COAL PRICES: LIVING WITH AN ILLUSION

IMPACT ON INDUSTRIAL COSTS EXAGGERATED

LATEST reports from New Delhi suggest that the Government of India's long-awaited decision on raising coal selling prices is likely to be delayed for a considerable time yet. To those accustomed to the antics of bureaucracy, which twists and turns but does not move, the news may not be very surprising. Nevertheless, it is time the serious implications of the delay were realised by the country and the Government, which cheerfully continues to frame bigger and bigger plans without bothering about the financial health of the industry which is to provide the main energy resource for them. Historians and elephants may remember that, as long ago as May 1957, the Government appointed the Coal Prices Revision Committee, headed by Mr. S. Bhoothalingam, to examine the cost structure of the industry and to recommend a suitable modification in selling prices. The Committee, which was asked to submit its report within two months, ultimately managed to do so after 19 (the parts dealing with collieries in Assam and Andhra, it is stated, are still not ready). The Government has been looking through the main report for over six months, and the upshot of its labours now is that it does not know what to do. So, it is believed, a secretariat sub-committee has been appointed to grind its nose on the pages of the Bhoothalingam Committee's report, and produce a magic formula for changing coal prices which will earn the fulsome gratitude of the industry, consumers and the Government itself.

The move is mistaken. The growing array of committees, sub-committees and the like investigating this question may look imposing, but they are useless. What is required is first of all a decision by the Government on a fundamental issue: is it prepared to let the coal industry work economically, and is it prepared to raise coal prices if this should be proved necessary for the purpose? Or does it, on the contrary, wish to let the collieries languish for want of money (ostensibly on the plea that to raise coal prices would be inflationary), even if this undermines the prospect of raising production in the future? It is doubtful whether a mere secretariat sub-committee can resolve what seems to be primarily an inter-ministerial dispute which has now got sunk in the mire of sectional political pressures. Certain ministries, such as the one in charge of the railways, are major consumers of coal, so they are presumed to be opposing a rise in coal prices. Certain others, better able to look beyond the tips of their noses, realise that unless the rise in prices is granted, the adequacy of coal supplies in the future cannot be assured. There may even be one or two which are dimly aware of the fact that the Government itself owns collieries, whose production is meant to be expanded rapidly; if they continue to produce the ugly financial results they have been doing, the taxpayer will be less complacent about enquiring why his money is being wasted.

Political and sectional considerations apart, the case for a quick and substantial increase in coal prices is unassailable. It is set out concisely and well in a pamphlet issued recently under the joint auspices of the Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners Association. Although the Government has been hiding the Bhoothalingam Committee's report as if it were a patch of leprosy, Press reports indicate that the Committee too has accepted the need for an increase, albeit an inadequate one. Our New Delhi correspondent reported some weeks ago that rises varying between eight annas and 11 annas a ton have been recommended. Each day's delay is thus losing the industry thousands, if not lakhs, of rupees. The delay, and the financial losses resulting from it, are already having a disturbing effect on coal production: output, which rose by 4.1 million tons to 43.5 million tons in 1957, increased by only 1.8 million tons to 45.3 million tons in 1958, and is expected to be a mere 2 million tons higher this year (judging from the first three months' figures). Coal is an industry where capital expenditure has to be steady and substantial even if production is to be merely maintained. It is evident, therefore, that unless urgent action is taken, the slower upward trend in output will before long be halted, even reversed.

The pamphlet issued by the producers' associations points out that there has been a sharp increase in production costs since 1947, when the first labour award in the industry's history was issued. With one minor exception, price increases since that time have been allowed only to cover the rises in labour costs resulting from various tribunal awards. No allowance has been made for the growth in many other items of working expenditure. Stores, which account for 10 percent to 15 percent of total production costs (being the most important item after labour), have become steadily more expensive; the impact of the increase in their prices since 1947 averages between 14 annas and Rs. 1-4 a ton of coal produced. The implementation of the Mines Rules, 1955, and the Coal Mines Regulations, 1957, it is estimated, will cost most coal companies from Rs. 1-8 to Rs. 2 a ton, and some even more. In addition, electricity charges have gone up, stowing assistance is inadequate, and there have been substantial increases on account of cesses, railway freight, and compensation for lay-off and retrenchment. The coal industry has a good case for being granted rehabilitation and depreciation allowances on a more liberal scale. It works a wasting asset, so that additional capital outlay is necessary as the mine advances; and in any case, the present allowances bear little relation to replacement costs in an inflationary age.

Many still nurse the illusion that collieries make big profits, but somehow spirit these away into the pockets of their shareholders or use them for other less estimable purposes. In fact, however, it has been calculated that if a return of 6 percent on capital employed be taken as fair, roughly 70 percent of coal companies do not earn it. Attention is sometimes drawn to collieries paying supposedly high *rates* of dividend. But it is forgotten that the rate of dividend on paid-up capital signifies little; on the contrary, it is highly misleading in an undercapitalised industry like coal. (This should serve as a warning to many companies in other industries too which have neglected to maintain a proper balance between the paid-up capital and the actual capital employed.) Even if the rate of dividend be considered (that is, the dividend as a percentage of the paid-up capital), the statistics indicate that in the five years from 1951 to 1955, it has averaged much less in coal than in leading industries such as tea, "other plantations", iron and steel, sugar, paper, matches, cement and cotton textiles. Since 1955, the relative position of coal has in all probability worsened further. The pamphlet prepared by the coal producers' associations quotes an analysis made in 1957 of the financial results of 19 companies, which together raise about one-third of the country's total output. This shows that the profit remaining after providing for taxation was Rs. 1.21 a ton, out of which dividends accounted for 54nP a ton. The dividends represented a return of 6.3 percent on the paid-up capital, and of only 3.4 percent on the total investment. After providing for taxation and distributing the modest dividends, only Rs. 57 lakhs remained, out of which sums still had to be set aside for depreciation. Against this, capital expenditure totalled Rs. 88 lakhs. In other words, the financial resources of the 19 units were depleted by Rs. 31 lakhs in a single year; projected over the whole industry, this would imply a total depletion of around Rs. 1 crore.

The argument that a rise in coal prices would be inflationary sounds hollow if the facts are considered. It sounds particularly so when it comes from a Government which has otherwise shown itself to be quite unconcerned about controlling inflation and which has spent many years printing currency notes with gay abandon. Official statistics indicate that the cost of coal and coke, expressed as a percentage of the gross ex-factory value of the products and by-products of various industries, ranges from 14.32 percent in cement and 11.25 percent in steel to 3.13 percent in chemicals, 1.15 percent in cotton textiles, and 1.02 percent in general and electrical engineering. It is as low as 0.37 percent in a major industry like sugar. The conclusion is inevitable that a rise in coal prices would have a very limited effect on industrial costs, and certainly a much smaller effect than the Government's labour, fiscal and general economic policies have already been having. It would be a grave injustice if coal producers were called upon to continue to subsidise the rest of Indian industry. A decision on raising coal prices substantially is urgently necessary, and the Government should have the courage to make it before it succumbs to the political pressures and the economic illusions which are now being vigorously cultivated in its presence.

INDIA AND WEST GERMANY'S PROTECTIONISM

ALTHOUGH little or no publicity is given to the G.A.T.T. negotiations in Geneva, it is understood that India has associated herself with the renewed campaign against West German protectionism. This is very proper, not only because it is certain that some Indian exports suffer from West Germany's refusal to honour its obligations to G.A.T.T., but because the issue raises questions of principle that will continue to be of importance as the Common Market evolves. Many members of G.A.T.T. take the view that this is a test case for the Continental countries in their attitude to non-members of the Common Market, and the fear has been expressed that if West Germany is allowed to "get away with it", the external trading policies of the Common Market might be affected very unfavourably from the point of view of outsiders. Without speculating about that, it is possible to agree that the debate of principle already raised is of importance. It turns on this question: can a hard-currency country that has no sign of payments problems, and which in fact enjoys astronomical trading surpluses, persist in defying international organisations to which it subscribes, such as the I.M.F. and G.A.T.T., by continuing to impose protective restrictions that shut out imports from, notably, certain Asian countries on the vague grounds that Asian competition is "unfair".

Two years ago the West German mark was declared by the I.M.F. to be a hard currency. It followed, according to international treaties, that West Germany was under an obligation completely to liberalise its foreign trade. In fact, up to this day she has not done so. Despite two years of

sometimes virulent attacks from other members of G.A.T.T. and despite threats of trade reprisals, West Germany continues to impose restrictions on imports of some 300 lines of industrial goods. These include textiles, clothing, ceramics, toys, optical equipment and a variety of goods labelled rather indefinitely "Japanese-style goods", though in fact they can come from other countries and do in some cases come from India. West Germany also practises an extreme form of agricultural protectionism, but nobody is calling that in question for the good reason that nobody dares throw the first stone—all western countries coddle their farmers. The debate concerns only the restrictions on industrial imports, and some of the members of G.A.T.T. feel so strongly about it that threats of reprisals must be taken seriously. Bonn does not deny that it is infringing the treaties it has subscribed to, but answers that the obligations those treaties lay on it are unjustified and unreasonable. West German industry adds that it is unfair that a country like theirs, that has mastered its trading difficulties by following a liberal policy, should be "punished" by G.A.T.T. by being denied a minimum of protection for its industries against unscrupulous competition. This argument will seem curious to the developing countries in Asia who hold that a trading position such as West Germany enjoys, not only enables it to stand such "punishment", but places on it a moral obligation to assist countries whose trade is less affluent.

Needless to say, the wrongs are not all on one side. The West Germans have a case, and if it is not altogether convincing, its force will nevertheless be recognised by any business that has had to meet Japanese competition. The Germans point out that of G.A.T.T.'s 37 members, there are 12 who do not give Japan most-favoured-nation treatment and therefore do not have to worry about Japanese goods entering their markets. In fact, of the European members of G.A.T.T., there are only two that do give Japan most-favoured-nation treatment, namely, West Germany and Italy. The reason for these two exceptions is evident: the U.S.A. forced this on the defeated Axis countries after the war. So far Italy has not suffered from this, because her continuing payments difficulties entitle her to maintain suitable import restrictions. So West Germany is the only European country both to award Japan equal treatment and to have the obligation to remove all import restrictions. If West Germany were to honour this latter obligation, the Germans say, the result would be a flood of Japanese goods; if all European countries would open their markets to Japanese goods, the problem would be manageable, but since they do not mean to do so, West Germany would be left alone to face the Japanese menace. This case is accompanied by specific charges of unethical Japanese trading practices, e.g., spurious "Made in West Germany" labels on Japanese goods. The solution, the West Germans conclude, is not for them to adjust their import regulations but for G.A.T.T to adjust its rules.

The reply to this would seem to be that, although German complaints are no doubt well grounded, the issue of principle involved is far too important for the other members of G.A.T.T. to leave it at that. Of the 37 members of that organisation, there are 25 that do award Japan equal treatment, and not all those 25 can afford this as well as West Germany. Moreover, if West German restrictions are aimed at Japan, they hit other countries too. Above all, it is so vitally important for world trade that nations who can afford to liberalise their trade should do so, that G.A.T.T. must insist on West Germany honouring its treaty obligations. A precedent established here could have highly damaging consequences (a) as other countries strengthen their currency, (b) as the Common Market comes to fix its external trading practices, and (c) as the notion of "unfair" or "unethical" trading practices comes to have a vaguer and wider meaning. It would be better for West Germany to abide by the rules of G.A.T.T., and thereafter lead the attack on Japanese misdemeanours which are, surely, not quite beyond international control.

A YEAR OF FREE CREDIT IN THE U.K.

EARLY in July last year Mr. Heathcoat Amory, Britain's Chancellor of the Exchequer then as now, announced that from the end of that month the banks would be free to lend without restriction on the category of borrower or on the total amount lent. As they began to negotiate new overdrafts some weeks in advance of the formal date, we can say that the credit-squeeze ceased to operate about a year ago. In the intervening period the recession of business continued for approximately a further quarter-year, the trend was uncertain in the next quarter, and in the ensuing half-year the recovery was firmly established. Britain's recovery has not been strong, like its counterpart in America; nor has it been evenly spread, being almost confined at first to the consumer trades and to the industries directly serving them, extending gradually to the building industry (but rather the residential than the industrial sector of it), and not perceptibly affecting the other capital industries.

The latest quarterly analysis of bank advances reflects these developments. Although, relating to May, it does not show the effects of a full year of unrestricted credit. Between May 1958 and May 1959 the total of advances increased nearly £650 million to £2,680 million, and of that increase practically a half is attributable to categories wholly or mainly concerned with consumption—personal and professional, hire-purchase finance, food and drink and tobacco, and retail trade; and the only industry that is prominently represented in the remaining half is the iron and steel industry—which makes materials and components for durable consumer goods. The changes that have occurred in approximately a year of unrestricted credit have doubtless convinced the authorities that the credit-squeeze was not only an effective method but also a discriminating method of regulating the economy. As demand for consumer credit expanded vigorously in the state of freedom, it was obviously repressed in the state of restraint. Other restraints, notably on hire-purchase, were in force at the same time as the restriction of bank-credit, and it is impossible to see clearly how effective each factor was in restraining consumption in the period when the Government was restraining it deliberately; but it is evident that the restriction of bank-credit, which bankers disliked intensely, served its purpose.

The rôle of Bank rate is more difficult to determine. Between March and November last year the London Bank rate was brought down rapidly from 7 percent to 4 percent. Thus, in the latter part of the year, the cost of credit was considerably reduced at the same time as credit was easier to obtain. Naturally, the reduction brought in some marginal demand for credit, but nobody knows how much. Below a certain point, Bank rate loses contact with the banks' rates on overdrafts, and a further reduction in Bank rate now would therefore be less effective than last year's reductions.

In the meantime, anyway, the downward tendency of money-rates in the world has been checked. The growth of bank-credit has continued in Britain. But in the latest monthly figures (which are not itemised like the quarterly statements) there is evidence that the rate of growth is slowing down. Some further increase will doubtless be recorded in the coming months, but it will probably be much less than in the same months of last year; unless activity in the capital trades expands considerably or various trades and industries accelerate their stockbuilding.

Some observers are apprehensive lest Britain's recovery in general lose momentum (not a very strong momentum at the best) when bank-credit is no longer expanding fast. Bankers themselves, however, have been somewhat apprehensive lest the authorities disapprove of an expansion so fast as in the first year of free credit. They have not been unduly troubled by problems of liquidity, for the expanding tendency of the Treasury's floating debt has made available a relative abundance of Treasury bills (though the seasonal factor was operating against the increase earlier in the year, and the Government has been receiving a substantial volume of savings through other media). Nonetheless, some banks have at times had to sell appreciable quantities of investments—shorter-term Government stocks—to finance the growth of their advances. It is generally assumed that the banks are glad to exchange investments for advances, because advances are the most profitable means of employing their resources. But the margin between the rates on advances and the yields on investments is no longer wide, for the lowering of Bank rate has brought down the former while the latter, by normal standards, have remained high. The banks are no longer willing sellers of investments, and their reluctance may have important implications for the rate of interest, as measured by prices in the bond market. It may also affect their attitude towards prospective borrowers; for their liquidity ratios, though adequate at present, are not so high that they can increase their advances much unless they sell more investments or otherwise (for instance, by acquiring more Treasury bills) increase their liquid assets.

Some economists have argued that the floating debt should be increased substantially so that the banking system will be made more liquid and credit will be made more plentiful; the economic expansion, which is still rather hesitant, would then, presumably, gain strength. The authorities' objection to this procedure is that it would weaken their control over the financial system: and if they had to operate at the same time through a weak bond market the difficulty of converting short-term debt into long-term debt would increase. The banks would certainly resent the use of "special deposits", immobilising some of their "excess" liquidity, as a means to restrain inflation and to strengthen the authorities' control over the system. While considering these medium-term problems bankers are aware that the average term of their loans is tending to increase. Advances which are nominally for short periods are often in practice renewable, and British banking is tending towards the practice of longer-term lending which is common in many countries abroad.

MUDDLING EXPORT PROMOTION

IN spite of official exhortations to business men, New Delhi's efforts to promote exports have not obviously been successful. The concessions granted to some of India's export industries—such as tea and cotton textiles—were much too belated and niggardly, and were announced when the damage had already been done by continuous official apathy and negligence. The Central Ministry of Commerce and Industry appears to believe that with the inauguration of a few export promotion councils, its task has ended. The responsibility for the fall in exports—which has evidently been caused by factors which were, in most cases, beyond the control of traders—is laid, fairly and squarely, on the shoulders of producers and exporters. The Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, for example, did not hesitate to criticise the textile industry for a fall in exports while inaugurating recently the Delhi Productivity Council. The irony of it all is that only a couple of months ago he was praising millowners for launching a vigorous campaign of export promotion. The pitfalls in policy and the reaction of importers abroad have been highlighted in the report of the F.I.C.C.I. goodwill trade mission which recently visited as many as nine countries in Asia, Europe and North America.

In their enthusiasm to expound the doctrine of a socialist pattern of society, official spokesmen show a tendency to express extreme views which, unfortunately, upset business sentiment, both inside and outside the country. The mission noticed the adverse consequences of such reckless utterances. It rightly suggests, therefore, that there should be a self-imposed code of discipline for all sections of the public, including official spokesmen. It was primarily due to ideological considerations that the Government formed the State Trading Corporation: it did not care to consider that its intrusion into the legitimate preserves of private enterprise might not be welcomed by importers. The mission heard complaints against the Corporation when it was surveying the export potentialities of Indian goods in the Japanese market. Many countries, especially those which base their belief in a free enterprise economy, are reluctant to undertake trade negotiations with a giant monopoly started under State auspices. The mission is obviously convinced, therefore, that the State Trading Corporation is not the answer to the problem of increasing exports.

There is no denying that some efforts have been made to make Indian goods popular in overseas markets. But if exports have not increased commensurately with such efforts, the blame should rest with the Government. The latter is responsible for India's poor performance in export markets on three important considerations. First, it has not cared to consider that export policy should be kept stable. The lack of continuity is a serious handicap; the mission says in its report that too often it heard complaints against the quota items of exports, for traders were unable to depend on India because of the frequent changes in her export policy. Secondly, showrooms and export promotion councils have not served any useful purpose. Many are not equipped to supply reliable information concerning prices, delivery dates and suppliers. As for the councils, it is indeed a serious complaint—which the mission has disclosed in its report—that they do not acknowledge letters and are indifferent to enquiries. It is high time, therefore, that a review of their activities was undertaken to find out how far they have been able to achieve their objectives. Thirdly, the lack of opportunities for personal contacts has posed a serious problem for increasing exports. It would be harmful if the present shortage of foreign exchange should serve as a permanent excuse for refusing to allot foreign exchange to business men for overseas tours. As it is, the delay in the allotment of foreign exchange, the complexities of official formalities and, above all, the belief in Government circles that such visits abroad serve a useful purpose, have stood in the way of quite promotion of business.

There has been considerable incongruity in New Delhi's precept and policy for export promotion. It has offered only verbal exhortations to producers to reduce the cost of production, though it has been chary of introducing measures to achieve this objective. Its response to the request of mill-owners for the introduction of automatic looms in textile mills has been half-hearted, since it is afraid that the modernisation programme might lead to retrenchment. In the face of rising prices for indigenous cotton, millowners have tried in vain to reduce production costs with a view to cutting export prices. The Government has not come forward with concrete measures to alleviate their critical position. In spite of great possibilities for increasing tea exports to Britain and the United States, the mission believes that the promotional efforts have proved inadequate, especially when Ceylon is spending large sums to get favourable results. There is also scope for intensifying the promotional campaign in Canada, and it is urged that the Tea Council in that country be strengthened financially. As for the U.K. market, the mission says: "It is a fallacy to think that because tea is a national drink in the U.K., propaganda is unnecessary. Our Tea Board should take more active interest in the U.K. market, open one tea house to start with in a prominent centre and undertake a campaign to encourage retailers to display and push Indian tea."

In the face of a fall in India's export trade, the best that the Government can do under the circumstances is to show, by word and deed, that it is genuinely interested in export promotion. There is a dearth of intelligence about the country's leading exporters in various spheres, and the compilation of an export directory would go a long way to help importers abroad. The mission has admittedly put forth a constructive proposal that both the F.I.C.C.I. and the Government should give immediate attention to the setting up of an investment and information centre, to start with, in the United States, with a base office in India. This will undoubtedly help investors and importers in that country to get information about India and assist in establishing contacts between traders in the two countries. Like the Birla delegation sponsored by the Federation, the latest mission has spared no pains to point out the deficiencies in official policy. Since the report contains the recommendations of hard-headed business men, whose interests in this matter coincide with those of the country as a whole, the Government would do well not to pigeon-hole them; there is too much leeway to make up in increasing exports.

Current News and Comment

Dalmia Cement Rights Issue

The offer of 217,788 ordinary shares of Rs. 10 each at par by the Dalmia Cement (Bharat) Ltd. may please shareholders, at least to begin with, since the new issue will be entitled to the dividend which may be declared for the year ended December 1958. The dividend will not only help them in subscribing for the new shares; it virtually amounts to a bonus, as the holders of the new shares will be participating in the dividend for the year ended December 1958 without contributing any money during that period. From the balance-sheet for the year ended December 1957—the latest year for which figures are available—it looks as though the same dividend of 12 percent may be paid for the year ended December 1958. In 1957, the profit amounted to Rs. 47.63 lakhs, of which dividends absorbed only Rs. 22.20 lakhs. The proposed issue would claim a little over Rs. 26,000 if a dividend of 12 percent is to be paid. So there should be an adequate cover if the dividend for 1958 is maintained. This assumption is based on the belief that profits in 1958 will not be lower than in 1957, as no major change in the industry has occurred.

The directors have decided that "the holders of the existing equity capital (ordinary and deferred shares) will have the renunciable right to subscribe to the new ordinary shares of Rs. 10 each in the ratio of one new ordinary share of Rs. 10 each against the paid-up value of the existing ordinary and/or deferred shares of Rs 60 or part thereof." The money will be used for expansion. A new plant is being set up in the cement works in Dalmiapuram, Madras, and it will have an installed capacity of 500 tons a day. It is expected that the project will be completed soon. When it is, the rated capacity of the Dalmiapuram works will increase from 250,000 tons to 410,000 tons a year. Meanwhile, steps have been taken to diversify the company's activities. The stone-wire pipe plant and the refractory plant have been completed. The company is acquiring a substantial interest in the dead burnt magnesite plant in Salem, which has begun production. The directors say that they are getting considerable orders from the State Trading Corporation for the supply of iron ores from the company's mines for export to Japan. They hope that the expansion plans will help improve earnings. They also hope that the Government will consider favourably the application for increasing the price of Dalmia cement in view of the heavy capital expenditure incurred on expansion.

Kumardhubi Engineering Explains

In a circular letter, the directors of the Kumardhubi Engineering Works Ltd point to the justification for issuing 307,200 ordinary shares of Rs. 3 each at par to the existing shareholders in the proportion of one new share for every two held. As is already known, 104,400 ordinary shares of Rs. 3 each were issued in March 1956 at a premium of Rs. 6 a share. It was then expected that a total expenditure of Rs. 35½ lakhs would be incurred on the expansion scheme, the initial stages of which would cost Rs. 14.28 lakhs. The directors report that the expansion of the structural shop has been completed, and that it is capable, under favourable circumstances, of an output even higher than the planned level of 450 tons a month. The shop is not at the moment working to capacity because of certain factors beyond the company's control and because of the shortage of steel, although, unlike many other fabricators, it has not been necessary to close the shop at any time. It does not appear that such a move will have to be made either. This side of expansion has cost Rs. 5 lakhs. At the same time, the expansion of the foundry, fettling and machine shops has been proceeding, and Rs. 26 lakhs has been spent so far. This covers the installation of a five-ton basic electric furnace, a heat treatment furnace, and certain extensions. The final stages of the expansion have now been reached, the completion of which is expected to cost a further Rs. 7 lakhs. This includes the installation of an additional sand preparation plant and the provision of additional foundry space and facilities. The estimates have increased as prices have risen and because of some changes in the form of the plans. A substantial portion of the expansion scheme has so far been financed by the company's own resources. Fresh capital of Rs. 9 lakhs is now needed to complete the renovation and expansion scheme for placing the foundry, fettling and machine shops on a satisfactory, competitive basis. The new finance will also help provide further working capital.

The directors comment: "Unfortunately, owing to severe competition and also to changes of policy on the part of Government railways, the type of work available has not been that previously customary and for which your works were suitably laid out, and in recent months a serious falling off in orders secured has received the serious attention of your directors. In their considered opinion, it is essential to complete the planned expansion of the foundry, fettling and machine shops in order to place your company in a position to meet competition and to meet the current necessity for reorganisation of production." They think that the accounts of the company for the year ended November 1958 are not likely to show very satisfactory results, and it is most unlikely that even those results can be expected in the current year. "For that reason, therefore, shareholders cannot look to a continuance of their return on their present holdings, nor, until the completion of the foundry expansion and a revival in the availability of steel, can they expect the present total distribution on the proposed increased capital." They, nevertheless, think that the capital now under offer should be issued, as it is only by the completion of the expansion, as proposed, that the company can expect to obtain adequate quantities of suitable orders for maintaining full and profitable production in the future.

Gunnies: The S.T.C. in Action

A correspondent writes: A couple of weeks ago, the State Trading Corporation sold to a foreign trade representation 7,500 bales of heavy Cees for delivery within the first half of July, at a price of about Rs. 106 a 100 pieces, f.o.b. Calcutta. It made the sale apparently on the basis of an offer from one of its pet gunny exporters, who seems to be a particular favourite of the S.T.C. Unfortunately for the S.T.C., the market started to go up very soon after the conclusion of business and possibly before the S.T.C. had signed a contract with its supplier (it is hard to see how this could be, as firm offers always come from suppliers on paper and the business is confirmed immediately by letter). Be that as it may, the market having risen sharply, the supplier firm decided that fulfilling the contract would involve it in a large loss and that it was preferable to let its friendship with the S.T.C. go through a temporary setback rather than implement the commitment. Taking advantage of a technical point, it refused to sign the contract. The rate at this stage had reached Rs. 112, which is the price even now.

The S.T.C., admitting that it had no recourse against its supplier, went to the foreign buyers with the sad story and asked them simply to cancel the contract. The foreign buyers were not so stupid and insisted on the goods being delivered according to contract. Since then, the leading men in the S.T.C. have been in a flat spin, wondering who is going to be made the scapegoat for the loss of nearly Rs. 2 lakhs which will be suffered if it does implement the contract. This, however, is still not definite because, of course, nobody wants to take the responsibility. What the S.T.C. appears to be expecting is that somebody somewhere will agree to sell it heavy Cees at the original selling price, thus buying the S.T.C.'s undying gratitude for the sum of Rs. 2 lakhs. So far, there seems to have been nobody anxious to undertake this piece of philanthropy.

The lessons to be drawn so far are: (1) the S.T.C., as is well known, knows precious little about business and business procedures; (2) it does not bother to do business with local parties of repute who can be trusted, but seems to prefer, at least in the gunny business, to deal with lesser-known traders; (3) at a time when India is endeavouring to raise exports and is channelling as much as possible through the S.T.C. (the public sector being so much better than the bad private boys), the Corporation's attitude towards its buyers might well induce them to go and buy somewhere else. If one could hear what foreign buyers have to say about the S.T.C., one might be highly edified by their opinion of the "public sector." This, of course, is only the beginning of the story, as the S.T.C. is now faced with a fascinating dilemma. On the one hand, it can buy the goods in the market and execute its contract, so that it will be faced with a loss which is mounting each day that goes by; a loss of that magnitude will, even in the civil service, cause a certain amount of merry hell. On the other hand, it can simply tell the foreign buyers that it is too bad it cannot fulfil its commitment, so they will then be faced with the loss if they have to repurchase the goods (in addition to having brought a steamer to load, which will have to sail empty or stay in Calcutta for a much longer period than was anticipated, incurring thereby a further loss). They are quite likely to take up the matter somewhere on a more elevated plane, hence more merry hell. The next thrilling instalment of this episode is awaited with keen interest. In the meantime it gives a pretty good idea of how well civil service and business mix.

Foreign Private Investment

The Economic and Social Council of the U.N. is currently meeting in Geneva (the meeting began on 30th June) to discuss the economic development of backward countries. The statistical service of the United Nations has prepared, as a working document for the meeting, a study entitled *The International Movements of Private Capital, 1956-58*, which contains the most detailed and recent review of this subject available. At first glance, the global figures for foreign private investment seem to be extremely encouraging, but when one analyses and separates out the large amount of capital that flows to a few countries fortunate enough to have oil resources, the balance is of very mediocre interest to countries such as India. The U.N. report says that "the prospects for an increase of private capital movements towards the under-developed regions, and for an increase in the rôle that such capital plays in economic development, are better than they have ever been". It highlights, as "the outstanding feature of recent years", the reappearance of the west European nations as major exporters of private capital; on the other hand, it equitably draws attention to the numerous measures prospective borrowing countries have taken to make their economies more attractive to the foreign capitalist. But more striking than any of these facts is the vast inequality in the distribution of foreign investments, depending on whether borrowers have oil resources or not.

The U.N. estimates that in the four years 1955-58 the total outgoing of private capital from the main lending countries (including a guess for undistributed profits ploughed back by overseas branches and filials) came to $17,000 million. If one compares this large figure with the total foreign private investments made in the five years 1924-28, which came to $5,000 million, one must conclude that, even taking account of the depreciation of the dollar over the past generation, private capital moves abroad much more today than it did in the prosperous 'twenties. But the figure of $17,000 million includes investments exchanged between the advanced nations—such as U.S. investments in Canada and western Europe, and West German investments in North America. Long-term private investment in countries that can properly be called under-developed came to $8,000 million over the four years, or an average of $2,000 million a year. This is still high, and in fact is equal to the total of governmental loans and gifts made to the under-developed countries in that period. But three-quarters of it represents U.S. private investment in Latin America ($1,500 million in 1957, for instance), and the bulk of this

sum went, not to the poorer South American countries, but to the oil-producing regions, Venezuela and the West Indies. Similarly, the greater part of British private investment was accounted for by the oil companies. Virtually all the private capital received by the Middle Eastern countries was destined for this one industry, and with the opening up of the Sahara much of the capital going to Africa was of the same nature. (Most of the remaining private investment in Africa went to the South African gold mines, and the copper, cobalt, tin and manganese deposits of the Belgian Congo.)

The upshot is that the ten poorest countries of Asia, which have insignificant oil resources, received only $100 million of private investment—whereas they received $600 million from foreign governments as official aid. And even a part of this foreign private capital was connected with the oil industry—for instance, the substantial investment in the oil refineries in India. So if one leaves out of the reckoning the oil industry, the flow of foreign private capital will appear much less impressive than the global figures suggest. Naturally, it is not claimed that oil investments "don't count". They do; their effect on a country's balance of payments is, in the short term, the same as that of any other private investment. But they constitute a very special case, which needs to be considered separately, if only because in most countries they take the form of machinery manufactured abroad and used to produce a commodity that is entirely sold abroad, with the result that the local stimulating effect is often minimal.

From India's point of view the most encouraging facts revealed by the U.N. report are these. Firstly, foreign private capital invested in India used traditionally to go to plantations, commerce and transport, but now it is increasingly finding its way to manufacturing industry. Secondly, Western private banks are playing an ever more active rôle, both in supplying short-term credit (export credit, particularly) and in supplementing the work of official and semi-official agencies by subscribing to medium-term loans or placing them with their own public. It is difficult to put a figure on this work, but there is no doubt that it helps open the way for private long-term credit later.

Underwriters and Ships

In his address at the annual meeting of the Association of Average Adjusters in London recently, Mr. Maurice Hall Downes, chairman, raised some interesting points for insurers, ranging from the liability of underwriters for unrepaired damage, to problems arising out of giving notice of abandonment in constructive total loss cases. On the subject of unrepaired damage, Mr. Downes said it is unfortunate that in the last ten years, two decisions have been given in the English courts and one in the United States to the effect that the "reasonable depreciation" referred to in the Marine Insurance Act, 1906 (and stated therein to represent the measure of indemnity for unrepaired damage), cannot be assessed by the simple process of deducting the damaged value from the sound value. The law has in fact decided that the percentage of depreciation determined by comparing the sound and damaged values must be applied to the insured value to ascertain the "reasonable depreciation." Estimating the sound value, the damaged value and the cost of repairs, and deciding the time and place at which these estimates are to be made, pose a number of difficulties. Where a vessel is outside her normal limits of operation—as might be the case under recent conditions, where vessels are being laid up for lack of suitable employment —Mr. Downes was extremely doubtful whether the place at which she happens to be at the termination of the risk under the policy is necessarily the right one at which to assess the depreciation and cost of repairs. It might well happen, under recent conditions of falling values, that the estimated cost of repairs remains more or less constant, or even increases, while the sound value falls. In such a case, the estimated cost of repairs might exceed the sound value of the vessel at the termination of the risk.

If the suggested legal formula is applied, the recovery might be greatly in excess of the sound value—a strong argument against the result obtained by the formula. The fact remains, however, that the assured has a right to recover reasonable depreciation from the underwriter, and it is on this basis that any investigation should commence. The chairman felt strongly that clarification of the situation would save much of the time and effort at present spent by brokers and underwriters on settling such claims. The precise point of time at which an assured ought to give notice of abandonment to underwriters in order not to prejudice his own interests has always been a matter of contention. Mr. Downes did well to draw attention to this confusing feature of constructive total loss cases. He said the situation created by the present form of the law is far from satisfactory. If he is right, it is most important that notice of abandonment should be given at the earliest possible moment; if, as mostly happens, it is refused on the usual terms—that at the time of declinature underwriters agreed to place the assured in the same position as if a writ had that day been issued against them for payment of a total loss—the assured has secured the most favourable position available to him. However, it has to be remembered that notice of abandonment can only be given if there is enough information to justify it. The assured invariably feels inclined to give notice before he really possesses sufficient information. He is often in a quandary, for he is not supposed to give notice before he has sufficient information, yet he might prejudice his position by delaying. Mr. Downes thought it well worth investigating whether anything can be done to save the assured from this perplexing situation.

The chairman then turned to his second point—the question of the assumption of ownership of the wreck by underwriters on payment of a conservative total loss. Underwriters have the right to refuse the wreck if they feel that by taking it over they will assume liabilities which exceed its value, but Mr. Downes thought that some definite decision should be taken in reasonable time and that the decision should be made known to the assured. The assured is frequently left in doubt as to whether he or the underwriter is to be considered the owner of the wreck. If something can be done to make a definite decision possible within a reasonable time, it will be of great help in settling such cases.

Sen-Raleigh Profits Down

The profits of Sen-Raleigh Industries of India Ltd declined during the past year because a shortage of raw materials prevented production from reaching the targets necessary to offset the general rise in costs. But the directors have recommended that the ordinary dividend be maintained. Speaking at the annual general meeting of the company, which was held in Calcutta on Monday, Mr. S. K. Sen, chairman, said that the raw material shortage and the frequency of lay-offs handicapped regular production. So the turnover was not much higher than in the previous year. (A fuller version of the speech appears elsewhere in this issue of *Capital*.) Although the plant required for the expansion programme arrived, it could not be used because raw materials were not available. The import licensing policy for the bicycle industry was announced towards the middle of last year. But the company's expansion programme did not benefit much as the foreign exchange released under it only allowed the 1957 level of production to be maintained. It will be possible to increase the production of bicycles beyond the 1957 level if raw material supplies can be augmented from indigenous sources. "In the present circumstances, what the industry needs badly is an import licensing system which allows licences for all categories of materials to be issued simultaneously, instead of the issue being spread over four or five months in each period when production is always dependent on the last licence issued. Much of the material supply problems encountered by industries today would automatically disappear if such simultaneous issue of licences could be achieved."

Meanwhile, the Central Ministry for Industries has announced certain changes in the licensing policy for April-September 1959. Mr. Sen said that these would help stabilise production programmes. It is necessary to attach greater importance to the production of components. Sen-Raleigh is now in a position to increase its bicycle output well above the 1957 level because it depends on component imports only to the extent of Rs 2 a bicycle. The foreign exchange shortage has compelled manufacturers to use domestic resources to the maximum. The progress towards self-sufficiency which ha been accomplished in only one year would normal ly have taken four or five years, Mr. Sen said Referring to exports, he declared that the com pany's efforts to develop foreign markets have nc met with any major success. East European cour tries are quoting prices at which transactions ar not possible. In spite of the trade agreement be tween Burma and India, the former has not ye issued import licences for bicycles.

Raw Rubber Shortage

The output of rubber products in India has increased sharply, but domestic raw material resources have not risen to the same extent. On the contrary, the gap between raw rubber supply and demand continues to widen. It was 13,722 tons in 1958, representing about 37 percent of the total rubber consumption in that year. The proportion, it is reported, has gone up to 50 percent during the first quarter of 1959. Mr. K. N. Mookerjee, chairman, National Rubber Manufacturers Ltd, said at the latest annual general meeting of the company (a fuller version of the speech appears on another page of this week's *Capital*) that in spite of the raw rubber price having been raised five times between March 1951 and August 1958 (a total increase of 71 percent, which includes a cess for raising funds for rehabilitation, replanting and development of rubber plantations) production has not increased appreciably. "Consumers are obliged to pay to the Rubber Board large sums of money covering the difference between the high Indian controlled rates and the lower prices of imported rubber." Yet during the past year, only 6,520 acres were replanted, against a target of 14,000 acres. The yield too remains at the low level of 270 lbs. The country has spent much foreign exchange on importing natural and synthetic rubber. Mr. Mookerjee urged that the Rs. 30-crore scheme to manufacture synthetic rubber in the country should be given high priority. Steps should also be taken quickly to implement the schemes for manufacturing carbon black and certain rubber chemicals in India. The current consumption of carbon black is estimated at approximately 10,000 tons, and that of accelerators and anti-oxidants at 600 tons to 700 tons a year. These figures are likely to increase considerably in coming years with the rise in rubber consumption. An American firm has shown interest in the carbon black plant which it is proposed to establish under the auspices of the National Industrial Development Corporation. A team of Rumanian experts visited India in 1958 for a fresh survey of the same scheme and their recommendations are awaited. A few proposals for the manufacture of rubber chemicals in the private sector have been approved by the Government. Mr. Mookerjee suggested that the Government take prompt measures to have these projects started.

Discussing the expansion schemes of his company, Mr. Mookerjee said that due to the growth in rail and road transport, the demand for certain products, such as bicycle tyres and rubber fittings for railways and motor-vehicles, has increased considerably. Industrialisation, particularly the expansion of major industries like steel and coal, has enlarged the scope for the production of conveyor and transmission belting, V-belts and other mechanical products in which his company specialises. Its latest model automatic bicycle tyre-making unit has already been installed, and will go into production shortly. The company is now the largest single producer of hoses and belting in India and further expansion in these lines is contemplated. The country is self-sufficient in most rubber products and for certain items there is surplus capacity. The industry will now have to turn its attention increasingly to exports, although the value of the latter has gone down from Rs. 176.20 lakhs in 1953-54 to Rs. 15.71 lakhs in 1958. The Rubber Panel of the Chemicals and Allied Products Export Promotion Council has tentatively suggested a target of Rs. 156.59 lakhs in 1959-60. Accordingly, the company has told the Government that it intends to export substantial quantities of bicycle tyres.

West Bengal Financial Corporation

The West Bengal Financial Corporation ha achieved better working results for the year ende 31st March, 1959. Its profits have improved to Rs 4.76 lakhs, from Rs. 3.92 lakhs in the previo year. The profits earned in 1954-55, 1955-56 an 1956-57 were Rs. 1.28 lakhs, Rs. 2.45 lakhs and 2.94 lakhs, respectively. If the Rs. 18,559 wh the Corporation earned during the past year as terest on a loan account, which the party concer ed has not paid, were included in the profits, th results would have been even better. The Corpo ration's gross income has increased to Rs 8.1 lakhs from Rs 5.29 lakhs, and its investible funds have been raised from Rs. 1 crore to Rs. 1.50 crores ugh borrowing. But in spite of the improve- t in profits, the Corporation has had to approach West Bengal Government for a subvention of 1,64,267 to pay the dividend at the guaranteed imum rate. This, said Mr. B. M. Birla, chair- , in his address at the fifth annual general eting of the Corporation last week in Calcutta, ue to the fact that the Corporation's tax liability increased because of the changes in the latest ance Act. The present level of taxation and obligation placed on the Corporation to pay inimum guaranteed dividend from the very beginning give little scope to build an adequate reserve, which is vital for an institution of this kind.

From the figures furnished by Mr. Birla, it appears that the Corporation is pursuing a rather conservative policy in granting loans. During the year under report, it considered 48 applications for loans amounting to Rs. 111.9 lakhs, out of which only 15 applications for loans aggregating Rs. 36.3 lakhs were sanctioned. The remaining 33 applications for loans totalling Rs. 75.6 lakhs were rejected. "It is a matter of regret that in spite of our anxiety to accommodate the applicants, a large percentage of the applications had to be rejected for cogent reasons, which cannot be ignored in granting industrial loans on a long-term basis." Not all the loans sanctioned were taken by the applicants. Nearly 25 percent were declined by them "without giving any convincing reasons", but Mr. Birla thought that "lack of confidence in or the absence of opportunities for successfully carrying out the proposed scheme for which the finance had been applied for, was, in many cases, the reason for backing out after arranging for the loan." The climate for new investment was discouraging, he said. One of the objects of the West Bengal business men's convention held early this year in Calcutta was to "create an atmosphere and climate favourable to the establishment of new ancillary and medium-scale industries." But the sharp increase in taxation during the last few years has had an adverse impact on industry, and the steadily rising cost of living is undermining industrial peace. The only solution to West Bengal's unemployment problem lies in the expansion of industries. A favourable atmosphere needs to be created for business activity to flourish in the State.

Bombay Financial Corporation

The Bombay State Financial Corporation earned a gross income of Rs. 16 lakhs in 1958-59, compared with Rs. 12.76 lakhs in the previous year, but profits were Rs. 50,636 lower at Rs. 7.78 lakhs. This was mainly because of an increase in establishment charges, directors' fees, and expenses and interest on bonds. The substantial sums borrowed during 1957-58 remained uninvested during the year under report, as there was little demand for the Corporation's funds, with the result that the interest paid on them was far in excess of that realised from banks on term deposits. In order to meet the dividend liability at the minimum guaranteed rate of 3½ percent a year, the Government of Bombay has been requested to sanction a subvention of Rs. 5.59 lakhs in relation to the past working year. The subvention in the previous year was Rs. 3.99 lakhs. The report of the directors, presented at the annual general meeting last week in Bombay, explains that the need for a bigger subvention has arisen because the Corporation's net profits have fallen and tax liabilities are higher. The chairman reported in his speech that the Corporation will have taken a total subvention of Rs. 23.31 lakhs since 1954 up to 31st March, 1959, and will have paid Rs. 19 lakhs during the same period as income tax. Since "the subvention is being utilised mostly for payment of taxes," he suggested that a review of the Government's present policy, which does not grant any tax relief to the Corporation, is necessary.

As for financial assistance to small and medium industries, the report states that applications from all types of industrial concerns for loans ranging between Rs. 10,000 and Rs. 10 lakhs are being considered. During the past five years of working, the Corporation has sanctioned loans aggregating Rs. 3.83 crores to 181 concerns. Unless the advances exceed Rs. 4 crores, it will not be possible for the Corporation to work on a profitable basis. Of the 181 concerns, 114 are medium-scale and 67 small-scale. Besides, the Corporation has subscribed to the debenture issue of a concern amounting to Rs. 3.75 lakhs. During 1958-59, it received applications for loans from 97 concerns, including 39 brought over from the previous year; these included applicants from the ceramic, electricity, general engineering, ginning and pressing, metals, oil-crushing, pharmaceutical and chemical, paper and paper board, mining and quarrying, textile and miscellaneous industries. Only 27 applications were sanctioned. Of these, 13 were for general engineering, one for ginning and pressing, two for textiles and eight for the miscellaneous group. The report points out that effective steps are being taken to process applications which could not be disposed of during the past year. The Corporation received 127 applications from small-scale concerns for loans under the State Aid to Industries Rules, 1935, as agents of the Bombay Government. Thirty-two of these were recommended for loans, 101 were rejected and 72 are being considered.

U. P. Financial Corporation

The U.P. Financial Corporation has earned a net profit of Rs. 4.21 lakhs for the year ended 31st March, 1959, against Rs. 3.80 lakhs in the previous year. The directors propose to set apart Rs. 2.24 lakhs for the guaranteed dividend of 3½ percent, after transferring Rs. 10,000 to the statutory reserve fund and making a provision of Rs. 1.87 lakhs for taxation. The total amount of dividend payable for the year is Rs. 3.5 lakhs. It is proposed to use the Rs. 2,24,497.83 set apart for the payment of dividend and request the State Government to give a subvention for the balance of Rs. 1,25,502.17 to make up the guaranteed dividend. During the year, the Corporation sanctioned loans amounting to Rs. 24.2 lakhs to ten applicants, against Rs. 45.75 lakhs in the preceding year. It also issued bonds of the face value of Rs. 50 lakhs, bearing interest at 4½ percent a year, to increase its resources. Although a total of Rs. 1.37 crores had been sanctioned as loans from the inception of the Corporation until 31st March last, the actual amount of loans disbursed was only Rs. 75,74,500. Loans aggregating Rs. 46.13 lakhs had been declined by the parties or reduced or cancelled by the Corporation. The balance of loan commitments at the end of the year was Rs. 15,34,500.

Castor and Groundnut Oil

Castor oil exports have been quite satisfactory recently. Business has been put through for approximately 21,000 tons, of which the United States alone has accounted for 8,000 tons to 10,000 tons. Buying by communist countries has also been sustained. The prospects for the immediate future are bright because the United States still has to cover its full requirements, with consumption running at a high level and with Brazilian supplies not being readily available. But American importers are reluctant to buy on a large scale. Price is still the major factor and they tend to spread their purchases in order to avoid a sharp rise in rates. In spite of their urgent need for supplies, they are determined to strike a hard bargain. It is, however, gratifying to note that the Bombay market has reacted realistically in spite of the temptation to force up prices. Along with the export demand for oil, domestic crushers are buying oilseeds, but the September castorseed contract has fallen to Rs. 158.87 from Rs. 177.62 in the middle of May. The range of recent fluctuations indicates that there may be no appreciable increase in prices. On the contrary, with the onset of the monsoon, there may be a small seasonal decline. If this occurs, the prospects of further substantial business with the United States and the United Kingdom will be good.

Exports of groundnut oilcakes and expeller have been satisfactory. The United Kingdom purchased about 9,000 tons of extractions recently at around £33 15s a ton, but business was limited by the available quota. The trade is eagerly looking forward to an announcement from the Government about the future policy for the export of groundnut oil. The Indian quotation is still above world parity and sales abroad will be impossible unless the export incentive scheme is continued. The scheme expired on 30th June, 1959, and there is considerable uncertainty in the trade about the future. The Government has a difficult choice to make. The statistical position of groundnut oil is far from comfortable, and any further exports will be at the expense of the home consumer. Since groundnut oil is required as a raw material for the vanaspati industry, it might be advisable to restrict exports. But, on the other hand, foreign exchange is needed and if the export incentive scheme linking oil with cakes is continued, considerable business is possible. The overseas demand for cakes has been exceptionally good and it is believed that it will broaden still further. In these circumstances, with favourable cake prices, it should be possible to sell large quantities of oil and earn substantial foreign exchange.

The Expressway to Durgapur

Addressing the committee members of the Bengal National Chamber of Commerce and Industry last week, Mr. S. K. Patil, Central Minister for Transport and Communications, announced that the Centre will give Rs. 5½ crores for the expressway which the West Bengal Government plans to build soon between Bally and Durgapur to relieve the traffic congestion in Calcutta's industrial hinterland. It is not yet known whether the State Government has accepted the suggestion that the proposed four-lane highway should start somewhere nearer the heart of Calcutta, eve though this might involve the widening of th Bally bridge. But Mr. Patil's pointed reference t the serious nature of the traffic congestion in Ca cutta city itself might just conceivably mean tha the Centre would prefer this. Mr. Patil made or other announcement which will be modestly en couraging for the people of this State. It is tha work on the Farakka barrage will begin after th second plan, and will not be postponed indefinitel as is feared in some quarters. Mr. Patil explaine that the choice of Ernakulam in preference t Geonkhali as the site for the second shipbuildir yard does not mean that the latter is less suitabl the selection has been made on such consider tions as the balanced development and the sec rity of the country. Geonkhali stands a very goc chance of being selected as a site when more shi building yards are constructed in the future.

Replying to the plea of the Chamber's presider Mr. D. N. Bhattacharjee, that the development of road transport should be encouraged, Mr. Patil said that there will be enough scope for the development of all forms of transport during the next 25 years or so. "There is no reason to fear that different modes of transport will compete with one another in a harmful way. Such competition may exist in highly advanced countries but not in India, which lags far behind them in road transport," Mr. Patil said. While acknowledging the need for a long-term plan to prevent overlapping and to build a well co-ordinated and efficient transport system, the Central Minister said that at present road transport is becoming increasingly important. All goods cannot be carried by the railways. Besides, roads will continue to be the best means of communication among villages. The railways with an investment of Rs. 1,000 crores are contributing Rs. 40 crores to the Exchequer, whereas road transport with an investment of possibly Rs. 1,500 crores contributes more than twice as much—about Rs 95 crores—in taxes. It also employs more people than the railways, Mr. Patil declared.

New Insulator Factory

The charges for electrical energy provided by the Madras Electricity Board to industrial and domestic users might be higher under its scheme for a rationalised tariff. There is no doubt that the Board has kept in view the possibility of a further increase in demand for power from industrial projects sponsored by private enterprise. Two years ago, a company was launched by the Seshayees of Trichinopoly (which took over the Mettur chemical plant from Calcutta interests 20 years ago) to find a local use for the fine clay which is found in Neyveli. A factory for making both H.T. and L.T. insulators of porcelain is to be started within a few months. It will supplement the production of the Government electrical factory in Bangalore. The new company proposes to set up a large self-contained workshop for making electrical equipment. Its paid-up capital of Rs. 30 lakhs in shares has already been subscribed privately. The ordinary capital of Rs. 21.6 lakhs and the preference capital of Rs. 8.4 lakhs has been fully taken up by investors in Tanjore and Trichinopoly. The block, including the cost of machinery, might amount to Rs. 50 lakhs and the Refinance Corporation, it is said, has agreed to provide Rs. 15 lakhs. An agreement relating to technical collaboration and deferred payment has been signed with a West German firm which is a leading manufacturer of insulators. It is expected that the plant will be commissioned in October this year.

COTTON MILL CRISIS

A "MOFUSSILITE" correspondent asks us as to the reason of the present great depression in the cotton mill industry and whether any improvement in the trade is likely. This is rather a difficult question, and there is no doubt that the cotton mill industry in Bengal has entered on a very unprofitable phase. The mills have heavy unsold stocks, and these stocks show more disposition to increase than to decrease. The reason of this, so far as we can ascertain, is two-fold: the first is, that there has been a great falling off in the China and Japan demand for cotton yarn; and, secondly consequent upon the cheap price of cotton, Manchester has been able to put upon the market a cloth which competes with advantage against that manufactured by hand-loom weavers from the locally made yarn. The result is, that the mill deliveries have been very small, stocks have accumulated, and prices have gone down to a point at which a loss has been substituted for the profit hitherto made. When things are at the worst they sometimes mend, and we are almost inclined to the view that things have seen their worst though the mending process will, we fear, be a tedious one. We observe that Bowreah Cotton Mill 7 per cent preference shares, on which one year's interest is overdue, have been done at Rs. 70.

hout Prejudice

Faulty Test of a Testator

(FROM OUR LEGAL CORRESPONDENT)

)W careful one has to be in drawing a will ! The lawyer who drafted the following clause will may well have thought it simple, plain unassailable, and the writer would have ght so too and still, with due respect, thinks The will purported to make a gift to a person arried to, or on marriage to, "a person of sh race and religion." What is wrong with Nothing except that the gift is void. kwerts J. held that it was *impossible* to say "a person of Jewish race" meant, and it d be *impossible* for any candidate to show, reasonable certainty, that he satisfied the which the testator had attempted to lay down. that word "impossible". "Difficult", yes, times, especially the clause in full "Jewish and religion." The writer had the privilege e friendship of a scholar who was Principal hichester Theological College and a canon of Cathedral. His father was an orthodox Jew. Pass was proud of his Jewish ancestry and ied that, like St. Paul and the other apostles, ras a Christian Jew. Probably he would not qualified under the clause. But "impossible". at is so, a person marrying into the Rothschild or the Samuel family or marrying the daughter of the Chief Rabbi could not "show with reasonable certainty that he satisfied the test," which seems absurd. We may expect further developments by way of appeal, perhaps.

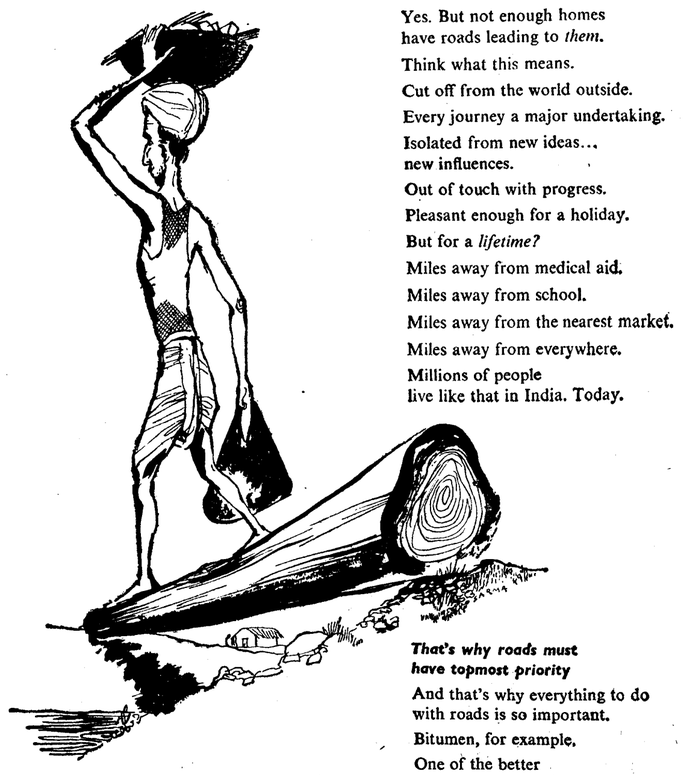
(*Tarnpolsk, Re Barclays Bank Limited* v *Hyer.* 1959. *Law Notes.* Vol. 78. P. 8)

These *benami* transactions between husband and wife! How dangerous they are! The parties marry. All is sweet concord. The husband contemplates entering into a contract which may turn out advantageous to him or may not. He does so in his wife's name. The contract turns out to be advantageous. The husband and wife quarrel. The husband seeks to enforce the contract. "Oh, no!" says the wife. I have ended it." And nine times out of ten, the husband can do nothing about it. He cannot have his cake and eat it too. Here is the latest illustration of the fact.

The husband was the tenant of a house. By arrangement with his wife, he asked the landlord to accept his wife as tenant and to change the rent-book from his name to hers. The landlord agreed and, thereafter, the rent was paid in the name of the wife. Some time later, the wife left the house and gave notice to the landlord that she was terminating the tenancy. The husband remained in the house and the landlord refused his offer to pay rent. Can the landlord claim possession from the husband as being a trespasser ? "Yes", said the Court of Appeal (Jenkins and Romer L.JJ. and Roxburgh J). "The husband is a trespasser. His former tenancy had been surrendered by operation of law when the new arrangement with the wife was entered into, which could not have been made if his tenancy still subsisted. He was estopped from denying that the old agreement had gone."

(*Collins* v *Claughton*: 1959. 78 *Law Notes.* 32).

Life assurance in Ireland. This will come as a shock to the man engaged in life assurance and, if he is an Irishman, will rouse his wrath. It is a letter from a solicitor in Ireland to his clients, a life assurance company in England, and we are indebted to *Law Notes*, London, for being able to reproduce it. As the learned editors put it, the company "must have been up against a tough proposition." "I would be very unwilling," says the lawyer, "to advise the company to contest any claim but Mr. W's claim on C's life is too flagrant an imposition to be submitted to..... there is no doubt but that C and all his brothers were consumptive,.....but at the same time it is next to an impossibility to obtain a verdict in this country from a jury in an insurance case.....besides, the doctor who certified for C is *now the sheriff of this city* while the other referee is *sub-sheriff of the county* (italics the solicitor's), and maintains that C was a good life and if a trial is held in the city or county, there are the gentlemen who have the impanelling of the jury." Shocking indeed! But the non-Irish insurance reader will forgive the leg-pull and it will assuage the Irish reader's indignation when we add that the letter was written in the year of Queen Victoria's accession, 1837. Different conditions, no doubt, prevail today.



Here is an interesting income tax point ; one on which we may venture to prophesy that there will soon be legislation both in Britain and India. The case relates to the estate of the late Mr. Peter Cheyney and to an attempt by the income tax authorities to tax copyright royalties received by that author's executor after his death. The claim is not a new one in principle, nor is its application confined to the estates of authors. It applies to musical composers, for example. The late Sir John Stainer composed a great deal of scholarly work, all of it extremely popular during his lifetime and now, save a few hymn tunes, almost completely forgotten. But he composed one work which today probably earns for his executors more money than that earned by any other British composer, alive or dead, with the solitary exception of Sir Arthur Sullivan's comic operas, of which the copyright has recently run out. That work rendered all over the Commonwealth year by year "in choirs and places where they sing" is *The Crucifixion*. In 1952, the income tax authorities tried to get at the profits accrued to Sir John's executors. The attempt failed. It is the same with film actors. After the tragic death during the war in an air crash of Mr. Leslie Howard, very large sums were earned from his films and were paid to his executors. The same attempt was made. It failed. The principle applies also, it seems, to the earnings of a practising barrister received by his executors after his death and, no doubt, it extends to other professions also.

Now comes the case of Mr. Peter Cheyney's estate, which the income tax authorities took to the final appellate court, the House of Lords, and which settles the issue once and for all until there is legislation, as no doubt there will be in the near future. You may be surprised to hear that the works of the late Mr. Cheney, completely worthless though they may be from a literary point of view, still command a great sale in English and translations throughout the world. These two assessments amounted to about £28,000.

Royalties on Mr. Cheyney's works, including those from publication of an existing work licensed by him in the French language, were assessed during his lifetime under Case II of Schedule D on a receipts basis, instead of an earnings basis Harman J. held that royalties paid to his executors after his death were not liable to tax, being receipts of his profession. They could not be assessed under Case III or Case VI of Schedule D. The income tax department appealed to the Court of Appeal, which affirmed the decision of Harman J. and on further appeal by the authorities to the House of Lords, Harman J.'s decision was again affirmed.

The crux of the case lies in some observations of Lord Keith in the House of Lords appeal : "The difficulties in this and similar cases arise from the fact that assessments to tax are made on a receipts basis, instead of an earnings basis. It may be that in some professions, no more satisfactory basis can be adopted. If the result be, as was suggested, that a large fund of income is to go untaxed, the remedy would seem to lie in legislation."

All roads lead to home

Yes. But not enough homes have roads leading to *them.*

Think what this means.

Cut off from the world outside.

Every journey a major undertaking.

Isolated from new ideas... new influences.

Out of touch with progress.

Pleasant enough for a holiday.

But for a *lifetime?*

Miles away from medical aid.

Miles away from school.

Miles away from the nearest market.

Miles away from everywhere.

Millions of people live like that in India. Today.

That's why roads must have topmost priority

And that's why everything to do with roads is so important.

Bitumen, for example.

One of the better road-building materials.

Inexpensive. Easy to handle.

Long-lasting. Hard-wearing.

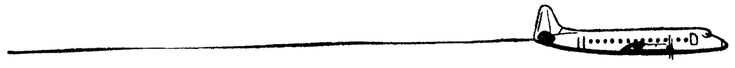
Supplied by Burmah-Shell.

BURMAH-SHELL BITUMEN FOR BETTER ROADS

Burmah-Shell Bitumen is more than an important material—it's a service. Burmah-Shell make available skilled engineers, whose job it is to assist in the construction of roads. Good roads. Cheaper roads. BURMAH-SHELL BITUMEN CAN BE SUPPLIED IN BULK. THIS IMPORTANT DEVELOPMENT, PIONEERED BY BURMAH-SHELL, SAVES VITAL STEEL BECAUSE IT MAKES DRUMS UNNECESSARY. BULK BITUMEN IS PARTICULARLY SUITABLE FOR MECHANIZED ROAD CONSTRUCTION—AND IT IS MUCH CHEAPER IN ITS INITIAL COST.

A Ditcher's Diary

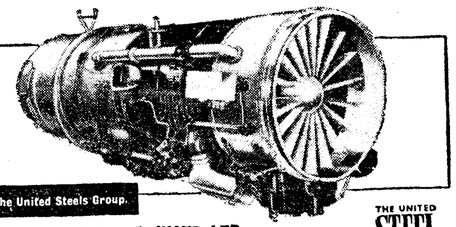
AST WEEK'S HARTAL PASSED OFF LEAVING THE feeling I had lived through it all before. There s the same official shilly-shallying before the ent, together with the same brave words from police and the State Government ; there was same pathetic determination of a few individals not to be intimidated, the same urchin rule the streets and the same absence from the scene the Chief Minister, Dr. B. C. Roy. In fact, the pression was simply that hartals have become rfectly acceptable and respectable features of e in West Bengal and that everybody has settled wn to live with them. Neither side—the strikers r the authorities—appeared to have the slightest ention of interfering with what is now an established, and in some ways convenient, ritual. As the general public, those sections of it which ve not already taken the hint and learned to cept the whole thing as yet another welcome dition to this State's impressive total of holidays, e showing the kind of rugged spirit which is nply not appropriate to this day and age, and ust expect to suffer accordingly. More explicitly, ey are likely to be rewarded with a broken windreen, or worse still a broken head, in full view the nearest police patrol. In my opinion, this ady renunciation of any positive rôle on the part the police is every bit as depressing as the supine titude of the State Government. I appreciate the lemma facing the average police officer, who nows well enough that to do his duty conscienously will be to invite the disapproval of what ught to be responsible authority. But surely it is ot necessary for him to identify himself quite so osely with such recognised items of provocation tram-cars and motor-buses, and to ensure his vn scarcity as soon as trouble is threatened. olice protection in India today is becoming a rivilege for which one must fulfil a number of rict conditions to qualify, instead of an inalienble right of every law-abiding citizen. One must, r instance, comply with any requirement the tate Government considers in its own political nterests. To stand on one's rights in, say, a labour ispute, or a general strike, is to invite damage to ne's property or assault to one's person while the olice look on. The withholding of police protecon is, in fact, becoming a normal kind of hazard nese days in circumstances where the State Govrnment prefers peace at any price.



LIKE MR. RAJAGOPALACHARI, I HAVE NOT THE lightest love for the communist Government in Kerala. But it still seems to me that the Congress Parliamentary Board, in its effort to unseat the Reds, has gone about it the wrong way all along the line ; and I have a feeling that the pusillanimity it has shown proceeds largely from the many contradictions that are Mr. Nehru. He is so many things rolled into one, and some of them are, unfortunately for him, mutually exclusive. As the preacher of co-existence in the world at large, a communist Government in Kerala is almost a necessity for him : he can tell the Americans, 'Look, here's a communist State within India ; and it means no disaster." As Prime Minister, he has to think not only of the Constitution but also of repercussions in the other States where the Congress is in power. But he is also a party man ; and he has been persuaded, perhaps correctly, that not supporting the direct action in Kerala would mean the end of the Congress Party in that State. The Parliamentary Board speaks of fresh elections, which can follow only resignation by or dismissal of the present Government. I do not see that the Opposition is entitled to expect the communists to oblige it by resigning ; and it seems obvious that, for all its willingness to embarrass, the Government of India is reluctant to martyr. The ambivalence is pathetic. Mr. Nehru's difficulties are real, but his strongest point in politics hitherto has been his explicit adherence to his beliefs. I simply do not know what they are in relation to Kerala. If a case has been made out, as many believe, that the Government there has failed to function as a State Government should, the Centre would do well to act boldly and dismiss it. If not, fresh elections must wait until 1962 ; and, meanwhile, the Opposition must wait too. Direct action can be a double-edged weapon politically ; and Mr. Nehru knows it, even if his daughter, or the Kerala Pradesh Congress, does not.

IN READING THE ARTICLES OF ASSOCIATION OF A new company, the layman is often struck by the extraordinary vagueness of the first of them, the one that sets out the objects of the company. It is being formed, say, to make bobbins, yet the first article authorises it, by a skilful use of the most general terms, to undertake almost any imaginable activity. The reason is, of course, that experience has taught directors that companies can have a long life, industry and technology advance, unexpected opportunities arise, and so on. Thus, one never knows when a company might reasonably want to venture into a new field and yet be prevented from doing so by some discontented shareholder demanding the winding-up of the concern on the grounds that the law requires an association be ended when its purpose ceases to exist. A dramatic illustration is provided in a case now being brought by a group of private persons against the Suez Canal Company, in fact against the major shareholders, the British and French Governments. The unexpected contingency in this company's life was, of course, Colonel Nasser, who deprived it in 1956 of its original object, the management of the canal. Nothing daunted, the directors transformed it into the "Suez Finance Company" and began to look around for something else to do with the Rs. 100 crores they have on their books. They accepted the Rs. 5 crores that Colonel Nasser has so far paid them as compensation, but instead of passing this on to shareholders (who would have got it tax-free), they issued shares in a holding company to that value. The company meetings authorising these proceedings have been dominated by the 353,000 shares held by the British Government, thanks to Disraeli ; individual shareholders have been represented by only 47,000 shares. Some of these latter now ask the Paris courts (the company is domiciled in that city) to declare all these goings-on null and void, for the reason that the purpose of the company, and hence the company itself, disappeared on 26th July, 1956. Since then, they maintain, the company has been in a state of liquidation, and the directors have acted, or should have acted merely as mandataries of the shareholders. Their juridical position I could not hope to assess, and in any case the matter must be decided in terms of the French Civil Code, not of our law. But the judgement when it comes will no doubt be read by lawyers around the world with much interest. The law apart, if I were a shareholder, which I am not, I would not press for the Suez Company's liquidation. Its prospects as an investment company seem to be excellent—are not numerous investment companies now being formed in London, New York and Zürich to put capital into the Common Market? Moreover, the company's interest in the Channel Tunnel is a guarantee of the future. That project seems no more visionary today than the piercing of the Suez isthmus did one hundred years ago.

SIR WILLIAM HALEY RECENTLY TOLD US WHAT HE thinks the rôle of the Press should be, which was not an obvious improvement on what Delane said a century or so ago. Now Dr. P. S. Gourgey of the World Jewish Congress tells editors that they can help Authority deal with racial riots by suppressing news—he calls it "lurid details"—of unpleasant incidents. I see his point, without accepting all of it. In this country, I am told, there is a sort of gentlemen's agreement that at the time of communal riots the community of the victim is not mentioned, because that might encourage the tendency on the part of the aggrieved community to get even. This policy is perhaps justified in most circumstances. On the other hand, I do not see how public opinion against these beastly happenings would have been formed without the Press not only publishing but actually dramatising such riots. As a rule, I have found, much greater harm is done to society by not publishing the truth than by publishing it ; and this applies to any kind of truth, pleasant and otherwise. In the unsewn and emaciated copy of the *New Statesman* I have received this week, Vicky has a cartoon showing Gromyko reading a copy of *Pravda* in which the latter says : We may safely accept that Comrade Khrushchev has lately taken Comrade Gromyko's arm in a paternal grip, led him to one side and said: 'Enough is enough.'..."—an amusing parody of what *The Times* published the other day of Macmillan and Selwyn Lloyd. But, surely, the whole point is that such a thing could not possibly have been published in *Pravda*. The function of a free Press is, in normal times, not, repeat not, to be a party to national policies, either in the international sphere or in the internal. Official policies are variable, not eternal verities. Before World War II, for instance, the disastrous policy of the Chamberlain Government was appeasement of Hitler's Germany, and it is known how honest accounts of the doings of the régime were suppressed by a section of the British Press under a mistaken notion of patriotism.



OF THE FEW DRAMATIC GENIUSES WHO HAVE contributed to the advancement of the Bengali stage, the name of Mr. Sisir Kumar Bhaduri, who died in the early hours of Tuesday, should find a most honoured place in the history of Bengali theatre. The renaissance in Bengal which, incidentally, was the impact of western education and culture, left its mark in the form of theatres organised on the western model. It was many years ago that I saw Mr. Bhaduri acting the rôle of Chanakya in D. L. Roy's celebrated drama, *Chandra Gupta*, and I sat enthralled by his extraordinary powers. Mr. Bhaduri's greatest desire in life was to establish a National Theatre in Calcutta but, unfortunately, this remained unfulfilled up to the time of his death. What could be a better epitaph to his memory than an effort on the part of his compatriots to fulfil this unrealised dream?

IRREGULAR TREND IN STOCK MARKET

TAKE-OVER BIDS CONTINUE TO DOMINATE INTEREST

London, 1st July.

THE stock market maintained a satisfactory tone during the past week but movements generally were irregular. The overall volume of business was smaller than recently and interest was selective. Most of the attention was concentrated on the shares of companies involved in take-over developments, among which Harrods in the stores section provided the outstanding feature. Harrods recorded a further sharp advance after the appearance of a third bidder—United Drapery having followed in the path of Debenhams and the House of Fraser. With three sets of proposals to consider, the Harrods board decided to make no further comment until the formal bids have been sent to their shareholders. Meanwhile, the House of Fraser stated that full voting rights will be given to the "A" ordinary shares, which at present have only one vote for 20 shares. Debenhams and United Drapery were around 1s lower, but the House of Fraser issues were about 2s better, while Harrods were about 5s higher. Other stores rose too on the possibility or other take-over bids. Brewery shares were active but erratic on further consideration of the withdrawal of the Sears Holdings bid for Watney Mann. The market generally tended to improve after the earlier uncertainty, and was helped by a number of encouraging factors. These included the improvement on Wall Street, the news of a further fall in unemployment in the United Kingdom, the rise in industrial production, the Chancellor of the Exchequer's reference to robust industrial progress and numerous good dividend statements. Gilt-edged maintained then recent firm tendency and further modest gains were recorded. Among foreign issues, Greek bonds were lower but Baltic issues advanced on speculative buying. Banking shares recorded very little change, but insurances were firm, with Scottish Union and Yorkshire Insurance better on the latter's withdrawal of its merger proposals with Scottish Union. Although generally irregular, the tone of the industrial market was satisfactory and prices were mainly higher. Base metal shares were quiet and generally easier. Oils fluctuated within narrow limits. Rubbers turned easier after initial irregularity, while tea shares were quiet and showed no definite trend.

The Money Market

The end of the half-year is usually a difficult time in the money market, and the conditions experienced last week were no exception. Banks were anxious to keep their books level, and in the absence of bill maturities, they made fairly substantial withdrawals. From time to time, the authorities had to provide considerable assistance but only a small amount of borrowing on Bank rate terms took place. The general borrowing rate for short-term loans was around 3½ percent, but in the more difficult periods 3¾ percent was conceded. Business in bills was restricted by the credit stringency but Septembers and "hots" usually changed hands at 3¾ percent. The weekly Treasury bill tender proved uneventful and the average rate came to £3 9s 0.52d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 24th June showed that the U.S. gold stock declined by $364 million to $19,771 million. The fall included the $343,750,000 paid to the International Monetary Fund as increased subscription. Foreign deposits rose by $59 million to $337 million, while foreign investments were $15 million higher at $3,909 million. The Federal Reserve sold $25 million worth of bills, making the total holdings of Government securities $25 million down at $25,919 million. Total discounts and advances fell by $222 million to $909 million, while the aggregate excess reserves of member banks fell by $451 million. The daily average excess reserves of member banks were $24 million higher at $497 million, while their daily average borrowings fell by $100 million to $876 million. The business loans of New York city banks fell by $63 million to $11,091 million, compared with a fall of $3 million to $11,050 million in the corresponding week of last year. Gold certificates on hand and due from the U.S. Treasury were $74 million lower at $18,561 million. Federal Reserve notes in actual circulation were $45 million lower at $27,308 million. The daily average of deposit member bank reserve accounts was $681 million lower at $18,188 million.

Activity on Wall Street

U.S. Treasury bonds generally held steady during the past week in quiet dealings. Terms of the U.S. Treasury's $5,000 million cash financing were in line with what had been expected. Speculative rail lines were sometimes fractionally higher while convertibles moved higher in sympathy with the stock market. Quiet conditions again prevailed in the foreign bonds section. Australians were the most active with prices tending to ease. Japan 5½ percents slipped while Brazil 3¾ percents were firmer.

U.S. Gold Stocks Decline

U.S. Treasury gold stocks declined by $364 million in the week ended 24th June, the New York Federal Reserve Bank reported. Of the total $343,750,000 represents the U.S. payment of the gold part of its increased subscription to the International Monetary Fund. The total decline since the start of the current year amounts to $753 million. The current gold stock total is $19,771 million which is $585 million under that of a year ago, and the lowest since 19th June, 1940.

Paris Gold Quiet

The Paris gold market was quiet throughout the past week. Only fractional changes took place without any modification in the basic trend. The market is waiting for the French tax reform which is aimed at the inheritance tax. The Geneva conference failed to affect the market which was considerably less active than in recent weeks.

Hongkong Gold Easier

Prices in the Hongkong gold market tended downwards during the past week due to small trade and lack of incentives. In the early stages, values gained fractionally, eased during the mid-week touching the period's low but finally closed showing no change over the period. Carry-over charges were nil. Arrivals from Macao amounted to 18,000 ounces. Forward contracts were done at $(U.S.) 38.01 an ounce c.i.f., Macao.

Devaluation of Spanish Peseta Rumoured

Financial circles in Madrid say that the probable extent of the impending Spanish devaluation is likely to be in the range of between 33 percent and 36 percent. The most probable new rate is one of between 56 pesetas and 58 pesetas to the dollar against the current official rate of 42 pesetas a dollar. The sources add that the final rate has, quite possibly, not yet been fixed. They say that it may well be necessary to keep a few preferential peseta rates in order to maintain exports. Last week the Spanish cabinet held discussions with top officials of the International Monetary Fund and the Organisation for European Economic Co-operation. Following these talks, the impression in financial circles in Madrid was that Spain would probably obtain foreign credits and also be admitted to the O.E.E.C.

U.S. Steel Strike Postponed

The strike by the 500,000-strong United Steel Workers Union, threatened for 1st July, has been postponed until 14th July after the week-end intervention by President Eisenhower.

Money

THE CALCUTTA MONEY MARKET

ADVANCES CONTINUE SLIGHTLY LOWER

Wednesday, 1st July.

THE past week has seen a moderate fall in the level of advances outstanding in the Calcutta money market. Funds have been returning from the sugar mills in fair quantities, but other sources of demand, including the jute and cotton industries, show little or no change. There has been a further increase in advances to State Governments on account of foodgrain procurement and storage. The interbank market was tighter today after showing extreme easiness at the beginning of the week. The call rate is back to 3½ percent after business had been done down to 3 percent.

Once again it has been a quiet week in the exchange market, with very few bills of any kind coming to hand. Demand for remittance has been keen. The pound is ruling steady, and shows fractional gains against the U.S. dollar and some Continental currencies. The Canadian dollar is, however, dearer against sterling.

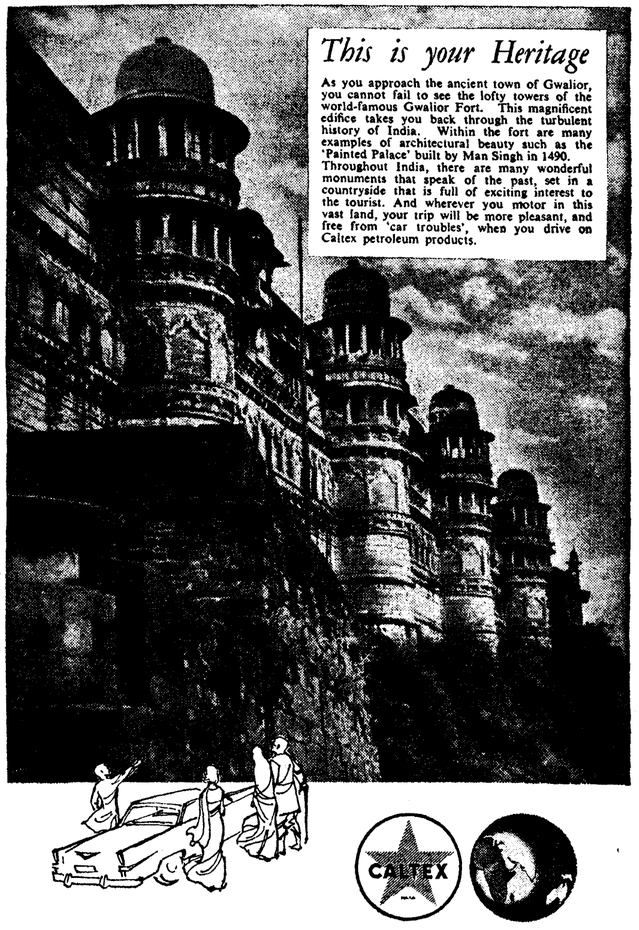
BULLION WAS STEADY LAST WEEK ON REPLACEment buying. Silver advanced from the previous week's level of Rs. 195.25 to Rs. 196, quoted today for ready delivery. Forward delivery was quoted at Rs. 195. The London and New York prices were 78⅜d and 91.375 cents.

Gold was steady in sympathy with silver. The price was quoted at Rs. 122.50. The sovereign realised Rs. 79.

DECLINES OF Rs. 24.23 CRORES TO Rs. 1,713.56 crores in active notes and of Rs. 18.50 crores to Rs. 1,752.01 crores in the total note issue were the notable features of the return of the Reserve Bank of India for the week ended 26th June, 1959. The currency contraction was adjusted by reducing Government securities by Rs. 20.02 crores to Rs. 1,325.73 crores in the paper currency reserve. In the Banking Department, deposits of the Central Government increased by Rs. 65 lakhs to Rs. 50.47 crores but other Government accounts were Rs. 1.69 crores lower at Rs. 16.60 crores. Balances of commercial banks improved by Rs. 19.47 crores to Rs. 99.35 crores. Balances held abroad declined further by Rs. 1.07 crores to Rs. 14.55 crores. Investments at Rs. 322.39 crores showed a gain of Rs. 20.04 crores. Other loans and advances rose from Rs. 61.70 crores to Rs. 64.87 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.45 crores (Rs. 3.46 crores). Ways and means advances totalled Rs. 23.43 crores against Rs. 27.18 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 19th June, 1959, shows a rise of Rs. 4.53 crores to Rs. 530.74 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 32 lakhs and Rs. 20 lakhs to Rs. 301.71 crores and Rs. 10.26 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 31 lakhs to Rs. 194.12 crores. Cash and balances are, in consequence, shown at Rs. 32.06 crores or Rs. 6.18 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 19th June, 1959, shows Demand and Time liabilities at Rs. 757.52 crores (Rs. 28.41 crores on account of borrowings from banks) and Rs. 1,020.99 crores (Rs. 28.01 crores) compared with Rs. 750.06 crores (Rs. 28.60 crores), and Rs. 1,017.73 crores (Rs. 27.52 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 3.93 crores and Rs. 5.37 crores to Rs. 48.68 crores and Rs. 73.19 crores, respectively. There is a rise of Rs. 14 lakhs to Rs. 634.95 crores in investments. Advances and bills discounted at Rs. 999.67 crores show a fall of Rs. 1.45 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.9 percent and 56.2 percent, against 6.4 percent and 56.6 percent.



TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 26-6-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
26-6-59	27-9-59	2,00,00	Rs. 2.760%

PROFESSOR GALBRAITH COMMENTS ON FOREIGN RESOURCES FOR THE THIRD PLAN

REORGANISATION OF PUBLIC SECTOR SUGGESTED

THE following is the text of certain comments made by Professor J. K. Galbraith on "foreign resources in the third five year plan" during his recent visit to India:

"Before coming to India, I had concluded that much of the preliminary thinking on the third five year plan was concerned with avoiding the problems and crisis of the second plan. The men of sound judgment, those inveterate gamblers of our time, were arguing successfully that India with her rapid increase in population and her even more rapid increase in aspirations, should try the reckless experiment of economic stagnation. I am vastly pleased, now that I am here, to see that there is a strong contrary view. Whether a Rs. 10,000-crore plan, a figure on which discussions seem to be settling, is the proper size, I cannot say. The strain on resources will always be great. But such a plan would be smaller relative to what is available than the second plan. However, it is not my purpose to comment further on this except to say that any safe, sound and, indeed, any tolerable plan must be big.

"I would like to comment on the discussion of foreign resources and foreign aid in the preliminary papers I have seen. Of the total investment of Rs. 10,000 crores, it has been suggested that Rs 1,000 crores are to come in the form of grants and loans from abroad.* This compares with a probable Rs. 1,400 crores in the present plan. It would be 10 percent of total net investment and 18 percent of the increase in gross national product during the plan period. In the present plan, foreign aid will be about 23 percent of net investment and 55 percent to 60 percent of the increase in product. On these comparative grounds, the figure of Rs. 1,000 crores for foreign assistance does not look excessive. Nevertheless, the planning papers and discussion seem to be defensive on this figure. It is suggested that foreign assistance is to be cut sharply in the later years of the third plan. And a major aim of this plan period is to make India independent of such assistance. The arguments for this are several: dependence on loans and grants will jeopardise India's political independence; the debt is becoming excessively burdensome. Interest and repayment are a heavy burden on the balance of payments. It is not surprising that anyone who argues for independence of overseas grants or loans wins immediate approval. However, so many dubious and false propositions are implicit in these seemingly impeccable conclusions that the critic has a sense of surfeit.

Political and Moral Issues

"The political and moral questions may be disposed of first. It is unlikely that India, having escaped the British *raj*, will succumb to the control of its creditors. Among the ominous figures in Indian history, Eugene Black is unlikely to rank with Robert Clive, Warren Hastings or even the late Lord Curzon. It is true that, in the past, some small countries have been taken in hand for their debts, but this is not the fate of great nations. Had it been so, the United States in the nineteenth century, always a large debtor and sometimes an unreliable one, would have succumbed to Baring Bros. Creditors will always presume to make suggestions to debtors. Debtors, if they are otherwise strong, need not hear or fear. Some articulate Americans are unquestionably troubled by Indian socialism. But as many, and I am sure many more, defend India's right to make her own choice in her own way.

"Some of the Indian objections to grants and loans is evidently moral. They proceed from what in the United States are called the copybook maxims. 'Neither a lender nor a borrower be'. However, this cogent advice has never been followed by those who have won wealth. Those immoral but practical souls have always borrowed liberally. The moral precepts covering debt and assistance reflect mostly the desire of the well-to-do to be relieved of responsibility for the poor. How much better if they live with austerity and look after themselves. These are not necessarily the precepts for a developing country.

Servicing Loans

"It is quite true that service charges on loans are increasing. In the current year, they are Rs 23 crores. In the second year of the third plan, according to some preliminary projections, they may reach a peak of Rs. 100 crores. But, save in the fiscal imagination, these are not a unique or a decisive element in the balance of payments. They must be covered. But so must the growing payments for oil. Should the burden become too severe, arrangements can always be sought, at least on the Government loans, for extending periods of repayment. There is no crime in this. It is frequent commercial practice. Such extensions, so far as the inter-governmental loans are concerned, might be easier to arrange than new borrowing.

"I come now to the affirmative case for employing foreign resources to the full. Growing countries have almost always borrowed. Even Russia has frequently indicated its desire to do so. The purpose is not to save resources for internal consumption and this should not be the goal. (Belts cannot, of course, be tightened when there is nothing under them and people cannot afford them in any case.) Rather, foreign resources increase the pace of advance and provide capital equipment which is not available in the country and which would not be paid for from ordinary foreign exchange earnings. Repayment is from the earnings of the capital. Since this claims only a part of the returns on sensible investment, there is a net gain from the transaction. In the last century, private capital nourished the development of many countries. At present, it confines itself, certainly in professedly socialist countries, to a rather narrow range of oil, mineral and marketing activities, combined on occasion with promises of future wonders that have a rather low cash value. Government-sponsored capital movements have, accordingly, taken the place of private capital movements. Whether good or bad, this is the modern form of capital movement. It is here to stay, and must now be regarded as perfectly normal and natural.

Responsibility for Helping

"At the same time since the second World War, the richer countries, in one of the rare improvements in the human conscience, have come to feel some responsibility for helping the poorer lands. The motivations are complex. Arcane strategic calculations are combined with a sense of uneasiness and even guilt over the great and growing difference in affluence. But I think it possible to conclude that kindness and compassion are not wholly absent. If there has been an improvement in the human conscience, it should obviously be welcomed, encouraged, cherished—and used. So both government loans and government grants should be considered a normal aspect of modern international relations. If the Indian Government by some false calculation or some misplaced morality fails to exploit them fully, it does a disservice to its own people, to other needful countries and perhaps even to the souls of those who are impelled to provide the assistance.

"In the past, it was not the growing burden of debt and not the burden of transfers on the balance of payments which brought an end to capital imports. It was the increase of wealth and well-being. Speaking very broadly, increased well-being meant a declining urgency of consumption, and an increase in savings. More domestic resources were thus available for investment. Presently, some became available for export. Thus capital imports changed to capital exports. Obviously, if this historical criterion of when there is an end to borrowing is taken as a guide, India will be in no such happy position by the end of the next plan. Consumption will still be meagre. Savings will still be relatively small. Capital imports, if less irreplaceable than before, will still be capable of making a major contribution to growth. So to end capital imports would be to sacrifice the growth. Further, governments, if they are rational, will want this growth. Their hands should not now be tied by a policy that seems to exclude this opportunity. Nor should present policies have the effect of making such future borrowing seem an admission of failure or a miscarriage of plans. For all these reasons, the emphasis in current discussion on eliminating capital imports by the end of the third plan is wrong.

"The effort to make India independent of foreign assistance needs to be distinguished from the effort to reduce dependence on imported capital goods. The latter is a natural and desirable consequence of industrial development. It is assisted by measures which ensure balanced growth. And once India has engineering, machinery, electrical and similar industries, there is a greater certainty that growth can continue in the absence of capital imports. But achieving this stage does not mean that capital imports contribute less to growth. It is merely that they are no longer imperative. Depending on circumstances, they will contribute less, as much or more than before. There is no rule.

Bigger Plans

"A plan is not only a projection of intentions and an assurance of internal consistency in what is attempted. It is also a goal. By its existence, it stimulates effort and acts as a lodestone to accomplishment. This effect of the plan on domestic energies is well recognised. The larger the goals, the larger the effort in mobilising resources and in getting them used. Taxes are increased and consumption postponed only when there is a need to do so. A big plan creates the need. Democracy being what it is in India and elsewhere, we can be sure that a plan that produces no crisis is a plan that is too small. The crisis brings the required effort.

"The same considerations hold in regard to foreign resources. In the case of the United States, the amount of foreign aid provided is not based on a refined calculation of what as a people we can forgo from domestic consumption, or what taxes we can pay, or on what spending we can afford without inflation. These matters are all raised in the foreign aid debates, but for their orchestral, not their economic, effect. (In the recent recession years, more foreign aid might have meant higher domestic consumption, except that the amounts involved are not large enough to have a recognisable effect on the total U.S. economy.) So far as any historical and arbitrary figure can be rationalised, the amount of foreign assistance voted by the United States is a consequence of the size of the request and the urgency of the need. But both the size of the request and the urgency of the need are related to the size of the plan. If the second five year plan had been smaller, the ensuing crises would have been milder, the requests for aid would have been smaller, and the pace of development would have been slower in a country where to many people it must already seem terribly slow. As it was in the last plan, so it will be in the next. The amount of the aid will depend on the size of the crises. The United States Congress awards no prizes for modestly conceived and neatly executed plans. Neither do other governments for whose increasing participation we must hope.

Payments Deficit

"In a few countries—Israel and Yugoslavia are two—there has been increasing recognition, at least by individuals, of the necessity and the virtue of a large balance of payments deficit for a long time to come. Anything else means that opportunities for growth are being traded for the barren applause of those who mistake fiscal respectability for economic progress. I would hope that an increasing number of Indians would also take a rational view of these matters. And such a view should not be concealed by double-talk—by coupling defence of capital imports today with resounding promises of balance tomorrow. People in both the receiving and the providing countries need education on these matters. Moreover, for all expedient arguments, there is a day of reckoning. Aid should not be defended today by arguments that will cause difficulty and misunderstanding a few years hence. Even the basic strategy of the plan, which is that large size makes for larger effort at home and establishes the basis for larger claims on foreign resources, should not be concealed. This will trouble those who advise small plans, the cautious avoidance of crisis and small effort. But these men were intended by nature to be troubled."

Economic Organisation

In his "notes on the rationale of Indian economic organisation," Professor Galbraith writes: "Returning to India after an absence of three years, I am impressed by the progress in many directions. I must confess I am also impressed by the lack of progress in working out a rationale of Indian economic institutions. This seems to me the most urgent problem that India now faces. This note is more to state the problem than to suggest solutions—although I have a few solutions to suggest. The time has come when India must seriously consider the pattern and shape of its economic institutions. Matters that are now being regarded traditionally and piecemeal must, if this is possible, be viewed pragmatically and as a whole. Let me illustrate.

"The basic division in Indian economic institutions is between the public and the private sectors. This distinction is commonplace in everyday discussion, as is the question of what industries and activities should be in the public sector. There is also a good deal of debate over co-operatives, small industries and other such issues. But there is very little public discussion of the organisation of the public sector. The decisive question is nationalisation. Once in public hands, things will work out. The real issue, to which the most attention is paid, is how to scrape together resources to establish or expand industries, especially in the public sector, and what the priorities should be.

"I venture the view that the public sector has reached the point where its organisation requires a great deal of attention. India has a kind of post-office socialism, which is out of date and which is working far less well than it should and must. Even a fairly brief stay at the actual sites of the new steel mills reveals numerous faults, and further difficulties are on the way. Competent executives are frustrated and angry over the centralisation of purchasing, personnel and financial decisions in New Delhi. These delays are a source of discouragement to the younger engineering and technical personnel, who should be showing great enthusiasm. The result is poor morale where it should be high.

Expansion Plans

"Moreover, people in the field feel no responsibility for the next steps in the development, that is, for the enlargement of these plants. Nor is there much concern over how the present ones, when they come in, can be operated at low cost and with satisfactory earnings. Expansion is a matter for New Delhi. Presumably, the foreign engineers will be called on again. Nor is the economics of plan operation a local question, although success or failure will be decided locally.

"The problem of earnings and investment in the public sector is especially urgent. Until now the most difficult problem in Indian planning has been where to get resources for investment. In a competently guided country like India—as distinct from most Middle Eastern or Latin American countries—this, not administrative capacity, is the bottleneck. Everything turns, or seems to turn, on what can be mobilised in taxes and voluntary savings at home and what can be obtained in loa and grants from abroad.

"Obviously, a prime aim of India must be plan its way out of reliance on such uncertain a exiguous sources of domestic savings. (Foreign resources present a somewhat different problem.) To give people income and then remove it by taxation, inflation or appeals to thrift is an inefficient and self-limiting procedure. In both the capitalist and the communist countries, investment is in very large measure from the earnings of the industrial enterprises. These accumulate a surplus, which become available either for their own expansion or elsewhere. The enterprise thus assumes responsibility for both the technical side of its own growth and improvement and also for getting the requisite resources.

Accumulating Surpluses

"Something very like this must happen in India, as all Indian economists recognise. Industrial plants must take on their full job which is to be efficient producers and to accumulate the surpluses which will provide for future expansion. It is very important that these surpluses be immediately identified with such further expansion. Otherwise they may become the target of workers in the industry who can easily be persuaded that they have a privileged claim on them, and consumers may also insist on low prices as in the present case of rail passenger travel. The result will be a small surplus (or none), and hence no resources from this source. What I have called post-office socialism—public ownership that contents itself with avoidance of loss or a modest profit which it returns to the Treasury—will inevitably prove a stagnant form of economic organisation.

"I now come to another and somewhat related point. The proper organisation of the great establishments is not the only problem of the public sector. There is also the task of generating effort and enthusiasm in small activities—those of the villages, extension blocks, cities and perhaps also the States. The need for this is well recognised and is, indeed, one of the recurring themes in Indian discussion. The best planning provides people with an opportunity for doing what is beyond the mind and even the imagination of the planners.

Different Organisation

"But the things that arise here in the public sector—expanding local control over local public finances, the sponsorship and development of local industries, the organisation of volunteer labour effort, of co-operatives, the provision for a period of rural service by university graduates—have little relation to the problems of organising steel production or fertiliser manufacture. They require a different organisation and, to a considerable extent, they call for a different type of mind. This type of public activity and enterprise will be blighted if it is too closely identified with ordinary large-scale industrial development.

"We may think, indeed, not of one public sector but three. One sector is concerned with bringing totally new industries into existence. This has been the important sector so far—it has been creating such industries as electrical generation, fertilisers, iron and steel. The second sector, an outgrowth of the above, is concerned with the operation, expansion and regeneration of the existing industries and with providing capital for the establishment of new industries. Finally, there is the wholly different sector which seeks to develop local responsibility and the release of local energies.

"By way of making this more explicit, let me suggest in summary form, without extensive argument, what each sector involves. I hope that will not be taken as any sort of final suggestion but rather as a basis for discussion.

Three Parts

"1. The three parts of the public sector may be denoted as follows:

"Sector A: Intimation.
"Sector B: Operation, expansion and financing.
"Sector C: Spontaneous development.

"2 The initiation sector will be concerned with the launching of entirely new industries. This, as in the past, will be a ministerial function. However, this does not preclude the granting of more autonomy of effort than at present to companies developing new industries. And existing public firms should often be called upon to foster and develop new ones. Still, initiation is a distinct function. It calls for decision as to what and where, and in the early stages of creation of an industry, considerations of efficiency and earnings are not vital. It is getting things started which counts. This stage of initiation has principally characterised the industrial public sector in India up to this time. However, a new phase is rapidly approaching.

"3. The operation, expansion and financing sector embraces those industries which are now fairly launched. While in the initiation sector a considerable measure of ministerial initiative and supervision may be necessary, in the operation, expansion and financing sector ministerial supervision and intervention must shrink to a minimum. Civil service decision-making is inevitably and properly slow and deliberate and demanding in quality. Operating decisions must be prompt and they need not always be right, for most such decisions are reversible. So ministries have as their principal function the selection of good managers supported by competent though not powerful boards and the provision of firm but workable rules by which the public enterprises shall live.** Beyond this, ministries must hold the companies responsible for results. To this end, officials should never be members of the boards. If they are, the autonomy of the enterprise will almost certainly be lost, as the board becomes a link in the civil service hierarchy. Parliamentarians must have clearly in mind that when they question individual decision of companies, they force ministries to protect themselves by asking for advance knowledge and approval of all decisions. This destroys the autonomy and hence the effectiveness of the public enterprise. And again, it must be stressed, the public enterprise must be free even to make some mistakes, for these are inevitable in efficiently rapid decision-making.

Efficiency of Operation

"4. The success of the operation, expansion and financing sector will be measured broadly by the efficiency of its operations—its ability to organise ample production at low cost and to sell at remunerative prices.† This means that there will be earnings—profits—and these are the most important test of the effectiveness of the public enterprise. (As a measure of performance, Russia attaches about the same importance to profits as the U.S.A.) Production is not the only task. The existing concern is also the logical agency to undertake expansion in its own line and even to bring into existence related industries. When it is efficiently organised for aperation, it will usually be efficiently organised for expansion. In any case, it will be more effective for this than a wholly new, inexperienced and untested organisation.

"5. Expansion and operation in this sector should be tied together by the financing function. When a firm is given an expansion target it should be asked to prepare a plan for financing it. This plan would have first claim on earnings. It would come to the Government only for what would not be supplied from earnings. If the expansion schedule does not absorb all the planned earnings, these should be used to repay capital and thus become available for investment in other industries. A public development bank is a logical part of this sector.

"6. These accounting procedures, which incidentally are also broadly common to capitalist and socialist countries, have the great virtue of keeping the essential character of the enterprises and their tasks in the public view. Thus, if the enterprise is obliged to use its earnings for the planned expansion rather than return them to the Treasury, their use for development will be clear to workers and consumers. They will be less likely to assert a privileged claim on the assumption that they are profits in the old sense. It will be seen that excessive wage or salary claims—or indeed any waste—is at cost to the nation's development.

"7. Time does not allow me to comment on the spontaneous development sector, which I think has great possibilities. Development is not confined to the great industrial enterprises. As a growing body of opinion in India clearly realises, much must be done—always speaking of the public sector—in releasing the energies and efforts of local bodies and organisations. Community development is an important beginning but I hazard the guess that opportunities here have scarcely been touched.

Enemies of Socialism

"These are hurried comments. As I have observed they are intended more to provoke discussion not answer questions. I have assumed that India has made a firm decision in favour of a public sector. But this decision is the beginning, not the end, of the discussion. In the old days, the principal enemy of public enterprise was, no doubt, those who disapproved of socialism. Now it is the socialists themselves. For it is socialists who refuse to consider seriously the peculiar requirements of the modern productive enterprise, whether public or private; who decline to give it the autonomy it must have; who destroy it by meticulously passing on its decisions and thus forcing upon it an intolerable and unworkable centralisation; who decline to see that the organisation of public enterprises must keep pace with new conditions and new tasks; who are careless about the standards to which management of the enterprises must be held; and who, on occasion, encourage workers and consumers to appropriate the surplus on which expansion and growth depend and without which there will be stagnation. Above all, it is socialists who are responsible for the paralysing belief that success is a matter of faith, not work.

"In many parts of the world, including India, there is in fact no real alternative to extensive public enterprise. And while public enterprise is often successful, the record is highly uneven. It is sufficiently imperfect so that no one concerned with the success of economic development can take it for granted."

---

*This is in addition to a sum of Rs. 400 crores to Rs 500 crores which may be required for meeting the obligations falling due during the third plan period on account of foreign loans incurred during the second plan.

**Covering, in particular, recruitment and labour relations, accounting and financial procedures and procurement policies. While the rules should effectively exclude dishonesty and favouritism, it should be remembered that excessive precautions can be

†Control of prices is a separate chapter. To the largest possible extent they should also be under the control of the enterprise. Then prices will not be an excuse for low earnings. This decentralisation of price-making has been a major accomplishment of recent Yugoslav experience. However, there will be cases, electricity and doubtless steel are examples, where central or group price setting are inescapable.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE.
Branches at: **Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at Delhi & New Delhi.**

THE CONGRESS MOVE TO FORCE CO-OPERATIVE FARMING

DANGERS OF COMPULSION

By S. Kesava Iyengar

THE declaration by Prime Minister Nehru that Congressmen who do not see eye to eye with the Nagpur resolution should quit the Congress has elicited a rather unusual note of caution by President Prasad about it. But the climax seems to have been reached, and if a national calamity should be avoided, the Prime Minister should quickly revise his attitude and go down to realities. He has thrown out a challenge that co-operative joint farming is the only way to maximise agricultural production and social justice. Hurdles, such as ignorance, illiteracy, inertia, and fatalism, are numerous. Besides, the stupendous task of evaluation and accounting involved in a co-operative joint farm by itself must convince the enthusiasts of the calamitous consequences that are likely to follow the adoption of this system of farming as the only method.

The Prime Minister has repeatedly affirmed that membership of such farms will be voluntary, and quite different from "compulsory co-operation" which is evidently intended by the Nagpur resolution. Voluntarily, even 5 percent of the cultivating landholders will not join: doubts over *bona fides*, the psychological downgrading from proprietor-manager to labourer, uncertainty about the facility for timely credit, fear of losing property rights, the legitimate suspicion of red-tape and delays, are among the numerous reasons. If, on the other hand, "voluntary membership" is meant in the Chinese sense leading to collective farms worked by communes, it should be said so plainly, in the democratic way. In 1958, China grew over 50 ounces of foodgrains *per capita* a day (in India, the target is 14 ounces), and the productivity of commune system cannot be denied, but that could be achieved only by compulsion.

Periodical Evaluation

Original and periodical evaluation should include agricultural and pasture land, cattle, implements, carts and personal labour. In each of these categories, there will have to be sub-categories and at least three grades in each such sub-category. For example, under agricultural land, there must be at least three grades in each sub-category, viz., dry land, wet land, garden and special crops (orchards, plantations, etcetera) in the account books. As for cattle, the sub-categories should be at least plough cattle, draught cattle and pump cattle (scrub cattle, cows and she-buffaloes, poultry, sheep and goats are to be excluded). Personal labour should be analysed into men, women and children, each comprising skilled and unskilled units. Man-hours, not man-days, would have to be calculated because the input of hours of work would be different as among the three sub-categories. A cultivating land-holder's contribution should be under all the major five categories, while landless tenants and labourers might contribute possibly under the latter four, but mostly in the shape of personal labour only. Land revenue assessment is not frequently revised, and items like proximity to the village site, a road, a market or a railway station is not given due weight in such assessments. The co-operative joint farm evaluation might use land revenue assessment as the yardstick in the case of arable land, but this should be modified in the light of objections and complaints.

While the evaluation and accounting processes are thus complicated, laborious and vexatious, some vital issues are still left delightfully vague. Will the joint farm management take over good, bad and impossible debts of the members? Will the members be allowed, of course up to a limit, kitchen gardens, etcetera, for personal cultivation? Most of the Indian landholdings are smaller than personal kitchen gardens in Russia. Will the member have the option to secede from the co-operative farm, or sell, mortgage, or transfer his land in other ways? If the option is not there it would amount to a perpetual surrender and not retention of property rights. Who should do the job of evaluation and accounting—a committee elected by the members or a tribunal appointed by the Government? In four out of every five villages in India, there are party factions, and any elected committee must contain disharmonious elements. With land ceilings, implemented and prospective, incentive has disappeared among the village intelligentsia, and many suitable members may not agree to be on the elected committee. A tribunal must lead to red-tape, corruption and delays. Changing over from proprietor-manager to labourer, and not interested in the yield of his lands in particular, there is a strong likelihood of the average member "going slow," although putting in attendance. It would not be easy to spot out the idle from the industrious: agriculture is extensive in operations. What will be the future of intensive cultivation which is pre-conditioned by small area, high capital intensity and personal devotion? Godowns or credit should be provided in order to ensure weekly or monthly advances to members in anticipation of the annual dividend for food, clothing, house repair, pilgrimage, marriage, funeral and so on. Mass withdrawals on account of some reason or other like a depression or drought must spell disaster to the joint farm co-operative. How should such a contingency be safeguarded against? Even occasional withdrawals must result in troublesome changes in working capital. Denial of power to secede must belie the oft-repeated assurance that joint farming will be voluntary.

Inaccurate Statistics

Co-operative statistics are frequently superficial and inaccurate. In a recent enquiry, it was found that about 45 percent of the members were inactive, not having had anything to do with the respective co-operatives continuously for three years. The Nijalingappa committee will be doing the greatest service to the country by conducting a probe into the working of the present co-operative farms and giving a correct report to the nation as to how far these have been successes or failures. The Avadi and Nagpur resolutions should not be the last word: there is nothing sacrosanct about them, and if changes are warranted, they should be suitably amended or even repealed. Generally speaking, urban co-operatives in India have done bettter than their rural counterparts, particularly in the sector of credit, but even here, consumer stores have mostly failed—for the main reason namely, the difficult task of evaluation and accounting. There is not a single case of a co-operative joint kitchen, although logically very economical. An entertainment, an adventure or an experiment is fundamentally different from introducing a sweeping reform of a revolutionary character which is very likely to throw the country's agricultural economy into confusion, and may even bring about a collapse. The Prime Minister should select at random an average-sized interior village, camp there for 15 days, and direct the spade work for organising such a farm, under his guidance. Disillusionment is bound to follow; in all probability he is sure to say that any other scheme for agricultural and rural improvement should be more practical and useful. The right involved in universalising co-operative joint farming within a specified period indeed deserves the

YIELDING PLACE TO NEW

Ancient as the history of our vast land, this primitive machinery for extracting juice from sugar-cane, is still a common feature of rustic India. Picturesque and leisurely, this method of cane crushing served its purpose well and now it must yield—yield to the speed of modern sugar mill machinery.

The mechanised sugar factories of our time rely on a wide range of precision built equipment, not only for our daily needs but also to earn valuable foreign exchange.

Texmaco, pioneer in many fields of engineering, now manufactures and supplies in technical collaboration with the world renowned Stork Werkspoor of Holland, the complete range of sugar mill machinery.

Stocks and Shares

FRESH BUYING SUPPORT FOR SPECULATIVE ISSUES

ENQUIRY FOR SELECTED JUTES

Wednesday Evening.

THE postponement of the proposed T.I.S.C.O. rights issue until September next, and the lower badla charges at the settlement last Wednesday, seem to have given the bulls some encouragement. Speculative issues have staged a smart recovery—particularly Indian Irons which rose from Rs. 24.12 to Rs. 24.72. All other shares on the forward list moved up in sympathy. But the West Bengal Communist Party's sharp reaction to the Congress Parliamentary Board's resolution on Kerala has been interpreted as a bad omen and the trend of the share market in the coming weeks may, therefore, be influenced more by political than economic factors.

The subscription list for the new Central Government loans opened today and both issues appear likely to be heavily over-subscribed by this evening. Government securities have ruled firm owing to the slack condition of the money market and buyers have found it difficult to obtain their requirements.

Preference shares have continued to meet with keen enquiry, particularly tax-free issues, but holders are not prepared to part with their shares.

Coal shares were slightly better—particularly Bengal, which advanced from Rs. 303 to Rs. 314 and Raneegunge from Rs. 16.75 to Rs. 17.12. Burrakur rose from Rs. 16.75 to Rs. 17.81 and there were buyers of Katras Jherriah at Rs. 73 but no sellers.

In cotton textiles, Bowreah were Rs. 3 lower at Rs. 107 while both Jayshree Textiles and Kesoram moved up from Rs. 9 to Rs. 9.50 and Rs. 14.62 to Rs. 15.31 on reports of better working.

Electric supply shares were dull and featureless.

In the engineering group, profit-taking brought down the price of Braithwaites from Rs. 28.62 to Rs. 28.37 while Burn & Co. spurted from Rs. 439 to Rs. 452. Guest, Keen, Williams were better at Rs. 40 and Indian Galvanizing were stagnant, after their recent rise, at Rs. 21.75. Jessops were softer at Rs. 30.37 while Textile Machinery were steady at Rs. 25.50. J. K. Steel provided a good feature and rose from Rs. 127 to Rs. 140.

Jute shares were better during the week, as will be seen from the following table of prices:

	Opening 24th June 1959	Closing 1st July 1959
	Rs.	Rs.
Anglo-India	244	258
Bally	220	230
Barnagore	151	158
Howrah	24.50	24.81
Nuddea	61.50	65

Paper shares met with good enquiry and widespread gains were recorded, as will be seen from the following table:

	Opening 24th June 1959	Closing 1st July 1959
	Rs.	Rs.
India Paper Pulp	22.50	24.31
Orient	36.60	36.85
Star	11	11.31
Titaghur	44.50	44.87

There was only one feature in the sugar section, namely Carew, which advanced further on interested buying from Rs. 11.06 to Rs. 12.37.

Among miscellaneous industrials, Balmer Lawrie provided the outstanding feature spurting from Rs. 185 to Rs. 219 owing to the higher dividend recently declared. Dunlop Rubber were wanted at Rs. 34 as were Britannia Biscuits at Rs. 23.25. Hindustan Motors rose further to Rs. 10.12 and Indian Aluminium were higher at Rs. 22.25. Indian Oxygen recovered from Rs. 27.25 to Rs. 28.37 and Indian Cables from Rs. 31.37 to Rs. 32. Jardine Henderson rose sharply today from Rs. 81 to Rs. 85. National Carbon were marked down further from Rs. 34.12 to Rs. 32.81 and Metal Box from Rs. 43 to Rs. 42.50. Rohtas Industries were taken at Rs. 22.94 and Sone Valley were slightly better at Rs. 6.25. Shaw Wallace were steady at Rs. 20.12. National Tobacco were firm at Rs. 18.12.

In the mining group, Indian Copper Corporation were a shade better at Rs. 4.14 as were Orissa Minerals at Rs. 38. Metal Corporation were easier at Rs. 13.12.

Tea shares were subdued with little or no business passing.

Bridge and Roof

The profit of the Bridge and Roof Company (India) Ltd has improved by Rs. 33,000 to Rs. 13.27 lakhs for the year ended December 1958. Providing Rs. 8.43 lakhs for depreciation (against Rs. 6.78 lakhs), and Rs. 8.63 lakhs (Rs. 6.78 lakhs) for taxation, and bringing in Rs. 1,73,321, there is a balance of Rs. 8,32,321. General reserve is allocated Rs. 2 lakhs. A dividend of 7½ percent has been declared for 1954, a dividend of 10 percent for 1955, and a dividend of 2½ percent for 1958. Orders were made by the Commissioner of Income Tax under Section 23A(3) of the Indian Income Tax Act, 1922, requiring the company to distribute further dividends for the year 1954 and 1955. A reference was made under Section 23A(4) to a board of referees appointed by the Central Government, which directed that further dividends for these years amounting to Rs. 75,409 and Rs. 1,04,759, respectively, be distributed. The directors, therefore, recommend that additional dividends (rounded off for the sake of convenience) be paid in compliance with the decision of the board of referees. These additional dividends, although expressly declared to be payable for the years 1954 and 1955, will, if sanctioned, be payable to those members whose names are registered in the register of members of the company on the date of declaration. It will be observed that the total distribution will be at the same level as last year. The provisions of Section 23A of the Indian Income Tax Act, 1922, do not apply to the company subsequent to the financial year 1955 in consequence of the amendments made in that Section by the Finance Act, 1957. The directors state that the prospects for the current year are good. During the year under report, the company acquired a plot of land adjacent to its existing property. This land will be used in the reorganisation of the works.

Balmer Lawrie

Reporting the good results of Balmer Lawrie and Company for the year ended December 1958, the directors state that trading has been fully

maintained. With continued progress and development in associated manufacturing companies, the income from trade investments and from the managing agency has shown considerable improvement. It seems reasonable to expect satisfactory trading results again in the current year, although eventually the restrictions on imports must have some adverse effect. On the other hand, this may well be offset by the further development of manufacturing interests. The profit has increased by Rs. 16.15 lakhs to Rs. 44.24 lakhs. The dividend has been raised from 15 percent to 20 percent, including an interim of 5 percent. The taxation provision is Rs. 9.73 lakhs higher at Rs. 22.10 lakhs. General reserve is allocated Rs. 5½ lakhs, against Rs. 2 lakhs. The carry-forward amounts to Rs. 5,03,161, compared with Rs. 5,00,886 brought in.

Metal Box

There is an increase from Rs. 73.12 lakhs to Rs. 97.58 lakhs in the profit of the Metal Box Company of India for the year ended March 1959. The ordinary dividend of 17½ percent has been maintained, including an interim of 6¼ percent. Taxation absorbs Rs. 56 lakhs, against Rs. 41½ lakhs. General reserve is allocated Rs. 15 lakhs, against Rs. 10 lakhs. The carry-forward amounts to Rs. 19,33,761, compared with Rs. 16,62,798 brought in. The increased profit is due to the growth in sales (particularly of non-tinplate products, where indigenous raw materials have been freely available) and improved operational efficiency. Land has been purchased in Faridabad for a new factory to serve north Indian customers and it is hoped to commence production in the new premises early next year. The old Calcutta factory has been substantially reconditioned and it is the company's intention to use this building for the production of industrial components machine-building, flexible packages and other plastic products.

Calcutta Gas

The Calcutta Gas Company (Proprietory) Ltd has made a profit of Rs. 8.71 lakhs for the year ended September 1958. Bringing in Rs. 36,656, there is a balance of Rs. 9,07,659. Taxation absorbs Rs. 3.16 lakhs. The ordinary dividend of 5 percent is maintained, leaving a carry-forward of Rs. 95,634.

Dunbar Mills

The Dunbar Mills have made a profit of Rs. 2.75 lakhs for year ended December 1958, before providing for depreciation. Transferring Rs. 80,000 from general reserve, bringing in a debit balance of Rs. 1,86,309 and making other adjustments, there is a credit balance of Rs. 11,835, which is carried forward. The dividends have been passed over. The directors say that the period under review has been very difficult for the cotton textile industry in general and the mills of West Bengal in particular. The duty on consumption of electricity imposed by the West Bengal Government has brought an additional liability on the company of over Rs. 1 lakh a year. Depreciation for the year, as well as for the previous years, could not be provided because of the inadequacy of profits.

Bombay Market

PRICES IMPROVE ON RENEWED BUYING

GOOD CORPORATE NEWS HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market was very steady last week and share prices improved on a broad front due to renewed buying. The postponement of the rights share issue by the Tata Iron and Steel Company appears to have been discounted. Operators have been encouraged by a series of good company reports, and the general feeling is that corporate working might improve further. Hopes that the new Central loans will be subscribed without any difficulty have helped improve sentiment in industrial shares.

Tata Steel improved to Rs. 193.25, as did Indian Iron to Rs. 24.76 on strong support from Lyons Range. Other engineerings improved in sympathy and Alcock Ashdown were higher at Rs. 271. Premier Construction rose to Rs. 351 and Larsen and Toubro were quoted higher at Rs. 22.72. Motor shares were firm, and Hindustan Motor improved to Rs. 10.24 on prospects of a maiden dividend. Premier Automobile were taken at Rs. 121.50. Tata Locomotive were supported up to Rs. 225 on prospects of expansion in activity.

There was an all-round improvement in the cotton mill group, and Century spurted to Rs. 568 on short-covering. Bombay Dyeing increased to Rs. 66.20, as did Svadeshi to Rs. 256. Kohinoor were wanted at Rs. 296 and Simplex were transacted at Rs. 174. India United Ordinary were dealt in at Rs. 7.56 and Apollo were placed at Rs. 1.32.

Miscellaneous shares moved up in sympathy with the general trend. In the sugar group, Phalton were taken at Rs. 163 and Belapur were bought up to Rs. 310. Walchandnagar Industries jumped to Rs. 335 on talk of a rights share issue. Steamship company shares were steady, and Scindia Steam were transacted at Rs. 18.04. India Steamship were done at Rs. 14.03 and Great Eastern Shipping were indicated at Rs. 22.60. Among cement shares, Associated Cement improved to Rs. 153 and Digvijay Cement were quoted at Rs. 158. Mining shares were subdued, and Shivrajpur Syndicate were offered at Rs. 84.50. National Rayon gained at Rs. 337 on the publication of the export promotion moves for the rayon industry. Bombay Burmah were boosted up to Rs. 562 and Tata Chemical were taken at Rs. 19.32 on investment account. Voltas were in demand at Rs. 181 on suggestions of a fresh capital issue and Ceat Tyre were wanted up to Rs. 165.

Turnover in banking shares were restricted and fluctuations were narrow. Central Bank came to hand at Rs. 52 and Bank of Baroda were transacted at Rs. 102.25. Trends in insurance shares were mixed. All-India General improved to Rs. 2.70 and New India Assurance were higher at Rs. 57.50.

In the electricity supply group, Andhra Valley moved down to Rs. 1,126.25, but Bombay Suburban rose from Rs. 104 to Rs. 104.25. Tata Power increased from Rs. 1,172.50 to Rs. 1,175.

THE WEEK'S TRANSACTIONS

Books

A COLLECTION OF ESSAYS

Sotto Voce. By "Vighneswara". (Published by B. G. Paul and Company, 4, Francis Joseph Street, Madras. Price Rs. 4, pages 352.)

A journalist, Mr. N. Raghunathan, who was Chief Assistant Editor of the *Hindu*, contributed a social and political commentary to *Swatantra* and its successor *Swarajya*—English weeklies published from Madras. He adopted the pen-name of "Vighneswara" and his popular column was appropriately named *Sotto Voce*. The present volume is a collection of essays which the author wrote in the two papers from 1946 to 1949. It does not claim to be a systematic or a consistent account of India's social and political problems. The collection rather represents snapshots or brief expositions of the author's views on the many difficult problems which arose during the period of transition around independence and the eventual establishment of the Nehru Government. Although written more than a decade ago, many of the essays still have relevance to current Indian conditions. They deal with such varied themes as "the philosophy of feeding", "peace by dynamite" and "morals and Marx". The style is lucid and informal.

Inside this maze of pipes and tanks flows precious oil, for the nation's homes, transport and industries.

Outside — the Trombay refineries are well-protected with a tough coating of GOODLASS NEROLAC paint, *made especially to strengthen and preserve the pipes and tanks which hold these vital oils.*

Refineries are new to India, but GOODLASS NEROLAC have twenty-five years' manufacturing experience in India, backed by a century of technical and scientific development of methods and products. And each year, GOODLASS NEROLAC's research laboratories are perfecting better, stronger, protective paints.

GOODLASS NEROLAC — the Paint Specialists — supply all types of paints...each one specially manufactured to provide the best protection for every type of industry.

Engineering and Transport

BUILDING SUPERSONIC AIRCRAFT WITHIN SIX YEARS

LOCKHEED OFFICIAL DISCUSSES COMMERCIAL POSSIBILITIES

THE senior vice-president of the Lockheed Aircraft Corporation, Mr. Hall L. Hibbard, said recently that a profit-making 2,200 miles-an-hour passenger airliner could be built and certificated by 1965. Design studies and testing indicate the solution of all major technical problems which previously blocked the development of a Mach 3.0 and 3.5 aircraft. Mr. Hibbard, who was speaking at a meeting of the Institute of Aeronautical Sciences in Los Angeles, said that the projected airliner would carry about 90 passengers and could operate from the existing airports.

