LINSEED FIRM

Firm conditions prevailed last week. Business was restricted with both buyers and sellers pausing The oilcake market was dull, with no interest from shippers, as foreign markets remained quiet. The oil market was inactive due to the weakness in the London market, but prices kept steady. With high prices for seeds and low prices for cakes and oil, the millers found it difficult to keep their mills going. Latest quotations are as follows : Ready-December Rs. 25.37 a maund and May futures Rs. 23.88 a maund.

BANKS

H indicates that Share capital is half paid. O C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

72nd YEAR OF ISSUE — CALCUTTA, 10th DECEMBER, 1959. — Vol. CXXXXIII No. 3588

A LIST OF COMPLAINTS FOR MR. DESAI

In a way that has not been so obvious in past years, the speech Mr. J. D. K. Brown made this year's annual general meeting of the Associated Chambers avoided a general attack on government economic policies and concentrated instead on pin-pointing detailed criticisms. The formula proved moderately successful, although whether it ought to be adopted by future Assocham residents is another matter; overall policy does affect business, and business men are justified in giving their views on it. More important, they are entitled to have such views listened to, a right which so many these days appear to have abandoned in utter despair. If future chief guests have as reasonable in their replies as Mr. Morarji Desai was this year, then perhaps Presidential speeches will eventually achieve a more ideal balance of comment on general principles and specific points. But in the meantime, Mr. Brown's approach will find its valued place in the history of Presidential orations without necessarily being taken as a firm pattern to be followed in perpetuity. The trouble is that confining attention largely to concrete points is apt to leave Ministers who as a breed are too complacent at the best of times—with the impression that their general policies are above reproach. This is entirely false; the prosperity of the business community is a function of that of the country as a whole, and even economic policies are patently not such as to promote general prosperity in the most rapid and pain-free way possible, then there should never be any harm in saying so.

The remarkable feature of the addresses of both Mr. Brown and Mr. Desai was, perhaps, the apparent acceptance that because things have been better in the past year for business, they could not be better still for the country. No doubt to deduce such a view from Mr. Brown's speech would be a wholly incorrect interpretation of his own opinions let alone those of the business community. Even if the President did not dwell on the continued deadening effect of a too-high level of taxation, the growing evidence of inflation in the country, the threatened lack of balance in the economy which persistent emphasis on heavy industry is producing, and all the complications and inefficiencies which continue to arise from current concepts of welfare socialism, it would be wrong to conclude that he is not aware of them. The need to avoid too constant a repetition on the same theme no doubt inhibits Assocham Presidents year by year, and as long as this does not lead government into believing that all is now the best in the best of all possible worlds, then little harm is done by an occasional change of tune. But Mr. Brown's specific points notwithstanding, the real need of business in India is for a radical change in economic outlook towards more progressive and less restrictionist policies, and away from an interpretation of socialism which eventually leads to huge, uneconomic, publicly-owned projects, built at fantastic social cost, and capable of making only a negligible contribution to the country's immediate needs for more consumable wealth, more employment, more security, of course, and more welfare all round.

If Mr. Brown's speech seemed a remarkable tribute to the way business men are learning to manage under present difficulties, the various points he raised can leave no doubt in official minds where the major irritations lie. The new system of corporate taxation, although welcome as an attempt to simplify an unnecessarily complicated structure, ought not to be allowed by the Government to develop into another device for increasing taxes. And this is what it promises to be, especially for shareholders. Mr. Brown's suggestion of 40 percent as a more correct assessment for advance payment of tax by companies probably nearer the mark than the present 45 percent, and Mr. Desai could give substance to his impression of reasonableness by reviewing this matter in his coming Budget. The point concerning foreign companies' minority holdings in Indian firms, which are not covered by Section 56A of the Income Tax Act, is one to which the Government should give careful attention if it wants to attract from abroad some of the growing volume of what, in another connection, Mr. Brown called "portfolio" investment. An increasing proportion of private capital is being exported in this form nowadays, and it has certain advantages which might well help the Government over some of its present distrust of foreign capital. It does, however, demand a more enlightened approach towards the problem of taxing foreign holdings as a whole, and Mr. Brown was obviously correct in suggesting the need for a review of the present "differential" rates of tax on the profits of foreign companies.

The President's general remarks on the subject of bonus share tax and taxes on shareholders, deserve sympathetic consideration by the Government because nowhere is the impact of current tax measures more widely felt or more justifiably resented. There can be no excuse whatever for taxing bonus issues out of share premium accounts; this is clearly taxpayers' money and has no connection with earnings from investment. As it has no justification whatever in either logic or equity, it should be abolished forthwith. The tax on other types of bonus issue can be more a matter of opinion, but the most authoritative and disinterested views can be quoted against it, and anyway it has obvious disadvantages when the Government's aim, rightly or wrongly, is to promote the growth of auto-financing. There are serious dangers in encouraging under-capitalisation throughout the economy, and in a few years' time government as well as industry is likely to find this an unmitigated curse. If the Government could see its way to overcoming its prejudices against shareholders generally and learn to treat them for what they in fact are—some of the most valuable members of society—this vexed problem could perhaps be solved. If it were, the impact would soon be seen in an increase of marketable share scrip, and one of the Life Insurance Corporation's difficulties, as explained by Mr. Desai, would be overcome. There is a need at present for a complete review of the whole principle of taxes on shareholders and there is no time better than before the next Budget for undertaking it.

One of the more interesting portions of Mr. Brown's speech was that which dealt with current trends in company financing. Mr. Desai's apparent complacency concerning the increase in borrowing will not be echoed by the majority of industrialists. It is probably true that under present inflationary conditions, when markets are not too difficult to find, borrowings do not necessarily overburden a company. But in bad times—and these can occur even during a long period of progress—a large proportion of equity capital can often save a company in difficulties. It is also odd that a Government which professes to dislike the concentration of economic power should apparently be so disinterested in the healthy growth of equity financing and therefore the democratic ownership of industry. High personal taxation is one among a number of factors discouraging the increase in this most desirable and economic of all the various ways of financing industry; another is the low rate of profit which Mr. Brown mentioned. Such devices as promoting more bank lending are no real solution to the problem; what is required is some method of channelling into the neglected equity market whatever savings are left after the tax collector has had the lion's share. It is this need which gives point to Mr. Brown's suggestions for starting the "unit-trust" type of investment institution in India. There is considerable scope for such organisations in a country in which few people now have the wealth required adequately to spread their risks, where the need for more equity capital is urgent and where it can reasonably be expected there will be a considerable demand for a means of investment which provides the small man with an opportunity for hedging against inflation. No lingering suspicions that these institutions will eventually develop into the instruments for furthering personal or group ambitions—which the privately-owned life insurance companies were reputed to have been—should prevent the Government from devising rules by which unit trusts can be made to function in the public interest. It may be that, as Mr. Desai says, there is no particular shortage of funds seeking investment at the present time. But that might not always be so, and one suspects this is a point the Finance Minister himself will forget when it comes to justifying fresh taxes in the next Budget to pay for more public sector investment.

Whether or not higher profits are required, as Mr. Brown maintained, to pay for increased borrowing, it is certainly true that one of the main reasons for the trend towards more borrowed financing is due to the low level of profits. Mr. Desai took a dangerous step when he drew attention to the present strength of the share markets as evidence of investors' satisfaction with current profit levels—especially when elsewhere in the same speech he explained the Life Insurance Corporation's present lack of interest in equities as being partly due to a shortage of scrip. A predecessor of Mr. Desai's, also at an Assocham meeting, once quoted the strength of share prices as indicating public confidence in Government policies, when within a year those prices had fallen by almost a third and the Finance Ministry was being forced to use life insurance funds to support the markets. Profits in Indian industry should be compared with those in other developing countries for a correct assessment of whether or not they are adequate. If Mr. Desai were to do this, he would have less grounds for his present satisfaction.

In his reflections on the third five year plan, Mr. Brown may have said nothing that has not already been heard before, but his emphasis on the need to avoid inflation and attract foreign capital was one which can bear repetition. The recent U.S. decision to "tie" loans made through the Development Loan Fund was a reminder of the extent to which India's foreign exchange problem has become dependent upon politically-inspired aid from friendly countries over the source of which India herself has little or no control. A strong flow of private foreign capital could help offset this loss of economic independence and would be no more expensive for the country than the servicing, over bad years as well as good, of huge loan commitments. A good deal can be done, as Mr. Brown pointed out, to attract more private foreign capital if certain relatively minor adjustments are made in tax policy and if current efforts to restrain inflation continue to be reasonably successful. The Government has been far too casual towards the question in the past because loans have come too easily. It is, for instance, significant that at least one world-renowned economist, Mr. P. T. Bauer of Cambridge, an expert on under-developed countries, has said in public that aid to India can be harmful because it tends to encourage the Indian Government in the pursuit of its present socialist, totalitarian policies. This view could grow, especially in a socialist-hating, balance-of-payments troubled United States, and one of the few ways it can be countered is for the Indian Government to attract more private capital and prove that no matter what economists or foreign governments might think, there is at least a body of sound, practical business men who are prepared to risk their money. The time available for doing this may be less than the Indian Government appears to think.

When all the various points of disagreement between government and private sector have been covered, and when the natural tendency of Ministers to complacency has been countered, there is considerable consolation to be drawn from the

improvement which has taken place in economic prospects since the last Assocham meeting. At least both spokesmen appeared to agree on that, and on its probable causes. The task for the coming year will be to ensure that this precarious improvement continues and that the numerous difficulties to which Mr. Brown has drawn attention are not allowed to get in the way.

EFFECT OF LOWER PAPER PRICES

THERE has been a substantial decline in the prices of paper shares on the Calcutta and Bombay stock markets during the past month or so. Orient, for instance, have fallen from Rs. 38.30 to Rs. 35.85, India Paper Pulp from Rs. 23.12 to Rs. 21.37 and Shree Gopal from Rs. 24.56 to Rs. 22.51. Investors' caution seems to be justified by the decision of the Government to fix, from early next year, the prices of paper and paper boards at a lower level than at present. The new prices have been fixed on the basis of the recommendations of the Tariff Commission. In the absence of fuller details concerning the new prices, as well as the Commission's recommendations, it is not yet possible to assess precisely the amount of loss the paper mills will suffer. It is nevertheless certain that on average it will amount to nearly Rs. 1,000 a ton of paper produced. As the price cut is believed to have been sharper for quality grades, the size of the loss will vary from mill to mill.

It may be recalled that the Tariff Commission was asked by the Government in September 1958, to investigate the industry's cost structure and recommend fair selling prices. After making hair-splitting enquiries extending over a year, the Commission has produced a disappointing set of recommendations, which are now being implemented. They are not expected to bring any relief by reducing prices to the consumer and it is feared the present paper shortage may be further accentuated by the drastic price cuts, as these will almost certainly discourage producers. The point is that paper prices are high because there is an acute shortage. The past few years have seen a phenomenal increase in demand following advances in industry, education and standards of living. Supplies have not increased correspondingly. In fact, they have been held down because they are now derived mainly from domestic sources following restrictions on imports.

During the present period of shortage, consumers are being forced to pay high prices. So long as supplies are not brought in line with demand, there is not expected to be any worthwhile relief. It is not questioned that consumers' difficulty has been accentuated by malpractices in the distributive trades. Once the commodity leaves the mill doors, the distributors take full advantage of being able to sell it at the maximum price. Even if mill selling prices are reduced from next year, there is nothing to prevent distributors from forcing consumers to pay exorbitant prices. The Tariff Commission appears to have sidetracked the tricky problem of distribution. Experience indicates that no amount of moral exhortation will be sufficient to offset this oversight. A striking weakness of the new price schedule is that not much attention seems to have been paid to quality. In fact, quality producers have been hit hardest. All over the world, paper prices vary according to quality. But in India, by grouping the commodity into 24 grades only, the quality question seems to have been ignored.

It is feared, therefore, that the new prices will discourage producers at a time when the industry needs the maximum expansion possible. So far, the industry has made steady progress. Production has increased from 131,916 tons in 1951 to 250,000 tons in 1958. It is officially estimated that demand will increase to 350,000 tons in 1960, to 400,000 tons in 1961, to 460,000 tons in 1962 and to 520,000 tons in 1963. If imports are restricted—as they will be—by a shortage of foreign exchange, the domestic industry must be expanded a great deal more to meet requirements. Judging from trends, the demand will increase faster than expected. Consumption has been increasing steadily; *per capita*, it has improved to nearly 2 lbs, from 1 lb. during the last decade. It is interesting that while India's *per capita* consumption is 2 lbs., in the United States it is 432 lbs., in Britain 190 lbs. and in Canada 280 lbs. So the *per capita* consumption in India can be expected to increase further. The figures of literacy indicate a steady increase from 16 percent in 1951 to 27 percent in 1956.

The new prices will shave the mills' earnings considerably. Production may, therefore, suffer in two ways. The expansion of the existing producing units has so far been financed largely by their own internal resources. Under the new price schedule, the industry will face great difficulty in ploughing back enough money for expansion, modernisation and renovation. Whether the quality of production will be sacrificed to maintain earnings at a profitable level is at the moment anybody's guess.

Secondly, many new mills which are proposed to be set up in the near future are likely to be discouraged. Their working will turn out to be less remunerative than is thought, considering the heavier capital expenditure involved in buying new plant and equipment. It may no longer be so easy for the industry to obtain money as at present once the implications of the new prices are fully realised.

A CONSUMPTION APPROACH TO PLANNING

PLANNING for growth necessarily implies a high rate of savings at the "take-off" stage, the initial stages that is, whatever the methods adopted. From this it follows that consumption will have to be restricted until the time the economy has reached the stage of maturity in the sense that Mr. Eugene Rostow has defined. Communist societies pursue their policy for savings almost by brutal methods, and a whole generation of Russians could not look forward to anything but black bread until Mr. Khrushchev's arrival on the scene. And behind the story of all the impressive "leap forward" which the communist China claims to be achieving, there must lie a grim and tragic story of toil and tears from the human hordes in its charge. A democratic society can resort to such a policy only at its peril, and there lies its dilemma. It cannot go on investing in economic showmanship without investing in the human beings who are its members. They may make sacrifices for some time, but will not do so indefinitely if no tangible benefits accrue to them or there appears no prospect of any accruing in the foreseeable future. In India, a time has now arrived when people are getting impatient with the hardships which high taxes and inflation have been imposing, and their exasperation is heightened by the spectacle of official extravagance and waste. Yet there is no sign that the planners and the Government have recognised this danger, or are even beginning to do so. There is talk of a plan for the next quinquennium which places emphasis on most of the wrong things—still more steel plants, more heavy industries and more of this and that which will not help raise the people's living standards in the immediate period. The Chinese aggression is no doubt helping mould public opinion in favour of such a plan; even so it will be useful to remember that hoary old saying that an army marches on its stomach. And a hungry and under-nourished people are unlikely to be very effective in defence, although they may be intensely patriotic.

The approach to planning has, therefore, to be varied, with some of the emphasis shifting to

asumption. A pamphlet produced by the ployers Association, Calcutta, entitled: *What country should Plan in the Next Ten Years* ows into relief the fact that the consumption ndards in this country are even poorer than some of the Asian countries which cannot even ast of a developing economy. In food, cloth, using, lighting, water supply and sanitation, alth services and transport, the *per capita* availility is depressingly low. In other words, the lian economy, in spite of ten years of planning, s not produce enough to provide even the barest cessities of life for the vast majority of its ople, let alone what may be considered luxuries. e planners may point out that this will not be ssible unless the foundations for rapid growth first laid. This, of course, is a fundamental th, but there is no sanctity attaching to the thod which encourages the growth of heavy lustry in the public sector at the expense of the re dynamic and progressive elements in the nomy. If production is the aim, then this can done more economically and least wastefully ough smaller-scale private enterprise with the te confining itself to those sectors into which former is not in a position to venture and ich are better preserved for the State for strategic reasons. The emphasis on State-sponsored heavy industries has already created a serious unbalance in the economy. For example, while the State has put up three steel mills, not enough thought has been given to those complementary and ancillary industries which will process the metal fot final consumption. These instances can be multiplied. After all, the final end of all economic activity is consumption. It is not only desirable but essential that the development of consumer goods and heavy industries must proceed at a harmonius pace. This is indeed what the Employers Association pamphlet essentially seeks to stress. Its burden is very well summed up in these words: "Without a steady rise in consumption, production cannot get a stimulus and the economy, far from becoming self-generating and self-reliant will continue to stagnate." A point of criticism about the pamphlet is that its authors support the case for bigger and bolder plans, but they have not calculated neatly enough how the resources will be found or from where they will come. Domestic resources will clearly not be enough no matter how liberal the taxation policy, unless substantially supplemented by foreign capital, especially venture capital. This aspect has not been adequately stressed.

Current News and Comment

taghur Paper Pays More

The latest results of the Titaghur Paper Mills mpany Ltd for the year ended March 1959 apar to satisfy nearly all the conditions expected a "blue chip". There is a rise of Rs. 26 lakhs Rs. 1.08 crores in the profit, after increasing deeciation from Rs. 24.62 lakhs to Rs. 29.06 lakhs. itput and sales have improved. During the year der report, it is believed that the mills worked capacity. The eighth stage of renovation at the o mills has been virtually completed. The ectors, it is reported, are considering a further ogramme which will be aimed mainly at reduc the production costs. This is a timely move, earnings might otherwise suffer when the new ling prices for the commodity are enforced from 60.

The ordinary dividend has been increased from 4/5 percent to 25 percent. It is over three times vered and gives a yield of 6.2 percent at Rs. 40.50 share. Considering that in future the dividend ll be subject to the tax deduction under the nance Act, 1959, and that the selling prices will lower, it is necessary to take a cautious view of outlook. The hope is that the present divid cover is adequate. Sales have increased m Rs. 8.10 crores to Rs. 9.42 crores. The taxan provision is Rs. 20.37 lakhs higher at Rs. 62.56 khs. Statutory development reserve is allocated 9.13 lakhs and the new mill project reserve 7 lakhs. The carry-forward is Rs. 1,01,113, mpared with Rs. 1,16,856, brought in. The finanl position of the company is strong. The ordiy share capital of Rs. 1.12 crores is supported reserves of over Rs. 4.03 crores. Current assets ount to over Rs. 3.38 crores.

st India Coal Steady

The price of the East Indian Coal Company's linary shares has been steady around Rs. 21.56 cause of the encouraging results achieved during year ended April 1959. The company appears be working as satisfactorily as possible consider the restrictions concerning output and prices. recent increase of 50nP a ton in the prices of ter grades of coal, and the maintenance of the mer prices of the two lowest grades of coal as ling prices, are not likely to leave the collieries h enough money to finance expansion and reoilitation schemes. East Indian Coal is now rrying out a big development and reorganisation ogramme. Although output has increased by 314 tons to 574,849 tons and despatches by ,852 tons to 591,599 tons, production has fallen hind the targets permitted by the Coal Board. e targets have been fixed at 628,000 tons for 1959 d at 606,000 tons for 1958. During the present ase of development and reorganisation at the lieries, it is necessary to obtain coal from widesseparated and small working areas. This inases working costs. Such conditions may conue until the end of 1960, so it is possible that in current year the company will again fail to ieve the maximum permitted output. No great provement in working results can, therefore, be ked for. By quarrying all available areas of ected Grade coal along the outcrops, it is exted that the position will improve again during 0 and new inclines will be opened to provide a ady source of Grade I output from about the ddle of 1960. The greater strictness with which mining regulations are being enforced, has contributed to raisings being lower than was expected.

An encouraging feature is that the Government has accepted the Price Revision Committee's recommendation that a subsidy amounting to the entire cost involved, up to an increased ceiling, should be granted for stowing. The company will benefit from this decision beginning from 1960 for sand-stowing at the Bararee colliery on a large scale. Additional assistance may also be expected to be forthcoming at this colliery as a result of the Government's decision to grant subsidies to mines which are difficult to work. After initial delays, the ropeway for the sand-stowing scheme at the Bararee colliery is now in course of erection. It is expected to be in operation by May 1960.

Increasing depreciation from £12,827 to £17,284 and taxation provision from £14,663 to £15,375, there is a profit of £20,631, against £11,766. The dividend has been increased from 7½ percent to 9⅜ percent. It is over one and a half times covered and gives a yield of 5.8 percent at the present price. Development rebate reserve is allocated £8,000. The carry-forward is £9,562, against £19,431. The share capital of £240,000 is divided into 240,000 shares of £1 each. Reserves exceed £380,271 and current assets amount to £523,508.

Chase Bright Steel Issue

Chase Bright Steel Ltd, which has been licensed to manufacture a wide range of steel goods, will soon be in the market for raising fresh capital. The authorised capital of the company is Rs. 1 crore and the issued capital is Rs. 30 lakhs, divided into 300,000 equity shares of Rs. 10 each. The directors and their friends have taken Rs. 15 lakhs and the remaining 150,000 shares are being offered for public subscription. The company will manufacture bright bars, cold drawn and turned mild steel, B.S.S.E.N. steel, high carbon special steel rounds, sections, hexagons, squares, flats, etcetera. These are used mainly by locomotive and railway workshops, ball-bearing manufacturers, motor-car and cycle factories, shipyards, agricultural machinery and machine tool factories and nuts, bolts and spring manufacturers. The plant can also be used for products of non-ferrous metals. Most of the bright bars are at present imported, and there is hardly any up-to-date factory producing such bars to meet the country's requirements. The factory will be situated at Thana (Bombay). The total cost of the plant and machinery is estimated at Rs. 25 lakhs, of which the imported component will be worth Rs. 16 lakhs. The complete equipment is being supplied by one of the leading fabricators of this type of machinery from the U.K. The first shipment of one complete unit is expected by the end of this year, and the shipment of the second unit is expected by the end of March 1960.

For the present the production will be limited to 3,500 tons a year, as the licence for raw materials is for that quantity. The capacity of the plant is about 1,500 tons a month on one shift, and it will be run to its full capacity by securing raw materials from domestic sources. The plant will also be fed by raw materials provided by a number of industries, especially Government undertakings, on attractive conversion charges. The scope for this industry is thought to be vast, since its products are widely used. The prospects of developing an export market are considered fair. The well-known industrialist, Mr Ramniwas R. Ruia, is chairman of the company. The board of directors includes the Maharaja of Gwalior, Mr. Gordhandas Ruparel, Mr. B. N. Chaturvedi, Mr. S. L. Jajodia, Mr. S. K. Jajodia and Mr. B. L. Tannas.

Premier Automobiles Worried

The report of the directors of Premier Automobiles for the year ended June 1959 says that the Government's refusal to grant the company a suitable increase in the prices of Fiat cars, in spite of a mounting wage bill and the rise in the cost of raw materials and of ancillary items not allowed to be imported, has had an adverse effect on profits. Nevertheless, the shares of the company have been firm on the Bombay Stock Exchange. Investors recall that the company has suffered from the hangover of a long drawn out labour strike, and might prosper if it is given a licence to manufacture small cars. It appears that tests are being carried out, but which of the many applicants will get the licence is anybody's guess. Reliable sources report a suggestion to allow two or more manufacturers to make small cars, and say that at least one of the manufacturers will agree to this compromise formula.

During the year under review, Premier Automobiles produced 8,481 vehicles, of which 5,200 were lorries and the rest cars. Estimates for the current year are for a total of a little more than 11,000 vehicles, assuming that work will not be hampered by unforeseen circumstances. The indigenous content of cars during the year under review was 50 percent while in the case of commercial vehicles it was around 60 percent. During the current year, the indigenous content will go up to 60 percent for cars and 70 percent for lorries. The company plans to instal a shop for building car bodies from sheet metal and the cost of the scheme will be more than Rs. 2 crores. Ways of financing the scheme are being considered. Last week's fire, which occurred in the spare parts section, left the main building and production shop untouched. The loss, however, might run into many lakhs of rupees.

The report says that the continuous automatic heat treatment equipment made completely from

locally manufactured items will be ready for operation before the end of the year. The company recently installed a new eight-ton forging hammer having an anvil of 140 tons. Sales during the year totalled Rs. 17.42 crores and stocks are valued at Rs. 4.41 crores. After providing Rs. 28.54 lakhs for depreciation, Rs 7.65 lakhs for managing agents, Rs. 13 lakhs for development rebate reserve and Rs. 27.33 lakhs for tax and after meeting other charges, there is a profit of Rs. 23.25 lakhs. To this is added Rs. 4.78 lakhs, being the amount brought in, and Rs. 3.51 lakhs, being excess provisions and refunds in relation to previous years, making a total of Rs. 31.56 lakhs. From this is deducted Rs. 8.94 lakhs, being expenses and taxes, leaving a balance of Rs. 22.61 lakhs. Dividend absorbs Rs. 19.89 lakhs and the carry-forward is Rs. 2.72 lakhs. A new company under the name of India Steering Gears Private Ltd was registered during the year under review, and Premier Automobiles holds all its shares.

Gwalior Rayon: Pulp from Bamboo

India will soon be making rayon grade pulp from indigenous bamboo. The success achieved by its pilot plant has encouraged the Gwalior Rayon Silk Manufacturing (Weaving) Company to go ahead with the scheme on a commercial scale. Negotiations with the Kerala Government started some time ago are, it is said, on their way to finalisation and the choice of Kerala is obviously on account of its rich supplies of bamboo. Land has been acquired for the purpose of establishing a factory. The State Government will supply the company with water and electric power, besides meeting certain other needs. The company has made out specifications and quotations are being invited for the supply of machinery and equipment. The preliminaries are likely to be over soon and it should be making pulp early in 1962. The scheme, when completed, will be the first of its kind in India. It is of far-reaching importance, in that by finding a scientific and more profitable use for indigenous bamboo, it frees the country from its present dependence on foreign pulp. The company's pilot plant in Nagda has already been producing pulp from bamboo at the rate of 1.3 tons a day. The end-product was sent abroad for analysis, and reports received from test houses were said to be so encouraging that the company decided forthwith to manufacture it on a commercial scale. The proposed Kerala factory, costing Rs. 5½ crores, will produce 100 tons a day. It is likely that Gwalior Rayon will finance the scheme from its own resources.

Gwalior Rayon has on hand many other schemes for expansion. Within 12 months from now, it will be producing high tenacity staple fibre at the rate of 15 tons or 20 tons daily. It is said that this high tenacity fibre, being equal to Egyptian cotton, will help save the country a considerable amount of foreign exchange. The cost of the plant is estimated at around Rs. 50 lakhs, and half of this sum will be in terms of foreign currency. It is only five years since Gwalior Rayon first went into production. It began with a small capacity of 15 tons a day, but after surmounting heavy odds, it now makes 60 tons a day, meeting the needs of the country in full. A sister concern of Gwalior Rayon has installed a plant in Porbandar for making rayon grade caustic soda, an important raw material for the staple fibre industry. Gwalior Rayon began with a small capital of Rs. 1 crore which has now increased to Rs. 6 crores. The gross block—a bare Rs. 16,153 at the end of 1948—has reached Rs. 6.2 crores.

Bharat Commerce and Industries Recovers

Bharat Commerce and Industries is a company which has made rapid progress. It was born of the remnants of Bharat Airways left after the nationalisation of airlines. The shareholders of Bharat Airways wanted that the company, instead of going into voluntary liquidation, should seek other fields of activity. Staple fibre spinning was chosen as the most suitable line. As a result, a factory of 14,520 spindles, costing Rs. 40 lakhs, went into operation in Nagda in 1957. The plant capacity has since expanded to 17,600 spindles and the capital assets have moved up to Rs. 57 lakhs. Working results justify expectations and the debit balance is likely to be reduced considerably by the end of the current year.

The company had a liability of Rs. 14.55 lakhs on account of arrears of preference dividends but the preference shareholders have waived their claim for arrears. In return, the company has raised the interest from 5 percent tax-free to 9 percent taxable from January 1959. A scheme is on hand for expanding the capacity to 30,000 spindles. Most of the machinery has been ordered. The scheme, scheduled to be completed by the latter half of next year, is estimated to cost around Rs. 40 lakhs, which will be loaned by the Refinance Corporation. The shares of the company, like those of the other nationalised airlines, had declined to Rs. 1.25 from their face value of Rs. 10. Later they rallied and the quotation now is around Rs. 10.25. Perhaps this reflects the market's confidence in the future outlook for the company.

Malabar Steamship Earns More

The performance of the Malabar Steamship Company (Agents: Messrs Shoorji Vallabhdass) has been creditable. In a year which proved rather difficult for the shipping trade, Malabar has emerged with a sizeable rise in freight earnings. The directors say that due to the rises in upkeep charges, costs of ships' stores and scales of wages, the net profits have not been as satisfactory as could normally be expected. Port delays in India, particularly the poor drafts in the Hooghly, reduced the profits of shipping companies like Malabar which cater mainly to the coastal trade. The company has earned Rs. 1.07 crores on freight, against Rs. 83.47 lakhs in the previous year. The gross profit of Rs. 25.17 lakhs works out to 23.36 percent of freight earnings, against 19.28 percent in the previous year, when the gross profit was Rs. 15.78 lakhs. The cargo lifted totalled 289,000 tons, and was higher than in the previous year. The directors have provided Rs. 2 lakhs for dividend equalisation fund. After providing Rs. 17.22 lakhs for depreciation on the fleet and with Rs. 16,192 brought in, the total available is Rs. 3.08 lakhs. From this again, the directors have provided Rs. 1 lakh for development rebate account. The dividend on the ordinary shares at the rate of 10 percent a year absorbs Rs. 2 lakhs. The carry-forward is Rs. 8,184. Of the total income, 39.12 percent is taken by operational expenses and 21.16 percent by port dues and bunker costs. Fleet depreciation accounts for 15.27 percent, while another fairly big item is upkeep and repairs which absorbs 12.47 percent. Administration expenses form about 4.13 percent of the total while dividends are 1.73 percent. Managing agents take 0.3 percent of the total. During the year under review, the company added two fast-running coasters to its fleet. These were built in Belgium and are reported to be the speediest coastal vessels in India. The company has also placed two modern cargo ships on the U.K.-Continent route.

India Cement Shares for Managing Agents

In a circular issued by India Cements Ltd to its shareholders, it was suggested that new ordinary shares should be issued at par to the two directors of the managing agency firm, in order to help the company obtain a loan from the Indian Finance Corporation. The I.F.C. has suggested that the managing agents should increase their shareholding in India Cements Ltd to Rs. 5 lakhs, as against their present holding of Rs. 3,865, supplemented by the two directors' personal holdings of Rs. 52,775. The company has further stressed that instead of paying the managing agents a commission of 1 percent a year, the shareholders would benefit by letting the two directors buy unissued shares in a block at par. The purchase of the shares in the market has been held inadvisable as the price would be forced up. It is now learnt that, on a representation made by the Madras Stock Exchange and the Shareholders Association, the Rs. 5 ordinary shares will be taken at a premium of Rs. 1 a share, and the 7½ percent taxable preference shares at par. The managing agents have agreed to acquire the new shares on the terms proposed by the directors, but are permitted to pay the price in four instalments, while the right to a dividend on the new shares will be limited to the amount paid up. The complaint made before the extraordinary general meeting of the company was that the managing agents were allowed to buy the Rs. 5 ordinary shares at par, while they were being quoted at Rs. 6.50 in the market, and shareholders were being deprived of an opportunity to apply for them. The terms of the issue were then modified.

Automobile Products Expanding

Automobile Products of India Limited, Bombay, has embarked on an expansion programme which is estimated to cost Rs. 105 lakhs. The financial requirements, it is proposed, will be met through a loan of Rs. 50 lakhs from the Industrial Finance Corporation; Rs. 30 lakhs will come from the well-known Italian firm of Innocenti S.G. on a deferred payment basis and for the balance of Rs. 25 lakhs the company will enter the market some time next month. It has received the sanction of the Government for the issue of 250,000 equity shares of Rs. 10 each and 10,000 6 percent tax-free redeemable cumulative second preference shares of Rs. 100 each. The directors, however, have decided not to issue the preference shares for the pr sent. Out of the new equity capital of Rs. lakhs, the directors and their associates hav agreed to take up Rs. 7½ lakhs, of which Rs. lakhs' worth of shares will be issued to Mess Innocenti S.G. against the supply of machine of an equal value. The balance of Rs. 17½ lak will be offered for public subscription. The exis ing paid-up capital of the company consists Rs. 17 lakhs in equity shares and Rs. 33 lakhs preference shares.

The company was incorporated in 1949 Rootes Limited for the phased manufacture Hillman cars and Commer trucks, but Rootes so its interest to an Indian management in 195 Under the new management, the company secure manufacturing licences for Firestone brake lining Lambretta motor scooters and three-wheeler Henry Meadows diesel engines, Borg and Bec clutches and Lockheed brake systems. The Go ernment had originally sanctioned an installe capacity of 6,000 Lambretta scooters, but in vie of the heavy demand it has increased the capaci to 12,000 units a year. Innocenti S.G., Milan, hav agreed to supply machinery worth Rs. 24 lak for the manufacture of Lambretta engines, ou which Rs. 21½ lakhs will be on a deferred payme basis, to be repaid by the end of 1963. The teet ing troubles of the company are believed to over. Informed quarters think that the carry forward loss of Rs. 12½ lakhs will be wiped o by July 1960 and that there will be a dividend 1961. On the completion of the proposed expa sion programme by the end of July 1963, the co pany expects to have a sales turnover of abo Rs. 4½ crores.

State Bank of Travancore

The formation of the State Bank of Travancor on 1st January, 1960, will entail the conversion the Rs. 25 shares of the existing Travancore Ban into Rs. 100 shares. The new bank's capital wi be held by the State Bank of India. Travancor Bank shares have risen to Rs. 28.75 lately on hopeful reading of the terms of the notice issue to shareholders. Compensation in cash or in t shares of the new bank is offered, although t State Bank is authorised to acquire 55 percent the issued capital of the new bank. The rules f compensation prescribe that, as in the case of t Hyderabad, Patiala and Saurashtra institutions, t assets should include bank balances and the hol ings of securities at the present market prices, also land and buildings, although furniture and f tings would be taken only at the written dow value. The notice makes it clear that no separa compensation will be paid for any profit or an dividend concerning any period preceding t appointed day. This means that the Travancor Bank's shareholders will not get the 5 percer distributed in 1958, as the dividend is now merge in the compensation to be paid.

Developments in Cotton Market

Cotton has been very much in the news of lat Prices have been rising almost since the beginnin of the season. Last week, they soared. Betwee 28th November and 1st December, the Jaril (Moglai 25/32 in., fine) contract shot up fro Rs. 742 to Rs. 768. The rise occurred in spite the margin. But speculators could scarcely b blamed for rigging the futures rates when all t popular varieties of cotton in the spot mark fetched fancy premiums and delivery contrac were eagerly sought even at the ceiling. The Fo ward Markets Commission expressed serious co cern over the behaviour of the futures marke although the hedge contract even at its highe stood Rs. 52 below the ceiling of Rs. 820. Th East India Cotton Association was asked to s what could be done to check the price trend. C 30th November, it decided to enforce a margin the rate of Rs. 15 a bale above Rs. 750 a candy all long positions, with a free limit of 500 bal for a member and another 500 bales for his clien provided the total purchases did not exceed 2,0 bales. Since this did not have any effect on t market, and Jarilla March spurted from Rs. 747. to Rs. 768, the Commission came out with a dire tive on 2nd December raising the margin abo Rs. 770 from Rs. 25 to Rs. 75 a bale. The futur market reacted sharply to Rs. 754, but that w mainly because the news came when heavy sho covering had considerably weakened the technic position. When the rise in prices is due to serious unbalance between demand and suppl the margin can do little more than eliminate t small fry from the field, leaving the financial strong speculators free to exploit the situation their own advantage. Even so, the margin wou be welcome to the extent that it has a restrai ing effect on unhealthy speculation. Several sp houses, it is said, protested against the margin the plea that their purchases are only in the natu of a hedge against their sales to mills. There seen a strong case for exempting genuine hedge purchases, but it is not always easy to distinguish hedge purchases from speculative purchases.

The spot cotton market faces a very difficult situation. It is not that the new crop has been a failure but its movement has been delayed by about a month. (The mills need nearly 400,000 bales a month.) The 1958-59 season had ended with a smaller carry-over. It is the shortfall in current supplies in relation to current demand which has produced a critical situation in the spot market. Sellers in November-December delivery contracts have been virtually squeezed. Unable to secure their requirements even at the ceiling rates, mills, it is said, have been compelled to buy unginned cotton over which there is no price control. The Textile Commissioner had informal discussions on 3rd December with the representatives of the textile industry and various cotton interests on the situation prevailing in the ready market. The meeting, it is reported, approved of three measures. First, the trade should be warned against transacting any business above the ceiling rates. Second, ginning and pressing factories should be asked to complete their operations by the end of March so as to expedite the flow of supplies to the market; the deadline is to be varied according to the crop movement in different areas. Third, the Government should be urged to release a further import quota of cotton stapling 15/16 in. to 1-1/16 in. While it is good to warn the trade against bidding prices above the ceiling, it is the Textile Commissioner who needs the reminder that the Cotton Control Order is meant to be enforced. Unfortunately, it has seldom been made effective. This is partly because of the serious lacuna arising from the absence of control on the price of *kapas* (unginned cotton). If all the decisions taken at last Thursday's meeting were to be implemented they could produce a significant effect on the trend of prices. The view is widely shared that the market is likely to develop an easier tendency in January when arrivals pick up appreciably and foreign cotton also moves in.

U.P. Rayon Plant Opens

A plea to the Planning Commission not to look upon the rayon industry as a producer of luxury goods was made by Mr. Purushottamdas Singhania on the occasion of the formal opening of the J. K. Rayons plant in Jaykaypuri, near Kanpur. "The purpose of this industry", he declared, "is not the provision of luxury goods, but the supply of better quality cloth which can be compared with that manufactured from imported cotton like the Egyptian, African or American. The price of such cotton is about Rs. 2 a lb. and this results in the manufacture of cloth beyond the reach of the common man. Although at the moment we are getting our raw material imported, it should be not be very long before the raw material is manufactured in India itself. The man-made fibre industry will provide cloth of the best quality which is necessary for raising the standard of living. The rayon industry is, therefore, an economic necessity in cloth and not a luxury." Mr. Singhania also said that he had been assured by Mr. Manubhai Shah, Union Minister for Industry, that the plant will be given licences for doubling or trebling production in due course.

In his inaugural address, the Chief Minister, Dr. Sampurnanand, praised the contribution of Singhanias "to the industrial development of Uttar Pradesh." By setting up this rayon plant, he said, employment would be given to thousands of people and foreign exchange worth crores of rupees would be saved. In a pointed reference to Opposition members who had, in the past, severely criticised the financial assistance given by the Government towards setting up the rayon plant, Dr. Sampurnanand said that "these industries are not temples or *dharamshalas*, but are meant for earning profits and for building up the prosperity of the country."

U.S. Steel Output Recovering

The U.S. steel mills resumed operations quickly after the Supreme Court, on 7th November, upheld the federal court order sending the men back to work, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. By the end of the month, steel ingots were being produced at a rate of 92 percent of calculated capacity. While grumbling about "slave labour" and threatening to resume the strike when the injunction expires on 26th January, the men generally pitched in willingly and, with their wives and families, looked forward to a resumption of the flow of fat pay cheques. Disruptions caused by the strike will take time to repair, even if, as everyone can hope, an amicable settlement is reached by January. Nevertheless, as the million persons out of work because of the steel strike return to their jobs, the prospects favour rising incomes and spending in the months ahead. Retailers are counting on another record Christmas season. It will be some time, of course, before a balanced, orderly flow of finished steel, in the multitudinous forms required by industry, is achieved, and still longer before inventories are brought into balance. Steel stocks—abnormally swollen before the strike—have dwindled almost to vanishing point. Thus, there is a scramble for steel, not only to meet heavy current demand but also to build up adequate working stocks to ensure steady operations.

Just as the steel shut-down had a delayed impact on metal-fabricating industries, the resumption of operations will benefit them only after some delay. Not until the closing weeks of the strike were metal-working industries seriously affected, but then lay-offs mounted rapidly. In many cases, to keep final assembly lines going as long as possible, supply pipelines were drained of parts and components. Thus, paradoxically, motor-vehicle plants were still laying off assembly line workers during November. General Motors, while recalling employees at plants making parts, completely shut down its passenger car assembly lines on 11th November. *Ward's Automotive Reports* estimate that three-quarters of a million cars will have been cut from fourth quarter production schedules because of steel shortages, placing the latest estimate for 1959 domestic passenger car production at 5.5 million units. Output in 1960 will be boosted to recover as much of this loss as possible. Meanwhile, waiting lists are building up for the new cars, which have had a good initial reception. On the whole, industrial production, as measured by the Federal Reserve index (seasonally adjusted, 1947-49=100), held relatively steady from August to October. From the pre-strike record of 155 in June, the index declined by less than 5 percent. Because of the cross-currents in durable goods output, it is not clear how much—if any—recovery the November index will show. By December, however, industrial activity should be on its way back to pre-strike levels. Final demand—purchases of goods and services by consumers and the Government and capital investment by business—continued to rise steadily through the third quarter, virtually unaffected by strikes.

NOTICE

With the weekly issue of CAPITAL which is to appear on 17th December, it is proposed to issue a supplement of approximately 150 pages, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, such as jute, tea, cotton textiles and sugar, the Review will contain exclusive articles by well-known authors. Dr. P. T. Bauer will write about the problems, paradoxes and prospects of Indian planning; Dr. T. Balogh will discuss the promotion of economic growth in poor countries; Mr. C. Rajagopalachari will explain how bureaucratic plans are stifling economic enterprise; Mr. Asoka Mehta will discuss the food shortage; Mr. Geoffrey Tyson will review the Radcliffe Report; Mr. Neil McInnes will write about the aftermath of imperialism; Professor R. J. Taraporevala will explain how the new company tax scheme hits shareholders; Mr. G. M. Laud will review the working of co-operatives; Professor B. R. Shenoy will make a critical survey of the second five year plan; and Mr. K. B. Mathur will discuss the economics of railway freights. Other articles will deal with the control of public expenditure, concentration of economic power, advertising, control of money rates, the management system on plantations, small-scale industries, the progress of the Pakistani economy and tourism in Britain. In addition, there will be reviews of developments in the stock market, the freight market, life insurance, general insurance and banking. The supplement will be distributed free to all registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, Capital, at 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

State Employees want Interim Relief

State Government servants, including those of Madras, have demanded interim relief following the Central Pay Commission's report. The Madras Pay Commission is studying the proposals which may lead to the elimination of "classes," and ensure promotion by merit, without regard for extraneous considerations. Although the Governor's address to the State legislature on 5th December made no reference to the non-gazetted officers' claims, it is clear that the Central body's report has created a problem for the State Government, The Opposition parties are backing the non-gazetted officers, while the State Government feels that its point of view has not been properly appreciated.

The current grievance among railway men is that Madras is not ranked with Calcutta or Bombay. The difference between Central and State scales of pay remains the major cause of discontent, and the only thing that may now appeal to some is the reduction in holidays for officials and the adjustment of working hours.

Decontrol of Sugar Urged

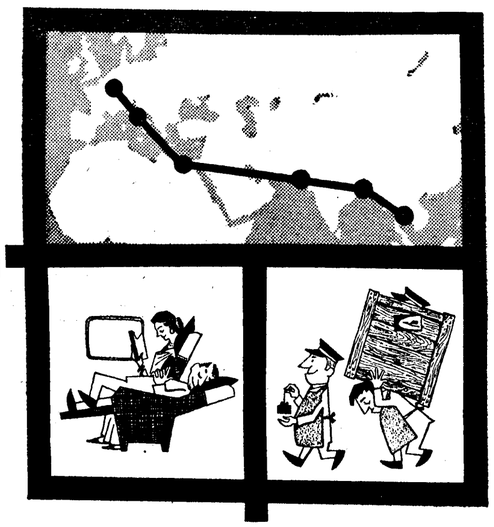
With the time of the proposed cane growers' strike in U.P. and Bihar drawing near, the sugar industry's spokesmen in both States have expressed serious apprehension. Addressing the half-yearly meeting of the Merchants Chamber of U.P., Mr. P. D. Singhania said that acceptance of the growers' demand for raising cane price to Rs. 2 a maund would necessarily result in a curtailment of production. The recent statutory increase of 12½ percent in cane price raised the gate delivery price of cane from Rs. 1.44 to Rs. 1.62 a maund, compared with the growers' demand of Rs. 1.75 a maund. A day earlier, speaking at a conference of the representatives of growers and of factories in Patna, Mr. K. K. Birla said that decontrol of sugar in U.P and Bihar would alone provide an adequate solution to the present problem. He said that if the industry could function without any control in other parts of the country, there was no justification for imposing it in Bihar and U.P. He asserted that control had stifled production, and if it was lifted, the production of sugar would increase leading to the extermination of the black market, where sugar was being sold at prices ranging from Rs. 60 to Rs. 100 a maund. He was against bringing cane co-operative societies into the picture. Whatever justification there might have been for these societies in the old days, there was none when statutory minimum prices were enforced and proper weighment was guaranteed.

Mr. Birla also claimed that factories were advancing from Rs 125 to Rs. 150 lakhs to cultivators every year. This has, however, been contradicted by the U.P. Minister for Agriculture and Co-operation, Mr. Mohanlal Gautam, who has charged the mill magnates with keeping the cane price payable to cultivators in arrears. Mr. Gautam has also made it clear that as far as U P. is concerned, there is no question of the cane co-operatives being wound up. On the other hand, these co operatives would in future handle all products of cane, like *gur* and *khandsari*. Under the new rules being framed, members of a society would be required to give a pledge that all marketing surpluses would be disposed of by them through the society. According to Mr. Gautam, this is being done with a view to ensuring the recovery of loans advanced against cane. Uttar Pradesh also has a plan to let these co-operatives handle the marketing not only of cane and cane products, but also of foodgrains.

L.I.C. Investment Procedure

The resignation of Mr. A. Subbiah from the Investment Committee of the Life Insurance Corporation, and echoes of the notorious Mundhra episode, keep the public keenly interested in news about the investments of the L.I.C. The fact that a highly regarded man like Mr. Subbiah had to resign from the Investment Committee of the L.I.C. is likely to create suspicion. Many people might quite legitimately be curious whether the investments of the L.I.C. were, or are, being made in accordance with the time-honoured principles governing the investment of life insurance funds. Mr. Subbiah, it is reported, has submitted a long report to the Finance Minister and made certain points which, if they are correct, will again give rise to serious concern. In fact, the investments of the L.I.C. have always caused some anxiety; if even after the recent troubles they are not being made in the appropriate form, policyholders have a right to know the facts and the Government's attitude to the criticisms made by Mr. Subbiah. He, it is reported, has stated in his report that there is too much concentration of power without responsibility in the hands of the top executives, and that the Investment Committee is not given sufficient time to be effective. Several investments, it is alleged, have been made in a slipshod manner and, significantly, the Investment Committee is presided over by the person who happens to be chairman and chief executive of the Corporation. Mr. Subbiah has pointed out that the policies and procedures actually adopted by the Corporation for investing its funds are contrary to recognised business principles, are against all sound canons of insurance investment, and are weighted heavily in favour of outside interests to the detriment of the interests of policyholders.

The administrative machinery, again, is inefficient and lacking in co-operation. It is incapable of handling the complicated task of scrutinising the shares of hundreds of companies engaged in a number of different industries. The Investment Committee is unable to apply it-



couple of hours. Meeting once in a few weeks, it is expected to consider hundreds of offers from brokers. The Corporation executives present the brokers' offers without detailed study and comments of their own. The members of the Investment Committee are not given advance information about the proposed investments, with the result that they are unable to scrutinise, assess or process the proposals in a manner conducive to the interests of policyholders. The reported importance of the Investment Committee is an indictment of the organisation; if the former were endowed with adequate powers, it would have had its own secretariat to scrutinise, examine and process investment recommendations. It is time that the Finance Minister made a statement in the Lok Sabha on the investment procedure of the L.I.C. with reference to the report submitted by Mr. Subbiah. The matter is urgent and delay will affect the interests of policyholders.

Indo-British Trade Improving

The improvement in Indo-British trade noticed during the first half of 1959 continued in the third quarter of the year. According to figures extracted from the U.K. Trade and Navigation Accounts, the principal U.K. imports from and exports to India rose in value during the nine-month period ended September 1959, the former to £95.23 million from £94.7 million during the corresponding months of 1958, and the latter from £116 million to £124.1 million. In the month of September, however, there was a fall in the value of imports, compared with the same month last year, but exports were higher at £12.1 million, against £11.8 million. Imports of tea into the U.K. during the first nine months of the year remained lower at £36.5 million; the value was £44.8 million in the previous corresponding period. Tobacco and tobacco manufactures also showed a smaller import value, as did cotton, crude fertilisers and crude minerals excluding fuels, metalliferous ores and metal scrap, animal and vegetable oils, fats, greases and derivatives. There were substantial increases in leather, leather manufactures and dressed furs, oilseed cake and meal (excluding husk meal), wool and other animal hair and tops and cotton yarns and woven fabrics. These, combined with moderate rises in miscellaneous animal and vegetable crude materials and miscellaneous textile manufactures, offset the falls in tea and other principal items of imports. On the export side, the U.K. sold considerably more machinery over the nine-month period, the value rising to £40.4 million from £34 million. Electric machinery, apparatus and appliances exports were also higher. Another item in which a substantial rise was recorded was chemicals (value £12.2 million against £9.9 million). Iron and steel, petroleum and petroleum products, non-ferrous metals, scientific instruments, photographic and optical goods and watches and clocks also showed increases. The items recording falls included wool and other animal hair and tops, paper, paper boards and their manufactures, metal manufactures, road vehicles and aircraft. The items of machinery showing big increases were industrial and works trucks, tractor and mechanical handling equipment, mining and well drilling machinery. Electronic valves, radio, television, radar and sour reproducing apparatus were also up.

The Wayward Ganga

The receding of the Ganga from the Kanp side of the river, which has been going on for ov 15 years, has now become a matter of serious a xiety. Last year, it receded by one mile. T Kanpur Water Works takes a daily supply of million gallons from the Ganga and 9 millic gallons from Ganga canal, while the Kanpur Ele tric Supply Administration takes 90 million gallo a day for its condensers. The water works and t power house have been carrying on their pitif dredging operations with two diesel dredgers a one electric dredger, and lakhs of rupees a spent every year for the purpose. If a comple breakdown is to be avoided, spokesmen of t water works say, the immediate demand for o bulldozer costing about Rs. 1.50 lakhs and for o dredger-cutter costing about Rs. 1.75 lakhs, w have to be met. But it would be much better instead of leaving this question to the resourc and ingenuity of the local utility services, t State Government were itself to step in, and e trust the work to the P.W.D. or the Irrigation D partment. The danger to Kanpur from the rec ing Ganga is not all, because by its waywardne the river may one day submerge the flat stretch of Unnao district for miles around.

Twice Weekly—

Wednesdays & Saturdays at 6 p.m.

Fly by LUFTHANSA German Airlines

DIRECT TO GERMANY!

Connecting India with the very heart of Europe, Lufthansa, German Airlines, forges yet another link in its world-wide net-work of routes.

Twice weekly, Lufthansa flies from Calcutta to the main cities of Germany—Frankfurt, Dusseldorf, Hamburg.

Whether you're an industrialist, a businessman, a student, a government official or an educationist—you'll appreciate the traditional, generous German hospitality of Lufthansa, aboard the swift Super-G constellations.

Lufthansa, German Airlines, directly connects Germany with Bangkok, Calcutta, Karachi, Cairo and Rome.

Coordinated flight schedules provide convenient connections with Air France and Alitalia.

FIRST CLASS OR TOURIST

For further information, consult your Travel Agent or any Air France or Alitalia office.

INDIAN PEPPER

PEPPER is a very ancient staple of Malabar and was a monopoly under the rule of the Dutch, Portuguese, and the Honorable East India Company. Till some fifteen years ago it was grown only in the low country, but has since been proved to do well at 2,500 to 3,000 feet above sea-level, and even up to 3,500 feet. There are at least six or seven varieties of cultivated pepper and two or three of wild pepper, which latter are found in primeval and secondary forests up to about 3,000 feet. The wild varieties are valueless, and only two of the cultivated are worth planting. The good kinds are the Balamcottah and the Kullyvully. The former has a large pale leaf raceme and berry, and is the heaviest cropper in suitable places and favourable seasons. The latter has a smaller dark green leaf raceme and berry, the berry is heavier, the vine is more hardy, and does better at the higher elevations; and it is a more certain cropper in unfavourable seasons. Both came from Tellicerry, which produces the best pepper in the low country of Malabar. Good kinds of pepper have broad rounded leaves (with small sharp points), which give a delicate aromatic odour when crushed, and the young shoots have liver-coloured tips. Bad kinds have small, narrow, or elongated leaves which give a coarse rank smell when crushed, and the tips of the young shoots are white or pale. Buchanan in 1802 mentions that the pepper chiefly on the Maurica (Coraltree Erythrina Indica), and this is still largely used especially on land bare of trees, as it grows readily from stakes. The best standard is, however, the jack *(Artocarpus integrifolia)* and next to it the Indian varieties of fig which have a rough bark. Almost any hardy tree, however, with a rough bark, will make a good standard. The silver oak (Grevillea robusta) grows readily in almost any land, and is a good standard after its bark roughens in the fourth or fifth year from planting. Pepper keeps constantly slipping down off smooth bark trees, but can be made to climb them by nailing narrow strips of bamboo to the bark vertically and about six inches apart. What is desired is a tree with a straight slender stem with a small head, and trees with bi heads, like the jack, must be well lopped a soon as the pepper vine is established.

A Ditcher's Diary

ONE DETECTED A DISTINCT FEELING AMONG THOSE present at last year's annual general meeting of Assocham that perhaps the custom of inviting busy Ministers to leave their desks in New Delhi to give important speeches in Calcutta which they obviously had no time to prepare, and for which their choice of topics is necessarily restricted, was overdue for revision. I remember having some views on those lines myself, although I did think it would be a pity to abandon such meetings altogether because they do have a purpose even in these changed times. That is why I was so pleased to find the old custom handsomely vindicated this year. In his address, the Finance Minister was reasonable, to the point, and brief. What more can one ask for? He also left me with the impression that he had taken some trouble to answer, as well as he was able under the circumstances, a few of the points put to him in an unusually detailed address by the President, Mr. J. D. K. Brown. The whole effect was entirely satisfactory and I thought I detected in the applause and good-natured comment which followed Mr. Desai's speech and the subsequent vote of thanks, a good deal of relief as well as genuine appreciation of not having had one's time wasted. It would seem that Mr. Desai has learned a good deal during his past year in office—and perhaps especially from his experience of meeting business men abroad—about how to inspire confidence and satisfy anxiety without necessarily giving anything away. The manner in which he did this last Saturday could only be described as statesmanlike. It only remains for me to add my humble support to the plea of Mr. N. Dandeker in his vote of thanks, when he recommended to Mr. Desai for reference in the coming Budget deliberations, the words of Omar Khayyam, Gently, brother, gently, pray".

THE PRIME MINISTER, I SAY, IS HIS BEST PUBLIC relations adviser. What professional P.R.O. would have thought of asking Mr. Nehru to invite a Santal girl to open the sluices at Panchet—what a wonderful touch! As the average newspaper reader read the story he must have forgotten that the D.V.C. is a supreme example of how the Government of India sets up autonomous bodies and then silently robs them of all autonomy, how every Government scheme embarks on its career with a fanfare and then peters out after producing a mouse or two. I hasten to add that the mice produced by the D.V.C. are pretty large indeed; and if they stood by themselves, and not against the background of what the country had been promised, the Government would have every justification to be proud. But, as I was saying, after the opening by the Santal girl, it seems almost indecent to ask any questions, to compare the Government's performance with its promises, to remember the many evil forces that have been at work in the progress of the D.V.C. from a dream to something to be shuffled into cold storage. But then this is the difference between a professional and a natural. It is conceivable that an American psychologist turned P.R.O. would have foreseen popular reactions to Mr. Nehru's grand gesture and recommended it; but the effect would very probably have been lost. As for Mr. Nehru, I am certain that he had not planned it one bit, that the inspiration came to him just at that moment—and it worked. The point was brought out brilliantly in Professor A. J. P. Taylor's review of R. H. S. Crossman's *The Charm of Politics*, which I find reproduced in the latest *Bedside Guardian*: "Crossman has seen the works. He discovered the secret of politics. The secret is power. True, the essential part of it is that it must be unconscious power . . . The true art of politics is to have ideals and to believe in them, but not too much. The politician uses ideals; he is not used by them." This is not hypocrisy, of which I would not dream of accusing Mr. Nehru. It is just how the game of politics has to be played by winners.

MR D. C. SHARMA SPOKE ON CORRUPTION IN the Lok Sabha last Friday as common people do, and it can have done the Treasury Benches no harm to hear him. Mr. Datar asked for specific instances of corruption which, he said, the Government would look into. The retort to this one is that the people pay an awful lot of taxes to maintain a huge police force, including various Enforcement branches, and if these cannot produce specific instances they ought to be sacked. What the Government should be aware of, instead of affecting injured innocence at being sniped at by a Congressman, is that the country is developing a dangerous degree of cynicism over Authority's much-vaunted determination to eradicate corruption from the administration. Part of the malaise is, of course, inherent in a controlled economy. Little bits of paper, called permits, have acquired an inordinate money value; and those who want them—and everyone has to—are prepared to pay many times a year's salary of the official who distributes them. Then there is the example set by not a few Ministers, and we have Mr. V. P. Menon's statement for it, yet uncontradicted, that while Governor he wanted to prosecute some of these corrupt officials but was advised not to because the prestige of the Congress would suffer. Again, prone to see everybody's point of view, the Ministers are not always free agents either. They represent a party; and a party cannot run elections and other things on idealism and fresh air alone. They are thus often obliged to do things for the good of the party, sometimes at the expense of the administration's integrity; and once officials know what will please the Minister's party *alter ego* they naturally do these things unasked in order to be in the Minister's good books.

IT IS VERY FLATTERING FOR THE LIKES OF ME WHEN Pope John says, as he is reported to have done, that: "If St. Paul were alive today he would probably be a newspaper man." Why, I wonder. What expression of the bundle of virtues and vices which comprised St. Paul's character would have directed him into my profession? Would it have been because he was obviously interested in human beings, found a solid satisfaction in revealing the truth, had a sense of mission, and would certainly have been financially better off if he had chosen a different occupation? Or would it have been because he loved power, enjoyed minding other people's business, and possessed an abiding conviction that he knew better than anybody else how the world should conduct its affairs? Indeed, as I read this list of qualities—or lack of them—through again, I can see that St. Paul and the modern newspaper man certainly have a good deal in common. But the Pope considers he would have chosen to be a journalist because that would have given him "the means of spreading the doctrine of Christ". With all due respect, I simply cannot agree. It is not a newspaper man's job to spread any doctrine, good, bad, or indifferent; and that is something I have repeated constantly in these columns. A journalist has two main functions: One is to report the news, the other is to comment on it. Any aim other than to do these two things to the best of his ability is an encumbrance to a newspaper man in the proper practice of his profession, and he has no right to have any part of it. The mistake His Holiness appears to have made is to confuse newspaper men with public relations officers; it is the latter's job to spread doctrines and promote points of view. The Government of India would do well to remember this when it is next tempted to urge journalists to confine themselves to what it vaguely defines as "constructive" criticism. A leading article entitled Press and Parliament, which appeared in the issue of *The Spectator* dated 20th November, 1959—and which I would recommend to anybody who is still confused about the true purposes of newspapers and newspaper men—explains this term "constructive" as "a stock ministerial euphemism for sycophantic", and I could not agree more.

SCEPTICAL AS I ALWAYS AM ABOUT COMMUNIST claims to have performed this or that particular miracle, I feel inclined to regard Professor Anna Aslan's "youth drug"—or H3 as she so unimaginatively calls it—as of highly dubious validity. It is of even more questionable benefit to the human race. I see no reason to disagree that age and decay are symptoms of a deep-seated disease in the human organism, or that it may be possible to prepare a prophylactic to arrest these processes in the same way that other human ailments are treated. What I am doubtful about is not how, but why. I know that man has longed to be immortal throughout the ages, but it has always struck me that this is largely because he has not bothered to think out the consequences. I would say nothing against extending the present span of youth by, say, twenty years, but if this means a proportionately longer old age, then it is probably not worth while. In fact, so many of these "elixirs" seem merely designed to protract a toothless, rheumaticky dotage, and those who have read Mr. Aldous Huxley's *After many a summer* will have some insight into what that could mean. Besides, what point is there in conquering death and decay when the problem has not yet been solved how to provide sufficient food and necessities for the millions that already inhabit this overcrowded planet? And what, again, will this world be like to prolong one's life into when scarcely an inch of standing room is left? Science would be better advised, in my opinion, to concentrate its attentions on improving what span of life we already have, rather than seeking to extend it. No doubt Professor Aslan, if she is a good communist, will regard all this as capitalistic heresy. But from what I have seen of communist countries, if she wishes to extend the kind of life that a person living in them has to tolerate, then it is not only her scientific achievements I would question, but also her sanity.

improvement is largely due to intensive operation of the plant and equipment, especially on the processing side. "Further, rationalisation of labour and increased production by the working of a partial third shift have also contributed towards the improvement of the results." In spite of improved conditions in the market, the most disturbing feature was the continued increase in the cost of production. *The mounting cost of living, which determines the rate at which* dearness allowance is paid to workers, was primarily responsible for higher costs of production. In addition, the various import restrictions on essential raw materials and stores caused an acute scarcity, pushing up prices. The increase in octroi duty from July 1958 and the revised railway freight structure which came into force from October 1958 also added to the cost of production. Taking advantage of the decision of the Government to permit the textile industry to install 7,500 automatic looms by way of replacement, the company has made an application for 144 automatic looms, against which a quota of 96 looms has been allotted. These automatic looms will replace 82 existing looms. An order for the 96 automatic looms will be placed on receipt of the import licence. The cost of installation, including extensions to the weaving department and other equipment, will be Rs. 9.5 lakhs.

Anderson Wright

There is a decline from Rs. 2.74 lakhs to Rs. 1.19 lakhs in the profit of Anderson Wright Ltd for the year ended December 1958. Taxation absorbs Rs. 55,414, against Rs. 1.23 lakhs. The usual preference dividends have been paid, after transferring Rs. 25,000 from general reserve. The ordinary dividends have been passed over, leaving a carry-forward of Rs. 6,145, compared with 7,803 brought in.

Hindusthan-Pilkington Glass

Hindusthan-Pilkington Glass Works Ltd has made a profit of Rs. 11.61 lakhs for the year ended October 1958. A dividend of 6 percent has been paid. General reserve is allocated Rs. 6 lakhs, leaving a carry-forward of Rs. 1,02,407. The supply of raw materials, it is reported, has improved in the current year.

Ahmedabad Electricity

The Ahmedabad Electricity Company has made a profit of Rs. 68.99 lakhs for the year ended March 1959, after providing Rs. 45.34 lakhs for depreciation. Bringing in Rs 857, transferring Rs. 3.70 lakhs to contingencies reserve and Rs. 4.68 lakhs to development reserve, and making other adjustments, there is a balance of Rs. 59,09,003. An interim dividend of Rs. 2.50 a share was paid. A final dividend of Rs. 4.25 a share has been declared, making 6¾ percent for the year. The carry-forward is Rs. 4,298.

Cambodia Mills

There is a loss of Rs. 14.64 lakhs for the Cambodia Mills Ltd for the year ended December 1958. Bringing in a loss of Rs. 3,62,065, there is a debit balance of Rs. 18,60,483, which is carried forward. The dividends have been passed over.

Tata Steel Output

Tata Industries Private Ltd, managing agents of the Tata Iron and Steel Co. Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during November 1959 was : pig iron 128.900 tons : steel ingots 129.900 tons ; semi-finished steel 35,100 tons ; and finished steel 68,900 tons.

Bombay Market

ALL-ROUND IMPROVEMENT IN SHARE PRICES

OPERATORS INTERPRET EISENHOWER VISIT BULLISHLY

Wednesday Evening.

THERE was a substantial recovery in the Bombay stock market last week and the prices of shares improved considerably. Earlier nervousness arising out of fears concerning a Central supplementary Budget abated, as it was thought that there was not enough time for any such move at present. This apart, sentiment improved on good corporate news. The encouraging production figures of the steel companies for November induced a great deal of short-covering as well as replacement buying.

Tata Steel improved to Rs. 157, as did Indian Iron to Rs. 23.52 on sustained support from Lyons Range. Operators were inclined to interpret the visit of President Eisenhower bullishly. Premier Construction recovered to Rs. 359, but Alcock Ashdown were freely offered at Rs. 247. Larsen and Toubro were shaded at Rs. 26.40 and Mahindra and Mahindra declined to Rs. 23. Tata Locomotive were taken at Rs. 200. In motor shares, Hindustan rose to Rs. 15.16 on influencial support and Premier Automobile were taken higher to Rs. 153.50.

The cotton mill shares were traded cautiously considering the sharp increase in the price of raw cotton. It was also feared that the increase in labour emoluments as a result of a rise in dearness allowance might reduce the profit margins of mills. Standard, nevertheless, jumped to Rs. 748 on knowledgeable support. Kohinoor were bought at Rs. 325.50 on good working reports. Century recovered to Rs 636.50 on bear-covering. Bombay Dyeing were quoted at Rs. 69.30 and Simplex came to hand at Rs. 161. Svadeshi were transacted at Rs. 262 and Tata Mills were indicated at Rs. 46. India United Ordinaries were available at Rs. 10.96 and Apollo were sold down to Rs. 1.06.

