The following are the salient features of the rubber development scheme suggested by the United Planters Association of Southern India: (1) the rate of subsidy paid to the growers under the rubber replanting scheme, which is being implemented by the Rubber Board since 1957, should be increased in order to induce the growers to take to replanting; (2) to make up the country's shortage of raw rubber and to achieve the target by 1967, the acreage of replanting may be increased from 7,000 acres to 17,000 acres a year in order to replace 119,000 acres by 1966; (3) new planting should also be assisted by the Government and a subsidy of Rs. 500 an acre may be given to growers, so that 10,000 acres a year may be brought under rubber; (4) growers should be helped to change the crop on lands declared unsuitable for rubber; (5) the replanting drive should be organised under a separate directorate and outside the control of the Rubber Board; (6) the progress of replanting and new planting should be periodically reviewed by an authority outside the Rubber Board and that authority should include a nominee of the Planning Commission and the U.P.A.S.I. president; (7) a separate development board may be constituted; and (8) a separate "replanting fund" may be created for financing development schemes.

New Paper Mill for Bihar

Messrs Shree Baidyanath Ayurved Bhavan Private Ltd, Calcutta, have been granted a licence under the Industries (Development and Regulation) Act, 1951, for the establishment of a new

ial undertaking in Darbhanga, Bihar, under me and style of "Ashok Paper Mills Ltd" manufacture of 15,000 tons of writing and g paper and 16,500 tons of pulp a year. ndertaking is likely to be established towards d of 1961. The capital equipment import ements are of the order of Rs. 2.8 crores and e imported partly from the U.S.A. under xport-Import Bank loan and partly from with French credit. The French suppliers articipate in the capital structure to the f Rs. 30 lakhs.

Expert Reports on Mangalore Port

Dutch port expert, Mr. Posthuma, has submhis report concerning the development of lore port. He has recommended that the port has advantages over an entirely artiort for the following reasons: (i) the itself can be used for the harbour; (ii) the port is nearer to the town of Mangalore le factories. It will be possible to carry s to the ships by means of river craft; (iii) isting port facilities will continue to be when a lagoon port is built. He has also nended to construct two experimental s and to observe the movement of silt that reach the lagoon harbour from the Netravati nd the littorol drift with the help of radioisotopes. The recommendations contained in Mr. Posthuma's report will be considered by the Intermediate Port Development Committee which has been set up recently.

Desilting of the Hooghly

The silting of the river Hooghly varies from season to season, and the depths of water available in the navigable channel vary from day to day. Of late, the deposit of silt in the navigable channel leading to the port has increased. This is due to (i) bad configuration of the river in certain stretches and the absence of training measures to improve the navigability of the river Hooghly, and (ii) the absence of perennial headwater supply from the river Ganga. The Commissioners have to resort to dredging to remove the silt at the bars in the navigable channel leading to the port. This is done with the help of suction dredgers. Due to the deterioration of the river Hooghly, the dredging commitments have of late greatly increased. To cope with the actual requirements, the Commissioners have modified their second five year plan programme to provide for (i) the construction of a new suction dredger; and (ii) the purchase of a second-hand dredger or to charter a dredger for immediate use if no second-hand dredger is available.

The Commissioners have also taken up river training works for improving the regime of the river. The Akra spur was completed in 1955. The Fulta point scheme is under execution now. Model experiments are in progress at the Central Water and Power Research Station, Poona, to determine the appropriate river training works necessary for improving the Balari bar. In the intervening period, the Port Commissioners are trying to dredge the Balari bar as much as possible with their existing fleet of dredgers. The capital expenditure incurred or which it is proposed to incur on the measures undertaken by the port authorities to improve the regime of the river is as follows:

	(Rs. lakhs)
i. Spur at Akra to improve the Sankral reach and Munikhali bar (completed)	27.17
ii. River training works at Fulta point to improve the Fulta, Nian and Nurpur bars and the eastern gut bar (in progress)	550.00
iii. River training works for Balari bar	It is too early to make an estimate of the expenditure that will be incurred since the nature and magnitude of the training works will be known only on conclusion of the model experiments being conducted at the Poona Research Station

Besides, the Commissioners incur an annual recurring expenditure of Rs. 57.6 lakhs on dredging, exclusive of depreciation of the dredging fleet. The silt that is dredged from the river is at present being dumped back into it in areas where accretion is required. The question of using a portion of the silt for reclamation purposes is at present under investigation.

India-Russia Shipping Service

According to the agreement signed between the Governments of India and Russia in April 1956, the shipping service between the two countries is to be operated with equal tonnage participation by each party. Both India and Russia have at present put in six vessels each in this service. On the Indian side, Scindias are operating four vessels and the India Steamship Company two. The India-Russia shipping service is one of the trade routes allotted to the Western Shipping Corporation which is a company in the public sector. The Corporation has not so far been able to participate in this service for want of necessary ships. It is, however, expected that it will be in a position to participate in this trade along with the two companies in the private sector (Scindias and India Steamship), with two vessels each, some time at the end of this year or early next year, when the new vessels which it has ordered for construction abroad, become available.

Acquisition of Ships

Acquisition of ships has been permitted on a self-financing basis or on deferred payment terms, under which foreign exchange is released to meet about 20 percent to 25 percent of the cost, the balance being met from the ships' own net foreign exchange earnings. Some 15 ships aggregating 83,691 gross tons were acquired during 1958-59, at a total price of Rs. 10.01 crores.

Customs and Excise Advisory Council

The first meeting of the Customs and Central Excise Advisory Council, which ended its two-day session during last week, was informed that it had been decided to establish advisory committees at the minor ports and major land Customs stations. It was agreed that a lenient view would be taken and reshipment allowed in *bona fide* cases where goods had been wrongly shipped by foreign suppliers to importers in India. The suggestion that Press notes should be issued whenever duties are altered was accepted. Another suggestion accepted was that as far as possible, the second appraisement system should be resorted to in a greater measure to ensure a speedier clearance of goods. The Government has agreed to grant full drawback of the duty paid on imported paper used in the manufacture of cement bags for export.

Government Opposed to Turner Morrison Changes

The Government of India will not approve of any change in the structure of the managing agency business of Turner Morrison and Company of Calcutta, it is learned. The Mundhras control 49 percent of the share capital of this firm which they acquired for Rs. 78.48 lakhs. The deal carried the option to buy the remainder of the share capital, which the Mundhras propose to exercise now. The shares were originally purchased in the name of the British India Corporation. The Government has been appraised of the negotiations now in progress between the Turner brothers and the Mundhras for the purchase of the remaining 51 percent of the share capital for Rs. 86.60 lakhs. The Government does not approve of the proposed deal and has warned the parties concerned that it proposes to withold recognition to any change

Thermocole
makes for cooler roofing
and cooler housing

Keeps heat and water out

A cooler building with dual-benefit Thermocole heat conditioning means more production, a higher rate of efficiency.

Thermocole, the new foam insulation, is water-resistant, combines lightness with unusual mechanical strength. It is easy to install, either as a false ceiling or above the roof with Bitumen coating.

More effective than any other insulation material, Thermocole prevents heat and vapour transmission and is completely waterproof and rot-resistant. It is ideally suited to insulating air-conditioning systems.

U.K. INDUSTRIAL PRODUCTION RISES

LOWER OUTPUT IN PUBLIC UTILITIES

(FROM OUR LONDON CORRESPONDENT)

THE continuing improvement in the economic situation appears to be overcoming such natural restraints to business activity as general election results, the seasonal drain on the dollar reserves, a rise in unemployment figures occasioned by the large influx of school-leavers, and other factors. At all events, industrial production continues to expand. The official index for July is provisionally expected to be 101-102, against 98 in July of last year. After adjustments for seasonal factors, the index has risen by 5 percent on the year, and this rate of growth seems to be fairly well established. Moreover, the rise is greater in manufacturing than in mining, while the output of public utilities is lower. The rise would have been greater but for the printing strike. Taking the seasonally adjusted figures, which show the trend more clearly, the June estimate of 109-110 is now confirmed at the higher figure, and for July the index is expected to be 111-112, the highest ever reached. All the evidence points to a further brisk expansion after the holiday period.

Gold Reserve News Good

While the U.K. Treasury announced that the gold reserves had risen during August by £10 million, the pound sterling fell against the dollar in the foreign exchange market. The two trends had little connection. Sterling was under pressure during the past week, partly because of the heavy seasonal demands for dollars to pay for bulk imports of grain and cotton, but mainly because speculators were buying dollars to profit by the expected increase in the Federal discount rate to 4 percent. Sterling is strong enough to take this temporary strain, and indeed has actually recovered recently, so it is causing no anxiety at the moment.

The news of the increase in the reserves is even better than it looks. If it had not been for a debt repayment of £9 million to the defunct European Payments Union and a contribution of £2.5 million to a joint European credit to Spain, the reserves would have gained no less than £21.5 million in August. In every previous August for many years past, the reserves have dropped, the average loss for the month between 1950 and 1958 being £28 million. In the black August of 1957, before Bank rate was raised to 7 percent, there was a loss of £81 million.

Rise in Bank Advances Slows Down

According to the mid-August statement of the 11 clearing banks, advances in the past month rose by £19.2 million. This is the smallest increase since November and compares with a rise of £90 million the month before. While there is no doubt that the expansion in advances is slowing down, the latest figure is deceptively small. If allowance is made for transit items of £16.1 million, and for loans to nationalised industries which were £8.1 million down, advances to the private sector and local authorities appear to have risen by £43 million. This compares with £71 million on a similar basis for the previous month. Bank advances generally tend to fall in August, partly due to the greater liquidity of the farming community. Investments were down by £8.9 million to £1,801.6 million. Both Westminster and Martins sold Government securities of over £4 million. The overall liquidity ratio rose slightly to 33 percent from 32.7 percent. Gross deposits showed a fall of £52 million to £6,924 million. Lloyds Bank's index of net deposits, which adjusts for seasonal variations, was down from 116.4 to 116.2.

Export Prices Fall

For the first time this year, export prices fell last month. The 1 point fall in the Board of Trade export index was largely due to the 3-per-cent drop in the index of the metals group of manufactured goods. There was a fall in textiles and other manufactures, and mineral fuels also contributed to the downward trend. As the import index remained unchanged at 97 for the third month in succession, the terms of trade (1954 equals 100) moved up by 1 point to 90. On the import side, there were price increases in the base materials and fuel classes and, to a lesser extent, in food, beverage and tobacco. These were partly offset by falls in manufactured goods.

Sterling Balances up Again

Mainly because of the additional subscription to the International Monetary Fund (£174 million), overseas sterling holdings rose by £196 million at the end of June, compared with three months earlier. The total of £4,071 million was the highest for two years, according to details made available in *Economic Trends*. Apart from the I.M.F payment against which British stand-by reserves have been increased by several times the subscription, two movements are of interest. Balances of independent sterling countries have increased during the quarter by £81 million, chiefly due to the reviving export earnings of primary producers. Secondly, balances held by O.E.E.C. countries dropped by £40 million, as a result of a clearing up of the German account. The remaining sterling holdings of all countries (excluding international institutions) rose at the more than a year earlier, although £255 million less than it was five years ago.

Good Response to Cotton Plan

In the words of Lord Rochdale, chairman of the Cotton Board, "the response to the cotton reorganisation schemes has proved satisfactory. The machinery which will be scrapped will effect a realistic elimination of excess capacity in the industry and the way now appears to be clear for those who will remain in the industry to reorganise and re-equip themselves for the future." To the end of August, the following applications to participate in the re-organisation scheme had been received: 11,969,386 mule equivalent spindles; 14,407 carding engines; 492,994 doubling spindles, and 95,491 looms. The minimum targets were: 6 million mule equivalent spindles, 45,000 looms, and 400,000 doubling spindles. The final date for acceptances is 30th September, but a bonus of 5 percent was offered to firms which applied to take advantage of the scheme before 31st August. It is reasonable to suppose, therefore, that many firms wishing to participate have now notified the Cotton Board.

A preliminary announcement from the U.K. Board of Trade outlines the main conditions of payment of grants for re-equipment and modernisation and includes a list of the main categories of equipment which will qualify. The grants are not intended as a contribution on repairs, maintenance, and normal replacement. Applicants will have to satisfy the Cotton Board "that their proposals are part of a scheme or schemes of re-equipment and modernisation." Grants will be payable to producers who install new equipment used in productive processes; second-hand items will not qualify They will also be available for the modernisation of existing equipment. There will be no restriction on the type or make of equipment to be installed. Firms taking advantage of the scheme must incur the expenditure within the period 14th April, 1959, and 9th July, 1962, and the equipment must be installed before 9th July, 1964. The minimum expenditure, which will qualify for a grant, is £2,500.

Trade Quotas with Russia

Agreement has been reached on quotas amounting to £3.4 million for consumer goods to be exchanged between Britain and Russia in the year ending 30th June, 1960, it has been announced by the U.K. Board of Trade. Russia's main imports from Britain will be woollen piecegoods and leather footwear. Other items in the British list of exports to Russia are: motor-vehicles, including spare parts; cotton piecegoods; carpets, machine-made; woollen knit-wear; medicines, drugs, pharmaceuticals, including raw materials; made-up clothing; floor coverings; white fish; herrings; whisky and gin; leather gloves; sports goods; stockings and socks; musical instruments; flax, canvas; toys; photographic materials; razor blades; earthenware and china; toilet preparations.

Britain's chief imports from Russia will be canned crabmeat and canned salmon, and other items on the list of lesser value include *vodka*; hand-made carpets; medicines, drugs, and pharmaceuticals; matches; motor-cars and spare parts; cameras; wines and brandies; cotton fabrics; caviare; handicraft and fancy goods; musical instruments; perfumery; cotton fabrics; sporting guns and ammunition; toys, wrist watches; earthenware and china.

Brand Names for British Nylon

To ensure the ready identification of British nylon goods of an assured quality, new brand names are being introduced by British Nylon Spinners. Products traditionally associated with nylon—stockings, lingerie, and the like—will, in future, be called "Bri-Nylon." Bulkier, warmer garments—such things as sweaters and fur coats, the result of technological developments of nylon yarn—will be called "Bri-Lon". The firm will permit the use of these brand names only where it is satisfied that goods so marked are made of the right type of British nylon used in the right way. Registered user agreements will be signed by manufacturers wishing to use the names.

