declined after 26th September, but there were, it is said, many other causes also which brought them down. The findings of the Committee are expected to throw light on these developments.

The oilseeds market ruled steady during the week under review. Despite the margin imposed last week-end, groundnuts continued to move upwards, thanks mainly to the extension of export promotion measure for groundnut oil. The Government of India has decided to extend the validity period of the current quotas for groundnut oil from the end of October to the end of December 1959. It has also decided to allow export of 3½ tons of groundnut oilcake (expeller variety) up to the end of January 1960 by established shippers of groundnut oil for every ton of the oil exported up to the end of December this year against contracts concluded during October-November 1959. This measure has imparted some strength to the market. The ready section, however, failed to hold the ground, in view of the reports of large arrivals of new crop at upcountry centres. The February 1960 contract which wound up last week at Rs. 174.50, rallied to close today at Rs. 177.25. Bold ready, however, lost 50 nP to Rs. 40.50. Oil ex-mill was unaltered at Rs. 21.37, although it hardened to Rs. 21.50 on Monday.

The castorseed section put on a distinctly cheerful appearance in the initial sessions of the week on hopes of revival of American buying activity for Indian oil. Subsequently, castor drifted to lower levels in the absence of any export business in castor oil. Castorseed September 1959 went off the board on 30th September. May 1960 contract, which closed last week at Rs. 163.50, rose to Rs. 164.35 on Monday. But, subsequently, it fell to Rs. 164.25. Ready Madras closed steady at Rs. 31.62. Oil B.S.S. improved from Rs. 17.44 to Rs. 17.75, after moving both ways in a narrow range.

The linseed section maintained firm tendency, particularly on account of the pronounced strength in the oilcake section. The Government of India has released a further quota of 30,000 tons of linseed oilcake and a quota of 15,000 tons of coconut oilcake for export to all permissible destinations during the period October 1959 to March 1960. Exports against these quotas would be licensed freely without any restriction on maximum shipment by an individual shipper up to the end of March next year. An export quota of 10,000 tons of linseed oilcake has also been released in addition to the quota of 15,000 tons released on 26th August, 1959. But it was explained that licences covering this 10,000-ton quota had already been issued. Linseed May 1960 improved from Rs. 34.25 to Rs. 34.44. Bold ready wound up from Rs. 33.50 to Rs. 34.12. Linseed oil gathered 13 nP to Rs. 16.69. In the cottonseed section, February contract rallied from Rs. 127.50 to Rs. 129.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	7-10-1959	30-9-1959	23-9-1959
Groundnut			
February 1960	177.25	174.50	174.62
Bold ready	40.50	41.00	40.25
Coromandel ready	40.75	41.00	40.25
Khandesh quality	40.75	41.00	40.25
Oil ex-mill ready	21.37	21.37	20.87
Railway receipt	21.25	21.12	20.61
Cottonseed			
September 1959	150.00	150.00	150.87
May 1960	164.25	163.50	163.12
Ready Madras	31.62	31.62	30.75
Ready Kanpur	30.75	30.62	29.50
Oil B.S.S.	17.75	17.44	16.94
Oil commercial	16.81	16.50	15.94
Linseed			
September 1959	34.44	33.87	—
Bold ready	34.12	34.25	33.81
Oil ready	16.69	16.56	16.00
Cotton seed			
February 1960	129.25	127.50	127.00
Niger seed	31.00	31.50	31.00
Kard seed	28.00	28.00	28.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
‡ All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 80 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quart.

READY PEPPER LOOKS UP

(Messrs. Parekh & Co.)

BOMBAY, 7th October

Malabar black pepper ruled irregular during the earlier part of the fortnight, with under one steady to quiet for want of foreign inquiries for nearby shipments. It was, however, reported that New York continued to be steady buyer for November-December and December-January shipments at prices ranging from \$0.28½ to \$0.29½. Unгарbled at Cochin was done at Rs. 77.5, while October delivery moved down to Rs. 133 and December to Rs. 129½.

In the later part of the fortnight, however, the market ruled firm, following news that Russia and other East European countries were in the market for October shipment and about 600 tons were reported done. October delivery, which ruled quiet under pressure of liquidation by speculators, owing to the approaching due date, spurred up to Rs. 145, owing to short-covering and renewed buying by exporters. This resulted in the scarcity of October contracts. December delivery had a sympathetic rise and advanced to Rs. 138. Ready ungarbled at Cochin climbed up to Rs. 825, with sellers scarce.

Spot in New York advanced to \$0.32½, following the dock strike. It was, however, reported that President Eisenhower invoked the Taft-Hartley Act 80-day back-to-work court order. As a result, the strike, which had tied up shipping piers from Maine to Texas affecting the flow of food and other perishable products, is now likely to be set tied.

Singapore, after going down to Str.102 from the highest of Str.110, recovered to Str.1103, but without any notable activities.

Indonesia is reported to be firm at Rupias 1,800. There are reports of damage to crops of various produce in East Sumatra owing to heavy rain and floods, but nothing is known about pepper.

The future of the market depends upon the future buying policy of the U.S.A. and the size of the new Malabar crop. Bulls are estimating the crop at 23,000 tons, while the bears at 30,000 tons, according to their book positions. It is, however, too early to give any definite figure.

Ready in Bombay showed a small improvement, owing to demand from the Middle East, though inquiries were poor, owing to the dislocation of the railway traffic because of floods. Ready is likely to improve from the present price of Rs. 107 per Bengal maund when booking is reopened.

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 6th October

Good demand was maintained during the internal tea auctions held last week. Good quality teas hardened further. Once again, during the week, shipments of tea were highly satisfactory. A feature was that shipments to the U.S.S.R. made good progress. Buyers on behalf of Port Said and Turkey showed fair interest.

The very steady conditions in the sales held in Mincing Lane and the gain in prices in Assam teas, broken leaf Doors, orange fannings and black leaf broken orange pekoes there were noted here as reflecting the British need to replenish stocks

Another feature in London sales was the good attention which African teas received.

The recent allegation by the Union Commerce Minister that the tea industry had not responded to the call of the nation and increased exports has found a fitting reply at the hands of the Tea Association of India, Calcutta. The industry has not only reached the second Plan's target but surpassed it. Tea produced in 1958 amounted to 711 million lbs. and exports to 566 million lbs., as against the targets of 700 and 500 million lbs., respectively. On the other hand, the relief accorded to the industry has been meagre, and it meets with stiff competition in foreign markets. The call for withdrawal of the export duty on tea has been falling on deaf ears, and cost of production continues to be high, in view of high labour charges and high taxation.

The Association has again urged for tax relief and withdrawal of the entry tax. The need for effective and vigorous propaganda in foreign countries has also been stressed as a measure to enable the industry to export more and earn more foreign exchange.

Trade circles wondered as to how the industry's efforts to reduce cost of production could be effective, when the Government was determined to increase wages paid to plantation workers. It was only announced during this week that the Government had decided to increase the wages for workers in Darjeeling gardens by 5 nP to 8 nP per day per worker on the basis of the report of a tripartite committee for that area. The increased burden on employers on this account would amount to Rs. 75,000 per month.

Industry and trade circles have been naturally worried over the suggestion for setting up a wage board for the plantation industry. This would be considered by the Industrial Committee on Plantations which is meeting on the 22nd and 23rd inst. If the formation of the Board is decided upon, that would lead to increase in the wage of workers, and indirectly to further increase in the cost of production.

In the internal auctions held last week, dusts on offer aggregated 21,863 chests. The feature was the dearer trend in leg-cut teas, albeit the irregularity. Orthodox teas, by the time the sale came to a close, gained in price, although, at the beginning, the price had eased by 2 to 4 nP. Darjeelings were quiet. C.T.C. teas gave way by 10 to 15 nP, while the stronger liquoring powdery teas were in good demand. The quotations, exclusive of excise duty, were: best Assam C.T.C. Rs. 2.50 to Rs. 2.70; medium Assam C.T.C. Rs. 2.00 to Rs. 2.10; medium Assam Re. 1.90 to Re. 1.94; and medium Doors Re. 1.94 to Rs. 2.00.

Leaf on offer amounting to 411 chests met with good demand.

In the sale held in Chittagong on 30th September, offerings amounting to 15,457 chests, met with good demand. Clean plain fannings gained As. 2 and well-made B.O.P.s an anna. The quotations were: P.F. Re. 1-9, O.F. Re. 1-15; and B.O.P. Re. 1-8.

RAW JUTE FIRM

(From Our Own Correspondent)

CALCUTTA, 6th October

Following the heavy rains in this part of the country during the week and reports of floods from jute areas, firmer conditions were in evidence in the raw jute market during the week under review, and prices for most varieties recorded a fractional gain. Floods slowed down arrivals in mills' stations, and buyers showed fair interest in anticipating a further rise in prices on account of possible damage to crop. Prices of jute goods were maintained firm, in sympathy with raw jute. Excepting for Egypt, which bought heavy goods for delivery in October and November, overseas interest was insignificant.

News of much importance during the week was the proposal to send delegation by the Indian Jute Mills' Association to the United States, Canada and Great Britain. The delegation, which is manned by the Chairman and Vice-Chairman of the Association, Mr. Kenneth E. Tosh and Mr. D. P. Goenka, is aimed at the maintenance of the close contact which earlier delegations had established with importers and consumers of Indian jute goods in those countries. Market circles have two opinions as to the timing of the delegation's visit. For, the poor interest shown by U.S. buyers in recent months in hessian had been causing concern here, and it was considered meet and proper that the I.J.M.A. reviewed its promotional work in the United States and examined the effect of the present trends in market. One of the chief tasks of the delegation while in the U.S. would be to suggest new uses for hessian including canal lining, for which hessian should be treated with asphalt. It was believed that this fabric could be used in furniture, and automobile industries. Other possibilities in new uses of burlap were in the manufacture of laminated boards and in packing materials since jute was cheaper than other types of containers but in no way inferior in durability. While in the United Kingdom, the delegation would discuss with the Jute Controller and the Board of Trade any possibility of reducing the mark-up value of Indian jute goods. At present the price of imported jute goods in the U.K. is fixed at 30 per cent. above the imported cost, and this serves as a protection to Dundee-made goods. Previously, the mark-up value was 40 per cent. above the imported cost which was reduced in 1957 as a result of Indo-British discussion. If only the mark-up value could be reduced, trade circles were confident that they could export more to the U.K.

On Tuesday last week, conditions in the gunny market were steady, but prices moved within narrow limits on account of activities in the futures market. Ready 40" 10 oz. was quoted at Rs. 40.25 and B. twills at Rs. 102. Prices on the

next day rose following keen buying in the futures market. However, profit-taking soon followed, but closing levels for hessian 40" 10 oz. at Rs. 40.30 and B. twills at Rs. 102.50 were higher on balance. At the higher levels, overseas interest was lacking for ready goods, but mills accepted orders for delivery extending from January to June. On Thursday, B. twills sagged to Rs. 101.40 and hessian 40" 10 oz. to Rs. 40.20. On Friday, the market was closed on account of Mahanav. Over the week-end, a feature of the trading was bear-covering in heavy goods in the futures market. Ready B. twills rose to Rs. 102.40 and in sympathy hessian 40" 10 oz. closed better at Rs. 40.40. At this stage, the U.S.S.R. lent its buying support and bought a fair quantity of heavy goods for immediate and near delivery positions, and yesterday ready B. twills rose to Rs. 103. In sympathy, hessian 40" 10 oz. hardened to Rs. 40.70. Active conditions were also reported in futures.

Raw jute prices rose by 25 nP per maund for most varieties. Mills showed more interest, as they were anxious to replenish stocks. The floods affected arrivals of the new crop, and river levels continued to rise. The latest quotations for the 1959-60 crop, October-November delivery are given below:

	Middles	Bottoms
White		
Selected Assam	Rs. 25-75	Rs. 23-25
Ordinary Assam	25-15	23-00

Pucca Bales		
1st mark	Rs. 165-00 ready per bale.	

LINSEED ADVANCES

(Messrs. A. Bradley & Co.)

CALCUTTA, 5th October

The linseed market remained very steady during the week and sharp advances were recorded in all sections. Supplies were inadequate for the improved demand from crushers and business was done at Rs. 24.75 for ready, with sellers indicating Rs. 25 for forward delivery.

Prices in the oilcake section rose sharply to Rs. 15.00 for local delivery, with fair trading reported. Overseas prices hardened by about 30s. to £37 5s., with sellers now indicating higher levels. September futures terminated at Rs. 24.25 and firm prices were held for May, although the volume of business was small. Oil prices gained about Re. 1.50 and sellers were very reserved, owing to shortage of supplies. Shippers were buyers at Rs. 53.50, with sellers indicating Rs. 54. The U.K. price reached £112.

The latest quotations per maund are: Ready October Rs. 24.75; October-November Rs. 25; and May futures Rs. 24.

NON-FERROUS METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 6th October

Steadier conditions were in evidence in the metal market during the week under review, following rising trend in foreign markets. Trade circles noted with considerable relief the increased quotas for non-ferrous metals, but, in view of the continuance of the actual-user system, hoped that the metal manufacturers would utilise normal trade channels in distributing their goods.

Tin was steady around Rs. 586. On the London Metal Exchange, tin rose from £79½ to £79¾. Lead was unchanged at Rs. 73.50 and, at £70 on the London Metal Exchange, the price recorded a fractional rise. In London, zinc advanced from £85½ to £87 and copper from £226 to £235½.

FOODGRAINS QUIETLY EASY

(From Our Own Correspondent)

HAPUR, 5th October

Quietly easy conditions prevailed in the foodgrains market during the week, thanks to rains over wide area, including east U.P., which was mainly dry for most part of the season. Late kharif crops were very much benefited and rabi sowings would be timely. In some of the east U.P. districts, the loss of the kharif crop was estimated at 50 to 75 per cent., following abnormally low rains. The U.P. State Government is worried over the coming lean winter months when cultivators would have exhausted the little coarse grains they are harvesting. But with about 150,000 tons of foodgrains in State Government warehouses and with a steady supply of 52,000 tons of wheat monthly from the Centre, the Government expects to meet any demand on its stocks. The Union Government is also concentrating on more imports and a fresh agreement to import 150,000 tons of rice from Burma has just been arrived at. This is in addition to the 350,000 tons of rice to be imported from that country under the Five-year agreement which is due to expire next year.

Wheat at Hapur eased fractionally during the week, thanks to better arrivals in the private market at an average of 50 to 100 maunds daily, and due to fall in consumer demand which was being switched on the new maize. There were as yet

no substantial purchases of wheat on State Government account under the wheat levy scheme, as prevailing wheat prices were Rs. 17.75 to Rs. 18.75 a maund, as against the fixed controlled price of Government purchases at Rs. 13 to Rs. 15 a maund.

Sales of wheat through fair-price shops are being continued, but the quality of flour supplied as substitute is reported to be poor. Fairly good rains have been received during the week-end, which will enable timely rabi sowings. But, in some areas, dearth of rains is still reported. Harvesting of paddy is being continued, but due to subnormal rains in most part of the State, the crop prospects are reported to be not very bright. The prevailing prices of rice here are: basmati sela Rs. 32.50 to Rs. 35; ramajayan Rs. 24.50; mainpuri Rs. 24; gadda Rs. 22 a maund.

After an early rise, gram eased fractionally towards the week-end. Owing to good outside demand, gram stock was gradually declining. Barley and bejhar ruled quiet, while new maize prices lost about 50 nP per maund, due to better arrivals. Jowar and guwar stayed steady. The week-end prices (in rupee per maund) were: gram 13; barley 12.75; bejhar 11.50 to 11.75; jowar 12 to 14; guwar 11.5

WORLD BANK AS GARDENER

Clearly, Mr. Black is in a much better position to view dispassionately the process of economic development with which the World Bank is now becoming so intimately connected. It is a measure of the man that his stature, as an international economic statesman, keeps growing along with the expansion of the Bank's activities. Indeed, his observations on the current economic scene are imbued with the mellowed wisdom of a practical philosopher. They contain a great deal of what is valuable as much to the industrialised west as to the underdeveloped regions. He rightly insists that the underdeveloped world should make its own efforts for development before it seeks aid from abroad. Further, it must abandon the policies which destroy economic growth. He says: "It is, after all, not the shape of the financial instrument but the presence or absence of the right economic policies which primarily determines the success of an adventure in economic development." If an underdeveloped country thinks it can stimulate economic progress by drying up the springs of initiative, it is sadly mistaken.

No less significant is Mr. Black's plea for broadening the "international channels through which new and additional resources may flow into the development of the underdeveloped

No less significant is Mr. Black's plea for broadening the "international channels through which new and additional resources may flow into the development of the underdeveloped

countries." In particular, he rightly stressed that a creditor country should be prepared "to accept eventual repayment in goods and services if the structure of international indebtedness is to be sustained." He pointed out that many of the trade restrictions today, particularly on agricultural products and industrial raw materials, "already stood in obvious contradiction to the proposed aim of more advanced countries to aid the underdeveloped lands." This is a point of view which the industrialised countries, especially in Western Europe, have not always learnt to appreciate. Financial aid had no doubt a positive relevance to economic development in the economically backward regions. But it cannot be a total, nor a satisfactory, substitute for trade facilities. It may be recalled here how a similar view has been expressed by the U.N. Department of Economic and Social Affairs in its report, *World Economic Survey 1958*, when, after referring to the 7 to 8 per cent. fall in export earnings of the underdeveloped countries during the period mid-1957 to mid-1958, it said: "This drop, reinforced by a continuing, albeit slight, rise in the import prices of manufactured goods in the face of industrial recession represents a loss in import capacity equivalent to about six years' lending to the underdeveloped countries by the International Bank for Reconstruction and Development at 1956-57 rates." This analysis lends strength to Mr. Black's view that, as a stimulus to an underdeveloped region's efforts to meet its current needs, aid is no permanent substitute for trade. Surely, if industrial countries give generous loans to the underdeveloped world but, at the same time, adopt measures which curtail its exports, they will have taken away its capacity to repay the loans.

IT is most gratifying to hear that arrangements have been completed to establish one more industry which will bring wealth out of industrial by-products that are now not being put to the most profitable use. We refer here to the proposed joint enterprise of the House of Kilachands and Firestone Tyre and Rubber Company of the U.S. to manufacture synthetic rubber in Uttar Pradesh on a fully integrated basis. It is a well-known fact that, of the by-products of our sugar industry, molasses and bagasse are not being put to the best possible use, with the result that crores of rupees worth of raw materials are being thrown away. Bagasse is being consumed by sugar factories mostly as fuel to power their own plants, whereas research has proved that a more profitable outlet for it would be in the manufacture of first class writing paper as well as newsprint, both of which will be needed in increasing quantities in the coming years. Many large-scale producers of cane sugar in the world are already making paper and newsprint out of this sugarcane waste. A modest beginning in this direction has just been made in Mysore and the first company to make paper out of bagasse—the Mandya National Paper Mills Ltd.—has approached the market for capital.

Similarly, molasses are used for making industrial and power alcohols, but, as the outlets for these are very restricted, the scope for this conversion is limited and large quantities of molasses are literally destroyed. It is estimated that the molasses available in the country are sufficient to produce 40 to 44 million gallons of alcohol. Hardly half of this quantity is produced now. Last year, the production of alcohol was only a little over 18 million bulk gallons. There would be no necessity for wasting molasses if there were no prohibition; in other countries, molasses are being utilised on a big scale for making potable alcohol and cattle feed, highly profitable outlets, indeed. In this country only a small quantity is being used for making rum. Even the industrial and power alcohol are not being utilised in a **gainful manner**.

redeemed on 1st May 1964 onwards. The Company has option to redeem debentures at 10% per cent. on 1st July 1964, on six months' notice, from 1st May 1964 onwards. T = Taxable. T.F. = Tax free.

* Current Income. x.d.—Ex-dividend. x.r.—Ex-Rate

At one time in the not distant past, more power alcohol than industrial alcohol was being produced; this was so even at the beginning of the second Plan. But now the demand for the latter has gone up, thanks to the growth of plastics, D.D.T. and rayon industries. In 1958, of the total production of 18.18 million bulk gallons, the share of industrial alcohol was 9.67 million gallons, that is, more than 50 per cent. As against this, in 1955, of the production of 15.6 million gallons, industrial alcohol's share was only 5.2 million gallons, that is, just one-third. One should not be misled by the growth in production and consumption of industrial alcohol to assume that the situation has improved enough. While the trend is on right lines, it has to progress further before one can say that the country is having the optimum use of molasses.

As already stated, the present production of alcohol is less than half of what could be produced from the available supply of molasses. Again, nearly half of the alcohol produced is being used as fuel for motor vehicles by mixing it with petrol. Neither the owners of road vehicles nor the oil companies are in favour of this arrangement. They are being compelled by legislation to take to this mixture in U.P. and Bihar, as well as in a few other States, where power alcohol is being produced. This mixture had its utility during the war and early post-war years, when petrol was scarce. But there is no scarcity of petrol now; indeed, there is a large surplus of it. Further, it is conceded by competent technical persons that alcohol is better used as industrial raw material than fuel. The Planning Commission also said, in its report on *Programmes of Industrial Development*, that "the use of alcohol as motor fuel can by no means be regarded as the most useful or economic outlet for this product." It went on to add that "while its consumption as motor fuel has to be permitted and even encouraged in the immediate future as a means of fostering the development of alcohol industry, a steady and permanent demand for alcohol has to be found in the establishment of industries using alcohol as their raw material." The Expert Committee on Alcohol Industry (Chairman: Dr. A. Nagaraja Rao) was also of the view, as early as in December 1956, that the development of alcohol-based industries like synthetic rubber, acetate rayon/cellulose acetate, pharmaceutical products, D.D.T. and other organic chemicals and solvents should be encouraged on a priority basis. This opinion was accepted by the Government, without any qualification, in March 1958. The proposed establishment of synthetic rubber industry in U.P. has thus the backing of expert opinion and will offer an ideal, large-scale outlet for alcohol. The promoters of the proposed synthetic rubber project have estimated that approximately 14 million gallons of alcohol will be required initially, when they propose to produce 20,000 tons per year of G.R.S. rubbers, latices and other rubber products, and 20 million gallons later, when production is stepped up to the full capacity of the G.R.S. plant, namely, 30,000 tons per annum.

Synthetic rubber belongs to the family of petro-chemical industries, as does plastics. In the rest of the world, both plastics and synthetic rubber are based on mineral oil industry, but, in India, the position is different. In the first place, India does not have at present sufficient supply of petroleum. Secondly, the by-products of petroleum refineries can be profitably used for other purposes, as, for instance, the manufacture of fertilisers which are urgently required for increasing agricultural production. And, thirdly, as has been shown above, there is a large surplus of molasses and its derivative, industrial alcohol, which are either wasted or ungainfully utilised. The planners were, therefore, right in deciding to base synthetic rubber on industrial alcohol. In coming forward to establish this industry, both Kilachands and Firestones are rendering a signal service to the country.

From the point of view of demand also, the case for synthetic rubber is unassailable now. The demand for rubber is rapidly expanding. Current consumption is running at the rate of 40,000 tons and is expected to touch 60,000 tons in another 18 months, thanks to the sizable expansion that is taking place in the capacity for manufacturing tyres and other rubber goods for both industrial and domestic use. It is expected to exceed 75,000 tons by the end of the third Plan in 1966. Because of the belated and halting efforts for stepping up production of natural rubber—here it is the Government that is largely to be blamed—the supply of natural rubber will greatly lag behind the demand. Even now, the gap is about 15,000 to 16,000 tons which is now being met by

imports. In two years, it will easily be in the neighbourhood of 24,000 tons and the foreign exchange position is not favourable for importing such a large quantity of rubber. It has been found from experience that, in certain respects, synthetic is superior to natural rubber. In the U.S., nearly 75 per cent. of synthetic rubber goes into tyre manufacture. It is claimed that, when synthetic is mixed with natural rubber, the final product has certain advantages not found by using natural rubber alone. There is thus no doubt that synthetic rubber has come to hold a firm place in the manufacture of rubber goods. Further evidence of it can be had from an article on page 644 of this issue.

It is true that, even four years ago, the idea of establishing a synthetic rubber industry in India sounded fanciful. This journal itself felt that it was a far-fetched one and wondered whether it would be worthwhile making a large capital investment for this purpose when India was endowed with appropriate climate, land and man-power for growing natural rubber. But then the case for the synthetic was by no means as clear as it is now. It was then generally assumed that the synthetic would be based on either petrol or coal, as is the case elsewhere in the world. There were no proved petroleum reserves of any sizable nature. The conversion of coal for this purpose was no easy job. The position in these respects is still much the same. In any case, both oil and coal are exhaustible resources, whereas rubber trees can be replaced by fresh planting. The idea, therefore, did not sound attractive. The foreign exchange position was then thought to be so comfortable that the Government itself was very liberal in allowing imports of even luxury goods. Thus, the circumstances were such that imports of rubber seemed to offer a better solution for closing the gap, until such time as the natural rubber was able to take care of the country's needs.

But now things are different. The demand for rubber has risen faster than anticipated. The synthetic rubber is based on an inexhaustible source of raw material which is going waste. Sugarcane and sugar are produced every year in increasing quantities, so that there is going to be a regular, inevitable supply of molasses and, therefore, industrial alcohol. Even the other raw material, benzene, is, and will always be, available in plenty, as it is a by-product of steel industry which is being expanded on a large scale. No drain of foreign exchange is involved in regard to raw materials. On the contrary, when the industry is fully established, it is expected to result in a saving of at least Rs. 5 crores, if not more. No immediate loss of foreign exchange will occur through import of plant and machinery, as Mr. Tulsidas Kilachand has been successful in securing not only the technical and financial collaboration of the Firestone Tyre and Rubber Company (U.S.), but also the assistance of commercial banks in the U.S. and financial institutions in the U.K. for taking care of the foreign exchange needs of the project. Of the estimated capital cost of Rs. 13.50 crores, foreign exchange requirements are Rs. 7.5 crores, of which Rs. 3 crores will be given as credit by Firestones and the balance will come from the sources just mentioned. In addition to the credit of Rs. 3 crores, Firestones will also be investing in the proposed company to the tune of Rs. 11.25 lakhs, out of a total equity capital of Rs. 4.50 crores. With Kilachands ready to provide another Rs. 11.25 lakhs, the balance of Rs. 2.25 lakhs is not beyond the capacity of the domestic capital market today.

The promoters, it is noteworthy, have not sought any assurances, or guarantees or subsidy from either the Central or State Government, even though the project involves as large an investment as Rs. 13.50 crores, excluding working capital. This shows their confidence in the intrinsic merits of the project and in their ability to make it a success. It also shows their faith in the Government and the belief that, if due to any unforeseen circumstances their industry gets into difficulties, the authorities will afford it suitable protection. The promoters are also confident that, on the basis of today's cost of alcohol in Uttar Pradesh, they would be able to produce synthetic rubber at a cost cheaper than natural rubber and at almost the same price as the imported synthetic rubber. The assumption is somewhat nebulous, for the producers of molasses and alcohol alike have been demanding a higher price for their materials (which are now subject to strict official control), on the ground that their costs have gone up and that the profit margin is unremunerative. In any case, the hope entertained by some that the establishment of synthetic rubber industry will lead to a fall in the price of sugar is rather an extravagant one.

AIR FARES

WORLD airlines have long recognised that there is a virtually inexhaustible potential market to which they could cater. It is true that only a fringe of this vast market has now been exploited. Even so, it is significant that the volume of air traffic is rising year by year. But the airlines realise that a rapid expansion in air traffic could come only through successive reductions in fares. The problem is not by any means an easy one, for there are several factors which influence the level of fares, operating costs and density of traffic being the most important. Operating costs continue to rise faster than revenue. Last year, the airlines showed an overall operating deficit of \$160 million, as against \$41 million in 1957. The simple expedient of increasing the fares is not the right solution, because it may well lead to a fall in air travel and an increase in deficit.

Clearly, some way must be found to keep the fares down. But world airline representatives, who met this week at Tokyo where the International Air Transport Association held its annual session, could not reach any agreement over proposals for lower plane fares between Europe, Africa and Asia and across the Pacific. It is believed that a new fare-setting conference may be called, in order to pave the way for an acceptable solution of the problem of fares. Apart from the rise in operating costs brought about by the use of costlier planes and larger wage bills, there are two factors which prevent the movement towards a lower fare schedule. It is to these two factors that Sir William P. Hildred, the Director-General of the International Air Transport Association, referred in his annual report when he said that world airlines' power to keep fares down was being threatened by the "military blockade of the upper air space and the tendency of governments to increase airport charges." He said that by closing off large areas of upper space from civilian traffic, the military authorities were forcing jets to operate over longer tracks or at lower altitudes which increased their fuel consumption. It would, however, appear that the military had been more understanding and helpful in recent months in finding a solution to the problems over the North Atlantic and the European Continent, though the goodwill "has been of slow growth and is being outpaced by developments." Referring to the second factor, Sir William said that increased Government charges at air ports, often imposed at short notice, were causing the airlines "serious concern." He added: "Those lightning levies are unfair and unwise."

It is of the utmost importance to world progress that air traffic should grow and grow fast. The problem before the airlines, as Sir William pointed out, is to attain the highest possible economy of operation as the basis for the lowest possible price and then to squeeze the greatest amount of traffic out of whatever market that price level enables them to exploit. Sir William said: "Our markets are inexhaustible as long as we keep the fare down, down, down." Since an increase in air traffic is a matter of vital concern to all countries, it is to be hoped that their Governments will show the necessary imagination to keep the airport charges to a minimum. Any measure that is calculated to bring down the air fares is a contribution to world progress, worthy of the highest praise.