Following a typical supersonic time-table, the aircraft could leave London at 11 a.m., arrive in Los Angeles at 7-45 a.m., depart from southern California at 9 a.m. and land once again in London at 9-45 p.m the same day. "After a great deal of study, analysis and wind tunnel and laboratory testing, we believe that such an aircraft is imminently feasible." Mr. Hibbard disagreed with "several recent opinions" claiming that the introduction of the subsonic flight (1) established an air transport "plateau" reaching indefinitely into the future, and that (2) airlines will be unable to finance new aircraft advances in the next decade. "Quite to the contrary, the supersonic transport is a money-maker, and the profits do be realised are quite substantial—indicating ample justification for the required investment," he added.

Design Characteristics

Particularly attractive to a potential operator is the fact that both departure and arrival on the west-bound flight—and departure on the east-bound segment—are scheduled during premium daylight hours. "Cruise between Mach 3.0 and 3.5 is the logical next step for the air transport operator," the Lockheed officials said. Typical design characteristics for such an airliner will include these factors:

1. A trapezoidal or delta wing, symmetrically mounted at the rear of the fuselage.

2. Four-abreast or twin-engine nacelle installation of nonafterburning turbo-jet engines.

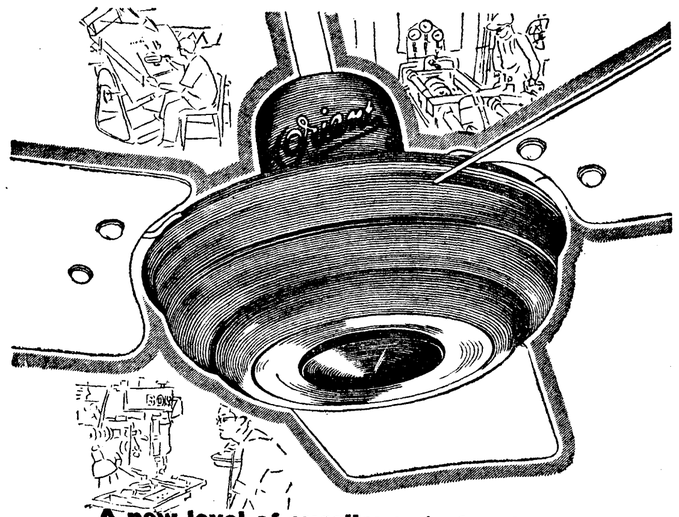
3. A canard (tail in front) arrangement for optimum longitudinal trim control and flight crew stations.

4. Stainless steel and titanium structural material using conventional skin-stringer construction.

5. Cabin cooling with intra-wall air circulation and a thermal barrier of glass fibre—with a Freon vapour cycle system to remove heat absorbed by wall circulation.

6. Operating costs less than present subsonic jet transports—and substantially less than today's best piston-engine airliners.

7. Field length requirements comparable with, or shorter than, those for subsonic jets.



8. Take-off and landing speeds comparable with subsonic jets.

9. Cruise altitude between 60,000 and 80,000 feet.

10. Multiple applications to military missions.

Cruising Speed

Lockheed studies, based on the present and projected turbine engine design, show that the efficiency of the cruising speed reaching a peak at Mach 0.8 and 0.9 "is clearly unattractive" between Mach 1.0 and 2.0, then gradually peaks again in the Mach 2.0 and 3.5 range. Thus although a Mach 2.4 aircraft can be built with less expensive aluminium design and fabrication methods, the Mach 3.0 or 3.5 aircraft holds a 5 percent advantage in direct operating costs. "This occurs," Mr. Hibbard said, "because the 16 percent higher block speed and the improved overall fuel economy overcome a higher initial cost. And the Mach 3.0 or 3.5 aircraft—made of titanium and stainless steel—inherently will have "stretch" to accept newer, improved engines over its useful service life. There is little reason for further consideration of a design speed less than Mach 3.0."

A new level of excellence in fan design

Here is the fan that combines beauty, comfort, performance and durability that every one looks for. Orient Fan, replete with many features, is a technical masterpiece—a result of a new level of excellence in design and technique that is achieved by the vast funds of engineering 'know-how' accumulated over the years.

Its pressure die cast, dynamically balanced rigid rotor complete die cast casing, centre less ground shaft, stove enamelled paint are the reasons for its remarkable performance and incomparable finish.

Here is the fan created by Orient's highly skilled technicians backed by their modern designers, tool engineers and other specialists to meet the exacting demand of the users all over the country and abroad.

Orient FANS

Years ahead in look and performance

ORIENT GENERAL INDUSTRIES LTD.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953 100) rose by 1.7 percent to 116.6 during the week ended 13th June, 1959, compared with 116.6 (revised) for the previous week. The index was higher by 1.6 percent and 5.2 per cent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles advanced by 3.4 percent to 120.8, against 116.8 (revised) for the earlier week due to the reappearance of tea at a higher level and an increase in the prices of milk (+27%), meat in Patna (+20%), oranges in Madras (+12%), ragi in Ghoti and potatoes (+8% each), jowar in Coimbatore (+6%), salt (+4%), ghee, gingelly oil and coffee (+2% each) and rice, barley, mung, urad and bananas (+1% each), although the prices of onions in Calcutta (−13%), Cat fish in Bombay (−11%), jowar in Rohtak (−9%), gram (−3%), and maize, arhar, turmeric and cardamoms (−2% each) showed declines. The index for Tobacco stood at 95.0, compared with 95.1 for last week. The index for the Fuel, Power, Light and Lubricants group remained stationary at its previous week's level of 116.4. Lower prices of cottonseed (−3%) and raw wool, rapeseed and lac (−1% each) brought down the index for Industrial Raw Materials by 0.2 percent to 119.9. The prices of raw silk, linseed, castorseed and gingelly-seed (+1% each), however, moved up. The prices of linseed oil and zinc (+1% each) showed advances while copper, tin and lead (−1% each) moved down and the index for Intermediate Products stood at 108.3, against 108.2 for the earlier week. The index for Finished Products worked-out to 109.1, compared with 109.0 for the previous week. The prices of jute manufactures and oilcakes (+1% each) and drugs and medicines, bicycles, bricks and tiles (−1% each) showed variations.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53 100)

Groups and Sub-Groups	Week Ended 12-6-59	6-6-59	14-6-58
I. Food Articles	120.8	116.8(R)	111.8
(a) Cereals	100.9	100.7(R)	105.3
(b) Pulses	96.3	97.1(R)	90.1
(c) Fruits	135.5	130.6(R)	109.9
(d) Milk and ghee	128.7	110.7(R)	109.7
(e) Edible oils	132.8*	132.5(R)	122.3
(f) Fish, eggs and meat	107.2	106.6	107.5
(g) Sugar and gur	149.3	149.5	123.4*
(h) Others	163.8	156.2*(R)	140.2
II Liquor and Tobacco :	96.7	96.8	91.8
(a) Tobacco	95.0	95.1	90.0
III Fuel Power Light and Lubricants :	116.4	116.4	115.7
IV Industrial Raw Materials :	119.9	120.2	114.9
(a) Fibres	109.4	109.4	109.4

YUGOSLAV FACTORY TO SUPPLY LOCOMOTIVES TO INDIA

In the Yugoslav factory, "Djuro Djakovic", in Slavonski Brod, preparations are being made to deliver 12 locomotives, which the enterprise has manufactured for the Indian Railways. The value of the total consignment amounts to £130,000. One of these days, the locomotives will be transported to Rijeka and from there by ship to India. At the same time, a bridge construction ordered by Indian investors from the Yugoslav enterprises "Metalna" of Maribor and "Djuro Djakovic" of Slavonski Brod will be sent to the building site in Gandak in India. Iron parts worth 700,000 dinars will be forwarded to Rijeka. The bridge weighs 3,000 tons and has eight arches of a 250-foot span.

New Delhi

CONGRESS COMMITTEE PREPARING REPORT ON THE THIRD PLAN

COMMERCE MINISTER AGAINST NATIONALISATION OF LUXURY GOODS IMPORT TRADE

UNDER SECRETARY TO GOVT. OF INDIA 4 JUL 1959 PUBLICS DEPARTMENT

(FROM A NEW DELHI CORRESPONDENT)

THE Congress planning sub-committee under Mr. U. N. Dhebar is now busy drafting its report on the third plan for the consideration of the party's Working Committee. The report is being drafted in the light of the recent discussions at the Congress seminar in Ootacamund. At least in one matter, the approach to the third plan may be a little more sober than was indicated by the papers for the Ootacamund seminar or the discussions on them. This relates to the "suggestions" for nationalising the import and export trade in luxury items so as to augment resources for the third plan.

The Congress "ginger group" leader and Deputy Minister for Planning, Mr. S. N. Mishra, advocated this in a paper submitted to the seminar. He found a powerful supporter in Dr. V. K. R. V. Rao. Mr. Mishra suggested that the State should take over the import and distribution of certain items on which the private trade, according to him, was making huge profits. Dr. Rao declared that, to raise additional resources for the third plan, the State should undertake trading in luxury and semi-luxury items. It should import them on Government account, manufacture or take over the indigenous production of items of a luxury or semi-luxury character, and distribute them. Dr. Rao suggested that this could be done by opening a chain of co-operative stores throughout the country. According to him, a sum of Rs. 500 crores to Rs. 700 crores could be obtained in this way. The Commerce and Industry Minister, Mr. Lal Bahadur Shastri, is, however, reported to have marshalled some hard facts and presented them to the Prime Minister to show that such loose suggestions only add to the troubles of the administration without bringing in the resources.

Payments Figures

According to the Reserve Bank of India's balance of payments statistics, out of total imports of Rs. 1,045 crores in 1958, Rs. 503 crores were on Government account. The break-up of the balance shows that only a small portion represented luxury or semi-luxury items. Up to February 1959, the total number of private licences issued during 1958-59 amounted approximately to Rs. 465 crores. Of this, Rs. 55 crores were for capital goods, heavy electrical plant and machine tools. Raw material requirements of scheduled industries accounted for another Rs. 105 crores. Petroleum products and lubricants accounted for Rs. 60 crores, while actual users in industries other than scheduled industries were granted licences worth Rs. 165 crores. The margin of profit on these items, even if imported by the Government and distributed to private parties, cannot be high, and governmental efficiency in procurement and distribution might well push up the cost. Even if the imported cost is the same, any attempt to increase the margin of profit, taking advantage of the governmental monopoly, will add to the cost of production of Indian industrial goods.

This leaves a balance of Rs. 80 crores worth of licences issued to the trade under the quota licensing system. Established importers who get licences under the syetem used to play a dominant rôle in the import trade. But the pattern of this trade has been rapidly changing. Industries are importing their requirements directly from abroad and actual users' licences are issued freely so as to enable them to import their requirements. In fact, actual users have come into the field on such a big scale that the established importer has lost most of his trade. There is also the State Trading Corporation. It has been importing a number of commodities from the Iron Curtain countries on a barter basis. To that extent, the licensing of such commodities from the rest of the world has been reduced or stopped. The S.T.C. now imports industrial raw materials, such as caustic soda, soda ash and raw silk. These items are now the sole monopoly of the State Trading Corporation. It also imports items like machinery and capital goods, either for distribution through the trade or for supply to Government departments. Items like newsprint are imported to build buffer stocks in the country. It is thus clear that the picture of a sector of the economy where there are huge profits just waiting to be lapped up when the State enters it, is just an illusion.

Problems of Established Importers

There is another aspect to the problem. The established importer who now imports commodities has a wide and well-established distribution system to reach the small consumer living in faraway places. He and his distribution machinery give employment to a large number of people. In any economy, it is the secondary and tertiary sectors that provide most of the employment. The restrictions on imports have already created considerable unemployment. If the State is to step in and "nationalise" this trade, there is no doubt that a few lakhs more people will join the army of unemployed.

Again, when talking of "nationalisation" of this trade, it should be noted that there is no legal right like the *zamindari* to be nationalised or property to be acquired. The established importer has, in fact, no legal right. He can be turned out of business any day by a stroke of the pen. The Government can elbow him out by stopping all quotas for his goods in the next licensing policy. There is much to be said from the point of view of the consumer that the established importer and trade should not be allowed to indulge in profiteering, taking advantage of scarcity. But the answer to this lies in governmental regulation. As it is, established importers have begun to realise their vulnerable position and have formed associations to supervise the import and distribution of goods and to ensure that the margin of profit charged is not higher than that fixed by the Government. In the case of imports of copper and other non-ferrous metals, for example, the margin of profit has been considerably reduced from the 20 percent or 30 percent that used to prevail before. But there cannot be talk of the State entering this trade to protect the consumer, and at the same time raising fresh resources. If the consumer is to be protected, prices will be brought down and the margin of profit reduced. If resources have to be raised, a high margin of profit has to be retained.

The experience of the Government in the limited field of import and distribution it has so far undertaken has not been very happy. Take the case of newsprint. When the State Trading Corporation came into the picture, it was said that it would help the small newspapers in the mofussil areas and that they could get newsprint without undergoing the trouble of applying for a licence and importing the newsprint through an established importer or directly. It is common knowledge that the small periodicals in the countryside—weeklies, fortnightlies and monthlies—lead a hand-to-mouth existence. In the old days, they used to get their requirements of paper in small quantities from the trader. They did not have to find finance for stocking the newsprint. The State Trading Corporation has storage and other facilities only at port towns and major centres. The small publisher in the mofussil station either must run to the Corporation week by week to get his quota, or obtain it in bigger lots and find the necessary finance for stocking them.

F.I.C.C.I. Mission Reports

The F.I.C.C.I.-sponsored goodwill and trade mission has reported that "extreme views expressed off and on, in different forums, some of which are near to the authorities, do upset business sentiment both within and outside the country". Its report adds: "In a political democracy as our own, it is understandable that there should be free discussion and free expression of views. The cross-fertilisation of ideas, which such discussion engenders, is the essence of a free society. Yet there is a point beyond which (and we perilously reach that point) discussion takes more than a disturbing turn and virtually becomes minatory in character. We would, therefore, like earnestly to suggest a self-imposed code of discipline among all sections of the public which should include, of course, government spokesmen also".

The mission visited Hongkong, Japan, the U.S.A., Canada, the U.K., France, West Germany, Switzerland and Italy, and has reported on the prospects for export promotion. On State trading in exports, the delegation says: "The S.T.C. is not the answer to the problem of increasing our exports. It is up to the Indian industry and trade to organise themselves in a way so as to make unnecessary the continuation of the S.T.C. which apparently is irksome not only to business in India, but also to business abroad, especially in free competitive economies."

The mission has called for a stable export policy and is against exports being switched off and on too often. "Nothing ruptures good trade relations more than bad performance and delay in the execution of orders—whether such lapses stem from failure on the part of individual firms or from a change in Government policy. As for quota items of export, there have been complaints too often that foreign purchasers were unable to depend on India because of frequent changes in export policy. While for these quota items, domestic needs and domestic production had to be taken into account, still there must be a continuity in export policy. A minimum export below which the level will not fall at any time should be ensured even if this should mean some disarrangement at the national level. There should be timely announcements of quotas.

"There is great scope for improvement in the co-ordination of work between the Government of India and State Governments, and even between the various Ministries of the Central Government itself. Thus the export of lean meat to Hongkong has suffered because of lack of some recognised body in India to issue certificates of quality of meat instead of private veterinary surgeons. Though more than two years have elapsed, the Central and State Governments have been unable to get together for making the necessary rules.

"Exports cannot be stimulated by compulsion. A surplus cannot be automatically marketed abroad. Indian goods must *sell* abroad along with other competitors and the Government has to assist Indian business to sell abroad. The f.o.b. costs of Indian exports should be brought down. Even now the Government as a whole is not aware that there are real impediments in the way of exports. The emphasis must be on removal of impediments rather than on the grant of fresh incentives.

"While it will be in India's interest to diversify exports as well as export markets, it will be wrong to neglect either traditional exports or export markets. As for the export of cotton textiles, India is now entering the field of processed textiles. The quality of processing and finishing is, however, not up to the world standard. Facilities should, therefore, be provided to parties who are prepared to enter into foreign collaboration arrangements concerning finishing processes. Facilities should also be given for bringing technical experts from abroad, if necessary, in processing sections. Indian textiles should also be manufactured to meet the particular requirements of buyers and must be produced to the specifications and requirements of foreign buyers. Similarly, the jute industry should keep a vigilant eye on the tastes and requirements of customers abroad. Tea is India's prime foreign exchange earner and the Tea Board should be more alive to propaganda and publicity so necessary for effecting sales in foreign countries. Not only does Indian tea face competition from tea originating from other countries, but it has to meet competition offered by numerous alternative drinks."

Prospects in Various Countries

The mission has also made a number of suggestions concerning each of the countries it visited.

Hongkong: With some imagination and a thorough and proper organisation, there is scope for exporting the following commodities—table fans, pumps and diesel engines, tea, groundnut oil, cotton textiles, handlooms, yarn, cement, finished leather, leather goods, pharmaceuticals and carbon paper.

Japan: Of over 100 items exported to Japan, only four or five add up to a sizeable proportion of the exports. Even for these few items, the organisational part could be improved. As for others, a beginning has yet to be made. Indian exports of coal to Japan are declining. There is a great demand in Japan for washed coal. The Government should encourage the setting up of coal washeries. There is also a demand for raw jute from Japan. Cotton exports can be increased, but there should be a proper check on quality.

The U.S.A.: There is today a greater understanding of India's problems than ever before. Time should not be lost to carry forward India's commercial and industrial relations with the U.S.A. on this goodwill. There is a preference in the U.S.A. for exports being routed through a small rather than a large number of exporters, at least in the initial stage. As for the export of handlooms and handicrafts, more centres should be tapped and the effort should not be confined, as hitherto, to a few big departmental stores. The Indian jute industry should explore possibilities of manufacturing the specialities which are currently imported by the U.S.A. from other countries like Japan, the U.K., West Germany and Belgium. There should be more propaganda for Indian tea. Ceylon is spending large funds with more than proportionate results. In the U.S.A., the tea habit is seasonal and Americans generally drink iced tea in summer months. They want to buy their requirements some time in the early part of the year when the best second flush tea is not available. India should, therefore, try to offer the autumnal tea which should be acceptable from the point of view of price. India has a good market for hides and skins in the U.S.A. but Americans prefer fully tanned hides and skins. The Government should liberalise the issue of import licences to genuine tanners for importing machinery, chemicals and dyes and invite technical people from abroad to help them export finished hides and skins to the U.S.A.

Canada: Tea and jute are the principal Indian exports. Jute is constantly facing competition from paper bags, and the Indian jute industry must be vigilant. More money should be spent on tea propaganda.

The U.K.: The British market feels it cannot absorb more of Indian exports in jute and cotton textiles. The Indian Government should take up with the U.K. Government the question of the "mark up" in the price of jute manufactures.

France: The French industry can contribute substantially to India's development programmes by supplying capital goods and technical know how. There should not be too much dependence on traditional items of exports like jute and cotton textiles. There is, however, scope for increasing exports of castor oil and tanned hides and skins, cashewnuts and black pepper.

West Germany: Indian textile sales are not picking up because of the restrictive policy of the West German Government. Internal levies on tea also substantially add to the price and constitute an impediment to sales and consumption. These two matters should be taken up with the West German Government.

(See editorial comment)

Replacement of Dakotas

Discussions at the highest level on the question of replacement of the *Dakota* fleet of the IAF

... the Indian Airlines Corporation have more or less resulted in the choice of *Avro 748*, which is still in the design stage in the Hawker Siddeley group. Four types of aircraft were under consideration—the Dutch Fokker *Friendship*, the American Lockheed *Electra*, the British Handley Page *Herald* and the Hawker Siddeley *Avro 748*. The last-mentioned is still on the drawing board and the prototype is yet to be produced and tested. The Defence Ministry has been keen on having one type of aircraft to replace the *Dakotas*, both of the I.A.F. and the I.A.C., because in an emergency, the I.A.C. fleet can be taken over by the I.A.F. without any operational difficulties. The latter is naturally keen on going in only for an aircraft which has been flown and tested. It is understood that the Defence Ministry has now been asked to go ahead with further negotiations for the production in India of *Avro 748* with the qualification that the question of replacement of the I.A.C. *Dakota* fleet will depend on the performance of this aircraft. But this constitutes a snag: the prototype of the *Avro* will not be ready for a year. How will the I.A.C.'s urgent needs of replacement be met? If it goes in for another aircraft, the Defence Ministry's production programme is not likely to be economical.

Technoexport Report on Heavy Machine Plant

The Government of India last week received from Messrs Technoexport of Russia the project report for the heavy machine-building plant in Ranchi. The plant will have an initial capacity of 45,000 tons, and is to have an ultimate capacity of 80,000 tons in the second stage. The contract for the preparation of the project report was signed with Russia in December 1957. During the recent visit of the Sardar Swaran Singh mission, agreement was also reached in principle for dovetailing the two stages of this plant so as to reach the capacity of 80,000 tons sooner than was originally planned.

Industrial Estates Programme

The selected buildings projects team of the Committee on Plan Projects under Mr. S. K. Patil, Minister for Transport and Communications, has reported that an overall saving of Rs. 20 lakhs is possible in the industrial estates programme. Under the second plan, a sum of Rs. 11 crores is envisaged as the outlay on industrial estates and a large number of factory buildings are yet to be constructed under the scheme. The panel for factory buildings was, therefore, asked to make a special study. It visited six estates in Madras, Kerala, West Bengal, Andhra Pradesh, Bombay and New Delhi. For the programme under the second plan, 4 to 4.5 million square feet of work sheds are yet to be constructed. The panel has said that steel is not indispensable for roofing work sheds in industrial estates and that alternatives like timber, and pre-cast and pre-pressed concrete, should also be considered. About 10,000 tons of structural steel can thus be saved and diverted profitably to other important users while the industrial estates scheme will have an overall saving of Rs. 20 lakhs. The panel has recommended the following index of good performance in the construction of the estates: the area under the factory plot should not fall below 60 percent or 65 percent, and the area under roads should not exceed 20 percent. The proportion of administrative and other buildings should be between 5 percent and 10 percent and the limit for open space 10 percent. The panel is also of the view that industrial estates should be located in towns with a population of 50,000, and not very near big towns as the latter defeats one of the objectives of the scheme, namely, that it should not result in the further concentration of population in big urban centres. Preliminary surveys should be more thorough than at present, and the setting up of new industries should not suffer because of ready demand from established industries. The location of industrial estates in rural areas should be done on an experimental basis in the first instance, and should be extended only if it proves a success.

Code of Efficiency and Welfare

The representatives of the employing ministries of the Government of India have generally endorsed the Labour Ministry's draft code of efficiency and welfare. An inter-ministerial meeting held last week approved the draft code. It was also argeed that since it mentioned only the broad principles, there should be no legal quibbling over its interpretation. The draft code of efficiency and welfare seeking to improve productivity and production is a complement to the code of discipline in industry and the code of conduct for trade unions adopted at the last Indian Labour Conference. Certain rights and responsibilities are to be placed on management and labour under the code of efficiency and welfare in a concerted bid to improve efficiency in industry. The scheme also underlines the importance of positive incentives to workers.

Last Saturday's official meeting stressed the need to avoid waste and inefficiency by employers and workers, the adoption of suitable productivity techniques and the drawing up of rules for recruitment, training and promotion. The draft code, along with the suggestions of the inter-ministerial group, will first go before a sub-committee of the Indian Labour Conference, and later before the full conference. It may, however, be noted that all the employing ministries have not yet agreed to abide by the code of discipline.

Promoting Rural Employment

Mr. Shriman Narayan, member of the Planning Commission, who aired his views on the third plan recently at a training camp, said that the third plan would have a predominantly rural and employment bias. Besides making concentrated efforts to increase food production, the plan should provide for 15 million jobs through a network of small village and cottage industries organised on a co-operative basis. He also said that the Planning Commission was considering schemes to use unemployed people on wages below market levels for productive work.

A note on this subject by Mr. Gulzarilal Nanda, Minister for Planning and Labour and Employment, is of interest. In his note, Mr. Nanda says: "Full utilisation of manpower in the rural areas should (i) be primarily through the expansion of normal employment opportunities ensuring that the investment pattern provides a proper balance between capital-intensive and labour-intensive schemes of development; (ii) provide useful work for the local community, mainly of a productive character and partly also to provide urgently needed amenities; (iii) make special arrangements for the output of goods and services which the people need but are not marketable in the ordinary way and (iv) arrange for organised voluntary service. The second will provide the largest scope for expansion of employment. While there can be a variety of such programmes, preference should be given to those which will yield a large 'net surplus'. Irrigation facilities, land reclamation, planting of trees, work on community lands and such things may add to production and incomes directly. Even building a big road linking the village with the nearest market town may be very useful.

"The size of the additional manpower which can be enlisted for such programmes may be about 20 percent of the rural labour force or two million work-seeking persons. It will not be a practicable proposition if normal wages have to be paid for this work. But it will not be forthcoming on any considerable scale if the wage paid does not cover the basic minimum needs of the worker—60 percent to 70 percent of the current rate. At the rate of 12 annas a day for roughly 300 working days, the annual wage bill will come to about Rs. 450 crores. If we include the expenses of organisation, employment and training, the total amount may be in the neighbourhood of Rs. 500 crores. The local village community should be able to meet the whole of this cost if effective use is made of this labour for productive purposes. Payment can be made in kind by taking collections from families which will benefit from the work. Even if in the initial stages, some assistance is called for, because the work may not be very efficient, it will not be more than 20 percent to 25 percent or Rs. 100 crores to Rs. 125 crores. This is roughly the amount of land revenue at present being collected in the country.

"The local works programme in the second plan did not make much impression. They were on a 50:50 basis. In the first plan, a sum of Rs. 12 crores was allotted for this purpose and in the second plan Rs. 15 crores only. It did not lead to appreciable results and made no impression on the unemployment problem. It would be necessary to allocate about Rs. 100 crores, or one-fifth of the contribution, the balance to be provided by the local village community. Further assistance in the shape of short-term credit free of interest may also be necessary".

Mr. Vaikunthlal Mehta has made another suggestion in this connection. He wants a common production programme. This, according to him, has been accepted in theory, namely, that there should be reservation of spheres and restriction of capacity. "A common production programme for the production of cloth was laid down in June 1955, but the limits proposed were exceeded and not adhered to. Since production of yarn with the *ambar charkha* is proposed to be increased as part of a planned programme for the expansion of employment opportunities, the Government should decide that vocational and training schools should use *ambar charkha* yarn for training people in handloom weaving. Thus new entrants into the handloom field will be able to familiarise themselves with *ambar charkha* yarn and the present dependence on mill-made yarn will diminish. The Kanungo Committee on the textile industry felt in 1954 that there would be a shortage of yarn and licences were freely issued for the installation of spinning mills. The Karve Committee which went into the problem later suggested that licences should not be issued for a year or two. Recent surveys show that supplies are more than adequate at present, and several parties to whom licences were given are unwilling or unable to set up new units or expand the existing capacity for spinning. In the changed conditions, the Government might well decide that for the period of the third plan, there should be no addition to the existing spinning capacity in the mill sector unless the demand for handloom cloth expands beyond the proportions indicated in the production programme of 1956. Similarly, no additional looms should be permitted for the production of cloth. Mills should be directed not to manufacture cloth of counts 4's and lower. Spinning of lower count yarn or yarn with left-hand twist should also be prohibited. This was voluntarily agreed to by the mills during Gandhiji's time. The availability of such mill yarn facilitates the manufacture of spurious *khadi*."

Increase in Civil Expenditure Explained

During the Budget debate in Parliament in April this year, members criticised the Finance Ministry for increasing civil expenditure. The actuals of 1957-58 showed a civil expenditure of Rs. 427.03 crores, against a budgeted estimate of Rs. 596.50 crores in 1959-60, which is an increase of Rs. 169.47 crores. The Finance Ministry has now circulated to members of Parliament a note explaining the increases as follows:

(Rs. lakhs)

	1957-58 actuals	1959-60 Budget estimates	Variation more (+) less (−)
1. Direct demands on revenue (mainly tax collection)	21,55	29,25	+ 7,70
2. States' share of Union excise duties	40,22	72,40	+ 32,18
3. Irrigation	11	15	+ 4
4. Debt services	42,08	57,88	+ 15,80
5. Civil administration			
(a) Administrative expenses	42,96	54,57	+ 11,61
(b) Development and social services	125,04	168,16	+ 43,12
6. Civil works	16,88	18,29	+ 1,41
7. Electricity and multipurpose river schemes	28	1,06	+ 78
8. Currency and mint	7,23	9,83	+ 2,60
9. Pensions (including privy purse)	9,24	9,63	+ 39
10. Stationary and printing	2,98	2.66	− 32
11. Miscellaneous	61,03	88,33	+ 27,30
12. Grants-in-aid (including miscellaneous adjustments between the Union and States)	45,90	49,02	+ 3,12
13. Community development	10,86	19,98	+ 9.12
14. Transfer of P.L. 480 funds to Special Development Fund	...	15,00	+ 15,00
15. Other items (famine, civil defence and pre-partition payments)	67	29	− 38
Total civil expenditure	427,03	596,50	+ 169,47

Of the total increase of Rs. 169.47 crores, Rs. 66.49 crores is accounted for by the increase in obligatory expenditure like the payment of their share of Union excise to States, debt services, pensions and statutory grants-in-aid under P.L. 480 to the Special Development Fund, leaving a balance of Rs. 102.98 crores covering the other remaining heads.

(a) *Direct demands on revenue:* Rs. 1.08 crores by way of increased payments on opium cultivation, Rs. 69 lakhs on increased outlay on stores for India Security Press (this cost will be recovered through the products of the press), Rs. 1.51 crores on additional payments to the Delhi Municipal Corporation and territorial councils on account of their share of taxes, Rs. 75 lakhs on grants to State Governments for forest development schemes and Rs. 64 lakhs on increased expenditure on forest development in Union territories. The balance of Rs 3 crores is absorbed by the cost of strengthening, expansion and improvement of the various tax-collecting organisations at the centre and in the Union territories. (Mr. Feroz Gandhi questioned this latter figure and its justifiability at a Congress Party meeting and quoted the instance of the number of stenographers in the 11 Customs collectorates being increased from 118 to 314, merely because of an order from the Central Board of Revenue on the entitlement of officials to stenographers, the greatest increase being in the Allahabad collectorate. The Finance Ministry is yet to explain this).

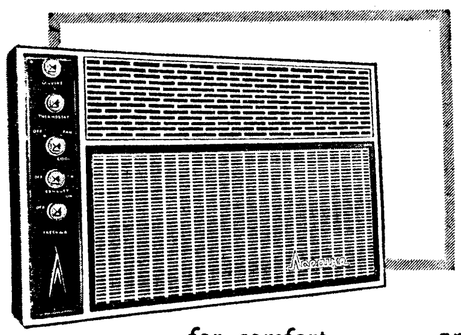
(b) *Civil administration—administrative expenses:* The increase of Rs. 11.61 crores is accounted for under General Administration Rs. 1.39 crores, Audit Rs. 1.18 crores, Mercantile Marine Rs. 33 lakhs, Lighthouses and Lightships Rs. 31 lakhs, Police Rs. 1.10 crores, Tribal Areas Rs. 5.85 crores, and External Affairs Rs. 1.37 crores. An increase of Rs. 50 lakhs for Central Intelligence is offset by an equal drop under elections. The explanations given in the note concerning these are interesting: The increase under General Administration is mostly on the Secretariat where the expenditure has been rising with the increase in governmental activities", the note circulated to the Press says: "It however needs to be pointed out that only a small portion of the increase is due to expansion of Ministries proper, *i.e.*, headquarter establishments. The rest of the increase in expenditure obviously is due to expansion of the operational organisations of Ministries, which are entrusted with the implementation of developmental programmes and welfare work".

This is not the only variation or contradiction Mr. Feroz Gandhi pointed out at the Congress Party meeting that there are variations on the total number of Government employees in the figure supplied by the Labour and Employment Ministry, the Finance Ministry and the Home Ministry's census of Government employees. The reasons for such variations are still being investigated by the Cabinet Secretariat. Mr. Gandhi also then said that compared with 1956-57, the wages and salaries of the Government of India (including Defence) registered an increase of roughly Rs. 15.8 crores in 1957-58. Rs. 36 crores in 1958-59 and Rs. 67 crores in 1959-60. (Of the increase of Rs. 36 crores in 1958-59, only a sum of Rs. 12 crores is accounted for by the interim relief granted by the Central Pay Commission.)

Audit and Accounts Department to meet the increased work on maintenance and audit of the acounts of the Central and the State Governments whose expenditures on the plan outlay have been increasing. The increase under Mercantile Marine and Lighthouses and Lightships is due to the improvement of facilities and services provided, while under Police, larger payments have had to be made to State Governments for services rendered by them. The increase in the provision for the development of the tribal areas accounts for Rs. 1.66 crores, while the taking over of the Naga Hills and Tuensang area under Central administration and the increase in the strength of the Assam Rifles account for the balance under this head. The increase in External Affairs is largely due to the increase in the contribution to the U.N.O. (Rs. 90 lakhs), increased provision for Indian missions abroad and payment of certain subsidies.

(ii) *Civil expenditure—development and social services:* Of the Rs. 43.12 crores increase, Rs. 100.04 crores is under scientific departments—Archæology Rs. 22 lakhs, Geological Survey Rs. 114 lakhs, exploration of natural gas and oil Rs. 2.47 crores, Meteorological Department Rs. 24 lakhs, Atomic Research Rs. 1.95 crores, C.S.I.R. Rs. 1.10 crores, and Scientific and Technical Education and Research Rs. 1.82 crores. Expenditure on education shows an increase of Rs. 17.14 crores, while Medical and Public Health account for Rs. 3.71 crores. Other increases are: Agriculture Rs. 3.57 crores, Animal Husbandry Rs. 1.58 crores, Co-operation Rs. 1.84 crores and Rural development Rs. 37 lakhs. Industries account for another Rs. 4.44 crores.

According to the Finance Ministry, "while there has undoubtedly been some increase in what may be called purely administrative expenditure, by and large a very substantial portion of the increased provision in this group head is on account of development, and any curtailment of this expenditure would involve the curtailment of the plan". The increases under Miscellaneous (Rs. 27.3 crores) is accounted for by Resettlement and Employment Rs. 3.46 crores, grants for the improvement of backward classes Rs. 4.98 crores, grants to the States for raising the emoluments of low-paid employees Rs. 7.93 crores, servicing of dollar purchases Rs. 1.38 crores, write-back of trading losses on foodgrains Rs. 2 crores, grants to the Delhi Corporation for the transfer of administration of certain institutions and services from the Delhi Administration Rs. 1.40 crores and payment to the Mysore State "to make good the dislocation caused to its finances by the acquisition of its gold at the official price instead of the market price" Rs. 2.49 crores.



According to a background note prepared for the benefit of Pressmen, Civil Administration as a total revenue expenditure of the Government of India. If a study of this over the period 1955-56 to 1959-60 under the heads "Administrative Services" and "Developmental and Social Services" is made, one gets the following percentages:

	1955-56	1956-57	1957-58	1958-59	1959-60
Administrative expenses	34.81	39.31	42.97	51.98	54.56
Development and social services	59.27	82.98	125.03	145.74	148.17
Total	94.08	122.29	168.00	197.72	222.73

While civil expenditure as a whole has thus registered an increase of 137 percent during these years, the increase in administrative expenses has been about 57 percent. The proportion of expenditure on administrative services to the total expenditure on civil administration has decreased over the four-year period from 37 percent in 1955-56 to 25 percent in 1959-60. The increase of Rs. 20 crores in the administrative services over the four-year period, it is said, is accounted for by the annual accrual of increments to employees and the increase in the total strength of government employees from Rs. 4.5 lakhs in 1955-56 to Rs. 4.95 lakhs in November 1958.

Now, while the Finance Ministry suggests in the note to M.P.s that the increase of Rs. 1.39 crores in 1959-60 over the 1957-58 actuals in general administration under Administrative Services "is mostly in the Secretariat where the expenditure has been increasing with the increase of governmental activities", the note circulated to the Press says: "It however needs to be pointed out that only a small portion of the increase is due to expansion of Ministries proper, *i.e.*, headquarter establishments. The rest of the increase in expenditure obviously is due to expansion of the operational organisations of Ministries, which are entrusted with the implementation of developmental programmes and welfare work".

This is not the only variation or contradiction Mr. Feroz Gandhi pointed out at the Congress Party meeting that there are variations on the total number of Government employees in the figure supplied by the Labour and Employment Ministry, the Finance Ministry and the Home Ministry's census of Government employees. The reasons for such variations are still being investigated by the Cabinet Secretariat. Mr. Gandhi also then said that compared with 1956-57, the wages and salaries of the Government of India (including Defence) registered an increase of roughly Rs. 15.8 crores in 1957-58. Rs. 36 crores in 1958-59 and Rs. 67 crores in 1959-60. (Of the increase of Rs. 36 crores in 1958-59, only a sum of Rs. 12 crores is accounted for by the interim relief granted by the Central Pay Commission.)

RECORD RISE IN U.K. EXPORTS

VISIBLE TRADE GAP REDUCED

(FROM OUR LONDON CORRESPONDENT)

THE evidence is now strengthening that the recent improvement in Britain's export trade is no mere "flash in the pan." From the full details of overseas trade in May, when the export total established a new record at £299.1 million, it is obvious that the expansion has been broadly based. The record in May did not result, as had been supposed in some quarters, from any unusual concentration of deliveries of high-value items. Exports of ships, aircraft and submarine cable were about £10 million lower than in April. The May record reflected substantial further rises in shipments of machinery, motor-cars and commercial vehicles, chemicals, textiles and most other consumer goods. Equally significant, the signs of recovery in exports to the sterling area, which first appeared in April, became more pronounced in May. Sales to New Zealand rose substantially, and there was a more modest increase in shipments to Australia.

The full figures show the nature of the sharp fall in May in imports, which contributed largely to the reduction of the visible trade gap to £11 million, the lowest on record. The main element in the £35-million drop in total imports was a £20-million fall in arrivals of food, beverages and tobacco. Imports of industrial materials were also £7 million lower, but the reduced import bill owed nothing to any fall in average prices. There was, in fact, a slight increase in prices in May, the U.K. Board of Trade's index moving up from 96 to 97. With export prices unchanged, the index of the terms of trade moved slightly against Britain from 88 to 89. It can still be said, however, that in this matter, Britain is faring remarkably well, so well in fact that a gradual rise in import prices must and should be expected. As for the outlook the Board of Trade sounds a warning that it will be foolish to look for a continuation of the rise in exports at the recent pace. It also regards the import total in May as unduly low. But it endorses the view that the general outlook for overseas trade for the rest of the current year is encouraging.

Plea for More Credit

The Federation of British Industries has asked the Chancellor and President of the U.K. Board of Trade to permit "in selected cases, each of which will be decided on its own merits," the expansion of the guarantee period for export credits from its present maximum of five years to ten or even 15 years. It claims that exporters of heavy capital goods are already severely handicapped by their inability to arrange credit for foreign customers over longer periods than five years, and that this situation is likely to grow worse. Although the F.B.I. is at pains to draw a parallel between its proposals and the development loans provided by the U.S. Export-Import Bank, and although it insists that it is not calling for a general credit race for export business, it is quite likely that action on the lines it suggests will start a credit race. This does not mean that the Federation's complaint is unjustified. Mr. J. Macartney-Filgate, of Lazards, declared recently that the five-year form of credit did not make sense: "Turnkey" projects in particular (in which a consortium of firms carries out a major project from start to finish) usually need a 12 to 15-year credit term. But the Berne Union countries have agreed that five years shall be the maximum for Government-backed credits, and this gentlemen's agreement could hardly survive a breakaway on the scale the F.B.I. is suggesting.

Capital Spending

Fixed capital expenditure by manufacturing industry in the first quarter of 1959 is provisionally estimated to have been 11-percent lower than in the first quarter of last year, and expenditure by other industries and services 4-percent higher, the *Board of Trade Journal* says. Taken together, these two broad groups of industry showed a fall of 5 percent. In manufacturing industry, expenditure on plant and machinery was 11-percent lower, and expenditure on building work showed a fall of 16 percent. Expenditure on motor-vehicles was 11 percent higher. In other industries and services, a "marked increase" in expenditure on new building work more than offset declines in outlays on motor-vehicles and plant and machinery. The fall of 11-percent in the first quarter follows a decrease of 5 percent in the last three months of 1958.

Control of Public Expenditure

The Government is to review the principles and practice which govern the control of public expenditure by the Executive. This will be an internal enquiry, conducted under the general authority of the Chancellor of the Exchequer, but on some points, the Government will seek outside advice. The progress of the review and of Ministers' consideration of the various propositions, which might be put forward, will be confidential. The Government's conclusions will, however, be reported to Parliament. This news was published in a report from the select committee on estimates, giving the U.K. Treasury's replies to various criticisms made by the committee in 1957-58. All departments of the Government, and not only the Treasury, will be covered by the review, and while Ministers will remain responsible for it, a small group of officials may be set up to organise the work.

This is the Government's response to the proposal of the select committee that a small independent committee with access to Cabinet papers should be appointed to report on the theory and practice of Treasury control of expenditure. This proposal has been rejected by the Government, principally because it will mean, in essence, an enquiry into the working of the central processes of the Government. The latter suggests that it will be inappropriate for a committee of independent people to be invited to scrutinise and pronounce on the inner counsels of the Government or on the resulting decisions, for which it is collectively responsible to Parliament and to Parliament alone. Detailed arrangements for the conduct of the internal review will be settled by the Chancellor of the Exchequer and the Prime Minister.

Books from Britain

The Government is to spend about £500,000 to increase knowledge of England and English literature abroad, particularly in Asia and Africa. A five-point programme has been agreed upon and should be operating with effect from next year. This shows that the Government intends: (1) To negotiate new agreements with countries at present restricting the import of books. (2) To subsidise the production of books for sale abroad in a paper-back form at roughly a shilling each. (3) To assist the British Council in accumulating better libraries and in arranging presentation books. (4) To develop lending libraries, especially in the colonial territories. (5) To assist the distribution abroad of British newspapers and periodicals. The Government's plan will bring the best British literature and books of an informative nature into the homes of foreigners who otherwise could not afford them.

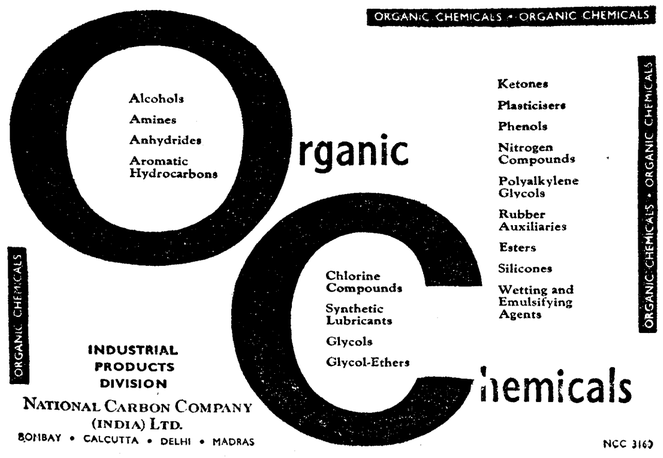
Oil Consumption Rises

Oil consumption in Britain in the first quarter of this year amounted to 9,222,439 tons. Figures published by the Petroleum Information Bureau show that this was 1½ million tons more than in the same period of 1958. The expansion in fuel oil deliveries to 3,798,064 tons accounted for more than 1 million tons of the additional demand. Much of the increased use of fuel oil was due to higher deliveries for electricity generation. The use of motor spirit, at 1,491,604 tons, was 6.9 percent greater than in the first quarter of 1958, with an increase of 16.3 percent in the demand for premier grades. The motor spirit trade to commercial consumers fell by 4.9 percent. Increased use of diesel-powered tractors led to a fall of 2.9 percent in deliveries of vaporising oil, but the sales of burning oil increased by 17.1 percent to 543,305 tons.

Iraq Leaves Sterling Area

Iraq has decided to leave the sterling area. This step, taken after several weeks of discussion between British and Iraqi officials in Baghdad, is not likely to have any harmful effect on sterling, but will presumably add something to the prestige of the Iraqi Government. General Kassem told the Iraq Engineers Union on 4th June that his Government was determined to leave the sterling area, but would remain friends with Britain. Iraq has about £160 million of reserves in sterling but, as most of her trade and other international financial transactions is done in pounds, it is in her own interest to hold sterling. Iraq's freedom to exchange pounds for gold or dollars or any other foreign currency has been the same as that enjoyed by other members of the sterling area. Her power to do this is now the same as that of other foreign countries for which sterling has been convertible since December.

Iraq will continue to peg the exchange value of the dinar to the pound. The former is a strong currency and Iraq does not lack foreign currencies, although it has been suggested that her wish to gain complete control of her sterling reserves may have something to do with a policy of increasing trade with communist countries. The decision to leave the sterling area, which Britain has not opposed, does not affect the present arrangement whereby royalties on Iraqi oil are paid by the oil companies in sterling. Iraq has been a member since the sterling area system was formalised in 1947 and for many years previously her external finances were under Britain's surveillance. The main attraction of membership, the privilege of drawing on a large central gold and dollar reserve, is no longer strong enough to defeat the pull of the prestige of independence. Jordan and Libya are members of the sterling area, but it is very doubtful whether they will now follow Iraq's example.



Sir John Braithwaite Retires

The retirement of Sir John Braithwaite from the chairmanship of the London Stock Exchange is an event which will be widely regretted. During his ten years of office, he has achieved more than any of his predecessors in making the Stock Exchange comprehensible to the ordinary general public. In this task of improving public relations, he has steered a middle course between the City traditionalists, and the impatient progressives whose policies might have destroyed more than they created. After ten years of solid work, Sir John has the satisfaction of knowing that the Stock Exchange is much more firmly established in the public mind as an integral part of the economic machinery of the country. In his retirement, he will carry with him the good wishes of a large circle of friends in the City and in industry, not excluding the financial journalists to whom he was always so readily accessible.

Fifty Years of Handley Page

The Handley Page aircraft company celebrated its fiftieth anniversary on 17th June. It claims to be the first British company, and probably the first in the world to be formed solely for the design and manufacture of aircraft. Sir Frederick Handley Page, chairman and managing director, founded the organisation in 1908, but it was incorporated the following year. Its headquarters were then in Barking, Essex, where several aircraft were built. The first was a monoplane called *The Bluebird*. It is questionable whether this ever flew, although it left the ground in what may have been only bounces. The second model, the *H.P.2*, succeeded in flying, but was not considered entirely successful. Sir Frederick reckons his first fully successful aircraft was the *H.P.5*, a 50-horse-power monoplane. This was built in 1912 and was flown at many flying meetings.

In 1912, the company moved to a larger factory in Cricklewood, London, N.W., which is still its headquarters. The company has been concerned mainly with large aircraft. The first heavy bomber squadrons of the R.A.F. were equipped with *H.P.0/000s* and *0/400s*. The company's latest aircraft are the *Victor* jet bombers, recently introduced in service with the R.A.F., and the *Herald* turbo-propeller short and medium-range airliner.

TALKS ON RAW JUTE T.S.D. CONTRACT FORM INCONCLUSIVE

NEW CROPS MAKING SATISFACTORY PROGRESS

DURING a week of inactive trading, the main talking point has again been the disputed East India Jute and Hessian Exchange's raw jute contract, which has now been in force for one month. It is doubtful, however, whether any business has been done solely on the new contract. Transactions have invariably been negotiated with a covering letter if on the new form, or on C.O.D. terms under the old I.J.M.A. contract. This is unsatisfactory from the trade's point of view, and is not conducive to stability or confidence. It makes a farce of the authority of the board of the East India Jute and Hessian Exchange. It is surprising that this body has not asserted its authority to bring about a solution. The point is perhaps very significant, and appears to endorse the remarks passed in 1954 when the conclusions of the Jute Enquiry Commission on futures markets were published. Statements were then made to the effect that it was one thing to set up a well-regulated futures market, "but the greatest difficulty would, of course, be in the enforcement of the regulations."

During the past week, meetings were again conducted, the most significant one being a round-table conference between representatives of the I.J.M.A., sellers' associations and the brokers' association (why no representative of the East India Jute and Hessian Exchange Ltd?). There, the main point discussed was the "invoicing back" clause requested by sellers. Great hopes were placed on this meeting, but the anti-climax came when it proved inconclusive, with the I.J.M.A. calling on sellers to put up concrete proposals in writing to enable their members to discuss them. Once again, it appears that neither party is willing to give ground, so the stalemate continues.

During the past week, representatives of the I.J.M.A. attended discussions in New Delhi about the discriminatory imposition of Rs. 15 a bale made by the State Trading Corporation on licences for the import of Pakistani cuttings. Although licences appear to be freely available, mills have not taken advantage of them and have appealed to the highest authority for the removal of the charge. Meanwhile, Indian cuttings continue to enjoy a monopolistic security, and enhanced rates have been reported for so-called special grades.

The troubles of the jute trade in Pakistan have increased since the Indian demand for Pakistani cuttings fell. According to the Pakistan Central Jute Committee, prices have declined, so many farmers consider it uneconomical to make the effort and waste land on growing jute. It is feared that all licences issued for growing jute will not be used. It is pointed out that the farmers' return over the past year has been about Rs. 15 a maund, against the Rs. 25 a maund which was considered a "fair return" by the International Jute Commission which met in East Pakistan in 1957.

Gunnies Quiet

After expectations of increased overseas interest, the past week's lack of enquiries for jute goods disappointed the trade. The Argentine has shown little inclination to buy, as the political unrest continues. A Sudan tender was circulated, but mills showed little interest as it was mainly for odd constructions, and apart from that was for forward shipment in both sacking and hessian. These delivery periods are at a considerable discount, so mills prefer to sell for the nearer positions, where possible, and get the higher price. Demand will inevitably rise, as it is normal at this time of year for overseas business to increase, and this will be partially met by the increase in production resulting from the 1½ percent unsealing of looms. The full effect of the increase will not be felt, however, until the end of July, by which time the position should be clearer. There are still many in the trade who consider the increase in production to be too small, but the majority support the I.J.M.A.'s decision that it is better to have a demand for goods rather than a glut resulting in large stocks waiting to be bought up, with a consequential price drop.

Pakistani Jute Goods Production

The production of jute goods in East Pakistani mills during April was 17,344 tons, or 729 tons lower than in the previous month. The decline was distributed evenly over all constructions, sacking falling by 213 tons, hessian by 342 tons and other goods by 174 tons. The actual figures were 12,247 tons for sacking (70.6 percent), 4,290 tons for hessian (24.7 percent) and 807 tons for other goods (4.7 percent). The total production of Pakistani jute goods from July 1958 to April 1959 amounted to 166,046 tons, of which 114,557 tons (69 percent) were sacking, 42,318 tons (26 percent) were hessian, and 9,171 tons (5 percent) were other goods. The consumption of raw jute by mills in East Pakistan during April 1959 was 95,000 bales, or 17,000 bales less than in the previous month.

In spite of the fact that many jute fields in Assam are waterlogged, and that in some cases the new plants are standing in about two feet of water, there is no immediate danger to the crops. Many farmers think that these conditions may prove to be beneficial in that the yield will be greater as the plants will be taller. But the crop may be heavy-rooted after having stood in water. However, if a good spell of sunshine is forthcoming, even this disadvantage may be overcome. In general, the crop in Assam and northern Bengal is reported to be good, but more sunshine is required. In the local Daissee districts, conditions have been favourable with alternating rain and sunshine, although more rain is required. The initial imports of Daissee white from the Bongaon-Chandpara areas show that although good colour is predominant, the fibre is immature and short, and is more in the nature of weedings. In western districts, and in Bihar and Orissa, the prospects are favourable; the standing crop is reported to be very healthy.

THE JUTE MARKETS

There was a fair amount of activity in the futures markets during the past week, but the general trend of prices was downwards. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 24th June to 29th June, were as follows:

	Hessians 40in. 10oz. August		Sacking B Twills August		Raw Jute Upper Assam June	
	Rs a 100 yds	Rs a 100 metres	Rs a 100 bags		Rs a md.	Rs a 100 kilos
Opening	41.60	45.49	97.30		23.84	63.87
Highest	41.68	45.57	97.45		23.88	63.98
Lowest	41.00	44.83	96.60		23.54	63.07
Closing	41.00	44.94	96.80		23.54	63.07

Manufactured Goods: The market was closed last Thursday due to the *hartal* in and around Calcutta. Conditions in both sections were quiet at this stage, especially in hessians which drifted lower on the disturbing political news from the Argentine. Sacking showed a slight improvement due to buying support in the local market for all constructions for varying deliveries. B Twills opened at Rs. 96.85 for ready shipment and Rs. 96.25 for January-March. This was 65nP or 75nP higher than last week's closing rates. Opening prices for 40in. 10oz. were based on ready shipment at Rs. 42.45 and January-March shipment at Rs. 39.60. The market continued to rule quiet due to the lack of overseas enquiries, and rates in both sections showed small losses of 5nP or 15nP. Prices weakened considerably on Saturday, mainly as a result of speculative activity. B Twills dropped to Rs. 96.55 and 40in. 10oz. to Rs. 41.90. The tendency was downwards after the week-end and small losses were recorded as overseas business had still not materialised. Towards the evening, reports of the formation of a new Government in the Argentine caused rates to recover, but the recovery was not maintained over the Bank Holiday on Tuesday, and by Wednesday morning hessian prices were much lower. Sacking showed small gains due to local speculative activity and reports of enquiries from the Far East.

Opening quotations on Wednesday morning were as follows:

	Ready		July		July-Sept.		Oct.-Dec.	
40in. 8oz.	33.65	(36.68)	33.60	(36.62)	33.20	(36.18)	32.10	(34.99)
40in. 10oz.	41.30	(45.01)	41.40	(45.12)	41.20	(44.91)	39.66	(43.16)
B Twills	96.65		96.85		97.00		96.40	
Heavy Cees (Plain)	97.50		98.00		97.10		96.40	
A Twills	117.00		117.00		116.75		116.50	
Liverpools	106.00		106.75		107.00		107.00	
Cornsacks	99.00		99.75		99.75		98.25	

Raw Jute: Business in the fibre markets was practically at a standstill as far as contract jute was concerned. It was reported, however, that mill agents and representatives were very busy in Cossipore and in the upcountry agencies, and purchased fair quantities. Prices advanced by 25nP to Rs. 22.50 for old crop Assam. Offers of new crop jute were limited as sellers were not willing to sell on C.O.D. terms, and transactions under the new contract were held up until an agreement had been reached between the mills and the sellers on the terms of the contract. Wagon arrivals in Cossipore amounted to 350 wagons, which was nearly 100 more than the arrivals in the preceding week and in the corresponding week of last year.

Business consisted of old crop Assam Bottoms at Rs. 22, and Assam Tossa at Rs. 23.25 basis Bottoms. New crop purchases were confined to small lots of Desal and Daissee white at Rs. 21.75 basis Bottoms for August-September and September-October shipment, and jungli white at Rs. 20.25. A small lot of Barpeta jute was purchased at Rs. 23 basis Bottoms for August-September shipment.

At the close, the market was unchanged and opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs a maund	Rs. a 100 kilos	Shipment
Old Crop:			
Assam	22.50	60.30	July-Aug.
Northern	21.75	58.29	"

Northern	22.75	60.97	

GUNNY SHIPMENT STATISTICS

The following figures including coastal shipment relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th June, 1959	1,039.8	15,422.2	16,462.0
1st to 20th May, 1959	3,029.9	12,714.3	15,744.2
1st to 20th April, 1959	987.7	14,305.7	15,293.4
	Sacking		
1st to 20th June, 1959	16,447.9	1,307.9	19,755.8
1st to 20th May, 1959	19,010.1	1,133.3	20,143.4
1st to 20th April, 1959	18,894.2	432.3	19,326.5

THE FOREIGN JUTE MARKETS

FIBRE PRICES WELL MAINTAINED

(FROM OUR DUNDEE CORRESPONDENT)

A BETTER feeling pervades the Dundee jute market, and more business is being done. There are hopes that the improvement will continue and that both spinners and manufacturers will be able to work full time again. The curtailment of output is still going on, but usually with a stoppage of machinery only. With raw jute prices well maintained, there is little hope of values for yarns and cloth being altered.

The raw jute market in Pakistan is firm and unchanged. Very little business is being done in Dundee, however, because spinners are already well bought in old crop fibre. Mill Firsts are offered at £110 for old and £107 for new crop jute. Mill Lightnings from £90 for both old and new, and Mill Hearts at £79 for old and £80 for new, c.i.f. U.K. Shipment periods are July-August and August-September, respectively. Old crop Grade Hearts are still quoted at from £64.

Good marks of Daissee-2/3 are offered at from £93 and Grade from £85, with Grade Tossa-2/3 from £114 and fours from £95. July-August and new crop from £107 and £95, respectively, for Tossa, September-October, c.i.f. U.K. Indian jute is again being offered this season and business is reported to have been done in Mill Hearts at £78 for August-September shipment, c.i.f. The rate for Pakistani Mill Hearts, as stated above, is £80, c.i.f., new crop.

The Calcutta goods market fluctuated slightly during the past week at around 63s 9d for 40in. 10oz. hessians and 48s for 7½oz., July, 62s 9d and 47s 6d, August-September and 60s 3d and 45s 9d, October-December, with B Twills at 146s 3d, 146s 9d and 145s 9d for the respective positions of shipment, all f.o.b. Calcutta. The value of 8 lbs C.H.W. cops is unchanged at 14.29d a lb. and of 8 lbs J.C.H. warp is 15.43d, and business has been done in a fair quantity at these rates for August-September delivery. Some spinners of the poorer yarns are very much in need of orders, but a quiet steady business is being done in jute cloth at 12.88d a yard for 40in. 10oz. hessians and 11.03d for 8oz.

Calcutta Markets

BETTER DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 3, held on 29th June and 1st July, offerings at the Export auction amounted to 31,481 packages. There was a better demand, particularly for plain brokens and bright liquoring teas. Other descriptions were, however, irregular, and there were a number of withdrawals. Plain brokens were well supported but similar Fannings were a weak feature. Bright liquoring orthodox Dooars received fair support but Legg-cut teas were a weak feature with the exception of the few bright invoices which sold well. Orthodox and C.T.C. Assams with useful liquors received a good enquiry but at often lower rates. The more ordinary descriptions, however, met with less support, and there were substantial withdrawals. There was a fair demand for whole leaf grades and Darjeelings, but prices generally showed an easier tendency.

	Quotations 1959 Rs.	1958 Rs.
Clean Black Pekoe	2.30	2.35 to 2.45
Plain B.P.	1.62 to 1.68	1.82 to 1.98
Plain Fannings	1.60 to 1.70 (Nom.)	1.90 to 2.00
Medium B.P.	1.90	(Nom.) 2.10 to 2.22 (N)
Medium Fannings	(Not quotable)	2.30 to 2.50
Best Assam C.T.C. B.P	3.20 to 3.40	3.50 to 4.00
Best Assam C.T.C. Fgs.	3.70 to 3.10	4.00 to 4.50

(Quotations are exclusive of excise duty.)

In the Internal Sale there were 11,326 chests of Dust on offer, of which 2,104 chests represented old season's manufacture. There was a good general demand at irregular and sometimes easier rates. Teas of orthodox manufacture realised prices at about valuations but were sometimes easier. Legg-cut Dooars teas were sometimes 4nP to 6nP easier but the powdery types were keenly competed for. Darjeeling Dusts were irregular but those with flavour often sold above last rates. There were some withdrawals, however, in this category. Medium C.T.C. Dusts were irregular, those with bright liquors were often dearer but those with early first flush character met with less demand. The best teas in this category showed a similar tendency with the smaller kinds sometimes selling up to 20nP above valuation.

	Quotations 1959 Rs.	1958 Rs.
Medium Dooars Dust	1.66 to 1.72	1.71 to 1.73
Medium Assam Grainy Dust	Unquotable	1.81 to 1.9. (N)
Medium Assam C.T.C. Dust	2.08 to 2.28	2.30 to 2.35
Best Assam C.T.C. Dust	2.28 to 2.98	3 to 3.30

(Quotations are exclusive of excise duty).

Leaf offerings amounted to 131 chests.

AUSTRALIAN GRAIN FREIGHTS DEPRESSED

THE weakness in Australian grain rates in the freight markets this past fortnight was indicated by the fixture of a vessel for September-October from western Australia to the Continent at 60s, i.e., 5s under the last rate paid. Ore was arranged from Bombay to Poland at 53s and from Calcutta completing one East Coast Port to the same destination, at 55s f.i.o.t. Reports from Rangoon give an alarming account of priority given by the Customs and other Government authorities there to the chartered vessels of the joint Zim Israel concern and Defence Services Institute, in the matter of allocation of cargo, permission for ships to work, etcetera. The current depressed state of freight markets pemits speculation of this nature, but in the long-term view, the results can only be harmful to that country's economy.

LINSEED DULL

Dull conitions prevailed in the linseed market during the past week, and with a generally quiet tendency in other oilseeds, linseed prices sagged. Little interest was shown by either buyers or sellers, and turnover was small. Due to a further improvement in linseed cake prices abroad, fresh business was done and there was brisk activity in the local market. The oil section was dull.

HIDES AND SKINS UNCHANGED

The market in skins showed little change. Stocks were less than in the previous week.

Bazaar Sales

(Between 23rd June and 29th June, 1959)

Cowhides: Wet salted (Ord.) 7,000 pcs. on the basis of Rs. 10.75 to Rs. 15; Wet salted (Slaughtered) 12,500 pcs. on the basis of Rs 12.50 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee, Kustia) 42,400 pcs. on the basis of Rs. 360, Rs. 400 to Rs. 445 and Rs. 380 to Rs. 500; Wet salted (Ord.) (she-killed) on the basis of Rs. 4.62 and (he-killed) on the basis of Rs. 4.87 a piece; Assam 3,800 pcs. on the basis of Rs. 350 to Rs. 370; Purneah-Dinajpur-Maldah 30,200 pcs. on the basis of Rs 380 to Rs. 415; Patna-Pakur (Ord.) 1,900 pcs. on the basis of Rs. 350 to Rs. 365.

Bazaar Stocks

(29th June 1959)

Cowhides; Wet salted 98,700 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia and Killed) 66,500 pcs.; Assam-Dinajpur-Maldah-Jalpaiguri 42,000 pcs.; Muzafferpore-Patna-Pakur-Purneah 110,500 pcs.

COMPANY AND PUBLIC NOTICES

THE NEW SAMANBAGH TEA COMPANY, LIMITED

NOTICE is hereby given that the Fifty-sixth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday, the 23rd July 1959, at 3-15 P.M. for the following purposes :—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1958.

(2) To declare a dividend on the Preference Shares.

(3) To elect a Director.

(4) To appoint Auditors and to fix their remuneration.

(5) To consider and if deemed fit to pass the following Resolution as a Special Resolution :—

"That it is hereby approved that Clause (2) of the contract entered into between the Company and the Managing Agents Messrs. Shaw Wallace & Co. Ltd. in terms of special Resolution No. 7 passed by the Shareholders in the General Meeting of the Company held on 16th April, 1958 and contained in letters dated 1st and 2nd May, 1958 exchanged between the Company and Messrs. Shaw Wallace & Co. Ltd. respectively, whereby the Company was *inter alia* authorised to borrow money at interest from Messrs. Shaw Wallace & Co. Ltd. the Managing Agents, to the extent of Rs. 5 lacs at any particular time, be varied to read as follows, such variation to come into force from 1st January, 1959, and that such contract varied in conformity with this resolution shall be valid for a maximum period of 5 Years from 1st March, 1958 unless previously terminated by either party giving to the other one month's notice in writing".

Clause (2) "Money lent by Shaw Wallace & Co. Ltd. to the Company which shall not at any time exceed Rs. 8 lacs in the aggregate may be repaid by the Company without notice and shall be repaid within three days of demand".

The Transfer Register will be closed from the 13th July, 1959 to 23rd July, 1959, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,

SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Explanatory Statement.

The above Resolution has been necessitated due to the fact that the Company's funds could not be transferred from Pakistan to India and the Managing Agents are having to advance money to the Company to meet the expenses in India. These advances by the Managing Agents will continue to increase till such time as the Company is able to receive sanction from State Bank of Pakistan to transfer its funds to India. In order therefore to regularise the recurring future advances by the Managing Agents to the Company the above Resolution is necessary.

Calcutta, 12th June, 1959.

JESSOP AND COMPANY, LIMITED.

NOTICE is hereby given that the Twenty-seventh Annual General Meeting of the Members of Jessop & Co., Ltd., will be held at the Registered Office of the Company on Friday, the Twenty-fourth day of July, 1959, at 11-00 o'clock in the forenoon, for the transaction of the following business :—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors, for the year ended 31st October, 1958.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 8th to 24th July, 1959, both days inclusive.

By Order of the Board,

D. D. MARKAN,
Secretary.

63, Netaji Subhas Road,
Calcutta, 29th June, 1959.

NOTE: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

NEW INDIA INVESTMENT CORPORATION LTD.

NOTICE is hereby given that the Twenty-second Ordinary General Meeting of the shareholders of New India Investment Corporation Ltd. will be held at the registered office of the Company at 9, Brabourne Road, Calcutta, at 4 P.M. on Wednesday the 5th August, 1959, to transact the following business :—

(1) To receive and adopt the Directors' report & audited Profit & Loss account and Balance sheet for the Y. E. 31st Dec., 1958.

(2) To declare dividend recommended by the Directors.

(3) To appoint Directors in place of Sir B. D. Goenka and Sir Walter Michelmore, who retire by rotation and offer themselves for reappointment.

In this connection to consider and if thought fit to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed separately as required by Section 173 of the said Act.

To be proposed as an ordinary Resolution :

That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Sir Badridas Goenka, who has attained the age of 75 years and who retires by rotation from office of Director under Article 117 of Articles of Association of the Company and that he be and is hereby reappointed a Director of the Company.

(4) To appoint Auditors & fix their remuneration.

(5) To transact any other ordinary business of the Company.

The share transfer register of the Company will be closed from 30th July to 5th August, 1959, both days inclusive.

By Order of the Board,

RAMDUTT RAMKISSENDASS,
Secretaries & Treasurers.

Calcutta, 26th June, 1959.

Note:—(a) A member entitled to attend &, vote is entitled to appoint a proxy to attend & vote instead of himself and a proxy need not be a member.

(b) The dividends if declared will be paid to those shareholders whose names appear on the Company's books on the 5th August, 1959, or to their mandatees. No application for dividend warrants will be necessary.

Explanatory statement u/s. 173.

In the special notice given to the Company of the resolution under Item No. 3(a) of the above notice it has been stated that Sir Badridas Goenka, who is proposed to be reappointed a Director of the Company, & who retires by rotation and offers himself for re-election, has attained the age of 75 years. He is one of the Promoter Directors of this Company & it is most desirable that the Company should continue to avail itself of his experienced guidance and as such the age limit prescribed to Directors u/s. 280 of the Companies Act, 1956, should not apply to him.

By Order of the Board,

RAMDUTT RAMKISSENDASS,
Secretaries & Treasurers.

THE EAST INDIAN COAL COMPANY, LIMITED.

(Incorporated in England with Limited Liability).

The Share Transfer Books of the Company will be closed from the 14th to 27th July, 1959, both days inclusive.

By Order of the Board,

JARDINE HENDERSON, LIMITED,
I. F. MORRISS,
Actg. Secretary,
Managing Agents and Secretaries.

4, Clive Row,
Calcutta, 26th June, 1959.

N.B. Payment of the above dividend will be made only to those members whose names are registered in the Books of the Company on the 27th July, 1959 or to their mandatees. No application for Warrants will be necessary. Claims on behalf of the holders of shares on blank transfer will not be entertained.

THE ALUMINIUM CORPORATION OF INDIA LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.

NOTICE is hereby given that the Deferred Share Transfer Book and the Register of Members of the Company will remain closed from the 10th to the 16th July, 1959, both days inclusive.

Persons holding Deferred Shares under Blank Transfer Deeds are requested to apply for Transfer of such shares before the 10th July, 1959.

The holders of Deferred Shares whose names will appear on the books of the Company as on 16th July, 1959, will be entitled to receive such number of Ordinary Shares which the Company has decided to allot to them respectively in pursuance of the Scheme of Arrangement approved at separate general meetings of the holders of Ordinary Shares, the holders of Deferred Shares and of the Company, all held on the 8th August, 1958, and sanctioned by the Calcutta High Court and the Controller of Capital Issues. Thereafter Deferred Shares will cease to exist in the capital structure of the Company.

By Order of the Board,

J. K. INDUSTRIES PRIVATE LTD.,
Managing Agents,
H. S. SINGHANIA,
Director.

The 23rd June, 1959.

THE COST PROBLEM IN INDIAN INDUSTRY

SEARCH FOR EXPORT CONSOLATIONS

THE news from New Delhi that the Government is to ask industries to review their cost structures so as to make Indian goods more competitive on foreign markets, is yet another reminder that the economy is fast becoming a high-cost one. This development was not altogether unforeseen; for the past few years the pursuit of political ends has gone on with scarcely any regard for the fact that Indian industry must compete on world markets. It has been stated repeatedly in these columns that socialist planning inevitably involves high costs; in India's case it also means greater reliance on foreign aid to support the rupee. There is no abiding remedy for this state of affairs save to abandon socialism altogether; Mr. Nehru himself in Kathmandu recently affirmed that it was unsuited to a poor economy. But the political consequences of this now would not be pleasant to contemplate. The best India can hope to do is in future to progress more cautiously, plan less ideologically, take a more realistic attitude towards industry's problems and to go on hoping that some generous foreign power will continue to be liberal with its aid.

Leaving aside the true (though not necessarily helpful at this stage) fact that the high-cost malaise goes deeper than can be tackled with mere palliatives, there is still much that can be done, if only the Government is determined enough, to keep costs at least in line with those of the rest of the world. Industry itself can make a fair contribution; the inflation of the past few years has encouraged an altogether too casual view of the importance of costs. To a large extent, the psychology of Indian industry has come to rely too much on constantly rising prices to take care of the cost-inflating items which, in an efficient economy, would have to be ironed out under the stimulus of competition. Even without the Government's tendency to take advantage of the lack of cost consciousness in industry for its own political convenience, there would still be room for an improvement in the attitude of Indian industry towards its duties to the consumer. The traditional export industries can, to a large extent, be exempted from this criticism, if only because the circumstances under which their goods are sold differ somewhat from the soft conditions existing at home. But export industries are themselves a market for indigenous products, and inevitably suffer from the general indifference towards costs. The economy must inevitably be regarded as a whole where matters of cost are concerned. And there is no denying the fact that in Indian industry today far too little attention is given to such matters in the general preoccupation with expanding capacity and taking advantage of the numerous inducements the Government offers to that end.

The part industry itself can play in reducing costs may be an important one, but that is not to deny that it is the Government's rôle which is crucial. Simply to harangue for lower costs is not enough; it is necessary to be sincere and consistent in action. How the Government can reconcile this need with its political commitments, is very much its own business, but unless a way is found —and the slight move towards the right which is now going on within the country makes the present time at least as good as any—industry itself will be able to achieve little. A more scientific attitude towards taxation would be a useful contribution; the point does not yet appear to have been grasped in New Delhi that a tax system is an economic entity as well as a purely administrative one. Taxes are nowadays among the approved ways in which pressure and incentive can be brought to bear on industry to adopt more efficient practices. The present high level of taxation, ideologically satisfying though it may be, is an inflationary element in itself. The danger is that it will become even more so during the third plan when heavier stress is to be laid on those highly inflationary expedients for raising fresh revenue, excise duties and the monopoly profits of State enterprise.

An effective campaign against high costs is going to require of the Indian Government considerable effort and sacrifice of cherished notions. That no doubt accounts for the growing tendency to clutch at straws where export matters are concerned. The proposal that industry should ignore overhead costs in fixing export prices, as reported in the New Delhi letter published on another page of this issue of *Capital*, is just such a straw. So is the compulsory export proposal made by the Commerce and Industry Minister, Mr. Lal Bahadur Shastri, at the meeting of the Central Advisory Council of Industries early this week, to say nothing of the wild hope which seems to have taken root that the newer export items will find easier markets than the old ones are doing. Apart from the fact that to sell below average costs of production, including overheads, is roughly the definition of dumping, and is therefore likely to cost India *more through* retaliation and boycott than will ever be gained from extra earnings, it is difficult to see how the Government expects industry to shoulder the loss involved. If internal markets are large enough, and in India today this is seldom true, it is certainly possible to reduce the incidence of overhead costs to a minimum. This is a point the Government appears to have grasped, although its reaction to it is scarcely the logical one that internal consumption should be encouraged. But the concentration of overhead costs on that proportion of an exporting firm's goods destined for the home market, is only likely to feed the internal inflation and so, ultimately, defeat its own object. It cannot be too heavily stressed that there are no magical ways out of the cost dilemma *into* which Government policies have forced the export trades. Any attempt to rely *on magic can only* divert attention from the realities of the situation, to say nothing of endangering India's reputation as an exporter; and if the Government considers that point of little consequence, it has only to look to the costly damage which Japan has done her export trade over the past 30 years by resorting to these risky expedients.

A large proportion of India's present difficulties *in the export markets are due to the simple fact* that, at the present level of internal prices, the rupee *is over-valued.* When the last serious public discussion of the prospects of devaluation was taking place two years ago, this was not necessarily true. Since then, internal inflation and a further hardening of the Indian economy into an inflexible, bureaucracy-ridden, high-cost mould, has been going ahead rapidly. Now the incontrovertible fact emerges that the rupee is out of line with existing world parities. In the present circumstances of tight exchange controls and increasing bilateral trading, this does not mean that the rupee will have to sustain the kind of run which could force a devaluation; it simply means, as we can all see, that India's exports are becoming steadily less attractive on world markets. Unfortunately, in spite of the change in circumstances, there can be no revision of the action recommended to counter them. A general devaluation of the rupee at the present time would solve no problems; India's aim in this period of development *must remain the simple one* of maximising foreign exchange earnings; the object of promoting exports will have to be attained by methods other than currency manipulation. A half-way stage between full devaluation and the present situation—differential exchange rates—is not to be recommended either. Such expedients are notoriously difficult to handle and are apt to ruin entirely what international confidence still resides in a currency. Among the alternatives, such as export subsidies, earnings retention schemes and so on, the most likely to yield results would seem to be that of selective tax reduction. To a certain extent, this can be used without incurring the international stigma which subsidies always attract. In fact, *in the case of some industries*, notably tea, it would be necessary only to reduce the present tax burden *to that* existing in the economy as a whole to gain a useful incentive to further exports.

It is one of the tragedies of the *mistaken* political policies of the past five years or so that India has by now dissipated *all* the cost advantages which generally accrue to an under-developed country *in the traditional* export of agricultural and simple manufactured goods. Both politically and *economically* it is now next to impossible to retrieve the ground lost. The search for consolations *in the form of new*, manufactured exports is unlikely to be rewarding either. The best that can be hoped for is that determined economic measures and promotion schemes will be able to *maintain* earnings at about the present level or just above. The building of a really healthy export economy will have to wait until the present phase of development is completed and something can be done about the internal inflation and the health and flexibility of the economy. Until then, India will just have to rely for her foreign exchange requirements on the generosity of her friends.

THE L.I.C.'S FIRST VALUATION

THE long awaited first Valuation Report of the Life Insurance Corporation of India, as at 31st December, 1957, has now been made public. Section 26 of the Life Insurance Corporation Act lays down that the Corporation shall, at least once every two years, call an investigation by Actuaries into the financial condition of the business of the Corporation, including the valuation of its liabilities. It is not, however, mentioned in this Section what qualifications the Actuary should possess, or how he should be appointed—whether he should be accountable to the Corporation or an independent Actuary. The public interest demands that the person entrusted with the investigation be independent of any control of, or influence from, the Corporation itself or the Central Government, and that the policyholders should have an opportunity to say what they think about the, appointment. The semi-judicial status of the Actuary is paramount in any actuarial investigation, and the fact that this particular valuation has been completed by the Corporation's own Actuary exposes it to a measure of criticism which, as far as practicable, ought to have been avoided. Nevertheless, the stupendous size of the venture should be appreciated and will be understood from the fact that the number of policies at the end of 1957 stood at nearly 5,700,000 involving a total sum assured of Rs. 1,470 crores. It is pertinent to mention that at the end of 1955 the number of policies was 4,450,000 assuring a sum of Rs. 1,143 crores. This figure showed an increase of Rs. 42 crores over that for 1954.

The technicalities involved in the process of valuing the assets and liabilities of the Life Insurance Corporation are largely the preserve of a

technically equipped members of the Actuarial profession. Yet policyholders maintain an interest in the valuation owing to its direct association with the declaration of bonus to which they are entitled. The nationalisation of life insurance brought into one group a mixed bag of 245 individual concerns—good, bad and indifferent. The Government of India realised that in the interest of equity, policyholders who had entrusted their insurances with the better managed companies, were entitled to preferential treatment. Provision was made, therefore, for the declaration of a differential rate of bonus in accordance with Section 49(2)(k) of the Life Insurance Act. A circular explaining the valuation has been issued by the L.I.C. to various Divisional Offices emphasising that profits allocated to policyholders as a result of the actuarial valuation, represent the share in the profits of the holders of "with-profit" policies *as a whole*. The circular poses the question of how this profit should be distributed among individual policyholders. A system designed to achieve such a distribution can lay claim to being a *good one* if it is both equitable and practicable.

The principle of uniform reversionary bonus generally adopted by the insurers in this country in the past served well the requirements of a good system of distribution of profits. For the Corporation, however, the problem bristles with complications. That with-profit policies issued by particular insurers prior to the date on which the Government took over control of insurers' business as a first step towards nationalisation, should *inter se* qualify for a uniform rate of bonus, is easy to understand. That all with-profit policyholders, where policies were issued by the insurers during the interim period when the Government had taken over the management or as soon as the Corporation was established, should, as a group, be entitled to bonus at uniform rates, should also be evident. The circular then goes on to say that as between policies taken over from one insurer and those taken over from another, or those issued by the Corporation, equity demands that the rates of bonus applicable to various groups should reflect the respective contribution to the profits disclosed at the valuation—or, in other words, their respective financial strength. This is the principle which finds recognition in Section 49(2)(k) of the Life Insurance Corporation Act, which provides that the Corporation may make regulations for the classification of policies for the purpose of declaring differential bonuses, that is, bonuses at different rates on policies of different companies.

The results of any valuation should be conditioned primarily by three factors, i.e., mortality, interest earnings and expense. If the actual mortality and interest earning are more favourable than those assumed, profit will clearly emerge from these two sources. It is also necessary in making a valuation to assume that future expenses will be maintained at a particular level, and that provision for this item over the years must be justified in the light of current experience and trends. The mortality basis of the Corporation's valuation is the Oriental (1925-35) Ultimate Mortality Table. An investigation was also made, says the report, into the mortality experience for the year 1957 of a few of the big units which had contributed data for the proposed combined mortality investigation. A comparison between the experience for the years 1953 and 1954 on the one hand, and that for the year 1957 on the other, indicates a further improvement in mortality. The "Oriental" Table was used by a large number of Indian insurers in their valuation immediately prior to 1956. Indeed, being the most reliable statistical data on the assured lives available in India, its adoption by the L.I.C. was practically a foregone conclusion. The Corporation is now, however, in a position to build up its own mortality table for future use, which should reflect more accurately current experience. Steps to compile these important statistics must necessarily be undertaken by the Corporation. If, as is asserted, actual mortality shows satisfactory improvement, the benefit has to be passed on to the insuring public either by the declaration of a higher bonus in future or by a reduction in premium rates.

The net rate of interest earned by the Corporation during the entire period 1956-57 was "practically 3¾ percent", as against which the valuation basis has been fixed at 3-1/8 percent. This, in the words of the Actuary, "leaves an adequate margin of profits." It is worth noting that the net interest earned by the erstwhile insurers in 1955 was 3.51 percent. In its last valuation, as at 31st December, 1954, the leading Indian life insurance company, the Oriental, had adopted a more stringent basis using the interest rate of 2-11/16 percent and although a few other companies used an interest rate lower than 3 percent, the majority of insurers reported in the *Insurance Year-Book of 1956*, adopted either 3 percent or 3¼ percent. Employment of the rate of 3-1/8 percent by the Corporation was, therefore, no departure from the established practice, and as interest earnings at the moment display an upward trend, this should result in sizable profits in future.

The renewal expense ratio has been calculated by the Actuary separately for two periods, one being for the first eight months of 1956 when the companies operated under the Custodians, the other for the 16-month period from 1st September, 1956, to 31st December, 1957, under the aegis of the Life Insurance Corporation. For the first period, the expense ratio was 20.90 percent but came down to the level of 15.89 percent during the second period. According to the *Insurance Year-Book of 1956*, the combined renewal expense ratio for all Indian companies in 1955, under private management, was 17.3 percent. The integration of the entire business into one single corporation led the public to expect a substantial lowering of expenses. During the debates in Parliament, repeated charges of excessive expenditure were levelled against the private company managements. The Corporation's Actuary states by way of explanation that the expenses incurred "do not serve as a measure of probable future experience, in view of the fact that during the formative period the cost structure of the Corporation was in a state of flux". The Actuary goes on to say that the Corporation is taking steps to bring down the expense ratio, and a provision for expense of 16 percent of the office premium can be considered as more than adequate. The specific provision for future profits of 4 percent of the office premiums in the case of with-profits policies, together with the margins in mortality and interest bases, should provide an adequate overall margin for future profits. Evidently, thought is being given to the problem of bringing down costs. While the actual mortality experienced by the assured lives and the actual interest earned must necessarily be subject to the mortality to which the country is exposed, and the rates ruling in the investment market respectively, the expenses admit of a considerable degree of control.

The final result of the valuation discloses a surplus of Rs. 27.04 crores, and here again the Actuary mentions that a loss of Rs. 3.49 crores had to be provided for on account of defalcation and unsound and over-valued investments. No specific mention has been made of the "Mundhra" investments which brought the Corporation so much notoriety last year, but presumably the resultant loss has been included in the computation.

After making certain adjustments for income tax liability and tax deducted at source, the net profit amounted to Rs. 29.01 crores, which it is proposed, subject to Government approval, to allocate as follows:

Policyholders' share	Rs 27.56 crores (95 percent)
Government's share	Rs. 1.45 crores (5 percent)
	Rs. 29.01 crores (100 percent)

Under Section 28 of the L.I.C. Act, policyholders are entitled to a minimum of 95 percent of the surplus, and this minimum amount has been allocated to them resulting in a bonus declaration of Rs. 14 a thousand *per annum* on endowment assurance and Rs. 17½ a thousand *per annum* on whole life assurance.

While these are the standard rates applicable to policies issued by the Corporation and are also being granted to policies issued previously by 31 insurers, a special group comprising policies of 11 foreign insurers and four Indian insurers will be entitled to higher bonuses at Rs. 16.80 and Rs. 21 a thousand *per annum* for endowment and whole life policies. The inclusion of the "Oriental" in this group is a matter for satisfaction on the part of its previous management. For the policies of better companies, bonuses allotted are not at the level of the company régime as disclosed by the following table of the bonus declarations of a few leading insurers in their last valuation prior to nationalisation.

	Endowment	Whole Life
Oriental	18	22½
New India	14	16
Hindusthan Co-operative	15	17
National	14	17
United India	15	17

Three other groups have been created attracting successively lower bonus rates, while a further group has been made for companies whose policies will not be entitled to any bonus at all. Although to some this may appear to be a matter for regret, policyholders of this group of companies are fortunate in the maintenance of their contracts, at least to the extent of the original sum assured. This should be sufficient solace. It is not difficult to appreciate that had these companies continued to operate, their policyholders would have eventually lost their money.

Viewed as a whole, the valuation report presents a picture which does not differ materially from that produced by the erstwhile insurers in the year 1955, and to this extent it may be described as not unsatisfactory. But the facts give the Corporation no cause for complacency, as considerable pruning and planning will be required to place its results on a footing notably superior to that achieved by the private companies in the past.

WORLD OIL CONSUMPTION EXPANDS

CAPITAL AND EXPLORATION EXPENDITURE HEAVY

IN spite of all the talk about the potentialities of nuclear power as commercial energy, confidence in the importance of oil in the world of fuels remains unaffected. This is evident from the huge amounts of money which oil companies continue to invest in capital projects, as well as exploration. The Royal Dutch-Shell Group of oil companies, for example, spent a total of £387 million in 1958 on their capital and exploration works, according to the 1958 annual report of the Royal Dutch Petroleum Company. They spent £386 million for similar purposes in 1956 and £333 million in 1957; between 1954 and 1958, the total for the five years came to £1,780 million. The world tanker fleet also expanded considerably during the year, when almost all the developed economies of the free world, especially the United States, suffered from economic recession. Considering that the trade in oil accounts for half the total of world sea-borne trade, this significant fact ought to indicate the degree of confidence which oil companies have in the future of their industry. The group's own fleet was strengthened by the addition of two new vessels with an aggregate tonnage of 72,000, besides seven 18,000-ton tankers which were delivered under its tanker financing scheme initiated in 1956. At the end of the year, the group's fleet comprised 533 vessels of 2,000 deadweight tons and over, aggregating more than 9 million tons deadweight, and representing nearly one-sixth of the world tanker tonnage.

An interesting, and paradoxical, fact discussed in the annual report is that during 1958 world oil consumption rose by 5 percent compared with 1957, although production grew more slowly due to the high level of stocks with which the year began. Even in the United States, where the recession affected consumption most, demand for the year as a whole rose by 2½ percent over 1957. In South America, oil offtake grew by nearly 6 percent, and in Africa, Asia and Australia by some 7 percent. In Europe, the increase was as high as 15 percent. What explains this relative immunity of oil demand from the uncertain economic conditions of 1958? The annual report attributes it to various factors. The growing diversity of oil uses and the increasing realisation of its attractions as an efficient and convenient fuel, is stated to be one of those causes making for expanded sales. In Europe, an exceptionally large rise took place compared with the previous year, due to the lifting of the restrictions which had been imposed on oil consumption since the Suez crisis.

Placing the 1958 increase in the broad perspective of the post-war consumption pattern, the report points out that the trend of growth in the demand for this fuel is unmistakable. In North America, the largest oil consuming area in the world, consumption has increased by just over two-thirds during the past ten years. In Europe, where local sources of energy could not be substantially expanded (the coal industry is the major contributor to Europe's energy needs), oil consumption in this period has tripled. In South America, advances made in economic development have resulted in the use of oil increasing nearly two-fold; and in the fast developing regions of Asia and Africa, it has more than doubled, although *per capita* consumption in these latter regions still remains low. World supply has adequately kept pace with this rising trend in demand. An important event of the year was that the commercial output of oil from the Sahara began in January; while the first shipment of oil from Nigeria was made in February. "Though the full potential of these and other areas has yet to be defined," the report adds, "they will undoubtedly add to the sources from which crude oil can be drawn, and with the more ample supplies now available from existing sources, will provide greater flexibility."

The group's own production of crude oil and natural gasoline in 1958 (including quantities received under special supply contracts) amounted to an average of 2,194,000 barrels a day. (World output during the year averaged 18,937,000 barrels a day.) Its South American associates were the largest contributors, with 850,000 barrels a day. Those in Europe came next with about 750,000 barrels a day, the Middle Eastern companies produced about 400,000 barrels a day, and the balance of 200,000 barrels a day was the output of its African, other Asian and Australasian associates. The company continued its extensive exploration programme in the various areas of the world in which it is interested. The group's output of petro-chemical products and by-products continued to expand, and sales increased substantially everywhere excepting the United States. It is the world's largest producer of synthetic solvent and one of the largest suppliers of raw materials for the manufacture of synthetic detergents.

The group's gross income in 1958 was £2,574 million, compared with £2,644 million the year before. The receipts would no doubt seem to be large, and certainly to Mr. K. D. Malaviya, the Indian Minister for Oil, who appears to be labouring under the illusion that the oil companies habitually mulct their consumers. But those familiar with the economics of this industry take a different view of things. The operating and other expenses of these companies are extraordinarily large. For instance, of the total receipts of over £11,000 million of the Royal Dutch-Shell Group for the period 1954-58, as much as £6,195 million went towards these expenses. Taxes paid to Governments amounted to £3,267 million—far the largest part of the income—and £1,605 million were spent as capital and exploration expenditure, besides £126 million that the groups had to raise in the money markets for these purposes in the single year of 1958. Only about £200 million went in the 1954-58 period towards paying dividends to shareholders and parent companies, a proportion of the total receipts which is not excessive if the risks of this investment are taken into account.

Current News and Comment

Tea Shares: Investors Hesitate

The start of the new marketing season in Calcutta a month ago was expected to give tea shares a substantial boost. Instead, throughout this period, they have been sluggish and irregular, with declines predominating. Bishnauth have been hovering around Rs. 19.81, neglectful of the optimism which the better-class Assam garden enjoyed. Among Dooars scrip, not often a very happy lot, Hantapara have fallen from Rs. 125 to Rs. 121. Soom in the Darjeeling area are idle around Rs. 40. The original hopes that tea shares would rise with the opening of the 1959-60 auctions in Calcutta was based on two main expectations. One was that many companies, particularly those operating in Assam, would be showing better financial results for 1958 than they had done for 1957, and dividends might therefore be bigger. The other was that the new season's teas would meet with good demand, at least for the first few weeks, and this would arouse speculative as well as investment interest in the shares. The first of these expectations has been reasonably well fulfilled, but the second has been almost wholly belied.

The idea that the 1959-60 auctions would start off well arose because the previous season's auctions had finished rather early. This implied: (1) that world demand had risen considerably; and (2) that buyers might need to replenish their stocks quickly when the new north Indian teas arrived on the market. The first setback to the optimism came when the two preliminary sales of Darjeeling teas in May yielded poor results. The second—and more important—setback came when, at the very first of the regular 1959-60 auctions in June, large quantities of tea had to be withdrawn as buyers were simply not willing to pay the somewhat inflated prices which sellers and brokers were asking. In the sales which have been held since then, the improvement has been very minor. The trend at the Export auction held on Monday this week, however, has been described as distinctly better, though selective; larger amounts of better quality teas were on offer, and they met with good demand. Hopes, therefore, seem to be rising again that the Calcutta market is on the threshold of a revival.

A variety of explanations have been offered for the lethargy of the market hitherto. One is that since consumers are delaying purchases, they must be well-stocked; this is not particularly true of the biggest consumer, Britain, whose stocks (including teas afloat) are now 146.9 million lbs., against 144.2 million lbs a year ago. The relaxation of credit restrictions in the U.K. since last year would normally encourage importers there to hold bigger inventories. Another explanation is that Russian buying so far this season has been much smaller than was expected; some time ago, it was believed that, over 1959, Moscow would be taking twice what it did in 1958. A third explanation is that the quality of the early north Indian teas has been exceptionally poor as the weather was unfavourable. A fourth explanation is that local valuations have been rather high in relation to buyers' ideas; time and experience may bring the two closer.

The bearish trend notwithstanding, the statistical position of the world tea markets does not seem to be too discouraging. Total output in the main exporting territories is running at a level 12 million lbs lower than last year. Compared with the corresponding periods of 1958, north India has produced 1.1 million lbs less at 53.9 million lbs until May; south India 14 million lbs less at 39.1 million lbs until April; Ceylon 2.2 million lbs less at 192.3 million lbs until May; and Indonesia 500,000 lbs less at 24.5 million lbs until March. But Pakistan has produced 1.2 million lbs more at 7.9 million lbs until May and British East Africa 4.6 million lbs more at 31.8 million lbs until April. The increase in the last of these areas is significant, for it is a low-cost producer whose teas have a big impact on the London market. Any discouragement for tea investors on that count may be disguised by the good prices which the second flush teas are expected to fetch as they arrive in the Calcutta market over the next few weeks. But the fate of the commoner varieties will give cause for concern for a long while yet. Labour troubles in Ceylon may help the Indian industry temporarily, as also may the political unrest in Indonesia. But to rely on such adventitious factors would be folly; the recent revision of the export duty structure in Ceylon underlines the need for the Indian Government, as well as the State Governments of Assam and West Bengal, to cut the levies they impose on the local industry soon.

Jessops Resume with Six Percent

The latest report of Jessop and Company Ltd for the year ended October 1958 is encouraging in so far as it shows that the concern is recovering from the damage it suffered during the famous Mundhra episode. The payment of an ordinary dividend of 6 percent after an interval of two years is cheering by itself, but the size of the distribution is disappointing considering that the last dividend, which was paid in 1955, amounted to 30 percent. Although the ploughing back of money into the business is necessary for meeting the cost of the modifications now in hand and for financing the greatly increased output which will become possible as soon as raw materials are more freely available, it is debatable whether a higher distribution could not have been made. The company has earned a profit of Rs. 26.18 lakhs, after reducing the taxation provision from Rs. 42 lakhs to Rs. 23.10 lakhs. An amount of Rs. 24 lakhs is allocated to general reserves. The outstanding feature of the year under review is the commissioning of the new coach works, which is expected to increase the manufacturing potential substantially. As the works did not commence production until nearly the end of 1958, they could not contribute materially to the financial results of the year under review. The output from all the works was hampered considerably by the shortage of raw materials, but the order-book remains satisfactory, and once materials become more freely available, production will increase rapidly. The major expansions planned for the manufacture of electric multiple unit coaches and for the manufacture of road rollers were completed by October 1958, but the company is still faced with the necessity of making considerable modifications in its manufacturing facilities for meeting changes in the demand of the Railway Board. The work is being done and the prototypes of the new vehicles have been completed. About investments, the directors say that Richardson and Cruddas Ltd issued a public notice last autumn requesting all holders of its shares to notify full particulars of their holidings by a certain date. "We supplied the information in respect of all shares held by us and mentioned in the auditors' report, but we have not yet had any further communication from the company."

Jute Shares Look Up

One of the pleasanter features of the Calcutta stock market in recent weeks has been the better trend in jute shares. The rise has not been spectacular, but that it is taking place at all is of major interest, seeing the great influence which jutes have on the market as a whole by virtue of the fact that they represent the biggest single category of investment in eastern India. The past four weeks have seen Howrah advance from Rs. 23.50 to Rs. 24.81, National from Rs. 23 to Rs. 23.56, and Anglo-India from Rs. 236 to Rs. 264. The increases reflect primarily the improved working of the industry over the past year or so. Shareholders are hoping that profits will have risen; many companies which have not been able to pay dividends for a long time will start doing so again, while a number of others will be able to increase their returns. To some extent, the rise in the price of the shares has also been anticipatory in nature; the indications are that the prosperity of the industry, albeit modest, will be maintained during the new jute season which has just begun.

The biggest contribution to the health of the Indian jute industry during the past year has been made by the relative cheapness of raw jute. The supply of fibre has been plentiful, thanks to India's remarkable progress in achieving self-sufficiency, and dependence on imports from Pakistan has been extremely limited. Although the investor has occasionally been worried by official announcements aimed at lifting Indian raw jute prices, their effect has fortunately been small. Some months ago, it was feared that fibre values had fallen to so uneconomic a level that sowings for the new crop would be reduced. The indications at present, however, are that sowings have been much the same as they were in 1958, so another big crop may be harvested. There is an undercurrent of anxiety that the recent floods in Assam might damage the plants there, but the somewhat flimsy information so far available suggests that only a small proportion of the total jute area will be affected. It might, however, be an area which produces some of India's better-grade jute. Since the monsoon is not even halfway through yet, jute investors will no doubt be watching its antics closely; heavy rainfall could cause more extensive flooding, and thus promote bullishness in the raw jute markets, whether or not the actual damage is severe.

After raw jute, the most important influence on jute shares will be exerted by the gunny markets. The year 1958 was a disappointing one for gunny exports, as is evident from the fact that sacking stocks remained at an unusually high level most of the time. More recently, the statistical position of jute goods has improved a great deal, so much so that last month the industry was able to restore the fractional cut in output which became necessary in February-March. It is presumed that most of the reopened looms are being concentrated on hessian manufacture, as stocks in this category are low. Their replenishment will be necessary considering that the Argentine has yet to cover a large portion of her estimated requirements, and that the normal U.S. buying season is about to begin (in line with the general increase in U.S. economic activity, burlap consumption is running at a higher level this year than last year). The outlook for sacking has made a major contribution to the improvement in the gunny markets, and large business has been done over the past month or so with Australia, Burma, China, Indonesia and certain African territories. India's own requirements of sacking, it is expected, will be maintained this year. Market rumours are that the Indian mills might soon decide to unseal another 2½ percent of their looms; if they do, the effect on jute shares is likely to be bullish.

The resumption of an increase in the Indian jute industry's production is the more encouraging for having come at a time when the output of the Pakistani competitors has been rising. Cynics say that the Calcutta mills are still picking only the crumbs dropped from the Pakistani industry's tables, but the assertion is exaggerated. Investors are entitled to assume that the availability of cheap jute in India, and the progressive modernisation of the Calcutta mills, are important enough factors to enable the local industry to compete strongly with its neighbour.

Bhartia Electric to Split

The move of the Bhartia Electric Steel Company to split up its business between two companies appears to have been made at an inopportune time. The company at present has two works—the Ballygunge works are concerned with the manufacture of steel as well as steel castings, and the Khardah works are engaged in the production of rods and bars. It is proposed to set up a new company with an authorised capital of Rs. 1 crore for taking over the Khardah works. The management claims that the division of the business between two companies is justified as at present there are a number of difficulties which one company has to face in handling business of different kinds. "While at Ballygunge we produce steel ingots and steel castings, the plant at Khardah is purely a re-rolling plant and, apart from the very meagre supply of steel ingots from Ballygunge, has to depend mostly on supplies of billets from outside sources. Except for the supply of nearly 400 tons of ingots a month from Ballygunge to Khardah, which may also, in course of time, cease as the production of steel castings increases, the activities of your two works are entirely independent of each other." Quite apart from administrative difficulties, it looks as though there are practical difficulties in running the two plants under one company as the products of the Khardah plant have to be sold at controlled prices while those of the Ballygunge works are generally sold at market rates.

For the time being, the new company will issue an ordinary capital of Rs. 50 lakhs. The shares will be offered to shareholders of the Bhartia Electric Steel Company at par in the proportion of one of the new company's shares of Rs. 10 each for each share of Rs. 10 held in Bhartia Electric Steel. The fixed assets of the

Khardah works will be sold to the new company at their written-down book value and the stocks of stores, raw materials and finished goods will be transferred at the purchase price or controlled price, whichever is higher. All contractual obligations of Bhartia Electric Steel concerning stores, machinery, plants, raw materials and finished products for the Khardah works will be transferred to the new company. It is reliably learnt that the new company will require Rs. 70 lakhs for taking over the Khardah works—Rs. 40 lakhs will be paid for the fixed assets and Rs. 30 lakhs for stores, manufactured goods, etcetera. It is, therefore, clear that the new company will require more money than it is proposed to raise by the issue of shares. If current indications are a fair guide, it appears that a great deal of additional finance may be needed if the Khardah works are to be run at their rated capacity. During the year ended December 1958, the working of the Khardah works suffered heavily because of the shortage of billets. Against a rated capacity of 10,000 tons a month of rods and bars, an amount of 17,625 tons was produced during the year ended December 1958. There is little evidence to suggest that there has been any worthwhile improvement in the supply of raw materials since then. So it is debatable whether the Khardah works can operate on a remunerative basis unless a substantial improvement in the supply of raw materials takes place. The management, nevertheless, thinks that there are signs now of the shortage of raw materials becoming "less acute and it is probable that, in the foreseeable future, a greater percentage of capacity will be utilised."

As a result of the division, the Bhartia Electric Steel Company is expected to gain substantially. The purchase money for the Khardah works will be paid to it. Out of that sum, it can not only repay its outstanding loans; it will also obtain enough money for financing its modernisation and expansion schemes. This is the reason why the directors are not proceeding with the flotation of debentures for Rs 25 lakhs. The directors state that fundamental changes in the designs and types of wagons are being considered by the Railway Board. These changes, if introduced, will greatly affect the types of steel castings which may be in demand in the future. Foreign designs of centre buffer couplers are likely to replace the buffers now used. They have, therefore, entered into provisional technical collaboration and patent rights licensing agreements with two American firms.

Indian Copper Repeats Dividend

The price of Indian Copper shares improved from Rs. 4.14 to Rs. 4.25 in the stock market on Wednesday because the dividend has been maintained at 24nP a share for the year ended December 1958. It gives a yield of 5.6 percent at the present price. The dividend has been welcomed considering that the company's profit has declined from £175,000 to £150,000 due to a fall in the metal price in sympathy with world trends. The taxation provision is lowered from £522,534 to £1,262. General reserve is allocated £125,000, against £175,000. Development rebate reserve receives £50,625. The carry-forward amounts to £71,312, compared with £120,361 brought in. The outlook for the shares is considered good. Not only are copper sales assured as the Indian output is much smaller than demand; the long-term world price trend is expected to be steady since the statistical position is sound. Although world output has increased considerably during the past year or so, demand has improved with the increase in economic activity. The proposal to set up an electrolytic plant in India is expected to help the earnings of the Indian Copper Corporation Ltd.

Progress of Enfield India

Investors' preference for bicycle and motor-cycle shares, which now fall in the category of growth stocks, appears to have increased recently. The growing demand in Madras for Enfield India shares is presumably due to the progress made by the company last year. After raising the capital to Rs. 25 lakhs, it intends to secure a further loan of Rs. 9 lakhs from the Industrial Finance Corporation in order to raise the present block of Rs. 40 lakhs to Rs. 50 lakhs. The present output of 4,000 motor-cycles (1.5 horse-power and 3.5 horse-power) commands a market all over India, and the company is planning to export its products to the Middle East. The Indian Army has tested the *Enfield* motor-cycles and its technical development branch has approved them. The company's development programme, now in hand, is expected to raise its annual output to 5,800 motor-cycles and 1,000 three-wheelers (with 3.5 horse-power engines). The latter, it is expected, will be able to overcome the competition from scooters. Sixty percent of the equipment is to be of indigenous manufacture, and the company is trying to achieve self-sufficiency in components. Both the police and posts and telegraphs departments are using Indian-made motor-cycles. An agreement made in May to maintain industrial peace fixed wage-scales according to categories of workers. This raised the annual wage bill by Rs. 2.5 lakhs. But it will not adversely affect the company's financial position since output is being gradually raised to full capacity. Furthermore, import restrictions will provide a fillip for the rapid expansion of the company.

U.P. Textile Handicaps

A detailed memorandum listing the various handicaps of U.P.'s textile industry and suggesting the minimum remedies necessary has been submitted to the Central Commerce and Industry Minister, Mr. Lal Bahadur Shastri, by the Textile Millowners Committee of the State. According to the Committee, over 100,000 spindles and 2,000 looms are lying idle in U.P., and almost all the 31 mills are "mortgaged to the hilt." Apart from the usual difficulties to which all the country's textile mills are subject, the millowners, who were led by Mr. Padampat Singhania, stressed that an average mill in Kanpur pays annually Rs. 2.59 lakhs more as railway freight for cotton from other States and another Rs. 1.5 lakhs for the transport of stores. The increased railway freight since last October has enhanced the burden. The incidence of the Central sales tax on the consumption of raw cotton has affected U.P. mills adversely, as the units in Bombay and Ahmedabad and other cotton-growing States do not have to pay this levy. Excise duties, which neither consumers nor the industry can bear, have particularly hit those units which manufacture coarse and medium cloth.

One of the suggestions made in the memorandum is that mills should be allowed to defer the payment of excise and additional excise duties up to 60 days or 90 days if they can give a bank guarantee for the amount. A 100-percent entitlement to foreign cotton against exports of manufactures is asked for. All Indian mills, it is stated, should be given this quota and left free to use it or to sell it at any price in the market. The *dhoti* quotas of U.P. mills should be increased and the lapsed ones should be revived. In the distribution of staple fibre, no distinction should be made between a unit of spindles constituting a factory and a unit which is only part of a factory. The labour problems of Kanpur mills are a serious handicap since they inflate production costs compared with factories in other centres. An average Kanpur mill having 1,000 looms bears an additional burden of Rs. 32.82 lakhs because of the State duty on electricity. The Textile Enquiry Committee of 1958 emphasised the need for modernising plants, but all schemes have been held up due to the lack of funds. Apart from more liberal financial assistance from the N.I.D.C. and other financial corporations, payment in instalments for the import of textile machinery should be allowed since the Government of India has secured credit facilities from the U.K. and the U.S.A.

Record Sales of Metal Box

Sales of the Metal Box Company of India Ltd increased during the past working year by Rs. 85 lakhs to Rs. 6.97 crores—an improvement of 14 percent. This is described as a record performance in the report sent by Mr. K. C. Mahindra, chairman, to shareholders, on the occasion of the company's forthcoming annual general meeting. (A fuller version appears on another page of this week's *Capital*.) "During this period, we increased our production and improved considerably our operational efficiency, so that, with the forward tinplate situation fairly well assured, we have been able to announce a reduction of 2½ percent in our general line prices." Sales of open-top cans increased substantially as canned prawns were exported to Europe and America and because of "the stimulation afforded by the Ministry of Food and Agriculture's subsidy scheme for processed fruit and vegetables". Lower prices also helped sales. Under the Food Ministry's scheme, can prices have been reduced by the equivalent of Rs. 500 a ton of tinplate used in manufacture. For the most popular size of can, this means a price reduction of 26 percent. In addition to this subsidy, the company has reduced prices by Rs. 100 a ton of tinplate used. This, together with the further reduction in prices the company was able to announce due to a fall in the cost of the special-quality tinplate imported for open-top cans, brought a decrease in prices of 15 percent since 1st April, 1958. Therefore, the consumer now buys his cans 41 percent cheaper. Mr. Mahindra says. While indirect exports have increased, the company's direct exports have fallen because of the foreign exchange difficulties in Burma, an important market. An export promotion unit has been set up, and an extensive tour of countries in south-east and west Asia has resulted in an impressive order-book being built up. "I am confident that by the next year, I shall be able to report a substantial increase in our export sales," the chairman adds.

The company's raw material (tinplate) stocks were badly run down during the early part of the year. At one time, it was thinking of drastically rationing the available stocks to avoid a major closure of the factories. But with the assistance received from its U.K. associates which provided finance for the import of a substantial tonnage of tinplate "on most generous and favourable deferred payment terms", and due to the arrangements the Government of India made for importing tinplate with the U.S. D.L.F. loan, the company was able to improve its forward position. Stocks are still below the desired minimum operational level, but there are now good prospects that the position will improve in the near future, Mr. Mahindra reports. Speaking of the company's development plans, he says that Government permission for the new factory in Faizabad near Delhi has been received, and the company is now proceeding with construction work. It is hoped that the factory will be in production by the first quarter of 1960. A small extension to the Madras factory has been completed and an extension to the Worli factory in Bombay is being planned. To meet the financial commitments for the various development projects, it is proposed to increase the share capital. Consent has been received from the Controller of Capital Issues for a rights issue at par in the ratio of two new shares for every five held.

Forward Trading in Madras Shares

The first anniversary of forward trading in the Madras Stock Exchange, on 1st July, was a happy occasion as the market's experience has been very satisfactory. The companies whose shares are included in the clearing list have contributed much to the success. Business has expanded steadily and share prices have risen. The ten shares which are now on the fortnightly clearing list are market leaders and are actively traded. Business in Deccan Sugar and Travancore Rayon has recently been substantial. The Bank of India, which has supervised the clearing and deliveries, has contributed to the satisfactory running of the scheme. The size of the local forward list was increased some time ago with the inclusion of about half a dozen shares. But one share which is included in the Calcutta list, Indian Aluminium, has been excluded from the Madras one. The improvement in such shares as Orissa Cement and Mysore Paper has been mainly influenced by movements in Calcutta and Bombay. Nevertheless, the Madras stock market has gained considerable independence due to its inherent strength. Although plantings have eased to some extent and the depression in textiles has persisted, there has been a sharp and steady rise in sugars and chemicals over the period; it is generally presumed that since the last Central Budget, brokers as well as clients have gained.

Industrial Allocations in U.P.

A bias in favour of village industries is evident in the U.P. Government's scheme for the allocation of Rs. 7.73 crores for industrial development during the current year. Nearly Rs. 3½ crores have been set aside for village and small-scale industries, and for programmes to train over 10,000 persons in village arts and crafts. Apart from continuing 49 schemes for developing cottage industries, six new projects are to be taken up during the year, including those for the *zari* industry of Banaras and the ebony industry of Nagina. It is proposed to spend Rs. 1.8 lakhs of foreign exchange on establishing a laboratory for high- and low-tension insulators in Khurja. Over Rs. 21.50 lakhs will be spent on fruit utilisation schemes, which cover the installation of a cold storage plant in Ramgarh and the provision of additional equipment for the Fruit Research Station. The large-scale industries programme, which has been allocated Rs. 3.1 crores, provides for a substantial expansion of the Government cement factory in Churk and the precision instruments factory in Lucknow, it also provides for the purchase of shares in the co-operative sugar factory in Meerut. A modest expansion in industrial co-operatives and the further development of 14 types of industries are to be undertaken with the help of the All-India Khadi and Village Industries Commission. The plan and non-plan expenditure for the reorganisation and expansion of technical education will amount to Rs. 99.30 lakhs during 1959-60. A Press note issued by the State Government mentions that a Regional Engineering College is to be established in Allahabad, three new diploma institutes set up in Kanpur, Faizabad and Mirzapur, and five polytechnics converted into junior technical schools.

Industrial Activity Index

Corrected for seasonal fluctuations, *Capital's* [illegible] showed a drop of 8.8 points during November 1958. There were declines in tea, yarn, cloth, coal, pig iron, paper, motor-cars, electricity and railway ton-miles. Sugar, jute, cement, finished steel, tyres and bicycles showed increases.

CALCUTTA TEA SALES

THE prices of teas sold on garden account in Calcutta cannot but be depressing to those interested in the industry. The question which naturally suggests itself to those who are affected by the present slump is, why the present depression? Is it justified, or otherwise? Some little time ago we reviewed the position and we then pointed out that the inflation in Calcutta was not justified by the statistical position and that there could but be grief if it was carried on; and our forecast has, unfortunately, been more than justified by the sales held to date, and we venture to say that there is just as little reason for the present slump as there was for the former boom. 'Tis true that London regulates the values of most articles of produce, but with regard to tea this is, according to our brokers and experts, to a certain extent in Calcutta, held in check by the Persian Gulf and other outside markets. To a certain extent this may no doubt be true, but as these markets take only what we might term whole leaf teas, the heavy burden of all the brokens is thrown upon London with the result that we see it reflected in the values realised for these classes in the sales held up to date. In former years a planter looked to his brokens running up his average, but the result now is that if he makes much brokens, he lowers his averages. All the same, we cannot but think that the price now paid for brokens in Calcutta is very much below the values obtaining in London, and those who lost so heavily in the first auction in buying are now recouping themselves in what they are bidding for these classes. The commonest tyro knows that a Broken Pekoe liquor is far stronger than a Souchong or Pekoe Souchong one, i.e., it makes more cups of tea, and after all this is what should regulate the values of Broken Pekoes, at 5 annas per lb, or thereby.

Without Prejudice

The Duties of an Employer

(FROM OUR LEGAL CORRESPONDENT)

EVERY now and again, a judge speaks out and, giving vent to natural exasperation, says something worth remembering for its pungency. Here is one of these aphorisms. It was uttered in the highest court in Britain, the House of Lords, by one of the most eminent judges in the land and, in the writer's respectful submission, might well be communicated to, and be read, marked and inwardly digested by, members of industrial tribunals throughout India, many of whom seem to have exactly the tendency to which Viscount Simonds referred. "I deprecate," said his lordship, "the tendency to treat the relation of employer and skilled workman as equivalent to that of a nurse and imbecile child."[1]

The employer's duty to protect his servants is far-reaching and hard enough at common law. The workman owes no thanks to trade unions or organised labour for the gradual development of the principles which follow from this duty. They were evolved long before trade unions ever existed. Nor are the masters of bygone times to be thanked for it. They resisted the development in the courts at every stage. The gradual imposition of these obligations was the result of the sturdy independence, sense of fair play and impartiality of generations of British judges. But there are limits to the employer's common law liability, and the present-day tendency of the judiciary is to emphasise those limits and see that they are not passed. The latest case concerns an attempt to pass those limits and relates to the employer's undoubted common law obligation to provide what is termed "a safe system of working"; and before we come to the facts in the case, let us, by way of a refresher to the reader, enlarge a little on what the obligation implies. It is three-fold and, said Lord Wright in a famous leading case, consists in "the provision of a competent staff of men, adequate material, and a proper system, including effective supervision."[2]

And you may have to supply special appliances to suit the requirements of an individual workman. Mr. Paris, like Mr. Squeers, "had but one eye, whereas the popular prejudice runs in favour of two." Not only the popular prejudice, but the law. Mr. Paris was employed by the Stepney Borough Council. While working in his employer's garage, he sustained injuries to his sound eye, with the result that he became totally blind. He sued the Council for damages. "You knew I had only one eye", he claimed in effect, "and, therefore, you should have taken special precautions about me. You should have provided me with goggles." The Court of Appeal agreed with him and he was awarded heavy damages.[3]

In the same way, if you employ on manual work a man getting on in years, you may have to take precautions to insure his safety, which would not be necessary or obligatory in the case of younger men. Mr. Williams was 60 years old. He was a labourer, and at work on a tramway belonging to his employers. The tramway was elevated some 15 feet from the ground. The younger men ascended and descended from the tramway by clambering up and down with the aid of an iron spike hammered into a wall and an iron bar attached to the tramway itself. Not so Mr. Williams. That active veteran used to get down by standing on the wall and jumping on to a heap of iron ore. One day he slipped on the wall, fell backward into a metal bin and was killed. His widow sued his employers. "You did not provide a safe system", she said, or her counsel did for her. "In view of his age, you should have supplied my husband with a ladder." Lord Darling gave judgment for the employers, but on appeal by the widow a strong Court of Appeal set aside the judgment and, accepting the widow's contention, allowed her appeal. Not a safe system of working for that particular workman.[4]

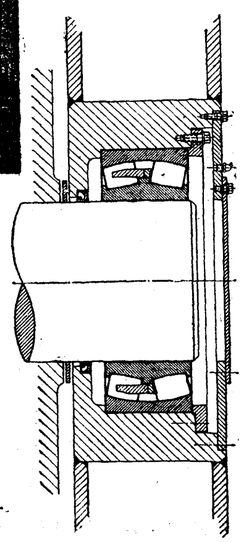
The employer's duty to his workmen is very wide indeed. But there are limits to it. The latest English case on the subject concerned a claim which you may think went too far, and was an attempt to extend that duty beyond the limits of common sense and fairness which, if it had been successful, would have had far-reaching results indeed. "The provision of a competent staff of men, adequate material and a proper system, including effective supervision." But we have to consider this three-fold division in the light of the judicial explanation of it in a Court of Appeal decision of last year and some observations of Pearce L.J. in it.[2] His lordship said of these divisions: "All three are ultimately only manifestations of the same duty of the master to take reasonable care so to carry out his operations as not to subject those employed by him to unnecessary risk." Note those words "reasonable care"; they are the crux of the whole case.

A workman, Mr. Davie, was supplied by his employers with a tool which was defective. The employers had bought the tool from a reputable manufacturer. The defect was latent and the employers had no means of discovering it; and it consisted in the fact that the tool was excessively hard, with the result that when Mr. Davie struck it with a hammer, as it was his duty to do, a piece of metal flew off and injured his eye. In two separate suits, Mr. Davie sued the manufacturers of the tool and his employers, respectively, for damages. He won against the manufacturers, and why he sued his employers also is difficult to understand, though Viscount Simonds later hinted that "it is possible that he or others have an eye on these far-reaching consequences of which I have spoken." However, we are concerned only with the claim against the employers. Could Mr. Davie sustain it? The answer—and we have time and again laboured the point in these notes—lies in the application of common sense and a knowledge of the meaning of ordinary English words; in this particular instance, the words being "delegate" and "duty".

Counsel for Mr. Davie argued: (1) The master's three-fold duty includes the provision of proper tools (that is perfectly true). (2) The master cannot escape liability by delegating his responsibility to the manufacturers (perfectly true also). (3) Therefore, the master must be held liable for the manufacturer's negligence.

Ashworth J. accepted these contentions and gave judgment for Mr. Davie. The employers appealed and the Court of Appeal, by majority, reversed the decision. Mr. Davie was enabled to appeal to the House of Lords. His appeal was unsuccessful. "Unhampered by the citation of authority and in the light of common sense and the application of the common law . . . . . (*per* Lord Tucker), their lordships held that the employer's duty is a duty of care, not an absolute duty. If he chooses to leave the performance of this duty to his servants or agents or (subject to limitations) to his independent contractor, he remains liable because in the eyes of the law, the negligence of his 'delegate' is his own negligence. But in no possible sense could the manufacturer, with whom the employer in this case had no contractual relations, be regarded as a person to whom the employer had delegated his own duty . . . . . The employer would in no sense be delegating any duty to that manufacturer, and the sole question would be whether the employer had by himself or by his servant or agent exercised proper care, *e.g.*, in the choice of a reputable manufacturer and in such inspection and maintenance as the nature of the tool might demand . . . . . (and) the master's duty of taking reasonable care (*inter alia*) to provide proper appliances was personal to him and could not be delegated meant only that he was liable for the acts of himself, his servants and his agents and sometimes his independent contractor, and not that he was liable for the negligence of a manufacturer who was in no sense his delegate or agent."

The whole question was summed up in words which are the embodiment of plain common sense. "Employers have to act as reasonable people and take reasonable care, but if they buy their tools from well-known makers . . . . . they are entitled to assume that the tools will be proper for the purposes for which both sides intended them to be used and will not require daily, weekly or monthly inspection to see that in fact all is well."



This case is worth taking careful note of in India by employers and insurance companies; for the attempt made unsuccessfully in England and rejected by the highest court in the land to convert the manufacturer into a "delegate" of the employer is certain to be renewed in this country.