More than 400 leading British manufacturers selling top-quality nylon articles have already agreed to enter into the new agreement and only 3 percent of the manufacturers so far approached have refused. Of some 12,000 retail stores approached, less than 2 percent have shown unwillingness to co-operate in promoting the new names. Some 400 million nylon articles are produced in Britain each year, and the British are the biggest buyers of nylon goods in Europe. An extensive and sustained advertising and publicity campaign starting shortly will be used to make them familiar with "Bri-Nylon" and "Bri-Lon."

Lloyd's Profits Lower

Sharply lower profits were earned by the Lloyd's insurance market in its latest three-year accounting period although premium income was higher. After meeting all claims and providing for reserves and reinsurance, the 1956 account, which was closed at the end of last year, shows a profit of £5.7 million, while premium income amounted to £255.9 million. In the previous period, the profit was £12.8 million and premium income totalled £235.6 million. Underwriters profits from "all other business," one of the principal sections of the market, rose by £14 million to £134 million But the profit balance fell by £4.8 million to £2.1 million, the rate of profit being only 1.57 percent, compared with 5.7 percent for 1955. A big increase in claims offset a rise of £5.6 million to £112.8 million in income of marine, aviation and transit underwriters. As a result, the profit was little more than £2 million, a drop of £3.7 million, largely due to aviation premium income being practically offset by the cost of claims. Against this, however, profits in the motor-car insurance section show a strong recovery. While premium income rose by about £600,000 to £8,940,900 claims fell by more than £700,000 to £6,546,640. The resulting profit balance of £1,387,298 is equivalent to a profit rate of 15.5 percent, which no doubt reflects the higher premiums imposed during the period.

New Capital in August

The capital market had a quiet time last month, when the total amount of new capital raised was £22,495,000, compared with the (abnormally high) amount of £57.5 million raised in July. Even so, the sum for the eight months of this year has reached the record total of £323,763,000 according to the monthly statistics compiled by the Midland Bank. This compares with £264.8 million in the same period of last year.

Brevities

The Oxford Playhouse Company will leave by air on 5th November for a 16-week British Council-sponsored tour of India, Ceylon and Pakistan. The company of 16, directed by Frank Hauser, is to present plays by Shakespeare, Shaw and Eliot in 16 towns.

The m.v. *Bankura*, a cargo vessel of about 7,500 d.w.t., has been completed by Harland and Wolff at its Govan yard for the British India Steam Navigation Company. She has been handed over to her owners after successfully completing her sea trials.

A jet service between London and Australia, to be run jointly by the British Overseas Airways Corporation and Qantas Empire Airways has been announced. Qantas *Boeing 707s* will start flying from Australia to London on 15th October, and the first B.O.A.C. *Comet 4s* will leave London for Sydney on 1st November. The joint fleets will provide eight services a week, and are expected to reduce the journey to about 33 hours.

The directors of Rangoon Electric Tramways and Supply Company state that the question of nationalisation compensation has been reviewed by the Electricity Supply Board in Burma, whose accountants are now preparing an offer for discussion with the company's directors. The loss for the year ended 30th September last was £7,203, against £8,596.

Engineering and Transport

ELECTRICITY FROM CHEMICALS

ECONOMIC SIGNIFICANCE OF THE FUEL CELL

MR. F. T. Bacon had been working since 1932 on the idea that produced the fuel cell demonstrated recently at Cambridge. Another comparable project is well advanced in Britain, and similar work is being done in other countries. But Mr. Bacon is the first who has been able to demonstrate that electricity sufficient to supply useful quantities of power can be produced by chemical action, and it is presumably Mr. Bacon's fuel cell that will be recorded in history as a landmark in the development of energy. More orthodox industrial inventions can be offered for sale and put into use immediately, but revolutionary developments such as a steam-engine, an aircraft, a nuclear reactor, or a fuel cell, have no practical value in their original form It may be technically interesting, but it is not economically important to detail the various defects of Mr. Bacon's device—its cumbersome control-mechanism and so on. The principle of producing electrical energy from chemical energy on an industrial scale has been proved, and it can be assumed that its practical application is only a matter of time.

It is, in a sense, appropriate that the first use envisaged for fuel cells is to provide power for a manned satellite—a new mode of power for a new purpose. It is not so appropriate that the satellite for which they are intended is American—a British device adopted first outside Britain. A few days after the demonstration of the fuel cell, it was revealed that the Hawker Siddeley aircraft group had designed a British-manned satellite, but it is too early to say that Britain is playing her proper part in the new era of research in space. Anyway, it has regretfully to be recorded that during the research on fuel cells British firms showed little interest in them. As far as it is known at present, the British invention will be exploited first in the United States. The apparent inability of British industry to make full use of British inventions is a serious matter. It is a reminder that the proportion of national resources devoted to technology is much smaller in Britain than in other major countries, particularly Russia and the United States. It is one explanation why Britain's direct export trade is not increasing as much as it might, and why the invisible account tends to grow more important—for a considerable income is derived from licences to exploit British inventions abroad.

Worldwide Implications

However, one is more concerned at the moment with the worldwide implications of the fuel cell. Unless unforeseen difficulties occur in its development, it will eventually be used in all countries and in communications between countries. It will be applicable to many purposes for which electricity is used at present and to many purposes for which power is at present supplied by fuel, particularly oil. Some of the more important applications envisaged are for motor-cars, heavy road-vehicles, earth-moving equipment, agricultural machinery, railway transport, ships, particularly submarines, and aircraft, and it can be used, presumably, for innumerable purposes in industry. This list of applications suggests various ideas. Most obviously, it confirms a basic trend towards electrification. This trend harmonised until recently with increasing use of coal and oil. Then nuclear energy appeared, challenging coal and oil as fuels for generating electricity and also, at a later stage, as fuels for ships and aircraft. Now the fuel cell appears, challenging not only coal and oil but nuclear energy as well.

The principal use for nuclear energy is to generate electricity, and it is difficult to imagine that it will ever be otherwise; although conventional methods of generating may be unnecessary when controlled fusion of light elements is practicable. But there are many possible subsidiary uses for small nuclear reactors, of which the most promising is to provide power for ships. Nuclear reactors can be used either in big static power-stations or individually as small mobile power-units; either as part of a generating system or as part of a motor. Either way, they replace coal or oil. The fuel cell has no obvious place in a generating system; its use is rather as power for an individual electric motor. It may, therefore, be used instead of a nuclear reactor for some of the more advanced uses envisaged for reactors; but its possible uses as an individual power-unit are much more varied, and it will, therefore, compete with oil-powered engines more than with nuclear units. Because its potential applications are so numerous, it will probably compete with conventional generating systems, diverting some of the demand for electricity from mains to individual units.

Comparative Efficiency

Intrinsically, the cell is much more efficient than the generator. The conventional method of generating electricity uses heat from burning fuel, converted into a form suitable for driving engines, which generate the current. (A hydro-electric plant, of course, uses energy already provided by nature.) This indirect method is roughly 30 per-cent efficient, the greater part of the energy-potential of the fuel being lost. The fuel cell produces electricity directly by reactions between chemicals, and its efficiency is theoretically of the order of 80 percent. Obviously, the economic potential of this device is conditioned by (among other factors) the chemicals required as "fuel". In the Bacon cell, the "fuel" is hydrogen and oxygen, which are introduced separately (but simultaneously) into the cell through two electrodes immersed in chemical solution; but to attain its potential economic value, the system should use more plentiful gases such as methane (it may provide a new outlet for natural gas from coalmines and oilwells), perhaps even coal. And the system of fuel control must be simplified if the cell is to be used in small-scale units. But there is no reason to doubt that these technical problems will be solved, and that the next generation will have at its disposal yet another means of disproving the pessimistic belief that the world would be short of power.

OPERATIONAL POTENTIALITIES OF AVRO IN INDIA

Potential operational use in India of one of Britain's new airliners, the *Avro 748*, was emphasised at a Press preview of the prototype now in production at the factory in Chadderton, near Manchester, of A. V. Roe and Co. Ltd. The chief designer, Mr. J. R Ewans, after pointing out that the Indian Government is to manufacture the *Avro 748* under licence for the Indian Air Force, said that his company had studied in great detail the potentialities of the new aircraft as far as India was concerned. The majority of commercial aircraft in service in India are *Dakotas*, the type which the *Avro 748* is being built to replace.

Commenting on the agreement signed with the Indian Government, the firm's joint managing director, Mr. J. A. R. Kay, said: "It is always part of such a deal that there is a programme. It may be that we supply a number of planes first and components later, or it may be that only components go. There is a mission from India here now, and details are being worked out". The *Avro 748* costs about £170,000 and is cheap to run, with an operating cost a passenger-mile of 1½d (8nP). Production of 30 *Avro 748s* is in hand, including the prototype which is due to fly next February. The first production aircraft is expected to be flying in November 1960. When, as the company plans, the prototype flies within 13 months of the first piece of metal being cut, the company will have achieved a British record for an aircraft of this type. Powered by two Rolls-Royce Dart 6 turbo-prop engines, the *Avro 748* can carry 48 passengers seated four abreast, plus freight up to a maximum payload of 9,750 lbs. It is able to operate from DC-3 type airfields within the latest civil airworthiness requirement, and provides pressurised comfort at 20,000 feet at a speed of 265 miles an hour. Particular attention has been paid to obtaining maximum interior space for minimum weight, and the whole of the cabin between the bulkhead just aft of the pilot, and the rear pressure bulkhead is entirely available to the airliner operator. No equipment or systems are located in this area.

Robust Undercarriage

Mindful that the *748* will be used in remote parts where airfields are simply grass or stony strips, the makers have fitted large-diameter twin wheels with low-pressure tyres as well as a short robust undercarriage. The propeller blades have a ground clearance greater than usual—two feet. Most of the equipment of the *748* is already in use, particularly in the Vickers *Viscount*. It is understood that A. V. Roe and Company is negotiating with operators in the United States, South America, Europe, Australia, New Zealand and South Africa for the sale of the *748*. The British Minister of Supply has already ordered three of these aircraft, which will be made available to a U. K. operator for proving and introduction into regular service. Skyways Ltd has given a letter of intent to buy an undisclosed number for operating on its non-scheduled and charter services.

TRANSISTORISED AIRBORNE TELEPRINTER

A transistorised airborne teleprinter receiver, type AD308, has been designed and manufactured as a valuable contribution to the solution of the problem of congestion which is tending to reduce the efficiency of communication on the h.f. channels. One means by which the situation can be relieved is for certain routine messages (such as meteorological reports) to be radiated from a ground station operating in the low-frequency band and received on a radio-teleprinter in the aircraft. By this means the bandwidth required for transmission is much less than would be taken up by radio-telephony. The teleprinter will operate without attention and messages can be taken from it at intervals suited to the normal routine of the aircraft. The AD308 teleprinter receiver is an airborne one designed to operate on services of this nature. It is capable of receiving narrowband frequency-shift-keyed telegraph services on any one of four spot frequencies in the 90-150 Kc/s band and produces a double-current output suitable for operating a standard teleprinter. Control of the complete installation (receiver and teleprinter) is effected from a small control switch which can either be mounted on the teleprinter itself or supplied as a separate control unit for installation in any convenient location in the aircraft. The AD308 is fully transistorised and combines maximum reliability with low weight, compactness and low power consumption. A high-sensitivity omni-directional loop aerial provides very good protection against static electrical interference; alternatively, a conventional vertical aerial can be used if desired.

NEW B.I.S.N. LINER WILL CALL AT INDIAN PORTS

A new cargo liner of the British India Steam Navigation Company, the *Bankura*, has successfully run her trials, attaining a speed of 17.5 knots, and has been taken over from the builders, Harland and Wolff Ltd. She is likely to call regularly at Calcutta, Bombay, Trincomalee and Colombo when she starts her service on the Australia-Persian Gulf trade route. The *Bankura* was launched last January, and will join the *Bulimba* on the service between the Persian Gulf and Australia. She will be followed by the *Barpeta* and *Bamora* in 1960, and the *Bombala* in 1961.

BOEINGS START FLYING THROUGH INDIA FROM OCTOBER

Qantas *Boeing 707* jet airliners will start operations on the Kangaroo route between Australia, India and Britain on 5th October, and B.O.A.C. *Comets* will be introduced on the some route on 4th November. This has been announced by B.O.A.C. and Qantas in a joint statement issued from Sydney. The joint fleets will provide eight jet services each week on the whole route between London and Sydney which is operated by the two airlines in partnership. The jets will reduce the end-to-end journey to as little as 33 hours. They will replace the present Qantas *Super-Constellations* and B.O.A.C. *Britannias* which take 63 and 48 hours, respectively, for the 12,000-mile run.

Qantas *Boeings* will operate three times a week and B.O.A.C. *Comets* five times a week. A ninth service a week will be operated by a *Comet* from London to Singapore and from there by a *Super-Constellation* to Sydney. The combined fleets will provide 640 seats weekly in each direction. They will, between them, serve all the present points of call on the Kangaroo route, including Calcutta and Bombay. Calcutta will be linked with Australia seven times a week and Bombay once a week. Melbourne will also have a number of *Super-Constellation* shuttle services connecting with *707s* in Sydney. On 3rd November, an express *Super-Constellation* all-cargo service will start between Sydney and London. With a capacity of 12 tons, the aircraft will cover the 12,000 miles in 58 hours.

PAN AMERICAN AND T.W.A. TO EXCHANGE JET AIRCRAFT

Pan American Airways and Transworld Airlines will exchange *Boeing 707* jets, T.W.A. taking over the former's six short-range *707s (707-121* version), and making available six *Intercontinentals* (the bigger version of *Boeing 707*) to Pan American. With the T.W.A.-P.A.A. exchange deal, Pan American will build its entire fleet of 44 jets with 23 long-range *707s* and 21 Douglas *DC-8s*, the latter being another long-range variety of aircraft. The *Aviation Daily* suggests that this transaction indicates that T.W.A. plans to concentrate more heavily on domestic routes. The acquisition of *707-331s* from T.W.A. will cost Pan American $40 million. The cost of short-range *707s* to T.W.A. would be about $32 million. This latter company expects to receive the first of its *707-331s* after delivery of the first six to P.A.A., but in sufficient time to place them in international service as planned early in 1960.