While the Governments should, of course, do all they can to keep the airport and other charges to the minimum, the airlines, on their part, should not relax their efforts designed to cut costs of operations. By employing high-cost aircraft, like jet planes, on routes which just do not have the traffic to permit the use of such aircraft as an economic proposition and which can very well be served with the less costly traditional aircraft, the airlines will be merely adding to their own and their patrons' burdens. India's delegate to the meeting, Mr. J. R. D. Tata, was quite pertinent when he urged that some "sober and realistic" thinking was called for in the matter of satisfying the "untapped demand for cheap travel." He referred to the fact that the air transport industry had been accused of "having made a ghastly mistake in going in for jets in such a big way, and the I.A.T.A. gets its share of the blame for the adverse effect the jets will have on fare levels." It would appear that, in certain cases, considerations of prestige rather than economics dictate the use of jets. Surely, jets, as Mr. Tata warned, might prove an expensive luxury if operated in excessive numbers or on routes for which they are not suited. It is, of course, for the airline to determine where these aircraft have the best chance of attaining economic operation.

MARKET GOSSIP

THE momentous development of the week is the resounding victory of the Conservative Party in Britain. It has come back to power, with a far greater majority than it enjoyed in the previous tenure. While the return of Conservatives to Government had been anticipated by many in this country, it was not expected that it would get such a large majority as 100. The Labour Party has suffered a crushing defeat, having polled fewer votes than in the last elections. The significance of this development is that, for the third time in succession, the vast majority of British people have rejected socialism, with all its paraphernalia of nationalisation of industries, State capitalism, undue State direction and controls, and that they are content to have a party in power which has promised minimum State controls and State-ownership. It must be remembered, in this connection, that, on the eve of the elections, the Socialists had promised liberal concessions in purchase tax, no increase in income taxation and a grandiose pension scheme. Yet, the people did not vote them to power. It must also be remembered that the Labour Party had done a lot of re-thinking and readjustment in their policies. They had incorporated in their policy statement Mr. Nehru's idea of controlling the economy from strategic heights, instead of outright ownership. But all this has not helped them to be in charge of Her Majesty's Government. What more evidence is required to show that, in Britain, socialism is out of date and that the British people immensely distrust it?

The success of the Conservative Party reflects the British people's hard common sense. They have found that this Party has delivered the goods, in the sense that it has brought about a considerable improvement in the standard of living of the people. They have wisely preferred to keep in harness the tried horse.

The Conservative Party, of course, deserves the success it has had. After the deplorable Suez episode, it worked hard to salvage its political reputation and to restore the British position to a sound position. Some idea of its achievements can be had from our London Letter elsewhere in this issue. Whatever the Socialists may say, there is no doubt that, under the rule of the Conservative Party, the lot of the common man has greatly improved and that Britain has moved a long way towards a classless society. This Party's victory means an endorsement by the British public of all its economic policies, including the 7 per cent. Bank rate and abolition of controls once the economic emergency was over.

In the past two years, the Conservatives have also had a lot of luck. The favourable balance of payments position of the U.K. is due, in a large measure, to (a) the heavy rise in the prices of primary raw materials, (b) the great fancy which Americans suddenly took for small cars, and (c) the lead which the British aircraft industry had obtained in making jets. These advantages cannot last for ever, though the first mentioned factor may continue longer than many people think.

Tasks Ahead

The fear of Labour victory in the polls had a sobering influence on British employers and Conservative Ministers. But there is a danger of their thumping success removing this restraining factor. If they allow heavy speculation in markets, they will be inviting economic trouble. Instances similar to the Jasper affair show the risk involved in giving unrestricted freedom to free enterprise. The re-elected Party and the Government have also to bear in mind the obligations of developed countries to underdeveloped countries. They have to see that the understanding reached at the Ottawa Commonwealth Conference, namely, that the underprivileged nations must be helped to grow even if this involves some sacrifice by the developed countries, is faithfully implemented. It is quite refreshing to find that this point has been effectively brought out by our London contemporary, the *Financial Times*. Writing on the tasks awaiting Mr. Macmillan's Government during its fresh tenure of five years, this paper says:

"In the international field, too, there is much to be done—more indeed than at home. Apart from the main problem of world tension, there are many specifically economic tasks. There is the question of Britain's economic relations with Western Europe and with the Commonwealth. There is the need to improve living standards in the underdeveloped countries, and especially in our own colonies. There is the growing Soviet economic challenge. In the next five years, there is a lot to do.

"While a settlement in Europe remains essential, it is equally important that the eventual bargain should not be concluded at the expense of the rest of the world. Wars, as a whole, no less than Britain, will in future have to accept greater responsibility than hitherto for the development of the poorer countries in Africa, the Middle East and South-East Asia. The time has come for a shifting of some of the burden from American on to European shoulders. This country will have to devote increasing resources to investment in the Commonwealth. One point which will have to be kept in mind here is that an attempt must be made to encourage private investment in these areas of the Commonwealth which have hitherto had to rely on Government assistance.

"Stability must be established where it does not exist at present. Aid must be given. At the same time, the developing countries must be given the chance to expand their trade. As their industrialisation is advanced, this will pose difficult and painful decisions. Other industries may share the fate of cotton and find themselves exposed to competition on a scale which they cannot easily meet. It will be

up to the Government to ease the transitional process as much as it can. The major challenge for all industrial countries, non-Communist and Communist, in the years ahead will arise to their relations with the underdeveloped nations. Until the gap between the rich and the poor countries in this world can be seen to be narrowing, the advance of the world as a whole towards peace and greater prosperity will remain in jeopardy. This is the background against which the international problems of the coming years have to be tackled."

Mr. Eisenhower's Remarks

These sentiments doubtless reflect the thoughts of leaders not only in this country but also in the U.S. At the annual meetings of the Fund and the Bank, the Americans missed no opportunity to stress the point that it was time Western Europe, which they had helped to recover and become strong against Communism, took active interest in, and made substantial contribution to, the economic advancement of the less developed free world. This point was reiterated by President Eisenhower in an inspiring speech in his native town in Kansas State on Wednesday the 14th inst. He said:

"Any responsible person will recognise that no one nation, even with the legendary strength of an Atlas, could long support the world on its shoulders. Each nation will progress only if its own people and leaders recognise that the major responsibility for improvement is theirs. Even if every other nation were as generous as the U.S. has been in recent years, this would still be so. But this does not imply that we or any other fortunate people may be indifferent to the welfare of others. We cannot today live—either in domestic or international life—with the long-obsolete picture of the factory-owner living on a hilltop in isolated riches and splendour, wholly indifferent to the aspirations and just demands of the oppressed multitudes in the plains below. . . . Every nation should contribute to the common enterprise in whatever way it can. No nation should be deemed incapable of contributing in some fashion to the common goal.

"The ingredients of this resistance must be technical service, private and public loans, dependable, mutually helpful trade relationships, grants in emergency situations, security help in transition years, and, above all, continuing efforts to build true understanding among nations and peoples, without which all else will fail. Foreign capital helped our own country make spectacular progress during the first three-quarters of the nineteenth century—capital which over a 40-year period we repaid with interest. So too can private and public capital under the right conditions, now assist the less-developed nations, make sound progress towards the achievement of their goods. The 'right conditions' must include both an honourable and responsible attitude within the nations needing the capital and intelligent trade relations among all free nations."

The aforesaid quotation from President Eisenhower, it must be conceded, aptly reminds both the developed and underdeveloped nations of their obligations towards each other.

Five per cent. for 58 Months

Interest rates in the U.S. have of late been showing sustained strength. The rise began in the summer of 1958 in the context of large-scale sale of intermediate and long-term Government securities. By mid-1959, average rates on long-term Government bonds had risen above 4 per cent., the highest yield since early 1930's and those on some short-term securities to nearly 4½ per cent. Medium-term rates had advanced almost to the peaks reached in 1957 prior to the recession. In keeping with this trend, commercial banks raised, in May last, the rate on prime loans to 4½ per cent. and, subsequently, still higher to 5 per cent., the present ruling rate. The Federal Reserve discount rate, which was 3 per cent. in March last, was raised to 3½ per cent. in May and to 4 per cent. last month.

Last week, the U.S. Treasury issued short-term bonds of the value of \$2,200 million, maturing in 58 months, at as high a rate as 5 per cent. per annum, the highest in thirty years. The issue was a resounding success, as the subscriptions were more than five times the amount invited. It may be interesting to note here that, in India, one can get only 3.78 per cent. per annum on a 15-year Central Government loan and 3.57 per cent. on a 10-year issue. The yield on a 5-year loan is no more than 3.44 per cent.

As the five per cent. interest offered by the U.S. Treasury was higher than the prevailing market rate, it turned out to be a tempting bait. Investors from the length and breadth of the country, some of whom have never hitherto applied for a negotiable Government security, turned up in a big way. Applications poured in overwhelming numbers for over \$11,000 million. The original amount of issue was, therefore, raised by 10 per cent., that is, by \$200 million to \$2,200 million. Even then, not more than five per cent. of the demand could be met. A system of allocation was devised according to which all subscriptions of \$25,000 or less were allotted in full and savings-type investors were allotted 45 per cent. of their application, commercial banks had to be satisfied with 8 per cent. and all other investors with 5 per cent.

The U.S. experience is contrary to the belief held by the authorities as well as advisers on Indian capital market. Here, the belief is that the Government should borrow from a position of strength, that it should lead the market rather than be led by it, and that, if possible, the issue should

carry a rate of interest slightly below the prevailing market rate. In view of this belief, if the Government of India were to issue a loan offering a higher rate of interest, it would be regarded as a sign of weakness, resulting in a slump in the Government market. In the U.S., however, things are different. The U.S. Treasury and the Federal Reserve system do not mind following the market. They prefer this policy to pumping money first into the market, so that new loans can be raised on more favourable terms.

The success of the latest issue confounded sceptics who had doubted whether it would be possible to strengthen the market by offering new issues at rates more favourable to the lender than the prevailing market rate. As the *Wall Street Journal* put it, the great rush for the new issue "reminded once again the power of price in the market place—the price of money as well as of anything else."

The issue of a new loan of less than five-year maturity at a high rate of interest is a sequel to the refusal of the U.S. Congress to lift the statutory ceiling of 4½ per cent. on Treasury bonds (that is, securities with a maturity period exceeding five years). It will be recalled that, in view of the rise in interest rates in the past one year, the President had proposed to the Congress, in June 1959, the elimination of the statutory ceiling. Without such an increase, it would not be possible for the Treasury to fund its short-term loans maturing in one to five years, which have grown to an enormous size, from \$39 billion to \$59 billion since June 1957. The Congress's refusal has forced the Treasury to concentrate entirely on the short-term market to meet its demand for funds. Consequently, the discount rate on three months' Treasury bills has risen from 3 per cent. at the beginning of August to 4.17 per cent. by mid-September, and the rate on six months' bills and on Treasury notes has gone above 4½ per cent.

The present issue of \$2.2 billion would appear to be aimed at easing the pressure on Treasury bill rate. It remains to be seen whether the upward trend will be halted. At the auctions held on the 9th inst., a day after the announcement of the issue, 13-week Treasury bills were sold at an average rate of 4.262 per cent. and 26-week bills at 4.666 per cent., as compared with 4.007 per cent. and 4.678 per cent., respectively, at the previous week's auctions. The rate of 4.262 per cent. for 13-week bills was a new peak as compared with the previous record of 4.259 per cent. in March 1953.

The consensus of opinion in New York at present is that, whatever the immediate prospects for Treasury bill rates, interest rates may resume their upward trend, once the steel strike over an economic activity restored, unless, of course, the Congress changes its mind when it meets again early next year.

Cotton Textile Situation

The shares of cotton mills seem to have caught the fancy of investors in recent months, as witness the handsome gains registered by most of them. An idea of the gains can be had from the following quotations for a few prominent scrips transacted on the Bombay Stock Exchange:

	15th October 1959	30th December 1958	Net rise since December 1958	15th October 1958
Bombay Dyeing	Rs. 69.20	Rs. 56.40	Rs. 12.80	Rs. 58.00
Century	601.00	416.60	184.40	436.75
Finlay	299.50	255.00	44.50	281.00
Khatana	271.25	155.00	116.25	178.75
Kohinoor	317.00	239.50	183.50	266.60
Standard	646.00	405.00	241.00	408.00
Total	47.25	35.50	11.75	57.25

The increased interest of investors in cotton mill shares must be attributed to hopes of enhanced return based on renewed reports of excellent off-take of both piecegoods and yarn for domestic consumption as well as exports. The hopes are so high that even the possibility of the improvement in mills' sales being offset largely by higher cost of production has failed to restrain their enthusiasm. It may be noted here that, as compared with last year, the average amount of dearness allowance paid to a mill worker in Bombay City for 26 working days has gone up from Rs. 81.58 (average for 1958) to Rs. 88.60 (August 1959) and the prices of cotton have risen by about 10-20 per cent.

Reflective of the excellent off-take of piecegoods is the sizable reduction in the accumulations of stocks lying with mills. The total of these stocks as at the end of last month was 559.5 million yards, a drop of 314.1 million yards as compared with the 873.6 million yards held at the close of 1958. Of this drop, unsold stocks account for 222.9 million yards—the actual quantity declining from 494.4 million yards to 271.5 million yards—and stocks sold but not taken delivery of for 91.2 million yards—the actual quantity falling from 379.2 million yards to 288.0 million yards. Similarly, the stocks of yarn lying unsold with mills as on 30th September were lower at 11.76 million lbs., as against 25.64 million lbs. at the end of December 1958. It must be noted that the decline in cloth and yarn stocks has taken place, despite the fact that production has not suffered a setback. The aggregate quantity of cloth actually produced in the first nine months of 1959 was more or less the same as that in the corresponding period of 1958, being 3,687 million yards. The output of yarn was actually higher at 1,279 million lbs., as against 1,247 million lbs.

The improvement in the off-take of cloth has been on account of both domestic consumption and exports. It is rather difficult to assess the quantity of mill cloth consumed within the country in the absence of details regarding the stocks held by the trade—wholesale and retail—as also by

(Continued on page 668)

EQUITIES RULE STEADY

SHARP RISE IN CENTURYS

(From Our Own Correspondents)

BOMBAY, 15th October

AFTER a sustained upward trend during the last few weeks, equities on the Bombay Stock Exchange displayed a somewhat hesitant tendency during the week under review. Movements were a little erratic, but the undertone remained very steady under the leadership of some leading textile scrips. Prominent in the textile group was Centurys which, under a spell of strong speculative support, crossed today Rs. 600 to touch Rs. 602.50. Rumours that the Company had received sanction to issue the proposed new capital at a premium of Rs. 20 infused fresh buying in this scrip. The general improvement in this group was, however, due to reports that the offtake of cloth had improved sizably during the last few months, thus enabling mills to reduce their stocks considerably. In the steel group, Indian Irons staged a good rise on rumours that the L.I.C. was interested in buying, but later reports indicated that the Corporation had turned down all offers. There was, therefore, a sharp drop from the week's peak level.

Steels

Tata Ordinaries jumped up early in the week from Rs. 164.25 to Rs. 166 before reacting to Rs. 163.25 on Monday. Subsequently, there was again a recovery to Rs. 165.50, but the closing was done a shade lower at Rs. 164.75. Tata Ordinary Rights came to be quoted today at Rs. 76 and their coupons at Rs. 16.50. Indian Irons advanced from Rs. 24.08 to Rs. 24.56 before reacting to Rs. 24.20.

Textiles

As stated already, the highlight of the textile group was provided by Centurys. The shares shot up early in the week from Rs. 583 to Rs. 600. After a subsequent setback to Rs. 587, the shares rallied to touch a high of Rs. 602.50 and closed at Rs. 601. Bombay Dyeings were also a feature, with a spurt from Rs. 68 to Rs. 69.20. Kohinoors fluctuated between Rs. 325 and Rs. 313 before finishing with a loss of Rs. 2.50 over the week at Rs. 317. Central Indias also lost Rs. 2.50 to Rs. 115. Finlays, however, gathered Rs. 4.50 to Rs. 299.50 and Gokaks Rs. 6.50 to Rs. 179.50. Indu Ordinaries gained 24 p to Rs. 11.40. Khataurs were done Rs. 6.25 lower at Rs. 271.25 and Morarjees Rs. 20 down at Rs. 270. Minervas hardened by Rs. 8 to Rs. 70. New Greats Halcyonias were fully steady at Rs. 16.37, as also Ouchterlony at Rs. 5.45 and Nelliampathys at Rs. 3.00. Among coffees, Coffeelands climbed up by 62 p to Rs. 24.12. Consolidated Coffees were marked up by 35 p to Rs. 22.50. Cowcoods improved by 5 p to Rs. 6.20. Wartybulls put on 3 p to Rs. 3.98 and Oosors 2 p to Rs. 3.95. But Balmadies dropped 5 p to Rs. 2.95. Among rubbers, Highlanders rose by 25 p to Rs. 14. Malabars gained 10 p to Rs. 6.60. Midlands, however, shed 30 p to Rs. 12.20. Thirumbadis and T.R. and Ts were unchanged, the former at Rs. 1.85 and the latter at Rs. 6.90. Vaikundams also were unaltered at Rs. 28.25 *interim cum-div.* The Directors of the Company have declared an interim dividend of 12½ per cent. for the year 1959, which is taxable, as against 12½ per cent. tax-free announced this time last year.

Banks and Insurance

Bank shares were featureless. Barodas were unchanged at Rs. 103.50. Centrals were a fraction lower at Rs. 48.50, while their 'A' shares were maintained at Rs. 51. Bank of India shed a rupee to Rs. 111. While Punjab Nationals disclosed no change at Rs. 21, United Commercial declined by Rs. 2 to Rs. 61. In the insurance group, New Indias were in the forefront, their old shares being marked up by Rs. 3.40 to Rs. 63.20 and their new shares by Rs. 2.70 to Rs. 63.50.

Electricity

Electricity shares were quiet with an all-round setback in prices. Ahmedabad Electrics shed 40 p to Rs. 95.80, Bombay Suburbans 75 p to Rs. 105 and Surat Electrics 50 p to Rs. 105. Tata Hydros were fractionally lower at Rs. 113. Andhra Valleys lost Rs. 1.75 to Rs. 1,090 and Tata Powers Rs. 30 to Rs. 1,120.

Sugars

A fall of Rs. 8 to Rs. 332 in Belapur was a feature of the trading in sugar shares. Phaltans were down by a rupee at Rs. 181, while Walchandnagars disclosed no change at Rs. 331.25. Some of the cash scrips, however, were firm, Maharashtra Sugars recording a gain of Rs. 22.50 to Rs. 269.50, New Svadeshis Rs. 5 to Rs. 270 and Kesar Sugars Rs. 3 to Rs. 70.

Cements

Trading in this group was dull with fractional variations in prices. Associated Cements moved between Rs. 154.25 and Rs. 151.50 before closing at Rs. 152.75. Digvijays were a fraction lower at Rs. 147.25, as also Orissa Cements at Rs. 154.00. Jaipur Udyogs were unchanged at Rs. 10.08.

Engineering and Minings

Barring a rise of Rs. 6.50 to Rs. 387 in Premier Constructions, engineering shares were dull. Tata Locomotives were, however, erratic, moving between Rs. 208.25 and Rs. 200, but closed at Rs. 200 with no change over the week. Alcock Ashdowns suffered a loss of Rs. 6 to Rs. 260. Larsen and Toubros were down by 36 p to Rs. 23.12. Cooper Engineering by Rs. 3 to Rs. 168. Mahindras by 44 p to Rs. 23 and Structural Engineering by Rs. 20.50 to Rs. 235. Shivrajpur, among minings, showed no change at Rs. 90, while Indian Coppers shed 8 p to Rs. 3.96.

Shipping shares presented a quiet trend. Scindias reacted from Rs. 17.84 to Rs. 17.08 before recovering partially to Rs. 17.32. Great Eastern Shippings declined by 82 p to Rs. 19.96 and Bharat Lines were a shade quiet at Rs. 10.48. Automobile shares were steady, Premier Automobiles

recording a rise of Re. 1.25 to Rs. 136.75 and Hindustan Motors 24 p to Rs. 13.80.

Bombay Burnahs (old) were erratic, fluctuating between Rs. 555.50 and Rs. 537.50. The closing was, however, done at Rs. 548, representing a fall of Rs. 5 over the week. National Rayons rallied from Rs. 375.50 to Rs. 388.25 before finishing at Rs. 384.50. Their new shares improved by Rs. 6.50 to Rs. 370, while Gwalior Rayons were marked down by Re. 1 to Rs. 25. Chemicals and Dyes continued to be in favour. Tata Chemicals gained 28 p to Rs. 17.32. Dhanganadras put on Re. 1.25 to Rs. 135.25 and Colour Chems Rs. 3 to Rs. 223. Dhanamsi Chemicals moved up by Rs. 9.50 to Rs. 150. Poly Chems staged a hectic rise from Rs. 144.50 to Rs. 163. Indian Dyestuffs advanced by Rs. 6.25 to Rs. 331.25 and Amar Dyes by Rs. 8 to Rs. 231. Tata Oils were unchanged at Rs. 65, while Voltas were a shade quiet at Rs. 182. Wimcos shed Rs. 2 to Rs. 226. W. H. Bradys were done at Rs. 360, as against Rs. 400 previously. West Coast Papers were marked down by Rs. 3.50 to Rs. 154.50 and Sarpurs by 64 p to Rs. 14.52, following the Directors' decision to skip over the final dividend for the year ended 30th June 1959.

Madras Stock Exchange

MADRAS, 14th October

The Madras Stock Exchange continued to rule firm during the week under review, with several scrips recording further gains. Buying support was well sustained, while floating stocks were scarce. Textiles evoked enquiries, thanks to persistently encouraging offtake of cloth and yarn, in addition to reports that satisfactory progress was being maintained in the implementation of modernisation and expansion programme in many mills. Tea shares were also well favoured, notwithstanding the news of a sizable fall in the production of tea in South India during the first nine months of the current year. Coffees elicited good support, induced by hopes of a marked rise in output. In sympathy, rubbers, too, moved up. Sugars were active on account of renewed firmness of sugar prices. Among the miscellaneous industrials, cements and chemicals were fancied greatly.

In the sugar section, Cauverys advanced by Rs. 3 to Rs. 128. United Breweries rose by Re. 1.50 to Rs. 463. E.L.Ds and K.C.Ps gathered 25 p each to Rs. 42.25 and Rs. 17, respectively. Deccans picked up 20 p to Rs. 12.80. Travancores, however, declined by 30 p to Rs. 12. Indias sagged by 5 p to Rs. 13.13.

Among teas, United Nilgiris strengthened by 30 p to Rs. 20.30. Neelamlals hardened by 12 p to Rs. 4.45. Chembras gathered 3 p to Rs. 3.95. Halcyonias were fully steady at Rs. 16.37, as also Ouchterlony at Rs. 5.45 and Nelliampathys at Rs. 3.00. Among coffees, Coffeelands climbed up by 62 p to Rs. 24.12. Consolidated Coffees were marked up by 35 p to Rs. 22.50. Cowcoods improved by 5 p to Rs. 6.20. Wartybulls put on 3 p to Rs. 3.98 and Oosors 2 p to Rs. 3.95. But Balmadies dropped 5 p to Rs. 2.95. Among rubbers, Highlanders rose by 25 p to Rs. 14. Malabars gained 10 p to Rs. 6.60. Midlands, however, shed 30 p to Rs. 12.20. Thirumbadis and T.R. and Ts were unchanged, the former at Rs. 1.85 and the latter at Rs. 6.90. Vaikundams also were unaltered at Rs. 28.25 *interim cum-div.* The Directors of the Company have declared an interim dividend of 12½ per cent. for the year 1959, which is taxable, as against 12½ per cent. tax-free announced this time last year.

Textiles, as already stated, registered a rise in prices. Buckingham's spurted by Rs. 5 to Rs. 195. Coimbatore Pioneers and Dhanalakshmis increased

NEWS IN BRIEF

REFRIGERATED vans for the transport of fish, fruit and other perishable articles are expected to be built for the first time in India shortly through the efforts of the Railway Board.

The Government of Bombay has sanctioned Rs. 15 lakhs for the exploration of lignite in the Saurashtra area. It is estimated that Umarsar area of Kutch has a deposit of about 10 million tons of lignite.

The Model Mills, Nagpur, which has remained closed since April last, will resume functioning from the 29th inst. The Government of India has taken over the management under the Industries (Development and Regulations) Act 1956. Mr. Hanuman Prasad Nevatia has been appointed the authorised Controller and entrusted with the work of restarting the Mills.

India imported 1.17 million tons of steel during 1958, as against 1.67 million tons in 1957. The quantities imported on Government account and distributed by the Steel Controller amounted to 753,805 tons in 1958, as compared with 1,037,063 tons in 1957. The total supply during the period was 2.47 million tons, including 1.30 million tons from indigenous sources.

An official delegation, led by Mr. V. V. Chari, a member of the Central Board of Revenue, has left for Tokyo for initiating talks with Japan on the conclusion of an agreement for the avoidance of double taxation. India has already entered into similar agreements with a number of European and Asian countries. An agreement has also been reached between India and the U.S. This is now awaiting ratification.

Production of ilmenite in India during the first half of 1959 was 143,000 tons. Ilmenite is recovered from the beach sands of Chavara in the Qulion district of Kerala State and the Manavalakurichi area in the Kanyakumari district of Madras State, the former contributing nearly 93 per cent. of the total production. Ilmenite is produced at present mainly for export. The U.S.A. and the U.K. are the principal markets.

Traces of rocks containing several minerals of economic importance in the Kaladgi system in Western India have been found by the Geological Survey of India. Located in the south of Bombay State, the Kaladgi formation corresponds to the Delhi system in Rajputana and the Cuddapah System in Madras covers a wide area in Bijapur and Belgaum. Minerals in rocks traced in the area are abrasives, construction materials, such as building stones, slates, road metal, ballast, calcite, clays, glass-sand, limestone, dolomite, and lithographic stone.

A symposium on "Industrial Productivity—Research, applications and implications," organised by the sections of Economics and Social Sciences and Industrial Engineering and Administration in connection with the golden jubilee year celebrations of the Indian Institute of Science, Bangalore, will be held on 14th and 15th November 1959. The symposium will cover major aspects of research relating to industrial productivity. Delegates from academic institutions and industrial organisations from various parts of India are expected to participate and present papers at the symposium.

The final round of negotiations on the question of sharing the Indus Basin waters between India and Pakistan will begin at Washington on the 20th inst., under the auspices of the World Bank. The talks are expected to continue for a few months, as a good deal of technical data will have to be examined. An agreement has also to be reached on the quantity of water to be supplied by India to Pakistan in the next ten years, that is, till the construction of its link canals. The Indian delegation will be led by Mr. N. D. Gulati, Additional Secretary, Union Ministry of Irrigation and Power.

The Hindustan Machine Tools, Bangalore, has entered into a seven-year technical collaboration agreement with the Italian firm, Messrs. Officina Meccanica Olivetti, for manufacturing, under licence, 16 types of cylindrical grinding machines, in addition to the existing range of 74 types. The H.M.T. will have full rights to market these machines in India, Burma, Ceylon, Pakistan, Afghanistan, Nepal, Thailand and Laos. Besides making available the services of two experts to assist the production of the new types of tools, the Italian firm has agreed to give training to five employees of the H.M.T. in its workshops in Italy.

A new trade agreement between India and Italy was signed at Rome on the 6th inst. The agreement lays stress on greater economic and commercial co-operation for mutual benefit. To this end, a commission has been set up to facilitate consultations between the two Governments and to adopt practical measures for promoting and extending co-operation between enterprises, commercial organisations and banks on both sides. The agreement will remain valid until 30th June 1960. It will be renewed automatically for another year, unless either party gives three months' notice of its intention to terminate it.

As part of the programme for eliminating waste and improving storage conditions on the farm, in the grain markets and in Government godowns, the Grain Storage and Research Training Centre at Hapur has provided practical training in scientific methods of grain preservation and inspection to 236 persons so far. The next session of the short-term training course will begin on the 19th inst. Free accommodation is provided to the trainees by the Central Government and no tuition fee is charged. The syllabus includes training in modern techniques to improve the indigenous methods of storage, importance of fumigation, elimination of factors causing damage to foodgrains in

PERSONAL

MAHARAJ Surender Singh, a former ruler of Alirajpur, has been appointed India's Charge d'Affaires in Lebanon.

Mr. J. J. Derksen, Vice-Consul of the Netherlands in India, has left for Peking to take over his new assignment there.

Mr. P. A. Menon, until recently India's High Commissioner in Australia, has been appointed India's Ambassador to Argentina.

Mr. F. A. Murphy, an employee of Messrs. Aspinwall & Co., Ltd., is being co-opted as a Director of the Pullangode Rubber and Produce Company, Ltd., in the vacancy created by the resignation of Mr. R. M. Saywell.

Mr. Robert W. Cavanaugh, at present Chief of the Finance Division of the Treasury Department, World Bank, and also Assistant Treasurer of the International Finance Corporation, has been appointed Treasurer of the World Bank. He succeeds Mr. Henry W. Riley, who passed away last month.

Mr. C. H. Case (Project Engineer), Mr. S. M. Banks (Resident Engineer and Manager), Mr. G. M. Humphrey (Construction Superintendent) and Mr. H. J. Zimmermann (Chief Designs Engineer) of the Kaiser Aluminium and Chemical Corporation, the U.S., have arrived in India in connection with the preliminary work on the aluminium project of the Hindustan Aluminium Corporation of Birlas.