Miscellaneous shares showed mixed movements. Sugar shares were quiet and Belapur declined to Rs. 329. Walchandnagar Industries were available at Rs. 316.25 and Phalton were dealt in at Rs. 175. In the cement group, Associated Cement lost at Rs. 150.50 and Digvijay Cement were done at Rs 144.50. Mining shares lost on balance, and Shivrajpur Syndicate were lower at Rs. 86. Steamship company shares fell, and Scindia Steam were quoted at Rs. 16.60. Great Eastern Shipping declined to Rs. 19.48. Bombay Burmah improved to Rs. 577 on replacement buying, but National Rayon were idle at Rs. 372.50. Chemical shares were quiet, and Tata Chemical were offered at Rs. 16.60. Voltas reacted to Rs. 181 on rumours of a rights share issue.

Business in banking and insurance shares was restricted and prices were lower where changed. Central Bank were taken at Rs. 48 and Bank of India were transacted at Rs. 105. New India Assurance declined to Rs. 61.90.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

1959 BONUS YEAR

Purchase a with-profits policy now

Second Valuation Soon

The second valuation of the Life Insurance Corporation will be made as at 31st December 1959. All eligible with-profits policies in force on the valuation date will be entitled to participate in profits disclosed as a result of that valuation.

The first valuation of the Corporation made as at 31st December 1957 disclosed a surplus large enough to support bonuses at the following rates on with-profits policies issued by the Corporation :-

Endowment Assurances : Rs. 14 per thousand sum assured per annum

Whole Life Assurances : Rs. 17½ per thousand sum assured per annum

Important : Policies which are converted into reduced paid-up policies or lapsed before 31st December 1959 will not qualify for bonus.

Preserve your policy, keep it up-to-date by regular payment of premiums and make sure that your policy qualifies for bonus to be declared as a result of the second valuation.

Remember 1959 is the Bonus Year

LIFE INSURANCE
—the day you insure you are secure

The time keepers of yesterday

The Maharajhas in olden days had devised an ingenious way of recording time. Pierced brass bowls of measured capacity were kept floated on a large basin of water one at a time. When the bowl filled and sank, the slaves struck a gong to mark the time.

No slaves or pierced bowls are needed today—you tell time and wake up in time not with the sound of the gong but to the tune of various types of alarm clocks of which black-bird easily tops the list.

New Delhi

FOREIGN INTERESTS INVITED TO JOIN IN OIL EXPLORATION

DIRECT TAXES ENQUIRY COMMITTEE SUBMITS REPORT

14 DEC 1959

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has invited parties interested in oil exploration to communicate o the Secretary of the Ministry of Mines and uel by 31st January, 1960, at the latest that they vish to negotiate an agreement to cover arrangenents for the "search and production of oil", iving details of their standing, experience and esources. This follows the announcement in 'arliament of the Government's oil policy and the ublication of the new rules. According to a rovision in the latter, licences and leases will be ranted on the basis of a specific agreement.

A booklet has been published, containing a map ndicating the sedimentary areas, the Oilfields Regulation and Development) Act, 1948, the new etroleum and natural gas rules, a review of the ossible oil-bearing sedimentary areas and an outine of the direct taxes in India. The Secretary o the Central Ministry of Mines and Fuel, Mr. . S. Khera, in a preface to this booklet, says: India has made, during the past few years, ignificant progress in the field of industrialisation. he rapidly rising consumption of petroleum proucts is an index of the pace of industrialisation f her economy. From 2 million tons in 1947, the otal consumption is already about 6 million ons. The best forecasts, based on present trends nd the likely size of the third plan, are that onsumption may increase to 14 million tons of rude oil equivalent by 1966, and possibly to 25 nillion tons by 1971. India's annual oil import bill, ncluding crude oil for the three coastal refineries, s already of the order of Rs. 100 crores a year; vhile her own production of crude oil is hardly 00,000 tons at present. With the exploitation of he new oilfields in Assam, jointly by the Governnent and Burmah-Assam oil companies, the reerves already established in that region may yield p to about 4 million tons a year. It is the ndeavour of India, therefore, to establish as uickly as possible an additional production of 0 million tons a year or more by 1966.

"Fortunately, recent efforts have yielded disoveries which have disproved the old former pprehensions that India has no oil potentialities. ndia has 400,000 square miles of potential oilearing sedimentary areas, spread over Assam, Tripura, Manipur, West Bengal, Ganga Valley, Punjab, Himachal Pradesh, Jammu and Kashmir, Rajasthan, Cambay and Cutch, the eastern and vestern coastal tracts (in Madras, Andhra Pradesh, Orissa and Kerala) and the Andaman and Nicobar slands. In August 1956, the Government set up he Oil and Natural Gas Commission (converted n October 1959 into a statutory commission by n Act of Parliament). The Commission has aleady carried out extensive geological and geohysical surveys in far-flung areas. As a result, il sands have been discovered at various places. Oil has been struck in the Cambay area, and drillng is in progress there to establish the existence f reserves in commercial quantities. Drilling is lso in progress in two areas in Punjab and in one rea in Assam. The Commission will continue the apid exploration of areas where it is at present ctively engaged and will also make arrangements or production, if oil is found there.

"The large and widespread sedimentary and otentially oil-bearing areas of the country proide opportunities also to others besides the O.N.G.C. to participate, on mutually satisfactory erms, in the search for oil, and in the event f the search being successful, in the production f oil. The Government of India has accordingly ecided to invite suitable parties from abroad to oin in the quest for oil in India, subject to mutualy acceptable terms and in keeping with India's ndustrial policy. In a number of areas, foreign arties of standing and experience are already xploring for oil on the basis of appropriate agreeents with the Government of India; discussions ave also been proceeding between the Governent of India and other parties to cover further reas. It is the Government's intention to conider new proposals for further areas in the sedientary basin of the country. It is in this conext, and also to aid those who are interested to onsider or formulate new proposals, that the Government has promulgated the petroleum and atural gas rules, 1959, to take effect from 25th November, 1959.

Granting Licences

"According to the provision made in the rules, licences and leases will be granted on the basis f negotiations leading to a specific agreement, nd in terms of such agreements. The Governent of India will be glad to have from interested arties their expression of interest in negotiating or an agreement to cover arrangements for the earch and production of oil. Such an expression f interest may be communicated to the Secretary o the Government of India, Ministry of Steel, Mines and Fuel (Department of Mines and Fuel) y 31st January, 1960, or earlier; and should be ccompanied by sufficient details of the party's standing, experience and resources so as to enable the Government of India to judge as to the suitability of such party for further discussion or negotiations. After such preliminary exchange of information as may be necessary, an interested party may submit a specific and detailed proposal in writing.

"The information contained in the booklet is intended to serve as a guide and should not be taken as infallibly accurate. Authentic information on specific points can be asked for by interested parties, while communicating their expression of interest."

POSSIBLE OIL-BEARING SEDIMENTARY BASINS OF INDIA

Location of basin	Approximate area in sq. miles
The region of Assam (including Tripura and Manipur)	30,000
The West Bengal basin (including parts of coastal Orissa and the Sunderbans)	30,000
East Punjab (including Himachal Pradesh), Jammu and Kashmir	50,000
Rajasthan	46,500
Cambay-Cutch	68,500
Ganga Valley	142,000
Madras Coast	17,000
Andhra Coast	9,500
Travancore Coast	6,000
Andaman and Nicobar Islands	3,000

It has been decided to set up machinery for close and continuous consultation between the private and public sectors in the fields of refining and distribution of petroleum products, to examine common problems and to evolve solutions in the best interests of the country. The major problems in this field, although interlinked, can be classified into three broad groups—consumption, supply and movements.

Tyagi Report on Direct Taxes

The report of the Tyagi Committee on direct taxes was submitted to the Government last week. It is a bulky volume, containing recommendations on all aspects of the problem. The recommendations relating to foreigners and to tax evasion are reproduced below: "The Department should take special steps to ensure that the statutory provisions and instructions of the Central Board of Revenue for keeping the tax demands relating to foreign income and assets in abeyance, until monies can be repatriated to India, are strictly followed by the assessing officers and no harassment is caused to the assessees. While the income from or the value of shares in Indian companies having assets in foreign countries, which have imposed restrictions on the repatriation of profits or capital to India, should continue to be included in the hands of the shareholders for assessment purposes, the amount of tax to be covered should be limited to the sum that would have been payable, had the income or assets in these countries not been included in the assessee's total world income or wealth. The balance of the demand should not be recovered until restrictions on their repatriation are removed. The certificates of assessment issued by the foreign taxation authorities on transactions in foreign countries should be invariably accepted as sufficient proof, unless there are reasons to suspect the *bona fides* of such certificates. In such cases, there should be no need for insisting on the production of account books or even audited balance sheets or statements of accounts. Such of the foreign profits as could not be remitted and also the taxes on them should both be excluded in the calculation of the distributable income. Simultaneously, it should be made clear in the statute that if and when such profits are repatriated, they would be included in the distributable income.

"The proposal for adopting in the Indian Income Tax Act the provisions of United Kingdom Income Tax Act in the matter of taxation of non-residents is not favoured. Executive instructions issued by the Central Board of Revenue, concerning the interpretation of the term 'business connection' and the provisions for the taxability of non-residents, should be widely publicised both within and outside the country. Applications for the issue of certificates under the second proviso to Section 42 (1) of the Income Tax Act concerning the extent of the tax ability of the agent of a non-resident should be promptly attended to by the assessing officers and disposed of within one month of their receipt. Where an assessee has more than one place of business, profession or vocation, the assessment should be done at the place which is the most important from the point of view of his business activities. It should be made clear that the place of assessment should be taken in relation to the assessment year and not the 'previous year'.

"In cases where the claim for double taxation relief cannot be filed within four years from the expiry of the relevant assessment year on account of non-completion of the assessment whether in India or in the foreign country within such time, the claim may be allowed to be made within one year from the date of assessment either in India or in the foreign country, whichever is later. In cases where the claims are filed beyond the permissible time limits and are thus technically time-barred, the Commissioners of Income Tax should, in deserving cases, condone the delay or extend the time for filing the claims where circumstances warrant such condonation or extension. In order to avoid the necessity for claiming refunds of double taxation relief and the hardships attendant thereto, the Government should conclude bilateral agreements for the avoidance of double taxation with as many countries as possible.

Arbitration in Disagreement

"The Government should take special steps to ensure that the two-man committee constituted to arbitrate in cases of disagreement between India and Pakistan concerning the allocation of the income chargeable to tax in either country, meets regularly and decides cases of disagreement. A provision should be made statutorily to extend the time limit of one year for production of the certificate of foreign assessment in order that the abatement in tax admissible to the assessees under the agreements for avoidance of double taxation is not forfeited. Alternatively, the Government should make some other suitable provision to safeguard the interest and rights of the assessees.

"The extent of tax evasion, although undoubtedly high, is not of the magnitude indicated by Professor Kaldor in his report. Unless it is brought home to the potential tax evader that attempts at concealment will not only not pay, but also actually land him in jail, there could be no effective check against tax evasion. Non-resort to prosecution and non-levy of deterrent penalties have undoubtedly encouraged the growth of evasion. The pressure of public opinion is a major deterrent against any offence and, if the secrecy provisions of the direct taxes Act are relaxed even to a limited extent, they will go a long way towards checking tax evasion.

"Suppression of the sales in the case of retail trades in an attempt to evade sales tax also results in evasion of income tax. Not only should the departmental officials be honest, but they must also be above suspicion and they should so conduct themselves in their private as well as official life that no wrong motives could be attributed to any of their actions.

"Establishment of a board of specialists consisting of non-officials would be of much help in checking tax evasion. However, officers with proved efficiency and experience in assessments of particular trades and industry should be appointed as specialists in the Directorate of Investigation and Intelligence. For the present, six specialists may be appointed, one each for the following industries and connected trades: (i) cotton textiles; (ii) other textiles, including rayon and paper; (iii) sugar and connected industries; (iv) iron and steel and engineering industries; (v) cement manufacture and building contractors; and (vi) mining and quarrying, petroleum and allied products.

"The suggestion that all traders should be statutorily required to keep closed and adjusted accounts on a mercantile basis is not capable of implementation at this stage. Any scheme requiring the assessees to write their accounts in books previously signed and stamped by the officials of the Department will not work satisfactorily and is likely to do more harm than good. In order to avoid any inconvenience to the assessees, the checking of the current accounts should be done in the business premises of the assessees, after obtaining the permission of the Commissioner. The feasibility of requiring the banks and other credit institutions to give names and addresses of their constituents, the sum total of whose deposits or withdrawals exceed Rs. 1 lakh a year, should be examined by the Government, in consultation with the Reserve Bank of India.

Insurance Policies

"The Life Insurance Corporation should be statutorily required to furnish the name and address of every person taking life insurance policies for sums aggregating to Rs. 50,000 or more, whether in his own name or jointly with another. The general insurance companies should also be statutorily required to furnish brief particulars of general insurance policies of the value of Rs. 5 lakhs and above, whether taken under one cover or more than one cover by the same person.

"In order to discourage tax evaders from entering into *benami* transactions for the purpose of achieving their object, statements made by any party to such a transaction before the direct taxes authorities concerning the ownership of an asset should be made available to the other party concerned in the case, if he applies for a copy of it. The secrecy provisions of the direct taxes Acts should be modified to secure this.

"By means of blank transfers dishonest assessees are able to conceal their income from the Department and even if the concealments are detected and assessed, they can avoid the payment of the taxes as the shares are not registered in their names, and they cannot, therefore, be attached and sold. The only effective remedy

gainst blank transfers is to provide that all ransfer deeds executed by the transferor should ie registered by the Stock Exchange and simulaneously date-stamped. It should be secured by tatute that the transfer deeds should have a currency of only six months from the date of stamping nd that multiple transfers will be permitted only vithin that period of six months.

"A detailed schedule of penalties should be lrawn up and incorporated in the statute book in place of Section 28 of the Income Tax Act and corresponding sections of the other direct taxes Acts. The schedule should make a distinction between cases of deliberate concealment or gross or wilful neglect and others which are not due to fraud, gross or wilful neglect, the levels of penalty for the latter category being much lower than those for the former. The maximum penalty leviable for concealment or deliberate furnishing of inaccurate particulars should continue to be 150 percent of the tax shought to be evaded, as at present. The penalty provisions of the direct taxes Acts should be brought in line with Section 19(1) of the Income Tax Act, 1952, of the United Kingdom so that the onus of proving that the omission to disclose income, wealth, etcetera, did not proceed from any fraud or wilful neglect, is placed on the assessee himself.

Indian Penal Code

"The Government should consider whether Sections 177, 191, 192, 199 and perhaps Section 181 of the Indian Penal Code should also be specifically referred to in the direct taxes Acts. Resort should be had more frequently to the provisions of the Indian Penal Code than to those of the taxing statutes and there should be a specific provision in the direct taxes Acts permitting the Department to take action also under the Indian Penal Code. Deliberate concealment of income, wealth, etcetera, should be made a specific offence punishable under Section 52 of the Income Tax Act and corresponding provisions of the other direct taxes Acts. There should be a footnote in the return form itself to the effect that false or incorrect declaration would attract the penalty provided under Sections 28 and 52 of the Income Tax Act or the corresponding provisions of the other direct taxes Acts, as the case may be, and Sections 177 and 199 of the Indian Penal Code. The relevant sections should also be reproduced *in toto* in the return form.

"Provisions of Section 28(4) of the Income Tax Act and the corresponding provisions of the other direct taxes Acts which bar prosecutions on the same facts on which a penalty has been imposed, should be deleted. Abetment of evasion of tax should be made punishable under the tax laws. A provision similar to the one contained in the Income Tax (Amendment) Bill, 1951, should be introduced in all the direct taxes Acts."

The committee has made some suggestions for amending the Act, including one to the effect that the remittances of foreign profits which are at present exempt under Section 4(1) (b) (iii) of the Income Tax Act should be made taxable.

Sterling Company Sales

During the period 1st January, 1959 to 30th September, 1959, remittances amounting to Rs. 34.60 lakhs were made to the U.K. on account of the sale proceeds of the British-owned tea estates in India.

Tata Plan to Make Alloy Steels

Tatas have informed the Government of their desire to put up an alloy and tool steel plant with an initial capacity of 100,000 tons of ingots or 60,000 tons of finished steel a year, it is stated.

Demand for Hard Coke

The annual demand for hard coke has been estimated during 1959 and the next few years, as follows :

	tons
1959	902,700
1960	1,074,600
1961	1,246,200
1962	1,418,000

This does not include the requirements of the steel plants, as they produce their own coke. The total availability in both by-product and bee-hive varieties has been estimated as follows :

(In tons)

Year	By-product	Bee-hive	Total
1959	1,026,500	350,000	1,376,500
1960	1,007,500	350,000	1,357,500
1961	1,107,500	350,000	1,457,500
1962	1,077,500	350,000	1,427,500

Multi-channel V.H.F. Equipment

An agreement was signed on 15th August, 1959, between the Government of India and Marconis for the licensed manufacture of multi-channel V.H.F. equipment, including radio terminals, repeaters and ancillary equipment. Production is expected to start in Bharat Electronics Limited after about 18 months. The agreement provides for the export of the equipment to a number of neighbouring countries. Although initially the production is being undertaken to meet India's demands, exports will be undertaken after the local demand is met.

Blue-water Gas

Heavy Electricals Limited, Bhopal, is setting up a plant in Bhopal for the manufacture of blue-water gas for its own use. The plant will comprise two units having a capacity of not less than 600,000 cubic feet a day of 475 British thermal unit gas. The value of the contract is Rs. 16.67 lakhs and the plant is expected to be ready by December 1960.

Northrop Type of Automatic Looms

The Central India Machinery Manufacturing Company, Gwalior, which is already engaged in the production of automatic looms, submitted a proposal to the Government for entering into a technical collaboration agreement with British Northrop Ltd, U.K., for the manufacture of the Northrop type of automatic looms. The proposal for collaboration provides for the following services to be rendered by the U.K. firm, in return for a lump-sum payment and royalty : (i) Northrop will give an exclusive right to the Indian company to manufacture and sell the Northrop type of automatic looms ; and (ii) technical assistance will be given to the Indian company for the manufacture of the Northrop type of looms as well as for improving the standard and quality of the automatic looms now manufactured by the Indian company on its own. The collaboration proposal is being considered by the Government.

I.M.F. Mission for Routine Talks

A three-man mission of the International Monetary Fund has arrived in India for the usual annual consultations on economic matters with the Government of India and the Reserve Bank. The mission is led by Mr. Henry Murphy, Deputy director of the Fund's Asian Department. The other members are Mr. N. Sarma, Chief of the South-Asian Division of the Asian Department of the Fund, and Mr. Roland Kalivoda, a staff economist. The mission is holding discussions with the Reserve Bank in Bombay from 7th December to 10th December, and will afterwards visit New Delhi for consultations with the officials of the various Ministries, including Finance, Commerce and Industry, Food and Agriculture and Labour and Employment, and also with officials of the Planning Commission.

Under the Articles of Agreement of the Fund, member-Governments which maintain exchange restrictions on payments and transfers for current international transactions, are required to hold annual consultations with the Fund either in Washington or in their own countries.

World Bank to Study Third Plan

A World Bank mission is expected here in March, by which time the third five year plan is likely to be ready in draft form. It will appraise the implementation of the second plan, the efforts made to mobilise internal resources and the way the credits made available have been used. The meeting of the friendly countries assisting India will be held in July to examine the third five year plan in the light of the World Bank's report in order to indicate how much assistance can be rendered, probably indicating the projects for which such assistance will be made available. So far, a Russian credit of Rs. 180 crores and a Czech one of Rs. 25 crores have been promised for the third plan.

Developing Watch Industry

A scheme for the manufacture of watches in the public sector in collaboration with the Citizen Watch Company of Tokyo is being considered by the Government. This factory will be a subsidiary of the Hindustan Machine Tool Factory in Bangalore. The Japanese yen credit will be used to finance the foreign exchange component of this scheme. The yen credit was offered by Japan as a result of the conference of the chief creditor countries held last year under the auspices of the World Bank. The question asked here is whether a watch industry is the right project to finance with the aid. There are two other issues involved. First, as already reported, the Government is setting up the watch industry on the pattern of the motor-car industry. Under the pretext of competition, a number of units are being installed, including one in the public sector. The import of watches will continue to be banned, ostensibly because of the foreign exchange crisis but in reality to protect the Indian watch industry. Unlike motor-cars, watches will continue to be smuggled into India. But like motor-cars, Indian watches will be the most expensive in the world. If there was no motor-car industry in India, the Government would have stopped the import of motor-cars and their parts, as it did during the war when it was faced with a foreign exchange crisis. A complete ban has become impossible because, to keep the Indian motor-car industry going, the Government has had to allocate foreign exchange to import components. It will have to do the same for the watch industry, irrespective of the foreign exchange crisis.

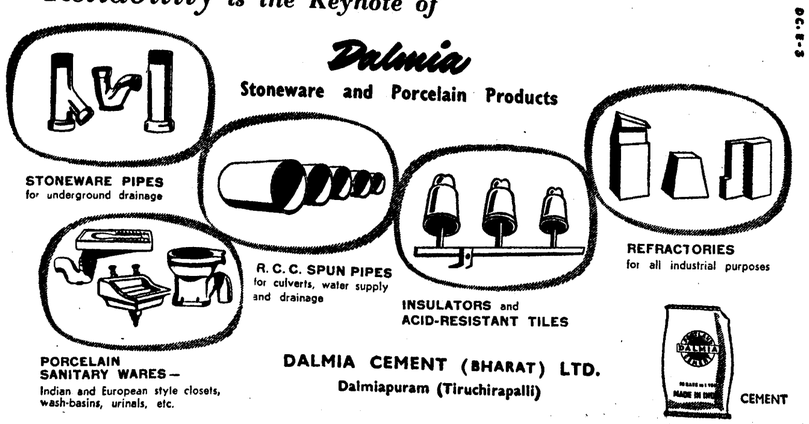
As already known, the Government has permitted the Phoenix Watch Company of Bombay to manufacture watches in the private sector in collaboration with *L'Horlogerie de Savoie, Annemasse*, France. The firm will initially manufacture, or rather assemble, 90,000 watches in the first year, increasing its output to 310,000 watches in the fifth year. The import of components will be permitted on the phased programme, subject to prices of such components being fixed. The French collaborators will supply the plant, machinery, tools and dies, required for the project against a capital participation to the extent of 50 percent of the subscribed capital of Rs. 50 lakhs. No royalty or lump-sum payment is involved.

December Programme for Steel

December promises to be a historic month for the steel industry in the public sector. In Bhilai the ammonium sulphate plant, billet-manufacturing plant and the second blast furnace will go into production. In Rourkela, the slabing mill and the L.D. plant will be commissioned, although the formal opening of the latter will be performed by the Vice-Chancellor of Austria on 13th January 1960. The L.D. process was invented by Austria hence the Austrian interest in Rourkela. The opening of the Durgapur steel works on 29th December by the President, however, will be the biggest event of the month. A large number of Indian and foreign dignitaries, including the British Minister, Mr. Alport, are expected to participate in the ceremony.

A.E.I. Chairman to Come to India

The chairman of Associated Electric Industries (which is collaborating in setting up the heavy electrical equipment plant in Bhopal), Lord Chandos, is coming to India next month. Talks for the expansion of the plant in the third plan period are already in progress.



Producing Ovaltine in India

A representative of the manufacturers of "Ovaltine" is here to negotiate the setting up of a plant to manufacture the product in India.

WITHDRAWAL OF FOREIGN MONEY CAUSES FALL IN RESERVES

INDUSTRIAL PRODUCTION INCREASES

(FROM OUR LONDON CORRESPONDENT)

THE immediate outlook on the economic front is not exactly rosy. The gold and convertible currencies reserves in November fell by £18 million to stand at the end of the month at £1,062 million, and at the same time, the pound sterling fell below parity with the dollar for the first time this year. There were no special circumstances, as there were in October, to explain the November setback to the reserves. This was caused by withdrawals of foreign money to take advantage of the higher interest rates in New York and to some extent on the Continent. This has developed over some weeks, so the fall gave rise to no alarm, although the market reacted by going quieter and there was some talk of a raising of Bank rate here—unrealised, and at present certainly unjustified. The slight rise of 12,000 in the wholly unemployed on 16th November was another sobering factor, although this is only about half the rise recorded in the same period last year.

Against these unfavourable developments, one has to record a number of favourable ones. Industrial production is improving and the October estimate by the Central Statistical Office at 119-129, corrected for seasonal variations to 114-115, is 9 percent higher than a year ago. This rise has been progressively better from quarter to quarter throughout the year. The Board of Trade reports an increase in the production of the engineering and electrical goods industries. Output in September and October was about 11 percent more than at the same period last year, which is rather better than the overall increase. Another strong rise in the hire-purchase debt to a peak figure of £807 million is also reported by the Board of Trade for October. There is no sign yet of any slackening in the amount of hire-purchase and other instalment credit sales, whether by finance houses—mainly for motor-vehicles—or by household goods shops. The rise in the total outstanding debt in October was £23 million, compared with rises of £28 million in September and £14 million in August. And finally, constructional work to the value of £504 million was carried out in Britain by contractors in the third quarter of this year. The Ministry of Works' provisional figures show that this was £11 million more than in the second quarter and £40 million above the first quarter.

A Survey of the Outlook

The rise of 7 or 8 percent in industrial production during the past year has been achieved mainly by higher output a man. Employment has risen hardly at all, although unemployment has dropped. For once there has been expansion without inflation and also without signs of labour shortage or other supply difficulties. Surveying these events, the new issue of the *Economic Review*, published by the National Institute of Economic and Social Research, suggests that production should go on rising, although perhaps more slowly. Prices have certainly remained stable and the balance-of-payments surplus is still adequate—the *Review* estimates that it may turn out to be £200-£250 million for 1959. Imports have not been rising any faster than exports, but the *Review* suggests that most of the import increases have been for consumption and not for stock-building of imported commodities, which may still be coming.

The view that demand will expand more slowly in the months ahead rests largely on the expectation that consumer spending will level out. The authors of the *Review* point out that "there is still little evidence of an increase in public investment in response to the enlarged programmes announced last year"—except for electricity and roads. They now expect public investment to go on rising slowly, but they do not seem to believe that private manufacturing industry will revise its plans upwards. One other prediction made by the authors of the *Review* is that the recovery in the primary producing countries of the sterling area, which has so far benefited the gold reserves, should now begin to benefit British exports. Since 1957, the United Kingdom has exported less and less to the overseas sterling area ; the fall has been offset by the sharp rise in exports to North America and more recently by a sturdy growth in exports to western Europe. The overseas sterling area or at least some important members of it, should soon be able to spend more on imports, and it seems not unreasonable to hope that British goods will at least maintain their share.

Another View

The strength of the economic position is also outlined in the latest *London and Cambridge Economic Bulletin*. This points out that the economy is beginning to operate very near its capacity, that capital formation is now 4 percent higher than a year ago, and that the gap between unfilled vacancies and the numbers unemployed is only half what it was 12 months ago. Indeed, the *Bulletin* is driven to ask whether the old familiar troubles of excess demand may not soon be back with us. They point to the shortage of sheet steel and difficulties in filling vacancies in some areas as evidence of inflated demand. The numbers of wages and hours claims and the recent surge in Stock Exchange prices are other hints of a return of the enemy, inflation. In a very cautious and qualifying phrase, the *Bulletin* says "there are good grounds for believing that a renewed bout of inflation is not yet an immediate prospect," but admits the authorities are right to have issued warnings. Meantime, Mr. Heathcoat Amory is arranging an early meeting with representatives of the four big employers' organisations to seek support for his campaign to reduce prices.

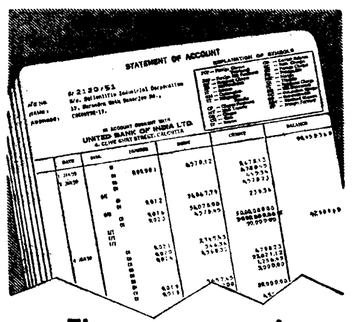
Rise in Sterling Balances

Overseas sterling holdings rose by £68 million during the third quarter of the year, and at the end of September stood at £4,139 million, the highest figure since June 1957. Over the three months, the Colonies, as usual at this time of year, ran their holdings down a little (by £6 million), but the independent members of the sterling area increased theirs against the seasonal trend by £35 million. This reflects the revival in world trade and in commodity prices—particularly of wool and rubber—since recession ended in America and Europe. No special reasons seem to account for the rise of £32 million in balances kept in London by the west European countries. Advance payments by West Germany and subscriptions to the I.M.F. were responsible for a drop of £100 million in the holdings of these countries between December 1958 and last June. The rise since then is apparently based on nothing more specific than an increased flow of business between here and Europe and continued confidence in sterling.

World Bank and the Commonwealth

Addressing the Institute of Bankers in London the other day, Mr. Eugene Black, President of the World Bank, surveyed the problems of the future with characteristic courage and frankness. Dealing specifically with the relations between the World Bank and the British Commonwealth, he marshalled irrefutable evidence to show that Britain has so far come out well on the right side. He revealed that up to June this year, British companies have obtained orders arising out of World Bank loans to the equivalent of £140 million, or 50 percent more than the total paid in to the Bank's capital by the British Government. Nor was this the main benefit. By far the larger advantage obtained by Britain has taken the form of loans to the Commonwealth. The self-governing countries have received loans to the equivalent of £460 million. Dependent territories have borrowed another £70 million. So, as Mr. Black pointed out, the grand total of Commonwealth borrowing has been about £530 million, or one-third of all the loans which the World Bank has made. In presenting these facts, Mr. Black was merely putting the position in true perspective. He was not complaining. He naturally went on, however, to remind his hearers that the dollar shortage has now come to an end, implying the need for a change of emphasis in the pattern of the World Bank's finance.

War Loan Redemption Pleas



With a total of nearly £1,910 million in issue and a current Stock Exchange quotation of around two-thirds of its face value, it is hardly surprising that suggestions are being put forward thick and fast for the Government to do something about the redemption of 3½ percent War Loan. The suggestion that a sinking fund might be established for this undated stock has been rejected. Mr. Anthony Barber, Economic Secretary to the Treasury, said in the Commons that a sinking fund would establish a heavy charge on the Exchequer without being likely to have an appreciable effect on market prices. If a sinking fund similar to that used on the 3½ percent Conversion stock were established, its cost in the first year would be about £38 million. A different suggestion, that a definite redemption date for the stock should be fixed, was rejected recently. The Economic Secretary to the Treasury also revealed that he hoped it would be possible to say something "quite soon" about the Government's intentions on the subject of widening the powers and discretions of trustees in relation to investments. The review of the whole question has now been in progress for well over a year and is apparently well advanced. It is understood that the review, which is completely comprehensive, is being carried on by a number of interested Government departments.

Companies Act Enquiry

The promise in the Queen's speech of an enquiry into the workings of the Companies Act, 1948, has been redeemed and the President of the Board of Trade has appointed a committee, which will sit under Lord Jenkins, to review the Companies Act, the Prevention of Fraud (Investment) Act, 1958, and the Business Names Act, 1916. The purpose is to decide what should be the duties of directors and the rights of shareholders in the light of modern conditions and practices, and generally to recommend desirable changes in the law. Naturally, in deciding to have an enquiry, the Government has had the use and abuse of take-over techniques in the forefront of its mind. The committee of enquiry will not concern itself with provident and building societies, which mainly come under different Acts. Legislation amending the Building Society Acts will be introduced long before the committee writes its report, which may be anything up to two years away. In his statement in the House of Commons, Mr. Maudling made it clear that action to regularise the soliciting of deposits by hire-purchase finance houses need not await the report either. Provisions of the Companies Act do touch this problem at various points, but it is a wider and more urgent problem than the committee could easily tackle. Probably, the most intriguing remark Mr. Maudling made concerned "the regulation of dealers in securities" into which the committee would also look. This means presumably that the stock exchange, and share dealers who operate on its fringes, will come within the committee's purview. In fact, Mr. Maudling remarked that stock exchange procedures were constantly under review by the stock exchange itself and he knew that Lord Ritchie, with whom he had discussed the matter, was anxious to examine any criticisms of substance that might be made. An examination of the Prevention of Fraud (Investments) Act also brings within the committee's range the unit trust movement. The enquiry Mr. Maudling has set on foot is not a negative response to a series of unfortunate events. It is comprehensive, and it has a great opportunity to be creative.

New Bank Rate Procedure

New arrangements for the authorisation and announcement of changes in Bank rate were announced by the Chancellor of the Exchequer in the Commons during the debate on the report of the Radcliffe Committee on the working of the monetary system. Mr. Amory said that the report suggested that all future decisions to raise or lower Bank rate should be made in the name of the Chancellor, and on his authority. It was well known that for very many years no change has been made without the Chancellor's approval and he agreed with that fact being made perfectly clear, but he disagreed with the use of a statutory direction for each and every change. The arrangements which he had agreed with the Governor of the Bank would be on the following lines : The Court of Directors had delegated to the Governor standing authority to settle changes in Bank rate with the Chancellor. The Governor would be free to discuss the matter with the Committee of Treasury and with other part-time directors, but would not put specific proposals before them. When, following the customary informal discussions between the Governor and the Chancellor, a change was agreed to be desirable, the Governor would make a formal written proposal to the Chancellor on the day before the change was to be made and the Chancellor would convey his formal approval in writing the same day. On the day of the change, the Governor would report his action to the Court. "The final decision will be made in the name of the Bank and announced forthwith in the usual way," Mr. Amory said. "The Bank will make a formal announcement to the Press, including a statement that the Bank's decisions have my approval."

They are so neat!

These mechanised Statement of Accounts ! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

PEBBLES STUFFED IN CASHEW KERNEL PACKETS

BOATMEN HELD RESPONSIBLE FOR MISCHIEF

(FROM OUR SOUTH INDIAN CORRESPONDENT)

A HIGHLY discreditable thing from the point of view of India's export efforts has been reported from Quilon. Some of the cashew kernel packets sent from there to West Germany in September were found stuffed with pebbles and dust. The amount involved was about Rs. 10,000. Investigations by the Kerala police lasting for a few days, it is alleged, have shown that the mischief was done by the crew of the countrycraft which took the parcels from Quilon to Cochin harbour. A case has been instituted against them. The cashew processors in Quilon allege that boatmen have been doing this sort of mischief for quite some time, more so with raw nuts imported from Africa. They are thinking of making representations to the authorities against the nefarious activities of the boat-men over whom they do not have any control, but on whose services they have to depend for the transport of goods from Quilon to the Cochin harbour and back, with a view to checking the recurrence of the malpractices of the type against which the West German importers have complained.

Minimum Wages

The stalemate in the cashew processing industry on account of the uncertainty concerning minimum wages continues. Processors are threatening closure if the Government accepts the report of the minimum wages committee without "substantial modifications" and taking into consideration the industry's capacity to pay. The committee's recommendation, if implemented, will raise the cost of production by about Rs. 750 a ton of raw nuts, according to their estimate. They also apprehend migration of the industry to other areas where there is no minimum wage regulation.

Pepper Prices Fall

Pepper prices have started moving down. The latest quotation for ungarbled old pepper from Cochin is Rs 1,050 a candy of 6 cwts., compared with the recent peak of Rs. 1,500 a candy. There are two important reasons for this; the picking up of arrivals in the market and the withdrawal of the United States which has been an active buyer in recent months. Arrivals in the Alleppey market are placed at about 2,000 tons. The supply of new crop pepper suitable for exports is better now.

According to a trade report, the U.S.A. was holding about 2,300 tons in stock (spot and afloat) on 18th November. With a shipment of another 700 tons from India to that country within the course of the past one month, the present stock must be about 3,000 tons, the largest for the past four years. The present interest of U.S. buyers in January-March and still distant futures lends support to the contention that their immediate requirement is covered. Releasing of stocks by the Chinese syndicate in the Singapore market is another factor in the present softening of prices.

Restricting Coffee Exports

More and more of African producers are joining the world agreement to restrict exports in a bid to prevent coffee prices falling to uneconomic levels. Seventeen producing countries of the world signed an agreement on 24th September, according to which they have agreed to export only 32,650,000 bags during 1959-60. The new agreement is effective for one year from 1st October, 1959. The African producers are permitted to have a free export to some countries in Europe. It is doubtful how long an agreement to control exports will alone hold the market against a slump. Production, too, needs to be controlled.

Raw Rubber Prices

The Tariff Commission's consideration of the question of revising raw rubber prices in India at a time when the world price rules at over Rs. 210 a 100 lbs compared with the Indian statutory price of Rs. 155.75, should be advantageous to growers. The Economic Adviser's Index Number for commodity prices shows that plantation rubber has moved less than that of other commodities in general after it came under the price control scheme of the Government. So it is pointed out that "protection" is a misnomer as far as rubber prices are concerned.

Producers argue that the price level provided by the tariff body last time was not sufficient to induce them to go all out either to increase production by replanting or new planting. The increased acreage of the last five years has been forced not by the attractiveness of rubber prices but by the threat of land ceiling which drove many farmers in the countryside in Kerala to put their land under rubber. If rubber has been sufficiently paying, the rubber planting industry would have attracted fresh capital in the form of corporate venture. There has not been any floatation of a rubber company during the past five years. The planters maintain that this is adequate evidence of the fact that the price policy recommended by the Tariff Commission, although by no means unreasonable, was inadequate to attract any large-scale investment.

WORLD OUTPUT OF NATURAL RUBBER

REDUCTION IN STOCKS EXPECTED

THE Natural Rubber Bureau of Washington says in its *Natural Rubber News* that world production of natural rubber in 1960 will again be in the 1.95-million to 2-million-ton range. If world consumption should hold or exceed the 1959 rate, the market will again be faced with an excess of consumption over production and another stock deficit, except that, in 1960, stockpile disposals will probably augment production by another 60,000 tons to 70,000 tons. Depending on the degree of balance between production and consumption, this stockpile tonnage will either reduce 1960's estimated world stock deficit substantially or could "even swing supply in excess of demand." The Bureau doubts that "the synthetic-naturals, cispolyisoprenes and cispolybutadienes will be producing enough volume in 1960 to affect the natural rubber supply-demand position." It says that if its estimates for 1959 are correct, more natural rubber will be consumed than will be produced during the year with a consequent reduction in world stocks. The Bureau's latest estimates for 1959 total world consumption and production of natural and synthetic rubbers are as follows:

ESTIMATES FOR TOTAL WORLD PRODUCTION AND CONSUMPTION OF NEW RUBBER FOR 1959

(in 1,000 tons)

	Consumption		
	Natural	Synthetic*	Total
U.S.A.	540	1,060	1,600
Rest of the world	1,510	440	1,950
	2,050	1,500	3,550
	Production		
U.S.A.	—	1,320	1,320
Malaya	700	—	700
Indonesia	700	—	700
Rest of the world	590	250	840
	1,990	1,560	3,560
Estimated sales from Government stockpiles**	20	—	20
	2,010	1,560	3,580

* Does not include the Soviet bloc or Chinese production and consumption of synthetic rubber.

** Based on 16,000 tons for the U.S.A. and 4,000 tons for the U.K. for the fourth quarter of 1959.

On the consumption side, the Bureau says that it may be somewhat optimistic with its record figure of 1.6 million tons for the U.S.A. On the other hand, the estimate for the rest of the world is on the conservative side and might offset a lower U.S. consumption figure.

Replanting in Malaya

Malaya's record achievements in the field of replanting and new planting of high-yielding rubber are worth noting. The table below shows the strides which have been made in the smallholders' programme instituted in 1953.

REPLANTING AND NEW PLANTING—MALAYA (ACRES)

Year	Estates	Smallholders	Total
1947	26,100	4,500	30,600
1948	52,100	4,000	56,100
1949	59,800	4,400	64,200
1950	48,800	7,000	56,800
1951	73,000	9,300	82,300
1952	58,800	11,000	69,800
1953	34,500	35,800	70,300
1954	46,200	25,900	72,100
1955	67,600	33,400	101,000
1956	93,100	59,600	152,700
1957	92,400	61,100	153,500
1958	80,000	62,600	142,600
1959	80,000*	70,000*	150,000*

* Estimated—The smallholder estimate at 70,000 acres should be considered as conservative as applications to replant during 1959 totalled 136,000 acres as on 31st January, 1959.

When it is realised that the overall average individual smallholder plot is between five and six acres only, it is evident that a major job has been accomplished by education and persuasion in convincing the smallholder to replant and sacrifice his income for seven years until the high-yielding trees mature. The planting grant of the equivalent of $(U.S.)200 an acre provides some income but a sizeable portion is absorbed in replanting costs.

Replanting Scheme in Ceylon

Ceylon with a total planted area of some 665,000 acres in rubber embarked on a five-year replanting scheme in 1953. It was financed by an export tax and, at the end of 1957, some 90,200 acres had been replanted. At the conclusion of this period, a new five-year scheme was instituted with the hope of replanting an additional 110,000 acres by the end of 1962. More than 24,000 acres were replanted in 1958. The second scheme (1958-62) was estimated to cost Rs. 2 crores or $(U.S.)520,000 a year, of which the Chinese Government, under the economic aid agreement signed in Peking between the Governments of Ceylon and China on 19th September, agreed to give Ceylon economic assistance to the value of Rs. 1.5 crores annually for the five-year period to meet part of the cost of the scheme. The Ceylon Government agreed to meet the balance of approximately Rs. 50 lakhs from Ceylon Treasury funds. The subsidies paid by the Ceylon Government to the rubber area proprietors are as follows:

	Per acre Rs.
Estates over 100 acres	700
Estates between 100 acres and ten acres	900
Smallholdings less than ten acres	1,000

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for November 1959:

Upper Assam: The cold weather has set in and the season is practically closed; outturn about normal but poor in Tingri.

Central Assam: Cold weather conditions prevail; the season has practically closed; outturn about normal.

Lower Assam: Weather seasonable; outturn about normal; the cold weather has set in and the season is practically closed.

North Cachar: Cold weather has set in and the season is practically closed; outturn poor; helopeltis prevalent.

South Cachar: Cold weather is interfering with outturn which is below normal; crop prospects generally are unfavourable; helopeltis prevalent in Hailakandi.

Eastern Doors: Outturn about normal; the cold weather has set in.

Central Dooars: Outturn about normal; the cold weather has set in; blister blight prevalent in Dalgaon.

Western Dooars: Outturn normal but poor in Dam Dim; the cold weather has set in and the season is practically closed.

Darjeeling: Outturn poor; weather seasonable; the season has closed.

Teral: Cold weather has set in; crop about normal; some helopeltis and blister.

GUNNY AND FIBRE PRICES RISE SHARPLY

FUTURES MARKET AUTHORITIES FIX MARGIN DEPOSITS

THE sharp rise in gunny and fibre prices during the past week was not unexpected, although w anticipated that the advance would be on ch a large scale or so quick. The origin of the end appeared to come from the fibre side, where llers' ideas were very bullish. These views ere based on the fact that upcountry markets ere still very steady, and imports in many aces were negligible. Operators in most cases ithdrew almost completely from the market. ills in general stayed out too, although some ndian-owned groups supported the rise almost ily, and covering business against cancelled ntracts helped maintain rates. At the higher tes prevailing towards the close, however, llers' offers increased, and more jute was put than had been seen for some time. This conadicted the sellers' contention that there is a arcity of jute.

During the past ten days, Pakistani cuttings ceived a great deal of attention. A fair amount business was done in this category following e issue of import quotas for the December eriod, and, as is often the case, contracts were so completed for January-March shipment cutngs subject to the issue of licences. However, mours began that India and Pakistan might gn a barter agreement in which the import of kistani cuttings into India would be prominent. he market in general had been advocating this ove for some time, as there was a heavy demand r Pakistani cuttings due to the fact that, apart om them being considered superior to Indian ttings, they were half the price. The latest mours proved to be an unsettling factor, and ith mills showing more interest in forward deliry cuttings in anticipation of receiving increased otas, prices shot up about Rs. 15 a bale in a few ys. This still made them an attractive proosition over local cuttings, as the indigenous riety also advanced by about Rs. 12 a bale over e period. The figure mentioned for the barter greement was around 50,000 tons, but there was confirmation from any quarter.

Further Fall in Mill Stocks

The publication late on Saturday of the gunny ock figures for November was another bullish ctor. Although stocks were expected to decline, e final figures came as a surprise. Total stocks ll by 6,800 tons to the extremely low level of ,200 tons. This was the lowest figure since ecember 1955, and November 1959 was the tenth nsecutive month that stocks had fallen. The ost surprising and welcome factor was the deine of 3,800 tons in sacking stocks, bringing them wn to 29,700 tons. This was believed to constite a new low level for the industry, and was ly a little under three weeks' output. The deine was the more remarkable considering that er the past few months nearly 10 percent of tal production had been transferred to this nstruction. When the loomage was increased 2½ percent on 24th August this year, most of was absorbed by sacking to meet the increased mand for heavy goods. At the time the inease was announced, it was stated that it was r a limited period only, and that the 2½ percent oms would be re-sealed on 2nd January, 1960. is was designed to prevent undue speculation the new year. It now looks as if these ideas ay have to be revised, as many think that stocks, rticularly sacking stocks, are at a dangerously w level, and that the present loomage should maintained.

The outlook for hessians also appeared to be ight. November stocks dropped by 2,500 tons 26,600 tons, which was 40.8 percent of the whole d less than three weeks' production. In view the fact that overseas demand had been very nited in recent weeks, the trend was considered couraging, particularly since purchases by the rgentine had been on a much smaller scale than ring previous years. It was still not possible assess the demand from the U.S.A., as it pended mainly on the U.S. steel industry. The erim working period in that industry will soon coming to an end, and there does not yet pear to be any solution to the dispute. If a ttlement of the strike can be reached in the ar future, there is a possibility that the demand hessians may be heavy. This is a further ctor to consider in the case for the retention the present loomage basis. There was very tle change in the stocks of miscellaneous goods. ese fell by 500 tons to 9,900 tons (the lowest ce November 1957), but their percentage inreased to 15.

Substantial Business

The high price of jute goods was an attraction mills, and several reports of substantial busiss were received. Although at current prices ultaneous business in jute and gunnies was not rticularly attractive, most mills were long in e bought at much cheaper rates, and could ow a substantial profit on the average price.

During the past week, hessian prices advanced by neary Rs. 35 a ton and almost kept pace with the Rs. 40 a ton rise in fibre prices. Heavy goods lagged behind and only showed a Rs. 15 a ton rise. In spite of this, sacking prices were at their highest since about the end of August 1959. Speculative activity was particularly heavy and prices fluctuated wildly in the futures markets. In an attempt to curb this tendency, it was reported towards the close that the East India Jute and Hessian Exchange Ltd had reimposed margin deposits. This had a sobering effect on prices after the official closing of the market at the end of the day's business. The new margin deposits were Rs. 2 a maund in raw jute should the price go above Rs. 29; Rs. 5 a 100 bags in B Twills should the price rise above Rs. 105.50; and Rs. 2.50 a 100 yards in 40in. 10oz. hessians should the price rise above Rs. 41. As a protest against this, local traders refused to operate, and on Wednesday morning, both the raw jute and the gunny markets were officially closed.

Raw Jute Business

In raw jute, most preferred to leave the market alone. The only interest came from those who were reported to be short of jute, and those who were covering against cancelled contracts. As expected, a large percentage of the mesta contracts due for November were cancelled due to the sellers not asking for extensions, although in nearly all cases the buyers were prepared to grant this facility. Large market differences were payable on these contracts, but sellers were of the opinion that prices would not fall back to the former levels. They preferred to pay the differences and get the higher price for any fresh sales they may make. At this time last year, Daissee mesta was priced at Rs. 17.75 a maund, which was

THE JUTE MARKETS

The futures market saw increased activity over the past week, and prices fluctuated rapidly. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 2nd December to 8th December, were as follows:

	Hessians 40in. 10oz. February 1960	Sacking B Twills February 1960	Raw Jute December 1959	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos
Opening	40.52	44.31	104.50	26.46	70.59
Highest	41.80	45.70	107.05	27.74	74.32
Lowest	40.24	44.00	103.85	26.46	70.39
Closing	41.66	45.55	197.00	27.74	74.32

Manufactured Goods: The market received a slight setback at the opening last Thursday due to heavy selling pressure in the futures section. Heavy goods lost about 50nP and hessians 10nP or 15nP. Opening quotations on Thursday morning were based on B Twills at Rs. 104.75 for December shipment and Rs. 103.75 for April-June shipment. In hessians, 40in. 10oz. opened at Rs. 40.35 for December and Rs. 40.55 for April-June. During the day, there was very little activity, and the continued absence of overseas orders caused a quieter tendency to prevail. Up to Saturday morning, prices showed only minor gains and losses. Over the week-end, however, a stronger tendency developed as a result of increased prices for raw jute, and considerable advances were recorded. B Twills jumped by 90nP to Rs. 106.40, and 40in. 10oz. hessians moved up by 65nP to Rs. 41.10, the ready position now going into a slight premium over forward goods, which only improved by 35nP. Heavy speculative activity throughout the day caused a steady rise, and at one stage B Twills rose above Rs. 107. With the market showing signs of soaring, the directors of the East India Jute and Hessian Exchange Ltd announced new margin deposit rates late on Tuesday. For B Twills, these amounted to Rs. 5 should business be conducted above Rs. 105.50, and for hessians 40in. 10oz. they were Rs. 2 for business over Rs. 41. A similar margin deposit was imposed on raw jute transactions over Rs. 29 for Assam Bottoms. In protest against these new impositions, operators refused to trade and the market was officially closed.

Quotations, therefore, were purely nominal, and on Wednesday morning were as follows:

	December	Jan.-March	April-June	July-Sept.
40in. 8oz.	33.20 (36.18)	33.20 (36.18)	33.15 (36.12)	32.90 (35.85)
40in. 10oz.	41.20 (44.91)	41.35 (45.07)	41.40 (45.12)	41.15 (44.85)
B Twills	106.50	106.25	105.75	105.00
Heavy Cees				
(Plain)	106.25	105.50	105.50	105.00
A Twills	130.25	127.50	126.50	126.00
Liverpools	118.50	117.50	117.00	116.25
Cornsacks	106.25	106.75	106.50	105.75

Raw Jute: The fibre market opened on a steady note due to the paucity of arrivals in the upcountry agencies, and the widening of the gap between Calcutta rates and those upcountry. In spite of the high prices, mills continued to buy in the agencies, but refused to do business at Calcutta rates. Some business was done in Calcutta, however, by mills who were reported to be short of jute, and also by buyers covering against cancelled contracts. Sellers were reserved for all categories of fibre and only small lots were on offer. At the opening last Thursday, Assam Bottoms were quoted at Rs. 26.50 but by Saturday they had advanced to Rs. 27. Heavy speculative activity in both jute and gunnies over the week-end saw Assam rates advance a further 50nP. The market continued to display a firmer tendency with rates touching a new high level of Rs. 28 on Tuesday. Speculative activity continued to play a prominent part in the daily proceedings, so much so that at the close on Tuesday the East India Jute and Hessian Exchange Ltd announced the imposition of fresh margin deposits against transactions in both raw jute and gunnies. For the fibre section, these amounted to Rs. 2 a maund on transactions above Rs. 29. Forward quotations in the futures market since the week-end had been ruling above this level, so an effective brake was put on further speculative activity. In protest, local operators ceased activity and the raw jute market was officially closed.

During the past week, business was reported in Assam jute at Rs. 27 to Rs. 28 and in Northern jute at Rs. 26.50 to Rs. 27.50. Murshidabad Tossa passed at Rs. 27.75 and selected Daissee and Tossa at Rs. 28.50 to Rs. 29.50. Daissee mesta was done at Rs. 24.50 to Rs. 26.50, and Northern mesta at Rs. 26.50. Small lots of Pakistani cuttings were also reported at between Rs. 63 and Rs. 66 a bale for January-March shipment, subject to the issue of licences.

Wednesday's quotations were nominal as follows:

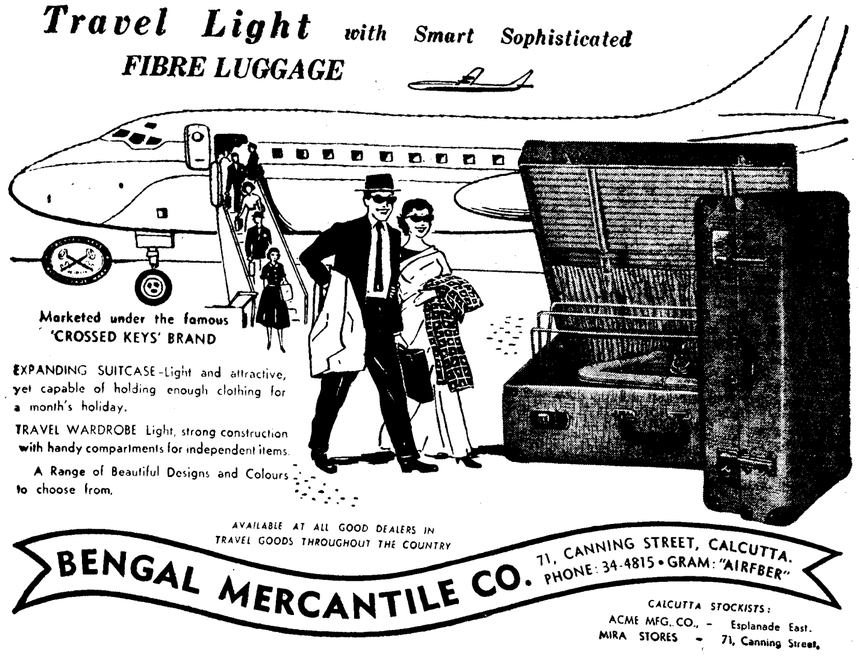
	Landed at Mills (Basis Bottoms) Rs a maund	Rs. a 100 kilos.	Shipment.
Assam	28.00	75.04	Dec.-Jan.
Northern	27.00	72.36	"
Purnea Desal	26.50	71.02	"
Daissee Selected	29.25	78.39	"
Assam Tossa	29.00	77.72	"
Northern (ex Calcutta)	26.75	71.69	"
Mesta:			
Assam Northern	26.50	71.02	"
Desal	26.75	71.69	"
Daissee	26.50	71.02	"
Jungli	25.75	69.01	"
Indian Cuttings	112.00 a bale		"
Pakistani Cuttings	63.00 a bale		"

THE FOREIGN JUTE MARKETS

LITTLE BUSINESS IN MANUFACTURES

(FROM OUR DUNDEE CORRESPONDENT)

SINCE prices for jute yarns and cloth were advanced by approximately £5 a ton on 25th November, there has been very little fresh business done. Spinners and manufacturers here, however, are very busy and likely to be so until well after the New Year. Unless there are signs of any further rise in the prices for manufactures, transactions in these will be very limited. All consumers bought freely before the advance took place, but they could buy again if necessary. The raw jute market in Pakistan is very firm indeed, and there are always some shippers quoting higher prices from day to day. The variation between sellers continues, the gap between the highest and lowest being considerable. Mill Firsts, for instance, are from £114 to £118, Mill Lightnings £96 to £102, Mill Hearts £83 to £88 and Grade Hearts £68 to £70, while dark jute is from £94 to £96 for good marks of Daissee-2/3 and £88 for Grade, with Grade Tossa-2/3 from £107 to £114 and fours from £96 to £100, December-January, c.i.f., U.K.-Continent. It is reported that Continental spinners are nibbling away at the raw material, picking up parcels where suitable material is offered. An occasional bargain comes along when sellers are disposing of Mill Lightnings on spot at £92 and £92 10s, which has been done.



There are adverse reports coming from Pakistan on the quantities of jute arriving from upcountry. These are small for the time of the season and this, added to the information that the acreage this season has been restricted, helps keep prices for the fibre very firm indeed. The Calcutta goods market has been slightly irregular, with occasional weakness shown.

I.J.M.A. STOCK FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports that the total stocks of jute goods at the end of November were as follows:

Description	30th November, 1959 Lakh Yds. (0·9 Metres)	000 Tons (000 Metric Tons)	31st October, 1959 Lakh Yds. (0·9 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (0·9 Metres)	000 Tons (000 Metric Tons)	30th November, 1958 Lakh Yds. (0·9 Metres)	000 Tons (000 Metric Tons)
Hessian Cloth and Bag	9.53	26.5	10.49	29.1	−.96	−2.5	6.47	17.3
	(8,71.51)	(27.0)	(9,58.89)	(29.5)	(−87.38)	(−2.5)	(5,91.94)	(17.6)
Sacking Cloth and Bag	6.78	28.7	7.63	32.5	−.85	−2.8	18.23	75.5
	(6,20.35)	(29.2)	(6,97.29)	(33.1)	(−76.94)	(−3.5)	(16,76.04)	(76.7)
Others		9.9		10.4		−0.5		12.6
		(10.1)		(10.6)		(−0.5)		(12.8)
Grand Total		65.2		72.9		−6.8		105.4
(000 Tons Metric Tons)		(66.5)		(73.2)		(−6.9)		(107.1)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

Engineering and Transport

THREE INTERNATIONAL AIRLINES REACH SERVICE POOL AGREEMENT

NEGOTIATIONS WITH LOCKHEED FOR MANUFACTURE OF TURBOJETS

(FROM OUR NEW DELHI CORRESPONDENT)

THE three international overseas airlines of India, United Kingdom and Australia—Air-dia, B.O.A.C. and Qantas, respectively—have ached an agreement to co-ordinate their opera-ons in a drive to expand their share of the orld's international air traffic in the present jet e. The agreement has to be ratified by the rlines' boards and the three Governments. It ill come into force on 1st April, 1960. The air-ie network involved extends from London east-ard to India, Australia, Hongkong and Japan and estward from London to New York, and thus vers a very large part of the world's air trans-rt systems. By joint planning of operations and -ordination of reservations systems, the three irtners in the agreement will offer the travelling blic service through the travel centres of the orld. Tickets of the three airlines will be freely ter-changeable and each airline will sell the rvices of the others.

Each airline will retain its own identity and dividuality. Under the agreement each partner rline maintains its complete independence and s right to develop its own future and provision made for the development of promotional ser-ces. Each airline will continue to exercise its ght to choose the best aircraft for its purposes its own judgment. The British Overseas Air-ays Corporation and Qantas Empire Airways ready have jet fleets in operation and Air-India ternational will introduce its large *Boeing* in pril.

A joint statement issued by the three airlines ys that the agreement opens up the prospect a whole new era of expansion and service to e public bringing with it new career opportu-ties for airline staffs.

Pan American Boeing Service

Pan American Airways has applied for the overnment's permission to operate one *Boeing* rvice through New Delhi every week. In the ature of things, the airline will not be able to rry its full load through Delhi. This is due to e unsatisfactory nature of New Delhi's airport. his airport was originally developed by the dian Air Force, which maintains its full control er it. Many a time, a civilian aircraft has to rcle round to enable a military aircraft to land the airport. Experience has shown that it is e most suitable airport for civilian purposes. he creation of another airport, however, is being ld up, among others things, for financial reasons. *via media* was found under which the Civil viation authorities were to build a new runway r the *Boeing* traffic. Even this appears to have en postponed. Meanwhile, the *Boeing* traffic ill start by the end of this month. The inter-ational airlines are forcing the Government to ach a decision. T.W.A. has applied for an addi-onal weekly frequency through India, which is ing considered.

Lockheed Offer to India

Representatives of the Lockheed Aircraft orporation are here, discussing the basis of their oject report to manufacture turbojet aircraft in dia as replacement for *Dakotas*. Their terms, hich are described here as attractive, include e use of the Rolls Royce Dart engine, to set up factory capable of developing the manufacture jet aircraft, taking a 40 percent share in equity apital which will pay for foreign exchange for e project and giving the right to India to sell e India-made aircraft in south-east Asia. An conomic factory should manufacture at least 150 rcraft a year. As India already has an agree-ent to manufacture *Avros*, the question which being examined here is whether a second rcraft factory will be economically feasible. leanwhile, the project report is being examined y technical experts.

Winter Services of European Airlines

According to A.B.C. *Airways Guide*, from 1st ovember, 1959 to 31st March, 1960, the European irlines' winter timetables will be in operation.

Air France has extended the operation of its *aravelle* jetliners. Almost all lines to the Middle ast are now flown with these aircraft and the rvice to Istanbul is extended to Ankara; Milan now served by one of the several weekly flights etween Paris and Beirut. Other routes to which e *Caravelle* is now introduced are those between rance and Switzerland and between France and ustria *via* Munich. Information has just been eceived that Air France will open a six-times-a-eek *DC-3* service between Paris and Strasbourg.

Alitalia's inter-continental routes are operated roughout the winter with little change, the only equency reductions being on the lines to the nited States on which there will still be nine ights in each direction every week. Frequencies n the carrier's international routes within Europe are virtually unaltered and most domestic services within Italy are maintained although there are fewer flights on certain of these routes.

British European Airways will maintain all its regular lines to the continent with only slight variations in frequencies apart from the seasonal withdrawal of purely holiday routes. An interesting feature is that the trunkline domestic services show very little change over those operated during the summer months. It is learnt that B.E.A. has already taken delivery of the first of its *Comet 4B* fleet and that further units will follow very shortly. It is planned to place the *Comets* in regular service when summer timetables are introduced on 1st April next year, but in the meantime, B.E.A. hopes to operate them on certain routes on an *ad hoc* basis.

K.L.M.—Royal Dutch Airlines will be placing Lockhead *Electra* aircraft in service progressively during the next few months. The first routes on which *Electras* will appear are those to the Middle East and, mid-December is set as the inaugural date for the turbo-prop service. The change in equipment has occasioned considerable alterations both to the Middle Eastern and Far Eastern routes of K.L.M. On the north Atlantic route, all flights will now be operated with *DC-7C* aircraft, all of which provide both first and economy class accommodation and some also *de Luxe* service. K.L.M. has announced certain improvements in facilities offered to first-class passengers on its inter-continental routes, and, in particular, between Europe and north America as well as the availability of alcoholic beverages for sale to economy class passengers on the north Atlantic

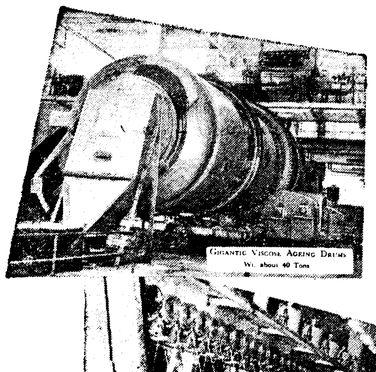
routes. The principal change in the European services of K.L.M. is the opening of a new service flown twice each way every week-day between Rotterdam and London.

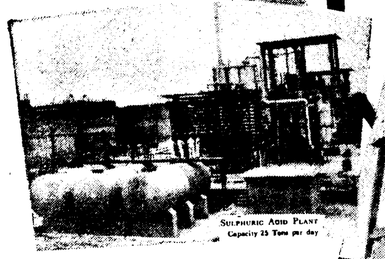
Lufthansa German Airlines' chief innovation this winter is the opening of a new twice-weekly service to the Far East. The route is from Hamburg *via* Dusseldorf and Frankfurt through Rome and Cairo to Karachi, Calcutta and Bangkok. On the north Atlantic route, there will be 11 flights each way weekly, two of which carry *de Luxe* and first-class passengers and are known by the title of "The Senator". All other flights carry first, tourist and economy class passengers. Lufthansa has now taken over the operation of all the early morning flights from London to Frankfurt, together with the late evening return from Frankfurt to London, thus offering daily connections at Frankfurt in both directions with services to and from the Middle and Far East. The daily Paris-Frankfurt service is extended to and from Nuremburg.

Scandinavian Airlines' winter timetable reflects a reduction in frequency on the north Atlantic route to 14 flights each way a week. All are operated with *DC-7C* aircraft and, with the exception of two *de Luxe*-first class services, provide accommodation for both first and economy class passengers. On the polar route between Scandinavia and the west coast of the United States, there is a slight frequency reduction to six services a week in each direction. There has been no change in the number of services operated on the other inter-continental routes of S.A.S., but schedules have been modified, particularly those for lines to the Far East. The principal change to the European network of S.A.S. is the seasonal withdrawal of night tourist flights; in other ways, these routes are operated with little alteration.



Swissair flights on the north Atlantic route is operated daily from 1st November with first and economy class accommodation on all aircraft. There will be an additional weekly flight in each direction, the "Atlantic Super Swiss" which also offers *de Luxe* accommodation in addition to the other two classes. Services to and from South America and the Far East are virtually unchanged, but there is a slight reduction in the number of weekly flights between Switzerland and the Middle East. Within Europe, the main innovation is the introduction of *DC-7C* aircraft to supplement *DC-6B's* on the lines between London and Zurich. Night tourist services will again be provided from mid-December onwards for the winter sports season.

Pan American World Airways has now introduced the long-range version of the *Boeing 707* jetliner known as the "Inter-Continental", which has a range of 5,000 miles, and is thus able to fly non-stop in either direction across the north Atlantic under any weather or wind conditions. This aircraft is now operating on the polar route between the U.S. west coast and London and will be progressively placed in service between New York and London until by December there will be twice daily flights with these aircraft. Non-stop flight times will be six hours and 25 minutes eastbound, and seven hours 35 minutes westbound. Acquisition of these additional aircraft has enabled Pan American to extend its "Jet Clipper" service eastward across Europe and through India to the Far East. At present, jet service from New York to Tokyo by this route is once weekly in each direction; a weekly jet service across the Pacific connects at Tokyo with these flights.