Nearly 10 million gallons of water per minute flow through three SKF-equipped sector weir gates which were put into service during 1950 at the Horseshoe Dam near the town of Phoenix, Arizona, U.S.A. Each gate has a height of 26 ft. and a width of 114 ft. and is carried by two arms fitted with counterweights — the shaft bearing housing of the arms resting on support pillars. The gates can all be operated together, or individually. Operation is usually automatic and is regulated by the level of water in the dam, but the gates can also be driven electrically. Since it is essential that the gates should move freely and that the bearings should be reliable and easily maintained, each counterpoise-arm shaft is fitted with two SKF spherical roller bearings.

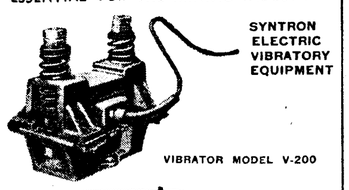
A Ditcher's Diary

THE LETTER DR. RAJENDRA PRASAD, PRESIDENT OF India, is reported to have sent Mr. Nehru the other day seems to raise a few interesting constitutional talking points. About the subject matter of the letter itself, one can only hope that coming from so high an authority, the Prime Minister will take more notice of it than he has been doing recently with similar advice from other quarters. It would be a pity if the President's letter were simply filed away—with due ceremonial deference, of course—in the nearest wastepaper basket. It is the fact that the letter was written at all which is the most interesting thing about it, especially when it covers something which could reasonably be regarded as the field of internal party politics. Does this mean, I wonder, that Dr. Prasad has been making good use of his time abroad to learn what other incumbents of presidential offices consider their own functions to be? Has he, for instance, been studying Dr. Soekarno's rôle, or following closely the antics of Dr. Adenauer and General de Gaulle? Personally, I can see nothing particularly wrong with the constitutional head of a State interesting himself in its affairs, especially in matters which he no doubt regards as fundamental to its whole personality and continued existence. Not even the British monarchy restricts itself entirely to its constitutional rôle in the narrow sense. At the other extreme, of course, is the position of Presidents Nasser and Ayub Khan, who do not really qualify for the name at all; they are dictators pure and simple. Enjoying a somewhat anomalous and uncomfortable position half way is President Eisenhower, who is expected to combine the dual rôles of head of State and chief executive, and who, apart from his poor health and dwindling vitality, is successfully prevented by the American Constitution from performing either satisfactorily. The position of the Indian President has not yet been clearly defined by historical precedents as distinct from constitutional limitation. If Dr. Prasad is now seeking to establish a more positive rôle for the Presidency, it might not be altogether a bad thing. When a country's elected government appears determined to weaken national unity by pursuing unpopular social experiments, it may eventually have need of an active head of State, and preferably one who has not always played a passive rôle in national affairs.

LATE THOUGH I MAY BE WITH MY CONGRATULATIONS for the *Indian and Eastern Engineer* on its hundredth birthday, which was appropriately celebrated recently both in Bombay and Calcutta, I can hardly let the event pass without recording it here. This for a special reason, which is that the editorial part of the magazine was once handled by W. H. Targett & Co., Ltd, at that time the managing agents of *Capital*. I cannot precisely recall when the connection started, but I do know that it continued for some years even after the end of the second world war. We were glad to be associated with so useful a magazine; it must be remembered that a hundred years ago when it was started, engineering was rather a new thing in India. It was only a vision of the future that could have encouraged the founders, and how correct the vision has proved to be. Who would have foreseen a century ago that in a few months now India would be producing her first military and civil aircraft, as Mr. Patil announced on the occasion? It will not be an exaggeration to say that to India's industrial progress the *Engineer* contributed not a little; and it has certainly set a standard for technical publications India will increasingly need in the years to come. On my way from Moscow to Leningrad I was amazed to see the number of Russian fellow passengers who were reading technical and scientific journals, while we were flipping through our favourite illustrated trivia. I hope technology will not become such an obsession with Indians, but wider interest in it is at once inevitable and desirable. I gather that import restrictions have begun to affect the distributing trade in technical publications, including essential textbooks. It is good to know that the *Indian and Eastern Engineer* is thinking of meeting this need, in collaboration with the famous British publishers in this field, Iliffes.

WHEN MR. A. D. SHROFF PREDICTS A SWING TO THE right during the next few years, I would be the last one to disagree with him. Among other things, such a movement would merely be in line with the direction I consider the rest of the world is likely to take in the next decade or so. But where India is concerned, I could agree more if what he really means is a swing away from the left—which here means the Congress Party—because I have not yet noticed any growing enthusiasm for right-wing solutions, if only because so few people know what the right in modern democratic politics really is. For instance, I cannot see there being much popular enthusiasm for the kind of old-fashioned, semi-feudalism which is traditionally condemned by the socialists as being right-wing; or, for that matter, for unrestricted monopoly capitalism on the pre-war Japanese lines, which was more or less the meaning of the term in the 1930s. It strikes me, therefore, that any political Party of the right, such as the new Swatantra Party, has a big task of education ahead of it. Personally, I have never considered this division into left and right to be particularly useful; the real choice is between authoritarian or liberal government, and it is my guess that what India will move towards is greater freedom, economic especially. By that I do not mean *laissez-faire*; those who think that modern liberalism means nothing more than that are only doing so because they want to. Socialism has not only shown itself to be incompatible with freedom, but also with the thing that India most requires, rapid economic progress. It is that which any right-wing, liberal or freedom Party—call it what you like—will have to offer in addition to being an alternative to Congress. Such Parties have been able to do so in Europe; whether one can in India will depend on how dynamic an economic policy is decided on when the new Swatantra Party debates its programme in August. At the moment, it appears to have nothing to offer except an escape from Congress's gradual encroachment on democratic freedom. Unless it can promise something new in the way of economic progress as well, I simply cannot see that being enough.



IT IS NOT OFTEN THAT BOTH SIDES TO AN ARGUMENT seem to me to be almost equally right, but I think that the quiet controversy that has arisen between New Delhi and Mussoorie has reason almost equally distributed between the two. There was, after all, some truth in India's assertion at the time that the decision to give asylum to the Dalai Lama was humanitarian rather than political. The political implications of the decision could hardly have been ignored altogether, but they were clearly not susceptible to precise calculation. They still aren't, for the other party to the affair, China, has been maintaining a curiously stubborn silence after the barrage of senseless propaganda against India's non-existent expansionism. Both New Delhi and the Dalai Lama are placed in a most awkward position. The former, apparently, has not given up all hope of resuming friendship with China, although Peking seems to care a good deal less. And the Dalai Lama can hardly while away his time in silence when his people, both here and in the country he had to abandon, expect him to give them a lead. But giving a lead, however obliquely, embarrasses New Delhi, which is certainly not his intention. There would be something to be said for doing nothing for the time being if it was shown in whose favour time was working; and that is something I simply do not know. It is easy enough to keep telling China that by her mulish silence she has been losing friends in Asia, which is probably true; but Peking appears deaf as much to the piteous cries of the oppressed Tibetans as to friendly gestures from India. Those well-intentioned gentlemen—"mugwamps" they are being called inelegantly—who swear by peaceful coexistence and all that, are thus given another reminder that friendship cannot be a unilateral affair. The pity is that intransigence such as China's at the moment sustains those others who are opposed to all negotiation at any time.

CLOSED-CIRCUIT TELEVISION, WHICH RECENTLY caused quite a stir when it was introduced by a leading firm of U.K. stockbrokers to link its offices has now, according to our London correspondent, invaded banking. Barclays Bank has just installed a system consisting of three cameras, three scanners, and eight monitor screens at its City office where it allows managers, cashiers, and other officials on the ground floor to see ledgers and statements which are prepared and stored in the bookkeeping department three floors above. The entire installation, which is believed to have cost rather less than £5,000, was supplied by the Marconi company. It is an essentially practical installation, designed to solve a particularly difficult problem. Until recently managers, cashiers and bookkeepers were all on the ground floor, in very cramped conditions. Expansion was essential, but the nearest place to which the accounting machines could go was the third floor—53 steps and eleven corners (the building is an old one) away. As somebody needs to see the ledgers, on average every two minutes, no messenger service would have been adequate. The television system overcomes the difficulty, and according to the branch manager, is if anything quicker than when the ledgers were kept on the same floor. A manager who wants to see an account telephones upstairs where the supervisor exposes the required ledger sheet in one of the three viewing consoles. She then switches the picture through to the appropriate monitor downstairs. The installation of the system has saved 1,000 sq. ft. of floor space, has greatly reduced noise, and has caused no loss of security. Although Glyn, Mills experimented with a television link between Whitehall and West London some years ago and three bank offices are linked by it in Victoria, Australia, this is believed to be the first use of closed-circuit television in a British bank.

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN, MR. K. C. MAHINDRA

The Twentysixth Annual General Meeting of The Metal Box Company of India Limited will be held on Thursday, the 16th July, at 59C, Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr K. C. Mahindra, which has already been circulated to members.

Sales

On this first occasion that I am addressing you it is particularly satisfying to be reviewing a record performance achieved by your Company. Sales for the year increased by Rs. 85 lakhs from Rs. 612 to Rs. 697 lakhs, a 14% improvement which would not have been possible but for our success in developing the sales of such of the Company's products which are not made from tinplate, a major raw material in short supply throughout the year.

Satisfactory sales of tinplate products—mainly *General Line containers for a miscellany of packs* and Open Top cans for processed foodstuffs—were achieved in the face of considerable odds which affected the high standard of performance to which we aspire. By the second half of the year the Government of India had recognised the inadequacy of the level of our tinplate stocks and enabled us to increase them. As a consequence, we were able substantially to supply our customers' requirements. During this period we increased our production and improved considerably our operational efficiency so that, with the forward tinplate situation fairly well assured, we have been able to announce a reduction of 2½% in *our General Line prices.*

Open Top can sales have increased following the emergence of a canned prawn export trade with Europe and America and the stimulation afforded by the Ministry of Food and Agriculture's subsidy scheme for processed fruit and vegetables. Under this scheme can prices are reduced by the equivalent of Rs. 500 per ton of tinplate used in their manufacture. For the most popular size of can this means a price reduction of 26%. The Union Government's vesting in your Company the responsibility for ensuring that this subsidy is passed on to the canners is a significant expression of faith in us, and in response *to this trust we simultaneously announced a reduction* in our prices of Rs. 100 per ton of tinplate used. This, together with a further reduction in prices we were able to announce because of a fall in the cost of the special quality of tinplate imported for Open Top cans, amounted to a decrease in prices of 15% since 1st April 1958. In total this means that the canner now buys his cans 41% cheaper at prices which, notwithstanding the fact that Open Top cans are produced in the United Kingdom by thousands of millions and in the U.S.A. by tens of thousands of millions, must be comparable with the cheapest in the world.

Though our indirect exports increased considerably, our direct exports, owing to Burma's foreign exchange difficulties, were below expectations. However, during the year we set up an export promotion unit; we undertook extensive touring in South-East and West Asia and planned an intensification of this work for the current year; we are thus well placed to make the best of our opportunities in the more promising of the export markets open to us. As a result an impressive order book has already been built up and I am confident that by next year I shall be able to report a substantial increase in our export sales. We continued to receive excellent support from the Export Promotion Directorate of the Government of India and the *Export Promotion Councils.*

Demand this year remains brisk: there are signs that the market of our customers, the packers of India, is growing and that materials are being made increasingly available to meet it.

Raw Materials

The low level of stocks of tinplate, our most important raw material, caused grave concern in the first part of the year. The possibility of increased imports in view of the critical foreign exchange position seemed unlikely. It was envisaged that the consumption of available stocks would have to be drastically rationed to avoid a major closure of our factories.

In the second half of the year our Associates in the U.K. responded to our appeal for assistance by offering to finance the import of a substantial tonnage of tinplate on most generous and favourable deferred payment terms. This, together with the arrangements the Government of India made for the import of tinplate under the U.S.A. Development Loan Fund, resulted in an improved forward position. Stocks are still below the desired minimum operational level, but there are now good prospects that the position will improve in the near future.

The Tinplate Company of India Limited is maintaining a satisfactory output but has a considerable backlog of orders with which to deal. If Tata's supply of tinplate bar is sufficient to ensure the continuance of indigenous production at the present level, then the prospects of liberalised supplies of tinplate to the Container Industry are more encouraging than they have been for a number of years. It is to be hoped that the Government of India will be able to maintain an adequate level of imports until the substantial increase in indigenous tinplate manufacturing capacity planned for 1961 comes into production.

The price of indigenous tinplate remained unchanged during the year but freight rates and sales tax were increased. A slight downward trend in price was noted in the price of imported tinplate reflecting the export drive in those countries where mills were working below capacity.

During the year supplies of indigenous aluminium were adequate to meet the substantially increased demand on your Company for a range of non-tinplate products and it appears we will be able to cover the enhanced requirements of this raw material for the current year from the same sources.

Steel for the manufacture of our widening range of industrial components was in short supply throughout the year. As these components were previously imported and represent a saving in foreign exchange, we believe the Government of India will not reject our present application for a licence to import part of our requirements of steel to supplement the material available to us from indigenous sources to meet demand.

In respect of other raw materials, it was reported last year that prices had substantially increased. Unfortunately the upward trend continues.

Developments

The new Calcutta factory was completed and the manufacturing equipment transferred from the B2 Hide Road factory. The benefits of the move have already been reflected in improved operational efficiency.

The manufacture of industrial components remains in the old premises at B2 Hide Road, which have been reconditioned. The additional space there will be utilised for the production of plastics embracing injection moulding and polyethylene extrusion, printing and bag making. Machinery building on an increased scale will be installed there and provision is being made for the manufacture of a range of spare parts required for our production machinery and machinery sold to customers.

Government permission was received to proceed with the new factory at Faridabad, near Delhi, and constructional work has already commenced on the site. It is expected that the new factory will be in production during the first quarter of 1960.

A small extension to our Madras factory has been completed. An extension to our Worli factory in Bombay is being planned and as this will utilise to the full extent the vacant area on the site, negotiations are proceeding for the acquisition of a new site of approximately 12 acres near Chembur.

Our Research Division which has hitherto confined its activities mainly to the development of indigenous materials to replace imported materials, will be expanded to include the field of plastics and to provide greater service to our customers.

A plan is under consideration for the acquisition of additional machinery to extend our range of products manufactured from raw materials readily available in India and to meet the demand for industrial components which are presently imported.

Increase in Ordinary Capital

In order to assist in the financing of the above new developments it is proposed to increase the Ordinary Share capital by means of a rights issue to shareholders. Consent has been received from the Controller of Capital Issues to a rights issue at par in the ratio of two new shares for every five shares held. It is anticipated that the issue will be made later this year.

Industrial Relations

During the year there was considerable activity in the field of employee relations.

In keeping with the Company's policy of rewarding for increased productivity, the Production Bonus Scheme, in force since 1948, was revised offering *increased incentives.* It was implemented in the Bombay factory at the end of the year and already the results have been to the mutual benefit of the employees and the Company.

A Gratuity Scheme has recently been introduced offering retirement benefits in addition to the yield from the Provident Fund Scheme.

The Prosperity Bonus Agreement concluded in 1956 expired on the 31st March 1958 and was renewed in March 1959 for another period of three years, after consultations with eight different establishments in five States. *The advantages of the Scheme are clear* indicated by the results achieved. The bonus earned during the period of the previous agreement averaged 30% of basic earnings per year and in respect of 1958/59 will be at an even higher level. Unfortunately in the course of discussions relating to the disposal of the Bonus Reserve Account on the expiry of the Agreement, there were breaches of industrial peace for brief periods at the Calcutta and Madras factories engineered by non-worker leadership of Unions. This marred the otherwise very satisfactory record of our relations with our employees throughout India since May 1955.

On the occasion of the retirement of Mr. H. Chisw*Jones, the employees of all our establishments expressed their appreciation of his 26 years' service in a manner that left no doubt as to their high regard for him and his leadership, and demonstrated mutual respect and sense of responsibility that exists between the Company and its employees.*

The rising cost of living during the year under review resulted in increased payments of dearness allowance and led to the examination of the rate of dearness allowance for the monthly rated employees *which have now been linked, as is the case with* daily rated employees, to cost of living indices. An award relating to wages and dearness allowance in the engineering industry in West Bengal was implemented in December at our Calcutta establishments. Although the question of interpretation of certain ambiguous provisions resulted in another Tribunal embracing the industry as a whole, our Calcutta establishments are free from any complication on that score.

Training continued to occupy a good deal of attention of the Company. During the year under review ten of our Indian executives were sent to the U.K. for training under the Company's Training Scheme. In addition, advantage was taken of various facilities for supervisory and craft training that are available in India. Recognising the importance of training, a full time Training Officer has been appointed at our Calcutta factory and a similar appointment is contemplated for our Bombay factory.

Staff

The Officers and staff are to be congratulated on their efforts during the year, on the ability and ingenuity they showed in adapting themselves rapidly to deal with the constantly changing conditions resulting from an uncertain supply of raw materials and in maintaining cordial relations with customers who must at times have been disappointed by our inability to meet their orders as and when required. We thank them for their continued loyalty and the high sense of duty they display. The satisfactory results achieved despite the difficulties which arose during the year will, we hope, encourage them and make them proud of their efforts have been really worth while.

Retirement

It was with regret that we said farewell to Mr. Chiswell Jones at the end of the year when he retired as Chairman of your Company to return to the United Kingdom. He served with your Company for nearly 26 years and for 17 of those years he was Chairman and, until March last year, Managing Director, bearing the heavy responsibility of managing the Company's affairs and guiding it along the successful path which it has followed. His leadership and energetic management have been an example to us all. Mr. Chiswell Jones continues to be a member of your Board of Directors and has also joined the Board of our Associates, The Metal Box Company Overseas Limited. I am sure you will wish to join me in placing on record the Company's appreciation of Mr. Chiswell Jones' services and our thanks for the success that has been achieved for the Company.

TEXTILE MACHINERY CORPORATION LIMITED

CHAIRMAN, MR. K. K. BIRLA, DISCUSSES RAW MATERIAL SHORTAGE

Speech delivered by the Chairman, Mr. K. K. Birla, at the Nineteenth Annual General Meeting of the Shareholders of the Textile Machinery Corporation Ltd., held at Belgharia, 24 Parganas, on the 7th July, 1959.

Ladies and Gentlemen,

I have great pleasure in welcoming you to this Nineteenth Annual General Meeting of Textile Machinery Corporation Limited. The Directors' Report and the Audited Statement of Accounts for the year ended 31st December, 1958 have already been in your hands for some time and with your permission I shall take them as read.

The year 1958 was a period of cautious adventure for commerce and industry. The recession in the West, though a mild one, had its echoes felt in this land too and affected our international trade adversely. Production also slowed down in certain industrial sectors and consumer resistance developed. A pruning of the Second Five Year Plan became unavoidable. With a view to retrieve the situation, the Finance Minister announced certain changes in taxation in this year's budget. The removal of Excess Dividend Tax and Wealth Tax on Companies is a welcome step which the industry in fact had been urging for some time. But the increase in the incidence of Wealth Tax on individuals and the abolition of the system of 'grossing' in respect of dividend incomes are likely to have an adverse effect on the industrial progress of the country. *The capacity of the individual to* save and invest and thereby contribute to the resources needed for industrial development is bound to be reduced owing to the rates of Wealth Tax having been enhanced. Such provisions for taxation are, therefore, not calculated to contribute to a favourable investment climate. Nor can such a climate be induced by austerity or under-consumption. The industrial edifice can only be built on increased demand which means an improved standard of living and additional employment. For all this a new investment climate is needed based on individual incentive and expectation of legitimate return. The importance of creating such an atmosphere is even greater today when the country is thinking of launching on an ambitious Third Five Year Plan with an investment outlay of Rs. 10,000 crores.

Foreign Exchange Shortage

Gentlemen, you might recollect that when we met last year I had referred to the shortage of foreign exchange as one of the main difficulties which stood in the way of a rapid industrial development of the country. Though on the surface the situation now seems a bit improved, we cannot discount the subterranean currents that still threaten to slow down the tempo of the Plan. In January 1957, our foreign exchange reserves stood at Rs. 511 crores. By January 1958 they came down to Rs. 283 crores and by January 1959 to Rs. 189 crores. Thus during the year 1957, the reserves were drawn down by Rs. 228 crores and during 1958 by Rs. 94 crores. The performance of 1958 was no doubt an improvement and it continued in the early part of the current calendar year also. In April 1959 the reserves stood at Rs. 214 crores which means that not only was the drain on our reserves stopped but there was actually an increase of Rs. 25 crores during the first quarter. In the last month the situation has taken a turn for the worse. The important point to note, however, is that even the earlier improvement had been due to a decline in import and not due to any increase in exports. Imports fell from Rs. 1,026 crores in 1957 to Rs. 864 crores in 1958 but at the same time the exports also declined from Rs. 638 crores to Rs. 571 crores. During the early part of 1959 also India's export performance continued to be disquieting. For the first quarter of the current calendar year our exports aggregated to no more than Rs. 134 crores as against Rs. 141 crores and Rs. 163 crores during the corresponding periods of 1958 and 1957 respectively. This indicates that in spite of our best efforts exports are *declining. The situation could* only be improved through a careful consideration of the problems of every industry individually. The engineering industry too has a great potentiality and, if properly handled, can play an important role in the Export Promotion drive.

The export of engineering goods during the past three years has been as shown below:

Year	Value of exports in Rs. crores
1956	4.4
1957	4.4
1958	4.1

In the current year, too, the exports during the first quarter were about Rs. 1.1 crores. Thus the exports continue to remain roughly at Rs. 4 crores annually. They form 1.5% of the total value of engineering goods produced which stands at Rs. 270 crores to-day and they form only 0.7% of the total exports which are of the order of Rs. 600 crores. This is a poor performance indeed, specially in view of the fact that India is fortunate enough to have on her borders good *potential markets.* In order, however, to take full advantage of these markets and to compete successfully in them against other suppliers, we must be able to establish a reputation for our quality, to reduce our cost of production and to offer reasonable credit facilities to our customers. So far as the quality is concerned I am confident the Indian Engineering Industry is capable of getting over the shortcomings if any exist and would surely build up a reputation in course of time. But the question of the cost of production *is a difficult one and not* entirely within the control of the industry itself. There is first the problem of insufficiency of raw materials which affected production in many industrial sectors and resulted in a higher cost of production. The availability of steel, for example, has been continuously falling over the last three years as the following figures would show:

	Availability of steel in million tons		
	1956	1957	1958
Indigenous production ...	1.33	1.44	1.30
Imports	1.79	1.63	1.08
Total availability ...	3.12	3.07	2.38

Steel Supplies

As these figures indicate, the availability of steel has been falling whereas the requirements of the engineering industry for this main raw material have obviously been increasing. This shortage of steel has been an important factor in rendering idle a substantial portion of the installed capacity in the engineering industry.

Apart from the shortage of steel which made it impossible to maintain an economic level of production, the prices of this main raw material have also been increased several times during the past few years. From 1952 onwards, the increases in the price of steel have been as follows:—

Year		Increase in the price of steel in rupees per ton
1952	First increase	50
	Second „	50
1954	... ...	14
1955	First increase	20
	Second „	80
1956	... ...	25
1957	... ...	70
	Total increase	309

The effect of these increases on the selling price of the more common categories of steel works out as shown below:—

Category of steel	Price in 1952 in rupees per ton	Increase from 1952 onwards in Rs. per ton	Present price in rupees per ton	Percentage increase in price
1. Bars and Rods	336	309	645	92%
2. Plates ...	424	309	733	73%
3. Structural ...	346	309	655	89%

In order to give an idea of how the price of steel in India compares with that in the other steel-producing countries of the world, a comparative table for a common category of steel, say plates, is given below:

Name of Country	Price of Steel Plates in rupees per ton	
	On 31st March, 1958	On 31st March, 1959
1. U. K.	561	561
2. U. S. A.	544	565
3. Australia	602	602
4. Belgium	590	590
5. India	733	733

The above prices are all internal prices. Those for India are *F.O.R. Destination prices* while in other countries they are ex-factory prices. These figures would show that the prices of steel in India are roughly 22% to 30% higher than those in other countries of the world. Such high prices of steel naturally make the cost of production of our engineering goods unfavourable in comparison with that in other countries and consequently reduce our competitive capacity in foreign markets.

Public Sector Steel Plants

It is to be hoped, that the impediment of shorter availability of steel which the indigenous engineering industry *is facing to-day will only be shortlived now.* Two out of the three steel plants in the public sector have already started functioning. Although as yet they are only producing pig iron—Bhilai about 1,000 tons and Rourkela 450 tons per day—it is expected that the manufacture of steel would commence before the end of this year. By that time the plant at Durgapur would also have gone into production. With these three plants in the public sector working at full capacity and with the completion of the *expansion programmes of the steel plants in the* private sector the total production of steel by the end of the Second Five Year Plan should reach something like 4.7 million tons as against the present level of 1.3 million tons only. With that much of production it is not unreasonable to hope that the engineering industries of the country would not feel shortage of steel and would receive their full requirements of this raw material. While concluding on this subject, I should like to point out that Indian Steel which used to be the cheapest *a few years back is now* unquestionably one of the dearest in the world. I hope, however, that after the Steel plants in the public and private sectors attain their rated capacity, they would find it possible to effect reduction in cost so that the engineering industry may be assured of supplies of steel at reasonable rates and its competitive capacity may not be impaired in any way.

The other important factor which, besides raw material, controls the cost of production is the productivity of labour. The per capita productivity of the Indian worker is unfortunately still very low as compared to the per capita productivity in other industrially advanced countries. If the present low level of productivity continues and if wages are increased to improve the standard of living as planned, the effect would be a further addition to the cost of production which is already high. I trust that this important aspect will not be lost sight of and that some sort of a relation would always be maintained between the rise in wages and a corresponding increase in productivity. Otherwise our capacity to compete in the export-markets would be further impaired.

Last year I had mentioned that enquiries from foreign countries for goods manufactured by your Company were being received and that there were fair prospects of sales for exports materialising in the near future. I am glad to inform you that a beginning has already been made. An order for 30 complete Ring Frames worth about Rs. 8 lacs has been received this year against which 19 Ring Frames have already been despatched. This is the first time in the history of the Textile Machinery industry in India that some exports of capital goods have been affected by the industry. I am glad to say that it is your Company who has had this proud privilege.

Production Indices

Gentlemen, it is a matter of satisfaction that in spite of difficulties, some of which I have pointed out above, the engineering industries of the country have maintained their leading position so far as development is concerned. This is a happy circumstance particularly in view of the fact that it is the engineering industries of a country which, more than any other industry, reflect its general advancement. The indices of production for the various industries given below would illustrate the point:

Name of Industry	Index of production (Base 1951 = 100)	
	1957	1958
1. Cotton Textiles ...	115.6	108.9
2. Jute „	120.5	123.9
3. Cement	175.3	189.9
4. Iron & Steel	119.3	119.2
5. Sugar	185.5	175.5
6. Paper	159.3	191.8
7. Engineering industries ...	241.3	252.9
8. General Index	137.3	139.4

The above figures show that the index of production of engineering industries has been the highest during recent years. Taking the engineering industries individually the production in some of the important ones has been as shown below:

Item	Unit	Production 1951	1957	1958
1. Machine tools ...	Rs. lakhs	47.3	250.0	375.9
2. Transformers ...	000 KVA	196	1219	1128
3. Bicycles ...	Lakh Nos.	1.14	8.01	9.12
4. Electric fans ...	-do-	1.94	5.24	6.55
5. Ring frames ...	Nos.	276	1368	876
6. Carding engines	„ ...		1020	1152
7. Looms ...	„ ...		2868	3192
8. Sewing machines	000 Nos.	44.4	166.6	205.3
9. Radio Receivers	-do-	49.1	190.3	198.1
10. Electric Motors	000 HP.	143	469	624
11. Railway Wagons	000 Nos	3.7 (51-52)	16.9	13.5
12. Diesel Engines	-do-	7.2	16.5	25.8
13. Automobiles ...	-do-	22.2	31.9	26.7

In a few industries, namely, Transformers, Ring Frames and Automobiles, the production in 1958 showed a decline as compared with that in 1957 out the other industries have mentioned their development as the above figures show. The most rapid development, as I stated last year, is mainly due to the excellent efforts made by the Hindustan Machine Tools Factory at Bangalore where not only have the targets fixed under the Second Plan been already exceeded but also the quality of production has been reported to be of a very-high standard. The development of the Machine Tool Industry is a most welcome sign because a higher production of machine tools gives promise of the establishment of further manufacturing capacity in the country.

Installed Capacity

Perhaps a better measure to judge the progress of an industry is its installed capacity. Actual production in any particular year may be less due to temporary reasons like shortage of raw materials, labour troubles, etc. but the installed capacity is a permanent indication of the stage of development. Although there are still two years to complete the period of the Second Five Year Plan, the targets of capacities fixed under the Plan have, in the case of a large number of engineering industries, been either already exceeded or are on the point of being exceeded. Some of these industries are mentioned below:—

Name of Industry	Unit	Target of capacity under the Second Five Year Plan	Capacity already reached as on 31.12.'58
1. Bicycles ...	000 Nos.	895	925
2. Complete Spinning Ring Frames ...	Nos.	2810	2784
3. Dry batteries ...	Lac Nos.	2250	2244
4. Electric fans ...	000 Nos	600	765
5. Grinding Wheels	000 lbs	4726	5533
6. Sewing Machines	000 Nos.	85	81
7. Storage batteries	-do-	350	317

Small-scale Industries

Gentlemen, the development of small scale industries side by side with that of the organised sector is also of major importance in the industrialisation of a country. Small industries play a very significant role in the industrially advanced countries of the world, their contribution to the national economy being quite substantial. In the U.S.A., for instance, it was recently estimated that the small industries contribute about 40% of the total private national income, and more than 33% of the national product. In the engineering sector, the development of small-scale industries is of special importance because they supply ancillary products to large scale industries at a lower cost and are, in a way, indispensible to them. Since the small-scale industries have also great potentialities for providing employment on a large scale, their development is all the more important for a country like India where the question of unemployment is one of the biggest problems of the day. In this context, it is heartening to note that there is now an all round realisation of the necessity of developing such ancillary engineering

industries in this country. Some of the major handicaps that are experienced by small entrepreneurs are a paucity of finance, lack of adequate technical guidance and non-availability of ready markets for their products. Efforts are being made to find a satisfactory solution to all these difficulties. The National Small Industries Corporation is providing machinery to small entrepreneurs on hire-purchase basis and is also helping them to market their products, while technical guidance is being offered by the Small Industries Services Institutes. Some other schemes are also under consideration through which these entrepreneurs would receive further financial and technical assistance from the large scale industries themselves. I have no doubt that with all these efforts, the ancillary industries will not take long to develop to a stage when they could be of real help in the progress of the engineering industries of the country.

Gentlemen, I would now deal briefly with the developments that have taken place in the different divisions of your Company during the year under review.

Cotton Textile Machinery Division

In my last year's address I had dealt with the factors responsible for lowering the tempo of production of cotton textile machinery. Cotton mills in India had not in the year under review recovered from the slump that started in 1957. Only those equipped with modern machinery—and they are few in number—are working without feeling the pinch while the vast majority are carrying on in a make-shift manner. Needless to say the impact of these adverse conditions on the machinery manufacturing industry has been severe. So far as we are concerned, our sales during the year under review were slightly better than in the previous year which, I must say, was a particularly bad year. But our production was much less. The reason for lower production was that whereas the carry-over of orders from 1956 to 1957 was very large, the carry-over from 1957 to 1958 was quite small and therefore the production had to be brought down to a lower level. We were also required to provide financial accommodation to several mills by offering medium term credit.

The Development Work in this Division during the year under review was satisfactory. By the beginning of 1959 we were able to make prototypes of the UD type of Ring Spinning Frame and an improved type of Drawing Frame. Development work on Simplex Fly Frame and Ring Doubling Frame is in progress. All the new items are made to the specifications of our collaborators, Messrs. Howa Machinery Ltd., Nagoya, Japan.

Carding Engine production progressed fairly satisfactorily during the year. We are now producing a higher proportion of components in our Works. A good deal of progress has been made on the manufacture of special Purpose Machine Tools which will help us in achieving production of almost all the component parts in our factory.

In the current calendar year, the Textile Machinery Division of your Company is expected to show better results because the textile industry appears to have turned round the corner and its condition is improving.

Boiler and Heavy Engineering Division

In this division the quantum of production during the year under review was substantially higher than in the preceding year. In fact it was one and a half times higher. Shop extensions undertaken during the previous year have been completed and we are now preparing to instal new plant and equipment for various items of manufacture.

Due to difficulties in importing the necessary equipment, we have not been able to make as much headway as we had intended in the manufacture of Water Tube Boilers and Sugar Machinery. Water Tube Boilers are, however, now in the process of production. Order for Lancashire, Vertical and Locomotive Boilers also continue to be received as before.

Manufacture of Sugar Machinery has progressed considerably. On the advice of the Government of India, machinery manufacturers including ourselves have formed Consortia to deal with the orders that would be forthcoming for Sugar Plants in this country. It is estimated that under the present scheme more than 75% of the equipment required by the Sugar Factories in India will be made indigenously. With a number of new sugar factories proposed to be set up in future and with a large number of the existing ones requiring replacement of their plants we and the other members of the Consortia expect to do quite a large volume of work in this field.

Our Structural Shops continued to do a big volume of work during the year under review. You will be pleased to hear that we have already finished the work of fabrication and erection of all the Radial Spillway Gates for the Panchet Hill Dam of the Damodar Valley Corporation. These Gates were of gigantic dimensions and due to difficulties of transportation they were despatched in sections and reassembled at site. We are getting orders for Dam Gates for other schemes as well. This, in fact, is one of the lines we intend to develop further. Among other items of structural work upon which we were engaged during the year under review, I may mention completion of fabrication work on 2,100 tons of various items for the Bhilai Steel Plant. We still have, on hand, work on about 1,200 tons more for the same plant. This work is being done in stages.

Railway Rolling Stock production during the year has been satisfactory. In the current year we shall be changing over production to the BOX type Broad Gauge Wagons. We have also made fair progress on the production of Passenger Coaching Underframes.

Steel Foundry Division

In this division we have maintained the progress achieved during the previous years. We are making Alloy Steel Castings specially High Manganese and Nickel Chrome Castings for various industrial purposes. We have also developed capacity for making cast steel Gear Wheels for Sugar Machinery. Certain parts of Locomotives required by Chittaranjan Locomotive Works are also being made in our Foundry. We are making efforts to develop capacity for heavy castings too.

Machine Tool Division

The Government of India have approved the terms of our collaboration with Messrs. H. W. Ward & Co. Ltd., U. K., for the manufacture of Capstan and Turret Lathes. This scheme is being pushed through with all possible speed and necessary arrangements are being made for an early import of the requisite capital equipment.

Gentlemen, before concluding I wish to place on record my deep appreciation of the ceaseless efforts put in by the officers, members of the staff and workers in sustaining the progress of your Company.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

HE CALCUTTA MONEY MARKET

INTERBANK FUNDS TIGHTER

Wednesday, 8th July.

NCE again there has been a slight fall in the level of advances outstanding in the Calcutta ney market during the past week. The requirements of the jute mills and the sugar industry e contracted, but those of the cotton mills remain about the same. There has been little change the offtake of funds by State Governments inst grains and seeds storage, but the requirements of other sources for the same purpose have reased slightly. The interbank market has n considerably tighter throughout the past week, hough rather easier conditions prevailed at the ek-end. The call rate is now standing at 3½ per- nt and there are reported to be borrowers over.

There has been a fair showing of tea and gunny ls in the exchange market for the first time in veral weeks. Demand for remittance has once ain been keen. The pound has lost ground inst the twin dollars and most important Conental currencies. The reason for the deteriora- n is not yet apparent, but it is possible that the ual seasonal pressure on sterling is beginning.

BULLION WAS STEADY LAST WEEK ON LACK OF rivals. Silver was quoted at Rs. 195.50 and ports of Tibetan coins were restricted. The ice was 77¾d in London and the New York otation stood at 91.375 cents. Gold was taken Rs. 122.25.

DURING THE WEEK ENDED 3RD JULY, GOVERNMENT India Treasury bills for Rs. 36,14,00,000 were sold favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT India Treasury bills were opened on 7th July. ie total amount offered was Rs. 2,05,00,000. Tenrs at Rs. 99.320 were accepted in full, the average te of acceptance being Rs. 2.759 percent a year. nders for Rs. 2 crores of 91-day Government of dia Treasury bills will be received at all centres to the close of business on 13th July.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY lls will be sold from 8th July to 11th July at s. 99.326 percent subject to the conditions preously announced that sales can be stopped at any me without notice if the Government thinks it ecessary. There were no sales of these bills uring the period 29th June to 4th July.

THERE WAS A DECLINE OF RS. 10.88 CRORES TO s. 1,741.13 crores in the total note issue, accordg to the return of the Reserve Bank of India r the week ended 3rd July, 1959. But active otes were Rs. 7.84 crores higher at Rs. 1,721.40 ores. The currency contraction was covered by educing rupee securities by Rs. 10 crores to s. 1,315.73 crores. Deposits reflected the effect the Central loan subscriptions. Deposits of the overnment of India increased by Rs. 8.57 ores to Rs. 59.04 crores. Other Government ccounts fell by Rs. 2.80 crores to Rs. 13.80 crores. alances of commercial banks at Rs. 65.98 crores owed a decline of Rs. 33.37 crores. Balances eld abroad fell further by Rs. 2.26 crores to s. 12.29 crores. Investments were Rs. 28.17 ores lower at Rs. 294.22 crores. Other loans and dvances increased from Rs. 64.81 crores to s. 74.88 crores, of which advances to scheduled anks against usance bills amounted to Rs. 3.26 ores (Rs. 1.45 crores). Ways and means adances stood at Rs. 26.74 crores against Rs. 23.43 ores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE eek ended 26th June, 1959, shows a rise of Rs. 5.29 rores to Rs. 536.03 crores in total deposits. Investents in Government securities are up by Rs. 1 akh to Rs. 301.72 crores, while other authorised nvestments are unchanged at Rs. 10.26 crores. dvances, including loans, cash credits, overdrafts, nd bills discounted and purchased, have decreased y Rs. 5.42 crores to Rs. 188.70 crores. Cash and alances are, in consequence, shown at Rs. 41.81 rores or Rs. 9.75 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED anks for the week ended 26th June, 1959, shows Demand and Time liabilities at Rs. 760.48 crores Rs. 23.68 crores on account of borrowings from anks) and Rs. 1,028.10 crores (Rs. 29.62 crores), ompared with Rs. 757.52 crores (Rs. 28.41 crores) nd Rs. 1,020.99 crores (Rs. 28.60 crores), respecively, in the previous week. Cash has declined y Rs. 1.20 crores to Rs. 47.48 crores, while balances with the Reserve Bank have increased by Rs. 17.62 rores to Rs. 90.81 crores. There is a drop of Rs. .35 crores to Rs. 631.60 crores in investments. dvances and bills discounted at Rs. 984.82 crores how a decline of Rs. 14.85 crores. The ratios to otal liabilities of cash and balances, and of adances and discounts, are, in consequence, shown t 7.7 percent and 55.1 percent, against 6.9 percent nd 56.2 percent.

The hard iron lay dead in slumber deep
And we stirred it to life, ho!
In the dark depths of a million years it lay hid
And we stirred it to life, ho!
Tamed by our strong hands
It sings to the tune we call.
Its silence of long years have we broken, ho!
The dead doth stir with new life today
And rushes forth the wide world to conquer.
Fearless with our two hands today
Its reins we hold strong, ho!

D. P. PARTHASARATHY,
SECRETARY.

Of course.

The Taj Mahal by moonlight is a must for every tourist.

And every tourist who comes to this country brings with him foreign exchange.

That's why the tourist industry is so valuable . . . it earns currency as well as goodwill.

But there are many other tourist centres waiting to be developed in India . . . centres which can only be reached by road.

Yet another reason why road construction must have topmost priority. Everything to do with roads is important to the country as a whole.

Bitumen, for example.
One of the better road-building materials.

Inexpensive. Easy to handle.
Long-lasting. Hard-wearing.
Supplied by Burmah-Shell.

Burmah-Shell Bitumen is more than an important material—it's a service. Burmah-Shell make available the advice and experience of skilled engineers, whose job it is to assist in the construction of roads. Good roads. Cheaper roads.
BURMAH-SHELL BITUMEN CAN BE SUPPLIED IN BULK. THIS STEP FORWARD MADE BY BURMAH-SHELL, SAVES VITAL STEEL BECAUSE IT MAKES DRUMS UNNECESSARY. BULK BITUMEN IS PARTICULARLY SUITABLE FOR MECHANIZED ROAD CONSTRUCTION—AND IT IS MUCH CHEAPER IN ITS INITIAL COST.

BURMAH-SHELL
BITUMEN FOR BETTER ROADS

FIRM CONDITIONS IN STOCK MARKET

INDUSTRIALS RISE

London, 8th July.

FIRM conditions developed in the stock market with the opening of the new account on last Wednesday, and prices improved under the lead of industrial equities which provided the outstanding performance of the week. Although the demand for industrials was selective, gains were numerous. Several factors combined to bring about an expansion in demand after the recent quieter conditions. The Chancellor's reference to robust industrial progress continued to encourage buyers, while the continuing fall in unemployment, the satisfactory end-June gold figures and the resumption of the advance on Wall Street which reached new peaks on successive days, all contributed. The printing industry strike was the only adverse influence, but even this had little effect apart from restricting activity to some extent. Take-over development continued to provide some of the main points of interest in the market. Gilt-edged securities maintained their recent firm tone, and most of the gains were held. Losses, where sustained, were very small. Greek bonds were an erratic market and were easier on balance. Baltic issues improved on the Russian agreement to discuss the post 1939 claims. Banking shares were subdued, but insurances provided some good features on take over talk. A general advance was recorded in dollar stocks in response to Wall Street. Gold shares moved irregularly. Diamonds responded to the latest sales figures. Coppers advanced. Zinc hardened but tins were on the dull side. Small gains were in the majority in a quiet oil share market. Earlier dullness gave way to better conditions in the rubber share market, following a improvement in the commodity price. Good features included rubber estates of Malay. Mensikibel, Tebrau and Jugraland. Teas also improved after earlier quietness and irregularity, and small gains were scored by Pabbojan, British India Lebong and Yatiyantota.

Activity on Wall Street

United States Government obligations in the short trading week were lower in sluggish dealing. Price declines were confined to fractions, but in many cases, the long end of the list was at record lows due to moves in Congress to remove the bond ceiling interest rate with their accompanying inflationary implications. Investment quality corporates were firm, while speculative rails generally held steady. Greeks were a soft spot, with the 6 percents lower by three points. German nationals were quietly steady, while among the industrials, United Steel 4⅞ percent added near two points. Italians were fractionally mixed and Norwegians a shade higher. Denmark 5½ percents were unchanged, and Serb 7 percents were ahead by a major fraction. Amsterdam 5¼ percents gained nearly a full point before falling back. Japanese Government 6½ percents of 1964 fell over a point, while Chile 3 percents advanced a small fraction.

Hongkong Gold Sluggish

Trading in gold was sluggish, with the steadiness of sterling depressing sentiment. Carry-over charges were nil. Arrivals were 22,000 ounces. Forward contract was placed at $(U.S.)38.01. A feature of the exchange section of the market was the wide movements in pesos. Forward notes touched 1.275 pesos a Hongkong dollar, while spot notes fell to 1.355 pesos and tele-transfers to 1.35 pesos.

Paris Gold Quiet

The Paris gold market was again in the doldrums last week. Trading was quiet and only routine movements were noted, while the price position appeared to be settled and traders did not expect any major changes unless outstanding developments occurred.

Mixed Trend in Vegetable Oils

Following the previous week's good business in linseed, United Kingdom crushers were more reserved, with prices easier in the vegetable oil market last week. Offers of British east African castorseed were scanty, and enquiries showed signs of expansion at the close. Groundnuts remained neglected. Soyabeans were quiet but steady, while copra closed steadier, although down on balance. Palm kernels finished steadier after early easiness. Castor oil was firmer, but cocoanut oil was dull and easy. Palm oil was quietly steady while palm kernel oil steadied after early softness. Most soft oils met with slow trading and lower prices.

ESTIMATE OF WORLD SUGAR REQUIREMENTS REDUCED

Ending its meeting in London recently, the International Sugar Council announced that the world minimum requirements of sugar in 1959 were now estimated at 5,465,000 metric tons. This compares with the Council's previous estimate of 5,580,000 tons. Taking into account the new export restrictions, it puts the total of available supplies at 5.6 million tons. This includes supplies from countries, notably India and the Argentine, outside the International Sugar Agreement. Previous estimates of free world demand by the Council have been low and it takes the view that supplies and requirements are now roughly in balance. Mr. Eric Roll, the Council's executive director, stressed after the meeting that it did not take a gloomy view of the market outlook.

Stocks and Shares

SHARE MARKET SPECULATIVES IN FIRM BULL GRIP

HANDSOME GAINS IN SEVERAL SCRIP

Wednesday Evening.

AFTER a hesitant start, the stock market displayed a steadier trend inspired by rumours (so far unconfirmed) that Government sanction has been received for the proposed T.I.S.C.O. rights issue at par and that an announcement from the Company is imminent. The bears rushed in to cover and a substantial amount of replacement buying by a prominent operator lifted the price of Indian Iron & Steel shares from Rs. 24.50 to Rs. 25.28; which was tonight's settlement rate, against Rs. 24.25 a fortnight ago. Share market reactions to Mr. Lal Bahadur Shastri's warning about compulsory exports—even at a loss—were bearish, but his plea for "co-operation" and "friendly competition" between the public and private sectors was generally welcomed.

The new Central Government loans were fully subscribed on 2nd July and both issues, 3½% 1969 and 4% 1979 were in each case quoted at the close of business today at a premium of 5nP over the issue price.

Business in preference shares was on a reduced scale owing to the continued absence of sellers and several best rate orders remained unexecuted.

In the banking section, United Commercial were marked down from Rs. 62 to Rs. 61.50.

Fresh hopes of an early announcement about an increase in the selling prices of the commodity helped a recovery movement in the coal section. Amalgamated rose from Rs. 25.50 to Rs. 26.50 and Bengal were Rs. 6 better at Rs. 320. There was some good buying of East Indian, and the price increased from Rs. 24 to Rs. 25.25. New Beerbhoom met with keen enquiry and were better at the close at Rs. 21.12, as were Raneegunge at Rs. 17.50. South Karanpura were wanted at the higher rate of Rs. 13.12 and Seebpore closed Re. 1 higher at Rs. 26.

In cotton textiles, Dunbar rose smartly from Rs. 162 to Rs. 167 as did Kesoram Cotton from Rs. 15.31 to Rs. 16.25.

Electric shares were dull and featureless.

In the engineering group, there were sellers of Braithwaites down to Rs. 28 and Britannia Engineering at Rs. 12.69. Burn & Company and Guest, Keen, Williams were taken at the higher rates of Rs. 455 and Rs. 41. Indian Galvanizing continued to meet with profit-taking and moved down further to Rs. 21.25. Kumardhubi Engineering were marked at Rs. 7.44 ex-rights and Textile Machinery improved today to Rs. 26.20, following the encouraging picture of the Company's prospects as presented by the chairman to the shareholders at yesterday's meeting.

Jute shares met with renewed enquiry and widespread gains were recorded, as will be seen from the following table:

	Opening 1st July, 1959	Closing 8th July, 1959
	Rs.	Rs.
Auckland	182	191
Birla	21.50	22.12
Ganges	85	90
Kamarhatty	202	221
Kinnison	192	198
Lansdowne	127	140
Orient	170	173
Fort Gloster (New)	262	275

A cornering attempt having failed, India Paper Pulp slipped back from Rs. 27.25 to Rs. 25.25. Contrary to the general trend, Orient Paper were quiet at around Rs. 37 on fears that the Tariff Commission's recommendations on paper prices, and Government action thereon, were likely to be unfavourable to manufacturers. Sirpur were quiet at Rs. 12.94; the resolution to make Sirsilk a subsidiary of this concern, was unanimously passed at the last meeting. Titaghur Paper were easier at Rs. 44.62.

In sugar, interested buying lifted the price of Carew to Rs. 15.12 but at this level there was profit-taking and the shares closed easier at Rs. 13.50. Cawnpore recovered from Rs. 12 to Rs. 14. Dyer Meakin Breweries were steady at Rs. 18 and Ramnugger Cane were better at Rs. 18.25.

Among miscellaneous industrials, Aluminium Corporation were in good demand and improved from Rs. 15 to Rs. 15.62. Balmer Lawrie were slightly easier at Rs. 217 while Britannia Biscuits moved up further to Rs. 23.44. Dunlop Rubber were steady at Rs. 33.75 as were Imperial Tobacco at Rs. 12.62. There was a good enquiry for Indian Aluminium and the price recovered from Rs. 22 to Rs. 22.75. India General Navigation improved from Rs. 64 to Rs. 67.50 as did India Steamship from Rs. 14.19 to Rs. 14.62. Jardine Henderson were taken at the higher rate of Rs. 86.50 and National Insulated Cables jumped Rs. 2 to Rs. 36.75. National Carbon recovered from Rs. 33 to Rs. 35.25 on rumours of a rights issue. National Tobacco were steady at Rs 18.25 and Rallis India spurted from Rs. 64.50 to Rs. 71.

In the mining group, Indian Copper improved from Rs. 4.14 to Rs. 4.25 when it was announced today that the dividend had been maintained. Orissa Minerals were in good demand and rose from Rs. 37.75 to Rs. 40.

Despite better prices realised at the recent auctions, little interest was displayed in the tea section and prices showed little variation.

Shree Gopal Paper

The profit of the Shree Gopal Paper Mills Ltd has increased by Rs. 34.25 lakhs to Rs. 78.41 lakhs for the year ended December 1958. Taxation absorbs Rs. 43½ lakhs. An ordinary dividend of Rs. 1.25 a share has been paid. An amount of Rs. 9½ lakhs is transferred to dividend equalisation fund, leaving a carry-forward of Rs. 75,300. Output increased from 14,342 tons to 17,181 tons. The increase was due to the completion of the first phase of the expansion scheme, raising the output capacity of the existing three machines to 55 tons a day. The new paper machine, the corresponding two pulp mills and the soda recovery section are being erected. They are expected to be ready by October 1958.

Mim Tea

The directors of the Mim Tea Company state in their report for the year ended December 1958 that satisfactory prices were obtained for the 1958 teas. But heavy hail damage occurred early in the year affecting a total of 500 maunds of made tea, so the crop was considerably below expectations. The crop of 1,978 maunds was sold at an average price of Rs. 3.93 a lb, which compares with the crop of 2,062 maunds in 1957 sold at an average price of Rs. 3.45 a lb. Estimates for the current season have been framed for a crop of 2,500 maunds costing Rs. 6,45,169. Although slight hail damage occurred at the garden in April this year, it is expected that 2,500 maunds will be produced. By 14th June, 1959, 1,000 maunds had been harvested, compared with 843 maunds until the same date last year. The profit in 1958 was Rs. 30,079. Bringing in a debit balance of Rs. 27,148 and making other adjustments, a credit balance of Rs. 5,657 is carried forward. The dividends have been passed over.

Jaybirpara Tea

The Jaybirpara (Dooars) Tea Company has suffered a loss of Rs. 34,854 for the year ended December 1958. Bringing in a loss of Rs. 62,442 and making other adjustments, a debit balance of Rs. 60,919 is carried forward. The dividends have again been passed over. The size of the 1958 crop was disappointing. The effects of the serious flooding of the garden a few years ago have not yet been eradicted, and remedial measures are being continued. The crop of 6,362 maunds was sold at an average price of Rs. 1.85 a lb. This compares with a crop of 6,425 maunds in the 1957 season, which sold at an average price of Rs. 1.87 a lb. Estimates for the current season have been framed for a crop of 7,000 maunds at a cost of Rs. 10,83,519. The season has started favourably and the crop until 14th June, 1959, amounted to 1,449 maunds, compared with 1,279 maunds until the same date a year ago.

Travancore Rayons

Increasing depreciation from Rs. 34.55 lakhs to Rs. 37.39 lakhs for the year ended December 1958, the profit of Travancore Rayons Ltd has risen from Rs. 21.65 lakhs to Rs. 46.20 lakhs. The ordinary dividend has been increased from 10 percent to 12½ percent. General reserve is allocated Rs. 30 lakhs, against Rs. 10 lakhs. The carry-forward amounts to Rs. 1,97,891, compared with Rs. 1,78,216 brought in. Permission has been received from the Central Government for setting up a plant to produce cellulose film with a capacity of 2,000 tons a year. The plant is expected to begin production next year. A sulphuric acid plant has been received at the site and is now being erected. The second moisture-proofing plant, it is reported, has been shipped. The company is in correspondence with the Government of India for expanding the capacity for rayon yarn by five tons a day. The directors state: "The setback of 1957 was gradually overcome. The capacity was increased by 1.8 tons a day, by the installation of six more spinning machines, making a total installed capacity of 8.6 tons a day."

Tata Iron Output

Tata Industries Private Ltd, managing agents of the Tata Iron and Steel Co. Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during June 1959 was: pig iron 115,700 tons; steel ingots 114,300

Saleable Steel	46,670 (52,105)	

Bombay Market

T.I.S.C.O. RIGHTS RUMOUR STARTS BULL BUYING

NEW CENTRAL LOANS FULLY SUBSCRIBED

Wednesday Evening.

THE Bombay stock market was firm last week and share prices scaled new peaks on hectic buying support. Operators were very bullish as they were encouraged by a rumour, still unconfirmed, that the Government might allow the issue of rights shares by the Tata Iron and Steel Company at par. Prospects of increased financial assistance, especially from the U.S.A., helped sentiment to a great extent. It is also believed that more money will be available for investment in industrial shares in coming weeks as the slack season gathers momentum. Full subscription to the new Central loans was interpreted bullishly.

Tata Steel soared to Rs. 197.25 on strong speculative support and Indian Iron were boosted up to Rs. 25.10, although Calcutta interests were rather inclined to take a sober view of the present trend. Knowledgable buying lifted Premier Construction to Rs. 373 and Tata Locomotive were bought at Rs. 231.50 on investment account. Alcock Ashdown were taken at Rs. 281 and Larsen and Toubro realised Rs. 22.80. Motor shares were steady, and Premier Automobile increased to Rs. 131, but Hindustan Motor were freely available at Rs. 9.92.

There were a number of bright spots in the cotton mill group. Bombay Dyeing went ahead to Rs. 66.50 and Century improved to Rs. 576. Simplex were taken at Rs. 190 and Svadeshi came to hand at Rs. 254. Tata Mills were higher at Rs. 40.50 and Kohinoor were bought at Rs. 299. India United Ordinary were placed at Rs. 7.44 and Apollo were indicated at Rs. 1.26. Miscellaneous shares moved up with the general trend. Sugar shares were steady, and Belapur improved to Rs. 313.50. Phalton were wanted at Rs. 164 and Walchandnagar Industries gained at Rs. 333.75. Among steamship company shares, Scindia Steam were transacted at Rs. 17.84 and Great Eastern Shipping were taken at Rs. 22.56. In the cement group, Associated Cement were placed at Rs. 154 and Digvijay Cement were taken at Rs. 156. Mining shares were quietly steady, and Shivrajpur Syndicate were done at Rs. 82.50. National Rayon increased smartly to Rs. 356 on bear-covering and Tata Chemical were bought up to Rs. 19.32. Voltas met with demand at Rs. 181.50 and Ceat Tyre improved to Rs. 191.50.

Turnover in banking shares declined and prices were shaded where changed, as it was feared that the profit during the half-year ended June might not be as expected. Bank of India were dealt in at Rs. 128 and Central Bank were taken at Rs. 53.30. In the insurance group, New India Assurance jumped to Rs. 62.50 on the publication of a satisfactory report.

Electricity supply company shares produced a mixed trend. Ahmedabad Electric declined to Rs. 91.70, but Bombay Suburban improved to Rs. 105.75. Tata Power were taken at Rs. 1,227.50 and Tata Hydro were wanted up to Rs. 121.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate: Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the corresponding Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

New Delhi

MAKING INDIAN GOODS CHEAPER IN FOREIGN MARKETS

GOVERNMENT SUGGESTS OMISSION OF OVERHEAD COSTS FROM EXPORT PRICES

(FROM A NEW DELHI CORRESPONDENT)

A REDUCTION in the export price of Indian goods by omitting overhead costs has been suggested by the Central Commerce and Industry Ministry with a view to boosting Indian exports. In a note to the tenth meeting of the Central Advisory Council of Industries, held this week, the Ministry says: "It is now widely appreciated that for the rapid economic development of the country and the growth of our industrial potential, a concerted attempt has to be made to increase the volume of our exports. This alone can enable us to earn foreign exchange for importing raw materials and machinery, etcetera, necessary for industrial progress.

"While the gain from the export drive for the national economy by augmenting our export earnings is well understood, there has not been sufficient appreciation that greater exports are equally vital to the health of our industries. Foreign markets, if successfully explored and held, yield valuable experience to enable industries to achieve greater output, to improve the quality of their products and to reduce costs and prices. The export figures for the past few years reveal that conditions in international markets for our traditional items are becoming more and more difficult. While steps are being taken to stabilise the position concerning these exports in traditional markets, the country has to rely greatly on new industrial products for a substantial expansion in our export earnings. The share of new industrial items in the export trade at present is insignificant, although many light engineering items have recently shown the capacity to increase fast. If we examine a few industrial items which feature in our export trade, we find that exports constitute a very small percentage of the country's production :

Commodity	Unit	Production	1958 Export	Percentage of exports to production

* Figures are for 1957.

For items 15 to 28, the figures relate to January-November 1958.

New Export Items

"From the above it is evident that except in traditional items like cotton piecegoods, jute manufactures and tea, India's exports in the case of industrial items form a negligible proportion of the total production. In the case of footwear, caustic soda, soap, cement, hurricane lanterns, oil pressure lamps, storage batteries, bicycles and so on, we do not export even 1 percent of production. Our competitors are industrially advanced countries, having greater experience in production and marketing techniques. They have already established their foothold in consuming markets. Their products are well known and hence consumer preference is inclined in their favour. If our new products are to penetrate these markets and achieve success at the expense of established competitors, it is essential that during the period of pioneering efforts, the Indian sale prices, quality to quality, should be decidedly cheaper than our competitors. But our cost structure tends to be rigid and heavy, operating as a disincentive to export promotion.

"It is this aspect that needs to be examined in detail with a view to evolving schemes for improved productivity geared to a dynamic drive for exports. Industry is, no doubt, constantly reviewing its cost structure with a view to effecting economic and increasing productivity wherever possible. Often its objective is to increase its competitive capacity mainly in the internal market. If export needs are brought into the picture, it will be evident that some rethinking is called for. To the extent overhead costs remain the same, an increase in demand by way of an increase in exports should have a healthy effect on our cost structure. This needs to be examined from factory to factory in every industry. Such of the units as would benefit by earmarking a part of their production for exports should be carefully selected so that they could increasingly participate in export promotion. They might examine how far it is possible to reduce the export price by omitting to take the overhead costs into the price of the articles earmarked for exports. If such a reduction of costs is not possible, the industry should consider a voluntary scheme such as is now being followed in the case of the bicycle industry. After exports get into their stride, larger production would be encouraged which, in turn, would no doubt favourably affect the cost factor, and then the export price. In short, an attempt needs to be made to start a chain reaction which would eventually increase output, maximise exports, reduce costs, lower prices, and to complete the circle, expand consumption. Another factor which has a bearing on costs is the extent of the markets open to the industry. If there are restrictions inhibiting our industry from competing effectively abroad, the unhealthy consequences of continuing such restrictions require to be examined.

Official Export Promotion Measures

"The Government, for its part, has offered various facilities for export promotion. For making Indian products competitive abroad, exporters are enabled to obtain drawback of import duties and rebate on excise duties on a large number of goods exported. At present, 50 commodities enjoy the facility for drawback of import duty. About a dozen items receive a rebate on Customs and excise duties combined. Export control has recently been freed for over 250 commodities. Facilities have been offered for manufacture in bond for export from imported raw materials, so that the price of the export product may not be affected by the import duty. A few articles are now enjoying this facility. Export targets have been fixed for various engineering goods and targets have also been fixed for individual manufacturers. Provision has been made for the supply of iron and steel and imported components to reach these targets. Facilities are offered for the replenishment of the iron and steel contents of exported engineering goods. Provision has been made for the replenishment of tinplates and steel sheets used in containers exported with contents. Special schemes have been drawn up for the supply of raw materials for exporting industries. The Government has set up institutions like export promotion councils, and is arranging for the supply of necessary marketing information from abroad and for the supply of information to foreign importers of Indian goods. Steps have been taken for the allotment of wagon space and expeditious movement of goods earmarked for exports. Concessional railway freights have already been offered for about nine commodities, and more are under examination. The Export Risks Insurance Corporation has been established to cover export risks so that the export trade could develop in channels otherwise not possible. The Reserve Bank of India has introduced a scheme to enable commercial banks to offer liberal credit facilities for exporters. The National Productivity Council set up last year is organising productivity training and services to industrial units to enable them to increase their productivity. These and other measures taken up by the Government, it is hoped, would assist the industries in reducing their export prices considerably.

"Export promotion being a national necessity today, the necessary institutional arrangements on the part of industries require to be organised. The experience of other countries indicates that if associations are formed and reasonably administered, prices of export products could be stabilised, overheads reduced, standardisation of grades effected and centralisation of inspection and consolidation of shipments provided for. American export associations are known to handle claims collectively, eliminate too liberal credit terms, present a united front against competitors and even provide facilities for handling large orders. It is time that our industries also organised associations for sales promotion.

"Our production capacity is growing steadily in many lines. Out of the several industries for which target capacity for the second plan period has been fixed, bicycles, matches, staple fibre and bare copper conductors have already achieved the target. On the basis of the additional capacity already licensed, we find that very soon items like electric fans, electric motors, electric lamps, power-driven pumps, radio receivers, sewing machines, paints and varnishes, power and industrial alcohol, caustic soda, refractories and so on would reach the target level. Industries engaged in the production of those and other similar items may now take steps, jointly by groups if not severally, to constitute appropriate export houses or associations.

Merchandising Methods

"While price reduction is no doubt important, the adoption of suitable merchandising methods to capture foreign markets is no less so. It is generally agreed that we have not yet created an atmosphere of product acceptance in foreign markets where our new items are likely to face keen competition. India's export advertising by industries also requires concentrated attention. Detailed market studies, consumer preferences, dealer incentives and the development of brand names representing clearly understood quality standards and distribution arrangements require equal attention.

"In the nature of things, barring State participation in industry, Government help could only be a signpost; the walking will have to be done by the industry itself. The speed of its march will depend on the ability it develops by reviewing and solving its own problems. In the light of the above, the following is suggested for consideration :

"(a) Every industry which is not organised into a development council or an association should organise itself into an association.

"(b) Where a particular development council or an association covers too large a field, the need for constituent associations or sub-committees to give concentrated attention to only cognate industrial units needs to be examined.

"(c) The association should carry out a survey of the export potential of its members, who should be divided into two categories: (i) the participating group, the members of which will directly participate in exports; and (ii) the non-participating group, the members of which will not directly participate in exports but will provide aid and assistance to those who do perform.

"(d) A study of both prices and merchandising techniques should be made by the association, and schemes suitable to each industry should be evolved providing for reduction in sale prices to competitive levels and for advertising and sales propaganda to secure the acceptance of Indian products in international markets. The rights and obligations of participating and non-participating members may be spelt out with the association occupying the pivotal position of enforcing the rights and obligations.

"(e) Collaboration arrangements with foreign manufacturers should be strengthened so that production based on India may be used to meet the demand of neighbouring foreign markets. Where collaboration arrangements provide for restrictive clauses, discussions may be entered into with collaborators for these restrictive clauses to be suitably amended or modified, if not deleted altogether.

"(f) The industrial associations and the directorate of export promotion may be encouraged to develop effective liaison arrangements so that the two may be able to co-operate in an effort to enlarge exports."

Industrial Expansion Slows Down

The rate of increase in industrial production in 1958 was somewhat lower than in 1957, due partly to the decline in the output of some major industries such as cotton textiles, sugar, steel and motor-cars, and partly because of the foreign exchange difficulties, according to a review of the general economic situation placed before the Central Industrial Advisory Council. The rate of in-

crease in industrial production was 1.5 percent in 1958, compared with 3.5 percent in 1957, and 6.2 percent in 1956. Excluding cotton textiles and sugar, in which certain unusual conditions prevailed during the year, the increase in the index of industrial production was of the order of 8.5 percent in 1958, compared with 6.5 percent in 1957. Significant increases in production were recorded in the case of a number of engineering products, chemicals, metal products, machinery, electrical appliances and apparatus. Special mention should be made of the increased production of machine tools, sewing machines, power-driven pumps, diesel engines, electric motors, electric fans, bicycles, sulphuric acid, caustic soda, paper and paper board and tyres and tubes.

A decline in production was noticeable in the case of cotton textiles, sugar, steel, motor-cars, A.C.S.R. and bare copper conductors, soda ash, plywood (tea chests) industries. A shortage of cane reduced the production of the sugar industry. A decrease in the internal offtake of coarse varieties and a fall in exports affected cotton textiles output. The changeover in production at the works of T.I.S.C.O. and I.I.S.C.O., due to their expansion programmes, involved a shut-down of a part of their plants, and led to a decline in production. Foreign exchange difficulties were largely responsible for the motor-car industry's reduced output, as well that of some of the engineering industries

Drain on Sterling Balances

According to the Central Commerce and Industry Ministry, the shortage of foreign exchange for raw materials and spare parts, although it considerably slowed down the rate of increase, did not retard industrial production. The drain on the sterling balances continued during 1958-59, although there was improvement towards the latter part of 1958. From Rs. 284 crores on 4th April, 1958, the sterling balances went down to Rs. 214 crores on 3rd April, 1959—a decline of Rs. 70 crores, compared with the decline of Rs. 241 crores in 1957-58. On 5th June, 1959, the figure was Rs. 200.5 crores. The Ministry says that while efforts will continue to be made for the release of foreign exchange for the maintenance of production as far as possible, there seems to be no alternative to the greater use of indigenous raw materials. Increased exports to countries with which there are special payments arrangements should enable the import of additional quantities of raw materials for industries. The increased production of pig iron in the country has afforded relief to some industries. Cement production is fast moving towards abundance which has enabled exports to be made. Other industrial schemes on which foreign exchange has been spent during the last two or three years will go into production in the near future, progressively relieving raw material shortages.

To deal expeditiously with schemes of foreign collaboration, an inter-ministerial committee consisting of the representatives of the Ministries of Commerce and Industry and the Department of Economic Affairs was set up four months ago. At its four meetings so far, the committee has considered 57 applications for foreign collaboration and has disposed of 50 of them. At the end of 1957, 115 cases involving foreign collaboration were waiting to be finalised; 278 more were received during 1958. Of these, 344 cases have been disposed of and 49 are under examination.

Machinery Manufacture

The standing committees set up by the Central Government to examine the possibilities of manufacturing machinery required for various industries and in particular to ascertain the likely requirements and production of industrial machinery in the second, third and fourth plans, are likely to report to the Government by November this year. They have been asked to indicate which machinery can be taken up for manufacture immediately by units already operating, and the number of new units needed to achieve the targets suggested for the third plan. The following is the progress made by the various committees:

The standing committee for machinery manufacture for engineering industries—The requirements of plant and machinery for units in different industries are being determined and targets allotted to these units to examine whether existing units should be permitted to expand or new units set up. Provisional targets have been determined for 17 industries and the determination of the targets of the remaining is being studied.

The standing committee for machinery manufacture for ferrous and non-ferrous metals and metallurgical industries—Six study groups have been set up to examine the requirements of machinery and the break-up of the machinery required. The norm for the iron and steel and alloy steel and ferro-alloys industry has been fixed at 1 million ingot tons of steel with 40 to 50 percent as flat-rolled production and the balance as structurals. For the castings industry, it has been suggested that a 50,000-ton steel foundry with two to 25 tons' weight of castings may be taken as a unit for calculating the requirements of machinery, etcetera. As for steel forgings, a 50,000-ton plant has been suggested as a representative unit, while for the cast iron pressure pipe industry, a 25,000-ton unit has been suggested for study. As for the aluminium industry, plant requirements are being studied for a 20,000-ton unit including the mining of ore and the production of conductor rods, sheets, extruded sections and foil. For copper, a 10,000-ton unit manufacturing electrolytic copper wire bars has been suggested for study, including equipment required for the manufacture of industrial copper, brass sheet and strips, wire rods and extruded sections. A for the lead and zinc industries, the requirement for a 10,000-ton zinc plant as well as for 12,000 to 15,000-ton plants are being studied.

The standing committee for machinery manufacture for machine tools, transport and communications industry—The committee expects to submit an interim report by August 1959. In view of the urgent need to expand the machine tool industry, it has been suggested that to begin with a certain amount of allowance should be made in terms of delivery, duties, performance, tolerance etcetera, and that the import of machine tools which are at present being manufactured in the country should be banned.

Indo-Pakistani Financial Talks

Indo-Pakistani financial talks to settle all outstanding claims are to begin in New Delhi on 28th July. Officials of the two countries will hold discussions from 28th July and the two Ministers will meet on 31st July. India and Pakistan have been making a number of claims on each other. Although there have been attempts in the past for the Finance Minister of the two countries to meet and settle these claims, no meeting has taken place since 1951.

India's claims on Pakistan are of three categories. The first relates to the partition debt. The amount of this is yet to be determined, but a balance-sheet was presented to Pakistani officials as far back as 1952. According to India's estimates, this debt is of the order of Rs. 30 crores in so far as it concerns the two Central Governments. The figures for the partition of the provinces, if taken into account, will increase the debt. It is to be repaid in 50 equated instalments beginning from 15th August, 1952. Seven instalments are thus already overdue while the eighth will fall due in August this year. In the 1952-53 Indian Budget, a sum of Rs. 9 crores was taken as credit under this account although in fact, no sum was actually paid by the Pakistan Government. In its Budgets in the past, the latter Government made provisions for the payment of roughly Rs. 7 crores to India, but in the budgets since the military régime came into being even this paper provision is not being made. According to Indian estimates, about Rs. 63 crores of debt instalments are overdue. In the second category are the claims arising out of the separation of the currencies of the two countries. Of these, the most important are the assets remaining to be transferred out of the Issue Department of the Reserve Bank of India. The value of this is about Rs. 49 crores. The third category of claims relates to the post-partition transactions. A large volume of payments have been made in each country on behalf of the other, which will have to be cleared up. On the Indian side, the estimate of this made in 1957 was Rs. 23 crores. There is a sum of Rs. 16.5 crores clamed by India on account of defence stores supplied after partition to Pakistan for which, under an agreement entered into in May 1958, the latter has to pay. There has also been some argument between the two countries about a sum of Rs. 13 crores, being the rupee balances held by Pakistan in India. From the Pakistani side, varying claims on India have been made. In the past, the sum mentioned was Rs. 100 crores, but after the military régime came into being, this figure suddenly jumped—to Rs. 180 crores.

Co-operative Farming Enquiry

The working group on co-operative farming, under the chairmanship of Mr. S. Nijalingappa, has issued a questionnaire to all State Governments asking for information on ten co-operative farming societies in each State. The questionnaire seeks details of the activities of these units relating to both agricultural as well as co-operative aspects. It is proposed to collect data about 150 good, bad and indifferent co-operative farming societies now in existence. State Governments have been asked to collect information on the membership, management, work distribution, organisation of subsidiary industries and the employment pattern of the societies. Other points of interest covered by the questionnaire are an assessment of the work done by members, the pooling of resources like livestock and agricultural implements, the method of distribution of income and the assistance received by the co-operative farming societies from the State and co-operative banks. State Governments have been asked to submit their replies by 10th July.

State Trading in Oil

The Indian Oil Company, a wholly Government-owned organisation for the distribution of petroleum products in India, was registered in Bombay last week. The company has an authorised capital of Rs. 12 crores. The Minister for Oil, Mr. K. D. Malaviya, told a Press conference that the company would not wait for the production of the Barauni and Gauhati refineries. The Government of India has been receiving a number of offers for imports from countries from which India is now not importing petroleum products. The new company might undertake the work of importing such goods and their distribution. If the terms offered are favourable, the Government might import mainly kerosene and other such products. It is also possible that the Government company might enter into arrangements with the existing distributing companies

Keep operating costs down with

Honeywell

Electronik

INSTRUMENTATION

It's time to go modern the low-cost way... with Honeywell instrumentation.

Full use of today's instrumentation gives you the newest methods of production and process measurement, recording and controlling. And that adds up to increased production, improved quality and lowered operating costs.

Instrumentation is being put to work in practically every known industry... from steelmaking to cosmetics preparations... from processing chemicals to imprinting bottle caps.

Honeywell instrumentation can be a profitable investment for you. Call in a Blue Star representative to advise you on modern instrumentation in your plant.

PRODUCTION RISES AND UNEMPLOYMENT FALLS

CHANCELLOR REJECTS SOCIALIST CRITICISM OF COMPANY TAKE-OVER BIDS

(FROM OUR LONDON CORRESPONDENT)

WHATEVER the Opposition hoped to gain in its assault on the Government's economic policy in the House of Commons early last week, it was only too evident that once again—and it has happened consistently of late—the timing could not have been worse. The U.K. Chancellor of the Exchequer was able to obviate any possibility of Mr. Harold Wilson's strictures being effective by giving news of the latest expansion in output and trade and the fall in unemployment. He said that the index of production for April was the best yet reached at 110 and for May it would probably be 110 to 111; a fall in the number of workless in May of 67,000 to 413,000, bringing the percentage down to 1.9; and the first quarter of the year will show a surplus of £78 million on the balance of payments without taking account of the record level of exports in May when the deficit was the lowest for a century. Answering in particular the socialist criticism of mergers and take-over bids, the Chancellor said that, on balance, the effect of these is beneficial rather than harmful to industry and the economy. The Opposition motion was defeated by 316 to 254, a Government majority of 62, and the official amending motion approving the policy was similarly passed.

The Government certainly took the honours of the day, and faced as Britain is with the possibility of no newspapers shortly, thanks to the disputes in the printing industry, Labour is not likely to have much opportunity of counteracting its effects until peace returns to the printing industry. That will not prove easy to achieve in the face of the uncompromising attitude so far shown by both sides, with the unions in a particularly belligerent frame of mind.

Balance of Payments

The markets have generally taken heart from Mr. Amory's disclosures, and especially the balance of payments situation. It had not been supposed that the balance of payments could be maintained on the favourable level at which the past year showed the record surplus of £438 million. So far, however, this year's experience is proving better than the most optimistic estimates. From the U.K. Treasury figures—the first summary of Britain's balance of payments on a quarterly basis—it emerges that an adverse visible balance on current account of £14 million has been more than offset by a large favourable balance on invisibles. In this latter category, a new debit of £52 million in the Government items has been much more than made good by a new credit of £144 million on the "other invisibles." As long as anything approaching this position can be maintained, sterling will enter the coming phase of seasonal pressure strongly underpinned.

Another Exchange Move

One at a time the restrictions which still separate sterling from the goal of full freedom are being removed. The latest step to be introduced takes the form of a further simplification of exchange control formalities designed to help traders and to economise on administrative costs. It will no longer be necessary to get permission for payments outside the sterling area for imports into Britain up to a value of £500. The previous limit was £250. Persons applying to make payments outside the sterling area will still have to produce evidence of the size and nature of their debt and comply with the requirements of import licensing. But it is estimated that the new move will dispense with the need for more than 130,000 forms a year. It will, however, eliminate from this formal control only about 2 percent, by value, of imports from the non-sterling world. In addition, there is to be a minor relaxation of export control. Persons wishing to send private gifts in kind to destinations outside the scheduled territories will not be required to make a declaration on form C.D.3 if the gift is of a value of £100 f.o.b. or less. This raises the limit from £25.

Output at New Peak

Industrial production, which for over six months has been slowly recovering, has at last risen above its pre-recession peak. Estimates published by the Central Statistical Office show that, in April, the seasonally adjusted index of production (1954 equals 100) reached 110. The previous peak, equalled in March, was 109 in September 1957. Preliminary estimates suggest that the index for May, at 110 to 111, will be higher, and that the average for the three months will be about 3 percent higher than in March-May 1958.

Taken with the remarkable trade figures for April, the announcement that unemployment has fallen below 2 percent and the continuing good performance by sterling, the economic picture is most encouraging. There are, of course, a number of industries which are still not out of the wood, and there is little reason for satisfaction in an average production index so far this year of 108—the same as in 1957. But for much of industry the recession is obviously over, while elsewhere there are at least signs that the corner has been turned. So far export demand has been much better than expected, and the consumer boom at home is not flagging. Indeed, almost the only weak spot is the failure of capital spending in manufacturing industry to revive.

Unemployment Drops Again

The number of unemployed in Great Britain has fallen in a month by 67,252 to 413,291. This is the largest single decrease since the end of the fuel crisis in 1947. The U.K. Ministry of Labour reports that the percentage of workless on 15th June, the day of the last count, was 1.9, the lowest since July of last year when the figure was the same. Previous percentages were: May 2.2; April 2.4; March 2.5; February and January 2.8; and June last year 2. Of the June total of workless, about 385,000 were wholly unemployed and 28,000 temporarily stopped. Unemployment among adults dropped by about 59,000, and among boys and girls by about 8,000. Employment exchanges filled 167,743 jobs in the five weeks ended 10th June. The number of vacancies notified to exchanges, but remaining unfilled, was 264,750. This was 34,243 more than a year ago and 37,134 more than on 6th May.

Good Revenue Inflow

The U.K. Treasury's income and expenditure for the first quarter of the financial year were both higher than in the same period of 1953. Ordinary revenue at £1,110 million compares with £1,043 million a year ago; expenditure at £1,199 million goes against £1,173 million. The cumulative deficit on the quarter is thus sharply reduced compared with last year. Ordinary expenditure exceeded revenue by only £89.2 million this time, against a shortfall of £130 million in 1958. Other payments, totalling £317.5 million, were £1.9 million less than last year, although they include £34.9 million for repayment of postwar credits, an item which took only £4.4 million a year ago.

Bank Advances Up

Full figures for the London clearing banks showing the position at 17th June disclose a rise in advances during the preceding month of £22.8 million to £2,602.2 million. Since borrowings of the nationalised industries fell between 20th May and 17th June by £9 million to £649 million, it follows that the increase in bank loans to the private sector of the economy was about £31.8 million. The banks' holdings of investments have dropped further by £21.1 million to £1,816 million. The hire-purchase debt in Britain rose another £34 million, or about 5 percent, in May according to the U.K. Board of Trade's provisional estimates. The total debt was about £727 million at the end of the month. The March and April increases were £22 million and £27 million, respectively. A third of the May rise was accounted for by household goods and most of the remainder by motor-vehicle sales.

Insurance Investments

Addressing the annual meeting of the British Insurance Association, Mr. Charles Trustam, the retiring chairman, said the invested assets of member companies increased last year by £378 million to £5,528 million, a record. This follows an increase of £359 million in 1957. British Government securities, at £1,235 million, were slightly higher in amount, but their proportion of the total had fallen from 23.5 percent to 22.3 percent, to bring them back to the level of 1937. Mr. Trustam said that there had been no policy of withdrawing support from Government securities. It had been rather a matter of concentrating the investment of new funds in other directions, such as property and mortgages, debentures and ordinary shares. Figures prepared by the Association show that between 1947 and the end of 1958, the proportion of insurance companies' total investments accounted for by Government securities has declined from 39.2 percent. Over the same period, the proportion of equities increased from 10.6 percent to 18.5 percent so that the gap between gilt-edged and equities has narrowed to less than 4 percent.

Motor Insurance Rates

Motor insurance rates in Britain will not be raised during the next 12 months. This was implied by Mr. Trustam. If present trends in claims costs continued, some increase in premium rates is inevitable, sooner or later, he said. The market is highly competitive. Motor insurers do not act precipitately. They study the trend of their accounts with the utmost care and caution, and over a sufficient period of time, before committing themselves to final decisions. He explained that the B.I.A., to which 253 insurance companies are affiliated, is not a rating body. Motor claims experience in its progressive deterioration has shown a startling similarity of trend throughout the world. In 1958, the worldwide motor premiums of British insurance companies amounted to £260 million, compared with £38 million in 1938.

Collective underwriting losses in 1958 amounted to £10 million. It was the fourth successive year in which the business had proved unremunerati For the average motorist, the price of insura has less than doubled since 1939, whereas cc generally have risen nearly three fold. The c of motor insurance as a proportion of the price the car has actually fallen. During prewar ye the premium on an Austin 7 was 9.1 percent the price. Today the premium on an Austin A is only 4.9 percent of the price. Underwriti results in the United States have been adverse, t there are good grounds for believing that t situation is under control and gradually reverti to normal. Of total British investment the nearly one-half is represented by British insuran Premium income of British insurance compan rose during 1958 by £80 million to £1,425 milli Nearly three-quarters of the fire, accident a marine business, which represented £823 milli of the total, was derived from overseas. Mr. H. Walters, general manager of Royal Exchar Assurance, was elected chairman of the Associati for the coming year. Mr. R. L. Barnett, gene manager of Alliance Assurance Company, is t new deputy chairman.

Rising Trade in Television Sets

Effects of the Budget, including postpon buying, are shown in estimates of makers' d patches of radio and television sets for Ap issued by the British Radio Equipment Mar facturers Association. Deliveries of television s in the month, at 176,000, were more than 20,000 on March, and more than twice the total for Ap last year. The April total for radio sets, 119,000, was 30,000 up on March and 36,000 up April 1958. In the first four months of the ye deliveries of television receivers, at 689,000, show a 78-percent rise on the comparative figure for l year. It is believed that May deliveries w about 60 percent to 70 percent up on May 19 Trade in television sets, both for rental and hi purchase, received a powerful stimulus in t closing months of last year from the lifting credit controls. This stimulus was still in fo in the early part of 1959, and business gained so further encouragement from the Budget cut purchase tax from 60 percent to 50 percent. It to be expected that deliveries in the closing mon of this year will fall below the abnormal level late 1958. But unless there is some unforese economic setback, the 12 months' total for tele sion sets may well show an improvement on t record total of 2.02 million achieved last year.

White Paper on Companies

The U.K. Board of Trade's annual report "matters within the Companies Act" is publish as a White Paper. The formation of companies as popular as ever; in 1958, 22,370 new compan were registered, the highest number for any y since 1946. The 1957 figure was 20,665. The to nominal capital of new companies declined by percent to £71.4 million, but two companies re tered during the year each had a nominal capi of more than £1 million. At the end of 1958, total number of registered companies was 345, with a paid-up share capital of £7,231 milli Public companies fell by 61 to 10,933, but number of private companies rose by 14,529 318,800. The names of 7,836 companies (252 m than in 1957) were struck off the registers l year and 21 were restored. The Board of Tra as usual, prosecuted many hundreds of compan mostly for technical infringements of the Co panies Act. It secured 505 convictions (out of prosecutions) for failure to file annual retu but only two (out of three) for fraudulent tradi Voluntary liquidators seem prone to forget to accounts (58 convictions out of 62 prosecutions)

Brevities

The U.K. Board of Trade sold 2,500 tons of from 1st July, it has been announced. It also available for disposal from 1st January, 1960 further 2,500 tons of tin which is no longer req ed for strategic purposes. The release of this will complete the disposal of the Governme stocks of tin.

Aircraft exports in May amounted £14,726,000, bringing the industry's exports for first five months of the year to the record fig of £73,143,000. This equals an annual rate of £ million against the previous best yearly total £154 million reached last year. India is the b customer.

According to the Midland Bank, the total new capital issued in June is £20,763,000, compa with £39,365,000 in June last year. In the f six months of this year, the capital market been approached for £243,805,000 of capital, agai £205,557,000 in the first half of last year.

As generally expected, Lord Ritchie of Dun was elected chairman of the London Stock change in succession to Sir John Braithwa Lord Ritchie is senior partner of the broking f of Richardson and Glover and has been dep chairman for the last five years. The new dep chairman, jobber and broker, respectively, Mr. H. M. O. Knox and Mr. F. R. Althaus.

Imperial Chemical Industries Ltd has annou ed that Sir Alexander Fleck, who will be 70 November, is relinquishing his position as ch man and resigning from the board on 7 February, 1960. Sir Alexander will have b associated with the company and its predeces for over 44 years. He became a director of I in 1944, was elected deputy chairman in 1950, became chairman in 1953. Mr. Stanley F Chambers is to succeed him as chairman. Chambers, who is 55, has been with I.C.I. si 1947, and became deputy chairman in 1952.

Commodity Markets

WORLD OUTPUT OF COTTON YARN UNCHANGED

PIECEGOODS EXPORTS DECLINE

COTTON yarn output in the first three months of 1959 in those non-communist countries for which regular figures are available, including all the major exporting countries, was about the same as in the first quarter of 1958. This, as the U.K. Cotton Board's latest *Quarterly Statistical Review*, to June 1959, shows, follows a period of five quarters during which the output was consistently below the level reached a year previously. Production in the United States, Canada, Belgium, India, Pakistan, Hongkong and Egypt was above the level of the corresponding period of 1958, while output in the United Kingdom, France, West Germany, Italy, Switzerland, Austria, Spain, Sweden and Japan was still below the level of a year ago. The increase in output in the United States was particularly pronounced: in the past such a rise has often been preceded an increase in output in the other main producing centres.

Exports of cotton piecegoods from non-communist countries in the first quarter were less than in the preceding quarter and as much as 10 percent less than in the corresponding period of 1958. Exports from Hongkong, Belgium and the Netherlands were greater than in the first quarter of 1958, while shipments from the United Kingdom, the United States, Japan, India and Italy were down. Exports of fabrics of man-made fibres from non-communist countries in the first quarter of this year were 17 percent less than in the first three months of 1958, a greater reduction than in the case of cotton piecegoods. Exports from western Europe were slightly greater, the reduction in world trade being entirely due to big decreases in shipments from Japan, the main exporter of these fabrics, the United Kingdom and the United States.

Improvement in the U.K.

Since the last *Review*, there has been a distinct improvement in the position of the U. K. cotton industry. Since the end of March, orders for yarn and cloth have been much larger in total, and this has brought about a welcome increase in activity. Cotton and cotton waste yarn output a working day in May (allowing for official holidays) was the highest since April 1958, and about 14 percent greater than in January. In contrast, the output of spun man-made fibre and mixture yarns has remained relatively depressed and in May was running at about 7 percent below the rate reached last November. The latest figures for the weaving section relate to April, when the production of cotton was nearly 10 percent greater than in January. The rate of output of man-made fibre and mixture fabrics in total has exhibited no definite trend since last autumn, but within the total, continuous filament rayon cloth and mixture fabrics have expanded, while the output of synthetic fibre cloth and spun rayon cloth has contracted still further. The spell of warm weather in May encouraged retail sales of clothing, but the low level to which pipeline stocks had fallen and the upward movement in raw cotton prices were the main factors behind the spurt in buying. While this improvement is naturally welcomed by the trade, it would be unfortunate if firms in the industry were to be induced by it to forget their past experiences so far as to neglect the opportunities now offered by the reorganisation proposals.

Exports of cotton piecegoods totalled 82 million square yards in the first quarter of 1959, slightly less than in the preceding quarter and 30 percent less than the 116 million square yards shipped in the first three months of 1958. Compared with 12 months previously, large reductions were recorded in shipments to the Union of South Africa, Rhodesia, and Nyasaland, Australia, New Zealand, the Belgian Congo, French West and Equatorial Africa and the United States. The only sizeable markets to which shipments expanded over this period were British West Africa and India. Exports of cotton yarn in the first quarter were as much as 30 percent less than in the first quarter of 1958 and were actually less than cotton yarn imports. These, although still relatively small in relation to home production, increased by 54 percent over the same period. Exports of piecegoods of man-made fibres in the quarter under review were slightly less than in the preceding quarter and were well below the level of the same period of 1958. Shipments to all the main markets with the exception of the West Indies declined, compared with the first quarter of 1958.

Progress in the United States

The cotton and man-made fibre textile situation in the United States has improved remarkably in recent months. Cloth sales in substantial amounts were made for as far ahead as the first quarter of 1960. Mill margins, that is, the spread between the price of a lb of cotton and its approximate cloth equivalent, have widened considerably to an average of 27.18 cents in April, compared with 25.06 cents in December and 22.75 cents in April 1958. At the end of April, stocks of cotton cloth held by mills amounted to only 27 percent of unfilled orders, compared with 72 percent 12 months previously and 38 percent at the end of 1958. In the first quarter, mill consumption of raw cotton was 9 percent higher than in the first three months of 1958. On a daily rate basis, consumption of raw cotton in April was 23 percent higher than in April 1958. The consumption of synthetic staple in the first quarter was 22 percent higher than in the corresponding quarter of 1958 while that of rayon staple was 17 percent higher. The latest definitive figures of cloth production relate to the final quarter of last year when cotton cloth production was about the same as in the fourth quarter of 1957. The output of rayon cloth was 13 percent higher, mainly because of an increase of 43 percent in the production of pure spun rayon cloth. The production of nylon fabrics was lower, as was the production of other synthetic fibre cloth. The total output of tyre cord and fabric in the first quarter of 1959 was 24 percent higher than a year previously.

Japan to Reduce Output Cuts

Production of cotton yarn in Japan in the first quarter of this year was 2 percent less than in the first quarter of 1958, and the output of spun rayon yarn was 15 percent less. In contrast, the output of spun synthetic yarn was 86 percent larger. The output of cotton cloth and of spun rayon cloth was also much less than a year earlier, while the production of synthetic fibre cloth increased and that of filament rayon cloth remained virtually the same. There has been a distinct improvement in the last few months in the position of the cotton and staple fibre branches of the textile industry. Stocks of cotton yarn and cloth decreased from 184 million lbs at the beginning of this year to 177 million lbs at the end of April and domestic deliveries of cotton goods in that month were 29 percent greater than in April 1958. Moreover, export contracts for cotton piecegoods in May amounted to 147 million square yards, compared with 93 million square yards in May last year. It has accordingly been decided to reduce the rate of output curtailment for cotton yarn from the present 30 percent to 27 percent from July onwards. Because of the continued reduction in stocks and large export orders from Indonesia for spun rayon yarn, it has been decided to relax the current 44-percent curtailment rate for the output of spun rayon yarn to 41 percent in the third quarter.

Exports of cotton piecegoods from Japan amounted to 291 million square yards in the first quarter of this year, compared with 331 million square yards in the preceding three months and in the corresponding quarter of 1958. Compared with the first quarter of 1958, increased shipments to British West Africa, the Union of South Africa, Iran, Burma Siam, Indonesia and the United States failed to outweigh large decreases in shipments to Malaya and Singapore, Ceylon, Hongkong, Sweden, West Germany, Holland, Indo-China, Syria, Sudan, the Philippines and Venezuela. Exports of man-made fibre piecegoods from Japan in the first quarter, totalling 256 million square yards, were considerably smaller than in the preceding quarter and the first quarter of 1958.

Production Rises in India

The situation in the Indian cotton textile industry has improved considerably. The output of cotton yarn during the first quarter was slightly greater than, and that of mill-made cloth about the same as, in the first quarter of 1958. In April, the output of both cotton yarn and mill-made cloth was at a higher level than in April 1958. Increased domestic demand is mainly responsible for this improvement. Stocks of cloth held by mills have been reduced considerably, from 874 million yards at the end of 1958 to 734 million yards at the end of March. Although detailed figures of exports of cotton piecegoods are not yet available for 1959, it would appear that shipments in the first quarter were about the same as in the preceding quarter, but were well below the level reached in the first quarter of 1958. In an effort to revive exports of cotton fabrics, the Government has increased from July onwards the percentage of export earnings which can be used by producers to import raw cotton, dyes and chemicals. The Government has also drawn up a scheme for the installation of additional automatic looms on condition that their entire production is exported.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) declined by 0.4 percent to 116.1 during the week ended 20th June, 1959, against 116.6 for the previous week. The index was higher by 1.2 percent and 2.8 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. Lower prices of bananas in Bombay (−15%), gur in Patna (−13%), onions in Calcutta (−12%), eggs in Bombay and milk (−8% each), mung in Madras (−6%), musur in Patna and potatoes in Mettupalayam (−5% each), urad (−3%) and jowar (−1%) brought down the index for Food Articles by 1.1 percent to 119.6, compared with 120.9 (revised) for the earlier week. The prices of bajra in Jodhpur and potatoes in Patna (+7% each), maize in Dohad (+5%) and rice, gram and betelnuts (+1% each), however, moved up. The index for Tobacco rose by 1.4 percent to 96.3 due to an increase in the prices of raw tobacco (+2%). The index for the Fuel, Power, Light and Lubricants group worked out to 116.5, against 116.4 for the earlier week. Castor oil (+1%) showed a rise during the week. The prices of raw silk (+2%) and groundnuts, cottonseed and lac (+1% each) moved up while raw wool and castorseed (−1% each) showed declines, and the index for the Industrial Raw Materials group advanced by 0.3 percent to 120.1, compared with 119.8 (revised) for the previous week. The index for Intermediate Products stood at 108.2, compared with 108.1 (revised) for the previous week. Items which showed noticeable variations during the week were : zinc (+6%), rayon yarn and tin (+2% each) and copper (−2%). The index for Finished Products rose by 0.2 percent to 109.4, against 109.2 (revised) for the earlier week due to an increase in the prices of jute manufactures (+3%) although silk and rayon manufactures (−2%) showed a decline.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53=100)

Groups and Sub-Groups	Week Ended 20-6-59	13-6-59	21-6-58

Jute

I.J.M.A. ACCEPTS NEW T.S.D. CONTRACT FOR RAW JUTE

SCHEME TO IMPROVE FIBRE YIELDS BEING PREPARED

AFTER the I.J.M.A. committee met last Friday, it was announced that the mills had decided to accept the new East India Jute and Hessian Exchange transferable specific delivery contract for raw jute in its entirety. This came after a month of negotiations between the two main parties concerned—raw jute sellers and the mills. It was the mills who originally protested against the new contract, and said that they would not accept it in its present form. Their main objection was to the introduction of the clause allowing parcels to contain 4 percent moisture before they could be rejected under arbitration, against 3 percent in the old contract. Various counter-suggestions were put forward, none of which were acceptable, and a stalemate was reached, with the mills hinting that their ideas were hardening against the new contract.

The sudden change of attitude came as a surprise to many in the trade It is perhaps significant that it occurred immediately after the return of the I.J.M.A.'s representatives from Delhi, who went there ostensibly to discuss the position of Pakistani cuttings and the imposition of the new levy of Rs. 15 a bale by the State Trading Corporation. That the new T.S.D. contract was discussed seems obvious. That some pressure from a high level was brought to bear on the I.J.M.A. is also not beyond the bounds of possibility. It is rumoured that the Government told the I.J.M.A. that before it allows any alteration in the new contract, it has to be accepted, as it stands, by all the parties concerned. This might explain the sudden change of attitude and the alacrity with which the decision was made. It appears that the mills are still determined to press for a revision of the terms of the moisture clause in the new contract. Since the announcement, they have not rushed in to buy jute. This is surprising, because many of them made no secret of the fact that they would like to buy but were unable to do so until a settlement had been reached on the new contract.

Many mills have suffered, since during the weeks of inactivity, contrary to expectations, the price of raw jute has shown a considerable advance. On 1st June, when the new contract came into force, old crop Assam jute was available at Rs. 20.50 a maund, and new crop Assam at Rs. 22 a maund, basis Bottoms. Today the same categories are quoted at Rs. 22 and Rs. 23.50 a maund, respectively—a rise of Rs. 1.50 a maund, or just over Rs. 40 a ton. Admittedly, during the same period the price of heavy goods has risen by nearly Rs. 50 a ton, but hessians, on which the main emphasis is laid in current negotiations, have advanced by only about Rs. 25 a ton. Thus, those mills who have still to cover previous sales are showing an immediate loss on paper, and current simultaneous business in jute and hessian does not show the same profit as a month ago.

Scheme to Improve Jute Yields

This newspaper, along with many branches of the industry, has long been emphasising the need to improve the yield of jute by producing more green fibre a plant rather than more jute an acre. The aim can only be achieved by using modern scientific methods, fertilisers, and line-sowing. These have been adopted in many areas and are working well, although the ultimate goal was often lost sight of in the scramble to attain self-sufficiency in raw jute. It is somewhat surprising, therefore, for the Chief Jute Development Officer of the Government of India to have said in a recent interview that only now has the Government become alive to the need, and that it proposes to implement a scheme during the third five year plan period to improve jute yields. The scheme visualises "scientific farming and fertilisation and an intensive method of line-sowing." He also said that steps are to be taken to minimise the "cost of production of jute in order to compete in the world markets, as it is the best foreign exchange earner."

Some of the statements attributed to the Chief Jute Development Officer appear to be inconsistent with his ultimate aim. He deprecates the cultivation of mesta, on the ground that it was mainly responsible for bringing down the price of jute last year; it was used by mills in large quantites for the manufacture of sacks. To try and substantiate the claim, he is reported as saying that mesta is a substitute fibre which is "neither valuable nor durable." If this be the case, why do mills use it in such large quantities? Admittedly, it is cheap, and reduces the batch price, which lowers the cost of jute goods, enabling India to compete more favourably. If the cultivation of mesta is banned, jute prices would rise and growers might benefit. But the price of jute goods would also increase, leading to a loss of business. Furthermore, farmers undoubtedly derive more profit from the cultivation of mesta than they do from other fibres, as it requires less care and is a very hardy plant.

Jute Goods Prices in U.K.

The price of jute goods in the U.K. has come up for discussion since a trade report that the U.K. Government will not agree to any reduction in the mark-up until after the general elections. The report indicates that if the present Government is returned, it will reduce the existing rate of mark-up, which stands at 30 percent. The reluctance to make any change before a general election is presumably based on the fear that it will inevitably lead to unemployment, a fact which weighs heavily in an election campaign. It will be recalled that the mark-up rate was first introduced as a measure of protection for the Dundee industry against competition from India. Originally, 40 percent was added to the landed cost of all imports of jute goods before they were released to U.K. buyers. When the mark-up was reduced in July 1957 to 30 percent, the Dundee industry protested that it would cause large-scale unemployment. Unemployment has increased in recent years, and it is possible that this is an indirect result of the Government's action in 1957.

For a long time, U.K. consumers have complained about the high cost of jute bags, which from time to time has forced them to turn to substitutes. Even manufacturers have complained that they are losing business because the price of bags is too high. Similar reports come from exporters of goods for the manufacture of which jute cloth is used. They say that the high price of jute cloth in the U.K. gives an advantage to foreign competitors. The complaints have no doubt been responsible for the present agitation to reduce the mark-up rate, which would automatically force U.K. manufacturers to reduce their price if they are to compete.

New Crop Progress Favourable

Flooding in the upcountry districts of Assam has had little effect on the new crop. Recent weather conditions have again been favourable in all areas, and the progress of the plants is satisfactory. In Dhubri and Assam districts, the height of the plants is now 6 feet or 7 feet, and in northern districts it is 6 feet. Weeding has been completed, and in some lowland areas harvesting has commenced. In western districts, alternate rain and sunshine has been very beneficial, and the height of the plants now ranges between 3 feet and 4 feet. Weeding in all areas is at an advanced stage. Work in the Daissee districts is much more advanced than it was last year, when the crop was very late. Harvesting of Daissee white in the lowlands has commenced and weeding in other areas is well in hand. More rain would be beneficial in general.

THE JUTE MARKETS

There was brisk activity in the futures markets during the past week, and prices in general showed a sharp rise. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 1st July to 7th July, were as follows :

	Hessians 40in. 10oz. August		Sacking B Twills August	Raw Jute Upper Assam September	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos
Opening	40.94	44.76	96.80	23.56	63.12
Highest	41.44	45.31	98.10	24.00	64.30
Lowest	40.76	44.57	96.50	23.32	62.48
Closing	41.04	44.87	97.75	23.80	63.76

Manufactured Goods : The market opened last Thursday on a quiet note with prices showing small losses. B Twills were quoted at Rs. 96.45 for ready shipment and Rs. 95.75 for January-March. Hessians opened at Rs. 41.25 for ready 10oz. and Rs. 39.30 for forward shipment. Dealings improved during the day on U.S. buying. Prices moved up rapidly, so on Friday morning sacking had improved by 65nP and hessians by 30nP. Business was reported in various constructions, which caused steadier conditions to develop. In the afternoon, a further upward tendency became apparent. The market became very firm at this stage and heavy goods were marked up by a further 40nP and hessian by 15nP. With the rise speculative activity increased, but mill interest was almost negligible. The market was now completely dominated by speculators. Over the week-end, heavy goods prices soared, and Monday's opening quotations showed a jump of 70p in ready B Twills to Rs. 98.20. There was very little interest in hessians, and quotations showed only nominal gains in sympathy with sacking. As speculative activity was prominent in the rise it also contributed to the fall. Profit-taking in the higher levels and selling pressure resulted in prices easing. Towards the close, quieter conditions prevailed, with prices tending to fall in the absence of any genuine business.

Opening quotations on Wednesday morning were as follows :

	July.	August.	September.	Oct.-Dec.
40in 8oz.	33.75 (36.79)	33.50 (36.51)	32.25 (36.24)	32.30 (35.
40in. 10oz.	41.55 (45.29)	41.30 (45.01)	41.05 (44.74)	40.05 (43
B Twills	97.85	97.95	97.60	97.00
Heavy Cees (Plain)	99.25	98.25	97.75	97.00
A Twills	117.25	117.25	117.00	116.25
Liverpools	109.00	108.75	108.50	108.00
Cornsacks	100.25	100.50	100.50	98.75

Raw Jute : The fact that the I.J.M.A. had accepted the new T.S.D. contract made very little difference to the fibre market. The mills in general showed little interest, although slightly more business was done than in previous weeks. Compared with previous years, however, the mill current purchases of new crop jute were much less. The apparent lack of interest should, in normal circumstances, have brought a fall in prices, but the knowledge that the mills still have to buy the bulk of their new crop requirements prompted operators to maintain their rates. Favourable crop reports did not bring down prices, which varied throughout the week between Rs. 22.25 and Rs. 22.50 a maund basis Bottoms. As the rates were not tested by any large business, they could be taken as nominal. Arrivals at Cossipore last week showed a big improvement over previous weeks, and a total of 555 wagons were reported. This was over 200 more than the previous week, and well above the average for the corresponding weeks of former years. Mill representatives were very active and arrivals found ready buyers, which helped maintain Cossipore rates.

Business reported during the past week consisted of old crop Assam, ex Calcutta, at Rs. a maund, and Northern at Rs. 21.50 to Rs. 22 July and July-August shipment. Jungli white done at Rs. 21 a maund ex Calcutta. Small of Desal and Northern white were reported Rs. 20.50 a maund.

New crop purchases were reported in North at Rs. 23 a maund for August-September shipment. Small parcels of Daissee white passed Rs. 22 a maund. Selected Desal white fetched Rs. 22.25, and ordinary Desal white Rs. 22 maund, all for August-September shipment.

On Wednesday morning, opening quotations were as follows :

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
Old Crop :			
Assam	22.50	60.30	July-A
Northern	22.00	58.96	
Purnea Desal	21.50	57.62	
Daissee	24.00	64.32	
Assam Tossa	24.00	64.32	
Northern ex Calcutta	22.00	58.96	
Mesta :			
Assam-Northern	20.25	54.27	
Desal	20.50	54.94	
Daissee	20.50	54.94	
Jungli	20.00	53.60	
Bimli F.A.Q.	20.25	54.27	
New Crop :			
Assam	24.00	64.32	Aug-S
Northern	23.50	62.98	

THE FOREIGN JUTE MARKET

FIBRE QUIET

(FROM OUR DUNDEE CORRESPONDENT)

PRACTICALLY all sections of the Dundee jute market are quiet, although sufficient business is being done to enable spinners and manufacturers to maintain their prices at unchanged levels. Raw jute shippers, too, are

I.J.M.A. STOCK FIGURES FOR JUNE

The Indian Jute Mills Association reports that the total stocks of jute goods at the end of June 1959 were as follows :

Description	30th June, 1959 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	31st May, 1959 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (—) last month Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	30th June, 19 Lakh Yds. (000 metres)	000 Tons (000
Hessian Cloth and Bag	8.78 (8,02,68)	23.7 (24.1)	7.98 (7,29,60)	21.4 (21.7)	+80 (+73,08)	+2.3 (+2.4)	11.53 (10,53,91)	
Sacking Cloth and Bag	13.95 (12,76,02)	57.9 (58.9)	14.66 (13,40,35)	61.4 (62.4)	—71 (—64,33)	—3.5 (—3.5)	20.98 (19,18,39)	
Others		14.3 (14.5)		16.6 (16.9)		—2.3 (—2.4)		
Grand Total		95.9		99.4		—3.5		
(000 Tons/Metric Tons)		(97.5)		(101.0)		(—3.5)		

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with for three non-member mills. The figures in brackets are metric measures, based on the actual (details and are more precise.

ng their quotations for all grades of the fibre unchanged. Old and new crop jute are now quoted t the same rates for the white material, but new rop Tossa-2/3 is quoted lower than old crop.

Reports from Pakistan state that the prospects re favourable for a good crop of jute for the eason which has just commenced, in both quaity and quantity, and there is likely to be a urplus to the mills' requirements in India. Raw ute shippers are offering new crop fibre from alcutta in the Dundee market at £92 for Mill ightnings and £79 for Mill Hearts for August-eptember shipment. As Pakistan is quoting £91 nd £80, respectively, buyers are not showing ny interest in the Indian offers, believing them o be too dear. Old crop jute from Pakistan is uoted at £110 for Mill Firsts, £90 for Mill Lightings and £80 for Mill Hearts, with Grade Hearts t £64, July-August, c.i.f. U.K. In the same shipent, good marks of Daissee-2/3 are still at £93 nd Grade £85, while Grade Tossa-2/3 is firm t £114 and fours £95, with new crop Tossa-2/3 t £108 and fours at £95, September-October.

A quiet but steady demand is being maintained or hessian yarns for weaving and the price of 4.29d a lb is firm for 8 lbs C.H.W. cops and 15.43d or 8 lbs J.C.H. warp, on spools. The carpet trade n Britain has quietened down considerably and usiness in the yarns normally used is slow. Twist s quiet at 17.35d a lb for 3 ply 8 lb, and transacions were restricted in sacking yarns at 10.77d lb for 24 lbs weft. Rove is dull, and very little usiness has been done in small sizes. There is a eeling that business will improve when the holilays are over by the second week in August. Meantime, it is monotoncusly slow for the majoity of manufacturers who continue to quote 2.88d for 40in. 10oz. hessians and 10.03d for 8oz. yard.

Calcutta goods were easier but firmed later at 62s 6d for 40in. 10oz. and 46s 9d for 7½oz., July, 62s nd 46s 6d August, 61s 3d and 46s 3d September nd 60s and 45s October-December, with B Twills 45s 6d, 146s. 145s 3d and 144s 6d, respectively, .o.b. Calcutta.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES DEPRESSED

(FROM A CORRESPONDENT)

DULL trading conditions and a depressed outlook continued to feature the raw jute market in Narayanganj during the past week. Sellers appeared keen for business, but were unwilling to sell at a discount. Buyers tried to pull down price levels and succeeded to some extent when there were scattered falls in values. The low arrivals in the market helped prices resist a more pronounced fall. Arrivals were in the region of 8,000 maunds daily. Overseas interest was lacking, consequently there was a quiet trend in prices. Export Firsts were quoted at £91 while Export Lightnings ruled at £80 a ton. Cuttings remained neglected.

Pakistan and Yugoslavia have finalised a barter agreement to exchange 50,000 tons of cement for Pakistan's jute of equivalent value. The Yugoslav cement will be imported in East Pakistan, where it is in acute shortage, and deliveries are likely to begin by September. Negotiations for another 50,000 tons of cement for East Pakistan are, it is understood, in progress with Russia. These barter deals form part of the Central Ministry of Commerce's export drive launched recently.

The first consignment of new crop jute totalling about 3,000 maunds arrived in Narayanganj market on 22nd June. This was from various low-lying areas of Dacca and Mymensingh districts. The local mills, it is stated, are mostly interested in the new crop and prices quoted ranged from Rs. 17 to Rs. 19 a maund.

The total of Export Price Control forms registered with the State Bank of Pakistan for the period July 1958 to 15th June, 1959 is 46,23,462 bales, compared with the corresponding period of last season's figure of 44,34,427 bales. Purchases by the United Kingdom this year are higher by over 250,000 bales. India comes seventh in the list.

Engineering and Transport

BRITISH AIRCRAFT EXPORTS RISE

INDIA STILL THE BEST CUSTOMER

DURING the first five months of this year, the British aircraft industry exported more in a month than it did in seven weeks a bare two years ago. The January-May total of more than £73 million represented an annual rate of some £175 million, compared with last year's record £154 million, and a monthly rate of almost £15 million. This has been achieved in spite of revision by the Board of Trade of the system by which aviation exports are calculated. Until the end of 1958, the value of used aircraft exported was included in the overall figure but this has been discontinued, starting in January 1959. The value of used aero-engines sold abroad is, however, still taken into account.

The May figure, £14,726,082, brought the total for the first five months of 1959 to a record £73,143,326, an increase of 16 percent over last year's equivalent figure and no less than 70 percent over the 1957 five-monthly total. The May figure was made up as follows: aircraft and parts £8,596,307; aero-engines, a record for the second month running, soared to £5,570,430; electrical appliances £299,857; tyres £41,885; and aeronautical instruments £217,603.

India was the leading buyer of aircraft and parts during May with £2,025,105, Argentina second with £1,322,266, then West Germany £918,544, Switzerland £802,175, the United States £720,757 and Brazil £557,532. The record January-May total of more than £73 million was made up as follows: aircraft and parts £44,982,147 (compared with £40,438,085 in January-May 1958), aero-engines £25,018,946 (£19,915,720), electrical parts and appliances £1,682,661 (£1,358,465), tyres £330,806 (£240,250) and aeronautical instruments £1,128,766 (£785,715). Electrical parts, tyres and instruments showed a combined increase of 32 percent over last year's corresponding figures. India was the best customer during this period with £7,981,242 worth of aircraft and parts, followed by West Germany £5,241,819, Argentina £4,214,210, the U.S.A. £3,539,679, Switzerland £3,279,517 and Australia £2,684,689.

NEW AERO-ENGINES WITH LOW FUEL CONSUMPTION

The jet engine fuel-economy race is on. By-pass or "fan", that is the question. Or are these two forms of propulsion complementary to one another? Four years ago, the Rolls-Royce Conway by-pass engine passed its first officially-announced type test after some years of development. This engine's compressor drives a proportion of air through ducts past the combustion chambers, thus by-passing them and enabling much cooler air to join the hot efflux gases. This has the effect, claims Rolls-Royce, of increasing propulsive efficiency, thus reducing fuel consumption, and reducing noise. The fan idea originated in Great Britain more than 10 years ago with an early Metro-Vick engine—a fact which the two American aero-engine companies manufacturing fan engines today readily concede. The fan engine is a jet engine with a compressor (Pratt and Whitney) or a turbine (General Electric) extending outside the outer-casing of the engine. The outer blades form in effect, an airscrew which gives added propulsive efficiency particularly at low speeds. Air can also be ducted downwards from the "fan" to give added lift for take-off or for flap-blowing. Both Pratt and Whitney (front fan) and General Electric (fan in rear) are convinced that their own engines provide the best answer. Meanwhile, Rolls-Royce continues to favour the by-pass because the overall diameter of the engine is less than that of the less powerful American engines and because the British company believes that an engine designed to use the by-pass principle from the start is likely to be more efficient than an existing jet engine fitted with an extended compressor or turbine.

New Bristol Siddeley engines have entered the field with the BE. 53 "lift-thrust" fan engine which, it is believed, incorporates some entirely new features. Details are still secret, but it is known that the engine's thrust-weight ratio is extremely high and that its designed fuel consumption is low. Bristol Siddeley say that thrust is provided through ducts for both direct lift and forward flight, which enables a very high speed aircraft to have short, or even vertical take-off characteristics. Further news of this interesting engine is awaited. It could well be that places will be found both for this kind of fan engine and for the Rolls-Royce by-pass type.

INDUSTRIAL POWER SWEEPERS

The modern trend in industry towards more and more elimination of manual labour by mechanisation is being developed in up-to-date factories, warehouses, etcetera, and in fact, any locations which require frequent cleaning; such non-productive duties as the sweeping and disposal of dust and debris are being carefully observed. It is recognised that an efficient dust collection system prolongs the life of plant and equipment and reduces the risk of contamination to stocks and stores. By mechanising this operation not only is sweeping efficiency increased but costs are greatly reduced, in some cases by as much as 80 percent.

Matling Ltd., manufacturers of mechanical handling equipment, have now added to their products a range of industrial power sweepers. These are known as the "Matling-Wilshire" Industrial Power Sweepers "800" Series. These machines are produced in three sizes for sweeping paths 24 inches, 36 inches and 48 inches wide, according to the width of the aisles and openings through which the sweeper must pass. Matling-Wilshire sweepers are powered by a 5 horse-power or 8 horse-power petrol engine which drives the road wheels through a clutch and differential assembly and also operates the brush units with a direct V-belt drive. The shaft extension at the other end of the engine drives the vacuum unit. The brush reel is composed of 12 brushes in all which can be supplied in a variety of fillings to cater for any sweeping conditions. The brush pressure may be varied by raising or lowering the front wheel by means of an adjusting screw. Patented brush holders facilitate brush changes and allow bristles to be worn down to minimum length. The patented "Duscon" control system filters the air and automatically separates the dust from the debris. This eliminates the necessity of laying the dust with a sprinkler system. The brushes rotate against the direction of travel throwing the debris into the hopper while the vacuum unit pulls the dust up into the dust bag. Heavy particles do not reach the bag, but are thrown out to the hopper by the cyclonic separator on the 836 and 848 models. The hopper is quickly detachable by tipping the sweeper and, being mounted on heavy rubber tyred castors, it can easily be wheeled away for emptying.

A side sweeper attachment fitted at the front of the machine on a two-way swivel head can be supplied as an optional extra. This enables the operator to sweep right up alongside walls or stacks of materials. A detachable sulky is available to permit the operator to ride when sweeping large areas indoors or outdoors. Matling-Wilshire sweepers are strongly constructed and simple to operate. A heavy front bumper protects the sweeping chamber. Finger tip controls are conveniently located. Three wheel suspension means effortless steering and correct weight distribution makes it easy to tilt the sweeper to clear obstructions.

QANTAS RECEIVES FIRST OF ITS SEVEN BOEING 707s

Boeing 707, "City of Sydney," first of a fleet of seven jet airliners ordered by Qantas, landed at Sydney airport at 2 p.m. on 2nd July on completion of its delivery flight from San Francisco. The flying time for the 7,633-mile journey was 16 hours 10 minutes. Aboard were a party headed by the chairman of Qantas, Sir Hudson Fysh and Lady Fysh and the president of Boeing Airplane Company, Mr. William Allen and family. The party included also a number of Australian and American aviation reporters. Elaborate ceremonies marked the progress of the first commercial jet airliner to cross the Pacific. At Hawaii's international airport, a giant 60 feet lei was placed over the nose of the 707. Qantas will inaugurate a regular jet service to the U.S.A. on 29th July.

RAPID EXPANSION OF THE CHEMICAL INDUSTRY

SUBSTANTIAL PROPORTION OF CAPACITY REMAINS UNUSED

By Harish Chandra

THE rapid progress of the Indian chemical industry in recent years is indicated by the fact that the number of registered chemical factories employing 20 or more workers and using power, increased from 174 in 1946 to 364 in 1956. During the same period, total productive capital employed in the manufacture of chemicals including drugs and pharmaceuticals, increased from about Rs. 12 crores to over Rs. 80 crores; employment from 25,000 to 57,000; the ex-factory value of gross output from Rs. 11.6 crores to Rs. 75.5 crores; and the amount disbursed as wages and salaries rose from Rs. 2 crores to over Rs. 9 crores. With this fast tempo of development, the industry has lately attained a key position in the economy like the other major industries, such as cotton textiles, jute, iron and steel and sugar.

A relatively minor chemical invention has often helped bring about economic phenomena of major importance. In recognition of this basic importance of the industry to rapid industrialisation, the second five year plan includes a programme of large-scale development of heavy chemicals and pharmaceuticals. Three years of the plan have gone by, and during this period, installed capacities in different branches have been increased at varying rates in accordance with the estimated requirements of the country. While discussing the targets of the third plan, it may be useful to take a retrospective view and enquire:

(1) how far the capacity was being utilised at the beginning of the second plan?

(2) was the creation of additional capacity in all cases justified?

(3) did the rise in production keep pace with the increase in capacity? If not, what was the probable reason for under-utilisation?

(4) what is the extent of spare capacity at present?

The above questions are vitally important for the success of any scheme of economic development. The second plan has stated: "It is a basic principle of planned development that capital resources, which are scarce in relation to competing demands, should be conserved, and that additional production should be achieved to the maximum extent possible through a greater use of idle capacity." There is, therefore, Governmental control and regulation in the matter of substantial expansion of industrial undertakings, and under the provisions of the Industries (Development and Regulation) Act, 1951 and the Registration and Licensing of Industrial Undertakings Rules, 1952, framed under it, every owner of industrial undertakings is required to obtain a licence from the Central Government before he can effect any substantial expansion.

Ill-conceived Investment Policy

In these circumstances, although it is axiomatic, it deserves mention that the existence of idle capacity is truly an index of ill-conceived investment policy. It must be remembered that under-utilisation of production capacity, particularly in industries in which large sums have been invested in fixed plant and machinery and "variable costs" of human labour replaced by "constant costs" of mechanical equipment, is not merely an indicator of locked up scarce national resources; it also results in higher cost a unit of output. The findings of the U.K. Committee on Trade and Industry have shown that taking the cost a unit in 1913 as 100, a heavy oil engine firm, working at 94 percent capacity showed a rise to 137; a bicycle firm, working at 90 percent capacity, a rise to 185; while locomotive construction firms, working at 35.5 percent capacity showed an increase to 320. High cost of production resulting from ineffective utilisation of plant capacity in its turn affects adversely the competitive position of an industry. It also inhibits the industrial development in general.