Prof. D. G. Karve, a well-known economist and an authority on Co-operation, and a Government-nominated Director of the Bombay State Co-operative Bank Ltd., has been elected as the Chairman of the Bank by its Board of Directors, following the retirement of Mr. R. G. Saraiya, who has been a Director of the Bank since 1932 and Chairman since 1938.

Mr. S. Lal, I.C.S. (Retired), a former Secretary, Department of Labour, Government of India, and Assistant Secretary-General in the United Nations, has been appointed part-time Chairman of the Damodar Valley Corporation for a period of three years. He succeeds Mr. T. Sivashankar, who has been holding this post, in addition to his duties as Secretary to the Union Ministry of Irrigation and Power since April 1959, when the Government of India reconstituted the D.V.C. Board.

product. Of overall industrial production in Sweden, the share of this industry is about 35 per cent. It employs over 30 per cent. of all workers and 50 per cent. of all salaried employees in industry. About one quarter of the engineering industry's output is exported, its share in overall exports being 30 per cent.

An increase of 108,000 to 23,162,000 in the number of persons in civil employment in the U.K. took place during the month of August last. The increase was shared by all manufacturing industries, and in most seasonal industries, such as building and contracting, distribution and agriculture. There is normally an increase in employment in August, but, this year, it was bigger than usual, reflecting the upward trend in industrial production. The fact that the increases occurred in all manufacturing industries makes it clear that the present phase of industrial expansion is broadly based. The number of operatives working overtime in the manufacturing industries in August was 45,000 more than three months ago and over 300,000 more than a year ago.

Recovery in world industrial production from the 1957-58 recession has not been reflected in any marked revival in international agricultural products trade up to mid-1959, according to the latest report of the F.A.O., *The State of Food and Agriculture* 1959. The foreign exchange position of many countries relying on agricultural exports, it is said, continues to be difficult. It adds that recession had an uneven impact on agricultural products last year. Earnings declined in the case of wool, cotton, rubber and forest products. Foodstuffs and beverage crops in general fared better. Average export earnings of dairy products, however, fell by 10 per cent. There were smaller declines for cereals, edible oils and oilseeds. The report says that the shrinkage due to the recession in international trade in agricultural products, particularly raw materials, forced Pakistan, the Philippines, India, Indonesia and some other countries to cut their imports and their development programmes. Foreign aid has not been sufficient to offset the fall in earnings.

The 15th session of the contracting parties to the General Agreement on Tariffs and Trade (G.A.T.T.) will be held at Tokyo from 26th October to 21st November 1959. During the first week of the session, there will be a meeting of the Trade Ministers representing the 37 member-countries. India will be represented by Mr. Nityanand Kanungo, Union Minister for Commerce. The Ministerial meeting will review the current trends in international trade and assess the progress made in the implementation of the programme for trade expansion. The meeting will also examine programmes for economic integration through trade liberalisation on a regional basis and harmonisation of these programmes with the world-wide objectives of the G.A.T.T. After the Ministerial meeting, the regular session of the G.A.T.T. will be continued. The Indian team for the session will be led by Mr. L. K. Jha, Additional Secretary, Union Ministry of Commerce and Industry. Among the subjects to be considered at the session is the report of a committee now investigating the trade problems of underdeveloped countries and import restrictions imposed by West Germany.

From Abroad

The Pakistan Petroleum Limited, one of the eight oil exploring companies in Pakistan, has discovered oil at a depth of 11,664 feet in the Karsal area near Rawalpindi.

Rubber exports from Malaya reached an all-time record of 898,136 tons during the nine months ended September 1959. This quantity represents an increase of 4 per cent., as compared with the same month last year.

The U.S. Export-Import Bank has decided to collaborate with eight U.S. Commercial banks to lend South Africa \$16 million for financing the purchase of three Boeing 707 jet airliners by the South African Airways. The jets will run between South Africa and Europe.

The view that there may not be any diamonds left to produce within the next 20 to 25 years and that the trade in diamonds will grow very small, unless big new discoveries are made, has been expressed by Mr. Harry Oppenheimer, Chairman of the De Beers Consolidated Mines, in London last week.

A new economic substitute for tin plate is likely to be developed in the U.S. in the foreseeable future, according to Sir Douglas Waring, a leading Malayan tin industrialist. Sir Douglas opposed the move to reserve tin deposits in Malaya for the future. He has warned that, if this were done, and production allowed to decline, there would be an enforced changeover by consuming industries to other materials.

Communist China is reported to be making a determined bid to achieve the current year's revised production targets ahead of schedule. Some of the targets fixed are 12 million tons for steel (original target being 18 million tons), 335 million tons for coal (380 million tons), 271 million tons for grain (525 million tons) and over 2.3 million tons for cotton (5 million tons).

The Japanese Government has agreed to limit the export of rayon and other man-made fibre piecegoods to Australia to 8 million yards a year. The exports have risen rapidly from about 1.5 million yards in 1956-57 to 8.5 million yards in 1958-59. The Australian industry has been asking the Government to impose a freeze on Japanese rayon imports, pending a full-scale enquiry by the Tariff Board.

The U.S. Firestone Tyre and Rubber Company has decided to establish a multi-million dollar tyre plant in France. The plant is expected to manufacture a full line of tyres and tubes for passenger cars, buses, farm equipments, motor cycles and scooters. The Company has also plans to set up another plant on the same site for the manufacture of special synthetic latices and copolymers of butadiene and styrene.

A British consortium of steel works plant and equipments, the Metallurgical Equipment Export Company (M.E.E.Co.) has offered to the U.S. Phenix Steel Corporation a \$44-million credit for the erection of a steel plant in New Jersey. The U.K. Export Credit Guarantee Department is expected to grant normal export insurance cover, besides giving a bank guarantee to the British banks to the extent of 90 per cent. of the finance involved.

Five West German Bourses have commenced official dealings in Montecatini shares, the first Italian stocks to be admitted in West Germany. Transactions are conducted in bearer certificates rather than shares, so as to comply with the Italian Company Law. The advent of the Italian stock follows closely on the admission of shares of Banque de Paris and Royal Dutch. The other foreign shares officially quoted in West Germany are those of the Dutch Philips and the Uniliver concerns.

For the first time in the history of East Pakistan, agricultural credit has been linked to warehousing. An ordinance issued by the East Pakistan Government provides for the licensing and control of warehouses, as well as the licensing and supervision of warehouse staff. Under the scheme, based on the principle first enunciated by the Reserve Bank of India in 1944 and implemented in the pre-partition Punjab and North West Frontier Provinces, any producer, who stores his produce in a licensed warehouse, will be able to obtain credit from banks and financial institutions on the strength of the receipt furnished by the warehouse.

The value of engineering goods produced in Sweden is now running at an annual rate of Kr. 12,000 million (£227.6 million). The engineering industry is Sweden's largest industry and accounts for over 20 per cent. of the gross national

DEVELOPMENT LOAN FUND

ESTABLISHED in June 1957, the U.S. Development Loan Fund has already made its influence felt in many underdeveloped regions. The beneficiaries of the Fund include countries in all continents, where both private and public enterprises have received its assistance. India has special reason to feel thankful, for the Fund has aided a wide range of its enterprises. Thus, the railways, cement, power and jute industries have made a call on the Fund to which the latter has generously responded. Imports of steel and capital goods have been facilitated through the Fund's assistance. Against this background, it is encouraging to note that the Fund's new Director, Mr. V. Brand, made, in the course of his address at a meeting of the Far East-American Council, New York, last week, an optimistic appraisal of the role of the Fund as a factor in stimulating the economic development of backward regions.

There are two features of the Fund's services to which Mr. Brand rightly drew pointed attention. In the first place, the Fund's loans, besides being available on a long-term basis at low rates of interest, could be repaid in local or other currencies. Since the major difficulty for many underdeveloped regions is to find the foreign exchange for returning the loans from foreign countries, they must welcome the Fund's liberal attitude towards borrowers. This facility, Mr. Brand said, was established as part of the U.S. policy "of assisting free friendly nations." Secondly, the Fund plays a positive and constructive role in strengthening the very basis of all economic development—enterprise and initiative. Mr. Brand said: "First and foremost, I want the Development Loan Fund to be an effective instrument for helping create and cement closer business ties between the U.S. and the underdeveloped or developing countries in which it operates. In other words, I want the considerable powers and resources of the Development Loan Fund to be used to the utmost to help bring the vitality, intelligence and experience of American private enterprise into those countries to participate in their own development efforts and those of other nations." Here is a broad hint that the U.S. Government wants the borrowers from the Development Loan Fund to use the facility to buy American goods and services. This desire is understandable in view of the balance of payments difficulties confronting the U.S.

Mr. Brand was legitimately proud of the achievements of American private enterprise. As he pointed out, American industry has "unexcelled resourcefulness, initiative and creativity." Surely, if the underdeveloped countries could imbibe something of the spirit of that enterprise, it will make a great deal of difference to the pace of their progress. Emphasising the role of private enterprise, Mr. Brand said that the peculiar problems of development require the talents of men who "have proven themselves as producers and enterprisers." He added: "The Development Loan Fund is not interested in promoting statism, primarily because we believe that statism is a blind alley for any developing nation that aims at sound progress." Although the area of free enterprise is shrinking in certain vital fields in many underdeveloped countries which have chosen the socialist path, institutions like the D.L.F. can help arrest the trend by aiding development and enabling the people to see what private enterprise can achieve for them. From this point of view, it is heartening to be told that Mr. Brand visualises the close co-operation of the D.L.F. and American industry which will help extend the "creative ferment of the American industrial revolution" in areas where it is needed.

A point in Mr. Brand's speech, to which attention deserves to be drawn, is his appeal to other industrially advanced countries to emulate the American example in international aid. Mr. Brand expressed the hope that other industrialised nations, in addition to supporting international lending institutions, would also expand their own "development financing" efforts as the U.S. had done. He said he would like to see

some of these nations become "alternative sources of financing to an increasing extent." It is true that not all these nations are capable of making the same effort as the U.S. in the sphere of international aid. But their combined efforts could be of considerable help to the underdeveloped world. Further, as Mr. Brand himself pointed out, the "dollar position of the leading friendly developed countries has changed very much for the better during the past decade" so that they are now in a much better position to lend a helping hand to the underdeveloped countries.

AID FROM RUSSIA

Next to the U.S. and the World Bank, Soviet Russia ranks as the largest provider of assistance for the economic development of India. Since February 1955, this country has made aid authorisations aggregating over Rs. 321 crores (2,700 million roubles). Almost the entire authorisations are in the form of loans; only Rs. 76 lakhs (6.38 million roubles) represent the value of agricultural machinery and equipment offered as gifts at the time of the Russian Prime Minister's visit to India towards the end of 1955. If the Rs. 180-crore loan promised a few weeks ago for financing a part of the third Five-year Plan is excluded, the assistance given by Russia to India during the first and second Plan periods amounts to Rs. 141 crores.

The first loan granted by Russia was in connection with the Bhilai steel project during 1954-55. In February 1955, the Indian and Russian Governments signed an agreement which provided for the supply on credit of Russian equipment and structural steelwork worth Rs. 63.07 crores (630 million roubles); the total estimated cost of the whole project is Rs. 131 crores (revised). The utilisation of credit and supplies from Russia are said to have been according to schedule so far; by the end of March 1959, Rs. 45.23 crores had actually been utilised, leaving a balance of Rs. 17.84 crores. The manufacture of pig iron in the Bhilai steel plant commenced on 4th February last, when the first blast furnace went into production. This has since been followed by the inauguration, on Monday the 12th inst., of the first open-hearth furnace which marks the formal beginning of steel production.

A further credit of Rs. 60 crores (500 million roubles), to be availed of from 1959 onwards, was offered by the Soviet Government in November 1957 for financing five selected projects:

1. Heavy machine building plant to produce equipment for coking and chemical factories, steel smelting, blast furnace and forge press shops, and rolling mills. The total estimated annual capacity of the plant is 80,000 tons. It is said that, when this project is completed, India will be able to produce, for the first time in its history, sufficient capital equipment for the iron and steel industry to ensure an output of one million tons of steel per annum.
2. Mining machinery plant to manufacture coal-mining combines, crushing machines, conveyors and electric locomotives for mines.
3. Development of Korba coalfields in the central part of India; the project covers a dressing plant, a coal open cast plant and a workshop for the repair of mining and other equipment. The additional annual output of coal is put at over 2.0 million tons.
4. A 250,000-kilowatt thermal power station to be built at Neyveli to provide electricity for South India.
5. A factory to manufacture optical glass.

The third loan offered in May 1959 by Russia, namely, Rs. 9.6 crores (80.64 million roubles), is for the establishment of four State enterprises to produce 1,500 tons of drugs and medicines annually and surgical instruments.

Another credit of Rs. 15 crores (100 million roubles) was offered recently for the erection of an oil refinery at Barauni in Bihar. An agreement covering this credit was signed at New Delhi a fortnight ago. Under the agreement, Russia will supply equipment according to standard specifications for the refinery which will process about two million tons of crude oil (transported from Assam through pipelines) and produce petrol, furnace oils, lubricating oils, diesel and kerosene oils. The refinery is expected to go into production partially in April 1962 and reach its full rated capacity by the end of that year.

In addition to these credits, Russia has, as already mentioned, given a gift of agricultural machinery, spare parts, etc., for the setting up of a 30,000-acre State-mechanised farm at Suratgarh. The machinery and equipment are valued at Rs. 76 lakhs and include 60 tractors, 36 transport vehicles, trolleys, etc., workshop equipment, tools and a number of tillage implements. About 40 per cent. of the machinery

was brought into use with the cultivation of 3,000 acres in *rabi* 1956, 1,865 acres in *kharif* 1957 and 2,500 acres in *rabi* 1957. The entire machinery will be brought into use when perennial supply of irrigation water is received from the Bhakra project on its completion during 1959-60.

While the aforesaid credits are for projects covered under the first and second Five-year Plans, the Soviet Union has agreed to grant a credit of Rs. 180 crores (1,500 million roubles) for meeting a part of the third Plan outlay; the agreement was signed at Moscow on 12th September. The credit is expected to be used, among other things, for doubling the capacity of the iron and steel plant at Bhilai, for constructing plants to produce oil equipment and heavy electrical machinery, and for establishing several major thermal power stations and oil industry in areas where oil reserves have already been proved. Soviet specialists have recently prospected oil deposits in Bombay State and gas in the Punjab.

There are three notable features of Russian credits. One, the rate of interest charged is low, being 2.5 per cent. per annum in all cases. Two, the repayments are spread over a period of twelve years, generally after the deliveries of machinery and equipment supplied against the credits are completed. Three, the repayments are mostly made in the traditional export goods from India, and not in foreign currencies or gold. What is more, the credits have been offered without any political strings. Surely, the projects receiving such assistance are, as Mr. I. A. Benediktov, Soviet Ambassador to India, described at Bhilai the other day, examples of "successful and effective co-operation between States with different social systems." There are, however, three points that must be noted in this connection. First, the Russian credits are used for buying Russian goods only. So it is only fair that repayment should be in Indian goods and not in convertible foreign currency. Secondly, the Russian credits are against clearly defined specific projects in the public sector and nothing is available to the private sector. And, thirdly, so far they have been only for heavy industries in which Russia has greatly specialised.

ONE MORE COMMON MARKET

If everything goes well as is planned, one more common market will come into existence some time in February next. This is the Latin-American Common Market comprising seven nations—Argentina, Bolivia, Brazil, Chile, Paraguay, Peru and Uruguay. The delegates from these countries, who held prolonged discussions at Montevideo (Uruguay), have agreed on a final draft treaty for integrating their economies into a common market. The Governments concerned have been requested to suggest amendments, if any, to the treaty before 15th January 1960. A final conference of the seven countries' Foreign Ministers is proposed to be held in the first fortnight of February, when the scheme will be formally put into operation. The Montevideo conference would have actually concluded with a signed agreement but for the request for postponement put forward by the Brazilian delegation, in view of the recent changes in the political situation in its country.

The exact contents of the draft treaty now agreed upon are not known; the only information available is that the treaty provides for the dismantling of trade barriers among the seven countries over a period of ten years. It is, therefore, too early to assess the impact of the Latin-American Common Market on India's foreign trade. In this connection, the following table showing the values of exports to, and imports from, the countries in the region during 1958 will be found interesting:

(In lakhs of rupees)				
	Exports to (excluding re-exports)	Imports from	Balance of trade	
Argentina	659.19	2.06	+ 657.13	
Bolivia	2.17	9.82	- 7.65	
Brazil	4.30	19.64	- 15.34	
Chile	96.87	17.61	+ 79.26	
Paraguay	16.21	0.06	+ 16.15	
Peru	86.06	8.58	+ 77.48	
Uruguay	61.78	..	+ 61.78	
Total	11,98.06	48.16	+ 11,49.90	

The table shows that the Latin-American countries taken as a whole purchased from India last year goods and commodities worth Rs. 11.92 crores, while their exports to India aggregated just Rs. 48.16 lakhs. India enjoyed a favourable balance of trade with all countries

with the exception of Bolivia and Brazil. The largest market for Indian goods in Latin America is provided by Argentina and jute manufactures are the main commodity exported to that country. Since none of the Latin American countries produces jute goods, the Latin American Common Market, if and when formed, will have no significant effect on this staple export item. It may, however, mean more effective competition from this region in the other markets of the world for some of India's agricultural exports, particularly oilseeds, coffee and edible nuts. The lesson that India has to learn from such regional economic integrations is the urgent necessity to improve its economic efficiency all round.

Assuming that the move will materialise, the Latin American Common Market, it may be noted, will be the third of its kind to be functioning next year. The other two are: the European Common Market (West Germany, France, Italy, Belgium, Luxembourg and the Netherlands) which came into being on 1st January 1959 and the proposed "Outer Seven" Free Trade Area (Austria, Britain, Denmark, Norway, Portugal, Sweden and Switzerland). The officials of the "Outer Seven" countries are busy at Stockholm drafting the actual treaty text on the basis of the draft scheme approved by Ministers in July last. The drafting work is expected to be completed by the end of this month. Utmost significance is being attached to the treaty. This is not surprising, considering that, within three months from now, the six-member European Common Market countries are scheduled to enhance import quotas for one another for the second time and, in less than a year's time, they will undertake the second tariff cut.

Meanwhile, fresh efforts are being made to bridge the gap between the "Six" and the "Seven." The initiative in this direction has been taken by Prof. Walter Hallstein, President of the European Economic Commission. Addressing the Parliament of the six-nation European Community held at Strasbourg on 25th September last, Prof. Hallstein put forward a series of proposals "as an effort to get things moving again between the 'Six' and the other O.E.E.C. countries."

The proposals fall into five main groups. First, all quotas on imports of industrial goods from all non-member countries should be abolished gradually on a reciprocal basis. Secondly, the "Six" must (a) declare their readiness to extend to all countries the coming second round of internal tariff cuts (10 per cent.), (b) hold talks with the other European countries on the question of giving the next round of G.A.T.T. negotiations the maximum effect, (c) propose a further round of substantial tariff cuts after the 1960-61 G.A.T.T. conference, and (d) ease any difficulties which other European countries might experience through the negotiation of tariff quotas for them in so far as they are compatible with the G.A.T.T. Thirdly, the "Six" should co-operate with other countries or agencies, such as the U.S. and the Commonwealth, for extending aid to the underdeveloped countries. Fourthly, a European liaison committee, representing the "Six" on the one hand, and the other European countries or group of countries, on the other, must be set up to smoothen the relationship between the two. Finally, the "Six" should expedite the process of establishing the Common Market by reducing the transition period and take steps to bring about a closer co-ordination of their economic and monetary policies.

These proposals have once again raised hopes about the establishment of the enlarged free trade area comprising all the seventeen nations of Western Europe. How far and to what extent the hopes will be realised will, of course, depend to a considerable extent on the success of endeavours to reconcile some of the basic conflicting view-points between the United Kingdom and France.

PAPER SITUATION

Consumers of paper continue to be confronted with conditions of scarcity, though production of paper and paperboard has steadily expanded in the last few years. They are often turned back by the traders because the types of paper asked for are not available with them in required quantity, or at the appropriate time. Who is to be blamed for this state of affairs? The distributive trade, of course, has come in for a good deal of criticism at the hands of consumers for allegedly creating artificial scarcity. The manufacturers, in turn, are blamed by the traders for raising prices of their products

arbitrarily. They argue, however, that higher prices are essential to meet the rapid increase in cost, particularly of raw materials and labour. The Government is not free from similar accusations either for its defective purchase policy or for raising excise duty on paper. While all these groups—the trade, mills and Government—blame one another for the present difficulties, pretty little has yet been done to diagnose the basic causes for the malady. It was a matter for some satisfaction that the Government at last referred the question of fixing fair prices for paper to the Tariff Commission. Although it is now a year since the Commission was entrusted with the work, it is not yet known at what stage the matter stands.

The Commission's probe is expected to provide a clearer picture of the causes underlying the problems of industry and trade. Meanwhile, consumers, quite naturally, let loose their ire on traders in particular for the scarcity of paper and their higher prices. A close examination of the problems of the traders, however, gives one the impression that they are more sinned against than sinning. In his presidential speech at the recent annual meeting of the Calcutta Paper Traders' Association, Mr. C. C. Mukharji sought to explain how there could be scarcity of paper in the midst of apparent plenty. He observed that the demand for common varieties of paper for writing and printing was rapidly going up, thanks to increase in population, in industrial activities and also in literacy and higher education. The production of the common varieties of paper had, however, lagged behind demand. In 1956, out of the total production of 193,104 tons of paper, the common varieties accounted for 123,000 tons, or about 63.7 per cent. Total production rose to 253,000 tons in 1958, but the share of common varieties at 154,000 tons declined to 60 per cent. Imports, too, were restricted. He characterised the present situation in common variety of papers as one of near-famine condition. Mr. Mukharji, therefore, urged the industry to expand the production of common varieties of paper.

Mr. Mukharji also complained that the mills, while producing a limited quantity of common variety of papers, manufactured papers of heavier type. This meant consumers got heavier but fewer number of papers. Besides, consumers, according to him, had to substitute the dearer speciality papers, which the mills were producing in fairly good quantities, for the common varieties. He added that the scarcity was mill-made, in that, in distributing their products also, most of the mills were not using the normal trade channels but were adopting means which were socially harmful, even if legally permissible. On top of this, he pointed out, the requirements of the Government, the largest single consumer of paper, were increasing. What was more, the timing of the Government's orders coincided with the seasonal demands from the civil market. This accentuated the problem of scarcity.

There has been a perceptible increase in prices of paper during the last few years. The Government has tried to hold the prices in check by appealing to the industry and trade. It is true that, since 1957, the price of common white printing paper has gone up by 13 per cent. to 83.5 nP per lb. Mr. Mukharji deplored the progressive enhancement of excise duty by the Government, which, he said, was one of the reasons for the upward trend in prices.

FRENCH ECONOMIC MIRACLE

France's recent economic experiences offer many lessons for countries having the same or similar problems. French politics has been proverbially as fickle as the English weather, but in economics, too, it has fared no better, especially in the post-war period. Its history since June 1958, however, tells a different story, a story of how economic wisdom, coupled with political courage, can work miracles in situations which are generally considered hopeless. And France did work a miracle which, though less spectacular than that of West Germany, is, indeed, remarkable. The programme of financial rehabilitation and stabilisation instituted by President Charles de Gaulle at the end of 1958 has helped France, the sick man of Europe, to find its financial feet in a surprisingly short time.

Some of the notable achievements of French economy in recent months have been summed up by the *Monthly Bank Letter* (October issue) of the First National City Bank of New York. They are:

1. The inflationary spiral has been broken and a foundation of faith has been built for the French franc.

2. Despite the slashing of subsidies and the rise in import prices consequent upon devaluation of the franc last December, the cost of living has showed only a small rise.

3. Industrial production has more than recovered the ground lost during last year's recession. Steel production during the first three quarters of 1959 exceeded 11 million tons, as compared with 10.9 million tons in the corresponding period of 1958. Private capital outlays this year are expected to be about 7 per cent. above last year's level.

4. The balance of trade, which had already improved during the second half of 1958, has recently shown a surplus.

5. Although the trade surplus is small, there has been a sizable overall surplus in France's international payments. As a result, its gold and convertible exchange reserves have increased at an average rate of \$100 million a month, from \$1,050 million in December 1958 to \$1,875 million in August 1959. At the same time, France has repaid some \$300 million of its foreign debt and the French Exchange Stabilisation Fund returned foreign currency working balances worth \$300 million to French commercial banks from which it had borrowed them in December 1958. The gradual strengthening of reserves has been followed by further relaxation of exchange controls. The inflow of foreign exchange has also been felt in the money market and, to a lesser extent, in the capital market. Buying interest in French Treasury Bills has increased markedly. The inflationary expansion in money supply has been arrested. The severe credit restrictions have been relaxed and the discount rate reduced, in stages, from 5 per cent. on October 1958 to 4 per cent. in April 1959, a rate which still prevails.

The significance of these achievements can be fully gauged only if viewed against the background of the economic chaos which prevailed prior to them. The ills that had been sapping France's economic strength during much of the post-war period, especially internal inflation and external insolvency, became so chronic by the middle of June 1958 that it became clear that they could no longer be cured by palliatives or patchwork methods. It is true that production had been going up year by year, but it was followed by seemingly intractable inflationary pressures. Political instability and the frequent changes in economic and financial policies complicated the problem. Fear of further inflation undermined the faith of the French people in the franc and this led to a widespread flight into foreign currencies, gold and other "real assets." Efforts made to arrest inflation proved abortive.

In June 1958, when General de Gaulle formed his Government, France was willing, and even eager, to accept drastic economic reforms. And President de Gaulle acted quickly. In order to prepare a reform programme, his Finance Minister, M. Antoine Pinay, appointed a commission of experts, headed by a distinguished economist, M. Jacques Rueff. In a report submitted to Pinay in June 1958, M. Rueff challenged as "simply absurd" the idea that "France, alone in the world, should be characterised by a kind of congenital inability to earn her daily bread by her own labour." "It is sufficient to state the problem," he observed, "to realise that the crisis in the balance of payments arises neither from the nature of things nor from the behaviour of the people, but from a particular feature of the conduct of French finances, namely, inflation. . . . To restore the equilibrium in the French balance of payments, only one effective measure exists: to suppress the inflation."

The Commission's recommendations, which the Government accepted almost entirely, were "bold" and "tough." The general line of attack was to carry out the task of rehabilitation of the franc within the framework of a free and open economy. This decision led to a series of inter-related steps. Briefly stated, they are:

First, in order to remove the gap between French prices and world prices, the franc was devalued from 420 to 493.7 francs to the dollar; this, in turn, made it possible to suppress export subsidies and to free imports. To emphasise the irrevocable character of the new exchange rate, the Commission proposed, and the Government agreed, to create a new monetary unit expressed by legislation in terms of gold. The new unit, "the heavy franc," is equal to 100 old francs and worth about 20 cents.

Second, the franc was made convertible for non-residents, for commercial as well as financial transactions, and the Government indicated its determination to restore full convertibility as quickly as possible. At the same time, France freed its imports to an even larger degree than it was bound to do under international agreements. In fact, trade liberalisation, completely suspended in 1957, was brought up, at one stroke, to 90 per cent. *vis-a-vis* other Western European countries and 50 per cent. (Continued on page 668)

LONDON LETTER

NATIONAL INCOME UP
BY 4 PER CENT.

FALL IN DEFENCE EXPENDITURE

(From Our Own Correspondent)

LONDON, 9th October

THE Annual Blue Book just published reveals that, last year, the United Kingdom's National Income rose another 4 per cent. to a new peak of £20,130 million. Of this total, nearly £19,000 million represents personal incomes, a rise of nearly £1,000 million on the year. The increases in some of the main components were as follows:

	(In million £s)
Wages	120
Salaries	230
Self-employed incomes	50
Unearned incomes	236

Pro-rata unearned incomes rose most (about 20 per cent.) and wages least (about 1½ per cent.). Consumer spending jumped up by over £700 million (that is, by 5 per cent.) and the main items on which the money went are as follows:

Food took just under one-third (a rise of £150 million). Housing took less than 10 per cent. (but a rise of £160 million) and clothing took as much (no rise) while the purchase of durable goods took only 7 per cent. (but a rise of £140 million). The nation spent more on alcoholic drink and tobacco than it spent on durable goods, while expenditure on entertainment and travel only accounts for 5 per cent. of the whole and shows no rise over the year. Clearly, the British are not a frivolous nation!

Social Services Benefit

Turning now to expenditure by public authorities, we find a decline over the past five years, in terms of 1954 prices, made up as follows:

	(In million £s)	
	1958	1954
Military Defence	1,226	1,554
Health Services	574	521
Education	462	386
Other public services (particularly by local authorities) ...	691	678
Total ...	2,953	3,139

Thus, the social services have benefited as military expenditure has been reduced, but it is a sobering thought that the country still spends more on defence than it does on health and education combined!

The Blue Book is also revealing on the way in which business enterprises in the United Kingdom use their profits. In 1958, the gross trading profits of U.K. companies was £3,119 million (as compared with £2,671 million in 1954) to which was added non-trading income plus overseas profits £463 million (£434 million), giving a total income to allocate to £3,582 million which went as follows:

	(In million £s)	
	1958	1954
Taxation (and remittances abroad)	916	1,028
Dividends and Interest	998	732
Savings (including depreciation provision)	1,668	1,345
Total ...	3,582	3,105

Use of Savings

Over the past five years in which taxation has fallen, dividends and interest have done best *pro rata* and savings increased rather less. How then were the savings used?