POWERFUL U.K. EQUIPMENT FOR INDIAN LIGHTHOUSE

One of the most powerful electrical lighthouse units ever constructed in the U. K. has been completed for an Indian lighthouse by a specialist firm in Britain. Ordered for a site at Dwarka (Bombay State), the 21-foot high, 13-ton unit is to be inspected shortly by India's Director-General of Lighthouses and Lightships, Mr. S. K. Lahiri. Light for the £22,200 unit comes from a 3,500W lamp condensed into two beams each of 5,100,000 candlepower. The two beams will provide two flashes every 20 seconds. In the event of a break-down or power failure, a reserve lamp and a diesel generator come into operation automatically. The light will normally function from the land main supply. The makers, Stone-Chance Ltd, have specialised in lighthouse equipment for more than 100 years. They have already supplied equipment for several Indian lighthouses. They describe the equipment for Dwarka as being one of the most powerful in Asia.

Jute

NEED TO DIVERSIFY THE USES OF JUTE

LAWLESSNESS RESTRICTS CALCUTTA GUNNY MARKET ACTIVITY

MORE than ten years ago, a commentator, writing on the "need for more and better Indian jute," asked: "Has research been worthwhile?" At that time, India produced only about 2 million bales of fibre a year, and relied on Pakistan to supply something like 5.5 million bales of her requirements. A shortage of jute was in the offing due to crop damage in Pakistan, and India was urged to stimulate to the utmost the production of her jute and its use by her mills. It was stated that "overseas customers cannot take the whole of Pakistan's crop, and Pakistan herself cannot turn it into finished goods. India is Pakistan's best customer (for jute), and must remain so for as long as anyone can foresee." At that stage, not only was India troubled by anxiety about her raw material supplies; the industry as a whole was strangled by controls in the form of gunny export quotas for different countries, export duties, quota allocations for Pakistan-India shipments, and so on.

How completely conditions have changed. India is no longer dependent on Pakistan for her supplies. Pakistan can now consume a large percentage of her raw jute in her own mills, through which she has successfully challenged India's monopoly, and emerged as a major competitor in the world jute goods market. Controls and quotas for the import of Pakistani jute still remain, but for an entirely different reason, and India can now earn foreign exchange by exporting her surplus jute.

In view of all this, what would be the answer today to the question asked over a decade ago: "Has research been worthwhile?" On the face of it, a unanimous answer in the affirmative would seem apt. But in present conditions, when the industry faces strong competition from substitutes, new uses must be found for the surplus jute. Research is carried on by the Indian Jute Mills Association and the Indian Central Jute Committee. The former concentrates mainly on problems relating to manufacturing processes, while much of the latter's work concerns plant research. But both bodies combine and conduct experiments in every branch of the industry. There is general satisfaction in the trade over the work done at the research establishments, and "new uses for jute" are continually being developed. Some, however, maintain that more use could be made of the facilities available. This view is strongly supported by many potential buyers, who still find it very difficult to get mills to accept orders for highly specialised goods which may entail the use of extra manufacturing processes. If the industry becomes apathetic, it may well be asked with good reason: "Has research been worthwhile?"

Slump in Calcutta Markets

In the early part of the past week, normal trading in Calcutta was disrupted by lawlessness, riots and the inevitable *hartal* which the long-suffering Calcutta public now invariably accepts without protest. Many mills were unwillingly forced to close last Thursday by gangs of demonstrators. Due to unrest, production was further cut by the large percentage of absenteeism on the following days, and this had a considerable bearing on market reactions. Overseas buyers showed no interest in sacking or hessian, and price movements were controlled mainly by speculative activity Operators in many instances were content to await the publication of U.S. burlap stock and consumption figures as these are often the barometer by which conditions are judged. The price gap between near and forward sacking prices was further reduced during the past week by about Rs. 1.50 to just over Rs. 5. as forward shipment B Twills fell by nearly Rs. 7 and near B Twills by Rs 5.50. The price gap between near and forward B Twills, before the squeeze was placed on ready goods by the Chinese order, was Re 1 or Rs. 2. so many thought that interest would not revive until these conditions returned. Hessian was quiet, and price movements were small in comparison with sacking. Little or no business was reported, and over the week rates fell by about 50nP.

The fibre markets were also quiet, and mills took very little interest in offers. Although rates declined slightly, operators were reluctant to make any marked reduction and preferred to wait for buyers' counter-bids. These were few and far between, so in the absence of business prices could be considered nominal. Rates in the growing districts were still above Calcutta parity, and there was considerable resistance to any lowering of prices upcountry. Crop reports from the northern Bengal areas remained discouraging The rainfall reported last week was negligible compared with previous years, and in no way alleviated the extreme shortage of steeping water. Harvesting was progressing only slowly as river levels were falling rapidly. Elsewhere conditions were very favourable with alternate rain and sunshine, and harvesting and preparation of the plants was well in hand. Quality still left much to be desired but was expected to improve in the near future.

Increase in Hessian Exports

According to the Indian Jute Mills Association, exports of hessian in the 1958-59 season showed a marked increase. Total exports amounted to 454,800 tons, or 67,000 tons more than during the previous season. The bulk of this (42,600 tons) was accounted for by a rise in shipments of hessian to the U.S.A. The United Kingdom accounted for a further 11,000 tons. Canada, Australia and the Argentine, and European, Middle Eastern and Far Eastern countries, all recorded increases.

THE JUTE MARKETS

The futures market was active during the past week and sacking prices fluctuated widely. Quotations, as given by the East India Jute and Hessian Exchange Ltd for the period 2nd September to 8th September, were as follows:

	Hessians 40in 10oz. November		Sacking B Twills November		Raw Jute September	
	Rs a 100 yds	Rs a 100 metres	Rs a 100 bags	Rs a md	Rs a 100 kilos	
Opening	40.46	44.24	100.85	23.32	62.48	
Highest	40.90	44.72	101.80	23.42	62.75	
Lowest	40.00	43.74	97.65	22.66	60.71	
Closing	40.08	43.83	97.85	22.88	61.30	

Manufactured Goods: The market was closed last Thursday due to the *hartal*. On Friday morning, it was slightly steadier due to the closure of some mills during the disturbances on the previous day. B Twills advanced by 25nP to Rs. 105.75 for September shipment, this being a premium of Rs. 6.75 over January-March. Hessians also increased by 25nP, bringing 40in. 10oz. to Rs. 41 for September and Rs. 39.95 for January-March. During the day, prices fell rapidly. By Saturday morning, Re. 1 had been taken off most sacking quotations, and 10nP or 20nP off hessians. Heavy speculative activity over the week-end caused wide variations in prices, and at the opening on Monday, rates were again reduced by the same amounts as on Saturday. Business was restricted at this stage as a Jain festival prevented many connected with the jute trade from taking an interest in the day's proceedings. Selling pressure in heavy goods succeeded in reducing B Twills by Rs. 2.25, making Tuesday's opening quotations for September shioment Rs. 101.25. This was Rs. 4.50 below the week's opening prices. There was brisk activity in the market on Tuesday, but towards the close operators paused, waiting for the publication of the industry's monthly stock statistics.

Opening quotations on Wednesday morning were as follows:

	September	October	Oct.-Dec.	Jan.-March
40in 8oz.	33.25 (33.24)	32.80 (75.75)	32 45 (35.37)	31.60 (24.44)
40in. 10oz.	40 35 (43.98)	40 30 (43.93)	40.25 (42.87)	39.50 (43.06)
B Twills	101.15	99.50	98.:6	96.75
Heavy Cees				
(Plain)	102.75	99.50	98.00	95.75
A Twills	120.00	1?9.25	116.25	114.75
Liverpools	112.50	111.00	109.50	108.00
Cornsacks	101.50	100 75	99.75	99.75

Raw Jute: The fibre markets were dull and inactive during the past week, and only small business was reported. In spite of the large fluctuations in goods prices, raw jute rates showed little change in the early part of the week, and at the opening, Assam Bottoms were quoted at Rs 23.25. These prices were purely nominal in the absence of business, but sentiment was unsettled due to the disturbances which took place in Calcutta on Thursday and prevented the market from opening. Towards the week-end, prices eased in sympathy with heavy goods, but sellers' attitude remained steady, and they were reluctant to offer at reduced rates. There was a feeling, however, that if any definite indications at the lower prices were offered, these would be met. Adverse weather conditions in the northern Bengal areas, and the fact that upcountry prices were still above the parity of Calcutta rates, caused many sellers to withdraw from the market after the week-end. On Tuesday, Assam rates were reduced to Rs. 22.75 but there were very few offers. At the close, the position was unchanged with sellers not inclined to sell at lower prices. There was an improvement in wagon arrivals at Cossipore last week, and a total of 800 wagons were logged. This was well up to the average of previous years.

Business was done in Northern jute at Rs. 22 to Rs. 22.25 basis Bottoms, and at Rs. 24.75 for Middles only. Assam Middles only were done at Rs. 25 a maund. Daissee White passed at Rs. 22 and Jungli White at Rs. 20.75 and Rs. 20.50 basis Bottoms. B Bottoms and X Bottoms of the same variety were reported at Rs. 20 and Rs. 19, respectively. Desal White was reported at Rs. 21.50 basis Bottoms.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
New Crop:			
Assam	22.75	60.97	Sept.-Oct.
Northern	22.50	60.30	"
Purnea Desal	21.75	58.29	"
Daissee (selected)	23.50	62.98	"
Assam Tossa	23.75	63.65	"
Northern (ex Calcutta)	22.25	59.03	"
Mesta			
Assam-Northern	21.50	57.62	Oct. Nov.
Desal	21.25	56.95	"
Daissee	21 90	56.28	"
Jungli	20.50	54.94	"

THE FOREIGN JUTE MARKETS

UNCERTAINTY IN GOODS TRADE

(FROM OUR DUNDEE CORRESPONDENT)

THERE is no knowing how the jute goods trade will be affected by the events on the Indo-Chinese border or how long the Chinese communists will stay. The Calcutta goods market was seriously upset by the rioting in Calcutta, but it is remarkable that prices refrained from shooting upwards. The reports reaching here simply say that prices quoted are nominal, although they are up about 6d for both hessians and sackings from the end of last week.

Little change has taken place in the raw jute market in Pakistan. Sellers are offering quite freely, but their prices are not being seriously tested. There seems to be little doubt that £89 would be accepted for Mill Lightnings or £79 for Mill Hearts, although sellers are mostly naming £90 and £80, respectively, for September-October shipment, c.i.f., U.K. Mill Firsts are quoted at £107, but up to £109 is also asked, while Grade Hearts are at £66, good marks of Daissee-2/3 at £93 and grade at £86, Grade Tossa-2/3 from £106 and fours from £93, September-October. Spinners are buying only small lots of jute where suitable parcels are offered, mostly on spot or afloat, at around the above shipment rates.

The Calcutta goods market was nominal for two days due to the *hartal* which had been declared. There are, however, quotations of 61s 9d for 40in. 10oz. and 47s 9d for 7½oz., September, 62s and 47s 3d October, 62s and 46s 9d November and 62s and 46s December, with B Twills at 158s, 155s 6d. 153s and 151s 6d for the respective months of shipment, all f.o.b., Calcutta. Little or no business has been reported here

With the easy tendency for raw jute prices buyers of jute yarns and cloth are hesitating to purchase Many orders are, however, being placed for quick delivery and it is mostly the forward position that is suffering from lack of orders.

There is a definite scarcity of workers for the jute industry in Dundee. Many advertisements are appearing in the local Press for spinners and weavers, demand for whom never appears to be satisfied. A good number of new establishments have been opened up locally in other trades and the uncertainty of employment in the jute industry has caused workers to move on to these. Prices for yarns and cloth are very steady, though the Rio yarns were reduced by about £5 a ton last week and common rove by £2 15s a ton.

I.J.M.A. STOCK FIGURES FOR AUGUST

The Indian Jute Mills Association reports that the stocks of jute goods at the end of August were as follows:

Description	31st August 1959 Lakh Yds (000 metres)	31st August 1959 000 tons (000 Metric Tons)	31st July 1959 Lakh Yds (000 metres)	31st July 1959 000 tons (000 Metric Tons)	Increase over (+) or decrease from (–) last month Lakh Yds (000 metres)	Increase over (+) or decrease from (–) last month 000 tons (000 Metric Tons)	31st August, 1958 Lakh Yds (000 metres)	31st August, 1958 000 tons (000 Metric Tons)
Hessian Cloth and Bag	9.01 (8,24.08)	24.7 (25.1)	9.42 (8,61.57)	26.0 (26.4)	+41 (—37.49)	— 1.3 (—1.3)	6.83 (6,24.96)	19.0 (19.3)
Sacking Cloth and Bag	10.96 (10.01.97)	45.8 (46.5)	13.01 (11.89.43)	54.1 (55.0)	—2.05 (—1.87.46)	—8.3 (—8 5)	21.00 (19.20.30)	86.4 (87.8)
Others		10 6 (10 8)		12.7 (12.9)		—2.1 (—2.1)		11.8 (11.9)
Grand Total		81.1		92.8		—11.7		117.2
(000 Tons/Metric Tons)		(82 4)		(94.8)		(—11.9)		(119.0)

N.B. These figures are based on replies received and represent all members of the Association and Garulbha with estimates for three non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures and are more precise.

THE NORTHBROOK JUTE COMPANY LIMITED

AT a meeting of the Board of Directors held on the 29th day of August, 1959 the following Dividends were recommended to be paid for the year ended 31st March, 1959 without deduction of income tax paid by the Company in each case.

On Preference Shares @ 2¼% making a total of 5½% P.A. for the year.

On Ordinary Shares @ Rs. 1.25 per share for the year.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

UNION JUTE COMPANY LIMITED

ANNUAL GENERAL MEETING
PUSSIMBING TEA CO. LTD.,

NOTICE is hereby given that the Share Transfer Books of the above Company will be closed from 17th September to 30th September, 1959, both days inclusive.

By Order of the Board,
N. K. BOSE,
Director.

85, Netaji Subhas Road,
Calcutta-1.
1st September, 1959.

PUSSIMBING TEA COMPANY LIMITED.