An attempt has been made in this paper to study this question of capacity utilisation concerning the chemical group of industries, on the basis of data contained in the *Monthly Statistics of the Production of Selected Industries of India*, published by the Industrial Statistics Wing of the Central Statistical Organisation (formerly Directorate of Industrial Statistics). The January 1959 issue of this publication contains complete figures up to 1958. As the figures are for calendar months, the monthly average of 1955 has been taken as the base to measure the progress in the first three years of the second plan, namely, 1956 to 1958. The number of chemical industries covered by this analysis is 30, in accordance with the availability of the required information, and includes such fundamental chemicals as sulphuric acid and soda ash. Since all chemical agents or tools are either acids or alkalies, the chemical group is fully represented.

Installed Capacity

Installed capacity refers to the maximum production which can be achieved in a plant or a combination of plants working together in a sequence under normal operating conditions, and is computed by the Development Wing of the Ministry of Commerce and Industry, assuming the following duration of working:

Industry	Number of working days	Number of shifts
Sulphuric acid Caustic soda Soda ash Chlorine liquid Bleaching powder Bichromates Superphosphates Ammonium sulphate	330	3
Paints and varnishes	300	2
Other chemical industries	300	1

The following sets of calculations have been made for each of the industries in the chemical group:

(a) Production-capacity ratio in 1955, i.e., the base year, to indicate the capacity utilisation in that year;

(b) Percentage increase in capacity in 1958 over the base year;

(c) The percentage increase in production in 1958 over the base year, and

(d) The production-capacity ratio in 1958 to measure the change in capacity utilisation during the first three years of the second plan.

The above calculations lead to highly interesting results. First, one finds a group of chemical industries in which the 1955 position has been accentuated, i.e., the extent of under-utilisation of capacity already existing in 1955 increased in 1958 as indicated by the fall in the output-capacity ratio. The industries in this group are shown in Table I.

TABLE I

Industry	Percentage increase in 1958 over 1955		Production-capacity ratio	
	Capacity	Production	1955	1958
Copper sulphate	205.9	100.0	52.1	34.1
Solubilised vats	63.2	46.8	40.5	36.5
Bichromates	27.5	17.6	54.5	50.3
Sulphur, black	50.0	9.5	84.8	61.9
Matches	17.0	(−) 0.2	87.2	74.4
Sulphuric acid	39.5	33.6	79.9	78.3
Soda ash	23.3	15.7	85.9	89.6

Next, one finds a group of industries in which the 1955 position has been modified in 1958. The industries in this group are shown in Table II.

TABLE II

Industry	Percentage change in 1958 over 1955		Production-capacity ratio	
	Capacity	Production	1955	1958
Ammonium sulphate	+ 1.4	(−) 2.3	92.3	88.9
Rayon (staple fibre)	+ 300.0	(+) 143.5	105.8	64.4
Stabilised azoics	+ 48.4	(−) 8.7	98.2	60.4

The fall in the output-capacity ratios of the industries grouped in Tables I and II, in 1958, compared with 1955, appears to have been due to:

(a) unnecessary or more than necessary increases in installed capacities, because the 1958 level of production could have been achieved by the capacity already available in case of some industries and by smaller increases in the capacities in case of others. The 1958 level of production was actually lower than 1955 in case of matches, ammonium sulphate and stabilised azoics.

(b) some bottleneck as a result of which production could not keep pace with the increases in capacities.

A probe is necessary before one can judge with some degree of precision the real cause of over-capacity. This will, however, be done later. In another group of chemical industries, the output-capacity ratio shows improvement in 1958 over 1955. This seems to have been achieved by proportionately larger increases in production. The industries in this group are shown in Table III.

TABLE III

Industry	Percentage increase in 1958 over 1955		Production-capacity ratio	
	Capacity	Production	1955	1958
Caustic soda	49.0	67.0	77.3	86.7
Chlorine liquid	55.7	71.2	57.3	63.0
Bleaching powder	78.9	140.9	33.1	44.4
Super-phosphates	46.1	124.9	34.5	53.7
Soap	5.3	24.1	41.2	48.5
Welding gases				
Oxygen	53.4	67.8	61.7	67.5
Acetylene	35.6	56.7	49.0	56.1
Glycerine (rectified)	38.3	50.9	45.7	51.9
Rayon (viscose yarn)	116.7	128.9	75.9	80.1

Large Idle Resources

It may be observed that in spite of substantial increases in production, the extent of under-utilisation of capacity in this group of chemical industries at the end of 1958 was still significantly large in several cases, such as bleaching powder, soap, glycerine (rectified), super-phosphates and welding gases (acetylene). Yet another group of chemical factories show improvement in their output-capacity ratios. The improvement in their case is partly due to increases in production and partly due to reduction in capacity or stationary capacity. The industries in this group are shown in Table IV.

TABLE IV

Industry	Percentage change in 1958 over 1955		Production-capacity ratio	
	Capacity	Production	1955	1958
Sodium sulphide	(−) 8.4	+41.9	28.1	43.5
Zinc oxides	...	+ 3.6	51.6	73.4
Paints and varnishes	...	+22.5	60.2	76.8
Glue	(−) 22.8	+21.1	40.5	63.6
Liver extract				
Injection	(−) 3.1	+44.6	22.3	33.3
Oral	(−) 65.6	+ 3.3	7.0	21.3
Calcium carbide	(−) 1.7	+17.8	76.9	92.2

While reduction in capacity or stationary capacity in this group of chemical industries with increases in their production may be regarded a welcome feature, the extent of spare capacity still in evidence at the close of 1958 was significantly large in case of liver extract, sodium sulphide and zinc oxide and substantial in case of others. Finally, we find a small group of chemical industries which achieved over-utilisation of capacity as shown in Table V:

TABLE V

Industry	Percentage change in 1958 over 1955		Production-capacity ratio	
	Capacity	Production	1955	1958
Rayon (acetate yarn)	...	+73.6	58.0	100.7
Phenol formaldehyde moulding powder	+11	+84.1	60.6	125.3

Clearly with a stationary capacity and a substantial increase in production in case of rayon (acetate yarn), the existence of large spare capacity in 1955 was not only wiped out, but production actually exceeded capacity in 1958, especially in the case of phenol formaldehyde moulding powder and covered up completely the idle capacity of 1955. As against a small increase of 11 percent in capacity, the increase in production in this case was 84.1 percent.

In case of four chemicals, namely, naphthols, vat dyes, hydrogen peroxide and alum (ammonia), relevant statistics for the base year are not available so that it is not possible to indicate their progress in capacity utilisation during the period under study. The extent of spare capacity at the end of 1958 can, however, be indicated by the production-capacity ratio in that year. This is shown below:

Industry	Production-capacity ratio in 1958
Napthols	44.6
Vat dyes	77.5
Hydrogen peroxide	78.0
Alum (Ammonia)	45.6

Production Bottlenecks

Under-utilisation of capacity is thus widespread in the chemical group of industries. Earlier a reference has been made to the unnecessary or more than necessary increases in capacity, or the possibility of a bottleneck in production as the probable cause of idle capacity. If there was no bottleneck in production, it could be safely assumed that the creation of additional capacity was not justified. But the possibility of some bottleneck in production cannot be ruled out completely. There might have been shortages of certain essential imported raw materials. Following the foreign exchange crisis, the import trade control policy of India was drastically revised with a view to restricting imports. Among other restrictions, the basic period out of which the established importer could select the best year for the purpose of calculating the quota of imports in 1958 was up to 1955-56 only, and that too not for all the items. Thus, on the one hand, the restricted import policy reduced the volume of imports of chemical materials in 1958 which might have caused a shortage of certain essential raw materials; on the other, installed capacities had increased in most chemicals because of the policy of rapid industrialisation. In these circumstances, it is quite conceivable that the rise in production could not keep pace with the increase in capacities.

In Table VI at the end of this article are given the values of imports of certain materials consumed by the chemical industry. Although it is not possible to indicate the extent of imports of these items for consumption by the industry for manufacturing chemical products, the fact that there were greatly reduced imports in 1958 as against 1957 is clearly brought out. And the decline, it will be seen, was so steep that it was bound to make the shortage of raw materials for the chemical industry almost inevitable.

Output-capacity Ratio

The conclusions emerging from this study are: (i) compared with 1955, the extent of idle capacity, by the end of 1958, decreased in 14 industries but increased in ten industries; (ii) the increases in capacities were not followed by proportionate increases in production. In fact, in three industries, production declined with increases in capa-

cities. In other industries, the 1958 level of output could have been achieved without any increases in capacities or with smaller increases in capacities than actually effected. It is also at the same time clear that the import restrictions might have resulted in the short supply of certain essential raw materials which would have caused bottlenecks in production. In effect, the output-capacity ratios went downward or did not move sufficiently upward; (iii) over-utilisation of capacity was reached in two industries; in all the remaining 28 *industries, idle capacity* existed in varying degrees although of a lesser magnitude than the base year; (iv) there was still an archaic and incoherent relationship between capacity and production, which needed to be corrected in the near future.

It is true that there is a time-lag between capacity and production. Or production may lag behind capacity for other reasons such as labour troubles or any other weak link in the manufacturing chain. It is also true that in a few specific industries, because of the special nature of production equipment, a 100-percent capacity utilisation may not be technically feasible. But these factors, in the existing position of chemical industries, do not vitiate the general conclusions concerning capacity utilisation and the pressing need for using it to the full, in order that there is a maximum utilisation of scarce national resources on the one hand, and balanced economic development of the country, on the other.

TABLE VI

Value of imports into India (Rs. in lakhs)

Item (1)	1957 (2)	1958 (3)	Difference (4)
Other coal tar products (i.e., other than coal tar)	10.71	6.67	(–) 4.04
Vegetable oils (refined and unrefined)	5.21	3.84	(–) 1.37
Zinc and zinc scrap	7.24	5.95	(–) 1.29
Sulphur, crude	3.03	1.95	(–) 1.08
Paints, pigments and colours	1.75	1.66	(–) 09
Alcohol beverages	89	56	(–) 33
Other alcohols	97	72	(–) 25
Oils and fats (other than vegetable oils, stearine and sandalwood oil)	92	71	(–) 21
Copper sulphate	25	6	(–) 19
Tallow	53	39	(–) 14

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 4, held on 6th and 8th July, offerings at the Export auction amounted to 44,061 chests. Quality showed an improvement, and there were some quite attractive teas on offer both of orthodox and C.T.C. manufacture. There was a strong general demand, particularly for "teas for price" and those with bright liquors. The remainder however, were irregular and generally easier. Plain brokens met with fair competition and were fully firm and up to 4nP dearer, but similar Fannings, though easier, were saleable 4nP below valuations. There was a fair enquiry for orthodox Dooars with bright liquors. The more ordinary Legg-cut teas, though irregular, were generally up to 6nP easier, but the brighter sorts sold well above last rates. Bright liquoring Assam B.O.P.'s were firm, while similar Fannings met with better demand and were generally dearer. The ordinary types were however irregular and from 10nP to 20nP easier. There was a strong competition for the best C.T.C.'s on offer, but the medium descriptions were up to 20nP easier, the first flush offerings again being neglected. Whole leaf grades were well supported and those with a clean leaf appearance were firm to dearer, but the stalky varieties were often up to 20nP easier. There was a fair support for Darjeelings, but these were generally easier. Tippy teas received fair support, but at a considerable discount.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.00	2.40 to 2.50
Plain B.P.	1.61 to 1.70	1.84 to 1.88
Plain Fannings	1.66 to 1.66	1.94 to 1.88
Medium B.P.	1.95 to 2.00	2.20 to 2.30
Medium Fannings	2.10 to 2.20	2.40 to 2.50
Best Assam C.T.C. B.P.	3.36 to 3.50	4.50 to 5.00
Best Assam C.T.C. Fgs.	3.90 to 4.30	5.00 to 5.50

(Quotations are exclusive of excise duty.)

In the Internal Sale, there were 13,413 chests of dust on offer, of which 237 were of old season's manufacture. There was a good general demand. Orthodox dusts sold at about valuations, powdery kinds being often dearer. Legg-cut Doars were generally 2nP to 4nP dearer with the powdery kinds meeting good support. There was much less enquiry for Darjeelings and these sold below last rates. Medium C.T.C. dusts were irregular and were about 15nP easier. But invoices which showed improving quality sometimes sold at dearer rates. The very best C.T.C. dusts received good support and generally sold above last rates, especially the small powdery kinds. As the sale progressed, however, the market for this type weakened appreciably and there were a number of withdrawals.

Quotations.

	1959 Rs.
Medium Dooars Dust ...	1.66 to 1.72
Medium Assam Dust ...	Unquotable.
Medium Assam C.T.C. Dust ...	2.10 to 2.40
Best Assam C.T.C. Dust ...	2.80 to 3.20

(Quotations are exclusive of excise duty.)

Leaf offerings amounted to 131 chests.

LINSEED FIRM

The linseed market has been firm during the past week. Turnover has been rather limited. Millers have not been very active due to unfavourable crushing margins. Fairly keen activity has continued in oilcakes, with shippers in the market, but overseas prices have reacted towards the close. The oil market has remained dull, with very little business reported. Latest quotations are as follows: June-July Rs. 22.62 a maund and July-August Rs. 22.62 a maund.

HIDES AND SKINS FIRM

The hides and skins market was firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 30th June and 6th July, 1959)

Cowhides: Wet salted (Ord.) 8,000 pcs. on the basis of Rs. 9.75 to Rs. 15; Wet salted (Slaughtered) 16,600 pcs. on the basis of Rs. 12.50 to Rs. 26.

Goatskins: Wet salted (Patna. Daissee. Kustia) 144.150 pcs. on the basis of Rs. 380 to Rs. 400, Rs. 425 to Rs. 450 and Rs. 480 to Rs. 515; Wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece: Assam-Dinajpur 5,000 pcs. on the basis of Rs. 345 to Rs. 400; Purneah-Kissenganj 9,500 pcs. on the basis, of Rs. 400 to Rs. 420: Patna-Pakur (Ord.) 9,900 pcs. on the basis of Rs. 357 to Rs. 375; Purneah 1,100 pcs. on the basis of Rs. 480.

Bazaar Stocks

(6th July, 1959)

Cowhides: Wet salted 62,100 pcs.

Goatskins: Wet salted (Daissee, Kustia. Patna, Killed) 46,500 pcs.; Assam-Dinajpur-Jalpaiguri-Maldah 41,000 pcs.; Muzafferpore-Patna-Pakur-Purneah 138,000 pcs.

SUGAR RISES

During the week ended 8th July, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 4,000 bags and stocks totalled 40,000 bags. Rates were Rs. 45.25 for big grain and Rs. 43.25 for ordinary grain. The market was firm.

SHELLAC STEADY

During the week ended 7th July, the tone of the market was steady. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 80 buyers; 80. 82 sellers.
TN Pure	Rs. 62 done and buyers, 60, 62 buyers; 62. 63 sellers.
Standard One	Rs. 68 buyers; 70 sellers.
F.O. Superfine	Rs. 70 buyers; 72 and 73 sellers.
Lemon No. 2	Rs. 74 buyers, 75, 76 sellers.
Lemon No. 1	Rs. 81 done. 80, 81 buyers; 82. 84, 83 sellers.
Kusmi Seedlac No. 2	Rs. 70 sellers.
Kusmi Seedlac No. 1	Rs. 76 sellers.
Golden Kusmi Seedlac	Rs. 95 sellers.
One B. Seedlac	Rs. 66 done and buyers 67 buyers; 67, 68 sellers.
Two B Seedlac	Rs. 58.50 to 60 buyers; 60, 61 sellers.
Golden Bysaky Seedlac	Rs. 67 to 70 buyers; 70, 72 sellers.
Manbhum Fine Seedlac	Rs. 64, 65 buyers; 66 sellers.
London Standard Fine Bysaky Seedlac	Rs. 62, 63 done; 62 buyers; 63, 64 sellers.
London Standard Genuine Bysaky Seedlac	Rs. 55, 56 buyers; 57, 58 sellers.

Shipments during June were 31,978 packages.

COMPANY AND PUBLIC NOTICES

BURN & COMPANY LIMITED.

NOTICE.

NOTICE is hereby given that the Annual General Meeting (being the sixty-fifth Ordinary General Meeting) of the Company will be held on Friday, the 31st July, 1959, at 11 a.m. at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the audited accounts for the year ended 30th April, 1959, and the Directors' and Auditors' Reports thereon.
2. (a) To confirm the interim dividends declared by the Directors comprising the dividends payable on the Preference Shares for the half-years ended 30th June, 1958 and 31st December, 1958.
   (b) To declare a dividend on the ordinary shares. The dividend, if declared, will be paid on or after the 4th August, 1959 to the Shareholders whose names are on the Company's Register on the 31st July, 1959, or to their mandatees.
3. To appoint a Director in place of the retiring Director.
4. To appoint auditors and fix their remuneration.

The Ordinary Share Register of the Company will be closed from the 23rd July, 1959 to the 31st July, 1959, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

Calcutta,
3rd July, 1959.

BURN AND COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the members of the Company will be held at the Company's Registered Office, 12, Mission Row, Calcutta, on Friday, the 31st day of July, 1959, immediately following the termination of the Annual General Meeting of the Company called for 11 a.m. on that day to consider and if thought fit to pass with or without modification the following resolutions the first of which will be proposed as an Ordinary resolution and the second as a Special Resolution.

Ordinary Resolution:

1. That the proposed re-appointment and the draft agreement (which has for the purpose of identification been subscribed by the Chairman of the Board of Directors) submitted to this Meeting setting forth the terms and conditions on which it is proposed that Martin Burn Limited be re-appointed the Managing Agents of the Company for a period of 10 years from the 15th August, 1960, be and is hereby approved and an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act 1956 be and is hereby directed to be made.

Special Resolution:

2. That the Articles of Association of the Company be altered in manner following:—

   Articles 131, 132, 133, 134, 135, 136, 137, 138 and 139 shall be deleted and for Article 131 the following shall be substituted—

   "131. Subject to the approval of the Central Government Martin Burn Limited shall be the Managing Agents of the Company upon such terms and conditions as may from time to time be agreed upon between the Company and the Managing Agents and embodied in an agreement in writing between the parties."

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

12 Mission Row, Calcutta,
Dated 3rd July, 1959.

Note: (i) A member entitled to attend and vote at this Meeting is entitled to appoint a Proxy to attend and vote on a poll instead of himself and a Proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to members of the Company.

MINERVA MILLS, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE is hereby given that the Thirty-ninth Annual General Meeting of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Thursday, the 6th August 1959 at 4-30 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December 1958.
2. To appoint Directors in place of those who retire but are eligible for re-appointment.
3. To appoint Auditors for the current year and to fix their remuneration.
4. To approve and authorise variations in the terms of two contracts referred to in the Prospectus dated 5-12-1958 issued in connection with the issue of 6½% taxable Debentures 1967-70.

The Transfer Books of the Company will be closed from 11th July 1959 to 31st July 1959, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

Detailed Notice of the above Meeting has been published in the Press and is also being posted to the shareholders individually.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,
N. D. SIRUR,
Managing Director.

Bombay, 16th June 1959.

FORT GLOSTER INDUSTRIES LIMITED

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 21, Strand Road, Calcutta-1, on Tuesday the 11th August, 1959 at 3-30 P.M. for the following purposes:—

(1) To receive the Report of the Directors and to pass the audited accounts for the year ended 31st March, 1959.
(2) To declare dividends.
(3) To elect a Director.
(4) To elect Auditors for the current year and to fix their remuneration.
(5) To transact any other ordinary business of the Annual General Meeting.

The Share Transfer Books of the Company will be closed from the 28th July to 11th August, 1959, both days inclusive.

By Order of the Board,
KETTLEWELL BULLEN & CO., LTD,
Managing Agents.

Calcutta, 1st July, 1959.

Note:—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

BASMATIA TEA COMPANY, LIMITED.

THE Board of Directors have today decided to recommend to the forthcoming annual general meeting of members a dividend in respect of the year ended 31st December, 1958 of Rs. 2.00 per share on the ordinary shares without any deduction in respect of taxation payable by the Company.

BASMATIA TEA COMPANY, LIMITED,
ANDREW YULE & COMPANY, LIMITED,
W. CUMMINGS,
Secretary,
Managing Agents.

2nd July, 1959.

RAJGARH TEA COMPANY, LIMITED.

THE Board of Directors have today decided to recommend to the forthcoming annual general meeting of members a dividend in respect of the year ended 31st December, 1958 of Rs. 2.50 nP per share on the ordinary shares without any deduction in respect of taxation payable by the Company.

RAJGARH TEA COMPANY, LIMITED,
ANDREW YULE & COMPANY, LIMITED,
W. CUMMINGS,
Secretary,
Managing Agents.

2nd July, 1959.

THE CONSOLIDATED TIN MINES OF BURMA LIMITED.

THE Extraordinary General Meeting of members held on June 29, to consider the winding up of the Company was adjourned until 12 o'clock noon on Wednesday 29th July, 1959 at Alderman's House, Bishopsgate, London, E.C.2.

The meeting of the creditors held on June 29, to consider the winding up of the Company was adjourned until 12-20 p.m. on Wednesday 29th July, 1959 at Alderman's House, Bishopsgate, London, E.C.2.

INDIAN COPPER CORPORATION LIMITED.

(Incorporated in England)

DIVIDEND NO. 33.

NOTICE is hereby given that at the Thirtyfifth Annual General Meeting to be held in Committee Room No. 1 of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 23rd September, 1959 at 11-30 A.M. the Directors will recommend payment of a Dividend (No. 33) for the year ended 31st December, 1958 of 18% (4.32 pence i.e. 24 Naye Paise per unit of stock) free of Income Tax payable by the Company in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 30th September, 1959 to all members registered in the books of the Company at the close of business on the 3rd August, 1959.

The Registers of Members will be closed from the 4th August to the 29th August, 1959, both days inclusive.

The nett profit for the year ended 31st December, 1958 was £197.785 (against £252.215 for previous year), after providing £150,000 for depreciation (£175.000 last year), £467,282 for Taxation (against £522.534), £125,000 for General Reserve (against £175,000), and £50.625 for Development Rebate Reserve (against Nil). With £120,361 brought in from 1957, there is an available balance of £318.146 (against £367,195). After providing £246.834 for proposed Dividend of 18% free of Income Tax payable by the Company (Dividend No. 32 of 18%, free of Income Tax last year—£246.834) the balance carried forward is £71,312 (against £120,361 brought in from previous year).

By Order of the Board,
S. C. GLADSTONE,
Acting Secretary.

Gillander House,
Netaji Subhas Road,
Calcutta-1,
Dated the 8th July, 1959.

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Thirteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on 3rd August, 1959, at 3 p.m. for the following purposes:—

(1) To consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
(2) To declare a Dividend on the Ordinary Shares.
(3) To appoint Auditors and to fix their remuneration.
(4) To elect Directors in the places of three Directors retiring.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 25th July to 3rd August, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
D. A. HOUGHTON,
Calcutta Director & Secretary.

4, Bankshall Street, Calcutta,
Dated, 6th July, 1959.

INDIA AS A READY-MADE COMMON MARKET

ROM time to time, one Indian business leader or another throws out the suggestion that country should take the initiative in organis- with her neighbours some sort of Asian com- market. Such plans—or, rather, vague pro- als—have so far been quite airy, and totally efinite on the important question of which ntries could be invited to join in such a ven- along with India. Most people realise inctively that proposals of this sort are wrong- ded, but fewer can say clearly why. They e from the recognition that economic national- which was one of the most vital forces be- d the independence movement, has run into ere and unexpected difficulties. Has not eco- nic nationalism similarly proven its futility ewhere, notably in Europe, and are not nations those regions now seeking a way out of this d alley by means of economic integration with ir neighbours? So the question comes to be ed whether a similar course might not be pos- le for India and certain other countries in th Asia. It was asked repeatedly at the Cairo nomic Conference at the beginning of this r, where there was a considerable amount of about an anti-imperialist common market ich appeared to find support from business men m Egypt to Indonesia.

Naturally, speculation of this kind seems very ch to the point to the Indian industrialist who manufactured more diesel engines or motor- s than the limited Indian market can absorb, l who then turns—with governmental en- iragement—to his "natural" export markets in arby Asia but finds them closed to him, often cause of competitive economic nationalism in se countries. To him it seems that south Asia, the very beginning of her industrial career, is eady involved in the suicidal nationalism that ested Europe's economic progress between the o world wars: and the proposal for a regional nmon market then takes on the colour of com- nsense, co-operative liberalism. He would pro- bly be indignant if he were told, what is true, t his pretended solution bears a resemblance to economic imperialism of young European pitalism which sought markets for its goods t in a prosperous metropolis but in a free-trad- empire overseas.

But above all the notion that the common rket strategy must have some relevance in this gion is bolstered by the fact that it is finding many imitators around the world. It is by means only in India that plans of this nature e put forward and in some areas they have ade very solid progress. To mention first the ost recent: At the beginning of June the seven st African States, Senegal, Sudan, Ivory Coast, auretania, Niger, Upper Volta and Dahomey, rmed a Customs union encompassing 20 million ople. And the only African opposition to this nture came, not from economic nationalists in y of those countries, but from the organisers of val common markets, the projected Mali Federa- on based on Senegal and Sudan, and the Ghana- uinea union with its expansionist ambitions. t the other end of the economic scale, there is e Eastern Common Market being set up by the mmunist countries of Europe under Russian adership; for all the differences entailed by the talitarian planning of national economies, this essentially a common market and it owes its spiration to the west European model, to which is intended as a reply.

To pass from these accomplished facts to pro- cts still under discussion, there is first the con- rence now going on in Stockholm where Great itain and six of her smaller European trading artners are trying to set up a common market 88 million consumers which, in some respects, ould make even faster progress towards integra- on than the Continental countries signatory to le Rome Treaty. This project arose from the ilure of the more grandiose British plan for a limited sort of common market—to be called the Free Trade Zone—which would have em- braced the 17 countries of western Europe. And it has replaced yet another common market plan that had been discussed for some years past by the Scandinavian countries, the proposed Nordic Union. Meantime, in Panama, the Economic Commission for Latin America is trying to write a plan for a Latin American Common Market that would integrate the 20-odd republics of that region by breaking down the jungle of tariff bar- riers and exchange discriminations that now hamp- ers a rational exploitation of their resources. More tenuous, but no less ambitious, have been proposals for common markets in the Middle East—based on the Arab League, or on the de- funct Baghdad Pact, or on the Egyptian-Syrian union—and in several other parts of the world.

Against this background of a world-wide movement towards regional economic integration, proposals for a common market in which India would find her place might seem entitled to res- pectful consideration. There is no doubt that the European Common Market (or the original Benelux union of Belgium, Holland and Luxem- bourg signed in London during the war) has touched off a powerful movement which is going to find its emulators—either by retaliation or imi- tation—in many parts of the globe. It has done this not so much by its achievements, for it is too young yet to have any to its credit, as by its example. Half a dozen of the world's most ad- vanced countries have recognised that we are living in the age of vast *ensembles* where only immense hundred-million-consumer markets can support industries of the size now required by an economical technology. The future lies with eco- nomies of the scale of Russia and the U.S.A. and it is economic and technological nonsense to envi- sage modern economies in countries of the size of Cuba, Ceylon or Czechoslovakia—and perhaps even in countries the size of Britain or West Germany. If now, in addition to showing that Europeans admit this fact, the European Common Market goes on to achieve the concrete gains of economic unity, the move towards common markets elsewhere will gather great force.

But granted that all this is true, does it prove anything of relevance to India's case? The fact that common markets find supporters in countries as variously placed as Britain, Senegal, Mexico and Poland does not show that India would have anything to gain from a similar project in our region. In some of those countries, common market plans are idle illusions no different from the vague suggestions often put forward in India; that an illusion is catching does not demonstrate that it has substance. In others of them, common market plans are serious and feasible projects, but only for reasons that have no connection or resemblance with India's situation. For example, Britain's interest in common markets of the sort projected in the Free Trade Zone or today in Stockholm derives from a natural and justified desire to protect her economy from the effects of the economic integration of her principal neigh- bours; if these latter were to abandon their com- mon market, Britain would very likely drop her schemes, or rather pursue a loose form of freer trade through O.E.E.C. and G.A.T.T. Again, the West African common market makes sound sense: seven petty ex-colonies with an area equal to that of the U.S.A. but with a population about as dense as that of the Rajasthan desert have no hope of building even a modest economy outside of inte- gration. As for the communist bloc's common market, this is Mr. Khrushchev's velvet-glove method of enforcing Stalin's more brutal policy of making the satellites specialise their economies "rationally"—*i.e.*, for Russia's benefit. That it will also correct some of the errors of communist over-industrialisation in the satellites, and pro- vide some of the latter with capital and know-how they cannot accept from the free world, are, how- ever, important points in its favour. Finally, as for the original, Continental, common market, this is a logical effort to exploit the complemen- tarity of the six national economies, in particular to balance the industrial region of Germany, Belgium and northern France against the agri- cultural region of southern France and Italy. Inci- dentally, it opens up to a technologically renascent European industrialism a 20th-century size market of 170 million consumers.

None of these considerations apply to any common market India could aspire to form with her neighbours. The only rational basis for a common market that has existed in this region was the situation just after 1947, when India still had little raw jute and Pakistan no jute mills and when a similar unbalance obtained in cotton and cotton textiles between the two countries. At that time proposals were indeed made for a Customs union. They were not economically absurd, but they were politically absurd because they over- looked the fact that it was the desire of that part of the Muslim bourgeoisie that has now gone to Pakistan to have its own tariff-protected pre- serves that contributed to the very creation of Pakistan; it was scarcely going to surrender its gains in a common market. No such opportunites exist today, and it is not by casting one's nets west- ward to the Middle East or eastward towards Indonesia that one is going to create them.

More important than the absence of outside opportunities is the existence of inside opportu- nities. The fact is that India is a common market of just the sort common market fanatics else- where are hoping to form. She belongs with the U.S.A., Russia and China in the class of 20th-cen- tury—and 21st-century—economies. The laborious process of integration that is being initiated to- day in western and eastern Europe, and perhaps tomorrow in South America, was begun here by the British just 200 years ago. It was carried near perfection by Sardar Patel in 1948. Since then, every reform of States' sales taxes, every recasting of the provincial map, every improve- ment in transport has made India more truly a common market. That she is still not a market of the capacity of the U.S.A. or Russia is evident, but changes nothing; it only shows that the mere constitution of a common market does not suffice, however necessary it may be, and so no exten- sion of Indian industry's market in south Asia is going to help it solve its problems.

To say that this country is already a self-suffi- cient common market (though not of course a self- sufficient economy) does not mean that all the narrow prejudices of economic nationalism are justified. They have done harm here just as they have abroad. Uneconomic hot-house indus- tries, suspicion of some foreign enterprises, an inadequate quest for foreign capital and certain dogmas about the processing of exportable raw materials are there to prove it. In divided Europe and Latin America the common market strategy serves to break down those prejudices; other means must serve that end in India. Perhaps on of the most important of them is a self-confident awareness that India's ready-made common market is so big that it has room for all the Gov ernment enterprise, all the domestic private enter prise and all the foreign business that we are likely to see or hear of for a century—without

the least need for any of the jealous restrictions now commonly suffered by any one of these three because of the timidity of the other two. Anyone who fiddles with schemes to widen India's market by incorporating it in a common market shows that he has not realised that fact. He neither understands the principle of the common market experiments being conducted in several parts of the globe nor appreciates the basis for expansion that already exists in India.

THE FORTUNES OF CEMENT

THE improvement in cement shares during the present bull phase on the stock markets, has been less spectacular than in those belonging to other industries. The index for the ordinary shares has increased only from 133.1 to 136.8 during the past year (1952-53=100), while the all-India general index for variable dividend industrial securities has moved up from 133.2 to 151.0 There are a number of reasons why investors' assessment of the prospects continues to be cautious, in spite of the fact that the industry's performance has so far been as good as can be expected. Output has increased from 1.2 million tons in 1937 to 6.4 million tons in 1958. Whether the second five year plan target of 12 million tons will be reached depends essentially on the trend of demand for the commodity. For the time being, production is being affected by a decline in demand caused by a substantial increase from Rs. 5 to Rs. 24 a ton in the excise duty within a few years. It is nevertheless hoped that suitable adjustments will soon be made in fiscal policy so that idle capacity can be removed and wastage relieved.

An important factor is that the industry's financial position has been affected by an irrational pricing policy Prices have been statutorily regulated since 1942. The ex-works prices allowed to producers, as also the selling prices charged to consumers, are fixed by the Government from time to time on the basis of recommendations made by the Tariff Commission. Because the Government is the biggest consumer, it has a direct interest in holding prices down. *In a recent brochure, entitled Financial Trends and Productivity in the Cement Industry,* published by the Association of Indian Trade and Industry, it is stated that "the industry's products have not been, therefore, allowed to exceed moderate levels, and it has not seen even one prosperous year comparable with some of those which the cotton textile and other industries had during the war and post-war periods".

As a result, the industry has not had the opportunity to accumulate reserves to the same extent as others have. In 1956, the cement industry's accumulated reserves (excluding capitalised reserves) amounted to 44 percent of its ordinary paid-up capital (including bonus shares) and premium on shares, against 165 percent in the case of iron and steel, 121 percent in cotton textiles, 99 percent in paper, 91 percent in jute textiles, 89 percent in sugar and 29 percent in electricity supply. If bonus shares issued against capitalisation of reserves are regarded as reserves instead of paid-up capital, the percentages would be still higher in the case of industries other than cement and electricity. The electricity industry, being a public utility, is governed strictly by official regulation, which limits the scope of profits and the creation of reserves. The cement industry capitalised during this period only Rs. 36 lakhs worth of reserves, against much larger capitalisation in the case of other industries except electricity; it capitalised premium on shares worth Rs. 1.75 crores. Cement companies' reserves and capitalised reserves, as percentage of paid-up capital in 1957, were 606 in the U.K., 308 in the U.S.A. 205 in Germany and 117 in Japan, against 57 in India, (bonus shares excluded from paid-up capital).

The scale of reserve accumulation appears to be inadequate in proportion to the industry's heavy capital requirements. As a capital-intensive industry, the reserve position needs to be a good deal sounder. This will help make equity investment more attractive and also improve considerably the borrowing capacities of the cement companies.

An examination of the balance sheets of 15 companies which, in 1957, owned 29 cement manufacturing plants comprising over 90 percent of total output, indicates that their income rose from Rs. 3.06 crores in 1937 to Rs. 37.34 crores in 1957, but that the shift in the cost structure has moved in favour of employees, taxation and manufacturing expenses, and against managing agents, dividends and profit retention. Between 1937-39 and 1955-57, net sales and net income increased ten times. Three items increased more than net sales, namely, manufacturing expenses (12 times), employees' remuneration (15.8 times) and tax provision (10.8 times). All other items increased less than sales. Managing agents' remuneration rose 4.8 times, depreciation provision and dividends, 5.2 times each, and retained profits 6.8 times.

The profit margin has shown a declining trend. The percentage of net profits to net sales fell from 22.7 in 1938 to 8.10 in 1957. Between 1951 and 1957, net profits as a percentage of net worth were between 6.7 and 10.7 in India, 14.1 and 20.3 in the U.S.A., 9.4 and 13.4 in the U.K. and 22.4 in Japan.

Dividends as a percent of net sales declined from 18.4 percent in 1937 to 6.5 percent in 1957. Dividends as a percent of net worth were 5.2 percent for the period 1937-57. There is no evidence of excessive dividend distribution by the cement companies, as no company could pay a dividend of 10 percent or more over a reasonable period.

The industry retained 31 percent of its net profits during the years 1937-57, which is lower than in the case of iron and steel (37 percent), paper (40 percent), cotton textiles (35 percent) and sugar (40 percent). As a result, an increase in gross assets amounting to Rs. 85.8 crores during 1937-57 has been financed by internal resources to the extent of only Rs. 31.1 crores, of which accumulated depreciation contributed Rs. 18.9 crores and resources (including capitalised reserves) Rs. 12.2 crores. So internal sources contributed 36.8 percent of the total finance—22.4 percent came from depreciation and 14.4 percent from accumulated reserves. The major portion of the money, amounting to Rs. 53.4 crores, was obtained from external sources, of which new issues of shares for cash provided Rs. 22.0 crores, debentures and loans Rs. 17.3 crores and payables, Rs. 14.1 crores. External sources provided 63.2 percent of the total capital funds, of which new shares issued for cash contributed 26.1 percent, debentures and loans 20.5 percent and payables 16.6 percent. The proportion of internal sources for financing the acquisition of assets since 1938 was, therefore, lower in the cement industry, at 36.8 percent of the total capital funds brought in (1938-57), than in other leading industries, and compared with 60.7 percent in the case of iron and steel (1938-35), 41.5 percent in paper (1938-54), 64.5 percent in cotton textiles (1938-55), 57.5 percent in jute textiles (1938-55) and 46.3 percent in sugar (1938-54).

FORECASTING CONSUMER DEMAND

IN their anxiety to push ahead with economic development, India's planners have shown an abiding fascination for gargantuan schemes. This they have tried to defend, howsoever unconvincingly, by claiming that the stress on gigantism is in the interest of rapid progress. Much of the current discussion on the third plan is obsessed with such over-ambitious ideas, and too little attention is being paid to the development of consumer goods industries. Nobody denies that in an underdeveloped economy like India, there is a need to promote machinery-making. But in the current craze for rapid progress, the planners will be committing a capital blunder if they continue to pay inadequate attention to the development of consumer goods industries. In this context, the report prepared by the National Council of Applied Economic Research, entitled *Demand Forecasts for Consumer Goods*, will help in assessing the demand for some important consumer goods items during the second plan. It embodies the findings of a research project sponsored by Hindustan Lever Ltd.

The techniques for forecasting consumer demand, which have been evolved to suit the requirements of developed western economies, cannot be applied with any high degree of precision to an under-developed country like India. Apart from the lack of methodological research and statistical data, the changing consumption patterns pose a serious problem in arriving at definite conclusions But even in the face of such handicaps, the council has made a laudable attempt to analyse, for the first time, data relating to individual consumer goods made available by the National Sample Survey. The report cannot be described as one trying to make the most authentic and accurate forecasts of consumption behaviour. It aims, by and large, to determine a certain range of magnitude for possible increases in consumption for such consumer goods as toilet and washing soaps *vanaspati*, milk, *ghee*, butter and other milk products. True, forecasting consumer demand in a developed economy is relatively easier : there consumption preferences generally remain stable over a short period. But in a backward economy such as India, people's tastes and habits cannot remain stable with the rise in national income. It is common knowledge that consumers who live at a subsistence level will naturally respond favourably to an increase in per capita income, and their consumption preferences, too, will change with the improvement in their living standards.

The fact that the council's report is a discussion on the nature of consumption probabilities does not mean that its findings are useless. But it does highlight the need for more accurate statistical investigations for socio-economic analyses. As it is consumer preferences in different zones, States and cities are not similar, so it is difficult to generalise about a set pattern of consumer preferences The percentage increase in consumption of toilet soap, for example, during 1951-56 varied from 1 percent in Gujerat, 20 percent in Bengal and Assam, around 25 percent in Punjab and Maharashtra, to 40 percent in Kerala. To add to this handicap, the National Sample Survey collected statistics relating to different groups of commodities. It is not easy to make an analysis of individual items of consumer goods since the required data are not given separately. The different rounds of investigations, carried out for separate periods, involve changes in prices. To make adequate use of the statistics, it will be necessary to have a detailed series of prices if they are to be combined in a useful way. The council, therefore, says in the report that it did not consider it advisable to combine the data from different rounds since they would have meant bringing together non-homogeneous categories Furthermore, "figures from one round are not comparable to those from another round, even for the same area, the same item and the same group. As between different areas rounds and groups, the comparability is of course infinitesimally less."

In the face of these difficulties, the council has shown how probable estimates of the future demand for consumer goods can be made with as much accuracy as possible. It says that the income elasticity of demand for washing soap has maintained a range between 2 and 4 : there is no possibility of its dropping below 2.5 within the next five or ten years. It thinks that the income elasticity of demand for toilet soap will probably remain within the range of 1 to 2 over the next decade. If India's national income rises by 25 percent in 1961—compared with the 1956 level—it is likely that the increase in washing soap consumption will be in the range of 60 percent to 70 percent, bringing the total consumption to between 331,000 tons and 351,000 tons. As for the increase in consumption of toilet soap, the council thinks that a rise of between 40 percent and 50 percent is possible if national income increases by 25 percent. The task of making forecasts for substitutable or complementary commodities, such as *vanaspati*, milk, *ghee* and butter, is more difficult since it is possible there might be a shift of demand from one commodity to another due to a change in prices or consumer preferences. This difficulty notwithstanding, the council says that an overall increase of 60 percent to 70 percent in the consumption of *vanaspati* need not be considered improbable over the second plan period.

It requires no emphasis in pointing out that if the planners genuinely want to lay down realistic production targets for consumer goods industries, it will be necessary to carry out more demand surveys like the one the council has recently completed. Planners usually fix targets on hypothetical assumptions and hardly any elaborate research investigation is carried out before they are determined. The example of the cement or textile industries suffering from gluts due to inadequate demand suggests that calamities of this nature can be averted if dependable market surveys are carried out before the production targets are fixed. In spite of tremendous difficulties due to the lack of statistical data and methodological research on demand forecasts for consumer goods, the council has made commendable efforts to lay the basis for future investigations. Its report, therefore, should be regarded as an important contribution to a subject which has hitherto received little attention in India.

Current News and Comment

Bulls in the Share Shop

The swings of sentiment in the Indian stock markets are apt, from time to time, to leave the observer baffled. For some days now, bulls have been pushing up share prices on the strength of certain remarks on economic policy made by Mr. Nehru when he met the committee of the Federation of Indian Chambers of Commerce and Industry in New Delhi last week. The published versions of the discussions at the meeting indicate, however, that almost nothing new emerged: it must have been among the most fruitless of Mr. Nehru's "fireside chats" with business men. The Prime Minister's ideas on economic policy are usually a comprehensive amalgam of those expressed by a wide and inconsistent variety of opinion, without being always particularly eclectic in quality. But in view of the reactions of the stock markets, it is worth examining a little more closely what exactly he said. Operators in both Lyons Range and Dalal Street have been cheered, in particular, by five points which Mr. Nehru made. These are reported as follows:

1. There is a wide field for the private sector even with the development of the public sector.
2. It is necessary to provide incentives in both sectors, although money is only one of the several incentives which can be thought of.
3. The Government wants generally to keep basic industries in the public sector, although it does not intend to nationalise existing undertakings merely for the sake of nationalisation.
4. It is prepared to sanction the establishment of large-scale units in the private sector.
5. Mr. Nehru's impression is that the Congress Planning Seminar in Ootacamund did not visualise the ultimate elimination of the private sector.

It is hard to see what reason for merriment can be found in these rather obsolete discoveries. As the development of the Indian economy has indicated for years, the politicians' boasts notwithstanding, the growth of the public sector is subject to inherent limitations such as the shortage of men, money and experience. The value of assurances about the continuance of the private sector is limited by the fact that Mr. Nehru's concept of private enterprise is unnecessarily broad and variable. Sometimes it even includes such motley folk as farmers, carpenters and kitchen *masalchis*, whose nationalisation is admittedly a long way off; so he and the business men often seem to be using the same term for quite different things. The only worthwhile assurance in this context would have been that the handicaps restricting the expansion and diversification of *organised* private enterprise are to be conscientiously reduced; but no hint of this was forthcoming from the Prime Minister at last week's meeting.

As for providing incentives apart from the monetary one, the statement indicated that Mr. Nehru's appreciation of the profit motive remains limited; business and industry will be expected to continue considering ministerial exhortations as more than adequate compensation for uneconomic working. The assurance about not nationalising industries merely for the sake of nationalisation has looked a little meaningless since the airways and the life insurance companies fell under the hammer with inexplicable suddenness. The statement that the Government is prepared to sanction the establishment of large-scale units in the private sector cannot be counted as a major revelation for students of official economic policy. Looking back on the Congress Party's Planning Seminar in Ootacamund, most people are veering round to the view that it was more an ideological circus than anything else, with second- and third-rate performers in the limelight. The gradual elimination of private enterprise may have been visualised by some of the artistes attending, but the economic wisdom dispensed in support of the idea was of the same order as is available daily from orators on the Calcutta *maidan*. The stock markets may, therefore, have been hasty in believing that the curious contortions of socialism displayed by such unfunny performers as Mr. U. N. Dhebar and Professor V.K.R.V. Rao would meet with the ready approval of the Government. The discovery that the approval may not be so readily forthcoming hardly constitutes an adequate reason for the latest boomlet.

Rohtas Shares Stagnate

The general rise in the stock market during the past few days seems to have brought little benefit to the ordinary shares of Rohtas Industries Ltd. The latter are stagnating around Rs. 22.50, after having been about 50nP higher. This may look surprising, considering that most of the leading industrials in the miscellaneous section have risen in response to the bullishness of the whole market, and that Rohtas has completed some important expansion schemes in recent months, the benefits of which should be showing now. Operators think that the stagnation in the shares is due primarily to investors' anxiety concerning the outcome of the Vivian Bose enquiry into the working of companies with which certain members of the Rohtas management are connected. It is due partly also to the uncertainties afflicting some commodities which feature prominently in Rohtas's production programme.

Rohtas is a company which manufactures a large variety of products, the main ones being paper, cement and sugar. The installed capacity of its paper factory has been raised by 30,000 tons to 52,000 tons a year under a modernisation and expansion programme costing about Rs 4.5 crores. Auxiliary machines have been installed for making special varieties of paper and board. The capacity of the existing board machine has been increased, and three new paper-making machines have been installed under the expansion programme. The capacity of the pulp plants has also been correspondingly raised. The expansion and diversification of output implied by these developments would normally be a bullish factor, especially since a commodity is involved which is in as short supply as paper. But investors have been hesitating in their response because it is expected that the report of the Tariff Commission on paper prices will be published soon. Rumours are that the report may have unfavourable consequences for the industry.

The annual installed capacity in Rohtas for cement is 350,000 tons, and for asbestos cement products 15,000 tons. The glut of cement has been worrying investors for more than a year now. It is unlikely to be reduced unless there is a major revival in economic activity, or unless the Government reduces the duty on cement in order to stimulate demand. For the manufacture of sugar, Rohtas has the substantial installed crushing capacity of 1,800 tons a day; the extraordinarily high price of sugar might have been a bull factor for this department, but the official moves to extend controls over the distribution of the commodity are causing producers serious anxiety. Although Rohtas's main products may be suffering from various uncertainties it is believed that the relatively secondary interests are doing well. The latter include caustic soda (for which the annual installed capacity is 6,000 tons), bleaching powder (2,100 tons), sulphuric acid (3,600 tons) and alums (6,400 tons). Market circles think that the company's profits during the year ended March 1959 are likely to be higher, primarily because of the implementation of the expansion programmes. The announcement of the next ordinary dividend is therefore awaited with interest, since it will to some extent reflect the directors' view of the prospects for the current accounting year.

Anglo-India Jute Diversifies

The Anglo-India Jute Mills Co. Ltd. is diversifying its activities. A new company called Isaac Holdens (India) Private Ltd will be registered and it will operate on a commission combing basis to cater for the Indian worsted industry. It is reliably learnt that the Government of India has permitted the company to set up a wool-combing plant with 10 million lbs capacity and the factory will be located in Jagatdal, West Bengal. The establishment of a wool-combing industry has been visualised in the second five year plan. The proposed plant will sort and process wool consigned to it only by topmakers and deliver the finished wool tops according to their instructions. In this way, the present trade relations of Indian spinners with their topmaker suppliers will not be affected, but the combing process will be carried out in India instead of abroad, resulting in considerable saving in foreign exchange and the creation of additional employment. An important feature is that the combing capacity will be freely and impartially available to topmakers in any part of the world. The promoters of the new company assure topmakers that the traditional confidence in dealing with topmakers' wools and instructions will be respected and enforced under the experienced control of Isaac Holden and Sons Ltd.

The shareholding of the new company will be held by Duncan Brothers and Co. Ltd., the Anglo-India Jute Mills Co. Ltd, and Isaac Holden of Bradford, England. The project is expected to begin production by the end of the current year and it is hoped that it will help improve the earnings of Anglo-India. This apart, the working of Anglo-India should improve in the future because production has been rationalised by concentrating the manufacture of jute goods in two mills —the lower mill and the middle mill. It is reliably understood that both the mills have been almost modernised as far as the spinning section is concerned. This will help reduce the cost of production. The upper mill has been closed since January 1956 and its property is likely to be disposed of soon.

Insuring Jute Against Fire

The frequency of fires in jute mills, storage godowns and jute presses has been causing concern to fire insurers for a long time. The question whether the insurance rating is adequate, and, if not, to what extent it should be increased, has been considered by the Tariff Committee. The subject figured prominently in the address delivered by the chairman of the Tariff Committee at the annual general meeting held in Calcutta recently. Fire insurance experience in the case of jute has been extremely bad for several years. The chairman deplored the position that, in spite of the suggestions made from time to time to improve matters, the business continues to deteriorate. He went so far as to say that no amount of rate adjustment can ever make this business break even unless the causes of jute fires are known and remedies found. The problem, he added, is mainly two-fold : how to check the frequency of fires, and how to reduce the loss once fires have started.

Jute fires, the chairman said, can be classified as being due to the hazards inherent in the commodity itself, and at least in part due to unsatisfactory moral hazards. One of the main causes of the fires is the ignition of gases emanating from the jute stored in godowns. The occurrence of such fires can perhaps be reduced if jute is not watered to increase its weight, thus reducing the possibility of gases being formed. Apart from this, the proper ventilation of jute godowns can help restrict the occurrence of fires, and proper stacking with adequately wide passages can reduce losses. The Regional Councils thought of encouraging the practice of stacking jute in smaller quantities and with more space between the stacks. The chairman disagreed with this view, saying that rather than permit an allowance or a reduction in rates for proper stacking, the storage of jute in larger quantities without adequate separation should be prohibited by a suitable warranty in the tariff, which should be obvious that by far the greater part of our loss is due to water damage attendant upon attempts to extinguish fires in large and close stacked stocks". Once fire has occurred, the cost of salvaging operations is inordinately high. The chairman suggested that owners or custodians of jute stocks involved in fires should be willing to take over the salvage, as is being done by cotton interests in Bombay. Alternatively, insurers should set up their own salvage association for taking

over salvaged jute, reconditioning it and disposing it of at reasonable prices.

On the general question of revising fire rates, the chairman referred to the agreement that fire premium rates should be reduced by stages to bring the claims ratio on an average to 40 percent of the premiums. The first reduction of about 10 percent came into force from 1st June, 1955. The second reduction, the chairman stated, is now overdue. But several issues have been raised in this context. He referred particularly to the volume of the premium income, which, it is said, has been relatively stagnant for many years in spite of the increasing pace of economic development. Procuration and servicing costs are high as distances are large and insurance consciousness is poor. The insurance market itself, said the chairman, is too young to have built adequate reserves, so the investment income of the companies is small. Moreover, marine business and most classes of accident business are unprofitable. The profits of fire business thus constitute the backbone of general insurance. The Tariff Committee is very worried about these issues and the hope has been expressed that it will be possible to explore a basis of reduction "that will ensure fairness to the insuring public and at the same time help the insurance market to achieve a healthy and sound position". The chairman was equally concerned about the deteriorating claims experience in Indian marine business. Considering the intimate relation between port working and marine insurance, he emphasised that "working conditions in the major ports in India are far from satisfactory." The question has been discussed with port authorities but "there is still a lot that can be done in our endeavour to claims minimisation". A representation has been made to the Central Ministry of Transport.

...K. Rayon Plant

The rayon plant which was put into commission by Mr. Padampat Singhania at a ceremony in Jajmau, near Kanpur, last week is the first of its kind in Uttar Pradesh. It has a production capacity of five tons of viscose rayon, 25 tons of sulphuric acid and five tons of carbon bio-sulphide a day. Built at a cost of Rs. 3½ crores, out of which Rs. 90 lakhs was provided by the U.P. Government, the plant has its own water supply arrangements and the eletricity consumption is estimated at 3,000 kilowatts. Considering that the demand for rayon has in recent years outstripped the supply, J. K. Rayons looks forward to a prosperous future. The total consumption of rayon yarn in 1958 was 67,278,000 lbs, out of which 33,680,000 lbs were imported. Large-scale imports, according to Indian rayon manufacturers, were responsible for bringing down prices during the first half of 1957, but the situation has completely changed since then because of the import restrictions. Some producers are even worried about the rise in prices recently and have tried to prevent profiteering by publicising the fair rates. The boom in rayon prices has led to the announcement of expansion programmes by existing manufacturers. The Planning Commission estimated that the consumption of viscose rayon will be 30 million lbs by 1960-61, and has fixed the production target at 60 million lbs. This means that even if all the newly licensed units go into production, there will be a gap between output and demand at the end of the second plan period.

State Trading in Sugar

While State trading is widely suspected to be responsible for the rise in foodgrain prices, it is curious that State trading in sugar should be proposed for the purpose of bringing down sugar prices. The U.P. Government, it is reported, has submitted to the Centre a scheme for the sale of sugar at the controlled price in all towns of the State with a population of more than 50,000. It is suggested that the authorised agent for distributing the commodity throughout the State should be the U.P. Co-operative Marketing Federation. The State Government also proposes to take over the entire distribution of sugar in one district as an experimental measure. To begin with, total distribution control may be tried out in Kanpur or Banaras. The scheme will need a direct allocation of 10,000 tons out of the State's monthly quota of about 25,000 tons. Ten percent of this will be set apart for confectioners and *halwais*. As for the remaining 15,000 tons, the State Government has asked the Centre to release six quotas for each district, to be marketed through licensed dealers who have already been named.

From the consumer's point of view, the U.P. scheme seems to be more liberal than the move for rationing sugar in Punjab at the rate of one seer a head a month. People in the latter State naturally resent having been singled out for such treatment at a time when the mills are said to have enough stocks and when the Centre's monthly quota to the State has been raised from 12,000 tons to 16,000 tons. Sales there will be made through fair-price shops in the urban areas and through co-operatives in the villages. According to a statement made by Punjab's Food Minister, some sugar will be sold to consumers at selected centres through the free market as an experimental measure. Such favoured treatment to selected centres, besides being invidious, might lead to heavy purchases for places not on the selected list. The ration of one seer a head for both town and village has probably been fixed with a view to holding the balance even between different sectors, but there is substance in the criticism that the real criterion for allotment should have been the previous rate of consumption. At any rate, the psychology of scarcity will only deepen as long as restrictions are placed on the quantity which consumers can purchase.

Prospects for Texmaco

The prospective rise in the production of pig iron and steel has revived optimism in the engineering industry, since for some years the critical shortage of these raw materials has badly affected its working. But the optimism is tempered by the fact that costs too have been rising, partly because steel prices have been substantially enhanced. Discussing the prospects for the engineering industry in his address from the chair at the annual general meeting of the Textile Machinery Corporation Ltd, held recently in Belgharia, near Calcutta, Mr. K. K. Birla pointed out that between 1952 and 1957, there have been increases totalling Rs. 309 a ton in the price of steel, with consequent rises of 92 percent, 73 percent and 99 percent, respectively, in those of bars and rods, plates and structurals. (A fuller version of the speech appeared in last week's issue of *Capital*.) The Indian price stood at Rs. 733 f.o.r. destination on 31st March, 1959, compared with Rs. 561, Rs. 565, Rs. 602 and Rs. 590 ex-works in the U.K., the U.S.A., Australia and Belgium, respectively. Mr. Birla added: "These figures would show that the prices of steel in India are roughly 22 percent to 30 percent higher than those in other countries of the world." After pointing out that Indian steel used to be the cheapest in the world and is now "unquestionably one of the dearest," he made the suggestion that the price should be reduced so that "the engineering industry may be assured of supplies of steel at reasonable rates and its competitive capacity may not be impaired in any way."

The other serious problem of the industry is the low *per capita* productivity of its workers. Yet labour has put up its demand for wage increases, which, if granted, will only add to the already high cost of production. The engineering industry is expected to participate to a larger extent in India's export trade. Its foreign exchange earnings at present average a mere Rs. 4 crores a year, as against an annual output of Rs. 270 crores, but experience during the past couple of years has shown that considerable expansion of India's foreign trade in these products is possible. This possibility cannot be realised unless the industry is helped in tackling its costs problem, Mr. Birla said. The industry's pace of progress has been impressive since 1951. its production index having risen to 252.9 in 1958 (with 1951 equalling 100), compared with 139.4 in the case of the general index. The rate has been higher than in the cotton textile, jute, cement, iron and steel, sugar and paper industries. The engineering industry could have shown even better results if it did not have to face the serious raw material problem during the past few years and if the labour force had been more productive.

Dealing with the working of Texmaco, the chairman said that the cotton textile machinery division showed slightly better sales in 1958 than in the previous year (a particularly bad one due to the slump in the cotton textile industry), but production was lower as the volume of carry-over orders was smaller. The development work progressed satisfactorily on the UD type of ring spinning frame and an improved type of drawing frame, prototypes of which were produced early this year; and work on the Simplex fly frame and the ring doubling frame was in progress. In the boiler and heavy engineering division, output was substantially higher and progress in the manufacture of sugar machinery was satisfactory. In the steel foundry division, apart from the existing production of alloy steel castings and certain parts for Chittaranjan locomotives, efforts are being made to develop capacity for heavy castings also. The company's terms of collaboration with Messrs H. W. Ward and Co., U.K., for the manufacture of capstan and turret lathes have been approved by the Government, and the "scheme is being pushed through with all possible speed."

High Sugar Prices

The South Indian Sugar Mills Association asserts that sugar is not so scarce as to justify the recent rise in retail prices. The occasional shortages are due mainly to changes in official policy concerning releases from factories, rather than to a reduction in the carry-over. In a recent speech, the chairman of the Association criticised speculation, and pointed out that producers in south India will not gain from the announcement of the export quota. The statistics show that in Madras, as in Andhra Pradesh, output has risen further: despatches totalled 37,257 tons out of the total production of 60,140 tons. The increase in sugar output in Madras has not reduced the need for supplies from Andhra Pradesh (which produced 120,167 tons) or from Mysore (which produced 84,582 tons, out of which 51,936 tons were despatched). The contribution made by Cauvery Sugar and Chemicals to the rise in the Madras output is noteworthy. The increase in production in 1958-59 also owes much to the success of the three factories in Pugalour, Mellikuppam and Pettavattalai, which are run by the E.I.D.-Parry group. Retail outlets have been fed regularly by the Parry factories, which still represent the "hard core" of the sugar industry in Madras.

Wheat Shortage in South India

Flour mills in south India need more wheat in order to meet the rising demand. Mr. A. P. Jain, Central Minister for Food and Agriculture, recently spoke to millers about the Government of India's undimmed faith in State trading and the need for procurement of foodgrains at fixed prices. He told the Flour Mills Association in Madras that only imported wheat might be supplied. The 14 flour mills in south India depend on outside supplies of wheat. The five located in Madras city use about 10,000 tons of wheat and produce about 8,000 tons of flour. An increase in the price of the wheat supplied to millers might raise flour prices, but the demand is large and the case for additional supplies for mills appears to be strong. The south Indian flour mills are convinced that Australian wheat should be improved to supplement the available supplies. They are willing to increase flour output to meet the rising local demand and are aware of the popular preference for indigenous wheat. But the latter is much dearer today than the imported white wheat which is sold at controlled prices. People in the rice-growing areas have been asked to consume more wheat. But traders feel that the free movement of foodgrains should be allowed in order to ensure large supplies of wheat from Madhya Pradesh to south India.

Insurance Code of Conduct

One of the main problems confronting the general insurance industry is the implementation of the provisions of the Code of Conduct to remove malpractices. Although the rules have been amended several times to make the Code workable and to plug loopholes, the problem continues to defy solution. Presiding over the annual general meeting of the New Great Insurance Co. of India Ltd on Saturday, Mr. Ambalal Kilachand said that market conditions have deteriorated in the current year. (Extracts from the speech are published elsewhere in this issue of *Capital*.) A sub-committee has been appointed to consider the situation. In the light of experience, it is necessary to change the rules so as to give scope to units of all sizes, Mr. Kilachand said. Referring to the proposal to reduce fire premium rates, he said that a cut at this critical juncture will have the effect of crippling the entire industry. The authorities should, therefore, abandon the idea.

CORRESPONDENCE

TOBACCO SURPLUS IN ANDHRA

(To The Editor of "Capital")

Sir,

In your issue dated 25th June, 1959, the Andhra Pradesh Finance Minister, Mr. K. Brahmananda Reddi, is reported to have told a Press conference that over 45 million lbs of the 60 million lbs of Sun Cured Country tobacco grown this year was unsold. It is not denied that there is a considerable quantity of Sun Cured Country tobacco lying unsold with growers but, according to our information, it is unlikely that the actual quantity at the end of June will be found to be in excess of 25 million lbs. It should be possible for the officers of the Central Excise Department to determine the exact quantity.

Due to heavy, prolonged, unseasonal rains early in February this year, a large quantity of this tobacco was rained on and is unsuitable for cigarette manufacture. It is difficult to assess the actual quantity which is unfit for cigarette manufacture, but, at a conservative estimate, this quantity will be found to be at least 10 million lbs.

References have been made to the allegedly unhelpful attiture of the Indian Leaf Tobacco Development Co. Ltd, in as much as it has only purchased this year 15 million lbs or 16 million lbs, against 30 million lbs last year. At the conference held in Hyderabad, which was attended by the Central Minister for Revenue and Civil Expenditure as well as the State Ministers for Finance and Agriculture, it was pointed out by our representatives on more than one occasion that this was incorrect and that the correct position was that, as against a purchase of just over 30 million lbs gross last year, the purchases this year will be just over 23 million lbs gross, which is only slightly lower than the purchases made in 1957.

Before the markets opened, it was obvious that there would be a considerable surplus of Sun Cured Country tobacco this year in view of the larger acreage and greater production. The Indian Leaf Tobacco Development Co. Ltd succeeded in persuading its principal customers in India to increase their orders, thus increasing manufacturers' stock durations. The durations, taking into account the customers' old crop stocks and current crop purchases, now extend to July-August 1961, and no cigarette manufacturer could possibly contemplate extending durations further; as it is, durations are approximately eight months overextended.

In addition to the Indian Leaf Tobacco Development Co. Ltd's purchases being lower, it is most significant that purchases by others are also lower to the extent of approximately 10 million lbs as at the same date last year. "Sweaters", who normally take a large weight of this tobacco, amounting to 10 million lbs to 12 million lbs on an average a year, for cheroot and chewing purposes, have only taken up an insignificant quantity, presumably because the rained on leaf is unsuitable for their purposes.

In our opinion, the only solution to alleviate the present position in Andhra is for the Ministry of Commerce and Industry to endeavour to obtain an export order for 10 million lbs of Sun Cured Country tobacco through the State Trading Corporation or some other agency. However, the big difficulty will arise concerning the very large weight of tobacco which will be found unsuitable for export and unsuitable for domestic consumption.

Yours etc.,

A. J. Brock

Member, Local Board, Indian Leaf Tobacco Development Co. Ltd

Calcutta, 9th July.

INCREASING JUTE YIELDS

(To The Editor of "Capital")

Sir,

In the Jute section of your issue dated 9th July, 1959, certain comments have been made obviously on the basis of a recent P.T.I. report referring to my views about jute development in the country. First of all, I would like to point out that I was not quite correctly quoted by P.T.I. For instance, I never said that mesta fibre "was neither valuable nor durable". I do admit having mentioned that mesta is a fibre inferior to jute and cannot be regarded as truly economical to grow. You have stated that the cultivators derive more profits from the cultivation of mesta. I am afraid this is absolutely wrong. As a single crop it may cost somewhat less to cultivate, but by growing mesta the cultivator loses a second crop which he can get from the same land. Again, if mesta is grown repeatedly for more than two years, the soil is completely impoverished and has to be left fallow for a number of years. Jute, on the other hand, although it costs little more to cultivate, incorporates a lot of organic matter into the soil, which benefits the succeeding crop. The industry may gain certain temporary advantages by using mesta, but if the future of the jute industry and the long-term agricultural economy of the country are taken into consideration, I am sure the consensus of opinion would veer to my viewpoint.

You mention in your article something about my having made the statement that "only now has the Government become alive to the need" for increasing acreage yield. In this, you have changed my statement substantially from even what P.T.I. published. It is a well-known fact that from beginning of the second plan, the Government has been laying emphasis on the greater use of fertilisers and the adoption of improved methods in jute cultivation, but it is the fluctuating price of raw jute that has so far retarded these efforts. I, therefore, only mentioned that under the third plan, these efforts will be intensified to the utmost limit.

Yours etc.,

E. A. R. Banerji

Chief Jute Development Officer, Government of India.

Calcutta, 11th July.

CORRECTION

The profit of the Indian Copper Corporation has declined from £1,123,749 to £997,848 for the year ended December 1958. Depreciation absorbs £150,000, against £175,000. The figures were printed wrongly on page 40 of last week's *Capital*.

RATES FOR CABLEGRAMS

It must be a source of satisfaction to feel that the subject of cheaper telegraphic communication between the United Kingdom and this country is at last fairly taken in hand, and will never be allowed to drop until sensible relief is afforded to the public. For, from the date of the dispersal of the last International Congress, the cry of "Agitate, Agitate," has been from time to time clearly heard, the ridiculous position taken up by the monopolist companies has been exposed, and the claims of commerce advocated. The Government of India have now, with public opinion in this country at their back, urged upon the Secretary of State a reduction of 50 percent on present rates, and though the Simla despatch has not yet been made public, we may be quite sure that Lord Curzon, with his broadly masterful way of treating all public questions, has made out a thoroughly strong case for India. Between the Indian Despatch and the House of Commons Committee, the Telegraph Companies may make up their minds that any arguments for the continuance of an extortionate tariff will be ground to powder. It is a little amusing now to read that the "companies are believed to be willing to make concessions." They have not been very willing hitherto, and we may be perfectly certain that their change of attitude towards a long suffering community is simply the result of a conviction that their hitherto exacting demands will no longer be tolerated. In a leading article on the present aspects of the question, the *Times of India* has raised an issue which seems to recognise the possibility of a *via media* being found between the present absurdly high tariff and the reduction suggested by the Indian Government. The "leading paper in Asia", while inclined to believe that so far the demand for reform "has simply been for a reduction to a uniform rate," considers that "there may be more ways than one of obtaining the desired relief," and it goes on to say that "it might be well while the subject is under discussion at home and while the companies are believed to be willing to make concessions, if those who are interested in it here would consider whether the public requirements could not be more efficiently met otherwise than by a uniform reduced rate."

Are You a Small-scale Industrialist?

This will interest you

To help small scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The Scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

Without Prejudice

Civil Liability for Negligence

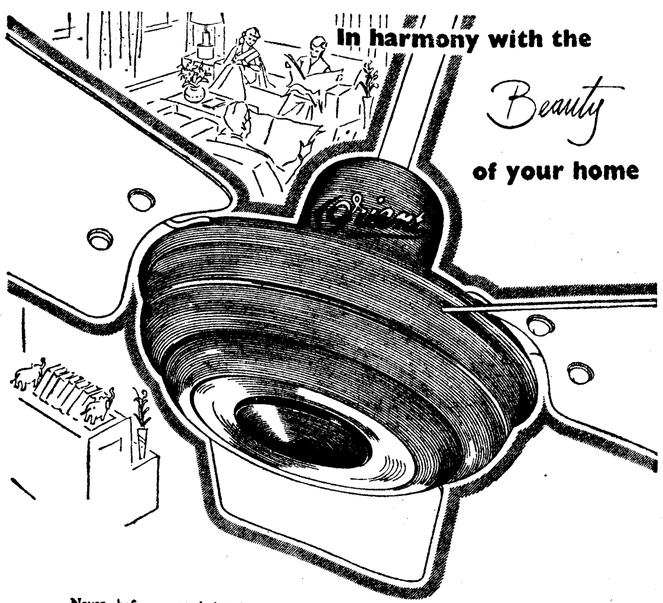
(FROM OUR LEGAL CORRESPONDENT)

BEFORE presenting the facts in this rather interesting English case based on the law of negligence, we will, in order to enable the non-legal reader to consider the problem involved, say a few words on what is necessary in order to establish civil liability on the ground of negligence. Three things must be proved: (1) a duty to take care of; (2) the absence of due care; and (3) actual damage caused directly by the absence of due care. The duty may be to the public in general on the ground that any person who does anything which may involve risk to the public is bound to take due care to avoid the risk. In the words of Lord Blackburn: "Those who bring property where they know that it may come into collision with the persons or property of others have, by law, a duty cast upon them to use reasonable care and skill to avoid such a collision." The standard of care is that which would be exercised by "an average reasonable man."

The particular member of the public in general involved in this incident was young Master Thomas Prince, aged ten. The boy was on the public highway, a road where he had a right to be, and was playing there, which he may or may not have had a right to do. We are not sure about the latter point. It may depend on the municipal bye-laws. There was a pile of lime mortar in the gutter close by where he was playing. This pile had been placed and left in the gutter by the occupant of an adjoining house who intended to use it for doing necessary repairs to the house. By so placing the pile, the occupant of the house had, of course unintentionally, provided ammunition for another boy who came along the road, picked up a piece of lime mortar from the pile and threw the same at Master Prince, who was struck by it and severely injured. On his recovery, a suit for damages was brought on his behalf against the occupant of the adjoining house. Grounds: negligence in placing the pile in the gutter. (The assailant's guardian was also sued but we are not concerned with that aspect).

Could the claim succeed against the occupant? Think it out before you read on and say yes or no. One fancies you will be a bit surprised, as the writer was. The case did not even come on for trial against the occupant, who applied contending that, even assuming the facts to be as stated, they disclosed no cause of action, and that the claim against him should be struck out. And it was. The Court of Appeal (Hodson and Ormerod L.JJ.) held that the statement of claim, as far as it affected the occupant, disclosed no cause of action and should be struck out. It was, their lordships held, a reasonable thing for the occupier to leave the lime mortar as he did, and he had no reason to expect that a mischievous boy would pick a piece of it up and throw it at another boy. "It was no more dangerous," said Hodson L.J., "than, for example, a milk bottle left on a doorstep." Well, one would be quite prepared to see the claim against the occupant lost after argument. But to have it thrown out as unarguable! Nor does one altogether like the implication as an axiomatic fact admitting of no argument that leaving a milk bottle on your doorstep cannot be dangerous. Suppose one dark night you go to bed early after so leaving out your milk bottle. A friend calls a bit late. He mounts the steps to ring the bell, and not seeing the bottle, knocks it over and steps on it while rolling; falls and is injured. Is it a case of *res ipsa loquitur* that he would have no shadow of a claim against you? We think young Master Prince was a bit unlucky. (*Prince* v *Gregory and another*. 1959. 78. *Law Notes*. 59.)

In another recent English case, this is what Mr. Fowler, the plaintiff, had to say in his statement of claim: "On 19th November, 1957, at..... the defendant shot the plaintiff. By reason of the premises, the plaintiff sustained personal injuries and has suffered loss and damage", and there followed particulars of his injuries. No allegation of negligence. The claim was based on trespass which, we are sometimes apt to forget, may apply to goods or person as well as to land. This was a claim for trespass to the person of Mr. Fowler b his being made the unintentional recipient of bullet from a rifle fired by Mr. Lanning.



Does this statement of claim disclose a caus of action against the defendant or should it b struck out? Even assuming the facts to be s stated, held Diplock J., they disclosed no cause c action and the claim should be struck out. "Tre pass to the person does not lie if the injury to th plaintiff, although the direct consequence of th act of the defendant, was caused unintentionall and without negligence on the defendant's par The onus of proving negligence, where the tre pass is not intentional, lies on the plaintiff, wh ther the action be in trespass or in negligenc This is unquestioned law in highway cases, an there is no reason in principle nor any suggestio in the decided authorities why it should be an different in other cases. The statement of clai offends the underlying purpose of the moder system of pleading that a plaintiff by calling h grievance 'trespass to the person' instead of 'neg ligence' should force a defendant to come to th trial blindfold; and I am glad to find nothing i the authorities which compels the court in th case to refrain from stripping the bandage fro his eyes." In short, no negligence, no claim.

Nevertheless, the degree of negligence, it seem need be very slight. You will remember som years ago the famous case of the Cheadle (Mar chester) Cricket Club and its mighty hitter. Th latter member was batting. The ground was very extensive one and nobody had been know to hit a ball clean out of it. Nevertheless, th local Jessop did just that. He thwacked the ba clean out of the ground straight into the eye c a lady who, not in the least interested in cricke was sunning herself in the road outside her ow house. The lady was knocked down, as if by M Lanning's bullet in the preceding case, and seriou ly injured. She sued the club and the membe for damages for negligence and won against bot Writing from memory, we believe the case wer to the House of Lords; certainly it went to th Court of Appeal and the judgment was sustaine That is why all clubs of standing take the precat tion of insuring against similar risks. And th risks are substantial, both against person and pr perty.

Playing for Somerset against Kent at Wel some ten years ago, Arthur Wellard hit six su cessive sixes out of the ground. An eerie squea ing noise followed some of the hits. Mr. R. Robertson Glasgow described the reason lat in the *Sunday Times*. The balls had fallen in a pigsty in a field belonging to a farmer, adjoinin the cricket ground, smiting some of the pigs. any of them had been seriously injured, the Some set County Cricket Club and Mr. Wellard woul have been liable to the farmer in damages for ne ligence. But why? The batsman did not eve know of the existence of the pigs any more tha the Cheadle batsman did of the presence of th lady on the road. Well, he should have foresee it and so arranged his hits as to avoid them; ar in not so doing he was negligent in law, althoug mighty efficient in cricket. If that is negligence and we have to accept the fact that it is—it show what a very slight degree of lack of care can justi fy a claim for damages. (*Fowler* v *Lanning*. 195 78. *Law Notes*. 61.)

We will conclude this note with a curious recei English problem; rather a grim one, too, for its answer depended whether a gentleman, name Jones, should receive the death sentence or one life imprisonment. The reader versed in wor men's compensation insurance will have little dif culty in answering it correctly by reference to or section of the Workmen's Compensation Act whic has been responsible for more litigation than a the rest of the Act put together. Mr. Jones was t trade a burglar. He broke into a store. He sto certain property and *having completed the the* (note the italics; they were subsequently M Jones's only hope) he was on his way to the ex in order to walk abroad on his now lawful occ sions. Then he heard the manager of the sto returning. He murdered the manager. Note aga that when he committed the murder, his job as burglar was completed and his day's work w done. Now by Section 5 of the British Homicid Act, 1957, murder committed "in the course of thef is punishable by death. This is where the accide insurance reader will come to a right conclusio for words italicised seem to be adapted fro "accident.....in the course of employment" in t Workmen's Compensation Act and under that A it has been held, after much disputation, that a accident sustained by a workman after his job finished but while he is still on his master's pr mises and about to go home, is one happening " the course of employment."

"How," argued Mr. Jones by his counsel in t Court of Criminal Appeal before the Lord Chi Justice and his two colleagues, "can I be said have committed this murder in the course of the when I had actually completed the theft at t time I committed it?" The ingenious argume did not avail. Mr. Jones's day's work was inde done. The death sentence was confirmed. *Regi* v *Jones*. 1959. 78. *Law Notes*. 63.)

Never before were industrial designers so conscious about the elegance of products as is evinced in the new design of Orient Fans.

Orient's designers bring home the kind of beautiful fan you would want to harmonise with the decor of your room. Graceful lines, sleek contours of the casing and beautiful everlasting pearly stove enamelled finish. All this makes Orient Fan a piece of sculptured beauty for every home. A thing of joy. A technical masterpiece!

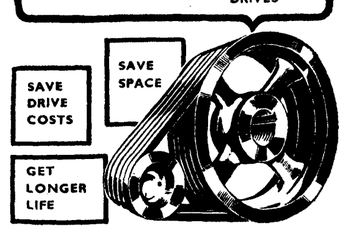
A Ditcher's Diary

IT WAS A FORMIDABLE INDICTMENT MR. C. D. Deshmukh produced in Madras on Saturday, and he is not among our careless talkers. What is more, he ought to know what he is talking about, for he is an ex-Finance Minister and before that was a distinguished civil servant. We can take it, therefore, that when he speaks of corruption at all levels he means *all* levels. I am a little sceptical, however, about the appointment of a high-level judicial commission to enquire into cases of "nepotism, high-handedness, gerrymandering and feathering of nests through progeny." First, it may not now be easy to find judges to look into affairs inevitably involving Ministers (on whom devolves the right of taking, or not taking, any action on judicial reports). Nor is it certain that enquiring judges will be given the whole truth. Most intriguing is Mr. Deshmukh's offer to help an enquiry with information about half-a-dozen cases. If he knew about these when he was Finance Minister, it remains to be explained why he did not do something about them then. Another mystery is whether the Cabinet knows about these cases too, which brings in Mr. Nehru who could surely not have been included in Mr. Deshmukh's "all levels." If it is true, as it well may be, that about 20 percent of the total cost of the plans goes to waste because of inefficiency and "malpractices", the situation is certainly alarming. But what is the answer? I have already said that a judicial commission will achieve just about nothing It has always seemed to me that corruption on so national a scale can never be effectively fought without the severest penalties being imposed in the cases detected, and here the Government has been unusually tolerant for reasons which are not difficult to guess.

THE DILEMMA THE BRITISH LABOUR PARTY IS facing in its policy towards take-over bids is becoming almost as laughable as the mess it has got into over the H-bomb. If it takes the sensible view that such bids are merely the logical result of over-cautious management and irrational government economic policies in the past, and—with certain reservations—the best contribution to the more efficient use of the nation's assets in the present, it will be acting completely out of character and will not carry its supporters with it. On the other hand, if it persists with the peevish threats of punitive legislation, then even Mr. Wilson must realise that it will not only be insisting on what is obviously not in the country's long-term interests, but will be offering to perpetuate the very conditions which make take-over bids possible. By this I mean that what a future Labour Government is promising to do will merely confirm the traditionally conservative attitude of U.K. managements towards the distribution of profits and their marked predisposition towards that convenient, though wasteful, expedient of auto-financing. It will be encouraging at one and the same time the continued disregard for the interests of shareholders and the chronic tendency towards the under-valuation of the country's productive resources. Such a situation leads inevitably to more and more take-over bids, and unless the Labour Government intends eventually to prevent by legislation the sale and purchase of shares altogether, there does not seem much it can do about it that will not be an additional gift to the take-over bidder and a further blow to the unfortunate shareholder. For once, shareholders are seeing their holdings priced at what is considerably nearer to their economic valuation, and there is no reason to believe that they are not all—every million of them, including most members of trade unions, superannuation funds, and investment trusts—highly delighted with the experience. If the Labour Party insists on depriving such people of what is rightfully theirs, just to suit its own prejudices, it is not only going to do the country a great deal of damage, it will lose itself a lot of votes as well. The answer to take-over bids is not more regulation, as India would do well to remember. It is to change the present stress on inefficient auto and loan financing and to rehabilitate the stock markets to their rightful place in the economy.

THE CONFERENCE SYSTEM IN WORLD SHIPPING, to which most liner companies subscribe, often comes in for criticism under the mistaken belief that its whole purpose is aimed at creating a huge monopolistic combine to the disadvantage of the shipper as well as the independent shipowner who is not a member. There should be less of this type of criticism if the British Liner Committee, of 3-6 Bury Court, St. Mary Axe, London E.C.3, secures as wide a circulation as it deserves for a small pamphlet entitled *Liner Services and the Conference System* which it has recently published. Within a very brief compass this pamphlet explains how liner companies work; what Conferences mean and do and why they exist; and what effect this working system has on the public they set out to serve. More detail could be given, but enough has been said to enable anyone who is interested to measure for himself the benefit which the Conference system represents to the trading community. The system itself, with its network of spontaneous mutual obligations between independent shipowners of many countries, is claimed to have helped to modify the impact of economic nationalism upon sea transport and to preserve a very large measure of competitive freedom in this sector, with corresponding benefit to the whole field of international trade. By contrast, international air transport is already so heavily dominated by national corporations, mostly with Government backing, that to protect itself from the consequences of subsidised competition the whole industry has had to accept an extraordinarily rigid and far-reaching control over all its operations, which virtually forbids the incursion of independent outsiders.



THANKS TO THE NEW-FOUND WILLINGNESS AMONG the Government's critics to challenge Ministers' public statements, we are seeing a little more reason used to defend official policies these days. Perhaps the Union Minister for Labour, Mr. G. L. Nanda, who has just returned from Europe, has not been back in India long enough to know this, because his attempt the other day to justify nationalisation by claiming that it is "working excellently" in Britain, was surprisingly weak. What seems to have impressed Mr Nanda was the purely negative fact that these industries are actually still going concerns; although he would do well to consider how much it costs the British taxpayer to keep them that way. It would be an edifying study for the Government as a whole; no more bright dreams then about making big profits. Certainly, if the criterion is to be simply whether or not a nationalised industry is actually working, then nationalisation in Britain has been a success. But surely that was about the least important of all the brave promises the early exponents of State-ownership made to the British public. I remember distinctly nationalisation being recommended as an unfailing panacea for the decline of the coal industry, the inefficiency of the railways, the lack of Parliamentary control over the Bank of England, the dissatisfaction of the trade unions, and much else besides. Now, more than ten years after, the coal industry is declining faster than it has ever done in the country's history, the railways have established a reputation for unpunctuality and expensive service which is likely to see them out of business altogether soon, the Bank of England has never been more independent, and one has only to read the newspapers to learn how blissfully happy are the miners, the railwaymen, the London Passenger Transport workers, and so on. If Mr. Nanda considers this is success, I fear for India. The only thing nationalisation has achieved in Britain is a rapid absorption of public resources to buy off bureaucratic inefficiencies and grasping trade unions. That is why the British people are fed up with the whole thing, and seem likely to reject at the next election any political Party, whatever its intrinsic merits and however much a change may be required, which sponsors any such out-dated, irrelevant ideas.

ALTHOUGH NOT NEARLY AS FUNNY AS PARKINSON'S Law, a similarly diverting piece appeared in the *Economist* recently: The Conference Game. It is too much of a private joke to be as popular as its predecessor, but it does draw pointed attention to one of the curses of our time. The number of man-hours wasted in useless meetings and conferences must be larger than anyone knows, for I suspect that, if anything, the communists are even worse offenders in this respect than their capitalist adversaries. I can remember a time when these institutions were almost unknown, and business was done, both in government and in commerce, with much greater expedition in spite of poor communications. Today, nothing can be done—and most of the time nothing in fact is—without a conference, preferably thousands of miles away from home. I do not grudge the conferees their holidays; I do object to their calling it business. The United Nations is in part responsible for many of these get-togethers, for it spends other people's money. But I am beginning to wonder whether the shrewd international airline operators have not quietly planted the idea that conferences are best held in distant places. I have personal knowledge of how boring such proceedings can be, and how unnecessary the whole thing. It does not appear to be realised that a man rarely says what he means when (a) he is on his feet, and (b) he has a fairly large audience. Here in this office we have a very old "circulation box", and this seems to me quite an adequate substitute for expensive and time-wasting meetings. Whenever directors have to be consulted about some business matter, either the telephone is used and the whole thing fixed in a matter of minutes, or a note is dictated and put into the box, which then comes back within a few hours. This will, I have no doubt, be adjudged too primitive for this proud century of ours, but then, we in this organisation have better uses for our time than have professional conference-wallahs. I would recommend our system to Mr. Dag Hammarskjoeld if I did not know that prestige comes into the question at a certain point: nowadays we cannot even persuade ourselves that we are doing something mighty important if we do not waste hours at conferences.

THE NEW GREAT INSURANCE CO. OF INDIA LTD.

SPEECH OF MR. AMBALAL KILACHAND

Mr Ambalal Kilachand presided over the 16th nnual General Meeting of the shareholders of the ompany on the 11th July, 1959, in the unavoidable bsence of the Chairman Mr. Tulsidas Kilachand, and eferred to some of the problems facing the Insurance idustry.

Code of Conduct

One of the most formidable problems confronting e Industry was the implementation of the provisions the Code of Conduct relating to the eradication the so-called malpractices. Although the rules had en amended several times with a view to making e Code perfect and to plugging the loopholes, the oblem continued to defy solution. This was not little due to the checks and controls included in ie Code which, apart from failing to take into count human nature, enjoined on all Insurers—g. medium and small—to transact business under ie uniform pattern of working as to rates, premium, mmission, and Policy conditions. He hoped that ie Sub-Committee appointed by the Executive ommittee would take into consideration the condi-ons in the Industry in the light of past experience id reframe the rules giving scope to all units, so iat they would be able to function on healthy lines.

Premium Reduction Move

Dealing next with the proposal to reduce the ire premium rates, Mr. Ambalal referred to the ingers inherent in such precipitate move at this itical juncture, which would have the effect of iopling the entire Industry. If Fire rates were educed, Marine rates might have necessarily to be ncreased, at least to some extent, to make the surance worthwhile on its own merits. This might sult in Marine business being deflected by power-ul foreign competitors, thereby retarding the pro-ess of our trade with overseas countries. He hoped iat the authorities would view the entire proposal i its proper perspective and see wisdom in dropping onsideration of this move altogether.

Limitation of Management Expenses and Scramble for Business

Mr. Ambalal then referred to the present pro-isions of Rule 17E of the Insurance Rules in regard to the limitation of management expenses of General Insurance Business, which were based on the gross direct premium in India and pointed out how this resulted in a scramble for direct business amongst Companies, mainly for the purpose of survival. On the one hand, there was shrinkage of funds available for investment following life insurance nationalisation which affected all general insurers, and on the other, small and medium-sized companies found it almost impossible to invest in new enterprises and consequently they were deprived of a share in this business. He was of the opinion that everything should be done by the authorities, including reconsideration of Rule 17E to enable Companies to work on sound underwriting principles and not go in for business at all costs, as was the case at present and to spread out their funds in varied investments, consisting of marketable securities, so that in the event of any unforeseen occurrences, adequate funds would be immediately available for meeting losses. This would also facilitate them to play their part at a time when there was vast and rapid industrial development in the country.

Company's Accounts

Dealing last with the departmental accounts, Mr Ambalal Kilachand stated that the gross direct premium for the year 1958 was Rs. 37,57,651 in Fire, Rs 22,22,434 in Miscellaneous Insurance, and Rs. 30,07,154 in Marine, whilst the net premiums were Rs 31,57,206, Rs. 22,23,445, and Rs 19,53,082, respectively. After providing for losses and expenses and reserves at 50% in respect of Fire, and Miscellaneous Insurance and 100% for Marine, the net amount transferred to the Profit and Loss Account in all was Rs. 1,70,678, whilst the total standing to the credit of the Profit and Loss Appropriation Account amounted to Rs. 2,60,910. The Directors proposed to transfer Rs. 40,000 to Staff Gratuity Account and to pay Tenth Dividend on Ordinary shares at Rs. 2/- per share free of income-tax, amounting to Rs. 2,00,000 which was the same as last year.

NOTE :—This does not purport to be a record of the proceedings of the Annual General Meeting of the Company.

THE CALCUTTA MONEY MARKET

SHARP FALL IN ADVANCES

Wednesday, 15th July.

THE largest fall this season in the level of advances was recorded in the Calcutta money market last week. Most of the main sources of demand reduced their requirements, including the jute and sugar industries. A somewhat smaller fall took place in the demands of the cotton mills and against grains and seeds storage. Conditions in the interbank market were considerably easier and, although the official call rate is still standing at 3½ percent, business has been done down to 3¼ percent.

Once again, there was a fair showing of tea and gunny bills. Demand for remittance continued keen The value of the pound has moved erratically during the past week but on balance is fractionally lower against the American dollar and slightly higher against the Canadian dollar. Against most Continental currencies, except the D-mark and the Danish kroner, the pound is easier.

BULLION WAS STEADY LAST WEEK BECAUSE OF limited arrivals. Silver increased to Rs. 197.25 for ready delivery and the rate for forward delivery was quoted at Rs. 195.75. The London and New York prices were shown at 77½d. and 91.375 cents.

In sympathy with silver, gold was firm and the price was quoted at Rs. 121.25. The sovereign realised Rs. 78.50.

DURING THE WEEK ENDED 10TH JULY, 1959, Government of India Treasury bills for Rs. 3,34,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 14th July. The total amount offered was Rs. 2,60,00,000. Tenders at Rs. 99.315 were accepted in full and those at Rs. 99.310 were allotted approximately 58 percent, the average rate of acceptance being Rs. 2.748 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 20th July.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 15th July to 18th July at Rs. 99.331 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 8th July to 11th July amounted to Rs. 7,00,000.

THE STATEMENT OF THE RESERVE BANK OF INDIA for the week ended 10th July, 1959, shows that active notes rose by Rs. 31 lakhs to Rs. 1,721.71 crores and the total note issue increased by Rs. 25 lakhs to Rs. 1,741.36 crores. In the paper currency reserve, foreign securities fell by Rs. 5 crores to Rs. 173.01 crores while rupee securities increased by an equivalent amount to Rs. 1,320.73 crores. As a result of the transfer of securities from the Issue Department to the Banking Department, balances held abroad in the latter Department rose by Rs. 1.27 crores to Rs. 13.56 crores. Investments declined by Rs. 5.21 crores to Rs. 289.01 crores. Deposits of the Government of India declined by Rs. 7.35 crores to Rs. 51.69 crores but other Government accounts rose by Rs. 25 lakhs to Rs. 14.05 crores. Balances of commercial banks at Rs. 77.14 crores showed a gain of Rs. 11.16 crores. Other loans and advances declined from Rs. 74.88 crores to Rs. 70.97 crores, of which advances to scheduled banks against usance bills amounted to Rs. 2.86 crores (Rs. 3.26 crores). Ways and means advances stood at Rs. 29.47 crores against Rs. 26.74 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 3rd July, 1959, shows a drop of Rs. 1.04 crores to Rs. 534.99 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 6.96 crores and Rs. 29 lakhs to Rs. 294.76 crores and Rs. 9.97 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 56 lakhs to Rs. 189.26 crores. Cash and balances are, in consequence, shown at Rs. 20.94 crores or Rs. 20.87 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 3rd July, 1959, shows Demand and Time liabilities at Rs. 761.18 crores (Rs. 20.28 crores on account of borrowings from banks) and Rs. 1,020.98 crores (Rs. 27.85 crores), compared with Rs. 760.48 crores (Rs. 23.68 crores) and Rs. 1,028.10 crores (Rs. 29.62 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 2.39 crores and Rs 28.76 crores to Rs. 45.09 crores and Rs. 62.05 crores, respectively. There is a rise of Rs. 6.27 crores to Rs. 637.87 crores in investments. Advances and bills discounted at Rs. 1,005.26 crores show an increase of Rs. 20.44 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.0 percent and 56.4 percent, against 7.7 percent and 55.1 percent.

DURING THE HALF-YEAR ENDED 30TH JUNE, 1959, the profit of the Bank of India amounted to Rs. 28,11,076. Bringing in Rs. 12,79,476, there is a balance of Rs. 40,90,552. The directors have declared an interim dividend of 6 percent (Rs. 3 a share), subject to deduction of tax at the prescribed rates on the paid-up capital of Rs 3 crores, and it absorbs Rs. 18 lakhs. The carry-forward amounts to Rs. 22,90,552.

G D Birla. Chairman.

S T Sadasivan. General Manager.

For a nominal charge, "Capital's" Statistical Department can provide you with a certificate of share prices.

This expert has won the trust of millions in the label *'Sanforized'*

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, *many washings!*

This is how he does it:

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for

SANFORIZED REG'D TO MK

on the label and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

DEPRESSED CONDITIONS IN STOCK MARKET

SENTIMENT UPSET BY ELECTION TALK

London, 15th July.

THERE was a complete change of sentiment in the stock market during the past week. Buoyant conditions ruled at the commencement, but later they were depressed because of a revival of election talk. There was no lack of favourable factors, and the Chancellor of the Exchequer was in a very optimistic mood in the Commons just before the week-end when he spoke of the U.K.'s prosperous economy, but with the holiday season now almost in full swing and uncertainty as to the outcome of a general election which many people expect to take place in the autumn, buyers became reluctant to extend commitments and with a fairly profitable fortnightly account just ending, some selling was seen. One bright spot, however, was gilt-edged where there was a steady investment demand and prices hardened. Foreign bonds moved irregularly with Greeks moving several points lower, although rallying later. The threatened U.S. steel strike continued to cast a shadow over dollar stocks, but prices held up remarkably well, and an event of some importance was the reappearance of a dollar premium. Canadian stocks were well supported on optimism concerning the outlook for the Canadian economy. Take-over bids played an important rôle in the industrial market, and Harrods and Kemsley newspapers were prominent, the former moving lower after the latest bid by the House of Fraser, while Kemsleys reached a peak level. Much of the ground gained earlier in the week was lost, and the market as a whole made a distinctly dull showing. Steel shares which were always vulnerable to election talk gave way and many leading stocks like I.C.I., Dunlops, Courtaulds and Cements lost ground. There was a selective demand for gold shares at one time in anticipation of the quarterly reports, but conditions became quieter later. Coppers had an unsettled week with the fall in the commodity price making itself felt, but tins enjoyed quiet to firm conditions at times. There was little to lift oils from their depressed levels and prices continued to drift still lower. Rubbers held comparatively steady on a certain amount of selective buying and teas responded to a quiet demand.

The Money Market

As the result of a distinct tightening up of credit in the money market last week, difficult conditions were experienced by discount houses on most days. As reflected in the weekly Bank of England return, bankers' cash balances had run down to a low level with the consequence that they had to call in loans from the market and money was in keen demand and the rate for overnight accommodation ranged between 3½ percent and 3⅞ percent. Although the authorities gave help, the market had to borrow a small amount at Bank rate terms for two days running. Bill business was restricted by the cash position. Once again, the weekly Treasury bill tender provided little of interest with the average rate virtually unchanged at £3 9s 0.22d percent. Discount houses, however, due to increased outside applications secured only 43 percent, as against 49 percent of the bills offered.

Paris Gold Irregular

There was no definite trend in the Paris gold market last week. The ingot initially declined, but then rallied again later in the period to reach above the official price of the Bank of France. Coins were generally steady. Dealers said that the arrival of ingots from abroad following the Finance Ministry's recent grant of permission to transfer foreign exchange holdings from abroad continued at a high level during the week.

World Commodity Prices Index Lower

Reuter's index of world sensitive commodity prices reached on 10th July its lowest point since the devaluation of sterling in September 1949. With 18th September, 1931, equalling 100, the figure was 405.9, compared with the previous low of 406.7 in September 1958 and 398.6 immediately prior to devaluation. World commodity prices generally have been falling steadily for some months, but in recent weeks, there has been a sharp drop in the price of copper, and sugar is the lowest for 18 years.

Vegetable Oils Fall

Price losses outnumbered gains on the vegetable oil and oilseeds market last week, with trading generally at a low ebb. The rise in linseed oil proved too fierce to attract following from buyers, most of whom seemed confident of some reaction in the near future. Eventually, August delivery linseed oil sold for £95½ ex tank U.K. Coconut oil weakened partly in sympathy with copra, while castor oil tended easier, but interest was noted beneath the surface. Idle conditions persisted for groundnut oil except for some limited spot deals, but soyabean oil recovered from its recent low point, helped by a broader Continental interest.

NAMES AND DATES

The 27th annual general meeting of the Oriental Chamber of Commerce, Calcutta, will be held at Prince's Grand Hotel, Calcutta, on 31st July at 3-30 p.m.

On 1st July, 1959, Mr. George L. Anderson was appointed managing director of the Firestone Tyre and Rubber Company of India Private Ltd. in succession to Mr. Andrew D. Wenzel who left India on 30th June, to take over as managing director of Firestone in the United Kingdom.

YOU'VE invested a lot of money in your car! All the more reason, then, that you should guard this investment by keeping your car in top condition for a long, long time!

MOBILOIL gives your car *full protection*. Whether your engine is cold, or racing at high temperatures, MOBILOIL maintains a tough, protective, unbroken film between moving parts. This film also cuts down on friction, resulting in *increased power* and *longer engine life*.

HEAVY PROFIT-TAKING HALTS UPWARD PRICE MOVEMENT

GILTS FIRM: NEW STATE LOANS EXPECTED

Wednesday Evening.

A MINOR boom, though shortlived, occurred in the share market during the early part of the week under review with Indian Iron & Steel touching a new high of Rs. 25.60. At one stage, it looked as though the recovery movement would gather momentum, but rumours from Bombay that the L.I.C. might turn seller, to take advantage of the substantial rise in share prices since the beginning of the year, halted the uptrend. This would not be altogether surprising because several blue chips today are yielding less than good-class preference shares, although the position is not yet as bad as in the U.K. where the return on some industrials is said to be no better than that obtainable on irredeemable Government stock.

Yesterday, a prominent bull operator in Bombay was reported to have unloaded about 300,000 Indian Iron shares and the price dropped sharply to Rs. 25.06. Other shares on the forward list moved down in sympathy. The rise in coal shares was stemmed on fears that the expected increase in coal prices may prove inadequate for the profitable working of the industry. Jute shares were also rather sluggish on rumours that a further 2½ percent of the mills' looms may be unsealed in the near future. The production figures for the month of June were received with disappointment, being only 82,700 tons against 86,800 tons in the previous month.

With conditions in the money market very easy, Government securities were keenly sought after, but scrip was in short supply. It is believed that the State Governments will be in the market by the end of this month with new loans carrying interest at 4 percent at a slight discount in most cases and with a maturity of about twelve years. These issues should help to take up some of the slack in the money market.

In the banking section, United Commercial were wanted at the higher rate of Rs. 62.50 against last week's opening quotation of Rs. 61.50. United Bank "D" shares were a shade better at Rs. 4.63.

Most brokers report that their order books are well filled with buying orders for selected preference shares, which are difficult to execute in the absence of sellers.

Prices of coal shares were trimmed owing to lack of enquiry. Amalgamated were lower at Rs. 26 as were Bengal at Rs. 317, Burrakur at Rs. 18 and East Indian at Rs. 25.62.

In cotton textiles, Kesoram were easier at Rs. 16.37 as were Jay Shree at Rs. 9.69 and Elgin at Rs. 13.94.

The only steady feature in the electric supply section was Calcutta which had buyers at the slightly higher rate of Rs. 15.25.

In the jute section, Anglo-India were steady down to Rs. 30 and Textile Machinery were lower at Rs. 24.55. J. K. Steel receded from Rs. 15.44 to Rs. 14.50 and Kumardhubi Engineering from Rs. 7.44 to Rs. 6.75.

In the jute section, Anglo India were steady because of the diversification of the Company's activities, and the price improved from Rs. 256 to Rs. 264. Similarly, Fort Gloster, for the same reason, were better at Rs. 355. Reliance provided a good feature and rose from Rs. 7.62 to Rs. 8.62 on unconfirmed reports that the Company might be put up for sale. Most other issues were easier.

In paper, Orient were easier at Rs. 37, as were Sirpur at Rs. 12.94 and Titaghur at Rs. 43.87. India Paper were a nominal market at Rs. 25.12.

In sugar, Carew were marked down further from Rs. 13.75 to Rs. 11.87 while Dyer Meakin were better at Rs. 18.25. There was some enquiry for Champaran Sugar which improved from Rs. 17.50 to Rs. 17.75. Belsund met with investment enquiry and rose from Rs. 13.12 to Rs. 13.75.

There was some profit-taking in the miscellaneous section and prices on balance were easier, as will be seen from the following table:

	Opening 9th July, 1959 Rs.	Closing 15th July, 1959 Rs.
Alkali & Chemical	23.44	22.75
British India Corp.	5.12	5
Godfrey Phillips	22	21.25
Indian Aluminium	22.94	22.87
National Carbon	35.50	35.25
Rallis India	80	76

Contrary to the general trend, there was a good enquiry for Angelo Brothers, Britannia Biscuits, Dunlop Rubber, Imperial Tobacco, Indo-Burma Petroleum, Martin Burn, Metal Box, National Insulated Cable and Shaw Wallace. Closing prices were higher than those prevailing at the beginning of the week under review as will be seen from the following table:

	Opening 9th July, 1959 Rs.	Closing 15th July, 1959 Rs.
Angelo Brothers	18.75	19.25
Britannia Biscuits	24.25	25.37
Dunlop Rubber	33.62	34
Imperial Tobacco	12.62	13.06
Indo-Burma Petroleum	26.25	28.75
Martin Burn	29	29.62
Metal Box	42.25	42.62
National Insulated Cable	36.50	37.37
Shaw Wallace	18	19

There was slightly more enquiry for tea shares during the past week and prices generally were slightly better.

In the mining group, Indian Copper met with bull liquidation and receded from Rs. 4.20 to Rs. 4.09. Other issues were more or less unchanged.

Rungamattee Tea

The Rungamattee Tea Company has incurred a loss of Rs. 1.60 lakhs for the year ended December 1958. Transferring money from reserves and making other adjustments, there is Rs. 3,58,325. Building and machinery reserve is allocated Rs. 3.34 lakhs and development rebate reserve Rs. 9,500. A dividend of 2½ percent is declared, leaving a carry-forward of Rs. 1,700.

The crop declined from 697,200 lbs to 553,446 lbs, and the average sale price increased from Rs. 1.72 to Rs. 1.75 a lb. Estimates for the current year provide for a crop of 640,000 lbs at a cost of Rs. 11.68 lakhs.

Sen-Raleigh Industries

The profit of Sen-Raleigh Industries of India Ltd has amounted to Rs. 11.28 lakhs for the year ended September 1958. Repayment of loan reserve is allocated Rs. 2.75 lakhs and development rebate reserve Rs. 2.45 lakhs. The ordinary dividend of 6 percent is maintained, leaving a carry-forward of Rs. 43,141, against Rs. 66,321 brought in. The more important factors affecting the profits were the intermittent nature of production controlled by the availability of foreign exchange for imports of raw materials, and the higher labour and overhead costs due to sporadic working. Moreover, as the benefit of increased production could not be availed of due to the lack of raw materials, the higher borrowings and overheads relative to the expansion of over Rs. 60 lakhs in fixed assets during the year under report also materially affected the working results. The directors state that an application has been made to the Industrial Finance Corporation for a further loan of Rs. 30 lakhs. "The ancillary industries sponsored by the company began deliveries in 1958 and all but one are now regular suppliers. All these arrangements have allowed the company to bring its component import down to below Rs. 2 a bicycle." Although the effects of disruption in production consequent on the crisis last year have not yet been fully overcome and there are still periodic supply failures, production is now showing a healthy upward trend in all sections of the factory. If the raw material position improves, the company is well set to implement the expansion plans fully.

Tata Mills

There is a profit of Rs. 4.20 lakhs for the Tata Mills Ltd (a Bombay cotton mill) for the year ended December 1958. Depreciation absorbs Rs. 1½ lakhs and taxation provision Rs. 50,000. Bringing in Rs. 17,925, there is Rs. 38,374. Transferring Rs. 3,93,437 and making other adjustments, an ordinary dividend of Rs. 1.50 a share has been paid, leaving a carry-forward of Rs. 17,925. The reorganisation and modernisation programme was carried a stage further during the year under report, involving a capital expenditure of Rs. 23 lakhs on buildings and machinery. Machinery worth Rs. 20 lakhs was installed during 1958. Under the U.S. Export-Import Bank credit scheme and the U.K. credit scheme, the company has submitted applications to import a combing set and a hot flue. Of the permitted installed capacity of 70,840 spindles, 60,500 spindles have so far been replaced. The directors have placed further orders for 10,200 spindles valued at Rs. 12 lakhs, thereby completing the programme of replacement of the old ring frames.

Cawnpore Textiles

The Cawnpore Textiles Ltd has incurred a loss of Rs. 8.50 lakhs for the year ended December 1958. Providing Rs. 3.36 lakhs for depreciation, Rs. 1.20 lakhs for rehabilitation reserve and making other adjustments, a debit balance of Rs. 12,94,192 is carried forward. The dividends have been passed over. The directors state that the results for the year under review reflect the extremely difficult trading conditions in which the cotton textile industry has been working. The effects on the cost of production of high cotton prices during the greater part of the year under review were aggravated by a substantial rise in the dearness allowance

payable to workers, which is linked with the cost of living index figure. The high level at which unsold stocks at Kanpur mills in general remained throughout the year kept prices at an unremunerative level. Since the closing of the financial year, trading conditions have improved. Measures have been taken by the Government to encourage exports by the industry. It remains to be seen whether they are adequate to achieve the desired results, but as the company participates in the export trade, the results for the current year are expected to show an improvement.

Bombay Market

STEADIER CONDITIONS FOLLOW SHAKE-OUT

BULLS STILL IN FULL CONTROL

Wednesday Evening.

THE Bombay stock market showed signs of settling down on Wednesday after having gone through a shake-out a couple of days before. The reaction was overdue as share prices scaled new peaks on hectic buying support earlier in the past week. In the beginning, operators were encouraged by unconfirmed reports that the Government might permit the issue of rights shares by the Tata Iron and Steel Company at par. Towards the close, caution was induced by a rumour that the Life Insurance Corporation might decide to sell a portion of its shareholding. On the whole, it looks as if bulls are well in control of the market, and prices in coming weeks, on present showing, promise to continue steady barring intermittent profit-taking.

Tata Steel backed to Rs. 195.25, as did Indian Iron to Rs. 25.15. Other engineering shares were fractionally shaded in sympathy with steel shares. Alcock Ashdown were transacted at Rs. 254 and Premier Construction were bought at Rs. 371 by knowledgeable quarters. Tata Locomotive were taken at Rs. 221 on the production of a satisfactory report. Mukand Iron came to hand at Rs. 18.40 and Larsen and Toubro were indicated at Rs. 22.48. Motor shares were steady, and Hindustan Motor improved to Rs. 10.04 on the prospect of a maiden dividend. Premier Automobile were dealt in at Rs. 123.

Cotton mill shares disclosed gains all round, although top levels were not maintained towards the close. Standard Mills were boosted on interested support and the price closed at Rs. 552. Bombay Dyeing were done at Rs. 66 and Simplex realised Rs. 188. Century came to hand at Rs. 558 and Svadeshi were transacted at Rs. 242. India United Ordinary were available at Rs. 7.40 and Apollo were bought up to Rs. 1.22.

Miscellaneous industrials moved in line with the general trend. In the sugar group, Phalton were dealt in at Rs. 160.50 and Belapur came to hand at Rs. 318. Among cement shares, Associated Cement changed hands at Rs. 155 and Digvijay realised Rs 155. In mining shares, Indian Copper were steady at Rs. 4.08 on maintaining the same distribution of 24nP a share. Shivrajpur Syndicate were transacted at Rs. 81. Steamship company shares were steady, and Scindia Steam improved to Rs. 18.08. Great Eastern Shipping changed hands at Rs. 22.36. National Rayon recovered to Rs. 359 on short-covering and Bombay Burmah were transacted at Rs. 557. Tata Mills were a strong feature and the price increased to Rs. 36.50. Tata Chemical were transacted at Rs. 18.20. Voltas were wanted up to Rs. 172 on good corporate news.

In the banking group, business was cautious considering that profits during the half-year ended June 1959 might not be as was expected. Central Bank were available at Rs. 52 and Bank of India were indicated at Rs. 122. Insurance shares were steady, and New India Assurance improved to Rs. 61 on the publication of a good report. All-India General Insurance improved to Rs. 3.74.

Interest in electricity supply company shares broadened, and Ahmedabad Electric were higher at Rs. 91.30. Bombay Suburban were done at Rs. 106.50 and Andhra Valley came to hand at Rs. 1,157.50.

TAX LIABILITY ON DIVIDEND INCOME

DEDUCTING INTEREST ON OVERDRAFTS

(BY A SPECIAL CORRESPONDENT)

MANY assessees are interested in the question whether they are entitled to claim as an allowance the amount of interest paid by them on their overdraft with their bankers, when they choose to utilise an overdraft rather than sell their holdings of shares which bring a more or less regular and attractive income. Judicial decisions on the cases so far taken to the courts have generally been unfavourable, except when certain conditions are satisfied; but the true reason for the assessees' failure to establish their case has been an incorrect conception of the nature of an overdraft account and the implications thereof. An attempt is made in the following paragraphs to present the case and illustrate it in such a manner that some of the current misconceptions may be removed.

Allowance for Expenditure

Under Section 12(1) of the Income Tax Act, and as specially provided in Sub-section 12(1)(A), income from dividend shall fall under the head "Income from Other Sources". Section 12(2) states: "Such income.....shall be computed after making allowance for *any expenditure* (not being in the nature of capital expenditure) *incurred solely for the purpose of making or earning* such income.....and *further* in the case of any income by way of dividend, for any reasonable sum paid by way of commission or remuneration to a banker or any other person realising such dividend on behalf of the assessee, provided that no allowance shall be made on account of:

(a) any personal expenditure of the assessee

(b) any interest chargeable under this Act which is payable without the taxable territories.....

(c) .....

Interest paid to a bank on overdrafts is an expenditure incurred by the assessee and he has to establish the proposition that this expenditure was incurred solely for the purpose of making or earning the income represented by the dividends on his shares (which dividends form part of his income under assessment). The next step is to consider what logical proof is sufficient to establish this proposition. Interest on overdrafts is charged by banks on fluctuating daily debit balances of customers' accounts, and to the extent that the daily debit balances do not exceed the market value of the shares the dividends on which form part of the assessable income, it must be accepted that the overdraft is for the purpose of holding the shares and maintaining the income therefrom and that the expenditure by way of interest on overdrafts is incurred solely for the purpose of making and earning the income, profit or gain.

Selling Shares

When an assessee holding shares yielding a dividend income has occasion to incur certain expenditure for some purpose, *even* for personal expenses, he has two alternatives open to him:

(a) to sell the shares, in which event there is a corresponding loss of income, but no interest charge;

or (b) to utilise an overdraft, in which event there is no loss of income, but there is an interest charge payable to the banker;

(c) A possible third alternative is to sell the shares, incur the expenditure in question out of the sale proceeds and then again to raise an overdraft from the bank and buy back the same shares, or other shares of equivalent value; in that case the position becomes identical with the position set out in alternative (b). In this example, it is possible to demonstrate visually that the overdraft is in fact being utilised for the purpose of purchasing shares, whereas in alternative (b) the purpose of the overdraft is to maintain the holding and the income therefrom. Logically, there is no difference between these two alternatives.

The proposition set out in the third paragraph above is subject to the limitation stated there, *viz.*, that interest on that portion, if any, of the daily debit balances which exceeds the market value of the shares held, will not be an expense incurred solely for the purpose of making the income, and will not therefore be admissible as an allowance. As for the proviso to Section 12(2), the term "any personal expense" of the assessee can refer not to legitimate interest incurred on the overdraft required to maintain the holding, but to other items of personal expenses; within the category of personal expense will be included interest on any overdraft in excess of the market value of the shares held, but not otherwise.

Bombay Case

In a Bombay High Court case, it was held that the purpose for which the assessee borrowed money (namely, to meet household expenses, purchase jewellery and meet advance payment of tax) had no connection, direct or indirect, with the income which she earned from the fixed deposit, and that she was not entitled to claim deduction in relation to the interest paid on the amount borrowed for the purposes stated above. In the course of the judgment, their Lordships stated: "Before we examine the facts, it is necessary first to turn to the section itself. The deduction which is permissible under Sub-section (2) of Section 12 is an expenditure incurred solely for the purpose of making or earning the income which has been subjected to tax. Therefore, in order to decide whether a deduction is permissible under Sub-section (2), we have to examine the nature of the expenditure. The purpose for which the expenditure is incurred must be in order to earn the income. The expenditure may be incurred for any commercial purpose. The connection between the expenditure and the earning of the income may not be direct. However indirect the connection may be, there must be a connection or a nexus between the expenditure incurred and the income earned. If we apply this test to the facts of this case, it is clear that the expenditure incurred by the assessee, which she claims as a deduction under Sub-section (2), has no connection whatsoever whether direct or indirect, with the income she has earned on her fixed deposit." (1956) 29 *I.T.R.*

Purchase of Jewellery

It is true that there must be some connection between the expenditure incurred and the income earned. It is, however, respectfully submitted that the expenditure claimed here is not the purchase of jewellery, etcetera, but the payment of interest *on overdraft and the income concerned* is the income from investments (in shares, or deposits).

The source of the income is first established when an investment is made out of funds temporarily, or for a long period, at the disposal of the assessee, and there immediately arises a potential claim for a charge by way of interest on overdraft that may have to be created in future, when part or the whole of the funds invested are required to be utilised for various items of expenditure

---

subsequent periods. The investment is a temporary capitalisation of future expenditure, of funds which would otherwise have remained idle. As long as the income from an investmnt is there, there is also the dormant right to claim interest charges, if actually incurred. As soon as borrowing takes place, regardless of the purpose, the dormant right comes into play.

In other words, in the case under discussion, it is not the expenditure on ornaments or on payment of taxes that is being claimed as an allowance, but interest on overdrafts or loans. The loan is primarily caused by the fact of the original investment in deposits or shares, and only secondarily related to the purchase of ornaments, etcetera. Interest on any loans not exceeding the value of the investments can, therefore, be properly claimed as an allowance.

Taking a Loan

In the illustration given below, the assessee has an annual net income of Rs. 1 lakh and his expenses are estimated at Rs. 70,000 a year. He decides to capitalise his savings for the next three years and purchases shares for Rs. 90,000, knowing full well that, other things being equal, he will have to overdraw his account up to a maximum of Rs. 60,000 in the first year, Rs. 30,000 in the second year and about nil in the third year. He can set about this business by:

(a) taking a fixed loan for Rs. 90,000 from the bank and making annual repayments at the rate of Rs. 30,000 a year, in which event he incurs interest charges on the entire debit balances outstanding at any time, while he would be earning no interest, or nominal interest on the surplus credit balances of his current account;

or (b) by making an overdraft arrangement with the bank under which his overdrafts are reduced by the credits put in and increased by further drawings, as necessary. and interest is charged only on the net daily debit balances.

Being a man of prudence. he decides on the latter alternative, which in effect means a loan of Rs. 90,000, the size of which is concealed and reduced by the effect of any credits put in and expenditure deferred. He can, therefore, rightly claim that within the limit of Rs. 90,000, any interest he incurs on overdrafts actually utilised is solely incurred for the purpose of earning an income on the investment of Rs. 90,000. If, however, the tests suggested by the Income Tax Department and endorsed by judicial decision (as shown above) are applied, it will be apparent that those tests become meaningless.

In this example, shares for Rs. 90,000 are purchased, soon after the commencement of the financial year, out of the income at the credit of the account and the relative debit does not result in an overdraft, which is superficially and directly caused later in the year when personal expenses fall to be debited to the account. It cannot, therefore. be strictly claimed that the overdraft was *directly* utilised for the purpose of earning an income, as required by the principle quoted in the Bombay High Court case. In order to establish that the overdraft was the *indirect* result of the purchase of shares, it would be necessary to analyse the transactions over the entire accounting year. This analysis shows total credits at Rs. 1,05,400 and total debits at Rs. 1,63,600. of which Rs. 73,600 represents expenses and Rs. 90,000 investment. the maximum overdraft being Rs. 58,200. In this case also, it can only vaguely be established, if the contested principle is literally adhered to, that the overdraft was essentially for the purpose of creating an income-earning investment, without any attempt at defining the limits within which such a claim could be entertained.

Overdraft Wiped Out

In the second year, the overdraft is wiped out on 4th April. When it is again created on 10th March, 1953, as a result of personal expenses incurred, it is difficult to relate the expense and the resultant overdrafts in any manner with the expenditure incurred on acquiring the source of the income as required under the contested principle, unless the transactions are related back to 4th April, 1951, when the shares were originally purchased.

The same difficulties arise in relation to the third year, enhanced by the additional complication introduced as a result of the purchase of ornaments for Rs. 20,000.

In the fourth year also, according to the principle quoted in the paragraph above concerning the Bombay High Court judgment, there is no case for claiming interest on the overdrafts, if we ignore the two asterisked figures representing a sale and a purchase of shares: If, however, we retain the two asterisked figures. the purchase of the shares would appear to establish a tangible claim for the allowance.

Futile Attempt

An examination of the transactions shown above demonstrates how futile and irrelevant is the attempt to follow up the objects to which the debits directly creating the overdrafts were actually applied. The seed of the overdraft was sown when the investment was made. and the object of any interest charges incurred on overdrafts subsequently utilised is solely to maintain the income from the investment. To prove that an expenditure was incurred for the purpose of preventing a loss of income is mathematically and logically as good as to prove that the expenditure was incurred for the purpose of "earning" an income. To ignore this elementary law of mathematics is to subscribe to all sorts of incongruities and illogical conclusions.

The conclusion is inescapable that the only logical interpretation of Section 12(2) is as stated in the latter part of the third paragraph of this article, in so far as the expenditure in question represents interest on overdrafts and the income is by way of dividends on shares. The acceptance of this mathematical interpretation will yield certain interesting results when the income is derived from income-yielding investments of a type other than shares.

Engineering and Transport

INDIA TO ADOPT AVRO AIRCRAFT

REPLACEMENT FOR AIR FORCE DAKOTAS

THE Indian Government has decided to adc Britain's new *Avro-748* aircraft for the Indi Air Force. Sir Roy Dobson, managing director of t Hawker Siddeley group, flew recently to India discuss with the Indian Government the manuf ture of the aircraft in this country, and an agr ment between the Government and the compa has already been reached. A company spokesm in London said: "We expect a good market f the *Avro-748* in any country which is now usi *Dakotas*". The *748* is designed as a more efficie and cheaper-to-run replacement for the *Dak DC-3*.

In a recent statement, Mr. J. A. R. Kay, jo managing director of Hawker Siddeley Aviati Ltd, said: "The *Avro-748* is a simple, robust a craft without frills, designed to do a practical j of transport in all parts of the world". The was designed for low initial cost and low operati cost, with ease of servicing and efficiency. T initial cost has not yet been announced, but it reported to be in the vicinity of £170,000. It is signed for use as a passenger aircraft carrying to 44 passengers, or as a freighter capable of car ing 10,000 lbs load or with a passenger-freight co bination. The operational cruising speed will about 265 miles an hour at about 20,000 feet, oper ing to a maximum of 33,000 feet. Short take- and landing strip requirements is another featu The aircraft is powered by twin turbo-prop Ro Royce Dart engines.