First, they were added to by the following: a reduction of stocks and work in progress as a result of the credit squeeze of £27 million as well as certain capital transfers of £13 million. Thus, £1,708 million was available. Of this, £139 million was reserved for tax; £210 million was invested overseas, and £1,359 million was the gross figure of capital invested at home—a figure more than half as much again as that invested five years ago.

The overseas figure is of interest—it does not represent the total of British overseas investment, but the total of such investment made by British business firms, whether by acquiring shares in overseas concerns or by the building up of associated firms. The following table

compares the capital investment of British business firms at home and abroad over recent years:

	Business Investment	At Home	Overseas
	(In million £s)		
1954	...	803	464
1955	...	982	111
1956	...	1,168	202
1957	...	1,310	66
1958	...	1,359	210

Annual average Total ... 1,124 211
The British firms appear to be investing £1 abroad for every £5 invested at home—a very reasonable proportion.—All Rights Reserved.

BRITISH ECONOMY RIPE FOR EXPANSION

The fact that conditions are favourable for a further expansion of Britain's economy is perhaps the main inference to be drawn from the course of events in September, writes Mr. Trevor Hughes. Sterling has remained strong and prices stable, and most sectors of demand have continued buoyant at a period when there is still some reserve capacity in industry. A comparison with the position a year ago shows that exports in recent months have been running about 6 per cent. higher. While fixed investment by private industry and business has not shown much change, consumer demand has continued strong. The seasonally adjusted index of industrial production (1954 taken as 100) rose from 108 in the first quarter of this year to 111 in the second; and the most up-to-date information suggests that production is now at a level about 8 per cent. above a year ago.

General confidence about business prospects has also been reflected on the Stock Exchange, where a part of the rise in share values has been caused by expectations of increased earnings as a result of resumed economic expansion both at home and abroad.

The external financial situation was marked in September by the continued firmness of the sterling rate, and it seems clear that the main factors behind this were the confidence arising from the balanced condition of Britain's economy, the recovery in the earnings of the overseas sterling area, and the continued strength of the gold and convertible currency reserves. In September, contrary to the nominal seasonal trend, the reserves gained another £13,000,000, bringing the net rise so far this year to £77,000,000.

The strength of sterling abroad has been matched in September by the stability of prices at home. The index of retail prices (17th January 1956, taken as 100) has now stood at 109 (the nearest whole number) for four months. In August, it stood at 108.3, as against 109 in July and 108.3 in August 1958.

The wages front has also shown remarkable stability. The index of weekly wage rates (31st January 1956, taken as 100) has been at 117 (the nearest whole number) for seven months. In August it was 117.1, just over 2½ per cent. higher than a year ago.

The first nine months of this year have, therefore, been marked by steady economic expansion at home and by satisfactory growth of overseas trade and of the gold and foreign currency reserves.

SYNTHETIC RUBBER LATEX PLANT

Work has started on a new plant to produce general-purpose synthetic-rubber latex near Southampton, England. The new plant has been designed to produce 2,500,000 gallons of rubber latex a year for use in foam-rubber articles, in carpet backing, adhesive paper, upholstery, and other industries. The International Synthetic Rubber Company's plant, costing £6,000,000, was opened less than a year ago, and was Britain's first venture in the bulk manufacture of general-purpose synthetic rubber. The plant has a capacity of 70,000 tons a year, and makes the United Kingdom independent of overseas sources of this material. The Company's plant has, in the last 11 months, exported synthetic rubber to many overseas markets, including Australia, South Africa, Norway, and Sweden.

RECORD SURPLUS FOR U.K. ELECTRICITY INDUSTRY

The electricity industry in England and Wales showed a consolidated surplus of over £27,300,000 in the year ended last March—the highest in any year since it was nationalised in 1949. All 12 Area Electricity Boards earned a surplus on the year's working. The annual report of the Electricity Council, just issued in London, states that the Central Electricity Generating Board had a surplus of £10,763,488 and the 12 Area Boards a total surplus of £16,571,206.

The report adds that, "in the absence of unforeseen circumstances," the Generating Board hopes to hold the bulk supply tariff at the 1959-60 level until at least 1961-62.

The total volume of cargo passing through U.K. ports during the second quarter of the current year was 21.9 million net tons, a rise of 7 per cent., as compared with the corresponding period of 1958. The rate of increase is said to be much higher than that for some years past. The volume of Commonwealth cargo rose by 6 per cent. though the proportion of Commonwealth shipping to the total fell from 56 to 55 per cent. The tonnage of all the other foreign vessels went up by 9 per cent., Norwegian tonnage expanded by 11 per cent. and U.S. tonnage by 19 per cent.

4¼ PER CENT

KERALA STATE ELECTRICITY BONDS, 1969
FOR Rs. 200 LAKHS(Payment of interest and repayment of Principal,
Guaranteed by the Government of Kerala)

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act. The bonds will also be eligible for the purpose of advances under Section 17 (4) (a) of the Reserve Bank of India Act 1934.

ISSUE PRICE Rs. 99.50 PER CENT

REDEEMABLE AT PAR ON THE 26th OCTOBER, 1969.

Subscriptions will be received in cash or cheques from the 26th October, 1959. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 200 lakhs and in any case not later than the close of business on the 5th November, 1959.

Applications will be received at the offices of the State Bank of India at Bombay, Calcutta, Madras, New Delhi, Trivandrum, Madurai, Bangalore, Bangalore City, Coimbatore, Nagercoil, Thiruchirappalli, Thirunelveli and at the local branches in Madras City and in Kerala State.

Copies of the Bond Prospectus announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Kerala and at all Division Offices of the Kerala State Electricity Board.

G. MADHAVAN,

Chairman,

Kerala State Electricity Board.

TRIVANDRUM, 12th October 1959.

AMERICAN LETTER

U.S. ECONOMY BEGINNING TO
THIRST FOR STEEL

LABOUR UNIONS RESENT GROWING MECHANISATION

From Our Special Correspondent

NEW YORK, 8th October

THE steel strike and its repercussions still dominate the domestic news in the United States. The walkout has now lasted roughly three months.

President Eisenhower has not really interfered, except to suggest that contract negotiations be resumed whenever they had been broken off for a few days after a hopeless deadlock. At this writing, neither management nor labour is nearer a solution than they were 12 weeks ago.*

The reasons for this lack of progress are manifold. Previous contracts gave the unions voice in how labour loads in certain fields were to be allocated among their members. Management claims that grave abuses of "feather-bedding" have resulted which should be eliminated.

The trade unions want to carry over these provisions into new contracts, in order to maintain the total work force on the payroll. Indeed, it is a strange phenomenon that trade union leaders resist every efficiency measure taken by management, even though it has been the history of mass production that efficiency and mechanisation produce jobs in the long run, but not necessarily in the same field.

What they are fighting perhaps is not progress *per se*, but the lag which always occurs when a worker's job is eliminated by mechanisation until he finds another job elsewhere. This also means fewer dues' paying members. The other side of the coin is that mechanisation and efficiency usually mean higher profits and higher wages. But this is usually not recognised.

The only farsighted labour leader I ever met is John L. Lewis, who virtually forced the mine-owners into mechanisation on the theory that, as he told me, he would rather have 300,000 well-paid miners in his union than 600,000 on starvation wages. He reached that goal in his lifetime at the risk of many strikes which lost coal many important markets in favour of oil. But, perhaps, the oil industry would have captured these markets in any case.

Inflation Becomes Meaningful

Another previously mentioned facet in the steel strike is inflation. Managements are still determined not to sign a contract which would force them to increase steel prices, in order to stay in business. Inflation has become a very meaningful word in America in the last few months and weeks. It has been the subject of

* Since this despatch was posted, President Eisenhower has invoked the emergency provisions of the Taft-Hartley Act to bring about an end to the 89-day steel strike, as both the parties to the dispute have informed him that "negotiations between them have broken down and that they see no hope for an early voluntary settlement." He has appointed (on the 9th inst.) a fact-finding board of three men, consisting of Mr. George W. Taylor (Chairman), University of Pennsylvania and a former Chairman of the War Labour Board, Mr. John Perkins, President of the University of Delaware, and Mr. Paul N. Lehoczy of the University of Ohio. Although all of them are University people, they have, we are told, extensive experience in arbitration matters. The Board will try to obtain a negotiated settlement. Mr. Taylor said shortly after his appointment:

"The Board will do all it can to get steel union and industry leaders to reach a voluntary agreement. I think it is our responsibility to do anything within the authority we have to settle this dispute in the only way it really can be settled—by agreement of the parties."

In taking the action under an executive order, President Eisenhower observed: "I want to emphasise that the action I have taken in no way relieves the parties of their grave obligations to the American people to resume negotiations and reach a just and responsible settlement at the earliest possible time."

The appointment of the Board is the first step the U.S. President can take under the Taft-Hartley Act. He took similar action earlier for tackling the dock workers' strike referred to by our special correspondent in his despatch. This does not mean that the strike has ended; it is still on. The procedures to be followed under the emergency provisions of the Taft-Hartley Act are briefly explained on page 587 of our last issue.—Ed.

Inevitably, this means sizable additional layoffs of workers. Up to this point, about 500,000 steel workers are idle and about 160,000 in related industries. From now on, layoffs are going to snowball. The net effect on the economy remains to be seen. In passing, it may be noted that the present steel strike is the longest on record in the U.S.

In addition, 70,000 members of the International Longshoremen's Association are on strike from Maine to Texas. They load and unload the boats on Atlantic and Gulf shore ports. Two hundred cargo ships lie idle in the harbours, 81 of them in New York. At issue, besides wages, is automation. The longshoremen think they are losing jobs by the relatively new wrinkle of bundling cargo into trailer-load lots and removing the huge bundles by crane. About 170 steamship lines are involved.

The annual meetings of the International Bank of Reconstruction and Development and of the International Monetary Fund, which were held in India last year, convened in Washington last week. There was nothing spectacular about either one, except remarks by Mr. Per Jacobson, Managing Director of the Fund.

Confidence in Dollar

The deterioration of the U.S. balance of payments, with its resulting outflow of gold, he said, was in considerable part due to the financial measures taken to fight last year's recession, a large Budget deficit and a huge expansion of credit. There is more foreign confidence in the U.S. dollar now than was the case six months ago, he added, due to the financial policy of Washington aiming for a balanced Budget and the credit restraint of the Federal Reserve system.

The U.S. Federal Budget will show a slight surplus this current fiscal year which ends 30th June, 1960. Revised estimates show receipts of \$79,000 million and expenditures of \$78,900 million. The resulting surplus is projected at this time at only \$95 million. Despite all talks to the contrary, there seems to be little hope that taxes can be cut next year.

The seasonally adjusted U.S. balance of payment deficit amounted to just under \$1,000 million for the second quarter of this year. This kept the annual rate at about \$4,000 million where it has been since the third quarter of last year.—All Rights Reserved.

I.F.C. EXPANDS ITS OPERATIONS

MR. GARNER'S EFFECTIVE REPLY TO CRITICS OF PRIVATE ENTERPRISE

THE year ended 30th June 1959, the third year of working of the International Finance Corporation, an affiliate of the World Bank, has proved to be the most active period in its short history, in that it entered into 13 investment commitments in projects located in ten countries for an aggregate sum of U.S. \$10.4 million, as against 9 commitments for \$9.4 million in the first two years of its operations. It will thus be seen that at the end of June 1959, the number and amount of investment commitments stand more than doubled to 22 and \$19.8 million, respectively, from those at the close of the previous year. Since the close of the year under review, the I.F.C. has made six additional commitments aggregating \$5 million, the number of new countries in which it has invested being two. In the first two years of its working, the I.F.C.'s commitments were confined only to five countries (Australia, Brazil, Chile, Mexico and Pakistan), but since then, they have been spread to eight additional countries, namely, Colombia, El Salvador, Guatemala, India, Iran, Peru, Thailand and Venezuela. Clearly, the I.F.C. has gained momentum.

Of the total net commitments (excluding cancellations) of \$19.83 million by June 1959, the effective operational investments were of the order of \$10.24 million. Of the latter, \$9.88 million had been disbursed, leaving only a small sum of \$360,000 undisbursed. The disbursements during the year, under review alone aggregated \$6.56 million, that is, twice the sum disbursed (\$3.31 million) up to the end of 1957-58. The bulk of the disbursements is in U.S. currency, being of the order of \$9.32 million. The balance of \$560,000 is in Mexican pesos.

Investment in India

The I.F.C. investments in India aggregate \$2.35 million, made up of \$850,000 in Kirloskar Oil Engines Ltd. and \$1.50 million in Republic Forge Company Ltd. No disbursements had, however, been made up to the end of the year under review.

The Corporation continues to invest in diverse types and sizes of enterprises. Thus, of the 27 projects in which it is participating, 13 are owned and managed by residents of the country, eight are joint enterprises of local and foreign ownership and management, and six are subsidiaries of foreign firms. In size, the enterprises range from the equivalent of about \$400,000 to \$20 million and the I.F.C.'s investments therein from \$140,000 to over \$3 million. "This variety," as Mr. Rober L. Garner, President of the Corporation, pointed out in his address at the recent annual meeting at Washington, "points to the fact that industrial growth in the developing areas offers opportunities for the smaller, the medium and the larger units, and for both local and foreign experience and capital."

Despite the large disbursements, the earnings of the Corporation for the year under review suffered a setback. The gross income dropped from \$3.51 million to \$3.15 million and the net income from \$2.36 million to \$1.74 million. There was a rise in administrative expenses from \$1.15 million to \$1.41 million. All accumulated net income up to the end of June 1959, amounting to \$5.74 million, has been transferred to a reserve against losses. No losses on investments have so far been incurred or are foreseen at present.

Large Private Capital Available

One of the chief functions of the I.F.C. has been, from the beginning, to stimulate the flow of investment capital, that is, funds of private investors—individual or institutions—into developing areas. According to Mr. Garner, the potential amount of such capital in the developed countries is very large, greater indeed than is likely to be available from Government sources. This is evident from the growing interest shown, in the past few years, by such investment capital in opportunities for attractive returns in the developing areas. In fact, several of the large commercial banks in the U.S. have organised corporations which give them increased latitude in making foreign investment. A few specialised investment funds have been organised and some of the long-established investment trusts are showing interest in the foreign field. Also, a number of investment banking houses, both in North America and Europe, have set up special organisations to invest overseas. In a number of projects, the

Corporation is justified in assuming. Referring to this problem, Mr. Garner observed in his speech:

"As I pointed out in my address last year, the Corporation's ability to meet the needs of its customers would be considerably increased, if we had local currencies available for use in our operations. We have followed closely the various discussions during the year concerning plans for use of these currencies, which exist in large amounts as a result of transactions between the United States and some of the European Governments with the developing countries. In conversations with officials dealing with these matters, we have received sympathetic understanding of the I.F.C.'s needs. However, no definite proposals for making such currencies available have yet come forward. We shall continue to pursue this matter to the best of our ability, and I again ask for the support of all our member-countries which may be able to assist in this matter."

Scrutiny of Projects

One of the practical problems which a private foreign investor is faced with is the difficulty of examining projects overseas. The I.F.C. is in a position to assist such potential investors by undertaking the work of investigation and preliminary negotiation in order to put projects in definite form. It is prepared to do the work and incur expense, so that well-prepared proposals may be presented to investors, thus enabling them to consider participation without undue expense to themselves. During the year under review, the Corporation's staff have visited 31 countries for the purpose of general contacts and investigation of specific projects. In fact, the Corporation has appointed a representative in South-East Asia for exploring the possibilities of projects in that area. The investigation and planning of projects need the services of engineers, accountants and other experts in the field of marketing, organisation and management. Mr. Garner, however, noted with concern the proposals in some countries to restrict the activities of foreign professional firms, particularly in the accounting field. "Such restrictions," he warned, "would not only hinder our (I.F.C.'s) operations but also be a disservice to business, in general, in these countries."

In view of the vast potentialities which underdeveloped countries offer for private in-

vestment, Mr. Garner alluded in his speech to the problems facing the investors and these are relevant to India as well. The first of these is the prejudice against private enterprise. His observations on this subject bear reproduction. He said:

Based on close contacts with the problems of the newly developing countries over some twelve years, I am convinced that there has been a growing realisation that private business and private capital can help in their progress toward stronger economies and a better life for their people. Nevertheless, among them there are more than a few sincere and responsible people who still retain doubt as to the effectiveness and suitability of private enterprise for their countries, despite the realisation that private enterprise is largely responsible in North America and Western Europe for the highest standards of living ever achieved.

Work of Private Enterprise

"These sceptics contrast the conditions of poverty and backwardness in their own countries with the greater wealth and progress in the industrialised countries, and conclude that what works in one will not necessarily work effectively in the other. However, this view overlooks the fact that the highly developed countries were at one time equally undeveloped, until individuals with reasonable freedom to venture, to develop new machines, methods and products, to risk, to win and to lose, were able to increase production of goods and services, so that, for the first time, large numbers of people had enough to eat, to clothe themselves and to have decent shelters in which to live. These individuals were, of course, exceptional, but their efforts made possible the productivity which has gradually spread to the benefit of whole populations. I am confident that there exist in the presently less developed countries individuals with similar capacity who, if given the chance to operate in reasonable freedom, can produce similar results. Today such individuals have at their command all the technology and experience developed within the most advanced countries. Capital is now much more freely available for their enterprises. Therefore, results can be achieved today in the developing areas infinitely faster than was possible for the pioneers of the past."

Private Enterprise to be Unfettered

"There is also a fairly widely held view that, though private enterprise can be useful, it needs to be rather strictly directed and controlled by Government. Certainly, no serious person today would dispute that Governments have a responsibility to lay down broad rules of the game for private business, as well as for all other organisations and individuals, to protect society against abuses which conflict with the conscience of modern civilised people. But, if an economy is to benefit from the vigour of individual effort and from the imagination and courage of the able man, Government must not put him in shackles of bureaucratic regulation nor attempt to substitute the judgment of officials for his business judgment. I fear, and I think experience proves that an economic system may get the worst of both worlds, if it accepts private enterprise only under conditions which tie its hands and interfere with its ability to produce and grow."

"One also frequently detects a distrust of private business in the minds of some well-meaning people, because it enables certain individuals to make large profits. They see in this a social injustice. However, looked at from a practical standpoint, profits which arise from producing useful goods and services are a very big plus in an economy. Profits are the food without which economic life cannot sustain itself, much less expand. It is useful to bear in mind that the capital which has been created out of profits and applied to growth has largely made possible the progress of the presently advanced economies. Furthermore, it is the prevailing custom for the State to draw its revenues largely from the transactions and profits of private enterprise. Therefore, I wish to pay tribute to profits, which not only spur individuals to their best efforts, but are the sustenance on which economic life lives and grows, and from which are provided the public services essential to modern living."

Fear of Foreign Domination

Another basis for the opposition to the growth of private enterprise in some of the developing areas is the fear that it will lead to an excessive role being played by foreigners. Assuring these sceptics that such fears were baseless, Mr. Garner said:

"We may assume that most of those who hold this view wish to see economic growth and progress in their countries, and they generally realise that, if such growth is to be at an acceptable rate, it needs to draw on the machines, skills and capital of the more advanced countries. But it is difficult to obtain these necessities without offering to those who provide them a welcome and an opportunity to share in the rewards arising from their contributions."

"I am confident that this can be accomplished without danger of foreign domination, for whatever may have been true in the past, one can say with assurance that present-day business men want least of all to play a dominant role in a foreign country. To the contrary, those whom I know (and I know many) are quite conscious of the sensibilities of the people of the host countries in which they do business. This is evidenced by the increasing number of joint ventures between business men and investors; by the measures taken to use local personnel to the maximum; and by the care in selecting those sent to the host country, with regard to their fitting agreeably into the local community."

Usefulness of Competitive Enterprise

"As you must well understand, I believe strongly that modern competitive private enterprise is useful and suitable for all free societies. The evidence seems clear that it has, more than any other sys-

FINANCE FOR SMALL-SCALE INDUSTRIES

At the fourteenth meeting of the All-India Small-scale Industries Board held at Puri, Orissa, the Union Minister for Industry, Mr. Manubhai Shah, announced various measures to promote the growth of small-scale industries. These include a re-definition of the term "Small-scale industry," and introduction of credit guarantee scheme. Under the new definition, the only limiting factor for a unit to be considered small-scale industry is the capital investment, which should not exceed Rs. 5 lakhs, including the cost of land, machinery, building and other materials. There will, however, be no limit on the number of persons employed in such a unit, which has hitherto been restricted to 50. The small units, as now defined, will get all facilities, including accommodation in industrial estates, irrespective of the number of persons employed.

The Small-scale Industries Board has approved of the blueprint of the credit guarantee scheme to be operated by the Reserve Bank from the beginning of next year. Under this scheme, the Government of India proposes to guarantee credit upto Rs. 25 crores, which will be extended to different small units in 42 selected districts. This measure is designed to increase the flow of funds from the banking system to small-scale industries. The system seeks to provide the banks a measure of insurance against possible default in respect of loans granted to small units through the guarantee organisation sharing the risk of lending with banks. The banks, however, will continue to bear a sizeable part of the risk. Under the scheme, a progressively diminishing part of a loan would be guaranteed against loss, the small loans being guaranteed a higher proportion. The benefit of the guarantee should, therefore, accrue in a special measure to the small borrower. The scheme will be operated through selected banks and apex co-operative banks. The benefit of guarantee will be available to small banks also, provided no less than 25 per cent. of the loan was either guaranteed or shared by a selected commercial bank or apex co-operative bank. The scheme will be administered during the experimental phase of two years by the Industrial Finance Department of the Reserve Bank and the guarantee will be extended on behalf of the Central Government. The details of the scheme are yet to be worked out.

The Government of India has also decided to introduce a slab system of interest rates on credits to *entrepreneurs*, instead of a flat rate of 5 per cent. as at present. In the case of credits of less than Rs. 2,500, the rate of interest will be three per cent. for credits between Rs. 25,000 and Rs. 2 lakhs, the rate of interest will be four per cent. and in case of credits above this level, the rate of interest will be five per cent. The Government is also making arrangements to minimise procedural formalities and provision of credit in bulk amounts.

An important adjunct to growth of private industries is the development of capital markets. The I.F.C. is, no doubt, concerned with inducing private investment capital in developed countries to go into newly developing areas. But equally essential to the growth of private industry in these areas is the ability to attract local investment capital. The development of capital markets in these countries has, however, lagged behind the growth of industry itself. There are many factors which influence the development of capital markets. They are: (1) the degree of political, social and economic stability, (2) the prevailing attitude towards private enterprise, (3) continuous inflation and (4) the restricted pattern of ownership of enterprises. The development of organisations to underwrite issues and to provide means of selling them, establishment of organised exchanges and the improvement of those existing now, with adequate requirements for the listing of securities are all important to the growth of broader capital markets. Mr. Garner believed that there are attractive opportunities in many of the developing countries for both local and foreign financial interests in building up these investment banking activities.

Confidence in Future

Notwithstanding these handicaps, Mr. Garner was convinced that the substantial growth of private industry currently taking place in the developing areas, with the aid of experience and capital from the more developed countries, would continue at an increasing pace and would play a major role in bringing a better life to the people. At the same time, it would, he added, benefit the more developed countries also, in that it would sustain the growth of trade between them and the less developed countries.

EXPORT TRADE IN RAYON TEXTILES PERFORMANCE ENCOURAGING—CORPORATION FOR HANDLING YARN TO BE SET UP

RAYON textiles have emerged as an important earner of foreign exchange since the last two years. The actual value of rayon fabrics exported during 1958 was nearly Rs. 8 crores, as against just Rs. 50 lakhs in 1957. In the first six months of this year, the value of exports was Rs. 2.57 crores (or an annual rate of Rs. 5.14 crores), as against Rs. 85.13 lakhs and Rs. 27.44 lakhs in the corresponding periods of 1958 and 1957, respectively. In terms of quantity, the shipments aggregated 2.81 million yards in 1957, 26.39 million yards in 1958 and 9.20 million yards in January-June 1959 (3.75 million yards in January-June 1958 and 1.46 million yards in January-June 1957).

While the export performance redounds to the credit of rayon textile interests, it still remains to be seen whether the Silk and Rayon Textiles Export Promotion Council has really laid the foundations of a growing trade in rayons, as Mr. D. N. Shroff, Chairman of the Council, claimed in the course of a welcome address to Mr. Satish Chandra, Union Deputy Minister for Commerce and Industry, in Bombay on Wednesday, the 7th inst. This point has to be made, because it was reported last year that several dubious methods were adopted by a section of the trade to inflate exports of rayon fabrics, with a view to taking advantage of the incentives granted under the export promotion scheme. Indeed, such methods were so widespread at one time that the Government of India suspended the whole scheme and strictly warned the rayon textile interests against any unscrupulous tendency to push up exports. Accordingly, it is doubtful whether the performance in 1958 and early 1959 can be regarded as normal.

Export Council's Activities

Be that as it may, besides the large quantities of rayon fabrics exported, a notable feature of export trade is the introduction of the products of ancillary industries, namely, art silk garments and hosiery, in foreign markets. Another notable feature is wider diversification, both item-wise and direction-wise. The success in all these fields must be attributed partly to the efforts of the Export Promotion Council and partly to the scheme of incentives. The steps taken by the Council to promote exports, as explained in some detail by Mr. Shroff, cover (1) study of the various existing and potential markets to find out the nature of indigenous production, imports, current items with prices, consumer preference, scope for Indian manufactures, publicity media; (2) establishment of overseas representatives in select markets; (3) maintenance of close touch with Indian Government trade representatives; (4) sponsoring of a delegation in 1956 to some of the Middle East countries; (5) market study tours of different countries by Council's officers; (6) planned propaganda campaign through the media of Press publicity, cinema slides, exhibitions, show-room displays and direct contacts; (7) establishment of a service centre housing a library of foreign samples and designs and Indian samples and providing a meeting place for the overseas buyer and the Indian exporter; and (8) move to eliminate undesirable elements in trade through a plan of registration of manufacturers and exporters.

The special export promotion scheme was first recommended by the Council to the Central Government as far back as 1956 and, after being approved by the latter, was initiated in January 1957. Under the scheme, the exporters of rayon fabrics were given import licences for 100 per cent. of f.o.b. value of goods exported except in respect of saris, where the percentage was lower at 66½. Last year, there were complaints of certain malpractices such as over-invoicing and export of non-rayon goods. The malpractices persisted early this year also and the Government of India suspended, on 6th March 1959, the operation of the scheme. The revised scheme was announced in the third week of June and this came into effect on 1st July. The details of the scheme are as follows:

Grant of licences for import of art silk yarn upto 100 per cent. of the value of such fabrics and saris exported as assessed by the Office of the Textile Commissioner.

Compulsory pre-shipment examination of the goods meant for export by the Textile Commissioner's Office.

Grant of import licences to exporters, including manufacturer-exporters of art silk fabrics and

saris, as well as processors of art silk yarn, to import permissible types of coal-tar dyes and textile chemicals to the extent of 2 per cent. of the value of exports assessed.

The revised export promotion scheme for rayon goods will no doubt bring about an improvement in exports, but it will not, by itself, put the export trade on a permanently sound and secure footing. Mr. Satish Chandra certainly struck a note of realism when he told the members of the Council: "No industry will progress by artificial support such as incentives. Incentives can only help the industry tide over certain difficulties. I do not consider it is a genuine export effort, if exports rise only when there are more incentives. There is a need for building up markets abroad on a permanent basis, even though it means a small sacrifice in profit on the part of traders." Reassuring was his statement that the Government would sympathetically deal with the genuine difficulties of the industry and the trade. At the same time, Mr. Satish Chandra forcefully urged the importance of ensuring that the consignments sent abroad conformed to the specifications furnished by importers.

Rayon Development Corporation

In his speech, Mr. D. N. Shroff alluded, in particular, to the export promotion scheme for rayon fabrics. He admitted that the scheme had helped to maintain the continuity of exports to some extent but pointed out that it had not proved as successful as desired. Elucidating this view, he said:

"The scheme does not give full scope to the exporter who has a major function to perform in any export activity, while the incentives granted under it have been found to be inadequate. The export trade, which has now become a major source of supply of yarn to the industry, has not looked up as anticipated. As such, I would add that the setting up of the Corporation, which has been accepted in principle by the Government, may be expedited. This would enable both the manufacturers and the traders to participate effectively in the development of export trade to the desired volume."

The Corporation referred to by Mr. Shroff is called the Rayon Development Corporation. Its primary objectives are regulation of export trade in rayon fabrics and distribution of export incentive benefits to the interests concerned. The establishment of this Corporation is envisaged in the draft outline prepared by the Development Council for Art Silk Industry. The Corporation, we are told, will have 18 directors (six each from yarn manufacturing mills and weaving factories, three from exporters, one from rayon yarn traders, and two Government nominees). Its initial capital will be just Rs. 1.6 lakh, to be subscribed by the interests represented by the 16 non-Government directors in proportion to the number of directors from each category. The functions of the Corporation are expected to be as follows:

The Corporation will not itself engage in the export trade. This will be left to established exporters of rayon fabrics who will have to get themselves registered with the Corporation if they are to avail of the export incentive scheme.

It will take over from the Silk and Rayon Textiles Export Promotion Council a part of its functions and devise a formula whereby the exporters can get the price differential between the domestic price of rayon fabrics and the price realised from exports. The loss suffered by exporters whose names are registered with the Corporation is proposed to be made good by the proceeds of a levy on imported and domestic rayon yarns provided to actual users.