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the Company will be held at the Registered Office at 85, Netaji Subhas Road, Calcutta, on Wednesday the 30th September, 1959 immediately on the conclusion of the Annual General Meeting of Members to be held at 11 A.M. on the same date to consider and, if thought fit, to pass the following resolutions :—

As Special Resolutions :—

1. **Resolved** that the Authorised Capital of the Company be increased to Rs. 10,00,000/- (Rupees Ten Lacs only) by creating 2,950 7% cumulative redeemable Preference Shares of Rs. 100/- each and 29,500 Ordinary Shares of Rs. 10/- each.

2. **Resolved** that the Articles of Association of the Company as drafted to comply with the provisions of the Companies Act, 1956 and placed before the meeting and signed by the Chairman for identification be and are hereby approved and adopted in substitution for and to the exclusion of all existing Articles of Association thereof.

3. **Resolved** that the Board of Directors be and is hereby permitted to borrow money from time to time for the carrying on of the business of the Company notwithstanding that the money to be borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceed the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes.

4. **Resolved** that the Board of Directors be permitted to borrow money from Messrs. P. K. Bose & Bros. Private Limited in which one of the Directors of the Company is interested or from Sri N. K. Bose a Director of the Company at rates of interest not exceeding 1% than the rates charged by the scheduled banks for demand loans and that the transactions effected with the said Company or with the said Director previously be and are hereby approved and ratified.

EXPLANATORY STATEMENTS.

Special Resolution No. 1: In order to finance the development plans of the Company, it is necessary to raise the authorised capital of the Company. This resolution is in accordance with the provisions of the Articles of the Association of the Company.

Special Resolution No. 2: In order to comply with the provisions of the Companies Act, 1956 it has become necessary to revise the existing Articles of Association of the Company.

Whilst revising such Articles an opportunity has been taken for introducing usual provisions for the appointment of Managing Directors. These provisions have become all the more necessary because of the resignation of the Company's late Managing Agents some time back.

A copy of the new set of the Articles is available for inspection by the Members at the registered office of the Company during usual business hours on any working day before the date of the Meeting.

Special Resolution No. 3: The above resolution is intended to enlarge the statutory borrowing powers of the Board of Directors for the purpose of the Company's business in excess of the limit prescribed by Section 293 (1) (d) of the Companies Act, 1956. To enable the Company to keep in production, it is necessary from time to time to borrow money in excess of the limit prescribed by Section 293 (1) (d) of the Companies Act and the resolution is intended to cover up such a contingency.

Special Resolution No. 4: The Company is in short of cash balance for the carrying of the day to day business of the Company since it became a Directors' controlled Company. To keep the Garden working, it is necessary to borrow money from time to time from Messrs. P. K. Bose & Bros. Private Ltd., in which Sri S. Mitra, one of the Directors of the Company is interested and also from Sri N. K. Bose a Director of the Company. As it is now felt that such transactions come under the purview of Section 314 of the Companies Act, 1956, this special resolution is sought to be passed if approved.

By Order of the Board,
N. K. BOSE,
Director.

Calcutta, 25th August, 1959.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

DHELAKHAT TEA COMPANY LIMITED

NOTICE is hereby given that the Forty-first Annual General Meeting of the Shareholders of Dhelakhat Tea Company Limited will be held at the Registered Office of the Company, No. 31, Chowringhee Road, Calcutta on Wednesday the 30th day of September, 1959 at 9-15 a.m. for the following purposes :—

1. To receive the Directors' Report for Season 1958.
2. To pass the Accounts for the year ended 31st December, 1958.
3. To confirm the Interim Dividend paid on 1st May, 1959.
4. To declare a final Dividend.
5. To elect Directors.
6. To elect Auditors for the current year and to fix their remuneration.
7. To transact any other ordinary business brought before the Meeting.

And also to transact the undermentioned Special Business :—

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution :—

"That the following contract between the Company and its Managing Agents a draft whereof has, for the purpose of identification, been subscribed by the Chairman of this Meeting, be and the same is hereby approved and the Directors are hereby authorised to execute the said contract on behalf of the Company with all convenient despatch."

Description of Contract

A Contract for the purchase by the Company from its Managing Agents of Tea Garden supplies of all kinds, including tea machinery, Motor Vehicles, Tractors & Implements, accessories and spare parts therefor and tools and other tea garden requisites in all of which the Managing Agents regularly trade or do business and which the Company may require for the purpose of its business.

The Share Transfer Books of the Company will remain closed from 16th September, 1959 to 30th September, 1959, both days inclusive.

As dividend warrants are sent only to registered shareholders or to their mandatees, shares on blank transfer should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board.
JAMES WARREN & COMPANY LIMITED,
Managing Agents.

31, Chowringhee Road.
Calcutta, 27th August, 1959.

The Dividend when sanctioned will be payable on and after 30th September, 1959 to those Shareholders whose names stand on the Register on 15th September, 1959.

NOTE: A member entitled to attend and vote at this Meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

An Explanatory Statement will be circulated to all the Shareholders with the Directors' Report & Accounts.

JUBBULPORE ELECTRIC SUPPLY COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, 1 on Wednesday, the 30th September, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-00 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely :—

"That approval be and is hereby accorded to the re-appointment of Martin Burn Limited, as Managing Agents of the Company for a further period of 10 years with effect on and from the 16th August, 1960, on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of identification signed by the Chairman thereof, and that an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956 be and is hereby directed to be made".

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1.
5th September, 1959.

NOTE: (i) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and, on a poll, to vote instead of himself. Such Proxy need not be a Member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

THE CALCUTTA TRAMWAYS COMPANY LIMITED
(Incorporated in England)

THE Directors of The Calcutta Tramways Company Limited announce that subject to final audit, the result of the working for the year ended 31st December, 1958, was as follows :—

	£	£
The Revenue for the year after transferring £80,000 to Renewals and Replacements Account was		17,041
Against this has been debited :—		
Provision for Wealth Tax	11,277	
Debenture Interest ...	22,306	
	33,583	
Less Income Tax deducted from Debenture Interest, less Tax on Investment Income	9,077	24,506
leaving a deficiency for the year of		7,465
In accordance with the Agreement dated 30th August, 1951, between the Governor of West Bengal and the Company, there has been credited to Shareholders' Account the sum of		87,457
making a deficiency of ...		94,922
which has been transferred to Special Reserve Account in terms of the above Agreement.		
The amount credited to Shareholders' Account as above is :—		87,457
out of which is payable :—		
Cost of 1st Debenture Stock purchased for cancellation	1,782	
2nd Debenture Stock Redemption	7,111

THE MEGNA MILLS COMPANY, LIMITED.

NOTICE

NOTICE is hereby given that an Annual General Meeting of the Members of THE MEGNA MILLS COMPANY, LIMITED, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Tuesday, the 29th day of September, 1959, at 3 O'clock in the afternoon for the following purposes :—

1. To consider the Profit & Loss Account of the Company for the year ended 31st March, 1959, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolution which will be proposed as a special resolution.

5. That consent be and is hereby accorded to Sri Rajendra Bajoria, who is a relative of Sri C. L. Bajoria, a Director, within the meaning of Section 6 of the Companies Act, 1956, being appointed to and holding an office or place of profit under the Company.

The Share Transfer Books of the Company will be closed from 18th September, 1959 to 29th September, 1959, both days inclusive.

By Order of the Board,
J. A. IRONS,
Secretary.

16, Strand Road,
Calcutta, 1st September, 1959.

Note : A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

(Pursuant to Section 173(2) of the Companies Act, 1956)

Under Section 314 of the Companies Act, 1956, no relative of a director of a company may without the previous consent of the company accorded by special resolution hold any office or place of profit under the company other than certain offices specified in that section. Sri Rajendra Bajoria is a son of Sri C. L. Bajoria, a Director of your Company, and it is proposed to appoint him as a Personal Assistant to the Directors on a remuneration of Rs. 2,000/- per mensem.

In order to comply with the requirements of Section 314, Resolution No. 5 as set out in the convening notice is to be considered at the annual general meeting.

No Director of the Company except Sri C. L. Bajoria has any personal or fiduciary interest in the proposed resolution.

THE BHAGWATI PRESSING CO. LTD.

Notice to Shareholders.

NOTICE is hereby given that the next Annual General Meeting of the Shareholders of the Company shall be held at the Registered Office of the Company at 9, Brabourne Road, Calcutta on Wednesday the 30th September, 1959 at 4-30 P.M. for the following purposes :—

1. To receive and pass the Report of the Directors and Audited Accounts for the year ended 31st December, 1958.
2. To Declare Dividends.
3. To elect Directors in place of those retiring.
4. To appoint Auditors.
5. To transact any other business that may be brought before the Meeting.

DIVIDENDS if declared will be paid to registered Shareholders only.

The Share Transfer Books of the Company will be closed from the 23rd September, 1959 to 30th September, 1959, both days inclusive.

By Order of the Board.
RAMDUTT RAMKISSENDASS,
Managing Agents.

Calcutta, 7th September, 1959.

A member entitled to attend and vote at the above Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

RAJAHBHAT TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of RAJAHBHAT TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th September, 1959, at 2-50 P.M. for the following purposes :—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956 :—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
3. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

4. To consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto :—

   "That Mr. A. K. Jalan be and is hereby appointed a Director of the Company liable to retirement by rotation."

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 1st September, 1959.

EXPLANATORY STATEMENT

Mr. A. K. Jalan was appointed an Additional Director of the Company in July, 1959, and vacates Office at this Annual General Meeting. A Special Notice has been received from a member of the Company notifying his intention to propose a Special Resolution as set out in item 4 of the above Notice. In the said Special Notice, it has been pointed out that Mr. A. K. Jalan is an "associate" of the Managing Agents and that, in view thereof, it will be necessary for the members to pass a Special Resolution, in conformity with Section 261 of the Companies Act, 1956, if they desire to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

JARDINE HENDERSON, LIMITED.

NOTICE is hereby given that an Interim Dividend at the rate of 2½ per cent. less Indian Income-tax and Super-tax at the prescribed rate thereon, will be paid to the Registered holders as on the 5th October, 1959, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1960.

The Share Transfer Books of the Preference Shares will be closed from 28th September to 5th October, 1959, both days inclusive.

By Order of the Board,
I. F. MORRISS,
Acting Secretary.

4, Clive Row,
Calcutta-1, 1st September, 1959.

MONETARY MANAGEMENT IN A MODERN ECONOMY

THE Radcliffe Report will no doubt take its place in economic history as the first practical and exhaustive analysis attempted anywhere in the world of monetary management techniques in the new, post-war variety of liberal growth-capitalism. Its importance for the vulnerable economy of the United Kingdom, on which its investigations have been based, is clear enough. But partly because that economy is so complex and finely balanced, and partly because it has already provided so many models for monetary practices and institutions elsewhere, the Report's significance will not be limited to the British example alone. There is something in it for all central monetary authorities to ponder, especially those in India. Its influence promises to be both far-reaching and lasting; unlike the ill-fated Macmillan Report of the pre-war period, which covered much the same ground, it appears unlikely to be overtaken by events. Whereas pre-war economic problems in capitalist countries centred round the control of deflation-induced depression, those of the post-war period are chiefly concerned with managing inflation-stimulated conditions of boom. This is another reason why the Report will be widely read abroad, especially in those countries —whether professing socialism or not—where the inflation generated by development is calling continually for new techniques of economic management. The Radcliffe Committee has provided the world with a great deal of sound, time-saving comment and advice.

For countries such as India, and indeed for the developing world as a whole, one of the more significant features of the Report is the importance it attaches to keeping the question of stability as far as possible out of politics. Although it distinguishes three main methods of economic management—physical controls, fiscal policy and monetary policy—and excludes the first two from its field of investigation except in very general terms, it does emphasise that the choice between them should be made on grounds of economic and not political expediency. There is no attempt to deny ultimate government responsibility either for the balancing of policy objectives where these conflict, or for the choice of measures by which they are pursued. But there is a clear attempt to establish the criterion of economic growth with stability as being above mere political considerations, especially where these are based on ideology. This may be crying for the moon, even in the comparatively simple case of the United Kingdom, but it is an indication that economic management may at last be in the process of being recognised as a science in itself. The idea may not be as far-fetched as it sounds. Certainly in Britain during the past few years there has been clear evidence of widespread disillusion with ideological approaches to economic problems the management of which is becoming increasingly technical. Nobody now believes for a moment that the changes which will take place in the handling of Britain's monetary affairs if the Labour Party wins the next election, will be anything but marginal. No democratic government in the West these days can get away for long with playing the ideological fool with people's aspirations for prosperity and their freedom to enjoy it. Perhaps the day is not far off when the same will be true in the under-developed countries—when ideology-ridden governments will be more willing to listen to the advice of their experts and resist the temptation to meddle too freely with matters they so seldom know enough about.

One of the facts which limits the value of the Radcliffe Committee's recommendations for India is the restricted scope which exists in this country at the moment for the exercising of monetary policy. That is not to say this scope could not, with considerable benefit to the economy, be extended. In Britain's case, the Report stresses the need to work through interest rates rather than the supply of money or the direct control of credit, while at the same time acknowledging the limitation of interest rates as a method of regulation in periods of excess liquidity. As India's position has become one of almost chronic excess liquidity due to deficit financing, it follows that interest rate manipulation, by itself, would be completely inadequate to maintain stability. Whether the present policy of neglecting interest rates altogether in favour of physical controls is the mark of wisdom and not the expression of current ideological fads, is, of course, another matter. A more judicious mixture of the two might be more effective, and here the Report's comments on the influence of long-term interest rates have considerable relevance for India's case. It is questionable whether, in a developing economy such as this one, a slightly higher structure of long-term interest rates would discourage productive investment—unless the Government persists in its policy of driving down the rate of return on equity capital—whereas it would certainly encourage saving and probably release a considerable amount of capital from socially less desirable uses. The amount by which it might increase the cost of the national debt would be negligible. Far more important in diverting capital from productive uses than the long-term rate of interest in India today, is the ideological antagonism towards private investment generally. The findings of the Report tend to confirm the uselessness of Bank rate as a method of regulation in a developing economy such as India's, and especially one which, unlike Britain's, is not the centre of an international currency system. It does, however, point out the main weakness in the alternative system of physical control of credit, which is the one used by the Reserve Bank at the moment. This is simply the fact that such controls tend to be rendered ineffective sooner or later because prospective borrowers can generally raise the money they want by other, uncontrolled, forms of borrowing. There can be little doubt that this is precisely what is happening in India today; it may be one possible explanation for the rise in food prices in a year of record harvest. One of the main lessons of the Report for this country would, therefore, seem to be that despite the absence of a well-developed bill market, there is more scope for the use of interest rates, especially long-term ones, although fundamentally the present emphasis on physical credit control is probably justified under current inflationary conditions. The Reserve Bank is no doubt fortunate that it is able to implement this policy so easily without having to consider such factors as a growing market for hire purchase, which at present appears to be complicating monetary management in the U.K.