RISE IN ENGINEERING GOODS EXPORTS

EXPORTS of engineering goods during the first ten months of 1959 have shown a significant improvement, compared with the same period last year. Exports during the period by sea route only, excluding pig iron, totalled Rs. 4.4 crores, compared to Rs. 3.25 crores during the corresponding period in 1958, showing an improvement of 35 percent. Adding to it the exports of Rs. 30 lakhs by land, the total comes to Rs. 4.7 crores. Exports of electric fans, sewing machines, diesel engines, textile machinery, oil mill machinery, crown corks, hand pumps, cutlery and E.P.N.S. ware have been very encouraging. Items like hand pumps and crown corks have shown a remarkable increase, exports being Rs. 6.07 lakhs and Rs. 7.88 lakhs, respectively, in the first ten months in 1959, compared with Rs. 0.23 lakhs and Rs. 0.40 lakhs, respectively, in 1958.

It is significant that in addition to the traditional markets in south east Asia, west Asia and east Africa, a regular export has now been established with some of the highly industrialised countries of the West like the U.K. and the U.S.A. For instance, the U.K. is the biggest single buyer of India's sewing machines. Some 37 percent of the total export of these going to the U.K. The machines are also being exported to the U.S.A., Belgium and Canada, too. Diesel engines are also being exported to the U.K.

J.K. HAS DONE IT

A FACTORY IN FIVE MONTHS

The world's most modern Chemico-Textile Plant comprising of Sulphuric Acid Plant, CS_2 Plant and Viscose Filament Plant, capacity 5 tons Rayon thread per day, was put up in Kanpur within five months.

A RECORD HARDLY ACHIEVED IN FOREIGN COUNTRIES

J. K. RAYON is the FIRST INDUSTRY of its kind in Uttar Pradesh. Established to give employment to hundreds of technicians and chemists, it supports thousands of handloom weavers who are manufacturing cloth from Rayon yarn.

It bids to--

SAVE FOREIGN EXCHANGE TO THE TUNE OF Rs. 1·2 CRORES PER YEAR at its present production.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) receded by 0.8 percent to 117.9 during the week ended 21st November, 1959, compared with 118.8 for the earlier week. The index was lower by 1.2 percent when compared with the corresponding week of the previous month but was higher by 4.2 percent than that of a year ago. Lower prices of rice in Imphal (−14%), in Tihu and Jeypore (−10% each) and in Jayanagar (−5%), bananas in Nagpur (−10%), milk (−9%), gur in Muzaffarnagar (−6%), fish and meat (−5% each), maize, masur and urad (−3% each), ghee, black pepper and turmeric (−2% each) and barley, arhar and potatoes (−1% each) brought down the index for Food Articles by 1.3 percent to 120.9. The prices of rice in Raipur (+7%) and in Nellore, (+5%), bananas in Bombay (+7%), jowar in Mohal and Coimbatore (+5% each) onions (+4%), eggs (+3%), gingelly oil and coconut oil (+2% each) and groundnut oil (+1%), however, witnessed an increase. The index for Tobacco also receded by 1.2 percent to 102.9 due to a fall in the prices of raw tobacco (−2%). The index for the Fuel, Power, Light and Lubricants group worked out to 116.5, against 116.4 for the previous week. The prices of castor oil (+1%) moved up during the week. The prices of raw silk and cottonseed (−2% each) and raw wool, groundnuts, castorseed and lac (−1% each) showed declines, while those of bamboos (+21%) and copra (+1%) were marked up and, in consequence, the index for the Industrial Raw Materials group fell by 0.2 percent to 122.2, against 122.5 (revised) for the previous week. The index for Industrial Products rose by 0.6 percent to 116.8, compared with 115.6 (revised) for the previous week as a result of an increase in the prices of zinc (+4%), coir yarn (+2%), and linseed oil, cotton yarn and lead (+1% each). The index for Finished Products remained unchanged at its earlier week's level of 110.9. Items which showed variations during the week were silk and rayon manufactures (+1%) and oilcakes and bricks and tiles (−1% each).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53=100)

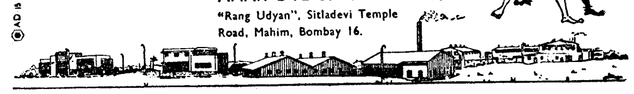
SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, the total output of sugar for the season 1958-59, as on 31st October, 1959, was 1,917,000 tons, against 2,026,000 tons by the same date of the last season. The total offtake from factories, including despatches for export in the season 1958-59, as on 31st October, 1959, was 2,105,000 tons, against 2,075,000 tons during the corresponding period of the last season. Total closing stocks of sugar with factories on 31st October, 1959, was 150,000 tons, against 329,000 tons on the same date of the last season. This does not include new season's sugar produced prior to November 1959.

the never-ending ADC Search!



Industrially, India is a young country, but with continuous research, determination and enterprise, there can be no doubt that it will not be long before the land of our birth grows up rapidly to take its rightful place among the industrially advanced nations of the world. ADC with its ever increasing activities endeavours to add to the wealth of the nation.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 23, held on 7th and 9th December, the offerings at the Export auction amounted to 71,170 packages. There was a good general demand at fully firm to dearer rates for clean broken grades, but plain and orthodox Fannings eased by 4nP to 8nP. C.T.C. Assams sold well, but were up to 10nP easier, the s condary grades and plainer sorts being less strong than in recent weeks. Nonwither Legg-cut descriptions were a little irregular and 2nP to 4nP easier. Medium orthodox B.O.P.'s and O.Fgs. were also a little irregular and often easier, particularly O.Fgs. Whole leaf grades were in demand at fully firm to dearer rates, while Darjeelings showed little change. There was a fair enquiry for tippy teas which sold readily.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.14 to 2.20	1.95
Plain B.P.	2.04 to 2.12	1.56 to 1.60
Plain Fannings	2.10 to 2.18	1.66 to 1.72
Medium B.P.	2.02 to 2.12	1.66
Medium Fannings	2.16 to 2.24	1.70 to 1.76
Best Assam C.T.C. B.P	2.70 to 2.90	2.10
Best Assam C.T.C. Fannings	2.70 to 2.90	2.20

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings amounted to 21,493 packages. There was once again a good general demand but the prices, for most descriptions, were easier. Orthodox Dusts were irregular and sold up to 4nP below last rates with the exception of the poorer kinds in this category which were firm and often dearer. Legg-cut teas also followed this trend. Darjeeling Dusts were in strong demand especially the smaller flavoury sorts, which were sometimes up to 20nP dearer. Medium C.T.C. Dusts were up to 10nP easier while the very best C.T.C.s generally sold at about last rates.

Quotations

	1959 Rs.	1958 Rs.
Medium Dooars Dust	2.10 to 2.18	1.12
Medium Assam Dust	2.06 to 2.12	1.74 to 1.76
Medium Assam C.T.C. Dust	2.10 to 2.24	1.85 to 2.05
Best Assam C.T.C. Dust	2.60 to 2.90	2.40 to 2.80

(Quotations are exclusive of excise duty.)

There were 915 chests of Leaf on offer, and these met with a good general demand.

BALTIC EXCHANGE AGREES TO HIGHER RATES FOR WHEAT

THE best feature of the freight markets during the past week was that the Baltic Exchange Chartering Committee accepted vessels at 77s 6d, which is 17s 6d a ton more for wheat from Pacific Coast to East Coast India. In the Far Eastern market also, a better tone was maintained. Chinese charterers paid 72s 6d a ton for cereals and generals from north China to the Antwerp-Hamburg range. Fixtures of ore parcels have been reported East Coast India-Poland at 63s 6d f.i.o. and trimmed, West Coast India to Constanza 51s f.i.o. and trimmed. A small vessel of 6,000 tons has been fixed, December position Bombay-Baltimore, manganese ore at $(U.S.)9.10 f.i.o. and trimmed. Time charter continued active.

LINSEED EASIER

There was little change last week, but due to poor demand for seeds and oil, a slightly easier tone has developed. Availability is still restricted and with only limited enquiries from local crushers, business has been negligible. With no appreciable stock held by either manufacturers or dealers in the oil market, prices have not shown much decline. The tendency is quiet. Latest quotations are based on: Ready-December Rs. 24.75 a maund; January Rs. 25 a maund and May futures Rs. 23.94 a maund.

HIDES AND SKINS FIRM

The market in skins ruled firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 1st December and 7th December, 1959)

Cowhides: Wet salted (Ord.) 6,300 pcs. on the basis of Rs. 11 to Rs. 14; Wet salted (Slaughtered) 18,900 pcs. on the basis of Rs. 13.50 to Rs. 16.50 and Rs. 19.50 to Rs. 29.

Goatskins: Wet salted (Daissee, Kustia) 62,000 pcs. on the basis of Rs. 470 to Rs. 490, Rs. 500 to Rs. 525; Wet salted (he-killed) on the basis of Rs. 6.12 and (she-killed) on the basis of Rs. 5.87 a piece; Assam-Dinajpur 76,700 pcs. on the basis of Rs. 415 to Rs. 480 and Rs. 500 to Rs. 530; Purneah-Monghyr-Kissenganj 13,000 pcs. on the basis of Rs. 505 to Rs. 525 and Rs. 530 to Rs. 545; Patna-Pakur (Ord.) Rs. 450 to Rs. 460 and Rs. 465 to Rs. 485; Muzafferpore-Patna 19,400 pcs. on the basis of Rs. 505 to Rs. 515 and Rs. 520 to Rs. 530.

Bazaar Stocks

(7th December, 1959)

Cowhides: Wet salted 152,800 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 35,500 pcs.; Assam-Dinajpur 51,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 45,500 pcs.

COMPANY AND PUBLIC NOTICES

MUTTRA ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the sixty-first Ordinary General Meeting of the Company) of the abovenamed Company will be held at its Registered Office, No. 15, Shib Thakur Lane, Calcutta-7, on Wednesday the 30th December, 1959, at 4-00 P.M., for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1959, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

72nd YEAR OF ISSUE — CALCUTTA, 17th DECEMBER, 1959. — Vol. CXXXXIII No. 3589

AMERICA VERSUS BRITAIN IN EUROPE

THE world has not yet measured the full consequences of the relative weakening of the U.S. dollar. The U.S.A. was often criticised, not always fairly, in the days of the perennial dollar shortage as being a "bad creditor" particularly because she did not increase her imports nearly as much as the strength of her currency would have allowed. Now that the tide has turned against the dollar, the traditional American tendency to import too little and export too much will become infinitely more noticeable. Washington has already set on foot vigorous campaigns for a reduction of discrimination against dollar imports, for a universal reduction of tariffs (this is the Dillon plan to be discussed by G.A.T.T. from the end of 1960), for the "tying" of U.S. aid to purchases in the U.S.A., for a transfer of the N.A.T.O. defence burden to the European members, and a variety of other measures that will correct the U.S. payments balance. One of the least expected consequences of the new American concern for the trade balance is that Washington is emerging as Britain's main opponent in London's tenacious fight for a west European free-trade area.

Why the Americans should be strongly opposed to this British scheme, already several years old, might not be immediately apparent; but the grounds of that opposition will appear on reflection—yet the Conservative Government does not appear to have seen the point in time. Up to now, Mr. Reginald Maudling and his colleagues have been able to explain their failure to convert the Continental Six to the free-trade idea by referring to the resolute and selfish opposition of French industry. France had accepted, in the Common Market, the opening of her protected economy to the onslaught of West German exporters, in exchange for the guarantees written into the Rome Treaty. She refused to open that economy further to the additional load of British exports, especially when Britain declined to give the same guarantees about equal social and fiscal conditions. The Conservative Government then made what is now universally admitted to have been a mistake: it launched an energetic campaign against the Common Market and particularly against the French Government. This was most forcefully expressed by Sir David Eccles, who has since been transferred to other functions for his pains. This campaign failed in its purpose, and the Common Market got off to a smooth start.

In the thick of this quarrel, London appealed to Washington for support against the Common Market, presenting her case as that of free trade against selfish protectionism, and thus as a case that the U.S.A. should naturally back. The lukewarmness of the American response was not sufficiently noticed at the time. Mr. Dulles, then still alive, simply replied that the U.S.A. was in favour of the Common Market and hoped not to see it adopt protectionist policies; but he said nothing in favour of the British free-trade area. Meantime, Britain went ahead with her answer to the Common Market, the little free-trade area of the Outer Seven—the U.K., Switzerland, Portugal, Austria and Scandinavia. The idea was that this organisation would develop exactly parallel with the Common Market, and by its competition would eventually force the latter to compromise or to fuse with it. This was a reasonable measure of self-defence, though one was entitled to have doubts about its ability to force an unwilling Common Market into a compromise. Washington, whose intervention was again sought, this time made its voice more plainly heard: it continued to favour the Common Market because of its political implications, but it took much less interest in the Outer Seven's organisation because it had no political implications.

During this time, the unbalanced state of American payments became more and more evident and the U.S.A. began thinking of ways to protect the dollar. For the first time it then took an unequivocal stand on European trade quarrels and indicated that it was no longer indifferent to Britain's proposals but positively hostile. This American judgement has not been pronounced officially, though the U.S. Press makes no secret of Washington's opinion. British thinking, which is recognised to have fallen out of date in an earlier stage of this quarrel, had best take account of the new American attitude before it is led up any more blind alleys. American judgements are by no means final in Europe's disputes, but they are of immense relevance. And at the present moment their tendency is to tolerate or positively encourage the Common Market, to frown on the Customs union of the Outer Seven, and to oppose by every means possible a fusion between the two that would produce a free-trade zone covering the whole of O.E.E.C. Europe.

The reasons for this attitude are simple. The gap has closed between a weakened dollar and a strengthened pound sterling. The Americans are naturally pleased with the improvement of sterling's position, which reinforces the whole western world, but, equally naturally, they have no wish to see that gap close further, to the point where sterling could come to challenge the dollar as the world's prime currency. To avoid that, they will oppose any reorganisation of European trade whose effect would be to weaken the dollar further, and to strengthen sterling further. An 18-nation free-trade zone, including Britain but excluding the U.S.A., would have precisely both those effects. Moreover, because Britain proposes to belong to this European free-trade zone while continuing to be the banker of the sterling area, the position of the dollar *vis-à-vis* sterling would have deteriorated in almost all the soft-currency part of the free world.

In the course of its campaign against the Common Market, London drummed home the lesson that any Customs union is inevitably discriminatory against non-members; that was the grounds of its attack on the six-nation Continental Customs union. It cannot be surprised that, now when it proposes to form an 18-nation Customs union, the Americans recall this lesson and point out that they would constitute the most notable non-member discriminated against, just when they are demanding a removal of discriminations against dollar goods. Obviously, a Customs union that included all western Europe, Britain, all the French Community and the Commonwealth and sterling area would be simply a new way of discriminating against dollar goods. Of course, London does not hope to achieve a literal Customs union covering all those regions, but it does hope to fit together (with Britain as the connecting link) two loose trading groups, one in western Europe and one in the Commonwealth. If these groups are to have any economic sense, it can only be that they discriminate more against goods from outside than against goods produced inside their boundaries—free-trade zones, common markets, Customs unions, etcetera, have no other possible significance. The Americans translate this as meaning that such zones or areas would be new machines for keeping dollar goods out of the soft-currency world.

Plainly, the Common Market is similarly discriminatory against dollar goods, but Washington has a dozen good reasons for not worrying about that. First, the area is smaller and the damage caused to U.S. exports is much less than would be suffered by the constitution of a west European free-trade zone. Second, the Common Market excludes Britain as well as the U.S.A., and the Americans do not mind suffering so much if the British suffer with them; whereas a free-trade zone that made sterling the supreme currency of half the free world would be intolerable to them. Thirdly, the Common Market has been astute enough to give very full guarantees about its future liberalism. It has undertaken, and begun, to reduce discrimination against dollar imports; it has backed the Dillon plan for tariff reduction; it has hinted that its common external tariff is not fixed but could be lowered; it has argued that it is resisting British free-trade zone plans simply in order to be able to make concessions to *all* countries, including the U.S.A.; and it has plans to take some of the burden of aid to developing countries off U.S. shoulders.

But above all, the U.S.A. supports the Common Market because it is politically committed to it by 15 years of consistent [illegible] in favour of European unity. The unifica[illegible] has been an over-riding principle [illegible] policy since before the Ma[illegible] Common Market is today the [illegible] ment of that policy. It could build an [illegible] Europe that would be capable of resisting the external Russian threat and the internal menace of communism, and it would anchor West Germany forever to the free world, as well as providing an increasing attraction to East Germany if ever that country were allowed to choose its destiny. It is no exaggeration to say that a politically united Continent—and economic unity will lead inevitably to that, despite the belated nationalism of such as de Gaulle—would halve the problems of American foreign policy. In view of these considerations, it is normal that the U.S.A. should contemplate with equanimity the most flagrant discriminations against dollar imports into the Common Market—and in fact, as we have just seen, the Common Market has undertaken not to practise such extravagant discrimination.

Compared with this, what are the attractions, from the American point of view, of the free-trade area? Politically, none. An association that includes neutral Switzerland and Austria, and near-neutral Scandinavia, clearly makes no political sense in terms of the world balance of power; and in any event, the British authors of the scheme emphasise that it is meant to be of purely commercial significance, leading on to no surrender of sovereignty, no co-ordination of foreign or defence policies. It nevertheless causes a certain amount of damage to American export interests, and that damage is unrequited. So much is true as long as the free-trade zone remains limited to the Outer Seven. If it is extended to all western Europe by a fusion of the Outer Seven and the Common Market, the damage to U.S. exports is vastly increased, while the political returns remain nil. Indeed, in so far as the incorporation of the Common Market in the larger and looser association would entail the dilution of the move towards political unity, there would be a political loss, from the U.S. point of view.

These facts are no truer today than they were three years ago when the European trade quarrel began. But in the interval the dollar has been seriously weakened, so that the U.S.A. is now much more sensitive to anything that handicaps her exports. In the context of the general American campaign in support of the dollar, a campaign that will gather intensity over the next two years, it is inescapable that the U.S.A. will do everything in her power to stop the formation of a Europe-wide free-trade area. The Common Market will continue to be encouraged as long as it gives the political returns expected of it. The Outer Seven will be watched from Washington with passive hostility. But any effort to fuse the two will encounter determined opposition. It might be unwise on the part of Britain and of the Commonwealth countries concerned with this question to place great hopes on their "Trojan horse", Dr. Ludwig Erhard, who continues to argue in favour of a free-trade area. His astute chief, Dr. Adenauer, appears once again to have a keener sense of present realities when he says, as he did to Mr. Macmillan in London lately, that the Common Market intends to follow a liberal policy and one that puts Britain and the U.S.A. on the same footing. This is the language that Washington wants to hear.

IKE PASSED THROUGH HERE

THE over-subtle Chinese mind can on occasions be unbelievably obtuse when it comes to interpreting other people's thoughts and actions. But it would be surprising if Peking decides that President Eisenhower's longest stay of his present tour of eleven nations was in India simply because he wanted to see the Taj or because this was the only way he could give himself some rest. Peking would probably be equally, and more dangerously, in error to think that India ever asked for any immediate military assistance from the United States or that the latter was unduly anxious to make such an offer. Those Indians, like Mr. Krishna Menon, who proclaim every other day that India must not join any bloc, never quite disclose just which bloc is trying to rope India in; it calls for no extraordinary intelligence to see that she would be a source of embarrassment rather than strength if she did join either bloc now as a full-fledged ally. In spite of some talk once of there being a price to be paid for neutrality—first by Stalin, and later by Dulles; both dead—the present balance of power would like to see India exactly as she is.

If anyone has done something to change this position, it is China; and if neither President Eisenhower nor Mr. Nehru has made any serious effort to conceal the fact the Chinese incursions into Indian territory were discussed by them, it is because China should be made to realise that, in the world as constituted today, she can no more have a "little" war to settle her score with India than Britain and France could with Egypt three years ago; and China's exclusion from the United Nations makes no difference. Both India and America owed it to China to let this be known in advance; and if Chinese propagandists decide to use it as a threat to their country, they are welcome. There has been far too much deference to Chinese sensitivity, misleading both China and India in contrary directions; and the time for some plain-speaking, of the kind Mr. Nehru has been indulging in, is surely now. Even as Mr. Nehru declared many years ago that India would not be neutral when freedom was in peril, it should be known in China that the great democracies will not be neutral either when India's freedom is in peril.

The Chinese must think that all the talk about greater American aid for India's economic development was only a facade for Mr. Eisenhower's attempts to bring India into the cold war, but, once again, China is grievously wrong. The Chinese approach to Russo-American efforts for a *détente* in Europe has always been rather ambiguous, but the rest of the world understands, with varying degrees of satisfaction or fear, that the two Powers are tired of the cold war and scared of what may follow; and so there is as much sincerity in Messrs Eisenhower and Khrushchev today as there can be in such a confrontation of two big powers. China's calculations are an enigma, but India has a vested interest in peace, for there is now a real probability that the vast sums spent by the mighty two on arms may be diverted to human benefit, and of mankind Indians comprise a good fifth.

Their reasons for saying so are obviously partisan, but Messrs Adlai Stevenson and Averell Harriman are not altogether wrong in suggesting that Mr. Eisenhower's tour has been necessitated by the State Department's failure to evolve a positive American foreign policy, that the tour will earn America great goodwill which will then be dissipated by the Administration's subsequent policies. It should be remembered that in less than a year's time Mr. Eisenhower will be out of the White House and that he already has a Democratic Congress to deal with. Then there are the inevitable though little-mentioned limitations of personal diplomacy. It is not for nothing that the communiqué issued in New Delhi on Sunday contained almost no specific agreement, that Mr. Hagerty has to fall over backwards to make it clear that there was never any question of the President "negotiating" with anybody on any particular question. The visit has corrected an unfortunate bias in India's posture of uncommitment, which is all to the good, but the concrete consequences of the pilgrimage to New Delhi have to be evaluated on a realistic basis, which can begin only after the President has returned to Washington and begun to do something about the discoveries he has made in various capitals. And he has not got an awful lot of time before him in which to get down to it.

The Indian part of the President's tour will have done both host and guest some good if it leads to the final abandonment of the fixed images each had of the other because of a nearly total lack of communication between the two peoples until after the second world war. Not many Indians may remember that it was in the United States that Swami Vivekananda made his greatest impact in the 1890's, thus uncovering a part of the American ethos usually believed to be dedicated to the "bitch goddess" of success. Admittedly on the west coast there is an enormous number of sham religions, deserving of all the contumely heaped upon the "*dharma* bums" by the sophisticated writers of the *New Yorker*; but it is naive to think that in America they live by Coca-Cola alone. *Per contra*, there is reason to suspect that in the American mind India's famous spirituality wears aspects hard to discover in the realities of Indian life today and even harder to find in modern India's aspirations to be a materially rich country. This is where exchanges could begin, for modern Indians find the terrible poverty of their people not only distressing but also humiliating. This aspect of the modern Indian's hurt pride has to be remembered in all dealings with this country; and it cannot be said that America has always in the past borne it in mind. By the same token, India has to abjure affectations of contempt for the American way of life.

Given mutual respect, there are not many reasons why Indo-American relations should not be generally good; and the President's entirely well-conceived tour may have helped. After all, both countries are democracies; and although the Indian Constitution, in its Cabinet form of government, is British in inspiration, it is well to remember that Britain is a small island. The magnitude and dimensions of India's problems are, in the American idiom, king-size; and it may well be wondered whether preoccupation with the British experience has not in some respects adversely affected the vision of Indian planners, divorcing them from realities. If it was relatively easy for Britain to create a welfare State, in the case of India the assignment has not only to be multiplied many times but also seen in a bigger and different perspective. A series of historical accidents brought Britain and India together but, in respect of population and size, India has much more in common with America; and Britain will be the happiest to see the utmost co-operation between the two countries. Britain is friend of both, and both are friends of Britain. Mr. Eisenhower brought to India, during his short stay, something of the atmosphere of Whitman's America—large, virgin, earnest, unexplored, full of possibilities, fresh and unaged. It is this kind of approach that is needed here rather more than the attitudes of the old and established societies of Europe.

THE TREND IN PAPER SHARES

THE downward slide of paper shares on the Calcutta and Bombay stock markets, which has been touched off by an enforced cut in the prices of the commodity from the beginning of 1960, seems likely to go a good deal further. The detailed recommendations of the Tariff Commission, in accordance with which the Government of India has decided to lower the prices, are disappointing. They will do no good either to the industry or the consumer. To begin with, the effect of the new prices will be more severe than had been anticipated earlier. Authoritative estimates indicate that the earnings of the paper mills will decline by from Rs. 130 to Rs. 1,000 a ton of paper produced. The price cut is heaviest for quality paper, so most of the mills will suffer greatly because expansion in recent years has largely been made with a view to producing those superior grades of which there is an acute shortage.

With the prospect of a big cut in the earnings of the mills, there is good reason for anxiety so far as the investor is concerned. The publication of the latest results of the paper mill companies shows how investors are likely to be hit by the new prices. If the mills' earnings are reduced substantially—as they will be by the cut—they may be forced to reduce their dividends considerably. In fact, a number of them may find difficulty in paying even a token dividend. The Indian Finance Act, 1959, has already placed heavier financial burdens on the companies by requiring them to deduct the prescribed tax on all dividends. So the outlook is far from encouraging. Reliable enquiries indicate that one leading company—whose scrip are considered "blue chips" in the market—will suffer an income loss amounting to over Rs. 70 lakhs a year. Judging from its latest balance sheet for the year ended March 1959, it is difficult to understand how a drastic cut in future dividends can be avoided.

It is loosely argued that a portion of the loss of income may be recouped by reducing the quality of production. Apart from the fact that the reputable companies may not like to do this, any encouragement in that direction could do a great deal of harm. The paper mills have up to now been encouraged to increase their output of those qualities of which there is an acute shortage. The trend is justified because, by importing quality paper at higher prices, a larger amount of foreign exchange has to be spent. So it is not fair that producers should be penalised—as they have been by a heavier cut in the prices of superior paper—because they have gone in for greater production of the quality grades. It is possible, therefore, that henceforth investors may not be quite as keen on the paper industry, as they have been. This will impair the health of both the existing and the new units. The established companies will find it difficult to obtain money for expansion and renovation. With a cut in their earnings, they cannot be expected to plough back as much money into the business. The new companies may not find it easy to attract money, as few will care to take the risk of an industry in which the profit-earning potential has been substantially reduced.

The Tariff Commission's recommendations are apparently based on the plea that the cut in the ex-mill prices will help reduce prices to the consumer. This is most unlikely to happen. Once the paper passes out of their hands, there is scarcely anything the mills can do to ensure that consumers pay a reasonable price for the commodity. So long as a shortage continues, the distributors are bound to take advantage of the situation and go on selling the commodity at the highest possible price. To blame the industry for increased market prices does not seem quite fair. The mills can do little to regulate prices to the consumers, because the distributive channels are too complicated. At best they can watch the activity of the distributors, but this is unlikely to produce any lasting benefit. The official claim that the industry has increased the ex-mill prices many times in contravention of its undertaking to the Government, is not corroborated. There is no evidence to indicate that the industry has ever given any promise not to increase the price without consulting the Government. Quite apart from this consideration, the increase in the ex-mill price during the past eight or so years has been only marginal in character, and the rise is probably more than justified by the increased costs of production.

If fair prices are to be ensured for consumers, it is necessary to increase supplies. If indeed there is a shortage of paper, it should be made good by increased imports, especially of the ordinary printing and writing papers. By doing so, supplies can be increased with the least expenditure of foreign exchange, as the price of this kind of paper is about the cheapest. So the move to import such paper through the State Trading Corporation may be of some value. Meanwhile, the domestic industry must be encouraged to produce more of the expensive, quality paper. The progress in the production of superior grades, which has so far been made, should not be allowed to slow down. For this it is necessary that the price cuts be reconsidered.

PRIVATE COMPANIES: THE TAX PINCH

THE November 1959 issue of the *Reserve Bank of India Bulletin* carries an interesting analysis of how private limited companies have been faring in recent years. The analysis covers 333 such concerns, none of which are financial institutions or Government companies; excluding these latter, the 333 represent about 30 percent of the paid-up capital in the remaining private limited company sector. A comparison is made of the financial statistics of these companies for the years 1955, 1956 and 1957. Although the conclusion which emerge are largely in accordance with earlier impressions, they are made more acceptable now by their statistical validity.

Economic activity generally expanded steadily from 1955 to 1957, but the expansion was faster in 1956 than in 1957. It is, therefore, natural to find that the sales income of the companies increased, but at a slower pace in 1957 than in 1956. The sales income of coal, cotton textile, and silk and woollen textile companies actually decreased in 1957, reflecting the acute difficulties faced by these industries. Electricity and shipping companies, however, increased their sales income considerably, no doubt because of a big expansion in capacity. Unfortunately, for all the companies taken together, the increase in sales income was largely offset by a rise in expenditure. Raw material and manufacturing expenses were bigger, and salaries and wages also rose, the increases in all these cases being slower in 1957 than in 1956. The companies paid more excise duty, and more by way of interest.

As a result, profits before tax, which had risen by over Rs. 2 crores to Rs. 13.2 crores in 1956, increased to only Rs. 13.8 crores in 1957. Notable contributions to the increase were made by trading, chemical and engineering companies. Sugar, coffee and rubber concerns earned less, while coal, cotton textile and shipping companies actually showed losses. The tax provisions made by the 333 companies rose sharply by Rs. 1.7 crores to Rs. 8.9 crores in 1957, the rise being particularly marked in trading, engineering and chemical companies. The profits after tax, therefore, declined by Rs. 1.1 crores to Rs. 4.9 crores in 1957, after having shown a minor increase of Rs. 20 lakhs in 1956. The increases in the after-tax profits of trading and chemical companies were more than offset by the declines reported in engineering, sugar, cotton textile, coal and shipping concerns.

The conclusion is clear, therefore, that taxes have hit the private limited companies hard. And the main victims of the tax-collector's rapacity have been retained profits, which means that the growth of the companies has quite probably been retarded. Distributed profits rose by Rs. 20 lakhs to Rs 4.3 crores in 1957, the increase being accounted for mainly by engineering, chemical and trading companies (cotton textile concerns paid dividends by drawing on reserves). But retained profits fell sharply from Rs 1.79 crores in 1956 to Rs 54 lakhs in 1957. The following table illustrates how heavier taxation has seriously eroded the retention of profits:

	1955	1956	1957
Tax provision as percentage of profits before tax	48	55	65
Profits distributed as percentage of profits before tax	32	32	31
Profits retained as percentage of profits before tax	20	14	4

The analysis in the *Bulletin* sums up the point by saying that "taking the three years 1955 to 1957 together, it would appear that more than half of the profits before tax was taken up by tax provision, while about a third was distributed. The balance, about 12 percent of the profits before tax, was ploughed back."

An interesting point which emerges from the statistics is that the private limited companies cannot be accused of extravagance merely because their distributed profits have hardly suffered, while their retained profits have been allowed to shrink. To a large extent, this is due to the inequitable impact of the income tax laws. A large proportion of private limited companies are subject to the provisions of Section 23A of the Income Tax Act, which makes them liable to a penal tax if they do not distribute a specified minimum out of their profits. The compulsion to distribute is, therefore, legal. It is worth noting how much heavier, and more inequitable, the tax liability became in 1957 as compared with the earlier years. That was the year in which Section 23A companies began to be squeezed both ways: if they distributed a large proportion of their profits, they had to pay the excess dividends tax introduced in the May 1957 Budget, while if they did not so distribute, they became subject to the penal provisions of Section 23A.

The broad conclusions which the statistics point to may be summarised as follows. Private limited companies have been expanding, but their expansion slowed down in 1957 as compared with 1956. They have done more business and earned bigger incomes, but their gross profits have not increased much because expenses have risen too. As taxes have increased sharply, after-tax profits have actually decreased; dividends show relatively minor variations, but retained profits have fallen sharply. In other words, the Government has taken away in taxes much of the money which the companies would otherwise have probably ploughed back into the business.

Current News and Comment

Scindia Steam Pays Less, Shares Up

The directors of the Scindia Steam Navigation Company have recommended a dividend of Rs. 1.30 a share, subject to deduction of tax, for the year ended June 1959. This works out to a net dividend of 91nP, against Rs. 1.25 paid in the preceding year. The stock market's reaction to the dividend has been favourable, for the announcement has been followed by a rise in the price of Scindia Steam shares from Rs. 16.88 to Rs. 17.24. The market had been fearing a bigger cut, and a gross distribution of Re. 1 was widely talked about. Few had entertained any big hopes about the dividend, since, while presiding over the last annual meeting of the company in February, Mr. D. M. Khatau had stated that "the working results up to the end of December 1958 are not satisfactory and it looks as if the current year will be a poor one. In the coastal trade, the available cargo is falling rapidly, as the railways and road transport are carrying away a sizeable portion of the cargo which previously moved by the seas. In the overseas trade, the company's ships have had to bear the full impact of lower, and in some cases uneconomic, rates of freight which, coupled with the recent introduction from the Indian end of a 10-percent deferred rebate, considerably affected our gross earnings, whereas on the expenditure side we are still faced with a spiral of increased costs."

What Mr. Khatau said in February is to a large extent true even today. All over the world, the shipping industry has been passing through a difficult period. The troubles of the Indian industry are reflected in the movement of the index for shipping shares. While the all-India index for variable dividend industrial securities has risen from 139.7 to 156.2 over the past year, the index for shipping shares has declined sharply from 141.1 to 122.6. Although Scindia Steam, it is said, has earned more freight and passage income by employing a larger number of ships, the profit has suffered because of higher operational costs. The proposed dividend absorbs about Rs. 73.20 lakhs, against Rs. 70.40 lakhs in the previous year. Informed circles say that the directors have had to transfer Rs. 3.5 lakhs from the reserve fund to provide for the dividend.

Great Eastern Shipping Prospects

The speech of Mr. A. H. Bhiwandiwalla at the annual meeting of the Great Eastern Shipping Company in Bombay last Thursday will be read with interest (a fuller version appears on a later page). It holds out some hope for investors in shipping shares, who have lost much money in a year during which the rest of the stock market has enjoyed a fair boom. Of course, the note he strikes is one of cautious optimism. It is still too early to say that the shipping industry has recovered from the slump but the worst has perhaps passed. The freight market steadily declined after the middle of 1957, and no one could foresee an improvement due to the considerable excess of tonnage. But Mr Bhiwandiwala said that since October, there has been some resistance to the decline, and a slight improvement has been registered in the international freight market. The laid-up war-built tonnage has started growing obsolete and some shippers have been mustering the courage to visualise a brighter future by the end of 1960-61.

The working results of the company during the first five months of the current accounting year have been encouraging. Gross freight and charter earnings are expected to be about Rs. 1.60 crores, against Rs. 1.12 crores in the same period of the past year. This means that, in the absence of any unforeseen eventuality, total freight earnings will exceed Rs. 3 crores, against Rs. 2.75 crores previously. In spite of the larger tonnage operating and the bigger lifting of cargo (877,000 tons, compared with 843,278 tons in the previous year), freight and charter hire earnings have fallen to Rs. 2.75 crores in 1958-59, against Rs. 3.59 crores in 1957-58. So the net profit has declined, which Mr Bhiwandiwalla attributed mainly to the depression in the freight market and higher depreciation allowances.

Speaking about the prospects for the industry in general, Mr. Bhiwandiwalla said that the Government might include shipping in the core of the third plan. The National Shipping Board has recommended a target of 1.6 million G.R.T. for the third plan. However, there exists the problem of finding gainful employment for an expanded Indian shipping fleet. A solution lies in the recommendations of the Rail-Sea Co-ordination Committee. Mr. Bhiwandiwalla urged the Government to accept the recommendations, and also to ensure that more coal, salt and other cargoes are available for carriage by coastal vessels. He suggested that all Government cargo in the overseas trade should be channelled through the proposed Chartering Committee.

In view of the progress of the plans and the consequent expansion in trade, Mr. Bhiwandiwalla declared that there is enough scope as well as necessity for another participant in the liner trade. If some of the present problems of the industry are overcome, his company will be able to add, inclusive of requirements for scrapping and replacing old units, 10 or 11 ships of a total tonnage of 70,000 to 80,000 G.R.T. during the third plan period. Proposals for expansion have already been placed before the Government. If they are to materialise, they will have to be supported by the shareholders of the company subscribing further capital, which, he hoped, will be offered on "the beneficial par basis."

Mukand Iron Expanding

The Mukand Iron and Steel Works has been growing fast. The steady progress made by the company is reflected in the impressive rise in its shares from Rs. 10 to around Rs. 23 over the past three years. The current quotation of Rs. 19.50, which is ex-rights (on the basis of a one-for-one rights issue) looks even more attractive. The company's latest annual report, issued a few weeks ago, showed encouraging results. Satisfied with the performance, shareholders had hardly any issue to raise at the annual general meeting held on 10th December. The chairman, Mr. Kamalnayan Bajaj, gave some interesting details about the company's development activities in his speech at the meeting (a fuller version of the speech is published on another page of this week's *Capital*). He said that efforts to diversify the production of steel castings have met with considerable success. Agreements have been reached with the National Malleable and Steel Castings Co. of Ohio, U.S.A., and the English Steel Castings Corporation of Sheffield, U.K., for the manufacture of automatic centre buffer couplers for the railways. These couplers are required for the large type of wagons which the railways propose to introduce. The company has secured substantial orders for the automatic couplers which, like the roller bearing axle boxes, are being manufactured for the first time in India.

Mukand Iron is making efforts to meet the competitive demand for rolled products. With supplies coming from the Bhilai and Rourkela projects and from the increased capacity of the other main producers, the steel position is expected to ease in coming years. In this context, the

chairman informed shareholders that the Government has already approved a substantial expansion of the company's steel-making capacity by 40,000 tons a year. This will naturally reduce its dependence on outside sources of supply of billets for the rolling mills and considerably increase productivity. The company is trying to acquire a new site for the 20-ton electric steel furnace and blooming and rolling mills to implement the expansion programme. The estimated capital investment for the project is Rs. 120 lakhs. The Industrial Credit and Investment Corporation has agreed to advance a loan of Rs. 60 lakhs in the required foreign currency.

The retention prices for the re-rolling industry were due for revision from January 1957, and the Government's decisions on the Tariff Commission's recommendations are anxiously awaited. The industry has been handicapped by the absence of a clear-cut policy announcement from the Government about conversion costs. It is to be hoped, the chairman said, that the Government will consider this, and fix the conversion costs in such a way as to enable the industry to make adequate provision to meet its needs for rehabilitation, modernisation and expansion, as has been done in the case of the main steel producers and the cement industry.

New Standard Engineering Offer

The New Standard Engineering Company Ltd of Bombay is offering 27,723 ordinary shares of Rs. 100 each and 25,000 6.3 percent tax-free cumulative redeemable preference shares of Rs. 100 each for public subscription at par. (The details are published elsewhere in this issue of *Capital*.) The directors and their friends have agreed to take up 3,223 ordinary shares, and the entire preference issue is being underwritten. The company's present paid-up capital is Rs. 22.28 lakhs, divided into 22,277 ordinary shares of Rs. 100 each. During the year ended March 1959, the gross profit amounted to Rs. 6.48 lakhs, and an ordinary dividend of 9 percent was declared to absorb Rs. 2 lakhs. The company had taken over the assets and liabilities of the New Standard Engineering Company (Private) Ltd, under a scheme of amalgamation sanctioned by the Bombay High Court. The company has three factories producing various kinds of engineering goods, such as structural steel work, machine tools, foundry plant and equipment, mild steel doors and windows, railway signalling equipment, textile machinery and components. Arrangements, it is believed, have been made for foreign collaboration in the production of various articles, and licences have been given by the Government of India. It is proposed to set up a heavy manufacturing and processing unit capable of serving the requirements of the building industry, the railways and other industries requiring special types of structures as well as mild steel fabricated plant and equipment. The steel construction workshop will, in the initial stages, have a capacity of 8,400 tons a year. It is proposed to raise its total capacity to 12,000 tons a year.

J.K. Cotton: Costly Mistake

The Industrial Tribunal, Allahabad, has held that no employer has a right to make a reduction in wages unilaterally, even if there are good grounds for doing so. The case arose out of a dispute between the J. K. Cotton Mills, Kanpur, and its employees. The rate of wages had been mutually agreed upon, but the employers reduced it on the plea that higher rates had been fixed by mistake. They also maintained that they had a right to do so. The court held that the mistake in fixing wages had been committed by the employers, and the workers had no hand in its calculation. The correction, therefore, amounted to a unilateral act. On the employers' claim to a right to rectify their mistake, the court declared: "A unilateral mistake was never a ground for avoiding contract." Elucidating the point, it said that a contract could be avoided on the basis of a mistake only when the mistake was bilateral. "Even in that case, a party cannot by his own order rescind the contract. Whenever there is a dispute between the parties, the parties should either settle it by mutual agreement or should obtain a decision from a competent court or tribunal." Declaring the reduction made by the employers to be wrongful and unjustifiable, the tribunal remarked that "the employers have arrogated to themselves the function of an industrial tribunal and they have themselves passed an order which they should have secured from an industrial tribunal. It is not open to them to decide a disputed point in their own favour and at their own sweet will. Unless an order is obtained for reduction of wages, the wages could not be reduced even if there had otherwise been good grounds for doing so." The tribunal ordered the employers to pay the wages at the originally stipulated rates and also to make good to the workmen the deductions made on this account.

Running Oriental Gas

The decision of the West Bengal Government to take over the management of the Oriental Gas Company Ltd, instead of nationalising the concern by paying compensation, is fully justified. On the face of it, there can be no reason for buying a company of this kind. The gas generating plant is reported to be in a rotten condition. It is very old and is not expected to work much longer. Even by taking over the management, the Government may have to run it under uneconomic conditions. The take-over is recommended, considering that a public utility concern such as Oriental Gas cannot be permitted to work as deplorably as at present. The supply of gas is not only irregular, but is of poor quality. Other service conditions have also deteriorated considerably, so the public has been greatly inconvenienced and many industries which depend on gas for fuel find it difficult to work.

It is authoritatively learnt that the balance-sheet of the company does not reflect a true state of the assets position, so it is difficult to make a correct valuation of its real worth. Because of unsatisfactory working during the past few years, the shares of the company are quoted at nearly half their par value. It is wondered how the State Government could have decided in the first place to nationalise the company by paying compensation. This indicates how carelessly nationalisation schemes are planned. By taking over the management, the State Government is expected to improve the supply of gas in Calcutta as far as might be practicable. This could involve a great deal of expenditure because the plant may have to be renovated for giving regular service. It is necessary that the State Government take urgent steps to arrange for the supply of gas from Durgapur. It should be economical to transport gas from Durgapur to Calcutta by pipeline. In fact, the Durgapur coke oven plant is likely to produce a large amount of gas which cannot otherwise be used. Unless gas is supplied from Durgapur, the requirements of Calcutta cannot be met. At present, the rated capacity of the Oriental Gas plant is estimated at between 2.5 million cubic feet and 3.5 million cubic feet a day, but the demand is believed to be more than twice as much. As soon as the gas supply from Durgapur can be arranged, the Oriental Gas Company's plant should be given back to the owners. If the Government decides to take over the distribution lines of the company, there should be no difficulty about fixing a reasonable price for them.

Boom In Oilseeds

The oilseeds market is enjoying near-boom conditions. Prices have recorded impressive gains recently. Between 27th November and 9th December, cottonseed February contract in Bombay rose from Rs. 133.25 to Rs. 145.75, groundnut February from Rs. 177.12 to Rs. 191.12 and castor May from Rs. 164.87 to Rs. 173.62. The rise in cottonseeds is due partly to the strength of raw cotton, which has pierced the ceiling rates, and partly to strong bull manipulation. Reduced supplies following the delay in crop movements, it is said, have emboldened certain powerful speculators to form a syndicate to rig prices and squeeze bears. The general trade prefers castor and groundnuts to cottonseeds. Being a thin market, cottonseeds are easier to manipulate. Groundnuts have flared up in spite of the fairly satisfactory flow of arrivals, both in Bombay and in the terminal markets. There is virtually a scramble for the spot material. This is reflected in the spot premium ruling at a time when the crop movement is in full swing. Crushers and *vanaspati* manufacturers are mentioned as ready buyers of all the seeds that are offered. Supplies of oil and oilcake, although heavy, are inadequate to satisfy the needs of export houses, which have huge outstanding contracts for December shipment. Estimates for oil vary from 25,000 tons to 30,000 tons for all ports. Fresh business, however, has come to a standstill since the end of November and further sales will have to await the new policy announcement. The proposed freight increase by the Conference Lines from January has prompted shippers to rush their supplies abroad before the end of December. Large shipments in December would not have been possible if the Conference Lines had not made available adequate space and assured dispensation in relation to the deferred rebate in case they failed to satisfy the shippers' needs. They are to be complimented on adopting such a helpful attitude.

It is possible that the rise in groundnuts might not have been so steep if exporters had not done huge business in extractions. Communist countries, such as East Germany, Czechoslovakia and Yugoslavia, it is said, have taken about 40,000 tons of extractions recently at prices ranging between Rs. 415 and Rs. 425 a ton, f.o.b. any port. Prospects of further business for about 15,000 tons are rated high. Apart from extractions, the State Trading Corporation, it is believed, has sold a fairly large quantity of expellers. Sustained export buying has pushed oilcake prices to all-time highs. The rise over the past fortnight has been about Rs. 25 a ton. Exporters seem confident of selling large quantities of extractions to the U.K. and the Continent in the near future, presumably because of the frosty weather at several places. Recently, prices abroad have firmed up considerably. Castor futures have recorded a handsome improvement in spite of the big discount on the spot material. It is not merely the absence of a margin below Rs. 175 which has turned speculators to this counter. Nor is it that the spurt in groundnuts has made castor look rather cheap. The buying in castor has been inspired mainly by prospects of fresh export business in castor oil. Shippers have reported increasing enquiries from the U.S.A. at steadily rising prices. No worthwhile business has been done recently, but with Brazilian offerings still very poor and U.S. consumption running at a high level, optimism about the revival of U.S. buying does not seem misplaced. Spot castor continues to be quoted at a sizeable discount because of reduced crushing; a better profit margin is available on crushing other seeds.

Linseed has remained distinctly subdued over the past few weeks. This is mainly because of the pronounced weakness in linseed oil abroad, which has led to a good deal of re-thinking on the export outlook for Indian oil. The decline in linseed oil abroad from around £118 to £111 a ton has followed an announcement about the release of stockpile oil by the U.S.A. The total quantity to be released is around 25,000 tons. It is to be disposed of over a period of six months. The first offer was made on 8th December and the quantity involved was about 2,000 tons. While the immediate outlook has been rendered uncertain by the sale of U.S. stockpile oil, few observers expect a further big decline in linseed oil prices abroad. But it might not be easy to sell Indian linseed oil unless world prices rise or domestic prices decline appreciably. There seems little chance of a marked decline in internal prices because of the rising trend in other oilseeds. The following are the shipment figures for oils and oilcakes from Bombay between January and 3rd December (figures in brackets show shipments from Bombay in 1958): castor oil 27,588 tons (18,887 tons), linseed oil 7,749 tons (15,948 tons), linseed cake 34,765 tons (5,350 tons), groundnut oil 3,582 tons (168 tons), groundnut 6,291 tons (803 tons), groundnut cake 155,545 tons (96,234 tons), cottonseed cake 10,746 tons (3,325 tons), cottonseed oil nil (2,410 tons), copra cake 9,940 tons (7,527 tons), niger cake 3,363 tons (201 tons), nigerseed 363 tons (240 tons), kardi oil 170 tons (62 tons) and kardi cake 72 tons (1,478 tons).

Insuring Atomic Risks

Fourteen years after Hiroshima and Nagasaki, people are still dying in Japan of leucemia directly caused by atomic radiations. In several other parts of the world, nuclear explosions, or more commonly accidents with atomic reactors, are causing damage that is less serious but still widespread in space and persistent over time. If the owners of the atomic equipment that has caused these ravages had been ordinary commercial enterprises, insured with ordinary insurance companies, one can imagine the problems that would have been raised for the latter by the number and variety of claims. As atomic reactors are built in many countries, India included, and as atomic-powered vessels begin to ply the oceans, the insurance problems of atomic power will preoccupy insurers everywhere. British experience has shown that even a modest reactor accident, which causes no human casualties, can poison cattle and fish over a wide radius, and when reactors of this kind are the property of private enterprises, as they will be increasingly, there will ensue claims that private companies probably will not be able to meet without Government assistance. So insurers are studying the possibility of an international convention on a special type of risk policy for atomic accidents; at present, they are largely in the dark because they do not know the possible frequency and extent of radiation damage, these matters still being treated as official secrets in the advanced countries. Their main concern is to define risks which private insurers can cover, if necessary by international co-operation and if necessary by pooling reserves from life, fire, car and general insurance, but at all events without calling on the aid of Governments to the extent where atomic insurance will have in reality passed into the public sector. Negotiations are in progress between the insurance companies of the 18 countries grouped in the O.E.E.C., on the one hand, and the atomic energy authorities of Euratom, the O.E.E.C. itself and the International Atomic Energy Agency, on the other hand. So far, these parleys have been inconclusive. More successful was the effort of the International Maritime Committee to draft a convention on the insurance of atomic-powered ships. The danger of accidents with these vessels is not necessarily great, but when a mishap occurs it could reach proportions that regular insurance companies could not handle. The convention foresees the constitution of special groups of insurers prepared to cover damage caused by such accidents, but even then it is assumed that the country issuing permission for the voyage of an atomic ship would have to contribute to meeting claims.

Engineering Goods Exports Rise

The engineering goods industry has been growing apace. There has been a marked rise in production over the past two years. For instance, the average monthly index of production for diesel engines has risen from 208.2 in January-August 1957 to 416.6 in January-August 1959. The index for sewing machines during the same period has risen from 372.2 to 554.7, machine tools from 482 to 895.8, electric fans from 239.7 to 327.8 and winding wires from 315 to 988. With production steeply up, the industry has been able to make a valuable contribution to the export drive. Exports of engineering goods have recorded a marked improvement over the previous year, and even highly industrialised countries in the West have been showing interest in the Indian products. The improved quality of goods apart, this is due in no small measure to the successful sales promotion work done by the Engineering Export Promotion Council. The statistics indicate that engineering goods worth Rs. 4.40 crores were exported by sea during the first ten months of this year. This compares well with the figure of Rs. 3.25 crores for the corresponding period of last year. In addition, goods worth Rs. 30 lakhs were exported by land routes, bringing the total exports during the period to Rs. 4.70 crores. Exports of sewing machines, centrifugal pumps, oil mill machinery, electric fans, diesel engines and textile machinery have all shown a substantial rise. Sewing machines alone fetched Rs. 20.59 lakhs during January-October 1959, against a mere Rs. 9.87 lakhs in the same period of last year. Among western countries, the U.K. figured as a prominent buyer, taking more than 37 percent of this country's total sewing machine exports. Other buyers were the U.S.A., Canada and Belgium. Exports of electric fans at Rs. 31.62 lakhs were 1½ times higher than the corresponding figure for 1958. Kuwait was the leading buyer, with an offtake valued at Rs. 8.2 lakhs, followed by Singapore and Malaya. Other buyers included Ceylon, Saudi Arabia and Nigeria.

An Association of Consumers

The latest annual report of the Indian Standards Institution refers briefly to the formation of a National Association of Consumers. It hopes that the Association will help raise the quality of Indian goods, make the consumer's voice heard and enlarge the scope of the I.S.I. certification scheme. The All-India Women's Conference has already recommended setting up a committee to advise on specifications for consumer goods, especially for domestic use. Although the prices of indigenous products such as confectionery and biscuits have risen this year, there is little inclination on the part of consumers to ask for imported goods. Meanwhile, they have very little choice, and there is as yet no co-operative to buy commodities in bulk and distribute them at reasonable prices to members, although there is much loud talk about extending such organisations. Consumers remain unorganised, and are served mostly by small shops. Multiple stores are rare, and manufacturers, except of a relatively few items like soap or *vanaspati*, do not indicate the fixed retail prices. Big pharmaceutical manufacturers do furnish price lists, and consumers are sometimes able to get a share of the discount allowed to retailers. Even so, the drugs and medicines now manufactured in India are very expensive and often of poor quality.

Manganese Ore: Spoon-Feeding S.T.C.

The manganese ore industry and trade is passing through difficult times. In spite of the repeated pleas for a more realistic export policy, the Government appears to be interested in patronising the State Trading Corporation rather than in promoting business. Exports of manganese ore have steadily declined since it was decided in June 1956 to hand over a portion of the trade to the S.T.C. India exported only 900,000 tons in 1958 and 700,000 tons during the ten months ended October 1959, against 1.6 million tons in 1956. Speaking at the annual general meeting of the Western India Minerals Association recently in Bombay, Mr. S. J. Kajaria, chairman, said that the Government's policy has been responsible for the continued sluggishness of manganese ore exports. Within a brief period of ten months this year, the Govern-

ment has thrice revised its long-term export policy for the commodity. Its latest notification, issued on 3rd October, 1959, stipulates that movement and export facilities for fulfilling long-term commitments will be offered only to the S.T.C. or its business associates. This means that no exporter, however well established he might be, will be permitted to enter into long-term commitments with foreign buyers unless he first agrees to become an associate of the S.T.C. Mr. Kajaria said that the change will not only act as a disincentive to traders but will also raise the f.a.s. cost of Indian manganese ore. There is no reason why the Government should reduce the export quota of the private sector and increase that of the S.T.C. Private exporters have always been able to use their quotas to the fullest extent and have even used part of the S.T.C. quota for meeting their commitments. Since the Corporation has been unable to make full use of its quotas, it is strange that the Government should announce that no private exporter will be allowed to conclude bulk deals with foreign buyers for deliveries extending up to three to five years unless he first agrees to become an associate of the S.T.C.

Unemployment in Kanpur

Says a Press note issued by the Directorate of Training and Employment, Kanpur: "Notwithstanding the increase in the number of vacancies, unless steps are taken to generate sufficient employment opportunities locally or employment-seekers of Kanpur are found employment elsewhere in the State, unemployment will tend to rise." The report for the quarter ended 31st March, 1959, is based on an analysis of the statistics of the Kanpur Employment Exchange for the last five quarters. The report says that after a successive rise during the two previous quarters, the upward trend was arrested during the quarter ended 31st March, 1959. In the private sector, 1,117 employers reported a decrease of 2.8 percent in their employment, which declined from 81,709 on 31st December, 1958, to 79,594 on 31st March, 1959. The fall in employment was significant in cotton textiles, foodstuffs and jute textiles. Employment gains were registered in leather and leather products, metal and machinery products, printing and publishing, chemicals and beverages, manufacturing and transport. Employment in the public sector also fell, but the decrease, according to the report, was very nominal (0.1 percent). Although *quasi*-Government establishments and local bodies had more jobs during the quarter, the rise was more than offset by the heavy decline in the Central and State Government establishments. This decline was observed mainly in the construction, education and scientific services. Information concerning contract labour did not come in full detail as only 49 out of the 1,125 employers disclosed facts relating to labour in their establishments. The figures available were equal to the full-time employment of 1,117 persons. The shortage of technical persons, such as technicians, stenographers, nurses, dairy engineers, overseers, turners, fitters, foremen, draughtsmen and research assistants, existed as before.

U.P. Plan for Roads

The proposal to introduce a betterment levy in areas where metalled roads are provided for the first time is interesting, but the Working Group on Transport and Communications in U.P. has, in recommending it, forgotten that the history of the betterment levy even for canals in U.P. has been far from happy. The Group has estimated that a levy of about Rs. 6 an acre, on average, would yield a revenue of Rs. 40 lakhs in the first year, increasing by about the same every year, thus yielding a total of Rs. 6 crores during a five-year period. According to the Group, this levy should extend to 20 years from the date of construction of the roads. An average area of one mile on either side of a metalled road is benefited and the betterment levy is to be only on the developed agricultural area, assumed to be 60 percent of the total area to be covered by the road plan. On these assumptions, about 770 acres would be "exposed" to taxation for every mile of road.

Other sources of additional revenue indicated by the Working Group are an increase in the rates of tax on petrol and diesel oil by 1 anna a gallon and the collection of tolls on bridges for the full 20-year period, whether or not the capital cost is recovered earlier. The draft plan for road development in Uttar Pradesh drawn up by the Working Group provides for the reconstruction and improvement of 3,655 miles of road at a cost of Rs. 13 crores, new construction of 4,942 miles of road at a cost of Rs. 28 crores, construction of major suspension and boat bridges and ferries at a cost of Rs. 8 crores, and other works, including civil works, equipment and surveys, at a cost of Rs. 7 crores. The estimated expenditure for the first year of the third plan is Rs. 6 crores, while for the entire period it will be Rs. 90 crores.

Programme for Mineral Development

In his foundation-day lecture at the Indian School of Mines and Applied Geology in Dhanbad, this week, Professor M. S. Thacker, Secretary to the Ministry of Scientific Research and Cultural Affairs and Director-General of the Council of Scientific and Industrial Research, discussed the problems of mineral development in the light of the plans for industry. He said that in common with the rest of the world, India's mineral production and consumption have been steadily going up over the past decade. The estimated total value of minerals mined in 1948 was Rs. 64 crores. This figure had doubled by 1958. Coal held the leading position with an output of 45.35 million tons and accounted for about 66 percent of the total value of mined products. The value of ferrous minerals was Rs. 16.4 crores, while that of non-ferrous minerals was Rs. 9.7 crores. The total value of minerals to be raised in 1966 and 1976, that is, towards the close of the third and the fifth five year plans, it is estimated, will reach Rs. 300 crores and Rs. 1,000 crores, respectively. "This accelerated mineral exploitation is considered essential by the planning authorities in order to maintain the pace of economic development. And not only larger tonnages, but also a wide range of minerals is demanded by industry," Professor Thacker said.

The situation demands extensive exploration as well as improved and more up-to-date methods of mining. India has fairly adequate resources of coal, iron, aluminium, manganese, magnesium, mica and ilmenite, but she is deficient in petroleum, sulphur, copper, lead, tin and a few other minerals. In non-metallic minerals such as clays, sands and refractories, the country is self-sufficient, and a number of regions remain unexplored. There has recently been a vast increase in the exploration and prospecting programmes of the Geological Survey of India, the Indian Bureau of Mines and the Oil and Natural Gas Commission. A ten-year scheme for the detailed geological mapping of resorces has been formulated. About Rs. 85 crores have been allotted for mineral development under the second five year plan and a larger allocation is expected in subsequent ones.

The manufacture of mining machinery in India has just begun with mine haulage, switch gear, cap lamps and diamond bits during the last two or three years, and the manufacture of chain conveyors has been taken up recently. A manufacturing concern is being established in the public sector to produce coal-cutting machinery, chain and belt conveyors, haulages, locomotives, etcetera. The annual turnover is estimated at 30,000 tons of machinery. As for technical personnel, Professor Thacker said that, according to one estimate, the present number of geologists and geophysicists in India is 1,700 and 200, respectively. This works out to one geoscientist for every 660 square miles, compared with one for every 110 square miles in the U.S.A. The existing personnel for running and managing mines will be inadequate to meet the needs of mineral development in the third plan. It is estimated that the additional requirements of mining personnel for the next quinquennium will be of the order of 41,000, consisting of 3,750 mining managers, 1,000 surveyors, 7,000 overmen, 12,000 *sirdars* and 17,500 short firers. Several steps have been taken to train skilled personnel. Provision has been made for graduates in mining engineering to act as under-studies for managers, so that they may become conversant with the practical aspect of management.

Industrial Activity

Corrected for seasonal fluctuations, Capital's Index of Industrial Activity showed a rise of 2.2 points during April 1959. There were increases in tea, jute, cloth, cement, coal, pig iron, tyres and electricity. Sugar, yarn, finished steel, power, motor-cars, bicycles and railway ton-miles showed declines.

NOTICE

With this week's issue of Capital is being issued a *supplement* of 156 pages, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, such as jute, tea, coal, cotton textiles and sugar, the Review contains exclusive articles by well-known authors. Dr. P. T. Bauer writes about the problems, paradoxes and prospects of Indian planning; Dr. T. Balogh discusses the promotion of economic growth in poor countries; Mr. C. Rajagopalachari explains how bureaucratic plans are stifling economic enterprise; Mr. L. K. Jha writes about the new trends in international trade; Mr. S. S. Khera discusses the management of State enterprises, Mr. M. M. Philip reviews the growth of air transport in India; Mr. Asoka Mehta discusses the food shortage; Mr. Geoffrey Tyson reviews the Radcliffe Report; Mr. Neil McInnes writes about the aftermath of imperialism; Professor R. J. Taraporevala explains how the new company tax scheme hits shareholders; Mr. G. M Laud reviews the working of co-operatives; Professor B. R. Shenoy *makes a critical survey of the second five year plan*; and Mr. K. B. Mathur discusses the economics of railway freights. Other articles deal with the control of public expenditure, concentration of economic power, advertising, the management system on plantations, small-scale industries, the progress of the Pakistani economy and tourism in Britain. In addition, there are reviews of developments in the stock market, the freight market, life insurance, general insurance and banking. The supplement is being distributed free to all registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, Capital, at 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations:

Rs. 100 each

Java Bengal Line, Burmah-Shell Oil Storage and Distributing Co. of India Ltd.

Rs. 20

Anonymous

Rs. 15 each

S.N.S. Raghavan, G. A. Randerian Private Ltd.

Rs. 10 each

J.H.K., A.E., R.H. Wimble.

Total Rs. 280

Previously acknowledged Rs. 3,771.50

Grand Total Rs. 4,051.50.

U.K. SHIPPING TRADE

The shipping trade of Great Britain has during the present year reached a stage of prosperity which, it appears, has hitherto been unknown; and during the first nine months of this year the volume of business has been greater than it ever has been during corresponding periods of previous years. Freights have risen considerably, the upward movement having commenced about two years ago; and the increase has been so marked that the excess has frequently amounted to more than half, and even to two-thirds of the rates formerly obtaining. As can easily be understood, the upward movement in freights received a decided impulse, when the Government chartered so many steamers as transports at high rates; and thus the war in South Africa has had a perceptible effect on the well-being of our shipping trade. As a natural consequence the market value of the leading steamship companies has risen rapidly. For instance, the deferred shares of the P. & O. Company have risen during the present year from £2,699,600 to £2,784,000; the Castle Mail Steamship Company from £288,000 to £360,000; the African Steamship Company from £476,000 to £571,000; and the Cunard Company from £735,000 to £1,140,000. Of the more important, no less than six are paying dividends equal to 6 percent and about a dozen are paying 5 percent and slightly more; while there is not a single company paying less than 4 percent on the actual market price of its shares. While the companies concerned must be congratulated on this marked run of prosperity, it must be owned that the market value of the shares is by no means high, compared to the dividends they are paying; and this state of affairs may be taken to indicate that the public—at any rate the investing portion of it—has no very great confidence in the stability of the prosperity of the said companies. No doubt these have earned large sums of money; and will in all probability long continue to do so, but the expenditure on the upkeep and improvement of their respective fleets is enormous and must make a large hole in the profits. Competition between the various lines is so severe nowadays that new vessels with the latest improvements have constantly to be constructed; and, unless the earnings are on a very good scale, the margin of profit cannot be great. At the present moment it happens that the earnings of companies are handsome; but they must long continue to be so before any stability in the market-value of the share capital will be reached.

FROM

CAPITAL

14th December, 1899

CORRECTION

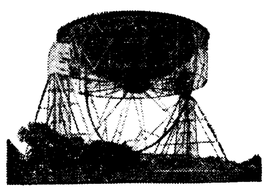
On page 764 of our issue dated 3rd December, 1959, in a paragraph which appeared under the heading "Madras Vanaspati may be Leased", it was said that Hindustan Lever Ltd had alone achieved real success in the production of *vanaspati* in Madras State. We are now informed by the East Asiatic Company (India) Private Ltd that they have been producing *vanaspati* in Madras for the past ten years and have schemes on hand for expansion.

A Ditcher's Diary

I am not as sure as the farming and other correspondents of some newspapers appear to be that the World Agricultural Fair, now being held in New Delhi, has such tremendous significance for Indian agriculture. These fairs have their uses, but to suggest that this one is going to make any appreciable impact on the thinking of the Indian farmer is surely going a bit too far. In the first place, of the twelve or so countries participating, only two—that is, the U.S.A. and the U.S.S.R.—use really advanced techniques, and the Indian peasant from the villages is as likely to view their exhibits with awe as with appreciation and understanding. Two others, Poland and East Germany, are communist countries, and I do not think their techniques could be useful here unless other, less attractive, features of their agrarian systems are copied as well. The facile suggestion that India could and should mechanise her agriculture to improve output, which came even from the President, Dr. Prasad, overlooks the important fact that this proposition cannot be pursued in isolation from the economic and social conditions in which India's peasantry lives. Mechanisation doubtless has its advantages, but those who claim to be familiar with the conditions of the peasants should know that without extensive co-operative farming, it can never be economical. I liked President Eisenhower's call to wage a world-wide war against hunger, but only as a slogan. The President is a good man, full of generous impulses, and he has an instinctive knack of being able to rise to the occasion. But those who know something about the world's present population problems will have no difficulty in realising that in addition to a "war" to raise output and human standards of living, an equally big struggle must be fought to keep numbers down. It is this pressure of population on land which is precisely the reason why farming techniques in the under-developed regions are so backward.