The Corporation will handle the entire imports of rayon yarn and distribute the same among actual users, subject to the entitlement earned by them against exports of fabrics. The weaving

mills will be permitted to supplement such entitlement with supplies of domestic yarn. The system of allotting import quotas on the basis of looms worked is to be abolished.

It is thus evident that the proposed Rayon Development Corporation will enjoy the exclusive monopoly of handling trade in art silk yarns, imported and produced within the country. Is the vesting of such monopoly in a single organisation desirable? This is a pertinent question which the Government will do well to consider carefully before giving its approval. The experience of monopolistic trade bodies have not been quite happy. In many cases, such bodies have not succeeded either in conducting transactions strictly according to business ethics or in ensuring adequate supplies of goods to the consuming interests at reasonable prices. It remains to be seen to what extent the Rayon Corporation will be free from these defects in its actual working.

WOOLLEN HOSIERY IN INDIA

According to a recent survey conducted by the Government of Punjab, there are 800 hosiery units in Ludhiana. The total number of knitting machines of all kinds engaged in the manufacture of hosiery articles is about 10,000, including 1,500 flat machines, 2,000 hand-driven circular machines, 500 power-driven circular machines, 5,000 hand sock machines and 80 raschal machines. The capital investment in all the hosiery units is estimated at Rs. 3 crores, of which the Ludhiana units alone account for a little over Rs. 2.5 crores. The majority of the machines employed in the industry are manually operated and locally fabricated.

The Ludhiana industry, if worked on two shifts all the year round, has a productive capacity of goods worth about Rs. 12 crores, but, in actual practice, it works only for six months (July to December) and employs about 20,000 workers directly in the establishments and an equal number, mainly women, outside. The present production of woollen hosiery in Ludhiana is valued at Rs. 3.5-4.0 crores. The quantity of yarn consumed by the hosiery industry is estimated at about 5 million lbs., of which about 4 million lbs. of hosiery and knitting yarn are consumed by the Ludhiana hosiery units.

The quality of indigenous woollen hosiery goods is claimed to be satisfactory and the industry has captured practically the whole of the domestic market for the cheaper grades of woollen hosiery which forms the bulk of the consumption in the country. In 1958, hosiery goods valued at Rs. 21.47 lakhs were exported, as against Rs. 11.76 lakhs in 1957.

NO-IRON WOOL PROCESS

The name Sironized will be used to identify correctly treated washable non-iron woollen fabrics made in Australia by the Commonwealth Scientific and Industrial Research Organisation's new process. The Australian manufacturers whose treated fabric conforms with the standard laid down by C.S.I.R.O. will be allowed to use the certification trade mark Sironized on their cloth. The C.S.I.R.O. will give all possible assistance to these prospective Australian users of the process, and each Australian treatment plant will be visited by a C.S.I.R.O. textile officer before the fabric treated in that plant is permitted to carry the mark Sironized.

Dr. M. Lipson, Chief of the C.S.I.R.O. Division of Textile Industry, has said that great interest has been shown in the process throughout the Australian textile industry, and plans are already being made to produce woollen garments that will use the wash no-iron properties to best effect. So far, no manufacturers have been authorised to use the mark Sironized. Arrangements for the commercial development of the process in countries other than Australia are still under discussion.

Garments made up in two new fabric treatments were shown to the trade and the Press in London last week. The first is the Immacula process recently announced by Proban. It is durable crease and permanent pleat chemical process applied to wool before the garment is made up. It does not in any way affect the behaviour and handle of the wool fabric. The second is a new lingerie nylon—Kayserlon—introduced for the first time by Kayser Bondor. The familiar nylon jersey yarn now used for underwear undergoes a mechanical process, the details of which are still secret—called the Schreiner process. This gives the handle, rather like pure silk. It is more opaque than other lingerie nylon but drapes well and has the same quick dry qualities.

WIN Rs. 5,000

Secretary, Indian Central Jute Committee, 4, Hastings Street, Calcutta-1, announces a prize of Rs. 5,000 to be awarded to a firm or individual submitting the best model for a suitable bullock-driven seek drill, capable of sowing 4 to 5 lines at a time and all kinds of seeds with slight adjustments. The drill should be multi-time and cheap and have a simple mechanism so that in case of breakdown it can be easily repaired under village conditions. Working model should be sent to Secretary by March 31, 1960. The decision of the Board of Judges regarding the result of the competition will be final and it is open to the Board not to recommend the prize in the event of none of the drills submitted proving suitable.

SHIFT WORKING OF AUTOMATIC LOOMS ON THE INCREASE CEILING PACT WITH INDIA AND PAKISTAN

From Our Special Correspondent

MANCHESTER, 6th October

ONLY a very limited response to the redundancy schemes in Lancashire took place in September, as had been generally forecast after the big rush at the end of August to submit plans before the bonus expired. This was confirmed when the final details of the scheme were issued by the Cotton Board, showing that about 13 million spinning and doubling spindles and 105,000 looms were to be eliminated during the next six months.

Now that the industry is in possession of the final redundancy totals, a more accurate assessment of their effect on production can be made. The process has been considerably assisted by the release of further information by the Cotton Board's special Committee, indicating the volume of plant likely to be left in the trade after the scrapping schemes have been completed at the end of the first quarter next year.

Some former estimates now require revision, partly because they were based on the only figures then available, which gave the quantity of machinery in place in running mills. Latest statistics include the machinery which was standing idle in buildings where operations had already ceased. Some slight reservations must be made about the details, but the general picture now shows up more clearly.

Final Redundancy Totals

As a result, the following synopsis of the situation can be drawn up:—

In spinning: Before the scheme, there were 26 million mule equivalent spindles in place in all mills. In April, approximately 16½ million spindles were in use and, under the redundancy plan, nearly 12½ million spindles are to be scrapped. The remaining 13½ million spindles represent a reduction of 18.2 per cent. in the amount of running machinery.

In weaving: Approximately 258,000 looms were standing prior to the introduction of the scheme, of which 183,000 were running. Nearly 105,000 machines have been submitted for scrapping and the remaining 153,000 accounts for a 16.4 per cent. reduction in the quantity of running looms.

In doubling: Figures in this branch are not strictly comparable, as the Cotton Board's original total of nearly 2 million spindles in place in running mills included those working on continuous filament yarns and also doubling spindles on sewing thread. Excluding machinery on such processes, the number in use in April was 1,015,000 spindles and the number likely to be left after the scrapping scheme will be 1,046,000 spindles. The final number submitted for disposal was 570,431 spindles.

All the sections exceeded their minimum targets, but, in the case of doubling, the machinery to be scrapped represents a smaller proportion than in the other departments. The figure of remaining plant is, in fact, higher than the machinery in use in April. This situation has arisen partly because of the revival in the doubling trade which has enabled the mills concerned to increase their output and bring additional spindles into operation in the past three or four months.

Automatics on Shifts

Other interesting figures were quoted by the special Committee to substantiate its claim that no supply shortage need arise. About 45,500 automatic looms are included in the 153,000 remaining after the scheme has been completed. Some 7,000 of these were working three shifts in June this year and another 20,000 were operating double shifts.

"The reduction in productive capacity of 30,000 looms could readily be replaced by additional shift-working of automatic looms already installed," was the comment of the Committee. On the face of it, there can be no argument with this view, but the switch to shifts will not be accomplished overnight. At the same time, as the Committee points out, the scrapping scheme is being spread over several months, which should give the firms remaining in the industry time to make adjustments to their production programme. Against this, many of the companies now engaged in working out their final contracts have sufficient orders to keep them busy until early 1960. The transfer of operatives from mills which are closing to those contemplating shift-work will require tactful handling and continual liaison between the firms and districts involved.

Under the arrangements for compensation, which vary according to the type of machinery offered and whether or not it was running at the time of the announcement of the scheme, millowners will be eligible for a total payment of about £15,000,000. The Government will contribute £10,000,000 of this sum and the remainder will be obtained by levies imposed on the firms remaining in the industry. Compensation for displaced workers will also be paid from a fund to which the employers will contribute.

Agreement at Last

Coinciding with the completed returns for mill scrapping came the news that, at long last, arrangements had been made with India and Pakistan to establish a ceiling on exports of cotton cloth and garments to the United Kingdom. So ended a long series of negotiations, conducted mainly at long range, which began with the complicated discussions aimed at establishing such a principle with Hong Kong.

As soon as the arrangement with Hong Kong was completed, it became clear that the

representatives of the other two countries interested in the import situation would demand further concessions. The ceiling on arrivals of Hong Kong cloth was sufficiently elastic as compared with the actual figures covering recent orders that India and Pakistan, too, would want some similar gap between achievements and prospects.

The final settlement, giving India a 175-million yard annual target for each of the next three years, is almost identical with the annual rate of arrivals from that country during the first half of this year. In 1958, however, total imports of Indian grey cloth, finished goods and made-up garments were equivalent to only 134 million square yards, although, in 1957, they reached a peak of 193 million square yards.

As a potential rival, Pakistan gets perhaps the best of the deal, although its progress as a supplier will be limited during the three years of the agreement. The figure of 38 million yards annually is well in excess of the current level of shipments to this country, which are running at approximately half that total.

While millowners welcomed the agreement as a means of gauging the likely level of imports, union circles hit out at it. The ceiling figures, they said, were too high for Lancashire to compete effectively. The Cotton Board said that the agreement—in line with the one with Hong Kong, which limits cloth shipments from the Colony to 164 million yards a year—will come into force on 1st January 1960. It will continue for three years and is subject to the Hong Kong pact continuing. The new pacts mean that 377 million yards of cheap cloth a year will be allowed into Britain from three Far Eastern countries—almost equal to Lancashire's total exports last year.—All Rights Reserved.

WORLD WOOL CLIP

The free world output of raw wool would touch a new post-war record of 4,420 million lbs. (grease basis) in the current season (1959-60), as against 4,325 million lbs. in 1958-59, representing a rise of 2 per cent. if the estimates of the Commonwealth Economic Committee were to prove correct. It will be the second successive increase since the setback suffered in 1957-58.

The rise in the free world wool production is almost entirely due to the anticipated increase of nearly 100 million lbs. in the Australian clip. Smaller increases are expected in South Africa, New Zealand, the U.K., the U.S. and a number of other countries. A sharp fall in the clip, however, is feared in South American production largely as a result of floods which have inflicted heavy sheep mortality in certain areas. The Argentine clip is estimated to be about 5 per cent. below that of 1958-59. In Uruguay, the position is said to be much more serious; recent reports from this area speak of the possibility of a 25 to 30 per cent. reduction in the clip, and Uruguayan production is tentatively estimated at 25 million lbs. less than last season.

On a clean basis, free world wool production in 1959-60 is estimated at 2,450 million lbs., 2 per cent. above the 1958-59 figure and a new post-war record. Merino wool is expected to rise by about 3½ per cent. and crossbred by about 2 per cent., while carpet wool may show a small fall.

For the group of countries comprising the Soviet Union, China and Eastern Europe, an overall increase of 6 per cent. is provisionally expected, though this figure is based entirely on the rise in sheep numbers last year. No official figures are yet available of wool production this season.

The estimated total world production on a greasy basis is accordingly put at some 5,460 million lbs. or 3 per cent. more than in 1958-59.

SUPPLY POSITION OF COTTON TIGHT MEDIUM-STAPLES TO BE IMPORTED?

INDICATIONS at present are that the supply position of cotton will get tighter in the current season than in the past. Preliminary figures relating to consumption of cotton by mills during the 1958-59 season, which ended on 31st August 1959, confirm the earlier impression that consumption of Indian cotton will exceed 4.6 million bales of 400 lbs. each, the actual figure being 4.61 million bales, as compared with 4.43 million bales in the previous season. Consumption of Indian cotton has thus risen again to reach a level very near the record of 4,665,000 bales witnessed in 1956-57. Total consumption of both Indian and foreign cotton amounted to 5.06 million bales, as against 4.99 million bales in the previous season. The following table gives the monthly consumption of Indian and foreign cotton during the 1957-58 and 1958-59 seasons.

(In bales of 400 lbs. each)

	Indian		Foreign	
	1958-59	1957-58	1958-59	1957-58
September 1958	382,499	399,125	42,554	49,310
October	394,558	372,781	41,303	48,415
November	363,650	390,784	35,444	51,031
December	419,814	391,499	39,301	51,858
January 1959	413,181	392,007	34,370	48,804
February	376,105	350,474	31,850	43,868
March	380,193	354,288	34,294	47,943
April	382,238	348,743	36,225	42,934
May	379,338	360,868	38,058	46,379
June	349,648	324,757	38,710	42,762
July	391,768	377,532	42,586	48,317
August	378,941	370,890	37,898	44,829
Total	4,611,933	4,433,239	452,528	565,650

The higher consumption of Indian cotton, no doubt, due mainly to the recovery in textile activity and, to some extent, to the substitution of foreign cotton by indigenous growths, while the fall in foreign cotton consumption is accounted for largely by the difficulty of getting adequate supplies due to the restrictive import policy.

Prices Up

The rise in consumption coupled with a lower crop of about 4.8 million bales and larger exports, has resulted in a sharp reduction in the carry-over stocks. The prospect of a still smaller crop in the current season, thanks to the adverse weather—latest estimates of the crop range from 4.5 to 4.7 million bales—and the likelihood of the *status quo* being more or less maintained in regard to imports owing to the persistence of the foreign exchange difficulty, indicate that the tight supply position will continue during the current season also. This is reflected in the firm trend of prices in both the forward and ready sections of the cotton market.

In fact, mills have of late been concerned over the high price of cotton. They also fear acute shortage of cotton in the coming month if supplies are not augmented. Recently, the Indian Cotton Mills' Federation stated, in a communication addressed to the Government of India, that, unless the allocation of the quota already announced was expedited and an immediate quota of 300,000 bales was announced, it apprehended partial or full closure of some of the mills and further deterioration in the cotton supply position.

Import Quota

Perhaps in response to this representation, the Government had announced two weeks ago, a fresh quota of 100,000 bales and promised that a further quota of 200,000 bales of U.S. cotton would be permitted to be imported as soon as the agreement between India and the U.S. under P.L.480 was finalised. Considering the need to step up exports of cloth, it looks as though imports of cotton would be permitted on a more liberal scale during the current than in the previous season. This will, no doubt, relieve the tight supply position to some extent. Millowners are understood to have represented to the Government that, unless action was taken to bring down cotton prices, export prospects for the industry would be considerably affected. It would appear that the Government has taken note of these developments and is contemplating the necessary remedial measures. The shortage is said to be not only in long-staple cotton but also in other varieties, following damage to the crop caused by floods and unseasonal rains.

At present imports are permitted of cotton of staple length 1.1/16" and above only.

The report in a section of the Press that the Government of India may allow imports of medium and long-medium staple cotton from the United States, Pakistan and East Africa, if the damage to the crop proves to be heavy has, therefore, aroused considerable interest in trade circles. However, it is felt that no action could be taken till a more or less correct estimate of the crop is available. As a clear picture of the extent of damage and the size of the crop will be available only next month, the decision in this respect, it is said, will necessarily have to wait till that time. The Cotton Advisory Board, which is scheduled to meet next month, is expected to consider all aspects of the problem and make suitable recommendations.

EGYPTIAN COTTON

Many changes are reported to have been made recently in the U.A.R. Government's policy in regard to internal and export sales of cotton. These changes are said to be aimed at normalising the export trade and making available Egyptian cotton, the bulk of which has been absorbed in recent years by countries of the Communist bloc which are alleged to have resold them in European markets at lower prices, to traditional customers. Some of the main changes made are the following:

In order to protect the needs of the domestic textile industry, export of Ashmouni grades 'good' and below has been forbidden. Export duty for the 1959-60 season has been abolished for all Egyptian varieties, except Ashmouni. Export price discounts allowed on foreign currencies will continue to be subject to revision every Monday, with a view to reducing the rate gradually whenever conditions are favourable. Very strict and severe measures have been taken to prevent other countries from re-exporting Egyptian cotton.

The Egyptian c.i.f. contract has been revised uniformly for all countries. Any claims on shipments will have to be forcibly arbitrated in Alexandria and the Government will have one representative on the arbitration Board, consisting of three

members, and three representatives on the appeal board consisting of five members. Amicable settlements have, however, been permitted on condition that the Government may check the allowance granted through one of its sworn classifiers.

In order to facilitate the marketing of the new crop, the Government has suspended offering of its stock with effect from the 1st inst., until further notice.

The rules and regulations of the Alexandria Cotton Exporters' Association have also been revised. The Government has also nominated a commissioner on the Committee of the Association. In addition, the Government will have three permanent representatives, namely, the managers of the National Bank of Egypt and the Exchange Control and one member of the State Council.

The regulation in respect of domestic price support have been modified as follows:

Government will buy all contracts offered on the futures market at 69 tallaris for long-staple contract and 55 tallaris for medium-staple. Government will also buy all quantities offered on the spot market at Alexandria at the following basic prices (in tallaris):

Karnak G/FG 66.00; Menoufi G/FG 69.00; Giza 30 Good 59.00; Dendera Good 57.00; Ashmouni Good 55.00.

The Ministry of Economy will fix the differentials for all grades very soon. While the support basic spot prices for all varieties are the same as last season, the price of Good and Fully Good Menoufi has been raised from 64 to 69 tallaris. A pool of exporters is being formed, with fixed quotas to be adjusted each year. The object is to avoid undue and unfair competition amongst exporters and thereby help to stabilise prices at home.

U.S. COTTON CROP

The Crop Reporting Board of the U.S. Department of Agriculture, in its October forecast, has estimated the 1959-60 cotton crop at 14.69 million bales (of 500 lbs. each). This compares with the last month's estimate of 14.68 million bales and the 1958-59 harvested crop of 11.51 million bales and the ten-year (1947-56) average of 14.136 million bales.

The yield per acre was placed at 470 lbs., the same as in the previous estimate. The yield per acre was 466 lbs. in 1958-59, 388 lbs. in 1957-58 and 317 lbs. (average) during the ten-year period 1947-56.

The Bureau of Census of the Department of Commerce estimated ginnings prior to 1st October at 4,448,000 bales, as compared with 2,627,000 bales at this time last season.

SUGAR PROSPECTS FOR NEXT SEASON NO NOTABLE RISE IN OUTPUT LIKELY

EXACTLY a fortnight from now—with effect from 1st November next—the official sugar season 1959-60 will begin. What are the prospects of sugar supply in the coming season? This question is very much in the minds not so much of sugar millowners or traders or the authorities as of consumers who it is that have been feeling the pinch of scarcity of supplies and high prices for some months now. It is no doubt very difficult to say with any degree of accuracy as to what will be the actual sugar production during the ensuing season. But, on the basis of the available indications, a rough idea can be had of the probable general trend of output.

By and large, it would appear that the next sugar season may not witness any notable rise in production. Some even anticipate that the output will be lower than the 1,900,500 tons produced in the current (1958-59) season, not to speak of 1,957,800 tons in the 1957-58 season and 2,026,200 tons in the 1956-57 season. It is true that seven new sugar mills, with a total annual production capacity of 72,000 tons, will commence operation in the coming season and that eight more existing units with an additional annual output of 60,000 tons will complete their expansion programmes; in other words, the aggregate production capacity of sugar industry in 1959-60 will be higher by 132,000 tons as compared with 1958-59, when the capacity stood at 2.20 million tons on the basis of 120 working days and 10 per cent. recovery. It will be recalled that the additional capacity which went into production in 1958-59 was 176,000 tons; of this, ten new mills accounted for over 70,000 tons and expansion of 23 existing units for 104,000 tons. But a mere increase in the capacity of the sugar industry will not result in an improvement in production, unless it is accompanied by a corresponding rise in the supply of cane available. This aspect must be specially stressed, for, despite the marked expansion of capacity in the current season, the level of sugar output was lower than in the previous season, because the sugar industry found considerable difficulty in securing adequate supplies of cane. The same difficulty may be expected to persist in the coming season also, as will be shown presently.

"Khandasari" Prices Spurt

The diversion of cane supplies from sugar mills to *khandasari* and *gur* manufacture will continue to be on a large scale, especially in the State of Uttar Pradesh, owing to the relatively high prices commanded by these commodities. The Government of India has removed, with effect from the 1st inst., restrictions on the export of *khandasari* sugar from Uttar Pradesh to any State. Immediately after the announcement was made on 30th September, the price of *khandasari* at Hapur (U.P.) spurted by Rs. 6.62 per maund. The following are the latest available quotations for *khandasari* as compared with those prevailing a week ago and on 22nd June 1959:

(Rs. per maund)				
	Latest available	4 week ago	22nd June 1959	
Inferior	40-46	34-40	39-39	
Superior	52-56	46-50	58-61	

The rise in *khandasari* prices would have been even more appreciable but for the continued uncertainty over the issue of orders by the U.P. Government on the licensing of *khandasari* crushers in mill areas, which are being kept pending as the question of cane supplies to sugar factories is under the active consideration of the Government. The price per maund of Rs. 52-Rs. 56 for *khandasari* (superior quality), it may be noted here, is much higher than the free market price of sugar, namely, Rs. 47-Rs. 48. The premium commanded by *khandasari* over white sugar thus comes to as much as Rs. 5-Rs. 8. In view of the premium and considering that *khandasari* enjoys a sizable tax advantage to the tune of Rs. 8.52 per maund *vis-a-vis* white sugar, the producers of this commodity will continue to compete more effectively with the white sugar producing mills for supplies of cane. Moreover, the prices of *gur*, too, are at a high level—about Rs. 21.75 per maund for dry-wet quality, as against Rs. 20 at this time last year—so that the cane growers in U.P. and elsewhere will find it more profitable to utilise the cane for making *gur* themselves, instead of supplying it to the sugar mills.

The size of sugarcane crop that will be harvested in the 1959-60 season is expected to be

to speak of finding the sugar required for building up a buffer stock of 250,000 tons, as is contemplated by the Union Food Minister, Mr. S. K. Patil.

Four Solutions

There are four ways of meeting the situation. The first is to let the sugar mills pay more for sugarcane in competition with *gur* and *khandasari* producers. This will mean a higher price for white sugar, as the mills will not be able to absorb the increase in the cost of cane. Sugar millowners, traders, the U.P. and Bihar State Governments, and the leaders of all the political parties in these two States favour this solution. If adopted, it will mean giving further impetus to inflation and letting *gur* and *khandasari* to dictate the price of white sugar.

The second solution is to take drastic steps to curtail the production of both types of brown sugar, either through heavy taxation on them or through stringent controls on the utilisation of sugarcane for their production. If successfully applied, this remedy will divert a larger quantity of cane to white sugar production. Since a large number of small producers are involved here, this solution, however, requires the willing co-operation of State Governments and local politicians. They must be prepared to implement a course of action which will be politically unpopular.

The third solution is for the Central and State Governments to forgo a part of their taxes on white sugar on the distinct understanding that sugar mills will utilise the relief for paying a higher price to sugarcane growers. The adoption of this course will mean a fall in the revenue of Governments, surely a lesser evil than inflating the consumer price of white sugar. To some extent, this fall in revenue may be offset by imposing a stiff tax on *gur* and raising the present excise duty on *khandasari*.

The fourth solution is to import sugar from abroad. The import can be in the form of either raw sugar or refined sugar. As the latter will cost more foreign exchange than the former, it will be preferable to import raw sugar and get it refined in the sugar mills in this country, as was done some years ago, during Mr. Kidwai's regime. But should the country at all import sugar, when its foreign exchange position is not favourable for doing so? An alternative is to go on a begging mission to Cuba, which has an enormous amount of surplus sugar and does not know what to do with it. We can ask Cuba to supply us 500,000 tons of sugar and take the payment for it partly in some goods in which we have a not readily exportable surplus (tea, coffee, textiles and jute goods) and partly in loans at low rates of interest repayable after 15 or 20 years.

These are the choices before the Government for overcoming the present scarcity of sugar. As all of them involve some hard work and inconvenient decisions, it will not be surprising if the Government just allows the situation to take care of itself. Consumers of sugar are, therefore, in for another year of hardship. The only effective solution to shortage of sugar, if it is not to become a chronic one, lies in getting more sugar out of every acre of land devoted to sugarcane than is the case at present. This is essentially a question of effective organisation by the public sector, for it involves the supply of basic agricultural needs.

SUGAR INDUSTRY IN U.P.

The decision of the U.P. Government to set up a sub-committee of the State Planning Board to consider a proposal for nationalisation of sugar mills in the State during the third Plan period was editorially commented upon in this journal four weeks ago (vide page 453 of our issue dated 19th September 1959). The Government has since come out with a statement discounting the fear of nationalisation. In the course of a Press communiqué, the Government says:

"Considerable concern has been expressed in certain quarters over a reported decision of the U.P. Government to nationalise the sugar industry. As a matter of fact, no such decision has been taken by the Government. At a meeting of the State Planning Board on 14th September which was attended by a number of leading industrialists, a resolution was moved by Mr. G. Singh, Praja Socialist M.L.A., recommending the nationalisation of the sugar industry. The resolution came up for discussion at the end of the meeting. The Chief Minister, who was presiding, pointed out that such an important subject could not be disposed of within the very short time at the disposal of the meeting and he suggested the appointment of a committee to examine the proposal from all points of view. This was unanimously approved. It will thus be seen that what the Government is committed to is the appointment of a committee to examine the Praja Socialist leader's resolution from all relevant angles. Any misapprehension is, therefore, totally unwarranted."

OUTLOOK FOR NATURAL RUBBER GROWTH OF RESEARCH HOLDS PROMISE OF WIDESPREAD USE

THE announcement of the U.S. Government's decision to sell rubber from its stockpile has had a softening effect on prices of natural rubber in world markets. In London, for instance, spot rubber has come down from 33½d. per lb. on the eve of the announcement, to 33d.; at one time it had gone down to 32½d. The General Services Administration of the U.S. Government said that sales of rotation rubber would begin on the 16th inst. No disclosure of the quantity of rubber that would be offered was made, but it is believed that sales have been planned on the basis of disposing of no more than 12,000 tons each quarter of the fiscal year ending 30th June 1960. According to this programme, the quantity that is expected to be sold in the sale commencing from the 16th inst. is 24,000 tons for the first two quarters of the year.

If prices have not reacted more sharply, it is perhaps due to two reasons. First, there had been rumours for some weeks past about the prospect of such sales. So the development had been anticipated. Secondly, it was assured by the G.S.A. that the sales were being planned for rotation of stocks and as such would not disrupt the market. Despite this assurance, dealers in Singapore and Malayan producers are sceptic about the American intention.

Boom Year Forecast

Meanwhile, the Natural Rubber Bureau of America has forecast a boom year for natural rubber. According to its estimates, supplies of natural rubber will again be short of demand by about 40,000 long tons; in 1958, the deficit was 30,000 tons. The Bureau holds out the possibility of the shortage persisting through 1960, if the output of natural rubber does not exceed 1.95 million to 2 million tons and if the present rate of consumption is held or exceeded. It goes on to add: "There is a sellers' market that could continue into 1960, with one major reservation—stockpile sales. Depending on the degree of balance between production and consumption, this stockpile tonnage will either lower 1960's estimated world stock deficit substantially or could even swing supply in excess of demand." It warns that sales of rubber from the U.S. and British stockpiles in 1960 can add another 60,000 to 70,000 tons to the supply.

The Rubber Trade Association estimates the free world's consumption of rubber in 1959 at 3.55 million long tons (in 1958, it was 3.21 million tons), of which natural rubber will account for 2.05 million tons and synthetic for 1.50 million tons. The U.S. is expected to use 540,000 tons of natural rubber, representing a substantial increase over 484,492 tons consumed in 1958, and 1,060,000 tons of synthetic. The rest of the world (other than the Communist countries), in the estimate of the Association, will use 1.51 million tons of natural and 440,000 tons of synthetic.

Shortage Will Continue

As against the above estimated increase in consumption, the Association has predicted a world production of 3.55 million tons in the current year. This will be made up of 1.99 million tons of natural and 1.56 million tons of synthetic. Malaya and Indonesia are each expected to produce 700,000 tons of natural rubber. The U.S. output of synthetic rubber is estimated at 1.32 million tons. The rest of the world will produce 590,000 tons of natural and 250,000 tons of synthetic. It will thus be observed that, in the estimate of the Rubber Trade Association, the shortage of natural rubber in 1959 will be of the order of 60,000 tons, as against 40,000 tons predicted by the Natural Rubber Bureau, and the consumption of synthetic rubber will fall short of production by 60,000 tons.

There are unmistakable signs of a growing demand for rubber and statisticians estimate the world consumption to rise to over 4 million tons by 1965. At the same time, production of natural rubber is sure to go up substantially when the 3.5 million-acre replanting programme in Malaya is gone through. Up to the end of 1958, about 1.4 million acres of this area were replanted with high-yielding rubber. In the current year, another 235,000 acres will be replanted with high-yielding stocks. The yield per acre is expected to rise from 490 lbs. to 1,000 to 1,500 lbs. under the replanting scheme. On the basis of the replanting done up to the end of 1958, Malaya will be producing about 850,000 to

900,000 tons per annum by 1965, a rise of nearly 200,000 tons or 30 per cent. in seven years. What is more, this additional quantity will have been produced at considerably less cost than now.

The above additional output is expected out of the high-yielding replanting and new planting only. It does not take into account the 1 million acres of virgin jungle in Malaya which the natural rubber industry is urging to be converted into rubber plantations. It does not also take into account the latest agronomical development, namely, tree stimulation. According to one scientist, twelve years of research has indicated that a few milligrams of the right chemicals applied to each tree twice a year could bring about 25 to 40 per cent. increase in yield at a relatively insignificant expense. It is claimed that, by this process, the yield could be raised to 1,800 lbs. per acre and, with a modest stimulation, it could be further raised to 2,350 lbs. per acre.