BRITISH FIRM TO SUPPLY NEW DREDGE FOR CALCUTTA PORT

A British firm has won a £650,000 order fr the Commissioners of the Port of Calcutta fo self-propelled, steam-operated, twin-screw, mu bucket dredger. The firm, Fleming and Fergus of Paisley, Scotland, has long associations w Calcutta port, having built the first dredger use here in 1894. This craft was taken out operation, still in working condition, only sev years ago. The new craft, designed specially conditions prevailing on the river Hooghly, is replace another dredger built for the port Fleming and Ferguson and commissioned in 19 It will have the unusually high speed (for dredger) of 10 knots, to enable her to manœu efficiently in the Hooghly. Her overall length v be 184½ feet, breadth 46 feet, and she will be fit with twin bucket ladders giving an output of 2, tons an hour at a maximum dredging depth of feet. The craft that the new dredger will repl has a capacity of 1,700 tons an hour, and anot in operation there—also built by a Scottish fi Ferguson Brothers of Glasgow—has a capacity 1,200 tons.

RECORD U.K AERO-ENGINE EXPORTS

During April and May, Britain's aero-eng manufacturers established new monthly exp records. Only in one previous month—Novem 1958—had £5 million worth of exports been achi ed in a single month, yet this figure was exceec in April (£5,417,506) and May (£5,570,430). Si the end of the war, aero-engine exports h amounted to £243 million a month, the ann record achieved last year standing at £49,557, Of last year's total Rolls-Royce accounted for million, or about 72 percent, according to L Kindersley, chairman of the company. In the two years, Rolls-Royce has spent more than million on the direct development of engir "Our industry has achieved considerable succ in the past under conditions less favourable th in America: we can do so again if our resour are applied with proper regard to the chang circumstances," Lord Kindersley added.

Already during the first five months of 19 the aero-engine export total, £25,018,946, has ceeded the annual totals of every year since war with the exception of 1956 (£28 million), 1 (£40.6 million) and 1958 (£49.6 million), and presents an annual total of £60 million.

K.L.M. GETS FIRST INTERNATIONAL MOD ELECTRA FROM LOCKHEEDS

K.L.M. Royal Dutch Airlines' *Electra* is the f international model of the prop-jet transport to at Lockheed's Burbank plant. Named as model 188C, its fuel capacity has been increa by 970 gallons, giving the airliner a 3,500-n range as compared with the domestic *Elect* 2,750 miles. Interior differences are floor tra for quick conversion of seating arrangement fr 66 to 99 passengers, moveable cabin partitions, two extra toilets at the rear of the cabin. Fli deck has full navigator's station. with over-wa and nation-to-nation communications equipm K.L.M.'s *Electra*, which has mechanised bagg expeditor. will be the first of the internatio models to be delivered. Other model 188C buy include Tasman Empire Airways. Qantas Airw Empire Airways and Garuda Indonesian Airwa

B.O.A.C. STAFF CHANGES IN INDIA

Mr. P. A. Gillibrand, B.O.A.C.'s Sales Manag India, since 1958, is leaving shortly to take u senior post with British European Airways manager, Germany. Mr. Gillibrand will be s ceeded by Mr W. D. C. Erskine Crum. at pres B.O.A.C.'s sales manager, south-east Asia.

New Delhi

PROGRESS OF MACHINERY MANUFACTURE IN INDIA SURVEYED

SUBSTANTIAL EXPANSION OF CAPACITY PROPOSED DURING THIRD PLAN

(FROM A NEW DELHI CORRESPONDENT)

IN planning the growth of machine-building capacity during the third plan, the planners have been asked to keep in mind the hope that the development programmes in the fourth and fifth five year plans should not be dependent on imports for the bulk of the requirements of plant and machinery. In a note on the subject, the Central Commerce and Industry Ministry has pointed out that experience gained during the second World War, when the compelling necessities of an emergency made it possible for new types of equipment to be produced in the country without significant additions to plant capacity, lends support to the view that the plants in existence and those it is proposed to set up, are capable of producing a wider range of industrial plant and machinery, given the determination to increase the indigenous content of all plan projects. The note adds that there are three basic components in the manufacture of an industrial plant:

(a) designing of equipment to ensure that the make or model proposed for manufacture will have a reasonable life and high productivity under operation;

(b) foundries, forges and structural works and other machine shops to convert metals and other processed products into machinery, the machining of the components into the final shape and the finish being one of the most crucial stages; and

(c) the skill of workers taking part in these operations.

The country is largely deficient now in the designing section and for the present, India will have to obtain suitable designs from abroad. Simultaneously, the work of turning out a large number of engineers and other skilled personnel and giving them the requisite training must be undertaken.

The following is the broad progress so far achieved in the machine-manufacturing industry:

Paper Mill Machinery Projects

Paper mill machinery: At present, there is no capacity. Two schemes have been approved by the licensing committee. One is for the manufacture of paper-making machinery to make paper on a small scale, and the other for machinery required for an integrated plant to produce pulp and paper on a large scale. The two schemes will turn out Rs. 2.45 crores worth of machinery a year, while the additional capacity required for the third plan has been estimated at at least Rs. 5 crores worth of machinery a year. These should cover the preparation plant, pulp-making plant, bleaching equipment, paper-making machinery, chemicals and other machinery required by paper mills. Prospective entrepreneurs' proposals should be for the manufacture of pulp and paper-making machinery —the standard capacity of each plant being 50 tons of paper a day. It has been suggested that those who intend to undertake manufacture, should obtain technical collaboration from leading producers abroad to ensure that the quality of machinery produced indigenously is of a high order.

Tea machinery: Rapid progress has been made in this field and the country is now producing not only the orthodox types of ordinary machines, but also special and costly machines like the tea dryer, the C.T.C. machine, and a new type of tea roller. Five firms are engaged in this field—Messrs. Britannia Engineering Company, Ltd, Titaghur, Messrs. British India Electric Construction Company, Calcutta, Steelworths Ltd, Assam, Messrs. Port Engineering Company, Calcutta and Davidsons (India) Ltd, Calcutta. Between them, they already produce practically the entire range of tea machinery. Production has also begun for the manufacture of the Sirroco brand of tea machinery in Calcutta. During 1957 and 1958, the value of tea machinery produced by all the firms was, respectively, Rs. 57.8 lakhs and Rs. 71.3 lakhs. It is expected that when fully implemented, the various schemes will not only make the country self-sufficient, but enable exports of tea machinery to be made.

Durgapur Mining Equipment Plant

Mining machinery: Besides the public sector plant in Durgapur with a projected turnover of 30,000 tons of machinery (valued at Rs. 15 crores) a year, two expansion schemes in the private sector have been approved—the manufacture of haulages and coal-cutters. Associated Cements, Vickers and Babcock have been licensed to produce not only cement machinery and water tube boilers, but also a fair amount of mining machinery. The factory to be set up in Durgapur is expected to go into production in 1961, but meanwhile, A.C.C. proposes to manufacture some of these items in its existing workshops.

Cement machinery: Messrs A.C.C., Dalmia Cement, Rohtas Industries and Orissa Cement already fabricate replacement parts required for their own use. K.C.P. Ltd has been licensed to manufacture two complete cement plants. It has already started producing a few items and import licences have been issued for the capital machinery required. Messrs A.V.B. Ltd (referred to above) will produce, under the licensed scheme, 2,250 tons of cement machinery a year. The A.C.C. workshop in Shahabad will take up the production of machinery in a complementary way. The installed capacity of this plant will also be 2,250 tons a year. This workshop already produces clinker coolers, clinker breakers and dust collectors. When all these schemes are fully implemented. the major requirements of the cement industry will be met from indigenous manufacture.

Sugar mill machinery: Six major sugar machinery manufacturers in the country have formed themselves into two consortiums—Sumaco consortium and Walistex consortium—for manufacturing and supplying machinery to 12 co-operative sugar factories. Four complete plants will be supplied to enable production to be started by January 1961, while the remaining eight will be supplied in time for production to start by October 1961. The installed capacity of the six firms by the end of the second plan will be 14 complete plants a year. Besides these six, there are eight other firms supplying machinery on order. The total installed capacity is expected to cover the complete requirements of new plants as well as those of replacement.

Heavy Demand for Boilers

Industrial boilers: The requirement of boilers is very heavy, and at present, imports of boilers, parts and accessories range from Rs. 7 crores to Rs. 8 crores a year. The requirements will increase with the new thermal power projects. A wide range of boilers are produced by Texmaco, Calcutta—Lancashire, Cornish, Economic and Vertical brands. This firm has also been licensed to undertake the manufacture of water tube boilers to the extent of 25 a year of a value of Rs. 1 crore. Three other schemes have been approved—the manufacture of vertical boilers by Larsen and Toubro, Bombay, the manufacture of water tube boilers by the Associated Cement-Vickers-Babcock combine, and the manufacture of sectional header water tube boilers by Walchandnagar Industries. Even when all these projects are implemented, the capacity in the country will only be Rs. 5.24 crores a year.

Chemical and pharmaceutical machinery: The present installed capacity is about Rs. 1.12 crores worth a year. But as against this, production during 1957 was Rs. 40.76 lakhs, and during 1958, Rs. 71 lakhs. A number of schemes of Telco, Vasant, Shakti Engineering and Teesteels have since been licensed. By the end of the second plan period. the projected capacity in the industry will be about Rs. 4.17 crores worth of machinery a year. As against this, the estimated requirements of machinery for this industry by the end of the third plan will be no less than Rs. 6.50 crores a year. Additional capacity to the extent of Rs. 2.50 crores a year will, therefore, have to be created to cater to the needs of this important industry. There will be scope for starting the manufacture of complete plants for (a) fertilisers, (b) caustic soda and (c) sulphuric acid, besides diverse items like pressure vessels, distillation columns, heat exchangers, gas washers and coolers, evaporators and reactors, required for different chemical industries.

Solvent extraction plants: The policy concerning the solvent extraction of cakes so far was to limit the manufacture to 800,000 tons a year. Now this limit has been removed, and it is the intention that all available cakes should be subjected to the solvent extraction process. Hence the demand for solvent extraction plants will rise considerably, and by 1960-61, about 2 million tons of cake is likely to be available. This will mean the installation of about 100 plants, of which 20 are already operating at present. Thus, even in the next two or three years, about 40 to 50 plants will be required on a modest estimate. A conference of likely Indian manufacturers along with the representatives of leading foreign manufacturers like Rosedown, U.K. and Desmet, Belgium, was held at the instance of the Development Wing. The parties have agreed to submit their manufacturing proposals to the Government in the near future.

More Weighing Machines Needed

Weighing machines: There are at present five firms producting weighing machines of various types like beam scales, platform scales, and cart and wagon weighbridges. But the country is not self-sufficient and with the accelerated rate of industrial development, there will be a growing demand on this industry. Averys, the principal indigenous manufacturers, have come forward with proposals for the expansion of production in lines they are already dealing in. Saran Engineering Company will shortly start producing automatic juice weighing scales required by the sugar, chemical and similar industries. There is, however, great scope for creating further capacity for new types as also higher ranges of existing types. In this connection, reference may be made to weighbridges of between 60-ton and 100-ton capacity required by the railways. the steel industry, the cement industry, and others. Weighbridges manufactured at present are up to 60-ton capacity.

New Printing Machinery Unit

Printing machinery: At present two firms, Maya Engineering Works, Calcutta, and India Machinery Company, Howrah, produce mainly platen presses against specific orders. Ramkrishna Industrials, Coimbatore, has been licensed for the manufacture of printing machinery. It has completed a stereo rotary press for experimental purposes. After a survey of printing houses carried out in July 1956, the estimated requirements for the second plan were placed as follows:

	Size	Quantity
1. Proof press	35 c.m. × 75 c.m.	2,500
2. Platen press (Victoria type)	300 m.m. × 450 m.m.	8,000
3. Flat bed machine (stop cylinder type)	600 m.m. × 900 m.m.	2,700

At that time, it was felt that the manufacture of a rotary press could not be established in view of the small demand, and also since the engineering industry could not make the rollers required for rotary presses. Now that roll shops, heavy foundries and machine shops are being established, the production of rotary presses can be taken up in the third plan period. A Calcutta firm has entered into collaboration arrangements with a well-known manufacturer of the U.K. to produce flat-bed machines in the country, starting with 50 percent indigenous content in the first year and going up to 90 percent in the fourth year of manufacture. Considering the likely increase in demand for printing machinery, including rotary presses and ancillary equipment, there is scope for a new unit. A new industrial undertaking in Madras is shortly going to undertake the manufacture of machinery including platen presses, flat-bed machinery, rotary presses and other types. But there is scope for another unit also.

Jute machinery: There is a great demand for the modern type of jute machinery like automatic doffing sliver spinning frames and high-speed drawing frames and cards. Indigenous manufacturers have started making modern machinery. Britannia Engineering Company Ltd, Titaghur, makes automatic doffing sliver spinning frames and the firm has been licensed to manufacture centrifugal pot spinning frames in collaboration with Messrs Sec. Call Adriane Cardella and F.LLO of Italy. James Mackie and Sons Ltd, Belfast, has floated an Indian company under the name of Lagan Jute Machinery Company Ltd, which has now started full production of machines of Mackie's design. Texmaco. Calcutta, is already producing sliver spinning frames in collaboration with Fairbairn Lawson Combe Barbour Ltd, Leeds.

The total installed capacity of these three firms is as follows:

Name of item	Total combined capacity a year
Cars (breaker and finisher)	180
Drawing frames (first, second and third)	288
Automatic doffing sliver spinning frames	660
Centrifugal spinning frames	96
First draw high-speed drawing frames	24
Second draw high-speed drawing frames	24

Indigenous manufacturers will now be making the bulk of the machinery required for the modernisation of the jute industry to be completed within the second five year plan period.

Electric transformers: Production during 1958 was of the order of 1,130,000 kVA valued at approximately Rs. 7 crores. At present, there are 14 manufacturing units with a total installed capacity of 934,000 kVA a year. Schemes for a total capacity of 907,000 kVA have been licensed for expansion and for the establishment of new units. A further capacity of 100,000 kVA has been approved for the grant of licences for expansion. The Development Council for the Heavy Electrical Industry has fixed a target of 1.5 million kVA a year by 1960-61. To realise this target. the Council has suggested a capacity of 2.2 million kVA should be licensed.

Electric motors: At present, there are 21 firms with an aggregate capacity of 614,200 horse power a year. In addition, a further capacity of 680,000 horse power has been licensed both for expansion and in new units. A capacity of the order of 70,000 horse power has been approved for the grant of licences. The target fixed for electric motors by the Development Council for the Heavy Electrical Industry for 1960-61 is 800,000 horse power to one million horse power a year. To achieve this production, the Council has suggested that a capacity of 1.25 million horse power should become available.

Diesel engines: With the implementation of various schemes already approved, the needs of the country, for both industrial and agricultural operations, can be met from indigenous sources.

Power-driven pumps: Production in 1958 was 75,000, compared with the target of 86,000 a year to be achieved by 1960-61. The largest size so far manufactured is one of 24 feet × 24 ins. requiring approximately 250 horse power. Proposals for the manufacture of new types of pumps such as submersible, axle flow and high-pressure multi-stage pumps and pumps for chemical duties are under the consideration of the Government.

Raising Machine Tool Output

Machine tools: Capacity for the manufacture of the following types of machine tools has be

established so far: (a) lathes, (b) milling machines, (c) shaping machines, (d) drilling machines, (e) radial drilling machines, (f) surface grinders, and (g) sheet metal working machines. Production in 1958 was worth Rs. 3.76 crores, but the varieties of machine tools so far produced do not meet the indigenous demand in full, and special types still have to be imported. Special-purpose machine tools are also being imported. There is considerable scope for the expansion of capacity. The licensed capacity of all the existing firms is Rs. 5.7 crores a year. Thirty-three firms have also been approved for the manufacture of a number of items. The total planned output for the firms is expected to be Rs. 5.75 crores. These firms in the organised sector manufacture graded standard tools. A number of small-scale units also produce machine tools, but not up to the required standard.

Compensation for Workmen

Three alternative proposals for the revision of the rates of compensation under the Workmen's Compensation Act, now before the Government of India, are to be considered by the seventeenth session of the Indian Labour Conference in Madras towards the end of this month. These are: (1) payment of compensation on the basis of the scale prescribed under the Employees State Insurance Act, (2) on the lines of the Government circular of 1955, and (3) on the pattern suggested by the study group on social security.

In the 1955 circular, it was suggested that in the case of death, compensation should be paid at the rate of 40 percent of wages for a period of 15 years from the date of death; in the case of permanent total disability, at the rate of 50 percent of wages for a period of 15 years or till the death of the employee, whichever is later. In the case of permanent partial disability, payment would be proportionate to the loss of earning capacity, namely, equal to the amount payable for permanent total disability multiplied by the extent of disability. For temporary disability, compensation should be at the rate of 50 percent of wages from the date of disability till the date of recovery, if the disability lasts for more than three days.

Under the Employees State Insurance Act, the rate of compensation proposed works out as follows: death: 60 percent of the full rate to the widow or widows of the deceased worker until remarriage or death, whichever is earlier. Forty percent of the full rate to each child up to the age of 16 or 18 if receiving education, the pension being terminated on the marriage of a daughter, whichever is earlier. All shares of dependents are reed *pro rata* so that the total does not exceed the full rate at any time. The full rate is roughly equal to half the average daily wage.

For permanent, total or partial disability, the payment will be life pension at the full rate multiplied by the extent of the disability, and for temporary disability, pension at the full rate for the duration of the disability.

On the basis of the recommendations of the study group, the compensation will be as follows: death—minimum Rs. 7 and maximum Rs. 62.96 a month; permanent total disability—minimum Rs. 9.80 a month and maximum Rs. 88.14 a month. The payments in both cases will be for a period of 15 years. Permanent partial disability—payment will be proportionate to the loss of earning capacity, namely, equal to the amount payable for permanent total disability multiplied by the extent of the disability. Temporary disability—minimum Rs. 20 or the full wage whichever is less, and a maximum of Rs. 120 for a period not exceeding five years.

Under the existing Act, in the case of death, the amount of compensation is from a minimum of Rs. 500 (in the case of workers drawing less than Rs. 10 as wages a month) to a maximum of Rs. 4,500 in the case of workers in the wage group of Rs. 301 to Rs. 400. For a permanent total disability, the amount of compensation varies from a minimum of Rs. 700 to a maximum of Rs. 6,300. In case of permanent partial disability, the rates vary according to the extent of the disability in terms of the loss of earning capacity. In case of temporary disability, compensation is paid periodically in the shape of half-monthly payments for a maximum period of five years. Those earning more than Rs. 10 a month receive payments ranging from two-thirds to half wages, subject to a minimum of Rs. 10 a month and a maximum of Rs. 60 a month. No compensation is payable for a waiting period of three days unless disability lasts for 28 days. Except in the case of temporary disability, the Act provides for payment on a lump-sum basis.

An actuarial committee was asked to go into the relative burden on the employers of the various schemes. The committee has reported as follows: "The relative burden on different industries varies between two and a half and three times under the Employees' State Insurance Scheme, and between two and two and a half times under the Government's 1955 circular, and double in the case of the working group's proposals."

Extending Periods of Industrial Awards

A proposal to amend the Industrial Disputes Act to empower the Central and State Governments to extend the period of validity of an award in an industry-wise adjudication up to a maximum period of five years, is being placed before the seventeenth session of the Indian Labour Conference. The Central Government had in the past ordered industry-wise adjudication in the case of the following industries: (i) banking and (ii) coal. Regionwise adjudications had been ordered concerning the mica mines in Bihar and Madras and manganese mines in Madhya Pradesh. Some of the Governments have ordered industry-wise adjudication within their States such as the textile industry in Bombay, the plantations industry in Madras and so on. In such cases, certain practical difficulties had to be faced which do not normally arise in the case of references which are confined to one or two establishments. The following are some of these difficulties:

(i) Considerable time was taken to collect the names of all the units in the industry as these had to be enumerated in the schedule to the order of adjudication. In fact, by the time the information was collected, some of it became obsolete in view of the changes in proprietorship, closures, etcetera.

(ii) The tribunals required considerable time to go through the formalities of issuing notices to individual parties, receiving their replies, examining their statements and accounts, etcetera.

(iii) There was the possibility of some individual party to the dispute approaching the High Court or the Supreme Court and obtaining a stay order on a technical point, thus preventing the tribunal from proceeding further even though most of the parties may have no objection to the proceedings going on.

(iv) Tribunals need considerable time to give their awards in industry-wise adjudications.

In spite of these difficulties, industry-wise adjudications sometimes become inevitable. The conference may, however, like to consider ways and means of obviating some of the difficulties of the type mentioned above. In a recent case, the Supreme Court has held that an award will continue to remainn in operation even if either of the parties terminates it under Section 19 (6) of the Industrial Disputes Act, 1947, unless it is replaced by another award. But this would not prevent the parties raising disputes over the matters which have already been settled by a previous adjudication.

The Industrial Disputes Act, 1947, does not make any distinction between disputes concerning individual establishments and industry-wise disputes as far as the period of operation of an award is concerned. In all the cases, the appropriate Government can extend the period of operation of an award up to three years. It is arguable that an award in an industry-wise adjudication which is given after much effort on all sides, should not be placed on par with other awards. A suggestion for consideration is whether in the awards given in an industry-wise adjudication, the appropriate Government should be empowered to extend its period of operation up to five years. In fact, the period of operation of the banks award was fixed for nearly five years.

Provident Funds for Employees

Another proposal before the I.L.C. is one to amend Section 17 of the Employees' Provident Funds Act, 1952, and the relevant provisions in the E.P.F. scheme, 1952, to provide specifically that the benefit of gratuity, if any, should be completely ignored and that only provident fund benefits and pensionary benefits, if any, should be taken into account in assessing the level of retirement benefits under the employers' schemes against the statutory provisions for the grant of exemption from the provisions of the E.P.F. Scheme.

Section 17 (1) (b) of the Employees' Provident Funds Act, 1952, provides that any establishment, to which the Act applies and which provides provident fund, pension or gratuity benefits to its employees, which are jointly or separately not less favourable than those provided under the Employees' Provident Funds Scheme, may be exempted from the operation of all or any of the provisions of the Scheme. Similarly, any person or class of persons in a particular establishment covered under the Act may also be exempted under Section 17 (2) of the Act.

It will be seen from the above that in addition to provident fund and pensionary benefits, gratuity is taken into account in judging whether the retirement benefits provided by an establishment are not less favourable than the benefits under the Employees' Provident Funds Act and the Scheme, 1952.

Consequently, establishments which provide both provident fund and gratuity and allow provident fund benefits on basic wages alone can continue to do so, if the amount of the total benefits allowed in the shape of provident fund and gratuity under their rules is not less favourable than the benefit of provident fund provided under the E.P.F. Act and the Scheme; and still get exemption from the E.P.F. Scheme. In the same way, such establishments may provide provident fund on basic wages and dearness allowance to keep on par with the benefits under the E.P.F. Scheme to get exemption from it, and could, if there were no other restrictions in the Act, deprive the workers wholly or partly of the gratuity allowed in addition to provident fund benefits without jeopardising their claim to exemption.

The contribution under the E.P.F. Scheme is to be calculated on the total of basic wages and dearness allowance including the cash value of the food concession, if any, under Section 6 of the E.P.F. Act.

"Dressing up a scarecrow, Mrs Banerjee?"

This isn't a scarecrow. It's my husband."

"A thousand apologies. But it is obvious your husband has not heard of BINNY'S cloth. BINNY'S Quality Control* their production you know..."

"*Quality Control? Never heard of it! What does it do?*"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S suitings stay smart so long."

"*That's wonderful news. We shall dash to the nearest BINNY'S shop the moment I can fix this tie and my husband is able to breathe again.*"

BINNY - a great name in textiles

* Testing the effective staple length of cotton

This apparatus measures the length and variation of all cottons that go into BINNY'S cloth. The quality of the cloth depends largely on the cotton used. Only specially selected cotton goes into BINNY'S fabrics. That's why they last so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees - Rugs etc. etc.

EFFECTS OF THE U.K. PRINTING DISPUTE ON INDUSTRY

SHORTAGE OF CARTONS MIGHT AFFECT OUTPUT AND EMPLOYMENT

(FROM OUR LONDON CORRESPONDENT)

THE dispute in the printing industry, now in its fourth week, is already having repercussions on workers and industries in no way associated with the issues at stake. Exports are threatened. The motor-car industry, one of Britain's biggest foreign currency earners, is being hampered in its export drive. Catalogues, which some countries insist on getting before allowing motor-cars in, are not available. The National Union of Manufacturers has reported that many firms are getting into difficulties. They are mostly firms which use printed cartons. If the dispute continues, it might affect employment in these firms. Supplies of cartons from Metal Box, whose customers include manufacturers of foods, detergents and household goods, have ceased. E. S. and A. Robinson, of Bristol, which supplies printed labels and a wide variety of printed materials to industry, has ceased production in a number of departments affected by the dispute.

So far, the only large suspension of work outside the printing industry is in paper-making. A large number of employees at Bowaters' mill in Sittingbourne, Kent, have stood off. Newsprint normally supplied to provincial newspapers is being stored, but accommodation is limited. The effects on industry and employment generally are not expected to be fully felt for a few weeks, if the dispute lasts that long. By then, many firms will have used up the extra stocks of labels, cartons and other printed materials laid in to tide them over for a short period. Fortunately, there are at least indications that a settlement of the dispute may be reached on the basis of negotiations under an independent chairman, with Lord Monckton favoured for that responsibility.

Reserves in Good Shape

Britain's reserves of gold and convertible currencies rose last month by £19 million. Total holdings, which are the central reserves of the sterling area, amounted on 30th June to £1,133 million, against £1,114 million at the end of May. Last month's increase followed a fall in the reserves in May of £47 million. That reduction, however, was more than accounted for by the special payment of £58 million in gold made to the International Monetary Fund. But for that special transfer, the reserves would have shown an increase of £11 million, in May. U.K. Treasury officials described last month as a good period for the reserves, reflecting a healthy demand for sterling. Indeed, save for two other exceptions similar to that in May, in March and last December, the reserves have risen in each month since the currency crisis in September 1957. In the first six months, the reserves have risen £37 million. The seasonal nature of much of international trade operates in favour of the sterling area's reserves for the first half of the year. The more difficult phase has now started, but as far as one can see, the coming months hold no terrors for sterling and the balance of payments.

Bank of England Report

The annual report of the Bank of England has been published a month earlier, and is a little bulkier, than last year, but it is still mainly historical and much of what it contains has appeared previously from other sources. The report of the Radcliffe Committee is awaited, and until it appears no radical changes in the Bank of England's account are expected. The Bank's year, which ended on 28th February, coincided with the growing confidence in sterling and a gradual easing in monetary conditions. The removal of many restrictions was carried through without damage to sterling and to the advantage of the economy where slackness was developing. The report singles out changes in the ownership of Government securities and the growth of bank advances as the two most striking monetary developments, and examines both in some detail.

As usual, the report is accompanied by its latest estimate of U.K. investment in foreign securities. Accurate estimates of British investment abroad are badly needed, and it is not the fault of the Bank that its figures, which cover the year 1957, do not fill the gap. Obtained as a by-product of exchange control, they show the nominal value of the securities involved, and cover only U.S. and Canadian dollar issues, together with those quoted in London. For what it is worth, one may record that the nominal value of these holdings fell by £4 million to £2,102 million, dividends paid on them during the year having declined from £223 million to £218 million.

The reduction in nominal value is entirely explained by changes in the exchange rates at which foreign-currency securities are converted into sterling, and it is obvious when the figures are looked at in more realistic terms that British investment abroad was growing quite rapidly in 1957. In the United States, for example, the sale of bonds and purchase of common stocks by British investors resulted in a fall of £2 million in nominal values, but cost, on balance, £36 million. The decline in dividends paid was the result of a number of special factors. Smaller dividends from Commonwealth tea and copper companies were not fully offset by higher payments from Malayan rubber plantations and the South African gold mines: the Suez company paid no dividends; and the 1956 distribution on German bonds out of enemy property was not repeated.

Settling E.P.U. Debts

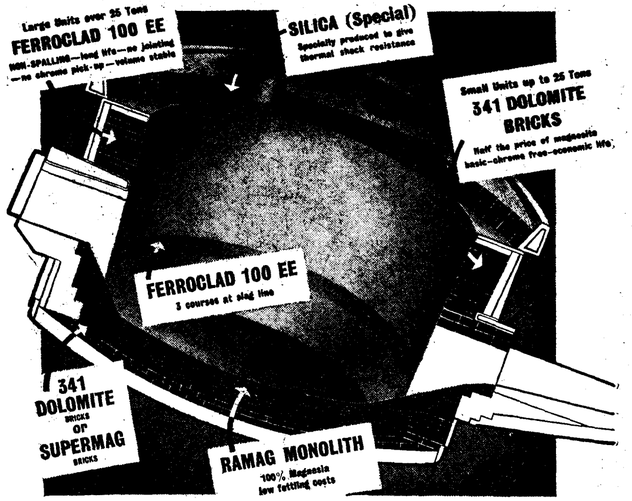
Arrangements have now been made for the settlement of Britain's debt to the European Payments Union, which stood at £135 million when the latter formally came to an end last December. This debt was converted into bilateral debts of £166 million owed to other member countries, and claims against them of £31 million. Of the £166 million, £136 million was covered by bilateral agreements made in 1954, the most notable being with West Germany to which Britain owed £95.7 million. The German debt, repayable over 12 and a half years, is offset against repayments by them of the postwar economic aid. (In 1957, the Germans transferred to London £75 million, from which they have paid five instalments totalling £37.5 million.) Agreements to cover the remaining £30 million mean roughly that the United Kingdom will clear its debts by semi-annual instalments over one and a half or three years.

Interest will be paid at rates in line with interest charged by the E.P.U. and repayments will usually be in the currencies of the creditors. Britain's biggest claim, £27.2 million, is against France. The latter has been treated leniently: repayments will not begin until 1962. Some other E.P.U. debts are being settled by offsetting them against U.K. wartime or postwar claims.

Payments through Banks

The clearing banks have set up a committee to find out if existing methods of transmitting payments can be improved. The cheque system, operating through a countrywide branch organisation, will not be sacrificed; otherwise the committee has a free hand. It has already met several times and a report is expected before the autumn.

Two alternative systems have been used increasingly in recent years—the credit transfer and the third party collection. With credit transfers, of which traders' credits and standing order payments are the most familiar, the account holder tells the bank to debit his account with the total cost of one or more transfers which the bank is to make to other accounts. The recipients may bank with the same branch, or with any banking office in the British Isles. Salaries, dividends, and interest charges are often paid in this way, and some firms, by arrangements, pay most of their bills by the same method. The debtor's account need be debited only once, even if thousands of payments are involved, and much of the paper work can be done by him. The cost of a standing order payment will vary with bank charges, but should be less than that of a cheque. Traders' credits seldom cost more than 6d and often as little as 2d. No revenue stamps are needed.



Third-party collections are those in which cash payments are made over the bank counter to or from those who are not the bank's customers. Account holders can arrange for a bank to pay cash to someone who calls (the system might conceivably be used as an alternative to paying wages by cheque). The main work of the committee will probably be to see how these two systems can be improved.

Motor-vehicles on Hire-purchase

According to *Hire Purchase Information*, the number of motor-vehicle contracts concluded in June was 167,919, compared with 164,315 in May and 115,158 in June last year. The total is higher than in any previous month. Agreements covering new motor-cars fell from 15,058 in May to 14,193 (9,716 in June 1958) but contracts for used motor-cars went up from 74,550 to 78,583 (61,192). Contracts for new commercial vehicles number 6,432 (6,329 in May and 4,113 in June last year), for used 12,780 (13,059 and 9,026), for new motor-cycles 19,440 (18,872 and 6,887), and for used 28,320 (28,161 and 18,943).

BASIC ELECTRIC STEEL FURNACES

HERE'S A *New* REFRACTORY LOOK!

During the past ten years new and improved refractories have been developed for the electric arc furnace producing steel, which have been used in many plants to increase life and reduce overall costs. General Refractories Ltd., are pleased to present their experiences and recommendations for the lining of both large and small units. Full technical information is available on request to assist the user to make the best use of the various types of products available.

GOOD RAIN HELPS PEPPER CROP

LARGER OUTPUT EXPECTED

FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA'S pepper crop prospects for the season beginning in November 1959 are brighter in view of the early advent of the monsoon and that, too, in abundance in Kerala, which is the home of Malabar black pepper. Water being the chief pollinating agent for pepper, good rain in the blossom period will help the farmer to harvest a larger crop. Follow-up rains were also sufficient, and this has helped the growth of the crop. India's crop for the 1958-59 season amounted to 22,000 tons. This is slightly lower than the previous season's harvest. Of this, nearly 15,000 tons accounted for export and home consumption up to the end of June. There might be a balance of about 7,000 tons left for the next four months of the current season. Traders say that a stock of 7,000 tons is not at all a problem for India, since for the past two months, there has not been enough pepper in the market. They add that the steadily increasing home demand will more than compensate the decline in foreign demand.

It is now the harvest period in Sarawak and Indonesia. These two producing countries have had a smaller crop this year. The Sarawak crop is down by about 5,000 tons at 9,000 tons while the Indonesian crop has declined by about 3,000 tons to about 15,000 tons. Consequently, traders expect that a world shortage for pepper will develop this year. The world market for pepper has been passing through a period of uncertainty with mild variations in prices. The market in Singapore is reported to be in a confused mood at the moment, and importers in the West are waiting for prices to stabilise. Cochin quotations for garbled black pepper vary from Rs. 113 a cwt. for ready delivery to Rs. 115 a cwt. for August delivery. New York prices are slightly lower.

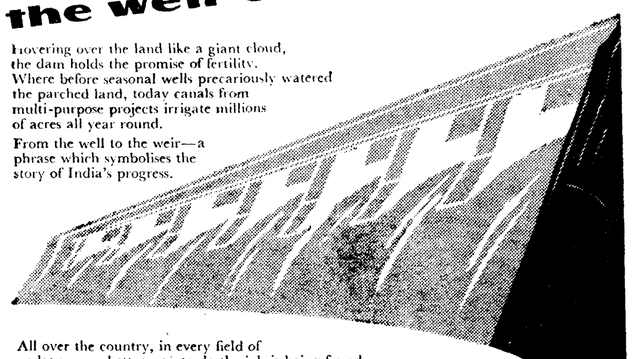
Fall in Lemongrass Oil Output Likely

The lemongrass oil output of India is expected to suffer a major setback this year. Some important exporters in Cochin are pessimistic: they say that production will be only 50 percent of last year's 1,200 tons to 1,300 tons. Growers have lost much of their interest in producing lemongrass oil because of the "unremunerative" price of the commodity. The season started in Kerala in May. But heavy rains for the past one month have been hindering production, so arrivals in the market have been smaller for this time of season. Quality also is comparatively poor since higher water content in grass leads to the deterioration of quality. Although the export demand is not encouraging, prices have improved slightly to Rs. 60 a dozen bottles in the Cochin market due to the shortage of supplies.

The world demand for lemongrass oil is declining because communist China is offering a similar oil. Furthermore, lemongrass oil is being replaced by carbide in the synthesis of Vitamin A in the United States. So keen competition from these quarters is expected in the future.

Export Outlook for Coir Goods

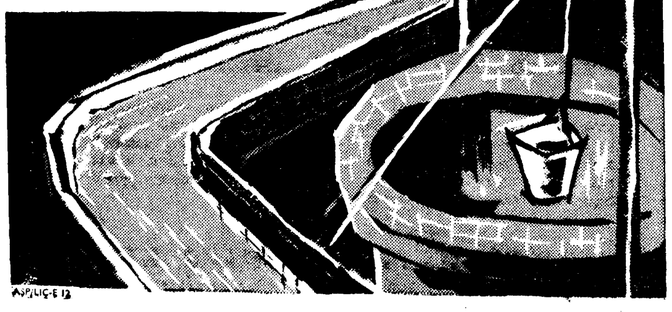
It is said that the Coir Board delegation, which has just returned after a tour of the western countries, has in its report warned that unless manufacturing techniques are improved, the export outlook for mattings, rugs and carpets produced in India will be bleak. Consumer preferences in the West are changing rapidly in favour of better manufactured and attractive floor coverings. Unless Indian manufacturers improve the quality of their products, they will be unable to face competition from their counterparts in Europe and elsewhere. A study of the statistical data on coir goods exports from Malabar coast ports for the past ten years shows that while exports of coir yarn to foreign countries have increased, those of mattings, rugs and carpets have been steadily decreasing. To quote figures: while exports of coir yarn increased from 763,959 cwts. in 1948-49 to 1,249,556 cwts. in 1957-58, those of mattings, rugs and carpets declined from 366,820 cwts. in 1946-57 to 105,517 cwts. in 1957-58.



It is necessary to examine the causes for this steady fall in exports of manufactured coir goods. The decline is attributed, among other things, to competition from sisal. It is said that sisal yarn is fast replacing coir yarn ad that the manufacturing countries in Europe are using the former for weft and that coir mattings so manufactured have become very popular. It is further said that entire mattings made of sisal yarn imported from East Africa have largely replaced coir mattings and rugs because of their attractiveness. These countries are, therefore, exporting matting made out of sisal to the U.S.A. and Canada.

THE CHANGING FACE OF INDIA

the weir & the well



Hovering over the land like a giant cloud,
the dam holds the promise of fertility.
Where before seasonal wells precariously watered
the parched land, today canals from
multi-purpose projects irrigate millions
of acres all year round.

From the well to the weir—a
phrase which symbolises the
story of India's progress.

All over the country, in every field of
endeavour, a better way to do the job is being found.
This needs money...a lot of money. And here the Life Insurance
Corporation plays its part. More than a million rupees a day
are invested by the Corporation both in the public and the private sectors.
Corporation funds are employed to building dams, to mechanising
agriculture, to erecting factories—in fact, to bringing about a
modern and prosperous India. And along with the Life Insurance
Corporation, every policyholder plays *his* part in building a
better life for himself and the generations to come.

Life Insurance Corporation of India

APPLIC-E 12

CALCUTTA TEA AUCTIONS IN JUNE

EASIER TREND IN PRICES

AT Sale B, held on 1st June, 11,104 chests of new season's Darjeelings were catalogued. Quality was rather disappointing. There was a fair demand which eased as the sale progressed, and there were numerous withdrawals with prices generally easier for all grades, say Messrs. Carritt Moran and Co. Private Ltd. in their monthly tea market review. At Sales 1, 2 and 3, approximately 90,300 packages were catalogued. Demand in the first two sales was poor except for the very few bright useful liquoring teas on offer, and there were heavy withdrawals with prices about 10nP to 40nP below valuations. In the last sale, a better tone was noticeable, particularly for plain brokens and bright liquoring teas, but other descriptions were irregular. There were a number of withdrawals and plain fannings and the more ordinary first flush C.T.C. Assams were weak features.

Leaf appearance of Darjeeling teas has maintained a satisfactory standard but, although a few teas with fair flavour have been seen, liquors have generally been rather disappointing and barely average. The appearance of the dry leaf from Assam has been satisfactory, but cup quality has on the whole been of a very ordinary first flush description. A few bright, useful liquoring teas were, however, catalogued in the last sale of the month. Leaf appearance of Dooars teas has been fully average. A few quite useful non-wither legg-cut teas were available but liquors have otherwise been rather ordinary and barely average. Both leaf appearance and liquors of Cachar teas have maintained a fair standard although some invoices catalogued were rather soft and plain in cup.

Sale No. 2 " "	1.63	1.85
Sale No. 3 " "	1.65	1.86

(Exclusive of zonal excise duty)

Internal Market

Only three internal sales were held in June. A small total of 200 chests of leaf was catalogued for sale, of which 98 chests were of new season's manufacture. Quality of the old season's tea was of a typical end-of-season description and the demand was irregular. A total of 58,931 chests of dust was offered for sale, of which 9,229 chests were of new season's manufacture. There was only a fair demand and prices generally showed a decline. Orthodox and legg-cut teas declined in each sale and Darjeeling dusts, though irregular, followed the general trend of the market. C.T.C. teas were also irregular, although Sale 47 witnessed a good demand for the very best kinds. The demand for the new season's dusts at Sale 2 was disappointing and weakened as the sale progressed, resulting in heavy withdrawals.

Quotations

	1958-59	1957-58
	Rs. nP	Rs. nP
Sale No. 46 Clean Plain Dust	1.70	1.50
Sale No. 47 " " "	1.66	1.58
	1959-60	1958-59
Sale No. 2 " " "	Not quotable	1.55

(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 2 totalled 53,449 chests at an average price of Rs. 2.90, compared with 38,017 chests at an average price of Rs. 2.91 for the same period in the previous season. Internal sales at 230 chests of leaf and 5,684 chests of dust (average prices Rs. 1.88 and Rs. 1.83) go against 408 chests and 126 chests, respectively, (average prices Rs. 2.02 and Rs. 2.27) of the corresponding period of the previous season.

The estimated north-Indian crop to the end of May 1959 was 53.86 million lbs, compared with 54.97 million lbs to the same date of last year. The average figure at this date for 1956-58 was 51.93 million lbs.

The price of special export licence fell from 1½nP to ½nP a lb in the first few days of the month, continuing at that price to the end of the month. The validity of special export licence expired at the end of June. Shipping Licence similarly declined in price from 1¼nP a lb in the first few days to ½nP a lb, up to the close. New season's export quota registered a decline in price from 4nP early in the month, to 3½nP and finally 3nP a lb, at which price the bulk of the business was done.

Arrivals (in chests) in Calcutta warehouses during the period 24th May, 1959 to 23rd June, 1959, with the corresponding figures of the previous year in parentheses were : by steamer 139,194 (111,794), by rail 54,561 (28,952) and by air 4,276 (8,843), making a total of 198,031 (149,589) chests. From the beginning of the season 1st April, 1959 to 23rd June, 1959, arrivals have been : by steamer 169,041 (126,350), by rail 77,470 (52,535) and by air 11,011 (19,817), making a total of 257,522 (198,702) chests.

COCHIN TEA SALES

At Dust Sale R. 325,000 lbs of tea were on offer. There was a good general demand, and the market was strong.

Jute

IMPROVED OUTLOOK FOR THE INDIAN JUTE INDUSTRY

I.J.M.A. OFFICIAL POINTS TO FIBRE SELF-SUFFICIENCY AND MILL MODERNISATION

A SPEECH made by the deputy chairman of the Indian Jute Mills Association at a Press luncheon in New York recently should help restore confidence in the Indian industry in North America. He stated that the Indian jute industry is today in a better position to serve its worldwide markets than at any time since the second World War. This has been brought about by assured supplies of raw jute through self-sufficiency, modernisation of mills and more satisfactory financial results. A further incentive is that U.S. burlap consumption in 1958 showed a welcome rise, accounted for 47 percent of the burlap production of the Calcutta mills, and brought India nearly 40 percent of her total dollar earnings.

Since the end of the year, consumption in the United States has again shown an increase. From January to May 1959, it was 372 million yards, which was 26 million yards more than during the corresponding period of 1957, and 22 million yards more than during the corresponding period of 1956. The increase in shipments to America is reflected in the U.S. burlap stock figures, which for May this year recorded a new high of 287 million yards and represented about 3½ months' supply at the current average consumption rate. To meet the increased demand for hessian, not only from America but also from other burlap consuming countries, the unsealing of looms was sanctioned. This should adjust the unsatisfactory ratio between Indian stocks of sacking and hessian.

It is not certain, however, that the increased production resulting from this move will be concentrated on hessian. At current prices, the manufacture of sacking shows a larger margin of profit than that of hessian, so many mills are not willing to alter the manufacturing ratio. From this, it appears that sacking rates might become still more competitive and perhaps enable India to recapture markets recently lost to Pakistan. One of the reasons why current Indian sacking rates are high is the increase in demand due to Pakistani production having reached saturation point for the next quarter. But this state of affairs will not exist indefinitely.

Jute Production in Brazil

According to statistics issued by the U.S. Department of Agriculture, Brazil now takes third place among the jute-producing countries of the world. Official estimates place the output at just over 900,000 maunds. As over the past few years production has been running at a higher level than consumption, stocks of raw jute are high in relation to demand. Brazil's jute mills, which concentrate mainly on bagging, have been working for some time at only half capacity due to the lack of demand for their goods. Brazil is in the fortunate position of being self-sufficient in raw jute for her mills, and also being able to produce all her own requirements of bagging material. However, the raw jute and the finished product are inferior in many ways to those available in other countries, so there seems to be little danger of her becoming a serious competitor in world markets. Token sample shipments of jute to Continental countries were not received as well as was hoped for, and repeat orders were few. It is estimated that, by the end of the year, the Brazilian Government may hold about 450,000 maunds of jute, for which there is no foreseeable outlet.

Crop Estimates

For the first time, the raw jute crop estimates for Pakistan are of relatively little interest to the Indian industry; fibre arrivals from Pakistan in the 1958-59 season amounted to only about 5 percent of the estimated consumption, and are liable to drop even below this figure in the current year. The crop estimates for India, however, are being widely discussed. In 1958-59, it is generally agreed, the final crop reached the record figure of 6.8 million bales. It was much larger than the Government estimates indicated at this time last year, but it is notorious in the trade that the official forecasts usually under-estimate the crop. This year has been no exception. It is understood that for the 1959-60 season, a figure as low as 5.5 million bales has been mentioned, but this must be excluding mesta and bimli. The trade looks upon the estimate with indifference. Internal requirements last season were about 6 million bales, leaving a surplus of 800,000 bales, of which only about 10 percent was exported. This leaves a carry-over of more than 700,000 bales, an all-time record for the Indian crop. It is perhaps this fact that has caused such a low estimate to be given this year.

According to crop reports for the 1959-60 season, indications that there may be a setback in the crop compared with last season are not borne out. In all the Assam and northern areas, sowings this year have been completed at 16 annas of last year. Only in some Murshidabad districts and the local Daissee areas have sowings dropped to 13 annas or 14 annas of last season. Harvesting in Assam and northern Bengal is proceeding steadily in the lowland areas, where plants are now 7½ feet to 8 feet tall. Unless some unforeseen circumstances occur, there is no reason why the outturn in these areas should not compare favourably with last season. In other areas, conditions are satisfactory, with plants in western districts topping the 4½ feet mark, and the crop in a healthy condition.

In Pakistan, it is generally agreed that the crop this season will be smaller. Its condition is reported to be good, and harvesting in the low-lying areas has commenced. Many farmers have not used their licences for growing jute fully, and it is thought that the poor return received for their labours last year is the main cause.

Stocks of Jute Goods

For the fifth consecutive month, stocks of manufactures held by member-mills of the Indian Jute Mills Association showed a reduction in June. Total stocks were 95,900 tons, or 3,500 tons less than in May. Sacking stocks dropped by 3,500 tons to 57,900 tons, constituting 60.3 percent of the whole, and being the lowest figure since March 1958. Other goods showed a substantial reduction of 2,300 tons to 14,300 tons (15 percent), but this was offset by an equivalent rise in hessian stocks to 23,700 tons, which was 24.7 percent of the total. These stocks were the largest for 12 months. In June last year, total stocks were 134,000 tons, made up of 31,000 tons of hessians (23.1 percent), 87,900 tons of sacking (65.6 percent) and 15,100 tons of other goods (11.3 percent). Thus, during the season July 1953 to June 1959, total stocks were reduced by 38,100 tons, most of this coming from the sacking section, which accounted for 30,000 tons. The percentage of sacking produced dropped from 65.6 percent to 60.3 percent, after rising during the season to 73.8 percent in August 1958. The hessian percentages increased from 23.1 to 24.7, but in February 1959 dropped to as low as 13.9. Other goods increased from 11.3 percent to 15 percent.

THE JUTE MARKETS

There was little variation in prices in the futures markets during the past week, and business was limited. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 8th July to 14th July, were as follows:

	Hessians 40in. 10oz. August		Sacking B Twills		Raw Jute Upper Assam September	
	Rs a 100 yds	Rs a 100 metres	Rs a 100 bags		Rs a md.	Rs a 100 kilos
Opening	41.08	44.92	97.80		23.81	63.79
Highest	41.12	44.96	98.25		23.86	63.92
Lowest	40.56	44.35	97.05		23.10	61.89
Closing	40.76	44.57	97.50		23.22	62.21

Manufactured Goods: There was a slight improvement in the jute goods market at the opening last Thursday on the I.J.M.A. gunny stock figures for June. Enquiries from Australia for sacking helped sentiment in heavy goods. Opening quotations for B Twills on Thursday morning showed a rise of 30nP to Rs. 89.15 for July shipment and Rs. 96.50 for January-March. Hessians showed little change and were steady at Rs. 41.55 for July 10oz, and Rs. 39.55 for January-March. Prices moved within narrow limits on Thursday and Friday, but on Saturday there was a general decline. Sacking lost 40nP and hessians 25nP. Overseas enquiries were very limited at this stage, and profit-taking in the futures markets caused a recession. By Monday, sacking had lost a further 50nP and near delivery hessians 25nP, so conditions were quiet. Mills showed little interest in the lower rates and genuine business was negligible. Towards evening, rumours of interest from the Argentine revived activity and on Tuesday small gains were recorded. Speculative activity showed an increase throughout the day, and as a result, rates were maintained.

On Wednesday morning, further small rises were indicated, and opening quotations were as follows:

	July	August	September	Oct.-Dec.
40in. 8oz.	33.50 (36.51)	33.30 (36.30)	33.05 (36.02)	32.20 (35.10)
40in. 10oz.	41.25 (44.96)	41.05 (44.74)	40.75 (44.42)	39.90 (43.49)
B Twills	97.50	97.70	97.35	96.60
Heavy Cees (Plain)	99.25	98.25	97.50	96.50
A Twills	117.00	116.75	116.75	116.75
Liverpools	109.00	108.50	108.50	107.75
Cornsacks	100.00	100.50	100.25	95.60

Raw Jute: Business in the fibre markets showed a distinct improvement during the past week, and more jute was bought than for several weeks. But mills still had large quantities to purchase to catch up with previous years. More offers were put on the market, and these were mainly responsible for the easing of prices during the early part of the week. Most of the business was done in new crop jute, but old crop fibre still had buyers. This was emphasised by the amount of business done in Cossipore not under contract through brokers. Mill representatives made daily purchases on a fairly large scale, and in spite of arrivals being above average, stocks dropped to about 300,000 maunds. In the corresponding week of last year mills reported the purchase of 600,000 maunds or 700,000 maunds on contract; during the current week, purchases on contract barely reached 150,000 maunds. The price difference between old crop and new crop jute remained at Rs. 1.50. Quotations for old crop Assam opened at Rs. 22.50 but after the week-end dropped to Rs. 22 and remained at that level until the close. Wagon arrivals in Cossipore amounted to 470, against 555 in the previous week.

Business in old crop jute consisted of Assam Rs. 22 to Rs. 22.25 and Northern at Rs. 21.75 basis Bottoms and Rs. 24.25 for Middles only. Northern and Assam mesta was done at Rs. 20.50 a maund.

New crop purchases consisted of Assam at Rs. 23 to Rs. 23.50 basis Bottoms for August-September shipment. Murshidabad White passed at Rs. 21.5 and Daissee and Desal White at Rs. 22 and Rs. 31. a maund.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
Old Crop :			
Assam	22.00	58.96	July-Aug
Northern	21.50	57.62	"
Purnea Desal	21.00	56.28	"
Daissee	23.50	62.98	"
Assam Tossa	23.75	63.65	"
Northern (ex Calcutta)	21.50	57.62	"
Mesta :			
Assam	20.25	54.27	"
Desal	20.25	54.27	"
Daissee	20.00	53.60	"
Jungli	19.50	52.26	"
Bimli F.A.Q	20.00	53.60	"
New Crop :			
Assam	23.50	62.98	Aug.-Sep
Northern	23.00	61.64	"
Daissee	24.50	65.66 nom.	Sept.-Oct
Daissee White	21.75	58.29 "	Aug.-Sep
Northern Mesta	21.75	58.29 "	Sept.-Oct
Daissee Mesta	21.25	56.95 "	"

THE FOREIGN JUTE MARKETS

FIRM TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

WITH raw jute prices in Pakistan displaying a firmer tendency during the past week buyers of yarns and cloth in Dundee were operating on a much more liberal scale than hitherto. The position has been so quiet for such a long time that the revival is not surprising. Reports state that good business is being done in raw jute with Continental spinners, several countries being mainly interested in new crop fibre, and the general rise in prices amounts to about £2 a ton. A cheap raw is occasionally quoted for Mill Firsts, Mill Lightnings or Mill Hearts for August-September, but such cases marks are mostly unknown and spinners are not interested.

The lowest for Mill Firsts of the new crop is now £110, Mill Lightnings £91 (though £92 has been done), Mill Hearts £81, but £82 is the most common quotation for August-September shipment. Offers are not now so freely made of any grade of jute, and old crop white fibre is more or less nominal at around new crop terms. Dundee spinners have enough old crop jute, having bought over 200,000 bales more during the past season than for the preceding one. Dark jute is unaltered at £114 for crack Daissee-2/3 and £85 for Grade, £114 for Grade Tossa-2/3 and £95 for fours, July-August and £108 and £95, respectively, for new crop Tossa, September-October, c.i.f.

The Calcutta goods market has ruled firm and hessian prices have changed little.

I.J.M.A. PRODUCTION FIGURES FOR JUNE

The Indian Jute Mills Association reports total production of jute goods for June as follows:

Description		Quantity	
1. Gunny Bags			
(a) Hessian	2,435 tons	(2,474 metric tons)	
	92.7 lakh yds.	(84.75 thousand metres)	
	59.1 lakh Nos.		
(b) Sacking	34,914 tons	(35,474 metric tons)	
	8,26.9 lakh yds.	(7,56,10 thousand metres)	
	3,77.9 lakh Nos.		
2. Gunny Cloth			
(a) Hessian	35,312 tons	(35,879 metric tons)	
	13,47.9 lakh yds.	(12,32,53 thousand metres)	
(b) Sacking	879 tons	(893 metric tons)	
	24.1 lakh yds.	(22,08 thousand metres)	
3. Other Manufactures	9,144 tons	(9,291 metric tons)	
4. Total Production			
(All kinds)	82,684 tons	(84,011 metric tons)	

Summary

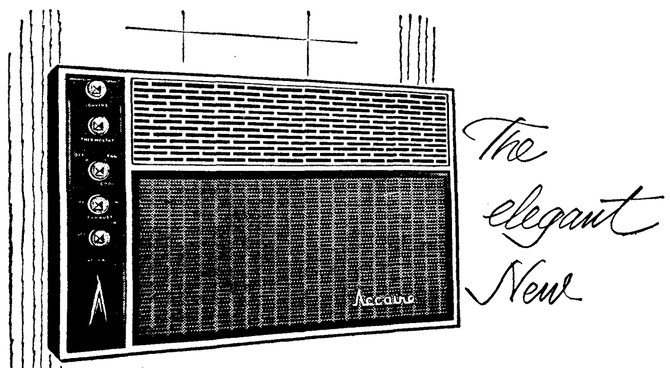
(00,0.0 yds. and 000 metres) (000 tons and metric tons)

	June 1959	May 1959	June 1958	June 1959	May 1959
Hessian	14.41 (13,17,28)	15.18 (13,88,10)	11.81 (10,79,79)	37.8 (38.3)	39.7 (40.4)
Sacking	8,51 (7,78,18)	8,91 (8,22,38)	11.03 (10,08,17)	35.8 (26.4)	37.9 (38.5)
Others				9.1 (9.3)	9.2 (9.3)
			Grand Total	82.7 (84.0)	86.8 (88.6)
			Hours worked	200.5	206.0

N.B.—These statistics are based on replies received represent all members of the Association and G bhai with estimates for three non-member mills. figures in brackets are metric measures and tho length being based on the actual (detailed) fig are more precise.

Commodity Markets

WHOLESALE PRICE INDEX FALLS



THE official wholesale price index (base : year ended March 1953=100) receded by 0.5 percent to 115.5 during the week ended 27th June, 1959, compared with 116.1 for the earlier week. The index was, however, higher by 0.8 percent and 1.9 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The monthly average for June 1959 worked out to 115.6, against 114.0 for May 1959 and 111.7 for June 1958. The index for Food Articles declined by 1.0 percent to 118.3, compared with 119.5 (revised) for the previous week due to a fall in the prices of oranges in Madras (–10%), milk (–9%), salt in Calcutta (–5%), mung (3%), mustard oil (–2%) and rice, cashewnuts groundnut oil, coconut oil and betelnuts (–1% each) although the prices of potatoes (+27%), Cat fish (+19%) and meat (+12%) both in Bombay, onions (+10%), eggs in Bombay (+9%), maize in Bahraich (+8%), ragi in Salem (+7%), bajra in Jodhpur, masur in Patna and bananas in Bombay (+5% each), and jowar, arhar, ghee, gur and cardamoms (+1% each) showed advances. The index for Tobacco rose by 1.1 percent to 97.4 as a result of an increase in the prices of raw tobacco (Pollah F.A.Q. medium) in Calcutta (+6%). The index for the Fuel, Power, Light and Lubricants group stood at 116.3, against 116.4 (revised) for the earlier week. Castor oil (–1%) showed a fall during the week. The prices of raw skins in Kanpur (–11%), mustardseed in Delhi (–5%) and groundnuts (–1%) showed a fall while raw wool and cottonseed (+1% each) moved up, and the index for Industrial Raw Materials declined by 0.2 percent to 120.1, against 120.4 (revised) for the previous week. The index for Intermediate Products stood at 108.3, compared with 108.2 for the earlier week. The prices of lead (+3%), tin (+2%) and zinc (–1%) showed variations. An increase in the prices of drugs and medicines and oilcakes (+1% each) was almost neutralised by a decline in the prices of jute manufactures and bicycles (–1% each), and the index for Finished Products remained stationary at its previous week's level of 109.4.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53=100)

Groups and Sub-Groups	Week Ended 27-6-59	20-6-59	28-6-58
I. Food Articles :	118.3	119.5(R)	116.1
(a) Cereals	102.0	102.1(R)	106.8

Accaire AW-102 (A.C.) DW-102 (D.C.)

WINDOW-TYPE ROOM AIRCONDITIONER

The new Accaire comes up with an impressive list of plus features. Within the elegant exterior styling, is an airconditioning unit that is engineered to give you long, efficient and trouble-free service ; a minimised electric consumption ; whisper-quiet operation ; a constant supply of purified, dehumidefied air and consequently, just the right conditions that promote good health and better living.

● A.C. or D.C., I.H.P., I Ton Capacity ● Compact Unit ● Whisper-quiet in operation ● One-year guarantee ● Easy to install ● Attractive design and shade ● Low upkeep cost

Well-organised Service Department at your command

AIR CONDITIONING CORPORATION PRIVATE LTD.

Also manufacturers of Accooler Water coolers, Buffalo Industrial Fans, and Pioneers in Airconditioning engineering

FAIR DEMAND AT TEA EXPORT SALE

DUST PRICES FIRM

AT Sale No. 5, held on 13th and 15th July, there were 42,743 chests on offer at the Export auction, and quality showed a further improvement. There was a fair demand which improved as the sale progressed, and although satisfactory prices were paid for the best liquoring teas on offer, buyers were discriminating. "Teas for price" and plain brokens ruled at firm to dearer rates but similar Fannings grades were irregular and sometimes up to 4nP easier. The brighter Legg-cut teas sold well but the more ordinary kinds were easier and at times difficult to sell. The bright liquoring orthodox and C.T.C. Assams were irregular and generally sold at slightly easier rates. The bright O.Fgs. were well supported and were firm and sometimes dearer but the remainder were irregularly easier. First flush C.T.C. offerings, however, were again neglected. The more stylish leaf grades showed a slight decline while the remainder were generally 10nP to 20nP easier. Tippy teas also sold considerably below last rates. Darjeelings met with fair support and showed a further decline although the most flavoury types were keenly competed for at dearer rates.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.96	2.40 to 2.50
Plain B.P.	1.66 to 1.72	1.84 to 1.88
Plain Fannings	1.60 to 1.66	2.00 to 2.10
Medium B.P.	1.95 to 2.00	2.30 to 2.50
Medium Fannings	2.10 to 2.20	2.50 to 2.70
Best Assam C.T.C. B.P.	3.40 to 3.60	4.30 to 4.80
Best Assam C.T.C. Fgs.	4.00 to 4.40	4.80 to 5.30

(Quotations are exclusive of excise duty.)

At the Internal Sale, there were 14,860 chests of Dust on offer, of which 108 were of old season's manufacture. There was a good general demand. Orthodox Dusts were firm to dearer, particularly the powdery kinds. Legg-cut Dooars were up to 6nP dearer while powdery types in this category also received good support. Darjeeling Dusts again sold at generally lower rates. Medium C.T.C. Dusts were irregular, the more ordinary descriptions were up to 20nP easier and were often difficult to sell, especially towards the close. Where quality showed an improvement, however, prices were firm and often dearer. The very best C.T.C. Dusts generally followed this trend, more interest being shown in the exportable types which often showed appreciable advances. Useful liquoring powdery kinds also met with good competition and realised satisfactory prices.

Quotations

	Rs. 1959	Rs. 1958
Medium Dooars Dust	1.70 to 1.74	1.66 to 1.70
Medium Assam Dust	1.70 to 1.78	1.74 to 1.80
Medium Assam C.T.C. Dust	2.00 to 2.30	2.20 to 2.50
East Assam C.T.C. Dust	2.80 to 3.20	2.90 to 3.20

(Quotations are exclusive of excise duty.)

Leaf offerings amounted to 297 chests.

LINSEED DULL

Activity in linseed last week was limited, and the general condition of the market was dull. Prices were maintained and there was very little movement either way. Crushers showed some interest in forward deliveries, but sellers were reserved. Business in oilcake was negligible with overseas buyers pausing. Trading in the oil market was slow, and buyers showed a meagre interest at lower prices only. Trading in the linseed options market for September delivery began on 15th July, under the auspices of the Calcutta Wheat and Seeds Association. With a view to curbing speculation, margins have been fixed at Rs. 2 a maund if prices rise above Rs. 24 a maund, Rs. 4 if above Rs. 25, and Rs. 6 if above Rs. 27.

Latest quotations are as follows: Ready-July Rs. 22.50 a maund and August Rs. 22.75 a maund.

HIDES AND SKINS FIRM

The hides and skins market was firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 7th July and 13th July, 1959)

Cowhides : Wet salted (Ord.) 15,000 pcs. on the basis of Rs. 13.50 to Rs. 16.25 ; Wet salted (Slaughtered) 16,600 pcs. on the basis of Rs. 14 to Rs. 26.

Goatskins : Wet salted (Patna, Daissee, Kustia) 66,000 pcs. on the basis of Rs. 390 to Rs. 400, Rs. 430 to Rs. 440 and Rs. 480 to Rs. 500 ; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece ; Assam-Dinajpur 11,500 pcs. on the basis of Rs. 350 to Rs. 415 ; Purneah-Kissenganj 15,000 pcs. on the basis of Rs. 410 to Rs. 420 ; Patna-Pakur 38,200 pcs. on the basis of Rs. 375 to Rs. 380 ; Muzafferpore-Patna 12,000 pcs. on the basis of Rs. 390 to Rs. 400.

Bazaar Stocks

(13th July, 1959)

Cowhides : Wet salted 70,000 pcs.

Goatskins : Wet salted (Daissee, Patna, Kustia, Killed) 32,300 pcs.; Assam-Dinajpur-Maldah 55,000 pcs.; Muzafferpore-Patna-Pakur-Purneah 1,30,500 pcs.

COMPANY AND PUBLIC NOTICES

BURMAH-SHELL REFINERIES LIMITED.

ACCOUNTS 1958

THE Directors' Report and Accounts reveal the following items of interest.

2.27 million metric tons of crude oil were processed during the year, yielding 2.23 million metric tons of finished products.

Capital expenditure during the year amounted to Rs. 34 lacs.

As anticipated last year the profits for 1958 show a decrease compared with 1957 due mainly to the narrowing of the margin between refined products and crude oil prices and to the increased liability to taxation.

The net income for the year ended 31st December 1958 after providing for depreciation and an estimated liability for taxation amounts to Rs. 309 lacs

To which is added the balance brought forward from last year of 42 „

Rs. 351 „

From which has been appropriated—

Dividends	Rs. 207 lacs	
General Reserve	82 „	
Tax Equalisation Reserve	8 „	Rs. 297 „

Leaving to be carried forward to next year's account Rs. 54 „

The Government has accepted an offer by the Company to surrender, as from 1st July 1959, the duty protection enjoyed on Furnace Oil, High Speed Diesel, Light Diesel and Bitumen and the Government has agreed to an increase in the refinery intake to approximately 2.6 million tons per annum which will help materially to rectify the present imbalance of products and will also result in a saving of foreign exchange. The effect of this Agreement as regards the financial results for 1959 will be a reduction of income from refining.

The Company are also examining a scheme for increasing the refinery intake up to 4,000,000 tons of crude oil per annum and a plant for the manufacture of Lubricating Oils. Government have given us their assurance that when these proposals are submitted with all necessary details, they will be examined by them on their merits.

THE INDIAN IRON & STEEL COMPANY LIMITED.

12, Mission Row, Calcutta.

NOTICE.

THE Board of Directors of the Indian Iron & Steel Company Limited in meeting held to-day has decided that the Ordinary Share Register and Transfer Books of the Company will remain closed from Thursday the 20th August, 1959 to Thursday the 3rd September, 1959, both dates inclusive, for the purpose of payment in due course of dividend for the year ended 31st March, 1959, on the Ordinary Shares ranking for such dividend, that is to say, exclusive of the Bonus Shares issued in February, 1959. The dividend when declared will be paid to those shareholders entitled thereto whose names appear on the Company's Register of Members for Ordinary Shares on the 3rd September, 1959, or to their mandatees.

Announcement of the Directors' recommendation of the dividend for the year ended 31st March, 1959, will be made in due course.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

14th July, 1959.

TEZPORE TEA COMPANY, LIMITED.

NOTICE is hereby given that the Forty-first Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday the 13th August, 1959, at 3-30 P.M. for the following purposes :—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1958.
(2) To declare Dividends.
(3) To elect a Director.
(4) To appoint Auditors and to fix their Remuneration.

The Transfer Register will be closed from the 3rd August, 1959 to 13th August, 1959, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 23rd June, 1959.

BAREILLY ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta-1 on Monday, the 10th August, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-20 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely :—

"That approval be and is hereby accorded to the appointment of Martin Burn Limited, the present Managing Agents of the Company, as Secretaries & Treasurers of the Company for a period of 10 years with effect on and from the 16th August, 1960 on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of identification signed by the Chairman thereof."

KUMARDHUBI ENGINEERING WORKS LIMITED

AT a meeting of the Board of Directors held recently it was decided to recommend the payment of dividends for the year ended 30th November, 1958 as under :—

On Cumulative Preference shares @ 5% p.a. without any deduction for Income Tax payable by the Company.

On Ordinary shares @ 30 nP per share without any deduction for Income Tax payable by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 9th July, 1959.

stepping forward

Marking an important technological advance stands the new Rs. 55-million sinter plant at the Jamshedpur Works. This plant — the first of its kind in India — will help to improve the efficiency of the blast furnaces, and increase the output of iron. Besides, the sinter process permits the use of fine-sized ore and coke, hitherto wasted.

TATA STEEL

The Tata Iron and Steel Company Limited

UPPER JUMNA VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED.

THE PRIVATE FOREIGN INVESTOR STAYS OUT

THE flow of private foreign capital into India remains slow, fitful and extremely inadequate. Whatever illusions the heady coconut juice of ministerial verbosity may inspire, to the foreign investor at least India is not the land of opportunity. It is arguable that, over the past ten years, the amount of foreign capital coming to this country has neither shrunk nor increased; it has merely fluctuated, although it has done so quite violently if judged by its own lilliputian standards. The study of "Foreign Investments in India: 1957 and 1958", published in the latest issue of the *Reserve Bank of India Bulletin*, indicates that no improvement in the inflow of private capital has taken place, nor is any yet in sight. This is a gloomy discovery in the light of the Government of India's claims that it is doing all it can to attract foreign capital, for it implies that the efforts have yielded nothing. It is the more gloomy considering that, as a recent U.N. survey has shown, the international movement of private capital over the world as a whole has expanded substantially. The need for long-term foreign investment in this country is becoming steadily more acute since the foreign exchange reserves are declining, exports are stagnating, and the period is fast approaching when heavy liabilities will arise in connection with the amortisation of past external loans. Considering the vast scope India has for attracting more capital, the record so far has been extremely disappointing.

The studies of foreign investment in India published by the Reserve Bank hitherto covered the period until the end of 1956, and indicated tentatively the trends up to the end of 1957. The latest one takes more comprehensive account of the data for 1957, and offers some tentative indications concerning 1958. It estimates that the net inflow of non-banking business investments was Rs. 48.8 crores in 1957, against Rs. 36.8 crores in 1956 and an annual average of Rs. 17.6 crores in the two years 1954 and 1955. As a result, the book value of the outstanding investments at the end of 1957 aggregated Rs. 555.6 crores. The variations in the net inflow during each of these years are due to the sums provided by one single agency—the World Bank—more than to any other factor. This institution supplied Rs. 32 crores in 1957, against Rs. 12.1 crores in 1956 and an annual average of Rs. 1.4 crores in 1954 and 1955. The net inflow of private foreign capital (that is, excluding the World Bank's contribution) dropped sharply to Rs. 16.8 crores in 1957 from Rs. 24.7 crores in 1956, and at the former level was only fractionally above the annual average of Rs. 16.2 crores in 1954 and 1955. The main conclusion to be drawn from these statistics is that the World Bank is lending money to India more liberally, but the private investor is not. Three factors responsible for the difference may be that: (1) the former enjoys special security; (2) interest is guaranteed on the straightforward loans it gives; and (3) the Government is less reluctant and less sluggish in negotiating with the World Bank than it is in dealing with the proposals put forward by private investors.

The Reserve Bank study argues that there were special reasons for the sharp decline in the net inflow of private foreign capital in 1957. Capital repatriation increased substantially, since Rs. 4.8 crores was paid as compensation to life insurance and gold mining companies following their nationalisation a little earlier. There was also a sharp decline in the retained earnings of foreign enterprises. While the advantages of the nationalisation measures are yet to be discovered, it may be salutary to note that they cost India the equivalent of over one-fourth of the net private capital inflow she got in the whole year 1957; the discouragement they provided to potential investors abroad is not susceptible to equally fine calculation, but might well have been more serious in its consequences. As for retained earnings, the Reserve Bank seems to be labouring under two delusions. One is that these fell because of "special factors": fluctuations in retained earnings, on the contrary, represent a normal response not only to the profitability of business but also to assessments of business prospects. The second delusion to which the Reserve Bank study subscribes is that "since the investors concerned are free to transfer their entire profits abroad, the decision to retain the profits in business (in India) is likely to be governed by more or less the same considerations as are applicable to any decision to bring new capital from abroad." This is false: in most established and well-run enterprises, there is a certain compulsion to plough back part of the profits even if the level of working is to be merely maintained, whereas no such compulsion governs the flow of new capital.

In its analysis, the Reserve Bank points out how the decline in retained earnings was brought about by the fall in the profits of foreign enterprises during 1957. It omits to mention, however, that if foreign enterprises reinvested less of their profits in 1957 than they did in 1956, it was not only because those profits fell, but also because the incentive to reinvest was sharply undermined by the economic gloom succeeding the Krishnamachari Budget of May 1957, especially its provision for a bonus share tax. Tea companies, in particular, had a bad year, so much so that money had to be withdrawn from, instead of added to, their reserves. Petroleum concerns earned less because the refining companies surrendered the duty protection they enjoyed until the last quarter of 1956. The earnings of other companies, including those in the manufacturing group, declined as taxation became heavier under the 1957-58 Budget and as the raw material shortages resulting from import restrictions forced cuts in production. The lower profitability cannot have failed to impress potential foreign investors who might have been thinking of putting their money into India.

The general position concerning the inflow of foreign capital seems, from the data so far available, to have been no better in 1958 than in 1957. On the contrary, in many ways it was worse. The total amount of foreign capital invested in the private sector in India was approximately Rs. 35 crores last year, against Rs. 48.8 crores in 1957. Most of it (Rs. 25.2 crores, against Rs. 32 crores) again came from the World Bank. The net inflow of private foreign capital fell to barely Rs. 10 crores, from Rs. 16.8 crores in 1957 and Rs. 24.7 crores in 1956. The sharp decline in the investments made in the oil industry last year apparently more than offset the decrease in capital repatriation (around Rs. 3 crores, against Rs. 9.1 crores in 1957), the increase in reinvested profits (about Rs. 6 crores or Rs. 7 crores higher) and the minor increase in the inflow of fresh capital (about Rs. 1 crore or Rs. 2 crores higher). In other words, India got less foreign capital in 1958 than in 1957, because the World Bank gave less and the oil companies invested less, although the inflow under certain other heads showed a relatively minor increase.

It is said that a large variety of truths, half-truths and lies are deducible from the same set of statistics. In conformity with the dictum, it is possible to draw varying conclusions from the figures compiled by the Reserve Bank, according to the dictates of personal or ideological predilection. Apologists for the Government can say, for instance, that India is so lucky in the wisdom of her statesmen that she has been able almost to treble the net inflow of non-banking business investments between 1954 and 1957. They may even find it convenient to nourish the pretence that whenever there has been a sharp fall in the net inflow of private foreign capital, it has been due to "special factors", such as the periodical misfortunes of the tea industry or compensation payments for nationalisation. But debate on these lines is likely to be singularly fruitless. On an overall view, the main conclusions to be drawn from the Reserve Bank statistics covering the trends in recent years are six in number. Firstly, the inflow of foreign investment to India has varied sharply from year to year. Secondly, in every single year out of the past ten, it has been extremely small not only in relation to the country's needs but also in relation to what could have been obtained if incentives comparable to those available in other borrowing countries had been provided. Thirdly, the World Bank's investment in India has been showing a welcome increase, perhaps because it is partially immunised against the risks attaching to other private investment. Fourthly, although the flow of *fresh* private capital into India may have increased a little in recent years, the *net* inflow of private capital (including retained earnings) does not by any means show a rising trend. Fifthly, although both are important and necessary, the Government has yet to recognise that private equity investment offers certain important advantages compared with, say, loan capital obtained from the World Bank; the former does not necessarily have to be repaid within a fixed period of time, and it brings with it the technical know-how and experience which this country needs as much as she needs foreign money. Sixthly, the foreign capital inflow figures are considerably inflated by the element of retained earnings; without it, they would look even less satisfactory than they do.

DEVELOPMENT COUNCIL FOR MOTORS

THE addition of a Development Council to the already impressive number of official and semi-official bodies which, during the past few years, have bestowed their ineffective, or even positively harmful, attentions on the motor-car industry, can scarcely be welcomed as an event of supreme significance either for the manufacturers or for the national economy. What is really required is not a Development Council, but a Salvage Commission not even the smooth, reassuring, self-congratulatory speech of the Government spokesman, Minister for Industry, Mr. Manubhai Shah, at the first meeting of the Council in New Delhi last week could hide the fact that the industry is in deplorable shape. There is certainly a good deal a Development Council can do, but if it restricts its investigations and recommendations to the internal organisation and functioning of the industry, as is usually intended of such bodies, the surface of the main problems will not even be scraped. Development along existing lines is a contradiction in terms. If the industry is ever to escape from its present predicament, its functions and difficulties will have to be viewed both by the Government and the existing manufacturers in an altogether different light. The new Development Council will need to interpret its own functions in the widest possible sense if it is to get anywhere at all. What is wanted is nothing short of a complete reorientation of official policy and established prejudices; and that is the kind of herculean achievement of which such bodies as Development Councils have so far proved themselves entirely incapable.

The figures of production the Minister himself quoted tell a dismal story of the industry's decline

in recent years. Since 1956, the total of motor vehicles built in India has fallen from 32,138 to 25,631. The estimate for 1959 has, of course, been pitched well on the optimistic side; at 34,500, it need be believed only when seen. In shouldering the greater part of the responsibility for this unfortunate state of affairs, the Government can console itself with one thing—it has certainly solved the problem of inadequate demand which was reported to be holding up the progress of the industry some few years ago. Mr. Shah took great pride in the increased use of indigenous components, but quite naturally did not dwell on the impact this has had on prices. He mentioned the restrictions on the number of manufacturers and the types they are producing, without, of course, analysing the effect this is having of cramping technical development, curtailing competition and saddling the country with a fleet of out-dated vehicles. Considering the mess which Government policy and the efforts of the Tariff Commission have already got the industry into, it would be too much to expect a Development Council to have any appreciable effect at all. Perhaps some improvement can be hoped for when the report of the Automobile Committee, which Mr. Shah says can be expected in September, is available for the Government's guidance. Much will depend on how strongly its recommendations conflict with the undeniable need to conserve foreign exchange. But if the industry is as important to the national economy as Mr. Shah says it is, then it certainly deserves a larger proportion of the country's earnings, which alone will see it over its present difficulties.

Perhaps the main task which any Development Council for the motor-car industry should set itself is the reduction of prices and the improvement of quality. When the present lag in output caused by shortage of foreign exchange is made up, these two items will once again help limit the expansion of demand. There can be no quarrel with the Government's aim of eventually manufacturing entire vehicles; the main complaint is that the pace of self-sufficiency has been forced too hard in the past three years. Indigenous component suppliers have had too easy a market. The result has been poor quality and high prices, together, no doubt, with the high profits which the Government is supposed to abhor, but which its policy all too often leads to. It is little wonder, under the circumstances, that motor manufacturers, instead of encouraging ancillary industries as they ought to be doing, are tending instead to bring all stages of production under their own roofs. They are scarcely to be blamed for this,; a reputation is all-important in the motor-car industry. But this reluctance to develop along the lines followed in more advanced economies, is of little help to India and Mr. Shah is right when he says that: "For a healthy and balanced development of the automobile and allied industries as a whole, it is essential that there should be perfect co-ordination between these two inseparable sections..."

The healthy development of ancillary industries is not, however, the most important element in the price problem. Many of the present difficulties in this particular field, as in many others, depend upon the expansion of demand. This, in turn, is equated with such factors as good roads, the taxing and licensing practices of State Governments, social habits and the general standard of economic development, as well as simply price and quality. Demand for commercial vehicles has been growing at a satisfactory rate, and at least as fast as the industry's ability to satisfy it. Limiting factors, at the moment, are probably related more closely to Government policy, both at the Centre and in the States, than to the technical conditions existing in the industry. Thanks to the inefficiency of the railways, commercial vehicle operation is profitable even at present vehicle prices. The industry can probably look forward to a fairly steady increase in demand during the next few years for lorries, jeeps and other such products, limited only moderately by circumstances of price and quality. It is not possible to say the same for passenger cars, and no motor-car industry can maintain health and efficiency on commercial vehicle output alone. This is probably where Government policy has been most at fault. The steady deterioration in the number and quality of motor-cars available to the Indian public from all sources has been a potent factor in limiting demand for the product. The motor-car habit is not automatically acquired: it needs a certain amount of cultivation. What has happened in India is that it has simply been discouraged, with the result that prices continue impossibly high, quality deplorably low and running costs extortionate. The present policy of limiting output to only three passenger cars can be partly excused only in terms of the foreign exchange emergency. It would be surprising if the Development Council did not find that one of the quickest ways to help the industry, apart from liberalising imports and encouraging efficient ancillary production, is to increase the number of motor-car models available, and with them the number of producers, so as to stimulate buying interest.

The Government's attitude towards motor-cars has been ruled for too long by socialistic prejudices and a narrow conception of consumer needs. Passenger car output in this country will not be adequately sustained by the requirements of Government departments, large as these may be. It is to the general public that the industry will have to look for any rapidly growing market. This raises a topic with which the new Development Council will no doubt soon concern itself, a low-priced family motor-car. It can be said without too much hesitation that under present circumstances such a project is next to impossible. There is likely to be no shortage of manufacturers prepared to try it, if sufficient foreign exchange is available. And no doubt a more reasonably priced vehicle than any at present available, can be turned out. But a really low-priced, good-quality small car, desirable though it may be, depends on a number of factors which simply do not exist in India at the moment. Among these can be included efficient ancillaries, high-quality engineering techniques, a large market, and so on. An attempt to turn out a small car to a fixed, low price therefore, would be likely either to lead to disappointment or to a Government subsidy.

If and when the new Development Council goes into the problem of popular car production, it will find it complicated by a number of social and economic factors which must be accepted as realities at least for the time being. These are, chiefly, the prevailing bullock-cart mentality of both the Government and general public—although the reluctance of the latter to becoming mechanised need not be exaggerated—and the pursuit of socialism. Efficient motor-car industries are peculiar to capitalist consumer-orientated economic systems. They cannot exist in rigid, State-directed, bureaucracy-ridden economies of the kind India is building. Any Development Council for the motor-car industry in this country, therefore, is likely to find itself in politics in just no time at all.

TAKE-OVER BIDS IN THE U.K.

THE British Government rejected the recent suggestion by a Member of Parliament that a Select Committee should be appointed to investigate the consequences of amalgamation of industrial and commercial organisations into big units. But that the suggestion should be made is evidence of anxiety concerning "take-over bids" in Britain. They have become not only more numerous but also more sensational in recent months—though not even the struggle for control of Harrods, the department-store group, has been more dramatic than the fight for the British Aluminium Company late last year. Incidentally, that drama has a sequel: Aluminium Company of America, which failed to secure an interest in British Aluminium, has entered into partnership with Britain's giant Imperial Chemical Industries to form a new aluminium company in Britain. "The aluminium affair" marked the beginning of a new phase in take-over bids, characteristic of which is the large size of the companies involved. Breweries, stores, publishing houses, insurance companies, food-processing firms, of national—even international—repute have been prominent in this year's bids. It is mainly because the companies concerned are so big that critics have professed to see in the movement something more sinister than consolidation. They suggest that various sectors of British business are tending towards monopoly.

Examination of the most prominent cases does not confirm this idea. There are principally two apparent motives behind the bids: to acquire another company's properties on relatively favourable terms (then to sell some of them or to put some of them to different uses), or to strengthen the bidding company's position so that it will be able to compete more effectively. The acquisitions achieved, or intended, so far imply stronger competition rather than monopoly. If the movement continued beyond a certain point, however, its character would change. This aspect of the movement should be watched—if only because an eminent an industrialist as Lord Chandos has foretold that the Restrictive Trade Practices Act will promote amalgamations, and an amalgamation whose purpose was to evade the application of the Act would obviously not be intended to strengthen competition. Another objection to take-over bids is that they are allegedly planned by slick financiers, adept in the manipulation of assets but not interested in the steady processes of industry and trade. Obviously, this charge is irrelevant to genuine amalgamation of companies that are already engaged in steady business of like character, but it may have some force where a "financial wizard" interests himself in some enterprise outside his industrial or commercial—as distinct from financial—range. The difficulty in such a case is to decide whether the financier is a disruptive intruder or a creative force. He may get quick profits out of a sound business, weakening it, even destroying it, in the process; or he may re-energise a business that lacks initiative and is incapable of making the best use of its assets.

There are, of course, such businesses, and the defenders of take-over bids assert that such bids are not only beneficial when they achieve their purpose but also necessary as a notional threat to any board of directors that is becoming too set in its ways. Any act or threat that makes management keener is, of course, health-giving. But the defensive actions of some directors are not in the long-term interests of the business. If directors who have for many years kept dividends, in relation to earnings, relatively small decide suddenly that a much more liberal policy is permissible, it may be that they are belatedly correcting a wrong policy, or it may be that they are so anxious to raise the price of the company's shares, to encourage a potential bidder, that they are willing to dissipate resources that ought to be employed in the business. Such changes are more often defensive on the part of a "threatened" company, than aggressive, on the part of a company engaged in competitive bidding. But one most desirable change has occurred on the bidder's side in the course of the bidding for Harrods. One of the contestants, House of Fraser, which was offered partly its almost-voteless ordinary shares to shareholders of Harrods, declared in the midst of the affray that full voting rights would be accorded to these shares. Mr. Hugh Fraser, the company's chairman, denied that the move was directly related to his bid for Harrods, but the stock market, content to think its own thoughts on the matter, promptly raised the price of the shares and, correspondingly, the value of the offer for Harrods. Voteless shares are disliked, particularly by insurance companies and other institutions—the Birmingham Stock Exchange has already taken action against them—and if a particular take-over bid has indirectly helped to enfranchise shareholders (it is thought that the example must be followed) this side-effect will be important.

Indeed, the question of votes is not really

can be persuaded to exchange these shares for voteless shares in another company if the terms of exchange are attractive; and if the acquiring company is effectively controlled by a small body of men they can extend their control over a wide range without corresponding financial commitments. Because insurance companies, particularly, dislike the principle of separating ownership from control, and because insurance companies own substantial blocks of shares in companies (*e.g.*, Harrods) which are or may be attractive to bidders, the practice of offering voteless shares in exchange for voting shares will quite possibly be abandoned Such a change in the method of acquiring businesses would allay the fear, in many people's minds, that relatively few individuals or groups will ultimately gain control of Britain's industry and trade. It is not, perhaps, an entirely rational fear, but it is certainly an element in the present opposition to "take-overs". The opposition is not unhealthy, for public scrutiny of take-over bids can help to ensure that their methods are fair and their purposes beneficial. But to deny that their purposes can ever be beneficial is another matter. Some companies' assets could certainly be employed better by other interests than they are by the present directors; and consolidation into larger units (though it can be disastrous in the few cases where a large unit is mismanaged) tends in most cases to reduce costs. The two basic purposes, redeployment and consolidation, are distinct. A nation that aims at efficiency cannot afford to reject either.

Current News and Comment

Hindustan Motors Pays Lonely Spinster

The rise to Rs. 10.81 in the price of Hindustan Motor shares, following the declaration of a maiden ordinary dividend of 5 percent a couple of days ago, might well prove to be short-lived. The scrip are fully priced, as at the current quotation the yield works out to 4.6 percent. There is little indication that future dividends can be improved, so the price appears to discount most of the favourable factors which can be foreseen for the time being. For the motor-vehicle industry as a whole, there are hard days ahead. The output of motor-cars, lorries and buses is expected to increase from 26,800 in 1958 to 34,500 in 1959. But the latter level of production will still be low, so the producing units will remain uneconomic and production costs will be high. Maintaining the current output depends to a great extent on imports of components; no one can tell how the official policy on imports will change, especially if the foreign exchange reserves deteriorate further.

Motor-vehicle companies have reason to be worried about the increased output of trucks from the Government's ordnance factories. Of greater concern is the move to explore the possibility of producing low-cost cars in India; it is hoped that the Government-sponsored committee will recommend their manufacture in order to encourage motor transport. The industry faces a difficult situation. If demand does not increase, production cannot be increased. If production is not increased, costs will remain high. Consumers are forced to pay exorbitant prices since the domestic market is insulated against competition by the ban on imports of fully-assembled motor-cars. As a result, nobody buys a motor-car unless it is absolutely necessary for him to do so. It is time, therefore, that steps were taken to produce and sell motor-vehicles at a reasonable price.

As far as the shareholders of Hindustan Motors are concerned, they need not be enthusiastic merely because a dividend has been declared. It remains to be seen from the coming report, for the year ended March 1959, whether the dividend is being paid after providing fully for depreciation. The accounts for the year ended March 1958 showed arrears of depreciation amounting to Rs. 1.40 crores. It may soon be illegal to pay dividends without providing adequately for depreciation, if the proposed amendment of the Companies Act on this matter is passed. The amendment should be passed, considering that depreciation has become essential with the rise in the prices of machinery and equipment. The management seems to have been keen on paying an ordinary dividend as soon as possible because the preference shares are redeemable at par at any time after 30th June, 1963, at the option of the company by giving three calendar months' notice; holders also have the right to convert preference shares into ordinary shares in the ratio of 10 ordinary shares for one preference share on or after 1st July, 1961, but not later than 30th June, 1966, if the preference shares remain unredeemed at that time.

Shareholders without "Grossing"

Some company reports, especially of banks, which have appeared recently give an interesting idea how shareholders will fare under the new corporate tax system introduced by the Central Budget for 1959-60. As the companies have closed their accounts during the fiscal year 1959-60, they have paid dividends in the light of the changes in corporate taxation made by the Budget. It is worth examining whether shareholders have been compensated for a loss of dividend income amounting to 46 percent resulting from the abolition of the system of "grossing up" of dividends. Under the new system, the tax on companies has been reduced from 51 percent to 45 percent. The wealth tax on companies and the excess dividends tax have been removed; banking companies were already not subject to the former.

The Central Bank of India has proposed an interim dividend of Rs. 1.90 a share subject to tax —which amounts to Rs. 1.33 net—for the half-year ended June 1959. Under the new system of taxation, companies are expected to deduct tax from the dividend at source and shareholders are entitled to adjust the tax deduction in their individual assessments. The Central Bank's latest dividend compares with the Rs. 1.50 a share paid free of tax for the first half of 1958. The Bank of India has maintained the dividend at Rs. 3 a share, but since it is subject to tax deduction at source at the prescribed rate, the net dividend is substantially less than that for the corresponding half of 1958. The Dena Bank has, however, increased the dividend to Rs. 1.86 a share (subject to tax) which is equivalent to Rs. 1.30 net a share. A distribution of Rs. 1.25, free of tax, was made for the corresponding period of 1958. So it does not look as if shareholders will gain. Their position will probably deteriorate under the new system of taxation. This is understandable, considering that banking companies held a substantial portion of their money in investments and the income from the latter are subject to a heavy tax at source. Although there can be a claim for refund on the tax later, after the final assessments, banks are unlikely to take such refunds into consideration at the time of paying dividends, because refunds are never made until a long time afterwards.

Outside the banking field, one notable company—Burn and Co. Ltd—has so far produced its accounts under the new system of taxation. The directors have increased the ordinary dividend from 20 percent free of tax to 28½ percent subject to tax. It is thought that shareholders have thereby been compensated for the loss of their dividend income. Judging from the trends, it appears that shareholders will be lucky if companies are able to maintain the same amount of net dividend. The relief obtained from the abolition of the wealth tax on companies and of the excess dividends tax may not be adequate in compensating investors for the loss of dividend income resulting from the end of the "grossing up" system.

Extending Madras Forward List

The recession in share prices in the Madras stock market during the past few days has not prevented speculation about more shares being put on the forward list soon. The Stock Exchange committee, it is said, is considering the inclusion of the scrip of some planting, chemical and cement companies, in addition to the ten already on the list. The advantage of ready marketability makes most investors prefer equities included in the forward list. Dealers say that more scrip on the list means more business, and the prices of shares such as Voltas and Larsen and Toubro have increased appreciably this year. Although bearish trends in the Bombay Stock Exchange easily depress forward shares in Madras, they usually have little effect on growth stocks. In recent dealings, Mysore Paper have risen to Rs. 22.25 mainly because of the dividend of 12½ percent for 1958-59. Investors are pleased about the recent improvement in Kirloskar Electric, which were listed only last month. The company's connections with the Brush group, its selling arrangements through Parrys and the 7½ percent dividend paid for the last accounting year have raised its shares to Rs. 12.75.

Fair Price for Coal

In spite of the reported recommendation of the Coal Prices Revision Committee in favour of higher coal prices in order to enable the industry to finance the expansion of its output, the Government has been taking an unconscionably long time in reaching a decision on the subject. Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, said recently that the Government might take "another few weeks to announce its decision concerning an increase in the price of coal and coke." Referring to this, the Joint Working Committee of the Indian Mining Association, Indian Mining Federation and Indian Colliery Owners Association, in a note to the Press says that the industry has noted the Minister's statement with dismay since its position is becoming steadily more precarious. "With the continued delay in the announcement of the increase in coal prices, an ever-increasing number of collieries are raising coal at an actual loss. An ever-increasing number of colliery-owners are forced into the position of putting off their plans for replacing worn-out plant and machinery, since such replacements just cannot be paid for out of the existing inadequate price structure".

The producers' joint working committee points out that the statistics of coal output during the first three years of the second plan already show that the increase in production is slowing down. The industry as a whole produced 38.2 million tons in 1955, 39.4 million tons in 1956, 43.5 million tons in 1957 and 45.5 million tons in 1958. The increase in output in 1958 thus was only 4.1 percent, against 10.4 percent in the previous year. Output from January to April this year totalled 15.96 million tons, against 15.16 million tons in the same period of 1958. This gives a probable annual rate of 47.5 million tons for 1959, "which means that coal output during 1960 must be increased by 12.5 million tons to reach the original second plan target of 60 million tons a year, or 7.5 million tons if only the reduced indication of 55 million tons is to be attained." Grade-wise, production has suffered particularly in Selected A coal, its output having declined from 7.60 million tons in 1957 to 7.44 million tons in 1958. Long-established collieries find that high-grade seams are being worked out; the present price structure gives no encouragement for working these seams, which are normally gassy and only available at increasing depths. Raisings of Selected B and Grade I coal have increased slightly but immediate encouragement is required to raise the output of these grades also, since they will form the bulk of the additional 7 million tons a year required for the steel plants. The steel industry's consumption this year is likely to exceed 7 million tons—almost 3 million tons more than in 1958—and in 1960 it is expected to total 10 million tons. There will thus be a considerable shortage of Selected A and Selected B coal required for the steel plants. The first of the three new washeries is not expected to come into production until early in 1961.

The Railway Ministry, it is said, is opposed to any increase in the price of coal and coke, on the ground that it will push up the railways' working expenses. The producers' joint working committee points out that a rise of Rs. 2 in the coal price will mean an increase of 0.8 percent in the railways' total working expenses. The average price of loco coal has increased by 150 percent since 1922; during the period 1945-57, it has gone up by only 50 percent, as against a 100 percent increase in the total running expenses of the railways. This means that the railways, as well as other consuming industries, are in fact being subsidised by the coal industry.

Futures Trading in Linseed

A futures market in linseed was opened in Calcutta on 15th July under the auspices of the Calcutta Wheat and Seeds Association. The West Bengal Minister for Commerce and Industry, Mr. Bhupati Mazumdar, inaugurated it. The city is an important terminal market and consuming centre for linseed. The average annual arrivals in Calcutta have been estimated at 23,315 tons, and they feed the large number of oil mills in West Bengal. (Out of a total of 50 major paint and varnish units, 18 are located in Calcutta alone with an annual output capacity of 36,360 tons of paint.) During the postwar years, when India exported 280,000 tons of linseed annually, a considerable proportion was shipped through Calcutta port. With the Government's new drive to raise exports of this commodity, the importance of Calcutta to the trade has increased.

Speaking at the opening ceremony of the forward market, Rai Bahadur G. V. Swaika, president, Calcutta Wheat and Seeds Association, recalled the early history of futures trading in linseed in the city before the second World War. The trading was done under the aegis of the Calcutta Wheat and Seeds Association and the Indian Wheat and Seeds Association. But excessive speculation led the Government to ban forward business in all oilseeds, including linseed, in 1943. The new futures market is to be conducted on more systematic and well-regulated lines, providing genuine "hedging" facilities to traders, including those who export the commodity. To the latter, the market may be particularly useful. Rai Bahadur Swaika said that speculation is a necessary part of futures trading, and can be economically useful if it does not degenerate into reckless gambling. Rules and

regulations have been prescribed as a safeguard against the possibility. The Forward Markets Commission has given the assurance that "whenever the interests of the industry, and for that matter, of the export trade in linseed oil would be at stake, the viewpoint and suggestions of the industry and trade would be carefully considered, and all possible ways and means would be adopted by the Commission to rectify and amend the rules, regulations and bye-laws to safeguard the interests of the trade and industry." Every member entitled to trade has to make an initial minimum security deposit of Rs. 2,500 in cash before he can begin business. In case he fails to fulfil an obligation or contract, the deposit is liable to be "utilised". Limits can be fixed on trading by an individual member on any trading day. Provision for weekly clearings has also been made. The board of directors, as well as the Forward Markets Commission, have the power to take suitable steps "in the event of any emergency arising in the trade or in case of squeeze or corner or bear raids."

World Bank Loan for I.C.I.C.I.

The World Bank has recently granted a loan equivalent to $10 million to the Industrial Credit and Investment Corporation of India Ltd. Like the earlier World Bank loan of $10 million (equivalent to Rs. 4.8 crores) to the Corporation, this loan will be used to meet the foreign exchange requirements of projects financed by I.C.I.C.I. The Bank of America is participating in the loan, without the World Bank's guarantee, to the extent of $200,000, representing part of the first maturity which will fall due on 1st October, 1962. The World Bank loan is for a term of ten years. The interest rate has not been fixed in advance of the loan being signed; interest will be applied to each portion of the loan at the Bank's current rate when such portion is committed for one of I.C.I.C.I.'s projects. Amortisation of the loan will begin on 1st October, 1962. The loan is guaranteed by the Government of India.

The principal sectors of private industry assisted by the Corporation have been the mechanical, electrical and automotive industries, paper, chemicals, pharmaceuticals, sugar and shipping. From the World Bank's first loan, an amount of $6.5 million has been used for six projects in the electrical, chemical, mechanical and shipping sectors. The Corporation is studying other projects which will probably use the balance of the loan by the end of this year. The new Bank loan should satisfy the Corporation's foreign exchange requirements through most of 1961. The I.C.I.C.I.'s total resources, before including this new loan, amount to Rs. 17.3 crores, made up of Rs. 5 crores of paid-up share capital (of which Rs. 3.5 crores is held by Indian investors and the balance by British and American private interests); a long-term interest-free advance of Rs. 7.5 crores from the Indian Government; and the first $10 million (Rs. 4.8 crores) loan from the World Bank. In addition to the second World Bank loan of $10 million just made, the Indian Government is lending the Corporation Rs. 10 crores from the proceeds of sales of U.S. agricultural commodities in India. The I.C.I.C.I.'s total resources will thus be Rs. 32.1 crores ($67,250,000). In the past three years, I.C.I.C.I. has made moderate but increasing profits. It distributed on share capital a 3½ percent dividend in 1956 and 4 percent in each of the years 1957 and 1958 (all net of tax) after modest allocations to reserves.

Rail-Road Competition

The railways have held a virtual monopoly over transport for a long time, but are now perturbed about the growing competition from road services. Speaking at the quarterly meeting of the central committee of the All-India Manufacturers Organisation, which was held recently in Srinagar, Mr. N. D. Sahukar, chairman, said that the railways are losing even long-distance goods traffic to road transport. Lorries pick up cargo from the door of the manufacturer and deliver it at the door of the distributor. Replies to business men's complaints against the railway administration are stereotyped and evasive, so many potential users favour road transport even if it costs more. The railways disown liability for loss and damage in most cases, whereas in the case of road transport there is usually a prompt settlement of claims. The loss of valuable merchandise on the railways is not infrequent: they handle the cargo entrusted to them "with such callousness" that damage occurs, often. The transit time taken by road transport is sometimes half that of railway transport. The chairman added that the capital cost of road transport being less than that of rail transport, the development of industries can be accelerated if more attention is paid to the former. Furthermore, inland river navigation has so far been neglected, and there has not been a fuller realisation of its importance to the economy. As a first step towards the maximum use of inland waterways, it is necessary to set up an Inland Water Transport Board, Mr. Sahukar said. The Board should be provided with adequate funds for keeping the major rivers navigable throughout the year and for the construction and maintenance of jetties and quays.

Companies Act Statistics

About 2,904 new companies with a total authorised capital of Rs. 598 crores were formed during the three-year period ended 31st March, 1959, according to a review of the working of the Companies Act published in the latest blue book on joint-stock companies in India. (The Companies Act, 1956, came into force on 1st April, 1956.) Of the new companies, 207 with a total authorised capital of Rs. 166 crores were formed as public companies, and 2,697 with a total authorised capital of Rs. 432 crores as private companies. Nearly one-third of the total number of new companies were registered in West Bengal and one-fifth in Bombay State. The actual figures of the new incorporations for these two States were 1,024 and 601, respectively; 284 and 359 new companies were registered in Madras State and Delhi, respectively. These three States and Delhi taken together accounted for about 78 percent of the new registrations.

Of the new companies formed during the period, 1,259 were for undertaking industrial and manufacturing business, 875 for carrying on trade and financing activities and 60 for mining and quarrying business. About 61 percent were small companies with an authorised capital not exceeding Rs. 5 lakhs each. Their actual number was 1,777. The total number of companies formed with an authorised capital of Rs. 5 lakhs to Rs. 10 lakhs and Rs. 10 lakhs to Rs. 50 lakhs was 733 and 273, respectively. The number of big companies, *i.e.*, those having an authorised capital of over Rs. 50 lakhs but under Rs. 1 crore each, was 43, whereas that of giant companies having an authorised capital of Rs. 1 crore or more was 78. Of the new giant companies, 15 were Government companies floated with a total authorised capital of Rs. 225 crores. The remaining 63 were floated by private promoters and industrialists with a total authorised capital of Rs. 251 crores. The statistical evidence shows that there was a decided preference for management directly by boards of directors rather than by managing agents. Of the 2,904 companies registered, 2,181 were to be managed directly by boards of directors, whereas only 36 were to be under managing agents. The number wanting managing directors at the head of their management was 674.

The total number of companies working in India on 31st March, 1959, was estimated at 27,479, with a paid-up capital of about Rs. 1,517 crores. Three years ago, when the new Companies Act came into force, the total number of companies was 29,874, with a total paid-up capital of Rs. 1,024 crores. The reduction in the number of companies does not imply a decline in the activities of the corporate sector, for the paid-up capital has risen steadily. During the last three years, the net increase in the latter has been Rs. 492 crores, after duly accounting for the paid-up capital lost in companies which have gone into liquidation. The decline in the number of companies is due to the vigorous policy pursued in removing virtually defunct companies from the registers by the Department of Company Law Administration. The fact was stressed in the second statutory report, which pointed out that the fall in the number of units in the corporate sector would be "more than offset by the strength of the units left, and it would in no way reflect the real trend of capital formation, which had suffered no setback".

Symposium on Iron and Manganese Ore

At the request of the State Trading Corporation, the Geological, Mining and Metallurgical Society has taken the initiative in organising a symposium on Indian iron and manganese ores. It will be held some time in November this year, and a committee of experts has been formed for conducting the deliberations. A pamphlet, published by the Society, says that in spite of the work done by the Geological Survey of India, reserves of iron and manganese ore have not been fully explored. Data concerning the deposits are scattered throughout the voluminous literature of the Geological Survey of India, and a handy compilation for the use of the Government and the Planning Commission is needed. Recorded information on the quality and grade of deposits is meagre. It is necessary to make standard gradings of ores after mining, keeping in view the requirements of buyers. There is also scope for improvement in the methods of mining and haulage. As methods of production and costs are closely related, the Society says that a comparative study of the effects of different methods of mining on production costs will enable mines to adopt cheaper means of extraction. India is lucky in having deposits of high-grade iron ores but there are also low-grade ones which need beneficiation. Beneficiation is especially important for manganese ore, the consumption of which is gradually increasing as the output of the steel industry expands. Before the discovery of the new steel-making processes, low-grade manganese ore was mostly used for the desulphurisation of pig iron. Many low-grade manganese ore deposits have been found in the steel-making areas, but as caustic soda is replacing the former in the desulphurisation of pig iron, the country will be faced with the problem of using the low-grade deposits. Beneficiation seems, therefore, to be the only answer to the problem, the Society says.

Information on Export Markets

In a recent discussion with chambers of commerce in Madras, the Director of Export Promotion admitted that official trade statistics appear late and are rather incomplete. Information about prices ruling abroad for Indian goods has to be collected in time, and prices quoted by India's trade rivals should also be communicated through commercial intelligence officials. It was pointed out that Trade Commissioners' reports appearing in the *Journal of Industry and Trade* and the *Indian Trade Journal* are not of much interest to traders at present. The Andhra Chamber of Commerce complained that payments for exports to Spain are delayed. But this difficulty may not arise in the future in view of the recent adjustments in exchange control in that country, bringing it into the network of the O.E.E.C. Referring to the surplus of inferior tobacco in Andhra Pradesh, the Chamber pointed out that many of the redrying plants in the State are more than 20 years old, so they need to be modernised. The importance of India's participation in international trade fairs is admitted. Some say that a complaints committee should be set up by chambers of commerce to deal with the grievances of Indian shippers and foreign buyers. But more information about market trends abroad is required, and the Government should recognise that the State Trading Corporation has not dispelled the doubts and difficulties of traders. As for official publications, the changes in the format of the *Journal of Industry and Trade* have not made it comparable to the U.K. *Board of Trade Journal*.

Trade with the Middle East

During the recent visit to Madras of Mr. R. K. Nehru, Indian Ambassador in Cairo, local chambers of commerce emphasised the need for more trade with the Middle East. The recovery of Egypt and Iraq is going ahead, although economic nationalism and Continental competition tend to restrict export opportunities in the region. The existing payments arrangements with Egypt ensure a market for Indian tea, coal and textiles, but imports are channelled through the Government. It is felt that trade exhibitions and fairs help exports, but individual exporters too should be given an opportunity to establish personal contacts with importers abroad. As the U.A.R. has poor foreign exchange reserves, Mr. Nehru said that imports from India will be rather limited. India's restricted buying of Egyptian cotton, he added, will affect Indo-Egyptian trade. Although Egypt does not import handloom goods from this country, she is willing to buy ready-made garments. She is manufacturing leather goods cheaply and does not, therefore, want them from India at present. Since India has a surplus in her trade with the U.A.R., the chances of enlarging the trade depend mainly on her buying more from Cairo. It is reported that China is exporting tea to the Middle East. Indian tobacco may not find a large market in Syria or Egypt, which have already set up cigarette factories.

Brighter Glass

With the commissioning of a sand-washing plant in Shankargarh, near Allahabad, the glass industry—U.P.'s in particular—may look forward to a brighter future. Allahabad district in Uttar Pradesh has almost a monopoly of silica sand, supplying 90 percent of the requirements of the entire industry in India. But the sand which has hitherto been supplied has had a small iron content, and this impurity has been responsible for dullness in colour and loss of brilliance in the glass. After treatment at the sand-washing plant, the iron content will be reduced considerably. The sand-washing charges amount to only 2 annas a maund. The decision to set up the washing plant was taken by the U.P. Government early last year. It has an initial capacity for washing 40 tons of sand a day, which is expected to increase to 200 tons by the end of the second plan period. In U.P., there are 30 units engaged in the glass industry with a total installed capacity of over 77,000 tons (actual production 31,579 tons), while the total installed capacity in India is 291,000 tons (actual production 151,000 tons). Although U.P. contributes only 25 percent of the country's total output of glassware, its production of hollow glassware is over 50 percent. Considerable interest attaches to the report that Gangetic silt might one day provide crockery for the masses. Experiments conducted with the silt at the Ceramic Institute in Calcutta have, according to these reports, yielded crockery, artistic figures and sanitary equipment conforming to specifications. The use of common plastic clay and Gangetic silt in the ceramic industry should help lower the cost of manufacture of white china clay products, which at present are a luxury even for large sections of the middle class.

Manufacture of Engine Valves

There is a minor enterprise in Madras manufacturing engine valves which is an offshoot of the motor-car parts business of Rane (Madras) Ltd. The company created a subsidiary in which its shareholders have an interest. It declared a dividend of 6 percent on its Rs. 5 shares for 1957-58. The starting of the manufacture of Tranco valves, suitable for lorries, small motor-cars and motor-cycles, at a factory near the Madras airport is an indication that the curtailment of imports has stimulated local effort. The venture has succeeded due to the arrangements for technical assistance made by Engine Valves Ltd with the Farnborough Engineering Company. Rigorous inspection of the products of the factory is promised, the Farnborough factory having deputed its technicians to train the local personnel. Tariff protection is being given to most manufacturers of motor-car components, and the visit of Mr. Manubhai Shah to Madras to inaugurate the enterprise suggests that light industry is receiving greater official attention.

Housing Co-operatives

According to the statistical statements relating to the co-operative movement recently released by the Reserve Bank, as many as 50 percent of the country's co-operative housing societies were set up in Bombay. In the country as a whole, 32,000 houses and 11,000 tenements of a total value of Rs. 34 crores were constructed in 1957-58 through the agency of 4,172 co-operative societies. In U.P., a special housing unit has been established in the office of the Registrar of Co-operative Societies to help the formation and functioning of housing co-operatives. As far as industrial workers are concerned, the Centre has authorised the State Government to sanction the projects prepared by co-operatives of industrial workers without submitting them to Delhi for sanction. The financial assistance in the form of loan and subsidy to such co-operatives has been increased from 75 percent to 90 percent of the cost of construction. In order to encourage workers to buy houses on a hire-purchase basis or to join co-operative societies, the qualifications about the resident having 15 years' standing as an industrial worker and staying for five years in the house have been reduced to ten years and three years, respectively. But in spite of the haste that is now being shown, the fact remains that even if the targets for constructing houses for industrial workers under the plans are achieved in full, only one-fifth of the State's industrial population will be covered.

Insurance in Pakistan

In his speech to shareholders at the sixth annual general meeting recently, the chairman of the Pakistan Insurance Corporation discussed the progress it has made during 1958. The overall gross premium income has increased from Rs. 94.61 lakhs in 1957 to Rs. 207.34 lakhs last year. The overall increase in net premium income is 45.52 percent, from Rs. 56.96 lakhs in 1957 to Rs. 82.88 lakhs in 1958. The rise, the chairman said, has been shared by all the main branches—fire, marine and accident and miscellaneous. The gross profit for the year is Rs. 10.69 lakhs, against Rs. 6.34 lakhs in 1957. The rise, according to the chairman, is remarkable, especially in view of the fact that the Pakistan Insurance Corporation has had to provide Rs. 14.58 lakhs as additional premium reserve. The proportion of business compulsorily reinsurable with the Corporation was increased from 10 percent to 30 percent with effect from 1st January, 1958. The large percentage of cessions possibly accounts for the increase in the overall gross premium income, but the chairman said that most of the additional 20 percent cessions were retroceded to the companies under a pooling scheme, after arranging adequate catastrophe cover for the entire account. The proportion of premiums retroceded by the Corporation, according to the chairman, was very high and this in turn will have enhanced the net premium income of the companies substantially. Apart from this measure of assistance to local reinsurers, the Corporation continued to provide facultative and treaty reinsurance facilities on a bigger scale. The chairman expressed the hope that Pakistani insurance companies will make greater use of these facilities in the interests of the economy.

Reviewing recent trends in Pakistani insurance, the chairman presented the figures for loss ratios which have been compiled from the returns filed by the insurance companies in relation to their statutory cessions to the Corporation. It appears that the fire loss ratio has gone up from 24.6 percent in 1954 to 29.4 percent in 1958. The accident and miscellaneous loss ratio has gone up from 26.7 percent in 1954 to 66 percent in 1958. The rather adverse claims ratio in this case is attributed to the unfavourable experience under fidelity guarantee and miscellaneous insurances. A remarkable feature is that the marine loss ratio, which went up from 54.3 percent in 1954 to 88.5 percent in 1956, dropped to 40.7 percent in 1957 but rose again to 50.2 percent in 1958. Even so, it is satisfactory compared with experience in other parts of the world, particularly in India, and must be gratifying for Pakistani marine underwriters. The Corporation, the chairman said, is helping new Pakistani companies in handling various preliminary matters concerning their flotation, and has decided to invest in the share capital of some new insurance companies which are now being formed. Whether a professional reinsurer should subscribe to the share capital of direct writing companies is a controversial problem. The Corporation should consider whether the interlocking of interests will ultimately prejudice the professional character of the reinsuring company.

Unemployment and the Plans

India's unemployment problem seems to get worse with each of her five year plans. At the end of the first quinquennium, the number of unemployed was estimated at 5 million. If the second plan, which originally proposed to create 10 million additional jobs, had succeeded in attaining the target, 3 million people would still have remained without work at the end. But the target has already been revised and brought down to eight million, and even the reduced figure does not look like being attained. During the first three years of the current plan, only three million jobs, it is reported, have been created. Even if employment is found for an additional five million people during the remaining two years of the plan, there will still be arrears of 7 million jobless at the beginning of the third plan, during which 14 million more people will have attained employable age. In other words, the third plan will have to provide 21 million jobs if the unemployment problem is to be solved fully. What will be the investment required to create 21 million jobs? Mr. Lakshmipat Singhania, president of the All-India Organisation of Industrial Employers, has expressed the view (in his speech at the annual general meeting of the Organisation held this week in New Delhi) that even with an investment of Rs. 10,000 crores (the figure which is often mentioned as the order of contemplated outlay, although it is not clear from where the money will come), it will be difficult to do this.

Mr. Singhania pointed out that while the number of unemployed is increasing, there is a shortage of technical personnel needed by industry. This shows that the facilities for technical education are insufficient. Although "it is not easy to provide these facilities to the fullest extent within a measurable period of time", a beginning can be made with the provision of basic technical training for students immediately after their high school studies, for "that will help the building up of a large number of technical personnel." This however, is not the only problem holding up industrial expansion. The steadily rising level of wages for labour is more serious. The wages which Indian industry pays its workers are already high enough to cause serious worry, particularly since increases in wage and other costs are not being accompanied by a rise in labour output. Mr. Singhania pointed out that while the *per capita* national incomes in the U.K. and the U.S.A. are 15 times and 34 times higher than the Indian figure, respectively, the average weekly earnings of workers in manufacturing industry in those countries are only five times and 15 times higher. "This clearly indicates that industrial workers in India are getting a greater share of the national income than their counterparts in the developed countries of the world."

CORRESPONDENCE

GOATSKIN EXPORTS

(To The Editor of "Capital")

Sir,

The export of raw goatskins has been brought under control, and in a Press note issued on 1st June, it was stated that "in the interests of the indigenous tanning industry and for increasing exports of tanned skins," the Government of India has decided to regulate the export of raw goatskins on a quota basis through established shippers. The indigenous tanning industry in Calcutta and eastern India is still in a primitive stage. Modern machinery and equipment, more than an increased supply of skins, will contribute to its progress. As it is, the tanners of skins here are not so experienced as to be able to produce export quality leather, and they do not require an increase in the supply of skins. The Government's order, therefore, will not benefit the tanning industry in the region.

Maybe, the Government wants to protect the tanning industry in Madras State, but Madras tanners usually get their supplies from the southern and western regions of India. From the Calcutta market, they usually buy double-rejection skins, which are not exportable. Goatskins produced in Calcutta and in the eastern region cannot be profitably used by them because the prices are comparatively high. It is evident that these goatskin supplies, being superior in quality and higher in price, can only be exported to foreign countries; as such, imposing restrictions on their export from here is unwarranted. In view of the foreign exchange the Calcutta goatskin shippers are earning for the country, and considering the fact that the control on their exports of goatskins in no way helps tanners in any part of India, the Government order should be amended so as to exclude Calcutta and eastern India from its purview.

Yours etc.,
Fazal Ilahi

Calcutta, 16th July.

GOLD REFINING

We are glad to learn that the Government have made offers to the Mysore or other gold mine proprietors to receive unrefined gold in the condition extracted from the ore, and to return the value of the pure metal at the rate of Rs. 15 per sovereign. As these terms will, we believe, be generally more advantageous than shipping to London, it seems probable that from this source the Governments will receive into their gold reserves not less than £1,000,000 annually. The Government seem in some doubt at present whether it will be desirable for this purpose to equip the mints with the additional machinery requisite for refining on a large scale. It is recognised that as the gold produced from the Indian mints contains a certain quantity of silver, there would, to that extent, be a source of profit, but the total quantity is probably too small to cover the cost of a fully equipped refinery. On the other hand, it is not only from the mines that unrefined gold, or gold unsuitable for coinage, is derivable. There is always a large amount of what is called country melted gold in the market, that is, gold which, for various objects, has been alloyed, chiefly with silver, and is sold in rough ingots at about 4 annas per tola below its pure gold value. Such gold often lies for long periods, we are told, in the hands of dealers and goldsmiths, and may be said to represent a portion of the unproductive native capital. We are sorry we are unable to form any sort of estimate of how much gold of this kind becomes available on the average in the course of a year, but we are led to believe that, if the Government mints were ready to purchase it at the usual market rates, considerable quantities would be tendered. If this were the result there would be plenty of work for a Government gold refinery and its effect would be to put into circulation a large amount of capital which now lies stagnant.

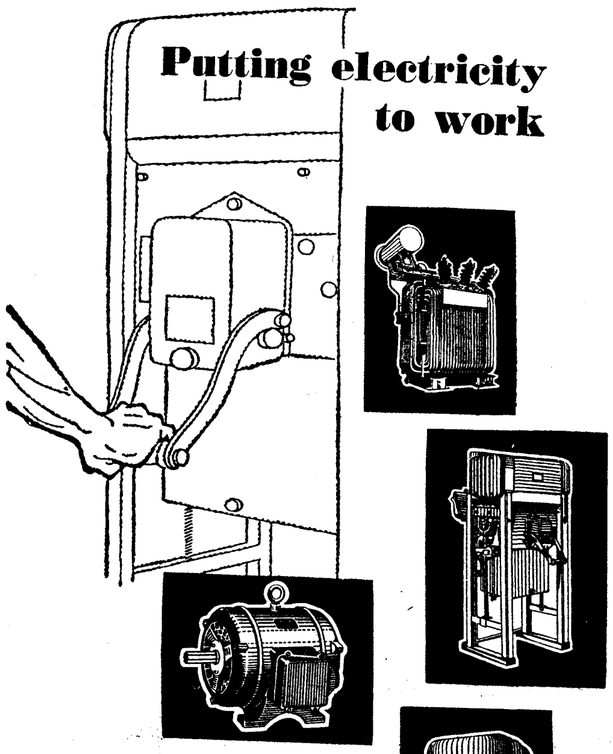
Benamis for Tax Avoidance

(FROM OUR LEGAL CORRESPONDENT)

HARDLY a month passes without two or three cases reported in the law journals concerning these *benami* transactions between husband and wife. The reports constitute a stern warning to trusting husbands. They always follow the same pattern, more or less. The husband, out of sheer benevolence or with the less worthy motive of protecting his assets from his creditors, more often than not the revenue authorities, buys land or securities and pays for them with his own money but in the name of his wife. The spouses quarrel. The husband claims his property from his wife. She refuses to part saying the property is her own. The husband sues her for its return or, if she has sold it and pocketed the proceeds, he claims the latter. Scarcely ever does the husband's claim succeed. It is the old story. You cannot have your cake and eat it too; or in the more austere language of the law, you cannot approbate and reprobate in respect of the same transaction. You cannot say to your creditor "this property belongs to my wife". and later, when it suits you to do so, say it belongs to you. In the latest case on the subject, the husband was a British subject and his wife was a citizen of the United States. American securities were bought with the husband's money with the intention that the beneficial interest should belong as to one-half to the husband and as to the other half to the wife. But the securities were registered in the name of the wife alone. All of them. Why? In order to avoid an American tax to which the husband, as an alien, would have been liable. The wife sold the securities. The husband sued in the English courts, claiming half the proceeds of sale. Can he succeed?