The report that President Eisenhower is considering a plan to reorganise the U.S. Government and create the office of Prime Minister, confirms the view I have always held that the greatest disaster in the United States' constitutional history was the fact that it won the War of Independence. If the U.S. had lost that war—or better still if it had never been fought—it would now have the type of efficient, honest, representative government with which its northern neighbour, Canada, is blessed, and would have none of these irritating problems about divided responsibilities at all. But joking apart, some type of government reform is long overdue if the United States is ever to play its proper rôle in the modern world, as the career of President Eisenhower has shown. The trouble is there has been no indication so far whether the proposed Prime Minister will be elected, or whether, like all too many top-ranking U.S. officials, he will be merely nominated by the President. The idea that any one man, however energetic and able, can perform efficiently the twin rôles of chief executive and Head of State in one of the world's largest countries, is simply preposterous, especially when, as is the case with most U.S. Presidents, he is chosen for reasons other than his political prowess. The main need, as I see it, is to devise some method by which a politician can be chosen by the people to lead the Government, just as Mr. Nehru does here, while the President, a national figure, can be selected from among the country's heroes and perhaps hold office indefinitely. There are plenty of existing examples the U.S. can choose from. Personally, I would recommend the Indian or West German models rather than the French.

The Bill the Lok Sabha passed last Monday to declare the Indian Statistical Institute an "institution of national importance" should at least help cure its financial worries, but I am still wondering exactly what other benefits it will confer. If it means that whatever money is required will now be forthcoming without the Government interference which has been such a confusing element in the Institute's financial affairs in the past, then I suppose it must be counted a good thing. But if it means that the whole range of research and teaching activities can now be subject to official scrutiny at any time the Government thinks fit, and assessed on some vaguely defined criteria of "performance", then I am not so sure. Mr. Nehru's words were consoling enough, but they would carry more weight if one were not quite so acutely aware of how seldom official actions conform to intentions in such matters. The declared aim of preserving the Institute's independence seems quite laudable, although the taxpayer is entitled to know whether this means that its activities will continue to be influenced by—more than any other single factor—the personal interests and ambitions of the director, Professor Mahalanobis. The Institute owes a great deal to the Professor; indeed, as its founder and chief worker, he is the person most responsible for its having reached its present status and importance. But too often it has appeared that the Institute's ultimate fate is to wind up as a departmental adjunct of the Planning Commission, and there is a danger that this Bill, rather because of than despite what it says about independence, will hasten the process. That is one of the reasons I personally disapprove of another section of the Bill—that which empowers the Institute to confer degrees. A second, of course, is that one faculty does not comprise a university, and I am old fashioned enough to believe that only the latter should be able to confer anything indicative of an all-round, balanced education. It is bad enough that anybody should be allowed to read for a much-coveted degree in an Institute devoted to only one discipline; it would be infinitely worse if the work of that Institute were progressively confined to the pursuit of socialist planning.



Surely India found herself in very strange company last week at the United Nations when her delegate sought to remove the word "seek", and replace it by "gather" in a resolution on freedom of information. Among India's supporters in this move I find such countries as Ethiopia, Saudi Arabia, the Philippines and Venezuela. I should have thought that Nehru's India had a little more respect for freedom than such covoters, and I have India's Constitution on my side of the argument. The difference between "seek" and "gather" is not merely semantic, and I suspect that the sponsors know it. Despite the somewhat specious explanation offered by Mr. Baroody of Saudi Arabia, what these Governments are trying to do is to reduce the reporters of the world to a passive rôle; gathering news is to mean that they will receive from information officials pre-fabricated hand-outs, which at their best contain only half-truths. I can understand Saudi Arabia being anxious to prevent the world from knowing about her slave traffic (white and black) in that country; and I daresay the other countries too have much to hide. But what need India be ashamed of? Admittedly there are many imperfections here today, as there are in every country. But India can in my view be justly proud of the social revolution she is going through under the leadership of a small, but enlightened, minority. The caste system and all that are being fought vigorously, and if even critical light falls on them, the effort is helped rather than otherwise. It did not damage Britain when the world Press wrote of the tough boys of Notting Hill or the streetwalkers of Bayswater; I thought such attention helped the authorities combat the respective evils. A lurid story in *Time* or *Life* on Calcutta, or a silly story in the *Mail* or the *Express* about the snake-catchers in New Delhi, never did anybody any harm, while they may well have awakened Indians to usually unnoticed aspects of the varied and rich life of their own people. Perhaps there are a few ignorant folk in some corners of the world who still have absurd notions about foreigners in general, but what do they matter? It does, however, matter a great deal if illiberal governments are allowed to suppress the truth about themselves.

It is often with considerable regret that I face the fact, that I have only hazy and second-hand appreciation of the tenor of life in this country 100 or even 50 years ago. Old Hickey has plenty to tell us about *nautch* girls, for instance; and I have never seen one. But when I read the other day that in Bihar this prudish Government of ours is out to harass these creatures, it somehow struck a chord somewhere. Their champion says *nautch* girls should be treated as artistes; and I say, why not? It is apparently true that but for them much of India's priceless classical music, over which Dr. Keskar swoons today, would have been lost for ever. And think of the delight and relaxation of body and soul they once gave to connoisseurs of the East India Company who had come from across the seas under incredible hardship. It is all to the good that classical music is now respectable again, and that bourgeois men and women practise it, but I cannot understand why All India Radio should be cagey about commissioning *nautch* girls when their merit as artistes is established. It is difficult sometimes to forgive the British for bringing to India the stern morality of Victorian England, which the puritans of India were so ready to make their own. This morality is totally at variance with present-day Europe as it was contrary to life in England itself in, say, Elizabethan times. In Britain now it is possible to laugh at the Victorians, but apparently not in this country yet. So there must be Prohibition, increasing the sale of "foreign" liquor seven times in Orissa. And poor *nautch* girls must go too—at least underground. The Wolfenden report has shown that even a welfare State with full employment does not automatically banish prostitution, and I cannot see India succeeding. What repression does is to help corruption in the police and rob the business of whatever finesse it has preserved. Then it becomes crude and truly sordid.

THE DITCHER

achievement depends on reliable steel

More and more industrial energy—to travel faster and over greater distances—the relentlessness of these demands has made technological development a race in which a modern industrial nation cannot afford to be left far behind—a race in which achievement depends on reliable steels, new steels and steels which are stronger especially at elevated temperatures. That is why a large part of United Steel's resources is devoted to research and development.

United Steel, with an annual output of 3 million tons of steel, meets many of the very exacting material needs of today. United Steel Structural Company built the radio telescope at Jodrell Bank (its reflecting bowl, 250 feet in diameter, was fabricated accurately to one eighth of an inch). All steel employed in this remarkable structure was rolled by United Steels.

THE GREAT EASTERN SHIPPING COMPANY, LIMITED

CHAIRMAN, MR. A. H. BHIWANDIWALLA'S REVIEW

ıe following is the speech delivered by the 'man, Mr. A. H. Bhiwandiwalla, at the Eleventh al General Meeting of the Company, held on December, 1959 :—

emen,

t the outset, I would like to refer to the great sustained by the Company in the death of the lers of the Company, viz. Mr. Maneklal Ujamshi Mr. Jagjiwan Ujamshi Mulji. These two iers were men of courage and foresight and Company owes its present position and status, reat measure, to their business acumen. They a full life and blazed many a trail in the strial and commercial life of the country. ough they passed away at ripe old age, your pany has become the poorer by their demise. will no doubt wish me to record our deep e of sorrow at the death of these two stalwarts.

Ve are most fortunate in having our Board igthened with three new Directors. Mr. L. T. ap joins as a Government nominee. We have nown Mr. Gholap for many years. Mr. Gholap had varied experience as an outstanding inistrator, and joins us after very close experience he Indian shipping field, both as Controller of an Shipping and as Chairman of the Bombay Trust. You all also know Mr. Mohamed Hussein nam Premji, past President of the Indian chants' Chamber. Mr. Madanmohan Mangaldas, comes from Ahmedabad, has also very wide ness and industrial interests. He was President he Ahmedabad Millowners' Association. On your alf I welcome all these gentlemen and have no ot that they will contribute significantly in the re deliberations of the Board and vital decisions your Company will take from time to time.

The Directors' Report and the Audited Accounts e been in your hands for some time now and, your permission, I shall take them as read.

Brief Review of Results

Last year I had referred to the crisis faced by ip shipping. The freight rates continued to be during the year under review and a considerable of the tramp and tanker tonnage in the world laid up. It is no wonder, therefore, that in e of larger tonnage under operation and higher ngs of cargo at 8,77,000 tons, as compared with ,278 tons lifted during the previous year, the ght and charter hire earnings fell from Rs. 3.59 es in 1957-58 to Rs. 2.75 crores in the year under iew. The fall in the net profit is therefore attributable, among other things, to the depression in the freight market, and higher depreciation provision.

In order to maintain a steady and stable rate of dividend at 15% to equity shareholders, your directors decided to transfer an amount of Rs. 15 lakhs from the general reserves of the Company to the profit and loss appropriation account. The necessity for drawing on the general reserves of the Company for purposes of payment of stable dividends to shareholders arose because of the statutory requirement that out of the profits of the year an amount equivalent to 75% of the development rebate on ships to be claimed for tax purposes must be earmarked and set aside as development rebate reserve. An amount of Rs. 29.50 lakhs has been set aside out of the profits as development rebate reserve. Therefore, in spite of the depletion of the general reserves by Rs. 15 lakhs, the total reserves of the Company have gone up from Rs. 1.91 crores in 1957-58 to Rs. 2.08 crores in the year under review. The development rebate reserve will be frozen for a period of 10 years and thereafter could either be merged with the general reserves or utilised freely in any way deemed fit by your directors.

Tankers

Although your Company was the first to acquire and operate an Indian-owned commercial tanker, it is a matter of regret that the National Shipping Board has recommended reservation of the tanker trade for public sector Corporations. The main incentive underlying our acquisition of the first tanker was serving of national interests. I am convinced that in the tremendous task of building an adequate and balanced merchant navy, active co-operation and participation of all Corporations whether public or private are essential and restrictive policies are least desirable.

The tonnage moved on the coast in 1958 was about 1.5 million tons. It is expected that an upward trend in the coastal traffic of oil products would continue at least until the establishment of the Gauhati and Barauni refineries in the public sector. Although one cannot forecast accurately, as to how this movement will be affected after 1962 when the two public sector refineries go into production, it has been estimated by the Government that even for catering to the total coastal movement of 1.5 million tons we would require about 12 tankers aggregating to about 120,000 to 144,000 D.W.T. It is, therefore, quite certain that the present fleet of two Indian tankers on the coast will have to be stepped up at least to 8, if not 12, tankers. I am, therefore, not able to follow the oil companies' statement that 3 coastal tankers will cover the *entire* oil movement on the coast. I would request the oil companies to reassess correctly the coastal tanker requirements with a view to ensuring self-sufficiency of Indian tankers on the coast by 1962. The goal of self-sufficiency in Indian coastal tankers is legitimate and the responsibility for achieving this goal rests squarely on the shoulders of Fuel & Oil, Transport and Finance Ministries and oil companies and shipowners. Each of them has to discharge their part of responsibilities so that the blame of continuous foreign exchange drain after 1962 at least for domestic oil movement is not attributable to any of them.

Coastal Dry Cargo Trade

A very disquieting feature for coastal dry-cargo trade is the policy pursued by the Indian Railways in respect of carriage of coal on the coast. The Government should broadly demarcate fields for various modes of domestic transportation as a national policy. About 40 per cent of the total movement of dry cargo on the coast consists of coal, and for coastal movement of coal sea transport is definitely cheaper than rail transport in actual cost. The railway freight rates on coal have been artificially kept down. The Rail-Sea Co-ordination Committee consisting of high officials of only the Railways and the Government recommended reservation of movement of coastal coal for Indian shipping. However, the Railway Ministry have not complied with this recommendation, and are endeavouring to divert part of the coastal coal movement to railways because of their spare wagon capacity. It is high time that the Government, who are so keenly desirous of developing Indian shipping, will stop the encroachment of the railways upon the legitimate field of shipping, and ensure the acceptance and implementation of the Rail-Sea Co-ordination Committee's recommendation.

Last Year's Expansion Proposals

In my speech last year I had referred to your Company's rupee four-and-a-half-crore expansion plan under which four overseas dry-cargo ships were to be built. The continued deterioration in the freight market and the frittering away of Government cargoes by Government Ministries and autonomous organisations, such as the State Trading Corporation, in foreign ships in spite of the accepted Government policy of patronising Indian ships on a preferential basis, made your Board of Directors drop that expansion plan.

Effective Co-ordination of Government Cargoes

It is a matter of gratification that a historic decision has been taken by the Government to effectively co-ordinate the Government cargoes belonging to various Ministries and Government organisations and achieve a saving in their total freight bill and the foreign exchange element of it. This decision will have a far-reaching effect on the development of Indian shipping after the scheme is put into effective working and will enable the shipowners to embark on expansion with an element of security. The Indian shipowners will also have the figures and statistics of cargoes readily available. It is a general feeling that the decision has been taken by the Government at a very propitious time. I am sure the Indian shipowners will reciprocate fully and extend their co-operation in achieving the national objective. It is hoped that a Chartering Committee or Corporation would soon be formed by the Indian shipowners, who will make available their expert knowledge in the fixing of Government cargoes in Indian ships as well as foreign ships.

Future

Since the middle of 1957 the freight market has been declining continuously. In view of the considerable excess tonnage, no one could foresee any improvement in the freight market. However, since October this year we have seen resistence and in fact a slight improvement in the international freight market has been registered. The laid-up war-built tonnage is getting older and some shipowners are mustering courage to foresee a brighter future by the end of 1960-61. It is reasonable to expect an improvement.

The gross freight and charter earnings for the five months ended 30th November, 1959, are expected to be about Rs. 1.60 crores as against Rs. 1.12 crores during the first five months of the year under review. In view of the increased tonnage owned by your Company and its more active operation the freight earnings in the current year, seven months of which are still to go, may, in the absence of unforeseen circumstances, well exceed Rs. 3.00 crores as compared with Rs. 2.75 crores during the year under review.

Third Five-Year Plan

The National Shipping Board has recommended a target of 16 lakhs G.R.T. to be achieved by the end of the Third Five-Year Plan. It also appears likely that the Government will include shipping in the core of the Third Five-Year Plan. The problem, however, bristles with the difficulty of finding gainful employment for expanded Indian shipping. The problem can be solved if the Government accept and implement the recommendations of the Rail-Sea Co-ordination Committee and take the other necessary steps for making increased quantities of coal, salt and other cargoes available for carriage by sea on the coast and arrange channeling of all Government cargoes in the overseas trade through the proposed Chartering Committee. Besides these general problems, your Company has the special problems of operation and development of tramp tonnage and entry in the India-U.K.-Continent Liner trade.

Last year, I dealt at considerable length with the question of freedom of operation to tramp operators and the urgent need for enunciation of a suitable and dynamic policy with regard to the operation of the tramp wing of shipping. I am glad that there is better understanding and appreciation in Government quarters of the special problems of tramp shipping. Permissions and licences required by us for voyage and time charters are being freely given from time to time. However, it is essential for the Government to enunciate and announce their policy in order that operators of tramp shipping are certain about the Government policy and proper climate for the expansion of tramp shipping is created. It is also hoped that the Government and the two Indian Liner Companies in the India-U.K.-Continent Liner Trades will actively support our entry in the India-U.K.-Continent Liner Conference and secure our participation in this liner trade. In view of the progressive execution of our country's economic plans and consequent expansion in trade, there is scope as well as necessity for another Indian participan in this liner trade. If these general and specia problems are solved, your Company will be able t add, inclusive of requirements for scrapping an replacement of old units, 10 to 11 ships of a tota tonnage of 70,000 to 80,000 G.R.T. on the Indian Register during the Third Plan period, at an approxi mate cost of Rs. 14 crores. It is assumed that th Government will grant loans to meet the usual 85% cost of new buildings or acquisitions and the 15% balance fund will be found out of our own resources We have already submitted these expansion proposal to the Government and have made clear to them tha these expansion proposals can materialise only i the general and special problems mentioned abov are solved satisfactorily.

Very broadly speaking, considering our Company role and responsibility during the Third Plan perio this very large expansion will have to be equall well shouldered by you by way of subscription t further capital, let us hope, at the beneficial par basi I know, in the meantime, partly-paid shareholder have been wondering why the call of Rs. 30 lakh has not been made. I may state the reasons:

First, we have over Rs. 1.4 crores in liqu resources and funds are actually unrequired sinc our Second Plan target has already been achieve long ago.

Secondly, the depressed condition is still continuin in the freight market. Therefore, it appears unwi to load the Company with greater dividend liabilit

I can assure you a very close watch will l maintained and at the earliest opportunity my c leagues and I will consider the question of makin the call.

Shipping industry has been fortunate in havin popular, fine and highly respected political leade as their Union Minister almost all of whom a continuing in the Cabinet. Are we not therefo placed in the envious position of being understo better than many other industries?

We welcome Dr P. Subbaroyan an elder statesm from Madras with very quick grasp and charmi manners. He has fast been assessing the challen that are faced by the Transport system as a whc We wish him all good luck and assure our clos co-operation in achieving the common objective, th is, speedy growth of Indian merchant marine.

I express our sincere appreciation and thanks the Minister for Shipping, the Transport Secreta the Director General of Shipping and the Sen Deputy Director General of Shipping and th Officers and staff for their active assistance a encouragement. I must also pay our sincere tribu to our valued shippers for their ever-growing supp and to our staff ashore as well as afloat and age at the various ports for efficiently shouldering th heavy responsibilities.

I now move for the adoption of the Audi Accounts and the Directors' Report.

MUKAND IRON AND STEEL WORKS LIMITED

CHAIRMAN, MR. KAMALNAYAN BAJAJ'S ADDRESS

During the course of his address to the Shareholders of Mukand Iron & Steel Works Ltd., held at Bombay on 10th December, 1959, the Chairman, Mr. Kamalnayan Bajaj observed :

The Indian economy, during the last year, has revealed a certain amount of sustained progress, but this has been off-set to some extent by basic inflationary factors. The severe curtailment of imports and a large inflow of external assistance made it possible to hold on to the existing level of foreign exchange reserves. The cut in imports which was expected to reduce the adverse balance of payments had the effect of curtailing production due to the shortage of imported raw materials, which in turn affected the growth of the national income. However, there is a slight improvement in recent months.

The target of Rs. 10,000 crores for the Third Plan, while ambitious, is within our reach. It is re-assuring to find that more realistic targets of production, especially of steel, are being considered. We should be conscious that these investments should be made in such projects and programmes which would yield optimum returns, consistent with the defence, economic and social needs of the country and should ensure that these returns will be sustained and continuous.

Foreign Capital

Foreign loans can only go to a certain extent towards alleviating the needs of a developing economy. What India requires is more and more foreign capital on easier terms participating in selective enterprises as an alternative and also as a complement to borrowings. Secondly, technical collaboration on royalty basis should also go a long way in helping to develop our industries. At present the rates of tax on non-resident companies and investors continue to be high. Royalties are taxed heavily, hampering many schemes of technical collaboration from materialising. Favourable conditions will have to be created for the inflow of foreign private investments and technical know-how, since we have to offer incentives in competition with other capital-hungry countries.

Our efforts for the diversification of steel castings have met with considerable success. We have entered into agreements with the National Malleable and Steel Castings Co., Ohio, U.S.A. and the English Steel Castings Corporation Ltd., Sheffield, U.K., for the manufacture of automatic centre buffer couplers for the railways which, like the roller bearing axle boxes, are being manufactured for the first time in India.

You will be glad to know that the Government has approved a substantial expansion of our steel making capacity by 30,000 tons per annum. This will decrease our dependence on outside sources of supply of billets for the rolling mills and considerably increase our productivity. The estimated capital investment for the project is Rs. 120 lakhs. The Industrial Credit and Investment Corporation of India has agreed to advance a loan of Rs. 60 lakhs in the required foreign currency.

Retention Prices

Government decision on the Tariff Commission Report on the retention prices for the re-rolling industry is anxiously awaited. It is to be hoped that the Government will give due consideration to fix the conversion costs in such a way as to enable the industry to make adequate provision to meet its needs for rehabilitation, modernisation and expansion, as has been done in the case of the main steel producers and the cement industry.

Two of our engineers are undergoing specialised technical training under the Colombo Plan, one at the Canadian Steel Foundries, Canada and the other at the Fujikoshi Steel Industrial Company, Japan. Three more of our technical personnel will also be going abroad for training shortly under the same scheme. The experience gained by these technicians should prove very useful to the Company.

As you are aware, the authorised capital of the Company has been increased to Rs. 2.5 crores, and the Directors have been authorised to issue equity shares of the value of Rs. 40,94,500 to the existing shareholders on the basis of one new ordinary share for one existing ordinary or deferred share held.

Note : This does not purport to be a record of the proceedings of the Annual General Meeting.

man's faith

Faith that makes man aspire, strive ...
awakening him to tasks in the early-glow of dawn.
That melts rock, shapes granite; transforms
still waters to surging power.

A faith in the living future:
in a world that offers a little more—
a little less of the care, a little more of the joy.
Faith that gives meaning to life.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for ... Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products ...

Today and Tomorrow...Hindustan Lever serves the home

THE CALCUTTA MONEY MARKET

SHARP INCREASE IN CALL RATE

Wednesday, 16th December.

ALTHOUGH the total of advances outstanding in the Calcutta money market during the past week has not increased substantially, there has been an improvement in the offtake of the sugar and jute mills. This is in line with seasonal trends and appears to confirm the view that the busy season has now begun. The demand on account of grains and seeds storage is about the same, but there has been a heavy fall in the requirements of the engineering and iron and steel industries, and this has helped offset the rise in jute and sugar advances. The interbank market has become tight due to the imminence of tax payments. The call rate has jumped to 3½ percent, at which level there are still borrowers over.

A fair supply of tea bills has been seen in the exchange market during the past week, but gunny documents have been scarce. There has been some improvement in remittance. The weakness in the pound sterling, which has been evident in the London money market for the past fortnight, last week gave place to a marked recovery. Fractional gains were recorded against the twin dollars and against most important Continental currencies with the exception of the Swiss franc.

BULLION WAS STEADY ON REPLACEMENT BUYING. Silver increased from the previous week's level of Rs. 206.25 to Rs. 206.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 205.00. The London and New York prices stood at 80d and 91.375c. Gold was, in sympathy with silver, steady and the price was quoted at Rs. 125.50. The sovereign fetched Rs. 81.25.

DURING THE WEEK ENDED 11TH DECEMBER, 1959, Government of India Treasury bills for Rs. 1,84,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 15th December. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.405 and above were accepted in full, the average rate of acceptance being Rs. 2 370 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 21st December.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 16th December to 19th December at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 9th December to 12th December, amounted to Rs. 18,00,000.

INCREASES OF RS. 21.11 CRORES TO RS. 1,731 37 crores in active notes and of Rs. 14.26 crores to Rs. 1,739.73 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 11th December, 1959. The currency expansion was covered by increasing rupee securities in the paper currency reserve by Rs. 15 crores to Rs. 1,326.69 crores. This was obviously done by transferring securities from the Banking Department in which investments declined by an equivalent amount to Rs. 227.15 crores. Deposits of the Government of India rose by Rs. 7.17 crores to Rs. 60.06 crores but other Government accounts fell by 5.32 crores to Rs. 9.34 crores. Balances of commercial banks at Rs. 68.54 crores showed a decline of Rs. 9.70 crores. Balances held abroad increased further by Rs. 97 lakhs to Rs. 41.21 crores. Other loans and advances increased from Rs. 86.60 crores to Rs. 90.95 crores, of which advances to scheduled banks against usance bills amounted to Rs. 5 lakhs (Rs. 12 lakhs). Ways and means advances stood at Rs. 27.86 crores against Rs. 26.67 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 4th December, 1959, shows a drop of Rs. 3.10 crores to Rs. 576.83 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 1.33 crores and Rs. 5 lakhs to Rs. 393.73 crores and Rs. 10.47 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 4.64 crores to Rs. 159.20 crores. Cash and balances are, in consequence, shown at Rs. 29.38 crores or Rs. 2.54 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 4th December, 1959, shows Demand and Time liabilities at Rs. 724.01 crores (Rs. 16.19 crores on account of borrowing from banks) and Rs. 1,150.92 crores (Rs. 29.85 crores), compared with Rs. 737.41 crores (Rs. 20.38 crores) and Rs. 1,148.24 crores (Rs. 30.59 crores), respectively. Cash has increased by Rs. 35 lakhs to Rs. 42.95 crores, while balances with the Reserve Bank have declined by Rs. 1.53 crores to Rs. 75.17 crores. There is a drop of Rs. 1.26 crores to Rs. 11.55 crores in investments. Advances and bills discounted at Rs. 935.39 crores show a rise of Rs. 11.89 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.3 percent and 49.9 percent, against 6.3 percent and 49.0 percent.

TREASURY BILL MATURITIES

TEAM SPIRIT
helping to build Durgapur for India

A partnership of 30,000 Indian and British people is completing a jigsaw of concrete and steel at Durgapur—building a vast new steelworks for the nation.

By their team spirit, the men of CEMENTATION-PATEL are helping this partnership—and the plan to make over a million tons of steel every year for India.

Together, they work on a site the size of a small city : 13,500 Indian and 75 British engineers, technicians and workers. Together, they have built foundations for the greater part of the project's seven square miles of buildings and plant. Together, they are laying a network of roads, railways and pipelines.

CEMENTATION-PATEL, Durgapur's civil engineers, were first to get to work at Durgapur. In three years, they have moved mountains of earth and concrete to a strict schedule—three years that crown THE CEMENTATION COMPANY'S 30 years of service in India.

A MEMBER OF THE ISCON CONSORTIUM CMP. 5-X58

For thousands of young men a new life begins at Durgapur Training completed, this young apprentice in Durgapur is on his first practical survey job in the field. When he becomes an experienced hand, efficient at his work, he will command a good salary and will have a future ahead, bright with promise.

In Durgapur today, ISCON, who are entrusted with the construction of the giant one million ton steel plant, have already helped to train up a large group of young Indians in the technical field. This is part and parcel of the ISCON scheme of collaboration—to work side by side with Indian technicians and workers, to instruct them on the spot and in steel factories in England so that in the future India will have, not only her steel plants but also technicians to run them.

Stocks and Shares

SHARE PRICES MARKED DOWN ON SETTLEMENT CONSIDERATIONS

COTTON SCRIP ACTIVE

Wednesday Evening.

THE buying spree which began soon after Mr. Eisenhower's visit to New Delhi, had spent itself by Monday last when the bulls began to liquidate. The downward trend was further accentuated today, following the news of the treatment meted out by the Chinese to Indian prisoners and the lodging of another protest by the Indian Government with China. Jute shares have become virtually unsaleable owing to the steady rise in the price of the raw material, and paper shares, with the exception of Orient, have met with selling pressure due to the reduction in the selling prices and the decision of the Tariff Commission to allow a return of only 12 percent on employed capital against the 25 percent suggested by representatives of the industry. Investment support has been virtually absent owing to fears of additional taxation in the next Budget.

Government securities passed a dull week and little business was transacted, although prices were quotably unchanged.

Preference shares continued to meet with good enquiry, particularly tax-free issues, but sellers were reluctant to part with their holdings.

In the banking section, United Commercial were slightly easier at Rs. 64.

Coal shares were softer, particularly Bengal, which were marked back from Rs. 300 to Rs. 296 and Karanpura Collieries from Rs. 120 to Rs. 114. Burrakur were shaded at Rs. 17.12.

In cotton textiles, Bowreah and Dunbar were outstanding with their prices moving up smartly from Rs. 142 and Rs. 175 ex-rights to Rs. 152 and Rs. 190 ex-rights, respectively. Jayshree were taken at the higher rate of Rs. 11.31 as were Kesoram at Rs. 20.12.

There was no change in the prices of electric supply shares and a minimum amount of business was put through.

In the engineering group, Indian Irons fluctuated between Rs. 23.80 and Rs. 23.04, to close at the latter rate. Burn & Company were marked down by Rs. 5 to Rs. 430 while Guest, Keen, Willianms rose further on bonus rumours to Rs. 46.50. Indian Standard Wagon were Rs. 2 lower at Rs. 92 and Indian Steel & Wire Products Ordinary were Re. 1 lower at Rs. 40. There was a sudden enquiry for Jessop & Company and the shares spurted from Rs. 23.75 to Rs. 25.75. Textile Machinery were easier at Rs. 24.05.

With the exception of Agarpara and National, which were better at Rs. 13.50 and Rs. 26, prices of most other issues in the jute section were trimmed down, and selling orders were difficult to execute.

In paper, Orient provided the only feature, improving from Rs. 36.60 to Rs. 37.95. Shree Gopal met with selling pressure and were marked down from Rs. 22.75 to Rs. 22, as were Sirpur from Rs. 13.56 to Rs. 13. Titaghur were fairly steady at around Rs. 41.50 in view of the fact that the company's third mill is expected to go into production early next year.

In sugar, Dyer Meakin Breweries met with profit-taking at the higher level and closed easier at Rs. 21.44. Samastipur were lower at Rs. 13.50 and Belsund receded from Rs. 15.25 to Rs. 14.87. Champaran were shaded at Rs. 19.75.

Among miscellaneous industrials, Alkali & Chemical met with some enquiry and improved from Rs. 22.87 to Rs. 22.25. Britannia Biscuits were steady at Rs. 26.19 while Dunlop Rubber were slightly lower at Rs. 35.75. Hindustan Lever rose from Rs. 34.25 to Rs. 36.62 and there was a good enquiry for Hindustan Motors with the price improving from Rs. 15.94 to Rs. 16.94. Imperial Tobacco were subdued at Rs. 10.87, as were India Steamship at Rs. 11.87. India General Navigation were shaded at Rs. 68.50 while Metal Box were wanted at Rs. 33.56. Indian Oxygen rose today from Rs. 30 to Rs. 31. National Carbon were taken at the higher rate of Rs. 40.75 as were Philips India at Rs. 21.62.

In the mining group, Indian Copper were marked down to Rs. 3.83 as were Metal Corporation to Rs. 10.94.

Tea shares were quietly steady, though business was on a restricted scale.

Raneegunge Coal

The Raneegunge Coal Association Ltd has made a profit of Rs. 15.38 lakhs for the year ended March 1959, against Rs. 10.78 lakhs, after providing Rs. 4.80 lakhs (Rs. 4.81 lakhs) for depreciation. The dividend of 10 percent is maintained to absorb Rs. 2.40 lakhs. Taxation provision is allocated Rs. 9 lakhs (Rs. 5½ lakhs), replacement and development reserve Rs. 2.90 lakhs (Rs. 1.70 lakhs) and reserve Rs. 2,640. The carry-forward is Rs. 5,488, against Rs. 3,802 brought in. Raisings increased from 453.767 tons to 459,659 tons, and despatches from 410,888 tons to 506.436 tons. The ... ment work is making progress.

Ashoka Cement

The trading profit of Ashoka Cement Ltd has amounted to Rs. 12.82 lakhs for the year ended March 1959, compared with Rs. 2.79 lakhs. Development rebate reserve is allocated Rs. 2.99 lakhs (Rs. 23,620) and depreciation Rs. 6.52 lakhs (Rs. 21,936). A maiden dividend of 4½ percent is declared. There is a carry-forward of Rs. 2,874, against Rs. 19,343 brought in. Cement output rose from 117,850 tons in 1958 to 133,288 tons up to November 1959. The directors state that the retention price allowed for the company's cement is unremunerative, and the company has asked the Government for a suitable increase. The Government could reasonably be expected to consider its case sympathetically and not allow the industry to suffer on account of the increase in costs over which it has no control. It is reported that the Wage Board for the cement industry has submitted its report. The implementation of the recommendations of the Wage Board will lead to a substantial increase in production costs. The Wage Board has also recommended that there should be at the same time a corresponding increase in the retention price allowed to the manufacturers. Since the margin of profit allowed to the industry is already meagre, it has no capacity whatever to bear any additional burden.

Agarpara Jute

Providing Rs. 4.35 lakhs (against Rs. 3.85 lakhs) for depreciation and Rs. 3.95 lakhs for taxation, there is a profit of Rs. 7.31 lakhs for the Agarpara Company (a jute mill) for the year ended March 1959, compared with Rs. 2.84 lakhs. The ordinary dividend has been doubled to 5 percent to absorb Rs. 3 lakhs. Machinery replacement reserve is allocated Rs. 3.25 lakhs and general reserve Rs. 9.72 lakhs (Rs. 25,000), leaving a carry-forward of Rs. 25,002 (Rs. 16.782). There is an amount of Rs. 9,71,500 from the pension fund, which has since been dissolved. This sum is not part of the year's profits, so it has been transferred to general reserve. The directors mention that the modernisation of the sacking weft machinery has been completed and a few more machines are left to be installed on the fine side to complete this phase of modernisation.

Patrakola Tea

The Patrakola Tea Company has made a profit of Rs. 29.06 lakhs for the year ended December 1958. After making all adjustments and bringing in Rs. 3.75 lakhs from depreciation reserve, there is a balance of Rs. 16,29,370. A dividend of 20 percent is proposed, leaving a carry-forward of Rs. 1,84,113. The directors state: "In spite of continued efforts made by the company's directors and the agents in India and Pakistan, the profits for the seasons 1955, 1956 and 1957 still remain unremitted to this country. The dividend now proposed and those for seasons 1956 and 1957 will be declared as soon as sufficient funds have been remitted from Pakistan." The crop increased

from 3,310,032 lbs to 4,626,038 lbs. Estimates for 1959 provide for a crop of 4,080,000 lbs at a cost of Rs. 54.77 lakhs.

Hukumchand Jute

Providing Rs. 7.90 lakhs, against Rs. 2 lakhs, for depreciation, the profit of the Hukumchand Jute Mills has amounted to Rs. 32.17 lakhs for the year ended March 1959, compared with Rs. 26.29 lakhs in the previous year. The ordinary dividend has been maintained at Rs. 1.50 a share to absorb Rs. 10½ lakhs. Taxation provision is allocated Rs. 17.28 lakhs, against Rs. 10.25 lakhs, and general reserve Rs. 56,156. The carry-forward is Rs. 1,07,839, compared with Rs. 1,09,462 brought in.

Bombay Market

PRICES IMPROVE ON RENEWED OPTIMISM

SOME OPERATORS REMAIN CAUTIOUS

Wednesday Evening.

THE Bombay stock market was steady last week and share prices improved to a considerable extent. Corporate news has been good, and the prospect of increased foreign financial assistance has improved sentiment. It is reported that industrial production promises to improve steadily during the past couple of months. A section of the stock market appears to interpret the coming Central Budget in an optimistic mood It is thought that the corporate sector might be spared of a further increase in taxes as the Government is anxious to encourage private enterprise. Operators were, nevertheless, cautious and disinclined to extend commitments either way.

Tata Steel closed at Rs. 155.75, but Indian Iron declined to Rs. 23.28 on pressure from Lyons Range. Tata Locomotive improved to Rs. 205.50 on replacement buying. Alcock Ashdown were taken higher at Rs. 280 in the expectation of a higher dividend. Premier Construction received influential support around Rs. 360.50. Larsen and Toubro were shaded at Rs. 27.30 on profit-taking, but Mukand Iron were steady at Rs. 20.08. Motor shares were firm on interested buying. Hindustan Motor were lifted to Rs. 16.80 and Premier Automobile changed hands at Rs. 158.50.

There were a number of bright features in the cotton mill group. Standard Mills were firm at Rs. 850 on knowledgeable support. Century were quoted at Rs. 457 because of the rights share issue.

Bombay Dying were transacted at Rs. 69.30 and Kohinoor were taken at Rs. 320. Svadeshi came to hand at Rs. 257.50 and Simplex were done at Rs. 157. Apollo were indicated at Rs. 1.04 and India United Ordinaries realised Rs. 11.

In the miscellaneous group, sugar scrip were quiet. Belapur made Rs. 326 and Phalton were available at Rs. 172. Cement shares were quietly steady, and Associated Cement were dealt in at Rs. 148.50. Digvijay Cement were quoted at Rs. 145.50. Mining shares were subdued, and Shivrajpur Syndicate were offered at Rs. 85.80. Scindia Steam featured the steamship company shares and improved to Rs. 17.08. The latest dividend appears to have been higher than was expected earlier. Great Eastern Shipping were quoted at Rs. 20.20. Bombay Burmah increased to Rs. 581 on strong support because of the improved prospects for tea. National Rayon recovered to Rs. 377 on short-covering. Chemical shares were steady, and Dhrangadhra Chemical were quoted higher at Rs. 157.75. Tata Chemical made Rs. 16.32. Indian Dyestuff improved to Rs. 500 and West Coast Paper were quoted at Rs. 162.

Banking shares were quiet and prices were lower where changed. Central Bank were available at Rs. 47.75 and Bank of Baroda were dealt in at Rs. 95.30. In the insurance group, New India Assurance were transacted at Rs. 61.70 and Vulcan at Rs. 21.44.

Electricity supply company shares were quiet, and Ahmedabad Electric declined to Rs. 87.70. Tata Power were offered at Rs. 1080, as were Bombay Suburban at Rs. 97.50.

STOCK MARKET IMPROVES

INDUSTRIALS RISE

London, 16th December.

IT has been a good week in the stock market this past week with sentiment influenced by favourable company news and bright business prospects. Bank rate fears have receded into the background and buyers have returned for industrial equities, to which prices have made a good response. At times, there have been acute shortages of stock in the better-class issues. There was some disappointment with certain of the steel company dividends, but the results from Volvilles were well received. Engineering shares have displayed a marked strength with Tube Investments and Guest Keen well in the picture. Many other leaders like Turner and Newall, I.C.I., British Oxygen and Glaxo have scored good gains. An outstanding feature has been the strength of Philips Lamps as a result of persistent investment buying. Another highlight has been the considerable advance in textile shares, following the news of booming conditions in the industry. Cotton issues have been particularly prominent. Gilt-edged securities have been a quiet market and were not helped by the further increase in Treasury bill rate, but there has been a certain amount of buying of the short-dated issues which is thought to have been end-of-the-year operations by the banking houses. Foreign bonds have provided little of interest and rails have been quiet. Dollar stocks have given a good account of themselves and on some days even when Wall Street has eased, prices in London have held steady. The announcements of the December dividends have been the main item of interest in the gold share market, but there have been few surprises. Nevertheless, prices present a quietly firm appearance with isolated outstanding movements. Coppers have been subdued, but Chartereds were a good market at the time the shares made their first appearance in Johannesburg. Tins went ahead at first in response to the increase in export quotas, but the ground gained has been lost since. Lead and zinc shares have held fairly steady. Oils have continued to disappoint and have moved narrowly. Good company news, be it mergers or higher dividends, have helped rubbers and useful gains are seen in a fair number of issues. Teas have also made some headway. Sisal shares came into demand following favourable Press comment. Jute shares were little affected by news of a cessation of futures dealings in Calcutta.

The Money Market

The money market last week had a mixed experience. Comfortable conditions prevailed early in the week with the rate for loans ranging from a high of 3¼ percent down to a low of 2 percent. Subsequently, there was a return to stringent conditions with borrowers having to pay up to 3½ percent for loans and the authorities providing substantial help. The market also had to go into the bank, but the amount of penal borrowing undertaking was on a smaller scale than on the previous week. There was a fair business done in February maturities and "hot" Treasury bills at 3-15/32 percent. Currently, the rate for Treasury bills has hardened to 3½ percent while March maturities and "hots" are on the basis of 3-17/32 percent. This is in reflection of a further increase in the Treasury bill rate following last Friday's tender of around 1s to £3 11s 6.91d percent.

Activity on Wall Street

Foreign bonds were generally lower on Wall Street during the past week, except for Brazilian issues which showed some firmness during the later stages. At the outset, the bonds were generally down by about half a point in the wake of the expected offering of $50 million of bonds by Credit Foncier de France. Later this sector of the market turned quiet. The Credit Foncier securities were over-subscribed. Brazilian bonds had net gains of more than a point in some cases, but Japanese 5½ percents 1974 were off a point. U.S. Government bonds managed to post small net gains after their recent easiness, helped by some buying. Investment grade corporate issues improved by about three quarters of a point, while rail bonds were inactive for the most part. Convertibles followed the stock market and were generally higher.

Hongkong Gold Quiet

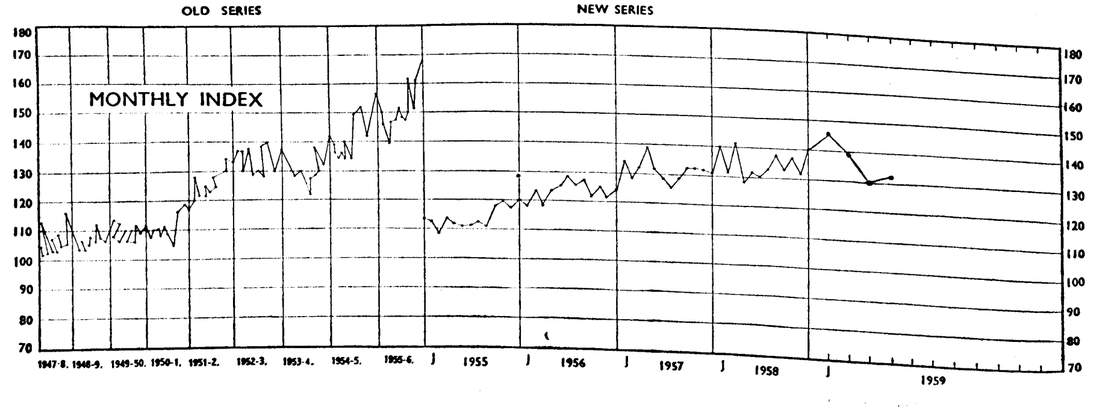
Higher rates for sterling resulted in a softer trend in the Hongkong gold market last week. But trading remained very quiet due to a lack of incentives. Carry-over charges were nil. Arrivals totalled 22,000 ounces and forward contracts were done at $(U.S.)38.01 an ounce.

PAN AMERICAN TRIPLES JET SERVICES TO INDIA

Pan American World Airways will serve India six times a week with round-the-world jets beginning on 23rd December, Mr. Harold E. Gray, executive vice-president, has announced. Pan American's large, long-range version of the *Boeing 707*, called the "Intercontinental," will call two times a week at Delhi and four times weekly at Calcutta. The Delhi calls will mark the first scheduled *707* service to the nation's capital. In addition to Delhi, four cities will be served by the airline's jets for the first time on the new round-the-world schedules. They are Teheran, Ankara, Vienna and Munich. Present jet schedules, inaugurated on 12th October, serve New York, London, Frankfurt, Istanbul, Beirut, Karachi, Calcutta, Bangkok, Hongkong, Tokyo, Honolulu and San Francisco. The pure jet service round-the-world now makes it possible for an air traveller to leave New York and circle the globe in 59 hours.

NAMES AND DATES

At the meeting of the Executive Committee of the Western India Minerals Association held on 10th December, at 3, India House, Bombay, Messrs Sevantilal M. Seth and Jagdishraj Seth were elected as chairman and vice-chairman, respectively.



"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Indian Industrial Activity (Base : 1953) has now been brought up to April 1959. Compared with the preceding month, there were increases in tea 37.67 points, jute 1.51 points, cloth 0.27 points, cement 5.30 points, coal 0.97 points, pig iron 7.64 points, tyres 14.04 points and electricity 1.53 points, while decreases occurred in sugar 178.62 points, yarn 1.27 points, finished steel 9.62 points, paper 34.90 points, motor-cars 54.74 points, bicycles 25.45 points and railway ton-miles 20.14 points.

Correlating all the factors, the *Capital* Index of Indian Industrial Activity increased by 2.2 points during April 1959.

TECHNIQUES OF CONTROLLING MONEY RATES

By Kesava Iyengar

AMONG the different items making up costs of production, the wage bill is usually large, while the element of interest is usually small. Even so, interest and discount rates have had a fair influence on economic development. Low rates can stimulate recovery in times of depression or recession, while high rates can exert an anti-inflationary influence in boom conditions. The demarcation line between profit and interest is sometimes hazy, in so far as some risk usually accompanies every variety of lending. Even Government securities involve a risk in that market rates may become high or low, and the rate of interest on actual worth may vary. Two decades ago, some investors in the U.S.A. got "negative" interest on account of the nominal rate itself having been very low, sometimes being more than neutralised by the low market quotations for such securities. In the case of preference shares and debentures, the risk is greater, and in the case of private loans, institutional or personal, it is still greater. In spite of this, the usual distinction made between interest and profit is that in the former case the rate of remuneration is based on contracts, while in the latter case it is residual in character. The holder of an ordinary share may get a big dividend or a small one, while the preference shareholder, the debenture-holder and the gilt-edged investor expect to get returns at the contracted rates.

The Money Market

The structure of money rates in general in any country is influenced primarily by the rediscount rate of the central bank of the country, called "Bank rate" in some cases. In the discount market, the actual rates are slightly lower, but Bank rate becomes effective when the money market shows signs of stringency. Economic conditions in different countries vary, so rediscount rates do not always reflect international influences. For example, the rediscount rate has recently been as high as 10 percent in Brazil, Equador and Greece, but only 2 percent in Venezuela and the Honduras. It stands at 4 percent in West Germany, Britain, Pakistan and India. In the U.S.A., it was raised to 4 percent last September. Within each country, Bank rate varies differently. In Britain, it was 7 percent in March 1958. In Japan, the previous rate was 7.3 percent while the present one is 6.94 percent. There is a broad division of loan transactions into the short, the medium and the long market, the distinction depending on maturity. For example, the distinction in the United States is between inter-call money, other demand liabilities, bills, notes and certificates with less than five years' maturity, and bonds with a maturity of five years or more.

The bond market is long while the bill market is short. Governments distribute the national debt between the short and the long markets according to the circumstances prevailing from time to time. Short-term borrowings are generally for temporary Treasury needs, while long-term loans are intended for financing a war, huge public works or for fighting inflation. In advanced countries, credit is predominantly institutional, while in India it is in a substantial measure personal in spite of the expansion of credit institutions during the last few decades. Generally speaking, personal credit permits more risk and carries higher rates of interest than institutional credit. Variation of interest rates in the short market generally affects long market rates, while there is little influence in the opposite direction. Tables I and II show how the recession in 1958 lowered short rates and influenced to a smaller extent long rates.

The Rediscount Rate

There are several ways of adjusting the structure of money rates, but some of them may not be desirable or practicable. More controls lead to a further abridgement of economic freedom, burdening the authorities with responsibilities which they may not be able to discharge. For example, fixing a price ceiling on food or other articles presupposes the readiness of the Government to take to rationing in order to enforce it; without this preparedness, a ceiling would be a dead letter. The best course would be to facilitate competitive conditions with minimum controls at strategic points. As one of the instruments in moulding monetary policy (among others like open market operations, adjustment of reserve ratios, approved securities and margins for advances), money rates have had varying degrees of influence under different circumstances. For instance, in the days of Daltonian easy money, Bank rate was considered a mere formality, and not intended to exert any influence on the contemporary economic set-up. During the last several years, money rates have exerted a great influence in checking inflation or facilitating reflation, as can be seen from the interest rate figures for 1957 and 1958 in Table I. In July 1958, Britain gave up quantitative controls of credit which held sway for 20 years, and the Radcliffe Report has endorsed the opinion that the interest rate should prove more effective in implementing monetary policy. In the U.S.A., the rediscount rate was 1 percent in the 'thirties. It was 1.75 percent until August 1958, when it was intended to stimulate recovery after the recession in early 1958. But it was raised to 2 percent in August and 2.5 percent in October 1958, to 3.5 percent in May 1959 and to 4 percent in September 1959, obviously to check the growing inflationary pressures. The days of automatic adjustments of the rates of interest as a result of free interaction among the forces of demand and supply, are over: cyclical ups and downs and stagnant economies have compelled the monetary authorities to intervene whenever it is necessary.

TABLE II

Bond Rates (percent a year)

	U.S. Government bonds (long-term)	State and local Government bonds Total	Corporate bonds Total
Number of issues	4.7	20	120
1956	3.08	2.94	3.57
1957	3.47	3.56	4.21
1958	3.43	3.36	4.16
1959, week ended 1st August	4.10	3.89	4.72

Created Money

Another way of pulling down money rates is for the Government deliberately to foster recessionary pressures. But no Government usually takes such a step because the other consequences are undesirable and dangerous. The remedy would be worse than the disease. High and rising rates of interest may not necessarily imply expanding business. As Table I shows, interest rates went down during the 1958 recession, although the Government was not responsible for the slump. A third alternative might be for the Treasury, with legislative sanction, to ask the central bank to purchase directly all its issues of bills, notes, certificates and bonds, thereby reducing the demand for cash in the money market and thus bringing down interest rates. This method is beset with dangers. Intended as a temporary facility, the Treasury may feel tempted to indulge in it for long; money issued against created securities, and not those marketable might well be the high road to inflation on account of the huge money supply injected by the Treasury into the system. Simple inflation may pave the way to galloping inflation as the central bank accelerates its speed of creating money. Such a step might be necessary in wartime, or under circumstances in which President Roosevelt implemented his New Deal with successive deficit Budgets relying on created money. Direct pressure on the money market might be avoided for the moment, but Government expenditure is bound to exert an inflationary pressure, not capable of being counterbalanced by measures like raising reserve ratios.

In the U.S.A., except in 1951, reserve ratios were revised downward, once in 1953, twice in 1954 and four times in 1958. Further, an upward revision must result in less cash with the member banks which in turn must lead to higher rates of interest. An expanding economy carries inherently the germs of cost inflation. During 1950-59, the United States Federal Government had seven deficits of $3.1 billion, $4 billion, $9.4 billion, $3.1 billion, $4.2 billion, $2.8 billion and $12.9 billion, while the remaining three had nominal surpluses. In the first three years of the first plan, the Government of India resorted to Rs. 286 crores of deficit spending, but on account of good seasonal conditions and a favourable balance of payments, the index number of wholesale prices went down to 92.5 in 1956-57 (base year 1952-53). During the first four years of the second plan, deficit spending amounted to Rs. 1,122 crores and the wholesale price index rose to 116.8 by the end of July 1959. The working class cost of living index went up to 121 in June 1959 (base year 1949). The rupee has been definitely diluted, with the result that liquidity preference has risen and inflationary pressures are on the increase.

TABLE I

Money Market Rates (percent a year)

	1956	1957	1958	1959, week ended 1st August
Prime commercial paper, four to six months ...	3.31	3.81	2.46	3.99
Finance company paper placed directly, three to six months	3.06	3.55	2.12	3.81
Prime bankers' acceptances, 90 days	2.64	3.45	2.04	3.50
U.S. Government securities (taxable):				
1. Three-month bills: rate on new issue ...	2.658	3.267	1.839	3.047
2. Three to five-year issues	3.12	3.62	2.90	4.40

Pegging Government Paper

Still another way of reducing money rates would be for the monetary authority to peg Government paper at a higher point than in the market, which must result in lowering yields and thus helping towards reduction in interest rates. But there would be a rush to sell such pegged paper to the central bank, leading to a larger money supply in the hands of banks. The currency would become corroded, encouraging borrowers and discouraging lenders. Such a situation must lead in its turn to higher rates of interest. A fifth way of toning down interest rates would be through a steady retirement of public debt, to that extent adding to money supply, but this would depend on the relative position of Government expenditure and revenue. If revenue is either equal to expenditure or less, any retirement of debt would be possible only by fresh borrowing. As such, the programme would have little meaning apart from the Government's budgetary position.

Selective Credit Control

The sixth method of influencing the structure of interest rates is through selective credit control. In the U.S.A., for example, there is a ceiling on bond issues by the Federal Treasury. It is the present policy of controlling interest rates that has enabled the U.S. Government to avoid a "flight from the dollar" in the case of $50 billion domestic savings bonds held by 40 million citizens, and $18 billion held in the U.S.A. by foreign individuals and institutions in the shape of short-term securities: soaring rates must bring about loss of confidence in the dollar, leading to withdrawals. In India, the Reserve Bank lends at rates varying between 2 percent and 4 percent, according to the purpose. For the seasonal financing of crops, the lending rate was 1.5 percent until 1956-57, and even at present, it is 2 percent for medium-term and short-term advances to co-operatives. The idea is to ease money market conditions through such discriminatory rates: it has been found by some recent sample surveys that such cheap money helped cultivators to hold back foodgrains from the market. Prohibitory orders against advances on the security of foodgrains were not respected by commercial banks according to the Reserve Bank's own admission. Under the Usurious Loans Acts and Debt Relief Acts in most of the States in India, the judge or the tribunal is empowered to scale down rates of interest to 6.25 percent, but such legislation cannot prove of much use because

TABLE III

THE GOVERNMENT OF INDIA'S BUDGETARY AND BALANCE OF PAYMENTS POSITION (in crores of rupees)

	1955-56	1956-57	1957-58	1958-59	1959-60
Bank rate	3.5	3.5	4	4	...

the parties collude in most cases and maintain *de facto* higher rates of interest than the ceiling laid down by the law.

Surplus Spending

Of the several possible methods of checking rates of interest, the soundest and most effective is for the Government to change over from a net borrower to a net lender domestically by achieving a surplus budget in prosperous years, through maximum economy in expenditure and efficient collection of revenue, accompanied, if necessary, by borrowing abroad. Such surpluses might be used in retiring the public debt and thus adding to the money supply. Such an addition should help in bringing down money rates. If a portion of the surplus is used in public works (plan projects), that also would have the same effect as domestic borrowing for the purpose would have been avoided. Such an achievement should convince the investor that the value of the currency would be protected against inflation, and that fiscal and monetary discipline would be maintained. It would also lead to an easier money market and lower money rates, and surpluses used in debt retirement should enable the Government to pursue a flexible policy on debt management and thus bring down its borrowing rates. While having the merit of least interference with economic freedom, it helps maintain employment, production and purchasing power "in a manner calculated to foster and promote free competitive enterprise and the general welfare" (U.S. Employment Act of 1946). It is indeed difficult to predict how far the Government of India can possibly change over from deficit to surplus budgets. But the task, although difficult, is not impossible, particularly with the help of friendly foreign Governments: through the import of more and more producer and consumer goods on the basis of grants and loans, the rupee would be no longer chasing after too few goods, and inflationary conditions might prove avoidable. The task requires a high level of discipline. But for the huge external receipts under capital account (as shown in Table III in Page 849), the Government of India's revenue and capital budgets would have had much larger deficits. With more foreign aid, the task of achieving a good budgetary surplus may not be impossible.

Contemporary international thought and policy appear to be very auspicious. Mr. Khrushchev has pleaded for the diversion of 100 million men and $100 billion now engaged on military preparations, to the task of aiding under-developed economies, through total disarmament. Mr. Paul G. Hoffman, Director-General of the Special United Nations Fund for Economic Development, has pointed out that this task involves 100 under-developed economies (60 States and 40 territories) with a population of 1,000 million (excluding mainland China), and this would cost at least $30 billion to be appropriated in the decade 1960-70. He estimates that such an investment might raise the national income of the less developed economies from 1 percent net a year to 2 percent, and the *per capita* income from $120 to $140. It is well to remember that the *per capita* national income in India is just half the average for all the under-developed countries put together.

London

U.K. CHANCELLOR REITERATES PLEA FOR REDUCING PRICES

CONSUMERS SHOULD SHARE BENEFITS OF HIGHER PRODUCTIVITY

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer is continuing his campaign to secure a lowering of prices as a safeguard against the return of the inflationary spiral. His talks last week with the employers' organisations at least indicated the dangers in the present situation, and it is doubtful whether they were intended to do more than that. The employers promised Mr. Amory that their organisations would give "careful and speedy study" to the question of maintaining price stability. The meeting, which was called at the Chancellor's request, lasted about two hours. An agreed statement afterwards said that there had been "an informal talk on general economic matters." It went on: "The Chancellor pointed out that the balance of the economy had been very healthy over the past 18 months and, in particular, we had enjoyed greater stability of prices than we had had for a long time. It was important to maintain this stability, particularly in view of the need to be competitive in exports, and he was anxious to discuss with the representatives of industry any steps that could be taken to achieve this end.

"The industrial representatives agreed that the risk of inflation was still very real and that keeping it under control was the key to further safe and balanced advance. They were confident that industry and the community in general were increasingly conscious of the benefits of the stability that had been enjoyed for the past 18 months; and the four organisations recognised the responsibility they shared with the Government and other sections of the community, including trade unions, nationalised industries, and distributive trades, to play their full parts in ensuring the continuance of this stability. The four presidents undertook that their organisations would give careful and speedy study to those matters in the light of what the Chancellor had said."

No Price Freeze

Lest it be felt that the Chancellor was placing too much responsibility on manufacturing industry and forgetting the other contributors to price stability, Mr. Amory followed up this meeting with a dinner speech in which he said this was far from the case. "What we want is that everybody, right through the chain of manufacturing, merchanting, distribution and retail selling, where he has been able to get an increase in efficiency and productivity, should share the benefit with his customers. The best way of all of ensuring what we want is healthy, fair competition. That is what we are out to encourage in every way we can.

"I am not asking for a price freeze or for that matter for a wage or dividend freeze. Nor am I saying that there is room for all prices to be cut now, or that I am dissatisfied with what has been happening. We have been fortunate enough to have enjoyed practically stable prices for more than 18 months. What I have been saying is that productivity is now rising fairly fast. I have suggested that it would be right and sensible if the financial benefits arising from that increase should not be used solely for increases in profits or wages, but shared between the shareholders, the workers in industry and the consumer. If that is done we can hope to keep our present price stability. Every one will benefit from our rising prosperity and our exports will remain competitive."

Exchequer Returns Promising

The Chancellor must have been pleased with the Exchequer returns. With two-thirds of the financial year now past, it seems clear that revenue is running higher and expenditure lower than the forecast he made while presenting his Budget. Moreover, national savings are helping enormously in bridging the remaining gap between the Government's spending and its income. "Above the line," there is at present a deficit of £290 million, against a forecast surplus for the fiscal year of £102 million. This shortfall is quite normal for December, since income-tax and surtax payments are heavy in the new year. In fact, the surplus may well be much larger than expected, and could even compare with last year's surplus of £377 million. The increase in "supply" spending (£117 million) is neatly in line with Budget forecasts, while the cost of debt service has fallen by £58 million already—only £5 million less than the estimate for the year. Revenue from income tax, expected to fall by £175 million over the full year, is actually slightly up on the year, and an extra £44 million has flowed in from stamp and death duties.

"Below the line," in the section dealing with capital payments, the overall deficit is up by £133 but for the full year it was expected to rise by £264 million. At the beginning of December 1958, nearly 60 percent of the eventual deficit of £559 million on capital account had already accrued. If the same is true this year, the below-the-line deficit would turn out to be nearly £40 million less than was forecast during last April. This leaves an overall deficit so far of £756 million—less than £100 million up against an estimated increase for 1959-60 of £539 million. It looks as if the Chancellor has a much smaller financing problem on his hands than seemed likely during last spring. At the moment, the floating debt is seasonally high at £5,765 million. But this figure will subside in the tax-gathering months and the final returns will probably show that a large proportion has been covered in the form of national savings. All this does not mean that Britain can look forward to tax cuts next spring. The Budget, as the Chancellor reminded the country recently, is now an instrument of economic policy. Last April, he budgeted deliberately for a large deficit to stimulate the economy, but four months hence he may well be thinking in terms of restraint or at least of neutrality. In that case, the best Britain could hope for would be that he left tax rates as they are.

Airlines to Pool Operations

B.O.A.C., the Australian airline Qantas, and Air-India International have reached an agreement to pool their operations in an effort to expand their share of the world's international traffic in the jet age. It was concluded after negotiations in Bombay. The details were announced in London by Air-India on behalf of the three airlines. The agreement has to be ratified by the boards of the airlines and the Governments concerned. If ratified, the agreement will come into force on 1st April, 1960. The announcement of the agreement said that the airline network involved extends from London eastwards to India, Australia, Hongkong, and Japan, and westwards from London to New York, covering a very large part of the world's air transport system. By joint planning of operations and co-ordination of reservation systems, the three partners in the agreement will offer the travelling public unrivalled airline service through the great travel centres of the world. Tickets of the three airlines will be freely interchangeable and each airline will sell the services of the others.

Each airline will retain its own identity and individuality. Under the agreement, each partner maintains its complete independence and its right to develop its own future. Provision is made for the development of promotional services. Each airline will also continue to exercise its right to choose the best aircraft for its purposes in its own judgment. B.O.A.C. and Qantas already have jet flights in operation and Air-India International will introduce its large *Boeing* jets in April. The executive heads of the airlines believe that the agreement opens up the prospect of a whole new era of expansion and service to the public, bringing with it new career opportunities of airline staff.

The new pooling agreement between the three Commonwealth airlines, which all operate on the routes between Britain and Australia, is believed in some quarters to be the first stage in an attempt to form a Commonwealth Air Union in response to the recent decision of Lufthansa (West Germany), Air France, Sabena (Belgium), and Alitalia (Italy) for forming an air union, in which they intend to pool their resources.

Free Trade Area Goods

An exporter's *vade mecum* under the terms of the European Free Trade Association has been published under the title *Text of schedules to Annex B to convention approved at Stockholm on 20th November, 1959—lists of qualifying processes and of basic materials; forms of documentary evidence of origin.* The rules relating to the origin of goods exchanged within the area have already been published in a report on the Stockholm agreement. The document now published (Stationery Office, price 7s) contains two schedules to Annex B in the earlier report. The first schedule describes goods which will be accepted as being of E.F.T.A. origin if they have been produced within the "Stockholm" area by a qualifying process prescribed for such finished products, or if they come within the rule that not more than half the export price is accounted for by non-E.F.T.A. materials. The exporter may choose which test to apply. The second schedule identifies the goods (among them, textiles) which may benefit from the E.F.T.A. tariff or may benefit only by satisfying the test of "qualifying process" and not the percentage test.

Television in the Bank

Customers of the Westminster Bank in Manchester can now check statements of accounts and other documents on television screens by an inter-branch closed-circuit television net-work introduced last week. Pictures are sent from a centralised book-keeping department at the bank's York Street headquarters to two branches at Royal Exchange and Knott Mill. The system can be extended.

An operator controls the transmissions and there is a two-way private telephone link. To ensure secrecy, the 14in. screens are in the managers' offices at Royal Exchange and Knott Mill and no documents are shown until they have been checked on the master screen. Royal Exchange also has a private viewing cubicle. By using a closed-circuit through cables laid specially by the Post Office under the streets of Manchester, there is no possibility, it is claimed, of customers' affairs leaking into the public television channels.

Hire-purchase for Exports and Imports

A scheme for using hire-purchase credit to finance export and import trade in machinery, motor-cars, and consumer durables is being launched by United Dominions Trust, together with a German and a Netherlands finance house. Three other finance houses in Switzerland, Sweden and Austria have just agreed to join the scheme. It is gathered that Barclays Bank, a large shareholder in U.D.T., has approved the venture and helped devise the technique.

In effect, each of the finance houses will extend credit only in its own country on much the same basis as hitherto; they will simply exchange credit information and co-operate in seeing each transaction through. For instance, in the case of imports into Britain, U.D.T. will purchase the goods and extend hire-purchase credit to the importer. In the European countries, a finance house will not normally do this, but will obtain the usual security from the customer. At present, the plan takes the form of a series of bilateral agreements between the finance houses, but if, as the sponsors believe, the business will grow into some tens of millions of pounds, it may develop into a clearing house for instalment credit in international trade. Whether a gap in the credit machinery really exists that needs bridging by some such scheme remains to be seen. Hire-purchase rates are bound to be more expensive than acceptance or other bank credit. In any case, it is an interesting business venture.

Brevities

The number of television receivers despatched by manufacturers in October was 390,000, bringing the total for the first ten months of the year to 2,176,000. This is 52 percent more than in the same period of last year. The October figure for radios was 175,000, and the total for January-October, 1,264,000, an increase of 18 percent.

Holders of 2½-percent Defence Bonds bought between April and September 1950, and maturing between 1st April and 30th December, 1960, of which only £1.5 million are still outstanding, will be invited to exchange their holdings into 5-percent Defence Bonds on the tenth anniversary of the date of purchase. The maturity premium of £1 a £100 will be paid on the date of exchange, together with the final interest payment at 2½-percent. If the offer is not accepted by 5th February, interest on the maturing bonds will cease ten years after purchase.

Steel production in November averaged 458,600 tons a week, compared with 441,400 tons in October and 351,900 tons in November 1958. The output was 30 percent higher than a year ago and exceeded the previous record figure of 443,200 tons in May 1957. The percentage of capacity worked was about 95.

small packs

Distribute, market or export your products, liquids/solids, in lithographed or plain tin plate containers, in convenient, easy to handle sizes. All containers fully tested.

Manufactured to standard specifications on up to date automatic machinery we can supply large quantities at competitive rates. *Early Deliveries.*

METHODS OF MARKET RESEARCH IN INDIA

By K. C. Jagasia

WHAT is market research? It is to anticipate consumer likes and dislikes; improving packages and containers; brand mark—whether it is easily remembered and catches the eye of the buyer; price structure; consumer demand, and the testing of the product in the market. As the American Management Association defines it, marketing research is the systematic, objective and exhaustive search for the study of the facts relevant to any problem in the field of marketing. Organised marketing research in the U.S.A. and the U.K. is becoming increasingly popular. There are institutions and associations to impart the proper type of knowledge and training to the marketing men. In India, with the rapid trade and industrial advancement, there is now, happily, gradual realisation by large commercial and industrial organisations of the need for marked research before they place new products, new packages and new containers, or introduce new brand marks, on the market. Some advertising agencies, of late, have on their staff trained members for research work. Their training has been acquired in foreign countries. But their knowledge and training, for application to the Indian marketing conditions, does not appear to be of much use. This is the opinion of one of the senior marketing executives, who probably had something to do in employing them in his organisation. Conditions in India differ. Here, in different types and conditions of markets, research work has to be done on entirely different lines.