Wide Variety of Uses

To sum up, increased acreage, replanting of high-yielders and application of tree stimulation can all bring down the price of natural rubber sizably from the present levels and stimulate demand for it. Besides, fundamental and applied research in natural rubber research centres all over the world have provided many use advantages that add to natural rubber's desirability. The annual report for 1958 of the U.K. Natural Rubber Development Board provides a vivid account of the wide variety of uses to which natural rubber has been put and holds promise of a bright future for natural rubber, provided that vigilance and energy continue to be applied to its development. The report records the encouraging progress made in the commercial development of rubberised road in the U.S. (where hundreds of miles of such roads are now in service), the U.K., Australia, New Zealand, the Far East and elsewhere. Other successful uses to which rubberised bitumen is being put are: the lining of reservoirs, roof sealing, sealing joints in sea walls, children's playgrounds, tennis courts and running tracks. With work on rubberised bitumen well advanced, attention is being turned to extending the scope of rubber in road work still further by developing rubberised tar and latex-bitumen. One advantage of this is the saving in cost, as tar is cheaper than bitumen. The use of rubber in building and engineering is also growing. It is

being used in anti-vibration mountings in buildings, joint-sealing, the making, decorating and fixing of concrete units, earth-moving techniques, latex-cement compositions and so on. The utility of rubber rail pads, inserted between rail and sleeper to reduce vibration and wear, is being increasingly realised; more and more countries are using them.

Latex Foam

Commenting on the use of rubber, particularly latex foam, in the furniture industry, the report says:

"The use of rubber in one form or another in furniture represents an outlet for natural rubber second, in potential importance only to the pneumatic tyre. In 1958, total world consumption of natural rubber latex is estimated at around 165,000 tons, just over 70,000 tons going to the U.S.A. and 26,000 tons to the U.K. Although it finds application in various industries for such purposes as dipped goods, elastic thread, adhesives, impregnation of tyre cords, and latex-cement floorings, by far the greatest proportion is utilised in foam for upholstery purposes. The market for latex foam is steadily expanding, in spite of the recent introduction of plastic foams for some of which extravagant claims are being made."

The Natural Rubber Development Board forecasts a steadily expanding outlet for rubber in footwear. The proportion of British footwear fitted with non-leather soles is said to have grown from 20 per cent. in 1955 to 60 per cent. now and the majority of these contain natural rubber. "The introduction of rubber resins in footwear compounds," the Board's report says, "is widening the field of use, particularly in leather-like materials, where the outstanding properties of rubber in regard to resilience, wear and protection against damp are finding increasing favour."

Research

Along with finding increasing use for rubber, attention is being paid to improving the processing and manufacturing methods of certain natural rubber products. Giving an account of this, the annual report for 1958 of the Rubber Technical Developments Ltd., one of the natural rubber research organisations, says that, with graft polymer rubbers, in which natural rubber is combined with synthetic materials to make hard moulding compositions, etc., work has been directed to producing material which can be "handled in the mixing plant without pre-conditioning". The trials carried out indicate that this can be best achieved with rubber modified from fresh latex on the plantation.

Further research work was undertaken with the British Rubber Producers' Research Association in connection with anti-crystallising rubbers designed to prevent natural rubber from becoming brittle and unusable at low temperatures.

Splitting or delamination is a characteristic of all non-woven fabrics, but one result of the year's work was to give latex bonded fabrics, developed by Rubber Technical Developments Ltd., a definite advantage in this respect. The report adds: "Lightweight fabrics which do not delaminate have been prepared from a great many different fibres or fibre blends, and considerable improvement have also been achieved with heavier weight fabrics using certain fibre blends." Impregnation methods have been improved and non-woven fabrics as low in weight as 1 oz. per square yard have been produced. Successful work has also been carried out to improve resistance to heat, dry cleaning, and detergents.

The programme for the year also included a successful study of methods of reducing the processing time for rubber bonded fibres of the type used in upholstery and packaging. Tests on schoolboys' shoes produced some striking evidence of the wearing qualities of plantation crepe rubber, the only 100 per cent. natural rubber footwear soiling material.

TEA MARKETING CORPORATION FOR CEYLON

The Ceylon Government has decided to establish a national tea marketing corporation. The organisation is intended to buy, store, blend, and package tea to suit consumer markets in Communist countries, as well as buyers in western Asia and central Europe with whom Ceylon will enter into trade agreements in the near future.

The Government proposes to offer 25 per cent. of the share capital in the Corporation to the private sector to ensure public participation. This share will be increased later to 49 per cent.

The above proposal is in pursuance of the Government's intention, announced early this year, to place packets of exclusively Ceylon tea on the market. The setting up of the Corporation will not, however, affect the normal trade, as it has been assured that the Corporation's activities will be confined to selling tea to Communist countries, Central Europe and Western Asia and the tea packets will not be offered in the London market.

DEVELOPMENT OF INDIAN RAILWAYS ACCENT SHOULD BE ON OPERATIONAL EFFICIENCY

By K. K. Saxena

ASSISTANT PROFESSOR OF COMMERCE, UNIVERSITY OF LUCKNOW

INDIAN railways are now in the throes of dynamic expansion. Titanic programmes of expansion and development have been germinated to cope with increasing traffic which the nation-wide economic activity is bringing about. Obviously, at this juncture of our economy, efficient operation of railways is of transcendental importance. A railway is usually said to manufacture and sell "transportation," and, like any other manufacturer, it requires to know the cost of what it sells, in order to measure its efficiency and prepare its rates. It has been said that the measure of efficiency is the amount of return produced on the capital employed, but, in some cases, this criterion could be fallacious, as, for example, in the case of a concern that is overcapitalised, requiring much larger net earnings on a given amount of business.

Despite the fact that heavy capital investment has taken place on Indian railways, it is gratifying to note that the figures of net earnings in relation to capital at charge give a rosy picture of the financial position of the railways during the past few years. From 4.26 in 1938-39, the percentage of net earnings on capital-at-charge increased to 6.13 in 1957-58. The simplest test of the genuine conditions of finance is the "operating ratio" which is the correct index of the residue available for payment of interest charges and appropriation to the distributable surplus. The ratio operating expenses of Indian railways increased to 81.21 in 1957-58 from 66.48 in 1938-39. In fact, a higher operating expenditure ratio is proof of uneconomical and inefficient working of a railway. In the case of Indian railways, the operating ratio no doubt is high today, as compared with the pre-war period, but allowance must be made for abnormal expenditure on repairs, maintenance and inflated wage bills.

It may be pointed out that dividend alone, however desirable, is not the only measure of economical working. It will not be fair to impugn the management of a railway merely on the fact of its inability to produce a dividend, without taking into consideration the conditions affecting its operations; nor is it sufficient to accept the ratio of the working expenditure to gross receipts, as an indication of efficiency or otherwise, since the expenditure may be burdened with charges which do not arise out of the actual cost of working but include such items as interest on loans, transfers to reserve funds, contribution to general revenues; or the administration may be bound down by inadequate maximum rates which limit receipts to a figure that cannot fully remunerate the work performed and the obligations contracted.

Evidently, therefore, the efficiency of railways is to be judged in a broader perspective. It should be remembered that, when speaking of efficiency on railways, there is no single index which can afford an overall appreciation of the improvement. It is necessary to watch a number of indices on various aspects of railway activities such as serviceability of equipment, its utilisation, speed of transport, etc., both in regard to goods and passenger traffic.

Passenger Traffic Operation

There has been a phenomenal growth of passenger traffic on Indian railways since the commencement of Second World War. The total number of passengers originating was 499 million in 1938-39, whereas it was 1,410 million during 1957-58. But there has not been a corresponding increase in the resources of railways to cope with this heavy increase in the traffic. On 31st March 1939, the railways had 18,763 passenger coaches. Nineteen years later, on 31st March 1958, the number of passenger carriages on broad- and metre-gauge on line was 15,775 only. Obviously, this has resulted in overcrowding. But a relieving feature has been the increased passenger miles operated from 17,988 million during 1938-39 to 43,043 million in 1957-58, an increase of over 130 per cent.

An average man normally judges the performance of railways from the point of punctuality with which trains run, the speed at which they run, the comfort which they provide and the amount that he has to pay for the travel. During 1957-58, 77.63 per cent. of the trains on

the B.G. and 80 per cent. on the M.G. arrived in time. In fact, these statistics are based on the trains reaching their destination at the scheduled time. What is more important to be aimed at is punctuality of a train right from its leaving a station upto its destination, including intermediary stoppages. It may be noted that a punctuality of 99 per cent. for long-distance trains and 100 per cent. in case of suburban areas is claimed by Soviet railways. As regards the speed of the trains on Indian railways, it may be said that overall average speed fluctuates between 15 and 27 m.p.h. An increase to the maximum permissible speed over main line routes would necessitate considerably strengthening the track by way of heavier rails, heavier ballast, increased density of sleepers, better signalling, etc. All this would involve heavy expenditure and hence, under the present state of affairs, it may not be possible. The only way, therefore, at the moment to improve efficiency is to aim at an increase in the overall speeds by reducing the number of stoppages en route for long-distance trains and also by curtailing the halts where possible. It may be pointed out that, in 1957, British Summer Services included 84 trains making start-to-stop runs at average speeds of 60 m.p.h. or more on most days of the week. We in India have, therefore, to do a lot in this direction.

Goods Traffic Operation

During the first Plan period, the volume of traffic on Indian railways increased from 91.4 million tons to 114.1 million tons. There is no parallel to what the new era of planned development is likely to unfold during the second Plan period. By 1960-61, the railways are expected to carry 168 million tons of freight traffic. These estimates take no account of "repeat" movement of goods from producers to wholesalers and from producers to retailers nor do they take into account "leads" of traffic which may go up to a very great extent under the impact of planned development. In an underdeveloped country like India, the demands for transport facilities are likely to multiply very fast. Consequently, the second Plan, which is a plan for rapid industrialisation, is likely to be more exacting in its demand on the railways than the first. Substantial increase in the movement of goods traffic during recent years has been made possible because of intensive utilisation of rolling stock, of planning in advance the movement of traffic over different routes and junctions, and, above all, of increased wagon loadings.

During 1957-58, wagon loadings increased by 4.87 per cent. on the B.G. and 7.61 per cent. on the M.G., bringing down the outstanding registrations at the end of the year by 15.0 per cent. on the B.G. and 63.2 per cent. on the M.G., as compared with 1956-57. This increase in wagon loadings is obviously reflected in the growth in the net ton mileage. Tons originating on Indian railways and ton-miles increased from 84.4 and 21,878 million in 1938-39 to 132.1 and 44,861 million, respectively, in 1957-58, that is, an increase of 57 per cent. in tons originating and 104 per cent. in ton-miles. In order to avoid loadings falling into arrears, it is necessary that outstanding registrations should be scrutinised from time to time and special arrangements should be made to clear as much traffic as possible by means of "block specials" or *ad-hoc* quotas.

Speed—A Vital Factor

To enable the railways to cope with the increased traffic adequate steps have got to be taken to increase and improve the available rolling stock equipment and facilities, but this may be a costly and slow process. Hence, it is inevitable for the railways to make the maximum utilisation of available stock by putting it to intensive use. Any loss that occurs due to inefficient operation can never be made good and hence it should not be permitted. It may be worthwhile to point out, in this connection, that improvement in operational efficiency, especially on the broad-gauge which accounts for 80 per cent. of total goods traffic, is more important.

During recent years, the speed of goods train has declined both on the M.G. and B.G. A decline in the speed of goods train adversely

affects the availability of rolling stock and thereby reduces wagon mobility and usage. It is true that wagon mobility is influenced relatively less by fluctuations in speed than by other factors such as yard detentions, terminal delays, etc., which hold up the wagons more effectively. But deterioration in speed means less turnround of engines and, consequently, less availability of engines and crew for moving the traffic. It also affects the sectional capacity, as it means increased hours of engine on lines. It affects the capacity and clearances from the yard, too. Obviously, the operational and financial advantages which follow even from a small increase in speed would be substantial and worth aiming at.

Deterioration in speed has been due to sections working at saturation level, falling in general standards of working and supervision, lack of adequate co-ordination between central offices or between the railways, low standards of rolling stock maintenance, engineering work necessitating imposition of speed restrictions, and heavy shunting at roadside stations. A close co-ordination of various departments, a strict watch on trains having a late start, regular study of paths, checking up "hold-ups," avoidance of unnecessary detentions to trains due to yard congestion, reduction in the time for meeting loco requirements, satisfactory loco watering arrangements, etc.—all these can go a long way towards easing the situation.

Multiple Aspects of Wagon Usage

It is heartening to note that a substantial increase in goods traffic has been achieved without a commensurate increase in the resources of rolling stock. During the period of eleven years from 1947-48 to 1957-58, when there was an 81 per cent. increase in the tonnage of traffic carried, the number of goods wagons on the B.G. and M.G. increased by 29 per cent. and locomotives on lines rose by 27 per cent. only. This proves the greater work which is being taken by each unit and goes to show the scope for further improvement in reducing the wastage that now occurs in marshalling yards, terminals, repair shops, shunting miles, etc. The efficiency of wagon usage, it may be noted, has multiple aspects. It is reflected by various factors such as wagon miles per wagon day, net ton-miles per wagon day, wagons under repair, wagon turnround, empty haulage and wagon loads. Wagon miles per wagon day increased from 38.7 in 1950-51 to 47.3 in 1957-58 on the B.G. During the same period, net ton-miles per wagon day increased from 402 to 588 on the B.G. and from 180 to 225 on the M.G., while the percentage of unserviceable wagons to total number on line decreased from 7.28 to 3.52 on the B.G. and from 8.64 to 3.96 on the M.G.

Wagon Turnround

As regards wagon turnround, there has been very little or no improvement, for it depends on a number of factors, as, for instance, detention time in yards, average speeds of trains, average time per loading and unloading, delays at originating depots and at destination for placement, and delays due to released empties awaiting despatch. Apart from these, it is also affected by local conditions such as length of railway, its gauge, strength of track and bridges, types of locomotives, normal loads of train, standard of signalling, line capacity nature and pattern of traffic. It is hoped that with the setting up of Wagon Chasing Organisation and Area Controls, the position would gradually improve. The railways have already taken several welcome steps with a view to securing quick and intensive utilisation of rolling stock. These are: augmentation of express goods trains, provision of linked and fixed path for goods trains, reduction in free time for loading and unloading, introduction of night shift at sheds and transshipment points and, above all, planning of additional line capacity works, including remodelling of yards, extension of loop and provision of crossing stations. Further empty haulage is being reduced and wagons are being put to maximum use. As each wagon represents a potential source of revenue to the railways, its maximum use is of utmost importance.

Locomotive Utilisation

As regards locomotive utilisation, it may be said that a tremendous improvement has been made in the amount of pay load moved on an average by each engine in an hour. Net ton-miles per engine-hour increased from 1,846 on the B.G. and 693 on the M.G. during 1948-49 to 2,231 on the B.G. and 994 on the M.G. during 1957-58. There has been an improvement in tractive effort per engine and also greater availability of engines in use (Continued on page 668)

That is what is meant
by the appointment of
INDMAC Private Ltd.

as sole representatives in India
for DEMAG, well-known for
their mechanical equipment for
the mining industry, blast furnaces
steelworks, rolling mill plants and
foundries, electro-metallurgical and
electro-chemical plants, cranes and
loading installations

of industrial fulfilment

of every description for harbours, shops
and storeyards, electric hoist blocks
reciprocating, turbo-, axial-flow
and rotary sliding-vane compressors
pneumatic tools, diesel engines,
excavators, high-capacity gas producers
sintered iron, structural steelworks
steel bridges, steel structures for
hydel-irrigation schemes, and drilling rigs.

INDMAC offer you
complete engineering services
under the direct supervision
of engineers trained by DEMAG.

INDMAC

CLIMATE FOR FOREIGN PRIVATE INVESTMENT

MR. G. L. MEHTA'S EXPOSITION OF INDIA'S POLICY TO U.S. AUDIENCE

[During his recent visit to the U.S., Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India, addressed the Far East-American Council of Commerce and Industry, Inc., New York, on the climate and scope for foreign private investments in India. His address was a brilliant exposition of the Government of India's socialist policies. In making a frank appraisal of the position, he sought to allay the fears of U.S. investors. Although the speech is a long one, containing as it does about 7,500 words, we are publishing it in full on these pages for four reasons. First, it deserves to be brought to the notice of numerous foreign investors, who are already in this country as well as to those who are contemplating to invest here. Secondly, the misgivings he tried to dispel exist among many Indian business men themselves; they would naturally like to know Mr. Mehta's elucidation of the "socialist pattern of society." Thirdly, the members of the Congress Party, including the Ministers, and the Government officials will profit by reading this address, as it will help them to know the defects in their policies and procedures. Fourthly, the address, being in a racy style, is easily readable. When we read it, we did not find it dull at any point.—Ed.]

ALMOST exactly seven years ago, on 24th October 1952, I first addressed the Far East-American Council of Commerce and Industry. Since then, much water has passed under the bridge, or, to use a metaphor better suited to India, our population has grown by around 40 million. Then, we were near the start of our first Five-year Plan and were at the start of an economic boom. Today, we are more than half-way through our second Five-year Plan and the boom has slowed down. We have made impressive progress, as any careful examination of our economic statistics will show; but the journey has not been smooth, for we have had to meet one crisis after another. We have lost some illusions during the years and, perhaps, have found some others. We have decided to move in the direction of a "socialistic pattern of society" and have discovered that, in this as in everything, success depends on hard work rather than on faith.

I have changed, too. I trust I can in a small way still represent India. But seven years ago I spoke, as Ambassador, as the personal representative of the President of India. Today I stand before you, not as an official, but as a member of the "business" community—both private and public "business." Like India's economy, I am "mixed"; and again like India's economy, I am managing to survive nonetheless.

Seven years ago, I spoke on "Private Enterprise in India's Planned Economy." My subject today is not very different—the prospects for private enterprise and particularly for private foreign investment in India.

I wish it were possible for me to say that the prospects for both are excellent and to tell you that private investment in India is safer and more profitable than anywhere else in the world. I cannot do this. Nor, on the other hand, can I take a pessimistic, often panic-stricken, view. Their cries must seem unusually shrill to Americans—especially to those who have forgotten the days, not long ago, when "That Man" in the White House personified Evil because he introduced programmes now taken for granted by everyone. The change, which many of you have seen in your lifetime—exemplified in the transformation from Robber Barons and Nabobs to their grandchildren today, who are public servants—have hardly begun in India. And as for foreign businessmen, they are not always sufficiently familiar with, nor always appreciative of, the problems of a country which is endeavouring to overcome in decades the accumulated economic and social backwardness of centuries. The United States—even in its colonial period—never experienced India's present circumstances; most of Europe, not since the early Middle Ages. And India is no longer the exotic India of Rudyard Kipling and the Bengal Lancers—if it ever was!

Too Complex

The situation in India with respect to private investment and its prospects is too complex to be portrayed in the simple blacks and whites which mislead rather than clarify. Private enterprise there does not have the relatively free hand it has in the U.S.; its path is not strewn with roses, although you must remember that there are no roses without thorns. On the other hand, private enterprise and foreign investment are neither dead nor dying despite difficult circumstances at times and some uneasiness induced by vague talks of socialisation and state controls. The private sector will, I believe, continue to exist for a long time to come and will play a role far larger in absolute terms than in the past, if less important in relation to the public sector. At the start of the second Plan, about 80 per cent. of all investment in industry was private; at the end, perhaps only 60 per cent. will be. The industrial output of the public sector will, however, be about seven per cent. of total industrial production.

I should like to call your attention to some basic facts about India, which you must keep in mind in considering the subject before us today.

The first is that one cannot conceive of India without thinking of problems—of population pressing hard on resources; of starvation, ill-health, and woefully poor standards of living; of an overwhelmingly agricultural population whose productivity is desperately low; of lack of resources compared to urgent minimum needs; of foreign exchange shortages, etc. These problems are not peculiar to India. But the sheer weight of numbers lifts them to a new plane, makes them different not only in magnitude but also in kind from those ever faced by Western countries or, indeed, by any country, except China.

The fundamental and inescapable problem which faces us is that India, with almost 400 million people, is growing at the rate of about 8 million each year. Eighty-five per cent. of our families live, miserably, on the land. A fifth of

the population is unemployed much, most or all of the time. Agricultural production is going up—but at only about 2 per cent. to 3 per cent. per year, just a little more than our population increase. Compare this with Europe. In the O.E.E.C. area, agricultural production increased from 1949, when the pre-war level was reached, to 1958 by more than 30 per cent.; during the same period agricultural employment declined by 20 per cent. Thus agricultural labour productivity in Europe has gone up by about 60 per cent.—in a period when ours was virtually standing still; and Europe's manufacturing and service industries can absorb the labour displaced from the land, while ours cannot cope with even the natural increase of our cities. The crux of our problem lies in these startling and tragic facts. It is ironic that we face this problem in part, because it is far easier and cheaper to adopt the medical developments which the West has made available to us, than to adopt the new technologies of production and modern ways of thinking.

Secondly, India is determined, both people and Government, to deal with these problems as rapidly and effectively as is humanly possible. Although there is inevitable disagreement on means, there is no disagreement at all on the objective, which is to convert our traditional society into one that is capable of steadily increasing productivity and rising standards of living. This task is of heroic proportions. To accomplish it, we have had to give up, as most of you did long ago, our faith in the "Unseen Hand" as the prime mover in economic growth—with all that this implies with respect to planning and priorities, governmental guidance, expansion of the public sector, husbanding of resources. Unfortunately, there is a conflict, which only political decisions can resolve, between the requirements of economic growth and the need to allow the population at once to consume a larger share of its output. It is inevitable that, faced with a task of such magnitude and with the conflicting demands on our inadequate resources, much of what we do is experimental and our approach empirical. And for this reason, we well know, we are fallible human beings, what we do is likely to yield errors as well as successes.

Quite Flexible

The third point to be remembered is that we are determined to achieve this objective by democratic means and thus, while we hope we have the long-term strength of democracy, we are also subject to its short-term weaknesses—even more than you are; for we have introduced democracy among a largely illiterate population unused to modern forms of representative government. Our political system is not unlike yours. Our governing party is similar to your two major parties in this respect: that its policies are broad (or vague) enough to cover under its umbrella a great variety of opinion—from the ascetic humanitarianism of Gandhi to State socialism and including many exotic shades of opinion between. Once, when India's purpose was political independence, these many segments of opinion spoke with one voice; today, with that revolution accomplished, the differences among us have naturally become more apparent. All these segments of the Party are articulate and it is easy to interpret a vigorous statement from one important politician, even a Minister, as the considered policy of the Party. Nothing could be further from the truth—for the Party's policy at any given moment is a compromise of many different views reached in the light of prevailing circumstances. In other words, we are and our Government is somewhat less coherent and more pragmatic and flexible than one might imagine.

Let me take a specific example. In India we hear much, and I believe you have heard much, too, about the "socialistic pattern of society" to which the Indian Government is committed. If the phrase induces euphoria in many people and politicians, it also induces in others visions of tumbrils rolling through the streets to bloody guillotines. In fact, it is a phrase which expresses a general ethical aspiration, but which does not have much precise content—yet. Our Prime Minister said a few months ago that the "content of a socialistic society is an important thing to discuss. Yet my mind does not function that way. Broadly, of course, we know we want a society in which everybody has equal opportunity, everybody can go ahead, everybody has a rising standard of living, where power is not concentrated and so on and so forth. But the moment you go much further than that—in theory you may—you are trying to imprison our system in the future." Thus the phrase "socialistic pattern of society" like the word "capitalism," should invoke neither euphoria nor panic; on the contrary, it should stimulate thinking citizens to bring every constitutional pressure to bear to give the expression the content they wish it to have. In

a democratic society, it is the amalgam of such pressures that will determine policy, not the statements of ideologues and damogogues.

Fourthly, some Indians still suffer from the complexes common to citizens of newly independent countries. One such complex is a distrust of foreign investors and of profits—an attitude which has its origin in the nineteenth century imperialism. But I would claim that Government and responsible public opinion have been rational and farsighted in regard to foreign capital. There has been no economic chauvinism, no irresponsible talk of discrimination or expropriation. Undoubtedly, neither India nor the world is the same today. As one of your economists—Kenneth Galbraith—put it, "It is unlikely that India, having escaped the British raj, will succumb to the control of its creditors. Among the ominous figures in Indian history, Eugene Black is unlikely to rank with Robert Clive, Warren Hastings or even the late Lord Curzon." Unfortunately, facts have a way of outstripping thinking; it is only with pain that nations the prospects for private enterprise?

Mr. Nehru Quoted

Against this background, what can be said of the prospects for private enterprise?

It is customary, in this connection, to speak of something called "climate." I wish I knew precisely what "climate" means; it appears to cover a host of intangibles and imponderables having to do with official attitudes towards private investment of Government and the politically directed statements of our political leaders, the "climate" in India would appear to be uncertain, like that of New York in spring—rainy one moment and sunny the next. I should like to stress that, for almost every derogatory statement about "captains of industry" and "private exploitation," one can find statements of encouragement to the private sector. For instance, there is Prime Minister Nehru's statement in Parliament on 25th May 1956:

"I have no shadow of doubt that, if we say 'let off the private sector' we cannot replace it adequately. We have not got the resources to replace it, and the result would be that our productive apparatus will suffer. And why should we do it? I don't understand. We have our industries, there is a vast sector, and we have to work it. Let the State go on building up its plants and industries as far as its resources permit. Why should we fritter away our energy in pushing out somebody who is doing it in the private sector?"

"There is no reason except that the private sector might build up monopoly, might be building economic power to come in the way of our growth. I can understand 'Prevent that, control that, plan for that,' but, when there is such a vast field to cover, it is foolish to take charge of the whole field when you are totally incapable of using that huge area yourself. Therefore, you must not only permit the private sector, but I say, encourage it in its own field."

So far as I know, this view still expresses official outlook. The fact that Government blows both hot and cold is but another aspect of the flexibility that I referred to earlier. No doubt, businessmen might prefer a settled climate, even if it were not an ideal one, to the monsoon-like weather, with sudden gusts and squalls, in which they now live.

I believe, however, that what is said is less important than the specific things that are being done and the trend of circumstances. Are there real opportunities for private investment? What are the concrete measures taken to facilitate or to impede private investment? How real are the conveniences to which it is subjected? What are the profit expectations?

Opportunities Increasing

With respect to opportunities, I believe they not only exist, but are increasing every day. The Indian Government has, no doubt, eliminated private enterprise from certain fields of industry, but the list of such spheres is a short one. A far larger would be expected to invest, is free for all—if I mean enterprises in fields specified in the pattern and programme of development laid down by the Government. True, in such fields there is the possibility of Government establishing competing enterprises. I suggest, however, that the prospect of significantly deter private investment. For, the are likely to be few and competition is not likely to be a serious obstacle if Government enterprises believe that there is no substantial limitation on size of the Indian market, the variety of its needs and desires, and the very small degree to which that market is being satisfied today.

I have referred to the size of the market. Four hundred million people are a large mass but they do not necessarily constitute a large market. The important question is how much they can afford to buy. It is in the conversion of a mass into a market that the Government's policies and measures are most likely to stimulate private industry. For, market being created by India's five-year plans. To the extent that these plans are successful, living standards will rise—and along with that, the power, the requirements, desires and purchasing range and depth.

May I, in this connection, call your attention to programmes under the Government's investment refer particularly to the two Five-year Plans? I port, communications, power, irrigation, community is highly unlikely that private capital would be invested in quantity, both because of the magnitude of resources required and because the financial return is low. (Of course, the heavy Government

investment in power and metallurgy may not fall in this category.) I cite this, not to point out that the bulk of Government investment is in fields which do not compete with the private sector. I do so rather to stress the fact that these investments in the general economic and social overheads of the country are essential to the expansion of private enterprise. These investments will play the same role in India's growth, and in the growth of the private sector, that in the United States, the expenditures of federal and State Governments played in creating first a network of canals, then railways, and now of highways.

There is, of course, the other side of this coin. Government investments must be financed. Government is but one of several claimants for the financial resources which can be mobilised from India's population, whether individual or corporate. Competition for financial resources is the only real competition so far between the public and private sectors. Every rupee withdrawn by Government is a rupee less for all other claimants. It can be argued that the level of Government outlays, including investments, exercises a depressing influence on private investment as well as on private consumption. This is, no doubt, true and the big question will long remain whether Government will, through taxation to finance its own investments, deprive private enterprise of the incentive and resources to finance private investment. Unfortunately, no formula has yet been found for determining the right proportion of a nation's resources that should be taken by Government, even taking into account that a large proportion of those resources, when spent, create opportunities for private investment and markets for goods and services produced privately.

Government policy contributes to the encouragement of private industry in other ways. A broad variety of institutions exists for the purpose

of providing surveys, research, training and technical advice and information essential to the stimulation of private efforts. Of much greater immediate importance are the direct financial aids provided by Government. For instance, Government is prepared to subscribe directly to the shares of or give loans to private industrial enterprises. You may find it strange that many Indian entrepreneurs seek and welcome such participation. In India, it gives the enterprise a cachet and, rightly or wrongly, it is considered by many to be a sort of security against the vagaries of governmental policy. Aside from direct participation, the Government has established or helped to establish an elaborate network of specialised institutions to provide finance for the creation or expansion of private industrial enterprises. Most of these institutions are still too young to have had a significant impact on the Indian economy. But their creation, and the financial resources the Government has endowed them with, are, I believe, evidence of a desire to strengthen the private sector.