"No", said Wynn-Parry J., applying *Gascoigne v Gascoigne* (1918). I. K. B. 223. Registration of the securities in the name of the wife raised a presumption of advancement, and the husband could not rebut that presumption by asserting that the property was put in his wife's name in order to avoid payment of tax on his beneficial interest. The court would not give its aid in breaking the revenue laws of a friendly country. (1959. 78. *Law Notes.* 112 : 103 *Solicitors Journal.* 257.)



The recommendations of the Wolfenden Committee as to homosexuality will put the ordinary member of Parliament, who presumably will allowed to vote on the report according to conscience and without the intervention of Party whips, in an anxious predicament. He w be torn, as all the rest of us are, between natu human sympathy with the involuntary offend the man who literally cannot help himself, w having certain unnatural inclinations simply c not control them, and abhorrence of the offer which he commits. Wherefore one welcomes wise extra-judicial observations of one of our m eminent and experienced judges on the subje The crime has always been considered by the la and until recently by the public, with savage det tation. With forgery and high treason, it carri with it the death penalty, after that punishme had been abolished for all other crimes exce murder. Even the mention of the specific natu of the crime is discouraged in the courts in ci suits pleadings today.

The writer remembers an occasion where leading member of the Calcutta bar—who will member the occasion, too, if he chances to read t note—some years ago, in settling the pleadings a civil suit, struck out the plain English wo "sodomy", and sought refuge in decorous Latin alluding to an "awful crime" between adults *n nominaudum apud christianos.* Now opinion at any rate highbrow circles in England seems have swung right to the other extreme. With t exception of somewhat elderly diehards li Cassandra of the *Daily Mirror* and John Gordon the *Sunday Express*, the intellectuals of the Briti Press, especially the highbrow weeklies and the broad-minded correspondents. seem to consid what is still a very serious crime in the eyes the law and both punishable and punished as suc as, at the worst, a pardonable if regrettable ecce tricity, the business of those who participate in and of no one else, least of all the law. Th Wolfenden Committee appears to support this view and to recommend Parliament to adopt it too by legislation to provide that sodomy (the Committee prefers the more gentlemanly term "homosexuality") and kindred acts, if performed between consenting male adults in private, shall no longer constitute a criminal offence. Thus it justifies its views (Commd. 247, para 61) : "Unless a deliberate attempt is to be made by society, acting through the agency of the law, to equate the sphere of crime with that of sin, there must remain a realm of private morality and immorality, which is, in brief and crude terms, not the law's business."

We can contrast the words of a wise and learned committee with those of a wise and learned judge, and take our choice between them. Mr. Justice Devlin was delivering the second Maccabæan lecture on jurisprudence. "While expressing no view one way or the other on the conclusions of the Wolfenden report, his lordship urged that morals were not always a matter for private judgment. Not everything was to be tolerated and no society could do without intolerance, indignation and disgust. These were the forces behind the moral law, and, if the genuine feeling of the society in which we lived was that homosexuality was a vice so abominable that its mere presence was an offence, his lordship did not see how society could be denied the right to eradicate it. It would not, in the long run, work to make laws about morality which were not acceptable to juries. Society could not ignore the morality of the individual any more than it could his loyalty ; it flourished on both, and without both it died."

Well, one reads the foregoing observations with the feeling that though Mr. Justice Devlin, in making them, made no specific reference to the Wolfenden Committee's report, he had in mind para 61 and was in clear disagreement with it and was of opinion that homosexuality is the law's business and that the offender is a criminal and should be punished as such, be he peer of the realm, member of Parliament, clerk in Holy Orders, artisan or labourer. Anyway, there you have the two points of view. Which way would you wish your local M.P. to vote when the Committee's report comes before the Commons ?

There is hardly one of us who has not at some time or another made an acquaintance, even perhaps a valued personal friend, whom he knows to be scrupulously honourable, sober, tolerant, charitable and in every respect, save one, an example to be followed. Yet he has an irresistible urge to the commission of that one offence. It may sooner or later involve him in blackmail, jail, irretrievable social ruin, even suicide. Should the offence remain a crime ? To answer makes one hesitate. In the writer's respectful submission, it should. The hitherto honest clerk has an irresistible urge to rob his employer's till, does so, and goes to jail for it. The law does not "equate the sphere of crime with that of sin." It expects him to resist the urge or, knowing what the consequences of succumbing to it are, to accept them and suffer for it. The otherwise honourable homosexual delinquent is one of a small minority : and there is a good deal of truth in Augustine Birrell's cynical aphorism : "Minorities must suffer ; it is the badge of their tribe." He must pay.

We can supply all the electrical equipment required for use with electricity supplies becoming available under the Second Five Year Plan.

A Ditcher's Diary

WITH THE INDIAN DELEGATION AT THE UNITED Nations it has probably become a habit to raise the question of China's membership year after year. Persistence is perhaps a virtue, and the failure to achieve any results takes away nothing at all from the fundamental soundness of the Indian stand or from the cussed stupidity of the American. Yet, this year's advocacy would seem rather odd to many. It is possible to argue that recent happenings in Tibet warrant no change in the principle governing the Indian view of Chinese membership. Perhaps they don't. It is equally possible to adduce many plausible reasons why China should be represented on the world body, whatever its political system or its colonial manners. But India should not be surprised if many see in her almost pathetic wooing of Peking, motives other than the purely high-minded. Many may interpret the latest effort to obtain a seat for China as one more appeasing gesture to an incredibly unresponsive Peking, and there is no evidence yet that the appeal has moved the addressee. India is entitled to claim that she is only being consistent, that she is doing no more than what she has done before and on the same grounds. It should still be enquired whether Indian friendship is not being taken for granted in the Chinese capital, which would hardly be consistent with India's dignity. The time may have come when it should seriously be asked whether India's goodwill is not being mistaken for the weakness which, the world has learned, always encourages further intransigence among communists. Mr. Nehru recently spoke of a wall of silence between New Delhi and Peking. I am among those who believe that India's hitherto friendly relations with China have been in many ways a good thing; they have given the free world occasional clues to the inscrutable Chinese mind. On the other hand, there is a good deal to be said for caution in unilateral attempts to scale the wall of silence, for awaiting some earnest of the other party's willingness to reciprocate friendship.

AS ONE WHO HAS NEVER SUBSCRIBED TO THE VIEW that the works of the great can be judged according to their nationality, I confess myself most favourably impressed by the public outcry at the removal of the statues of Lords Ripon and Bentinck. In these days of rabid nationalism, when even distinguished intellects can sometimes make childish fools of themselves, this is the kind of objectivity which renews one's faith in the world's inherent sanity. I had not myself considered Lord Ripon any worse off by being translated to the Victoria Memorial gardens, although the waste of public money did seem inexcusable at a time like this. His previous position always struck me as being particularly dismal, set back from the road as it was and shrouded in trees. The statue itself never struck me as being much of a work of art either—unlike the fine equestrian one of General Outram which, national feelings notwithstanding, deserves a better fate than to be exiled permanently in a Corporation paint godown. But I can understand the indignation of intelligent Indians when something is done in their name which appears to reflect on their capacity for the normal human virtues of gratitude and the appreciation of selfless public service. If the definition of patriotism is love of country, then Lords Ripon and Bentinck were as much Indian patriots as any national leader alive today. The same could be said of many other former rulers whose statues are scattered about this city, and if this outcry marks the beginning of a more discriminating and less emotional attitude towards their presence, then it is a trend which cannot fail to do India credit. I believe the feeling in the U.K. towards the removal of the statues has always been stronger than it has among the British residents in this country—who anyway have always been more impressed by how few rather than by how many have gone. This new attitude augurs well for the future of Indo-British relations.

DRIVING ALONG THE RED ROAD AT DUSK, AT WHICH time I often see boisterous young men flocking out in their thousands from the adjoining football grounds, I can well appreciate the enthusiasm which backs the popular demand for a stadium in Calcutta. Now I am pleased to hear, like every other sports lover, that the site for the stadium has been finally selected at the Ellenborough Course on the north-eastern side of Fort William. I can well understand why the experts have tentatively selected the Moscow design, for when I saw it myself last year I had the impression that the stadium there can accommodate more people in a smaller area. But that design, I feel, would need modification to suit Calcutta's climatic conditions. A stadium without a roof over the entire seating accommodation would be extremely inconvenient here, especially during the monsoon season, since spectators would get drenched in the heavy rain. To serve its purpose, a composite stadium should be commodious, and the scheme for providing accommodation for 45,000 spectators should, I consider, meet with the approval of the public. But there must also be arrangements for cheap and adequate transport, and special bus and tram services should be provided on important occasions. I am told that of all sports football is the most popular in Calcutta and that the city has a rich tradition of it, a fact which I can well appreciate when I hear that unbelievably long queues are formed on previous nights to secure tickets for important games, such as those between Mohun Bagan and East Bengal. But whether a modern stadium will help football fans acquire more civilised habits of behaviour, and abandon such unsportsmanlike tendencies as umbrella throwing, stone pelting and abuse of the referee, is more than I can say.

IT MAY SOMETIMES BE A GOOD THING THAT ONE HALF of the administration does not know what the other half is doing, or we might have witnessed only the steady removal of historical statues and never have seen the publication of the sixth and last volume of selections from the *Calcutta Gazette*. Ditchers will be interested to read *The Days of John Company*, and to learn what life was like for their forefathers in the years 1824 to 1832. This really is social history in the great tradition, and it relates to a period in which social intercourse between the British and the Indians was probably closest. Each respected the other's culture and in each community there were public-spirited men who recognised how much each had to learn from the other. This was the period of far-reaching reforms in Hindu society and, although some of the ideas had come from abroad, the reforms could hardly have been put through without the enthusiastic support of Indian leaders. Indeed, the zeal of the latter sometimes went far beyond the understandably cautious moves of the foreign rulers. What impresses me most is that the opponents of reform had the honesty of their convictions ; what indefatigable quoters of the scriptures these learned gentlemen were. Most of the time the champions of reform tried to refute their opponents' arguments with counter-quotations from the same scriptures, and the intellectual life of the city must have been throbbing with vitality. At the other levels, life was a lot easier in some respects and much harder in others ; but both Indians and the British in those days certainly knew how to while away their idle hours in the grandest manner. The young Briton who comes here today and is often bored, will be green with envy to read of the feasts and nautches. To get the picture in perspective, they would do well to remember that there were terrible epidemics, too, in those days, with few remedies known, that the trip *via* the Cape was a torture, and that there were no air-conditioners to make the heat bearable. The West Bengal Government's publication of this admirable volume is to be set against its many sins.

IT WILL CERTAINLY BE A SORRY DAY FOR THE WORLD when the U.S. dollar is devalued ; good use can be made of all the gold that has piled up for years in Fort Knox. But I am not to be numbered among those who say it could not happen. The way things are going, it is bound to sooner or later and the many arguments I have read lately to the contrary strike me as typical examples of the kind of reasoning which always manages to prove conclusively that a thing cannot possibly happen at the very minute preceding the one at which it does. After reading an interesting excerpt from the July issue of *Pick's World Currency Report*, I am more than ever convinced that either something drastic must be done with the U.S. economy to bring costs down—or at least stop them from rising—or the dollar will have to be devalued. Dr. Pick points out that the present American gold stock is at its lowest level in 20 years and that the outflow in the past decade has amounted to nearly $5,000 million. He then goes on to compare the gold backing of the American monetary system at the end of 1939 with the position now. As a percentage of the gross national product, it has fallen from 19.4 to 4.2 ; of the federal debt, from 37.1 to 6.9 ; of the federal Budget expenditures, from 199.2 to 25.7 ; and of the total of bank deposits and currency in circulation, from 27.9 to 8.2. What is more, he adds, the mid-1959 figure of $19,771 million for the gold reserve does not take into account the "mortgages" on it represented by at least $10,000 million of short-term assets owned by foreign governments, which are theoretically fully convertible into gold when required. Subtracting this sum, only $9,770 million remains as the "net" gold stock. And after such a deduction, the mid-1959 figures would show the gold stock percentages to be only 2.1 of gross national product, 3.4 of federal debt, 12.7 of federal Budget expenditures and 4.1 of total bank deposits and currency in circulation. All this may mean nothing more than that the American economy is learning to get by on a smaller gold backing ; most other economies in the world have had to. But for an open economy like the American, some gold stocks will always be required, and if measures are to be avoided which would drain the rest of the world of its much-needed gold, and if the American economy is to go on expanding, then an increase in the gold price—which would, of course, amount to a devaluation—seems to be inevitable sooner or later.

STOCK MARKET CONDITIONS UNSETTLED

ELECTION TALK CONTINUES TO INFLUENCE SENTIMENT

London, 22nd July.

UNSETTLED conditions were experienced in the stock markets during the past week with a good deal of fluctuation in prices. There was no lack of favourable factors, but sentiment was strongly influenced by election talk, and the fact that the holiday season is nearing its peak. Consequently, buyers were reluctant to extend commitments very far. There was occasional profit-taking, although not a great deal of stocks came out, and brokers still complained of a shortage of good class issues. One of the steadiest markets was the gilt-edged where prices quietly improved in response to investment buying. There was very little interest in foreign bonds and Greek stocks reacted sharply. With the United States steel strike having a restrictive influence on the activity on Wall Street, dollar stocks were subdued in London and the recent demand appeared to have dried up. Industrial equities suffered a fairly general setback. Steel shares moved erratically, but later tended to rally as election talk became more favourable. Take-overs provided much of the market conversation and the next move in the Harrods bid is keenly awaited. Textiles were a brighter market on optimism about the outlook for the industry. Tobacco shares returned to favour after being neglected for some time. In breweries, distillers made only a mild response to an increased dividend and higher profits. Other leading issues fluctuated somewhat, but the overall trend was towards lower levels. Gold shares were somewhat irregular, and price movements usually reflected those in Johannesburg. Diamonds eased, but coppers were better on balance. Oil shares tended to drift aimlessly lower due to a continued absence of interest. Rubber shares encountered a fair amount of profit-taking, but tea shares held very steady.

The Money Market

In the money market during the past week, conditions were stringent. The preparations for the mid-month balance-sheet and seasonal factors resulted in quite a heavy calling on the market and brought money into keen demand with borrowers paying 3¾ percent and up to 3⅞ percent for accommodation. The market was forced to borrow from the Bank of England, but the amount was less than a week ago. There was a fair offtake of bills by the banks from the market with September and October maturities and "hot" Treasury bills changing hands at 3⅞ percent. The weekly Treasury bill tender once again proved uneventful with the official average rate virtually unchanged at £3 9s 0.16d percent. The market secured 46 percent, as against 43 percent in the previous week, of the £250 million Treasury bills offered.

Activity on Wall Street

In a generally inactive market for foreign dollar bonds, Greeks were a soft spot with losses of over a point. Italians were also marked down early, but later staged a partial rally. Denmark 5½ percents advanced more than a point, and Norwegians were mostly fractionally higher. Germans and New Zealand 5½ percents were largely neglected. Amsterdam 5½ percents finished slightly lower on the week. Australians generally showed small gains, with Union of South Africas unchanged to a major fraction dearer. Japanese Governments were mixed. Chile 3 percents advanced to within a small fraction of their high for the year. United States Government obligations and top-quality corporates moved into higher ground, partly due to the recent strength in Treasury short-term securities. An additional factor was improved demand for fixed income securities due to the steel strike with its prospect of slackening economic activity. Speculative rail lines were mixed, while some convertibles toppled lower in sympathy with Wall Street.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 15th July shows that the U.S. gold stock fell by $24 million to $19.691 million. Foreign deposits fell by $22 million to $240 million, while foreign investments were $36 million higher at $4.067 million. The Federal Reserve bought $129 million worth of bills, but sold $1 million worth of bonds and $54 million worth of securities under repurchase agreements, making the total holdings of Government securities $74 million higher at $26,418 million. Total discounts and advances fell by $252 million to $780 million, while the agregate excess reserves of member banks fell $126 million to a total of $370 million. The daily average excess reserves of member banks were $16 million lower at $516 million, while their daily average borrowings fell $25 million to $1,002 million. Gold certificates on hand and dues from the U.S. Treasury were $27 million lower at $18,458 million. Federal Reserve notes in actual circulation were $18 million lower at $27,612 million. The daily average of deposit member banks' reserve account was $142 million higher at $18,500 million. Commercial, industrial and agricultural loans of New York city banks totalled $9,671 million, compared with $9,660 million in the previous week.

Paris Gold Steady

Gold prices were steady and only fractional changes were recorded for routine reasons in the Paris gold market last week. The price rallied again to 557,000 francs which was considered to be sufficiently low to attract foreign assets held by French residents abroad. Traders thought that at this level of prices, only technical adjustments might be expected, and a change in market conditions was unlikely without any major political events in the world or in France.

Further Cut in Copper Output Expected

A Union Miniere spokesman said he could make no comment when questioned on the possibility of the company having cut or intending to cut copper production. However, usually well-informed sources said they considered it likely that Union Miniere would reduce output if it had not already done so. Cutbacks in production have been announced recently by Pehlps Dodge in the U.S. and the Rhodesian Selection Trust.

No Single Jute Buying Agency for Europe

The Association of European Jute Industries has denied reports of plans for the setting up of a single raw jute buying agency for the six countries belonging to the European Economic Community. In a *communiqué*, issued in Paris, the Association said it had no knowledge of such a project.

U.S. Steel Strike

About 20 percent of the steel industry's metal-making capacity is operating in spite of the strike, according to a Dow Jones survey of the industry. Companies operating include firms like Ford Motor company. International Harvestor Company, and the Weirton Steel Division of the National Steel Corporation, which have independent union or unions other than the United Steel Workers' Union. The list also includes firms like Granite, City Steel and Jessop Steel Company, which have United Steel Workers' contracts, which have been extended.

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS EASIER

Wednesday, 22nd July.

THERE was another fairly sharp fall in the level of advances outstanding in the Calcutta money market last week. All the main sources of demand showed declines, especially the jute and the sugar mills. The only exception to the downward trend was the demand for accommodation against grains and seeds storage; this showed a slight rise. The interbank market has turned extremely easy, especially in the last few days. Business has been done down to 1 percent, the lowest call rate since 28th November, 1958.

The exchange market was steady last week, with fair quantities of both tea and gunny bills coming to hand. Remittance demand was slack. On the London market the pound is firmer and fractional gains have been recorded against the Canadian dollar. The U.S. dollar rate is unchanged. The movement of sterling against Continental currencies was mixed.

BULLION WAS QUIET LAST WEEK ON PROFIT-TAKING. Silver declined from the previous week's level of Rs. 197.25 to Rs. 196.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 195.25. The London and New York silver prices were quoted at 77 7/8d and 91.375c.

In sympathy with silver, gold was quiet and the price fell from Rs. 121.25 to Rs. 121. The sovereign at Rs. 78.25 showed a loss of 25nP.

DURING THE WEEK ENDED 17TH JULY, GOVERNMENT of India Treasury bills for Rs. 203,19,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 21st July. The total amount offered was Rs. 3,89,75,000. Tenders at Rs. 99.325 and above were accepted in full and those at Rs. 99.320 were allotted approximately 71 percent, the average rate of acceptance being Rs. 2.717 percent a year. Tenders for Rs. 3 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 27th July.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 22nd July to 25th July at Rs. 99.336 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 15th July to 18th July amounted to Rs. 1,19,50,000.

DECLINES OF RS 16.63 CRORES TO RS. 1,705.08 CRORES in active notes and of Rs. 13.55 crores to Rs. 1,727.83 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 17th July, 1959. The currency contraction was covered by reducing rupee securities in the paper currency reserve by Rs. 14.98 crores to Rs. 1,305.75 crores. A portion of securities were transferred to the Banking Department in which investments rose by Rs. 54.55 crores to Rs. 343.56 crores. Deposits of the Government of India fell by Rs. 2.13 crores to Rs. 49.56 crores and other Government accounts increased by Rs. 25.31 crores to Rs. 39.36 crores. Balances of commercial banks at Rs. 91.79 crores showed a gain of Rs. 14.65 crores. Other loans and advances declined from Rs. 70.97 crores to Rs. 67.80 crores, of which advances to scheduled banks against usance bills amounted to Rs. 2.76 crores (Rs. 2.86 crores). Ways and means advances totalled Rs. 21.23 crores against Rs. 29.47 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 10th July, 1959, shows a rise of Rs. 2.93 crores to Rs. 537.92 crores in total deposits. Investments in Government securities are up by Rs. 24.68 crores to Rs. 319.44 crores, while other authorised investments remain unchanged at Rs. 9.97 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have fallen by Rs. 3.69 crores to Rs. 185.57 crores. Cash and balances are, in consequence, shown at Rs. 30.97 crores or Rs. 10.03 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 10th July, 1959, shows Demand and Time liabilities at Rs. 737.40 crores (Rs. 24.69 crores on account of borrowings from banks) and Rs. 1,058.17 crores (Rs. 27.55 crores), compared with Rs. 761.18 crores (Rs. 20.28 crores) and Rs. 1,020.98 crores (Rs. 27.85 crores), respectively, in the previous week. Cash has declined by Rs. 1.63 crores to Rs. 43.46 crores, while balances with the Reserve Bank have increased by Rs. 8.39 crores to Rs. 70.44 crores. There is a rise of Rs. 30.38 crores to Rs. 668.25 crores in investments. Advances and bills discounted at Rs. 985.37 crores show a decline of Rs. 19.89 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.3 percent and 54.9 percent, against 6.0 percent and 56.4 percent.

LONDON FINANCIAL LETTER

OUTLOOK FOR STERLING

By Air Mail.

THIS is the time of year when the outlook for sterling becomes a matter of practical interest. The period of seasonal strength is finished; the period of seasonal weakness has begun, mainly because the tide of tourists to the Continent is in full flood. But the main factor in this weakening —the payments for dollar commodities in the autumn—*is not yet fully operating. There are other* special factors operating this year. The most important is the relative deterioration of the dollar. For this reason, some traders are deferring their purchases of dollars until the last moment, in the belief (probably mistaken, in the opinion of London bankers) that they will be able to buy dollars more cheaply. Earlier, however, sterling had been sold in advance of the normal seasonal decline, on the reasoning that its value could not go much higher (being near the maximum permitted by the present parities) and might be expected to go lower when seasonal influences were effective. So, there has not been much selling of sterling in this early part of the seasonally adverse period.

London bankers are not quite sure that the pound will be as healthy by about September or October. But the annual report of the Bank of England has created a favourable background for dealing. It emphasised the primary purpose of monetary policy in the early part of 1958 to reestablish confidence in sterling; and its recognition that monetary policy could later be relaxed without violating this intention is regarded as a demonstration of official confidence.

Balance of Payments

The first in a new series of figures of the balance of payments, issued a little earlier than the Bank's report, did not confirm the more optimistic private estimates: the estimated surplus for January-March, according to the official figures, was £78 million, compared with a surplus of £170 million in the first quarter of 1958. Earlier unofficial estimates of roughly £200 million for the whole of 1959 would still appear to have been exceeded; but the second half of the year is normally much less favourable than the first half. On the other hand, in spite of a disappoint-

More Food...

More Power...

with Water Roads

Canals and rivers are water roads.

Water roads to progress.

They irrigate the land.

Bring power to the village.

Canals and rivers spell prosperity.

But the great dangers are seepage and erosion.

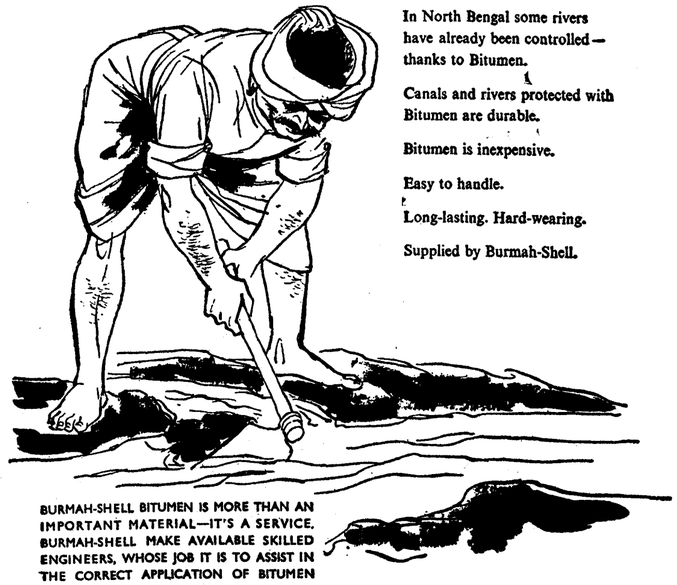
Water must be kept under control.

Water is useful *only* in the places where it is wanted.

That's where Bitumen comes in.

Bitumen is one of the most useful and most flexible waterproofing materials known to man.

In North Bengal some rivers have already been controlled—thanks to Bitumen.



Canals and rivers protected with Bitumen are durable.

Bitumen is inexpensive.

Easy to handle.

Long-lasting. Hard-wearing.

Supplied by Burmah-Shell.

BURMAH-SHELL BITUMEN IS MORE THAN AN IMPORTANT MATERIAL—IT'S A SERVICE. BURMAH-SHELL MAKE AVAILABLE SKILLED ENGINEERS, WHOSE JOB IT IS TO ASSIST IN THE CORRECT APPLICATION OF BITUMEN FOR HYDRAULIC WORKS, AND IN THE CONSTRUCTION OF ROADS.

BURMAH-SHELL BITUMEN FOR BETTER ROADS

ing setback in June, the visible trade figures for the second quarter are much better than the corresponding figures for last year. Anyway, the issue of quarterly, instead of half-yearly, balance-of-payments figures represents an improvement in the Government's statistical service. Whether the authorities will oblige by issuing daily, instead of monthly, figures for the reserve—as has been suggested—remains to be seen.

The weaker element in the sterling system for some time past has been the outer sterling countries, but the recovery in primary prices, although patchy and incomplete, should restore them gradually to their normal helpful function. In any case, prices are not the only element in their contribution: it is sometimes overlooked that, at moderate prices, the volume of international trade in sterling commodities has been expanding. One development that has attracted attention is the emergence of discounts on some sterling area currencies in unofficial dealings. Confidence in rupees has been largely restored, but their notes are still traded at discounts. The Governments of Singapore and Ghana have felt it necessary to deny rumours that they contemplate a change in their currencies' parities with sterling. To say that none of these parities is sacrosanct, is not to suggest that any change is imminent; it is merely a recognition of the fact that relationships established in the distant past are not necessarily appropriate in the changed circumstances of today.

Economy in Balance

As far as sterling itself is concerned, the discussion on devaluation or revaluation, which normally precedes the international discussions on currencies and related matters, is conspicuously absent this year. It is rarely said now, as it was in the more buoyant phase last year, that sterling is basically undervalued, and no one seriously suggests that a further devaluation will be necessary—unless a Labour Government comes into power and adopts thoroughly unsound policies. (It must be said that the Labour leaders are at present as insistent as the Conservative leaders on the importance of maintaining a strong pound.) Some people believe that the £-$ rate ought to be adjusted in favour of sterling, but—as mentioned before—bankers do not believe that the U.S. authorities will tolerate any such ideas. The British economy is, indeed, remarkably well poised. The recovery from the recession is vigorous but controlled. It is not itself well balanced: the latest figures of hire-purchase commitments, for instance, are further evidence of the strength of consumer demand, while the capital trades are only limping back to recovery. But, while production is expanding, the total pressure on the nation's resources is not excessive, and there is no immediate fear of inflation, such as has been characteristic of the early stages of previous booms.

Danger of Inflation

The British banks are well aware of the danger of inflation, not only to the nation in general but also to their own interests in particular. In the period of restraint, their relative position in the financial structure deteriorated distressingly, and they would be loth to forgo the freedom and enhanced status that they enjoy now. It is regrettable that when restraint is needed, it is applied almost automatically to banking while the "grey market" in finance is left almost untouched. That "grey market" took much business from the banks in 1957-58. They have regained almost all of it in 1958-59; but they could have lost it again if the authorities reimposed monetary controls. This thought imposes some voluntary control on the banks' lending; and it may be that if, nonetheless, compulsory control of credit is later considered necessary, the banks will not advocate orthodox policies as enthusiastically as they have done in similar circumstances in the past. Other interests in the City will consider other methods with sympathy.

WORKING OF CO-OPERATIVES SURVEYED

CREDIT NOT GIVEN FOR STRICTLY PRODUCTIVE PURPOSES

(BY A CORRESPONDENT)

CAN the Indian co-operatives, with their various shortcomings and drawbacks, be an effective instrument for the achievement of such objectives as the reorganisation of the rural economy, and the "reorientation of rural social relationships," as the National Development Council believes they could? This question is naturally asked in the context of the generally unsatisfactory picture of village co-operatives shown in a number of investigations during the last few years. The latest agency to have painted such a picture is the Programme Evaluation Organisation of the Planning Commission. It should, by and large, be possible to attain the official target of starting 50,000 new co-operatives during the next two years and the estimated extent of assistance for the purpose—about Rs. 5½ crores—should also be forthcoming. But this expansion by itself would do little to strengthen the movement, and there will be repetitions of the sorry tale of functional inefficiency and organisational debility which now characterise co-operation in this country.

The position about village co-operatives, big and small, disclosed in the P.E.O.'s evaluation report is not an encouraging one, from many points of view, although it has to be judged against the background of the fact that when its investigations were proceeding, the latest major shift in the co-operative policy, namely, the switch-over from the three-year old programme of establishing large co-operatives covering a few villages with larger share capital and membership and Government participation through financial assistance, to small societies each covering a village with a population of about 1,000, was only just announced following the November 1958 decision of the National Development Council. The evaluation report, further, covers only villages included in community development blocks.

Transition in Policy

It is true, however, that the position has not changed significantly since then and the transition has only just begun, which means that most of what the evaluation report mentions represents the position at present and what it is likely to be in the near future. The principal features of the P.E.O. evaluation may be summed up as follows. On their functional side, the co-operatives do not serve the main objective of enabling credit to be secured by persons who are in the need of it, that credit is available mostly for persons with substantial property in land and not to the small cultivator or the landless labourer, that credit is disbursed without careful enquiries about the purpose for which it was wanted and for which it was actually used. "Right in land", the report says, "still remains the most important consideration taken into account in settling the limits of loans, and only in a few cases, is the credit related to the crops produced." Proper records, it points out, are not maintained for assessing the productive requirements of the borrower. Loan applications do not even require the borrower to furnish some very necessary information. "The discrimination in favour of land-owners and against tenants persists", and the large and small societies are equally guilty of this dereliction. Broadly speaking, it is "creditworthiness" of persons and not "creditworthiness" of purposes that has determined the disbursal of co-operative funds. On the organisational side, the societies are dominated mostly by the big landlords and the more prosperous sections of the village. Office bearers continued in office from year to year building up little "empires" for themselves, and the importance of using co-operatives as training grounds in democratic functioning has been only imperfectly attempted or realised. On the side of supervision and audit, the position is not much better, there being in a number of blocks no effective arrangement for the supervision of the working of either the large or the small society, while the device of setting up supervision committees, composed of members themselves, had not proved more beneficial, because of the indifference or incompetence of the ordinary member. Inspection of societies by unions was perfunctory and full of snags, while quite a number of societies are not regularly inspected at all. The inspectors only too often "neglect almost entirely the extension work which, too, is supposed to be one of their important responsibilities". A more or less similar position obtains concerning the audit of societies.

Financial Structure

As for the financial structure of societies, the large societies are in a somewhat better position than the small ones, because of Government assistance to them and because of their covering a larger area enabling them to draw on local talent over a wider area for managerial positions. By and large, "both categories of societies are still largely dependent on outside assistance, i.e., the central banks" nearly 60 to 80 percent of their resources representing advances from that source. It is an unerring index of the lack of inner vitality of the societies on the one hand and the unwillingness of the local persons to invest savings in deposits in the societies and the inability of the societies to attract them on the other.

An important indication of the "health" in the co-operative organisation is the regularity of loan repayments. In this matter, the evaluation report provides greater indications of ill-health than in any other. Repayments are tardy and overdues constitute a considerable proportion of the total credit advanced. It is somewhat worthy of note that while the small societies had a better record of repayments, the large societies had a more satisfactory record concerning overdues. In both types of organisations, however, a considerablo proportion of loans remained overdue from year to year. The conclusion is natural that there is a lack of appreciation on the part of borrowers, particularly the bigger landlords, of the obligation they owe to the co-operatives. The laxity in supervision and the absence of potent public opinion against "unco-operative" practices are also clear.

Rules in many States provide for Government supervision of the working co-operatives and unions, particularly when, as in the case of large societies, the Government contributes finances in the shape of both share capital and loan advances, and intervention is attracted when any matter falling under the category of "financial policy" is involved. The evaluation report's comment on this aspect of the position is pertinent and highly significant from the point of view of the future progress of the co-operative movement. "Common sense and experience would suggest" it says, "that such powers of intervention (by the Government) wherever they are given, never remain on the statute book; they tend to be put into use and come in the way of co-operatives developing into people's institutions."

The recent change in co-operative policy, *i.e.*, from the large to the small society and the conversion of village credit societies into multipurpose societies, poses the basic problem of how and to what extent can the drawbacks inherent in the functioning of existing societies be removed so that they can be more efficient agencies for rural development, without at the same time necessitating too much of official participation.

In this connection, the most difficult problem that arises is how to make the small society viable and fulfil a multipurpose objective. An important remedy proposed is that every family in the village should be brought into the co-operative fold, which is one way of inculcating co-operative consciousness in the entire village population. Another remedy—it is, in fact, a basic objective of the co-operative policy—is to make use of the co-operative as a centre for promoting co-operative education and the democratic way of life among the villagers.

Unrepresentative Character

Valuable as these suggestions are, the Evaluation Organisation's assessment of the present position in relation to these matters leaves one unhappy. Only in a small proportion of the villages have co-operatives made an effort to touch the lives of all local families. Neither organisationally nor in serving the needs of the villagers, are they all-embracing. As the Programme Evaluation Organisation says, the crime of the small society is its smallness. It is borne out by the fact that the average small society has a membership of only 64 persons, roughly equivalent to 22 persons for every 100 households in its jurisdiction, a share capital of Rs. 30 a member and a deposit of Re 1 a member and a total loan business of Rs. 9,000 a year.

These are small dimensions for an average village society, but what are the prospects of its enlarging those dimensions if it is converted into a multipurpose society? The P.E.O. feels that its potentialities in that direction are quite good, because given proper supervision and effective management, given adequate guidance, advice and assistance by the credit-providing agencies and by the Government agency, and given its multipurpose character, it can improve its working efficiency, perform more useful functions for the village population and become the instrument of social change, community co-operation and co-operative effort on the part of villagers. Lacking these props and assistance, on the other hand, it can prove a dismal failure.

No Fair Trial for Small Society

The P.E.O. considers that the small society has not had a fair trial so far. But it will have it now as, in view of the shift in the co-operative policy, the Government is expected to assist it by subsidising financially, and providing it with all possible facilities to meet the needs of the village population, such as fertilisers, seeds, implements, etcetera, besides acting as an agency for the marketing of agricultural produce and other locally-produced articles. The co-operatives would no doubt shed at least in part their voluntary character under the new dispensation; but if they gain in efficiency, utility and otherwise, some loss in autonomy or in their voluntary character would be well worth the sacrifice.

An important principle recommended by the P.E.O and by the working group on co-operatives, and which has since been incorporated into the co-operative policy, deserves special attention. Loan advances by co-operatives, either to agriculturists, artisans, business men or others, should be strictly related to the productive purposes for which they are to be used. If this principle is firmly followed, a direct link will be established between the loan and its purpose and the widely prevalent practice of the limited co-operative resources being grabbed by a few persons for not strictly productive purpose will disappear. The societies would also acquire a more and more democratic look.

A hopeful feature of the situation is that emphasis is being laid on co-operative reorganisation schemes which accord a proper place to intensive campaigns by trained non-official workers to educate the people in co-operative ideals, principles and practices *pari passu* with efforts to vitalise badly and inefficiently run societies. This is being done as an integral part of the campaign for converting credit co-operatives into service co-operatives and to use the latter as multipurpose agencies.

SPECULATIVE PRICES FALL AS OPERATORS ANTICIPATE L.I.C. SELLING

MAIDEN DIVIDEND FOR HINDUSTAN MOTORS

Wednesday Evening.

THE stock market sustained a severe setback during the past week, although speculative counters suffered more than genuine investment scrip. The selling originated from Bombay where, it is said, some large bulls began liquidating their positions on the rumour that the L.I.C. was contemplating selling some of its more profitable investments. Another, and perhaps more plausible, explanation for the sharp recession was the heavy deliveries in the last settlement on the Bombay Stock Exchange—582,000 shares against 366,000 in the previous settlement. Wild-cat speculation during the past few months had lifted the prices of many shares to levels much above their intrinsic worth and the reaction which has taken place has, if anything, helped to correct the market's technical position. One bright spot in an otherwise dull market was provided by Hindustan Motors. This scrip spurted from Rs. 10 to Rs 11 following the announcement by the company of a maiden dividend of 50nP a share, the first in 17 years.

As was generally expected, the abolition of the grossing of dividends in the last Budget has already begun to have an adverse effect on shareholders' dividend incomes. Banking companies' dividends in particular have had to be reduced because banks were never subject to wealth tax and its removal has not, therefore, benefited them at all. Furthermore, the repeal of the excess dividend tax has brought little relief to such companies; the dividends they paid in the past were not so high as to attract the penal rate of tax in the highest slab. Three banking companies have all announced lower interim dividend distributions, namely, Dena Bank, Bank of India and Central Bank of India.

Easy money conditions were responsible for the continued firmness of the gilt-edged market with a keen demand for most loans, the exception being 3% Conversion Loan 1986 which was offered at the slightly lower rate of Rs. 74.07. The market is now awaiting the launching of the new State loans, which are expected to have a good reception.

Preference shares continue to be keenly sought after, but there were few sellers to meet the demand.

Coal shares were subdued and very little business was reported. Bengal were marked down from Rs. 315 to Rs. 310, Burrakur from Rs. 18.25 to Rs. 18 and Pench Valley from Rs. 26.12 to Rs. 25.75. Contrary to the general trend, East Indian were steady at Rs. 25.87 and Raneegunge were better at Rs. 18.

In cotton textiles, Bowreah spurted from Rs. 107 to Rs. 118 and Dunbar were better at Rs. 169. Kesoram met with profit-taking and dropped back from Rs. 16.37 to Rs. 15.87.

Electric supply shares were dull and featureless.

In the engineering group, Indian Iron & Steel fluctuated between Rs. 25.28nP and Rs. 24.78nP to close at Rs. 25, which was tonight's closing rate. Bhartia Steel and Braithwaite met with selling pressure and receded further to Rs. 15.62 and Rs. 28, respectively. Burn & Company were marked down six points to Rs. 447 and Jessop were easier at Rs. 29.87. Kumardhubi Engineering met with some enquiry at the lower rate of Rs.6.75 and recovered later to Rs. 7. Textile Machinery were marked down from Rs. 24.65 to Rs. 24.20 and J. K. Steel eased to Rs. 13.87.

Less interest was shown in jute shares during the week and prices tended to sag, as will be seen from the following table:

	15th July, 1959 Opening	22nd July, 1959 Closing
	Rs.	Rs.
Anglo-India	264	260
Bally	228	222
Howrah	24.31	24
Union	231	227

Contrary to the general trend, Birla improved from Rs. 21.62 to Rs. 22.25, Fort Gloster from Rs. 355 to Rs. 365 and New Central from Rs. 17.62 to Rs. 18.06. The sterling group of jute companies, namely, Samnuggur, Titaghur and Victoria were all better at Rs. 12.12, Rs. 11 and Rs. 11.50, respectively.

Paper shares met with profit-taking and prices were marked down in most cases. Orient were easier at Rs. 36.80 as were Sirpur at Rs. 12.62 and Titaghur at Rs. 43.75.

In sugar, Belsund were lower at Rs. 13.50, but Dyer Meakin Breweries improved further from Rs. 18.25 to Rs. 18.37. There was some enquiry for Darbhanga which improved from Rs. 17.62 to Rs. 18. Carew were offered at Rs. 12.

Among miscellaneous industrials, Alkali & Chemical were easy at Rs. 22.06 and Angelo Brothers, after being done up to Rs. 19.25, turned sellers at the close to Rs. 18.75. Balmer Lawrie receded to Rs. 202 and Britannia Biscuits were shaded at Rs. 25.25. British India Corporation were marked down from Rs. 5 to Rs. 4.75 and Dunlop Rubber from Rs. 34 to Rs. 33.87. Indian Aluminium were lower at Rs. 22.50 as were Indian Cables at Rs. 32.25 and Indian Oxygen at Rs. 27.75. The improvement in the price of Indo-Burma Petroleum attracted some selling orders and the closing quotation was lower at Rs. 27.37. India Steamship were softer at Rs. 14.24 and Jardine Henderson were marked down by three points to Rs. 84. Metal Box were steady at Rs. 42.25 ex-dividend, while National Carbon were lower at Rs. 34.25. National Tobacco were easier at Rs. 17.69 *cum*-dividend of 11% just declared. Rallis met with further profit-taking and were marked lower at Rs. 72.50 against an opening price of Rs. 76. Shaw Wallace were steady at Rs. 19.62 *cum*-dividend of 10%.

The recent enquiry for tea shares appears to have fizzled out and closing prices generally were slightly below opening rates.

In the mining group, Indian Copper met with selling pressure and were marked down to Rs. 4.07 *cum*-dividend of 18% recently declared. Metal Corporation recovered from Rs. 12.87 to Rs. 13.81 while Orissa Minerals and Karanpura Development were subdued at Rs. 39.37 and Rs. 13.62, respectively.

Tata Oil Mills

Increasing depreciation from Rs. 10.80 lakhs to Rs. 11.30 lakhs and taxation provision from Rs. 11.62 lakhs to Rs. 21.75 lakhs, the profit of the Tata Oil Mills Company has increased from Rs. 7.88 lakhs to Rs. 12.35 lakhs for the year ended March 1959. General reserve is allocated Rs. 2.25 lakhs. An ordinary dividend of Rs. 3.25 a share has been declared, leaving a carry-forward of Rs. 12,052, against Rs. 5,511 brought in. The improvement in the results is attributable to favourable purchases of raw materials, larger turnover of all products excepting vanaspati, upward revision in prices of

TACK
PERSONAL SALES TRAINING
means more sales at less cost...

Sales managers of large and small companies—marketing every kind of product and service—have found that TACK Sales Training contributes positively to solving their major sales problem: How to increase turnover without raising costs...

whatever the product or service!

Mr. T. R. Shields, Sales Director of Indian Oxygen Limited, says:
"Now that Tack Sales training courses are being held in India I can ensure that all our sales staff receive the benefits of this training and I am convinced that no organisation in India which has a progressive sales policy can afford to miss the opportunity of using Tack sales training now being provided through the British Institutes in Bombay."

Mr. D. K. Desai, Sales Manager of Dumex Private Limited, says:
"...I found the three-day Sales Training Course a refreshing one... Your approach, technique and emphasis on courtesies and human relations are really absorbing. I have no hesitation in saying that your Course would do a world of good both to the young and old, irrespective of the line of merchandise they are in to sell."

★ Tack Course in Salesmanship and Human Relations — 3 days
★ Tack Course in Sales Management — 2 days

Tack Training can help your Company

soaps and toilet products, and a reduction of Rs. 1.50 lakhs in interest charges as a sequel to smaller borrowings for the greater part of the year under report During the year under review, the company's two factories together crushed about the same quantity of copra and seeds as in 1957-58. Due to the scarcity of supplies, the tonnage of mowra seeds crushed at the Bombay factory was substantially less than in the previous year. Total sales of laundry and toilet soaps constituted a record for the company. The sales were 9 percent higher than in the previous year. The Calcutta factory operated in three shifts for most of the year. Progress on the same scale was also recorded in the output and offtake of glycerine. The continued shortage of tin containers, particularly small packs, affected the production of Pakav. The demand for the company's hair preparations continued to grow and the total sales of all toilet preparations increased by 16 percent over the previous year. Export sales did not show any advance, but in view of the potentialities for soaps and toilet articles in the Middle East and African markets, the company deputed its sales officers to visit these territories periodically to expand the market for the company's products. The erection of the new solvent extraction plant at the Bombay factory was completed towards the end of the year under review. The plant, after being tuned, has now gone into full production. At the Calcutta factory, new soap cooling and drying equipment has been installed; this will eliminate the old method of cooling the soap in frames. A new building was completed at the Bombay factory for housing the factory of Industrial Perfumes Private Ltd, in which the company has invested Rs. 4.15 lakhs. This factory has gone into production and its products are finding a ready demand.

Murphulani Tea

The Murphulani (Assam) Tea Company has earned a profit of Rs. 2.98 lakhs for the year ended December 1958. Bringing in Rs. 40,086, providing Rs. 2.36 lakhs for taxation and making other adjustments, there is Rs. 2,02,201. General reserve is allocated Rs. 85,000. The preferred ordinary dividend has been increased from Rs. 2.25 to Rs. 2.50 a share, leaving a carry-forward of Rs. 39,563. Production fell from 5.544 maunds to 5.171 maunds but the average sale price rose from Rs. 2.45 to Rs. 2.75 a lb. Estimates provide for a crop of 5,600 maunds at a cost of Rs. 8 42 lakhs. The directors have carefully considered the question of issuing bonus shares and they are of the opinion that, in view of the removal of the excess dividend tax but not of the tax on bonus issues, a bonus issue at this stage would not be in the best interests of the company.

Pullangode Rubber

The profit of the Pullangode Rubber and Produce Company has amounted to Rs. 94,603 for the year ended March 1959, against Rs. 64,261. An ordinary dividend of 5 percent has been paid, leaving a carry-forward of Rs. 72,398, compared with Rs. 76,143 brought in. The crop increased from 586,000 lbs to 648,000 lbs. The average sale price rose from 147.26 cents to 146.81 cents a lb. Estimates for the current year provide for a crop of 575,000 lbs at a cost of 115.99 cents a lb.

Bowreah Cotton

There is a loss of Rs. 1.53 lakhs for the Bowreah Cotton Mills Company for the year ended December 1958. Bringing in Rs. 1,17,244, a debit balance of Rs. 35,408 is carried forward. The dividends have been passed over. To meet the increasing cost of production, it has been decided to modernise the spinning and the preparatory departments by the installation of new machinery and by the conversion of some of the existing machinery to high-draft systems, for which orders have been placed.

Bombay Market

SLIGHT RECOVERY FOLLOWS HEAVY SHAKE-OUT

LARGE DELIVERIES ABSORBED

Wednesday Evening.

THE Bombay stock market showed signs of returning confidence today, after having suffered a heavy shake-out earlier this week. There has been substantial bull unloading and share deliveries in the last settlement increased from 366,000 to 582,000. Bears circulated a number of rumours which were not confirmed. First, it was stated that the two-million ton expansion plan of the Tata Iron and Steel Company had broken down. This was a story nobody believed. What is more likely is that the expansion scheme is getting in its stride slowly but steadily, as might have been expected. Secondly, it was thought that the Life Insurance Corporation might take profits by selling shares. There is as yet no evidence of any selling by the Corporation.

Tata Steels closed at Rs. 192.75, as did Indian Irons at Rs. 24.96 on support from Lyons Range. Alcock Ashdown were transacted at Rs. 258 and Premier Constructions were bought at Rs. 354. Tata Locomotives were dealt in at Rs. 218 and Larsen & Toubro were steady at Rs. 22.04 on prospects of a rights share issue. In motor shares, Hindustan rose to Rs. 10.88 on a maiden ordinary dividend and Premier Automobiles came to hand at Rs. 128.50.

In the cotton mill group, there was an all-round recovery at the close. Century increased to Rs. 553 on interested support. Bombay Dyeing recovered to Rs. 65.30 and Kohinoor changed hands at Rs. 293. Simplex were transacted at Rs. 182 and Tata Mills were bought up to Rs. 40.50. India United Ordinaries were taken at Rs. 7.64 and Apollo were offered at Rs. 1.22.

Miscellaneous shares moved in line with the general trend. Among sugar shares, Belapur were done at Rs. 315 and Phalton came to hand at Rs. 160. In the cement group, Associated Cement were dealt in at Rs 154 and Digvijay came to hand at Rs. 153.50. Among steamship company shares, Scindia recovered to Rs. 18.12 and Great Eastern Shipping were transacted at Rs. 22.24. In mining, Shivrajpur Syndicate were placed at Rs. 81. National Rayon jumped to Rs. 348 and Voltas were bought at Rs. 169 on investment account. Bombay-Burmah were indicated at Rs. 546 and Tata Chemicals were steady at Rs. 17.88.

Banking shares were quiet as dividends of two leading banks have in effect been reduced. Bank of India fell to Rs. 120, as did Central Bank to Rs. 52.50. Insurance shares were steady; New India improved to Rs. 60.50 and Vulcan were placed at Rs. 21.28.

There was selective interest in electricity supply company shares. Ahmedabad came to hand at Rs. 91.80 and Tata Power met with demand at Rs. 1,240.

THE WEEK'S TRANSACTIONS

BOLTS and NUTS
for all tightening purposes

You can rely on the output of our modern factory, made to I.R., I.S.D. & B.S. Specifications. Accuracy is meticulously checked in every stage of the manufacture.

COUNTERSUNK BOLT
for fastening of wood and metal

You can rely on our Countersunk Round and Countersunk Squares, Screws and Nuts, for the fastening of wood and metal.

Manufacturers of all type of Bolts, Nuts, Rivets and Spikes. Made to any required specifications.

STEEL MOULDERS
18A, Rupchand Roy Street, Calcutta-7

B·O·A·C introduces the Shippers' Service Unit
...a new aid to air cargo users!

BOAC's Shippers' Service Unit offers *you* something entirely new in air cargo service. Your telephone becomes a direct link with BOAC's team of freight experts.

For *instant* action on any consignment phone BOAC Calcutta (44-3671/7, week-ends—44-3677) and ask for "SKYLOAD". You will go straight through to the Shippers' Service Unit, for immediate information on costs, transit times, delivery dates and Customs' regulations. The Unit's specialists will solve all your problems.

BOAC's new Shippers' Service Unit is there to help you. Just say the word-"SKYLOAD"

All over the world B·O·A·C takes good care of your cargo

BRITISH OVERSEAS AIRWAYS CORPORATION

NATIONAL CITY BANK
of New York
(Inc. with Limited Liability in the U.S.A.)

First in World Wide Banking

Serving India Since 1903 at Bombay and Calcutta

FNCB.G.2

soaps and toilet products, and a reduction of Rs. 1.50 lakhs in interest charges as a sequel to smaller borrowings for the greater part of the year under report During the year under review, the company's two factories together crushed about the same quantity of copra and seeds as in 1957-58. Due to the scarcity of supplies, the tonnage of mowra seeds crushed at the Bombay factory was substantially less than in the previous year. Total sales of laundry and toilet soaps constituted a record for the company. The sales were 9 percent higher than in the previous year. The Calcutta factory operated in three shifts for most of the year. Progress on the same scale was also recorded in the output and offtake of glycerine. The continued shortage of tin containers, particularly small packs, affected the production of Pakav. The demand for the company's hair preparations continued to grow and the total sales of all toilet preparations increased by 16 percent over the previous year. Export sales did not show any advance, but in view of the potentialities for soaps and toilet articles in the Middle East and African markets, the company deputed its sales officers to visit these territories periodically to expand the market for the company's products. The erection of the new solvent extraction plant at the Bombay factory was completed towards the end of the year under review. The plant, after being tuned, has now gone into full production. At the Calcutta factory, new soap cooling and drying equipment has been installed; this will eliminate the old method of cooling the soap in frames. A new building was completed at the Bombay factory for housing the factory of Industrial Perfumes Private Ltd, in which the company has invested Rs. 4.15 lakhs. This factory has gone into production and its products are finding a ready demand.

Murphulani Tea

The Murphulani (Assam) Tea Company has earned a profit of Rs. 2.98 lakhs for the year ended December 1958. Bringing in Rs. 40,086, providing Rs. 2.36 lakhs for taxation and making other adjustments, there is Rs. 2,02,201. General reserve is allocated Rs. 85,000. The preferred ordinary dividend has been increased from Rs. 2.25 to Rs. 2.50 a share, leaving a carry-forward of Rs. 39.563. Production fell from 5.544 maunds to 5.171 maunds but the average sale price rose from Rs. 2.45 to Rs. 2.75 a lb. Estimates provide for a crop of 5,600 maunds at a cost of Rs. 8 42 lakhs The directors have carefully considered the question of issuing bonus shares and they are of the opinion that, in view of the removal of the excess dividend tax but not of the tax on bonus issues, a bonus issue at this stage would not be in the best interests of the company.

Pullangode Rubber

The profit of the Pullangode Rubber and Produce Company has amounted to Rs. 94,603 for the year ended March 1959, against Rs. 64,261. An ordinary dividend of 5 percent has been paid, leaving a carry-forward of Rs. 72,398, compared with Rs. 76,143 brought in. The crop increased from 586,000 lbs to 648,000 lbs. The average sale price rose from 147.26 cents to 146.81 cents a lb. Estimates for the current year provide for a crop of 575,000 lbs at a cost of 115.99 cents a lb.

Bowreah Cotton

There is a loss of Rs. 1.53 lakhs for the Bowreah Cotton Mills Company for the year ended December 1958. Bringing in Rs. 1,17,244, a debit balance of Rs. 35,408 is carried forward. The dividends have been passed over. To meet the increasing cost of production, it has been decided to modernise the spinning and the preparatory departments by the installation of new machinery and by the conversion of some of the existing machinery to high-draft systems, for which orders have been placed.

Bombay Market

SLIGHT RECOVERY FOLLOWS HEAVY SHAKE-OUT

LARGE DELIVERIES ABSORBED

Wednesday Evening.

THE Bombay stock market showed signs of returning confidence today, after having suffered a heavy shake-out earlier this week. There has been substantial bull unloading and share deliveries in the last settlement increased from 366,000 to 582,000. Bears circulated a number of rumours which were not confirmed. First, it was stated that the two-million ton expansion plan of the Tata Iron and Steel Company had broken down. This was a story nobody believed. What is more likely is that the expansion scheme is getting in its stride slowly but steadily, as might have been expected. Secondly, it was thought that the Life Insurance Corporation might take profits by selling shares. There is as yet no evidence of any selling by the Corporation.

Tata Steels closed at Rs. 192.75, as did Indian Irons at Rs. 24.96 on support from Lyons Range. Alcock Ashdown were transacted at Rs. 258 and Premier Constructions were bought at Rs. 354. Tata Locomotives were dealt in at Rs. 218 and Larsen & Toubro were steady at Rs. 22.04 on prospects of a rights share issue. In motor shares, Hindustan rose to Rs. 10.88 on a maiden ordinary dividend and Premier Automobiles came to hand at Rs. 128.50.

In the cotton mill group, there was an all-round recovery at the close. Century increased to Rs. 553 on interested support. Bombay Dyeing recovered to Rs. 65.30 and Kohinoor changed hands at Rs. 293. Simplex were transacted at Rs. 182 and Tata Mills were bought up to Rs. 40.50. India United Ordinaries were taken at Rs. 7.64 and Apollo were offered at Rs. 1.22.

Miscellaneous shares moved in line with the general trend. Among sugar shares, Belapur were done at Rs. 315 and Phalton came to hand at Rs. 160. In the cement group, Associated Cement were dealt in at Rs 154 and Digvijay came to hand at Rs. 153.50. Among steamship company shares, Scindia recovered to Rs. 18.12 and Great Eastern Shipping were transacted at Rs. 22.24. In mining, Shivrajpur Syndicate were placed at Rs. 81. National Rayon jumped to Rs. 348 and Voltas were bought at Rs. 169 on investment account. Bombay-Burmah were indicated at Rs. 546 and Tata Chemicals were steady at Rs. 17.88.

Banking shares were quiet as dividends of two leading banks have in effect been reduced. Bank of India fell to Rs. 120, as did Central Bank to Rs. 52.50. Insurance shares were steady; New India improved to Rs. 60.50 and Vulcan were placed at Rs. 21.28.

There was selective interest in electricity supply company shares. Ahmedabad came to hand at Rs. 91.80 and Tata Power met with demand at Rs. 1,240.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate: Opening Quotations Highest for the week. Lowest for the week Closing Quotations. Quotations for the corresponding Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

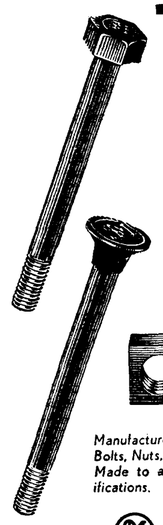
B·O·A·C introduces the Shippers' Service Unit

...a new aid to air cargo users!



BOAC's Shippers' Service Unit offers *you* something entirely new in air cargo service. Your telephone becomes a direct link with BOAC's team of freight experts.

For *instant* action on any consignment phone BOAC Calcutta (44-3671/7, week-ends—44-3677) and ask for "SKYLOAD". You will go straight through to the Shippers' Service Unit, for immediate information on costs, transit times, delivery dates and Customs' regulations. The Unit's specialists will solve all your problems.

BOAC's new Shippers' Service Unit is there to help you. Just say the word—"SKYLOAD"

All over the world B·O·A·C takes good care of your cargo

BRITISH OVERSEAS AIRWAYS CORPORATION

BOLTS and NUTS

for all tightening purposes

You can rely on the output of our modern factory, made to I.R., I.S.D. & B.S. Specifications. Accuracy is meticulously checked in every stage of the manufacture.

COUNTERSUNK BOLT

for fastening of wood and metal

You can rely on our Countersunk Round and Countersunk Squares, Screws and Nuts, for the fastening of wood and metal.

Manufacturers of all type of Bolts, Nuts, Rivets and Spikes. Made to any required specifications.

STEEL MOULDERS

18A, Rupchand Roy Street, Calcutta-7

COTTON PRICES DECLINE

In its report for the year ended 31st March, the Empire Cotton Growing Corporation deals with those territories where, by agreement with the Governments concerned, its staff is responsible for most of the research work on cotton. These are Aden, Kenya, Nigeria, Nyasaland, Tanganyika, Uganda, and the West Indies, while the corporation is also responsible for cotton breeding work in the Sudan. Cotton production in these eight territories fell by 340,000 bales in 1957-58 to the lowest level since 1952-53, but the total was affected by the exceptionally unfavourable season in the Sudan, where the crop was 432,000 bales less than the previous season's, so that the other seven territories showed an increase of 90,000 bales over 1956-57. Preliminary indications are that the crops from the eight territories will recover to a total of some 1.5 million bales in the current season, and this will establish a new record. It is pointed out in the report that during the year, there was not only a steady fall in cotton prices generally but also a progressive reduction in the differentials between short, long, and extra-long staples. This, it says, was caused partly by the U.S Government's price support policy and partly by technical changes in demand including the substitution of singles yarn for fine two-fold yarns for making shirtings. These circumstances have led some of the territories, particularly the Sudan and Aden, to consider growing on cotton lands shorter-stapled varieties which will give a higher yield.

LONDON INSURANCE LETTER

STRUCTURAL CHANGES

BEFORE the year was half-way through, it was apparent that 1959 would be for British insurance what 1958 was for British banking, a year of unfamiliar change. Structural change is, indeed, unfamiliar in these most conservative financial institutions in the world; but in the past year (for the transformation of banking occurred in the second half of last year, after the credit squeeze was withdrawn), banking and insurance have changed as rapidly as manufacture and distribution. If functional development has been more rapid in banking than in insurance, the simple explanation is that the scope for development was less in insurance, where all manner of risks were already being underwritten when the changes began. So in insurance the emphasis is organisational: companies are in process of amalgamating. The latest phase of activity in insurance shares on the London Stock Exchange began with the amalgamation of the Commercial Union and North British and Mercantile companies. One of the companies picked out by investors and speculators seeking "take-over profits" was Scottish Union and National Insurance; and their anticipation became fact when Yorkshire Insurance made a bid for this company. The next event, familiar enough in other sectors of business, was unprecedented in British insurance: a more generous counterbid from a rival group, Norwich Union Insurance. As Norwich Union is a mutual society (one of the largest in the U.K.), its offer was necessarily in terms of cash, whereas Yorkshire, a company, had offered cash-*cum*-shares; but there was no difficulty in perceiving that Norwich Union was offering much more. Yorkshire refused to take part in competitive bidding and formally withdrew from the contest.

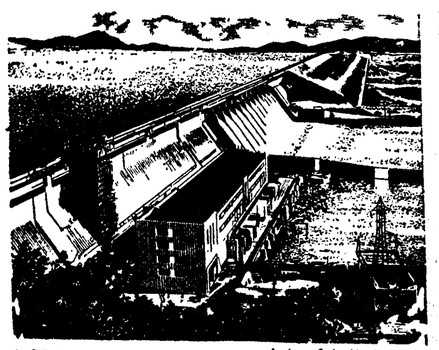
Unfriendly Episode

This episode has not been quite so friendly as the agreement between Commercial Union and North British for both the bidders seem to have felt at some stage that negotiations had been going on behind their backs. But the rivalry and resentment that are characteristic of many take-overs in industry and commerce are happily still absent from the insurance scene. Whether these elements can be altogether excluded when the movement has gathered strength is not sure; for when organisations are consolidating among themselves some of them are necessarily being pulled in different directions, and—in however gentlemanly a manner—such tussles may become acrimonious. The recent meeting of the British Insurance Association left no doubt that the process of merging would continue. The Association itself cannot, of course, initiate, or even co-ordinate, the moves, but some of its members have said that more bids are in prospect—and must have evidently accepted the principle of competitive bidding, in a business which is itself essentially competitive. Organisational and operational economies are obviously desirable, especially where a stronger attack on the North American market is intended. (It should be noted, however, that Yorkshire Insurance withdrew from the United States last year; and if it had gained control of Scottish Union this company, too, might have disposed of its American interests.) Moreover, the increasing scale of modern risks—in nuclear energy, for instance—calls for larger units to underwrite them.

The Weak Spot

Even in mid-year, full details of the past calendar year's business are not yet available, but the broad picture emerges clearly. The salient point is that the underwriting surplus on non-life business was substantial last year, whereas a small deficit resulted from the previous year's operations. Of the three main branches, the underwriting surplus on fire business was much increased, and the underwriting deficit on accident business was much reduced, while only the marine account deteriorated. The improvement in North America was an important factor in the general improvement, but conditions elsewhere abroad, and at home, played their due parts. Accurate forecasting for the current year is not yet possible, of course, but it can at least be said that there is no reversion to the gloomy mood of 1957. It is distressingly obvious that in marine business, the deterioration continues, but in the fire and accident departments, the relation between premiums and claims seems broadly similar to last year's. While accident business in the U.K. is distinctly difficult, the adjustment of premium rates in North America is still a strengthening factor.

In his annual statement as chairman of the British Insurance Association, Mr. C. F. Trustam mentioned a figure of almost £10 million as the net loss of British companies on motor-car insurance last year, and he emphasised that losses were a worldwide phenomenon. It may be thought that with comparable premium rates sometimes five times as high in New York as in London, American business must now be profitable—unless British business is fearsomely unprofitable. Mr. Trustam acknowledged, indeed, the decided improvement in the underwriting position in the United States; but it cannot be entirely satisfactory, on the basis of present rates, while costs of repair are very high and damages awarded are very generous. It is now accepted as inevitable that motor-insurance rates in Britain, after two years' stability, must rise. But there is a growing feeling, among insurers as well as insured, that a single increase in rates is no lasting solution of the problem. Much wider differentiation between good and bad risks is needed. The insurance companies could play a more active part in the national campaign for better driving. They could even exert their influence on the manufacture of cars, as they do already on the building of factories.



Buying Shares

The latest statistics show that the Association's members increased their investments from £5,149 million in 1957 to £5,528 million in 1958, and that they reduced the proportion of gilt-edged stocks from 23.5 percent to 22.4 percent and increased the proportion of ordinary shares from 17.2 percent to 18.5 percent. Last year they had £379 million of new money to invest, and as much as £135 million of it went into ordinary shares. The idea of using an insurance policy as a direct medium for—or at least aid to—investment is new in the United Kingdom. The London and Manchester Assurance scheme, unlike most contemporary schemes for facilitating investment, is not designed for "the little man": it applies to savers whose annual income is not less than £1,500, and who have at least £500 available. They deposit 25 percent of the value of the security to be bought; the insurance company advances the rest; and the arrangement then proceeds like a house-purchase scheme. Interest payable on the advance is allowable in assessing tax, and on the endowment policy whereby the loan is discharged, the investor gains the tax-reliefs on premiums. The investor thus benefits from tax concessions to which he would not be entitled if he operated through the normal mechanism of the stock market.

LLOYDS BANK CONTRIBUTES TO LOAN FOR INDIAN RAILWAYS

Lloyds Bank, of London, is one of seven private banks participating in a World Bank loan of $50 million to India for the modernisation and expansion of the Indian railways. The private banks are participating without the World Bank's guarantee to an extent equivalent to $8,762,000. This amount represents all of the first three maturities and part of the fourth, fifth and sixth maturities falling due between January 1963 and July 1965. The loan by Lloyds is in sterling; those by the others are in U.S. dollars. The $50 million loan is for 20 years and bears interest at 6 percent.

STATE TRADING RESPONSIBLE FOR FOOD PRICE RISES

CENTRAL MINISTRY STRESSES PROCUREMENT DIFFICULTIES IN DEFICIT STATES

(FROM A NEW DELHI CORRESPONDENT)

WHILE the Central Government and the Prime Minister are still bent upon introducing State trading in foodgrains on a countrywide scale, and blame traders for the rise in prices, it has been admitted for the first time in a Government document that State trading has been a definite factor in pushing up prices in deficit States. The Central Ministry of Food and Agriculture, in a note to members of the Central All-Party Food Committee, has posed the question whether in view of this, State trading should not be given up in deficit States. (There is no State trading yet in West Bengal and Bihar.) It says that production of foodgrains during the last three years has been as follows (in million tons):

Year	Wheat	Rice	Other cereals	Total cereals	Gram and pulses	Total foodgrains
1956-57	9.3	28.3	19.6	57.2	11.5	68.7
1957-58	7.7	24.9	20.4	53.0	9.5	62.5
1958-59	9.7	29.7	21.9	61.3	12.0	73.3

It goes on: "While the rise in prices in 1958 could be attributed largely to the drop in production, the high level of prices in some States this year, in spite of the large increase in production, has been causing general surprise. It will be recalled, however, that in 1957 also there was a similar situation, as in spite of the satisfactory production in 1956-57, the prices went up. It was primarily for the purpose of investigating the causes of the rise in prices in 1957 that the Foodgrains Enquiry Committee was appointed. Apart from the effects of varying production, the Committee drew attention to the general monetary factors and the rise in demand which were responsible for pushing up the prices. The new factor operating this year is the scheme of State trading in foodgrains. It is necessary to examine how far this is affecting the price level and to what extent this is responsible for difficulties which have arisen in certain States.

"The decision on State trading in foodgrains and the manner of its implementation were largely the result of the experience of the very bad year of 1958, when prices rose very high. The general feeling was that the traders were mostly responsible for the mischief. Naturally, there were widespread demands for the control of prices by the Government. State Governments generally felt that they would have been better off if they had some stocks of their own and had not to depend entirely on Central supplies, which were not always available in adequate measure. State trading in foodgrains provided the opportunity to the States to build up their own stocks and most of the Governments, therefore, decided to start State trading. Excepting for the southern zone consisting of Madras, Andhra, Mysore and Kerala, each of the other States has been practically cordoned off. This inevitably led to a rise in the prices in the deficit States. Government purchases in these States have pushed up the prices further. On the other hand, in the surplus States, the prices were not generally allowed to fall too low and the Government purchase price acted as the floor price. But for these factors, the price level for the whole of the country might have been lower during the last few months.

State Procurement of Rice and Wheat

"State trading in rice was undertaken from December 1958 after the last *kharif* harvest. An *ad hoc* target of 2 million tons was mentioned for the purchase of rice. After the *kharif* harvest of 1958, there was very little carry-over in the market. Large quantities of wheat were issued to meet the shortage of rice in the rice-eating States. The purchase prices fixed by the Government for the 1958 harvest, although generally reasonable, were much lower than the prices that prevailed before the harvest in 1958. Against this background, the procurement of 1.2 million tons of rice cannot be considered a bad performance. Out of this, about 700,000 tons have been purchased for the Centre and another 200,000 tons are likely to be purchased for the Central reserve during this year.

"State trading in wheat was started with the *rabi* harvest in May 1959. So far, only about 200,000 tons have been procured. The wheat prices fixed, although reasonable, are too low compared with the high prices that prevailed before the *rabi* harvest. Market arrivals, too, are still poor, except in Punjab where some headway has been made, and are below the arrivals in the previous year.

PUNJAB
(April-June)
(in thousand maunds)

Year	Moga	Barnala	Bhatinda	Jagraon
1958	581.1	251.6	44.8	478.4
1959	385.8	214.7	24.8	314.3

"In the last two weeks of June, the arrivals this year in these markets have been higher than in the previous year.

UTTAR PRADESH
(April-June)
(in thousand maunds)

Year	Chandausi	Hapur	Hardoi	Kalpi
1958	91.7	49.2	26.0	29.9
1959	53.9	8.4	10.5	34.6

"The growers and traders have a feeling that they would not lose by slowing down the sales, and in fact, might be gainers. This feeling might have been encouraged among the peasants by the trade. By and large, the traders do not seem to have built up large stocks this year, out of fear that the Government might take over the stocks at controlled prices. Whether this behaviour is due to the fear of traders or out of a desire to sabotage the scheme of State trading, the answer to the problem does not lie in seizing the stocks. For a consequence of this move will be the starting of a monopoly procurement scheme for taking grains direct from the producers. A decision on this must depend on an assessment of the general attitude of the producers and the effectiveness of the administrative machinery in each State. Since farmers also are resisting the Government scheme, direct procurement will involve compulsory acquisition. Most of the States are reluctant to resort to this.

Procurement in Surplus States

"In the States having a large surplus, the implementation of the schemes has not given rise to any major difficulty over internal availability and prices. In Madhya Pradesh, the 400,000-ton target for procurement has been exceeded. Although there was some initial resentment, both producers and the trade realised that with the cordoning off of the State and measures to prevent smuggling, they would have no market unless they sold to the Government. There has been general satisfaction with the arrangements made for making purchases in Madhya Pradesh and a similar result could be expected in other surplus States if proper arrangements are made.

"In the deficit or marginally surplus States, however, State trading has met with serious difficulties. Government procurement has been generally poor. It has been a definite factor in pushing up the prices in the market. The Government purchase prices being low compared with the market prices, the sellers have tried to make up the loss by pushing up the prices of the balance left with them. Although State Governments have been anxious to control prices, no State Government has found it possible to enforce the controlled prices, particularly out of fear that market supplies might dry up. In Bihar and West Bengal, price control and Government procurement have been given up. U.P., Madhya Pradesh and Rajasthan have been able to procure insignificant quantities of wheat. Punjab has ben able to procure about 120,000 tons of wheat, but that has been possible only by prohibiting the Punjab and Delhi flour mills from buying direct in the market. The total requirements of these mills are about 400,000 to 450,000 tons a year; Government stocks would be depleted to that extent, and unless Punjab's procurement exceeds this, there may be no net advantage. In the southern zone, prices were fairly steady last year and the prices, compared with the north, were lower. In spite of a better crop, the prices this year are higher. Madras did not procure any foodgrains last year and had no occasion to open fair price shops. This year it has started State trading and has also found it necessary to open fair price shops to check the rise in prices. There is no doubt that State trading in Madras has upset the market, not only in Madras, but also throughout the zone.

"It is wrong to say that the difficulties in these States have arisen only because of administrative lapses or inefficiency. In the deficit or marginally surplus States, the market is very sensitive and any steps reducing supplies, even temporarily, creates an appreciable disequilibrium. The inherent difficulties and defects of State trading in such States should be fully considered. The question is whether the purchase operations should extend over the whole of India or such States should be left out for the time being. If State trading is concentrated mainly in the States with a large surplus, and adequate supplies are made to the deficit States out of the purchases made in the surplus States, the building of reserve stocks wound naturally take longer.

Need for Buffer Stocks

"Large buffer stocks are essential for successful State trading. State trading means displacement of existing machinery of distribution, operating since times immemorial, and substituting new machinery in its place. This process cannot but present difficulties. It was for this reason that an interim pattern of State trading was envisaged as a final pattern. Although the interim pattern has been fitted into the existing system, it is natural that the traders, and at their instance, the farmers, would offer resistance. When State trading was started, the country had just emerged from a difficult and lean period. The country's stocks were low and the deficit areas could not be flooded with foodgrains necessary to overcome the resistance of the traders and producers.

"Moreover, the building up of reserve stocks in wheat by internal purchase is more difficult than in the case of rice. No State can be said to have a large surplus of wheat. In spite of the distribution of nearly 2.5 million to 3 million tons of imported wheat a year, there has been a substantial rise in wheat prices, indicating that the demand for wheat outstrips the supply. The questions that arise, therefore, are:

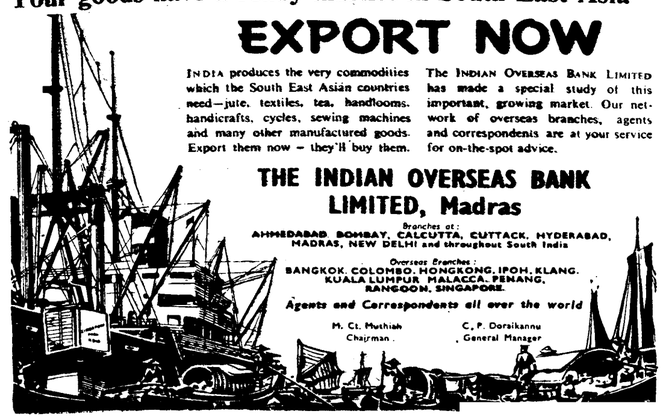
"Do the high prices and difficulties in State trading arise mainly from the opposition of traders and/or purchasers or from other economic factors?

"If it is considered that traders and/or producers are mainly responsible for the present situation, should the Government undertake monopoly procurement throughout the country and consequential rationed distribution?

"If, on the other hand, it is considered there are basic economic reasons for the present situation, or if it is not considered practicable or desirable to undertake monopoly procurement, should the scheme of State trading be modified to get over the difficulties that have arisen?

"Should State trading be undertaken in every State or should the deficit and marginally surplus States be left out, for the time being?" The All-Party Committee has postponed a decision on this question and has called for further information.'

Development in Third Plan



The Federation of Indian Chambers of Commerce and Industry has suggested to the Planning Commission that India's economy requires an integrated growth with a balanced development of capital goods and consumer goods industries. The Chambers' delegation, which had a discussion with the Planning Commission on the third plan recently, further suggested that governmental operations should be restricted to those fields where private enterprise is not in a position to participate on account of its inadequacy of finance and where the Government feels that the field should be reserved for strategic reasons. Other suggestions made by the F.I.C.C.I. are:

The utmost use should be made of the installed capacity, so investment should be directed in such a manner that it yields the highest return a unit.

The development of small-scale industries, both ancillary industries and feeder industries, as well

as industries producing consumer goods to satisfy local demand, is of vital importance to the economy.

The solution to the unemployment problem lies in rapid industrialisation and creation of employment opportunities directly in industry, and in the secondary and tertiary occupations.

In framing the import policy and making foreign exchange allocations, exclusive attention should not be paid to imports on account of industrial, hydro-electric or similar plans. Unless due allowance is made for the import of industrial raw materials as well as components, spare parts and replacements, the third plan will run into the same heavy weather as the second. The standardisation of machinery and equipment in a big way will progressively reduce the import bill.

Foreign exchange can be saved in the import of capital goods by paying proper attention to the comparative costs in various countries and importing from the cheapest source. The best agency to undertake this would be the associations of industrialists engaged in the same or similar industries. A reduction can also be attempted through the grant of credits and periodical repayments. But since these carry high rates of interest, the eventual cost of the capital import may prove to be higher. A better method would be foreign collaboration so that the cost of capital equipment is more or less borne by the foreign participant. This would mean considerable flexibility in licensing, since in industries the proportion of foreign capital equipment will vary, and in some, the proportion of foreign capital to the company's initial capital may have to be fairly high.

Tyagi Committee Report

Indications are now available of the likely recommendations of the Tyagi Committee on the reform of direct tax administration. Although its chairman, Mr. Mahavir Tyagi, M.P., has characterised the reports in the Press as "unauthorised and speculative," enquiries show that except for one or two matters, the committee has reached broad conclusions at its recent meeting in Mussoorie. It is meeting again in August and is expected to finalise its report for submission to the Government by the end of September. The following are some of the broad conclusions of the committee.

1. The onus of proving the incorrectness of any assessment should rest on the assessee when he raises the issue in appeal before the Appellate Commissioner. At present, at the initial stage of assessment, this responsibility rests on the assessee, but when he appeals to the Appellate Commissioner against the orders of the income tax officer, the onus shifts to the department.

2. Appellate Commissioners of Income Tax should be under the administrative control of the Law Ministry so that appeals made by assessees are adjudged without any scope of executive interference by the tax-levying authority. At present, Appellate Commissioners are under the Finance Ministry, while income tax tribunals are under the Law Ministry.

3. The committee is against the recommendation of the Law Commission for the abolition of income tax appellate tribunals as well as demands in Parliament for ousting the jurisdiction of high courts in income tax matters. The committee, it is reported, is of the view that both the viewpoints may best be reconciled by maintaining these tribunals with the stipulation that they will be headed by judges of high courts. It is presumed that in this event, high courts may not interfere under Article 226 in each and every case, but only in exceptional cases of injustice or serious violations of the law.

4. The committee is against the enactment of a provision similar to that in the U.K., prescribing imprisonment for filing false returns.

5. No decision has yet been taken about amending Section 54 to provide that the names of tax defaulters should be made public. This suggestion has been made repeatedly in Parliament. The former Finance Minister, Mr. T. T. Krishnamachari, got through the Cabinet a Bill for this purpose, but before he could introduce it, he resigned. His successor seems to have felt that in view of the appointment of the Tyagi Committee, the further progress of the Bill should be held up.

Arbitration in Labour Disputes

The Government of India has asked State Governments to issue suitable instructions to their conciliation officers so that in all cases where conciliation efforts fail, the officer should make definite proposals to the parties concerned for settling the dispute by arbitration. The Government of India's Chief Labour Commissioner has already issued similar instructions to the field officers under his control. It may be recalled that the sixteenth Indian Labour Conference, held in Nainital in May 1958, recommended that while the time was not yet appropriate for the suspension of adjudication for the settlement of industrial disputes, adjudication should come only in the last resort, and parties should be encouraged to have recourse to arbitration.

The tripartite Central Implementation and Evaluation Committee has clarified that where there is a conflict between statutory provisions, in a State, concerning the recognition of trade unions and the provisions in the Code of Discipline adopted by the I.L.C., the former will prevail. Other points dealt with are:

(i) A clarification was sought whether the condition relating to 15-percent membership, laid down in Clause 2 of the "Criteria for Recognition of Unions" would apply rigidly for recognition even if there is only one union, or would it apply where only more than one union existed in an establishment. On the analogy of clause one of the "criteria" which provides that "where there is only one union, it can be recognised even if it has not completed one year from the date of its registration, it would seem logical that the qualifying membership condition should apply only where there is more than one union in an establishment. Thus, where there is only one union in an establishment, or where there is more than one union and none of them has 15-percent membership, none will be entitled to recognition.

(ii) It seems desirable to maintain the *status quo* for two years from 1st June, 1958, in the case of unions already recognised before that date. The criteria do not, however, seem to place any bar to recognition of different "craft unions", representing distinct and separate interests in an establishment so long as they fulfil the conditions for recognition laid down in the criteria.

(iii) Clause 8 of the "criteria" implies that if a union has been found guilty of violation of the provisions of the code, its recognition can be withdrawn by the employer. Before, however, such an extreme step is taken, it seems desirable that the charges against a union should be investigated and confirmed by an officer of the Central or State Government, as the case may be. In case the charges are refuted by the union, the matter may be dealt with by the Central or the State implementation committee.

Appeals to Supreme Court

An analysis of the appeals made to the Supreme Court in matters relating to labour disputes during 1957 and 1958 shows that although in a majority of cases, the monetary benefit involved was comparatively small, in most cases, questions of law or principle were involved. In a number of cases, important decisions laying down broad guiding principles were given by the Court. The analysis was undertaken at the instance of the Central Implementation and Evaluation Committee. It covered 33 cases of which 25 had been initiated by employers, five by workers and three by State Governments. The broad conclusions of the analysis are as follows :

(a) In one-third of the cases studied, appeals were not successful. Of the appeals filed by employers, 25 percent were not successful—in these cases, it may be said generally that the appeal were not based on very substantial grounds.

(b) The largest number of appeals were preferred by employers and a majority of them were successful.

(c) Eighty-five percent of the appeals related to the termination of services, wages and bonus

(d) In most of the cases, questions of law o principles were involved; in a number of cases important decisions laying down broad guidin principles were given by the Court.

(e) In a majority of cases, the monetary bene fit involved was comparatively small; in case relating to the termination of service, the mone tary aspect did not seem important at all as seve ral of these cases concerned only one or two work men. But important questions of law and princ ples were involved, and in some of them, the vir dication of the viewpoint of the appellants, judi ed objectively, was considerable and worth whil

The above analysis is of interest in view of th fact that the ensuing Indian Labour Conference to review the position about labour awards an appeals to the Supreme Court and High Courts, i the light of the recommendations of the Law Con mission. The proposals before the Conferenc include the revival of the Labour Appellate Trib nal and the setting up of a special bench in th Supreme Court to deal with labour cases, manne by persons who have sufficient knowledge of th intricacies of this sector of the law.

Indo-Pakistani Trade

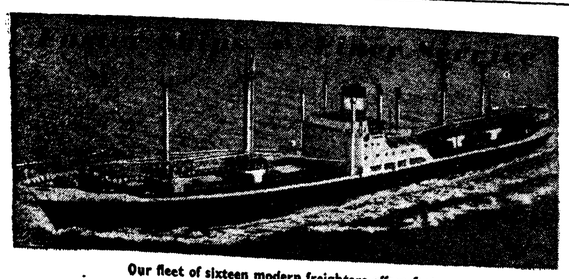
An Indo-Pakistani conference at Secretari level to review the working of the trade agre ment of 1957 began in New Delhi on 22nd Jul The eight-member Indian delegation to the co ference is led by Mr. K. T. Satarawala, Joint Se retary, Ministry of Commerce and Industry, whi the Pakistani delegation is led by Mr. I. A. Kha Joint Secretary, Ministry of Commerce, Gover ment of Pakistan. The conference is expected last two or three days, and is exploring the pc sibility of improving trade between the countri to the extent possible.

In 1948-49, India exported to Pakistan goo worth Rs. 77 crores while her imports from Pak tan amounted to Rs. 109.3 crores. In 1955-5 India's exports to Pakistan dwindled to a me Rs. 8.4 crores, her imports to Rs. 27 crores. Inc is now in a position to supply a variety of goo to Pakistan at competitive prices, and is intere ed in long-term contracts. Besides cement, s can also supply 1,500,000 tons of coal a year a 7,000 tons to 8,000 tons of pig iron a month. T position about border trade will also come up i review. This trade, which figures prominently the agreement, and which ran to several crores rupees a year soon after partition, has shrunk cc siderably during the last few years.

Controller for Model Mills

The Government of India has appointed M H. P. Nevatia as Authorised Controller under t Industries (Development and Regulation) A 1951, to take over the management of the Mo Mills of Nagpur. He will hold office for a peri of five years.

Distribution of Sugar



Under an order dated 16th July, issued in *Gazette of India*, the Central Government authorised district magistrates to fix prices which sugar can be sold by those to whom the G ernment makes direct allocations of the commod This order follows the recent introduction of system of licensing under which allotments v be made only to licensed dealers. According the notification of 16th July, every dealer whc allotted sugar by the Government is required sell at a price not exceeding the aggregate sum the fixed ex-factory price, the transport char incurred by him, any *octroi* or other tax paid payable by him, and a sum not exceeding Re a maund for his profit and any incidental char The actual price will be fixed by the district ma trate accordingly. It may be added that Pun and U.P. have already introduced a modified fc of rationing of sugar through fair price shops.

Rail Link in West Bengal

The Railway Board has ordered the final lc tion survey for a 3.6 mile long broad-gauge between Tildanga and Farakka in West Bengal the North-east Frontier Railway as part of Khajuriaghat-Malda rail project. The link is pected to help reduce congestion on the East Railway main line to Howrah.

Mineral Advisory Board Meeting

The All-India Mineral Advisory Board, wh is scheduled to hold its seventh meeting in C cutta on 22nd July, is to consider the causes lc ing to a decline in demand from abroad for Inc manganese ore and measures to make Indian competitive in the world market. It is also consider a suggestion by the Andhra State Gov ment concerning facilities for blending the Sr kular district manganese ores with Madhya Prac and Mysore ores before export through Visakhapatnam port. The Andhra Governm has suggested that the share of profits of the S Trading Corporation in this field should be usec the development and improvement of mine ar The Board is to discuss several proposals hav a bearing on the export of minerals from Ir Set up in 1953, the Board, among other things, vises the Central Government on questions directional exports of the country's minerals, order of preference of countries to which minerals are exported and measures for increa the internal production and use of the mine

U.K. COST OF LIVING INDEX REMAINS STEADY

STRONG POINT FOR CONSERVATIVES IN ELECTION CAMPAIGN

(FROM OUR LONDON CORRESPONDENT)

THE cost of living index continues to remain steady, which is no doubt gratifying to the U.K. Government, for it is now fairly generally expected in City circles that there is to be an autumn election ; the equity market is already reacting to that possibility. In view of the fact that the cost of living not so long ago was canvassed as a factor in any election campaign, that it has remained so steady in spite of the rise in wages and other related costs, must be regarded as favourable to the Government. This fear appears to have affected the Opposition, and to counteract it, 38 Labour M.P.s have tabled a motion calling on the Government to reduce the cost of living. The motion "notes with alarm" the figures given by the Chancellor of the Exchequer "which show that, in spite of a 14-percent reduction in the cost of our imports and a 9-percent rise in the receipts for our exports since 1951, the consumer price index has risen by 25 percent and the purchasing value of the pound sterling has depreciated by 20 percent over the same period." The retail price index on 16th June, announced by the U.K. Ministry of Labour, was 109.3, compared with 109.1 in May (January 1956=100). The index stood at 109 (disregarding the decimal) in October last year. It went to 110 in November and stayed at that level for six months.

Another feather in the Government's cap is likely to be the successful conclusion of the negotiations aimed at the setting up of a modified free trade area of the seven countries, now referred to as the Stockholm group, with the possibility of Finland joining in with Russian approval. If agricultural interests can be satisfied that they are not going to suffer from the British concession to Denmark, the prospects are distinctly good. Already, the other countries in the group take £300 million worth of Britain's exports and their total imports are £3,000 million. If the association is set up, the U.K. could well hope to increase its exports to them substantially.

Recovery in Steel Output

Steel production in June averaged 388,500 tons a week, compared with 384,600 tons in May and 373,600 tons in June last year, the Iron and Steel Board has announced. Pig iron production was at the rate of 235,300 tons a week, compared with 240,500 tons in May and 243,200 tons in June 1958. Preliminary figures indicate that consumers were still running down stocks in the second quarter of this year. The total orders on the makers' books, for both home and export, have been increasing since February.

Trade Gap Widens

The preliminary trade figures for June are disappointing. Imports recovered sharply from the very low May figure of £310.9 million to £331.4 million, while exports fell back from £299.2 million to £250.4 million. As re-exports were also slightly lower, at £10 million, the trade gap expanded from £1.5 million to £71 million, the highest figure this year. The sharp decline in exports needs explaining, for the June figure is also far below that of April (£295.6 million), but for the second quarter as a whole, exports were 4½ percent higher than in the same quarter of last year. Imports for the quarter were 6½ percent higher than in the second quarter of 1958. The excess of imports over exports and re-exports (the trade gap) averaged £36 million in the second quarter, compared with £39.5 million in the first quarter and £33 million in April-June last year.

The trade gap, as a residual of the other figures, varies a great deal from month to month, and the £71-million shortfall in June is far more typical of the pattern of British trade than the small gap in May, which was the smallest for a century. Imports are expected to go on rising as industry gets into its stride. The fall in exports is less easy to explain, and Sir David Eccles, President of the U.K. Board of Trade, made no attempt to do so when speaking to the National Production Advisory Council. But since special factors can distort the returns, it is fair to look, as Sir David did, at figures for several months together. In the second quarter of 1959, average monthly exports were 7-percent higher than in the first three months of the year, and were well above the corresponding period of 1958.

Dollar Exports Down

The North American export figures for June throw a little light on the United Kingdom's unexpectedly disappointing export performance last month, when total exports were nearly 17 percent lower than in May. Total exports to North America also fell by about 17 percent, dropping from £54.5 million to £44.9 million. Exports to the United States fell by nearly £4 million to £29.7 million, and to Canada by nearly £6 million to £15.2 million. June is not a good month for exports, but last month's fall was much worse than usual. Only when the full *Trade and Navigation Accounts* are available will it be possible to see where the demand faltered, but one weakness shows clearly already. Exports to the United States over last year have been far higher than anyone expected, but shipments to Canada have not increased correspondingly. While the Americans have taken 40 percent more of Britain's goods this year than they did in the first six months of 1958, the Canadians have bought only 4 percent more.

Trade from Good Salesmanship

Reaffirming his confidence that the rise in both imports and exports will continue, Sir David Eccles, President of the Board of Trade, told the quarterly meeting of the National Production Advisory Council that exporters appeared to have mastered the arts of salesmanship that many of them lacked in the years immediately after the end of the second World War. He thought that, in the past two years, while there had been a trade recession, Britain's competitive strength has improved significantly, and this gives reasons for strong optimism now that world trade is once again picking up. Sir David said that Britain is now putting the right sort of "brains and energy" into salesmanship and that this, combined with a steadier level in production costs and better delivery dates, has given the export industries a "new look".

Trade union members of the council, on the other hand, drew attention to the persistent problem of pockets of unemployment in the U.K. Mr. Lewis Wright, of the General Council of the T.U.C., said that in some areas the problem appears to be intractable. No matter how high the national employment figures might go, and in spite of the activities of the many agencies now in the field, unemployment seems to persist. He urged that the council carry out surveys of particular industries, starting with machine tools, and this was agreed. Mr. Wright also suggested that it might be time for the N.P.A.C.I. to review its scope and functions and to consider extensions of these. The council is a wartime body which has expanded its membership considerably since then. Mr. Wright said that he was not making his suggestion because of any supposed defects, but rather on the principle that a general review and overhaul might be a healthy thing. Mr. Errol, the Economic Secretary to the U.K. Treasury, is to be chairman of a small committee to be set up for this purpose.

Hire-purchase Sales Analysed

Detailed figures of hire-purchase sales in May, published by the Board of Trade, show that outstanding instalment debt rose by £33 million to £726 million—£1 million less than the preliminary estimate of £727 million given a fortnight ago. The returns suggest that finance houses may not be doing quite so well as earlier in the year. Although the total debt owing to them rose by £24 million in May—£4 million more than the April increase—the proportionate rise in new credit extended over the corresponding month of 1958 was much smaller. Whereas in the previous month they lent 67 percent more than in April 1958, the turnover in May was only 48 percent higher than a year earlier.

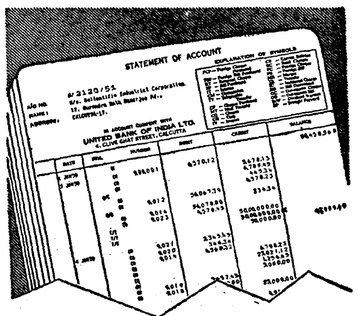
No such signs that the hire-purchase boom might be slackening are shown by the shop returns. The Budget helped sales in a slack season, although to a lesser extent than in April. But furniture sales (45-percent higher than a year earlier, against 46 percent in April) were well maintained without the benefit of any large Budget concessions. Hardware sales (radios, bicycles, refrigerators, etcetera) were 68-percent higher than a year earlier, not far below the 78-percent increase in April and much better than in the first quarter of the year when the increase over 1958 averaged 44 percent.

Cotton Reorganisation Scheme

Details of the Government-aided scheme to make the Lancashire cotton industry competitive in world trade were announced in Manchester last week. The Cotton Board will require the industry to promise, before 30th September, to scrap at least 6 million mule equivalent spindles in the spinning section, at least 400,000 spindles in the doubling section, and at least 45,000 looms in the weaving section, before it will operate the compensation scheme which is designed to reduce capacity and thus make the industry more efficient and competitive. To qualify for compensation, surplus capacity must be scrapped between 24th April, 1959, and 31st March, 1960, unless the Board should fix a later date in individual cases.

Compensation is to be paid at three rates which may be summarised as a premium rate for capacity which is being taken out of the industry altogether, a standard rate for the closing down of mills or plants which were in operation on 24th April (the day following the announcement that the Government will assist the industry); and a discount rate for capacity that had already been closed or was idle on 24th April. A bonus of 5 percent will be paid in addition to anyone who applies to participate in the scheme on or before 31st August—a month earlier than the official closing date for applications. The effect of the various rates of compensation is shown in the figures for a scrapped twiner spindle—premium rate 12s 6d, standard rate 10s, discount rate 7s 6d. Cotton firms going out of business will get compensation free of tax. They will also be allowed to sell their machinery for scrap.

Penalties to be Enforced



These details were published as schedules to draft orders made by the Board of Trade, which is satisfied that the schemes are adequate to eliminate excess capacity ; that arrangements have been made to compensate workers who lose their jobs : and that trade unions representing a majority of the workers have agreed to the arrangements. The detailed proposals of the U.K. Cotton Board are to be reinforced by a penal code laid down in the Board of Trade's orders, imposing varying penalties on anyone failing to produce information when required, persisting in such failure or making false statements. The three schemes are similar in detail. Anyone may participate who, at any time during the period of 24th April, 1956,—three years before the Government's announcement was made—to 30th June, 1969, was in business and was registered or subject to registration with the Cotton Board. An incorporated company, which does not so qualify, may nevertheless participate if it is a subsidiary of another company which does.

Applications must be submitted to the Cotton Board within a "participating period" ending on 30th September, 1959. Each participant must undertake to scrap all the capacity to which the application relates within a "scrapping period" (in general, 24th April, 1959 to 31st March, 1960). Each participant must also acknowledge that if all the capacity has not been scrapped at the end of the period, all his property or interest in that machine shall be transferred at once to, and vest in the Cotton Board. As soon as the latter has received applications covering the minimum capacity which it requires to be scrapped before paying compensation, it will give notice of the fact. Having done so, it will start to pay the compensation rates, and to collect levies from those remaining in the industry ; but the start of this phase of reorganisation will not prejudice the right of anyone to join the scheme within the limits of the "participation period." If, by 30th September, 1959, the Board has not received applications covering the required minimum, it will publish the fact, and state that there will be no compensation and no levy. Each applicant for membership of the scheme will thereupon cease to participate in it. The amounts of the levies to be raised are not stated, but they are not to run for more than ten years. There will be two annual levies—one to provide the amount of compensation not supplied by the Government, and to meet the Cotton Board's costs in administering the scheme: and the other to compensate displaced workers.

Brevities

Three jute companies are resuming the payment of interim dividends. The Samnuggur Jute Factory Company is paying 3 percent, against a single payment of 5 percent last year. Shareholders of the Titaghur Jute Factory will receive 2 percent against one payment of 3 percent, and the Victoria Jute Company is paying an interim of 3 percent, against a single dividend of 5 percent.

Total consumer expenditure in the first three months of 1959 was £3,100 million, against £3.514 million in the previous three months, and £3,049 million in the comparable period of 1958.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

BRITISH TEXTILE REVIEW

RECOVERY FROM RECESSION

IT is now an accepted fact that the whole British textile industry (though not necessarily every part of it) is recovering from the recession. The willingness of such big groups as Courtaulds and Coats to increase their dividends in spite of reductions in profit is significant. In the case of the former, the reduction in profit was slight, for the group benefited from the recovery of some of its constituents, notably Courtaulds (Canada) and British Celanese. On the other hand, Lancashire Cotton Corporation's interim statement for 1958-59 presented, with the announcement of a maintained interim dividend, a gloomy picture of recent earnings, and it must be supposed that the position would have been even worse if the group had had no building materials (yes, Lancashire Cotton Corporation is interested in bricks and tiles) to supplement its yarns. Whereas the Cotton Board's quarterly statistical review, published at the end of June, noted "a distinct improvement" in the cotton industry, Lancashire Cotton Corporation's statement, issued only a few days previously, was inclined to emphasise the difficulties of trading since the adverse judgment of the Restrictive Practices Court on the yarn spinners' agreement, although it acknowledged some improvement in trade this year from the very bad conditions prevailing late last year. It is noteworthy that both the Board's review and the Corporation's statement warned against any complacent idea that the improvement in trade made the Government-assisted scheme for eliminating redundant plant less necessary.

Lancashire's business is subject to an internal ebb and flow within the trade. At home, the weather has been, on the whole, unusually favourable this summer, and consumer demand has responded to it. Another unusual factor has been the women's resistance to unattractive fashions last year and their consequent interest in this year's better designs. But the principal factor in the improvement in trade, along the line back towards the factories, has been not consumer demand but traders' replenishment of stocks. Stocks were reduced to such low levels last year, when confidence was at its lowest ebb, that replenishment may be substantial in the present more confident mood. But common sense suggests—and past experience confirms—that traders cannot indefinitely buy in excess of their customers' offtake. A bigger final demand will soon be needed to sustain the present level of trade; and as far as export business is concerned, that demand is distressingly inadequate.

Topmakers in Strong Position

The wool industry's export trade has been reduced this year, but not so much as the cotton industry's. In spite of the more recent effects of the notorious U.S. tariff quota, the wool industry can still claim the distinction of Britain's premier dollar-earner in the postwar era. But the proportion of cloth in the value of the industry's shipments—still, it should be noted, rather more than half—is diminishing. The British (including, of course, the Scottish) industry has some reason to be proud of the quality of its cloth, but it is arguable that the main strength of the industry, on the export side, is in its combing and topmaking section. The territories with highly-developed wool industries—especially (as far as British exports of tops are concerned) North America and western Europe—have reduced their intake of tops in recent years; but in countries with developing wool industries—mainly in the East, particularly India and China—development is not yet at an even rate, and the disparities have opened up big opportunities for British exporters of tops.

It should be emphasised that the trading position of the wool industry is basically different from that of the cotton industry. Lancashire produces some very fine goods, which could undoubtedly be sold in larger quantities abroad if trade were free, but the growth of newer cotton industries abroad has much reduced its relative importance and it can no longer fearlessly face competition from whatever quarter. The wool industry is essentially more confident, almost aggressively asserting its desire for free trade, in the belief that, value for value, its goods are superior over most of the range. There is almost a political tinge in the lately-reiterated resolve of the National Wool Textile Export Corporation to "fight for a greater liberalisation of trade between the nations of the free world"; the implication being that the challenge of the communist countries cannot be met by such policies as the American President has adopted concerning wool goods.

Competitive Threat from Russia

Incidentally, authoritative statements from Russia have strengthened the belief that the challenge may be strong not only in trade in general, but in textile trade particularly. Mr. Alexei Kosygin, vice-chairman of the State Planing Committee of that country, reporting late in June, said that the Russian textile industry was using its equipment more fully than were the textile industries of Britain or America. According to his figures, his country's industry has 58 percent less spindles and 33 percent less looms than Britain's, but its output of fabrics is three times Britain's, and the United States is producing only 50 percent more fabrics than Russia with twice as many spindles and 70 percent more looms. Mr. Kosygin stated, too, that a programme of mechanisation and automation had been worked out for Russian textile mills.

It is difficult to believe that the British textile industry has reached the peak of its efficiency. Indeed, in the present more favourable state of trade, some people in Lancashire are inclined to emphasise the element in the Government's plan that assists re-equipment rather than that which assists elimination of equipment. It has not escaped notice that the most modern section of the industry, the synthetic fibre section, has come unscathed through the recession—which it could not avoid.

There was some idea a few months ago that demand for synthetic fibres had been basically over-estimated. Big products of man-made fibres, such as Courtaulds, Imperial Chemical Industries, and their joint offspring, British Nylon Spinners, did not endorse this interpretation of the under-employment of capacity, but it was certainly discouraging to see new plant installed by B.N.S. at Doncaster lying idle for months after it was ready to begin producing this year. Now more labour is being recruited at Doncaster, sufficient to bring the new plant into full production before the year-end; and at the B.N.S. factory in Pontypool, where the phase of short-time working ended somewhat later than at Doncaster, the labour force is also beginning to expand. This encouraging trend reflects, however, a growth of demand for industrial purposes rather than for clothing.

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base : year ended March 1953=100) worked out to 115.8 during the week ended 4th July, 1959, against 115.7 (revised) for the previous week. The index was higher by 1.0 percent and 2.5 percent, respectively, when compared with the corresponding week of last month and that of a year ago. Higher prices of potatoes in Shillong (+31%), jowar in Rohtak (+14%), maize in Mandi, mung in Bombay and fish in Calcutta (+11% each), onions and eggs (Calcutta) (+8% each), wheat in Rajkot and barley in Jaipur (+6% each), tea for export and betelnuts (+4% each), rice and black pepper (+2% each) and bajra, ragi, gram, urad, groundnut oil, coffee, chillies and cardamoms (+1% each) raised the index for Food Articles by 0.3 percent to 118.9, compared with 118.5 (revised) for the earlier week. The prices of fish in Tirur (−13%), potatoes in Kanpur (−12%) and in Patna (−6%), oranges in Madras and coconut oil (−11% each), wheat in Moga and tea for internal consumption (−6% each), arhar and gingelly oil (−2% each) and gur (−1%) showed declines. The index for Tobacco remained stationary at the previous week's level of 97.4. The index for the Fuel, Power, Light and Lubricants group also remained unchanged at its last week's level of 116.3. The index for Industrial Raw Materials receded by 0.3 percent to 120.6, compared with 121.0 (revised) for the previous week due to a fall in the prices of raw skins in Delhi (−12%), gingellyseed in Jhansi (−7%), raw cotton (−5%) and linseed (−1%). The prices of raw jute in Barachakia and galnuts in Salem (+12% each), groundnuts (+2%) and raw wool, castorseed and raw hides (+1% each), however, moved up. The prices of linseed oil (−6%), zinc (−3%) and coir yarn, aluminium, tin and lead (−1% each) showed declines while brass (+2%) and rayon yarn (+1%) were marked up, and the index for Intermediate Products fell by 0.7 percent to 107.5. The index for Finished Products remained unchanged at the earlier week's level of 109.4; the prices of drugs and medicines (−1%), however, showed a fall.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base : 1952-53=100)

Groups and Sub-Groups	Week Ended 4-7-59	27-6-59	5-7-58
I. Food Articles :	118.9	118.5(R)	116.0

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 6, held on 20th and 22nd July, offerings at the Export auction amounted to 42,629 chests for which there was a good general demand. "Teas for price" and plain brokens showed an advance of up to 6nP while similar Fannings received much more support and were up to 10nP dearer and sometimes more. Legg-cut teas generally sold well but were a little easier. Best C.T.C. Assams and bright liquoring orthodox descriptions came in for strong competition at about last rates. The medium and more ordinary C.T.C. teas, however, were 10nP to 30nP easier while low medium Assam and Dooars B.O.P.s with tip were a weak feature. Whole leaf grades were well supported at irregularly easier rates. Darjeeling teas met with fair support and the most flavoury types sold well. There was generally more demand for tippy teas.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.96	2.15 to 2.25
Plain B.P.	1.70 to 1.76	1.70 to 1.74
Plain Fannings	1.68 to 1.76	1.84 to 1.88
Medium B.P.	2.00 to 2.05	2.05 to 2.15
Medium Fannings	2.10 to 2.20	2.20 to 2.40
Best Assam C.T.C. B.P.	3.40 to 3.60	3.80 to 4.00
Best Assam C.T.C. Fgs.	4.00 to 4.40	4.30 to 4.50

(Quotations are exclusive of excise duty.)

At the Internal Sale, there were 18,179 chests of Dust on offer of which 187 were of old season's manufacture. There was a good general demand. Orthodox Dusts were firm and often dearer, while Legg-cut Dooars met with keen competition and were 4nP and sometimes 6nP dearer. Darjeeling Dusts were irregular but generally sold at about last rates. Demand for medium C.T.C. Dusts followed the trend of recent weeks, keen interest being shown in invoices with improving cup quality and in grainy exportable types, which sometimes showed advances. The more ordinary descriptions, however, received less support and prices declined by up to 30nP with some withdrawals. The very best C.T.C. Dusts were irregular and generally received less support as the sale progressed.

Quotations

	1959 Rs.
Medium Dooars Dust	1.74 to 1.78
Medium Assam Dust	1.72 to 1.80
Medium Assam CTC Dust	2.00 to 2.20
Best Assam CTC Dust	2.60 to 3.10

(Quotations are exclusive of Excise Duty.)

There were 386 chests of Leaf on offer and these met with a good demand at generally dearer rates.

FREIGHT MARKETS DULL

FREIGHT markets have been quite featureless for the past three weeks, and the only items of local interest have been a fixture of a 6,500 tonner for ore from Visakhapatnam to Antwerp or Rotterdam at 47s 6d f.i.o. and of a 9,500 tonner from Cuddalore to Rijeka at 50s f.i.o.t. Allegations of rate cutting among members of the Calcutta-U.S.A. Conference are likely to result in its dissolution. That there would appear to be room for lower rates is emphasised by the recent announcement of a Line trading to Cuba quoting very low rates although practically no cargo is moving in that direction. Shippers to the United States naturally feel that if rates to Cuba can be cut, then rates to the U.S.A. may well stand a reduction also. As the Line quoting cheap rates to Cuba is also a member of the U.S.A. Conference, its action does not seem calculated to improve the present disturbed situation, nor is it likely to benefit itself.

LINSEED FIRMER

A slightly firmer tendency prevailed in the linseed market during the past week. This was because of the steady trend of the futures market. Opening at Rs. 22.81 on 15th July, the futures price advanced steadily, in spite of a relatively limited turnover. Crushers showed interest in ready as well as forward deliveries, but there was little response from sellers. Arrivals showed a seasonal decline. Foreign oilcake prices sagged further. The oil market was firm. There was a notable improvement in local demand but sellers were reserved and only small quantities changed hands. Latest quotations were as follows : Ready-July Rs. 23 a maund, August-September Rs. 23.25 a maund, and September futures Rs. 23.37 a maund.

HIDES AND SKINS STEADY

The hides and skins market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 14th July and 20th July, 1959)

Cowhides : Wet salted (Ord.) 45,000 pcs. on the basis of Rs. 12.25 to Rs. 16; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 13.50 to Rs. 26.

Goatskins : Wet salted (Daissee, Kustia) on the basis of Rs. 425 to Rs. 450 and Rs. 480 to Rs. 500; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece; Assam-Dinajpur 38,900 pcs. on the basis of Rs. 355 to Rs. 400; Patna-Pakur 3,600 pcs. on the basis of Rs. 417.50 to Rs. 425.

COMPANY AND PUBLIC NOTICES

TRITON INSURANCE COMPANY LIMITED
with which is incorporated
THE EASTERN INSURANCE COMPANY

NOTICE TO MEMBERS

THE Board of Directors of the Triton Insurance Company Limited hereby give notice that the Annual General Meeting of Members will be held at the Company's Registered Office, 4, Clive Row, Calcutta on Monday the Seventeenth day of August 1959, at 11-30 a.m. to receive and consider the Audited Accounts for the year ended 31st December, 1958, the Balance Sheet as at that date, the Report of the Board of Directors and the Auditors thereon to declare a Dividend : to elect Directors and to appoint Auditors and to fix their remuneration.

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy in his stead and such proxy need not be a Member of the Company.

The Share Transfer Books of the Company will be closed from 1st to 17th August, 1959, both days inclusive.

By Order of the Board,
J. D. K. BROWN,
Managing Director.

4, Clive Row,
Calcutta, 14th July, 1959.

THE BIRLA JUTE MANUFACTURING CO., LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Friday, the 28th August, 1959 at 3-30 P.M., for the following purposes :—

(1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1959.

(2) To declare dividends on Preference, Second Preference and Ordinary Shares.

(3) To elect Directors in place of those retiring by rotation.

(4) To appoint Auditors and to fix their remuneration.

(5) As special business, to consider and if thought fit, to pass with or without modification, the following resolutions which will be proposed as Special Resolutions :

(i) "RESOLVED that the Company do hereby approve of contracts entered or to be entered into with the Textile Machinery Corporation Ltd., an associate of Messrs. Birla Brothers Private Ltd., Managing Agents of the Company, for the supply from the said associates of Machinery, Plant, Stores and other goods and sales to them of lime and other goods by the Company in such quantities and in the manner as may be agreed to between the parties from time to time on the term that the rates charged will not be less favourable to the parties than the market rates or which are otherwise reasonable and that the payment will be made within one month from the date of supply."

(ii) "WHEREAS the East Indian Produce Co., Ltd., an associate of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, maintain an office in London in the United Kingdom and whereas the said Company carry on business of acting as agents in the U.K. and the Continent for purchase and sale of goods including Stores, Plant and Machinery and rendering of services such as recruitment of technical personnel, etc. and also have dealings and business connections with parties all over the United Kingdom and the Continent and their operations are on a very large scale and whereas their expenses of maintaining their office amount approximately to £65,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year, and whereas the said East Indian Produce Co. Ltd. have been acting as such agents for and on behalf of the Company NOW it is hereby resolved that East Indian Produce Co. Ltd. continue to act as agents of the Company for a period of three years from 1st July, 1959 on the following revised terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company :

(a) For purchase of Stores, etc.—5% of the Invoice price.

(b) For purchase of machinery—2½% of the Invoice price.

(c) For employing technical personnel for and on behalf of the Company and for attending to enquiries—expenses incurred by the East Indian Produce Co. Ltd. apportionable to such work in each particular case.

(d) For rendering any other special service—such remuneration as may be agreed upon between the Directors of the Company and the East Indian Produce Co. Ltd.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will not be done unless such permission is obtained."

The Register of Members and Share Transfer Books of the Company will remain closed from the 10th August, 1959 to the 28th August, 1959, both days inclusive.

By Order of the Board,
Per Pro. BIRLA BROTHERS PRIVATE LTD.,
G. MAKHARIA,
Managing Agents.

Calcutta,
Dated, 18th July, 1959.

N.B. (i) The Directors have recommended the payment of the following Dividends.

On Preference Shares @ 7½% less Income-tax.

On Second Preference Shares @ 5½% free of Income-tax.

On Ordinary Shares @ Re. 1/- per share free of Income-tax.

If dividends on shares as recommended by the Directors are approved at the meeting THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 28th August, 1959 or to their order or to their Bankers. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders by the 26th September, 1959.

(ii) A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) An Explanatory Statement is annexed to the Convening Notice issued to members of the Company.

ECONOMIC DEVELOPMENT AND THE TERMS OF TRADE

THE most significant change in economic thought about assistance to the under-developed countries since the war has been the gradual transfer of attention from direct aid, public or private, to the terms of trade between the rich and poor parts of the world. Of course, it was always known that the terms of trade were an essential element in the economic development of the backward nations. It was recognised that there was a secular trend of the terms of trade unfavourable to the backward countries producing raw materials, and it was admitted that the wide annual fluctuations of commodity prices (and hence of the terms of trade) handicapped development. That is why there have always been plans, more or less utopian, for the stabilisation of world commodity markets. But in the decade after the war such plans were dismissed briefly as visionary and unpractical, and the emphasis was placed entirely on public aid and private investment as means of stimulating the backward economies.

The recent recession, of 1957-58, did more than anything else to revise opinions on this subject. Because of the fall in production, which reduced demand for raw materials in the industrialised nations, and because price inflation continued in those nations throughout the slump, thus increasing the cost of industrial goods imported by the backward nations, the terms of trade moved heavily against the poor countries. Between mid-1957 and mid-1958 their export earnings fell by 7 percent or 8 percent, yet they had to pay more for industrial goods (notably capital equipment) bought in the West. The result was that $2,000 million was lopped off their revenues, and off their purchasing power for imports. Now this figure of $2,000 million is equal to all the loans granted by the World Bank to under-developed countries in the previous six years. There are other ways of calculating the loss caused by the slump (which is necessarily putative) and other things to compare it with besides World Bank loans. But the main point stands: a shift in the terms of trade, during what was after all a mild and brief recession, virtually wiped out years of effort in international lending and investment.

Naturally the question comes to be asked: is it any use seeking to stimulate and perfect international lending if (a) a slump can annihilate the backward countries' gains in the short space of a year, (b) if continual uncertainty about the fluctuating relation between commodity prices and industrial prices makes it impossible for the backward countries to reckon the long-term cost of any aid they receive, and (c) if the one certainty in the case is that, behind the wide annual fluctuations, there is a long-term trend of the terms of trade against the backward countries? That this question is framed does not mean that any ready answer to it has been found. Attention has turned away from aid to commodity stabilisation not because any satisfactory method of balancing commodity prices and industrial prices has been discovered or suggested—most plans in this direction remain impracticable. The issue has been taken up because of the conviction that, whatever the difficulties, it is in this direction that a solution lies, if there is any. To suppose beforehand that there is none, that there is nothing the industrial nations can do to protect the backward countries from vast and damaging variations in their trade earnings, is tantamount to resigning oneself to the conclusion that there is very little the West can do—very little that is consistent, sure and dependable—to aid the economic development of countries that live on exports of raw materials.

The first result of the new line of thought has been to get straight the facts about the terms of trade between the rich and poor parts of the world. We shall take first the long-term trend because it is less familiar than the question of annual fluctuations and is persistently overlooked by planners in the developing countries who plan imports for five and ten years ahead (they do this implicitly when they plan projects with an import content), but do not forecast the terms of trade on which those imports will have to be bought. The trend is perfectly clear. Between 1928 and 1957 world industrial production increased by 146 percent, yet the exports of the under-developed countries (excluding oil) increased by only 23 percent. Raw material exports are indeed linked with industrial production, and they grow as production increases, but much more slowly. This situation will persist as far into the future as one can see. The raw material producers will continue to rely on the purchases of the industrial nations, but those purchases will increase much more slowly than the revenue and the output of those nations.

The reasons for this disproportion are multiple but simple. Technological progress in Western industry has been concentrated on using fewer raw materials, or even on dispensing with imported raw materials altogether. Increased efficiency in the chemical and engineering arts are the best known cases. Then there is the use of synthetics, where progress since the war has been truly astounding; the substitution of plastics for tropical fibres is one case among many that has directly impinged on a major Indian industry. Next there is Engels' law which has long made us familiar with the fact that as revenues rise in countries well above the subsistence level, outlays on food rise much more moderately, or even reach a ceiling; this concerns the backward countries that a generation or two ago used to supply Europe with its foodstuffs. Finally, there are governmental measures that discriminate against imports of food and agricultural produce. The most important of these are protective: quotas and tariffs to favour farmers in Western countries, and the U.S. price-support programmes. Others are fiscal: excises and sumptuary taxes on tea, coffee, sugar and tobacco, which are often the key exports of backward economies.

But while, for these reasons, the demand of industrial nations for raw materials rises only very slowly, the demand of the backward countries for industrial goods rises very quickly, more quickly in fact than their own national revenues. Most of these countries are committed to development programmes, with a high import content especially in capital goods. And the price of those industrial goods is constantly rising, not so much because of the pressure of demand from the backward countries (which is small, after all, in comparison with the advanced nations' consumption of their own industrial products) but because of the secular inflation that is endemic in industrial economies. Keynes pointed out that western workers always prefer higher wages (and higher prices) to lower prices (and lower wages), even if that choice is irrational. Western economies can adjust themselves to that irrational preference, but for the backward nations it means that the price of t industrial goods they buy is constantly rising, de pite technological progress, while their sales raw materials increase very little.

The unfavourable terms of trade that result e plain much of the payments difficulties exper enced by the under-developed countries. Whe world industrial production increases 100 percen their purchasing power increases only 40 percen This limits all their efforts towards economic d velopment. The capital equipment they receive the fruit of loans and investments from the a vanced countries compensates only in part for th relative loss of purchasing power.

We can be briefer about the annual fluctuatio in raw material markets, for this problem is qui familiar. Between the wars, commodity price used to vary by as much as 16 percent fro year to year; since the war, these price fluctu tions have been rather more moderate—of th order of 11 percent. But the variation in th volume of raw materials exported from the back ward countries has not diminished: it can reach percent from year to year. The product of thes two figures, price and volume, means that th actual export earnings of a raw material produce can be, in any one year, 12 percent higher or l percent lower than the average, simply as a resu of short-term market movements. Such a wid range of earnings is unknown to advanced econo mies with their relatively constant industri prices and their wide variety of export goods. It effect on planned development has been demon trated too recently in India for there to be nee of elaboration.