The other main section of the Radcliffe Report which will no doubt receive serious study here is that dealing with the rôle of the Bank of England. It would, of course, be unwise to apply directly to the Reserve Bank of India a set of comments which are, after all, intended for a special case. All central banks work under their own peculiar conditions, and their effectiveness has to be judged against their own particular background. The general theme of the Committee's remarks about the Bank of England would seem to be that it at present enjoys too much autonomy; or what might be more correct, *appears* to enjoy too much autonomy. Nobody could say that of the Reserve Bank of India. On the contrary, the fault is probably the other way. Perhaps the main lessons for Indian conditions lie in the Report's suggestion for a standing advisory committee on monetary policy to include representatives of the Bank of England, the Treasury and the Board of Trade. A similar committee in this country would probably consist of representatives of the Reserve Bank, the Finance Ministry and the Ministry of Commerce and Industry. In the present context of central planning, its influence would probably not be great. But the guidance it could offer on, say, the safe level of deficit financing—a matter about which the Reserve Bank has lately voiced tentative warnings in the annual report of its directors—would be of considerable value and might help avoid economic recklessness committed for political motives. Without the complications presented by the historical background of the Bank of England, the Reserve Bank of India cannot be suspected of wanting to live a life of its own; the real danger is that, again lacking the strength derived from historical precedent, it will not be allowed to exert the influence it ought to in the interests of a stable economy. That brings the discussion back to the chief weakness of the Indian economy today—the fact that it is far too ridden with politics and too seldom guided by expert opinion.

It would scarcely be accurate to say that this question of placing steady economic progress and its management above politics is the theme of the Report, but it is certainly one of the more obvious points to be obtained from it. Economic management is becoming a more technical business with every year that passes; indeed, whether a nation chooses to advance by liberal or socialist means makes surprisingly little difference these days to the nature of the problems it has to overcome. The Report is not intended as a textbook, much less a manifesto. But apart from its more limited application to the economic set-up in the United Kingdom, its acceptance as one of the first really detailed and practical—if unintended—attempts to establish modern monetary management as a science in its own right, would appear to be assured.

FOREIGN TRADE PROSPECTS

INDIA'S foreign trade remains in the doldrums. The exchange reserves are down to a mere Rs. 302 crores or so; exports have increased only fractionally; and there has been a sharp rise in imports. For well over a year, the country has been jogging along on the steam of foreign aid; the statements made by official spokesmen at the latest meetings of the Export and Import Advisory Councils in New Delhi over the week-end indicate that this is likely to be the case for as far ahead as one can foresee. No serious attempt is afoot to secure an appreciable increase in exports, although the inaugural speeches delivered by the Commerce and Industry Minister, Mr. Lal Bahadur Shastri, at the meetings try to give the impression that revolutionary new forms of assistance are being devised. As for imports, the Government is reconciled to the fact that they are already as small as possible if economic activity is not to suffer further; the squeeze on consumers and private industry is to be maintained, although the public sector will continue to allow itself a certain extravagance. All this makes a disheartening background to the current clamour for a "big" third five year plan. If a Rs. 10,000-crore plan is to be framed and a few thousands of crores are to represent its foreign exchange cost, huge sums will be required as external aid; India's present experience may not seem to potential helpers abroad a striking example of the excellence of her economic management.

About imports, there is relatively little to be said. And Mr. Shastri, in a long speech, did not manage to say very much either. He pointed out that although the foreign exchange difficulties remain enormous, the country is no longer facing an emergency because: (1) aid has come from countries like the United States, Britain, Russia and West Germany; and (2) imports have been cut. It is "hoped" that the core of the second plan will be completed. For the rest, all the Government can say is that, within the available resources, it will do "everything possible" to eliminate "all available (sic) hardships and obstacles" for all possible beings. That Mr. Shastri's "everything possible" can in fact only mean very little, is a point which even optimists will not have missed. The Commerce and Industry Minister has reiterated the assurance that raw materials will be given higher priority than capital goods so that existing

capacity can be used more fully; but has not explained why imports of the latter remain so high (16 percent of the total, in the first half of 1959) when many industries are languishing for want of their essential requirements.

The prospects for the future, judging from the speech, are dismal. Food imports may or may not increase, depending on the shortfalls in domestic agriculture and on the possibility of negotiating more aid agreements with countries like the United States. The consumer is promised nothing: he is urged only "to encourage our indigenous goods and not keep running after expensive items of foreign manufacture"—in other words, to continue paying more and more money for products of shoddy quality. The user of industrial raw materials can expect only a marginal liberalisation of imports, if even that. This is because, except for U.S. cotton under P.L. 480 and certain non-ferrous metals under the Colombo Plan, these materials generally cannot be obtained under foreign aid agreements, and they have to be paid for out of India's own resources. The position for the import of capital goods, according to Mr. Shastri, is "appreciably better, subject to certain limitations." The limitations are: (1) capital goods can be imported only for essential projects, especially those which will save foreign exchange; (2) the foreign credits given for buying them can be used only in the countries giving the credits, except in the case of the U.S. Development Loan Fund and World Bank aid; and (3) despite the tub-thumping on the subject two years ago, the Government will no longer encourage buying capital goods on conventional deferred payment terms, as the load of repayments throughout the third plan period is already "fairly heavy." The scope for greater discrimination against the private sector under limitations (1) and (3), and even (2), is evident.

However gloomy Mr. Shastri's speech to the Import Advisory Council may have been, his address to the Export Advisory Council on the following day was even more so. His sole contribution to the effort to promote exports in recent years can be sub-divided under six broad headings: (1) homilies; (2) platitudes; (3) exhortations; (4) verbosity; (5) threats: and (6) claps and slaps (claps for industries which happen to export more, and slaps for those which do not). The latest address is no exception. It expresses a delight reminiscent of past complacency when highlighting the fact that India has sold a few crores worth more of goods in the first half of this year than in the corresponding period of 1958 (the precise increase is difficult to calculate because the various figures quoted in the official Press note are contradictory). Those dealing in the four main export items—tea, cotton piecegoods, jute manufactures and manganese ore—are denounced because their foreign sales have decreased. On others, especially sellers of engineering goods, is bestowed general praise that seems reasonably well justified. The fact that tea and cotton textile sales have decreased primarily because of the Government's own extraordinary fiscal policies is calmly ignored. So also is the fact that competition in the world jute goods trade has increased sharply since the Ayub Khan regime began to help the Pakistani producers much more than India has helped her industry. The State Trading Corporation's contribution to the fall in manganese ore exports receives no recognition whatsoever. Mr. Shastri reaffirms his acquaintance with mathematics by urging new export industries to sell 10 percent of their production abroad and existing industries to increase their exports by 10 percent—although apart from the exhortation, he has no more to offer than the Calcutta *maidan* orator who pleaded for a 110 percent increase in exports.

The facts about India's export trade have long been known, although those who confine their reading to Mr. Shastri's speeches may by now have come to regard them as among the more inscrutable of economic mysteries. The first fact is that exports are suffering because production costs are too rigid and too high for a competitive world market; the costs are inflated more by taxes and labour charges than by simple inefficiency. The quality of the goods India has to offer is often poor, this is partly the fault of the industries, and partly of the Government which does not allow them to get the right raw materials in the right quantities and at the right time. That not many producers are enterprising about promoting exports is also true, but this is an inherent defect which the Government could do much to cure by offering facilities and incentives, by cutting the red tape of export controls and by encouraging stiffer competition within the usually protected home market. The incentives which Mr. Shastri has been talking about so loudly have been a little short of useless, and have done almost nothing to bring about the recent recovery in exports. Many who recall that he was blaming the 1958 slump in India's exports on the recession in world economic activity, will ask why he is not ingenuous enough to admit that the latest recovery is attributable mainly to the passing of that recession—and not to anything the Government has done.

ELECTION CONSEQUENCES IN BRITAIN

ALTHOUGH the date of Britain's general election, 8th October, was not announced until 8th September the idea of an election about that time took root in July. Then the London Stock Exchange suffered a relapse. The industrial sections of the market had been rising for nearly 1½ years, and substantial capital gains would be in jeopardy if the election put the socialists in power. So it was argued in July. Then in August investors realised that if the Conservatives were returned to power prices of shares could go much higher; they decided that the Conservatives would probably be returned; and a strong buying movement carried prices to new peaks. Around the time of the announcement in September fluctuations were violent, repeating the former pattern on a narrower time-scale. So the London Stock Exchange has left no doubt that it regards a socialist government as very different from a Conservative one. But the foreign-exchange market has not been so positive in its reactions; sterling remained surprisingly firm even when doubts about the election were combined with the seasonally adverse factors and the rise in U.S. interest-rates.

That the stock market and the exchange market have behaved differently does not necessarily mean that they take a different view of the prospect. They might both agree that a change of government would affect the internal economy, but not the international position of the currency. Both political parties have, in fact, asserted that they will maintain a stable currency, and there is no reason to doubt that they are sincere, for the Conservatives have shown that they appreciate the importance of stability and the socialists would certainly not want the problems of instability added to the difficulties that are normally associated with new policies.

However, while the socialists do not intend to change the structure of the economy, their methods of managing it would differ from the Conservatives', and the difference might affect the exchanges as well as the internal economy. The socialists believe in centralism, and therefore in controls—though any controls imposed in the present circumstances would be slight by comparison with those of the early post-war years. The socialists' insistence on economic expansion is rather stronger than the Conservatives', and they would be less willing to restrict expansion for the sake of the currency. It is most unlikely that they would tolerate devaluation of the currency, but if it weakened they might reinforce exchange-control. Why, it may be asked, is the Stock Exchange apprehensive of a socialist victory if the socialists are so interested in expansion? The reason is partly psychological, a vague belief that the socialists are hostile to private enterprise. But some investors have convinced themselves that, after a sharp relapse, share prices will resume their rise even if the socialists win. They argue that the socialists would be more tolerant of inflation than the Conservatives have been in the last two years, and that the active business and rising prices that would result from it would be good for ordinary shares.

On the other hand, the socialists are traditionally favourable to "cheap money", and, though they would certainly not resort to the unsound methods of reducing interest-rates that were adopted soon after the war, they might apply policies that would moderately raise prices of government stocks—unless, of course, inflation were so obvious that investors would reject fixed incomes. As rising bond prices provide support for rising share prices, it seems that shareholders should be happy with a socialist government. The fault in the argument is the Government's attitude towards shareholders as a class. Leading socialists may admit in private that a tax on capital gains would be futile and that "freezing" dividends could be positively harmful, but such devices might be employed to impress the unions if the unions' demands for wage-increases became embarrassing. Mr. Hugh Gaitskell—destined to be the next Prime Minister if the socialists win—has had the courage to tell the Trades Union Congress, in the course of the election campaign, that if the trade union movement wishes to be a positive force in a socialist-governed economy it must moderate its claims; because his government, he said, would be "determined to carry out industrial expansion in a planned way without inflation".

Perhaps, then, there is not much substance in the idea that the socialists in office would be more lax than the Conservatives have been recently. Perhaps they learned the lessons of "creeping inflation" while out of office, just as the Conservatives learned those lessons while in office. But the City is not wholly convinced of this change of heart. The change in the socialists' attitude towards nationalisation (in Britain as in West Germany and various other countries) is undoubted. They seem to feel morally committed to some form of nationalisation of the steel industry and of road-haulage services, but in respect of other enterprises they are more interested in acquiring shares (ostensibly, however, only for profitable investment of the superannuation fund) and in co-ordinating the development plans of big companies. The idea of public investment in ordinary shares does not appeal to private investors, particularly large ones such as insurance companies, because the market would thereby "lose" too many good shares; but it would obviously raise the value of shares and could thereby help industry by enabling companies to raise new capital on favourable terms. Co-ordination of capital plans could also be advantageous—it might avoid the temporary excesses of capacity such as have arisen in recent years in the paper industry and others. But industrialists would naturally resent official interference. A change to a socialist government would probably imply more direct action, particularly through the Budget, and less indirect action through the money market and the banking system. But the Conservatives (with little guidance from the Radcliffe Committee) are not themselves firmly committed to the monetary methods of recent years.

INSURANCE BUSINESS IN 1957

THE *Indian Insurance Year Book* is always published late. The one dated 1958, which contains a review of general insurance business during 1957 and has only just appeared, thus maintains the deplorable record. The system of submitting returns needs to be thoroughly overhauled. It is sheer indolence to issue near the end of 1959 a review of the 1957 figures. British insurance results for 1958, covering a worldwide business, were available for review by the middle of 1959. The Indian Controller of Insurance might well study the British system as something worthy of emulation. Insurers would welcome a broad summary of the relevant details by the middle of the year following the one to which they relate, while the various detailed statistical compilations and diagrammatic representations can wait. Although the 1957 figures have by now lost much of their topical value, a factual comparison of the results reported by Indian and non-Indian insurers operating in this country may be of interest.