Incentives

As important as the funds made directly available to stimulate private enterprise, are the tax concessions and incentives provided to private enterprise—about which much less is heard than about the discouraging effect of the high level of taxation. Yet these concessions and incentives are substantial. For instance, newly established undertakings are exempted for the first five years of operation from taxes on profits up to 6 per cent. of the capital employed. And, during that period, a shareholder is exempted from income-taxes on the dividends he receives out of the exempted profits of that company. Rapid and liberal depreciation is permitted on new investment, and losses may be carried forward to offset later profits. A development rebate of 25 per cent. of the cost of new plant and machinery is allowed in the first

year in which that outlay is made; companies may thus recover 125 per cent. of capital outlay. The list of these allowances and exemptions is a long one and, as I shall later point out, makes India one of the most liberal countries in the world in the treatment of new industrial enterprises.

Finally, much of Indian industry lives under an umbrella of protection. In part, this protection is the result of unfortunate circumstances—continuing foreign exchange shortages which have imposed severe limitations on imports, with the result that Indian producers are much less subject to the stimulating effects of foreign competition than, for instance, yours. But quite apart from the effect of such circumstances, Indian tariff policy is deliberately designed to encourage domestic manufacturers. Under this umbrella, many new industries have a lengthy breather during which to get over initial difficulties and to bring production costs into line with those prevailing elsewhere.

Nothing I have said so far about the opportunities and aids given to private enterprise in India is limited to Indian enterprise. It is equally available to foreign entrepreneurs and to foreign capital. The problem with respect to foreign capital is, not discrimination once it is in the country, but whether it is welcomed at all. I believe that the attitude towards foreign enterprise has shifted favourably during the past two years, with the increasing realisation of the benefits to be derived from it and with increasing foreign exchange difficulties. For instance, Government no longer insists on Indian majority and control. Quite apart from this, however, are certain positive factors which must motivate foreign enterprise—factors of self-protection and expansion. Many commodities now imported are being progressively manufactured in India. This process will continue, because where raw materials are available and skills can be readily developed, it is to India's interest to manufacture at home.

Progress

is the sum of KNOW-HOW plus RESOURCES

Regarded with little favour—even for household uses—by the ordinary man-in-the-bazaar less than 20 years ago, aluminium has today become the engineers' favourite light metal. It is now fast replacing other metals and wood in the construction of railway coaches, bus bodies, aircraft and ships.

The wide acceptance that aluminium has come to enjoy as a structural material is largely due to the ceaseless efforts of Indian Aluminium Company, which today accounts for over 90% of the country's total production. Pioneer and leader of the aluminium industry in India, Indian Aluminium Company has continuously sought to promote new applications of this versatile metal and has frequently expanded its production facilities to meet the increased demand thus stimulated.

To do this two-fold job of promotion and expansion Indian Aluminium has been uniquely well-placed. It has drawn fully upon the technical and research facilities of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies. And now, Indian Aluminium stands ready to contribute all its know-how and resources towards achieving India's self-sufficiency in aluminium.

Indian Aluminium Company Limited

A CANADIAN-INDIAN ENTERPRISE

Thus many companies, whose names and products are well known in India, run the danger of losing their market in India, unless they are prepared to change over from exporting to manufacturing. In the process of doing so, they may obtain an advantage they did not have before. India's location offers a good opportunity for serving competitive markets of the rest of Asia and of East Africa. On a base in India, with one of the world's largest potential markets, there is the possibility of serving an even larger market.

The Fears

Against these incentives and opportunities must be set the fears and inconveniences of the private sector. What are the fears? The first, of course, is nationalisation. Is there a real danger of nationalisation? This is a matter that every entrepreneur must judge for himself. But what are the facts? The enterprises that have been nationalised in the 12 years since independence can be counted easily and quickly—civil aviation, a gold mine, the Imperial Bank, life insurance. The Fourth Amendment to the Indian Constitution, which provided that compensation allowed in the event of taking over private property cannot be reviewed by the courts, has not been used—as so many people feared it would be—against private business. The prospects of nationalisation are not so today as they appeared to be a decade ago; the record of compensation is generally considered good, and while I cannot, of course, give any guarantee, my own opinion is that the risks of nationalisation of existing enterprises can be discounted.

A second fear is of competition from the public sector. I have already indicated that this competition is primarily competition for financial resources. However, I have also said that the Indian Government, like that of other democratic countries, consists of different people susceptible to varied pressures. There is a possibility that Government may decide to go into any industry; but because of limitations of finance, personnel and management, and for other reasons as well, competition will be restricted for many years to come. I believe, therefore, that for all but a few basic industries, Government competition is not likely to be very important.

A third fear concerns supplies of raw materials (and sometimes of spare parts) from abroad. The shortage of foreign exchange which has resulted in cut-backs in imports in the recent past is, I am afraid, a general problem concerning the economy as a whole. A fourth fear concerns confiscatory taxation. This I shall refer to a little later when I discuss profits.

Finally, foreign enterprises are faced by a special fear—will they be able to repatriate their profits and, in due course, to repatriate their capital? In many respects, this fear is the least important of all, since India has an excellent record of permitting remittances when it has agreed to do so. Its reputation for meeting commitments is unblemished, defaults are repugnant to our national tradition and the consequences of default are well known. I must, however, stress one important point. India wants foreign capital—but capital which will remain invested for a long time, not for a few years. A potential investor may expect Government to drive a hard bargain in this respect, that is, to insist on no repatriation at all for some years and then only gradual repatriation. But once a commitment has been made, a foreign investor may rest assured that it would be honoured.

If I seem to discount the fears which private enterprise appears to entertain, I do not at all discount the inconveniences and frustration to which it is subjected—the complex procedures for obtaining permissions, consents and licences to start or to expand an enterprise and the red-tape of regulations and controls, including labour legislation which sometimes appears to give greater weight to illusory welfare than to productivity. No doubt, all Governments are blame-worthy in this respect, and it is possible that in India the network of controls is extensive. I confess I have only sympathy for those business men, foreign and Indian, who go to New Delhi with the hope and intention of investing—and who are discouraged by weeks and months of walking through Government corridors.

Investment Centre

With growing experience, however, there will come an improvement in this situation. Moreover, for foreign investors, a new institution may soon be set up which should be of special assistance. I refer to the plans for an All-India Investment Centre to be established with funds provided by the Indian and United States Governments, but under the auspices and direction of the Industrial Credit and Investment Corporation of India. This Centre will have three principal objectives:

- It will bring together (and I hope will from time to time publish) basic economic, financial and legal data of the kind a foreign investor is interested in, and will prepare market surveys and prospectuses concerning investment opportunities in India.
- The Centre will also act as an intermediary between Indian and foreign entrepreneurs, trying to make contracts for the former with the latter and vice versa.
- The Centre will also try to guide potential foreign investors through the bureaucratic jungles of New Delhi.

This Centre, of course, is still some way off, and its promise will not be realised overnight. But I have real hopes for it; and I am encouraged by the fact that the Government itself is favourable to setting up the Centre and wants the Industrial Credit and Investment Corporation of India, a private institution, to undertake this work.

There exists, then, a broad range of opportunities for foreign and domestic private investment; the entrepreneurial fears which inhibit such investment are largely illusory; inconveniences and red-tape do exist. What of the profits? Here the picture is mixed. Price controls exist with respect to many commodities and Government has powers to

invoke controls over others. This is a threat hanging over enterprise which could easily become reality—at a cost, of course. In addition, the level of taxation, corporate as well as individual, is no doubt high, but recent indications suggest a lowering of corporate taxation. The fact remains, nevertheless, that profits are substantial—sufficiently substantial to sustain continuing interest in new industrial investment.

Rapid Expansion

If we were in Bombay, rather than New York, I would invite you to drive with me the 23 miles from my office to the town of Thana. It would not be a pleasant drive, but an informative one. A few years ago, this was a country road. Today, it is almost impassable thanks to the mass of trucks and buses serving solid ranks of industrial factories, large and small, built or under construction, on both sides of the road. The same rapid expansion is evident in the suburbs of every major city in India. This surely is not evidence of confiscatory taxation or of lack of incentive for industrial expansion.

As for the effect of taxation on foreign investment, I should like to call attention to a careful study of this subject by the National Council of Applied Economic Research. The Indian Government was not overly happy about this study. This study made some important recommendations regarding the structure and level of taxation in order to make foreign investment in India more attractive. Levels of taxes in different countries are, of course, difficult to compare; but the Council reached the following conclusion:

"Among areas which do not provide an outright exemption from all taxes (for new foreign investment, as Puerto Rico does), there is no country whose combination of tax allowances and exemptions is more liberal than India's for new industrial investment during the first five years, especially if the investment in question is in one of the twenty industries for which exemption from super-tax on inter-corporate dividends is provided."

Long-term Considerations

The Council also noted that, after the first five years, and for old investment, the full incidence of company taxes applies and India's tax levels are higher than in many countries, but by no means in all. The taxation of profits of a foreign branch appeared higher than in any country studied, but the tax on a subsidiary company was less than, for instance, in the U.S., France, Canada, Burma, Australia and Pakistan. Because of the difference between the short- and the long-term incidence of taxation, the picture is not so good for a long-term investor, unless operations are expanded from time to time so that advantage may be taken of the short-term allowances and exemptions. Said the Council: "It must surely be in the interest of India to maintain an investment climate, including taxation features, which appeals to the foreign investor with long-term interests, as well as to those with only short-term interests. It is our feeling that these long-term considerations have not been given adequate weight in the design of the Indian company taxation system." Since that report first came out two years ago, some measures have been taken by Government to relieve the hardship, but much still remains to be done.

That profits are nevertheless not unattractive for both domestic and foreign businessmen is evident in the decisions they are taking and in the buoyancy of the market for industrial securities. There are, of course, ups and downs in the level of private investment activity. Nevertheless, new company registrations, requests for new capital issues, and actual investment remain substantial. And I am sure that, in the past two years, when all these indices fell, they would have been much higher but for the Government's deliberate effort to keep private investment in check, for, faced with serious shortages of resources and with the prospect of a short-fall in its own part of the second Five-year Plan, the Government made every effort to divert resources available to the private sector, to its own use. The excellent response to new issues of Government securities is evidence, among other things, of substantial savings, which have few alternatives for profitable investment. This is also one of the factors responsible for the high levels reached in the stock market.

That the prospects are not unattractive is also illustrated in the continued flow of foreign capital into India. It is sometimes forgotten that this flow was not interrupted by independence, and that today non-banking foreign business investment (excluding World Bank loans) is somewhere in the vicinity of \$1.2 billion, well over twice the level of June 1948. The net inflow of capital, which averaged about \$50 million a year in the first five years after independence, fell in 1954 and 1955 to about \$34 million annually. In 1956, the net inflow returned to the earlier level, I regret to say that, in the next two years, it fell again, but the inflow of fresh capital (as compared to reinvested earnings) went on increasing. These trends probably continued in 1958 (except for petroleum). Of course, a substantial part of this new investment (sometimes most of it) has been financed from retained earnings rather than by new inflows of cash or equipment, but this is itself evidence of the sustained earnings of foreign investment in India.

Twenty New Issues

The composition of new foreign investment in India is worth reciting. There has been a relative (though not an absolute) decline of investment in trading and in plantations—the major traditional fields. Investment in petroleum and in manufacturing has grown very rapidly. Engineering, chemicals, and pharmaceuticals, electrical goods, rubber products—these are the new and beckoning fields of investment. A list of some of the foreign companies which have come to India in recent years would testify both to their diversity and to the new pattern of investment. Last year, for instance, the Controller of Capital Issues approved 20 new issues for enterprises involving foreign participation. The foreign companies involved include Parsons

and Whittemore, and Merck Sharpe and Dohme of the United States, Ceat of Italy, Hoffman La Roche of Switzerland, Westinghouse Brake and Signals, Armstrong Cork and Horlicks of the United Kingdom and Furukawa of Japan, among others. The list of foreign companies entering into technical collaboration with Indian firms—involving use of patents, technical services, exchange of personnel, etc.—is several times greater and even more diverse.

I should like to call your attention also to the fact that United States investment in India is increasing, although it is still a poor second to the U.K. U.S. business investment in India is only about \$150 million; the bulk of it in petroleum; but increasing amounts are going into chemicals, pharmaceuticals, rubber, abrasives and many other fields of industry. In 1957, for the first time the U.S. replaced the U.K. as the principal source of private capital; and last year, more new participation from the United States was sanctioned than from any other country. Evidently not all foreign business men are frightened off by the risks, difficulties and inconveniences. Many obviously are drawing favourable conclusions from a careful examination of the situation.

These foreign investments are profitable; or they would not be taking place. How much higher a return an American investor wants abroad, compared to what he can get at home, is difficult to assess. Just a year ago, the Stanford Research Institute, in a study of "Private United States Venture Capital for Investment in Newly Developing Countries," concluded that, taking current income and capital gains together, foreign ventures must hold out the prospect of returns of at least 20 per cent. per annum, after foreign taxes, in one form or another, averaged over a period of years. A recent study by the Reserve Bank of India suggests that U.S. companies in India earned 13.5 per cent. in 1953 and 12.6 per cent. in 1955, as compared with about 10-12 per cent. earned by large corporations in the United States. The U.K. investors in India also earned about 2 per cent. more than at home. These figures refer only to current earnings, not capital gains. A mission of American business men, which spent the first months of this year in India, concluded that "it is quite evident that the field for private sector investment is increasing. The record of American firms operating in India has been favourable. Reasonable profits comparing favourably with U.S. rates can be earned and transferred in dollars."

Conclusion

What does this add up to? I think the general prospect can be briefly described as follows.

In the short run, good, but subject to continued regulation of investment, prices, imports, foreign exchange, allocations of raw materials (mostly intended to conserve scarce resources); and one must be prepared to put up with the dilatoriness and irritations of Government machinery, much of which is unavoidable in any country. In the longer run, too, the prospect is good, but there is a possibility of successive incursions of the public sector and of expanded controls. This danger will be held in check, not by debate but by private enterprise showing its capacity, of which I have no doubt, to do a better job. For foreign investment, the prospects are as good as or better than in the rest of Asia, thanks to better administration, financial and political stability of Government, an unblemished record of fulfilment of commitments and the large size of the market.

It would be tempting to conclude by saying, bluntly, that economic self-interest should lead you to invest in India; that you should be driven in the same direction by the humanitarian considerations which are so splendidly reflected in America's open-hearted generosity to the world since the war; that investment in India would make an important contribution towards strengthening those regions where freedom is weakest and the threats to it are greatest. I think, however, that you are better able than I to calculate the risks and of returns from alternative investments; that it would not be appropriate for an outsider—even the friendliest one—to lecture you on your duties as citizens and men; and that one should clearly distinguish business from purely ethical and political considerations.

What is the Alternative?

I must, however, ask you carefully to weigh, not simply the risks of investment in India, but also the risks of the alternative of not investing. A decision not to invest involves risks no less great, and perhaps greater, than a decision to invest—and may be even more costly in the long run. In many fields of industry, a decision not to invest may mean the loss of the Indian market for many products in the not too distant future. A decision to abandon a place in that market carries with it heavy responsibility; not simply the loss of prospective profit, but a denial of the contribution business can make towards building the more prosperous and harmonious world which is the keystone of American policy.

From our point of view, from India's, it is only fair to say that I see little prospect that foreign private investment can make a large quantitative contribution to India's economic growth. The effort we must make is substantial, and it must be primarily our own. This is not to say, however, that foreign investment is not important to us. On the contrary. Even small quantities can make appreciable contributions. In particular sectors, foreign investment is of immense importance. In most fields, the contribution it makes in the form of technical and managerial experience is at least as important as its financial contribution. Finally, I firmly believe that the responsible business man, much more than the diplomat, is the medium for developing that understanding among nations which is the foundation of my own country's policy and the only basis on which India can develop.

Plying the coast or sailing the seven seas, India's ships must always be in prime condition... Goodlass Nerolac supply special marine paints to protect and strengthen these ships, ensure that they stay seaworthy for years.

Goodlass Nerolac have twenty-five years' manufacturing experience in India, backed by a century of technical and scientific development of methods and products. They manufacture special paints for the shipping industry, special paints for every industrial need.

Ships, bridges, dams, refineries, power plants, factories—all need a different type of protective paint, and Goodlass Nerolac maintain a free technical advisory service to study all requirements... supply special paints, specially-formulated, to meet these requirements.

DEVELOPMENT OF ROAD TRANSPORT STATE COMMISSIONERS' CONFERENCE MAKES SPECIFIC SUGGESTIONS

THE importance of "suitable and adequate" administrative set-up for road transport was emphasised by the Union Minister of State for Transport and Communication, Mr. Raj Bahadur, in his address to the conference of State Transport Commissioners/Controllers, which concluded its two-day deliberations at New Delhi last week. The success of India's Five-year Plans, the Minister said, depended largely on the availability of adequate transport facilities. Urging the States to implement the report of the Road Transport Reorganisation Committee (Chairman: Mr. M. R. Masani), which was submitted to the Government in March last, the Union Minister said that, unless road construction and transport operation were closely linked both at the planning and the execution stages, the policies of State Governments could not yield maximum benefits. The conference, on its part, recommended to the Government several important measures for reorganisation of road transport which were generally based on the suggestions made by the Masani Committee.

In the course of his speech, the Union Minister deplored the malpractices in the road transport industry which served to give a bad name to operators and officials. These malpractices included premiums on the sale of vehicles and route permits, over-loading and smuggling of contraband goods and evasion of rules and regulations and defiance of the provisions of the law. As the Minister himself pointed out, the sooner these evils are done away with, the better for the industry. An important step in the direction of eradication of these evils is to devise a sound criterion for the issue of permits and, having devised such a scheme, to enforce it without fear or favour. The evil of overloading is traceable to inadequacy of vehicles to cope with the growing passenger and goods traffic. It can be easily ended by removing this basic cause. The remedy lies in licensing more operators, in increasing the availability of vehicles and in reducing the burden of taxation on both vehicles and road operations. These measures will put an end to trafficking in permits and ensure that only the right type of people get into the industry. It will not be out of place to draw the attention of Mr. Raj Bahadur, in this connection, that many of the malpractices found in road transport, especially overloading of passengers, exist in the public-sector owned railways. He should take a few rides incognito during two or three working days in the suburban trains of Bombay City to see for himself the reckless overloading of passengers indulged in by the railways. He should particularly travel by the so-called first class compartments to see how the passengers are being daily defrauded by the Government. While the railways have taken full fare, they are not even providing the public with seats. Most of the coaches are either bereft of seats or have seats unfit for use. The coaches are fit more for carrying animals than human beings. If any road operator in the private sector were to run his vehicles in the manner in which the railways are doing now, he would have been heavily fined and his licence cancelled. The callousness of the authorities in charge of the suburban trains in Bombay has gone on for months and yet none has bothered about it. Even the public seems to have got inured to it.

Co-ordination

Several important measures for reorganisation of road transport were approved by the conference which, as stated at the outset, was largely guided by the report of the Masani Committee. Thus, the conference endorsed the Committee's emphasis on the need for close co-ordination between road transport and road construction. The conference felt that the best method of achieving such co-ordination would be to have one Minister to deal exclusively with roads and road transport. The Masani Committee's recommendations on the constitution of State transport authorities was accepted by the conference. It may be recalled that the Committee suggested that, in each State, the State transport authority should consist of an official chairman with judicial experience, two official and two non-official members. The conference, however, felt that the number of members may be increased to seven where absolutely necessary. It endorsed the recommendation of the Masani Committee that a single-member

regional State transport authority, consisting of an experienced official, was best suited to the scheme of administration the Committee had recommended. The functions of the regional transport authority, as envisaged by the Committee, are strictly limited. Since all major decisions will be taken at the State level, the only function of the regional authority will be that of granting permits and enforcing the conditions prescribed for the grant of permits.

As regards appeals, the present practice is that they are generally heard by an appellate committee or appeal board of the State transport authority. The Masani Committee found that the present procedure was unsatisfactory, because "the hearing of appeals and revision applications inevitably diverts the attention of the State transport authorities from their normal work of planning, regulating and developing road transport." Accordingly, the Committee recommended that all appeals and revisions should be heard by a separate body. A State transport appellate tribunal should be set up, consisting of a full-time judicial officer not below the rank of a district and sessions judge. The conference on its part, agreed that it would be ideal to set up a single-member transport appellate tribunal in every State, constituted by an official with judicial experience, but wherever there were serious practical difficulties in having a single-member tribunal, a State may appoint a tribunal with a maximum of three members.

Private Carriers

The conference agreed with the recommendation of the Masani Committee that private carrier permits for bona fide use should be issued without any restrictions and the permits may be valid in a State or as many States as desired by the applicant. As regards intra-State public carrier permits, the Masani Committee had recommended that, within the estimated overall capacity of the State, permits should be free and unrestricted subject to the allocation of certain number of permits to each region in order to ensure all-sided development, and that intra-State permits for goods vehicles should be valid for the whole of the State, unless an operator wanted to confine himself to a region. On this point, the conference recommended that the best way of achieving the objective would be that permits granted for a region should be freely countersigned for other regions in the State. The conference also agreed that a more liberal policy should be followed in the grant of carriage permits until travel facilities caught up with the demand. On the Committee's recommendation that, in the matter of inter-State motor traffic, while the States may be left free to initiate and negotiate

proposals, the Inter-State Transport Commission should be vested with power to issue permits in case of need, the conference felt that the Motor Vehicles Act already provided for the grant of powers to the Commission to issue such permits and the power could be invoked if the Commission did not succeed in a particular case in bringing about reciprocal arrangement by persuasion.

Taxation

On the question of taxation, it is noteworthy that, although the conference did not specifically indicate any particular reduction in taxation, it agreed that the policy of consolidation of taxes, fixation of ceiling, elimination of indirect taxes and abolition of double taxation should be given effect to. It agreed with the Masani Committee that, until the principle of single-point taxation was accepted, it was desirable for all States to specify that all tourist coaches and other vehicles with permits under section 63(6) of the Motor Vehicles Act, which have paid taxes in their home States, should be exempted from further taxation. It further agreed with the Committee that tax concessions and preference for Government contracts should be given to encourage the extensive use of multiple unit vehicles and that the vehicle tax on the trailer part of a truck-trailer should not exceed half the tax on the truck itself. Finally, the conference rightly stressed that the sales tax on trucks and buses should not be at luxury rates but at rates applicable to essential goods.

COMET 4

Heralding the anniversary (on 4th October) of the World's first pure jet commercial flight across the Atlantic by B.O.A.C.'s Comet 4, Mr. Basil Smallpiece, Managing Director, announced on his arrival at London from New York that the De Havilland Comet 4 was largely responsible for a 40 per cent. increase in the Corporation's passenger traffic on all services across the Atlantic this summer. Earnings of U.S. dollars for passenger freight and mail traffic were 32 per cent. greater than last year and for the 12-month period ended 3rd October amounted to \$33 million or nearly £12 million. On its Eastern routes also, the Comet 4 had enabled B.O.A.C. to increase its passenger business so far this year by 22 per cent. compared with the corresponding period last year. On the Southern routes to Africa, traffic was only two per cent. higher than in the year before. In total, all over the world, the Corporation's passenger traffic paid to the performance of the Comet 4 by Mr. Smallpiece, who said that during the first year of five North Atlantic routes, it had shown itself to be a remarkably punctual airliner. Despite inevitable effects of varying winds 73 per cent. of all flights from London to New York and Montreal during the last 12 months had arrived at the terminal buildings within a quarter of an hour of the advertised arrival time and 89 per cent. had arrived within one hour. This was a remarkable performance and was substantially better than that achieved by any other type of aircraft that the Corporation had ever had in service of these routes.

BETTER-QUALITY STEEL

Research aimed at showing how better-quality steel can be produced for the manufacture of tubes is being carried out in Britain at a new laboratory at Hington Hall, near Cambridge. The work, which is being undertaken by Tube Investments, is carried out with the assistance of an X-ray scanning micro-analyser, which provides a picture of the surface of a metal specimen by electrons reflected from the surface, and also an X-ray present in a specimen can be made. It is said to enable examination of the distribution of elements on a fine scale never before attainable. The machine is to be developed to enable it to analyse lighter elements such as nitrogen and carbon. The prototype instrument was developed at the Cavendish Laboratory, Cambridge, and the Tube Investments machine has been in operation for about eight months. Other development work on steel tubes will be done at the Company's technological centre at Walsall, Staffordshire, where new plant, likely to go into operation next year, is to be installed. This plant is expected to be one of the most versatile in the world for producing tubes by cross-rolling and rotary piercing.

MOTOR COMPONENTS

Quinton Hazell Ltd., of Colwyn Bay, North Wales—the well-known manufacturers of Q.H.L. steering components—have concluded an agreement under which Q.H.L. steering and suspension joints will be manufactured under licence in India for supply to motor vehicle manufacturers and repairers in India. The agreement was signed by Mr. Quinton Hazell and Mr. L. L. Narayan, a prominent Indian business man, in Colwyn Bay. The new company will have its headquarters in Madras, already begun on the specialised tooling and Hazell Ltd. It is anticipated that partial production will commence in the Indian factory in January 1960, and that the Managing Director, Mr. Quinton Hazell, and the Works Director, Mr. Geoffrey Schofield, will visit Madras to inaugurate the new production unit early in the new year.

People just cannot help
buying things wrapped in
TRAYOPHANE

TRAYOPHANE production will soon be doubled and we will be able to meet the growing demand for this miracle wrapping material.

TRAYONS

"TRAYOPHANE is more transparent than any other wrapping material. It protects your goods from moisture, dust and careless handling and yet costs so little."

"TRAYOPHANE is available in rolls and sheets. A ream costs Rs. 44.00 plus taxes."

"UMESH YOGA DARSHAN"

(FIRST PART)

In Four Languages: English, Hindi, Gujarati and Marathi.

(Author: SHRI YOGIRAJ UMESHCHANDRAJI)

An excellent treatise on the true meaning of Yoga, which explains to you how to control your digestive, nervous, respiratory, urinary and other body systems. The book is fully illustrated with 108 real Asana Photographs and explains to you about their efficacy in attaining complete remedy of various ailments or disorders through the medium of Yoga, Naturopathy, Chromopathy, Psycho-Therapy, etc.

Useful for men and women alike, young or old, healthy or unhealthy. Deserves a rightful place in every home, hospital and library.

PRICE: Rs. 15/- Plus Postage Rs. 2/- extra. No V.P.P. sent.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices: Rs. 4/- for big bottle and Rs. 2/- for small. Available everywhere.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: Rs. 2.50 including Postage, to be sent by M.O. only.

YOGIC CLASSES are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

STEADY EXPANSION OF PLASTICS RAPID GROWTH POSSIBLE ONLY IF RAW MATERIALS ARE MADE IN INDIA

THE plastics family of chemical products, though it is of comparatively recent origin, is now considered one of the basic industries essential for a modern economy. This chemical product has found a prominent place in industry, construction, agriculture and the home. Plastics were not developed until about the 'thirties, though celluloid was known since about a century ago. But, during the Second World War and after, plastics made great strides. Intensive research has led to the discovery of a great range of applications and to the development of new types of plastics. Today, they are one of the world's major industrial raw materials, ranking with copper and aluminium in tonnage used and, because of their lighter weight, far exceeding either of these metals in terms of physical bulk also. Plastics are synthetic resins, usually of organic origin, which at some stage of their manufacture pass through a plastic condition when it can be shaped into any desired form by the application of heat and pressure. Plastics can be transparent or opaque, flexible like rubber, soft like silk or strong like steel. Their characteristics are diverse in that they include lightness, toughness, transparency, rigidity, flexibility and inertness. They are capable of resisting corrosion and moisture. They can be produced in a wide colour range and used as electrical insulators. They can be moulded to suit specific purposes. They lend themselves to mass production, and are cheaper than traditional goods. Small wonder then that plastics are fast replacing such traditional materials as wood, glass, paper, metals, leather and rubber. Plastics are put to use in a wide range of industries, such as engineering, building, chemicals, telephone, radio, railways, automobile, shipbuilding, aircraft, textiles, pharmaceuticals, cinema, photography and electricals. In the domestic sphere, innumerable consumer goods, such as toilet requisites, kitchen wares, toys, upholstery, handbags and travel requisites are made from plastics.

Basic Chemicals

Most types of plastics, except cellulose which are chemically modified natural polymers, are produced by synthesis from basic chemicals, such as benzene, ethylene and acetylene, which, in turn, are ultimately derived from coal, petroleum, limestone, alcohol, air and water. The process is essentially the same as that adopted for manufacturing new synthetic textiles, which are produced from polymers identical with or similar to those used in plastics. The growth of plastics industry, therefore, depends upon the growth of basic chemicals industry. This explains the phenomenal expansion of plastics in such advanced countries as the U.S., the U.K., West Germany, Japan and Canada. The production of plastics in the U.S., for instance, has gone up from 130 million lbs. in 1938 to 4,500 million lbs. in 1958. According to the Union Carbide Plastics Company, by 1965, the U.S. will manufacture 2,150 million lbs. of polyethylene, 1,400 million lbs. of vinyls, 860 million lbs. of polystyrene and 600 million lbs. of phenolics. Total world production of plastics has risen twenty times during the last twenty years.

As compared with the Western countries, India's progress in this industry has only been modest. This country entered the field of plastics only after the War. It has been making finished consumer goods, mainly of domestic utility out of imported raw materials, machinery and moulds. It has still a long way to go, but it has become quite conscious of the importance of this modern industry. Of late, production of some of the important raw materials has also been commenced in this country. These include, phenol formaldehyde moulding powder, urea formaldehyde moulding powder, polystyrene, polyethylene, P.V.C. sheeting, nylon nonfilament and laminated sheets. But this is only a beginning and much more remains to be done. There are, however, plans to undertake in the near future the manufacture of other raw materials such as P.V.C. resin, P.V. acetate, plasticisers and pigments.