There appears to be no large marketing organisation in India, which employs a full-time marketing research director, a sales executive, or has a special staff for the purpose. Such staff as there are probably all do this type of work as part of their other duties. The local or upcountry market salesmen submit a form duly filled in, answering various queries and furnishing other data. This form is supposed to be in the nature of a questionnaire for market research work. Some salesmen fill these forms after careful and elaborate enquiries, others in a casual way, by guess work. Their feeling appears to be that these forms calling for elaborate information, are rarely, if ever, scrutinised by sales executives and that they are simply put on files for future reference purposes. Data are not tabulated or collated. There is one large marketing organisation, which sent out an elaborate questionnaire to its agents and dealers, also their salesmen. The response, even after telegraphic reminders, was nil.

Industrial and consumer sales and marketing organisations are not the same from the point of view of marketing and sales. They are different. Industrial manufacturing companies and marketing organisations are primarily concerned with markets for their products. Consumer goods manufacturing companies and consumer goods marketing organisations are more particularly concerned with sales methods, sales policies, advertising and publicity methods. As is well known, industrial organisations are also interested in the new uses for their products. But both the manufacturers of industrial as well as consumer goods are equally interested in finding out the prevailing competition, consumer dissatisfaction, price factors, the types of packages and containers needed. But the research work, to be useful, has to be both qualitative and quantitative.

Right Type of Workers

A foreign trained man for research work for the Indian markets would not be of much use. He is probably narrowly specialised. So a marketing man, who has done considerable amount of travelling of various markets in India should be selected, that is, if he has shown a flair for this kind of work; proves himself reliable and accurate in reporting, and can be sufficiently trained to do this work satisfactorily. There is a lot to be learnt from the actual consumers of the products. The research worker would discover various channels of supply and distribution through which the goods pass, before they reach the actual consumer. He would also discover that if any channel of supply and distribution were eliminated, there would be gradual or immediate reaction on the sales. In the same way, if any attempt were to be made to reduce the margin of profit of the middle men, there would also be reaction on the sales. The middle man is a very great necessity in a marketing and sales organisation. These conditions are not stable or universal for all the markets. They vary from market to market. Only theoretical knowledge will not do. The marketing research man should, of necessity, be also a marketing man and a sales organiser. He has to work as a link between the company's upcountry or local marketing organisation and research activities. He is supposed to be a trained man, to collect the technical data. His acceptance of the findings of the market research depends, to a great measure, on his own skill and ability, in studying conditions of the markets, and communicating the correct views to his company.

Market research work has to be divided into two parts—qualitative and quantitative. The first part deals with the complicated problem of how and why people buy and use a particular product. Why the sales of the competitor's brands of identical articles are twice as large. The likes and dislikes of consumers have to be studied. The answer can be found by proper investigation. The finding of the on-the-spot study and investigation has to be communicated to the principals. It may either be the unpopularity of the brand name, as the buyers cannot readily remember it, or the lack of a pictorial design on the packing or the container, which they are not able to recognise properly. The packaging or wrapping may be defective and not at all attractive. The package or the container may be very bulky and not handy enough to be transported or handled conveniently and comfortably. The dealer handling the product may not be popular among the potential purchasers. The margin of profit for the dealer or the retailer, compared with whet the competitors' offer, may not be attractive. These have considerable bearing on the sale and popularity of the brands, and the large consumer demand. These factors weigh considerably in favour of the competitor's identical or equal products.

The second part needs compiling and studying a lot of useful and valuable statistical data. Such data about population figures, crops, earnings of the people, factors for and against their prosperity, are available from the numerous government publications on Census figures and surveys. The company has probably, already, in its possession such data, which it should make available to its salesmen. So a set of appropriate forms are provided with gaps to fill in. These will have to be accurately filled. The executives in their offices compile and tabulate the statistics about consumption demand and the potentialities of each market.

Qualitative Research

For qualitative research, two problems have to be faced. The first one is that a company makes a product, sells it to the public. The public accepts it, simply because there is nothing better to offer, or there is nothing better available on the market. The second is that different markets have to be studied. What the public wants has to be found out. The company has to manufacture the article according to the requirements and specifications of the actual users. Their needs and requirements about the design, packing, containers, price structure, and also the brand mark and pictorial design on the outside of the cover of the container, as the case may be, have to be carefully studied.

Here are a few examples of the type and nature of research work done in the early 1930s. The Asiatic Petroleum Company, the former name of Burmah-Shell in India, launched, at the time, a scheme of market (village) research. The problems were:

There was less consumption of kerosene oil, particularly in rural areas, as the people still used vegetable oil, which was available locally, for lighting purposes in *chirags* (small earthen lamps, commonly known as *devas*);

What methods to be adopted to convert the masses to the use of kerosene oil;

Why was the company's brand of oil "Rising Sun", not so popular, compared with the competitor's "Elephant" brand, and

Why was there general reluctance on the part of masses in villages, as well as a section of the people in towns also, to the use of kerosene oil for lighting and illuminating purposes?

A band of salesmen and canvassers, who were trained for this type of research work, were provided with questionnaires. They went guided by the writer, from cities and towns, watching and studying the system of distribution. Then they entered fairly large villages, served by or adjacent to big towns and cities. The investigations showed the following salient facts. Having arrived at concrete conclusions, the investigators did not wait for long, but promptly put the various schemes and ideas into effect.

Practical Steps

(a) Intensive verbal and pictorial propoganda was launched to the effect that a hurricane lantern serves many useful and important purposes, as it could be carried about in the case of floods, attacks by dacoits, attacks by wild animals, supervision of the fields at night time, to ward off dangers of floods, escaping snake and scorpion bites, etcetera, while the flickering light of a *chirag* is ineffective for the purpose. An impression was also created on their minds that the smoke coming out from open *chirags* was injurious to the eye-sight.

(b) The company was marketing kerosene oil in four-gallon tins. These tins were considered too expensive to buy. There was not much demand for the empty tins. These tins were too heavy to be carried by these villagers from nearby towns and cities. Small one-gallon tins were immediately introduced. As empty containers, they were put to many uses locally. One-bottle tins were also placed on the market to facilitate oil being purchased in small quantities. Bottles had a tendency to break. These small containers were priced low. Within a comparatively short time, large stocks were sold. Lanterns were sold side by side with the sale of kerosene oil. Taste for the article was created. It held on, and went on growing. Every hut and cottage, every hamlet, had a hurricane lantern to display. The village dealer started stocking up kerosene oil to meet the demand which had sprung up.

(c) The distribution system was extended and it penetrated right into the villages. The price structure for village retailers was fixed. They were assured of a reasonable margin of profit. On the occasion of fairs and market days, which are common all over India, demonstrations in kerosene oil burning lanterns were given. Very large stocks of these lanterns, which were always carried by the company's propaganda units, were sold on these occasions. The agents, distributors and dealers also held stocks of these lanterns for sale to the villagers. The consumption of kerosene oil increased. The use of vegetable-oil-burning-*chirags* disappeared. Stocks of wicks, globes and other components were kept. The lanterns continued to be used, and were not discarded, because wicks and globes were not available on the spot.

(d) The "Rising Sun" brand, it was found, was unpopular because it was most unimposing. There were in a semi-circle vertical and horizontal lines. Villagers could neither remember the name of the brand nor its most unimposing picture. On the other hand, it was found, the "Elephant" brand of the competitors was considered to be most imposing, majestic in appearance, and everyone could easily remember it. So the company immediately put on the market its "Horse" brand kerosene. Everyone is familiar with a horse. This brand became most popular and caught the eye and the imagination of the purchasers. The product was the same. The price was the same. But only the brand was changed. The sales went up like anything—most surprising results were obtained. But surprisingly, in some parts of India, like Rajputana, "Rising Sun" is still a popular brand, for conditions of the market vary and differ. The research conclusions for one market may or may not be suitable for universal application or for other markets. So effective and immediate steps on research conclusions have to be taken. The initial work done has to be followed on. Success does not lie in merely getting long reports.

First Steps

The first step should be to raise the sale of the article. Then comes the popularisation of the brand. The brand name has to be simple and imposing, so that it readily catches the eye and the imagination of the buyer. Stocks have also to be available for sale at economical rates. What good is the use of vast and intensive advertising and publicity campaigns if the stocks are not readily available on the spot? Otherwise, the buyers would soon forget about the brand and start using the competitor's brands. The proper uses of the articles have also to be demonstrated. Their advantages and good points have to be explained. It has to be impressed upon them that under the brand mark concerned, they are getting a guaranteed genuine article, worth the money they are spending on it. Once consumer demand has been created, it has to be stimulated by periodical and regular visits to the same markets, until the position is consolidated. Through the adoption of these measures, the article becomes a household name.

While interviewing, the file, the form of the questionnaire or the note-book should not be displayed. These would terrify the people, for their standard of education is low. They would invariably misunderstand the questions. Their confidence has to be gained. Gradually, by engaging them in conversation on the condition of their crops, it would be easy to glean out of them all the information that is required. The local dealer should go with the interviewer. If anyone has visited Nall Bazaar in Bombay, which is the hub-centre of retail business activity, he must have found many wholesale and retail dealers. Information from them cannot be got by simply walking into their shops. Their confidence has to be first gained, and then the useful and valuable information can be collected. One has to dig for it deeper. It is not lying on the surface to be picked up.

Oncee experience of this type of work has been gained, the real reasons and causes can be soon discovered—why and how certain people use certain things, and act in certain ways. In short, why the people buy particular and certain things.

Collection of Data

Executives in charge of the work should be painstaking and not casual workers. They should carefully go through the mass of most valuable and useful data and information that is submitted to them. They should tabulate it. They should convey the impression to the field workers that their reports, forms and notes on observations on different markets, are being carefully scrutinised and studied. Research work is most painstaking, but always a thankless job. They should not sit on the reports and conclusions of investigations, but take immediate and effective steps for the same conditions, favourable now to the company, may not be there after a lapse of six months or a year. Probably, the competitor has consolidated his position in the market already.

Jute

HEAVY SPECULATION IN JUTE AND GUNNIES

MILLS POSTPONE MOVE TO RE-SEAL LOOMS

RAW jute prices rose steadily last week, and Indian-owned mill groups bought large quantities on the rise. Some people estimated the amount as nearly 300,000 maunds, and when one adds to this the purchases made in the agencies by mills, the total quantity bought was considerably larger than for some time. The continued support given by buyers encouraged the already bullish outlook of sellers, as a result of which fibre rates showed an increase over the week of about Rs. 60 a ton. Thus, since the beginning of December, raw jute rates had advanced by about Rs. 100 a ton. Goods prices last week were maintained solely on the strength of raw jute, and apart from speculative activity, very little business was recorded. B Twills improved by Rs. 20 a ton to make a total advance of Rs. 35 a ton this month, and last week hessians improved by only about Rs. 15 a ton to bring the rise in December to Rs. 50 a ton—half that of raw jute.

The trade in general, and overseas interests in particular, considered the prevailing conditions very unhealthy for the trade. The rise was too rapid and too large, and frightened away many prospective buyers. In these days, when there is so much competition from substitutes, and it is so easy for customers to turn to them, the current high prices for gunnies and the uncertainty of fibre prices gives the overseas consumer little incentive to continue to place his faith in jute goods. Some mills which were long in jute, wishing to take advantage of the high prices prevailing which gave them a considerable profit on their average price of jute, could find no genuine overseas buyers. The only interest came from bazaar parties.

Bigger Margins

Most raw jute and gunny operators continued to ignore the policy of the East India Jute and Hessian Exchange Ltd, and in many private transactions, its authority was openly flouted. In order to curb the excessive speculative activity, the Forward Markets Commission decided to raise the margins payable by operators which were imposed last week. They were increased from Rs. 2.50 to Rs. 3 on hessians, from Rs. 5 to Rs. 6 on sacking, and from Rs. 2 to Rs. 7 on raw jute, the maximum price indices remaining the same in each case. As a protest, operators once again stopped trading. But this had little effect as, in spite of the increased deposit rates, heavy speculative transactions were recorded by bulls, which only succeeded in forcing rates higher initially. The real effect was felt from Monday onwards when the margin rates became payable. From then on, conditions eased.

The genuine shortage of ready goods, and indeed the apparent shortage of goods for all deliveries as shown by the industry's statistics, proved a further bullish factor. Reports that U.S. burlap consumption rose to 80 million yards in November —an increase of 11 million yards over the previous month—were welcomed by the trade. The continued uncertainty about the final outcome of the American steel strike discouraged purchases by the U.S.A., and it was expected that after a final settlement she would accelerate her buying. U.S. burlap consumption during November was the highest for that month since 1956, and was 15 million yards more than in November last year. Total U.S. consumption for the year is now 817 million yards, for an average consumption of 73.8 million yards.

Increasing Production

The prospect of fresh demand from America, and the hope that the Argentine can surmount her foreign exchange difficulties and once again become a major customer, prompted many in the trade to advocate a further increase in production. They argued that if the mills were as well bought in jute as they claimed, there should be no difficulty in raising gunny production. If any difficulty was visualised, the export of jute could be suspended and the situation eased by allowing the import of more Pakistani cuttings. It has now been decided by the I.J.M.A. that loomage, which was due to revert on 2nd January to the pre-24th August position when 12½ percent of the industry's loomage was sealed, will remain at the current 10 percent sealed, at least until 1st February.

There was little change in the production statistics for November published by the I.J.M.A. Total production amounted to 88,000 tons, made up of 36,600 tons of hessians (41 percent), 45,700 tons of sacking (52 percent) and 5,700 tons of other goods (7 percent). The production ratios showed a very small drop in sacking and a slight increase in hessian and other goods. Stocks were still equivalent to only about three weeks' production.

Jute Purchases

During the rapid rise in raw jute prices last week, many buyers from Indian-owned groups changed their attitude and became bullish. A heavy demand developed and Assam jute was purchased at as high a rate as Rs. 31 a maund basis bottoms, while other fibres commanded equally high rates. This was interpreted by many in the trade as an admission of a shortage of jute in buyers' godowns, which hardened many sellers' bullish attitude. One prominent buyer, however, was known to have over five months' stock of jute.

The upcountry jute markets continued to show a premium over Calcutta rates, and the continued demand for fibre at mill agencies gave very little hope that the position would change. Imports upcountry by no means satisfied the demand, and operators bid strongly for premium qualities. The movement of jute showed a slight improvement, and arrivals in Cossipore were higher than at any time in the past six weeks. There is still a big backlog to be moved, however, and the demand for wagons is very big.

Token Srike by Jute Mill Workers

The one-day token strike by jute mill workers in the Calcutta industrial belt, in response to the call of the National Union of Jute Workers, was completely effective. Over 220,000 workers in the 70 jute mills scattered up and down the river struck work to demand increased dearness allowance, bonus, additional wages for night-shift operatives, amendment of standing orders and the revision of retirement benefits. The strike was peaceful and passed off without incident. The last time the industry experienced a general strike was in 1938 and this lasted 11 weeks. An earlier general strike in the late 'twenties lasted nine weeks. The Indian Jute Mills Association described the strike as "totally unjustified", as the workers' demands had been submitted to a Wage Board, which was directed to pronounce on the interim relief question within 60 days of its being constituted, and the workers had been advised by the Labour Minister of the Union Government not to proceed with the strike as their claims were being considered.

The Press note issued by the I.J.M.A. pointed out that any increase in wages at this time would be detrimental to the trade when it was facing serious competition from the East Pakistani jute mills whose labour costs were considerably lower and which at the same time enjoyed the advantage of cheap raw material. The jute industry served primarily the export market, and any increase in its wage bill could not be passed on to consumers overseas. The I.J.M.A. considered that any claims for higher wages would be highly damaging to the future prospects of the industry if they were not considered on the basis of the mills' ability to pay. Unofficial estimates put the total loss to the industry as about 3,700 tons, which they can ill afford in the light of the present stock position.

THE JUTE MARKETS

There was heavy activity in the futures market throughout the past week, and rapid changes of price were recorded. Rates, as given by the East India Jute and Hession Exchange Ltd for the period 9th December to 15th December, were as follows:

	Hessians 40in. 10oz. February 1960		Sacking B Twills February 1960		Raw Jute March 1960	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags		Rs. a md.	Rs. a 100 kilos
Opening	41.60	45.49	106.40		29.60	79.31
Highest	42.72	46.72	110.10		31.80	83.85
Lowest	41.24	45.09	106.10		29.60	79.31
Closing	41.80	46.70	108.50		29.78	79.79

Manufactured Goods: The goods market opened on a very firm note last Thursday in sympathy with raw jute. Overseas buyers showed no interest at the higher rates, and there were very few local buyers at mill indications. B Twills advanced by Re. 1 to open at Rs. 108, and 40in. 10oz. hessians improved by 55nP to Rs. 41.75. Heavy speculative activity, particularly in B Twills, caused sacking prices to go up a further 60nP, but lack of interest kept hessians unchanged. Throughout the week, speculative activity proceeded unchecked in spite of the margin deposits demanded by the East India Jute and Hessian Exchange. To try and curb speculation, this body raised the margin deposits, but once again advices from the very firm raw jute section overcame the quiet tendency prompted by this decision. By Saturday morning, B Twills had reached Rs. 109.50 for December shipment, and Rs. 108.25 for July-September shipment. Hessians also showed some life at this stage and 10oz. advanced to Rs. 42.60 for ready delivery, but activity was negligible and was purely in sympathy with the other sections. Over the week-end, reports of a Government tender for about 30,000 bales of sacking pushed B Twill rates up to a new high level of Rs. 110.25, but there was no change in hessian advices. Profit-taking at the higher levels now developed on a large scale, and this, combined with the quieter raw jute, succeeded in pulling back prices in both sections of the market. B Twills lost 75nP and hessians 35nP as rates went into a general decline on selling pressure.

On Wednesday morning, the market was again quiet, and opening quotations were as follows:

	December	January	Jan.-March	April-June
40in 8oz.	33.75 (36.79)	33.75 (36.79)	33.75 (36.79)	33.70 (36.73)
40in. 10oz.	41.90 (45.67)	41.90 (45.67)	41.95 (45.72)	42.00 (45.79)
B Twills	106.10	108.75	108.75	108.35
Heavy Cees				
(Plain)	107.75	107.75	107.75	108.00
A Twills	135.75	133.50	131.75	130.75
Liverpools	121.75	121.75	120.00	120.00
Cornsacks	108.50	109.00	109.00	109.00

Raw Jute: The continued support at rising prices given by mills caused the market to advance by Re. 1 at the opening on Thursday morning, and general indications for Assam Bottoms were on the basis of Rs. 29. Sellers were reserved at this price as upcountry markets were fully steady, and were still above the parity of Calcutta rates. Agency buying by mills also helped inflate prices, which again rose by Re. 1 a maund on Friday. Business still continued, mainly with Indian-owned groups, and prices continued to rise until on Monday morning Assam Bottoms stood at Rs. 31.25. At this stage, the market eased, and although business was still reported, it was on a much smaller scale. Over the next two days, rates dropped by about Rs. 1.50 a maund, and sellers began to increase their offers. Arrivals at Cossipore showed an improvement and wagon arrivals amounted to 630, the highest for some time. There were keen buyers for all arrivals.

During the past week, Assam jute was bought at Rs. 29 to Rs. 31, and Northern jute at Rs. 29 to Rs. 29.50. Assam Tossa fetched Rs. 30 to Rs. 31 and selected Daissee Rs. 31 to Rs. 31.50. Some mesta was bought and buyers paid Rs. 28.50 for Assam mesta and Rs. 28 for jungli mesta. Pakistan cuttings were done at Rs. 83 a bale and Indian cuttings at Rs. 112 to Rs. 115 a bale.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottom:) Rs. a maund	Rs. a 100 kilos.	Shipment.
Assam	30.00	80.40	Dec.-Jan.
Northern	29.00	77.72	,,
Purnea Desal	28.25	75.71	,,
Daissee Selected	31.25	83.75	,,
Assam Tossa	31.00	83.08	,,
Northern (ex Calcutta)	28.75	77.05	,,
Mesta:			
Assam Northern	28.25	75.71	,,
Desal	28.25	75.71	,,
Daissee	28.25	75.71	,,
Jungli	27.75	74.37	,,
Indian Cuttings	120 a bale		,,
Pakistani Cuttings	88 a bale		,,

I. J. M. A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total production of jute goods for November as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	5,252 tons (5,336 metric tons)
	1,76.9 lakh yds. (1,43,43 thousand metres)
	85.3 lakh nos.
(b) Sacking	43.732 tons (44,434 metric tons)
	10,31.8 lakh yds. (9,43,44 thousand metres)
	4,7.6 lakh nos.
2. Gunny Cloth	
(a) Hessian	31,376 tons (31,879 metric tons)
	11,97.6 lakh yds. (10,95,11 thousand metres)
(b) Sacking	1,9.7 tons (1,968 metric tons)
	42.7 lakh yds. (3,906 thousand metres)
3. Other Manufactures	5,718 tons (5,810 metric tons)
4. Total Production	
(All kinds)	88,015 tons (89,427 metric tons)

Summary

(93,000 yds. and 850 metres) (000 tons and metric tons)

	Nov. '59	Oct. '59	Nov. '58	Nov. '59	Oct. '59	Nov. '58
Hessian	13.85	13.47	13.50	38.6	38.4	35.8
	(12,38,54)	(12,31,59)	(12,34,35)	(37.2)	(37.0)	(36.4)
Sacking	10.74	10,71	10.78	45.7	46.0	44.9
	(9,83,50)	(9,79,37)	(9,85,38)	(46.4)	(46.7)	(45.6)
Others				5.7	5.5	6.3
				(5.8)	(5.6)	(6.4)
Grand Total				88.0	87.9	87.0
				(89.4)	(89.3)	(88.4)
Hours worked				200.5	200.5	197.5

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, and those of length being based on the actual (detailed) figures, are more precise.

THE FOREIGN JUTE MARKETS

FURTHER RISE IN YARN AND CLOH PRICES EXPECTED

(FROM OUR DUNDEE CORRESPONDENT)

THE firmness in raw jute prices in both India and Pakistan is having a hardening effect on values of all other commodities in the industry. It looks as if there will be a further rise in prices for jute yarns and cloth in the U.K., and buyers of these are displaying some anxiety; some because of the probability of dearer terms and others because of the fear that they may not be able to secure the required delivery.

Mill Firsts are quoted lowest at £115 a ton, Mill Lightnings £96, Mill Hearts £85 and Grade Hearts £68, with good marks of Daissee-2/3 from £96 and Grade £89, Grade Tossa-2/3 from £110 and fours £97, c.i.f. U.K., December-January. Quite a number of secured parcels have been cleared out and with their disposal the cheaper rates have naturally disappeared. Mill Firsts, for instance, have been offered by a number of sellers at £112, but now £115 is quoted.

The Calcutta goods' market has jumped up by about 1s for hessians and 3s to 4s for sackings, and it is likely that there will be a change in the "depressed range" (that is, 40in. 11oz. and 10oz.

imported goods) prices soon, as well as B and Liverpool Twills in the U.K. The rates have been so low that local manufacturers have not been able to compete for this business, but fortunately they are busy now and do not need to compete.

Business has been quiet again in yarns and cloth but a few sales have been made. There is a dearth of spinning and weaving workers, and yarns are becoming scarce. The Jute Wages Council has recently agreed to grant an increase in wages to the workers of 3¾ percent. The minimum wage is now 150s 3d for an adult worker (male) and 103s 3d for a female.

The Dundee firm of Alexander Henderson and Sons, Ltd, spinners and weavers, has been bought by Low Brothers. Another item of local news is that Jute Industries have taken over the old-established firm of D. and R. Duke, Ltd. Brechin, which manufactures jute, linen and cotton goods.

LONDON INSURANCE LETTER

HOME SERVICE BUSINESS EXPANDING

CONTRASTS in the British insurance business have been emphasised in recent weeks. While further information on the progress of life assurance has been released, other branches have attracted attention mostly on account of heavy claims pending or of uneconomic rating. But the business has continued to show its dual function, as a collector of savings and provider of capital on the one hand and as a protector against hazards on the other. The chairman of the Industrial Life Offices Association, Mr. Geoffrey Kitchen, has given, in a progress statement, some new figures for 1958. The 23 companies and societies included in the Association, transacting more than 99 percent of the nation's industrial life business, increased their industrial life funds by £65 million and their ordinary life funds by almost the same amount last year, and the net saving of £130 million through these media, combined, was larger than ever before. The saving was achieved in spite of payments to policyholders on a larger scale than ever before, at a rate of £3¼ million a week—the greater part of it on account of industrial policies.

A few years ago, there was some doubt whether the industrial, or "home service", branch of life assurance could go on expanding; even whether, on account of its high cost, further expansion was desirable. No such doubt troubles Mr. Kitchen, and the 10 million British households, which are visited regularly by the life offices' representatives, show no general inclination to change to ordinary life assurance. "The 1958 figures are clear proof", said Mr. Kitchen, "that home service insurance continues to provide an effective and attractive channel—in many homes the only channel—for long-term voluntary saving." Net saving through this medium alone has added more than £600 million to "the nation's pool of investment capital" since the war.

Rise in Investment Assets

British insurance, as a whole, increased its investment assets by an average of £270 million a year between 1947 and 1958, to a total of nearly £5,530 million at the end of last year, and the increase in 1958 was much more than the average —£380 million. It is not surprising that insurance funds have been prominent in the boom on the London Stock Exchange, which gained strength before the general election and, of course, much more after it. The spectacular rise in ordinary shares has confirmed the wisdom of investing an increasing proportion of funds in these media (more than 27 percent was invested in this form at the end of last year, compared with less than 17 percent at the end of 1947), but it has also raised some doubt whether new funds should be put into ordinary shares while their prices are so high. Government stocks are attracting the institutions' attention, and the appeal of property as an alternative to ordinary shares is enhanced. It is a sign of the times that all the £7 million required to develop an important site in London's Piccadilly Circus is being provided by the Legal and General Assurance Society.

New Interests for Investors

One or two other developments concerning insurance and investment (the Stock Exchange variety) deserve mention. The public is, of course, extensively interested in the big insurance companies but not in Lloyd's underwriters or insurance brokers. Minet Holdings ordinary shares, placed in the market in October, provide an interest in broking, for the company was formed to acquire the capital of J. H. Minet and Company, one of the biggest Lloyd's insurance brokers, doing business in more than 70 countries. And life assurance has now been linked to the unit trust idea.

The new unit trust, British Shareholders International Trust (incidentally, the first institution of its kind ever to be advertised on British television), combines investment with insurance in ingenious ways. An "executive saving scheme" (intended for "the younger executive") provides through the Eagle Star and the Guardian insurance companies an endowment assurance policy payable in units of the trust instead of cash—a new way of protecting against inflation; and Eagle Star is covering a "regular saving scheme", whereby a specified number of the trust's units is bought each month for one or more years and the buyer is covered by life assurance for the outstanding number of units at no additional cost.

The Darker Side

The adversities in non-life business mentioned above include another big factory fire (A. V. Roe), apparently involving claims of the order of £5 million, an exceptionally big burglary of jewels, valued at some £300,000, the crash of a *Boeing* 707 in the United States, much of the loss of more than $4 million being borne by the London market, and, of course, the hurricanes over the United States and Japan. These hurricanes cannot be compared with the catastrophes in the United States in 1954, and in any case the London market learned its lesson from those experiences. Premium rates were raised to accord, more or less, with a hazard that was obviously much worse than had been imagined, and some insurers limited the amount of risk that they were willing to underwrite. Nonetheless, directly and through re-insurance, hurricanes still involve substantial claims on London.

The International Union of Aviation Insurers was informed at the annual meeting in Seville in October that the London aviation insurance market had incurred heavy losses on the latest jet and propellor-turbine aircraft. The report showed that underwriters had paid out more than $12 million (approximately the value of three new jet aircraft) in the first year of operating jet airliners; and the American report indicated a similar experience. The London market's premium income was estimated at some £25 million a year, divided in roughly equal proportions between the companies and Lloyd's. It was confirmed that some airlines had complained at the scale of rates which supported this premium income, but insurers cannot accept the suggestion that rates are, in general, too high in relation to losses.

DEVELOPING PAKISTAN WITH FOREIGN AID

(FROM A CORRESPONDENT)

PAKISTAN'S Finance Minister, Mr. Mohammad Shoaib, and the chief of the Planning Commission, Mr. G. Ahmad, are back in Karachi after a recent tour abroad. They went on a trade mission to western Europe, including the United Kingdom, as well as to the U.S.A. Their stock was a list of industrial projects, intended tentatively to form part of the country's second five year plan in the making. Their market was the private investment market. Both the Finance Minister and the Planning Commission chief are now busy injecting the impressions of their tour into the body of the plan. Into it will also certainly go the reactions of the seven-man official team from Bonn which visited Karachi to negotiate an investment treaty with Pakistan. It may also be affected by what the team sent by the American company, Kaisers, has to say about the potentials, possibilities, and problems of Pakistan's cement industry after completing its survey of that industry at the request of the Pakistan Industrial Credit and Investment Corporation. The team is aready in Pakistan on the job.

Pakistan's second five-year plan, therefore, may take a little longer to be finalised. It is scheduled to be launched in July 1960, that is, at the beginning of the next Pakistani financial year. But in official quarters, the plan is not expected to be finalised before the spring of 1960. In view of the military régime's current zeal for maintaining its reputation for prompt decisions and even prompter execution, it may be expected that some kind of a blueprint giving the draft plan in little more than a mere outline will be published within this month. Such a publication will help the Government in continuing, in the field of economic planning as in other fields of official activity, its policy of giving what may be called in terms of its aspirations "a popular base to top-level scientific decisions."

It may at the same time be expected that the plan, even when it is finalised, will allow for the maximum of flexibility possible, alike in scope, emphasis and method or machinery of execution, in order to gear itself to the trends and patterns of those economies of the West which are most likely to be interested in fitting Pakistan's development to their own plans for expansion. Pakistan is now mature enough to appreciate that economic activity does not necessarily follow political or any other sentiment, but is essentially determined and directed by the law of economic necessity. She realises that none of the free world's leading economies can afford to treat her more than a unit, howsoever favoured, to fall in place under global or even zonal planning.

Free Mind

It is no wonder then that Pakistan's mind is now comparatively free from the complexes centring round India and hampering her own working partnership with the big economies of the non-communist world. It is now a far cry from the parliamentary days when Prime Ministers and Finance Ministers, in Parliament and out of it, mainly to exploit popular sentiment at home, could cause serious embarrassment to the country's much-needed friends abroad by harping on the latter's co-operation with India. That the invitation to a joint defence system between the two countries should come from Pakistan is by itself significant. The credit for this big change goes to Pakistan's new realistic and sound-thinking military leadership, headed by President Mohammad Ayub Khan.

The second five year plan's flexibility will perhaps be most evident in the sectorisation as well as in the size of individual projects falling within its scope. Pakistan has to cut her coat not only according to her own cloth but also according to the cloth of the countries who would be most interested in investing in her economy. Such co-operation is likely to come to her during her second plan period from the U.K., West Germany, the U.S.A. and Japan in a varying degree.

Bonn is certainly interested in Pakistan in rather a big way, but as certainly not quite interested in all the fields in which Pakistan would have West Germany invest. Bonn has perhaps a global investment scheme under which Pakistan will have her place, but just as one unit among many of varying importance. The other countries with attraction for the West German investor or included within the scope of Bonn's current capital-export drive, according to the seven-man German trade team leader, Dr. von Bargen, are Malaya, Burma, India, Ghana and Liberia. Bonn's treaty with Pakistan, expected to be finalised and signed in the West German capital between the representatives of the two countries' Governments before the end of this month, will be followed by similar treaties to be signed by Bonn with the Governments of the other countries at the earliest time possible.

Invitation to West German Capital

It is learnt on the authority of the same West German team leader that the Pakistani representatives, in the course of the talks held in Karachi [illegible] invited West German private capital in specific industrial fields relating to steel rerolling and manufacturing of metal products, machinery and equipment, electric machinery and equipment confined to fans and radio sets, the whole range of chemicals (including basic chemicals, fertilisers, rayon, dyes, and pharmaceutical products), rubber products, cement and synthetic rubber including plastic material. Out of these 12 fields (under the planners' tentative development scheme with a total outlay of $(U.S.) 248.6 million out of the scheme's own total cost of $(U.S.) 558 million), only seven, namely, the five chemical industries, electric machinery and equipment and cement, it is understood, have been chosen by the Germans for the participation of their private capital. In the case of the field of electric machinery and equipment (at present confined to the manufacturing of fans and radio sets), however, the Germans want the scope widened so as to include the whole range of products (including telephone sets currently manufactured only at the State-owned factory in Haripur in West Pakistan) coming under this head.

Besides the seven chosen fields, the West German private capital, according to the German team leader, would make itself available to Pakistan in a big way for irrigation projects (such as building dams), railway construction jobs (such as laying new lines and replacing or strengthening the old ones) and the modernisation of railway machinery and equipment (such as dieselisation of rolling stock or locomotives, etcetera). Bonn has already, under the terms of an earlier treaty, namely, the Credit Guarantee Treaty, signed in May this year, made available to Pakistan a ceiling credit guarantee to cover purchase of capital and other goods of the value of 170 million deutschemarks. Under the protective umbrella of this guarantee, Pakistani buyers of West German goods can defer payment to their suppliers over a period of ten years or more during which the latter can recover their own capital involved in such deals by raising loans from their own country's banks with the West German Government acting as the guarantor.

Investment Guarantee Treaty

Bonn's present investment guarantee treaty in the making and expected to be signed within this month with Pakistan in the West German capital under the former's $500-million programme, announced in June this year, will initiate the third phase of her penetration of the underdeveloped markets of Asia and Africa in the post-war world. The first phase was the export of technical know-how represented by extensive tours of these markets in the mid-fifties by German industrial magnates like Baron Alfred von Krupp. The second phase was started by the export of capital and other goods under Bonn's credit guarantee pacts (the current programme's overall ceiling value is 9.5 billion deutschemarks) with select countries of the region concerned. The three phases, it appears, will henceforth run parallel to each other as part of Bonn's economic drive in the Afro-Asian region. Its impact alike on the U.S. and communist bloc's aspirations in or *via* the economic field in this key region of the world-to-come should be watched with interest, particularly after the "buy American" phase of Washington's economic support policy for the less developed countries of the region has set in— that is, on "American aid to be followed by trade and investment" plans in India and Pakistan and communist designs on African countries like Ghana.

Under the terms of Bonn's investment guarantee treaty with Pakistan (in broad outline and salient features to set the pattern for similar treaties to be signed by Bonn with other countries of the region, such as Malaya, Burma, India and Pakistan in Asia, and Ghana and Liberia in Africa), the West German Government will do all it can as a democracy to persuade its nationals, through appropriate chambers of commerce and industry, to invest in mutually-agreed fields with or without local partnership in the under-developed country. Pakistan, under the terms of the same treaty, will undertake to provide full protection and repatriation of capital as well as transfer of profits facilities to the West German private investors, whose investments, too, will be protected in the form of a guarantee or insurance at home, by their Government. The progress of West Germany's economic plans in Pakistan deserves to be watched with interest.

Prospects for U.S. and U.K. Investment

Pakistan's development plan "salesmen," however, have found American as well as British investors conservative as usual, if not exactly indifferent or shy. The Finance Minister, who returned from his tour of the U.K. and the U.S.A. on 23rd October, does not seem to be fully satisfied with the fruit of his labours abroad. In a recent encounter with Press men he, it is reported, advised "cautious optimism" in expecting foreign investment in Pakistan in the near future.

Pakistan's expected gap between home resources and the tentatively $3,800 million cost of her second five year plan is in the region of $1,500 million, which is almost 40 percent of the total outlay. The investment target for the development of large-scale or heavy industries has been tentatively fixed at about $558 million ($455.4 million as new investment and $102.6 million as outlay for modernisation of existing units) of which $266.6 million are meant for East Pakistan and $291.4 million for West Pakistan; $23 million in the public sector and $335 million in the private sector. Out of the public sector's share of $223 million, $152.4 million are meant for East Pakistan and $70.6 million for West Pakistan; out of the private sector's total of $335 million, $114.3 million are meant for East Pakistan and $220.7 million for West Pakistan. Of the total outlay for the large-scale industries, the foreign exchange component is about $312.7 million or over 55 percent of the overall cost; $127.6 million in the public sector and $185.1 million in the private sector.

Industrial Development

The categories of industries to be developed under the $558 million programme are (1) food production with a total outlay of $84.8 million ($44.6 in foreign currency): $52 million for East Pakistan and $32.8 million for West Pakistan, $31 million in the public sector and $53.8 million in the private sector (2) manufacturing tobacco products such as cigarettes, with an outlay of $1 million all for East Pakistan and in the private sector; (3) textiles with an overall outlay of $93 million ($40 million in foreign currency); $65 million for East Pakistan and $28 million for West Pakistan, $13 million in the public sector and $80 million in the private sector; (4) basic metals with an overall outlay of $8 million ($3 million in foreign currency); $5 million for East Pakistan and $3 million for West Pakistan, all in the private sector; (5) metal products with an outlay of $10 million ($4 million in foreign currency); $4 million for East Pakistan and $6 million for West Pakistan, $2 million in the public sector and $8 million in the private sector; (6) machinery and equipment with an outlay of $19 million ($4 million in foreign currency); $3 million for East Pakistan and $7 million for West Pakistan, $2 million in the public sector and $8 million in the private sector; (7) transport equipment with an outlay of $10 million ($5 million in foreign currency); $7 million for East Pakistan and $3 million for West Pakistan; $2 million in the public sector and $8 million in the private sector; (8) electric machinery and equipment with an outlay of $9 million ($4 million in foreign currency); $4 million for East Pakistan and $5 million for West Pakistan, all in the private sector; (9) chemicals with an overall outlay of $148 million ($89 million in foreign currency); 58 million for East Pakistan and $90 million for West Pakistan, $82 million in the public sector and $66 million in the private sector; (10) petrochemicals, confined to petroleum refining, with an outlay of $33 million ($22 million in foreign currency) all for West Pakistan; $8 million in the public sector and $25 million in the private sector; (11) footwear and clothing with an outlay of $4 million ($2 million in foreign currency); $1 million for East Pakistan and $3 million for West Pakistan, all in the private sector; (12) paper and board with an outlay of $19 million ($9 million in foreign currency); $17 million for East Pakistan and $2 million for West Pakistan, $16 million in the public sector and $3 million in the private sector; (13) wood and coke products with an outlay of $600,000 ($200,000 in foreign currency): $400,000 for East Pakistan and $200,000 for West Pakistan, all in the private sector; (14) printing and publishing with an outlay of $6 million ($3.6 million in foreign currency); $2 million for East Pakistan and $4 million for West Pakistan, all in the private sector; (15) leather and leather products with an outlay of $4 million ($1.6 million in foreign currency); $0.6 million for East Pakistan and $3.4 million for West Pakistan, all in the private sector; (16) rubber products with an outlay of $600,000 ($200,000 in foreign currency): 100,000 for East Pakistan and $500,000 for West Pakistan all in the private sector; (17) non-metallic mineral products with an overall target of $47 million ($2 million in foreign currency): $9 million for East Pakistan and $38 million for West Pakistan, $1 million in the public sector and $30 million in the private sector; (18) natural gas with an outlay of $16 million ($11 million in foreign currency) all for West Pakistan and in the public sector; (19) synthetic rubber and plastic material with an outlay of $34 million ($26 million in foreign currency) all for East Pakistan and in the public sector; (20) miscellaneous industries including cotton ginning and jute baling, with an overall outlay of $20 million ($9 million in foreign currency); $4 million for East Pakistan and $16 million for West Pakistan, all in the private sector.

World Bank Endorses

This list of industrial categories drawn up under the $558 million development programme, is believed, has already received the blessings of the World Bank, although foreign private capital has yet to be attracted to it in any encouraging degree. If it is true that the World Bank has agreed with the draft scheme, it is also reasonable to believe that the latter in its finally adopted and incorporated version will not differ very much from what it is now. At the same time, in view of the present régime's most measures relating to economic activity (the export bonus scheme for example) being very much in the nature of a experiment, the present scheme will necessarily remain flexible throughout the second plan period.

The list itself is an elaboration on the theme of the new régime's industrial aspirations expressed in the form of a policy statement made by the Industries Minister early this year. The statement

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

in February last, among other things, set forth the principles which would guide the new régime's industrial planning in future. These emphasised the setting up of only those industries which would use indigenous raw material and thereby save foreign exchange and at the same time would boost exports and thereby earn foreign exchange. The same policy statement also, in general terms, listed the industrial fields in which it would particularly benefit Pakistan to invite foreign investment. These were heavy engineering, heavy chemicals, production of synthetic distillation of coal and gas, pharmaceuticals, antibiotics, manufacturing of producer goods and spare parts and mining, beneficiating, concentrating, refining and processing of all minerals including oil.

The $558-million list attempts not only to elaborate the separate heads of industry named in the preceding paragraph, but also to integrate them so as to take the form of a consistent and coherent piece of development planning based on the cardinal principles of the country's new industrial policy Under the head of "food manufacturing", for example, are grouped together industries like wheat and rice millings, sugar, edible oil, vegetable ghee, food processing and tea. Textiles include cotton yarn and cloth ($45 million), silk and art silk ($1 million), and jute manufacturing ($41.2 million). Basic metals include steel rerolling ($2 million) but exclude the much-debated and P.I.D.C.-sponsored steel mill. Metal products, machinery and equipment, transport equipment, and electric machinery and equipment, although separately provided for, are not elaborated. Perhaps their elaboration and range will be left to be determined by foreign investors. Chemical industries include basic chemicals ($64 million), fertilisers ($50.6 million), rayon ($16 million), dyes ($3 million), pharmaceutical products ($5 million), and matches ($0.4 million). The basic chemicals are not defined, but, it is understood, include the whole range of industrial acids, besides soda ash. Petrochemical industries are at present confined to petroleum refining (provided for separately under its own head), but are expected to be elaborated and ranged at a later stage. Footwear and clothing, paper and board, wood and coke products, printing and publishing, leather and leather products and rubber products, although separately provided for, are not fully explained. Under the head non-metallic mineral products are grouped cement ($35 million), natural gas ($16 million), and synthetic rubber, plastic, etcetera, ($34 million). Miscellaneous industries mention only cotton ginning ($15 million) and jute baling ($1 million).

Development of Small Industries

Pakistan's tentative five-year programme for the development of small-scale industries, it is understood, provides a total outlay of $160 million (to be equally divided between the public and private sectors and to include $47 million in foreign currency). In the public sector, programmes to be sponsored by the two provincial Governments are allowed a total of $70 million to be equally divided between the heads of "revolving funds" (meant for providing credits to private industries) and of "investment and recurring development cost". The foreign-exchange component of this outlay, it is believed, is in the region of $16 million. In the same sector, the programme to be sponsored by the Central Government, it is believed, has been allowed $10 million ($1 million in foreign currency). In the private sector of the small-scale industries' plan, the development cost in foreign currency is geared to an increase from $12 million in 1950 to $20 million in 1965. The entire programme's overall target is a production boost of 20 percent and 300,000 additional jobs by the end of the second plan period.

Pakistan invites foreign investment only in the fields of large-scale industries, the programme affecting which is targeted to provide about 200,000 additional jobs in 1965. Some of the major industries like sugar, cement, dyes and paper, hitherto reserved for pioneering by the State-run Pakistan Industrial Development Corporation, are progressively being thrown open to private enterprise, supported by the loan-giving Pakistan Industrial Credit and Investment Corporation.

Under Pakistan's current industrial policy, foreign private enterprise can join hands with local public or private capital or start its own ventures with 100 percent control. Under the same policy, a number of other safeguards and concessions are offered to the foreign investor. These include free and unrestricted remittanec of current profits, permission to repatriate original investment in whole or in part for approved industries set up after September 1954, just and fair compensation payable in the currency of the country involved in case of nationalisation, relief from double taxation in case of undertakings of pact countries (such as the U.S.A., the U.K., West Germany, Japan and India), and income-tax relief for foreign technicians employed under a contract approved by the Central Government. The investment repatriation concession also applies to any appreciation of capital investment ploughed back into approved undertakings.

How far these attractions have been successful in making an impression on foreign capital in the context of Pakistan's present political situation is yet too early to judge. Ever since her creation in 1947, the Government has authorised about 159 joint ventures between Pakistan and foreign private interests of a total value of $146 million, shares of a cumulative value of $100 million of which belong to non-Pakistani interests. The U.K. heads the list of foreign investors with a value of $79.17 million, to be followed by India with $4.1 million, South and East Africa with $13.6 million, West Germany with $1.8 million, the U.S.A. with $1.37 million, Sweden with $1 million, Switzerland with $700,000, and other countries (Holland, Denmark, Uganda and Japan) with $300,000 (all U.S. dollars). In view of the fact, however, that these break-down figures, although official, do not account for over $10 million of foreign investment, they should be taken only as general indicators of the comparative size of foreign holdings in Pakistan.

Sound Investment Proposition

The country today offers a reasonably sound proposition to good, hard-working and hard-driving money and experience from abroad. Under her present leadership, she is more of a nation than ever before. Her economy has registered a positive recovery; her stock is rising. Her political conditions bid fair to stay stable; her present leadership is capable of staying in power, besides being honest, sincere and patriotic. Red tape has been reduced to the minimum and many bottlenecks to business have been removed. Labour is plentiful, sturdy and cheap and free from violent trade unionism, at least in West Pakistan. The country as a whole is free from the aggressive nationalism of the rest of Asia.

On the debit side, Pakistan's most problems arising out of the facts of her past history and factors of geography remain unsolved; she still carries the burden of her history and the disabilities of her geography. Her present régime's grand performance nevertheless poses the question, what next? Power tasted too much and too long is not without its risks and creating a worthy successor régime would amount to creating a new society and a new economy. Her economic measures are mostly in the nature of an experiment. The present régime, though down-to-earth and middle-of-the-course alike in thought and action is also inclined to be hasty and rough and ready by non-military standards. The progress of her experiment of "basic democracies" deserves to be watched with interest. Investing in Pakistan, therefore, is not altogether proof against risks, but at the same time while considering to invest in this under-developed Asian country, one may not forget the age-old maxim "no risk, no gain". Pakistan, although not exactly the investor's paradise, is yet worth the money and trouble of a brave investor.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research

CALCUTTA TEA AUCTIONS IN NOVEMBER

STRONG GENERAL DEMAND

SALE No. 21, which was scheduled to be held on 17th November, was postponed until 23rd November pending a clarification of the West Bengal Sales Tax Act, in its application to tea. Nevertheless, four sales were held, and 287,705 packages were offered. There was a strong general demand throughout the month. C.T.C. teas, particularly secondary types, were very strong, and the cheaper varieties appreciated considerably in value, while medium-wither legg-cut teas, particularly the better colouring sorts, sold well at dearer rates, say Messrs. Carritt Moran and Co. Private Ltd in their monthly tea market review. Plain teas were barely steady during the middle of the month, but were considerably dearer in Sale Nos. 21 and 22, and medium B.O.P s recovered much of their recent losses in these sales. Whole leaf grades sold steadily, tending dearer towards the end of the month. and Darjeelings came to a ready market, and in the later sales they were often dearer. There was a good enquiry for tippy teas, which were often dearer in the last two sales.

Quotations

	1959-60 Rs nP	1958-59 Rs nP
Sale No. 19 Plain B.P.	1.89	1.68
Sale No. 20 " "	1.88	1.65
Sale No. 21 " "	1.95	1.60
Sale No. 22 " "	2.06	1.56

(Exclusive of zonal excise duty.)

There was little change to note in the Darjeeling offerings. Leaf appearance was satisfactory, liquor cup quality was generally of an ordinary rains description, although a few quite bright liquoring teas were seen. A little more stalk and fibre became noticeable at times, in Assam teas, but cup quality remained satisfactory for the time of year, and in a few instances showed a slight improvement. In Dooars teas, a little more stalk and fibre were noticeable, and cup quality was barely maintained, although there were some quite useful liquoring teas of non-wither manufacture. There was very little change to note in the Cachar offerings, which were about average for the time of year.

The Internal Market

Due to the uncertainty on the implementation of the proposed 5 percent sales tax on tea, the auctions which were to be held during the week commencing 16th November, were postponed to the following week. There were, therefore, only three sales during the month.

A total of 2.144 chests of leaf were offered and these met with a good general demand, particularly in the last sale of the month. Total dust offerings amounted to 65,558 chests. Teas suitable for export remained a strong feature during the month and, in the last sale, all kinds appreciated considerably in value. Legg-cut teas remained firm and were often dearer. C.T.C. dusts were irregular in the first two sales except for the exportable types, which in the last sale, were keenly competed for and were often dearer.

Quotations

	1958-60 Rs nP	1958-59 Rs nP
Sale No. 19 Clean Plain Dust	2.05	1.90
Sale No. 20 " " "	2.05	1.93
Sale No 21 " " "	2.19	1.86

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 22 totalled 1,213,106 chests at an average price of Rs. 2, compared with 1,144,693 chests at an average price of Rs. 2.44 for the same period in the previous season. Internal sales at 13,973 chests of leaf and 1,108 chests of dust (average prices Rs. 1.80 and Rs. 2.02) go against 28,269 chests and 377,871 chests, respectively (average prices Rs. 1.67 and Rs. 2.02) for the corresponding period of the previous season.

The estimated north-Indian crop to the end of October 1959 was 490.55 million lbs, compared with 487.16 million lbs to the same date of last year The average figure at this date for the three years, 1956 to 1958, was 481.95 million lbs.

There was very little fluctuation in the price of export quota during November. During the first two weeks, however, a slightly easier tendency prevailed, with the price declining from 2nP on 1st November, to 1⅞nP on 13th November. With the postponement of Sale No. 21, scheduled to be held on 16th November, blenders did not enter the quota market as sellers and thus caused the price to appreciate to 1⅞nP on 20th November. However, with the sale on 23rd November, there was enough quota available, and the price dropped to 1½nP a lb. with business at the close being transacted at this price.

Arrivals (in chests) in Calcutta warehouses during the period 24th October, 1959, to 23rd November, 1959, with the corresponding figures of the previous year in parentheses were : by steamer 2,272,930 (549,058), by rail 168,692 (155,488) and by air 3,441 (8,047), making a total of 782,163 (712,593) chests. From the beginning of the season 1st April, 1959 to 23rd November, 1959, arrivals have been : by steamer 2,476,447 (2,508,970), by rail 796,728 (672,879) and by air 52,793 (81,536), making a total of 3,325,968 (3,263,385).

FUTURES TRADING IN PEPPER REMAINS DULL

HIGHER DEPOSITS RESTRICT ACTIVITY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

SINCE futures trading in pepper at the Cochin market was resumed on 8th December after two weeks' break, the market has remained comparatively dull. The raising of deposits is responsible, to some extent, for the restricted activity of traders. The February-March contract, which recently opened at Rs. 190, has risen to Rs. 220 a cwt., largely due to the interest of U.S. traders in distant positions. The U.S. quotation for spot is below Indian parity. It is reported that the United States has bought sufficient quantity to meet her immediate requirements. The latest stock position in that country is said to be "comfortable" with about 3,000 tons in hand and afloat, so a section of exporters in India holds the view that the U.S.A. will not again buy Indian pepper at higher prices. Meanwhile, arrivals are picking up. In Alleppey, the producers' pool reported an arrival of about 2,500 candies of 6 cwts. each last week, against 2,000 candies during the previous week. The quality of arrivals, especially from south Travancore, is satisfactory. The narrow difference between the price of new and old crop pepper also suggests that the quality of new crop pepper is satisfactory. The trade has absorbed the new crop at prices varying between Rs. 1,100 and Rs. 1,150, according to ripeness and weight, against Rs. 1,200 for old crop pepper. Although the harvest has not yet started in the main centres of production, namely, central and north Travancore and Malabar, the trade estimate of the new crop is still unchanged at less than 25,000 tons.

Lemongrass Oil Steady

Lemongrass oil, after rising to Rs. 150 a dozen bottles of 16oz. each on the Cochin market a couple of weeks ago, recently started moving down and, for the last one week, the price is ruling steady at Rs. 125 a dozen bottles of 16oz. each. Although speculation was to some extent responsible for the recent rise in prices, it appears that the law of supply and demand is now operating in favour of the growers in India. Overseas buyers have been compelled to raise their price ideas in keeping with the Indian quotations, obviously due to the shortage in the world supply of this essential oil. India accounts for the major part of the world production of lemongrass oil, but she is not expected to contribute to it anything more than 1,000 tons during this season, against the last season's 1,200 tons or 1,300 tons. This is partly due to the growers' declining interest in lemongrass cultivation on account of the "unremunerative" price during the past two years and partly due to unseasonal and heavy rain in the lemongrass growing regions of Kerala. Two-thirds of the current season's crop has already been sold for export, so for the period between now and the beginning of the season in May next, the left-over stock will remain too small.

COFFEE POOL RECEIPTS RISE

THE receipts into the pool from the 1958-59 coffee crop up to 30th November, 1959, amounted to 46,200 (44,046) tons, consisting of 17,822 (21,492) tons of Plantations, 7,465 (7,997) tons of Arabica Cherry and 20,913 (14,557) tons of Robusta, the figures within brackets indicating pool receipts on the same date of last year. Arrivals of the 1959-60 crop, mainly of the Pulneys, have started. Up to the end of 30th November, 1959, 199 (295) tons consisting of 190 (290) tons of Plantations, 5 (1) tons of Arabica Cherry and 4 (4) tons of Robusta, have been received. The smaller receipts, compared with the receipts on the same date of last year (shown within brackets), are accounted for by the heavy rain during the last two or three months. The pool release to the internal market during November 1959, was 2,675 tons, bringing the total release in the first 11 months to 27,640 tons, which represents an increase of about 11 percent over the total release during the corresponding period of last year, amounting to 24,924 tons.

A total quantity of 15,047 tons of coffee was sold for export out of the 1958-59 crop till the end of November 1959, comprising 8,168 tons of Plantations, 3,100 tons of Arabica Cherry and 3,779 tons of Robusta. Out of the balance to be sold against the allocation of 17,000 tons for export, 894 tons were covered by tenders due on 16th December, 1959, and 235 tons by offers made to Italy, Sweden and Nepal.

COCHIN TEA SALES

At Dust Sale K, 500,000 lbs of tea were on offer. There was a good general demand. High-grown dusts were dearer while all others were irregularly 5nP to 10nP easier, particularly coloury mediums.

At Sale No. 48, 1,500,000 lbs of tea were on offer. There was a strong general demand, particularly for low mediums which were dearer. Mediums and good mediums were fully firm while best liquoring high-growns were dearer depending on quality. Whole leaf grades were very strong and dearer.

BRITISH TEXTILE REVIEW

COURTAULDS EXTENDS INTERESTS

PEOPLE whose only interest is textiles would probably not have been wholly enthusiastic about Courtaulds' new developments in North America if they had not been, in a sense, counter-balanced by a new development in Europe. The geographical distinction is irrelevant, but it happens that in New York and Montreal, Courtaulds is extending its interests further from textiles while in Calais, it remains faithful to textiles. Diversification into other activities is recognised as a necessary means of stabilising companies which have in the past been subject to the vagaries of the textile trade, and it is understood that if a textile company has big unemployed resources, it will not necessarily feel that the textile industry is the most profitable outlet for them. But when a company in Courtaulds' position —unquestionably successful in the textile trade—shows keen interest in such activities as chemical engineering, it may be thought to be losing faith in its original function. Certainly, Courtaulds' new North American ventures, which are not concerned with textiles, contrast with its return to the U.S. textile industry in 1951—ten years after its involuntary withdrawal from that industry when British companies' dollar assets were acquired to help pay for the war. But the plant now under construction in the area of Calais has been planned to produce "Courtelle", the acrylic fibre which has progressed rapidly in Britain.

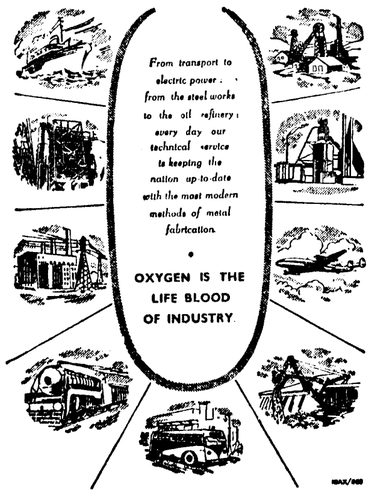
The site of the new "Courtelle" plant is adjacent to the rayon plant of Courtaulds' subsidiary, *Les Files de Calasis*; so a British textile centre of considerable importance is growing in that part of France; with, however, French participation, for Prouvost, the worsted group of Roubaix, is involved in Courtaulds, France, which will operate the "Courtelle" plant. It may be assumed that this new British interest in the market of Continental Europe is concerned with the evolution of the Common Market, and that the output of the new plant is destined not particularly for France but for the whole market of "the Six", of which West Germany is the most important part.

Formidable Competitors

The British textile industry has some formidable competitors in Europe, operating there and trading in the British market. The problem of imports of cotton goods from Asia has not been solved but it has been more or less stabilised, and some attention has shifted to imports—in other categories of trade—from Europe. Mention was recently made of the influx of Belgian cotton yarns into Britain. Last month, attention was focussed on Switzerland, for it was the month that included "Swiss Fortnight," when all Swiss goods and activities were publicised in Britain. People of Britain were reminded that in an earlier era of cotton manufacturing, Switzerland was, in terms of quantity, the leading producer of cotton goods in Europe, and that country still "does everything with cotton". Indeed, Lancashire (whose population, incidentally, is larger than the whole of Switzerland's) can learn something from the tasteful designs exhibited on that occasion.

The British textile industry does not resent this instrusion from Switzerland—in cotton, wool or man-made fibres. But it does resent the flood of Italian knitwear, cheap because it is subsidised and because some of it is made in conditions where wages are of no account—in people's homes or in convents. Switzerland will be associated with Britain in the European Free Trade Association; Italy is already in "the other camp", the European Economic Community. A tariff-free region of "the Seven" (or possibly "the Eight", with Finland) will suit the British industry quite well; and if there is some positive discrimination—quotas or higher tariffs—against certain members of "the Six", the industry will have no reason to complain.

New Process



It was an authority from Switzerland, Dr. H. R. Hirsbrunner, who recently described to the International Federation of Textile Chemists and Colourists in London the new possibilities of continuous or semi-continuous dyeing of wool or of blends of wool and chemical fibres. But he added that in its methods of dyeing, the wool industry was still very backward, compared with the cotton industry. In manufacturing, there is a new method of making carpets, which is apparently applicable also to apparel. It was exhibited in Scotland recently by Donaldson Brothers (Alloa). Wool, in the form of Slivers, is knitted into a warped background material, then bonded with latex. The result, the firm claims, is the first knitted carpet. At the other end of the scale is a non-woven fabric—a thousandth of an inch thick—made from polyester fibre. This addition to the technical and industrial fabrics of Forthergill and Harvey is cheaper, as well as thinner, than any comparable woven fabric.

Machinery Trade

The textile machinery industry is already reporting increased activity as a result of the reorganisation of the cotton industry, for re-equipment will proceed alongside the withdrawal of old machinery. Some mills will be partly re-equipped with modern machinery from others that are being closed, but the re-equipment subsidy, available for a limited period, offers an incentive to buy new. In any case, extensive changes in the character of the trade in cotton goods will make some existing machinery unsuitable, however efficient it may have been for its former purpose. The domestic machinery industry is not securing all the new orders; and in this trade, too, Continental competition is keen. One machine now arriving in Britain in considerable numbers (it was shown at the machinery exhibition in Manchester last year) is the "President" loom made by *Métiers Automatiques Picanol* of Ypres, Belgium. This is a versatile high-speed fully-automatic machine which can weave rayon and synthetic and linen as well as cotton fabrics, and large-scale production enables the company to offer it at competitive prices, in spite of the protective tariff.

However, the British industry continues to do good business abroad, particularly with Russia. The Soviet orders are very welcome; but they may order textile machinery for manufacturing fabrics, for communist countries will soon be more prominent as sellers than as buyers.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) for the week ended 28th November, 1959, receded by 0.3 percent to 117.7 when compared with 118.0 (revised) for the earlier week. The index was lower by 0.9 percent when compared with the corresponding week of the previous month but was higher by 4.7 percent than that of a year ago. The index for November 1959 worked out to 118.3, compared with 119.3 for the earlier month and 114.0 for November 1958. The index for Food Articles came down by 0.7 percent to 120.2, against 121.0 (revised) for the earlier week due to a fall in the prices of rice in Vijayawada (−21%), in Nandgarh (−17%), in Dumka (−15%), in Shimoga (−14%), in Jamshedpur (−10%), in Tihu (−9%), in Balurghat (−7%) and in Madras city (−6%), oranges in Shillong (−21%), jowar in Nagpur (−10%), in Jhalawar (−8%) and in Hubli (−5%), bananas in Bombay (−9%), bajra in Jodhpur (−8%), onions in Delhi (−7%), milk in Bombay and gur (−5% each), coffee and ragi (−3% each), barley, gram and groundnut oil (−2% each), potatoes, ghee and chillies (−1% each). The prices of onions in Nagpur (+45%), milk in Calcutta (+33%), oranges in Madras (+18%), wheat in Kotah, fish and black pepper, (+10% each), bajra in Hissar (+7%), rice in Jeypore and jowar in Nandyal (+6% each), bananas in Calcutta and salt (+3% each), cashewnuts (+2%) and maize, arhar, eggs, meat and turmeric (+1% each), however, moved up. The index for Tobacco declined by 0.7 percent to 102.2, compared with 102.9 for the earlier week due to a fall in the prices of raw tobacco (−1%). The index for the Fuel, Power, light and lubricants group remained unchangd at the previous week's revised level of 116.4. The index for Industrial Raw Materials rose by 0.2 percent to 122.9. compared with 122.7 (revised) for the earlier week due to a rise in the prices of raw jute (+4%), lac (+3%), raw wool (+2%) and raw hides (+1%), in spite of the declines in the prices of bamboos (−18%), groundnuts (−2%) and raw silk, gingellyseed, rapeseed, cottonseed and copra (−1% each). The index for Intermediate Products stood at 116.4, compared with 116.3 for the earlier week. The commodities which showed variations were: zinc (+4%), lead and rayon yarn (+1% each), linseed oil, coir yarn and tin (−1% each). The index for Finished Products worked out to 111.0, against 110.9 for the earlier week. Prices of jute manufactures (+2%) and oilcakes (−1%) recorded variations.

Engineering and Transport

U.S. MOTOR-CAR OUTPUT INCREASING

FOREIGN VEHICLE IMPORTS RISE

MOTOR-CAR production in the United States this year is expected to show a 29.1-percent increase over 1958, the Commerce Department has reported. The total production of passenger cars in 1959 will be approximately 5,498,000, compared with 4,257,812 in 1958. This gain is expected to be achieved, the Department says, in spite of the extended steel industry work stoppage in the second half of 1959 and some work stoppages in other material-supplying industries earlier in the year. The Department also says that to expect an increase of 21.8 percent in 1960 over 1959 will be only a conservative estimate. This will mean a production of 6,700,000 passenger cars in 1960, and will represent the highest annual production since 1955, when 7,920,186 motor-vehicles were produced. Among the favourable factors seen influencing the 1960 outlook are "a continuing upward trend of the economy as a whole," and the "high public enthusiasm for the new U.S. cars, available in a greater variety of makes and models."

Details of the U.S. motor-car industry's operations, and discussion of the industry's rôle in the total U.S. economy, have been included in the Commerce Department's report. It was noted that the motor-car industry, the largest of the U.S. durable goods industries, "is comprised of six corporations which manufacture 22 makes of motor-vehicles. Production and assembly operations are carried on in some 45 plants located throughout the country, in 34 cities and 18 States. Distribution is handled through approximately 34,000 franchised dealers. In 1959, factory sales are expected to exceed $10,500 million." This industry is that country's largest single user of steel, glass, rubber and upholstery leather.

Two Trends

The Department has cited two prominent trends in the manufacturing processes. "The industry is changing rapidly to united body construction, although over 50 percent of it has not yet done so. The industry is also turning increasingly to the use of aluminium. In 1955, the average a car was 29.6 lbs (13.3 kilogrammes). Each year since has shown sizeable increases. In 1959, the average amount of aluminium used a car is expected to be 52 lbs (23.4 kilogrammes). Large quantities of aluminium are being used in 1960 engines, and the first all-aluminium engine is in mass production." The report noted that the imports of foreign cars increased from 307,558 units in the first nine months of 1958 to 498,802 units in the first nine months of 1959, an increase of 62.2 percent.

U.K. BUILDING NEW SUPERSONIC RESEARCH AIRCRAFT

Details of the new supersonic research aircraft now being built by Bristol Aircraft Ltd, at Filton, for investigation into the problems of flight at more than 1,500 miles an hour, have been released by the makers. Entirely new techniques, says the announcement, have had to be evolved for the fabrication of the Bristol type *188* in welded stainless steel to meet the problems of heating. The aircraft, in fact, presses on the frontiers of knowledge structurally, aerodynamically and in the evolution of its systems. Much that is being learned in all these aspects will be of direct significance to the evolution of future supersonic transport aircraft. The aircraft, being built to the order of the U.K. Ministry of Aviation, has a long, slim fuselage, with an overall length of 71 feet, a minimum width of 3 feet and 9 inches and a maximum depth of 4 feet and 11½ inches. The engines—two de Havilland Gyron Junior turbojets, with provision for reheat—are installed in wing nacelles extending beyond the leading and trailing edges of the wings.