The total number of Indian insurers was 101 in 1957 (including ten whose registration stood cancelled on 31st December, 1958) and that of non-Indian insurers was 105 (including 13 whose registration stood cancelled on 31st December, 1958). In fire insurance, Indian insurers used 38.8 percent of their net premium income on claims, against 16.9 percent used by non-Indian insurers. But while management expenses accounted for 46.7 percent of the Indian insurers' premium income, the ratio was 54.3 percent for non-Indian insurers. Yet the balance in favour of non-Indian insurers was 20.3 percent, against 9 percent for Indian insurers. The same trend was noticed in the marine and miscellaneous accounts; 63.2 percent of the net premiums in marine and 51.1 percent in miscellaneous were taken by claims in the case of Indian insurers, against 46.6 percent and 44 percent, respectively, in the case of non-Indian insurers. The management expenses of Indian insurers were 28.7 percent and 42.9 percent for the two accounts, respectively, against 40.9 percent and 46.7 percent for non-Indian insurers. The balance of the accounts was minus 0.05 percent in marine and minus 2.2 percent in miscellaneous for Indian insurers. It was 10 percent in marine and 4.5 percent in miscellaneous for non-Indian insurers. This will be gratifying to foreign insurers operating in the country. It seems to be business-like to spend more on improving the quality of management, pay less in claims by sound underwriting, and then to show a favourable balance. The large number of tied accounts with foreign firms operating in India perhaps gives non-Indian insurers an advantage. Yet, by their judicious acceptance of business and prudent management, they provide a welcome contrast to their Indian counterparts. The continuance of bad results in marine and the loss in two departments (marine and miscellaneous) suffered by Indian insurers are unfortunate; they underline the need for caution and prudence in future underwriting.

The gross premiums written direct in India by Indian insurers were Rs. 18,12,78,000 and those written outside India were Rs. 6,50,65,000, against Rs. 9,86,16,000 written by non-Indian insurers in India. The net premium income of Indian insurers amounted to Rs. 22,55,06,000, against gross premiums written direct in and outside India of Rs. 24,63,38,000. For non-Indian insurers, the net premium income in India amounted to Rs. 7,15,51,000. Expressed in percentage terms, it will be seen that non-Indian insurers obtained 39.5 percent of the net premium income in India while Indian insurers obtained 60.5 percent. Of their total net premium income, whether in India or outside, Indian insurers obtained 48.6 percent from business in India and 51.4 percent from business outside India. Of greater interest is the fact that while Indian insurers with 64.8 percent of the total gross premiums written direct in India could obtain only 60.5 percent of the net premium income in India, non-Indian insurers with 35.2 percent of the gross premiums written direct in India could obtain 39.5 percent of the net premium income in India. It appears that non-Indian insurers, by virtue of their worldwide standing, financial stability and large free reserves, have greater retaining capacity, and could possibly obtain from their Indian counterparts reinsurances for which they did not need to or did not reciprocate.

Of the total gross premiums written direct in India by Indian insurers during 1957, fire business accounted for 40 percent, marine for 24 percent and miscellaneous for 36 percent. The composition of the gross premiums written direct in India by non-Indian insurers was 48 percent in fire, 27 percent in marine and 25 percent in miscellaneous. Fire insurance accounted for 32 percent of the gross premiums written direct by Indian insurers outside India, marine for 31 percent and miscellaneous for 37 percent. The share of fire insurance business in the gross premiums written direct in India by Indian insurers has decreased, while the shares of marine and miscellaneous business have increased over the period from 1951 to 1957. As for the business in India of non-Indian insurers, the share of fire business has remained almost static, that of miscellaneous business has increased, and that of marine business has decreased over the same period. Miscellaneous business has accounted for an increasing proportion of the gross premiums written direct outside India by Indian insurers, while fire and marine business have both recorded decreasing proportions.

The trend of general insurance business written *direct* in India shows that during the period from 1952 to 1957, the claims experience of non-Indian insurers was better than that of Indian insurers in all classes; only in 1957 was the miscellaneous insurance claims ratio of non-Indian insurers estimated to be slightly higher than that of Indian insurers. Non-Indian insurers paid a higher percentage as commission in all classes of insurance business. Their expenses of management (including taxes and miscellaneous outgo) also constituted a higher percentage than in the case of Indian insurers from 1954 onwards in all classes of general insurance business.

Current News and Comment

India Paper Grows

The price of India Paper Pulp shares has improved from Rs. 25.25 to Rs. 26.44 during the past week, as they now carry the right to receive two new ordinary shares of Rs. 10 each for every five ordinary shares held, at a premium of Rs. 2.37 a share. The new issue is being made to pay off the debts incurred by the company for completing its expansion programme. The latter has cost Rs. 1.05 crores; it has been financed partly by a cash issue of 330,000 ordinary shares of Rs. 10 each at a premium of Rs. 10 a share which realised Rs. 66 lakhs, partly by the company's own resources and partly by a loan from the managing agents. The expansion has begun to produce good results. The output capacity of the mill has increased to 11,500 tons a year. During the year ended March 1959, paper sales improved from Rs. 1.10 crores to Rs. 1.6 crores. The profit has increased from Rs. 7.92 lakhs to Rs. 11.24 lakhs, after raising depreciation from Rs. 5.47 lakhs to Rs. 14.70 lakhs. Development rebate reserve is allocated Rs. 11.59 lakhs. An ordinary dividend of 10 percent has been paid. It is covered over 1½ times and gives a yield of 3.8 percent at the present price. Considering the increased depreciation provision during the year under report as well as the adequate dividend cover, the company should have little difficulty in maintaining the present dividend on the increased capital.

The share has good growth prospects. The directors take the view that the capacity of the mill's existing paper-making machines should not be increased until it is possible to estimate when it will receive supplies of bamboo pulp from the proposed pulp mill in Assam. The Assam Pulp Mills Ltd, in which India Paper Pulp has made an initial investment of Rs. 1,12,500, has not yet completed its arrangements for the finance and foreign exchange, although considerable progress has been made in this connection during the past year. A strong point is that India Paper Pulp has impressive reserves of Rs. 65.47 lakhs, including the share premium account of Rs. 31.61 lakhs, against the present ordinary share capital of Rs. 63 lakhs, which is to be increased by the proposed issue. So there is a prospect of capitalisation of reserves as soon as circumstances justify.

Dividend Outlook for Howrah Jute

The price of the ordinary shares of the Howrah Jute Mills Company has been sluggish around Rs. 23.25 for some time because of a cautious assessment of the outlook for the industry. Although jute mills are making fair profits on sacking manufacture, it is difficult to say how long the spell of prosperity will continue. For the time being, not only is the price of fibre favourable in comparison with the prices of manufactured goods, but there is also a shortage of sacking. Lately, however, there has been a switch of looms from hessian to sacking manufacture and the latest production figures for August indicate that sacking production has been rising fast. It is, therefore, thought that the profitability of this construction might not be fully maintained much longer. Although the working of Howrah Jute has improved substantially during the year ended March 1959, the increased profit is due mainly to the favourable price of raw jute. There has also been an improvement in manufacturing efficiency, but it appears that trouble has been experienced in the operation of some of the mill machinery. Although modifications have been carried out on these machines, there is scope for a further increase in productivity, but the directors have not indicated when such an improvement is likely to take place.

The profit has amounted to Rs. 17.43 lakhs and an ordinary dividend has been declared after a lapse of two years. The dividend of 10 percent is covered over 2½ times and offers a yield of 4.3 percent at the present price. Taking a view, there is reason to be cautious about the outlook. Considering the past losses and depreciation allowances on which the company is not liable to income tax and supertax, it is necessary to conserve resources. About Rs. 8 lakhs out of the profit has been transferred to general reserve. As this trend is likely to continue for some time, shareholders might well take a sober view about future dividends. As a result of modernisation, production is now concentrated in Nos. 1 and 2 mills, and No. 3 mill has been lying idle since its closure in February 1957. The directors have for some time been thinking of using the latter profitably, either by the installation of some new manufacturing process or by its disposal through a lease or sale. Negotiations are believed to be in progress for a 20-year lease to Remington Rand of India Ltd, with break clauses after ten years and 15 years, on reasonable terms.

Dividend and Profit Trends

The decline in activity in the stock market during the past couple of weeks has occurred mainly because of the deterioration in political relations between India and China. Investors are also getting worried about the outlook for the corporate sector. A study of the finances of 1,001 Indian joint-stock companies during 1957, appearing in the latest issue of the *Reserve Bank Bulletin*, and published elsewhere in this issue of *Capital*, points to two disconcerting features. The first is that there has been a deterioration in the position of shareholders. The profitability of the equity capital of the companies, as measured by the percentage of profits after tax to net worth, declined from 9 percent in 1955 to 8.7 percent in 1956, and fell further to 6.2 percent in 1957. The average rate of dividend on ordinary shares declined from 9.5 percent in 1956 to 8.7 percent. The ratio of dividends to net worth fell from 5.2 percent in 1956 to 4.9 percent. It is feared that shareholders will be affected further by the changes in company taxation outlined in the last Central Budget. The dividends paid by a few companies so far under the Finance Act, 1959, show that they have been forced to draw on additional resources for paying the same amount of net dividends as before. Because the gross dividends (including tax) have had to be increased substantially. It is, therefore, doubtful whether net dividends can be increased in the near feature. Preference shareholders have also been adversely affected, as some companies which had hitherto paid preference dividends tax-free have now begun to pay them after deducting tax. Some say that, unless the articles of association permit a company to pay dividends tax-free, it is not clear in law whether it can do so. The Budge Budge Jute Mills Company, for one, has decided to attempt to compensate its preference shareholders. A resolution has been proposed which will entitle them to an additional non-cumulative dividend, subject to income tax, at the rate of 1 percent per annum, for every 1 percent in excess of 7 percent declared as dividend on the ordinary shares in any year, up to 3 percent in one year.

The second point brought out in the *Reserve Bank Bulletin* study is that capital formation, including gross fixed assets and inventories, amounted to Rs. 225 crores in 1957, but it was not soundly based, since external resources contributed as much as 72.4 percent of the total sum. Of this, bank credit amounted to 20.5 percent. Internal sources contributed only Rs. 65 crores, or 27.6 percent of the total. New issues of shares and debentures contributed Rs. 29 crores, ordinary shares accounting for 84.7 percent (Rs. 25 crores), preference shares for 11.8 percent (Rs. 3 crores) and debentures for 3.5 percent (Rs. 1 crore). The predominance of external finance in corporate capital formation has caused a disequilibrium in the capital structure. As external finance is obtained by a charge on assets, companies may have great difficulty in securing credit for meeting current expenditure. It is time steps were taken to attract more money for industrial investment by encouraging increased payments to shareholders.

Oil Exports Pick Up

The oilseeds market is in a buoyant mood, and prices have risen on a broad front since the beginning of the month. In Bombay, groundnut for February has gone up from Rs. 163.25 to Rs. 107.75 a candy, castor May from Rs. 151.50 to Rs. 157.87 cottonseed May from Rs. 112.50 to Rs. 118.75 and linseed May from Rs. 32.50 to Rs. 33.75 a cwt. Groundnut oil and linseed oil have risen by about Re. 1 a quarter and oilcakes have advanced by Rs. 10 or Rs. 15 a ton. The rise in groundnut and linseed seems to be much more than a mere technical correction of the preceding downward trend. The undertone itself seems to have become basically bullish. The rise in the Indian market closely follows the rise abroad. Only about a month ago groundnut oil in the U.K. was marked down to around £99 a ton. It is now quoted at £111. A few months earlier, it had been bid up to £126. The decline from £126 to £99 followed the slump in coconut oil prices from £155 to £119, which in turn was precipitated by reports that the U.S.

Commodity Credit Corporation was likely to release 265 million lbs of oil from the stockpile. Prices began to recover when it became known that no sales would be made up to 10th December, and even thereafter sales would be very gradual. The latest quotation for coconut oil is £138 a ton.

The rise in linseed oil prices abroad has been far more spectacular. It was quoted as low as £68 a ton about the end of June, but has risen to £111 10s. The rise in foreign prices reflects an important change in the world supply position following the drastic revision of crop estimates in both Canada and the United States. Not many months ago, the disparity between Indian and overseas prices was as much as £22. Export business was confined only to the occasional sales made to Australia. But the spurt in prices in U.K. and Continental markets has now made business possible with the former. It is estimated that between 6,000 tons and 8,500 tons of linseed oil, from both Calcutta and Bombay, have been sold during the past three weeks. Exporters of groundnut oil have had a busy time since New Delhi's announcement on 4th September permitting them to resume the export of oil under the incentive scheme, which allows the shipment of 3½ tons of expellers for each ton of oil. Sales since the quota release are estimated at between 4,000 tons and 5,000 tons. It is said that Rumania has purchased about 2,000 tons and the rest has been taken by the U.K., the prices realised having ranged between £108 and £111. The steeper rise in domestic prices since 4th September has reduced the profit margin from around £7 to £3 10s a ton. The trade seems to be confident about selling another 6,000 tons to 8,000 tons by the end of this month. More business might be possible if the validity period for export licences is extended beyond September. Some wonder why export business should be handicapped by restrictions on the licensing period. It is only now that business has become remunerative, and demand has to be fed when it exists. Oilcakes have been faring well, with groundnut oilcake establishing a new all-time record. The current trend holds out the prospect of a good performance in oil too.

Sugar and Khandsari

The Chief Minister of Uttar Pradesh, Dr. Sampurnanand, has said that the Government of India's decision to ban the export of *khandsari* from the State is not final. Even if it were, it should not worry *khandsari* manufacturers because out of their total production only about 900,000 maunds is sold outside the State. Unsold stocks of *khandsari* at present are estimated at 1,050,000 maunds. "There is no reason," says Dr. Sampurnanand, "why this should lie unconsumed in a State which already consumes 6,400,000 maunds or 6,500,000 maunds of *khandsari* sugar annually." The ruling price of *khandsari*, Rs. 31 or Rs. 32 a maund, compares favourably with that of crystal sugar, which is Rs. 36. Meanwhile, a conference of sugar brokers of Uttar Pradesh held in Kanpur has called for the abolition of price control and rationing of sugar. In one or two cities, including Lucknow, it has been officially admitted that the offtake of sugar from ration shops has been very low. This is because the ration cards issued to the public are usually for shops situated miles away from their residence. As a result, the introduction of sugar rationing has led to the rise of a flourishing black market, in which any amount can be had at a price. The Estimates Committee of the U.P. Assembly, in its report released last week, has commented adversely on the discrepancy between estimates of sugarcane production prepared by the different departments of the Government. According to the Cane Development Department, the yield of sugarcane has dropped from 463 maunds an acre in 1952-53 to 433 maunds in 1956-57. But according to the Department of Economic Intelligence and Statistics, the yield has shot up from 272.80 maunds in 1952-53 to 311.06 maunds in 1956-57. It is intriguing that the Sugarcane Development Department, admitting a fall in production, maintains that the yield in 1956-57 was 433 maunds, while the Department of Economic Intelligence, insisting that there has been a rise in production, is unable to put the figure at more than 311 maunds. Considering that over Rs. 2½ crores of cane cess have been spent on cane development in the State during the past six years, the public is entitled to know the truth about the extent of the improvement, if any, in cane production.