The latest U.N. report on world economic cor ditions, for the year 1958, which was presented t the meeting of the U.N. Economic and Social Cour cil at Geneva on 30th June, devotes one half of it space to a consideration of these facts and t attempted remedies. The discussion on the latte point is inconclusive, but vitally important as show ing that official economists are now prepared t think about commodity stabilisation, whereas a fe years ago they would have dismissed the subject a a crank's delusion (with honourable exception such as Mr. Colin Clark). The U.N. economist agree on two important points. Firstly, there i very little one or two countries can do by them selves to stabilise markets. Secondly, it will pro bably not be much use to deal with each commo *dity separately, to stabilise individual markets.* I the aim is to provide the developing countries wit some assurance about export earnings over longish period, then there must be a multi-nationa approach to a group of the principal commodit markets. The problem bristles with politica difficulties too: Are prices to be fixed on strictl economic criteria, or will an element of aid b allowed to creep in for specially favoured nations Unless communist countries can be persuaded t co-operate, there is a fair chance that the nation working such a scheme will be buying at one pric in world markets while the communists buy at lower one. Adjustments will not be easy to nego tiate, even when prices become unrealistic; parti cular vested interests in both the poor and th richer countries may find themselves affected an either bring pressure to bear on their government to kill a scheme, or to retain it long after its pro visions are out of date.

The imagination hesitates before so vast prospect. It is already a superhuman task to regu late comparatively limited markets such as thos for tea or tin. How much greater would be th complexity of regulating trade in even a few o the principal raw materials supplied by the poo nations to the industrialised ones, with a view t stabilising the earnings of the former without pre judice to the interests of the latter. Yet it is ir that direction that progressive thought on econo mic development is moving. Mr. Jean Monne lately envisaged a combined approach to the sub ject by the three principal importing units of the world—the U.S.A., Britain and the Common *Market—in collaboration with the principal ex*porters of south Asia, Africa and Latin America At the present moment, such notions seem simply visionary. But this is perhaps the main economic

problem of the remainder of the 20th century. The common man in both halves of the world, the rich and the poor, has just succeeded in digesting the lesson announced a generation ago by far-sighted economists, that the problem of the mid-20th century was aid and investment from the advanced countries in favour of the under-developed nations. But the forward-looking economists of our time have already surpassed that perspective, having learnt the lesson of the disappointing results of aid and investment to date. They are thinking in terms of a slogan coined in a slightly different context several years ago—"Trade not Aid".

SUGAR SHARES: BITTER SWEET

THE trend in sugar shares has been quiet and uncertain for some weeks. The most spectacular movements have been in Carews, which shot up briefly to Rs. 16.12 on interested buying aimed at cornering the company; subsequently, the price has fallen back to about Rs. 12.44. But the relative lethargy of the rest of the section is reflected by Darbhangas hovering around Rs. 18.25, Cawnpores around Rs. 13.69, and Belsund around Rs. 13.25. The main factor troubling investors in these and other north Indian companies is the Government's price and distribution control policy for the commodity. Sugar prices have been at an extraordinarily high level for some months now. In an attempt to bring them down, the Government has been trying to extend and stiffen its control over marketing by the sugar mills, particularly those in U.P. and Bihar. The efforts have not been a resounding success so far; sugar is now selling at Rs. 1.12 a seer in the Calcutta retail markets, which are fed mainly from north India, against Rs. 1.06 a seer a couple of months ago. Shares of sugar companies in southern and western India are faring well, comparatively speaking. Deccan Sugars, for instance, are in demand at Rs. 12.35, while Belapurs are fairly steady at Rs. 305. In the south and west Indian mills, token controls over distribution have only recently been imposed, without any control over prices. Their profits are sustained also by the superior quality of the cane they get.

Why sugar should be so expensive is not easy to understand. Admittedly, a large part of the Indian industry, in northern India especially, is inefficient and uncompetitive. The machinery and equipment used is obsolete, and the quality of the cane is poor, so costs are high while productivity is low. The mills say that they are made to pay too much for the cane they get considering its quality, and the rigidity of their cost structure is to a large extent due to the high level of Central and State taxation. Furthermore, they say, when sporadic shortages of sugar arise, they are invariably due to transport bottlenecks and to the faulty official policy governing releases of sugar from factories. The Government does not think that these are the more important explanations; in its view, the major factor responsible for the dearness of the commodity is that the distribution network, from the mills downwards, is corrupt and inefficient. The statistics provide some support for this belief. The latest ones, issued last week, show that during the current season, until June 1959, sugar production totalled 1,904,000 tons, against 1,967,000 tons during the corresponding period of the last season. Despatches from factories amounted to 1,396,000 tons, against 1,350,000 tons. The fall in output has thus been only marginal, and for the time being at least its implications should have been neutralised by the rise in despatches. One point in favour of the bulls in the sugar market is that the mills held a total stock of only 841,000 tons at the end of last month, against 1,040,000 tons at the end of June 1958. But whether this alone is sufficient to account for sugar being 12 percent dearer than a year ago is doubtful. It looks as if speculation has greatly increased. A fair number of mill interests may be indulging in it, since their reputation on this score has never been very high.

Much of the speculation is a direct, if unintended, consequence of Government policy. Imaginative plans are periodically announced for exporting sugar, which do little good to anybody apart from hoarders and profiteers. As an incidental consequence, the plans serve also to highlight the hypocrisy of the Government: on the one hand, it calmly accepts the situation where the money lost on exports can be made up by mulcting the domestic consumer, while, on the other, it affects to maintain an elaborate, if impractical, system of distribution controls, ostensibly to protect the same consumer. There has been talk of banning exports, but the wholly worthy step has not yet been formally taken. Sugar investors will have reason to welcome a ban if it is imposed, for at present the mills are supposed to be meeting the loss on exports from their own coffers. How big the loss is may be gauged from the fact that Indian sugar costs roughly twice as much as the sugar available in international markets.

It might even be advisable for the Government to go a little further and start thinking in terms of importing sugar. The foreign exchange cost need not be as high as is generally supposed. A number of sugar-producing territories in the Far East, and also perhaps Cuba, cannot buy all the jute goods they need from India because they too have foreign exchange troubles. The scope for bilateral or other arrangements, whereby India exports jute goods and gets sugar in return, deserves to be energetically explored. Although proposals to import sugar will meet with strong opposition from the powerful U.P.-Bihar lobby, they promise many advantages. Such a move would enjoy the grateful support of the ordinary consumer, who has already had to pay too much for protecting this inefficient industry over the past few decades. It would also provide an incentive for the industry to overhaul and modernise its equipment. It would save the Government from the disgrace implicit in the notorious failure of its attempt to rationalise the price and distribution of the commodity. And finally, it would help rehabilitate India's reputation as an international trader, for the manner in which sugar exports have recently been made is gradually earning this country the stigma of a dumper.

The long-term prospects of India having a reasonably efficient and competitive sugar industry are favourable. Investors might be well advised to be highly discriminating and patronise the relatively limited number of companies which are aware of this fact. The main headache of many concerns, especially in U.P. and Bihar, arises from the nature of their cane supplies. Cane production is liable to vary sharply from year to year, being subject to the same uncertainties as the rest of Indian agriculture. The amount of cane which sugar mills are offered is subject to further uncertainties; it is reduced if *gur* and *khandsari* manufacture become more profitable, or if for political reasons cultivators are persuaded to withhold supplies, as they were in U.P. a few months ago. Much of the cane produced in India is of very poor quality. The health of the sugar industry will depend a great deal on whether State Governments, especially those of U.P. and Bihar, can be persuaded to take a little more interest in cane development; the cess they have collected, ostensibly for this purpose, has for years been squandered on other things. The main aims of cane development need to be three-fold in nature: (1) to increase cane yields to the acre; (2) to improve the sucrose content of the cane produced; and (3) to develop more of the early and late-ripening varieties, so that the mills can reduce unit overhead costs by having a longer crushing season. The cultivation of better cane can make a major difference to the economics of the sugar industry; farmers can be given a tangible incentive to grow it if they are paid for their cane according to its quality.

Over the long term, a bull factor for sugar shares is that demand is increasing for many of the waste products and by-products of the industry. The use of bagasse for newsprint and paper manufacture is expected to grow. With the setting up of chemical, plastics and synthetic rubber factories, the alcohol production of the sugar mills will find an expanding market. If sugar producers spend a little less time bickering about the modest relief which the cheaper *khandsari* has provided to consumers, they might have a little more time for putting their own house in order and preparing for the opportunities ahead.

PROBLEMS OF GENERAL INSURANCE

IN his address to the annual general meeting of the Indian Insurance Companies Association in Bombay last week, the president, Mr. A. S. Dastur, expressed the view that continued heavy taxation on the so-called surpluses of general insurance companies is weakening the security which they are bound to provide to the insuring public. It is thus retarding the reserve building of these companies, and is continuing in spite of the persistent plea of Indian insurance companies, made over a long period of years, for special consideration in matters of taxation. The reserve position of an insurance company is the criterion of its soundness and usefulness to the trade in general. If, as is often stated, the industry is indispensable to commerce, its peculiarities call for individual treatment. Mr. Dastur, therefore, urged the Government to allow Indian insurers to build up tax-free reserves. He also objected to the proposed methods for the revision of fire rates. In a scheme of rate revision, the components in the build-up of rates have to be taken into account. Surprisingly, at the moment only losses are being considered while expenses for conducting the business, free reserves to withstand unforeseen calamities and a fair profit to shareholders—all of which affect the composition of fire rates—are being ignored altogether. Nor is the premium income in the fire department composed only of pure fire premium. Riot, earthquake and other extraneous risk premiums come into it. Losses in the latter categories are not frequent, but the catastrophic and explosive content of such risks calls for sufficient reserves. Mr. Dastur contended that to judge the claims ratio of the fire department as a whole—that is, including the premium derived under these items—would be unscientific. If the premium under these heads is taken away, the net premium on the pure fire section would, said Mr. Dastur, go down by at least 15 percent, if not more. Companies should be allowed to build up sufficient reserves to meet these extraneous perils before the results of fire department business are judged. In support of his argument, he quoted from the *Indian Insurance Year Book, 1956*, pointing out that the net premium income of Indian insurers was Rs. 3,29,89,000 in that year. Under the regulations of the Code of Conduct, if 10 percent of net premiums is set aside as free reserve, that would only amount to Rs. 33 lakhs. This, Mr Dastur pointed out, is insignificant compared with trading needs. It is the duty of the powers that be, he maintained, to see that Indian insurers are stronger, because the strength of an insurance company can only be built up from the rate structure.

It is not without significance that complaints from insurance spokesmen these days have a marked similarity though not necessarily in approach. On the subject of fire rates, the issues have been examined from different angles. There seems to be marked unanimity on the unsoundness of any reduction in rates being made on inadequate consideration. Yet, surprisingly, the Tariff Committee, an elected body, seems to be pushed into that position despite the contrary views held by successive chairmen of the Committee itself. This, presumably, is because the Controller of Insurance supposedly represents the views of the Government of India. The present suggestion for reducing the rates, said Mr. Dastur, is due to the unhealthy competitive practices adopted by many insurers. The view has been expressed that the surplus from the fire department finds its way into the market in the shape of illegal inducements. It has been suggested that the reduction in the trading surplus through a progressively rising claims ratio will effectively block this underground outlet. He also commented adversely on Section 40C, which he considered, along with the rules made thereunder, as being "outdated". Although calling for a revision, he did not suggest an alternative. That pressure of direct business leads to undesirable practices has been acknowledged; yet the Code of Conduct Sub-Committee, now engaged in "taking stock of the present position," has failed so far to pay adequate attention to this view. Mr. Dastur called the current scramble a "disease", amounting to mistrust among insurers and a wholesale and indiscriminate scramble for business with the fundamental principles of underwriting shelved in favour of "quantity rather than quality". This scramble, he said, is responsible for top-heavy acquisition costs. What he did not directly emphasise is that it has been stimulated to a very large extent by the regulations governing expenses.

The release of pressure of direct business would, to a large extent, eliminate the scramble. The motivating force of profit rather than compliance with statutory regulations would then act as an automatic curb on large overheads, unsound underwriting and excessive acquisition costs. Mr. Dastur requested the Code of Conduct Sub-Committee to ensure freedom (acknowledging overall control by the authorities), not to make the Code too elaborate, complicated and expensive and to formulate and try out a well-planned, balanced scheme. Frequent changes are detrimental to trading interests.

On the subject of marine insurance, Mr. Dastur explored its erratic course. The continuous theft, pilferage and non-delivery losses contribute to a very great extent, he said, to the mounting claims. He suggested representations to the Port Trust and Railway authorities. Marine premium is to a large extent subsidised by war rates (where reasonable tariff control exists) and if war premiums are taken out, the claims ratio in the marine department will, said Mr. Dastur, be prohibitive. He suggested tariffing marine rates. This has also been powerfully advocated by the chairman of the New India Assurance Company, although how it would be possible to tariff marine "all-risk" rates, where conditions differ from account to account, and interest from interest, is not very clear. Similar loss ratios in the miscellaneous account, said Mr. Dastur, can be eliminated if the motor vehicles department—where, he said, the claims ratio is not less than 65 percent to 70 percent—is separated. The rising claims ratio may merit a further increase in rates, he maintained.

An important point made by Mr. Dastur is the hardship experienced by Indian insurers on account of the restrictive policies of banks and other financing institutions. The Industrial Finance Corporation of India requires "some insurers" to obtain letters from their treaty and reinsurance offices to confirm that, in the event of a claim arising, these offices will pay direct to the Corporation. While these restrictions are bad for Indian insurance as a whole, there might be good reasons for the I.F.C. of India insisting on conditions in some cases. Instead of damaging the reputation of Indian insurers in the international market the I.F.C could require the policies of these "some insurers" to be guaranteed internally by other insurers for whom it does not lay down such humiliating stipulations. Alternatively, it might be even better for the I.F.C to refuse such policies rather than go to such lengths.

Current News and Comment

Tata Steel: Mouse from the Mountain

The decision of the Tata Iron and Steel Company to cut the ordinary dividend for the year 1958-59 has hit the stock market with a resounding thud. As soon as the dividend was announced last week, share prices slumped on heavy selling pressure, and at one time nobody could guess what the bottom would be. The disappointment over the dividend is the greater considering that at the last annual general meeting the management had given an assurance that the directors would try to pay shareholders as much as possible because so far the latter have had a raw deal from the company.

It is proposed to pay a dividend of Rs. 6.80 per share on the old ordinary shares (including the bonus shares issued in 1958 in the ratio of one for five held). A similar dividend will also be paid on the new ordinary shares issued in March 1957, and the payment is made up of a dividend of Rs. 3.80 a share and an amount of Rs. 3 a share to be paid as interest out of capital. The dividend compares with the Rs. 8.25 an old share and Rs. 7.56 a new share paid for 1957-58. The reduced dividend, however, will absorb Rs. 2.09 crores, against Rs. 2.02 crores. If the dividend had been maintained at the 1957-58 level, the company would have had to pay a further sum of Rs. 44.48 lakhs. This amount does not by any means look big considering the size of the company's activities. It is thought that the company could easily have found the sum by drawing on tax reserves; using the tax reserves at the present stage appears to be justified, as it is not known how they will be placed when the changes in company taxation are effected in accordance with the Finance Act of 1959.

Shareholders are greatly worried and are wondering why the directors have cut the dividend. Since there has been no indication about the profit position yet, it is not possible to offer any special reason for the directors' decision. Judging from production trends, it does not look as if the profit will be so much lower as to justify the substantial cut in the dividend. Assuming that the profit during 1958-59 is likely to be pruned by statutory allocations, such as depreciation because of huge expansion, as well as by increased labour emoluments, the directors could have easily maintained the dividend if they had wanted to.

It is, therefore, not surprising that some shareholders are likely to raise a debate on the dividend as soon as an opportunity arises. In financial circles, it is wondered whether the directors' decision has been governed more by New Delhi's reactions than by the company's earnings during 1958-59. Since the Government has not yet permitted the company to issue rights shares, some think that the cut in the dividend might make it easier to obtain permission for issuing the rights shares at par. Even so, the directors may find it difficult to explain their decision, because there is no reason why the payment of a dividend for 1958-59 should be a factor in deciding the terms of a new share issue—whether at par or at a premium.

State Governments to Borrow

Government securities are steady because demand is good while offers are few. The steadiness indicates that there will be a warm response to the loans which are being issued by 12 State Governments (Kerala and Jammu and Kashmir not raising loans). The total offer amounts to Rs. 57.50 crores and the subscription lists will open on 19th August. All the Governments reserve the right to retain subscriptions up to 10 percent in excess of the notified amounts. Although the interest of 4 percent now offered compares with the 4½ percent offered on the loans raised last year, the cut is justified by market conditions. Over the past year, prices of securities have gained on a broad front, so yields have fallen. That is why the Government of India could borrow earlier this month more cheaply than in 1958; the cue has been followed by the State Governments.

As the call rate in Calcutta is moving around 1 percent or so, the interest on the loans is considered attractive. A large amount of money is available for investment, so the subscriptions look like being assured. There should be good institutional support. Banking resources have increased since advances have shrunk with the advent of the slack season in the money market. The Life Insurance Corporation and provident funds have ample sums to invest. Except for Bombay, which will make its issue at par, the other State loans are being issued at discounts. West Bengal has increased its borrowing from Rs. 5 crores in 1958 to Rs. 7 crores this year; on its loan, the redemption yield works out to 4.05 percent and the running yield to 4.02 percent. The money in this State will be used for completing a number of productive economic projects. Bombay is borrowing Rs. 6 crores, which is Rs. 4 crores less than in 1958. There are two notable features. The first is that, in the event of oversubscription, applicants for loans are being given the option of transferring their cash refunds to any of the other State Government loans which may not be fully subscribed. This is expected to mobilise more money. Secondly, Assam is entering the market with an offer of Rs. 2½ crores after a long while. (Further details about the loans are published in an advertisement on page 146.)

The Jessop Dividend Enigma

The ordinary shareholders of Jessop and Company recently received with gratification the news that they are to get a dividend of 6 percent for the year ended October 1958, after having got nothing at all for the two previous years. The pleasure, however, was tempered by three thoughts. Firstly, the last time they got a dividend, it was 30 percent (for the year ended October 1955). Secondly, the latest distribution of 6 percent, at the price of Rs. 29.34 a share, provides a yield of only 2 percent, which is far from attractive by current market standards. Thirdly, the distribution could easily have been bigger, since the 6 percent dividend is covered more than four times by earnings.

The main point of interest, therefore, in the speech from the chair delivered by Sir Bijoy Prasad Singh Roy at the company's annual general meeting in Calcutta last Friday, should have been an explanation why the dividend is not bigger. (A fuller version of the speech is printed on a later page this week.) The explanation, unfortunately, is briefer and less satisfactory than might have been expected. The chairman admits that the distribution "is by no means a high return on the capital invested." But he asks shareholders to join him in expressing "great satisfaction and relief" that it has been possible to recommend what he calls "a reasonable dividend" after providing for the heavy losses suffered by the company in 1955-56 and 1956-57. He indicates that a large expansion in the company's activities is likely when the supply of steel increases by 1960-61. Much larger working capital will, therefore, be required "than ever before." The Government has helped much in meeting the company's financial requirements during the last one year. But, Sir Bijoy says, "in order to meet the expanded production programme, it is necessary to improve the company's financial resources and to build up a substantial reserve. For this purpose, a cautious and conservative financial policy is not only desirable but essential." While appreciating the point, shareholders may, however, ruefully reflect that it was precisely the pursuit of "a cautious and conservative financial policy" for many years previously that helped Jessops land in disaster under a previous chairman, Mr. H. D. Mundhra. But for the large reserves built up during those years, the company might not have attracted that gentleman's unwholesome attentions.

Market circles say that last year's dividend decision, like this year's, has been influenced greatly by the Government acting through its stooge, the Life Insurance Corporation (which body cheerfully proceeded to acquire a large shareholding in Jessops during the notorious Mundhra scandal). If so, the Government's influence is to be regretted. It is widely known that during the Krishnamachari regime at the Finance Ministry (which, incidentally, coincided with the Mundhra scandal of the L.I.C.), the Government's views veered sharply in favour of auto-financing for company expansion. Those views are now apparently being brought to bear on Jessops' financial policies. One of the main lessons of the Mundhra scandal has thus apparently not been learnt: that excessive conservatism in distributing dividends leads to the large-scale accumulation of funds, which provides a permanent attraction to the speculator, the cornerer and the take-over bidder.

Such conservatism is the less justified nowadays since the penal bonus issue tax of 30 percent eliminates much of the reward shareholders would expect for the sacrifice they make in building large reserves. This is a point which Jessops' present chairman, Sir Bijoy, has not missed when speaking from certain other platforms. Market circles recognise that the company needs money since an expansion in activity on the scale visualised in the chairman's speech is expected. But they point out also how the company's paid-up capital is getting rather far out of line with the actual capital employed. Some shareholders feel that one method of rectifying this unbalance, and at the same time raising more resources to cope with the expanded turnover, would be to consider the possibility of issuing rights shares. The company's earning capacity would not militate against the prospect of such an issue succeeding. The issue would also hold out the hope of shareholders getting more adequate returns than they have these past few years.

Mining Shares: High Hopes & Fancy Free

There has been a substantial improvement in mining shares over the past year, the index for the ordinary stocks in this section having increased from 132.9 to 147.5 (1952-53 equals 100). The upward trend is now flattening out as current prices seem to have discounted the prospects for quite a while. The optimistic hopes of a rapid rise in mineral output expressed by Mr. K. D. Malaviya, Minister for Mines and Oils, in his presidential address to the Mineral Advisory Board meeting in Calcutta last week, have failed to cheer investors much—and for good reasons. Mr. Malaviya estimated that production will increase from Rs. 130 crores at present to Rs. 300 crores at the end of the third five year plan, and ultimately to Rs. 1,000 crores. (He apparently did not have time enough to revise his speech before delivering it; in one place, he mentioned Rs. 1,000 crores as the target for the fourth plan, *i.e.*, 1970-71, while in the very next sentence he described it as the target for 1975.) But this is likely to remain an idle official pipe-dream unless a number of drastic measures are urgently taken in order to make the astronomical increase possible. Two such measures are the provision of larger facilities for increasing technical personnel and know-how; and a reform of the Government's mineral policy so as to ensure that development in the private sector is not inhibited by the socialistic attachment to State enterprise. Investors have been getting worried about the increasing official control over the industry. Not only has production been hampered by statutory restrictions; the marketing of minerals too has been subjected to greater official regulation without regard to efficiency. The attempt to channel the sale of minerals, especially to foreign countries, through the State Trading Corporation, is harming the prospects for the industry to a considerable extent.

During the past year or so, there has been a substantial decline in production as well as sales of manganese ore. Since the intrusion of the State Trading Corporation in the export trade, foreign buyers have been turning increasingly to other countries for their supplies. The United States and the U.K. have diverted their orders from India to Russia, Brazil and Africa. Although the latter suppliers are meeting Indian

competition partly by producing cheaper ore through modernised methods, there is evidence that Indian sales have declined because foreign buyers do not like to trade with a Government body. Companies having big manganese ore interests are, therefore, suffering. If the Indian ore is to be made more competitive, private enterprise will have to be given greater freedom in producing and selling it.

Recent trends indicate that the prospects for iron ore are better. This is why investors have preferred companies with a substantial interest in this mineral. Production has risen steadily and the second plan target of 12.5 million tons a year might not be difficult to reach. Domestic demand will increase as steel output is raised, so it is possible that the third plan target may have to be increased to 34 million tons a year. The harmful effects of the State Trading Corporation's intrusion in the iron ore export trade have so far been concealed by two factors. Firstly, the domestic demand absorbs a major portion of the production. Secondly, the export business is restricted to a few countries which have agreed to take Indian ore on special terms.

In copper, there is at present only one unit—the Indian Copper Corporation Ltd—and it produces about 8,000 tons of the metal a year. As the domestic demand is much bigger, it can sell all it manufactures for many years ahead at a reasonable profit. Its earnings might improve considerably when electrolytic copper begins to be produced. Official hopes of increasing copper production to 35,000 tons a year by exploring new cuprous mineral deposits are likely to remain in the realm of fancy for a long time to come. It is meanwhile necessary to concentrate attention on obtaining as much as possible from Indian Copper by encouraging its expansion.

Indian Insurers' Pool Problems

Presiding over the recent annual general meeting of the Indian Insurance Companies Association Pool in Calcutta, Mr. P. U. Patel, chairman, explained that the adverse results during 1958 were primarily due to a few heavy losses in the marine department. Because of the huge Government projects that have been started in recent years, the Pool has been called upon to cover all sorts of risks. Considering the support and patronage it has received from the Government, it is not in a position to refuse any risk that is offered. Nor is it practicable for the Pool to pick and choose, because "if we did so, our motives would be completely misunderstood". The chairman again complained that the statutory corporations controlled by the Government first approach foreign markets for the lowest possible quotations, and then ask the Pool to grant cover at "low and uneconomic rates" for heavy risks. Occasionally, he added, selections are made against the Pool, and this causes an adverse claims experience on balance.

This will sound strange to many. If the Pool is not equipped to accept and service risks which the insured require, the normal procedure would be politely to decline the insurance as being beyond its competence. It is unfair to say that foreign markets quote "low and uneconomic rates." It is to be assumed that foreign markets are conducted on business principles: they must have good reasons for offering rates they do, even if the Pool considers them "low and uneconomic." Competition is inherent in efficient business, and if the Pool is unable to stand competition, the logical course would be for it to decline the business. The Indian Insurance Companies Association Pool can expect patronge, but it cannot expect discrimination in its favour. The buyer and the seller have to see to their own interests too. The adverse claims experience which has brought a net loss to the Pool is thus to be attributed to unsound underwriting, and perhaps to the lack of machinery for handling and servicing large claims. No insurance organisation which is run on business principles will quote rates which it considers uneconomic and which will result in an adverse balance. Therefore, in reiterating the plea before the Government for renewing the Pool agreement, which is due to expire next December, the Pool would do well to emphasise this point; the Government will, no doubt, examine the matter in its proper perspective.

The controlled companies now share to the extent of 50 percent in the Pool business. In accordance with the wishes of the Government, they are associated actively with management and underwriting in the Pool. The chairman mentioned that changes have been made in the Pool agreement under which certain powers have been delegated to a sub-committee consisting of the chairman and the representatives of the controlled companies. The new sub-committee would do well to examine the underwriting of the Pool, with particular reference to claims settlement. The numerous huge claims that have occurred as a result of the Pool's underwriting call for careful handling. If the Pool is not equipped to handle and service such risks, and if it has taken upon itself responsibilities which it cannot discharge properly, the correct course for it is to restrict its acceptances to those risks which it can appropriately service. There has also been considerable discussion in the market about the scope of the Pool agreement. The chairman said that it is absolutely essential that the agreement be precise, so that the Pool can understand the type of business it is to underwrite in the future. The scope of the Pool agreement must be carefully defined. In saying this, he suggested that "there should be no further treading on the toes of the private sector. It is necessary to clarify this because if there is any further encroachment—direct or indirect—I have my own doubts whether the Pool could function in a satisfactory manner in the future."

Quality in Gunnies

In his presidential speech to the annual general meeting of the Gunny Trades Association in Calcutta on Tuesday, Mr. H. L. Mehta made an earnest appeal to the Central Government for new and redoubled measures to promote jute goods exports. Among other things, he suggested to all concerned that efforts be made to eliminate such damaging features as the lack of uniformity in the quality of goods, the failure to supply the quantity and quality contracted for, and unsatisfactory packing. Trade delegations and goodwill missions abroad, he pointed out should stress the usefulness, cheapness and durability of jute goods. On the industry, he urged the necessity for an all-out drive to eradicate sub-standard quality exports, thus seconding the plea which the former I.J.M.A. chairman, Mr. J. I. Jamieson, made to members at the Association's last annual general meeting. Mr. Mehta's advice was that the I.J.M.A. should evolve some system of quality control "which should be as jealously and vigorously enforced among its members as the working time agreement." While no doubt over-estimating the control which the Association has over its individual members in this respect, and possibly under-estimating the measures which have already been taken to deal with the small number of mills who do indulge in such practices, there can be no doubt that Mr. Mehta expressed on this general question of maintaining high standards in exports, the feelings of all respectable members of the industry and the trade. Fortunately, there is every indication that the I.J.M.A is fully aware of the need—indeed this was revealed in Mr. Jamieson's speech—and is doing all at present in its power to root out the evil. One of the ways it can be done is, of course, to improve the quality of raw jute, and this was a problem Mr. Mehta was careful to emphasise. While expressing curiosity as to "what steps have been taken or are going to be taken to enforce a check on the outturn of lower grade jute", he urged that "a permanent solution to stabilise raw jute prices with a view to ensure constant supply to mills and fair prices to the growers should be worked out by the Government in consultation with the trade and industry" It was unfortunate, however, that Mr. Mehta did not appear to know how such a system of price stability could be devised and operated, because on these two important points he had nothing particular to say.

One interesting forecast in Mr. Mehta's speech was that internal demand for jute goods would increase and might touch 300,000 tons annually by the end of the third plan. There is no shortage of people in Calcutta who will hope that he is right.

Madura Mills Dispute Over

The labour dispute in the Madura Mills' units in Madura, Tuticorin and Ambasamudram has been settled after 65 days of forced idleness. Work has been resumed as the trade unions have agreed to the terms negotiated under official auspices. The agreement provides for the acceptance of over 80 percent of the proposed increase in the work-load. It is noteworthy that the union controlled by the A.I.T.U.C. has followed the example of the one sponsored by the I.N.T.U.C., saying that the agreement is the only intelligent step to take since the other unions have expressed their willingness to arrive at a compromise. Although some safeguards have been provided against retrenchment and a reduction in wages, on the main issue of ensuring greater efficiency the unions have mostly accepted the management's views. The recent prompt improvement in Madura Mills shares to Rs. 30.25 from Rs. 29.25 has not been maintained due to bearish advices from Bombay, but most local investors now take a hopeful view of the prospects for recovery.

Inflation Hedges

In the ten years between December 1948 and December 1958, the U.S. dollar lost 16.7 percent of its value because of the rise in prices. (Retail prices, for example, rose 20 percent in that time.) What could the individual American have done to protect himself against this depreciation? That is, if instead of holding bank notes he had bought in 1948 stocks, or shares, or property, what would he have gained or lost when he re-sold in 1958? The following table gives the answer. The figures, of course, concern only the United States and only the past decade; one could not transpose them to other countries or periods and argue that such and such is the best hedge against inflation. But, roughly, the order of the figures will suggest lessons that could have relevance in other times and places.

Holding	Percentage change in constant 1948 values
Currency Notes	− 16.7
Treasury Stock	− 29.1
New York City Loan	− 31.6
New York State Loan	− 35.7
Ordinary Shares (average)	
Banks	+ 80.7
Railways	+105.8
Insurance	+118.9
Utility services	+124.8
Industrial	+224.9
Real Estate	
Typical family house	+ 0.8
Farm property	+ 28.1

So the American who bought industrial equity in 1948 not merely survived the inflation but did very well out of it. Not necessarily as well, however, as the increase of 224 percent seems to show. Because of the rise in share prices, the yield of his investment is very low—2.5 percent or less on the best scrip. And when he realises, the Government takes 25 percent of his profit in capital gains tax. Moreover, he could have made many costly mistakes: certain industries have done worse than others, and the share market fluctuations have been immense. In order to avoid the risk of buying the wrong share at the wrong time, an error that can completely wipe out the value of the inflation hedge, Americans are buying an interest in one or other of the 150 "mutual funds" investment trusts.

If he had bought commodities—in the unlikely event that he had the place to stock them—he would have been exposed to the wide and highly speculative fluctuations of specialised markets; no one uses this as a long-term inflation hedge. The American is not allowed to buy gold in his own country, and if he had, he would have sunk his funds in a commodity that is expensive to keep and whose price is fixed by law at $35 an ounce. Precious stones, antiquities and the like have been an excellent hedge for the very few experts who know their way around these specialised markets but the cost of dealing in them, maintaining and insuring them has to be deducted. There has been much talk about the utility of works of art as a hedge, and indeed there are impressive examples. But the vagaries of taste are here added to the speculative movements of the market, and mistakes can be disastrous. The purchaser of a painting by an artist of the English School would have seen his investment lose 90 percent or 95 percent of its original value, so greatly has this style fallen from favour in less than a generation.

New India Assurance Results

The premium income of the New India Assurance Company Ltd in 1958 was Rs. 7.54 crores compared with Rs. 6.30 crores in 1957. Profits transferred to the profit and loss account amounted to Rs. 55.90 lakhs, against Rs. 32.7 lakhs in the previous year. The company's total funds rose by Rs. 61.4 lakhs to Rs. 9.11 crores. Reviewing the working results at the annual general meeting held last week in Bombay, Mr. A. D. Shroff, chairman, said that 1958 continued to be a difficult year for general insurers the world over. (A summary of the speech appears on another page of this week's *Capital*.) In India, the insurers' Code of Conduct and the administrative machinery set up to enforce it have yet to produce "adequate results". But he had no doubt that with more effective organisation and better observance of the Code, matters can be improved a great deal. Mr. Shroff was of the view that the adjustments in fire rates proposed by the Tariff Committee will be "a significant step forward in achieving a rate structure equitable to both the insurer and the insured." It is necessary to build an efficient claims organisation to investigate into claims and render prompt service to the insured "with the same zeal which the insurers now display for the procurement of business." Mr. Shroff advocated an obligatory marine tariff for the Indian insurance industry, so that wasteful and uneconomic competition can be avoided. He regretted that in spite of repeated appeals, the placing of the insurance business of Government-owned and aided industries with private insurers is still far from equitable and just.

Payments Crises in Development

Most balance-of-payments crises in underdeveloped countries, as elsewhere, are the result of bad economic policies. But, as Mr. Eugene Black emphasised in an address to the International Banking Summer School, it is possible to have a justified balance-of-payments problem. The president of the World Bank drew a sharp distinction between payments crises which are simply the result of economic mismanagement or extravagance, and those which are brought on "when economic development is pursued under forced draught." These are very difficult to cope with. A country which has been following an ambitious development plan for some years will probably have taken upon itself as much fixed debt (World Bank loans and the like) as it can afford to service on a definite time-table and in scarce foreign exchange. It must continue to invest while only a small return is earned on completed projects. Orthodox monetary measures might lessen balance-of-payments difficulties, but they might also, where the process of economic growth is not yet self-sustaining, stop development altogether. What is needed, but has not yet been devised, is "some sort of financial instrument which will not levy a charge on the borrower's supply of foreign exchange, or, alternatively, which will stretch out the period of repayment and thereby reduce the burden of a fixed charge on scarce foreign exchange reserves." It must be a genuine addition to the flow of development capital, not a diversion of funds which would otherwise be borrowed from the World Bank or through the private capital markets. In under-developed countries, Mr. Black said, "we cannot afford to be concerned solely with balancing the accounts every year or two, but rather with a point some time in the future when it will be possible to balance the accounts at a tolerable standard of living. The test of progress must be how well the country concerned is building into its society the many and varied institutions and policies necessary for sustained growth over a long run."

Small Industries: The Same Again

An uneven amalgam of interesting ideas and ageing platitudes emerged from the all-India seminar held in Hyderabad last week to discuss the financial problems of small-scale industries. The four-day seminar was sponsored by the Reserve Bank on a suggestion made by State Financial Corporations at their fifth annual conference last year, and was inaugurated by the Chief Minister of Andhra Pradesh, Mr. Sanjiva Reddy, on 20th July. Mr. Reddy, for want of anything original to say, dutifully declared that a country like India with its limited financial resources should think more in terms of small industries than major industries in trying to reduce unemployment and increase production. He regretted that the Central and State Governments have not hitherto paid enough attention to small industries. He believed that the difficulties confronting these industries are not so much financial as technical. They can thrive if those promoting them are provided with technical knowledge and know-how.

Mr. B. Venkatappiah, Deputy Governor of the Reserve Bank, said that the tremendous progress made by small-scale industries in Japan is due in significant measure to their relations with large units, and the technical and financial benefits they derive therefrom. As small industries are essentially ancillary to the large ones, it should be possible to arrange things in such a way that violent fluctuations in the sale proceeds of the former are avoided. Mr. Venkatappiah expressed the view that small-scale industries have made some progress, but their growth is still haphazard and they are subject to a high rate of mortality. More institutional credit is available, but the majority of the producers are still at the mercy of money-lenders or traders. Although knowledge about production techniques is increasing, productivity standards remain low and impair the competitive strength of the small units. Organised credit institutions are chary of lending to small industries because the risks of losing the money are too great. In order to remove this uncertainty, the small units themselves should raise their standard of production and develop greater willingness to avail themselves of the facilities offered by organised institutions. If the objective is to lessen the hold of the non-institutional lender, it is necessary to build institutions to compete with him in the different rôles he can and does assume in his relation with producers. Various steps have been proposed to overhaul the production and marketing structures of small industries so as to reduce the element of uncertainty. If suppliers of credit take the view that not much can be done because small industries are not credit-worthy, very little progress will be possible. One cannot sit and wait until the ideal conditions for lending emerge. One has to go out and do what can be done to make small industries more viable and, therefore, more credit-worthy.

Referring to the rôle of the Reserve Bank, Mr. Venkatappiah said that it has increasingly taken upon itself, in addition to its normal functions of a central bank, certain developmental functions appropriate to its own work in the context of planning. In the industrial field, it has given support to specialised institutions in a variety of ways. In performing this task, it has inevitably been impressed by the continuing difficulties of the small industries sector and the need to create a proper environment for its efficient growth. Neither the Government, nor the Reserve Bank, nor any one agency, can by itself bring about the measure of change which will make small industries vigorous. All—the Government, financial institutions, technical agencies and the small-scale industries themselves—have to act in unison.

Sales Tax Refund

A ten-year-old dispute between the U.P. Government and the forward traders of the State has at long last been settled, but it looks as though procedural difficulties are still holding up the actual refund of the sales tax due to the traders. The U.P. Legislature enacted and enforced the Sales Tax Act in 1948. Among other things, the Act proposed the levy of sales tax on forward contracts. The traders, acting under the impression that the Act was valid, continued paying sales tax on forward transactions up to February 1952, in which year a writ petition filed in the Allahabad High Court by Hapur traders in 1950 was decided in their favour. The High Court decision was confirmed by the Supreme Court in May 1954. Following the judgment that the sales tax could not be levied on forward contracts by the U.P. Legislature, over 1,500 revision petitions were filed before the Judge, Revisions, Sales Tax, claiming refund of the amounts paid. The total sum involved was Rs. 40 lakhs. The Judge issued instructions for the refund of the tax, but the State Government filed reference petitions in the High Court against his orders. In the meantime, a Banaras dealer who had deposited a certain amount as sales tax on forward business filed a writ petition in the High Court claiming refund. Strangely enough, the State Government submitted the plea that the payment of the tax being voluntary, it could not be claimed for refund and that payment under a mistake of law was not refundable. The High Court rejected the plea and allowed the refund. Against this order, too, the State Government went in appeal to the Supreme Court, which upheld the decision of the High Court. The Allahabad High Court had, in fact, held that the money was refundable to the traders irrespective of whether the traders had or had not realised it from their customers. Acting on the principles enunciated by the High Court, the Judge, Revisions, passed clear and unambiguous orders for the refund of all money relating to the 1,500 petitions pending before him. A couple of months have elapsed since these orders were issued, but it is reported that actual payments are still being held up by various alleged procedural difficulties. Tax-dodgers have justifiably been held to scorn in the past, but when Governments stoop to dodging tax refunds, they are only furnishing fresh justification for artful dodgers of taxes whose brood is legion in this country.

Regulating Forward Markets

The Central Government has so far granted recognition to 23 associations operating 39 forward markets in 13 different commodities in the country. It is expected that by the end of the current year there will be 28 recognised associations operating 47 markets in 14 commodities. Speaking at the conference of the nominated directors of the associations recognised under the Forward Contracts (Regulation) Act, which was held in Bombay on Monday, Mr. W. R. Natu, chairman of the Forward Markets Commission, said that the task of regulating forward markets is a highly complex one. The Commission has tried to impress on the associations that the primary machinery for regulation is in their own hands, and it is for the boards of directors to regulate the markets in accordance with their own articles of association and bye-laws. The elections to the boards in the past were generally held on the basis of franchise, with the result that they had a predominant majority of directors representing brokers. The new Act has, therefore, provided for the nomination of three directors by the Central Government on the board of an association to represent special interests. In nominating directors, the Government has drawn personnel mainly from three fields—university departments of economics and commerce, commercial and co-operative banking, and the technical departments of State Governments. Mr. Natu said that the presence of three nominated directors possessing such a wide variety of experience has an important impact on the board's deliberations. It has been the experience of the Commission during the last five years, he added, that the nominated directors have rendered distinct service by giving impartial and wise counsel and by conveying their personal appraisal of the market situation.

In his inaugural address at the conference, Mr. Nityanand Kanungo, Central Minister for Commerce, said that the nominated directors should be able to make an objective contribution to the discussions and their aim should be to uphold the public interest. Not infrequently, the action taken by the boards is inconsistent with the long-term interests of the trade. Some associations have not yet built a strong reserve position against the risks of default. "The reserve funds of some associations are often locked up in investments of doubtful security. . . . . Trading outside the appointed hours, trading in illegal contracts and trading in unrecognised associations, proceeds on a large scale, with the connivance of the members of board of directors." Forward price movements have important effects on the economy: they influence the ready prices of commodities, their export possibilities, the sowing of agricultural crops, etcetera. The Forward Markets Commission, therefore, has to adopt regulatory measures, such as imposing special margins, fixing ceiling prices or closing out contracts, so as to prevent undue fluctuations in prices resulting from speculative manipulations. Mr. Kanungo said that the Government cannot "give a long rope to the activities of speculators who throw caution to the winds and rig up prices to the detriment of the national interest." Neither Mr. Natu nor Mr. Kanungo seem to recognise that the present theoretical emphasis on controlling speculation tends to deprive the forward markets of vigour, vitality and patronage. Over the past couple of years, the Forward Markets Commission has quite often proved to be mistaken in its assessment of commodity trends—for instance, in the cotton, jute and gunny markets. Apart from bringing about price stability in the long run, speculative operations help establish harmony in the free market mechanism. All speculators should not, therefore, be condemned in the terms the Minister did at the recent conference.

Temporary Labour into Permanent

If a judgment of the Allahabad High Court in the case of the Kays Construction Company is extended, all labour employed by contractors may be entitled to be treated as permanent hands. The company was engaged in the manufacture of railway coaches for the North-Eastern Railway and four workmen's services were terminated when one of the contracts expired. The U.P. Government thereupon referred the dispute for adjudication, and the adjudicator in his award held that the workmen were entitled to a certain compensation. The company filed a writ petition impugning the legality of the award. The High Court admitted that contracts for the coaches could be placed only by the railways and that by their very nature the contracts were placed from time to time. But the Court held that the mere fact that the nature of the work in which a particular undertaking was engaged was such that it was dependent on indents placed with it, particularly when indents might be placed from time to time, did not render the employment of the persons engaged in the execution of that work to be temporary. The judgment said further that continuity is implicit in the fact that indents, although individually placed, follow one after the other. The company's claim that the workmen were temporary employees, in the sense that they were employed for each individual contract and that their services automatically ceased with the execution of the contract, was rejected.

There is much in the administration of industrial law that is mystifying. But in the face of verdicts like these it is to be wondered how it can be said—as the I.L.O. expert, Professor J. H. Richardson, has done—that High Courts and the Supreme Court cannot be expected to do full justice to concepts like "social justice" or "fair wage." It is reported that Professor Richardson, who has worked with the Central Ministry of Labour for six months, has pleaded for the establishment of an "Industrial Supreme Court" on lines similar to the Supreme Court. This is, of course, not the same thing as the industrial wing of the Supreme Court, the case for which has been ably argued by the Law Commission. It is also different from the plea voiced by Mr. Lakshmipat Singhania at the recent meeting of the All-India Organisation of Industrial Employers for incorporation of the adjudication machinery for settlement of industrial disputes into the regular judiciary.

Industrial Prospects in Pondicherry

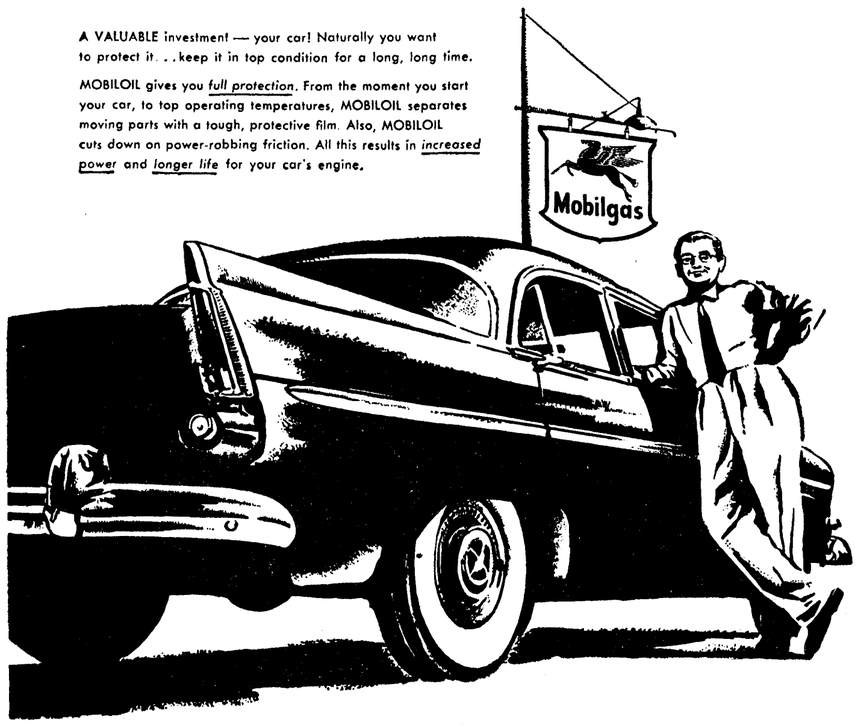
A report on industrial possibilities in Pondicherry has been prepared by the Small Industries Service Institute. It indicates that, in spite of the shortage of steel, there is a good future for light engineering enterprises. The establishment of a bolts and nuts factory, for instance, is contemplated. The soap industry, which is organised on a small scale, can also be developed as vegetable oils are available in plenty. The two units assembling radios may be able to expand if State assistance is offered them. The report recommends the manufacture of bricks on a large scale in view of the building activity in the area. It also says that the prospects for the manufacture of electrical accessories and small motors and for the assembling of bicycles are good. The only large-scale industries which appear to be promis-

ıg are cement and sugar. The Sri Aurobindo Ashram is especially interested in the development of new industry in Pondicherry, and it is said that the problem of raising capital locally will not prove difficult for a sugar mill with a crushing capacity of 60,000 tons of sugarcane by 1960-61. The report indicates that the tanning industry remains undeveloped in spite of the fair supply of hides. Outside entrepreneurs have, meanwhile, submitted applications for making such articles as agricultural implements, domestic utensils, blades, press buttons and umbrella ribs.

U.P. Ceiling for Mechanised Farms

The Planning Commission is not infallible; nor are the State Governments of Rajasthan, Mysore and Orissa. It is, however, to be regretted that the U.P. Government should consider itself the wisest in the land and accordingly reject without a second thought the plea for exempting large mechanised farms from the operation of the Land Ceilings Bill. In doing so, it has over-ruled the objections voiced even by the U.P.C.C. executive. The decision will affect 2,000 big mechanised farms, some of them with 3,000 acres each, in the Terai and Bhaber areas alone. There are about 500 other mechanised farms in the State belonging to former *zamindars*. The Terai, it may be recalled, was an uninhabited waste of forest and swamp only ten years ago. Its reclamation is a major achievement redounding to the credit not only of the Government but also of the pioneers who braved many hazards and invested large sums of money in colonisation. The Terai farmers Federation's claim that the demand for the exemption of their farms has wider significance because it is based on agricultural economics is supported by the Rudrapur Soil Laboratory's warning that the Terai will become barren again if it is not worked scientifically. With somewhat confused and ungrammatical fervour, a memorandum submitted by the Federation says: "Our only crime has been to rise at the call of the nation and in our patriotic zeal investing whatever we had in farming instead of in urban property or in the shares of some industrial concern where there are lesser risks to property and more profit and no ceiling." All land in excess of 40 acres is to be taken away from the mechanised farms, and the only concession that the State Government proposes to make in the interest of mechanised cultivation is to appoint the present owners as managers. It is not proposed to use the land taken over for State farms or to redistribute it in small farms. How many owners will agree to become managers in the pay of the Government remains to be seen, but it looks as if not many will be left with an option because by this course the Government has also shelved the problem of immediate compensation. This, to say the least, is an unscrupulous way for a Government to do business. If ceilings are imposed on mechanised farms, the erstwhile owners are entitled to compensation just like others, and there can be no justification for harnessing them as paid managers against their will.

Modernising the Slums



The sub-group on slum clearance set up by the Planning Commission has yet to submit its final report; but, according to a Press release, it holds the view that greater attention should be paid to improving existing conditions in slums rather than to clearing them wholesale, since the latter is highly expensive and would take many years. There seems to be common sense in this approach, judging by the failure of the slum clearance programme in Kanpur. The slums in that city, it may be recalled, often evoked the wrath of the Prime Minister, who wanted them to be burnt down. But, according to the Acting Labour Commissioner of U.P., Mr. M. C. Pant, not many slum dwellers are keen to move into the alternative quarters built for them for the simple reason that they cannot afford the rent. The economic rent for a tenement works out to Rs. 17 a month, and the Government offers a subsidy in order to provide it at Rs. 10 or Rs. 12. The inducement, however, has not helped much and the tenements have eventually had to be let out to people for whom they were never intended. Even so, Mr. Pant says, over 2,000 tenements are lying vacant. He has admitted at a Press conference that most of the tenants are unable, even if not unwilling, to pay the fixed rent, with the result that arrears of unrealised rent today are of the order of Rs. 2.39 lakhs. Kanpur's is not an isolated experience, as is evident from reports of distress sales of tenements by refugees in Delhi. Hundreds of tenements, it is said, have changed hands in the last two months following a Government order asking the refugees to pay by 31st July 20 percent of the cost of the allotted house and rent arrears until September 1956. Why the Government should have allowed the rent to accumulate while the refugees had been praying for the recovery of the cost of the allotted houses in 30 annual instalments is not easily understood, but one result of such distress sales will be the migration of the tenants to new unauthorised colonies, which is only another name for slums. It is time a final decision was taken on the question of rent for Government-built or subsidised quarters. There is no sense in building quarters if the tenants are not able to pay the rents fixed. It is because they cannot pay higher rents that they live in slums. For the time being, it may be necessary to reduce more drastically the rents for quarters already built, which will mean a heavier subsidy. Thereafter, as the Planning Commission sub-group believes, it may be advisable to concentrate on improving conditions in the slums.

Because you value your car

you should use **Mobiloil**

A VALUABLE investment — your car! Naturally you want to protect it. . . keep it in top condition for a long, long time.

MOBILOIL gives you *full protection*. From the moment you start your car, to top operating temperatures, MOBILOIL separates moving parts with a tough, protective film. Also, MOBILOIL cuts down on power-robbing friction. All this results in *increased power* and *longer life* for your car's engine.

Mobiloil

FIRST IN PROTECTION — FIRST IN WORLD SALES

STANDARD-VACUUM OIL COMPANY (Incorporated in the U.S.A. with Limited Liability)

Incentives for Higher Productivity

A seminar on incentives for higher productivity, which was held recently in Madras, showed that there is general agreement on the need to create a lively interest in work and that non-financial incentives, too, can play a part in raising labour productivity. The National Productivity Council and the regional centres have made commendable efforts in this direction. The former is a Government-sponsored council, and is being helped by the U.S. Technical Co-operation Mission. It has been able to create interest among labour representatives in raising both output and earnings and in improving quality through sound leadership and efficient systems. Some foreign experts are now examining the State transport system to ascertain the scope for higher operating efficiency. The experiment may induce private enterprise to look for better results through a scrutiny of the factors which have a bearing on higher productivity. It may be noted in this context that without the aid of the Productivity Council, India Pistons, which manufactures motor components, has raised its average output by 70 percent over a period of three years by introducing a scheme of incentives for workers. It has, therefore, been able to increase basic wages by 25 percent to 50 percent. Another result has been a cheapening of its product for the consumer, so it may be claimed that the drive for higher productivity offers all-round advantages.

Fewer Ships Being Built

The prolonged slump in the world shipping industry has hit U.K. shipyards severely, as many orders have been cancelled or postponed. The latest issue of Lloyd's Register of Shipping, which contains figures on merchant shipbuilding during the second quarter of the current year, shows that steamships and motorships under construction in the U.K. at the end of June totalled 2,033,745 tons gross, which represented a decrease of 215,107 tons compared with the previous quarter. The tonnage commenced was the lowest since the war, bringing the tonnage under construction to the lowest since June 1956. Britain continues to be a net importer of ships; at the end of June, 414,770 tons (the highest figure ever recorded) were being built abroad for U.K. shipowners, while the tonnage under construction in the U.K. for export was only 220,969 tons. Lloyd's Register says that although the production figures for different countries reflect the unsettled condition of the world shipbuilding industry, the tonnage under construction in Sweden, Denmark, Poland, Belgium and Yugoslavia was the highest ever recorded. Japan launched 820,000 tons during the half-year, compared with 2,067,000 tons for the whole of 1958, but had a high figure for tonnage commenced. She is still the leading shipbuilder, with 1.2 million tons under construction, followed by West Germany with about 1 million tons.

The flow of new orders to U.K. shipyards during the second quarter of the current year was negligible—29 ships of 44,000 gross tons. During the first half of this year, total orders amounted to 98,000 tons, but were almost offset by the cancellation of orders for 96,000 tons during the same period. The order-book for the U.K. shipbuilding industry now stands at 4,734,000 tons, which is 2.2 million tons lower than in June 1957. With an annual output of about 1.4 million tons, this represents two or three years' work for the industry. But the rapid fall in orders is disturbing. Britain's medium-sized shipyards are likely to be the worst sufferers, since production will have to be thinly spread over a couple of years. There is a danger that a number of shipyards will have to retrench workers.

Trees for the Cows

Vanmahotsava is not what it used to be when Mr. K. M. Munshi elevated it to a national festival, but the ritual is still dutifully observed by the country from year to year. If all the saplings planted during the last ten years had grown fully, dense green forests would have been found where at present the desert winds blow. Bombay's Minister for Forests has been conscientious enough to count that of the 4,965,632 saplings planted in 1957, as many as 2,791,159 have either died of neglect or been consumed by cows and goats. The Delhi Chief Commissioner's agonising query: "Where are the forests?", while inaugurating the tenth *Vanmahotsava* in his area, is also a reminder of the futility of speeches without work. The survival of the saplings is almost impossible as long as steps are not taken to deal firmly with stray cattle. It is reported that an "Operation Wild Cattle" has already been launched on the Delhi-U.P. border. Scores of cow-catchers have been employed, the fee being Rs. 25 for each stray cow rounded up. Similar operations are contemplated in Madhya Pradesh and Bombay, where the menace is by no means small. In U.P. alone, estimates of the number of wild cattle range between 25,000 and 35,000, and the damage inflicted by them is enormous. Once they are caught, there will remain the question what is to be done with them. Taming them is a hazardous affair, but the success of experiments at the Pusa Institute in Delhi in making even sterile cows yield milk opens up possibilities which might be usefully explored. The proposition should prove attractive if, as has been reported, the fat content of the Sahiwal cow, which was made to yield milk without calving, was 5.25 percent, compared with the normal 4 percent. The treatment consists of the administration of "oestrogen" tablets and injections of "silbestrol". But it will be some time before the treatment is standardised and can become what the Institute claims to be "a boon to farmers for making dry cows productive."

Matthai Hits Reds, Quits F.A.C.T.

Dr. John Matthai, a former Finance Minister of the Central Government, who is relinquishing office as chairman of Fertilisers and Chemicals, Travancore, Ltd with effect from 31st July, told the company's annual meeting in Alwaye that his resignation has not been prompted by any lack of faith in the potentialities of the concern or the future of the industry, but by differences he has had with the Government of Kerala "in their approach to certain problems connected with the running of this industry—an approach which, in my judgment, is immature and unsound and not in the best interests of the industry." Referring to the criticisms made recently about the managing agents of the company, Dr. Matthai said that many critics overlooked the inherent difficulties of the industry in the conditions prevailing in that part of the country. If the adoption of wood as a raw material has led to difficulties, he added, it must be remembered that it would have been impossible to make a beginning at all otherwise; neither the alternative of using coal nor the adoption of the electrolytic process was feasible then. The gasification of oil now being considered for the second stage of expansion, he went on, was not possible then, as the process itself was developed much later. The managing agents, therefore, took a risk in starting with wood and "they were, in my opinion, justified in doing so." In conclusion, Dr. Matthai said the industry has now turned the corner and there is no reason why it should not continue to prosper "provided the tendency to amateurish and bureaucratic handling by the State Government is held in check." F.A.C.T.'s expansion scheme, which is now under way, will increase the ammonia capacity to 120 tons a day from the existing 40 tons. It is also expected to make the cost of production of ammonium sulphate sufficiently low to enable F.A.C.T. to sell its products to the pool at the same price as the product from Sindri. Provision has been made to give every employee a bonus equivalent to 96 days' salary, inclusive of dearness allowance, against 28½ days for 1955. A dividend of 4 percent has been declared for 1958.

INSURING HIRE-PURCHASERS

WE would draw the attention of such of our readers as may be thinking of settling at home to the advertisement of Norman and Stacey, Queen Victoria Street, London, which appears in another column. This enterprising firm is prepared to supply furniture and to receive monthly payments until the amount has been liquidated, these payments extending over a period of from one to three years. Besides this they arrange an insurance on the life of the purchaser, so that should he die before the purchase money has been paid the furniture belongs to his estate; no claim is made for anything, and any payment he may have made will be refunded. As regards this insurance, we may say that Messrs. Norman and Stacey practically undertake to insure every customer's life. But, on the other hand, the Insurance Company reserve the right to refuse any exceptionally bad case as a safeguard against what practically would be a matter of fraud in a person, with a full knowledge that his life would be refused by any insurance company, endeavouring to open an account with this firm with the object of obtaining the benefits of the insurance. We learn that out of many thousand customers the Insurance Company has only refused one, and he was over 82 years of age and practically uninsurable; any person in average health need not have the least doubt as to their being able to insure him. We commend this system to Anglo-Indians settling at home, and Messrs. Norman and Stacey will post their pamphlet of terms, etc., to any address on application.

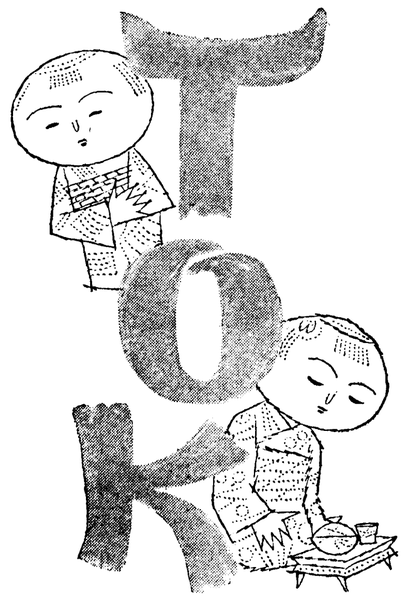
Without Prejudice

Keeping Bequests Secret

(FROM OUR LEGAL CORRESPONDENT)

THE one document which a man executes in the course of his life, and which, more than any other, he may desire to keep secret, is his "last will and testament"; and it is an odd and disconcerting fact that this is also a document which, once it becomes operative, is open to the full glare of publicity. The moment Probate of it is obtained, any member of the public, on payment of a small fee, is entitled to inspect the will and obtain a copy of it from the authorities with whom it is lodged. The Press can publish extracts from it and regularly does so in the public interest where the contents are of such a character as to constitute "news", thus completely defeating the desire for privacy of the testator and perhaps causing his reputation irretrievable harm.

A man may have illegitimate issue for whom he wishes secretly to provide for in his will; or, having basked in the odour of marital respectability all his adult life, he may, nevertheless, have contracted an extra-conjugal association with an equally respectable lady and wish to make such provision for her by will as would cause his lawful spouse, if she knew of it, to suspect and investigate the liaison and possibly contest that part of the will. So secrecy is essential. But how is it to be secured? In the U.S.A.—we write subject to correction but after some enquiry—where the law as to wills is substantially the same as that in England, and is based, as is the law in India, on the English Statute of Frauds of 1677 and the English Wills Act of 1837, some of the States have devised an ingenious, if cumbersome, means of getting round the common law. In Louisiana, for example, the State legislature recognises what is known as "the mystic will", and it is indeed mystic. The testator writes out or gets his lawyer to engross his own will; then he encloses it in a sealed envelope and it is presented to, and signed by, a notary public together with seven witnesses. Neither the notary nor the seven witnesses need know anything about the contents of the envelope except the bare fact that it is a will (or more often a codicil to an existing will), containing details of the bequest which the testator desires to be kept secret. After the death of the testator, the envelope is opened, the contents signed but not read by the notary and two of the witnesses. The executor, named on the envelope, can then pay the legacy to the legatee without obtaining Probate disclosing particulars of the secret bequest.



We now return to the law in England and India. Note the word "England", not "Britain". The law of Scotland, based largely on Roman law, may be different, and the writer knows nothing about it. In England, there are no means whatsoever whereby full publicity concerning the contents of a will can be avoided once Probate of it has been obtained. As has been said, any citizen is entitled to inspect and have copies made of it and any newspaper may publish it. The one exception is in relation to wills of members of the Royal family which are sacrosanct. Nevertheless, although a will is public property in so far as its contents are concerned, a testator can secure absolute privacy as to the disposition of his property after his death. That sounds paradoxical but actually is not. There has been a correspondence in *The Times* on the subject, to which that well-known authority on matters legal, Dr. Glanville Williams, has contributed a valuable letter. In it, he says: "Anyone can keep his affairs private by the device of creating by will a 'secret trust'. The device is not much used because it is not widely known; also, it is somewhat inconvenient to work."

The words "somewhat inconvenient" strike the writer as in the nature of an under-statement. It may be highly embarrassing and damaging to the trustee who has to work the secret trust without disclosing to a living soul what it is and who is the beneficiary. It may involve him in suggestions of undue influence over the testator and even in litigation against himself personally. The device is not a new one. As long ago as November 1942, *Law Notes* commenced on it as follows: ". . . . An intending testator may prepare a will of three or four lines giving all his property to B 'for the purposes indicated by me to him.' He may spend four hours verbally indicating to B what those purposes are. He then asks B the crucial question: 'will you agree to carry out those purposes?' If B replies 'yes', the testator at once executes his short will and for all intents and purposes he has succeeded in spite of Section 9 of the Wills Act in disposing of the beneficial interest in his property by word of mouth."

The testator must indicate the purposes to B at or before the date of the will. Omit the words "for the purposes indicated by me to him" and the purposes may be communicated to B at any time before the testator dies; to which we might add the cautionary words that if the testator does omit those said words, he will probably land the trustee in a peck of trouble with his (the testator's) next of kin, since it will appear to them from the wording of the will that B, who is in honour bound not to disclose the real beneficiary under the secret trust, is the actual legatee himself, and they may try to set the bequest aside. And that is the snag concerning these secret trusts. However strong the bonds of friendship and however complete the confidence that may exist between the testator and the trustee, no sensible man should accept such a trust. It is asking too much of any friend.

The writer remembers the case of an old schoolfellow of his own. We will call him X. X had a friend Y who was a world-famous figure. X was Y's rightly trusted legal adviser. Y, a married man, had a private life of his own, associated with a lady for whom he wished secretly to provide for in his will. He consulted X, who advised him of the device of a secret trust, and Y, who would trust no one else with his secret, prevailed upon X, much against the latter's will, not only to prepare the necessary document but to act as trustee in the secret trust. Such words as "for the purposes indicated by me to him" were omitted because their presence would in themselves rouse suspicion and because Y felt he could absolutely trust X. And so he could, but at great cost to X's personal and professional reputation. When Y died and his apparently simple will was disclosed, his relatives were astounded and furious. There was X, for no explicable reason, bequeathed a large capital sum which they knew well the testator, unless subject to undue influence, would never have left him. So "undue influence" they alleged and honestly believed. There was no actual litigation but a most injurious smear campaign against X who preserved an honourable silence, remembering his promise of dead secrecy to Y. There was a happy ending. The lady who was the real beneficiary, chivalrously intervened and told the facts to an unimpeachable authority in the confidence of the next of kin, to whom he disclosed sufficient to satisfy them that their suspicions against X were unfounded. Ample and spontaneous apologies followed and all was well. But what a dilemma in which to place a friend!

The testator is dead and out of all trouble but the trustee remains to face the music or rather the discord, gagged. No one should accept such a trust.

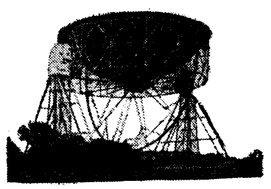
A Ditcher's Diary

LAST FRIDAY'S MEETING OF THE CORPORATION of Calcutta was something of a charade—with a good few lessons for those that will learn. Part of the proceedings, I find, was conducted in the courtyard, with the Mayor perched on the roof of a motor-car from where he later had some difficulty in descending. Now you know that the roof of a motor-car can be as unsafe a height to climb to as the top of the Howrah Bridge; the latter has of late been visited by too many. Then the meeting was an excellent example of what Mr. Gulzarilal Nanda calls "worker participation". Apparently some hundreds of Corporation employees had been waiting outside the council chamber while the meeting was in progress to decide on a matter that had been before the councillors for four years. Then the Mayor went back, and eventually the meeting was resumed; but by then the workers had seated themselves where councillors should have been. And I say, why not? This is only one more variation on the theme of direct action, and I can see endless possibilities of development on the same lines. Proceedings of legislatures have been interrupted by demonstrations immediately outside. I am now waiting for one of the Central Cabinet meetings to be aided by the voice of the people at the gates, after which I shall gladly recommend to every joint-stock company that the annual meetings of shareholders should also be held in similar democratic atmosphere, with workers dictating from outside what the decisions should be. In this last experiment there may be a snag or two, for some of the recommendations from outside will almost certainly disregard the Company Law. But then, what is a law or two in a perfect democracy? Those who read our "Without Prejudice"—and who does not?—know how labour laws are being reduced to a shambles by the tribunals; and the Company Law can hardly be more sacrosanct. The Government already participates in industry quite considerably. With worker participation added, I just do not see what the management and shareholders will be left to do—but this kind of "redundancy" will probably not bother Mr. Nanda. It may bother the country's economy though.

MY FIRST REACTION TO THE NEWS THAT DELHI AND Bombay are to have television was that it serves them right, they never did know how to enjoy themselves. Now I shall have another reason, although as usual a negative one, for preferring to live in bold, bad, backward Calcutta instead of either of those two great centres of gloom. If you have concluded from this that I am not to be numbered among the devotees of the "goggle box", then you would undoubtedly be right. Next to the hydrogen bomb, Karl Marx and the split infinitive, I regard it as one of the most serious disasters which has ever afflicted the human race. Not everybody would agree with me; Dr. Keskar, for example, must be rubbing his hands at the prospect of yet another opportunity for promoting tiresome Government propaganda in the guise of entertainment. I have even heard television praised as a promoter of healthy curiosity among the uninitiated and the young; sales of the *Encyclopædia Britannica* are supposed to have increased immoderately in the U.K. lately. But joking apart and such trivial advantages notwithstanding, the "square eye" is an unmitigated curse, the current absence of which India should regard as one of her few major blessings. That term "square eye" by the way, comes from an article I have just been reading by Mr. Malcolm Muggeridge, a former editor of *Punch*. In it, aside from amusing comments such as that mankind may eventually develop square eyes, or worse still a single square eye in the middle of the forehead, and that for television personalities adultery is impossible because they are bound to be recognised wherever they go, he has some interesting things to say about the impact of the flickering screen on newspapers. As a journalist, that is a subject of some importance to me; and as what might possibly be called a "serious" one, I am relieved to find that there is a future still before me. Mr. Muggeridge distinguishes three main effects on the Press: First, the attempt to go along with television by, for instance, employing its personalities as columnists; second, the attempt to provide rival attractions by neglecting news stories and concentrating on frivolous human interest themes; and third, the attempt to meet the challenge by producing more of what television cannot produce adequately, that is, comment, exposition and the search for meaning and significance in the contemporary scene apart from its mere presentation. He makes the interesting point that television is never *listened to*; nothing that is *said* on it is ever remembered. This, he considers, gives newspapers a chance to drop the excrescences, the cheese-cake, the gossip and the melodramatic over-playing of news stories and to rehabilitate the written word in an earlier and more responsible tradition. I hope he is right; the written word may not yet be as debased and corrupt in India as it has become in the West, but in many newspapers the tendency is already there. Anyway, I think enough has been said to make the point that by clasping the television viper to her bosom. India is not likely to be subtracting from her problems.



ONE ASPECT OF THE WELFARE STATE, WHICH just about every country seems determined to become, had not occurred to me at all until the other day when I read Charles Curran's stimulating essay in *The Reporter* entitled "The Old Order Cometh". He calls it the New Feudalism, and history is surely on his side. He takes his cue from Sir Henry Maine's *Ancient Law*, published in 1861, which had shown the true meaning of the change from feudalism to capitalism. The progressive society, said Maine, evolves from status to contract, from the sort of State in which the citizen's place is fixed for him to the sort where he fixes it for himself by his own efforts. Mr. Curran's thesis is that the welfare State is again fixing the status of the citizen. I am not discussing the vexed question of incentive and all that, which is a related subject but not the same thing. Mr. Curran shows how the municipal housing estates of Britain determine for their tenants their pattern of living: the latter cannot decorate their residences as they like, their children cannot play except on the ground allotted for the purpose, all the children have to go to the same school. Freedom has been sacrificed for security. And then Mr. Curran shows the psychological consequences of living in so much security. Initiative and adventure gone, the citizen of the perfect welfare State, another name for which is the Tutelage State, lives in a world of fantasy. Television and football pools constitute all the "kick" he wants, and all the time he imagines that "wiv a littl bit o' luck" he will get the hundreds of thousanc of pounds poolsters distribute. Then life will be gin, meaning work will cease. That some of th ideas behind the welfare State have removed number of dreadful evils, nobody will deny. Bu what a dismal view of life then appears. Th ultimate irony of it all is that, as wages rise, th average worker pays more and more for the sut sidised things he gets free from a benevolen State, and this is certainly true of Britain already Who is doing what, and for whom?

IT IS NOT SURPRISING THAT THE U.S.A.'s "CAPTIV Nations' Week" has irritated the bustling M Khrushchev. When a man is busy leading hi country to the stars, it is only natural he shoul consider it bad form to be reminded that it ha the blood of freedom on its hands. Besides, com munists are just not used to this kind of thing. often think that the most remarkable feature o the new imperialism is that it has achieved s much enslavement in such a short time withou accumulating any of the stigmas of the dyin western kind. That is why the American gestur strikes me as so pathetically Quixotic. Apart fron complicating Mr. Nixon's Moscow visit—and if tha had not been intended to improve relations, i would have been better not undertaken at all—thi sort of thing only makes the U.S. look foolish Indeed, it could very well attract the charge o hypocrisy after the way that country stood by an watched the rape of Hungary; I cannot imagin Mr. Khrushchev doing the same if similarly placed Perhaps it would be better, before any more un necessary damage is done, for the idealists respon sible for the Captive Nations' Week to face the fac that very few people outside a small number o western countries are particularly interested i who communist imperialism captures, so long as i is not themselves Even in Asia, which one would expect to know something about the human desir for liberty, freedom has few friends these days There is, of course, the usual routine scramble t condemn French action in Algeria, and one find no shortage of votes in the U.N. General Assembly when it comes to censuring Britain over some thing or other. But that is just habit; the poin is that none of these voters would dream of sug gesting the United Nations debate the plight o Latvia, Estonia and Lithuania. Indeed, not many people even remember that these were once inde pendent countries; nor, for that matter, that th Poles, the Hungarians, the Bulgarians, the Alba nians, the Roumanians and the Czechs were once able to choose their own Governments without having to make do with what their communist Parties and the Red Army impose upon them. It is forgotten that, for instance, Kirghizstan was once acquired by the same imperialistic means that Britain used to annex Burma, and that the Russians have just as much right today to call it part of the U.S.S.R. as the Portuguese have to consider Goa part of Portugal. Even the latest victim of communist imperialism, Tibet, is rapidly being forgotten, and there is no doubt the Chinese will be able to go ahead with its colonisation unhampered by any particularly strong opposition from the rest of the world, or even from their immediate neighbours. Everywhere communist imperialism is proving brilliantly successful because nobody has the courage or the enthusiasm to oppose it. The efforts of western idealists might be better spent in improving their countries' prospects of coming to terms with it diplomatically. The captive nations will just have to take a lesson from Mr. Nixon and learn to look after themselves.

THE DITCHER

achievement depends on reliable steel

More and more industrial energy—to travel faster and over greater distances—the relentlessness of these demands has made technological development a race in which a modern industrial nation cannot afford to be left far behind—a race in which achievement depends on reliable steels, new steels and steels which are stronger especially at elevated temperatures. That is why a large part of United Steel's resources is devoted to research and development.

United Steel, with an annual output of 3 million tons of steel, meets many of the very exacting material needs of today. United Steel Structural Company built the radio telescope at Jodrell Bank (its reflecting bowl, 250 feet in diameter, was fabricated accurately to one eighth of an inch). All steel employed in this remarkable structure was rolled by United Steels.

For Business or Pleasure... FLY KLM

JESSOP AND COMPANY, LIMITED

CHAIRMAN, SIR B. P. SINGH ROY ON PROGRESS AND PROSPECTS

The following is the speech delivered by Sir Bijoy Prasad Singh Roy, K.C.I.E., Chairman, Board of Management, Jessop & Co. Ltd., at the Twenty-seventh Annual General Meeting of the Shareholders held in Calcutta on 24th July, 1959:

Gentlemen:

It gives me great pleasure to welcome you today to the Twenty-seventh Annual General Meeting of your Company.

At the previous Annual General Meeting held in September last year, I told you that the new Works set up for the manufacture of Metre Gauge Passenger Coaches and Electric Multiple Unit Broad Gauge Coaches for the Calcutta Electrification Project had gone into production, but output had been restricted by shortages of steel and components. As you will have read in the Press, the Railway Minister, Mr. Jagjivan Ram, presided at the Inauguration Ceremony of the handing over of the first Electric Multiple Unit Coach on the 6th June 1959. This is indeed a landmark in the history of your Company, because it has established a new Industry in India, and will save the Country valuable foreign exchange.

The Company has been assured of further orders to keep this new Works fully occupied and I hope this will make considerable contribution towards the prosperity of your Company.

For many years we have manufactured Metre Gauge Passenger Coach Shells which have been furnished by the Railways, but your Company was recently requested by the Railway Board to undertake the complete furnishing of these Coaches. I am pleased to inform you that your Works have now commenced production of furnished Coaches and hope to build up to a full output within the course of the next two or three months.

Manufacture of Wagons

Another important development is that we have had to make a major change in the main line of wagon manufacture in your Works. For the last 30 years we have received from the Railway Board orders for large numbers of four-wheel covered goods wagons, and as demand increased your Wagon Works was organised for production of these wagons at the rate of 15 per day. In 1958 the Railway Board decided that manufacture of the four-wheel general service goods wagon should be discontinued, and that its place should be taken by a heavy bogie vehicle of entirely new design.

Prototypes have been made but details of design are still under discussion with the Railway Board, and because of shortages of steel and components it will be about the end of this year before the Works will be able to commence production of the new B.O.X. wagon in quantity.

This new wagon needs considerable amount of welding for which entirely new procedures will have to be evolved, but I am fully confident that the Technicians and Workmen at Dum Dum will succ fully overcome the teething difficulties which inevitable with any new line of production.

The demand for our Diesel Road Rollers conti at a very satisfactory rate, but the shortage of and imported components has prevented your W from increasing output to its rated capacity of Rollers per year. Once adequate supplies materials are available the Works should be abl meet the present demand without difficulty.

Shortage of Raw Materials

You will note that I have more than once refe to shortage of materials, and this acute shortage inevitably affected the financial results. At Annual General Meeting last year I had referre the fact that your Works were being serio affected by the shortage of steel which was b increasingly felt throughout the Engineering Indu and I had also mentioned that while results for year ending in October, 1958 would be satisfact they would certainly not be as good as they w we have received from the Railway Board orders for large numbers of four-wheel covered goods wagons, and as demand increased your Wagon Works was organised for production of these wagons at the rate of 15 per day. In 1958 the Railway Board decided that manufacture of the four-wheel general service goods wagon should be discontinued, and that its place should be taken by a heavy bogie vehicle of entirely new design.

Prototypes have been made but details of design are still under discussion with the Railway Board, and because of shortages of steel and components it will be about the end of this year before the Works will be able to commence production of the new B.O.X. wagon in quantity.

Prototypes have been made but details of design are still under discussion with the Railway Board, and because of shortages of steel and components it will be about the end of this year before the Works will be able to commence production of the new B.O.X. wagon in quantity.

This new wagon needs considerable amount of welding for which entirely new procedures will have to be evolved, but I am fully confident that the

Ths shortage of raw materials still continues production of wagons and other products in Works is still on a restricted scale, but fortuna with the commissioning of the new Coach Works have not had to retrench workmen, and it is hc that we shall be able to continue at the present of production until adequate supplies of steel available from the new Rolling Mills at Rourk Bhilai and Durgapur.

In view of the continued shortage of raw mate the results for the current year ending in Octo 1959 may not be as good as those for the year en in October, 1958 but it is hoped that materials be more plentiful in 1960 and once supplies readily available the output from your Works sh increase considerably.

Engineering Tribunal

The findings of the Fifth Engineering Trib were announced on the 6th December, and onc the immediate effects of the Award was an incre of Rs. 5/- in Dearness Allowance to every worki at the Dum Dum Works. Several points in Award required clarification, and were referred t to the Tribunal. We understand that a deci will be announced within the course of the next weeks. The effect of this Award will be a substar increase in the wage bill at Dum Dum, but this i keeping with the Country's objective to raise general standard of living. I hope it will also helpful to increased output by the workmen.

The Country is most anxious to find ex markets for engineering goods, and your Comp has constantly borne this in mind. A prelimir survey of markets in Thailand, Malaya, Austr and New Zealand was made last year by one of Members of the Board of Management, and survey has clearly shown that if we are to ob export business we must quote firm prices guaranteed delivery times, but unfortunately supp of steel have been so irregular during the eighteen months that it has not been possible submit quotations which would be considered Y Company is fully alive to the vital necessity engineering exports, and when raw material supp are readily available every effort will be made secure markets for its well known products.

It is indeed a matter of gratification to thos us who are associated with the management of Company that it has at last been possible for Board of Management to recommend payment c dividend of 6 per cent on the Ordinary Shares the Company. It is by no means a high return the capital invested, but I hope that you agree w me that the fact that it has been possible to rec mend a reasonable dividend after providing for heavy losses suffered by the Company in 1955/56 1956/57, is a matter of great satisfaction and re to all concerned.

Working Capital

We visualise a larger increase in production v availability of steel by 1960/61. This will natur require a much larger working capital than e before. Thanks to the help that the Company received from Government, to whom we are inc grateful, it has been possible to meet the Compa financial requirements during the last one year. should, however, be appreciated that in order implement the expanded production programme i necessary to improve the Company's finan resources and to build up a substantial Reserve. this purpose a cautious and conservative finan policy is not only desirable but essential. I sincerely hope that the Board of Management receive the full support of the Shareholders in respect.

I may inform you that the Board of Managem has now obtained legal opinion on the losses suff by the Company in 1955/56 and 1956/57 due certain speculative transactions of very doub nature, and has already submitted the opinion Government for their consideration.

Gentlemen, before I conclude I feel sure you like to join me in expressing our thanks to workmen and staff who at all levels have worke devotedly to produce the excellent results.

I would also like to express the Board's appre tion of the valuable services rendered by Mr. S Srinivasan as Member of the Board of Managen till the end of May, 1959 when he was transfe to Bombay. His place has been taken by Mr. A Dutta.

This does not purport to be a record of proceedings of the Annual General Meeting.

4 PER CENT. STATE GOVERNMENTS LOANS, 1971

Name of State	Amount	Issue price per cent.
(1) Andhra Pradesh	Rs. 600 lakhs	Rs. 99.50
(2) Assam	Rs. 250 lakhs	Rs. 99.00
(3) Bihar	Rs. 300 lakhs	Rs. 99.50
(4) Bombay	Rs. 600 lakhs	Rs. 100.00
(5) Madhya Pradesh	Rs. 300 lakhs	Rs. 99.50
(6) Madras	Rs. 800 lakhs	Rs. 99.50
(7) Mysore	Rs. 500 lakhs	Rs. 99.50
(8) Orissa	Rs. 350 lakhs	Rs. 99.00
(9) Punjab	Rs. 200 lakhs	Rs. 99.00
(10) Rajasthan	Rs. 350 lakhs	Rs. 99.50
(11) Uttar Pradesh	Rs. 800 lakhs	Rs. 99.50
(12) West Bengal	Rs. 700 lakhs	Rs. 99.50

All the State Governments reserve the right to retain subscriptions up to ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 19th August 1971.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 19TH AUGUST 1959 AND CLOSE ON 25TH AUGUST 1959 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 19th August 1959.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% Madras Government Loan 1959 will be accepted AT PAR for conversion into the new loan of that Government; interest at the rate of 4 per cent. from 21st June 1959 up to and including 18th August 1959 will be paid on the securities of the 3% Madras Government Loan 1959 tendered for conversion.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the office of the Reserve Bank of India at Nagpur in the case of the Bombay loan.

(ii) At the branches of the State Bank of India and at Treasuries and Sub-treasuries in the case of Andhra Pradesh, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan and Uttar Pradesh loans.

(iii) At the branches of the State Bank of India in the case of Assam and West Bengal loans.

(iv) At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Bombay loans.

(v) At the branches of the Bank of Mysore Ltd. (except at Bangalore) the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering their applications at the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, New Delhi and Madras will, in the event of oversubscription, be given the option of transferring their cash refunds to any of the other State Government loans which may not be fully subscribed provided they complete the SPECIAL OPTION FORM copies of which are obtainable on application from any of the abovementioned offices of the Reserve Bank of India.

THE CALCUTTA MONEY MARKET

BIG FALL IN ADVANCES

Wednesday, 29th July.

LAST week saw another heavy fall in the level of advances outstanding in the Calcutta money market. It was accounted for entirely by a decline in the requirements of the jute and sugar mills. Other sources of demand, including the cotton industry and against grains and seeds storage, were relatively unchanged. The interbank market continues extremely easy. The official call rate is unchanged at 1 percent, but business has been done down to ½ percent, and it is reported there are many lenders over.

The exchange market continued fairly steady, with good quantities of both tea and gunny bills seen. Remittance was restricted. The pound sterling shows further fractional gains against the twin dollars and several important Continental currencies including the D-mark and the Swiss franc.

SILVER WAS STEADY LAST WEEK ON SPECULATIVE support. The price closed at Rs. 197.06. The price was quoted at 78d in London and at 91.375 cents in New York.

Gold declined to Rs. 119.50 on talk of bigger contraband arrivals.

DURING THE WEEK ENDED 24TH JULY, GOVERNMENT of India Treasury bills for Rs. 137,90,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 3 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 28th July. The total amount offered was Rs. 5,35,00,000. Tenders at Rs. 99.375 were accepted in full and those at Rs. 99.350 were allotted approximately 82 percent, the average rate of acceptance being Rs. 2.545 percent a year. Tenders for Rs. 3 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 3rd August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 29th July to 1st August at Rs. 99.391 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 22nd July to 25th July amounted to Rs. 7,25,00,000.

DECLINES OF Rs. 24.74 CRORES TO Rs. 1,680.34 crores in active notes and of Rs. 22.75 crores to Rs. 1,705.08 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 24th July, 1959. The currency contraction was covered by reducing foreign securities in the paper currency reserve by Rs. 5 crores to Rs. 168.01 crores and rupee securities by Rs. 19.91 crores to Rs. 1,285.84 crores. In the Banking Department, deposits of the Central Government were up by Rs. 15.06 crores to Rs. 64.62 crores because of good tax collections, but other Government accounts fell by Rs. 11.46 crores to Rs. 27.90 crores. Balances of commercial banks at Rs. 89.95 crores showed a decline of Rs. 1.84 crores. Balances held abroad increased by Rs. 2.31 crores only to Rs. 12.24 crores, in spite of a transfer of securities from the Issue Department. Investments at Rs. 347.27 crores were Rs. 3.71 crores higher. Other loans and advances declined from Rs. 67.80 crores to Rs. 65.78 crores, of which advances to scheduled banks against usance bills amounted to Rs. 8 lakhs (Rs. 2.76 crores). Ways and means advances stood at Rs. 22.11 crores against Rs. 21.23 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 17th July, 1959, shows a rise of Rs. 2.05 crores to Rs. 539.97 crores in total deposits. Investments in Government securities are down by Rs. 3.94 crores to Rs. 315.50 crores, while other authorised investments are up by Rs. 10 lakhs to Rs. 10.07 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 1.77 crores to Rs. 183.80 crores. Cash and balances are, in consequence, shown at Rs. 40.52 crores or Rs. 9.55 crores higher.

THE NEW INDIA ASSURANCE COMPANY LIMITED BOMBAY

CHAIRMAN, MR. A. D. SHROFF'S REVIEW

The following is a summary of the Speech delivered by Mr. A. D. Shroff, the Chairman, at the Fortieth Annual General Meeting of the shareholders of the New India Assurance Company Limited, held at Bombay, on July 22, 1959.

Referring to the continuing drift in international affairs Mr. Shroff made a fervent plea for peaceful co-existence. In the economic field, Mr. Shroff analysed the broad trends in the developed and underdeveloped countries and said that the recessionary trends of the previous year have tended to peter out and a cautious re-expansion of economic activity was well under way in a number of countries. Referring to the establishment of common markets or regional groups in the sphere of trade, he expressed his apprehension that these might degenerate into rival blocks indulging in economic wars, and exploiting and weakening the underdeveloped countries instead of becoming reservoirs of strength for their uplift.

He was gratified to note that more emphasis was now placed on economic rather than military aspects of aid to underdeveloped countries.

After reviewing the trends in the Indian economy, Mr. Shroff stated that our national policies called for a fundamental re-orientation and re-adjustment so as to make them consistent with our paramount need to maximise production. In this connection, he pleaded for Government policies which were free from ideological or doctrinaire inhibitions. In the industrial sphere, Mr. Shroff favoured the establishment of industrial nuclei of key and basic industries around which small clusters of ancillary cottage industry units are organised and developed. This would not only solve the problems of technical know-how, credit facilities and marketing, etc. but also evolve a diversified and integrated industrial structure. In this connection, he advocated the establishment of special types of institutions for hire-purchase financing, central marketing and technical services. He recommended the promotion of institutions like the Unit Trusts to promote savings on a larger scale.

Code of Conduct

Turning to General Insurance, Mr. Shroff stated that 1958 continued to be a difficult one for general insurers the world over. Referring to the Code of Conduct and its Administrative Machinery, he said that though results had not yet been adequate, a more effective organisation of the Administrative Machinery and observance of the Code by the Insurers, both in letter and spirit, could improve matters a great deal. He expressed the hope that the adjustments in Fire rates proposed by the Tariff Committee would be a significant step forward in achieving the ultimate objective of a rate structure equitable to the insurer and the insured. Reviewing the problems of the industry, Mr. Shroff said that insurers should build up an efficient claims organisation to investigate into claims and render prompt service to the insured with the same zeal which they now display for the procurement of business. He strongly advocated an obligatory marine tariff in so far as India was concerned, to avoid wasteful and uneconomic competition. Mr. Shroff very much regretted that his appeal to the Government for an equitable and just deal to private enterprise in the matter of placing the insurance business of Government-owned or aided industries had so far gone unheeded. He emphasized the need for a spirit of healthy co-operation between the public and private sectors of the industry to eradicate common maladies.

Premium Income

Reviewing the results of New India's operations during 1958, Mr. Shroff stated that the total premium income for the year amounted to Rs. 7.54 crores as against Rs. 6.30 crores in 1957. Profit transferred to the Profit and Loss Account amounted to Rs. 55 90 lacs as against Rs. 32.7 lacs in 1957. As a result of the year's operations the Company's Total Funds increased by Rs. 61.4 lacs to Rs. 9.11 crores.

Mr. Shroff concluded by saying that the Directors were confident of the continued expansion of the Company's activities.

(This does not purport to be a record of the proceedings of the Meeting).

WANTED WORKS MANAGER

British Chemical Factory in West Bengal invites applications from Indian Nationals for the post of Works Manager. Applicants should be aged 40/45 and possess a minimum of 10 years experience in factory management. The appointment carries considerable responsibility with every prospect of advancement to the top. The salary offered will be commensurate with qualifications and experience. Only those now in senior positions will be considered.

Reply Box No. 4796.

INDUSTRIAL OUTPUT SLOWS DOWN AND PRICES RISE

RESERVE BANK REPORT ON CURRENCY AND FINANCE

THE Reserve Bank's *Report on Currency and Finance*, for the financial year 1958-59, presents a review of the economic situation in India during the period along with a brief survey of economic and monetary developments abroad. According to the *Report*, the Indian economy showed mixed trends during 1958-59, with a blend of elements of stagnation and forces of sustained progress and of recessionary tendencies with basic inflationary factors. With continuing drastic import curbs and larger external aid, the balance of payments position underwent a distinct change, with a marked easing of the drain on the foreign exchange reserves. This improvement was, however, to a not inconsiderable extent, associated with a slowing down of the rate of new investment and of growth of industrial production. These developments, which were already apparent in the latter half of the previous year, became more pronounced in the first half of 1958-59, with the general level of prices recording an almost continuous rise. However, in the latter half of the year, the situation showed improvement, with a seasonal decline in prices and a recovery in the rate of growth in industrial production. The resumption of economic growth was accompanied by a substantial monetary expansion during the busy season of the year, although the latter would appear to have been somewhat excessive.

Revival of U.S. Economy

Abroad, the most outstanding development in the world economic scene in 1958 was the vigorous revival of the U.S. economy from out of the shortlived but sharp recession of 1957. The developments during the year dispelled the fears entertained earlier that the U.S. recession would lead to a general international liquidity crisis. In fact, industrial countries, aided by a favourable turn in their terms of trade, were able to raise their gold and dollar reserves to record levels. This, in turn, made possible, towards the close of 1958, the move to convertibility in western Europe which marked a significant step towards a freer system of multilateral trade and payments. In most European countries, the decline in economic activity, the degree and timing of which varied, proved to be much less than apprehended.

Slowing Down in Indian Industry

In India, the rate of increase in industrial production showed a further slowing down in 1958, the average general index being 139.4 (base : 1951=100), representing an increase of only 1.5 percent, compared with 3.5 percent in 1957 and 8.3 percent in 1956 ; however, in the closing months of the year there was evidence of an increased tempo of industrial activity. The fall in the rate of growth of industrial output was partly attributable, as in the previous year, to the shortage of industrial raw materials, arising from import restrictions. In some industries, notably cotton textiles, the decline in output was also due to the slackness in domestic demand during the greater part of the year and the difficulties of maintaining exports. The employment situation continued to cause concern, as a result of a more rapid rise in the number seeking employment.

Sharp Setback in Agriculture

Overall agricultural production suffered a sharp setback in 1957-58, the index of agricultural production (base : year ended June 1950=100) falling from 123.8 in 1956-57 to 113.4 in 1957-58. The fall was as much as 11 percent in the case of foodgrains. For 1958-59, provisional estimates indicate an encouraging position. The production of foodgrains is expected to attain a record level of 73 million tons. The output of jute also reached a new record level during the year.

The price situation caused some concern during 1958-59. Reflecting mainly the impact of the sharp fall in foodgrains output in 1957-58, prices rose almost continuously up to October 1958, but thereafter there was a slow decline. The general index of wholesale prices, which had showed no material change in 1957-58, recorded a net rise of 6.5 percent in 1958-59, the food articles group rising by as much as 11.2 percent. The Government's efforts continued to be directed towards holding the price line and to this end, a number of measures were adopted to control the movement, consumption and prices of foodgrains as well as to build up stocks. Partly as a result of these measures but mainly because of the substantial rise in the 1958-59 foodgrains output, the weekly index for food articles, which had touched its peak of 122 in mid-October 1958, declined to 112.7 at the end of March 1959. But this level was still higher by 9 percent than that a year before, and since May 1959, there has again been a rise, the index going up to 120.9 by mid-June.

Monetary Expansion

Monetary and banking trends during 1958-59 differed in important ways from those in 1957-58. The seasonal swings in both money supply and bank credit were more marked than in the previous year and, in the busy season, monetary expansion assumed larger proportions than in any previous year ; this was mainly due to the estimated record agricultural output and the rising tempo of industrial production, but speculative influences were also at work. Over the financial year, the expansion of money supply at Rs. 109 crores was larger than in 1957-58 (Rs. 76 crores), but smaller than in 1956-57 (Rs. 129 crores) and in 1955-56 (Rs. 264 crores). The expansion in scheduled bank credit in 1958-59, on the other hand, was only Rs. 51 crores, compared with Rs. 63 crores in 1957-58. The rise in scheduled bank deposits (Rs. 184 crores), although substantial, was only about two-thirds of the preceding year's expansion (Rs. 276 crores); however, the rate of turnover of current deposits of business and individuals recorded a further rise. Of the use of funds, the most conspicuous feature was the very sharp rise in investments in Government securities, the rise (Rs. 173 crores) being almost twice that in 1957-58 (Rs. 93 crores); counterpart funds arising from P.L. 480 imports continued to be an important factor in the growth of bank deposits and the gilt-edged portfolio of banks.

Controlled Expansion of Credit

The Bank's credit policy continued to be one of controlled expansion directed to meeting the genuine credit needs of the productive sectors of the economy. The state of excess liquidity in the banking system, which tended to exercise some pressure on prices of shares, commodities and bullion, reinforced the need for continued monetary restraint in general. Under these circumstances, the Reserve Bank not only maintained the selective control on credit against foodgrains and sugar, with suitable modifications, but also extended its scope to groundnuts. With a view to checking unhealthy speculation on the stock markets, the Bank impressed upon banks the need to exercise vigilance in the matter of advances against shares.

Fall in Private Investment

Conditions in the capital market continued to reflect the slackness in the rate of growth of the economy which set in during 1957-58. Overall investment would appear to have recorded only a modest rise during 1958-59, it occurring in the public sector. Investment activity in the private sector would appear to have been somewhat lower than in 1957-58, due mainly to foreign exchange difficulties. The trend of company profits appeared to be downwards, as in 1957. However, the Government adopted several measures to assist the private sector of industry. In particular, the fiscal policy was adapted to meet the needs of the situation ; for example, excise duties on a number of goods were scaled down considerably and various export incentives were provided in an attempt to maintain production and exports. Some industries also benefited from the protective effect of the import curbs. In consequence, there appeared to be a definite change in the investment climate, and reflecting this, the share markets experienced a minor boom, the rise in prices being more pronounced following the presentation of the Union Budget. The Reserve Bank index of variable dividend industrial securities recorded an increase of 16 percent, in contrast to the fall of 13 percent registered in 1957-58. The gilt-edged market also maintained firm conditions practically throughout the year. The institutional set-up for providing finance to industry was further strengthened. Bullion prices evinced a further substantial rise during the year. The rise in prices reflected the growing pressure of demand in the context of a tight supply position which was further accentuated by the reported reduced arrivals of smuggled gold and of Tibetan silver coins. As for Government finances, due mainly to larger domestic borrowing and external assistance, the combined actual overall deficit of the Centre and the States was appreciably smaller in 1958-59 at Rs. 136 crores, compared with Rs. 503 crores in 1957-58, and Rs. 253 crores in 1956-57. The plan outlay of the Centre and State Governments maintained its uptrend ; after having increased from Rs. 689 crores in 1956-57 to Rs. 846 crores in 1957-58 it, recorded a further rise to Rs. 981 crores in 1958-59. The contribution of external assistance to resources was material. During the year, net receipts from market borrowings amounted to Rs. 227 crores, compared with Rs. 71 crores only in 1957-58, the larger Government borrowing reflecting partly the ample liquidity of the banking system during the greater part of the period. The performance of small savings was also slightly better than in 1957-58, the net receipts amounting to Rs. 78 crores, compared with Rs. 69 crores in 1957-58.

External Aid and Reserves

The strain on India's balance of payments experienced in the previous two years was considerably relieved in 1958-59. Due to the combination of a much larger inflow of external assistance and a severe curtailment of private imports, the draft on the country's foreign exchange reserves in the third year of the second plan was reduced to Rs. 47 crores ; it had amounted to Rs. 260 crores in 1957-58 and Rs. 221 crores in 1956-57, even after taking credit for I.M.F. assistance of Rs. 34 crores and Rs. 61 crores, respectively. In fact, from November 1958 onwards up to the end of the year, There was a rise of Rs. 44 crores in the reserves. Export earnings at Rs. 576 crores recorded a further decline of Rs. 19 crores in 1958-59, while aggregate import payments at Rs. 1,047 crores represented a fall of Rs. 157 crores over 1957-58. The current account deficit in 1958-59 at Rs. 339 crores was Rs. 137 crores less than in 1957-58, although it was Rs. 27 crores more than in 1956-57. Total external assistance available for the second plan as at the end of March 1959, amounted to around Rs. 1,216 crores, inclusive of a carry-over of Rs. 190 crores from the first plan. Of this, Rs. 697 crores was estimated to have been used during the first three years of the second plan, so that Rs. 519 crores is available for the rest of the plan period.

City Cable

SHARES STEADIER BUT BUSINESS SHRINKS

STRONG TREND ON WALL STREET HELPS LONDON

London, 29th July.

STEADIER conditions developed in the stock market after the recent sharp fluctuations and its performance was generally satisfactory during the past week. Business, however, contracted further as the holiday season neared its peak. Buyers returned to the market and attention was switched back to industrial equities after the recent popularity of fixed-interest stocks. Good institutional buying of industrials was reported, and sentiment was assisted by the steady advance to a new peak of Wall Street. Other favourable influences included the fresh fall in unemployment in the United Kingdom, the latest review of the business outlook, and hopes of an early settlement of the printing dispute. An outstanding feature was the substantial rise in the price of Ford Motors on rumours that the U.S. parent company, which already holds a controlling interest, intended to increase its holding. These rumours were denied by the U.S. company and the price reacted sharply, although it still showed a big gain on balance. Shares with U.S. following were generally better. Steels were quieter. Gilt-edged securities were inclined to be easier prior to the week-end, but improved subsequently in response to small investment demand. In the foreign market, German and Greek bonds improved, while dollar stocks advanced in sympathy with Wall Street. Gold shares generally tended lower but there were several firm features. Coppers eased but lead-zincs hardened and tin shares held steady. Oils fluctuated narrowly, and Ultramar eased on the possibility of a rights issue. The improvement in rubber prices brought a revival in the demand for rubber shares, which showed numerous good features. Tea shares were quiet but several issues responded to good dividend statements.

The Money Market

Stringent credit conditions continued to prevail in the money market during the past week, with credit in keen demand. The position was mainly affected by the poor cash position of the leading clearing banks due to seasonal influences. The authorities had to fill the gap between supply and demand but a small amount of penal borrowing was resorted to by the market. The rate for day-to-day loans in consequence ruled firm at 3½ percent to 3¾ percent. The banks were not very keen buyers of bills and only a fair business was transacted in October maturities and "hot" Treasury bills at 3⅜ percent. The Treasury bill rate at the weekly tender was again virtually unaltered, the official average being £3 9s 0.13d percent, compared with £3 9s 0.16d percent.

Activity on Wall Street

U.S. Government obligations during the past week were strong in the short end of the list where prices scored their best gains in recent weeks. Speculative rail lines were generally unchanged in an inactive market. Convertibles were mostly higher with a number of issues moving to new highs. Intermediate and long-dated securities tended to drift irregularly lower, partly reflecting the switching by investors into the new 4-3/4 percent notes. High-grade corporate issues extended their recent advance. In the foreign bonds market, Greek issues extended their recent declines with losses ranging to two points. Serbs were also soft while Danish 5-1/2 percents were steady and Norwegians were mixed. Amsterdam 5-1/4 percents and New Zealand 5-1/2 percents eased. Australians were lower while South Africans showed little change.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 22nd July shows that the U.S. gold stock fell by $44 million to $19,637 million. Foreign deposits rose by $24 million to $264 million, while foreign investments were $28 million higher at $4,95 million. The Federal Reserve bought $24 million worth of bills, $1 million worth of bonds and $54 million worth of securities under repurchase agreements, making the total holdings of Government securities $79 million higher at $26,487 million. Total discounts and advances fell by $78 million to $702 million, while the aggregate excess reserves of member banks fell by $98 million to $272 million. The daily average excess reserves of member banks were $48 million higher at $564 million, while their daily average borrowings fell by $90 million to $912 million. Gold certificates on hand and dues from the U.S. Treasury were $57 million lower at $18,401 million. Federal Reserve notes in actual circulation were $93 million lower at $27,519 million. The daily average of deposit member banks' reserve accounts was $135 million higher at $18,635 million. Commercial, industrial and agricultural loans of New York city banks were $42 million higher at $9,711 million. Loans to non-banking financial institutions totalled $1.605 million, and loans to foreign banks $391 million.

NAMES AND DATES

The twenty-seventh annual general meeting of the Oriental Chamber of Commerce, Calcutta, will be held on 31st July at 3-30 p.m. at Prince's, Grand Hotel, Calcutta.

Stocks and Shares

LOWER T.I.S.C.O. DIVIDEND BRINGS SHARP BREAK IN PRICES

HESITANT UNDERTONE: NEW STATE LOANS

Wednesday Evening.

THE announcement by the Tata Iron and Steel Company last Thursday of a lower ordinary dividend (Rs. 6.80 a share on the increased capital against Rs. 8.25 a share), for the year ended 31st March, 1959, hit the stock market like a bombshell. In Bombay, T.I.S.C.O. shares initially slumped from Rs. 190.75 to Rs. 176 ; in Calcutta, Indian Iron dropped from Rs. 24.73 to Rs. 23.72. As one selling wave followed another the bulls found themselves in full retreat. Small bouts of replacement buying brought a short-lived recovery, but this soon petered out and at the close of business today the market was weak and the near-term trend uncertain. On a yield basis, Indian Irons are now more attractive than Tata Steels and it is possible that if, as is expected, the former company maintains its dividend—due to be announced shortly—at 10 percent, both investors and speculators may decide to switch from T.I.S.C.O. to Indian Irons. The Investment Committee of the Life Insurance Corporation will be holding its next meeting in Calcutta on 6th August and it will be interesting to see whether or not it is decided to support the equity market at the present level of prices.

The major factor at present retarding a substantial recovery movement is the possibility of payments difficulties at the forthcoming settlement on 31st August, in view of the decline in the prices of all the clearing shares since the last settlement. Some observers, however, believe that a large bear account has been built up during the past week and if part of this is covered by the settlement date, stable conditions may return before long.

The Reserve Bank announced yesterday that 12 State Governments, with the exception of Kerala and Jammu and Kashmir, would enter the market on 19th August to borrow an aggregate sum of Rs. 57.50 crores. All the loans will carry interest at 4% and will be redeemable in 1971. Details of the amounts and issue prices of the new State loans are given below :

	Amount	Issue Price
	Rs. lakhs	Rs.
Andhra Pradesh	600	99.50
Assam	250	99
Bihar	300	99.50
Madhya Pradesh	300	99
Madras	800	99.50
Mysore	500	99.50
Orissa	350	99
Punjab	200	99
Uttar Pradesh	800	99.50
West Bengal	700	99.50
Bombay	600	100
Rajasthan	350	99.50

Somewhat more business was put through in preference shares during the past week with the appearance of a few sellers. Orient Paper First were crossed at Rs. 93 and Ramnugger Cane at Rs. 99. Godfrey Phillips changed hands at Rs. 61.75 and Indian Iron & Steel at around Rs. 103.

The announcement of lower interim dividends by banking companies during the past few weeks, as a result of the new pattern of taxation, kept buyers away from this section, although prices showed little variation.

Coal share prices were trimmed in the absence of fresh enquiry. Here is a chart showing representative price movements :

	Opening 23rd July, 1959	Closing 29th July, 1959
	Rs.	Rs.
Amalgamated	25.87	25.25
Bengal	310	307
Burrakur	17.75	17.37

Contrary to the general trend, Equitables improved from Rs. 31.25 to Rs. 31.75 and both Central India and Western Bengal were steady at Rs. 8 and Rs. 6.37, respectively.

In cotton textiles, Kesoram met with selling pressure and were marked down from Rs. 15.94 to Rs. 15.37. Bowreah, however, improved today from Rs. 118 to Rs. 122.

Electric supply shares were a nominal market and little interest was shown in this section.

In the engineering group, Britannia Engineering met with some enquiry and improved to Rs. 13, while Guest, Keen, Williams were marked down from Rs. 39.75 to Rs. 39. Textile Machinery came under heavy selling pressure and were marked down from Rs. 24.05 to Rs. 23.45, owing to the weakness in Indian Iron & Steels.

Selected jute shares met with enquiry, including Auckland which improved from Rs. 185 to Rs. 190, Birla from Rs. 22 to Rs. 22.50 and Fort Gloster from Rs. 365 to Rs. 370. Most other issues were unchanged at around previous quotations.

In paper, India Paper Pulp were marked down sharply from Rs. 24.37 to Rs. 23.50 as were Orient from Rs. 36.60 to Rs. 35.95 and Titaghur from Rs. 43.50 to Rs. 43.12.

In sugar, Carew recovered slightly to Rs. 12.31, while Dyer Meakin Breweries were shaded at Rs. 17.75. Ramnugger Cane registered a sharp fall from Rs. 21.75 to Rs. 19.75.

Among miscellaneous industrials, Alkali & Chemical were better at Rs. 22.44 as were Britannia Biscuits at Rs. 25.50. Bengal Flour met with good enquiry at around Rs. 36, but sellers were scarce. Dunlop Rubber eased from Rs 33.75 to Rs. 33.37 and Imperial Tobacco receded to Rs. 12.31 on profit-taking. Indian Aluminium were easier at Rs. 22.06 as were Indian Oxygen at Rs. 26.50 and Indian Cables at Rs. 31.56. National Insulated Cables were marked down from Rs. 36.50 to Rs. 35.74 and National Tobacco from Rs. 17.69 to Rs. 17.37. Philips on the announcement of a lower dividend (8½%) met with selling pressure and reacted sharply from Rs. 23.25 to Rs. 21.25. Rohtas Industries eased from Rs. 21.62 to Rs. 21.19. Contrary to the general trend, Shaw Wallace met with good investment enquiry and improved from Rs. 19.50 to Rs. 20.

Tea shares were generally dull and neglected. Dufflaghur, however, met with some enquiry and improved from Rs. 39 to Rs. 39.50.

In the mining group, Indian Copper were quiet at Rs. 4.05 as were Metal Corporation at Rs. 12.75.

Shaw Wallace

The profit of Shaw Wallace and Company has increased by Rs. 6.53 lakhs to Rs. 44.45 lakhs for the year ended December 1958. Taxation absorbs Rs. 21.75 lakhs, against Rs. 18.24 lakhs. Bringing in Rs. 3,65,425 and making other adjustments, there is Rs. 26,57,538. An amount of Rs. 2 lakhs is written off investments. General reserve is allocated Rs. 7½ lakhs. Development rebate reserve receives Rs. 1.62 lakhs. The ordinary dividend of 10 percent has been maintained, leaving a carry-forward of Rs. 4,87,291. The directors have for some time now been investigating the possibility of manufacturing "bakers' yeast" in India, and a new company is in process of formation for this purpose. This company will be called the Indian Yeast Company Private Ltd, and Shaw Wallace will be majority shareholders in it. Most of the remaining shares will be held by the Distillers Company Ltd of the United Kingdom, whose collaboration in this venture has been secured. The Distillers Company Ltd, through its subsidiary, the United Yeast Company Ltd, is the foremost manufacturer of yeast in the United Kingdom. Referring to Shaw Wallace's other activities, it is stated that in the first full year of production, the output of acid from the superphosphate factory in Madras amounted to 7,396 tons and of superphosphate to 23,839 tons, compared with 5,770 tons and 15,454 tons, respectively, in 1957. The extensions to the factory are now well under way. "The Tinplate Company of India Private Ltd, an important section of the steel industry of this country, and a vital industrial unit in the country's economy, has once again been prevented from playing its full part in that economy by causes entirely beyond its control." As supplies of steel were insufficient, the company was obliged to work at 30 percent below capacity and in consequence there was a sharp fall in production. It is hoped that the expansion programme undertaken by Tatas will result in adequate indigenous supplies being available during most of 1959.

Engo Tea

The Engo Tea Company Ltd has incurred a loss of Rs. 1,961 for the year ended December 1958. The directors say that although generally the prices obtained for the 1958 season's teas were somewhat better than those for the previous season's crop, they were still unsatisfactory. The year's working would have shown a small profit, had it not been for the burden of Rs. 13,049 imposed by the West Bengal entry tax. Bringing in a debit balance of Rs. 63,469 and making other adjustments, a debit balance of Rs. 59,525 is carried forward. The dividends have been passed over. Production rose from 2,944 maunds to 3,348 maunds and the average sale price from Rs. 1.67 to Rs. 1.89 a lb. Estimates for 1959 have been made for a crop of 3,250 maunds at a cost of Rs. 4.77 lakhs. "This is considered a conservative crop forecast and, provided normal conditions prevail, it is likely that a larger crop will be secured".

Fort Gloster Industries

Presenting the report of the Fort Gloster Industries Ltd for the year ended March 1959, the directors state that the results are good because simultaneous trading was possible, and for the first time there was an ample supply of fibre within the country to meet the jute in-

For a nominal charge, "Capital's" Statistical Department can provide yo with a certificate of share prices.

ustry's needs. The reports on the new crop om jute-growing districts have generally been vourable so far. Considerable progress has en made with the cable project. Except in the ubber mill department, erection in other sec- ons is almost complete, and it is hoped to start e wire drawing section in July, as scheduled. he most modern method of producing cables the latest continuous vulcanising machines has een chosen. By this method, the company will e in a position to meet, to a large extent, the ountry's needs of insulated cables. The profit as amounted to Rs. 33.28 lakhs. Bringing in s. 2,53,663, there is a balance of Rs. 35,81,322. epreciation absorbs Rs. 8.73 lakhs and deben- ure sinking fund Rs. 1.75 lakhs. Taxation pro- ision is allocated Rs. 11.75 lakhs. The ordinary ividend of Rs. 20 a share has been maintained. he carry-forward amounts to Rs. 1,94,546.

New India Assurance

There is a profit of Rs. 55.90 lakhs for the New ndia Assurance Company for the year ended ecember 1958, against Rs. 32.73 lakhs in the revious year. Bringing in Rs. 1,41,481 there is balance of Rs. 54,20,047. A dividend of Rs. 4 a hare has been paid, including an interim of Rs. 2 a share, leaving a balance of Rs. 1,22,147 o be carried forward.

Jaybirpara Tea

The Jaybirpara (Dooars) Tea Company has assed over the dividend for the year ended ecember 1958. There is a loss of Rs. 34,854. Making various adjustments, a debit balance of Rs. 60,919 is carried forward. The size of the 1958 rop was disappointing. The effects of the seri- us flooding of the garden a few years ago have ot yet been eradicated, and remedial measures re being continued. A crop of 6,362 maunds was ecured and sold at an average price of Rs. 1.85 a lb. This compares with a crop of 6,425 maunds in he 1957 season sold at an average price of Rs. 1.67 a lb. Estimates for the current season have been framed for a crop of 7,000 maunds at a cost of Rs. 10,83,519. The present season has started favourably and the crop until 14th June, 1959, amounted to 1,449 maunds, compared with 1,279 maunds until the same date a year ago.

Bombay Market

SIGNS OF NEW CONFIDENCE FOLLOW SHAKE-OUT

TECHNICAL POSITION MUCH IMPROVED

Wednesday Evening.

THERE are signs of returning confidence in the Bombay stock market as the week closed on Wednesday. After having suffered a considerable setback earlier because of a lower dividend announced by the Tata Iron and Steel Company, share prices appeared to be settling down at present. The shake-out has helped improve the technical position to a considerable extent and selling pressure has abated. Rumours of official controls on credit given to the stock market and of selling by the Life Insurance Corporation have not been confirmed. In fact, the proposed meeting of the Life Insurance Corporation Investment Committee on 6th August in Calcutta is being interpreted bullishly. It is thought that since share prices have now returned to more reasonable levels, the Corporation could just as well think of placing further money in industrial share investments. This apart, a considerable portion of the floating money appears to be seeking investment.

Tata Steel improved from Rs. 170 to Rs. 174.50, as did Indian Iron from Rs. 23.70 to Rs. 24.24. Other engineerings recovered a portion of their losses. Alcock Ashdown were transacted at Rs. 255 and Premier Construction changed hands at Rs. 340. Tata Locomotive were bought at Rs. 212 on investment account because of improved prospects. Larsen and Toubro met with demand at Rs. 21.44 as the company has encouraging expansion programmes. There was a flutter of activity in motor shares on the publication of a maiden ordinary dividend by Hindustan Motors; the latter were dealt in at Rs. 10.80. Premier Automobile were taken at Rs. 130.50.

Cotton mill shares were fractionally shaded. There was hectic activity in Kohinoor and the scrip moved up and down on talk of a change in management; the price closed at Rs. 295. Bombay Dyeing were taken at Rs. 64.90 and Svadeshi came to hand at Rs. 236. Simplex were indicated at Rs. 163 and Tata Mills were bought at Rs. 41. India United Ordinary were offered at Rs. 8.20 and Apollo changed hands at Rs. 1.25.

Miscellaneous shares moved in pattern with the general trend. In the sugar group, Belapur were done at Rs. 305 and Phalton were bought at Rs. 159. Among cement shares, Associated Cement were placed at Rs. 152 and Digvijay Cement were indicated at Rs. 150. Mining shares were quietly steady, and Shivrajpur Syndicate were dealt in at Rs. 83.50. Steamship company shares were steady, and Scindia Steam came to hand at Rs. 17.84.

Great Eastern Shipping were lowered to Rs. 21.60 on pressure. Bombay Burmah declined to Rs. 525 on profit-taking and National Rayon were quoted at Rs. 344.50. Tata Chemical were placed at Rs. 17.48 and Voltas were taken at Rs. 167.50.

Routine turnover was transacted in banking and insurance shares. Central Bank were transacted at Rs. 49.50 and Bank of Baroda were done at Rs. 101.50. New India Assurance were offered at Rs. 57.50.

There was scattered investment interest in electricity supply company shares. Tata Hydro were bought at Rs. 119 and Ahmedabad Electric were quoted up to Rs. 93. Bombay Suburban changed hands at Rs. 110.

Men and Oil . . .

The Field Engineer

Long before the oil drillers move in to start a new well, the Field Engineer is on the scene. One of his first tasks is to build roads and bridges to the new location so that the mass of drilling equipment and machinery can be brought safely to the site. He surveys the land for a suitable plot to take the derrick foundations, marks the route for pipe lines, and arranges water supplies, electricity and housing for the workers and the drilling operations. After his bulldozers and excavators have finally rolled away (perhaps to start all over again at a new location), he supervises the erection of the drilling engines, pumps, tankage and piping, and maintains them in first-class operating order during the period of drilling. For the Field Engineer is concerned with all engineering aspects of the oil search outside the drilling operation itself.

The men who do this work possess a great deal of varied engineering experience, not only in oilfields but in general practice too. It is a long-established policy of the Assam Oil Company to select and train Indian men for specialised work of this nature; a policy that works well—for the men, for the company and for India.

ASSAM OIL a full-scale petroleum industry

"CAPITAL" STOCKS AND SHARES INDEX *

The *Capital* Stocks and Shares Index (Base :939) has now been brought up to May 1959. Compared with April, the May indices for Government securities and preference shares show rises of 0.1 point and 0.2 points, respectively.

There were decreases in banks 3.4 points, coals 2.1 points, jute 3.5 points, engineerings 5.3 points, papers 63.6 points, sugars 1.3 points and miscellaneous 11.9 points, while increases occurred in cottons 8.7 points, minings and oils 1.2 points, cements 1.5 points and teas 12.7 points.

Correlating all the factors, the *Capital* variab yield securities index declined by 4.0 points durir May 1959.

New Delhi

COMMITTEE RECOMMENDS MEASURES FOR DEVELOPING INLAND WATERWAYS

PRODUCTION OF IRON ON EXPERIMENTAL BASIS FROM SMALL FURNACES

(FROM A NEW DELHI CORRESPONDENT)

A Rs. 50-crore development programme for inland water transport during the third plan has been suggested by the Inland Water Transport Committee in its report to the Government of India. It is recommended that the Government should assume responsibility for improving and maintaining all important waterways in the country. "Inland water transport," says the committee, "has a great part to play in the transport system of our country, provided it is properly organised and placed on a sound footing." Further deterioration of existing waterways should, therefore, be arrested. The committee, with Mr. B. K. Gokhale (a retired member of the Indian Civil Service) as chairman, was set up in 1957: (i) to review the part played by the inland water transport system; (ii) to advise on measures for the increased use of this mode of transport, including the movement of bulk commodities; (iii) to examine the prospects of increasing and extending river and canal services, and to suggest steps necessary for effective co-ordination between the railways and inland waterways including financial participation, an appropriate allocation of traffic and arrangements for through booking; (iv) to consider the organisation of an efficient country boat service on a co-operative basis; (v) to suggest whether any special organisation is necessary to execute the schemes and how they should be financed; and (vi) to recommend which important waterways should be declared as national waterways, as laid down in the Constitution. The committee is of the opinion that the decline of water transport in India is peculiar to the country. It was due to the policy in the 19th and early 20th century of encouraging the railways, and the principle adopted of balancing expenditure from tolls.