AIRCRAFT CAPABLE OF SHORT LANDINGS AND TAKE-OFFS

A new type of 62-ton air transport that could land as short as a tiny monoplane but in terrain rough enough to destroy the ordinary aircraft has been "rolled out" at Lockheed's Georgia Division. Its first flight will take place before the end of the year. A development of the *C-130B Hercules*, the new aircraft uses a Boundary Layer Control system to enable it to make amazingly short landings and take-offs. The Boundary Layer Control *Hercules* is capable of landing with a ground roll of only 460 feet at a gross weight of 100,000 lbs. This is approximately one-third the distance required by the *C-130B*, which has a ground roll of 1,410 feet at this gross weight. The *Hercules* can take off from soft terrain in only 610 feet at a gross weight of 100,000 lbs, compared with 1,535 feet required by the *C-130B*.

The *C-130 Hercules*, equipped with Boundary Layer Control, is designed to land directly on small rough areas in front-line combat zones or disaster areas, and yet carry typical 25,000 lbs payloads 2,400 static miles. It will be the first operational transport using Boundary Layer Control. It is the largest aircraft ever to be so equipped. In addition to the normal power plant of four prop-jet engines, the B.L.C. *Hercules* is equipped with four small pure jet engines to operate the Boundary Layer Control system. They will pump air at high speeds over the flaps, ailerons, elevator and rudder.

Calcutta Markets

FAIR DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 24, held on 14th and 16th December, offerings at the Export auction amounted to 71,661 packages for which there was a fair but less general demand. Plain and medium brokens were steady, but Fannings grades were irregular. Medium Assam B.O.P.'s and O.Fgs. tended easier, although those with improved liquors were well sought after. Best C.T.C. Assams were up to 20nP easier while the others sold at about 10nP below last rates. Non-wither Legg-cut Dooars were a little irregular and often easier. There was strong demand for whole leaf grades and these were generally dearer. There was only fair enquiry for Darjeelings, but tippy teas were well supported.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.18 to 2.24	1.55
Plain B.P.	2.04 to 2.12	1.56 to 1.59
Plain Fannings	2.10 to 2.18	1.66 to 1.72
Medium B.P.	2.02 to 2.12	1.66
Medium Fannings	2.16 to 2.24	1.70 to 1.78
Best Assam C.T.C B.P.	2.55 to 2.75	2.10
Best Assam C.T.C. Fgs.	2.55 to 2.75	2.20

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings amounted to 22,869 packages for which there was a good general demand, although prices showed an easier tendency. Orthodox teas were up to 4nP easier except for the few selected lines which were firm. Legg-cut teas also followed this trend. The few lines of Darjeelings on offer were firm to dearer. Medium C.T.C.s were an irregular feature. Although the poorer and powdery types were firm and often dearer, the remainder in this category were sometimes up to 6nP easier. The best C.T.C.s declined by up to 15nP and were often difficult of sale.

Quotations

	1959 Rs.	1958 Rs.
Medium Dooars Dust	1.10 to 2.16	1.72
Medium Assam Dust	2.06 to 2.10	1.74 to 1.76
Medium Assam C.T.C. Dust	2.16 to 2.24	1.85 to 2.05
Best Assam C.T.C. Dust	2.50 to 2.80	2.40 to 2.80

(Quotations are exclusive of excise duty.)

The 1,278 chests of Leaf on offer sold at irregular rates. The few green teas realised satisfactory prices.

FREIGHT MARKETS FIRMER

IN all freight markets, the tone remained firm and higher. The Baltic Exchange Chartering Committee reported further grain business from the U.S.A. to India and tankers were reappearing to accept wheat cargoes. Chinese charterers were still prominent in Far Eastern areas. Rice in bags from one or two ports Shanghai—Whampoa range to Poland paid 82s f.i.o.s. Rice in bags Burma to Ceylon paid 33s 9d f.i.o. with 600 load 600 discharge. Fixture of 5,000 tons 10 percent skull scrap Calcutta-one main port Japan has been exported at 69s f.i.o. December loading. In the ore market, East Coast India to Poland paid 63s 6d f.i.o. and trimmed. The time charter section is alive and Japanese particularly have shown increasing interest and have fixed four standard oil burners for trips from Indian, Pakistan ports or Marmugao to Japan, December-January 1960 position.

LINSEED STEADY

Steady conditions prevailed during the past week. The tone of the market was firm. Arrivals of seeds from upcountry were poor and the turnover was small. The oil market was stagnant with little business, but prices were steady. The oilcake market was also steady. Some shippers were buying for ready deliveries to cover up previous sales, as the London markets are now slightly better. Latest quotations are as follows: Ready-December Rs. 24.75 a maund: January Rs. 25 a maund and May Futures Rs 23.94 a maund.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 8th December and 14th December)

Cowhides: Wet Salted (ord.) 8,300 pcs. on the basis of Rs. 11 to 13.50; Wet Salted (Slaughtered) 10,800 pcs. on the basis of Rs. 13.50 to Rs. 16.50 and Rs. 18 to Rs. 29.

Goatskins: Wet Salted (Daissee, Kustia) 44,500 pcs. on the basis of Rs. 470 to Rs. 500 and Rs. 510 to Rs. 525: Wet Salted (he-killed) on the basis of Rs. 6.37 and (she-killed) on the basis of Rs. 6.12 a piece; Assam-Dinajpur 30,700 pcs. on the basis of Rs. 415 to Rs. 475 and Rs. 500 to Rs. 520; Purneah-Kissenganj 10,400 pcs. on the basis of Rs. 505 to Rs. 545; Patna-Pakur (ord.) 11,300 pcs. on the basis of Rs. 450 to Rs. 460 and Rs. 465 to Rs. 480.

Bazaar Stocks

(14th December)

Cowhides: Wet Salted 120,500 pcs.

COMPANY AND PUBLIC NOTICES

NEW INDIA SUGAR MILLS LTD.

NOTICE is hereby given that the Twenty-fifth Annual General Meeting of the New India Sugar Mills Ltd., will be held on Friday, the 8th January, 1960 at 2-30 P.M. at 8, India Exchange Place, Calcutta for the following purposes:

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1959.
2. To declare Dividends.
3. To elect a Director in place of Shri P. D. Himatsingka who retires by rotation as well as under section 280 of the Companies Act, 1956.

   In this connection the Company has received a special notice pursuant to section 281 read with section 190 of the Companies Act, 1956 from a shareholder of the company and special notice is hereby given that the following resolution will be moved at the meeting:—

   "Resolved that Shri P. D. Himatsingka who retires by rotation and who has attained the age of 70 years be and is hereby re-appointed as a Director of the company and that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

   Shri P. D. Himatsingka has been on the Board since the inception of the Company and has rendered valuable services to the company as a Director. It is, therefore, in the interest of the Company that he should continue as a Director of the Company.
4. To appoint auditors and fix their remuneration.

By Order of the Board,
Per Pro. THE COTTON AGENTS PRIVATE LIMITED,
B. N. SABOO,
Managing Agents.

'India Exchange',
Calcutta-1, the 10th December, 1959.

Notes:—

1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.
2. Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the company.
3. The dividends, when declared, will be payable to the registered shareholders as on 8th January, 1960 on or after the 30th January, 1960.
4. The Register of Members of the Company will remain closed from the 29th December, 1959 to the 8th January, 1960 both days inclusive.

BURN & COMPANY LIMITED.

NOTICE.

THE Board of Directors has sanctioned payment of dividends on the 6% and 7% tax free Cumulative Preference Shares in the Company for the period 1st July, 1959 to 31st December, 1959.

The Preference Share Registers and Transfer Books of the Company will be closed from the 26th December, 1959 to 30th December, 1959 both days inclusive. Payment will be made on or after the 9th January, 1960 to those Preference Shareholders whose names appear on the Registers of Preference Shareholders on the 30th December, 1959 or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,

The hard iron lay dead in slumber deep
And we stirred it to life, ho!
In the dark depths of a million years it lay hid
And we stirred it to life, ho!
Tamed by our strong hands
It sings to the tune we call.
Its silence of long years have we broken, ho!
The dead doth stir with new life today
And rushes forth the wide world to conquer.
Fearless with our two hands today
Its reins we hold strong, ho!

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE SEARCH FOR A NEW FOOD POLICY

THE Government of India's food and agriculture policy has been going through a quiet but fundamental change during the past four months. The exact nature of this change has often looked vague, in that none of the former shibboleths about compulsory procurement, State trading and joint co-operative farming has been openly and categorically rejected. These notions are still liable to find a place in statements of official agricultural policy; but the fact is pardonable since the basic trend of Mr. S. K. Patil's speeches indicates that, in actual practice, they are likely to be diluted considerably and relegated to the background. That they should be allowed to survive at all is a concession to the left-wing pressures operating in the Congress Party and in supra-Cabinets like the National Development Council—pressures which were strongly reflected in this week's debate in the Lok Sabha as well as in last week's debate in the Rajya Sabha. But that should not cause too much worry if, after due lip-service has been paid, they are allowed no longer to interfere with the effect to produce more food, and to distribute it better.

For many years now, India's food and agriculture policy has looked like a game of hop-scotch with dilemmas as rectangles. The main dilemma has lain in the fact that production has fluctuated sharply from year to year, according to the weather. To the extent it has increased, the rise has been more than neutralised by the growing requirements of a bigger and less impoverished population. Output has not risen faster because farm practices are primitive, cultivators are conservative, and the agricultural administration is slow, corrupt and inefficient. Governmental efforts have been weakened, in addition, by the biblical sanctity attached to the assumption that economic progress is determined by the growth of industry, regardless of what happens to agriculture. The second five year plan, in particular, was framed against a background where a bumper harvest had brought food prices down to uneconomically low levels, thereby encouraging the belief that India's food problem had at last been "solved." Oblivious of the fortuitous nature of the success, the planners proceeded to concentrate on heavy industry to the neglect of agriculture, so that much of the energy and resources which might have yielded better results if devoted to the latter, were instead diverted to the former.

The consequences of this fundamental error have shown up sharply during the past three years. The highlight of Indian economic experience during this time is that agriculture remains almost as independable as ever. As the foreign exchange reserves have fallen, imports have been cut, industrial expansion has been retarded and deficit financing has continued on a lavish scale, the inflationary impact of the inadequacy of food supplies has been extremely sharp. At first, the Government tried to explain away the economic disportions by saying that the stagnation in agriculture was due merely to bad luck with the monsoon in 1957. Later, when the 1958-59 harvest reached the all-time record of 73.5 million tons, without there being any appreciable fall in food prices, the Central and State Governments took the easiest way out by starting to denounce the wholesale trade for corruption, hoarding and profiteering. Against this background, grandiose schemes were hurriedly framed for the compulsory procurement of foodgrains from producers, for State trading, and ultimately for the spread of joint cooperative farming. Since these took no account of the practical difficulties of the problem, or the willingness and the quality of the administration which was to implement them, their absurdity became evident in the first half of this year, when an all-time peak in food production was accompanied by a nearly all-time peak in food prices in many parts of the country.

Mr. Patil thus inherited an unpromising legacy when he succeeded to the Central Food and Agriculture Ministry four months ago. Since his tenure at the Ministry is still young, it is no criticism to say that his concrete and tangible achievement so far has been small. Food prices have come down a little, and the flow of supplies also seems to have eased. But this was to be expected in any case with the arrival of the new harvests and with the partial dismantling of distribution controls in the dusk of the Jain régime. Mr. Patil's main achievement hitherto is that he is gradually succeeding in creating a new climate of thinking throughout the country on the measures it will have to take if it is to produce, and be able to buy, the food it needs. On the distribution side, he is proceeding, rightly, from the assumption that overall supplies (domestic output plus imports) are not as small as the prices prevailing recently might have indicated. With a bumper harvest of 73.5 million tons just in, and another one of roughly the same size expected in 1959-60, the main problem is to ensure that hoarding is discouraged and the available supplies are evenly distributed. Unlike the National Development Council and the leftist mentors of the Congress Party, Mr. Patil realises that hoarding cannot be discouraged merely by issuing paper fiats about procurement from producers or by prosecuting occasional wholesalers or retailers. The governmental machinery is simply not vast enough to reach the millions of farmers, traders and speculators who all start hoarding when they think prices will rise. And even if the machinery were vast, the corruption extending from the higher levels right down to the lowest would alone ensure that the aims of equitable distribution would never be achieved. Mr. Patil is facing this dilemma in the only way it can be faced: by trying to spread the impression that prices will not rise, and that if they do, he will promptly bring them down by disgorging large Government supplies. For this purpose, the proposal to build a "food bank" or buffer stock with 5 million tons of wheat and rice is welcome, especially since, as seems likely, the cereals are obtained mostly through aid programmes from abroad. The main doubt which arises is whether the "bank" can be built "within a year", as Mr. Patil has promised. On his own evidence, proper storage capacity simply does not exist at present for holding such large quantities, and it will be "two or three years" before the Government can hope to have modern storage space for 5 million tons. The shortage of silos may seem strange in the midst of a cement glut, but it demonstrates the unimaginative way in which the Government's food distribution policies have been conducted.

After the buffer stock proposal, the second main aim of Mr. Patil's food policy is to ensure that supplies move more freely from surplus to deficit areas. Here he is to be complimented on fighting a hard battle against the parochialism of State Governments. Surplus Orissa does not want to feed deficit West Bengal; surplus Andhra Pradesh does not want to feed deficit Kerala; and surplus Madhya Pradesh does not want to feed deficit Bombay. The hesitation of the surplus States in joining zonal distribution schemes is to some extent understandable. The outflow of food from Orissa, Andhra Pradesh and Madhya Pradesh might be so large that prices within those States would rise sharply, harming the narrow political interests of their Governments. But the hypocrisy of the Governments' arguments seems never to have struck them: when prices fall, as they did five years ago, States like these are the first to rush to the Centre with pleas for price support schemes in order to get their farmers a better return; even today, they would welcome such schemes. Yet, when the Centre offers an alternative for giving the farmers a better return, in the form of zonal grouping, the surplus States start pretending that they cannot jettison the interests of their consumers (well-nigh 80 percent of whom are in any case farmers). Mr. Patil deserves every support in his effort to prevent the break-up of the southern food zone including Andhra Pradesh, Madras and Kerala and in trying to introduce the western food zone consisting of Madhya Pradesh and Bombay. His success this week in inaugurating the eastern rice zone, consisting of Orissa and West Bengal, will be warmly welcomed. The guarantees offered the surplus States are the most they could ask for. In retrospect, they may be grateful for the measure which are likely to give them a more contented more prosperous and more productive peasantry.

After the compliments have been paid to the new Food and Agriculture Minister, however, it is important to remember that his main task still remains to be done. Its enormity is represented by two simple facts. The first is that, according to Dr. C. Chandrasekaran, the demographic expert, India is likely to have nearly 480 million people to feed by 1966, as against roughly 425 million now. The second is that, to feed those 480 million, she will have to produce 110 million tons of foodgrains as against the 73.5 million tons she produces now. (These were the estimates given by the Ford Foundation team also in its report nearly eight months ago.) The ultimate test of Mr. Patil's success will be whether an increase in production of this order can be secured. He has spoken with remarkable confidence recently that the achievement is possible; a few days ago, he told the Rajya Sabha that food production can be doubled or even trebled over the next five or ten years. But such claims might have been more reassuring if they had not also been issued by previous Food and Agriculture Ministers who ended their days with confessions of failure. Success is more likely if Mr. Patil places less reliance on contrivances like the Price Fixation Board he proposes to set up; the diversity of Indian agricultural conditions, and administrative ignorance, are too great for such bodies to serve much purpose, even if their functions be restricted to the purely advisory. The chaotic working of the sugarcane pricing scheme serves as a salutary reminder in this context. Greater attention needs to be concentrated on the other aspects of the effort which Mr. Patil has outlined. These include building more fertiliser factories (there is no reason, however, why each State should be given one if fertilisers can be produced economically only a few States); speeding up the construction and use of irrigation facilities; establishing more seed multiplication farms; liberalising rural credit; and encouraging the use of better implements. Many of these advantages could be offered through service co-operatives, although the tardy progress of the co-operative movement suggests that it might be unwise to rely too heavily on them.

An important prerequisite for success is that the Central Food and Agriculture Ministry should stop being treated like a debating society freely open to dictation from cranks, dreamers and jugglers. Since his departure from the Ministry, Mr. A. P. Jain has described in detail how policies were foisted upon him which he knew all along to be wrong (a confession, incidentally, which conveys a disturbing impression of the ease with which economic nonsense is purveyed under political labels, as well as of the personal qualities of the Ministers who acquiesce in it against their judgment). Remarkably enough, the Central Minister for Agriculture, Dr. Punjabrao Deshmukh, has given expression to much the same feelings while addressing a symposium on the problems of food production in New Delhi last Sunday. It is astonishing that the member of a Ministry which Mr. Nehru claims works like a team should be able to say that "the arguments of the planners and other people are factors as important as my views....on the one hand, we are shouting about greater agricultural production, and we are doing so many foolish things which are absolutely contrary to the interests of larger production.....We are possessed by theories, slogans, views, ideas and advice.....It is the weak administration that we have in this country that is responsible" (for the slow implementation of agrarian reforms). The Central Food and Agriculture Ministry is still some way from exercising the influence and independence its responsibilities call for; the fact qualifies much of the confidence and optimism which Mr. Patil has tried to disseminate about the food prospects for the next six years.

RECENT TRENDS IN RIGHTS ISSUES

A NUMBER of rights share issues which have recently come to the Stock Exchanges in both Calcutta and Bombay have been difficult to justify as being in the best interests of the particular company's shareholders. Because these rights issues usually have a value, especially if they are issued by a comparatively reputable company, it is generally profitable for shareholders to take them up if they are able to do so. But if a shareholder is, for some reason, unable to take up his rights, he stands to suffer a loss—sometimes a heavy one—on the value of his existing investment. It is, therefore, only simple justice that a reputable company should make its rights issues in a form which is reasonably convenient for its shareholders, and not in such a way that they can only benefit if they happen to be millionaires. There have been a few instances in the past year or two in which rights shares have been issued in quantities out of all proportion to a company's existing share capital. For example, if an investor who holds an investment of Rs. 1,000 in a company is asked to contribute a further Rs. 5,000 or more, it is not to be expected that he will be able to take up his rights without considerable strain on his resources. If he is a small investor, he is unlikely to have so much money available, and unless he has considerable security to offer, he will probably be unable to raise it from the banks. Whether the rights renounced are subsequently sold to persons interested in the management of the particular company—perhaps to be unloaded at some later date at a considerable profit when the project for which the issue was made has begun to yield dividends—or to outsiders, is irrelevant to the argument; the point is that the shareholder is forced into a position where he must either find far more money than he bargained for when he bought his share, or suffer a loss which he probably cannot afford.

A shareholder stands to lose in two important ways when he is forced to renounce his rights. His existing holding, ex-rights, is reduced in value by virtue of the smaller claim it has on the company's profits, and he is denied the opportunity of sharing in the increased prosperity of the company when this materialises. This runs counter to the whole principle underlying the issue of rights shares to existing shareholders—the principle which informs the legal provision in the Companies Act. Nobody will question the advantages of obtaining money by issuing rights shares. If a company needs to increase its share capital, it is far easier to get the resources from its existing shareholders than by selling the new shares to outsiders. In fact, if a company cannot persuade its own shareholders to take up more of its shares, there is obviously little chance of its attracting the confidence of outsiders who may have had no previous connection with the company.

The two basic factors governing rights issues are, therefore, that they facilitate the raising of capital, and that they permit the existing shareholders to benefit from the purpose to which the new capital is to be put. To conform with this last principle, the company should have a good and justifiable reason for making the issue. For instance, it may require the money for modernisation or expansion. Modernisation is usually justified on most occasions as being in the best interests of all concerned, and expansion too usually has the support of both the Government and the shareholders. Such expansion can, however, take place in a number of ways. The first is the straightforward one of simply increasing the size of the existing plant. A second is by absorbing other firms doing allied business. And a third is by branching out into entirely different lines of activity. The first method is the more normal one and is usually entirely unobjectionable. The second is unlikely to be open to serious objection so long as a merger or combination yields economies resulting from the better utilisation of output capacities, the larger scale of operations or the improvement of labour handling. The third form, however, is less orthodox and more questionable, and it is mostly for expansion of this particular kind that the recent indiscriminate use of rights share issues has been made. For instance, a jute mill company branches out into chemicals, a tea company into paper-making, a cotton mill company into engineering and a paper mill company into vanaspati or silk manufacture. It is not always easy to see how this kind of diversification can contribute to economies in management, although it is not altogether denied that it may do so.

This type of hybrid growth trend in Indian business appears to stem from the need to comply with a certain statutory obligation likely to be enforced in the near future—that is, managing agents may not manage more than ten companies. Whether the trend is or is not desirable is a matter of opinion; it can be argued that anyway it is being forced on industry. But clearly its economic benefits are not such as to provide adequate excuse for placing an unwitting shareholder in the position of either losing a substantial proportion of his capital, or having to scrape together enough money to invest in a particular form of industrial activity which he may not care to be connected with, and for which he certainly did not bargain when he bought his shares. It would appear tc be time, therefore, that the Government came to the unfortunate shareholder's rescue and took active steps to prevent his being victimised in this way. If companies must diversify, then they should be required to ensure that their shareholders do not suffer in the process and are given the option of disassociating themselves from the company's new activity without becoming involved in heavy capital losses.

Experience would seem to indicate the ineffectiveness in this and other respects of the Controller of Capital Issues. Because this institution, to function correctly, requires to be staffed by persons possessing a good deal of expert knowledge as well as imagination and flexibility, the normal type of civil servant background is scarcely appropriate for those who staff it. Without expert knowledge and considerable experience of company affairs, it is almost impossible to formulate and implement a rational policy concerning company financing; the alternative, as at present, is simply to follow a rigid code of rules and regulations. No doubt this fact is responsible for the time the Controller of Capital Issues wastes at the moment on splitting hairs over the premiums to be paid on rights issues when its attentions could profitably be devoted to more important matters. The need would, therefore, appear to be established for some suitable institution, preferably in the form of a non-official body, to be set up to advise the Government on capital issues. Such a body could contain a cross-section of various interests. Its personnel should possess the necessary technical knowledge and be in close touch with current developments in the company financing field. Only this way could the Government be assured of getting the best advice on these complicated problems.

CAPITAL AND TRADE

ONE positive result of the recent talks between the U.S. Under-Secretary of State for Economic Affairs, Mr. Douglas Dillon, and the appropriate Ministers of European Governments was an agreement to co-operate more closely to assist the under-developed nations. It is possible that a new consultative committee will be formed for the purpose. It may be thought that there are already enough bodies whose purpose is to facilitate discussion and that what is needed is more vitality in organisations whose purpose is more practical—to provide finance. But the countries that provide finance do not always agree among themselves on basic policy, and any body that can help them to work harmoniously would be most acceptable. The Development Loan Fund, an important U.S. agency for foreign aid, is a case in point. The stipulation that its loans must be used to buy U.S. goods does not accord with the idea of European Governments that recipients of development capital from whatever source should be free to spend it where they like.

Even if this restrictive American policy persists, there will be a substantial quantity of free capital available to the developing countries, and keen competition to supply capital goods will result from the flow of money. Such competition is necessary if the receiving countries are to get the maximum benefit from the assistance provided. Whether the supply of capital, though substantial, will be adequate is another question. The International Development Association—the body formed to provide loans in "soft" currencies to countries whose credit might not fulfil the requirements of the International Bank—will be an important new source of finance from 1960 onward, but its contribution may be offset by economies in U.S. aid provided through other channels.

Private capital is an increasingly important source of finance for the developing countries. Usually, however, it is least willing to go to those countries that need it most, the very poor countries. They do not offer big markets to foreign companies that intend to manufacture abroad, and, because they are poor, they may be politically unstable. The possibility of organising an international convention to protect private capital in under-developed territories has been discussed. It would doubtless appeal to the Governments of these territories if it ensured also that foreign companies did not become dominant in their economies. But it could not ensure that capital would be invested where it was most needed. While companies prefer to invest in developed areas, such as north America or Europe, or in developing countries which have already a strong industrial base, such as Australia, government money distributed through international development agencies is essential for the development of the poorer countries. The method of financing—whether public or private—and the distribution of the finance available affect the trade that results from the under-developed countries' growth. At present, of course, "tied" loans favour American exporters. The increasing proportion of private capital in the total of U.S. exports of capital also favours them in so far as American firms building factories in under-developed countries incline towards American equipment, if only because it is more familiar to them. (By contrast, an American firm establishing itself in Europe, for instance, uses largely European equipment, because Europe makes the capital goods required.) Exports of European capital have likewise increased the proportion of private to public money, and European exporters of capital goods have benefited accordingly. Thus, the range of completely free competition in the supply of capital goods to the developing countries is not very wide.

However, there is big potential trade waiting for the countries that can offer equipment at relatively low prices, especially if they can also offer long-term credit. For credit, Britain is at a disadvantage compared with the United States and Germany, but various ideas for lengthening British export credit (without contravening—more than it is being contravened already—the spirit of the international agreement on export credit) are under discussion, and if it is evident that British exporters are losing much trade for this reason the ideas will probably take more concrete form. On the question of prices, Britain's position seems to be improving somewhat, in so far as prices are now subject to more inflationary pressure in the United States and Germany than in Britain. But the trends of international trade in manufactured goods, viewed from Britain's standpoint, are not reassuring. British exports have not in recent months exceeded the levels of a year earlier by nearly so wide a margin as have those of continental Europe, and Japan.

The disparity is partly explained by the traditional association between Britain and the markets of the outer sterling area. Primary production is the main element in the economy of the outer sterling area as a whole, and the low level of primary prices has, therefore, affected Britain's markets more than, say, the markets of Germany, for a much larger proportion of Germany's trade is with continental Europe. That is one way of looking at the problem. From the poorer countries' point of view, the distressing fact is that their share of international trade has been greatly reduced in the last three decades. The unsatisfactory position of these countries is more or less obscured when primary prices are relatively high, but a problem that persists over decades demands co-ordinated treatment. Mr. Adlai Stevenson, who has returned to this subject in the U.S. quarterly *Foreign Affairs*, urges that all the richer western nations should combine to provide about $5,000 million a year for the under-developed countries—roughly a third more than their combined contribution (governmental, not private) at present. Mr. Stevenson's emphasis on the positive character of economic aid, rather than its negative character as a political weapon against communism, is in line with current British thinking on the matter. The only advantage of competition between the big power groups is that each tries to give more than the other to the under-developed countries.

DEMAND FOR SPECIAL STEELS SURVEYED

STEEL in this modern age is the metal of destiny, and the habit is growing of measuring the extent of industrialisation in an economy by the quantity of steel it produces. A fair proportion of the industrial strength of the United States is based on a steel industry capable of producing over 140 million tons of steel a year. It is with a view to raising Russian output to the level of the U.S.A. that Mr. Khrushchev recently outlined a 15-year programme to increase Soviet steel production. But it is doubtful whether an under-developed country, such as India, will get the full benefits of economic development if it continues to pay overmuch attention to the building of large steel plants which are capital consuming and yield returns only slowly. There has been considerable speculation in knowledgeable circles as to whether or not the third plan steel production target of 10 million ingot tons is on the high side; Sir Biren Mookerjee pointed out in his annual statement to the shareholders of I.I.S.C.O. that he is not sure the 4½ million tons of finished steel which are to be produced under the second plan, can be absorbed by the country. Another aspect of unrealistic planning concerning steel is the inadequate attention paid to the production of alloy, tool and special steels. This is discussed in an interesting pamphlet entitled *A Survey of Demand for Alloy. Tool and Special Steels* published by the Engineering Association of India.

The fixing of an ambitious steel target for the third plan has been the major pre-occupation of the planners who have not, apparently, considered that with the rapid growth of the machine-building industries, it will be equally necessary to increase the output of alloy, tool and special steels. The authorities have vacillated for a considerable time in coming to a decision, although private producers pointed out, time and again, that there is a crucial need to increase the production of these items if the growth of the heavy engineering and machine-building industries is to receive a steady supply of these materials. Some well-known private firms used to manufacture alloy and special steels, but many of them have stopped doing so and those that are still in the field are merely supplying their own requirements. The production of ordnance factories and that of Mysore Iron and Steel Works is too small to meet the country's needs, and the bulk of the demand has to be met through imports, mainly from the United Kingdom, and to a lesser extent from West Germany. But it seems high time that the country made determined efforts to attain self-sufficiency in these materials so as to save the much-needed foreign exchange which, in any case, will be scarce during the third plan period.

There is no doubt that there was sufficient scope for establishing an alloy, tool and special steel plant during the second plan: the country had been importing 6,000 tons to 7,000 tons during the past five or six years, although the amount increased to 30,000 tons by 1956. The large amount of foreign exchange that has been spent for this purpose could have been saved had there been a plant for producing alloy, tool and special steels. The failure to develop production in India, the Engineering Association of India says, has to be attributed to the lack of technical know-how, unsuitability of equipment and the low level of demand leading to uneconomic production costs. But the major producers in the private sector are capable of manufacturing these items should they be given an opportunity to do so. It will be recalled that when the Government decided to install a plant—for which project reports were invited from two firms, one British and the other French—it was, in fact, questioned in Parliament whether the Government was thinking of preventing the major private steel producers, especially the Tata Iron and Steel Company, from participating in the project. It was also pointed out that the company was producing no less than 100 varieties of special steels during the second world war, so it has had some experience of manufacturing alloy, tool and special steels.

Recent Press reports indicate that the Government is considering the installation of a plant for the production of alloy, tool and special steels, with an initial capacity of 40,000 tons of ingots a year and an ultimate capacity of 80,000 tons. It is also considering a scheme submitted by T.I.S.C.O. for setting up a plant with a capacity for 100,000 tons of ingots a year to be stepped up later to 300,000 tons. The Government has not yet intimated whether the two schemes are to be implemented, but it would appear that the construction of two plants would be necessary if the indigenous supply of alloy, tool and special steels is to be adequate during the third plan period. The survey carried out by the Association says that about 500,000 tons of steel were allotted to the engineering industries during 1958. Considering the likely increase in allocations for them, year by year, it is expected that they will consume about 2.5 million tons by 1965. Assuming the consumption of alloy, tool and special steels at 30,000 tons by engineering industries in 1956, the Association says that it can go up to 150,000 tons by 1965, when the supply of steel to the engineering industries is expected to rise to 2.5 million tons. The future machine-building projects will consume a much larger proportion of these steels, so there is no reason to fix their production target on the low side. The Association, therefore, says that it will be reasonable to assess the requirements of alloy, tool and special steels at 200,000 tons a year by 1965-66.

Two main points emerge from the Association's findings: first, the estimated demand, at 200,000 tons, is four times as large as the one arrived at by the Ministry of Steel, Mines and Fuel—50,000 tons a year. Secondly, there may be doubts in official circles about the Association's estimate. But considering the manner and method of compiling official statistics, it would appear that its views are more realistic and, therefore, more dependable.

Titaghur Paper: How Price Cut Hits

There has been steady support for the ordinary shares of the Titaghur Paper Mills around Rs. 41.62. At this price, the yield works out to 6 percent on the basis of the dividend of Rs. 2.50 a share declared for the year ended March 1959. Apart from the attractive yield on this "blue chip", confidence has been strengthened by the growth prospects. The new mill at Chowdwar in Orissa is expected to begin production in early 1960. During the period ended March 1959, working has shown considerable improvement. Not only has output increased, but the increased costs of production have been partly offset by the renovation and modernisation of the mills. This is probably the reason why the reduction in paper prices—which is to take effect from the beginning of the next year—has had little effect on the shares. In any case, they are not likely to fall much considering that they are tightly held.

The comments made by Sir Walter Michelmore, chairman, in his statement, which has been circulated with the report and accounts, deserve careful study. (A fuller version of the statement is published elsewhere in this issue of *Capital*.) Sir Walter realistically examines the harmful effects of the paper price reduction, so it is hoped that the latter will be reconsidered soon. The Tariff Commission's price recommendation contains a 5 percent allowance for increased costs of production. As costs have risen further since it made its enquiries, an increase in the price is necessary. Sir Walter's suggestion for evolving suitable machinery to adjust prices periodically and speedily requires careful attention. The Tariff Commission has permitted a return of 12 percent on the capital employed, but this figure includes managing agents' commission, interest on loans and provision for redemption, taxation, dividends, and reserves for the replacement of machinery, expansion and other purposes. In view of this, the return is inadequate. Sir Walter says: "In my view, at least 20 percent is required, particularly since the cost structure adopted by the Commission provided for depreciation on two shifts only at the rates allowed for income tax purposes on written down values of the fixed assets, and contains no provision for replacement at higher price levels."

Unless a reasonable return is assured, renovation, modernisation and expansion will suffer. So far, modernisation and expansion schemes have been financed largely out of internal resources; Titaghur Paper, for instance, has spent over Rs. 2.97 crores on renovation and expansion during the past 15 years. The new prices will not allow enough money to be ploughed back into the business. As the profit margin will be cut, it may not be possible to pay a reasonable dividend, so it will be difficult to attract new money for investment in the industry. This could do much damage at a time when it is urgent that the industry's installed capacity be increased considerably in order to meet the rising demand for paper. Many mills have borrowed large sums of money to set up new units or expand old ones, and they will be financially embarrassed if they have to meet interest charges and provide for repayment out of the reduced profit margins now allowed. The statistical evidence which Sir Walter offers shows that the price increases introduced by Titaghur Paper since 1950 are not too big considering the increase in costs of production. Dividends also have by no means been excessive. The present dividend gives a return of only 5½ percent on the equity capital plus reserves. Sir Walter points out that the new prices will reduce earnings by at least 8 percent. So he says: "I have grave doubts of our ability to maintain that return after this revision of prices and the new system of company taxation introduced in the 1959 Finance Act."

Considering the possibilities of rapid expansion in the paper industry, it is time that indigenous sources of raw materials were developed more vigorously. It looks as if for a few years ahead, India will have to depend on increased imports of wood pulp. As it is expensive, the price of paper needs to be fixed in such a way that the mills are able to use it adequately. Meanwhile, the production of indigenous pulp has to be promoted. Sir Walter points out that large sources of bamboo remain untouched or poorly developed. It is hoped that State Governments will continue their efforts to increase forest resources by achieving better yields an acre, and, where necessary, by replanting in areas damaged by floods or careless felling. "Other paper-making fibres are bagasse, soft or hard woods, cotton linters, and sabai grass, the cultivation of which is now in a state of some neglect and might well repay more attention."

The Bombay Burmah Outlook

The sharp setback in Bombay Burmah Trading Corporation shares from Rs. 598 to Rs. 574 on Wednesday last week reflected mainly the stock market's disappointment over the chairman's statement at the annual meeting on the previous evening denying rumours that the company is considering several new expansion schemes. The building activities of A. F. Co. are, however, being transferred to Madh island, and it is expected that the new factory will be completed by about the middle of 1960. Mr. Pratapsinh Mathuradas told shareholders that the company will try to stabilise itself before thinking of expanding in new directions. Expansion in foreign countries is out of compulsion as the money invested there is locked up and cannot be brought back to India. While discrediting talk about new expansion plans, the chairman struck a note of cautious optimism about the outlook for the company. Its new major interest abroad is the branch in Wallace Bay, North Borneo, where timber is extracted for sale in world markets. After the construction of a road network in this isolated jungle area and the introduction of mechanical equipment on a full scale, production has increased in a year in which market conditions have improved considerably. The results from that branch have contributed materially to the profits for the first time. The immediate prospects for the branch look equally promising if the price level is maintained.

As for the prospects for tea during the current year, the weather so far has been unfavourable for some periods, and the crop on the company's estates

is running about 100,000 lbs below last year's level. In addition, the average return has been very slightly less than in the same period of last year. The company hopes, however, to harvest a crop as big as in 1958-59. As for prices, the possible shortfall in world production of quality teas, in comparison with 1958, should help keep prices at a reasonable level. Other favourable factors are the U.K. stock position, the buying operation on behalf of Russia and increased purchases from south India for the Middle East. About the company's tea estates in Tanganyika, the chairman said that the present acreage was planted from 1955-56 to 1958-59, and it will be some years before the bushes reach maturity. However, the first factory will be erected by 1960 61 and a very modest quantity of tea will be manufactured in 1961-62. The present intention is to develop about 1,000 acres to 1,200 acres of tea area in East Africa initially. Referring to the company's coffee estates in India, Mr. Pratapsinh Mathuradas said that 1958-59 provided a record crop of about 8,100 cwts of Arabica and 11,800 cwts of Robusta. It is normal for very big crops to be followed by smaller ones, but in the case of the company's estates, the lower crop expected in 1959-60 from the older bearing areas will to a certain extent be offset by increased crops from the areas coming into production The estimates for the current year are about 8,000 cwts of Arabica and 10,750 cwts of Robusta. However, no marked increase can be expected in the immediate future from the areas coming into production, since many of them were planted only recently.

In Siam, the Joint Timber Company has had a satisfactory year, but the continuance of forest working depends on the outcome of the current negotiations with the Government of Thailand. Most of the timber for which a permit was issued has been extracted, although a large proportion has still to reach the market. This will tide the company over the current year. As for Thai Tapioca, the increased production and reduced costs have not yielded a margin of profit. The current year, however, is expected to bring a moderate improvement. The company's holding in North Borneo Timbers has increased from 30 percent to 70 percent, the remainder being in the hands of Wallace Brothers and Company (Holdings). While avoiding a straightforward reply to questions about the future dividend, which depends on the trend of profits (these are difficult to predict in the case of a company with varied interests like Bombay Burmah), Mr. Pratapsinh Mathuradas assured shareholders that the management will always bear their interests in mind. The company will naturally have to reckon with the new scheme of corporate taxation next year.

Structural Engineering to Expand

The report of the directors of the Structural Engineering Works for the year ended June 1959 is encouraging. The company has fared well, and hopes to do better in the current year as it has sufficient orders on hand at both the Bombay establishments—Wadala and Mulund—for various types of structural steel work, including transmission towers, hangars, industrial workshops, tanks and bridges. It expects still more work from the Bombay Municipal Corporation. The Calcutta works went into operation in February 1959 and pipes of considerable length have already been fabricated. The company expects shortly to obtain from the Government a licence to fabricate light and heavy structural work in this establishment, in addition to pipes. The promise of a brighter future, which the directors' report holds out, may make Structural Engineering shares a useful investment. The management has been considering various new expansion schemes, such as the manufacture of cast iron spun pipes, pre-stressed concrete pipes, structural work using the Ceno-Patent methods, and high-pressure penstocks for hydro-electric schemes. In almost all these cases, a considerable amount of spadework has already been done. The licences required have also been obtained. Collaboration agreements are being finalised with foreign firms. With the implementation of the schemes, the company will achieve satisfactory progress in the development and expansion of its business.

Realisations from sales and work done in the year ended June 1959 amounted to Rs. 1.02 crores, against Rs. 89.9 lakhs in the previous year. Finished stocks at the end of the year were valued at Rs. 33.37 lakhs, against Rs. 30.53 lakhs. The gross profit of Rs. 21.47 lakhs is slightly higher: but the net profit of Rs. 6.77 lakhs is a little lower than the Rs. 6.82 lakhs made in the previous year. Depreciation takes Rs. 439,814 (against Rs. 422,532), managing agents' commission Rs. 170,772 (against Rs. 171,539), taxation Rs. 6 lakhs (against Rs. 8.6 lakhs) and development rebate reserve Rs. 2.45 lakhs (against Rs. 1,156). Allocations from the disposable income include: general reserve Rs. 1.5 lakhs (against Rs. 3 lakhs), contingency reserve Rs. 50,000 (against Rs. 1.5 lakhs) and gratuity reserve Rs. 25,000 (against Rs. 97,672). The ordinary dividend of Rs. 17 gross (Rs. 11.9 net), against Rs. 18 net in the preceding year, absorbs Rs. 4.25 lakhs, against Rs. 3,01,004. The rise is explained by the fact that the company's ordinary capital was increased in June 1958, and, as such, only one month's dividend was paid on the increased capital in the previous year. The company raised its capital further during the year under report by issuing 20,000 6½ percent cumulative redeemable preference shares of Rs. 100 each fully paid. The directors say that a considerable amount of additional funds have had to be raised to finance the increasing volume and value of operations. The funds have been provided mainly by borrowings from banks and by the issue of new capital. The growth of the company's business, and the new schemes which it proposes to implement, will make it necessary to maintain large stocks of raw materials and imported components and to purchase machinery; this will have to be financed over a period of months before sales proceeds can be realised. The company will, therefore, need more capital, and the question of raising it is being considered by the management.

Deccan Sugar Attracts

The yield on the ordinary shares of the Deccan Sugar and Abkhari Company works out to 9.2 percent at the present price of Rs. 14 a share, since an ordinary gross dividend of 25¾ percent has been declared for 1958-59. The yield is attractive in comparison with that offered by other sugar shares, and the steadiness of the scrip is reinforced by optimism concerning the outlook for 1959-60. Speaking at the annual general meeting held in Madras last week, Mr. C. R. Srinivasan, chairman, said that current working is expected to be satisfactory. (A fuller version of the speech is published elsewhere in this issue of *Capital*.) It is hoped that the Samalkot factory will crush 110,000 tons, against 95,617 tons in the 1958-59 season. The Pugalur factory will crush 189,000 tons, against 193,004 tons. Although the latter has started crushing earlier than usual, the recovery has not been affected. In both factories, the recovery improved in the 1958-59 season, so earnings have been satisfactory.

Mr. Srinivasan did not rule out the possibility that some cane will be diverted to the cottage and small manufacturers, but he thought the mills may still obtain a larger supply in the current season because production will be bigger. The latest official decision to increase the minimum cane price may not yield the incentives that are hoped for, according to him. The weakness is that it does not encourage the production of quality cane. Mr. Srinivasan thought that the earlier decision of the company to give a bonus in addition to the minimum price would have promoted quality production. The chairman welcomed the production incentives which have recently been announced, but said that the mills will derive only marginal benefit. If output is to be increased, a considerable reduction in taxes is necessary.

Sales of carbonic acid gas from the Samalkot factory continue at a satisfactory level. Although the distilleries are well equipped to produce as much spirit as practicable from all the molasses, the demand is limited and there is keen competition in the spirit trade. An encouraging feature is that the Samalkot factory has been modernised. This is expected to reduce the cost of production. The management is examining proposals to expand the capacity of both the Samalkot and Pugalur factories. The expansion of the latter might be more remunerative considering that the cane supplies there are of a superior quality. Mr. Srinivasan recognised the need for increasing the installed capacity of the industry in order to raise sugar production. But whether this should be done by expanding the existing factories, or setting up new units, or both, requires careful investigation. The expansion of existing units will be cheaper. If new units are set up, they should be located in places where they do not encroach on the cane areas which have been developed by the existing factories after considerable expense and trouble.

Bhopal Sugar Earns More

The directors of the Bhopal Sugar Industries have recommended a dividend of Rs. 2.50 a share, subject to deduction of tax, for the year ended September 1959. This works out to a net dividend of Rs. 1.75 a share, against Rs. 2 paid in the preceding year. The reduction in the net dividend does not in any way reflect on the performance of the company, for the new scheme of corporate taxation is to blame. On the 12,500 5 percent tax-free redeemable preference shares alone, the company has had to provide an additional sum of Rs. 13,337, while the gross dividend of Rs. 2.50 absorbs Rs. 4,37,500, which is Rs. 87,500 more than the previous year's figure. The company has reported satisfactory results for the year under review. After providing Rs. 1.18 lakhs for managing agents' commission (against Rs. 1.23 lakhs) and Rs. 2.23 lakhs for depreciation and development rebate (against Rs. 2.98 lakhs), it has made a profit of Rs. 11.66 lakhs, against Rs. 11.53 lakhs in the preceding year. Although production was about 28 percent lower, the profit has been maintained because of the increased realisation on sugar sales and a higher recovery.

Sales have amounted to Rs. 99.99 lakhs, against Rs. 1.04 crores in the previous year, but stocks on hand are valued at Rs. 9.92 lakhs, against Rs. 25.85 lakhs at the end of September 1958. The total quantity of sugarcane crushed during the season was 70,092 tons (against 99,762 tons) and the output of sugar amounted to 70,680 bags (against 97,086 bags). The directors attribute the decline in output to a fall of nearly 30 percent in the supply of cane. The average recovery improved from 9.75 percent to 10.10 percent, which is the highest attained by the factory. The overall average yield from the company's farms showed a marked improvement from 28 65 tons to 32.48 tons an acre, which is also the highest figure on record. About the current season's prospects, the directors state that the monsoon has been very good and the cultivators' crops are in a better condition than last year. Crushing, however, depends a great deal on the price of *gur*; until this is stabilised at a lower level than now, cane supplies will be adversely affected. The directors, however, hope to maintain the level of crushing and sugar production. The company has again applied for permission to increase the crushing capacity of the factory from 750 tons to 1,250 tons in response to the Government's decision to raise the installed capacity of the industry. A previous application was rejected on account of foreign exchange difficulties.

Assam Sillimanite Expanding

In his statement from the chair at the annual meeting of Assam Sillimanite Ltd. last Saturday in Gauhati, Mr. S. M. Wahi told shareholders that 1958-59 had been a good year. After eight years of waiting, the mining concern "has transferred its profits to reserves for larger dividends next year." (A fuller version of the speech appears on another page of this week's *Capital*.) The quality of the products has been well maintained, and the demand for Khasi Sillimanite is growing. Even with the increased production of 6,255 tons during the past year, the company could not meet the entire demand. Large orders for 7,742 tons worth Rs. 25 lakhs are still pending.

The company enters a new line with its refractory manufacturing project. The rapid expansion of the steel and other industries is widening the gap between the demand for refractories and domestic production. The present installed capacity in India is approximately 444,000 tons a year, "whereas the anticipated requirements by the end of the second five year plan alone are estimated at twice the present installed capacity," Mr. Wahi said. Imports have shown a steep rise from Rs. 30 lakhs in 1953 to Rs. 3.32 crores in 1958. The company's project, which is designed to manufacture 44,720 tons of refractories a year in two stages, will require a capital investment of Rs. 101 lakhs. Of this, Rs. 65 lakhs will be the foreign exchange component, which will be borrowed from the International Finance Corporation, Washington. Part of the rupee capital of Rs. 21 lakhs for the first stage is being arranged locally, and "in due course, the company shall call for subscription" of the balance from the investing public. (Last year, the shareholders authorised it to issue 600,000 equity shares of Rs. 10 each). The West German firm of Vereinigte Grossalmeroder Thonwerke A. G., has agreed to collaborate on the technical side. According to the scheduled programme, at the first stage, involving an investment of Rs. 65 lakhs, refractories worth Rs. 40.96 lakhs will be produced by 1961-62. The second stage, involving an investment of Rs 42 lakhs, will increase output to a value of Rs. 99.07 lakhs in 1962-63 and to Rs. 1.31 crores in the financial year 1963. The company is also expanding its mining activities to meet the raw material needs of its refractory works and of the industry as a whole. Certificates of approval have been obtained to prospect for quartzite and chrome ore in Orissa, magnesite and steatite in Uttar Pradesh, and kyanite, quartzite and fireclay in Bihar.

Cotton Against Quotas

Mills can hereafter buy indigenous cotton only against quota allocations that will be issued to them by the Textile Commissioner within the next few days. The quotas will first be issued to the extent of 50 percent of last year's consumption of domestic varieties, and will be increased as and when the crop arrives in the market and its size is more definitely known. Besides, a quality survey is also to be introduced. The Textile Commissioner has warned the trade that if the orders are violated, powers of requisitioning will have to be used. These decisions follow the recommendations of the Cotton Advisory Board which met in Bombay last Friday to review the serious situation arising from the steep rise in cotton prices following the shortfall in domestic supplies and the still slow pace of arrivals. Another important recommendation made by the Board, on which New Delhi's decision is awaited, is the early release of an import quota for 300,000 bales of cotton stapling 1 inch and below. This quota will raise the import figure for the current season to around 1.2 million bales, including the 140,000 bales released on 31st August. It is estimated that cloth exports in 1959 will fetch around Rs. 75 crores, of which Rs. 50 crores will be earmarked for import of cotton. This will permit the purchase of nearly 750,000 bales. Of the 300,000 bales of short staple cotton now being recommended, half will be given to exporting mills on a 100 percent retention basis instead of the present 30 percent. The remaining 150,000 bales will be licensed to importers and mills on a "first-come-first-served" basis.

All this follows another downward revision of the crop estimate. The total availability of Indian cotton during the current season, after providing for exports already allowed (150,000 bales), *ambar charkha* requirements (50,000 bales) and village consumption (270,000 bales), has been estimated at around 4.1 million bales. This means that the commercial crop will be around 4.3 million bales. Six weeks earlier—on 3rd November—the Advisory Board had estimated the commercial crop at 4.8 million bales, and thought that only the delay in crop movement had made the supply position look critical. What has prompted the expert body to revise the crop estimate so drastically, is difficult to say. But the industry is happy that its most pessimistic estimate of the crop has been accepted, because this has encouraged the Board to recommend larger imports. The mills are now assured of adequate supplies. But uncertainty prevails as to where the short-staple cotton will come from. Pakistan is unlikely to offer large quantities because of the poor crop there. Syria and Egypt too cannot contribute much. The U.S.A. is expected to be the main supplier. As long as cloth is in a sellers' market, the price of raw cotton is unlikely to cause the industry serious anxiety because there is no control on cloth prices. That it should have used only a meagre quantity (126,000 bales) out of the 620,000 bales of cotton released for import, in spite of the tight supply position, has intrigued many observers.

Cloth Output, Stocks and Prices

Latest reports indicate a further deterioration in the supply of cotton piecegoods. Exports continue to make a very good showing and the figure for 1959 is now expected to rise well above 750 million yards. Internal offtake, too, has remained encouraging; there has been a steady rise in prices in spite of larger releases of cloth for civilian consumption, the monthly rate of deliveries being 373 million yards in 1959, against 366 million yards in 1958 and 348 million yards in 1956. These are the combined figures for mills, handlooms and powerlooms. Enquiries from the wholesale trade indicate that the mills are so heavily booked already that they are unwilling to make further commitments even at higher prices.

While offtake has been steadily improving, mill production of cloth has been barely maintained at the 1958 level. The provisional figure for November 1959 is no more than 396 million yards, compared with 414 million yards in October. This brings the total for the first 11 months of the year to 4,498 million yards, compared with 4,489 million yards in the corresponding period of 1958. With production almost unchanged and offtake appreciably better, stocks with mills have continued to decline. At the end of November, total stocks amounted to 308,000 bales, against 338,000 bales a month earlier. Unsold stocks of cloth, at 147,000 bales, are believed to be a record low. Even during its most prosperous periods, the industry did not carry such small stocks. Few have taken much notice of Mr. Manubhai Shah's recent statement in the Lok Sabha that the Government does not fear any serious shortage of cloth. Most observers think that supplies will become scarcer as seasonal demand rises in the months ahead. This view is shared by Mr. N. H. Tata. A few days ago, he hinted at the early prospect of quotas, queues and rationing, and all the distasteful measures connected with shortages, while addressing the annual meeting of the Ahmedabad Advance Mills. Mr. Tata asserted that the danger can be avoided only if the Government revises its ideas on cloth supply and demand, so as to enable the industry to expand its production capacity in time to meet the increased requirements on account of larger exports, a rising population and improved living standards.

Since cloth production has increased very little in spite of the marked improvement in demand, the mills have come in for a good deal of criticism. Some believe that the industry is deliberately keeping down production in order to exploit the shortage. But the industry says that the current level of production is only slightly below the safe limit suggested by the Joshi Committee, which investigated the crisis arising from the accumulation of stocks in 1957-58. The industry claims to be doing its job well. Out of 293 composite units, it is reported that as many as 176 are working three shifts and 75 are working two shifts. The scope for an appreciable increase in production, therefore, is thought to be limited. Output, it is said, has been affected by the closure of a number of units. According to the latest figures, 27 composite units and 17 spinning units have ceased to function. The industry claims that production can be increased only if installed capacity is expanded. This was the main theme of Mr. Tata's speech at the annual meeting of the Ahmedabad Advance Mills. Under Government control, the productive capacity has been static. Mr. Tata said that such controls and regulations were justified to a large extent when they were introduced in order to protect the handloom, the *ambar charkha* and the cottage sector. But the time has now come to relax the controls in order to avoid a possible shortage of cloth. The targets for the mills have been fixed with an eye to developing the handlooms and the powerlooms. It will be unfortunate if ideological considerations prevent an increase in cloth output. As for cloth prices being high, the industry explains that the rising costs of raw cotton and of labour (due to the higher dearness allowances) are to blame. Its own profit position is far from enviable. The stock market's verdict, as indicated by the boom in textile shares, is, however, different.

India Drinks More Tea

This year's auction trends indicate that the demand for tea is rising within India. But there is no reason yet for the fear that the increase in internal consumption will reduce exports and harm foreign exchange earnings. Speaking at the annual general meeting of the Calcutta Tea Traders Association in Calcutta last Friday, Sir Richard Duckworth, chairman, said that if the total demand of foreign and domestic buyers rises, more tea can and will be produced both in north and south India. A considerable quantity is at present being sold for less than the cost of production because demand is not strong enough. Instead of discouraging operators in the internal market, the Government should try to expand domestic as well as foreign sales. If it wishes to encourage exports, it should launch propaganda campaigns in overseas markets. "Any steps to place internal buyers at any disadvantage with their export competitors would be detrimental to the overall interest. If there is any risk, as there must always be, of world crops exceeding supply, a strong and active internal market must remain India's greatest ally."

Sir Richard said that the current year has seen a rapid growth in the sale of tea direct from producing estates to upcountry purchasers. As long as the West Bengal Government maintains its entry tax on all teas brought to the taxable area for sale or distribution, the inducement to traders to purchase their teas otherwise than in the Calcutta auctions will continue. The teas so purchased are not only destined for internal distribution; it is reported that considerable quantities are despatched direct from the growing areas to Bombay for shipment to Middle Eastern countries. No trader, if given equal incentives, wishes to go to the trouble of maintaining buying organisations in the tea-producing areas, and remitting the funds necessary for purchasing and consigning teas from inaccessible and difficult upcountry stations. "Since, however, the use of a normal Calcutta organisation for this purpose continues to demand an additional charge of 6nP a lb on all tea so handled, there is a steady pressure on traders to remove all or part of their places of business from Calcutta and to constitute new offices elsewhere. None of us can fail to see that this is a retrograde or damaging development so far as our Calcutta business generally is concerned". Sir Richard said that it is the policy of the Association to foster the growth of the Calcutta auctions, but the complete removal of the West Bengal entry tax is necessary. The multiplicity of taxes which have been imposed on tea should be simplified, and, if possible, reduced to a single levy imposed at a single point of collection.

Fertiliser Prices and Production

The Central Minister for Food and Agriculture, Mr. S. K. Patil, recently expressed his anxiety to increase the use of synthetic fertilisers. His view is shared by the Madras Government, which feels that its quota of ammonium sulphate is inadequate. During a discussion in the State Assembly some time ago, it was stated that an additional quota of 4,000 tons has been offered from Sindri. Cultivators in the State do not have much prejudice against inorganic manure, although mixed manures are preferred. There have been reports about the adulteration of ammonium sulphate with fine white salt, and it looks as if controlled distribution is responsible for this evil. In more than one district in Madras, it has been noticed recently that the prices charged are higher than the ceiling fixed by the Fertiliser Pool. Plantations, it is said, are better placed than small cultivators for getting bigger supplies at more reasonable prices. The high price of super-phosphate has discouraged cultivators, so it is urged that they be offered loans through multi-purpose co-operatives. Meanwhile it is said that the doubling of F.A.C.T.'s capacity will increase fertiliser supplies soon, and the high price of land may induce the cultivator to try for a bigger return from it by using more fertilisers.

"CAPITAL" CHRISTMAS TOY FUND

Total Rs. 206

Previously acknowledged Rs. 4,051.50

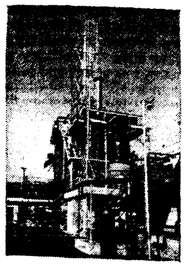
Grand Total Rs. 4,257.50.

NOTICE

There will be no issue of CAPITAL on 31st December, 1959, as the markets will be closed for the Christmas and New Year holidays. The first issue of the New Year will be published on Thursday, 7th January, 1960.

CHINA TRADE

UNDER present circumstances the condition and prospects of the trade of China cannot fail to be of interest, particularly to those connected with India. It is generally admitted that the Celestial Empire possesses immense commercial potentialities. The country itself is extremely fertile, and its mineral wealth is great. The population is believed to amount to over 300,000,000 and the trade is valued at £53,000,000; whereas Japan, with a population of 42,000,000, enjoys a trade of £45,000,000. The whole system of administration and taxation in China, however, is such as to greatly hamper, if not to actually strangle, trade—at any rate foreign trade; and foreign merchants dealing with China have great difficulties to contend with. About two-thirds of the foreign trade of China has hitherto been in English hands; and great efforts will now have to be made if England is to retain her commercial supremacy in the Far East. The total exports of China amount to about 22½ millions of pounds sterling; and this branch of Chinese trade is almost entirely in British hands; and especially is this the case with regard to such articles as furs, silk and tea; though the Russians have of late been exhibiting activity in respect of the last-named article. Chinese imports amount in value to a little over 30 millions of pounds sterling; and the greater portion of import merchandise is carried by British ships; but this does not imply that the articles imported are British goods. It appears that a large proportion of these goods are purchased by British merchants in America; and are sold by them in China as British goods; and thus, while these merchants and the shippers profit, the British manufacturers count for nothing in these transactions. As far as the import trade of China is concerned, Great Britain has to contend with two very active rivals, viz., Germany and the United States; and it is constantly stated that, while Germans and Americans are prepared to supply the particular sorts of articles the Chinese require, the British keep sending things, as Lord Charles Beresford remarked in a recent speech, which they imagine the Chinese ought to have.

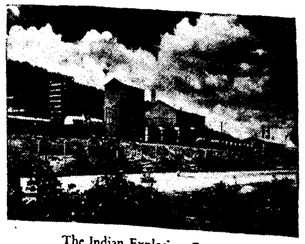


FROM

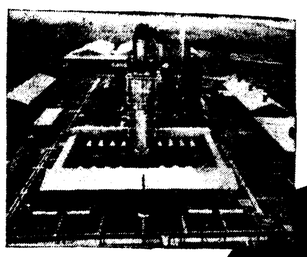
CAPITAL

21st December, 1899

Here are a few examples of Simon-Carves' ability to combine their long experience of engineering design and construction with the specialised technical knowledge of their clients and to accept responsibility as main contractors for complete industrial plants on a major scale.



ENGINEERING CHEMICAL PLANTS BASED ON CLIENT'S KNOW-HOW



India's first 3,500 tons per annum Polythene Plant at Rishra, West Bengal, set up by the Alkali and Chemical Corporation of India—Simon-Carves were the main contractors for engineering and for detail design and construction of plant and buildings.

Over 40 million lb. of phosphorus from phosphate rock are produced from this factory at Portishead, U.K., every year for Albright & Wilson: Simon-Carves were the main contractors for civil engineering and building and for detail design and construction of plant and buildings. Two travelling pneumatic unloaders were supplied by Simon Handling Engineers.

The Indian Explosives Factory at Gomia, Bihar, where Simon-Carves were responsible for design, construction and erection of the sulphuric acid and oleum plant, for construction and erection of the denitration and acid blending unit and ammonium nitrate plant, and for erection of the nitric acid plant.

60,000 lb. of carbon black are daily manufactured in this plant by the "furnace process" for Cabot Carbon Ltd. (wholly-owned subsidiary of Godfrey L. Cabot Inc. of USA) at Stanlow, Ellesmere Port, U.K. Simon-Carves were the main contractors for the entire plant on a green-field site.

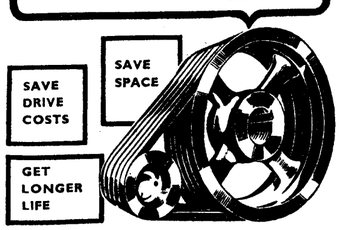
A Ditcher's Diary

RIGHT FROM THE START IT SEEMED TO ME UNLIKELY that Mr. Nehru and Mr. Chou En-lai would be in Rangoon on Saturday; and the man least surprised at this must be Mr. Chou himself. And will he have convinced the world that here is China dying for the earliest possible settlement of all her disputes with India—while India herself is refusing to talk except on "absurd" conditions? I doubt it, for the trick has been played too often in the past. The Chinese Premier's letter is the familiar chop-sui of innuendoes, threats and hypocrisies, seasoned with some chilly sauce; and nobody in India has found it appetising. Except, of course, the communists who, I see, have now to hold their meetings—surprisingly well-attended still—under police protection. If Russia was once, to quote Sir Winston, "a riddle wrapped in a mystery inside an enigma", the epithet is today more applicable to China. Yet, it is possible that much too much may be made of this mystery business—to China's advantage. For a definite policy towards China I recommend a down-to-earth working hypothesis, which is that power—rather than ideology—be treated as the central factor in Indian-Chinese exchanges. Mr Nehru came near my point when he described Chinese actions as Chinese rather than communistic. Mr. Walter Lippmann may well be right in thinking that in the next few decades China, with its population at about 1,000 million, will probably be the greatest power on earth, and the containment of this colossus will perhaps require the combined strength of Russia and the West. In the immediate future south-east and central Asia will have to brace up to the fact that China may no more spare fellow-Asians than Japan did. As a matter of fact, Asia seems to be going through the troubles Europe has not yet done with—she is threatening to become a continent of many warring and ambitious States. It was a noble dream of Mr. Nehru's that Asia would evolve differently, but the historical basis for the belief was meagre; and now it has been finally exploded by Peking.

DISCUSSING RELIGION IN THE U.S.S.R. A WEEK or two ago I remember saying that although the Soviet Government was still antagonistic, it was by no means as illiberal in its attitude towards the Church nowadays as it was when Stalin was alive. The main reason for this, or so I presume, is because religious persecution in the early days of communism was so thorough that Russia's rulers today have no fear of their power being challenged by the people's spiritual leaders. Religion, therefore, can be tolerated because its lack of influence makes it contemptible in the eyes of a materialistic Government and an easy object for ridicule. I suspect this is the pattern in most communist countries, but a cutting of an article I have received from a correspondent tells me there is still one where it is not. The article is by the American writer on east European affairs, A. M. Rosenthal, and it appeared in a recent issue of the *Montreal Star*. Mr. Rosenthal tells us that in Poland the Roman Catholic Church is still so powerful that it is actually able to force the communist Government to accept an uneasy co-existence in which its interests are not only safeguarded, but in many ways actually fostered. The Poles have always been a religious people—but then, so were the Russians. Their present devotion is partly traditional and partly, or so it seems, a substitute for nationalism. The communist Government was forced on the Polish people, and is maintained in power by the Soviet Army; rebellion against it would thus be inviting disaster of the kind which overtook Hungary. This means that all the emotional energy which would normally go into throwing off a foreign-dominated régime and supporting a national one, has to find other means of expression and religion is perhaps the most obvious one to choose. All this is very understandable, and, up to a point, commendable. The trouble is that the opposition to communism as represented by the Church is sometimes truly reactionary in that it is apt to reject all change, even if it is for the better. It is true that the record of the Church in matters concerning modern progress has not always been a good one, but the lesson from this attitude in Poland's case would seem to be that it is about time the Soviet Union allowed her neighbours to choose their own form of government.



AT THIS SEASON, WHEN EVEN IF THERE IS NOT exactly peace on earth, we are supposed to feel goodwill towards men, is hardly the time to remember that there are in fact too many of us. That, however, must have been the idea behind Family Planning Week. The rate at which the population of the world has been increasing, especially in Asia and Africa, is truly alarming; and neither social politeness nor religious susceptibilities can be allowed to veil the prospect from the constant gaze of all of us. The most stupid aspect of Marxism is perhaps its view of population—its absurd belief that a limited world can hold unlimited numbers indefinitely. It is no longer reasonable perhaps to ignore outer space and possibly habitable planets; but I do not see why their prospective citizens cannot wait until their practicabilities have been explored. As far as I can gather, Japan is the only country which has faced up to the problem courageously; there were 1,170,143 legalised abortions in 1955 alone. I respect the sentiments of those who disapprove of this method of controlling population, but it seems to me no more than sentimentality to be sorry for those unborn while remaining callous to the hungry and stricken millions around us. And the latter cannot possibly be avoided unless some correlation exists between a country's numbers and its economic resources. India, for instance, is making manful efforts at great sacrifice to raise the present miserable standard of living; but an allocation of Rs. 65 lakhs in the first plan, and of about Rs. 5 crores in the second, for family planning, bespeaks an almost light-hearted approach to what may yet be the country's biggest problem—and the chief point at which poverty can be attacked.

ALTHOUGH I KNOW OF NO FACTS WHICH CONTRADICT Professor Humayun Kabir's recent statement that the percentage of literacy in India has increased to about 40 percent from 14 percent in 1947-48, I find it difficult sometimes to understand what good it might be doing. Nor am I convinced that the fact there are now one million university students instead of 250,000 represents an unmixed blessing. Already too many educated youths unable to find jobs are cursing their education instead of regarding it as a boon. But that is a problem which it is the duty of the State to solve; what the public is more concerned with are the frequent reports of student agitation in almost all Indian universities. It is not only the students of Calcutta that are to blame; those of Allahabad have recently acted just as disgracefully. I was amazed the other day to see that the post-graduate economic students of Calcutta University had used the same excuse for leaving the examination hall as is so often used by their presumably less responsible undergraduate colleagues—that the questions were too stiff. It may be true that the paper-setters are not always above reproach; the late Sir Asutosh Mookerjee, I am told, once compelled a question-setter to answer his own questions within the allotted time of three hours and proved he was unable to do it—but even then I do not see what difference it makes when all students are in the same boat. In any case, this can never be an excuse for students to break windows and furniture, assault invigilators and girl students and leave the examination hall compelling others to do the same—as they have done so often in Calcutta. But if students have been indisciplined, teachers have been equally indifferent: this is a complaint I have heard from a number of parents and guardians. The creation of new universities, such as that planned for Burdwan to relieve the strain on the existing ones, may or may not be the solution. But is it not time a new commission was appointed to study the deep-rooted malaise in university education in general?