Savers in Delhi

The National Council of Applied Economic Research has recently completed an interesting study on the savings behaviour of the population of Delhi. A stratified random sample of 600 households scattered over Old and New Delhi was selected for the purpose. The Council says that the households are representative of 1.6 million people. One of the findings of the survey is that the average level of saving a household showed marked variations both between and within different income classes. Income was found to be the most important determinant of saving. By and large, households with high incomes saved more, both absolutely and in relation to their incomes. The average net saving a household in the city worked out to Rs. 230, or about 11 percent of the average gross income of a household. Those with an annual income of up to Rs. 3,000 were found to dissave on the average. The propensity to save beyond this income level, the Council says, increased with rising incomes: the average propensity to save of the highest income class (annual income Rs. 10,000 to Rs. 25,000) was found to be about 30 percent. This class, constituting about 5 percent of total households in Delhi, accounted for as much as 64 percent of the aggregate savings. Occupation-wise, households belonging to the managerial, executive and supervisory class saved the highest absolute amount (about Rs. 900 a household a year). An average household belonging to the self-employed business class saved as much as Rs. 700. The Council adds that this class of households in Delhi seems to show a higher marginal propensity to save than other occupational groups.

Irrespective of the level of income up to Rs. 10,000 a year, an average Government employee household in the city was found to save more than a private employee household. Although the reason for this behaviour is not known, the Council says that it may be attributed partly to the amenities received by the former class in the matter of housing and health, besides its compulsory savings in the form of provident or pension funds. But one of the most striking findings of the survey is that "an international comparison (based on multiples of mean income) of saving propensities showed that an average household in Delhi saved a larger fraction of its income in comparison with the U.K. and as large a fraction of its income as its counterpart in the U.S.A."

As for the form of saving popular among Delhi households, the Council's report contains some interesting findings. Nearly a third of the households saved by paying life insurance premia and their mean payment amounted to about Rs. 370 a household. Nearly 3.5 percent of the total aggregate income of the households was saved through life insurance payments. About 28 percent of the households saved by contributing to provident funds, and their mean contribution was Rs. 380 a household. Taking all households in Delhi together, nearly 44 percent saved contractually, that is, either contributed to life insurance or provident funds or both. The purchase of National Savings Certificates "does not seem to be an important form of saving" for Delhi households, for only 6 percent of them saved thus in 1958 while about 3 percent dissaved by encashing them in the same year. As for the net absorption of gold by households in the city, the survey shows that the value of additions to the gold stock by 6 percent of the households very nearly matched the value of gold sales by 4 percent of the households. For Delhi as a whole, therefore, there was little net saving resulting in accumulation of gold, the Council says.

Shifting Textile Mills

Reports that about a dozen textile mills in Bombay city are thinking of shifting to less congested areas—the Kalyan-Kasara Khapoli area is mentioned as a probable site for textile townships—have caused considerable excitement there. Many big names have been mentioned in this connection; but it might all turn out to be much ado about nothing, for the idea has been mooted before and abandoned as impracticable. Press reports about the shifts might not have attracted much attention if Birla's Century Spinning and Weaving Company had not let it be known that it was appointing a technical expert to study the economics of changing its address. The move apparently has nothing to do with the bifurcation of Bombay, because the new sites would lie in the proposed Maharashtra State. There are 65 mills in the island of Bombay, and they employ about 195,000 workers. The Government has sounded the industry in the past about the possibility of shifting the factories to mofussil centres. It would, therefore, be only too glad if mills decided in favour of shifting. It might encourage the move if industrialists gave an assurance that labour would not suffer either through a cut in wages or through retrenchment and temporary unemployment during the period of shifting. Some reports indicate that the industrialists are willing to give these assurances. The labour unions' reactions to the move are favourable because workers' living conditions in the new industrial estates will be much better; all they insist on is that the existing labour force should not be adversely affected.

If the move materialises, it will help reduce congestion in Bombay city, eliminate many slums and yield big plots of land for gardens and residential buildings. But all this implies that the Municipal Corporation will purchase the mills' premises and pull them down, along with the workers' *chawls*. The prospect of having textile townships away from the city—but not very far—is pleasing. But whether a transfer is possible is doubtful. Most observers are sceptical; dismantling buildings and shifting machinery present many headaches. Transport difficulties in moving raw materials to and manufactured goods from the mofussil areas are bound to inflate costs. Considering the floating character of textile labour, it is difficult to believe that mills can provide accommodation for an army of temporary hands.

It is being suggested that the mills can make huge fortunes by selling their land, which some of them acquired almost free, at fancy prices. In some cases, the capital appreciation might be of the order of 200 percent. But if the Government is to be the buyer, it is unlikely to pay fantastic prices. The suggestion that mills which have huge modernisation programmes on hand will find it easier to shift, confuse modernisation with expansion of capacity. Only in cases where the machinery is completely worn out and outmoded and needs to be scrapped, might the setting up of entirely new units outside the city be considered. But the trouble is that the mills which most need to modernise do not have the means to shift, while many of the big mills have already made substantial progress with modernisation. The decentralisation of industries may be welcome on economic and social grounds, but it is not easily possible through the shifting of existing units.

Road Transport in U.P.

A State Road Transport plan costing Rs. 3,092.5 lakhs has been prepared by the working group for inclusion in the draft third five year plan for U.P. The capital investment proposed is Rs. 11.80 crores, while Rs. 1,912.5 lakhs will be operational expenditure. The schemes which need capital investment include the purchase of 1,600 diesel chassis, the purchase of machinery for roadway workshops, the setting up of a new central workshop and the acquisition of land for the construction of bus stations. The operational expenditure is for running 1,600 buses, enlarging enforcement squads and opening sub-regional offices. The 1,600 new buses will cost Rs. 7.20 crores, and will operate on an additional 4,000 miles of roads. The cost of operating these buses is estimated at Rs. 1,868.8 lakhs at the rate of Re. 1 a mile a bus running 100 miles a day. To provide motor transport on more routes and to facilitate goods traffic, it is also proposed to issue permits to private operators more liberally. The U.P. Government Roadways is a paying concern, its profits for the year 1958-59 having totalled approximately Rs. 1.60 crores. The proposed expansion under the third plan will yield an additional gross revenue of Rs. 20.93 crores for the entire five year period and the net profit a year will be about Rs. 224.25 lakhs. Mr. S. K. Patil, former Central Transport Minister, often stated that it is unnecessary to think in terms of competition between rival methods of transport like roads and railways for at least 25 years, as they will all need to be developed to the maximum extent. The Masani Committee has pointed out that the number of motor vehicles in India to each 100,000 of the population is only 89, compared with 903 in Ceylon, 9,595 in Britain and 37,998 in the United States. The Committee has also shown precisely what is wrong with the present administration of the Motor Vehicles Act. The promise of more liberal issue of permits to private operators will be welcomed only to the extent that the corruption which governs the issue of the permits is eliminated. Motor transport represents in the aggregate a Rs. 200-crore investment with an annual turnover of Rs. 200 crores, but a long-term national plan for road transport will probably not be evolved until the Neogy Committee has completed its review of the Masani Committee's recommendations.

Policy for Tinplate Imports

The tinplate fabricating industry, which takes an optimistic view of its future, is at present worried about the inadequacy of its raw material supplies. According to Mr. Basudeo Lal Goenka, president of the Tinplate Fabricators Association, it requires 140,000 tons of tinplate annually, but the quantity available from domestic sources has never exceeded 75,000 tons. The Tinplate Company of India, which until recently was the only producer of the material, has a production capacity of 80,000 tons a year. A new concern has now been set up near Calcutta with a capacity of 10,000 tons, but the total availability of tinplate in 1959 is not likely to be more than 80,000 tons. The fabricating industry has necessarily to depend upon imports for the balance of its needs. Mr. Goenka said, in his address at the annual general meeting of the Association last week in Calcutta, that the import quota for individual fabricators under the existing policy is based on their actual consumption in 1957. The idea is to maintain at least the 1957 level of production since a higher level is unattainable due to foreign exchange

difficulties. The situation has now improved as "the foreign exchange position has comparatively eased", and India has secured facilities for importing steel under the U.S. Development Loan Fund scheme. So Mr. Goenka suggested that the Government should help the industry raise its output by at least allowing imports on the basis of consumption in 1956, 1957 and 1958, whichever is the best year for an individual factory. "In doing so, it should be guided by the actual consumption of the material in the factories and not by monthly returns submitted to the Development Wing".

As for the Government's policy of importing tinplate in bulk, Mr. Goenka said that while it is desirable to import it in that form, the import of secondaries on such a basis is unlikely to be profitable. Since the latter are not all of standard quality and specifications, there is every risk that the material imported might turn out to be unfit for use. In Mr. Goenka's opinion, import licences for secondaries should be granted directly to actual users. He also suggested setting up an advisory committee consisting of both importers and consumers, which could help in selecting the cheapest and the right type of material. Factories could also use tinned strips formed in the course of tinplate production. These strips should be supplied to all quota holders on a *pro rata* basis, Mr. Goenka said.

Activities of Madras Stock Exchange

The chairman of the Madras Stock Exchange said at the recent annual meeting that stock market business is still confined mainly to two classes: one consists of speculators, and the other of institutional investors like the Life Insurance Corporation. Activity remains rather restricted, and the stage has not come when it can be expanded appreciably. The chairman pointed out that there are many misconceptions about the functions and usefulness of stock exchanges, so it is necessary to educate public opinion about their value in promoting savings and investment. It has been argued that stock exchanges should undertake a publicity campaign aimed at persuading every potential investor to channel his savings into productive investment. But an essential prerequisite is to create favourable conditions for the launching of new investments. The effects of changes in corporate taxation and the position of tax free preference shares were discussed. The absence of jobbers in the stock market, he said, has been a long-standing complaint. As for forward trading, he felt that its success depends on an adequate supply of scrip, although some improvement in its functioning has been noted during the current year.

Madras Tariff Values Revised

The recent revision of tariff values by the Madras Customs Department for a wide range of imported goods like spices and chemicals, has led to a rise in their prices. In view of the speculation concerning import licences and quotas for the second half of the current financial year, this may seem natural, although traders are not at all happy that the Government, in order to collect some extra revenue by way of *ad valorem* duties, should have taken a hand in forcing up retail prices for cloves, cinnamon, etcetera. It is said that the usual consultations with trade associations did not take place this year and that the Government notification of 31st August was more or less arbitrary. Few are worried about the prevailing rates for imported ivory, but the rise in the prices of chemicals, dyes and colours will affect consumers. Copra and coconut oil values have gone up, as also those of home-grown cashewnuts, comminseed and asafoetida. Although the notification does not adopt the metric system of weights for tariff values in relation to quantity, it is widely felt that higher prices caused by local shortages have been enhanced by the revision of tariffs which has hit consumers more than traders. The general view in the market is that the revision has induced stockists to hold back goods for higher prices on the assumption that future import quotas will be nominal.

CORRESPONDENCE

REPORT ON COSTS OF OIL COMPANIES

(To The Editor of 'Capital")

Sir,

Your issue of 3rd September, 1959, includes a reported summary of the Chief Cost Accounts Officer's report on the evolution of a price formula for petroleum products. While my company is not in agreement with many of the opinions and conclusions reached in this report, I am only concerned now to remark on two points referred to in your issue.

It is "presumed" that this company used its "advantage" as price leaders under the [illegible] procedure to make no attempt to control costs. This is an entirely unacceptable and false presumption, and has been categorically denied and rejected. Burmah-Shell has a long record of responsible management and service in India. As in the case of any other commercial undertaking which has survived the test of time and competition, control of costs constitutes an important function of responsible management in the oil industry and most certainly in my company.

Secondly, it is claimed that the marketing and distribution costs of another company were found to be the lowest. This conclusion is reached on a false premise and, therefore, presents a completely distorted picture. In comparing the performance of one company against another, like must be compared with like, which has not been done in this case. Burmah-Shell is satisfied that, on a comparable basis, its costs compare more than favourably with those of any other company.

Yours etc.,
L. D. Mudie
General Manager in India,
Burmah-Shell Oil Storage and Distributing Co. of India Ltd.

New Delhi, 9th September.

TURNER, MORRISON AND COMPANY

(To The Editor of "Capital")

Sir,

We would appreciate it if you would publish at the earliest opportunity in your paper the following: "The attention of the board of directors of Messrs Turner, Morrison and Co. Private Limited has been directed to the statements recently appearing in the Press, both in India and in England, in regard to the control of the company. The directors, on behalf of themselves and of the majority shareholders in the company, desire to state that any statement that the control of the company has passed to Mr. Haridas Mundhra is not correct. Any statement that the control of any subsidiary company or managed company or agency held by Messrs Turner, Morrison and Co. Private Limited has passed to Mr. H. D. Mundhra or his associates is also incorrect. It is also desired to state that Messrs Turner, Morrison and Co. Private Limited does not hold a controlling interest in any paint company but has a minority share only in Messrs Shalimar Paint, Colour and Varnish Co Private Ltd, which company will continue as heretofore."

Yours etc.,
A. H. Hume
Director,
For and on behalf of
Turner, Morrison & Co. Private Limited,

Calcutta, 16th September.