Irrigation and Navigation

The committee says that while irrigation should continue to be the main consideration in river valley schemes, navigational aspects shuld also receive full weightage. It is, however, against immediately taking up projects for a direct inland water transport service from coast to coast and from north to south. The Central Water and Power Commission has taken the view that a unified multi-purpose development of rivers would make vast stretches navigable and by inter-connecting some of these rivers, a network of waterways from coast to coast could be prepared. The Gokhale committee suggests that these projects may be taken up after the implementation of the various multi-purpose schemes in the next 30 years in the light of the traffic conditions prevailing then. Meanwhile, navigable locks should be provided in in all dams. (The Gokhale committee in its interim report to the Government had described the C.W.P.C. scheme as "impracticable" and wondered whether the requirements of water for navigation would not conflict with those of irrigation.)

The following are the other points made by the committee:

Before the development of waterways can be seriously undertaken, it is necessary to arrest their further deterioration. One of the chief causes of deterioration has been the lack of a technical organisation for the planning, supervision and execution of the works intended for the development of inland water transport. Special technical wings for this purpose should be created in the Ministry of Transport and Communications, and in the C.W.P.C. in the Irrigation and Power Ministry.

The co-ordination at present in existence between the railways and inland water transport in north-east India should be extended to other regions as well. There is, however, little justification, in the present state of development of inland waterways, for financial participation by the railways.

Training Facilities

The existing facilities for training masters, serangs, drivers and other personnel should be improved.

A concerted drive should be made to make people "water-conscious" by encouraging water sports, regattas, yacht clubs and the organisation of boat races.

In spite of their slow speed, country boats perform an active service for the community. Facilities should be given for the proper development of country boats. In areas where there are no other means of access and self-propelled boats cannot ply, the country boat has a very useful part to play.

Co-operative societies of boat-owners should be organised and they should be encouraged to manufacture country boats and run regular organised services.

There is no advantage in mechanising existing country boats. But the system of towing them by mechanised tugs may be introduced on a co-operative basis.

Restrictions of any kind on country boat operation by ferry contractors or by the levy of excessive tolls should be removed.

Ferry Services

The existing ferry services in the country, except railway ferries and State-managed ferries in a few States, are not suitable. State Governments should run ferry services on all important rivers until they are bridged. Ferry rights should not be auctioned to the highest bidder. Port authorities in Bombay, Calcutta and Madras should be persuaded to organise ferry and harbour excursion services. The railways should extend their existing ferry services.

There is no justification for declaring any waterway in India as a national waterway. The Government of India should, however, assume responsibility for improving and maintainnig all important waterways.

There is little justification for developing and improving the Buckingham Canal and linking it with the Madras harbour. Experimental dredging with a view to maintaining existing navigable depths in the canal should, however, be undertaken.

The inland water transport system in Kerala State is performing an important rôle in the transport of goods and men. The West Coast Canal between Cochin and Quilon should be improved. Locks should be constructed between Punani and Chetwayi and the West Coast Canal should be extended from Badagara up to Mahe. The inland water transport system in this part of the country could be greatly improved and imports and exports through Cochin Port could be greatly facilitated. Mangalore and Coondapur should also be linked by connecting the numerous backwaters on the west coast in Mysore State.

India-Indonesia Trade Agreement

The trade agreement between India and Indonesia has been extended up to the end of 1959. Under it, the commodities listed for export to Indonesia include cotton textiles and yarn, jute goods, tobacco, linseed oil, hardware, pharmaceutical products and chemical preparations, tea chests, sports goods, rubber tyres and tubes, porcelainware, paper and paper boards, machinery including agricultural implements, diesel engines, sugarcane crushers, textile machinery, electrical equipment including motors and batteries, sewing machines, hurricane lanterns and household utensils. The items listed for import by India include copra and coconut oil, palm kernels and oil, essential oils, spices including betel nuts, timber, tin, rubber, hides and skins, canes and rattans, gums and resins, tanning materials, sisal fibre and tobacco wrappers.

Industrial Disputes

The Central Implementation and Evaluation Committee, which is holding its second meeting in New Delhi on 13th August, will consider a suggestion made by the All India Trade Union Congress for the constitution of tripartite screening machinery to scrutinise appeals to the High Courts and the Supreme Court concerning industrial disputes. The committee will also review the progress made in out-of-court settlement of industrial disputes pending in the High Courts or the Supreme Court.

Water Scarcity in Colliery Areas

The sub-committee of the Industrial Committee on Coal Mining will meet in Dhanbad on 19th August, to consider the problem of water supply in coalmining areas. The memorandum before the sub-committee says: "Scarcity of drinking water is a general feature of coalmining areas. Among other things, the Coal Mines Welfare Organisation assists in augmenting the water supply position in these areas. The Planning Sub-Committee appointed by the Advisory Committee for preparing the second five year plan of the Organisation in 1954 felt the necessity of a satisfactory water supply system in the coalfields, and after carefully examining the financial position of the Fund, decided that a portion of the accumulated balance in the General Welfare Account of the Fund could be used for the formulation and implementation of water supply schemes. A total sum of Rs 85·3 lakhs was earmarked by the sub-committe for expenditure on water supply schemes in the various coalfields.

"The estimated balance in the General Welfare Account on 1st April, 1959, was Rs. 2.80 crores. A considerable part of this will be required for non-recurring expenditure on schemes which are being implemented or which it is proposed to implement. Although the present expenditure on general welfare measures is about Rs. 65 lakhs, the full re-

GLOBAL NAILBITINGS

Selling in export markets is always a tough job, it is more so now when competition is fierce. All over the world experts are doing a lot of nailbiting to develop export markets.

Nearness to the Afro-Asian markets and familiarity with conditions and needs there, are India's clear advantages over her competitors.

With quality products and competitive prices, Indian engineering products could keep on feeding the Afro-Asian markets for decades to come.

E.E.P.C. can help you in your export drive.

ENGINEERING EXPORT PROMOTION COUNCIL

India Exchange (7th Floor), India Exchange Place, Calcutta-1

EEPC-59

curring expenditure on all the schemes in operation or in the process of implementation will be about Rs. 80 lakhs a year, from the next year or so. If expenditure on schemes approved and those likely to be introduced in the near future, such as the two 100-bed T.B. wards attached to the central hospitals and the regional hospital in Korba, are added, the total recurring expenditure will go up to Rs. 90 lakhs. Even after the completion of the target of 30,000 houses under the new scheme, it is the intention to continue thereafter the construction of a few thousand houses every year. This will not be possible if the ratio of apportionment is to the advantage of the General Welfare Account. In the circumstances, it will not be possible for the Organisation to implement bigger schemes of water supply entirely at its own cost, which is mainly the responsibility of State Governments and the colliery owners. State Governments have, therefore, been informed that the Fund Organisation would consider the question of giving small financial assistance for the implementation of water supply schemes.

"It has also been found from practical experience that State Governments generally are not giving the necessary priority to water supply schemes in the coalmining areas. It has, therefore, been proposed that smaller schemes for individual or groups of collieries may be implemented. These schemes would have to be financed by the collieries themselves with the assistance of the Coal Mines Labour Welfare Fund Organisation.

Singareni Scheme

"The Singareni Colliery Company has prepared a scheme of water supply for its coalfields in Hyderabad at an estimated cost of Rs. 6.15 crores, and administrative approval has been given for the payment of Rs. 3.325 lakhs to it as subsidy out of the Fund. The question of giving a similar grant to another company in Madhya Pradesh is under consideration. As for other coalfields, a scheme has been sanctioned for the payment of a 50 percent subsidy to colliery owners for the sinking of wells. Under the scheme, sanction has been accorded in August 1958 for the construction of 40 wells in the coalfields of Bihar and West Bengal.

"It has been suggested by the A.I.T.U.C. that legislation may be undertaken for ensuring the supply of drinking water to coalminers, but it is doubtful whether legislation will solve the problem. The setting up of water boards by State Governments with necessary powers to levy a cess for implementing bigger water supply schemes in coalmining areas on a self-sufficient basis may offer a solution."

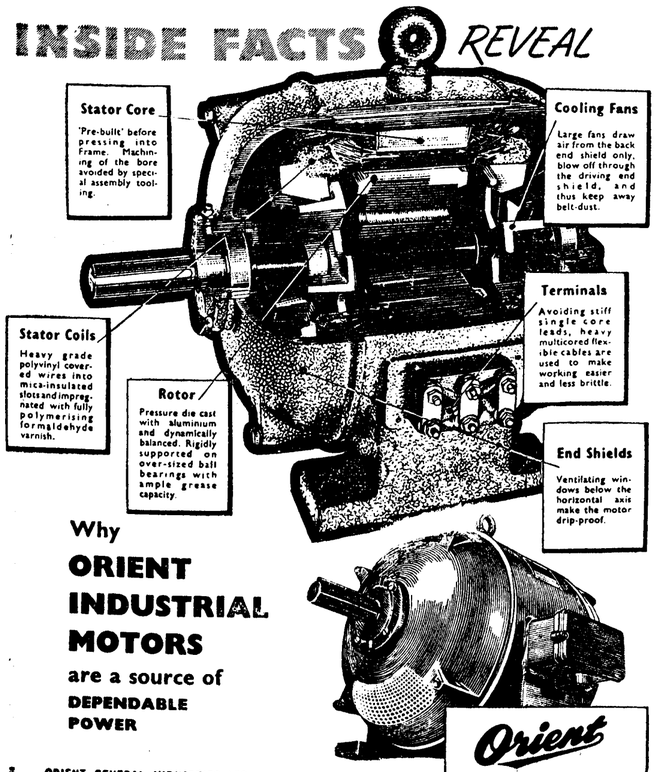
Transport Co-ordination Committee

A committee to study and recommend co-ordination between different means of transport has been set up by the Government of India with Mr. K. C. Neogy as chairman. "The Planning Commission and the Ministries of Railways and Transport and Communications have had under consideration for some time past, questions relating to the co-ordination of different means of transport, specially rail and road transport, and their future development having regard to the needs of the growing economy of the country. It has been felt that a comprehensive examination of these problems at this stage will be of material assistance in the formulation of plans of future development in the field of transport. It has accordingly been agreed in consultation with the Ministries of Railways and Transport and Communications to constitute a committee to study the problems involved, and to make recommendations on the measures required to secure the necessary co-ordination between different means of transport and on long-term policies and considerations which should guide their future development.

"The committee consists of Mr. K. C. Neogy (chairman), Mr. Vishnu Sahay, Secretary, Planning Commission, Mr. R. L. Gupta, Secretary, Department of Transport, Mr. K. B. Mathur, Chairman, Railway Board, Mr. A. K. Roy, Secretary, Department of Economic Affairs, and Mr. S. Ranganathan, Secretary, Ministry of Commerce and Industry (members). Mr. K. L. Luthra, Director, Transport Division, Planning Commission, will be secretary of the committee.

"Taking into account the existing stage of development of the various means of transport and the economic, political, social and strategic purposes which the transport machinery is designed to serve, the committee is to recommend what broadly should be the long-term transport policy of the country, so that the development of transport machinery may be effected in consonance with the country's growing needs, with economy and efficiency, avoiding duplication to the maximum extent practicable. It will also define the rôle of the various means of transport in the country during the next five to ten years, and indicate the best mechanism for the regulation and co-ordination of the various means of transport, so that the transport needs of the country are met in an efficient and economic manner consistent with the larger interests of the country."

Productivity Campaign



A countrywide campaign for increasing productivity by organising a large number of productivity teams for conducting intensive studies and stimulating technical exchange within industry will be launched by the National Productivity Council during the next few months. These productivity teams, consisting of ten members each, will be divided into "subjects teams" and "industry teams", the former having on them representatives of different industries and the latter consisting of representatives of the same industry. The teams will include representatives of workers' trade unions, employers and management from the public and important industrial centres to hold discussions with the representatives of organisations and institutions dealing with the subjects of their interest. In the case of industry teams, which will be planned on an all-India basis, the subjects of study will include specific problems of the industry concerned, whereas the studies by the subjects teams will include such subjects as organisation structure, joint consultation, international communications, incentive schemes, job evaluation, materials handling, welfare activities and safety measures.

An agreement has been reached between India and Canada to approve, in principle, the use for educational purposes of the counterpart funds generated under the Colombo Plan. These funds, of approximately Rs. 5 crores, are to be used for the development in India of higher technological institutes and polytechnics. The final approval will be subject to detailed agreements being reached between the two countries on individual projects.

Indian Steel Delegation to China Reports

The official Indian steel delegation which visited China to study the production of iron and steel there in small plants, has recommended that the design and construction of a few small blast furnaces and converters be taken in hand as an experimental measure in areas likely to be favourable for the location of such plants. While economy and efficiency should continue to be important factors in deciding the size and location of new iron and steel works, there is scope for some small modern blast furnaces and side-blown converters in areas where conditions are favourable for the development of such small units. Some of the features of the small plants seen in China could be incorporated in those to be put up in India. The construction of a few such small plants entirely from Indian designs and with Indian material would give confidence to designers and construction engineers. The scheme should, however, be tried on an experimental basis and after pilot plant tests, to assess the suitability and economics of small blast furnaces and side-blown converters for the production of iron and steel on a commercial scale.

The mission has pointed out that the production of steel in small units in China was favoured under peculiar conditions. The great bottleneck in transport—railway mileage in that country is only one-half of that in India and that, too, is mainly confined to the eastern region—and the availability of iron ore and coal in all parts of the country, unlike in India, were two of the main favourable considerations. There was also a great scarcity of steel, particularly for agricultural operations, where slightly inferior quality steel could be used. At present, steel is produced in three or four centres in modern plants while it is required all over the country for increasing agricultural production. In these circumstances, the construction of small furnaces and small steel plants of more modern design has been encouraged all over the country. At the same time, realising the advantage both in the cost of production and the efficiency of operation of large and modern works, the authorities are going ahead with the construction of more such works. The "native furnaces" were built in 1958 and as soon as the immediate demands of agriculture and local needs were met, they were abandoned. They were generally of two types, single and twin-shaft, and varied in volume from 3 to 6.5 cubic metres a shaft. Although the native furnaces have been abandoned, production of iron in small blast furnaces of modern design continues to be encouraged even though the tendency is to go in for bigger and bigger blast furnaces. The standard size of small furnaces is 6.5, 8, 13, 22 and 28 cubic metres. Those of medium size are 54, 83 and 255 cubic metres, while the size of large furnaces in integrated steel works is growing and the biggest of them is about 1,600 cubic metres in volume. The coefficient of utilisation of furnaces—tons of iron produced per cubic metre volume in 24 hours—ranges from 0.7 to 0.8 in the case of small furnaces, 1 to 1.3 in the case of medium furnaces and 1.2 to 1.4 in the case of large furnaces, using unsintered burden. In one case of a large furnace of about 1,600 cubic metres, a coefficient of utilisation of over 2.0 has been reported with sintered burden. The cost of production in these furnaces is about Rs. 392 a ton of iron.

U.K. CLEARING BANK ADVANCES INCREASE SHARPLY

GOVERNMENT MAY HAVE TO INTRODUCE CREDIT RESTRAINTS

(FROM OUR LONDON CORRESPONDENT)

IN the month to mid-July, the London clearing banks' advances have risen by another £90 million. This increase, following a rise of only £22.8 million in June, effectively refutes suggestions that the expansion in bank loans had begun to slow down. The latest increase, which lifts the total to about £2,692 million, is one of the sharpest since the ending of the credit squeeze a year ago. In the intervening 12 months, bank loans have risen by nearly £700 million, mainly a reflection of the buoyancy of the consumer goods industries. If, as seems possible, the rising trend is again gathering pace, the question will inevitably arise whether an inflationary situation is being built up. If evidence in that sense accumulates, the Government will have to consider a gentle tightening of the credit screw. Rising money rates in New York strengthen the reasons for slightly higher rates in Britain.

One possible explanation of the continued buoyancy of bank lending is that heavy industry may feel the first invigorating effects of consumer spending. This will be cheering: the bankers' quarterly analyses of advances up to now have shown that most of the money lent has been used for consumption rather than investment. But there is no definite evidence of any change, and figures just published by the U.K. Board of Trade show that, in the first quarter of 1959, capital expenditure was at a low ebb. Bearing out provisional estimates published a month ago, they show a 12-percent fall, compared with a year earlier, in fixed capital expenditure by manufacturing industry. This was only partly offset by a 3-percent rise in expenditure by the rest of industry, building and contracting, road passenger transport, distribution and services. It is the sharpest fall in capital spending reported since the recession began. Over 1958 as a whole, manufacturing industry spent 2-percent less, and even in the fourth quarter the decline was only 5 percent. Expenditure on both buildings and plant was well down (by 17 percent and 12 percent, respectively). Other industries and services also spent less (8 percent) on plant and machinery, but their building expenditure was 22 percent higher than in the first three months of 1958.

General Election

The political parties are making their plans on the assumption that the general election in the U.K. will take place in October. In the ordinary course, Parliament is to be adjourned on 30th July, and it will not meet again until late September or early October, and then only to be dissolved. Last year, Parliament—having completed its legislative work—was adjourned from 1st August to 23rd October. It reassembled solely to be prorogued until 28th October, when a new session was opened.

June Exports Fall

Detailed figures of overseas trade for June—less detailed than usual because of the printing strike—fail to provide any quick or convincing answer to the £48-million drop in exports. The figures show that the fall was spread uniformly between commodities, nearly all the main divisions showing a decline of about one-sixth. Shipments to the principal market areas similarly showed a fairly even setback. Board of Trade officials make the valid point that one month's figures rarely provide the key to underlying trends and emphasise that a drop of about £20 million in exports in June, after the sharp rise in May, would have been expected on normal seasonal grounds. They conclude that it is best to record some part of the fall in that month as a "correction" of the previous figure. Allowing for the much lower export total for June, exports in the second quarter of this year were 7-percent higher than in the first quarter and 4½ percent above the second quarter of 1958.

The June rise of £21 million in imports from the relatively low level in May is described as "much as expected." Most of the increase was in industrial materials and finished manufactures. Prices had little influence on the June export-import picture, the terms of trade remaining unchanged at 89. That was also the average figure for the year so far.

Economic Indicators

The post-Budget buoyancy in the retail trade which developed in April and May continued in June. The U.K. Board of Trade estimates that the total value of sales in June was between 4 and 5 percent higher than a year earlier. Prices in June are estimated to have been lower than a year earlier by between 1 percent and 2 percent, so that the increase in the volume of trade must have been greater than the rise in the value of sales. The Board of Trade's index of basic materials and fuel used in manufacturnig industry fell by 0.5 percent in June to 101.2 (1954 equals 100). Falls of ¼ percent in the index for raw wool, of 5½ percent for raw rubber and 2¼ percent for copper were only partly offset by a 2½-percent increase in the prices of some types of raw cotton. Lead prices continued to fall, but the price of zinc rose by 1½ percent to its highest level since May 1957. The index of all manufactured products remained steady.

Motor-car production rose in June, compared with May, but exports fell, according to Board of Trade figures. But for the second quarter of this year, exports were well above the level for the first quarter or for the corresponding period of last year. In June, 123,059 motor-cars were produced —31,125 more than in May and 18,297 more than in June 1958. Output for the second quarter of this year was 315,457, compared with 258,339 in the first quarter. Motor-cars exported in June totalled 47,586, against 60,349 in May and 31,915 in June last year. Britain sent 109,400 motor-cars to the dollar market in the first six months, 38,975 more than the comparable figure for 1958.

More Aid for Backward Areas

Mr. Erroll, Economic Secreatry to the U.K. Treasury, recently announced in the House of Commons that the Government is prepared to subscribe to a new international institution to assist underdeveloped countries. Speaking in a debate initiated by the Opposition he said it was suggested that the association should be an affiliate of the International Bank, to supplement its operations without duplicating them. The idea was to provide not merely additional funds, but funds which might be lent on somewhat more flexible terms than is possible by the Bank. They will be on terms which will defer or alleviate the burdens of debt repayment by the less advanced countries while they are still in the early stages of economic development.

This matter was aired in Delhi last year at the annual meeting of the World Bank. Further discussion is expected at this year's annual meeting in Washington. A measurable step forward might then be taken. The size of the association is one of the most important aspects still to be settled. It is too soon to say what Britain's contri might be. A capital of $1,000 million wa gested when the plan was first advanced United States. If that is to be the figure Britain contributes the same proportion of 1 cent as she did to the World Bank, her sul tion will be £50 million.

Cotton Orders Approved

The Government's plan for the reorgani of the cotton industry took a further step fo when the House of Commons approved three dealing with the doubling, spinning and we sections. Presenting the orders for approva David Eccles, President of the U.K. Boa Trade, said that a scheme for the finishing s would be considered in autumn. The tota of achieving the minimum figure of scra machinery will be about £7.5 million. The ernment contribution to this will be abo million. The starting date is 30th July and cations for compensation for scrapping mu made within two months. Scrapping mu completed by 31st March, 1960.

Arrangements for the import of textile factures from China will continue for a furthe to 31st July 1960, the Board of Trade has ani ed. They cover the following goods originat the People's Republic of China and con therefrom or through Hongkong: manufa wholly or mainly of cotton, linen or man fibres or mixtures thereof, other than the f ing: yarns, threads, and fabrics; stocking socks; other footwear; carpets, rugs, mats other floor coverings; lace and lace net an article containing lace or lace net, except

Lower Air Fares

Britain is to press for a reduction in air at the International Air Transport Assoc which will meet in September. If there agreement, Britain might leave the Assoc This was the effect of a statement by Mr. W son, Minister of Transport and Civil Aviatio debate on aircraft production in the House of mons. With the Government's full suppo said, British European Airways, British Ov Airways Corporation and the independent a would go to the conference determined to for lower fares. "What they want is reducti the European, African and Eastern routes." Minister hoped the Association would ap these proposals. If they do not, Britain will to reconsider her position in the organis Mr. Watkinson was considering proposal "very cheap fares," relating these to the "bu senger of the air." If the U.K. cannot g orderly reduction through the Association, sh have to do the best she can with her own resc

RUBBER CONSUMPTION RISING STEADILY

PLANTERS WANT PRICE INCENTIVE TO INCREASE OUTPUT

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PLANTERS have recently demanded an incentive price for raw rubber, attractive rates of subsidy for replanting and new planting and protection from land ceiling. These are essential, they say, if the production of rubber is to be increased quickly and substantially. The Indian output in 1958 amounted to 25,373 tons, against 38,000 tons consumed by the manufacturing industry. The shortage had to be met through imports amounting to 15,000 tons of natural and synthetic rubber at a cost of Rs. 8 crores. Consumption is increasing steadily and the manufacturing industry expects that it will need 150,000 tons by 1970 and 350,000 tons by 1980. If this demand is to be met from the indigenous output, rubber cultivation has to be expanded to 600,000 acres besides replanting 200,000 acres out of the existing 280,000 acres.

It has been found from experience that the granting of an incentive price is the most effective way of increasing rubber cultivation. Rubber acreage has increased by 60 percent to 70 percent since 1950, and the maximum expansion took place between 1952 and 1956 since growers got an attractive price during the period. Although price remains the same, profit margins have narrowed considerably since then because of the substantial increase in labour costs and the tax burden on growers. The statutory price of Rs. 155.75 a 100 lbs can no longer be regarded as an incentive price and the growers' request for an upward revision of the price is now pending before the Tariff Commission.

Subsidised Replanting

The rubber replanting scheme, which is being implemented by the Central Government with the help of the Rubber Board from 1957, provides for subsidised replanting of 70,000 acres in ten years, at the rate of 7,000 acres a year. The subsidy offered is not sufficient to attract either small or large growers to replant even on the limited scale envisaged under the plan. It can be said from the experience gained in the last two years that the target is inadequate to meet the increasing demand for raw rubber, and even this small plan has little chance of being fulfilled. As for the failure of the Government's modest rehabilitation scheme, planters think that it was due to administrative and organisational defects, absence of research and the paucity of financial assistance. A grower with an estate of 50 acres, who gets subsidy at the rate of Rs. 350 an acre, will sustain a loss of Rs. 12,000 if he ventures to replant his entire estate with the subsidy offered by the Rubber Board. This explains why the scheme has failed to evoke sufficient interest among growers.

New Development Scheme

The United Planters Association of Southern India has recently prepared a rubber development scheme after taking all these factors into consideration and has submitted it for the consideration of the Central Government and the Rubber Board. It envisages replanting at the rate of 17,000 acres a year, over a period of seven years, that is, from 1960 to 1966. It also envisages new planting at the rate of 10,000 acres a year for seven years. The scheme will lead to an increase in production by more than 50 percent from 24,469 tons in 1960 to 37,539 tons in 1966 when replanting will be completed. By 1970, when part of the new plantings will start giving yields, the output will rise to 88,500 tons, a 350-percent increase in ten years.

The U.P.A.S.I. scheme provides for different replanting subsidy rates. They vary from Rs. 1,000 for small growers to Rs. 800 for large growers, against the present rates from Rs. 400 to Rs. 300, respectively, for small and large growers. On the other hand, subsidy suggested for new planting is Rs. 500 an acre. To finance this scheme, Rs. 14 crores will be required. As for resources, the Association says that they will be available. Section 92(2) of the Rubber Act provides for a pool fund which is to finance exclusively the rehabilitation of small growers. U.P.A.S.I. urges that a single replanting fund be created from the proceeds of the cess and the income from the difference in the price of imported rubber and the controlled internal prices. The income from the cess of Rs. 6.25 a 100 lbs and the probable earnings into the pool fund from imports at an average difference in price of Rs. 25 a 100 lbs is estimated at Rs. 16.61 crores. Another Rs. 3 crores now remain unspent. Adding these together, one gets Rs. 19.6 crores to be spent during the rubber plan period. The U.P.A.S.I. suggests that proceeds from the cess and imported rubber be directly deposited into the replanting fund.

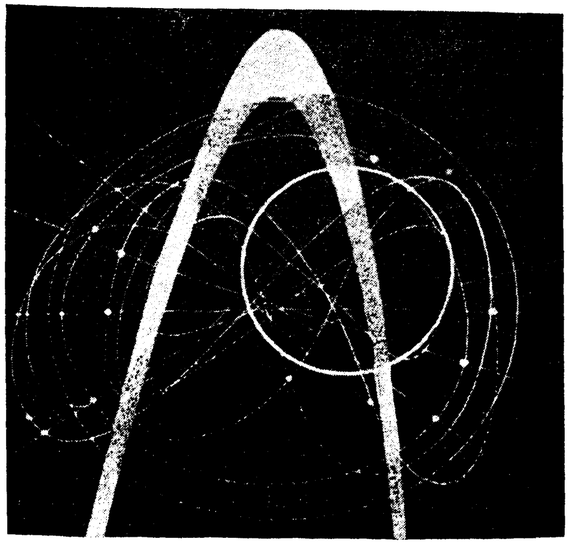
For the successful implementation of the scheme, its sponsors advocate the creation of a more powerful organisation which might be capable of acting with energy and determination. It should be able to carry out its work without constant references to other authorities on matters which fall within its sphere. Furthermore, it should be fully in control of the entire development programme and the fund meant for this purpose. Since the Rubber Board does not meet these requirements, the creation of a seperate development board on the lines of that in Malaya or Ceylon or in the alternative the setting up of a development directorate is suggested by the Association.

Demands of Planters

It is gathered that the Central Government is favourably disposed towards the scheme, except on certain details. The Central Ministry of Commerce and Industry recently sent two of its senior officials to Kottayam, headquarters of the Rubber Board, to discuss rubber development problems with planters' representatives and Rubber Board officials. Planters told the Central Government officials that the granting of an incentive price, attractive subsidy for replanting and new planting and protection from land ceiling alone will enable growers to meet the growing demand for rubber. They added that to enhance production from 24,000 tons to 100,000 tons in ten years is not an easy task. Moreover, the Kerala Agrarian Relations Bill will block the expansion of rubber cultivation, although the State has the ideal land for this purpose. Planters say that if the availability of fresh land is to be limited to 20 percent of the present acreage, as is envisaged in the Bill, it will not be possible to get additional 600,000 acres required for rubber cultivation. They have, therefore, demanded suitable amendments to the Kerala Agrarian Relations Bill. Meanwhile, planters are optimistic that the Central Government's rubber development policy will undergo some changes in the immediate future since it has realised that its present scheme is inadequate to meet the situation created by demand outpacing production.

New Chairman of Rubber Board

Mr. Warrier, an I.A.S. official, has recently taken charge as the new chairman of the Rubber Board. He has succeeded Mr. Sankara Menon, the first official chairman of the Board. Planters think that the new experiment of having official chairmen for commodity boards has not worked well, especially in the case of the Rubber Board.



Tax Burden on Tea Plantations

Mr. M. W. Hoare, chairman of the Nilgiri Planters Association, told the annual meeting, held on 21st July, that the present level of taxes on the tea industry leaves little to the producer. It retards the growth of the industry and thereby restricts larger yields from taxation. The Government should, therefore, consider the tax burden from this important aspect. New burdens of taxes and amenities, not to speak of the cost of supplies and services, cannot go on being added to the cost of production, in the hope that planters will find the means to bear them. He said that there is a prudent limit for enhancing taxes and to go beyond that limit will be to undermine the stability of the tea industry.

COCHIN TEA SALES

At Dust Sale T, 375,000 lbs of tea were on offer. There was a strong general demand, and prices were irregularly dearer.

At Sale No. 29, 980,000 lbs of tea were on offer. There was a good general demand, particularly for low medium and medium sorts which advanced by 5nP or 10nP. Best liquoring high-grown brokens were neglected. Orange pekoes were dearer but other whole leaf grades were easier.

The Place of New Friendships between Customers and Producers of the Five Continents

INTERNATIONAL TRADE FAIR — BRNO, CZECHOSLOVAKIA

6th—20th September, 1959.

Total area of exhibition grounds: 520,000 sq. metres
Covered area: 65,000 sq. metres
For 2,000,000 visitors

Products of the engineering and metallurgical industries, raw materials, semi-manufactures and engineering consumer goods are displayed by exhibitors from all parts of the world.

GOOD U.S. BURLAP CONSUMPTION FIGURES CONTINUE TO INFLUENCE MARKETS

SUBSTANTIAL ENQUIRIES FOR SACKING

THE U.S. burlap consumption and stock figures continue to influence the Calcutta markets. The increase in U.S. consumption which has been apparent since the beginning of the year was maintained in June, when 81.4 million yards were used. This was a new high level for the month, and brought the total consumption during the first six months of 1959 to 454 million yards, also a new high. The trend in U.S. consumption will be watched closely in July. The average monthly consumption in the first six months of this year was 75.5 million yards, against 68 million yards in the same period of 1958—an increase of 11½ percent. It is normal for consumption to rise in the second half of the year (an average of 71 million yards a month was attained in the last six months of 1958), so if the increase can be maintained in the current year, the prospects for the industry are indeed good.

The U.S. burlap statistics have strengthened the belief in many quarters that it would be propitious to increase the Indian mills' productive capacity by unsealing more looms. In general, mills' order-books are almost full up to the end of the year, but enquiries continue to be received for substantial amounts from Australia, China and the Middle East. Many of these, particularly for the heavy goods varieties, can be absorbed from the large stocks currently held by mills and bazaar parties, but many other enquiries, slightly varying from the standard constructions, remain unfulfilled.

Little Raw Jute Bought

Calcutta mills have shown very little interest in raw jute purchases recently, and this is a direct result of India becoming self-sufficient in fibre. It was normal in previous years for buyers to take up fairly large quantities early in the season so as to ensure a regular supply, otherwise the possibility of shortages became real. Today, however, with adequate stocks in godowns, and the knowledge that there is ample jute for all, there is no incentive to buy. A glance at the statistics of previous years shows how a fall in jute prices is quite normal at this time of year, and more so after harvesting. Rates usually drop steadily by about Rs. 2 a maund between July and September, in spite of constant demand. Admittedly, prices were higher in those days than they are today, but the inference is the same. Last year at this stage, new crop raw jute was quoted at Rs. 26.50 a maund, and on 1st August, 1957, Assam Bottoms were priced at Rs. 30 a maund. Today, new crop Assam is quoted at Rs. 23 a maund basis Bottoms.

Although the current cost of the raw material is about Rs. 80 a ton less than it was last year, the price of heavy goods is only slightly lower, giving mills increased profits on sacking. Hessian, on the other hand, shows a drop of Rs. 105 a ton since last year, which is indicative of the mills' reluctance to manufacture more hessian. The present sacking rates show why order-books for near delivery goods are full. Now July-August B Twills command a premium of about Rs. 20 a ton over January-March 1960 shipments. Last year, the position was reversed. In hessians, conditions last year were similar to this year's, ready goods showing a premium over forward delivery, although last year the premium was double.

Bigger Domestic Demand

The president of the Gunny Trades Association, speaking at its annual meeting last Tuesday in Calcutta, was very optimistic about the future of the jute industry in India. The optimism was based on India achieving self-sufficiency in raw jute, and the reorganisation of industrial units by modernisation. To encourage gunny exports, which in 1958 fell by 82,000 tons, it was suggested that the Central Government should arrange for more vigorous propaganda abroad, and also that efforts should be made to eliminate shipments of unsatisfactory quality and short shipments. An encouraging feature was the increase in the internal consumption of jute goods by 26,000 tons to well over 200,000 tons. With further industrial and agricultural expansion, it was suggested that the figure can be raised to 300,000 tons by the end of the third five year plan.

Reports from the jute-growing areas are very encouraging. All areas indicate that weather conditions throughout the past week have been mainly favourable, but inclined to be dry. In Assam, the harvesting of the lowland crop is now completed, but due to the lack of rain and river levels falling, there is insufficient steeping water. For this reason, the harvesting of the midland crop has been delayed. Similar conditions prevail in northern Bengal, and more rain is now urgently required, not only to provide steeping water but to promote the growth of the standing crop which in the past week has shown very little progress. Conditions are a little better in the western areas and the local Daissee districts, but more rain is still essential.

THE JUTE MARKETS

There was a fair amount of activity in the futures markets during the past week, the main fluctuations being in sacking. Hessians moved mostly in sympathy with heavy goods. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 22nd July to 28th July, were as follows:

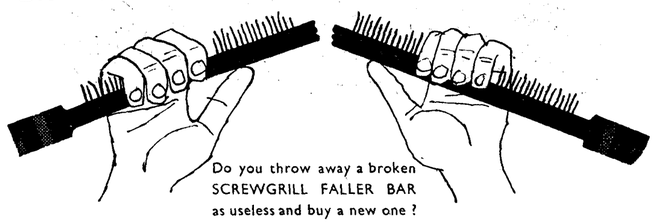
	Hessians 40in. 10oz.		Sacking B Twills	Raw Jute Upper Assam September	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos
Opening	40.62	44.42	98.30	23.28	62.37
Highest	40.82	44.63	99.50	23.30	62.42
Lowest	40.28	44.05	97.80	22.80	61.08
Closing	40.42	44.20	98.75	22.92	61.41

Manufactured Goods: In the absence of foreign demand in the early stages of the week, conditions were quiet, with hessians substantially weaker than sacking. Operations in the futures market were mainly responsible for price movements, which tended to be downwards. Opening rates on Thursday morning were based on B Twills at Rs. 98.05 for July shipment and Rs. 97 for January-March 1960. There was a slight recovery on Friday morning, when sacking rates advanced by 35nP on covering business, but hessians remained unchanged with a tendency to weaken. Reports of business with China for 10,000 bales of heavy goods for delivery up to the end of September helped maintain the firmer outlook for sacking, and by Saturday morning, ready B Twills had moved on to Rs. 98.85. Once again hessians lagged behind and 10oz. showed a small fall. Over the week-end, price movements were mainly influenced by speculative activity, and selling pressure forced down heavy goods rates by 50nP. There was little change in hessians. This trend continued but heavy goods recovered some ground under the influence of covering. Towards the close, quiet conditions prevailed, with little interest and no business passing.

On Wednesday morning, opening quotations were as follows:

	July	August	September	Oct.-Dec.
40in. 8oz.	33.30 (36.30)	33.10 (36.08)	32.90 (35.86)	32.05 (34.93)
40in. 10oz.	40.60 (44.25)	40.65 (44.31)	40.40 (44.04)	39.90 (43.49)
B Twills	98.50	99.10	98.25	97.35
Heavy Cees (Plain)	101.25	101.00	100.00	97.35
A Twills	117.25	117.50	117.00	117.00
Liverpools	109.50	109.25	108.75	108.25
Cornsacks	101.40	102.00	101.50	98.80

Raw Jute: There was very little activity in the early part of the week, but some activity was apparent on Friday and Saturday. About 75,000 maunds of jute was bought up to the week-end, mainly new crop. In most cases, mills had sellers over, so they were able to select their marks. Following this, and also in sympathy with the improved goods markets, sellers were inclined to be reserved, but there was little change in fibre prices, which were based on new crop Assam at Rs. 23.50 basis Bottoms. After the week-end a quieter trend developed. In the absence of further business from mills, prices eased and over Monday and Tuesday fell by 50nP. Sellers were keen for business and offers of all grades of jute were plentiful. During the week, 550 wagons were reported at the Cossipore sidings. This was 135 more than in the previous week. There was heavy buying in Cossipore and rates there were well maintained, and tended to be higher than of late.



New crop purchases consisted of Northern at Rs. 23 a maund basis Bottoms, and Middles only at Rs. 25.25 for August-September shipment. A small quantity of Assam Tops was reported at Rs. 33 to Rs. 33.50. Karimpore Tossa passed at Rs. 24 basis Bottoms for October-November shipment. Business was done in jungli and Desal white at Rs. 20.50 and Rs. 21.50, respectively, while jungli mesta was done at Rs. 20 and Daissee mesta at Rs. 20.50. A small parcel of Indian cuttings fetched Rs. 90 and Rs. 91 a bale, and Pakistani cuttings Rs. 46 to Rs. 48 a bale.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 ki'os	Shipment

BROKEN—BUT CERTAINLY NOT USELESS

Do you throw away a broken SCREWGRILL FALLER BAR as useless and buy a new one? Well now you need'nt! Because we at LAGAN, have installed a new FALLER BAR repair plant which does a marvellous job of repairing—MACKIE FALLERS—so good in fact, that your once broken FALLER BAR, can be made to look like new and serve as well too.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in June was reported at the highest level it has reached since October 1956. Compared with June a year ago, which, however, was abnormally low, it increased by 35 percent. For the first six months of this year, estimated consumption was 48 million yards more than for the same period of last year—an increase of 11¼ percent. There was a marked rise in piece-goods deliveries in June, and a satisfactory increase in cut-up for bags, part of which was due to replacing bag stocks in returnable bag programmes. U.S. burlap stocks at the end of June were slightly lower than at the end of May, but were 53 million yards more than a year ago. At an estimated 285 million yards, 170 million yards were spots and 115 million yards were afloats. Appearing below are two tables which include the June figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

RISE IN YARN AND CLOTH PRICES LIKELY

(FROM OUR DUNDEE CORRESPONDENT)

BOTH spinners and manufacturers are much better placed with orders for yarns and cloth than they were for some months past, and the position in Dundee at present is much more promising. With the annual holidays coming along and all the works closing between 24th July and 10th August, there has been a bit of a rush to get orders as soon as possible. The tone of the raw jute market was firm last week and most dealers felt that a rise in yarn and cloth prices was likely. Consumers bought fairly freely and delivery was often for forward despatch. There is now a quieter tone and some sellers of raw jute are willing to reduce their terms by 10s to 20s a ton in order to get on. They have been without orders for some time past, according to what has been reported in the market, although there must have been many more transactions than appeared on the surface. The quantity of jute registered for shipment to the U.K. from Pakistan for the first half of July was 60,500 bales, compared with only 19,600 for the same period of last year.

Raw jute shippers' representatives on the Dundee market, a very large percentage of whom have had experience in Calcutta, are not reporting sales as former jute brokers used to do, and there are now very few spinners who attend the markets each day. It makes it difficult, therefore, to get news of raw jute business. The tone was quieter last week, although there was no real change in values.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.8 percent to 116.9 during the week ended 11th July, 1959, compared with 116.0 (revised) for the earlier week. The index was higher by 0.6 percent and 2.4 percent, respectively, when compared with the corresponding week of last month and that of a year ago. The index for Food Articles advanced by 1.5 percent to 120.9, compared with 119.1 (revised) for the previous week due to a rise in the prices of eggs in Bombay (+27%), oranges in Madras (+12%), fish in Tirur (+11%), arhar in Bombay (+10%), tea (+8%), wheat in Kotah and Chandausi (+6% each), bajra in Jodhpur and milk (+5% each), rice, jowar, potatoes, black pepper and salt (+2% each) and ragi, masur, gingelly oil, mustard oil, coconut oil and coffee (+1% each). The prices of onions in Nagpur (−27%), fish in Bombay (−10%), bananas in Bombay (−6%), wheat in Rajkot and gur in Madras (−5% each) maize (−4%), turmeric (−3%), meat and betelnuts (−2% each) and barley and gram (−1% each), however, moved down. The index for Tobacco stood at 97.5, compared with 97.4 for last week. The index for the Fuel, Power, Light and Lubricants group worked out to 116.2, against 116.3 for the previous week. Castor oil (−2%) showed a variation during the week. The prices of linseed in Kanpur (+5%), gingellyseed (+4%) and raw jute and raw skins (+2% each) moved up while linseed in Sahibganj (−10%) and groundnuts and rapeseed (−1% each) showed declines, and the index for Industrial Raw Materials stood at 120.9, compared with 120.8 (revised) for the earlier week. An increase in the prices of rayon yarn, coir yarn, aluminium, copper and lead (+1% each) was neutralised by declines in the prices of linseed oil, zinc and tin (−1% each), and the index for Intermediate Products remained unchanged at the earlier week's revised level of 108.3. The index for Finished Products worked out to 109.5, against 109.4 for the previous week. The prices of general chemicals (+1%) and bicycles (−1%) showed variations.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 11-7-59	4-7-59	12-7-58
I. Food Articles:	120.9	119.1(R)	118.2

WORLD COTTON CONSUMPTION LIKELY TO BE MAINTAINED

Cotton consumption, for all purposes, in the non-communist countries of the world in the 1958-59 season should be close to the total of 28.5 million bales used during the last season, according to the International Cotton Advisory Committee in its latest monthly report. It says that a slump in the textile industry in western Europe and Japan shows signs of easing, but the year will probably end with west European cotton consumption down by about 700,000 bales and Japanese consumption by 200,000 bales. The U.S. consumption of cotton will be up by about 700,000 bales, to about 8.7 million bales, and the Canadian industry will also show an increase. Of western Europe, it says that most countries appear more optimistic of the future trend of cotton consumption, but the aggregate consumption in the United Kingdom and western Europe during the present season is estimated at 6.8 million bales, compared with 7.5 million bales in 1957-58. The total production of cotton outside the communist countries in the season, which ends on 31st July, is placed at 28.9 million bales, compared with 27.8 million bales in 1957-58. Discussing production prospects for 1959-60, the report says that the U.S. crop is tentatively estimated at 14 million bales. The last U.S. crop was some 11.5 million bales, grown on an area of about 12.4 million acres, but the new arrangements for the next crop provide for increases in the area planted. Elsewhere, the Mexican crop may be 25 percent to 30 percent smaller than the last one, and some central American countries are also expected to plant less cotton. In most Middle Eastern countries, the report says, there is no lack of interest in cotton growing in spite of the fall in prices this season, but a "significant" reduction is expected in the production of long-staple varieties in Egypt. The area planted with extra-long staples is to be restricted to a maximum of 850,000 acres, or about 28 percent less than was planted last year, though the regulations permit an increase of about 200,000 acres in the area for medium staples in lower Egypt.

SEARCH FOR NON-FERROUS METALS IN U.K.

A new attempt is being made to look for tin, lead, zinc, copper, and other non-ferrous metals in Britain. The U.K. Metal Mining Association has asked the Government to help in the preliminary work which, it is estimated, will cost about £300,000. Last September, the Association and the Institution of Mining and Metallurgy held a symposium at which the possibilities were debated, and afterwards the Association invited Professor K. C. Dunham, Professor of Geology in the University of Durham, to prepare a report on the papers then delivered and the discussion arising from them. The Association has now received Professor Dunham's report and has approached the Government expressing the hope that it might be prepared to undertake the preliminary work. It is likely that a deputation from the Association's council will be invited to discuss the proposals with the President of U.K. the Board of Trade. In his report, Professor Dunham says that the United Kingdom still offers opportunities for the discovery of non-ferrous ores. Exploration to find deposits should be carried out by geological mapping, geophysical and geochemical surveying, and drilling. He estimates that a sum of £300,000 is necessary for the cost of this preliminary phase of investigation, which will take about three years. Two ways in which the Government might provide the money are suggested in the report. These are that a non-ferrous division of the Geological Survey should be set up for this purpose. The other is that the fully Government-owned company, which existed from 1942 to 1945, should be reconstituted.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to June 1959. As compared with May, the June Index for Food shows a rise of 6 points, while those for Clothing, Miscellaneous and Fuel & Lighting remain unchanged at 548, 292 and 282 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 3 points during June 1959.

Engineering and Transport

FLYING DISPLAY IN U.K.

GROWING POPULARITY OF THE ANNUAL SHOW

THE Society of British Aircraft Constructors' flying display and exhibition of this year will open on 8th September. There will be 376 exhibitors at the show—a record. This year's display will be the twelfth to have been held at the R.A.E. Farnborough. The Society's first display took place at Hendon on 27th June, 1932. Thirty-four aircraft were on show and 21 member companies (five of them engine companies) exhibited their wares on trestle tables in two tents. Rather fewer than 1,000 guests (the majority from the U.K.) attended, and the show was not open to the public. In 1933, 1934 and 1935, the display was again held at Hendon for one day only. In 1936 and 1937, Hatfield was chosen since it provided a longer runway, more space and better facilities for the exhibition. The series was resumed in 1946 at Radlett and, after the 1947 show—also at Radlett—it was decided to open the display to the public. This demanded an aerodrome with reasonably good road approaches and, because the show was growing rapidly in complexity and size, a sophisticated flying control system and plenty of room for an exhibition building with space for expansion. So the R.A.E. Farnborough was rented from the U.K. Ministry of Supply. The number of exhibitors has risen from 163 to 376, while the number of overseas guests has increased from 800 in 1948 to 7,500 in 1958 and, probably, some 8,000 in 1959. Public attendance has grown from 100,000 in 1948 to a quarter of a million.

The Exhibits

The 20 displays, over a period of 27 years, have seen tremendous changes in aircraft design. In 1932, the *Hendon* twin-engined night bomber—the first big, all-metal monoplane to enter R.A.F. service—had a maximum speed of 155 miles an hour and a range of 1,360 miles. Today, the mk. 2 *Victor* and *Vulcan* can fly in the substratosphere at near-sonic speeds over almost unlimited distances, thanks to flight refuelling. The fastest single-seater fighter at the 1932 display was the 218 miles-an-hour *Jockey*. Today's *Lightning* has flown at twice the speed of sound.

In 1932, Gloster showed a four-engined troop transport capable of carrying 30 troops at 146 miles an hour. In 1959, the *Britannia 253* now in R.A.F. service, can carry 115 troops at 400 miles an hour. The most modern airliner at the 1932 display was the *Atalanta*, a four-engined monoplane which could carry 17 passengers over 660 miles at 135 miles an hour. The *Comet 4B* of today will carry 100 passengers at 545 miles an hour over nearly 2,000 miles.

Invitation to Indian V.I.P.s

More than 250 Indian V.I.P.s have been invited by the Society of British Aircraft Constructors to see this year's show. Among the Indians invited are Cabinet Ministers, chiefs of the defence services, civil aviation executives, representatives of major companies concerned with aviation, and members of Government departments. Last year, more than 100 guests from India attended the show.

B.O.A.C. FREIGHTER SERVICE TO HONGKONG

A new cargo air service between London and Hongkong was opened by B.O.A.C. on 22nd July. The service will be operated by *Constellation 749s* to a weekly frequency. B.O.A.C. already operates a weekly freighter service between London and Singapore. The new service will leave London on Wednesdays reaching Hongkong on Fridays. It will leave Hongkong on Sundays and arrive in London the following day.

LONDON TALKS ON USING U.K. AID FOR INDIAN ENGINEERING COLLEGE

Discussions have recently taken place in London on the steps necessary to give effect to the offer of the U. K. Government and the Federation of British Industries to assist in the setting up of the College of Engineering and Technology in Delhi. The foundation-stone of the college building was laid by the Duke of Edinburgh during his Indian visit early this year. Taking part in the London talks was Professor M. S. Thacker, Director-General of the Indian Council of Scientific and Industrial Research and Secretary to the Ministry of Scientific and Cultural Affairs, who was a delegate to the recent Commonwealth Education Conference at Oxford. Professor Thacker, who has been closely connected with the proposal to establish the engineering college in Delhi, was accompanied by Mr. J. N. Moudgil and Mr. J. M. Benjamin (planning officer and architect, respectively, of the college).

On the British side, those who took part in the discussions included representatives of the Commonwealth Relations Office, U. K. industry, and professional institutions. It was announced last December that, under the Technical Co-operation Scheme of the Colombo Plan, the U.K. Government will contribute £250,000 to cover the salaries of eight to ten members of the professorial staff which it will recruit for the college. Another £250,000 will be provided in the form of equipment, supply being organised by the Federation of British Industries in co-operation with four professional institutions in the United Kingdom. The Government of India will provide the building for the college and meet the running costs and other local expenditure.

C.S.I.R. TO ORGANISE EXHIBITION OF INDIAN TECHNICAL PUBLICATIONS

The Council of Scientific and Industrial Research (C.S.I.R.) has decided to organise in February 1960 an exhibition of scientific and technical books, published in India. It will portray the progress of scientific and technical publications, including school and college books, popular science books, journals, bulletins and encyclopædic works in the major Indian languages and in English. All publishers, universities, research institutions and learned societies have been invited to participate in the exhibition. It will help in taking stock of the national effort in the publishing field and it will stimulate, at the same time, interest in scientific publications and their value as instruments of information and education. It is proposed to bring out a directory of the publications displayed in the exhibition. The directory will give full bibliographic details and constitute a work of reference. It will afford a unique opportunity to display publications and bring them to the notice of the general public. The time of the exhibition has been selected to coincide with the best season in Delhi when all educational institutions and cultural organisations will be working in full force. It will be also the time when the World Agricultural Fair is being held in Delhi. A central place easily accessible from all parts of the city has been selected as the venue for the exhibition. The publications should be in India, brought out in English or any other regional languages.

KINETIC ENERGY FOR MOTOR-CAR PROPULSION

A new system of motor-car transmission in which kinetic energy is stored and used to provide extra power is to have practical tests within the next few weeks. The system has such possibilities that the National Research Development Corporation in the U.K. is helping in the experimental work that has been carried out up to now in secrecy. The designer is Mr. Robert C. Clark, and the principal feature of his system is the inertia flywheel which is housed in a sealed casing so made that a vacuum is maintained inside. This unit is mounted beneath a gear box which has epicyclic gears and electro-magnetically-actuated clutches.

The flywheel, which weighs about 200 lbs and is 20 inches in diameter, is automatically connected with and disconnected from the engine and final drive at certain engine revolutions and road speeds. Having been set in motion and being in a vacuum, the flywheel can turn at tremendous speeds, the maximum being about 30,000 revolutions a minute. The kinetic energy thus stored is very great and exceeds that developed in the car when it is travelling at its fastest.

There is a scavenge pump which extracts all air within the casing so that the vacuum is retained, and as the flywheel shaft is mounted on an anti-friction bearing, the wheel, when running free, can rotate for a long time. By having this energy "on tap", the performance of the car could be very much improved, particularly during acceleration, and the load on the engine would be lightened by the extra power provided by the flywheel. In fact, the designer says that his system could propel a vehicle a long way without the engine. The possibility of using much smaller engines with the new transmission is foreseen. Several embodiments of the system—which is known as the Gyreacta—have been worked out and there are designs for adaptation to ships and aircraft. A prototype now being made is to be mounted in the chassis of a Midland Red doubledeck bus, and the Birmingham and Midland Motor Omnibus Company is to carry out extensive trials soon.

NEW LABORATORY EQUIPMENT FOR THE CHEMICAL TREATMENT OF LIQUIDS

A new item of laboratory equipment of interest to chemists, water, sewage and effluent plant superintendents and all concerned with the chemical treatment of liquids has recently been developed by the Paterson Engineering Company (India) (Private) Ltd, the well-known water purification specialists. This is their laboratory flocculator, by means of which up to four small-scale treatment tests can be carried out simultaneously when, for example, the problem of modifying the chemical treatment of a liquid while at the same time maintaining a high quality effluent has to be considered. This procedure is not always feasible on the actual plant as it invariably involves delay and wastage of chemicals while the correct dosage is being determined. The flocculator has, therefore, been designed to fulfil all requirements for "jar" tests which are likely to be encountered in normal laboratory practice and is particularly valuable when deciding upon a treatment for supplies of variable quality. The instrument consists of a black enamelled pressed steel frame from which are suspended four stirrer paddles driven by a small geared electric motor mounted on a platform at one end of the frame. The whole is fixed to a black base of chemically resistant material. The drive is transmitted by a flexible belt to a main shaft and by gearing to two auxiliary shafts, each of which drives two of the stirrer paddles. By altering the position of the driving pinion on the shaft relative to the driven disc, the speed of each paddle can be individually regulated. The paddle speeds are determined by reference to the position of the pinion on the shaft, a chart mounted on the frame showing paddle speeds over the full range of the instrument.

The driven discs, which have a plastic lining, are integral with the paddle shafts and by raising these the glass vessels can be placed in position beneath them. Oilite bearings are used throughout the drive mechanism, the other fittings being chromium-plated. The motor with a normal output speed of 45 r.p.m. gives the paddles a range of six to 19 r.p.m. with one pulley setting and 20 to 60 r.p.m. with the other. The flocculator can be supplied to suit any input voltage and speed requirements. It is claimed that the initial outlay can speedily be recovered by the economy in chemical reagents effected in the plant through the carrying out of periodic tests.

SHALIMAR WORKS

MARINE ENGINEERS:

Builders of HARBOUR CRAFT, TUGS, DREDGERS, BARGES *and* SHIP REPAIRERS

GENERAL ENGINEERING:

CAST IRON CASTINGS *up to 6 tons weight*
BRASS, GUN-METAL & PHOSPHOR-BRONZE,
STEEL CHIMNEYS, TANKS *Welded or Riveted.*

SHALIMAR WORKS PRIVATE LTD.,
1, Foreshore Road, Shibpore, Howrah.

MANAGING AGENTS:

TURNER, MORRISON & CO., PRIVATE LTD.
6, Lyons Range, Calcutta.

COMPANY AND PUBLIC NOTICES

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 7, held on 27th and 29th July, offerings at the Export auction amounted to 40,205 chests. There was a strong general demand for all descriptions except for plain liquoring medium brokens. "Teas for price" and plain B.P.'s were firm and sometimes dearer, while Fannings were the strongest feature of the sale and often showed an advance of 10nP to 15nP. Best C.T.C.'s with bright liquors received good support, and were at times dearer, but the plainer liquoring descriptions were generally 20nP to 30nP dearer. Bright liquoring Assam B.O.P.'s and O.Fgs. were well competed for, but the more ordinary types were 20nP and sometimes 30nP easier. The poorer leaf grades were well supported, but the remainder generally showed a decline. Darjeelings met with fair support at lower rates and there were some withdrawals. There was a good demand for tippy teas.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.92	2.15 to 2.25
Plain B.P.	1.70 to 1.76	1.70 to 1.74
Plain Fannings	1.80 to 1.90	1.84 to 1.88
Medium B.P.	2.00 to 2.10	2.05 to 2.15
Medium Fannings	2.10 to 2.20	2.20 to 2.40
Best Assam C.T.C. B.P.	3.40 to 3.60	3.80 to 4.00
Best Assam C.T.C. Fgs.	4.00 to 4.50	4.10 to 4.50

(Quotations are exclusive of excise duty.)

At the Internal Sale, 15,704 chests of Dust were on offer for which there was a good general demand. Black exportable orthodox Dusts met with keen competition and were often 4nP to 8nP dearer. Legg-cut Dooars teas were firm and sometimes dearer. There was more demand for Darjeeling Dusts than in recent weeks and these realised satisfactory prices. Medium C.T.C. Dusts were irregular and sometimes up to about 20nP easier except for some exportable types which were well supported and realised prices well above last rates. The very best C.T.C. Dusts were in less demand and were generally easier.

Quotations

	1959 Rs.	1958 Rs.
Medium Dooars Dust	1.60 to 1.86	1.66 to 1.68
Medium Assam Dust	1.76 to 1.84	1.68 to 1.72
Medium Assam C.T.C. Dust	2.00 to 2.20	2.00 to 2.20
Best Assam C.T.C. Dust	2.70 to 3.00	2.55 to 2.85

(Quotations are exclusive of excise duty.)

A total of 329 chests of Leaf was offered, which included 48 chests of green tea and these met with a good general demand.

LINSEED QUIET

There was a sharp advance in prices during the middle of the past week when ready and forward deliveries were quoted at Rs. 23.50 and Rs. 24, respectively, while September futures touched Rs. 23.81. The rise was not maintained, and it was followed by a quiet tendency. Millers were inactive due to the poor demand for both oil and oilcake, and also because of the unprofitable crushing margins. The oil section was mostly dull with neither shippers nor local buyers showing much interest. Although prices advanced earlier in sympathy with seeds, the absence of enquiries caused a reaction towards the close. Latest quotations are as follows: Ready-July Rs. 23.12 a maund; August-September Rs. 23.37 a maund and September futures Rs. 23.25 a maund.

HIDES AND SKINS STEADY

The market in skins continued steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 21st July and 27th July, 1959)

Cowhides: Wet salted (Ord.) 35,000 pcs. on the basis of Rs. 13.75 to Rs. 15.50; Wet salted (Slaughtered) 17,800 pcs. on the basis of Rs. 14.25 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee, Kustia) 94,900 pcs. on the basis of Rs. 400 to Rs. 410, Rs. 435 to Rs. 460 and Rs. 480 to Rs. 500; Wet salted (she-killed) on the basis of Rs. 4.75 and (he-killed) on the basis of Rs. 5 a piece; Assam-Dinajpur 19,500 pcs. on the basis of Rs. 355 to Rs. 400; Purneah-Kissenganj 21,000 pcs. on the basis of Rs. 405 to Rs. 420; Patna-Pakur (Ord.) 39,100 pcs. on the basis of Rs. 375 to Rs. 380; Muzafferpore-Patna 12,500 pcs. on the basis of Rs. 390 to Rs. 400.

Bazaar Stocks

(27th July, 1959)

Cowhides: Wet salted 151,000 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 336,700 pcs.; Assam-Dinajpur 31,500 pcs.; Muzafferpore-Patna-Pakur-Kissenganj 135,000 pcs.

SUGAR EASIER

During the week ended 28th July, sugar sales in the Calcutta market averaged 7,000 bags daily. Arrivals a day were 10,000 bags and stocks totalled 75,000 bags. Rates were Rs. 40.87 to Rs. 41.25 for big grain and Rs. 39.75 for small grain. Prices declined by Rs. 2 to Rs. 2.50 a maund due to heavy arrivals.

MARSHALL SONS & CO. (INDIA) LIMITED.

NOTICE is hereby given that the FORTY-FIRST ANNUAL GENERAL MEETING of the members of MARSHALL SONS AND COMPANY (INDIA) LIMITED will be held on Wednesday the 19th day of August, 1959, at 10 a.m. at the Registered Office of the Company, No. 33/1, Netaji Subhas Road, Calcutta, to transact the following business:

1. To receive and adopt the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1958.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors for the current year and to fix their remuneration.

And also the under-mentioned Special Business:

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contracts between the Company and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956, drafts whereof have, for the purpose of identification, been subscribed by the Chairman of this Meeting, be and the same are hereby approved and the Directors are hereby authorised to execute the said contracts on behalf of the Company with all convenient despatch:

1. With Marshall, Sons & Co. Ltd., (an Associate of the Managing Agents)—

   for purchases of plant, machinery and equipment of all kinds, including road rollers, tea garden machinery, tractors, steam engines, boilers and accessories and spare parts therefor in all of which the Associate regularly trades or does business and which the Company may require for the purpose of its business:

2. With John Fowler (India) Private Limited (an Associate of the Managing Agents)—

   for purchases of accessories and spare parts for filtration equipment and accessories and spare parts for diesel and steam road rollers and diesel locomotives in all of which the Associate regularly trades or does business and which the Company may require for the purpose of its business."

The Share Transfer Books of the Company will remain closed from 12th August, 1959 to 19th August, 1959, both days inclusive.

As dividend warrants are sent only to registered shareholders or to their mandatees, shares on blank transfer should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,

MARSHALLS (DIRECTION) PRIVATE LIMITED,
Managing Agents,
H. K. AMES,
Managing Director.

33/1, Netaji Subhas Road,
Calcutta, 23rd July, 1959.

The Dividend when sanctioned will be payable on and after 1st September, 1959 to those Shareholders whose names stand on the Register on 12th August, 1959.

NOTE:—A member entitled to attend and vote at this Meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

EXPLANATORY STATEMENT

The Agreements referred to in the Special Resolution are proposed to be entered into in order to comply with the provisions of Section 360 of the Companies Act, 1956 and are intended to be effective from the 1st June, 1957. The Agreements relate to the normal trading transactions taking place between the Company and Associates of the Managing Agents.

The Managing Agents of the Company hold no shares therein nor in Marshall, Sons & Co. Ltd., but hold 20% of the issued share capital of John Fowler (India) Private Ltd. The Managing Agents may, therefore, be deemed to be interested in the Resolution to the extent of such shareholding.

Save as hereafter mentioned, none of the Directors of the Company is either a member or a Director of either of the Companies mentioned in the Resolution. Mr. N. W. Keyworth is, however, a Director of both the said last-mentioned Companies.

To the extent of their qualification shares in the Company, Mr. D. P. Dunderdale and Mr. P. B. Nicholls may be deemed to be interested in the proposed Resolution. Mr. S. K. Mullick and Mr. V. S. Vijayaraghavan may also be deemed to be interested as persons appointed to the Board of the Company by Marshall, Sons & Co. Ltd., under a provision in that behalf contained in the Company's Articles of Association.

The draft Agreements referred to in the Resolution may be inspected by any member at the Registered Office of the Company between the hours of 2 p.m. and 4 p.m. on any business day prior to the Meeting and will be available at the Meeting.

To the Shareholders of Marshall, Sons & Co. (India) Limited and in particular to:—

Mr. Mark Burton, Mr. J. Hugh Marshall (decd.), Mr. L. F. Warren, Mr. Jerbhai Hormusji, Miss M. Reid, Mr. M. C. Dubash (decd.), Mr. P. J. D'Souza, Mr. F. C. Nelson, Mr. A. E. Kinsey, Mr. Shantishekhareswar Ray, Mr. W. S. Beech, Mrs. M. G. Thorpe (decd.), Mrs. A. Hecquet (decd.), Messrs Kalidas Bashak, Paresh Ch. Bashak, Naresh Ch. Bashak & Ashim Kumar Bashak (minors represented by their mother, Sm. Rakeshwari Bashak), Mrs. M. H. B. Morton, Mrs. M. H. Softly, Mrs. M. S. Redpath, Mrs. S. H. Goss, Mr. I. L. Watson, Mrs. E. S. Fink, Mr. R. C. M. Short, Mrs. Gole Anar Bibi, Messrs Marshall Sons & Co. Ltd., Maj. C. H. H. Young and Mrs. I. H. Young, Mr. Ghulam Murshed, Mr. Abdullah Rahimtullah, Mrs. Virbaiji Pestonji Dastur and Faredoon Pestonji Dastur, Mr. E. J. Ellis, Brig. Col. Indra Bahadur Karki & Capt. Nara Bahadur Karki, Messrs B. H. Hurd & J. R. Hunter, Mr. Lal Ram Sharan Singh, Mr. J. R. Kay, Mrs. K. J. Legge, Mr. P. E. Perry, Mr. C. W. Anderson, Mr. G. A. Rainey, Mr. D. Yule, Mrs. E. M. Collingwood, Mrs. E. F. Nepean, Messrs W. E. Witt, G. W. Taylor and H. C. Nelson, Extrs. to the Est. of Mrs. M. J. F. Witt (decd.), Miss N. Kelly, Mrs. Elizabeth Cook, Mr. H. T. Bates (decd.), Mrs. M. G. Annan, Messrs C. K. OCTAVIUS STEEL & CO. LTD.,
I. P. GOENKA,
Managing Director,
Managing Agents.

Calcutta, 29th July, 1959.

Note:—A Member of the Company entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

BALLY JUTE COMPANY LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, at 8, India Exchange Place, Calcutta, on Friday, the 28th August, 1959, at 2-30 p.m. for the following purposes:—

(1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1959.
(2) To declare Dividends on Preference and Ordinary Shares.
(3) To elect a Director in place of the retiring Director.
(4) To appoint Auditors and to fix their remuneration.
(5) As special business to consider and if thought fit to pass with or without modification the following resolutions:—

(i) **As a Special Resolution:**

"WHEREAS the East Indian Produce Co. Ltd., an associate of Messrs. Birla Brothers Private Ltd., at present the Managing Agents of the Company, maintain an office in London in the United Kingdom and whereas the said Company carry on business of acting as agents in the U.K. and the Continent for purchase and sale of goods including Stores, Plant and Machinery and rendering of services such as recruitment of technical personnel etc., and also have dealings and business connections with parties all over the United Kingdom and the Continent and their operations are on a very large scale and whereas their expenses of maintaining their office amount approximately to £65,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year, and whereas the said East Indian Produce Co. Ltd., have been acting as such agents for and on behalf of the Company NOW it is hereby resolved that the East Indian Produce Co. Ltd., continue to act as agents of the Company for a period of three years from 1st July, 1959 on the following revised terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company:

(a) For purchase of stores etc.—5% of the invoice price.
(b) For purchase of machinery—2½% of the invoice price.
(c) For employing technical personnel for and on behalf of the Company and for attending to enquiries—expenses incurred by the East Indian Produce Co. Ltd. apportionable to such work in each particular case.
(d) For rendering any other special service—such remuneration as may be agreed upon between the Directors of the Company and the East Indian Produce Co. Ltd.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained."

(ii) **As an Ordinary Resolution:**

"WHEREAS Messrs. Birla Brothers Private Ltd. desire to be relieved from the office of the Managing Agents of the Company with effect from the close of the 31st March, 1960 subject to their being appointed as Secretaries and Treasurers, it is hereby RESOLVED that, subject to the approval of the Central Government in that behalf, Messrs. Birla Brothers Private Ltd. be and are hereby appointed as Secretaries and Treasurers of the Company as and from the 1st April, 1960 for the period at the remuneration, and upon terms and conditions set forth in the draft agreement placed before the meeting and initialled for the purpose of identification by the Chairman thereof, and that the Directors of the Company be and are hereby authorised to enter into an agreement with Messrs. Birla Brothers Private Ltd. in terms of the said draft subject to any modifications thereof as may be agreed upon between the Directors and Messrs. Birla Brothers Private Ltd. for the purpose of complying with any modifications required or conditions imposed by Central Government in granting their consent as aforesaid."

(iii) **As a Special Resolution:**

"RESOLVED that the Articles of Association of the Company be amended in the manner following:

That the following new Article 139A shall be inserted between the Article 139 and 140:

139-A—If at any time the Company shall have Secretaries and Treasurers (and not Managing Agents) to manage its affairs the following provision shall apply:

(1) The Company shall execute an agreement in writing appointing the Secretaries and Treasurers for the period, at the remuneration and upon terms and conditions approved by the Central Government and in such a case all or any of the authorities, powers and discretions by or under the Articles of the Company vested in or exercisable by the Managing Agents shall vest in and shall be exercisable by the Secretaries and Treasurers in so far as permitted by law.
(2) Article No. 109 shall be deemed to read as follows:—

    109—The number of Directors shall not be less than three nor more than five.

(3) Every instrument to which seal is affixed shall be signed by at least one Director and shall be countersigned by Secretaries and Treasurers."

The Register of Members and Share Transfer Books of the Company will remain closed from the 10th August, 1959 to the 28th August, 1959, both days inclusive.

By Order of the Board,
Per Pro. BIRLA BROTHERS PRIVATE LTD.,
G. MAKHARIA,
Managing Agents.

Calcutta.
Dated, the 18th July, 1959.

N.B. (i) The Directors have recommended the payment of the following Dividends:

On Preference Shares @ 7% free of Income-tax.

On Ordinary Shares @ Rs. 10/- per share free of Income-tax.

If dividends on shares as recommended by the Directors are approved at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 28th August, 1959 or to their order or to their bankers. No application need be sent for dividends as relative Dividend Warrants will be posted to such shareholders by the 26th September, 1959.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.
(iii) An Explanatory Statement is annexed to the Convening Notice issued to members of the Company.

WORLD CHAMPIONS CHOOSE
Firestone
..SO SHOULD YOU

because — in the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

To the ever growing list of Firestone racing champions, comes Mickey Thompson who recorded an average speed of over 266 miles an hour at Bonneville Salt Flats in Utah.

PLANNING AND THE PRICE INFLATION DANGER

THE Reserve Bank of India's annual *Report on Currency and Finance*, appearing as it does almost four complete months from the end of the financial year to which it refers, is usually of little more than historical interest. The latest Report, which covers the year ended 31st March, 1959, is, however, of rather more importance; the picture it draws has considerable relevance for the current economic situation, and for the future. Briefly, the message of this Report is that the country has been passing through a period of dangerous price inflation, from which, in spite of the appearance of a number of more favourable features, it has not yet emerged. The significance this has for an economy which is still carrying large development burdens, and can be expected to be subject to extra strains within the next few years, should be fairly obvious. It is useful, therefore, to study the various causes of this situation and judge whether something cannot be done to modify them in the interest of stability.

Apart from the restriction of imports due to the foreign exchange shortage, the two main factors appear to have been the shortfall in agricultural production and the slowing down of the rate of growth of industrial output. The increase of the money supply, another fruitful source of inflationary pressures in any economy, certainly played an important part; but at Rs. 109 crores, although higher than in 1957-58, this was lower than in either 1956-57 or 1955-56. The Report describes the price situation as having been a "matter of some concern". The general index of wholesale prices, which recorded little material change in 1957-58, jumped by 6.5 percent in 1958-59; the food group increased by no less than 11.2 percent. This upward trend would appear to have continued; from 110.7 (Base: 1952-53 = 100) on 3rd January, 1959, it had risen to 111.7 by 31st March and to 116 by 11th July. This latter figure is not far short of the peak of 116.9 for the week ended 13th September, 1958, at the height of the difficult period caused by the poor harvest of 1957-58. The progress of the food group in the index is even more disappointing. From 112.5 on 3rd January, it stood at 113.8 on 31st March and 120.9 on 11th July. On present showings, the peak of the wholesale price index should be comfortably exceeded this year in spite of what the Report calls "quite an encouraging position" in food, and an "increased tempo of...activity" in industrial output. The question may be asked: Why is it that when food production is expected to have reached an all-time high of 73 million tons for last year, and industrial output is again accelerating, prices have lately risen steeply and on present trends will almost certainly pass last year's record levels? It is time this query was answered satisfactorily, because unless it is, the chances of avoiding inflationary dangers during the next 18 months, and into the third five year plan, seem slight.

The food problem is probably the most difficult to unravel. The obvious result of a large increase in output is a fall in prices. Yet so far, nothing of the kind has developed. It is possible that the experience of last year has made the grower more cautious about his own position and less anxious to risk leaving himself and his family short of food by selling it in the market. It is more likely that last year's high prices have encouraged the hope among farmers that this year's will be even higher, and that supplies are being withheld from the market on what are, to give them their correct designation, speculative motives. Peasant farmers are particularly prone to this sort of behaviour, and the more holding power they can accumulate, the worse they become. It has also been suggested that the present system of State trading in foodgrains may be responsible for the situation. This seems more than likely. In the first place, the whole idea is wasteful and cumbersome in practice; in the second, State trading is unlikely to prove more efficient or be more honestly conducted. The system has not yet been in existence long enough to pass a final judgment. But those who are already calling for its revision would seem to be on reasonably safe ground. The main point to notice so far is that even if it is not responsible for the continued increase in food prices despite the improvement in output, it has certainly not fulfilled the hopes originally placed in it. If the rise in prices is the direct result not so much of the inefficiencies and corruptions of State procurement policies as the attempt to build adequate buffer stocks against future requirements, then this may be accepted as a mitigating circumstance. But if it is the case, then the policy behind it is a mistaken one, at least in part, because stable prices are every bit as important as laying up stocks for the future; in a year of record production, of course, it should be possible to reconcile the two.

The industrial goods prices phenomenon is easier to explain. The industrial sector is settling into an inflationary frame of mind. Shortage of imports may have encouraged indigenous production, but it has also increased costs all round. And once industry acquires the habit of operating in an atmosphere of constantly rising costs and prices, it is extremely difficult to break it from it. What is important to realise is that wage inflation, the general lack of competition in industry, the maladjustments caused by shortages, and the brake on industrial progress imposed by the bureaucracy, are all damaging to the price level. It is the general rise in the latter, even more than the disappointing performance of exports and the insecurity of the foreign exchange position, which lends significance to the recent revival of talk about the devaluation of the rupee. A columnist of the London *Financial Times* returned to this theme only last week, although for entirely the wrong reasons. It remains true that the aim of a developing country is not so much to maximise exports, or to rebuild depleted foreign balances, as to minimise the adverse balance of trade. At the moment, this is probably best done with the rupee at its present value. But if industrial costs continue to rise, and with them the prices of India's exports, the time may come when the gain in foreign exchange earnings from a cheaper rupee will outweigh the inevitable increase in the import bill. That time may be drawing perilously near. The trouble is that unless measures are taken to correct the inflationary tendencies in the internal economy, devaluations are at best temporary expedients, and unless designed to correct long-term maladjustments, dangerous ones at that. They are also inflationary in their own right. It would certainly be better for this country if steps were taken to tackle the internal situation first, rather than to devalue and then have to tackle an even worse one later.

A further disappointing feature revealed by the report, and foreshadowed in a speech given early this year by the Governor of the Reserve Bank, Mr. H. V. R. Iengar, is that private investment is now virtually at a standstill. What new investment is taking place is almost entirely in the public sector, and appears likely to remain so for the duration of the second plan. The reason for this, apart from the fact that foreign exchange restrictions fall entirely on private industry and consumption, is the purely rational one that the private sector has been more efficient at completing the admittedly limited investment target allotted to it. The logical result of such a situation would seem to be an increase in the private sector's investment allocations and targets in future, and this could be one possible long-term solution to the chronic problem of rising prices. The investment of a given amount of foreign exchange in private industry is productive of more inflation-absorbing output than a similar amount devoted to the public sector. There would seem, therefore, to be a direct causal relationship between the rise in prices and the fall in investment in private industry. This is a point that Government planners would do well to bear in mind for the future.

It is no exaggeration to say that prices promise to be the most dangerous and intractable problem in the third plan and what is left of the second. In a totalitarian economy, the situation would call for the strongest measures of control, restriction and allocation. This might simply not be politically possible in India. The alternative is to encourage food output and liberalise distribution to the greatest extent possible—this is no time for experiments in compulsory co-operation—to discourage the present growth of inflationary psychology in industry, and to give maximum scope for the expansion of output in the private sector. It is important to appreciate the probable consequences of not facing these simple necessities. The country is threatened with inflation as it has never been threatened before in its history. Failure to tackle it will not only lead to the comparatively **mild** expedient of devaluation, of which socialists anyway have few fears, but to political instability and the eventual abandonment of planning. That last point is no exaggeration; there can be no planned development in an atmosphere of chronic inflation, at least not without the kind of restrictions on personal liberty and freedom which would be unthinkable in this country.

SWATANTRA NEEDS A PROGRAMME

THE Swatantra Party, which Mr. Nehru was once inclined to dismiss as a not-too-funny joke, has begun to irritate him; and it is possible to see in this change some evidence that the Party is making a greater impression than defeatists had initially dared to expect. If all the claims of the Congress were to be accepted, there would be no need for a second political party—for that body certainly embodies in its various wordy resolutions something of everything for everybody. Yet there are parties galore; and there is certainly room for a Right-wing opposition. It is simply not true that the masses of the country have for all time to come been "sold" to the Left. Indeed, it has been proved time and again that the thinking of the present leadership of the Congress is sharply at variance with that of the people in their commonalty—who are conservative by nature and not only mistake cameras for hypodermic syringes but also believe in the traditional Indian way of life, however distasteful the latter may be to the English-educated middle-class intellectuals in the country. It is not the intention here to go into the merits of any particular mode of living but, if representing the inarticulate popular will were the sole criterion of democracy, it would be perfectly tenable to argue that the Congress with its socialism and all that is utterly unrepresentative of the majority of the people. The Swatantra Party's emphasis on tradition should strike a readier chord in the Indian ethos than socialism ever can.

Freedom as an abstract concept may be incomprehensible to the masses, but the Indian peasant is an individualist. He has been left cold by the promises of socialism, as Mr. Nehru has

now and again confessed with a touch of despair in his voice. What admits of no doubt at all is that, for all the resolutions passed at Avadi and Nagpur, the Congress has succeeded in generating very little enthusiasm for its programme of co-operatives. For all the crores of rupees spent on community development, the villages remain moribund. The Congress is so wedded to slogans and catchwords that it will not face up to the fact of its failure in spite of accumulating evidence. If rural India is to be revitalised, an alternative programme is clearly needed; and if the Congress will not provide it, some other party has to—if the villages (the larger part of the country) are not to die altogether.

This is at once a challenge and an opportunity for the Swatantra Party, but while the 21 points adopted at the recent convention in Bombay contain much that is salutary, its manifesto will need to be more specific. It is all to the good that, for the present at any rate, the Swatantra Party has kept itself outside foreign affairs, Mr. Nehru's disproportionate preoccupation with which has been criticised as a luxury by friends and as a red herring by the not so friendly. The Party should make it clear that its gaze is fixed on essentials and that its attention is not going to be deflected either by clichés masquerading as ideologies and programmes or by happenings in distant planets unconnected with the interests of the Indian people. While the Congress has lost itself by speaking an idiom the Indian voter hardly understands, since its ideas are all borrowed from the London School of Economics, the new Party has made a good beginning by speaking a language he does understand—the language of the peasant, of the family.

The terms "progressive" and "reactionary" have no meaning except as abuses; and it should hurt nobody if Mr. Nehru chooses to call the Swatantra Party a reactionary one. It will be enough if he realises that the new Party has been formed as a reaction against his policies. Professor Ranga may well have been right when he claimed that his party was only voicing the reaction of the inarticulate masses, who are afraid of established authority and uncertain as to what the Government will do next. It can hardly be doubted that the stresses produced by the two five year plans have driven the Government into some extreme positions, and the third plan promises no decrease in tension.

The Swatantra Party appears to suggest a pause, which is perhaps necessary. But this may not be enough. It will have to produce a detailed, concrete economic programme to take the place of the Congress's vague generalities of a roseate future. The new Party serves a useful purpose in seeking to remove the spell cast by socialism, which is really the spell cast by Mr. Nehru, but it will have to hold an alternative picture before the country. The manifesto that will be presented before the next convention will presumably take care of that, and the sub-committee, composed as it is of men of affairs with a wealth of experience, should produce something that will not only make economic sense but also approximate alike to the aspirations of the people and the resources of the country.

As it happens, an alternative plan is just what is *not* needed. It may not have been perceived by all, but it is through the mechanism of planning that the State has indulged in what Mr. Nehru himself has called "gigantism". It may not be remembered by everybody that at least one Finance Minister resigned from the Nehru Government because he felt that the Planning Commission had usurped all powers and that even the Cabinet had been reduced to a shadow. The Swatantra Party has to show that economic prosperity can be achieved, with freedom unimpaired, through ways other than that of planning as the Soviet Union knows it, that freedom of the individual is more efficient *economically*.

The broad principles of this other method are known already, and they have been tested by experience as recently as in post-war West Germany. The Swatantra Party speaks for incentive, here and now and not in an unknown future. By its emphasis on the latter the Congress has created in the country a massive despair of frightening proportions. Any party which promises early rewards will thus appeal to the people immediately, and the Swatantra Party will have to seek out the points of the economy at which it is capable of producing visible results with the least possible delay. Such points exist both in agriculture and industry; and, once the artificial restrictions are removed, the economy will gain a dynamism of its own. Little does the Government realise how frustrating it is for business men to go to the slow-moving Government machinery for everything. Business men have a vested interest in the people's prosperity. But as long as the Government stands between these two bodies it will distort not only their real relationship (encouraging many malpractices in the process, in the Government as well as in business) but also delay the coming of prosperity. The Swatantra Party has already enlisted the support of men who have been either in Government or in business, in some cases in both; and it is experience (which can be had outside of prisons) which tells them that all business is not the business of Governments.

THE NEW AMERICAN MYTH

FOR weeks before the strike began in the American steel industry American bankers had been warning the nation of the dangers of continually-rising wages and prices; but some American economists had been arguing that a gradual rise in wages and prices would avoid labour disputes and help business. These conflicting opinions are familiar in Britain and elsewhere. What distresses American bankers is the reluctance of many of their fellow-countrymen to learn from the experience of these other countries, where the theory of "creeping inflation" is now generally discredited. The theory was fashionable in Britain until the sterling crisis of September 1957, but at that time, and in the months following, "creeping inflation" was forcefully suppressed, and the theory was subdued with it. The benefits of the change of policy are self-evident. Yet British observers are not deceived by the lamentations of the American bankers. They are not convinced that American goods are no longer competitive in the world market, and that America's export markets can now be divided among the other exporting countries while these countries take an increasing share of trade in America itself. They point out—indeed, the Federal Reserve Bank of New York itself has pointed out—that most of the much-publicised decline in U.S. exports over the last two years is attributable not to manufactures but to commodities for which foreign demand was abnormally large in 1957—when the period after the Suez crisis coincided with the European boom. They point out too—and the statistics of the International Monetary Fund provide confirmation—that the proportional rise in American export prices since the early-1950s has been similar to the proportional rise in British and German export prices over the same period.

Comparison of export prices is, admittedly, an unsatisfactory method of assessing a country's competing power. To quote prices much above the market's prices would be unrealistic. If the market's prices are too low the would-be exporter will be inclined to ignore that market, and the effect will be seen in a declining volume of exports. However, it is well known that in the period of scarcity many customers were willing to pay relatively high prices for American goods because of the difficulty of getting similar goods within a reasonable time from any other source. The most important change in the situation—a change that at least partly explains America's "problem"—is not in relative prices but in availability of goods. American exporters have lost the special advantage of the sellers' market, and, though their prices have not generally risen more than others', the world has become aware that their prices are (and have been for years) in many cases above their competitors'. European cars, for instance, are attractively priced in the American market itself, even with import duties added to their basic prices; and in various categories of machinery American exporters can compete abroad only with such special aids as long-term credit. A dual-pricing system and special subsidies are needed to restore America's lost trade in raw cotton.

Some disharmonies that have existed for years are now being revealed; but the idea that the trend of costs has now turned decidedly against American industry cannot be accepted without question. Sceptical British observers have remarked that, while American wages rise, the productivity of American labour rises also. A recent survey by the Organisation for European Economic Co-operation, comparing national output and productivity in the U.S.A. and the U.K., shows that the disparity between American and British productivity, which was naturally wide a few years after the war, has not been reduced by the intensive modernisation of British industry in recent years. On the other hand, American wages are correspondingly higher than British wages, and Britain thus has an advantage in industries where the labour element is comparatively large. The American economy is undeniably benefiting from its relatively high rate of mechanisation. The counterpart of this mechanisation is underemployment of labour. The boom has absorbed some of America's unemployed workers; but the social problem of unemployment has been solved much more rapidly in Britain, although Britain's recovery has not assumed the proportions of a boom. For Britain, this is a gratifying achievement in the social sense, but in the economic sense it implies that big expenditure on new equipment and processes has not substantially economised labour. Even a moderate rise in wages in Britain could, therefore, nullify British industry's slight advantage over American industry.

Such are the arguments passing back and forth over the Atlantic. To the detached observer it may seem curious that both Britain and America, though anxious to strengthen foreigners' confidence in their currencies, are in this dispute emphasising not the strength but the weakness of their economic positions. But the self-derogatory comments are intended for their own communities, particularly the labour unions. On both sides, probably, the case has been somewhat over-stated and apprehensions have been exaggerated. The truth seems to be that Britain and other countries are now enjoying some unaccustomed advantages in competition with America but that these advantages are not so substantial as to require any counteraction by America. Mr. Walther Lederer, chief of the Balance of Payments Division of the U.S. Department of Commerce, has forecast in *Survey of Current Business* that various factors—mainly, increased exports of cotton, civil aircraft, and military equipment—will appreciably improve the U.S. balance of payments in the latter part of this year. Even now, on commercial account, American exports are considerably in excess of American imports—the loss of gold is caused by foreign investment and by foreign aid. This fact does not support the argument that American goods are, in general, uncompetitive. And against the arguments for "protective action" must be set the undoubted benefit to the economies of the non-communist world that has resulted from the deficit in America's total external account. For the first time in many years, no country is seriously troubled by problems of external payments.

HIGH HOPES ON COMMUNITY DEVELOPMENT

IN the face of conflicting evidence concerning the success of the programme, the planners, especially the Prime Minister, continue to pin high hopes on community development projects. In fact, it is now proposed to cover the entire country with such blocks by 1963. Between the beginning and now, a good deal of investigation has been held into the working of these projects. Evaluation and expert teams have made a searching scrutiny of the defects and shortcomings which have thwarted their progress, and the Government has continued to make generous grants to the various project authorities in the belief that money will make up for the incompetence of its unimaginative bureaucracy, which always tends to remain away from the people. Yet it can scarcely be said that results have been achieved which are commensurate with these efforts.

This is not to say that the idea of community development is impracticable. In theory, it is the answer to the many social, economic and psychological problems which arise when an underdeveloped country (and, therefore, by definition a predominantly agricultural economy of the inefficient type), tries to industrialise itself rapidly. But to realise it in practice, more than a lavish expenditure of public funds is necessary. Nowhere is the drawback more evident than in West Bengal and Punjab. In the latter, it is said that the staff costs as much as the value of the work done. The truth of the matter is that genuine popular co-operation, without which projects such as these cannot succeed, has not been forthcoming in the right measure, although those who write the progress reports of the Planning Commission will not admit it. But there is no reason why popular co-operation should not be evoked to the extent necessary to make this great movement a success. The answer lies in setting up the right machinery, that is, by employing a cadre of officials and workers with the proper training and outlook who can inspire confidence in the village people. The Congress organisation itself could do a great deal if only it would care to translate some of its professions into practice, and also try to understand the implications of what its leaders have been proclaiming from housetops. The community development programme, as with many other important schemes of social and economic policy, is being fed by slogans more appropriate to mass meetings than to a sphere of activity which makes heavy demands on intelligence and imagination.

The proceedings of the recent Mysore gathering were, unfortunately, marked by the same approach. In the very learned and lucid, although unduly long, address that Mr. V. T Krishnamachari delivered at the conference in his capacity as deputy chairman of the Planning Commission, one found a lot about what the Government proposes to do to develop the villages economically and socially, but little about the concrete results which have been achieved so far, and the exact difficulties being experienced in carrying the people along. The Government has now been approaching the problem from the administrative end. By recent legislation undertaken in the States, community development functions are being entrusted with block committees or block *panchayats* with district committees. "Through this devolution, community development activities are being linked up with those of *panchayats* and a unified administration is brought into existence," Mr. Krishnamachari said. This perhaps serves the ends of democratic decentralisation, but the village *panchayats* can scarcely be expected to provide efficient and dynamic leadership without their office-bearers or representatives being given some training in the work they have to do. Mr. S. K. Dey, the Central Minister in charge, was right in suggesting that training for non-officials is a necessary condition of the *panchayats* being able to shoulder the administrative task of the community development blocks competently.

There are some important questions to which the conference did not try to find an answer. Why it is that there is a large disproportion between the potential irrigation created and that actually used? Why is it that many of the minor irrigation works are in a state of disrepair and the areas served by them progressively diminishing, although these projects have been given an important place in the second plan scheme of agricultural development? Why is it such necessary farming operations as contour-bunding, soil conservation and other dry-farming schemes are still not integral parts of the village programmes? Why is it that the number of seed farms is not going up? The Government cannot blame these on the traditional apathy of the village people; it is itself not very serious about the programme. Co-operation is now sought to be made the only source of rural credit, and the granting of the customary *taccavi* loans is being discouraged, even though the cultivator finds it much more difficult to secure a loan from the co-operative than from the latter source? The whole criterion of granting co-operative agricultural credit is wrong. It should be the purpose, not the person, that counts. If the *panchayats* and the co-operatives are to be the real instruments of rural progress—which it is said they are now meant to be—and help in the achievement of the plan targets of food production, the Government must frame its laws so as to make them the genuine representative bodies of the village people, and not mere playthings of political or economic vested interests. Otherwise, the high hopes which Mr. Nehru and his Planning Commission have set on their community development programmes will have little chance of realisation.

Current News and Comment

Jute Shares Remain Cheerful

Although the stock market took a nose-dive after the Tata Iron and Steel Company announced that it was cutting its ordinary dividend, jute shares managed to show considerable resiliency. They have recovered promptly since then as the condition of the market as a whole has improved. Howrah, celebrating the payment of a total dividend of Re. 1 a share for the year ended March 1959 (against nil in the previous year), have been steady around Rs 23.81. Nationals are up at Rs 23, and New Central have risen to Rs. 18.06. Of the immediate factors helping jute shares, two are particularly important. One is the evidence that financial results for the past accounting year will be much better, so dividends might be increased, or paid where none were paid before; Howrahs have already provided an example of this. The other is the presumption that the profit margins of the industry as a whole are likely to be even bigger in the current year than they were last year. For the time being, investors are neglecting the point that the distributable profits of jute companies might suffer: (1) because of the new system of corporate taxation introduced by the last Central Budget; and (2) because liabilities incurred under modernisation and rationalisation schemes will have to be provided for.

The increase in the profit margins of the industry has been quite impressive. The price of Assam Bottoms for early delivery in the raw jute market is about Rs. 22 a maund now, against Rs. 26.75 at this time last year. On the other hand, B Twills are quoted at Rs. 100.85 a 100 bags, against Rs. 99.85 a year ago, but 40in. 10oz. hessian is Rs. 40.55 a 100 yards, against Rs. 43.95 last year. These quotations reflect the improved financial and statistical position of the industry. Sacking stocks are down from 87,900 tons at the end of June 1958 to 57,900 tons at the end of June 1959. Hessian stocks have decreased over the same period from 31,000 tons to 23,700 tons. Total stocks of jute goods (including "other manufactures") are 95,900 tons, against 134,000 tons a year previously. The outlook for the gunny market over the next few months is reassuring. Large business has been done in sacking in recent weeks, with orders coming not only from domestic consumers, but also from China, Australia, Burma, and various territories in the Far East and Middle East. For hessian, the most encouraging feature is that consumption in the United States is running at an unusually high level; as business activity there is well maintained, the offtake of burlap during the remaining months of the year is expected to be large. Meanwhile, the Argentine continues to buy hessian from Calcutta on a small but steady scale, and it is believed that the larger part of her requirements are yet to be covered. When the I.J.M.A. jute goods stock figures for July are available in a week's time, they are expected to confirm the improvement in the statistical position of the industry. It is presumed that the I.J.M.A. will then again take up seriously the question of increasing gunny production by unsealing more looms—a question which both it and the gunny markets have been debating for nearly a month. The last time looms were unsealed—1¼ percent, on 22nd June—jute shares reacted bullishly. There is reason to expect that they will do so again.

This is normally a time of year when the prospects for raw jute supplies dominate thoughts not only in the gunny but also in the jute share markets. The current year has been exceptional in that raw jute has attracted very little attention. The reason is that fibre supplies are likely to be adequate. The new crop in India has been making satisfactory progress on the whole, and is expected to total last year's record of around 6.7 million bales (trade estimate). The 1959-60 output in Pakistan is officially estimated at 6.8 million bales, against the trade estimate of 7.8 million bales for 1958-59. With fair-sized carryovers in both countries, jute supplies during the current season should be satisfactory, unless exceptional floods intervene. Jute shares are, in fact, steady to a large extent because of this expectation.

An interesting feature of the activity of jute companies in recent years is that they have been taking on new interests not directly connected with gunny manufacture. Fort Gloster Industries, for instance, has plans to start producing cables, New Central Jute is to make chemicals and Anglo-India Jute is launching into the woolcombing business. The latest addition to this list is India Jute, which has just bought the Sree Radhesyam cotton mill in Howrah for a little over Rs. 31 lakhs. This cotton mill has been closed for some years. India Jute's idea is apparently to sell off the land where the Sree Radhesyam cotton mill now stands, and to transfer the machinery and equipment to the space rendered vacant by the closure some time ago of one of India Jute's own mills. The Megna Mills Co Ltd meanwhile is going in for the manufacture of carpet-backing.

Steel Shares Recover Smartly

There has been a remarkable improvement in steel shares during the past three days or so. The recovery has been helped by the fact that during the previous week the decline following the lower dividend announced by the Tata Iron and Steel Company was excessive. But the present improvement has been induced by a number of favourable developments too. Indian Irons have risen from Rs. 23.75 to Rs. 24.90 and Tata ordinaries from Rs. 171 to Rs. 181.50. As far as shareholders of the Tata Iron and Steel Company are concerned, they have to reconcile themselves to getting the lower dividend which has been declared for 1958-59. In a recent meeting with the Bombay Shareholders Association, the company's management has made it clear that the dividend fulfils the promise given to shareholders previously. It is pointed out that the latest dividend of Rs. 6.50 a share on the increased capital in fact works out to a total payment of Rs. 10.50 on the old ordinary shares and of 5 percent on the new capital. An encouraging point is the assurance from the management that the net payment to shareholders during the current year will not only be maintained, but the management will do its best to remunerate any new capital which may be called at the rate of 5 percent. Considering that the dividend payment for 1959-60 will be subject to tax deduction at source under the provisions of the Finance Act, 1959, it is thought that the company may have to pay a much bigger sum on dividend account than in 1958-59. As earnings are expected to improve substantially during the current year because of the steady progress of the expansion scheme, there should be little difficulty in finding money for paying the dividends. The report that the Controller of Capital Issues has permitted the Tata Iron and Steel Company to issue 618,372 ordinary shares of Rs. 75 each and 375,000 7½ percent second preference shares of Rs. 100 each—both at par—is expected to have a bullish effect. The permission to issue the rights shares at par is welcome. It indicates that New Delhi has taken a realistic view of corporate financing problems. The rights share issue is being made in order to satisfy an important condition of the loan agreement between the company and the World Bank, wherein it is stipulated that the company will try to maintain a ratio of 50:50 between the ordinary share capital and its total debts. At present, the ratio is 54:46.

There is a great deal of speculation about the coming Indian Iron dividend, but it is expected that there will be no difficulty in maintaining it at 10 percent, if earnings are taken as a guide for dividend policy. Whether the Government will permit the company to pay a bigger dividend in view of the improved earnings following expansion, it is difficult to say at this stage. Meanwhile, the output figures of both Indian Iron and Tata Steel for July are encouraging. The production of pig iron in Indian Iron has increased by 18,287 tons to 97,082 tons, compared with the previous month. Steel ingots are 8,901 tons higher at 71,411 tons. Saleable steel has increased by 6,607 tons to 55,903 tons, of which semis constitute 25,051 tons (against 16,109 tons) and finished steel 30,852 tons (33,187 tons). Despatches of saleable steel have improved by 6,837 tons to 53,507 tons. The output of saleable steel by the Tata Iron and Steel Company has risen from 88,100 tons to 98,500 tons. The production of semi-finished steel is 41,600 tons, against 31,700 tons. Finished steel has increased from 56,400 tons to 56,900 tons. The production of pig iron has improved from 121,100 tons to 125,000 tons, and that of steel ingots from 114,300 tons to 115,700 tons.

A Good Report from Burns

The latest report of Burn and Company—a blue chip among engineering shares—for the year ended April 1959 is of special interest for two reasons. The first is that the company has prepared the accounts and paid dividends in accordance with the provisions of the Finance Act, 1959, which has introduced a number of changes in company taxation. By increasing the ordinary dividend from 20 percent tax-free to 28½ percent, subject to tax, the directors hope to compensate shareholders for the loss they will suffer as a result of the abolition of "grossing up" of dividends. In the case of the tax-free preference dividends, the company has maintained the same net payment. At the ordinarily applicable overall total company rate of income tax and super tax for 1960-61 of 45 percent under the Finance Act, 1959, which it is understood will consolidate the wealth tax and excess dividends tax previously chargeable, there will naturally, in the case of all companies to which this rate applies, be a considerable saving in the tax payable.

As far as shareholders are concerned, however, they will cease to receive notional credit for the income tax paid by a company; they will instead receive credit only for the tax which, under the provisions of the Act, must be deducted at source by the company at the prescribed rates from the gross dividend declared. Shareholders of all companies will accordingly be affected under the new arrangements to the extent that such gross dividend differs from the amount of the previous dividend after it was grossed up according to the rate of income tax that was applicable to the profits out of which it was paid. Each company's ability to compensate its shareholders for the loss of the notional tax credit will vary, being dependent to a large extent on the relationship of the saving in tax payable to its previous dividend distribution. In accordance with the Finance Act, 1959, the dividends on the preference shares payable after 31st March, 1959, will require to be engrossed at a rate of 30 percent and the dividends previously paid free of tax thenceforth paid under deduction of tax at the prescribed rates. The incidence against profits of the preference dividends will in future accordingly be the gross amount. For the year under review, however, such engrossment applies only to the provision made out of the profits for the amount of dividend accruing during the period 1st January, 1959, to 30th April, 1959. Preference dividends for the year, therefore, account for Rs. 2,06,858 leaving an available balance of Rs. 25,30,878.

The second point of special interest in the Burn report is that it shows how the activity of engineering companies is being affected not only by a shortage of steel, but also by irrational official policies. Burn is particularly lucky, because it has been able to make good the loss it suffered from the steel shortage by increased activity in other departments. The forced restriction of work due to the shortage of steel culminated in the closure of the wagon shops in the Howrah works for the four months, August to December 1958, and

entailed laying off about 2,500 men. This inevitably caused dissatisfaction among the workers and loss of revenue. Fortunately, the loss of profits on wagon work was largely offset by the improved working of the three trading departments and the several refractory works. The shortage of steel and the possible closure of the works was foreseen by the directors 11 months earlier, and repeated representations were made to the Railway Board about it. Planning imports of steel to produce with indigenous supplies the matched stocks which must be available to carry out a wagon-building programme is the responsibility of the Railway Board and the Iron and Steel Control; it is, accordingly, a matter entirely outside the control of the company. "At the time of preparation of this report, the quantity of steel delivered has increased, but it remains to be shown that there is any improvement in the planning and supply of matched steel."

The programme to diversify and expand the company's activities is making headway. In connection with the directors' plan for acquiring magnesite mines in south India and building a factory there, on 31st July, 1958, the purchase of all the assets in India of the Magnesite Syndicate Limited of the United Kingdom was completed and the company took possession. Shortly after taking possession of the mining properties in Salem, the directors appointed the well-known London engineering consultants, the International Construction Company Limited, to advise on and supervise the construction of a complete works for the manufacture of magnesite shapes by the most modern methods. Work at the site has commenced and steady progress is being made. As the refractory technical staff was extremely busy on the Salem project, progress on the project in Niwar was not at the rate originally contemplated but a further Rs. 1 lakh has been added to the Niwar reserve. Steady progress continues with the expansion work at other refractory works and at the Howrah works. To provide for all these schemes, an amount of Rs. 3,63,511 out of profits has been added to the reserve for works reconstruction and expansion. Increasing depreciation from Rs. 17.36 lakhs to Rs. 18.31 lakhs and providing Rs. 50 lakhs for taxation, against Rs. 56.90 lakhs, Rs. 2.07 lakhs (Rs. 8,447) for development rebate reserve, Rs. 3.64 lakhs (Rs. 3.25 lakhs) for works reconstruction and expansion reserve, Rs. 20 lakhs (same) for Salem project and Rs. 1 lakh (Rs. 6 lakhs) for the Niwar project, the profit has risen from Rs. 18.82 lakhs to Rs. 26.07 lakhs.

Engineering Shares and Exports

In proportional terms, India's exports of engineering goods have increased sharply. During the first half of this year, they were worth Rs. 2.34 crores, against Rs. 1.93 crores in the corresponding period of last year and Rs. 4.1 crores over the whole of 1958. The rise of around 20 percent is welcome; but it does not warrant the boast often heard, especially from New Delhi, that this country is well on the way to diversifying its exports and becoming an important supplier of manufactured goods, led by engineering products. These products still constitute barely 0.09 percent of India's total exports, and will have to rise nearly 20 times before they attain the importance of jute goods or tea in foreign trade. They also constitute a very small proportion of the total output of the engineering industry. It cannot be surprising, therefore, that engineering shares have hardly responded to the news of rising exports. There have been only small increases in Texmaco to Rs. 23.90, Jessops to Rs. 28.62 x.d., and Britannia Engineering to Rs. 12.50 during the past week. But even these rises are due primarily to the antics of the *prima donna*. Indian Irons, and to the prospect of an increase in steel supplies, not to export prospects. The bigger engineering concerns, in which public investment interest is mainly concentrated, do not in fact export much of what they make. They are pretty fully occupied with meeting the rising domestic demand, to the extent that the steel shortage will let them, although it is conceivable that in years to come many of them will have to look increasingly to foreign markets. In anticipation, some of these concerns, including Jay Engineering, Jessops and Britannia Engineering, have already started moving in that direction. Jay Engineering has been successfully exporting a considerable proportion of its output for some years. Metal Box, although not generally classified as an engineering concern, is vigorously exploring foreign markets too.

It is presumed that the rise in exports of engineering goods has primarily benefited the smaller concerns. This is encouraging, for such concerns have long been the sick children of the industry. They are not well organised; they are short of capital, equipment and technical resources; and the quality of their products is generally poor. It is reassuring, therefore, to note that the improvement in the affairs of some of them at least has been big enough to enable their products to be sold in foreign markets, including some highly competitive ones. It comes as a pleasant surprise that sales of Indian engineering goods have risen in the first half of this year, compared with the first half of last year, in almost all areas of the world except Australia, New Zealand and South America. Exports to the United States have increased to Rs. 36.11 lakhs in the first six months of 1959 from Rs. 23.75 lakhs in the first six months of 1958; while those to the U.K. have risen to Rs. 6.21 lakhs from Rs. 3.04 lakhs.

It is claimed that the goods which have made steady progress in western markets are sewing machines, sugar and tea machinery, hardware, tractor parts, hurricane lanterns, diesel engines, umbrellas, air-conditioning units, cutlery and E.P.N.S. ware, artware and brassware. There has been an "appreciable increase" in exports to the Persian Gulf area, British East Africa, Pakistan, Ceylon and Malaya. In zonal terms, west Asia has apparently taken the most during the first half of this year, followed by south-east Asia, North and Central America, Africa, and Europe. The main engineering goods which India has exported to the world as a whole, in order of value, are aluminiumware, electric fans, steel trunks, sewing machines, steel furniture, textile machinery, diesel engines, hand pumps, sugar machinery, agricultural implements and hand tools, and cutlery. It is evident that the more complex engineering items do not feature prominently in India's exports. That, and the relative poverty of many markets where Indian engineering exports go, should serve to restrain any premature jubilation about their becoming important earners of foreign exchange. The fact that this country managed to export razor blades worth Rs. 67,208 in the first half of 1959 is evidence that some of her buyers have strictly primitive tastes.

Wheat for the Flour Mills

The latest reports of flour mill companies implicitly provide a good explanation for the support enjoyed by their shares. During the year ended December 1958, the output of the Hooghly Flour Mills Company increased to 713,403 maunds, from 679,096 maunds in the previous year. The United Flour Mills Company increased its production from 552,344 maunds to 586,613 maunds during the year ended November 1958. In both cases, net profits were maintained at a reasonably satisfactory level. The small decline in the proportion of net earnings to turnover was due to increased costs, especially on account of labour; this trend is a common feature of Indian industry. The directors of both companies state that there has been an improvement in the supply of wheat. Their experience does not appear to support the main complaint made by Mr. G. D. Jatia in his presidential address at the annual general meeting of the West Bengal Flour Mills Association in Calcutta last week. Mr. Jatia declared that flour mills are working much below their installed capacity, with the result that working has become uneconomic.

The divergent trends in working possibly indicate that wheat supplies are not uniformly distributed among the mills. Although precise information about the distribution policy is not available, it looks as if mills which are capable of delivering the goods on suitable terms are assured of reasonable supplies. Domestic production trends as well as imports indicate there is little reason to worry about any acute shortage of wheat. Its production in India has increased considerably during 1958-59. Nevertheless, it is necessary to investigate whether overall supplies to mills can be increased so that their installed capacity may be used more fully. When supplies are increased, attention will have to be given to ensuring that consumers can get wheat products at economical prices.

Raw Cotton Imports and Exports

The textile industry hopes that the Government of India will promptly accept the suggestion made by the Cotton Textiles Consultative Board that the import quota for raw cotton should be fixed at 600,000 bales a year for the next three years. The move will enable mills to plan ahead and avoid the irritating delays which occur between the exhaustion of one quota and the announcement of the next. The Government itself will benefit, in as much as it will know in advance its approximate foreign exchange commitment in this sphere. It is also possible that fixing the import quota in advance will help the industry obtain more favourable terms from suppliers. Uncertainty about import quotas has often harmed the mills. The suggested quantity of 600,000 bales seems reasonable on the basis of present trends in cloth offtake. Although cloth exports fell from 154.89 million yards during the first quarter of this year to 147.9 million yards in the second quarter, the position was much better than in the corresponding quarter of last year when only 131.64 million yards were exported. The fall in the second quarter is attributed by some to seasonal factors; they look forward to improved trading in the months to come, as a number of foreign buyers have booked sizable orders for shipment during the last two quarters of this year. The Sudan, which held off purchases for nearly six months, is placing orders which might well run to around 10 million yards. The United Kingdom, Australia and some European countries have made firm commitments, while it is only a question of time before Burma places substantial business against the P.L. 480 assistance she has received from the United States. The revived demand justifies for the time being the Board's recommendation for a raw cotton import quota of 600,000 bales. It would be rash to say what textile exports will be like during the next two years, but, barring unforeseen circumstances, many in the industry think that the worst of the export crisis has passed. The export incentive scheme seems to have produced some results, and the limited modernisation which some mills are undertaking should increase their competitive power. In these circumstances, exports should stabilise at a somewhat higher level and the Board's recommendation is calculated to contribute to the stability.

Another question which is worrying the trade is the export quota for raw cotton. The trade believes it can sell at least another 75,000 bales of Bengal Deshi fibre during the rest of this year. Japan is known to be eager to buy, and Indian prices are attractive in spite of the concessions announced by the Pakistani Government to stimulate that country's exports. It is estimated that the carryover stock of the Bengal Deshi variety will amount to 160,000 bales at the end of the 1958-59 season, against 132,000 bales at the close of the previous season. The trade's request for a further allocation might, therefore, be justified, particularly when the indications are that weather conditions this year have mostly been satisfactory. There is some surprise that the Government is hesitating to earn the foreign exchange. There seems to be no reason why the co-operatives which have failed to fulfil their export quota should not be made to surrender it to the established trade.

A Tariff for Marine Insurance

It is a surprising coincidence that the question of having an obligatory marine tariff for India has been raised almost simultaneously by two important spokesman of general insurance. Mr. A. D. Shroff, chairman of the New India Assurance Company, referred a few days ago to the difficulties experienced by insurers in obtaining business following the restrictions on imports, especially non-governmental imports; this, he said, has intensified the already uneconomic competition for the dwindling available business." Therefore, "I once again repeat that in so far as India is concerned, in the context of the foreign exchange difficulties which we are facing, there is a greater need now for an obligatory marine tariff to avoid wasteful and uneconomic competition." Speaking in almost the same vein, Mr. M. S. Dastur, chairman of the Indian Insurance Companies Association, found the claims ratio in the marine department prohibitive and declared that "no company will ever hope to make any profit." If the marine market in India, he maintained, expects to make a reasonable profit, it must devise ways of having an obligatory tariff for the business.

Whether an obligatory marine tariff will prevent "uneconomic competition" and ensure a "reasonable profit" is an issue on which there can be considerable divergence of opinion. Even with a tariff, there can be "uneconomic competition" if the practice of granting rebates and illegal inducements continues. The profit, again, depends more on the quality of underwriting than on tariffs. International marine business is conducted by contracts between buyers and sellers; if Indian marine tariff rates are higher than those offered by the overseas insurers, business will be diverted to the latter. The statistical compilations underlying the Indian rates would be limited to experience in this country only, whereas the compilation for the overseas insurers' rates is likely to be based on worldwide experience. Their experience on the entire outturn, averaged out, is likely to be more satisfactory than the Indian experience alone; in consequence, the overseas insurers will probably be in a position to offer more advantageous rates than can be given by Indian insurers under the proposed marine tariff. In international trade, India is an eager buyer of some commodities and an eager seller of others. She is even contemplating compulsory exports. Many of the goods she is eager to buy come from a seller's market, just as many of the goods she is eager to sell go to a buyer's market. Considering this, her bargaining strength will not always be so great that she can secure the marine insurance terms she wants. If the proposed tariff terms, based presumably on India's collated experience, are higher, more business will go overseas. The case for a tariff for internal transit and for coastal shipments on an "all risks" basis may be based on more plausible grounds. But here again there is nothing, in law, to prevent the insured from obtaining overseas insurance if the local rates, in his view, compare unfavourably with the rates obtainable overseas. The remittance of premiums abroad will present difficulties, but that is entirely another matter. The practical difficulties in tariffing "all risks" rates, where experience differs from account to account and interest also varies, cannot be ignored, even though marine insurers in India might otherwise welcome obligatory marine tariffs to avoid what Mr. Shroff calls "uneconomic competition".

Had India been a closed market like Pakistan, there might have been a case for an obligatory marine tariff. But she subscribes to G.A.T.T., so the buyer and the seller in an international transaction should enjoy freedom of contractual relations in the purchase of marine insurance. Mr. Carl E. McDowell, executive vice-president of the American Institute of Marine Underwriters, while addressing the seventeenth congress of the International Chamber of Commerce, maintained that sound marine insurance protection is an important factor in international transactions, and should be as readily available to either party as the air they breathe. Its source of supply and the form it takes should be as freely determinable as any other conditions of the transaction. The opiate of monopolistic and restrictive underwriting of insurance, remarked Mr. McDowell, undermines and could destroy the foundation of sound underwriting of transport risks. In her own larger interests, India cannot have a parochial outlook in international transactions. Since an obligatory and comprehensive marine tariff would defeat rather than promote their aims, marine insurers will find it hard to endorse the views of Messrs Shroff and Dastur. Prudent underwriting can eliminate the vices which the spokesmen of Indian general insurance have underlined.

Shaw Wallace Expanding

The working results of Shaw Wallace and Co. Ltd for 1958 have been satisfactory, and various expansion schemes are being examined. Speaking at the annual general meeting in Calcutta on Monday (a fuller version of the speech appears elsewhere in this issue of *Capital*), Mr. S. M. Smith, chairman, said that the company has increased its financial stake in Sandoz Products Private Limited. The latter has commenced the manufacture of various pharmaceutical products and has plans for extending its operations in the near future. Shaw Wallace has been investigating the possibility of manufacturing bakers' yeast in India, and Mr. Smith said that a new company, which is to be known as the Indian Yeast Company Private Ltd, "is in process of formation for this purpose." The various projects and schemes will make heavy demands on the company's resources. It is necessary to conserve resources, so the directors have allocated Rs. 7.50 lakhs to general reserve and have recommended that the ordinary dividend of 10 percent, free of tax, be maintained.

Referring to different sections of the company's business, Mr. Smith said that, except in the Dooars, the tea companies had a reasonably good year; as a result, the income from this source increased. But as far as fertilisers are concerned, the past year was one of considerable difficulty because of the restrictions imposed by the Government on imports of nitrogenous fertilisers. The operations of the superphosphate factory in Madras proved satisfactory. Its output of acid amounted to 7,396 tons and that of superphosphate to 23,839 tons, compared with 5,770 tons and 15,454 tons, respectively, in 1957. The extensions to the factory are "now well under way", although it is unlikely that substantially increased production will be obtained in the current year. The Tinplate Company of India Private Ltd had to work at 30 percent below capacity due to insufficient supplies of steel.

Tea Consumption in India

The consumption of tea in India has been rising. Two factors are mainly responsible for this. Firstly, the tea drinking habit has spread among the people along with the growth in their incomes; and, secondly, propaganda has been done by the Tea Board to promote consumption. It is being increasingly realised that the future of the industry will not be secure unless the home market expands along with the rise in output. Overseas markets are becoming more competitive, and the scope for expanding them is limited. Speaking at the annual general meeting of the Anamallai Planters Association last week in Valparai, Mr. E. J. C. Menzies, chairman, said that the industry is getting "somewhat worried" about what might happen if the markets fail to absorb all the tea that is produced, "as appears to be happening in the case of coffee." The question of market promotion at home has become extremely important. Internal consumption has increased from about 90 million lbs (out of a total output of 440 million lbs) in 1939, to 235 million lbs (out of a production of 710 million lbs) in 1958. But it needs to be raised further if the bigger production planned during the next quinquennium is to be absorbed. A third of India's tea production can safely be sold at home without harming exports. Discussing export prospects, Mr. Menzies said that although the reduction in excise and export duties has given a little relief, the industry still has no control over its production costs. The Central and State Governments "continue to turn a deaf ear to our pleas for a reduction in the crushing burden of taxation the industry now has to bear." This is in addition to the heavy imposts under the Plantations Labour Act and other measures. The collection of vast sums as taxes from tea producers might benefit the country in the short term, but it is doubtful whether it will in the long run. China adopted a similar taxation policy for its tea industry around 1880, with the result that rival producers started operating in India and Ceylon, and Chinese tea was eventually priced out of foreign markets.

Rihand Power for Aluminium Plant

A vigorous defence of the U.P. Government's decision to allocate power from the Rihand dam project to the proposed aluminium factory in the private sector near the dam site was made by the Chief Minister, Dr. Sampurnanand, in his reply to the debate on the Governor's address in the State Legislature. One of the main criticisms was that the Government has no right to help a private industry with power from a public project. Dr. Sampurnanand said that it is the duty of any Government to help the private sector as long as it is assigned a place in the scheme of development. Calling upon the opposition to think in terms of industries more than of industrialists, the Chief Minister denied that power will be sold to the aluminium company at a loss. The Government will be giving electricity at a price of Rs. 150 a kilowatt, and the agreement is to be in force for eight years, after which it can be revised. Even with this price, he said, the Government will gain by Rs. 1.50 on the production cost. The rate will apply only to the power used for extracting aluminium from bauxite and power for other purposes will be charged for at a higher rate. The Chief Minister points out that the firm had an option to establish the factory in other States. Kerala, for instance, was prepared to offer power at Rs. 113 a kilowatt, and Orissa at Rs. 135 a kilowatt. The agreement with the firm, he contended, far from proving a losing proposition, might yield bigger profits; the cost of the Rihand project is likely to go down because the Bihar Government has now agreed to pay about Rs. 3 crores for the irrigation benefits it will derive from the project. As for the criticism that the diversion of Rihand power to the aluminium factory will cause a power famine throughout the eastern districts, the Chief Minister said that the Central Government has already decided to start work on a giant thermal station in Moghulsarai with a generating capacity of 180,000 kilowatts. There is also a scheme to connect the power generated by the thermal stations in Mau, Sohawal and Gorakhpur with that from the Rihand grid; this will add a total of 45,000 kilowatts to the system. The country's needs of aluminium are placed at 30,000 tons. The plant in U.P., according to Dr. Sampurnanand, will produce 10,000 tons. Meanwhile, Bombay's Planning Minister, Mr. S. K. Wankhade has announced that a Rs. 25-crore aluminium factory will be set up in Koyna during the third plan period.

Increasing Productivity

Addressing a productivity conference convened by the Kanpur Regional Directorate of the National Productivity Council, the I.L.O. expert, Mr. R. L. Mitchell, made an interesting suggestion that some method for the weekly payment of the results of increased efforts should be evolved so that workers may feel enthusiastic about the drive. According to him, workers are not in a position to understand how the profits based on a year's working are calculated; hence a bonus based on those profits may not act as a proper incentive. Many of the incentive schemes now in operation in this country, particularly in the textile industry, are rather crude, and most of them are based on piece-rate systems. He felt that, in many industries, production can be increased by 100 percent merely by better management. Inaugurating the conference, the Governor of U.P., Mr. V. V. Giri, emphasised that the moral and social aspects of the productivity drive are not always fully realised by workers and employers. Unlike rationalisation, which means replacing existing machinery by automatic plants, a productivity drive, if properly managed, need not result in unemployment even for a short period. A productivity drive is capable of increasing production a unit of time and a worker from the existing personnel and machinery. It is through such a drive that the cost of manufactured goods can be brought down in backward countries like India, which cannot always afford to invest in new machinery. I.L.O. productivity teams, which have done some useful work in the cotton textile and engineering industries, have shown that production can be increased by between 12½ percent and 116 percent in individual items of manufacture in the engineering industries, and by between 6 percent and 36 percent in various processes in the cotton textile industry. All the same, the president of the conference, Mr. S. M. Bashir, did well to correct the tendency to consider productivity as only a question of better labour-management relations. Apart from the input of labour, he said, other aspects of input relating to machines, methods, materials and marketing have to be tackled effectively before production can be accelerated.

Brno International Trade Fair