There are at present 150 units of varying size in the organised sector of plastics industry in the country, besides innumerable small-scale and cottage units. The capital invested in the industry is about Rs. 16 crores and is expected to reach Rs. 20 crores within the next two or three years. The industry employs about 20,000 workers. Thus, the plastics industry in India, as recognised by Mr. Satish Chandra, Union

Deputy Minister of Commerce and Industry, while inaugurating the twelfth annual conference of the All-India Plastics Manufacturers' Association in Bombay on the 6th inst., is a growing industry, destined to play an important part in India's industrial progress. Mr. Satish Chandra, however, stressed that the future prosperity of this industry would depend on establishing production of the full range of essential raw materials and on acquiring self-sufficiency in equipment and tools. Mr. B. M. Thakkar, in his welcome speech at the conference, gave a brief account of the problems of, and prospects for, the industry. In his presidential address, Mr. J. R. Galloway was optimistic that the industry could reach the self-sustaining or the "take off point" during the third Plan, provided production was planned on sound and progressive lines and adequate investment was forthcoming. The data given in this article are taken from the speeches of these gentlemen at this conference.

Production

There has been a steady expansion in the production of plastics goods, though the industry has been considerably handicapped by the restriction on imports of raw materials and equipments. The total value of their production aggregated over Rs. 14 crores in 1958, as against Rs. 12 crores in 1957. The following table shows the growth in production during the last three years:

Product	Unit	1958	1957	1956
P. F. moulding powder	Tons	1,341.49	1,174.80	984.40
Plastic moulding	'000 gross	4,500.0	3,848.4	3,809.6
Plastic laminated sheets	Tons	370.0	334.5	232.4
Tooth brushes	Mill. pieces	10.3	13.5	9.6
Fountain pens	"	10.3	7.3	9.2
Spectacle frames	"	2.0	1.84	1.84
Buttons	"	2.0	2.88	3.0
Leather cloth	Mill. yds.	4.0	3.86	2.04
P.V.C. sheets	Tons	584	148.0	2,68,571*
Polyethylene film and lay	Mill. lbs.	1.85	1.57	1.22
Rat tubings	"			

* In sq. yards.

Satisfactory as has been the trend of production, it has fallen short of the targets laid down in the second Plan. A tenfold increase in plastics production during the period 1956-61 is envisaged, the target to be achieved for the manufacture of moulding powders by 1961 being about 13,000 tons. At present, about 5 million lbs. of thermo-setting powders (phenol formaldehyde and urea), which cannot be re-shaped once they have been set, are compression-moulded, 10 million lbs. of thermoplastic materials (cellulose acetate, polystyrene, polyethylene and polyvinyl chloride) which can be repeatedly softened by the application of heat, are injection-moulded, 10 million lbs. are extruded and blow-moulded and 3 million lbs. are used in textile coating and calendering.

The current consumption of plastic materials is estimated at about 25 to 30 million lbs. per annum. According to official estimates, the consumption is expected to increase four- or five-fold during the third Plan. Exports are small. About Rs. 26 lakhs worth of plastics goods were exported in 1958. The estimates for 1959 are Rs. 50 lakhs.

Raw Materials

As already pointed out, the industry continues to depend on imports for a considerable part of its requirements of raw materials. The situation is likely to improve when the basic chemicals industry is developed. At present, polyethylene is perhaps the only chemical made in the country from wholly indigenous raw materials. The value of imports of synthetic plastics raw materials amounted to Rs. 3.42

African Traders (Import, Export) Corporation Ltd.

Requires offers and quotations urgently from
Exporters and Manufacturers. Manufacturers
or Exporters who desire to be represented in
Nigeria are welcome.

crores in 1958, as against Rs. 5.09 crores in the previous year. The value of imports of different raw materials imported during the last two years is given in the following table:

Raw materials	1957	1958
Phenol formaldehyde moulding powder...	Rs. 8,05,361	Rs. 8,88,015
Urea formaldehyde moulding powder ..	4,42,577	10,86,090
Cellulose acetate moulding powder ..	32,67,987	19,29,522
Cellulose acetate butyrate moulding powder ..	13,04,680	12,66,308
Polyethylene moulding powder ..	76,84,817	61,30,339
Polystyrene ..	62,28,979	4,67,622
Vinyl resins ..	23,61,973	33,57,975
Semi-fabricated plastics raw materials in film, sheet and rod form ..	1,50,13,777	87,95,656

The following table shows the current annual demand in respect of various raw materials:

Raw materials	Current annual demand (in tons)
Phenol formaldehyde moulding powder ..	2,000
Urea formaldehyde moulding powder ..	600
Polystyrene moulding powder ..	3,000
Polyethylene ..	2,800
Cellulose acetate and butyrate ..	1,500
Polyvinyl chloride resin and composition ..	2,500

The rated capacity and production in respect of raw materials produced in the country are shown in the following table:

Raw material	Capacity	Production in 1958
Phenol formaldehyde moulding powder...	Tons 2,250 (single shift)	Tons 1,341.49
Urea formaldehyde moulding powder ..	840	170
Polystyrene moulding powder ..	5,400	1,906
Polyethylene ..	6,500	Production started in May 1959. Expected in 1961. 584
Polyvinyl chloride ..	2,880	
P.V.C. sheetings and film (unsupported) ..	1,200 (single shift)	
Nylon monofilaments ..	To meet requirement	Production started early this year.

The production of another raw material, foam plastics, based on polystyrene, has also been started in India. Foam plastics are extensively used for heat insulation purposes in various industrial applications. The production of this item amounted to 225 tons in 1958-59, as against 150 tons in the previous year. The manufacturers expect to produce 1,200 tons during 1959-60.

Investments made in this industry will give one an idea of its growth in recent years. About Rs. 7 crores were the investments in plastics industry at the commencement of the second Plan. By the end of this current plan, it is expected that investment in this industry will have trebled to a level of about Rs. 20 to 22 crores. Apart from the progressive investment by plastics converters and fabricators in plant and equipment, investment in two polyethylene plants aggregating about seven to eight crores of rupees, a polyvinyl chloride plant, a urea formaldehyde plant and possibly a styrene monomer plant will contribute materially to this investment total.

The progress of plastics industry in the country depends mainly on the speed with which raw materials, machines and moulds are produced indigenously. India has or will soon have sufficient supply of basic raw materials, such as industrial alcohol, benzene and chlorine. These materials should be readily made available to manufacturers of plastics under conditions which are favourable from the standpoint of prices, taxation and freight. As regards machines and moulds, the Government of India is currently considering proposals based on offers of collaboration by foreign firms for the manufacture of plant and equipment in India. Another proposal to set up a modern tool room in the public sector at the Praga Machine Tool Factory at Hyderabad, is also being examined by the Central Government. At the end of the third Plan, the annual demand for moulds is expected to be substantial, requiring at least five or six tool rooms. It is, therefore, essential that the leading plastics manufacturers should undertake to arrange for the production of these moulds in suitable engineering units in the country.

Investment

If India is to have a fully equipped plastics industry necessary for modern economy, it will have to invest much heavier sums than it has done so far. Some idea of this investment was given by Mr. Galloway in his speech. To quote him:

"Additional investment in the manufacture of plastics moulding powders and compositions alone will have to be in the range of Rs. 30 to 40 crores. Investment by plastics converters and fabricators in better and more equipment, improved tooling, etc., will bring the total additional investment during the third Plan to some 50 crores or more of

The lighting-up of the Coke Oven battery No.1 marks a new stage in the progress of the Durgapur steelworks

With the lighting-up of the Coke Oven battery No. 1 on 24th August, the Durgapur steelworks of Hindustan Steel Limited enters a new stage. ISCON is proud

to announce that work on this battery has been completed nearly ten weeks ahead of schedule.

When the process of gradually heating up the battery to operating temperature is completed, the Coke

Ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.

PSIC 17

MORARJEE GOCULDAS EARNS SLIGHTLY HIGHER PROFIT

DIVIDEND RAISED FRACTIONALLY

THE fractional increase in dividend recommended by the Directors of the Morarjee Goculdas Spinning and Weaving Company, Ltd. (Managing Agents: Messrs. Piramal Sons Private Ltd., Bombay), for the year ended 30th June 1959 is in consonance with the trend of earnings. It is proposed that a taxable dividend of 21.5 per cent. on ordinary shares be paid for the year under review, which is equivalent to a tax-free distribution of 15.05 per cent., as against 15 per cent. tax-free paid for the previous year. The gross profit for the year under review has recorded a rise of only Rs. 1.37 lakhs to Rs. 35.48 lakhs, as against an improvement of as much as Rs. 12.20 lakhs to Rs. 34.11 lakhs in 1957-58. Following the impressive rise in profit for 1957-58, the dividend also had been stepped up from 14 per cent. to 15 per cent. tax-free, but, for the year under review, the Directors have not been able to recommend a dividend which will give a perceptibly higher tax-free return. This is understandable in view of the small rise in profit.

The provision for depreciation has been drastically reduced from Rs. 17.25 lakhs to Rs. 5.25 lakhs. Last year's provision, however, had included special depreciation amounting to Rs. 6.33 lakhs, but, as the same is not permissible under the Finance Act 1959, the Directors have made a corresponding reduction in this year's provision. The provision for taxation has been raised from Rs. 3 lakhs to Rs. 10.35 lakhs, leaving a net profit of Rs. 17.17 lakhs, as against Rs. 11.21 lakhs for 1957-58. Whereas last year the Directors had to supplement the distributable profit by drawing a sum of Rs. 3.20 lakhs from the general reserve, no such necessity has risen now. On the contrary, the general reserve has been replenished with Rs. 1.50 lakhs, after transferring Rs. 1.50 lakhs to the development rebate reserve.

An idea of the Company's progress during the last three years can be had from the following comparative table:

	For the year ended 30th June			
	1959	1958	1957	1956
Sale proceeds	3,74.57	3,86.06	3,23.53	3,52.59
Closing stocks	1,07.85	1,21.98	1,06.32	73.90
Cotton consumed	1,38.74	1,59.10	1,58.95	1,46.44
Stores, chemicals, power and fuel consumed	55.14	53.15	46.86	39.93
Wages and other expenses	1,32.99	1,36.01	1,28.88	1,17.40
Gross profit	35.48	34.11	21.91	39.72
Managing Agents' remuneration	2.71	2.65	1.48	3.57
Provision for—				
Depreciation	5.25	17.25	6.97	18.46
Taxation	10.35	3.00	1.00	8.00
Net profit	17.17	11.21	12.46	9.69
Transfer from reserves and other funds	0.23	3.20	8.02	..
To reserves	3.00	5.88	13.64	..
Dividends—				
4½ per cent. preference	1.11	0.78	0.78	0.78
Ordinary	11.13	7.76	7.24	7.76
(21½%)	(15%)	(14%)	(15%)	(15%)
Carry forward	2.35	0.22	0.23	1.41

Note.—Dividends for 1958-59 on ordinary and preference shares are taxable, whereas those for the previous years are tax-free.

Sales for the year under review show an increase of only Rs. 8.51 lakhs, whereas closing stocks of finished goods and stocks in process are lower by Rs. 14.14 lakhs. There has been a fall of Rs. 20.36 lakhs in the cost of cotton consumed and of Rs. 3.02 lakhs in wages and other expenses. The decline in these two items has been offset to some extent by the rise of about Rs. 2 lakhs in stores, chemicals, power and fuel consumed.

The Company's financial position is quite satisfactory. The paid-up capital as on 30th June 1959 stands at Rs. 69 lakhs, of which ordinary capital accounts for Rs. 51.75 lakhs and preference capital for Rs. 17.25 lakhs. Two-thirds of the ordinary capital, namely, Rs. 34.50 lakhs, represent capitalisation of reserves in the past. Even after such large capitalisation, the reserves and surplus now aggregate Rs. 46.38 lakhs. There has been a substantial reduction in the Company's secured borrowings from banks from Rs. 99.97 lakhs to Rs. 77.94 lakhs. Unsecured loans amount to Rs. 5.04 lakhs and other liabilities and provisions Rs. 59.65 lakhs. In pursuance of the policy of rehabilitation and modernisation, the Company has been making sizable capital expenditure every year. During the year under review, the additions to the block account aggregated Rs. 9.67 lakhs, bringing the total expenditure during the last five years to Rs. 94.60 lakhs. This brings the gross value of

the block account to Rs. 284.53 lakhs, on which the depreciation provided so far amounts to Rs. 205.23 lakhs, leaving the net value of the block account at Rs. 79.30 lakhs. This compares favourably with the written down value, according to income-tax returns, of Rs. 85.35 lakhs. Thus, the Company's fixed assets have been well written down. The other assets aggregate Rs. 179.89 lakhs, of which stock-in-trade alone accounts for Rs. 152.53 lakhs. The surplus of current assets over current liabilities works out to Rs. 37.26 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 290 cum-div. On an ex-div. basis, the shares provide a yield of 8 per cent. per annum, subject to tax. On a tax-free basis, the yield works out to 5.5 per cent. per annum.

ENFIELD INDIA LTD.

A fifty per cent. increase in production, a rise of nearly Rs. 27 lakhs to Rs. 68 lakhs in sales and a more than threefold appreciation in gross profit from Rs. 1.51 lakhs to Rs. 4.92 lakhs are the main features of the results of working of Enfield India Ltd. (Managing Director: Mr. S. Sankaran, Madras) during the year ended 31st December 1958, as compared with those for the previous year. After providing Rs. 2.68 lakhs for depreciation (the corresponding sum for 1957 was Rs. 82,496), the Directors have created a development rebate reserve with an initial allocation of Rs. 2 lakhs and have paid the preference dividend, the rate of which was increased with effect from 25th June 1958 from 6 per cent. to 7 per cent. (tax-free). The Company has yet to declare a maiden dividend on ordinary shares, but the year under review is only the third year of its working.

The expansion in production achieved by the Company during 1958 has been mainly due to the allotment of foreign exchange, under quite difficult circumstances, by the Government of India for import of components and parts. Even so, the Company has not been able to work up to full capacity on account of shortage of raw materials. The increased outlay on the manufacture of components and parts and the difficulty in stepping up production to full capacity have naturally led to heavier working expenses, but the management has taken care to see that the consumer got his motor cycle at a "reasonable" price. It is said that the Company's prices compare quite favourably with those charged for similar vehicles imported from the U.K.

The Company has undertaken a phased programme of raising the indigenous content in its products and hopes to keep up its schedule for obtaining all the components from indigenous sources in 1960. In view, however, of the inadequate number of ancillary industries to supply the

necessary components, the Company proposes to install additional plant and machinery. For this purpose, it has made an application to the Industrial Finance Corporation of India for an additional loan of Rs. 9 lakhs. At the same time, steps are being taken to promote a number of small-scale ancillary industries.

In order to accelerate the phased programme of manufacture, the Company is making substantial additions to plant and machinery, the capital expenditure during the year under review alone being of the order of Rs. 20.60 lakhs and further large expenditure is envisaged during the current year and the next one.

Production during 1959 is expected to increase well over the 1958 level. As a result of the larger foreign exchange granted recently to the Company, still further increase in production is anticipated in 1960, though it will still be below the Company's production capacity. It is stated that its capacity, if fully utilised, is capable of meeting not only the country's present needs of motor cycles but also the likely rise in demand in the next few years. The Company has also undertaken general engineering works to make use of its unutilised plant capacity. Substantial orders have already been secured and a steady increase in such orders is expected. This will not only result in additional revenues but assist in spreading the overheads over a large arena of production. This, together with the increase in the output of motor cycles, will enable the Company to reduce the price of its vehicles and thereby widen the market.

During the year under review the Company raised its issued capital from Rs. 10 lakhs to Rs. 25 lakhs. Its paid-up capital, as at the end of the year, however, stands at Rs. 22.13 lakhs. The total capital expenditure up to the end of the year aggregated Rs. 39.40 lakhs and depreciation written off comes to Rs. 3.59 lakhs. The Company has fully availed of the loan of Rs. 11 lakhs sanctioned so far by the I.F.C. of India. It has sought an additional loan of Rs. 9 lakhs, as stated earlier. Borrowings from banks stand at Rs. 13.86 lakhs.

AHMEDABAD ELECTRICITY FARES WELL

The Ahmedabad Electricity Company, Ltd. (Managing Agents: Killick Industries Ltd., Bombay) has made impressive progress during the year ended 31st March 1959. The transmission and distribution system has been extended sizably, the generating capacity of the Sabarmati power station has been increased by 15,000 kw., sales of energy have risen by 9.4 per cent., that is, from 630.64 million kwh. to 689.80 kw.h., and the gross profit has gone up from Rs. 117.03 lakhs to Rs. 128.64 lakhs, probably a record in the history of the Company.

The provision for depreciation has been raised from Rs. 44.28 lakhs to Rs. 45.34 lakhs and to Rs. 5.06 lakhs. The Managing Agents also have had their share of the rise in profit, with an increase in their commission from Rs. 4.16 lakhs capital and debenture issue expenses, as well as other expenses, a sum of Rs. 9.13 lakhs (as against Rs. 1.30 lakhs) to the development rebate fund. This is made up of Rs. 3.70 lakhs against Rs. 4.78 lakhs a year ago) has been ploughed back. This is made up of Rs. 3.70 lakhs equalisation reserve. The addition to the dividend reserve replenishes partly the sum of Rs. 2.07

lakhs drawn from that reserve last year. The distribution to shareholders is also proposed to be raised from 6½ per cent. to 6½ per cent. by stepping up the final dividend from 4 per cent. to 4½ per cent. The total dividend for the year absorbs Rs. 2.19 lakhs more at Rs. 59.05 lakhs.

The Company has added the fourth 15 M.W. set in 'C' station at Sabarmati. This was commissioned in October 1958, thus completing the first half of the 'C' station. The total generating capacity of the station now is 157,500 kw. The Government of India has released the requisite foreign exchange for the first 30 M.W. plant in the second half of the 'C' station and has authorised the Company to confirm the provisional orders on Messrs. British Thomson-Houston Export Ltd., Messrs. Babcock and Wilcox and Messrs. Strachan and Henshaw Ltd.

The Company has made a capital expenditure of Rs. 95.31 lakhs during the year under review. This is nearly three times that (Rs. 34.10 lakhs) spent in the previous year and brings the total capital expenditure up to the end of June 1959 to Rs. 14.80 crores. The depreciation provided so far amounts to Rs. 3.57 crores. The following synopsis of the latest balance-sheet gives an idea of the Company's financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital (paid-up)	8,74,78,895	Gross block	14,80,85,370
Reserves and surplus	92,59,117	Less—Depreciation	8,57,58,380
Borrowings	2,11,64,522	Net block	11,22,76,990
Other liabilities	1,50,36,748	Work in progress	2,33,704
		Stores, spares, etc.	64,53,230
		Book debts	1,00,89,514
		Investments	26,29,747
		Cash	7,23,780
		Miscellaneous expenditure	5,81,817
	Rs. 18,29,88,782		Rs. 18,29,88,782

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 98.20 cum-div. (final: Rs. 4.25). On an ex-div. basis, the yield works out to 7.3 per cent. per annum, free of income-tax, assuming that the net dividend for the current year will be the same as that for 1958-59.

SREE MEENAKSHI MILLS

A setback in turnover and earnings is disclosed by the accounts of the Sree Meenakshi Mills Ltd. (Managing Agents: Messrs. Thiagaraja Chetty & Co., Madurai) for the year ended 31st March 1959. Thus, sales of cloth, yarn and waste have declined over the year from Rs. 355.40 lakhs to Rs. 342.49 lakhs and gross profit from Rs. 40.23 lakhs to Rs. 34.21 lakhs. The net profit is, however, substantially higher at Rs. 10.02 lakhs, as compared with Rs. 3.77 lakhs earned in 1957-58, as a result of the sharp cut in the provision for depreciation (normal asset shift) and development rebate from Rs. 29 lakhs to Rs. 14.33 lakhs. The provision for taxation has, on the contrary, been raised from Rs. 5.70 lakhs to Rs. 7.64 lakhs. The Managing Agents' remuneration is lower at Rs. 2.22 lakhs, as against Rs. 2.76 lakhs for the previous year.

The rise in net profit has not meant any higher return to shareholders, for the dividend on ordinary shares has only been maintained at 10 per cent. per annum, tax-free. This is the third year in succession for which the dividend is being paid at this rate, after having been cut from 12½ per cent. to 10 per cent. in 1955-56. The reserves have, however, been strengthened by the addition of Rs. 5.86 lakhs, of which the transfer to the machinery renewal and replacement reserve accounts for Rs. 5 lakhs.

The setback in earnings is in consonance with the general trend of results of coarse and medium count mills, which have been hit hard by the mounting costs of labour and the relatively high price of Indian cotton, unlike mills producing fine count yarns from low-priced imported cotton.

The Company is 38 years old, having been established in 1921. It has three units, one at Madurai, the second at Paravai and the third at Manaparai. The total installed capacity of all the three units is 107,584 spindles and 144 powerlooms. They manufacture single yarns in counts 16 to 60s, double yarns 2/20s and 2/40s and cone yarns for weaving and hosiery factories. The power looms are established at the Madurai unit.

The Company's financial position is quite satisfactory, as will be borne out by the following summary of its balance-sheet as on 31st March 1959:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	40,05,030	Gross block	9,37,73,878
Reserves	79,79,897	Less—Depreciation	1,13,23,008
Borrowings	1,69,70,991	Net block	1,25,50,870
Other liabilities	..	Stock-in-trade	1,46,81,118
	Rs. 89,80,818	Stores	18,05,484
		Book debts	18,84,202
		Investments	..
		Cash	..
			Rs. 8,60,74,980

The additions to the gross block during the year amount to Rs. 5.86 lakhs. Nearly half of the gross block has been written down and the current assets exceed the current liabilities and provisions by over Rs. 3 lakhs.

The Company proposes to rehabilitate and modernise its unit in Madurai, with a view to cutting down cost of production and improving efficiency. For this purpose, the Company has been sanctioned a loan of Rs. 57.86 lakhs by the National Industrial Development Corporation.

COCHIN STATE POWER AND LIGHT CORPORATION

The improvement in the working of the Cochin State Power and Light Corporation Ltd.

(Managing Agents: Messrs. Chandrie & Co. Private Ltd., Madras) noted during the past few years has been well maintained in the year ended 31st March 1959, also. Sales of energy and gross revenue continue to maintain the upward trend, with a rise in the former from 7.30 million kw.h. (in 1957-58) to 8.60 million kw.h. and in the latter from Rs. 10.04 lakhs to Rs. 11.52 lakhs. The gross profit, too, has recorded an increase from Rs. 3.61 lakhs to Rs. 4.11 lakhs.

After providing Rs. 28,371 (as against Rs. 24,111 in respect of 1957-58) for managing agency commission, and raising the provision for depreciation from Rs. 86,911 to Rs. 1,00,382 and that for taxation from Rs. 90,000 to Rs. 1,30 lakhs, the Directors have added to the various reserves an aggregate sum of Rs. 60,116, as against Rs. 52,779 last year. They have, however, transferred back Rs. 3,358 from the tariff and dividend control reserve. The distribution to the shareholders has been maintained at 90 p per share or 9 per cent. per annum, free of income-tax.

The higher profit has been earned, despite an increase of 33½ per cent. to 6 paise in electricity duty imposed by the Kerala Government with effect from 1st September 1958 on energy sold at rates higher than Rs. 2 per unit. On account of this increase the total amount of duty paid by the Company to the Government has risen from Rs. 1.03 lakhs to Rs. 1.38 lakhs. There has been no change in the tariff rates on energy supplied by the Company during the year under review. Since the close of the year, the Kerala State Electricity Board has increased its tariff rates to its consumers and is contemplating introducing a revised higher tariff to licensees, in which case the Company will have to increase its own tariff rates to its consumers.

Several improvements were effected during the year in the Company's transmission and distribution systems and the capacity of the substations was increased. A sum of Rs. 2.34 lakhs was spent on additions to the fixed assets. The Kerala State Electricity Board had served a two-year notice of purchase of the undertaking. This was considered by the Directors as "defective" and addressed a letter to the Board. The future development and expansion programme will, therefore, depend on the reply to the Company's representation.

The shares (Rs. 10 paid-up) of the Company are listed on the Madras Stock Exchange and are being currently quoted at Rs. 10.50 cum-div. On an ex-div. basis and at the current rate of dividend, the yield on the shares is 9.4 per cent. per annum, free of income-tax.

design your next wiring job in covered aluminium conductors!

ALIND ALL-WEATHER
Weatherproof wire: Polyethylene-insulated, braided steel reinforcement, complete aluminium sheathing for outdoor weather-proof applications.

ALIND KER-AL-LITE
Building wire: Polyethylene-insulated and polyvinyl chloride (PVC) sheathed aluminium conductors for indoor and light outdoor use (in place of conventional CTS and TW wire).

ALIND AL-VINYL
All-purpose wire: Polyethylene-insulated (PVC) insulated aluminium conductors for indoor and light outdoor use (an ideal alternative to conventional wire for conduit or casing and capping wiring).

Now these include:
• Electrical conductors
• Grade aluminium rods
• ACSR and AL-Alum.
• Conductor accessories

COMPANY MEETINGS AND DIVIDENDS

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, Bihar, 20th October 1959. Dividend: Re. 1.50 per share, without deduction of income-tax. Transfer books remain closed from 6th to 20th October 1959, both days inclusive.

KEMP AND CO. LTD. Annual General Meeting, Bombay, 23rd October 1959. Dividend: Rs. 20.00 per share (includes bonus of Rs. 2.50 per share), on shares of Rs. 200 each, free of income-tax, payable on or after 2nd November 1959. Transfer books remain closed from 14th to 23rd October 1959, both days inclusive.

MYSORE CHEMICAL MANUFACTURERS LTD. Annual General Meeting, Chikbanavar P.O., Bangalore District, 23rd October 1959. Dividend: 20 per cent. or Rs. 2.00 per share, free of income-tax, payable on or after 26th October 1959. Transfer books remain closed from 10th to 23rd October 1959, both days inclusive.

MALANKARA RUBBER AND PRODUCE CO. LTD. Annual General Meeting, Kottayam, Kerala State, 23rd October 1959. Dividend: 16 per cent. or Re. 1.60 per share, free of State and Central income-tax. Transfer books remain closed from 7th to 23rd October 1959, both days inclusive.

ALUMINIUM CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 27th October 1959. Dividend: Re. 1.00 per share, or 10 per cent., without deduction of tax, payable on or after 30th November 1959. Transfer books will remain closed from 22nd to 27th October 1959, both days inclusive.

SINGARENI COLLIERIES CO. LTD. Annual General Meeting, Khairatabad, Hyderabad-Deccan, 27th October 1959. Dividend: 7½ per cent. or Re. 0.75 per share. Transfer books remain closed from 14th to 27th October 1959, both days inclusive.

WEST COAST ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 28th October 1959. Dividend: 10 per cent. or Re. 1.00 per share, payable from 21st to 28th October 1959, both days inclusive.

UNITED PROVINCES ELECTRIC SUPPLY CO. LTD. Annual General Meeting, Calcutta, 30th October 1959. Dividend: Transfer books will remain closed from 24th to 30th October 1959, both days inclusive.

SAUGOR ELECTRICITY SUPPLY CO. LTD. Annual General Meeting, Calcutta, 30th October 1959. Transfer books will remain closed from 24th to 30th October 1959, both days inclusive.

OCTAVIUS STEEL AND CO. LTD. Annual General Meeting, Calcutta, 30th October 1959. Transfer books will remain closed from 22nd to 30th October 1959, both days inclusive.

MORARJEE GOCULDAS SPINNING AND WEAVING CO. LTD. Annual General Meeting, Bombay, 3rd November 1959. Dividend: Rs. 15.05 per share, payable from 9th November 1959. Transfer books remain closed from 9th October to 3rd November 1959, both days inclusive.

SYNOPSIS OF COMPANY REPORTS

Mysore Tobacco Co., Ltd.

The directors of the above Company (Chairman and Managing Director: Mr. M. Mallaraj Urs, Bangalore) present the audited accounts of the Company for the twenty-second year ended 31st March 1959.

The results of working for the year have resulted in a net profit of Rs. 81,112 (Rs. 85,534) after providing Rs. 66,547 (Rs. 52,662) towards depreciation. Rs. 11,884 (nil) towards development rebate and Rs. 1,13,147 (Rs. 51,500) towards taxation. With the balance brought forward of Rs. 4,088 (Rs. 43,554) of last year and by drawing Rs. 40,000 (nil) from the dividend equalisation fund, the directors recommend the following appropriations to be made:

To declare a dividend of 12½ (12½) per cent. or at Re. 1.25 (Re. 1.25) per share absorbing Rs. 1,25,000 (Rs. 1,25,000) and to carry forward the balance of Rs. 200 (Rs. 4,088).

A sum of Rs. 92,545 is added under fixed assets in the sub-head barns and buildings. Out of this, a sum of Rs. 85,100 represents the value of the building at 17, Richmond Road, Bangalore, purchased for locating the registered office of the Company. The long-felt want of owning a building of its own in Bangalore for the Company, having full opportunities for additional construction in a spacious site, has now been realised. Added to it, the Redrying Plant at Whitefield has been so altered to enable the feeding of tobacco in the form of 'hands' as a result of which the redrying output per day is increased by 50 per cent.