IT IS POSSIBLE TO AGREE WITH SOME OF THE REASONS the Tyagi Committee puts forward to explain the extent of tax evasion in the country without approving all the possible remedies it proposes. I have not read the Committee's terms of reference, but from the Press reports it appears to have accepted too readily the present stifling system of personal taxation and to have taken the view that the best way of improving it is to make it even more stifling. What is worse, it proposes to increase the scope for harassment, and put new powers of blackmail into the hands of corrupt officials, by introducing prison sentences and deterrent penalties. Lately, the attitude of tax inspectors towards individual assessees has improved; I doubt if it will go on doing so if these recommendations are accepted. We all know the odd case which deserves such treatment, but the majority of taxpayers are more bewildered and frightened than deliberately dishonest, and I suspect that any attempt to make the tax-gathering apparatus more fearsome than it is now is as likely to increase evasion as to diminish it. The main point the Committee does not appear to have emphasised is that personal tax evasion in this country is due neither to the slackness of the law nor the lack of penalties so much as to the actual level of taxation and the tiresome process which has to be gone through to pay it. If personal taxes were lowered and the methods of gathering them simplified, my guess is that the yields would soon rise. It is the *habit* of paying taxes which has to be encouraged—and nobody in his right senses is going to be in a hurry to adopt it when he knows he will henceforth be treated like a potential criminal. If the Committee had urged that steps be taken to reduce the inquisitorial aspect of paying one's taxes, then its recommendations would be of more value.

'HE DECCAN SUGAR AND ABKHARI COMPANY LIMITED

SIXTY-THIRD ANNUAL GENERAL MEETING

MR. C. R. SRINIVASAN'S REVIEW

Presiding over the Sixty-third Annual General eting of the Shareholders of the Company held on h December, 1959, Mr. C. R. Srinivasan, Chairman, d:

entlemen,

The Report of the Directors and the Statement Accounts for the year ending 31st May 1959 have en in your hands for sometime and I hope you ve found them interesting. I propose with your 'mission to take them as read.

'I am glad to say that the results of the financial ir have enabled your Directors to propose pay- nt of dividends on the Company's ordinary share pital totalling 25¾% gross for the year equivalent 18% after deduction of Income Tax at the rate plicable to resident individuals.

Taxation

Reference has been made in the Directors' Report d in Note 7 on page 14 of the printed Accounts the provision for taxation and the tax deducted deductible from dividends, but there are two ther points relating to taxation upon which I uld like to comment briefly.

The first relates to the unusually large figure of 2,62,500/- included in the provision for taxation the Profit & Loss Account under the description djustments relating to previous years'. It has en the practice of the Company to reserve in one ar of account for the expenses that will be incurred the following year in overhauling the machinery cause the overhaul is necessitated by the operation the machinery in the year of account and therefore cost of the overhaul should appear in the same ar. Such reserves have hitherto been allowed as deductible expense for income-tax purposes in ch of the years in which they have been set up, t the Income Tax Department are now seeking revise past assessments of the Company so as to stpone the allowance of the reserves from the years which they were set up to each of the following ars when the expenditure was actually incurred.

The matter is under reference to the Income Tax ppellate Tribunal and pending its disposal it is viously necessary that we should provide for the t involved, should the decision go against us and is is the Rs. 2,62,500/-. It will be appreciated om what I have said that this additional tax ovision required out of the profit of the Company's ar 1958/59 is not for tax which ought to have en provided for in earlier years but is to antedate one year payment of tax on a reserve for penditure which will be allowed for tax purposes the following year.

The second point is the practical doubling of the vance payment of Income Tax and Super Tax own under Note 10 of the Accounts at 14,50,643/- as against the corresponding figure d year of Rs. 7,31,630/-. The reason is that the come Tax Officer's demand for advance payment tax during a particular accounting year is based on the tax actually paid by the Company against last completed assessment which, in the case of is Company, generally relates to the profits of the counting year two years ago. Thus the advance x of Rs. 7,31,630/- paid during our year ended st May 1958 was based on the assessable profits the year ended 31st May 1956 which were latively low because we were able to set off against e book profit of Rs. 21.08 lakhs of that year a bstantial carry forward of unabsorbed depreciation om previous years of approximately Rs. 9.8 lakhs.

The advance payment of tax made during the ar to 31st May 1959 was based on the profit of ir year 1956/57 which was Rs. 26.54 lakhs and ice we had no more unabsorbed depreciation from rlier years we had to take up the full tax liability d correspondingly the advance tax payment we d to make during the year under review had to increased.

Samalkot Factory

The new boiler for Samalkot to which I referred my last speech has been erected and commissioned om the current season which began on 27th vember. With the addition of this and the new ll last year the reconditioning of the Samalkot ctory may be said to be practically complete but is does not mean that there will be no need for rther Capital expenditure in the next few years. The new mill consisting of 3 units of 3 rollers has justified itself in economy of maintenance but to bring it to the recognised standard to cope with a crush of 800 tons per day and give the expected extraction, the addition of a fourth mill is essential. Application has been made to the Central and State Governments to import and erect this unit at an estimated cost of Rs. 4 lakhs. It is hoped that this will be in operation in time for the 1960/61 season. A note of caution may not be out of place. It should not be thought that the modernisation undertaken so far, including the proposed addition of the fourth milling unit, will result in an increase in the crushing capacity. This remains at 800 tons cane per diem.

In common with factories in Coastal Andhra, we work at Samalkot a season of about 150 days' duration. The climatic and geographical conditions are such, that a longer season with cane of millable quality has so far not proved possible. At the same time, bearing in mind the larger cess on cane we pay in Andhra and the lower realisation on sugar, the bulk of which can still only be marketed outside the State, the cost of production has to be brought down. One way of achieving this is to expand the capacity thereby also contributing to increased sugar production, the necessity for which whether for internal consumption or export is now beyond doubt. I shall refer to this aspect later on in this speech. Your Board has accordingly ordered an examination of the cost of expanding the factory to 1,000 tons. The figures, when they are presented to us, will be examined against the background of expectations of availability of sufficient cane and the comparative merits of incurring the necessarily large capital expenditure as between Samalkot and Pugalur.

Pugalur Factory

In Pugalur we have the best cane that is milled in the group of sugar factories under the management of Parry & Company Limited, only five factories in the Southern group having a better recovery. In contrast to Samalkot we work at Pugalur 250 days in the year, while the all-India average is 141 days and the Southern Zone average 153 days. It is obvious that within reasonable bounds money spent on the expansion of Pugalur will show a better return. It is incumbent upon us to examine all possibilities.

The balancing of certain sections of the Pugalur Factory was completed in July 1959 at a cost of Rs. 8 lakhs. The factory is currently crushing at the rate of 1,000 tons per working day. You will probably recall that a few months ago the Government of India invited applications for expansion of existing units and for establishing new factories in the context of requirements of sugar at the end of the Third Plan. We have sought permission of the Government to increase Pugalur's capacity to 1,250 tons. With the sugar policy for the Third Plan still not formulated, Government have presumably not seen their way to sanction individual applications, but we can confidently expect approval of the proposal. Meantime we have asked Mr. Parkes, who is now Technical Adviser to the Managing Agents, to examine the possibility of a still larger expansion. I hope that when I address you next year I shall have something favourable to report on this matter.

Shareholders may remember what I said last year, that the minimum price for cane will in future be merely an advance payment and that the final price will represent a percentage—as yet unpublished—of the price realised for sugar after adjustment of a number of factors. In the context of this Price Linking Formula, which is more far reaching in its consequences than the well known SISMA formula, we can no longer confidently count on benefiting from the upward trend in sugar prices. There will be virtually a fixed margin for manufacture between costs and profit. It is in this context, apart from contributing to sugar production in the country, that we have to consider seriously our expansion plans with the aim of bringing down costs.

Sugar Production

The Samalkot Factory crushed in the 1958/59 season 95,617 tons cane against 1,11,567 tons in the previous season, and produced 9,134 tons sugar. The shortfall was due to lower yields and diversion of some contracted cane for jaggery. The recovery was however better at 9.55% against 8.98% in the previous season. The net shortfall in production over 1957/58 was 881 tons sugar.

At Pugalur production during the 1958 Special and 1958/59 Main Seasons was 18,359 tons of sugar on a crush of 1,93,044 tons of cane, the relative figure for the 1957 Special and 1957/58 Main Seasons being 20,888 tons of sugar on a crush of 2,27,207 tons cane. Here again the recovery was better than in 1957/58 though cane which ordinarily would have come to the factory was diverted by growers to jaggery.

The All-India production in 1958/59 was 19.17 lakh tons compared with 19.76 lakh tons in 1957/58.

Sugar Scarcity

You will doubtless want me to dwell on the present sugar situation, the more dramatic developments of which occurred after the close of the year under review. It was not so long ago that the country decided on export of sugar on the grounds that there was a sizable surplus after meeting the internal demand. What has happened in the interval to affect production to the point that exports ceased and supplies failed to meet the internal demand? It seems to me that the answer is two-fold. Undoubtedly there has been a spurt in consumption. In an expanding economy with progressive inflationary pressure, not easy to control, food is the first item of the family budget to absorb part of the increased money income. It was generally hoped that with a carryover of 3.59 lakh tons at 31st October 1958 and a production of about 20 lakh tons in 1958/59 the country would be wise to build up an export market after meeting the internal demand, estimated at 21 lakh tons. As the season progressed, however, it was clear that production would not exceed 19.25 lakh tons. In actual fact the production in 1958/59 was about 60,000 tons less than in the previous season whereas consumption showed a distinct rising trend. Speculative elements were not slow in taking advantage of the indications that the carryover into 1959/60 would only be about half the normal quantity and there was no prospect of any substantial increase in production in 1959/60.

The reasons for production not rising to the level of consumption are not far to seek. The Finance Act of 1957 had done considerable damage earlier, with the doubling of duty on vacuum pan sugar on one hand, and no taxation whatever on jaggery or khandsari on the other. The consequences followed as speedily and to as great an extent as they were obvious and predictable. Jaggery and khandsari manufacturers invaded factory areas and bought cane which would otherwise have gone to factories, at prices the factories could not afford to pay at the controlled price of sugar. There are no exact statistics but it is generally accepted that the manufacture of khandsari, which up to the 1956/57 season had been steady at 1 lakh tons, increased by 250 per cent in the cold weather of 1957/58 and has been maintained at this level.

In the 1959 Budget an attempt was made to correct the imbalance. A tax of Rs. 126 per ton was proposed on all khandsari compared with Rs. 291.20 on factory sugar, but in April this was reduced to a figure which still accentuated the disparity. If it is politically undesirable to tax gur and khandsari, what the industry needs is a reduction in the Central Excise duty sufficient to restore the relative positions prevailing prior to the 1957 Finance Act.

Sugar in Madras

In May last the position in Madras reached a stage where the ordinary channels of trade could no longer function. Your Board is firmly convinced that the long term interests of the sugar industry in general and of this Company in particular are better served by avoiding the extension of control than by grasping the temporary and illusory profits that could have been made these last few months, had we sold at the highest prices obtainable. In the event, in common with other members of the South Indian Sugar Mills Association, we imposed a voluntary control on ex-factory prices at levels agreed with the Sugar Directorate and opened fair price shops, no less than 6,000 in the Madras State, throughout the Southern Zone.

Thus the price of sugar was kept in reasonable bounds until early October when, with Deepavali looming ahead the demand reached a stage where Government intervention could alone cope with the situation.

Since October retailers have been given their quotas by District Collectors acting under the supervision of the Commissioner of Civil Supplies throughout the Madras State and, knowing something of their difficulties, I would like to say that these officials have done very well. This can only be a short term measure. I hope that in the near future the distribution of sugar can be returned to the traditional and well tried channels of factory to wholesaler, wholesaler to retailer and thence to the public.

I referred a little while ago to our expansion plans for Samalkot and Pugalur against the background of larger production and lower costs.

So far as Madras State is concerned production in the existing five factories in a normal year is about 75,000 tons. The three new co-operatives under construction are together likely to contribute in the course of the next 2 or 3 years about 30,000 tons per annum. The consumption hitherto has been of the order of 1,20,000 tons. Granting that this will rise to 1,50,000 tons by the end of the Third Plan, the deficit will be some 45,000 tons. Before aiming at self-sufficiency I submit that the authorities should consider the pattern of development that has evolved in the course of the last few years in the Southern region as a whole.

It so happens that more factories came into being in that part of Andhra which, before separation formed part of the Madras Province, than in the Southern districts. When Telengana was added to the new State to form Andhra Pradesh, the State as a whole became surplus in sugar with an average annual production of 1,30,000 tons and a consumption between 80,000 and 85,000 tons. In the subsequent drive for increased sugar production and eagerness for co-operative factories some new units also were sanctioned. When these materialise production in Andhra Pradesh will rise to about 1,70,000 tons. Assuming that in common with other Southern States consumption rises by 25 per cent though Andhra has the lowest *per capita* consumption among them—there will still be a surplus of 60,000 tons which

the first and the best in every grinding test
precision grinding wheels

SW-10.

should normally find its way into Madras and to a lesser extent Kerala.

Kerala is presently deficit by 40,000 tons and this may grow to 50,000 tons when consumption increases. The State which has now only one sugar factory producing 10,000 tons is reported to have plans for two co-operative factories together capable of producing 20,000 tons.

Mysore is more or less self-sufficient with possibly a small surplus easily absorbed by Kerala.

Thus the net deficit in the Southern region will be about 15,000 tons. This could be more than met by expansion of the existing units in the deficit Madras State at a cost—both in terms of rupees and foreign exchange—much lower than that of new and independent units. If on the other hand new factories have to be set up, not for economic reasons but to placate local interests, I appeal to the authorities to ensure that the locations are at such distances as will prevent the new units from encroaching on the cane areas developed by existing factories at considerable expense and trouble. An irrational distribution of new units can neither be in the interests of the growers nor the industry.

New Sugar Policy

The new sugar policy increases the price of cane by Rs. 5/- per ton and offers an inducement to factories to make more sugar by offering a rebate of 50% of the Excise duty on any sugar made in excess of the average production of the last two seasons. What the Government has now done is certainly a step in the right direction, and if it is continued, may produce marginal results. The concession of half the duty which can, at best be earned on a small percentage of the crop, represents in effect a halting and hesitant reversion to the pre-1957 conditions. A little more courage and the position can be retrieved. Without in any way begrudging the cane growers their extra Rs. 5/-, I am still disappointed that this has been introduced as a flat rate and without giving any thought to the possibility of retaining a comparatively low minimum price and arriving at a system whereby factories pay a bonus for good cane, i.e. cane that contains a high percentage of sucrose. Obviously, the higher the minimum price, the less can be the inducement that can be offered for the growing of good cane. It is particularly disappointing that this should have happened at the beginning of the first season in which the Pugalur Factory was to distribute any bonus due under the SISMA or Price Linking Formula on a quality basis.

Labour

Generally speaking our relations with labour have been cordial, but I must refer here to a disturbing factor which is not confined to our industry. I refer to the Code of Discipline which, the Unions having agreed to abide by, is violated in the form of lightning strikes and 'go slow' methods. These tactics can be very detrimental when they are employed in public utility services. It is regrettable that a close analysis of these methods should reveal that they often arise from political manœuvring or inter-union rivalry.

Outlook for Current Year

There is reason to believe that we shall have another satisfactory year. At Samalkot we expect to crush this year 1,10,000 tons. Jaggery prices have declined from the pre-Deepavali levels but are still sufficiently attractive to cause some diversion of cane from the factory. Indications, however, are that supplies are adequate to take care of requirements for jaggery. In Pugalur we expect a total crush of 1,89,000 tons in the financial year ending 31st May 1960. The 1959 Special season ended on 5th November. Usually there is an interval of 3 to 4 weeks between the close of the Special season and the beginning of the Main season, but this year because of the necessity for making sugar available early, the two seasons were linked with only a few hours' interval. I am glad to say that the recovery has not been affected by this early start, and is indeed better than that recorded at the start of the 1958/59 Main season. It may be necessary to close for ten days in February for boiler cleaning and a quick overhaul.

Sales of Carbonic Acid Gas from the Samalkot Factory continue to be satisfactory though there is keen competition in this line in Coastal Andhra. We are equipped for production of spirit to the extent of utilising all the molasses that the factory can produce, but here again the total output of the distilleries in Andhra is more than the alcohol-based industries in the State are able to absorb.

I would like to take this opportunity to thank the staff and labour for their loyal co-operation during the year."

The Report & Accounts for the year ended 31st May 1959 were adopted and a final dividend at the rate of 18¼% gross for the year ended 31st May 1959 (making a total of 25¾% gross for the year, equivalent to 18% after deduction of Income Tax at the rate applicable to resident individuals) was declared on the Ordinary Share Capital of the Company, the dividend being payable on the 19th December 1959. The dividends already paid on the Preference Share Capital of the Company for the year ended 31st May 1959 were confirmed.

The retiring Directors, Mr. C. R. Srinivasan and Mr. V. Ramakrishna, were re-elected and the retiring Auditors, Messrs Lovelock & Lewes, were re-appointed on the same remuneration as for the previous year.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

STATEMENT BY THE CHAIRMAN, SIR WALTER MICHELMORE

The following statement has been circulated to areholders of the Titaghur Paper Mills Company, mited, by the chairman, Sir Walter Michelmore.

I take this opportunity of submitting a few remarks the activities of your Company and the paper dustry, to be read in conjunction with the Directors' port and the Company's accounts for the year ded 31st March, 1959.

Shareholders will observe from the Directors' port that Mr. F. S. Mitchell has retired as an ex-icio Director of the Company after 33 years of rvice with your Managing Agents. During his reer Mr. Mitchell has been closely associated with ur Company in various capacities and has been, a large measure, responsible for the position in e industry which your Company enjoys today. We tend to Mr. Mitchell our best wishes for the future d trust that before long we shall be able to make e of his services again in an advisory capacity as member of your Board.

You will have noted that it has been possible to commend an increased dividend to ordinary share-olders. The improved results have been due in large easure to an increased production of 11% over the ture of the previous year and have been achieved the face of increasing costs of raw materials, emicals and labour. The electricity duty imposed by e West Bengal Government has cost your Company s. 10.23 lacs in this year and we are now faced with new tax imposed by the Orissa Government on the ansportation of bamboo which, though it has not fected this year's results, will in a full year cost out Rs. 3.70 lacs. In addition, no less than Rs. 124 cs have been paid to the Central Government in e shape of excise duty.

Largest Producer

Your Company is the largest user of bamboo pulp the world and still continues to be the largest roducer of writing and printing papers in India. enovations in the Mills in West Bengal have con-nued and it is interesting to note that a sum of no less than Rs. 297 lacs has been spent on machinery and plant in the last fifteen years. No. 3 Mill at Choudwar in Orissa is nearing completion and is expected to be in production in early 1960. We may take legitimate pride in the fact that the planning of the Mill was undertaken by your Managing Agents without the assistance of any specialist firm and that the fabrication of a large part of the machinery was carried out by the Company's own resources.

The Indian paper Industry is now producing about 330,000 tons of paper, paper-board and newsprint per annum, and by the end of the Third Five Year Plan demand will have risen to about 700,000 tons. This target is a challenge to the industry and to achieve it the twin problems of adequate supply of indigenous raw material and of finance must be overcome.

Indigenous Raw Materials

It is very necessary that the expanding paper industry finds new sources of indigenous raw materials for pulping. It seems probable that for a few years at least recourse must be had to larger imports of wood-pulp, more expensive it is true than indigenous pulp, but nevertheless cheaper than imported finished paper. Here again paper prices must allow for this higher cost or the incentive to increase production by using woodpulp disappears. A vigorous drive must be made to increase the sources of Indian made pulp, though bamboo is and must remain the industry's staple material. The State of Assam is largely un-exploited, mainly due to inadequate collection and transport facilities, but a step in the right direction has been taken by the formation of the Assam Pulp Company Ltd which should be of great assistance in meeting the industry's increased demands. Other sources of bamboo remain untouched or under-developed, and it is to be hoped that State Governments will continue their efforts to increase forest resources by achieving a better yield per acre, and, where necessary, replanting in areas damaged by flooding or careless felling. Other paper-making fibres are bagasse, soft or hard woods, cotton linters, and Sabai grass, the cultivation of which is now in a state of some neglect and might well repay more attention.

Revised Price List

As you are aware, Government requested the Tariff Commission in September 1958 to enquire into paper prices, and on the basis of the Commission's recommendations Government have called upon paper mills to issue a revised price list, effective from 1st January, 1960, which will contain very severe reductions. The full implications of these price changes are being studied, and though it is too early to forecast their precise effect on the future profits of your Company, it is clear that the value of sales will drop by at least 8%. I feel it my duty to make plain my considered opinion that this reduction in prices at the present stage of the industry's development is a retrograde step and a severe blow to companies like yours which follow a conservative policy of ploughing back into Reserves funds required to provide for further modernisation and expansion. Many mills have borrowed large sums of money to construct new units or expand old ones, and it will be a matter of great difficulty to meet interest charges and provide for repayment with the reduced profit margins now available. It should also be borne in mind that depreciation, which forms an element of cost, is usually calculated on the purchase price of fixed assets, and sufficient resources must be available to provide reserves for eventual replacement at higher prices. Moreover an attempt to defeat the fundamental economic principles of supply and demand by enforcing a reduction of prices in a time of scarcity can only result in failure, in an encouragement of the black market, and the consequent loss of revenue to Government.

Since the Tariff Commission commenced its deliberations, further variations in cost have taken place, and although prices fixed contain an allowance of 5% to cover increases, it is inadequate, and already some revision appears necessary. It seems to me that some method should be worked out whereby paper prices may be revised speedily and without friction where there are good grounds for so doing. While it might be argued that the rise in civil prices in April 1958 was too sharp in the case of certain qualities, the reduction to take effect in 1960 is too severe and cannot be looked on otherwise than as a considerable set-back to the industry. It would be extremely unfortunate if the opinion that the paper trade is merely looking for a source of quick profit and has no thought for its own future were to gain general currency. The industry must be in a position to plough back sufficient funds for continuous renovation and expansion, and at the same time paper mills must be allowed a margin of profit sufficient to pay a reasonably attractive dividend on ordinary shares and thus attract equity capital instead of relying on loans from outside sources. The Tariff Commission has calculated the fair return on capital employed at 12% but this figure has to carry Managing Agents' Commission, interest on loans and provision for their redemption, taxation, dividends and reserves for replacement of machinery, expansion and other purposes. For an industry which is expected to treble its capacity by 1965 this return is completely inadequate, and in my view at least 20% is required, particularly since the cost structure adopted by the Commission provides for depreciation on two shifts only at the rates allowed for income tax purposes on written down values of the fixed assets, and contains no provision for replacement at higher price levels. The ordinary dividend which your Directors recommend for the year to 31st March, 1959 is Rs. 2.50 per share and represents about 5¼% of the value of the equity capital; that is, the face value of the ordinary shares themselves and the reserves. This does not seem a very excessive return, but I have grave doubts of our ability to maintain that return after this revision of prices and the new system of Company taxation introduced in the 1959 Finance Act.

Average Selling Price

As a matter of interest I give below in the form of index numbers a comparison since 1949 of the variations in Titaghur Paper Mills' average selling price, overall cost per ton including depreciation and all charges except Managing Agents' commission, as well as the selling price of White Printing on both civil and Government account. On Titaghur's figures at least it would seem that the present prices are by no means too high, and it should be remembered that Indian mills still produce cheaper paper than British, American or Continental mills.

Base 1949-100	Average Selling Price.	Overhead Cost.	Price of White Printing	
			Govt.	Civil.
1950	109	110	100	100
1951	113	103	100	105
1952	116	107	102.3	105
1953	115	108	103.5	105
1954	116	118	103.5	105
1955	113.5	111.5	102	105
1956	114	109	101.5	105.2
1957	116.5	113.7	102	105.2
1958	125.5	122	106	111
1959	129.5	127	110	116.7
New Prices from 1.1.60			110	108

The Tariff Commission has suggested that manufacturers should have a trained staff of travelling salesmen and inspectors to see that anti-social activities in regard to prices and distribution are put down. This suggestion is praiseworthy but the implementation thereof will yet further increase costs. Your Company has always taken great care to see that as far as lies in its power paper reaches the consumer at a fair price, and this will continue to be its policy.

In conclusion I would express on behalf of your Board our appreciation of the services rendered by executive and supervisory staff, particularly those connected with the construction of No. 3 Mill in Orissa now nearing completion. It gives me great pleasure to record this expression of our thanks.

The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on 30th December, 1959.

ASSAM SILLIMANITE LIMITED

CHAIRMAN, MR. S. M. WAHI'S REVIEW

In the course of his statement to shareholders of Assam Sillimanite Ltd. at the Eighth Annual General Meeting held at Gauhati, Assam, on Saturday the 19th December, 1959, Mr. S. M. Wahi, the Chairman said :—

1958-59 has been again a good year in the Company's history and after eight years of waiting this Mining Company has transferred its profits to Reserves for larger dividends next year. When I was speaking to you last year, I mentioned that the last three years of operation enabled us to maintain a steady profit which went to make up the losses of the earlier years. After wiping out the losses amounting to Rs. 6,80,021-1-11 we carried forward a net profit of Rs. 11,746.38 nP. Adding the profit of this year of Rs. 1,62,236.73, and writing off an amount of Rs. 734.50 on account of freight rebate, as also providing an amount of Rs. 13,366 for Wealth tax and Rs. 76,668 for Income tax the net balance is Rs. 83,214.61 nP. I hope the Company will continue to maintain the same upward trend of profits in the coming years.

The Directors' Report and the Balance Sheet along with the Auditors' Report have been with you for some time and, with your permission, I shall take them as read.

Growing Demand

During the year under review we maintained the quality of the material, and, because of this, the growing demand for Khasi sillimanite is being progressively maintained. In fact, our quality control is attracting new customers notwithstanding the fact that Mullite or some other substitutes are being marketed under the trade name 'Sillimanite'. Even with the increased production of 6,255 tons this year we could not meet the market needs. Once again we are left with large pending orders for 7,742 tons valued at Rs. 25.00 lakhs, which would have to be executed next year. This situation and increasing demand have come about even after our accepting orders with much restrictions and only against confirmed letters of credit from new parties.

Last year, I mentioned about the proposed refractory Project which was one of the major conditions imposed by Government in liberalising our export quotas. With the rapid expansion of the steel and other industries in the Country there is a gap between the installed capacity for Refractories and the anticipated requirements in the Second and Third Five Year Plan periods. The present installed capacity of Refractories in India is 444,000 tons per annum approximately whereas the anticipated requirements by the end of the Second Five Year Plan period alone are estimated at twice the present installed capacity. Imports of refractories have registered a steep rise; from Rs. 30 lakhs in 1953 to Rs. 3.32 crores in 1958, entailing large foreign exchange to the country. This, therefore, necessitates augmenting the indigenous production of refractories. With the big developments in steel plants these requirements will continue to rise even beyond the 1 million ton target envisaged at the end of the Second Plan period.

Refractory Project

Refractory Project: In this context I have the pleasure to inform you that your Company has been granted a licence No. 6 (37)/L.IND.58 dated 15th September, 1958, by the Ministry of Commerce & Industry, to manufacture 44,720 tons of refractories per year.

I mentioned in the last report that a project of this magnitude is beyond the resources of your Company—both technical and financial—and that it was proposed to get financial and technical collaboration with some established and renowned Refractory Works in Europe and that negotiations were going on. These negotiations have been successfully concluded with the Vereinigte Grossalmeroder Thonwerke, A.G., Grossalmerode, West Germany, for technical collaboration and tentatively with the International Finance Corporation, Washington, for financial participation. Under the proposed arrangements, the IFC of the World Bank will meet the financial requirements of capital plant and machinery to the extent of U.S. Dollars 1,400,000 represented by unsecured Notes. You accorded sanction last year for increasing the authorised capital of the company by the creation of 6,00,000 Equity shares of Rs. 10/- each with a view to taking care of the needs of the Project.

The total investment on this Project is estimated at Rs. 65.00 lakhs for the first stage and Rs. 42.00 lakhs for the second stage. IFC has agreed to put up the entire foreign exchange composition, i.e., Rs. 44.00 lakhs in the first stage and Rs. 21.00 lakhs in the second stage. Balance rupee capital required for the first stage of Rs. 21.00 lakhs is being arranged locally and, with the wide requests of investments from several parties, the raising of this amount, would not present much of a problem. Of course, in due course, the Company shall call for subscription and every one of our friends would have equal opportunity to invest.

As per scheduled programme, the first stage investment of Rs. 65.00 lakhs on the refractory Project during 1960-61 should result in production of Refractories worth Rs. 40.96 lakhs by 1961-62. Additional investment of Rs. 42.00 lakhs for second stage in 1961 should result in a total production of Refractories worth Rs. 99.07 lakhs in 1962-63 and Rs. 1.31 crores in the financial year 1963. Nett estimated profits after paying taxes, etc., available to shareholders, on this project are likely to be low at Rs. 14.64 lakhs in the earlier two years but would steady out to an average between Rs. 24.65 lakhs to Rs. 27.09 lakhs.

Mining Project

Mining Project: With extensive and valuable contacts with the Refractory Works in the World market as also with Industrial Works in India, it was considered essential to expand the mining activities of the Company to enable it to meet the requirements of Raw materials needed for Refractory Industry. With this end in view the Company applied for and has obtained Certificates of Approval for prospecting Quartzite and Chrome Ore in Orissa; Magnesite and Steatite in Uttar Pradesh; Kyanite, Quartzite and Fireclay in Bihar. In some cases Mining leases are in course of being signed by the Company.

Thus the company would be shortly in a position to offer good quantities and excellent qualities of Kyanite, Magnesite, Chrome and Quartzite ores to its Overseas customers; as also meet the needs of industries in the country, including our Refractory Works.

The Directors wish to express their appreciation of the endeavours of the Mine Manager who continues to look after the Mine work in increasingly difficult and hard conditions. They specially commend the welfare work that has been done for workers in this period by the Managing Agents and hope that the hard work of all those deeply attached to their duty, would continue to be recognised and respected.

Note :—The above statement is not a report of the proceedings of the Annual General Meeting referred to.

For a nominal charge, "Capital's" Statistical Department can provide you with a certificate of share prices.

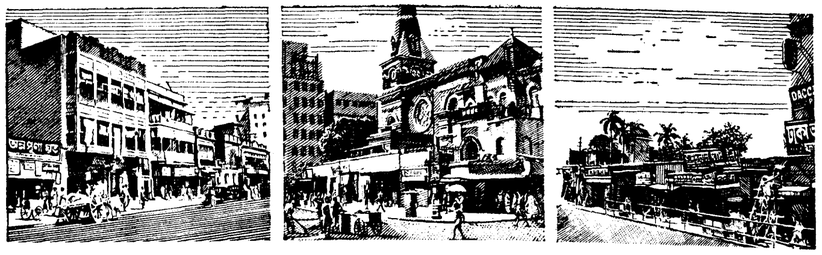
Twice Weekly—
Wednesdays & Saturdays at 6 p.m.
Fly by LUFTHANSA German Airlines
DIRECT TO GERMANY!



Connecting India with the very heart of Europe, Lufthansa, German Airlines, forges yet another link in its world-wide net-work of routes.
Twice weekly, Lufthansa flies from Calcutta to the main cities of Germany—Frankfurt, Dusseldorf, Hamburg.
Whether you're an industrialist, a businessman, a student, a government official or an educationist—you'll appreciate the traditional, generous German hospitality of Lufthansa, aboard the swift Super-G constellations.
Lufthansa, German Airlines, directly connects Germany with Bangkok, Calcutta, Karachi, Cairo and Rome.
Coordinated flight schedules provide convenient connections with Air France and Alitalia.

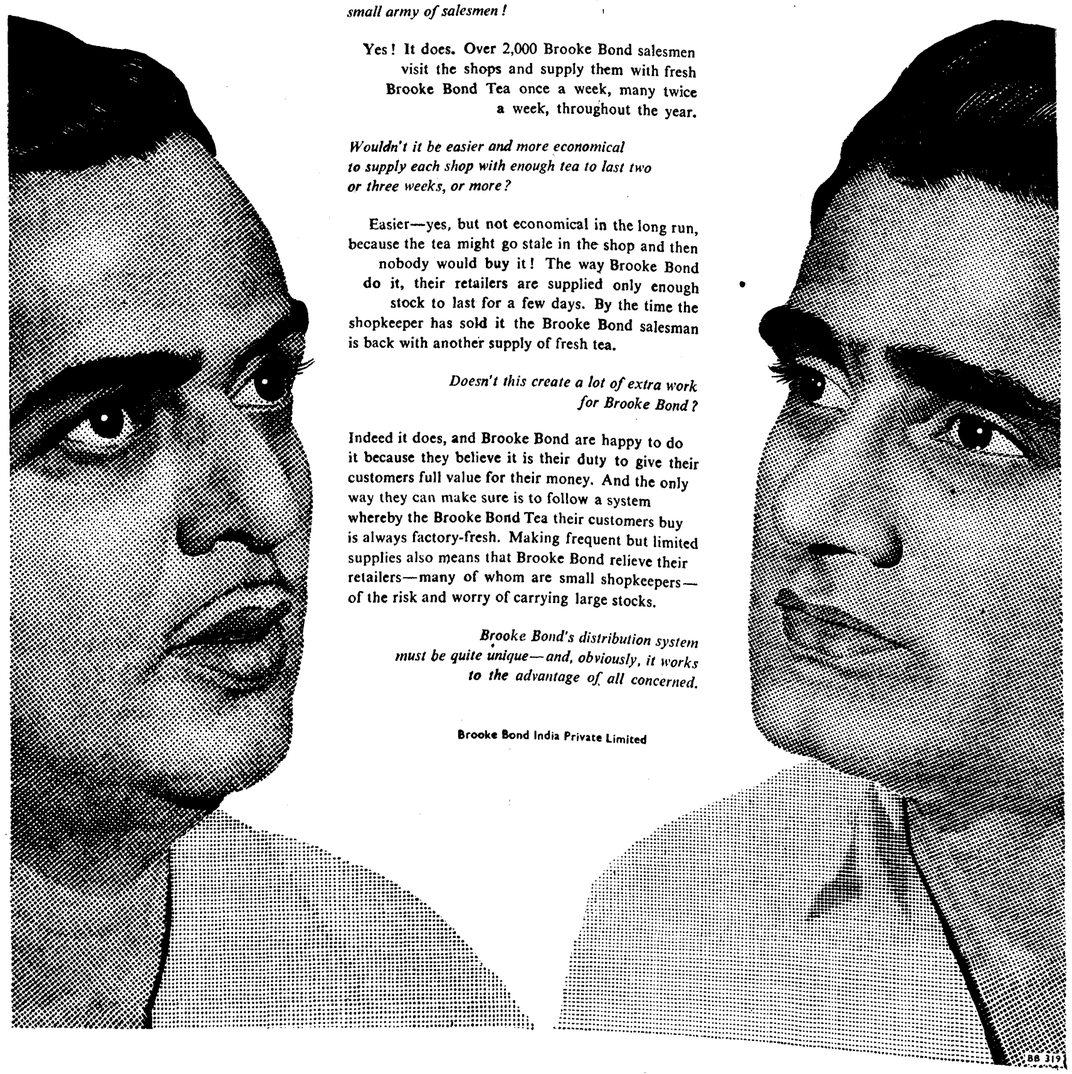
"Over 5,00,000 shops"

You mean, Bhai Sahib, that Brooke Bond's own people do this job of distribution to over 5,00,000 shops? It must call for a small army of salesmen!

Yes! It does. Over 2,000 Brooke Bond salesmen visit the shops and supply them with fresh Brooke Bond Tea once a week, many twice a week, throughout the year.

Wouldn't it be easier and more economical to supply each shop with enough tea to last two or three weeks, or more?



Easier—yes, but not economical in the long run, because the tea might go stale in the shop and then nobody would buy it! The way Brooke Bond do it, their retailers are supplied only enough stock to last for a few days. By the time the shopkeeper has sold it the Brooke Bond salesman is back with another supply of fresh tea.

Doesn't this create a lot of extra work for Brooke Bond?

Indeed it does, and Brooke Bond are happy to do it because they believe it is their duty to give their customers full value for their money. And the only way they can make sure is to follow a system whereby the Brooke Bond Tea their customers buy is always factory-fresh. Making frequent but limited supplies also means that Brooke Bond relieve their retailers—many of whom are small shopkeepers—of the risk and worry of carrying large stocks.

Brooke Bond's distribution system must be quite unique—and, obviously, it works to the advantage of all concerned.

Brooke Bond India Private Limited

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS TIGHTER

Wednesday, 23rd December.

THE seasonal increase in advances outstanding in the Calcutta money market has continued during the past week, although the rate of growth continues to be only moderate. The requirements of the jute mills show a slight decline, but demand from the sugar industry and on behalf of grains and seeds storage has increased. The requirements of the iron and steel and engineering industries have also risen. The interbank market is exceptionally tight on account of tax payments. The call rate is nominal at between 3¼ percent and 3½ percent.

The exchange market has been more active during the past week, with a sharp increase in gunny bills. Demand for remittance has been moderate. The pound weakened on the London money market, and after considerable fluctuations closed a shade easier against all important currencies.

BULLION IMPROVED ON INCREASED DEMAND, combined with lack of supplies. Silver rose from the previous week's level of Rs. 206.50 to Rs. 208.75, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 207.25. The London and New York silver prices stood at 80d and 91.375 cents.

Gold was steady in sympathy with silver. The price rose from Rs. 125.50 to Rs. 126.75. The sovereign improved by 25nP to Rs. 81.50.

DURING THE WEEK ENDED 18TH DECEMBER, 1959, Government of India Treasury bills for Rs. 1,40,48,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 22nd December, 1959. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.400 and above were accepted in full, the average rate of acceptance being Rs. 2.390 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 4th January.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 23rd December to 2nd January at Rs. 99.421 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 16th December to 19th December, amounted to Rs. 5,00,000.

A DECLINE OF Rs. 2.40 CRORES TO Rs. 1,728.97 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 18th December, 1959. The total note issue was Rs. 50 lakhs higher at Rs. 1,740.23 crores. Notes held in the Banking Department consequently rose by Rs. 2.90 crores to Rs. 11.26 crores. In the Banking Department deposits of the Government of India fell by Rs. 10.57 crores to Rs. 49.49 crores but other Government accounts increased by Rs. 16.62 crores to Rs. 25.96 crores presumably due to a transfer of money from the Central Government. Balances of commercial banks at Rs. 73.84 crores showed a rise of Rs. 5.30 crores. Balances held abroad rose further by Rs. 3.60 crores to Rs. 45.78 crores. Investments increased by Rs. 9.82 crores to Rs. 236.97 crores. Other loans and advances increased from Rs. 90.95 crores to Rs. 92.77 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.45 crores (Rs. 5 lakhs). Ways and means advances stood at Rs. 21.43 crores against Rs. 27.86 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 11th December, 1959, shows a drop of Rs. 65 lakhs to Rs. 576.18 crores in total deposits. Investments in Government securities are up by Rs. 42 lakhs to Rs. 394.15 crores, while other authorised investments remain unchanged at Rs. 10.47 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs 8 lakhs to Rs. 159.28 crores. Cash and balances are, in consequence, shown at Rs. 22.55 crores or Rs. 6.83 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 11th December, 1959, shows Demand and Time liabilities at Rs. 731.03 crores (Rs. 16.38 crores on account of borrowing from banks) and Rs. 1,141.22 crores (Rs. 30.02 crores), compared with Rs. 724.01 crores (Rs. 16.19 crores) and Rs. 1,150.92 crores (Rs. 29.85 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 2 lakhs and Rs. 9.65 crores to Rs. 42.93 crores and Rs. 65.62 crores, respectively. There is a drop of Rs. 8.21 crores to Rs. 803.34 crores in investments. Advances and bills discounted at Rs. 944.45 crores show a rise of Rs. 9.06 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 5.8 percent and 50.4 percent, against 6.3 percent and 49.9 percent.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of September 1959:

		Rs.
(1)	At the Reserve Bank of India in India	63,46,78,000
(2)	At treasuries in India	32,25,000
(3)	In England (Sterling converted at 18d the Rupee)	1,12,12,000
	Total	64,91,15,000

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 24-12-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

LONDON FINANCIAL LETTER

IMPLICATIONS OF RAPID EXPANSION

By Air Mail.

ONE doubt, at least, has been dispelled in the last month or two of 1959. Most of the ye it was uncertain whether the economy was panding fast enough; now there is no doubt t the expansion is vigorous and broadly bas Most notable is the growth of demand for capi goods, which had lagged so far behind consur goods in the recovery that it seemed an additio stimulus would be needed in 1960. The questi now is whether the economy can be allowed to on advancing at its present pace. The change apparent in the third quarter's index of prod tion, although the real upsurge of demand capital goods is more recent. In the first quart of 1959 production was virtually the same as the first quarter of 1958; in the third quarter was about 7 percent above the level of the thi quarter of 1958—at the end of which the recessi reached its furthest point. The index does n show the full extent of the increase in productio in manufacturing industry, for it is weighed dow by such depressed industries as coal-mining ar shipbuilding; nor does it show how much tot production can rise from the low point when t consumer industries and the capital industries a in top gear together.

It seems unlikely that that development will experienced in the present boom. There are sig already that demand for durable consumer goo is weakening: easy credit is not a spent force, b it has evidently lost much of its power to stimula

that sector of the economy. Britain will be most fortunate if demand is relaxed in that sector at the same time as it is intensified in the capital sector, for the economy as a whole would be overstrained if a big increase in demand for capital goods were added to the present total demand. Already there are shortages, particularly of steel (though not the heavy types) and skilled labour. It is, of course, still possible that the boom will gain too much momentum and will have to be restrained. The authorities can allow—indeed, must approve—a considerable increase in demand for capital equipment, even while the consumer industries are active; but they cannot allow the build-up of stocks of materials and components that has caused instability in past booms. There are signs that this build-up has begun. But it will not necessarily, even if unchecked, develop as far as in the past, for industrialists must surely have learned that the scarcities that result from booms are largely artificial and that holding unnecessary stocks is risky.

Meanwhile, however, stockbuilding can swell the cost of imports. In recent months both import and export trade have followed an upward trend, but imports have increased more than exports. The gap in visible trade is in no way alarming at present, but it is wide enough to suggest that, unless net invisible earnings are increasing considerably, the external payments surplus next year will not be nearly as large as the Treasury considers necessary to augment reserves and to fulfil commitments abroad.

Extending Banking

In the City of London itself, 1959 has been, perhaps, a little less eventful than 1958, in spite of the appearance of the long-awaited Radcliffe Report. In 1958, the transformation of British banking began about the time when the credit-squeeze was relaxed. The banks acquired substantial interests in hire-purchase financing, and, with offers of easier credit and other inducements to potential depositors, they became—as they had not been in many years—openly competitive among themselves. A few new services, mainly to provide finance for farming and for medium-scale industry, have been introduced in 1959, but they are naturally not so important as the previous year's developments. Near the year-end, however, was set in motion a change that may be very important in future years. The Government published the text of its Payment of Wages Bill, whose main purpose is to legalise payment of wages by cheque or directly into a wage-earner's bank account. The subject has been debated for years, and even now the Government is proceeding very cautiously, although to most people the idea does not seem either revolutionary or unduly controversial. The Bill will probably become law a few months hence, but the Act will not be effective until an Order has been issued, probably most of a year later. In the meantime, the banks will be able to prepare for the new system, and retailers' apprehensions will, presumably, be allayed.

It is a curious fact that a measure which is designed to extend the use of banking services is regarded by many retailers as likely to involve them in functions that should properly be performed by banks. They believe that many wage-earners who receive a weekly cheque will pay a bill—for the week's groceries, for instance—with the cheque and require cash for the value of the balance, and that ordinary shops, located near factories or offices which adopt the new method, will have to keep a large reserve of cash for the purpose. Even the banks foresee that some wage-earners paid by cheque will simply convert their cheques into cash over the bank counter, so that the banks will not increase their resources enough to recompense them for performing a service that is at present the responsibility of firms' cashiers. The innovation will, of course, be futile if it works in such ways. But it is more likely that wage-earners who are not sufficiently interested to use banking seriously will not accept payment of their wages by cheque: they cannot be compelled to do so. Extension of "the banking habit" to the mass of wage-earners would greatly increase the resources of the banking system and would thus be a very important development in British finance. It would involve extensive reorganisation of banking, and recent moves to mechanise the system should be viewed against this background.

Valuable Protection

for Valuables

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?

The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.

Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.

By depositing your valuables in the State Bank, you will save yourself the worry about their safety.

Please contact the nearest Branch Agent for further particulars.

Stocks and Shares

PRICES GENERALLY STEADY BUT LITTLE INVESTMENT BUSINESS

TEXTILES STRONG: INDIAN IRON FLUCTUATE NARROWLY

Wednesday Evening.

EXCEPT for the weakness in Indian Iron and Steel shares, which hovered around Rs. 23.25, the stock market generally maintained a steady tone. Several industrials, particularly in the miscellaneous group, advanced to higher levels. Special support for the Birla group of shares brought a recovery in certain counters on the forward list, such as Orient Paper and Textile Machinery. Indian Copper also improved. Whether or not the steady trend in share prices during the past week is justified by economic considerations, is difficult to say. But, in some cases, such as paper shares, the rise in prices does not appear to be warranted, considering the Tariff Commission's recommendations on fair prices for paper and the Government's decisions thereon. Furthermore, the yield on several blue chips has narrowed to the point where growth prospects have already been discounted. Very shortly, a panel of economists is expected to meet in New Delhi to consider the working papers of the third five year plan and to discuss ways of raising additional resources. It is believed that some of the suggestions which may be made are likely to be drastic and a further increase in direct taxation in the forthcoming Budget cannot be ruled out.

Government securities staged a moderate recovery, and bear covering in 3% Conversion Loan 1986 raised the price from Rs. 73.10 to Rs. 73.25. Other dated issues were well maintained.

The demand for first-class preference shares continued unabated but, with few sellers to meet the market, business was difficult to conclude.

In the banking section, Punjab National were slightly better at Rs. 20.75, while United Commercial were unchanged at Rs. 65.

Coal shares were neglected and a nominal amount of business was put through. Burrakur fluctuated narrowly around Rs. 17.25 but there was a small enquiry for Central India and the price improved to Rs. 7.50. East Indian were marked at Rs. 21.12 ex-dividend. Contrary to the general trend, Karanpura Collieries came in for strong enquiry today and the price rose sharply from Rs. 114 to Rs. 130.

In cotton textiles, Kesoram, on reports of better working, at one time spurted from Rs. 21.31 to Rs. 23.37. Another good feature was Elgin Mills which advanced from Rs. 15.87 to Rs. 17.75. Cawnpore Textiles recovered from Rs. 6 to Rs. 6.56.

In electrics, the only feature was provided by Jubbulpore, which were in keen demand and improved from Rs. 13.12 to Rs. 13.75.

In the engineering group, Jessop fluctuated between Rs. 24.44 and Rs. 25.50 to close at Rs. 24.62. Indian Galvanizing reacted from Rs. 21.75 to Rs. 21.25, as did National Iron and Steel from Rs. 9.75 to Rs. 9.56. The outstanding feature was Textile Machinery, which on special support advanced from Rs. 24.40 to Rs. 25.50. National Rolling moved up today from Rs. 14.75 to Rs. 15.62.

Jute shares were sluggish and prices generally were trimmed down, although there was a small enquiry today for Birla at Rs. 24.87 and Ganges at Rs. 22.50.

Among miscellarreous industrials, Alkali Chemicals on rumours of a rights issue rose from Rs. 23.75 to Rs. 24.25. Angelo Brothers were better at Rs. 19.75, while Britannia Biscuits receded from Rs. 26.19 to Rs. 25.75. Dunlop Rubber were better at Rs. 36.06 but Hindustan Motors were easier at Rs. 16.37. Indian Cables were steady at Rs. 30.75 and Indian Oxygen advanced further to Rs. 32. India Steamship were a shade better at Rs. 12.06, while Jardine Henderson were marked back to Rs. 71. Metal Box changed hands at Rs. 33.50 and there were small buyers of Godfrey Phillips at Rs. 21. Philips India were in keen demand and the price jumped from Rs. 22 to Rs. 24. Rallis met with some enquiry at the higher rate of Rs. 83.

In paper, Orient were steady at Rs. 38.25, as were Sirpur at Rs. 13.25 and Shree Gopal at Rs. 22.31.

With the exception of S. K. G. Sugar, which improved from Rs. 13.19 to Rs. 13.37, and Dyer Meakin Breweries which rose to Rs. 22, most other sugar issues were shaded.

In the mining group, Indian Copper were outstanding, with the price recovering smartly from Rs. 3.86 to Rs. 4.01.

Tea shares were fully steady but business was in a somewhat restricted scale.

Mysore Spinning

Providing Rs. 64,055 for development rebate and making other adjustments, the profit of the Mysore Spinning and Manufacturing Company has amounted to Rs. 3.16 lakhs for the year ended February 1959. An ordinary dividend of 10 percent has been paid. There is a carry-forward of Rs. 33,826, against Rs. 27,670 brought in. The directors state that, "with the turn of the year under report, there has been further improvement, which it is hoped will be maintained, barring any unforeseen circumstances."

Bengal Bonded Warehouse

The gross earnings of the Bengal Bonded Warehouse Association have amounted to Rs. 2.49 lakhs for the half-year ended October 1959. Making all adjustments and bringing in Rs. 6,511, there is a balance of Rs. 72,078. A dividend of 10 percent has been declared. Building fund is allocated Rs. 2,000, leaving a carry-forward of Rs. 2,578.

Raneegunge Coal

Providing Rs. 4.80 lakhs (against Rs. 4.81 lakhs) for depreciation, the profit of the Raneegunge Coal Association Ltd has increased from Rs. 10.78 lakhs to Rs. 15.38 lakhs for the year ended March 1959. The dividend of 10 percent has been maintained to absorb Rs. 2.40 lakhs. Taxation provision absorbs Rs. 9 lakhs (against Rs. 5½ lakhs), machinery replacement and development reserve Rs. 2.90 lakhs (Rs. 1.70 lakhs) and development rebate reserve Rs. 1.06 lakhs (Rs. 1.43 lakhs). The carry-forward is Rs. 5,488, compared with Rs. 3,802 brought in. Raisings increased from 453.767 tons to 459,649 tons, and despatches from 410,888 tons to 506,436 tons. About 6,272 tons of hard coke

HINDUSTHAN GENERAL INSURANCE SOCIETY LIMITED

"Pratap, isn't that shirt too big for you?"

"MUMMY says my clothes get torn so fast that this is all I can have."

"Poor lad! Ask your mummy to buy BINNY'S cloth. BINNY'S Quality Control* their production."

"Quality Control? Can you tell me what that means, uncle?"

"If you go to a textile mill, you will see machines that turn cotton into cloth work at terrific speeds and often small defects which we cannot see with our naked eyes get into the cloth. Cloth that contains these defects gets torn easily. At BINNY'S they have a special department which is continuously looking out for these defects and preventing them from getting into the cloth. That's why their cloth lasts so long."

"Thanks a lot, uncle. I must ask mummy to buy BINNY'S cloth straightaway."

BINNY- a great name in textiles

*Testing the fineness of cotton fibres

This instrument measures the fineness of the cotton fibres and enables the technician to select the right type of cotton suitable for the various qualities of cloth BINNY'S make. Only specially selected cotton goes into BINNY'S fabrics. That is why BINNY'S cloth lasts so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:
Shirtings • Khaki Drills • Bleached and Dyed Drills • Towels • Anticrease Suitings • Tussores • Union Fabrics • Silk Sarees • Dhoties etc etc

e produced. The development of the collieries making progress.

dnapore Zemindary

The Midnapore Zemindary Company has incred a loss of Rs. 1.25 lakhs for the year ended 1 April, 1959. Making various adjustments, re is a debit balance of Rs. 20,85,764 to be carried ward. The company's *zamindari* rights which e been acquired by various State Governments e hitherto been shown in the accounts at their k value of Rs. 82,23,887. It is estimated that maximum compensation receivable from the uiring State Governments is Rs. 40,71,403, and directors have therefore made transfers of 41,17,016 from reserves and of Rs. 35,468 from profit and loss account in order to write down value of *zamindari* rights to the value of the pected compensation receivable. The extended e for the publication of compensation rolls der the West Bengal Estates Acquisition Act s April 1959, but no compensation rolls have far been published. No information is available m the Government as to when this first step vards determining the compensation due to the npany will be taken. No further *ad interim* npensation has been received since the Governnt has still not determined the company's est income in spite of urgent reminders. Arrears rent collectable by the State acquisition authoies total Rs. 7,76,650, of which only Rs. 24,493 s received during the current year. A return capital of Rs. 7.50 a share, as recommended in bruary 1958, was finally sanctioned by the Court March 1959, and has since been paid. The direcs now consider that the funds of the company sufficient to enable a further return of Rs. 7.50 share to be made, and it is proposed to hold an traordinary general meeting immediately after annual general meeting in order to pass the cessary special resolution. As previously, the action of the High Court will be required before yment can be made.

annon Dunkerley

There is a trading profit of Rs. 7.35 lakhs for nnon Dunkerley and Company for the year ded March 1959. Depreciation is allocated 1.26 lakhs, development rebate Rs. 2.66 lakhs d taxation provision Rs. 2.20 lakhs. Transferng Rs. 55,000 from dividend reserve and bringg in Rs. 29,608, there is a balance of Rs. 2,21,434. dividend of 6 percent has been declared to sorb Rs. 2.16 lakhs, leaving a carry-forward of . 5,434. The engineering workshop for the anufacture of liquefied petroleum cylinders went to production in December 1958. Some cylinders re manufactured before the end of the financial ar under report, but the full impact of the partment will be reflected in the next balanceeet.

ndian Plastics

Indian Plastics Ltd has made a gross profit of . 2.88 lakhs for the year ended March 1959. Depreciation absorbs Rs. 1.50 lakhs and taxation provision Rs. 10,841. The ordinary dividends have been passed over, but the usual preference dividends have been paid, leaving Rs. 2,457 to be carried forward. The directors regret to report that the working results for the year under review were not satisfactory due to the lack of import licences for radio components and raw materials. The prices of raw materials have been rising, while the prices of plastic goods have been falling due to heavy competition. The development work is going on satisfactorily. The production of phenol formaldehyde moulding power could not be increased substantially because there were not enough licences for raw materials. The directors hope to show better working results for the current year.

Bombay Market

PRICES RISE IN CHEERFUL TRADING

COTTON MILL SHARES FEATURE

Wednesday Evening.

THE Bombay stock market closed in a cheerful mood last week. Cotton mill shares were boosted on encouraging reports from the piecegoods markets. Mills producing coarse and medium counts were fancied. Good corporate news helped improve the prices of a number of miscellaneous shares. The shares of new companies having growth prospects were bought at rising prices. In general, sentiment improved on the expectation that there might not be fresh taxation in the next Budget. It is thought that the Government may have to encourage private enterprise in order to attract foreign capital. The improvement in Indo-American relations was interpreted bullishly.

Steel shares were hesitant and operators were disinclined to extend commitments. Tata Steel were quoted at Rs. 155.50 and Indian Iron declined to Rs. 23.20 on pressure from Lyons Range. In the engineering group, Alcock Ashdown increased to Rs. 277, as did Mukand Iron to Rs. 20.88. Tata Locomotive were bought at Rs. 211 and Larsen and Toubro were transacted at Rs. 27.75. Mahindra and Mahindra were neglected at Rs. 25.50. Motor shares were firm, and Premier Automobile improved to Rs. 162. Hindustan Motor reacted to Rs. 16.12 on profit-taking.

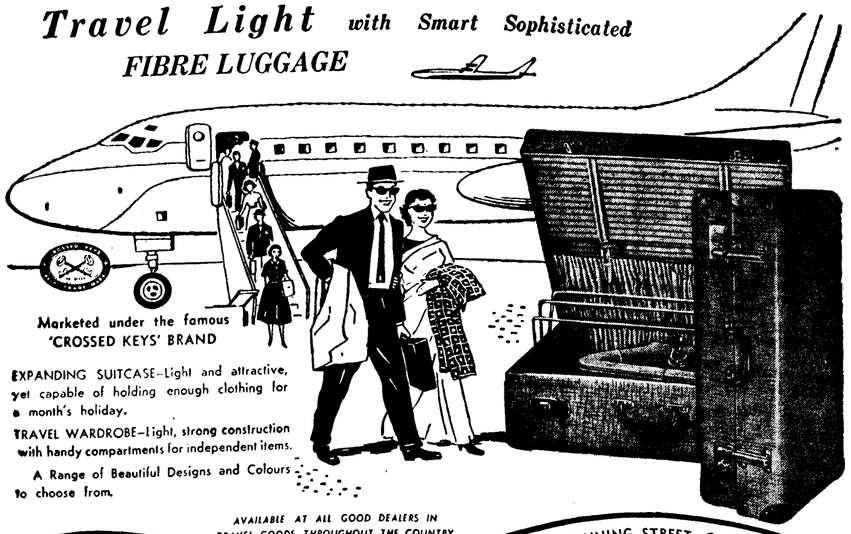
There were a number of bright features in the cotton mill group. Bombay Dyeing were taken higher to Rs. 71.10. Century changed hands at Rs. 458. Standard Mills were bought at Rs. 850 and Svadeshi came to hand at Rs. 276. Tata Mill were taken at Rs. 48 and India United Ordinaries were transacted at Rs. 13.16. Apollo were indicated at Rs. 1.66.

In the miscellaneous group, cement shares were quietly steady. Associated Cement were fractionally shaded at Rs. 150 as the company is believed to have postponed the issue of bonus shares by capitalising the share premium account. This has been done because of the heavy taxation on such issues. Digvijay Cement were indicated at Rs. 144. Sugar shares were quiet, and Belapur were available at Rs. 334. Phalton were offered at Rs. 178. Steamship company shares were quietly steady, and Scindia Steam were placed at Rs. 17.44. Great Eastern Shipping were dealt in at Rs. 20.24. Mining shares showed little change, and Shivrajpur Syndicate were transacted at Rs. 89. Bombay Burmah reacted to Rs. 572 on profit-taking, but National Rayon were supported at Rs. 378. Gwalior Rayon met with support at Rs. 28.25 on expansion prospects. Ceat Tyre were taken at Rs. 181. Indian Dyestuff soared to Rs. 487.50, as did Colour Chem to Rs. 325. Anil Hardboards moved up to Rs. 420 and Polychem were done at as high as Rs. 185. Chemical shares were steady, and Alembic Chemical were quoted at Rs. 203.50. Tata Chemical were idle at Rs. 16.84.

Banking and insurance shares were subdued. Bank of Baroda declined to Rs. 98, as did Bank of India to Rs. 110. New India Assurance were done at Rs. 62.

Electricity supply shares were quiet, and Ahmedabad Electric were available at Rs. 90.50. Tata Power were dealt in at Rs. 1,123.75 and Bombay Suburban were placed at Rs. 97.

THE WEEK'S TRANSACTIONS



[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

STOCK MARKET ACTIVE

FURTHER RISE IN INDUSTRIALS

London, 23rd December.

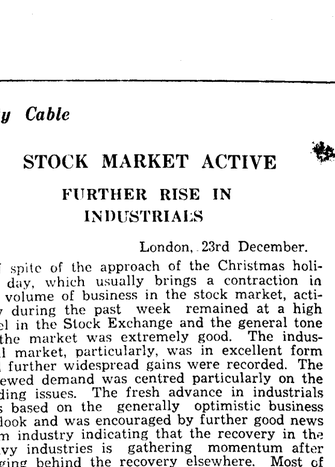
IN spite of the approach of the Christmas holiday, which usually brings a contraction in the volume of business in the stock market, activity during the past week remained at a high level in the Stock Exchange and the general tone of the market was extremely good. The industrial market, particularly, was in excellent form and further widespread gains were recorded. The renewed demand was centred particularly on the leading issues. The fresh advance in industrials was based on the generally optimistic business outlook and was encouraged by further good news from industry indicating that the recovery in the heavy industries is gathering momentum after lagging behind the recovery elsewhere. Most of the company results were up to or above market expectations. One of the outstanding developments of the week was the increased activity in take-over bids. The most surprising news in this direction was the bid by Fisons, the fertiliser and chemical group, for Crosse and Blackwell of 82s a share which topped a Nestle's bid by about 10s. At the same time, came news of Hawker Siddeley's bid for de Havilland. The latter shot up several shillings on the news and other aircraft shares went ahead on the possibility of bids being made for them. Shipping shares were one of the best sections following buying stimulated by the improvement in freight rates. There was also a good demand for textiles. Steel company dividends had a mixed reception, but Colvilles, Lancashire Steel and Dorman Long results made a good impression. Many of the miscellaneous leaders established appreciable gains. Gilt-edged prices deteriorated, however, and losses extended to over half a point. The feature of foreign bonds was the weakness of Greeks following adverse Press comment. Gold shares attracted a small selective demand at times, but generally prices moved within narrow limits and recorded very little change. Copper shares advanced on the doubling of the Nchanga dividend to 7½ percent, but lost part of their gains later. Rubbers and teas were quiet and irregular.

The Money Market

Credit conditions remained difficult in the money market during the past week. Money was short and in keen demand and up to 3½ percent was paid for overnight loans with the general rate 3¼ percent to 3⅜ percent. On three occasions, the market was forced to borrow small amounts from the Bank of England, although a certain amount of assistance was given by the authorities. It was not surprising, therefore, that with hardening money rates there was a further increase in the Treasury bill rate at the weekly tender of around 1s 4d percent to £3 12s 10.5d percent, the highest rate for 14 months. The current rate for bills in the open market is 3-19/32 percent for March maturities and "hot" Treasury bills.

Activity on Wall Street

In a slow market for foreign dollar bonds, Greeks were a soft spot with losses of over a point. Germans were inactive and lower while Italians were firm showing gains of a point or more. Amsterdam 5¼ percents improved about a point while Denmark 5½ percents backed. Norwegians were unchanged. Japanese Governments and Chile 3 percents were a shade higher on the week. Long-term United States Government obligations moved into lower ground during the week with a number of issues falling to new lows. The losses reflected small lot selling in the face of limited demand, coupled with switching of funds from Treasury bonds to higher-yielding corporate securities. Investment quality corporates were firm with rail lines mostly lower and convertibles mixed.



NAMES AND DATES

The Lyons International Fair will be held from 12th to 21st March, 1960. Details may be obtained from the following address: Foire Internationale de Lyon, Palais de la Foire, Quai A. Lignon, Lyon (Rhone), France.

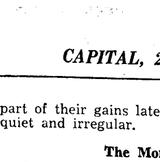
Mr. H. L. Khanna, Deputy Managing Director of the British India Corporation Ltd, Kanpur, has been elected president of the Upper India Chamber of Commerce, Kanpur, for the year 1960.

WHY WE ADVERTISE—4

taking
more goods
to
more people
in
more places

Mr. G.V.K Murthy, Chairman, Brooke Bond India Private Ltd.

We all know how widely newspapers and periodicals are read today. As a result, millions of people, in many widely-dispersed areas, learn of the amenities, the advantages, the services available through new inventions and improved products...of which, without Advertising, they might never have become aware.



And the people who read of these products *want* them. Products must be more widely-distributed to meet the increasing demand. The Tea Industry, for example, wanted its product delivered as fresh as possible in order to *hold* the new customers its Advertising had created. And because of these new customers, stocks had to be frequently replenished. Rapid re-stocking meant the rapid movement of supplies from factory to shop. The customer must get his tea fresh.

And what is true of tea, is true of other products. Customers in every part of India are receiving new goods, improved products—in better condition than ever before. Advertising acts as a potent and insistent stimulus in our country of great distances and widespread markets...pushing sales and distribution networks to higher levels of efficiency and public service.

Good advertising serves *you*

SIR OLIVER FRANKS TO LEAD WORLD BANK MISSION TO INDIA

JAPANESE FIRM GETS CONTRACT FOR WATCH MANUFACTURE IN PUBLIC SECTOR

(FROM OUR NEW DELHI CORRESPONDENT)

THE World Bank mission which will be coming to India shortly is likely to be headed by Sir Oliver Franks, chairman of Lloyds Bank and a leading figure in the operation of the Marshall Plan in Europe. Mr. Herman Abs, a German banker, Mr. Joseph Dodge, an American financier and Mr. Jean Monnet, the French planner, are other likely members of the team. Sir Oliver is expected in New Delhi next month.

At least three leading foreign economists are already here on various assignments. Mr. Reddaway from Cambridge is studying the techniques of analysing the implications of development programmes. Mr. Lydall from Oxford is studying the rôle of small-scale enterprise in development programmes. An American, Mr. Humphrey, is studying the foreign exchange and international trade aspects of development programmes. Mr. Andrew Shonfield, financial editor of the *Observer*, London, was here in connection with his book on the needs of under-developed countries.

Watch Manufacturing Schemes

The Government of India has accepted the offer of the Japanese firm, the Citizen Watch Company of Tokyo, to set up a watch manufacturing unit in the public sector. It will be a subsidiary of the Hindustan Machine Tool factory and will be located in Bangalore. The Japanese firm has proposed a five-year programme, starting with an annual output of 55,000 watches in the first year, going up to 240,000 watches in the third year and reaching the full production of 360,000 watches in the sixth year. Half the number will be ladies' watches and the other half for men. The estimated value of the output, on attaining full production, will be about Rs. 1.1 crores to Rs. 1.4 crores a year, "the price a watch being Rs. 30 to Rs. 50 approximately."

A Rs. 50 watch made in collaboration with a Japanese firm cannot be called cheap. There is, however, a catch in the proposal, namely, that the price of Rs. 30 to Rs. 50 a watch will prevail only when the unit has attained full production. Meanwhile, prices may have to be higher. Then, again, by the time full production is attained, labour and raw material costs may have gone up.

According to newspaper reports, the Planning Commission was opposed to the scheme, but as the Central Industry Ministry had decided to make India self-supporting in watches, it was eventually approved by the Cabinet. In support of the scheme, it is claimed, the indigenous content will progressively rise by about 10 percent every year to at least 90 to 95 percent by the end of the fifth year, items like hair-springs and rubies representing about 5 to 7 percent of the value being imported thereafter. A more alluring picture was not given even by irrigation engineers when they presented their multipurpose river development plans.

The capital cost of the plant and equipment required in five years will be Rs. 67 lakhs, of which 60 percent may have to be purchased from the Japanese firm and the remainder from any source in consultation with it. The capital cost of the factory, building and services has not yet been worked out, but "is not likely to exceed Rs. 30 lakhs". This does not include the cost of housing the factory workers.

The Japanese firm will be paid £50,000, spread over eight to ten years, in addition to a royalty of 2 percent, subject to tax. According to the Industry Ministry's own calculations, 1.5 million watches were imported into India in 1956. The Central Minister for Industries, replying to a question in the Lok Sabha on 18th December, however, said that "the panel for the clocks and watches industry set up in January 1959 had tried to assess the demand for watches, which varies from one million to two million pieces." It may be added that more correct information about the import of watches had been given to Parliament earlier.

The Government has sanctioned a scheme to start a watch unit in collaboration with a French firm in the private sector, the maximum output of which at the end of the third plan period is placed at 310,000 watches. The unit in the public sector will, by the same time, be manufacturing 360,000, making a total of 670,000 watches, or 330,000 watches less than what India imported in 1956. The Industry Minister has told Parliament that at least six other offers are being considered by his Ministry. They are from Mr. Moris of Italy, the Waltham Watch Company of the U.S.A. the New Saven and Clock Company of the U.S.A. and a West German firm whose name has not been disclosed. Side by side, negotiations are in progress with the Swiss Embassy in New Delhi to start another watch manufacturing unit. Under Indo-Swiss agreement, watches worth Rs. 1 crore may also be imported in exchange for Indian goods.

No Ban on Trade with China

The Government of India has no intention to ban trade with China, it has been announced in Parliament. India has neither diplomatic nor trade relations with South Africa and Portugal.

Increasing Pilferage of Postal Mail

In 1956-57, the percentage of complaints of pilferage of postal mail in the total traffic handled, was .00007. In 1957-58, it recorded an increase of 14 percent and in 1958-59, the increase was 42 percent over that of 1956-57. This was disclosed in Parliament last week.

Industrial Delegation from Russia

The Russian Industrial Delegation, headed by Mr. Skachkov, arrived here last week. During its stay in India, it will discuss the industrial projects to be undertaken with the aid of the 1,500-million rouble credit recently offered by Russia for the third plan.

Free Imports from Dollar Area

The Government of India has announced its decision to abolish all existing restrictions on imports from the dollar area except on capital goods. Consequently, imports from the dollar area will now be placed on par with those from the soft currency area. Importers will be permitted to use the full value of their licences to purchase goods from the dollar area. An official spokesman has explained that this has been made possible because of the improvement in the dollar reserves of the sterling area, to which India belongs.

As for the import of capital goods, the annuncement has stated that the validity of import licences will continue to be restricted to the countries specified, since their imports are financed not from current foreign exchange earnings or the sterling balances, but from the credits available from various countries. The Central Commerce and Industry Minister, Mr. Lal Bahadur Shastri, formally conveyed this decision to Mr. Frederick H. Mueller, U.S. Secretary of Commerce, when he met him in New Delhi.

The main impact of the decision will be on the import of industrial raw materials, since capital goods do not fall within its scope and the import of consumer goods is negligible. The official spokesman doubted if there would be any "significant change" in the country's trade pattern as a result. He explained that India has already removed restrictions on imports from the dollar area to a large extent. He, however, visualised the possibility of some reduction in prices as a result of competition between the sterling and dollar countries. He also felt that it might have a favourable psychological impact on U.S. trade circles.

Foreign Profit Remittances

The following statement shows the remittances of profits and dividends by branches of foreign firms and companies and foreign-controlled Indian joint-stock companies engaged in trading activities in India during the three years:

(In lakhs of rupees)

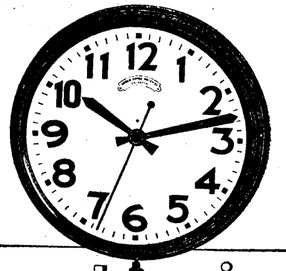
	U.K.	U.S.A.	Switzerland	Other countries	Total
1956-57	91.9	1,54.8	20.2	12.0	2,78.9
1957-58	1,70.4	2,18.6	1.2	10.3	4,00.5
1958-59	3,45.5	1,30.5	0.4	5.6	4,82.0
	6,07.8	5,03.9	21.8	27.9	11.61.4

Committee on Petroleum

The members of the high-level committee on petroleum which has been appointed by the Government are as follows: the Minister for Oil, Mr. K. D. Malaviya, (chairman); Mr. S. Ranganathan, Secretary, Ministry of Commerce and Industry; Mr. S. S. Khera, Secretary, Ministry of Mines and Fuel; Mr. R. L. Gupta, Secretary, Ministry of Transport; Mr. Pulla Reddi, Secretary, Ministry of Defence; Mr. K. B. Mathur, Chairman, Railway Board; Mr. Nijalingappa, chairman, Oil India Ltd; Mr. Feroz Gandhi, chairman, Indian Refineries, Ltd; Messrs Sinclair, Mudie and Dennis, representing, respectively, the Standard Vacuum, Burmah-Shell and Caltex Oil companies; and the chairman of the Western India Oil Company. The terms of reference of the committee, which will

A MODERN CLOCK FOR MODERN PEOPLE

A modern office or home needs a smart, attractively designed "Electric Clock". The Anglo-Swiss "Electric" Clock is just what you need. It needs no winding.



Dial 6" Overall diameter 7½" Model No. CL-19. Rs. 80/-
Dial 9" Overall diameter 11" Model No. CL-20. Rs. 100/-
Dial 12" Overall diameter 14" Model No. CL-21. Rs. 110/-
Dial 16" Overall diameter 18" Model No. CL-22. Rs. 125/-
Dial 24" Overall diameter 28" Model No. CL-23. Rs. 210/-

This clock runs smoothly and accurately on A/C mains, 220-230 volts. These clocks are available in 3 colours, Brown, Black and Cream.

Interchangeability of parts guaranteed. The beauty of the metal highly polished case is enhanced by the use of bold figures and hands. Fitted with red centre second hand. Current consumption 1½ units per month.

be a standing committee, will be announced shortly.

West German Import of Jute Goods

As a consequence of G.A.T.T. discussions, West Germany has agreed to abolish import restrictions on jute goods from India over five years from now. Similar treatment will also be given to some coir products, handlooms and handicrafts. Mr. L. K. Jha, a member of the Indian delegation to the G.A.T.T. conference in Tokyo, disclosed this at an informal meeting with correspondents. He said that West Germany had already fixed a quota for her imports of jute goods from India. This quota would continue to increase in the next five years until all restrictions were removed. The question of cotton textiles, he added, was still outstanding and was subject to negotiations between the two countries. It would be referred to at the next conference of G.A.T.T. for a decision.

Reviewing the achievements of the Tokyo conference, Mr. Jha stated that it had appointed three committees to report on various aspects of the problem of expanding international trade on the basis of the Haberler report. The report was submitted last year by a panel of economists under the chairmanship of Professor Haberler, appointed by G.A.T.T., to study trends in international trade. The Tokyo conference also approved the rules for the tariff conference to be held in 1960, which, it is hoped, will provide an opportunity to solve some of the problems arising from the creation of the Common Market. It may also try to induce the U.S.A. to lower its tariffs further.

The first committee appointed in Tokyo will be mainly concerned with the lowering of tariffs. Other problems before it are whether internal taxes and subsidies should also be negotiable just as tariffs are. Although there was general acceptance of these ideas, some of the member countries reserved their position.

The second committee will deal primarily with agricultural commodities. It was agreed that every member country should have consultations about its agricultural policy so that there should be no ground for complaint from agricultural countries that what they gained from lowering tariffs was often nullified through other means.

The third committee will concern itself with the problems of the under-developed countries. It has selected 11 items—cotton, cotton textiles, jute, jute manufactures, vegetable oils, tobacco, tea, coffee, cocoa, timber and lead—to study the various restrictions on their import by advanced countries. Each industrially advanced country will be asked to give details of its restrictions, such as high tariffs, internal taxation and quantitative restrictions with a view to finding whether these can be modified to facilitate exports from less developed countries. After deciding the broad principle, the committee will start its second round of talks for a detailed scrutiny in each case.

Some of the member countries expressed the fear that the removal of restrictions might disrupt their markets. At the same time, there was general acceptance of the principle that the trade of the less developed countries must be encouraged. On the Common Market and the proposed Free Trade Association, Mr. Jha pointed out that G.A.T.T. had so far acted as a restraining influence on what might have been a source of potential discrimination. He said that because of the G.A.T.T. discussions, many tariff reductions made by these six countries among themselves and for overseas territories, had been extended to the products of outside countries.

Production Pattern of Oil Refineries

At the instance of the Government, the existing oil refineries have adjusted their production pattern so as to reduce the output of motor spirit to the absolute minimum and to step up the production of the deficit products, namely, kerosene and diesel oils, particularly high-speed diesel oil. In view of this position, the public sector refineries are also being designed to produce only the unavoidable minimum of motor spirit. Recently, the Government has amended the specification of high-speed diesel oil by which its flash point has been lowered from the present 150°F to 131°F. This step will enable the refineries to divert a part of the naphtha that is now being absorbed in the motor spirit production to high-speed diesel oil—which means that the production of the latter (namely, high-speed diesel oil) will increase at the expense of motor spirit.

The Government is also considering what further steps could be taken to remedy the surplus in motor spirit and deficit in other products.

Under the Petroleum and Natural Gas Rules, 1959, a two-phased oil programme has been adopted by the Government. It consists of (1) an exploration or prospecting licence to be followed by (2) a mining lease. The rules of 1959 are less burdensome than the Petroleum Concession Rules of 1949 in that the rules of 1949 provided for a four-phased programme consisting of (1) a ficate of approval for petroleum, (2) exp licence, (3) prospecting licence, and (4) m lease.

The Government, by the publication of these rules, has attempted to make a positive approach to attract foreign explorers of petroleum and to this end, has laid down in the rules that certain of the conditions for exploration licences and mining leases are subject to negotiation. These specifically are: (1) grant of licence or lease, (2) rights of the licencee and the lessee, and (3) terms and conditions of licencees and lessees.

Under the new petroleum rules, geophysical and geological studies and wild-cat drilling are performed under a licence. Unless agreed otherwise, the area covered by a licence will ordinarily be 3,000 square miles, and for a period of four years, which may be extended for two additional periods of one year each. (Under the Petroleum Concession Rules of 1949, a prospecting licence was granted for a maximum period of three years and was renewable for two periods of one year each. The extent of the area to be prospected was not fixed by regulations.) On the terms and conditions of licences and leases, the new rules state: "Every licence and lease shall contain such of the terms, covenants and conditions prescribed by these rules as are applicable, and such additional terms, covenants and conditions as may be provided in the agreement between the Central Government and the licencee or the lessee.

Prospecting Fees

The applicant for a prospecting licence under the new rules of 1959 is obliged to deposit with the State Government, as security, a sum of Rs. 20 for each square mile or part thereof covered by the licence, subject to a minimum of Rs. 6,000. In addition, the licencee is required to pay yearly in advance a sum calculated for each square mile or part thereof, covered by the licence at the following rates:

	Rs.
1. First year of the licence ...	10
2. Second year of the licence ...	50
3. Third year of the licence ...	250
4. Fourth year of the licence ...	500
5. First and second year renewals	750

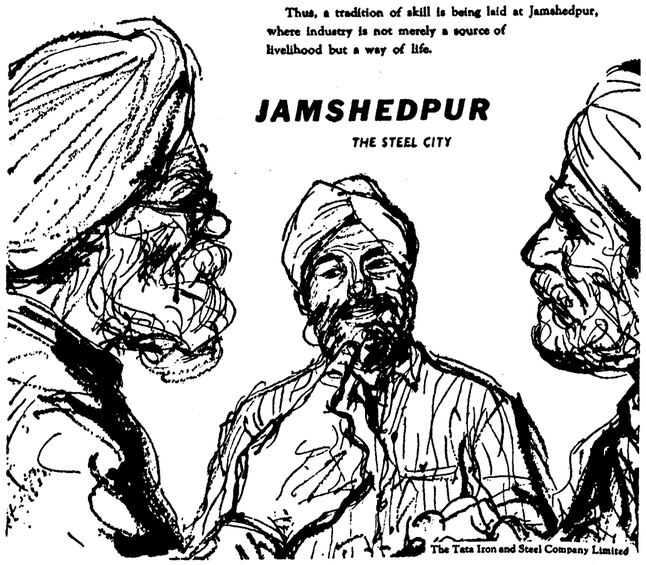
The Petroleum Concession Rules of 1949, in contrast, were complex and burdensome. Where exploitation follows exploration, the Petroleum Concession Rules of 1949, did not prescribe the maximum area for any one mining lease. No person could hold, solely or jointly, mining leases totalling more than 1,000 square miles. However, under the Petroleum and Natural Gas Rules of 1959, unless agreed otherwise, a prospecting licencee is entitled to an oil mining lease to 100 square miles for a 20-year period.

In addition, the Government of India assumes conservation powers concerning the spacing of wells, restriction of oil production and the regulation of operations on contiguous leases. A comparison between the petroleum rules of 1949 and 1959 concerning fees and annual rental charges is as follows:

Prior to the granting of lease	Rules of 1949	Rules of 1959
Application fee	5,000	5,000
Security deposit	20,000	2,000
Preliminary expenses deposit	2,000	20,000
After grant of lease	**Rules of 1949**	
First 10 square miles	2 an acre	
Next 40 square miles	3 an acre	
Next 50 square miles	5 an acre	
In excess of 100 square miles	10 an acre	
After grant of the licence	**Rules of 1959**	
First 50 square miles	5 an acre	
In excess of 50 square miles	10 an acre	
Surface area of land required	To be specified	

According to the Petroleum and Natural Gas Rules, 1959, "the lessee shall pay to the State Government on demand a royalty computed at the rate of 10 percent of the gross value at the wellhead of all crude oil, casing head condensate and natural gas obtained in each month from mining operations conducted pursuant to the lease. The State Government, with the prior approval of the Central Government, may direct that such royalty be paid in petroleum or natural gas.

"The Petroleum Concession Rules of 1949 established the royalty at a rate of 10 percent of the wellhead value of petroleum won or saved, convertible at the option of the authorities to an equivalent charge to be fixed annually, subject to a minimum of 8 annas a 40 imperial gallons. Under the Petroleum Concession Rules of 1949, a mining lease accorded the right to refine and carry away the oil extracted. A clause requiring that crude petroleum be refined by the lessee in India up to domestic needs of the country could be inserted into a mining lease. A lessee was free to construct pipelines, except that no such



the beginning of a tradition

FIFTY YEARS AGO, Sardar Pratap Singh Bhumra, now 87, was assembling cranes and electrical equipment as India's first steel works was taking shape in the wilderness of Chhotanagpur.

His son, Jwala Singh, joined the steel works his father helped to build. Drawing upon his mature technical skill, he suggested an improvement to soaking pit cranes which won him a reward from Management and appreciation from the American manufacturers.

Hari Singh, Jwala Singh's son, imbibed the family tradition early in life. A young electrician in Tata Steel's Skelp Mill, he was recently sent to Japan to study advanced crane maintenance.

Thus, a tradition of skill is being laid at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

JAMSHEDPUR

THE STEEL CITY

The Tata Iron and Steel Company Limited

pipeline might pass through non-Indian territory except with the prior approval of the Central Government. Provision is made in both sets of rules (1949 and 1959) that the lessee shall be liable to pay only the rent on royalty whichever may be the higher amount, or both."

"Wellhead" value in the Petroleum Rules of 1959 is not defined. It can be assumed that the gross value at the wellhead will have to be the subject of negotiation. "Wellhead" value was defined in the 1949 rules as "the published price of crude oil of similar type and quality in a substantial free market in any part of the world where such market may exist, with suitable adjustments to bring the price back to the wellhead of that crude." The Petroleum and Natural Gas Rules of 1959 do not provide for the disposal of petroleum or natural gas in the event of discovery. The new rules now provide for control by the Central Government in case of a national emergency.

Manufacture of Electric and Diesel Locomotives

India has so far met her limited requirements of electric and diesel locomotives by imports. The manufacture of electric locomotives will be started at Chittaranjan for which purpose negotiations are in progress with North British and Associated Electrical Industries of the U.K. Negotiations have also been carried on with certain parties for the manufacture of diesel locomotives in the private sector. They are now believed to be in the final stages. The three firms with whom negotiations have been carried on are the Textile Machinery Corporation Ltd, Calcutta, the National Engineering Industries Limited, Jaipur, and the Tata Locomotive and Engineering Company Ltd, Jamshedpur.

The first firm, it is believed, has submitted proposals for the manufacture of diesel locomotives in collaboration with Alco of the U.S.A. During 1957-58, the Indian Railways imported 100 Alco diesel electric locomotives, which have already been put into service in India's steel belt in the eastern region. Messrs National Engineering Industries will work in collaboration with the West German firm of M.A.K. of Kiel, for the manufacture of diesel locomotives and the West German firm of Maybach for metre-gauge diesel engines. It is understood that Tata Locomotives have submitted proposals for the manufacture of the vehicle portion of the metre-gauge diesel locomotives, the engines for which will be manufactured by the National Engineering Industries. Telco will work in collaboration with Krauss Maffei.

Under the proposals, the indigenous content of diesel locomotives manufactured by these firms will increase gradually, so that by the end of the third plan period, about 98 percent of them will be made in India. These three companies, it is understood, will also be free to supply the requirements of other users in the country such as ports, steel plants, mines, refineries, etcetera. They will be free to develop export markets in the neighbouring countries which are resorting to diesel traction. The Government of India is not likely to give any guarantee to the manufacturers concerning the number of locomotives to be purchased by the Indian Railways.

Foreign Exchange for Motor-car Industry

The ratios of 1.25, 1 and 0.75 have been fixed for the distribution of foreign exchange to Hindustan Motors, Premier Automobiles and Standard Motors since July 1958. During the year 1959-60, the allocations have been made more or less on the same basis.

	Licensing Period	
	April-September 1959	October 1959-March 1960
	(Figures in lakhs of rupees)	
Hindustan Motors	105.00+15.00	105.00+15.00
Premier Automobiles	84	84
Standard Motors	63	63

The extra allocation of Rs. 15 lakhs to Hindustan Motors has been made during these two periods because of their better progress in indigenous content and their capacity to use this amount of foreign exchange. Neither Premier Automobiles nor Standard Motors were in a position to use more than the allotments made to them. The policy subsequent to April 1959, has been to step up the manufacture of as many cars as possible to meet the growing demand for them, and as such, full requirements of foreign exchange which the makers can use for the manufacture of passenger cars, are being released. This has resulted in a considerable increase in production and no manufacturer is suffering for lack of foreign exchange for the import of components required for the manufacture of cars.

Requirements of Rims and Wheels

The present annual requirements of rims and wheels for motor-cars, it is estimated, are of the order of 200,000, both for original fitment and for replacements. At present, the entire requirements are met by imports.

One firm is licensed for the manufacture of wheels for cars with an annual capacity of 50,000. It is scheduled to go into production before June 1960. Another firm has recently been granted a licence for the manufacture of 180,000 wheels a year on single shift, both for cars and commercial vehicles. It is expected to begin production by the end of next year. In addition, the Government proposes to examine whether there is scope for licensing an additional unit to meet the increase in demand when the targets for production of motor-cars during the third five year plan period have been fixed.

Lorry Production in Ordnance Factories

The production of lorries and tractors in the ordnance factories is going ahead. The assembly line was started about the end of June 1959, and up to the end of October 1959, 250 lorries complete with bodies, had been manufactured, out of which 240 lorries had been delivered. As for tractors, 41 D-120 and 36 D-80 types have already been delivered to the Army and Dandakaranya authorities. The balancing plant costing Rs. 1.60 lakhs for the lorry project and Rs. 14.94 lakhs for the tractor project has been ordered, out of which the anticipated expenditure during the current year for both the projects is assessed at Rs. 11.20 lakhs only. Further plant and machinery required for these projects will be ordered shortly. The ordnance factories make goods only to specific orders. Crawler tractors, large or small, therefore, will be made available to indentors in reasonable time after the placing of their orders. As for small tractors, the prototypes of which were exhibited, the ordnance factories will start producing them if actual orders are placed. The price will depend on the type and quantity required.

Cost of Production in Industries

It is proposed to make a study of the cost of production in certain selected industries like cotton textiles, sugar, cement, rayon, jute textiles, bicycles, electric motors and transformers by constituting *ad hoc* study groups. The constitution of these groups and their terms of reference are being finalised.

High Temperature Carbonisation Plant

The Government is considering, in the context of the schemes for inclusion in the third five year plan, the establishment of a high temperature carbonisation plant in Neyveli for the manufacture of lignite coke, provided such coke is found suitable for the reduction of locally available iron ore.

Ceylon Restrictions on Indian Textiles

According to available information, restrictions imposed by the Ceylon Government on Indian textiles specify that import permits would be granted in the proportion of five yards of foreign cloth against the purchase of one yarn of locally manufactured cloth. The restrictions are in accordance with the broad scheme for the protection of Ceylon's textile industry, concurred in by G.A.T.T. The matter was recently discussed in meetings of the G.A.T.T. with the Ceylonese Government with a view to ensuring that these restrictions are not applied in a manner which would create undue difficulties for textile exporters from India.

Advance to Managing Agents

It has been brought to the notice of the Central Government that some companies are advancing considerable amounts of money to the managing agents or to their associates, to be adjusted over a period of years against rent charges of office accommodation, etcetera. Since it is not the normal practice of landlords to obtain payment of rent in advance from companies for more than a year or so at the most, this type of arrangement, the Government thinks, is a device for extending financial accommodation to the managing agents. Considering this to be an undesirable practice, not in conformity with the accepted standards of company management, the Government is of the view that transactions of this type may, in certain circumstances, contravene the provisions of the Companies Act restricting or prohibiting inter-company loans.

Small Iron Plant Licensed

The Government has licensed under the Industries Act, eight parties for putting up small pig iron plants in the following places:

Name of the firm	Capacity tons a year	Location
1. Kalinga Industries Ltd, Calcutta	15,000	Barbil (Orissa)
2. Textools Co. Ltd, Coimbatore	15,000	Coimbatore (Madras)
3. Kantilal K. Shah, Bombay	15,000	Khapoli (Bombay)
4. Structural Engineering Works, Bombay	14,400	Muland (Bombay)
5. Kalinga Industries Ltd, Calcutta	15,000	Salem (Madras)
6. Soundararajan and Co. Ltd, Madras	15,000	Salem (Madras)
7. Shri Nandlal Todi, Calcutta (Todi Steel Corporation)	15,000	Calcutta
8. Messrs. Sepulchre Brothers, Bombay	15,000	Bombay

Of these, the plants in Barbil and in Coimbatore have gone into production. In addition, permission has been granted recently under the Iron and Steel (Control) Order for the erection of small plant in Lashkar, Gwalior, with a capacity of 3.6 tons of pig iron a day.

Dairy Machinery Manufacture

The Government has recently approved three schemes for the manufacture of a wide range of dairy machinery. These are:

Name of the Indian firm	Name of the foreign collaborators
1. Messrs Larsen and Toubro Ltd	1. Messrs Silkeborg Maskinfabrik, Denmark
	2. Messrs Wright Hargeaves Engineering Company U.K.
2. Messrs Alfa Laval India (P) Ltd	3. Messrs A. B. Separators, Stockholm Sweden
3. Messrs Vulcan Trading Co. (P) Ltd	4. Messrs Graham Enock Manufacturing Co. Ltd U.K.

Imports of Writing and Printing Paper

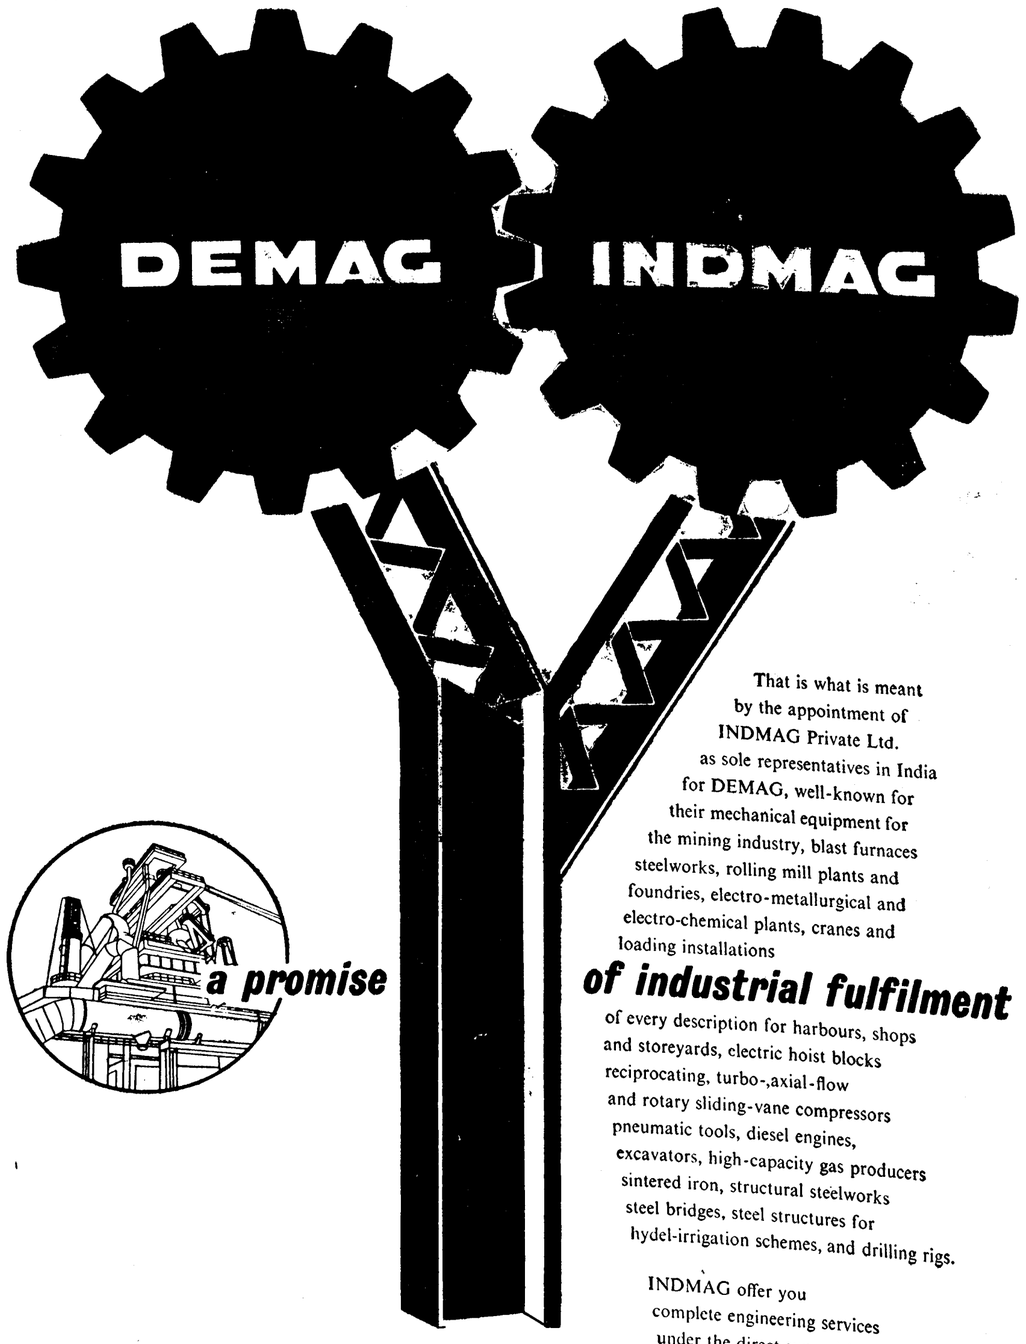
The State Trading Corporation has started negotiations with Russia, Rumania, East Germany China, Poland, Czechoslovakia, Yugoslavia, Bulgaria and Hungary for the import of writing and printing paper. Negotiations are still in progress with the rest excepting East Germany and Bulgaria, which have advised that they will not be in a position to supply any paper during 1960.

L.I.C. Service Development Plan

The Life Insurance Corporation has under consideration various schemes for the maximum use of its resources under its five-year development plan. The main outline of the programme is:

1. opening of more branch and sub-offices for rendering better service to policyholders
2. posting of field officers in these areas;
3. recruitment of an adequate number of local agents and imparting training to them;
4. increased publicity, particularly in the rural areas through mobile vans, films participation in village fairs and rural exhibitions;
5. greater facilities for payment of premiums by policyholders;
6. recruitment of an adequate number of medical examiners; and
7. training of development and administrative personnel.

Japan to Import Indian Salt



Under an agreement between the State Trading Corporation and Japanese importers, 450,000 tons of Indian salt will be exported to Japan during the period January 1960 to March 1961, at a selling price of 20s a long ton f.o.b. (trimmed). In addition certain quantities of salt will be exported by Indian shippers to Japan under direct contracts with the Japanese buyers at different prices prior to April 1960. These imports may aggregate 130,000 tons. Thus, during 15 months, exports, it is expected, will be of the order of 580,000 tons, or about 464,000 tons a year.

Indo-East German Trade

Letters have been exchanged between the Trade delegation of East Germany and the Government of India, embodying a trade and payments arrangement between the two countries. The new arrangement will be valid for a period of three years from 1st January, 1960. The current trade arrangement is due to expire on 31st December 1959, it was entered into in October 1956 and was later amended by a supplementary arrangement in November 1958. Under the new arrangement, payments for all commercial and non-commercial transactions will be made in non-convertible Indian rupees, and trade will be on a balanced basis on a higher level. India will export, besides traditional items like iron and manganese ores, tea, coffee, spices, cashewnuts, textiles and ready-made garments, jute manufactures, laminated jute bags, coir products, handicrafts, sports goods, canned fruit and fruit products, shoes, woollen and silken fabrics, plywood and refrigerators. Exports of East Germany to India will mainly consist of machinery items like textile machinery with automatic looms, printing machinery, machine tools, complete installations and plants, raw films, precision and optical instruments and fertilisers. Under the new arrangement now finalised, the volume of trade between the two countries is likely to increase.

Report on Dock Labour Board

The single-member enquiry committee, appointed by Government to review the working of the Calcutta Dock Workers (Regulation of Employment) Scheme, 1956, has recommended the suspension of the administrative body of the Calcutta Dock Labour Board, which has persistently flouted the authority of the Board and again and again behaved in an unconstitutional manner. The functions of the body, it is recommended, should be taken over by the deputy chairman who would constitute the administrative body under Clause 5(1) of the scheme.

That is what is meant
by the appointment of
INDMAG Private Ltd.
as sole representatives in India
for DEMAG, well-known for
their mechanical equipment for
the mining industry, blast furnaces
steelworks, rolling mill plants and
foundries, electro-metallurgical and
electro-chemical plants, cranes and
loading installations

a promise

of industrial fulfilment

of every description for harbours, shops
and storeyards, electric hoist blocks
reciprocating, turbo-,axial-flow
and rotary sliding-vane compressors
pneumatic tools, diesel engines,
excavators, high-capacity gas producers
sintered iron, structural steelworks
steel bridges, steel structures for
hydel-irrigation schemes, and drilling rigs.

INDMAG offer you
complete engineering services
under the direct supervision
of engineers trained by DEMAG.

Jute

BULLS REMAIN ACTIVE ON TALK OF RAW JUTE SHORTAGE

DECISION TO POSTPONE LOOM RE-SEALING WELCOMED

ONCE again, activities in the raw jute market dominated attention in Calcutta during the past week. As previously, speculators were prominent. In the opening stages, the effects of the earlier feverish activity began to show, so a recession developed. Profit-taking at the higher levels, in both jute and jute goods, and the deterrent nature of the higher margin deposits in the futures market played their part in bringing easier conditions. The decline was helped by unofficial reports and rumours that members of the I.J.M.A. had reached a "gentlemen's agreement" not to buy jute for a period of 15 days. It was hoped that this would reduce raw jute prices, which the majority thought were far too high.

The main debate still appears to be on the availability of jute. Representatives of the Government say that the current crop will provide ample supplies and there is no fear of a shortage. Many mills also subscribe to this view, but sellers are not convinced. They ask that if the claim is true, where is all the jute? Very little is left in the hands of growers; the big stockists, it is reported, have only small supplies in their godowns, and imports in most of the large receiving centres are down to only a few hundred maunds daily, as against ten times that amount in previous years. Taken at its face value, and also considering the fact that the Government's crop estimates are notorious for their inaccuracy, the sellers' contention that the crop will be short may be true. But this does not necessarily mean that there is going to be a shortage of jute, as mill stocks are more than adequate to meet most emergencies.

IMPORT POLICY FOR PAKISTANI CUTTINGS

The Government of India issued a Press note last evening which reads as follows: The recent steep increase in the price of jute and mesta has been noted with some surprise. This increase appears to have been brought about by undesirable speculative activity and has been aggravated by an apprehension about the size of the 1959-60 crop. The Government's review of the position does not disclose any justification for apprehension. The jute and mesta crop for 1959-60 is estimated to be 5,700,000 bales. Taking into account the large carry-over of 2,400,000 bales from the previous season, and normal imports of 250,000 bales, the Government believes that supplies in sight and in stock are adequate to cover the requirements of the industry for the rest of the year, leaving a comfortable balance for the normal carry-over into the next season. In addition, in order to ensure the economic production of gunnies, the Government has decided to permit immediately the import of 200,000 bales of jute cuttings from Pakistan. Licences for this quantity are being issued by the Joint Chief Controller of Imports and Exports on the recommendation of the Jute Commissioner. The Government would like to take this opportunity of assuring the industry that it will take such further steps as may be necessary from time to time to see that full production is maintained.

Raw Jute Arrivals

The latest trade statistics of raw jute arrivals in Calcutta are not very encouraging. Total arrivals in Calcutta and mill stations during November amounted to 780,000 bales, which was a good average for November, normally one of the peak months, but was still 75,000 bales less than during November last year. Arrivals were made up of 34,300 bales from Pakistan and 745,700 bales from India. Total arrivals for the current season are now 2,313,700 bales, made up of 96,000 bales from Pakistan and 2,217,400 bales from India. These totals are all smaller than last year's. Arrivals from Pakistan are 94,700 bales less, while those from India are down by 215,600 bales, making a total drop of 310,300 bales. Total arrivals so far this season are the smallest for five years.

The estimated mill consumption of raw jute during November was 487,100 bales, which brings the estimated consumption for July-November 1959 to 2,464,900 bales. This is 151,200 bales more than the raw jute arrivals in the current season. By this time last year, arrivals had already exceeded consumption, but conditions then were different. Not only was there a bumper crop; there was also no disruption of road and rail transport as was seen this year. At the present rate of progress, the consumption figures should be surpassed by the end of the year, which compares favourably with other seasons prior to 1958-59.

The price of Pakistani cuttings over the past few weeks has shown a rapid rise of over Rs. 30 a bale, and business has been reported at Rs. 85 to Rs. 88 a bale for January-March shipment. This is still well below the price of Indian cuttings, which are now priced at Rs. 122 a bale for ready shipment.

Business with Mills

Reports of business by Indian-controlled mills at high prices have intrigued the market recently. The quantities involved have been fairly large. As sellers are reserved at these prices and are only offering small quantities, the reports are treated with scepticism. It has now been revealed, however, that many of the transactions have not involved sellers but have been between mills of different groups, the result showing a handsome profit to the seller, and demonstrating the adequacy of jute stocks in a large part of the industry.

The firmness of raw jute has had a steadying influence on the Calcutta goods market, and in spite of the fact that overseas interest is practically nil, prices have ruled steady, with values advancing. The news that mills have postponed the move to re-seal looms—at least for another month—has been welcomed in the trade and an undertone of confidence has prevailed. Mills have not been able to take much advantage of the higher prices ruling as genuine buyers, particularly overseas parties, are scarce, but local inter-bazaar transactions have kept interest alive. Confirmation of a Government tender for 30,000 bales of B Twills caused sacking prices to rise, but throughout the period hessians have been easy and price movements there have been controlled by activities in other spheres. Speculators have continued to play a major part in the week's activities and futures trading has been brisk, causing wide variations in prices.

Results of G.A.T.T. Conference

The discussions which took place at the recent G.A.T.T. conference in Tokyo were watched with particular interest by the jute goods trade in India. At present, the import of Indian jute goods into West Germany is restricted. As a result of the G.A.T.T. discussions, West Germany has agreed to abolish import quota restrictions on jute goods from India over the next five years. A quota has already been fixed for next year, and it will go on increasing for the next five years until all restrictions are ended. This should help the Indian industry.

Final Estimate of Jute Crop

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India final estimate of the jute crop for 1959-60 places the area at 1,647,000 acres and the production at 4,548,000 bales, as compared with the previous year's partially revised estimates of 1,811,000 acres and 5,158,000 bales, thus showing a decrease of 104,000 acres or 5.7 percent in area and 610,000 bales or 11.8 percent in production. Compared with the average of the preceding five years' estimates, however, the current year's area and production of jute show an increase of 1.1 percent and 10.3 percent, respectively. It may also be noted that the production of jute during the current year, although less than last year's record production, is the next best since 1953-54. The decrease in acreage during the current year is shared mainly by West Bengal, Bihar and Orissa. It is attributed partly to the low market prices of jute in 1958-59, and partly to unfavourable weather conditions at the time of sowing. Assam has, however, reported a slight increase in its jute acreage. The decrease in production is accounted for mainly by West Bengal and Bihar. It is attributed partly to the decrease in area and partly to unfavourable weather conditions during the period of growth of the crop. The decrease in production in those two States has, however, been offset to some extent by the increase in Assam.

ALL-INDIA FINAL ESTIMATE OF JUTE, 1959-60

	1959-60 (Final Estimate)	1958-59 (Partially Revised Estimate)	Decrease (−) of Col. 2 over Col. 3 Absolute	Percent
	(1)	(2)	(3)	(4)	(5)
Area (thousand acres)	1,797	1,811	(−) 104	(−) 5.7
Production (thousand bales of 400 lbs. each)	4,548	5,158	(−) 610	(−) 11.8

Supply of Jute and Mesta

An official hand-out says that the final estimate of the jute crop for 1959-60 puts the production at 4.55 million bales. Although the final estimate of mesta is not yet available, the present indications are that its production is likely to be around 1.1 million to 1.2 million bales. In addition, the carry-over of jute and mesta at the beginning of the current season is estimated at about 2.45 million bales (I.J.M.A. estimate). Thus, the total supplies of jute and mesta for consumption during the current season would be about 8.1 million to 8.2 million bales. The annual consumption of jute and mesta in the country is estimated at about 6.7 million bales. Hence, the supply of jute and mesta during the current season from internal production and stocks alone exceeds the normal consumption requirements by about 1.4 million to 1.5 million bales. This, however, does not take into account the likely imports of jute from Pakistan. The supply position does not, therefore, corroborate the fears expressed in certain quarters about the jute industry facing a shortage of its raw material; on the other hand, the supply position appears to be quite satisfactory.

THE JUTE MARKETS

There was great activity in the futures market during the past week. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 16th December to 22nd December, were as follows:

	Hessians 40in. 10oz. February 1960		Sacking B Twills February 1960.		Raw Jute March 1960	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos
Opening	41.76	45.66	107.85	29.50	79.04
Highest	42.38	46.34	110.15	31.46	83.30
Lowest	41.20	45.05	106.75	29.00	77.70
Closing	42.04	45.97	109.35	30.94	82.90

Manufactured Goods: Because of heavy selling pressure in the futures market at the higher levels, and the almost total absence of overseas interest, the Calcutta goods market showed a marked decline at the opening last Thursday. Heavy goods, in which speculative activity predominated, fell by 70nP to open at Rs. 108.40 for ready shipment and Rs. 107 for July-September. Hessians dropped by 35nP for 40in. 10oz. to be quoted at Rs. 41.55 in the near positions, with a discount of 10nP for July-September. Little business was reported at these levels and sacking registered minor losses. Some small interest from local shippers caused hessian rates to advance slightly. The rise became quicker on Saturday in sympathy with heavy goods. Reports of a Government tender for B Twills induced a firmer tendency, and ready prices shot up by Rs. 1.65. The rise continued over the week-end in both sections, and very firm conditions prevailed at the opening on Monday morning. B Twills now stood at Rs. 110 and 10oz. hessians at Rs. 42.30. The rise was promoted by fresh speculative activity and the renewed steadiness of raw jute. Prices touched new high levels on Tuesday as speculative activity proceeded. Towards the close, heavy selling at the higher levels by a prominent operator in the futures market caused a slight setback. Continued support from mills for raw jute at higher prices soon dispelled the weaker tendency, and goods prices followed the rise in fibre.

On Wednesday morning, opening quotations were as follows:

	December	January	Jan.-March	Apl.-June
40in. 8oz.	33.25 (36.34)	33.68 (36.63)	33.65 (36.85)	37.85 (36.89)
40in. 10oz.	42.15 (45.94)	42.25 (46.05)	42.30 (46.11)	42.35 (46.16)
B Twills	110.65	110.90	110.00	109.85
Heavy Cees (F.sin)	109.65	106.00	108.50	107.00
A Twills	136.00	134.00	132.40	131.00
Liverpools	124.50	122.75	121.50	121.00
Cornsacks	109.45	110.30	110.50	110.25

Raw Jute: At the opening last Thursday, the was a definitely weaker tendency, and prices

Businessmen who are interested in developing trade with these countries are invited to use the complete banking services provided by the Bank of New South Wales.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

ESTABLISHED 1817

general eased. This was mainly due to the speculative influence of heavy selling pressure at the higher levels. Little mill business was reported but sellers remained reserved. Opening quotations for Assam jute dropped to Rs. 29.25. The easier tendency continued on Friday, with no change in prices. Upcountry markets remained well above the parity of Calcutta rates, and imports were very poor for the time of year. Renewed interest from mills towards the week-end made sentiment firmer, and on Saturday morning Assam quotations moved back to Rs. 30. Good business was done at these levels in spite of the shortage of offers from sellers. Over the week-end, new highs were reached and sellers became very reserved. Imports in Cossipore, although lower than in the previous week, were good, considering the state of the upcountry markets; nearly 500 wagons arrived.

Business was done in Assam jute from Rs 29 to Rs. 31 and in Northern at Rs. 30. Daissee was done at Rs. 30.75 to Rs. 32. Small lots of Daissee mesta passed at Rs. 27.50 to Rs. 28. Mills bought Pakistani cuttings at between Rs. 82 and Rs. 88.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)		
	Rs. a maund	Rs. a 100 kilos.	Shipment.
Assam	31.75	85.09	Dec Jan.
Northern	30.75	82.41	,,

Pakistani Cuttings	86 a bale		,,

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES RAISED AGAIN

(FROM OUR DUNDEE CORRESPONDENT)

THE Dundee jute market has been busy over the past three weeks and both spinners and manufacturers have booked a considerable volume of business for yarns and cloth. Sufficient orders have been received to keep them satisfactorily employed for the next three months at least, and it is a long time since they were in that happy state. It is unfortunate, however, that prices for manufactures have had to be raised so much. There had been two rises in the past three weeks of approximately £5 a ton on yarns and cloth, the second one being announced only last week. The rise in fibre prices was £2 to £3 a ton and a very firm trend prevailed, although the situation later became quieter as some sellers of raw jute were inclined to take a more lenient view of the position.

Mill Firsts have risen to £116 a ton and some are asking up to £120 a ton, with Mill Lightnings now lowest at £100 and up to £103 is wanted, while Mill Hearts are lowest at £88 10s and Grade Hearts at £71. January-February shipment, c.i.f. U.K. No crack Daissee is being offered in Dundee, because of the lack of interest, but Grade is mentioned occasionally at £88, and Grade Tossa-2/3 is now lowest at £113 and fours at £100, same shipment. Spinners have shown very little interest except in some secured lots which they have been able to pick up at some £1 a ton cheaper than the prices quoted for shipment. Dundee spinners are well bought in their jute and they can afford to hold off now to see which way the market goes.

Hessian yarns are now up to 15.43d a lb for 8 lbs C.H.W. cops and to 16.58d for 8 lbs warp, on spools, with 3 ply 8 lbs twist at 18.50d a lb. Rove is up by £2 15s a ton to £95 10s for 48 lbs. £85 10s for 96 lbs and £77 for 200 lbs. Three weeks ago, the prices were £90, £80 and £68 15s, respectively. Dundee jute cloth and bags have met with good demand as a result of the active market during the past week or so. Hessians rose to 13.64d for 40in. 10oz. and to 11.64d for 8oz. Sacking, bagging and tarpauling are higher.

The Calcutta goods market is back again to more reasonable levels. Hessians rose to 63s 6d for 40in. 10oz. and 48s 9d for 7½oz., but reverted to 63s and 48s 3d, respectively, f.o.b. Calcutta, December to June. B Twills have come down to 164s 9d from 170s December and to 163s from 168s 3d for February-March, f.o.b.

U. S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in November was surprisingly good, being 11 million yards more than during October and 15 million yards greater than during November last year. The improvement occurred in both cut-up and sales of piecegoods for industrial purposes. The estimated consumption for the 11 months of this year has been 56 million yards greater than for the same period of last year —a 7½-percent rise. U.S. burlap stocks at the end of November increased fairly sharply, being 13 million yards more than at the end of October and 44 million yards more than a year ago. At 267 million yards, 147 million yards were spots and 120 million yards were afloats. Appearing below are two tables which include the November figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry.

GUNNY SHIPMENT STATISTICS

The following figures including coastal shipments relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th December, 1959	1,465.0	18,876.7	20,341.7
1st to 10th November, 1959	2,165.3	10,551.9	12,717.2
1st to 10th October, 1959	567.4	6,670.5	7,237.9
	Sacking		
1st to 10th December, 1959	8,195.0	756.0	8,951.0
1st to 10th November, 1959	6,225.5	44.5	6,270.0
1st to 10th October, 1959	12,939.0	131.8	13,070.8

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association sugar production during November 1959—the first month of the season 1959-60—was 180,000 tons against 90,000 tons produced during the corresponding period of the last season. This excludes 32,000 tons produced by some factories for the season 1959-60 prior to November, against 31,000 tons produced during the last season by this date. The offtake of sugar from factories during November 1959, was 130,000 tons, against 165,000 tons during the corresponding period of the last season. Total closing stocks of sugar with factories on 30th November, 1959, were 222,000 tons, against 286,000 tons on the same date of the last season.

WORLD-WIDE RESOURCES

Submarine Communication systems to span oceans . . . or interphones to link adjacent offices. Broadcasting stations for service in the Far East . . . or navigational aids destined for the Frozen North. No matter what the telecommunications problem may be, no matter where it arises, the services of S.T.C. are always close at hand. For over seventy-five years S.T.C. has developed its resources to cover every aspect of telecommunications - *everywhere*. That's why it pays so well to depend on an organisation that *really* knows the world of telecommunications, and is truly at home in every corner of the globe.

PERFORMANCE OF ROLLS-ROYCE JET AND PROP-JET ENGINES

TEN MILLION HOURS COMPLETED IN AIRLINE SERVICE

ROLLS-ROYCE jet and prop-jet engines completed 10 million hours in airline service on 18th December. These 10 million hours represent more than 85 percent of the flying done by all civil gas turbines throughout the world. Rolls-Royce jet and prop-jets have flown 2,500 million engine-miles—equivalent to 5,000 round trips to the moon —in gaining this unique experience. Every 7.3 seconds another flying-hour is logged by Rolls-Royce civil gas turbines. Every 30 seconds, day and night, seven days a week, one of 490 Rolls-Royce powered airliners in service takes off somewhere in the world.

These 10 million hours have been flown by Dart prop-jets in Vickers *Viscounts*, Fokker *Friendships* and Fairchild *F-27s*, and by Avon turbo-jets in de Havilland *Comet 4s* and Sud Aviation *Caravelles*. They have been flown on long, medium and short-range routes by 58 airlines on six continents. The overhaul life of the Dart prop-jet started at 400 hours, and has now reached 2,500 hours—the highest ever approved for any aero-engine. At this figure, a Dart engine flies an average of 625,000 miles between overhauls. The Avon jet, which embodies much of the experience learnt from the Dart, started at 1,000 hours between overhauls, and after only 12 months in service this was increased to 1,600 hours, during which period the engine flies more than 700,000 miles. Over 70 airlines have ordered Rolls-Royce jets and prop-jets. The company employs nearly 34,000 people on the design, development and manufacture of aero-engines—more than 8,500 on research and development alone.

FIRST SPARE JET ENGINE FOR AIR-INDIA BOEINGS ARRIVES

The first Rolls Royce Conway jet engine ordered as a spare engine for Air-India's *Boeing* aircraft has arrived in Bombay on Scindia's *s.s. "Jaladhir"*. This is the first of ten such spare jet engines which have been ordered in preparation for Air-India's jet services scheduled to start in April 1960. The Conway jet engines, costing over Rs. 10 lakhs each, will be placed at Air-India terminal stations where the *Boeing* aircraft are scheduled to operate. These engines are equipped with thrust reversers to reduce landing runs and sliencers to muffle noise. Overhaul of the main engine itself will be done for the initial period of two years by Rolls Royce at their factory in the U.K. Other units will be overhauled in Air-India's Santa Cruz workshops.

BRITISH HELICOPTER MANUFACTURING COMPANY EXPLORES INDIAN MARKET

Westland, the largest manufacturer of helicopters in Europe, "is massing its forces for an assault on the helicopter market in India", as the company puts it. During recent years, India has been the British aircraft industry's best customer, having bought some £44 million worth of aircraft and parts since January 1957. Now the Indian Defence Ministry has expressed itself interested in helicopters, an interest dictated by an obvious need for rotating-wing aircraft for operation in the hilly parts of the country, in addition to the more normal operational requirements of the armed forces. Westland recently sent a technical sales team to India, which included the company's chief designer. Assisted by the British air adviser in Delhi, the team is now exploring Indian requirements and deciding the best ways in which Westland can help.

Meanwhile, Westland is pressing on with the development of turbine-powered helicopters for use in any part of the world. The company is convinced that apart from increased power, improved power-weight ratios and better overall performance resulting from turbine power, turbine helicopters are more economical to operate, have longer component lives and increased reliability. Clearly, the latter points are of particular importance when operating in isolated areas. Turbine power means less noise and vibration and, of great importance from the operational standpoint, does not need long warming-up periods. A turbine helicopter can be airborne within 30 seconds of starting the engine from cold. Another advantage of the free turbine is that there is no need for a clutch.

PAN AMERICAN EARNS MORE

Pan American World Airways' total operating revenues for the third quarter of 1959 were $104,116,000, compared with $91,680,000 in the corresponding period of the preceding year, according to the income statement circulated to shareholders on 13th November. Passenger revenue amounted to $83,582,000, a 15.9 percent increase over the $72,132,000 reported in the same period of 1958. Freight revenues were $9,661,000, up 10.7 percent from $8,728,000 last year. Operating expenses increased 13.3 percent. Net income after taxes was $5,632,000 compared with $6,305,000 in the third quarter of 1958. Net income a share for the third quarter of 1959 was $.86 on 6,580,198 shares outstanding, compared with $102 on 6,152,913 shares outstanding in 1958. Net income for the nine months ended 30th September was $6,284,913 or $.95 a share, compared with $4,645,000 or $.75 a share for the same period of 1958.

Plantation Topics

THE BONUS DISPUTE ON KERALA PLANTATIONS

VIEWS OF EMPLOYERS CLARIFIED

THE Secretary of the Association of Planters of Kerala has issued the following Press *communiqué* on the question concerning bonus payments to labour :

"It is regrettable that the question of bonus for plantation labour in Kerala for the year 1957, which was the issue on which the communist labour union in Munnar and elsewhere thought fit to let loose an orgy of violence in October 1958, still hangs fire. The communist Government in Kerala, which refused to order adjudication on the issue, went out of office without settling the question. The unions were not agreeable to the application of the formula which the Supreme Court has approved for all industries and for all India. Mr. T. V. Thomas, Minister for Labour in the communist Government, admitted that adjudication was refused because, adjudication and the application of the formula of the Supreme Court would yield no higher bonus than what the industry had already paid. He was plainly avoiding the machinery of the law, in order that pressure-tactics and the hideous machinery of violence might be used to coerce us to pay more than what we were bound to pay in law. The attitude of the Government encouraged and strengthened the unions in their demand that the formula of the Supreme Court should not be applied in Kerala.

"In August 1957, the communist Government in Kerala had appointed a special tripartite committee for devising rational wage rates and a formula for bonus in the plantation industry. This committee, which was presided over by a retired district judge, had submitted a report. The report contains a formula for bonus, which varies slightly from the formula of the Supreme Court. No action, however, was taken on the report; it had apparently been shelved.

"Soon after the fall of the communist Government, we brought these facts to the personal notice of the Governor of Kerala, and requested him that urgent steps should be taken to see that this question of bonus should be laid to rest. It was obvious to us that adjudication was the only remedy, if unions were not prepared to see reason. We pointed out to the Governor, clearly, that demands for departures from the formula of the Supreme Court were improper, and, in any event, should not be countenanced by the Government, as the communist Government did. The matter had become urgent, because with the lapse of time, the question covered not only bonus for 1957, but for the two subsequent years 1958 and 1959 as well.

Labour Committee Meetings

"On 16th and 24th November, the subject was discussed in meetings of the Plantations Labour Committee, to which the Chief Secretary to the Government himself had come down. In these meetings, the labour representatives showed the same unwillingness to accept the formula of the Supreme Court as before; and, to our painful surprise, the Government representatives showed the same unwillingness to order adjudication as the communist Government did.

"Various suggestions that we pay on a pure *ad hoc* basis were made to us in the Plantations Labour Committee. These suggestions had no reference to financial realities, or to the law relating to bonus as expounded and proclaimed by the Supreme Court. Two of these suggestions deserve special notice here. The first was that we pay at rates adopted in Madras, and enhance the 1957 bonus to 8¼ percent for tea workers and 9 percent for rubber workers. We pointed out that the profits of the industry in Madras were higher than in Kerala, and offered to consider settlement at rates which would bear the same relation to profits as in Madras. This offer was rejected by labour. The second suggestion was that we should adopt, for 1957, the same rates at which bonus for 1956 was settled some years ago. Here, we offered to settle on the basis of the 1956 rate, provided the increase in costs of production since 1956 was also reckoned with. Alternatively, we suggested settlement at rates which would bear the same relation to the 1957 profits, as the 1956 rates bear to that year's profits. These were also unacceptable to labour. This was how the meetings of 16th and 24th November broke down. It has been considered necessary to issue this account of the position, because certain reports which have appeared in the Press recently concerning the meetings of 16th and 24th November, are quite misleading. One such report is based on certain statements attributed to Mr Prakulam Bhasi. We shall merely point out that Mr. Bhasi was not present at the meeting of 24th November."

COCHIN TEA SALES

At Dust Sale L, 475,000 lbs of tea were on offer. There was a strong general demand, and the market was fully firm for everything except residual teas which were easier. High-growns and coloury mediums were the strongest feature of the sale.

At Sale No. 49, 1,200,000 lbs of tea were on offer. There was a strong demand for low mediums and mediums which were fully firm.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) advanced by 0.2 percent to 117.9 during the week ended 5th December, 1959, compared with 117.7 for the previous week. The index was lower by 0.5 percent when compared with the corresponding week of the earlier month but was higher by 5.4 percent than that of a year ago. Lower prices of oranges (−13%), rice in Nagpur (−12%), in Jayanagar (−10%) and in Jamshedpur (−9%), black pepper in Cochin (−9%), bajra (−6%), jowar in Hubli and in Jhansi and onions (−5% each), barley and ghee (−4% each), potatoes and meat (−3% each), arhar and gur (−2% each) and wheat, gram, mung, masur and eggs (−1% each) brought down the index for Food Articles by 0.2 percent to 119.9 The prices of black pepper in Calcutta (+16%) and in Madras (+5%), rice in Imphal and chillies (+8% each), jowar in Gulburga (+5%), bananas and tea (+4% each), milk (+3%), ragi and fish (+2% each) and groundnut oil, gingelly oil, coconut oil and turmeric (+1% each), however, moved up. The index for Tobacco remained stationary at the earlier week's level of 102.2. The index for the Fuel, Power, Light and Lubricants' group worked out to 116.5 compared with 116.4 The prices of castor oil (+2%) showed a rise during the week. The prices of bamboos (+14%), linseed in Kanpur (+10%), manganese ore (+9%), lac (+8%), raw jute and groundnuts (+3% each) and raw silk, tanning materials and logs and timber (+1% each) showed advances while those of raw skins (−3%), cottonseed (−2%) and raw wool, raw cotton and castorseed (−1% each) moved down, and the index for Industrial Raw Materials advanced by 1.1 percent to 124.0, compared with 122.7 (revised) for the earlier week. An increase in the prices of brass (+5%), copper (+2%) and cotton yarn, rayon yarn, coir yarn and zinc (+1% each) was responsible for a rise in the index for Intermediate Products by 0.7 percent to 117.2 during the week. The index for Finished Products also rose by 0.3 percent to 111.4 compared with 111.1 (revised) for the earlier week.

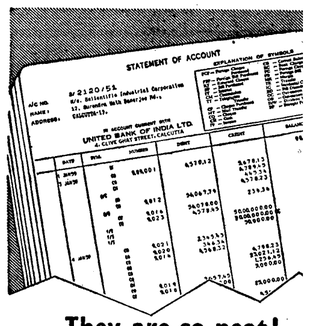
MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)



THE Middle Class Cost of Living Indices, by groups, have now been brought up to November 1959. As compared with October, the November Index for Food shows a drop of 12 points, while that for Miscellaneous rose by 4 points. The indices for Clothing and Fuel & Lighting remain unchanged at 550 and 282 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living decreased by 5 points during November 1959.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939 = 100

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

GOOD BUYING IN DUSTS

AT Sale No. 25, held on 21st and 22nd December, offerings at the Export auction amounted to 55,129 packages. The tone of the market was better than last week and there was a strong general demand Plain brokens and Fannings tended dearer, especially the clean black descriptions, but the poorest plain liquoring types of unattractive leaf appearance were occasionally easier. Medium B.O.P.'s and O.Fgs. came in for fair support and showed little change in value. C.T.C. teas were well supported but were 5nP to 10nP easier. Non-wither Legg-cut teas were readily sold and the cheaper varieties were often dearer. Whole leaf grades were again firm and sometimes dearer. Darjeelings were about steady and there was useful enquiry for tippy teas.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.18 to 2.24	1.98
Plain B.P	2.04 to 2.14	1.54 to 1.60
Plain Fannings	2.10 to 2.20	1.66 to 1.72
Medium B.P.	2.02 to 2.12	1.62
Medium Fannings	2.16 to 2.24	1.72 to 1.78
Best Assam C.T.C B.P.	2.50 to 2.70	2.20 (nom.)
Best Assam C.T.C. Fannings	2.50 to 2.70	2.30 (nom.)

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings amounted to 22,163 chests, for which there was a strong general demand. Black exportable types were a strong feature and were firm to dearer while the remainder in this category generally sold at 2nP and occasionally 4nP below last rates. Legg-cut teas were irregular and Darjeelings sold at about last rates. Medium C.T.C.'s received better support than in recent weeks, but were once again irregular. The few exportable grainy sorts and powdery descriptions were well supported at generally dearer rates, but the rest were sometimes up to 6nP easier.

Quotations

	1959 Rs.	1958 Rs.
Medium Dooars Dust	2.14 to 2.22	1.70
Medium Assam Dust	2.08 to 2.16	1.74 to 1.76
Medium Assam C.T.C. Dust	2.16 to 2.28	1.90 to 2.10
Best Assam C.T.C. Dust	2.50 to 2.80 (nom.)	2.50 to 3.00

(Quotations are exclusive of excise duty.)

There was a good general demand for the 947 chests of Leaf on offer.

FREIGHT MARKETS UNCHANGED

VERY few changes in rates were noted to make the past week distinguishable from others. It was a moderate week which could be described as "good" from a shipowner's point of view. News that the Atlantic ports have reached an agreement with the stevedore labour in the United States has given confidence to the charterers to enter into future programmes. Australian grain charterers have accepted a vessel at 100s for shipment to the U.K. and a sugar booking was noted for Cairns to the U.K for January-February at 125s. Business in the Far Eastern trade remained steady. Chinese charterers repeated 72s 6d for cereals from north China to the Antwerp-Hamburg range. In the Indian ore markets, 9,500 tons 10 percent ore Bombay-Northern range or mobile, 26th December-15th January, paid $(U.S.) 9.50 f.i.o., which is 40 cents more than before. Vessels discharging foodgrains at Haldia are showing better output. The loading of ore at Pardip has been resumed and a second vessel is due to load from 26th December.

LINSEED UNCHANGED

There was little change in the linseed market during the past week. Prices moved within narrow limits and dull conditions prevailed with the supply being limited. Seeds prices continued to be steady but millers showed little interest. Business in the oil market was slow with buyers and sellers hesitant. With overseas markets quiet, export prospects are not bright. Latest quotations are as follows: Ready-December Rs. 24.62 a maund, January Rs. 24.87 a maund and May futures Rs. 23.50 a maund.

HIDES AND SKINS FIRM

The market in skins ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 15th December and 21st December, 1959)

Cowhides : Wet Salted (ord.) 11,600 pcs. on the basis of Rs. 11.50 to Rs. 13.50; Wet Salted (slaughtered) 8,400 pcs. on the basis of Rs. 12.50 to Rs. 16 and Rs. 18 to Rs. 29.

Goatskins : Wet Salted (Patna, Daissee, Kustia) 78,200 pcs. on the basis of Rs. 430 to Rs. 445, Rs. 470 to Rs. 500 and Rs. 510 to Rs. 525; Wet Salted (he-killed) on the basis of Rs. 6.50 and (she-killed) on the basis of Rs. 6.25 a piece; Assam-Dinajpur-Maldah 18,300 pcs. on the basis of Rs. 415 to Rs. 425, Rs. 480, and Rs. 530 to Rs. 595; Purneah-Kissenganj 27,100 pcs. on the basis of Rs. 530 to Rs. 560; Patna-Pakur-Ranchi 26,600 pcs. on the basis of Rs. 450 to Rs. 460, Rs. 465 and Rs. 470 to Rs. 480; Muzafferpore 300 pcs. on the basis of Rs. 550.

Bazaar Stocks

(21st December, 1959)

Cowhides : Wet Salted 132,300 pcs.
Goatskins : Wet Salted (Daissee, Kustia, Patna, Killed) 55,500 pcs.; Assam-Dinajpur 32,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenganj 43,000 pcs.

SUGAR STEADY

During the week ended 23rd December, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals were 5,500 bags a day and stocks totalled 15,000 bags. The rates for ordinary grain were Rs. 47.50 and for bold grain Rs. 48.25. The market was steady.

SHELLAC QUIET

During the week ended 23rd December, the market was quiet. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 92, 93 buyers; 96 sellers.
Lemon No. 1 Shellac	Rs. 95, 93 buyers; 96, 95 sellers.
Lemon No. 2 Shellac	Rs. 90, 88 buyers; 92, 90 sellers.
F.O. Superfine Shellac	Rs. 84, 83 buyers; 87, 86, 88, 87 sellers.
Standard One Shellac	Rs. 82 buyers; 85 to 83 sellers.
TN Pure Shellac	Rs. 73 buyers; 77, 76 sellers.
Golden Kusmi Seedlac	Rs. 109 buyers; 110, 112, 110 sellers.
No. 1 Kusmi Seedlac	Rs. 90 sellers.
No. 2 Kusmi Seedlac	Rs. 80 sellers.
Golden Bysacky Seedlac	Rs. 95 to 92 buyers; 96, 95 sellers.
One B Seedlac	Rs. 94 to 90 buyers; 96 to 92 sellers.
Two B Seedlac	Rs. 76 to 73 buyers; 77 to 74 sellers.
Manbhum Fine Seedlac	Rs. 84, 80, 82 buyers; 88 to 84 sellers.
Fine Bysacky Seedlac	Rs. 73, 72 buyers; 75 sellers.
Genuine Bysacky Seedlac	Rs. 63, 62 buyers; 66, 65 sellers.

Shipments during December until the 18th were 9,967 packages.

COMPANY AND PUBLIC NOTICES

COAL COMPANIES

O., Po., F and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.