THE HEADQUARTERS OF PLAGUE

In continuation of our last week's article on this subject we now understand that Lord Curzon actually suggested to the Bombay Governor that the Poona Race Meeting, on account of the plague, should be cancelled. This eminently wise suggestion, however, was, so we gather from the *Indian Sporting Times*, not acted on, forsooth, because the race horses had arrived and "the syces, etc., had been put into quarantine." This being so, it appears that Lord Sandhurst decided that no good purpose could be served by cancelling the fixtures (the Races and the Polo Tournament) and so both are to be held. The *Times of India* on Friday last observed: "It is unfortunate that any important public gathering should even be contemplated in Poona at the present time. Yet the Presidency Assault-at-Arms was apparently abandoned with great reluctance by some of its supporters, while the arrangements for the races are being steadily pushed forward, though a more lugubrious scene for a race meeting was surely never selected." With every word of this we cordially agree and we are amazed that Lord Sandhurst has shown himself so incapable of acting in this matter on the lines suggested by the Viceroy. We should have thought that humanity alone, to say nothing of a due appreciation of public welfare, would have been quite sufficient to have shown His Excellency the miserable incongruity of a week's frivolity largely patronized and supported by Europeans in a centre where almost every other native family has been stricken with bereavement. No wonder that critics at home rail against the "want of sympathy of the Anglo-Indian," when, for the sake of a week's gambling, all ulterior considerations can be thus swept aside. We do not want the administration of this country to proceed in deference to the wishes of sporting subalterns, touts, tipsters, stable boys, jockeys, "noble owners" of sorts and bookmakers. The Poona meeting should be stopped.

Without Prejudice

Recovering Royalty from Russia

(FROM OUR LEGAL CORRESPONDENT)

SOME little time ago, we read with interest that the exploits of Mr. Sherlock Holmes as narrated by the blundering Dr. Watson are, next to the works of Charles Dickens, in Russia the most widely read of all fiction in the English language. Translated into Russian, they are sold by the hundred thousand. The copyright of Dickens's novels has, of course, long expired even in the (British) Commonwealth. But those of the late Sir Arthur Conan Doyle have still many years to run, and it is, therefore, not surprising that his executors have been seeking to recover royalties on the sale of his books in Russia. So far they have sought in vain; and we are indebted—not by any means for the first time—to a correspondent in Manchester for a cutting from the *Manchester Guardian*, now regrettably styled *The Guardian*, which explains the reason for the failure and which is of interest to publishers and authors. It was not a question of the cold war or of Russian political intransigence; but a matter of the international law of copyright applicable to all countries except such—and there are a great number of them—as choose to contract out of it by voluntary compact among themselves.

"English lawyers", says the legal correspondent of *The Guardian*, "find nothing surprising or unorthodox in (the) ruling of the Supreme Court of the Soviet Union in Moscow that the estate of the late Sir Arthur Conan Doyle could not claim royalties in the Soviet Union on Sherlock Holmes books published in the Russian language." Unjust enrichment upon which the Conan Doyle estate claimed is a doctrine well known to English law. It was unsuccessfully invoked in 1950 in not dissimilar circumstances to those of the copyright claim in Moscow. The Russian Supreme Court ruled that since Soviet copyright law specifically exempts foreign authors from its protection, the claimant could not rely upon the doctrine of unjust enrichment to get round the provision in the copyright law.

This was the precise argument adopted by the House of Lords in a case called *Boissevain* v *Weil* decided in 1950. Mrs. Dora Weil, a British subject living in the south of France, approached Mr. Boussevain, a Dutchman, in 1944 for the loan of 960,000 French francs. She was apparently in need of money in an attempt to purchase for her son, a Jew, exemption from being deported to Germany. Mrs. Weil, stated the courts, undoubtedly gave an undertaking to repay the money in sterling in London at the rate of 160 francs to the pound as soon as, but not before, the law of England would allow such a payment to be made. This would be at the time of the declaration of the armistice between Britain and Germany or earlier if her account at the National Provincial Bank in London had been released before the armistice. She had, in fact, assumed a liability of £6,000 in all, no part of which did she subsequently pay.

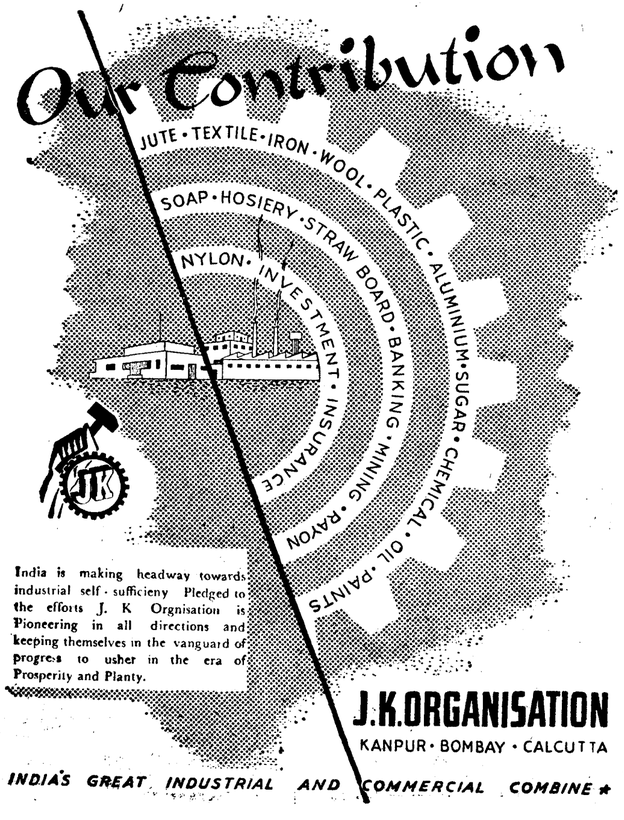
The House of Lords held that the borrowing of the foreign currency was contrary to the Defence Finance Regulations of 1939 (the forerunner of the Exchange Control Act, 1947, and itself a war-time provision) to which no exemption could be implied in the case of a British subject temporarily in enemy territory. When the Dutchman failed to show that the contract was not caught by the regulations and, therefore, not illegal, his counsel argued, although it was not pleaded specifically, that this was a case of unjust enrichment. The lady had obtained 960,000 francs and in the result the Dutchman had got nothing. The main judgment was delivered by Lord Radcliffe. He said that "since the Defence Regulations forbade the borrowing of foreign currency, the transaction between the parties could not provide a source of civil rights and no one could avoid those consequences by pleading that somebody was unjustly enriched by a transaction which was caught by the legislation."

It seems that Sir Arthur Conan Doyle's executors had a perfectly fair trial in the Supreme Court of Russia which decided the case on exactly the same principle of law as that enunciated by the House of Lords in England in the matter of that unlucky Dutchman. The Russian copyright law had excluded foreign authors from protection of copyright in the Soviet Union. It was not possible, therefore, for anyone to invoke any other law to circumvent that law.

The fact was that the executors were simply unlucky in that the law of copyright in Russia affords virtually no protection to foreign authors composers, artists, sculptors and the like and, conversely, their compeers in Russia are similarly without protection outside their own country. But excluding the Soviet Union, or rather the Soviet Union excluding itself, most of the States of Europe with the United States and Japan have come into copyright relations with one another, whereby this manifest injustice has, by slow stages, been removed. It is interesting to look back at the history of it. The reader will be surprised and, if he is a Gilbert and Sullivan fan, gratified to learn that the two men most responsible for the change were Arthur Sullivan and William Schwenck Gilbert especially Gilbert.

Gilbert was a barrister; also he was about the most quarrelsome man of his day, perpetually engaged in personal litigation; the last man in the world to submit to being the victim of "unjust enrichment" at his expense. It was the year 1878. The partners, with Rupert D'Oyley Carte, intended to produce *The Pirates of Penzance* in New York before it was produced in England. This was because of the chaotic state of the copyright laws in such States of the U.S.A. as had any. There was no copyright agreement between the two countries and unless the author of a play could produce it on the spot before anyone else could steal it and produce it first, he could whistle for his royalties.[1] Gilbert, Sullivan and Carte had so whistled in the previous production in the U.S.A. of *H. M. S. Pinafore*. The easy-going Irishman, Sullivan, took the "unjust enrichment" in good part. Said he: "A free and independent American citizen ought not to be robbed of his right of robbing someone else"; and anyway the trio had made in the States a tidy fortune out of *Pinafore*.

But in the case of *The Pirates of Penzance*, the pirates of New York went too far. The then law in the States was that "a work became anyone's property the moment it was printed; so after every performance of the *Pirates*, the music had to be hidden away in a safe. Large bribes were offered to members of the orchestra to loan their scores, and a careful eye had to be kept on their movements. Musicians were placed in the audience by piratical managers with instructions to jot down the themes, and eventually versions appeared elsewhere."[2] And Gilbert was especially infuriated when humourless gags were substituted for his witticisms. The trio had not much trouble in defeating the rival company in New York, which city had the original work produced and conducted by the world's most popular composer and England's best known librettist and would not be fobbed off with cheap substitutes. But bogus versions were being organised to tour the country.



So the partners worked day and night to train, rehearse and organise four genuine companies, got them on the road and raked in the enormous profits before the rival ones could get going. But it broke down Sullivan physically. Gilbert, made of sterner stuff, remembering that he was a lawyer, looked up his law books and, finding that the law provided no remedy, began to agitate for one.

So when Sullivan returned to England to bask in the favour of Royalty to the melancholy and, alas, immortal strains of his *The Lost Chord*, strummed on every barrel organ and sung by every tenor in every drawing-room in the country: the pugnacious Gilbert did not return until he had helped get together a committee of authors, composers and publishers to tackle, on an international basis, the problem of unjust enrichment. Gilbert was always true to form. So he proceeded, as usual, to insult the committee, which did not like being dictated to by a tall, upright, military-looking gentleman who was not even one of its members and was, moreover, a foreigner. Gilbert left. But the committee went on; and after years of persistent efforts came the Convention of Berne under which the United States, Great Britain, France, Germany, Italy, Belgium, Switzerland, Spain and the Scandinavian States (to which, no doubt, may be added now India and Pakistan) entered into mutual copyright relations. Under the regulations of the Convention of Berne, copyright protection was secured for all countries accepting membership in the Convention, the Governments of which were prepared to extend such protection to works originating in the other member States.

It is very hard luck for Mr Adrian Conan Doyle, his father's executor, that Russia is not and, apparently, by reason of its copyright laws being actually a part of its Constitution, cannot become a member of the Berne Convention; neither, incidentally, could the U.S.A. until a good many years after the Convention had been in active operation.

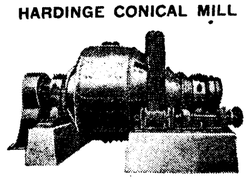
A Ditcher's Diary

I ALWAYS THOUGHT MR. SOMERSET MAUGHAM'S description of the monotony of the ceaseless patter of tropical rain was a shade overdone. At least, it never rained so in Calcutta—until Tuesday week. As I write, it is still beating on my window pane; and, frankly, I am beginning to get a little tired of it. But this is as nothing compared with the actual distress that must have come to thousands through the rains. The damage to crops is said to have been limited, but then who ever believed official statistics on food production? It is in housing that suffering must have been especially wide. It is impossible to open a newspaper without reading of mud-homes collapsing in various places. Where are the homeless going? Where will they go back after the rains are over? Then those thousands of people who sell various articles on the pavements to our great annoyance. Where are they, what are they doing? I cannot see any official relief going to them. As I extend my field of observation I begin to feel how petty my own inconvenience is, and a second thought offers itself—rather contradictory in appearance. How did *Lunik II* strike those who were rendered homeless because of the rains? If they heard of this new triumph of the cleverness of man, it must all have seemed to them a cruel joke. Here we are reaching out to new planets, and what a sorry mess there is right on our own door-step. During the hot summer I have often toyed with the idea of air-conditioning the whole city of Calcutta, and now looking round the puddles of water all over the city I realise how much faster some of our thinking is than the squalid realities. The most elementary amenities of civic existence are absent in this once proud city. It is not the lack of human knowledge (which might be true of my air-conditioning project) that stands in the way, but the lack of any serious effort to apply knowledge gained centuries ago.

HOW LONG WILL IT BE BEFORE INDIA IS A RICH industrial nation? Everyone must have asked himself this question, and although we realise that no one can give a firm date, it would make all the difference to our daily labours if we had an inkling of the answer: will it be in our time, or our sons', or our grandsons'? You may imagine that economists could not presume to give an answer without resorting to crystal-gazing, but in reality some eminent economic historians are coming to believe that certain of the phases of economic growth do have a more or less fixed time-span, no matter in what country they occur. The trouble is that certain other phases do not, so one cannot predict how long the whole process will take, but once a country definitely enters on an era of expansion one can predict fairly well when it will be complete. Professor Rostow, of the Massachusetts Institute of Technology, has just tried his hand at this sort of prediction and these are his conclusions ("modified for India", as the Army used to say). First there is a period in which a government wants to start the process of economic development but cannot give its full mind to it because it still wants to fiddle about with ideological questions—national prestige, anti-imperialism, anti-capitalism, and so on. This seems to describe the phase India has been in since 1947. Nobody can say how long it will last, but it ends, says Rostow, when "a political leadership takes hold that, at last, really means business". Then begins what Rostow calls the "take-off", a period in which the annual rate of capital investment is at least 10 percent. The surprising thing is that this phase seems to have a fixed span: about 20 years. It leads to the next stage, "the drive to maturity" which culminates in a technologically mature economy such as Britain achieved in 1850 and Russia and Canada achieved in 1950. This stage also seems to have a fixed term: about 40 years. The 60-year interval between the beginning of "take-off" and the point of maturity has been confirmed in the economic histories of Britain, the U.S.A., France, Germany, Sweden, Japan, Russia and Canada. Although Rostow describes India as passing through the take-off period now, it is doubtful whether a net investment of 10 percent of the national income has yet been reached. It would, therefore, be safer to give New Delhi another five years to settle down to the serious business of economic development to the exclusion of out-dated political obsessions. Then a real take-off might begin round about 1965, and on Rostow's reckoning India would have a mature industrial economy by the year 2025. So none of us will see it, but our grandchildren should.

IN THE UNLIKELY EVENT THAT ANY OF YOU ARE interested in what might happen in India after the year 2025, I should add that Rostow does not stop at that. There follows a phase in which the mature economy gets gradually richer before it enters the next stage "the age of high mass consumption". The length of this phase varies; it lasted only 20 years in the U.S.A., from 1900 to 1920, but it lasted almost a century in Britain, from 1850 to 1950. By 1950 the leading west European countries had stepped into this age of mass consumption (based on motor-cars and other durable consumer goods), but it still lies in the unknown future for Soviet Russia. How long the mass-consumption age lasts depends on the birth rate, among other things; the Americans have decided to make it last longer than was expected by increasing their population. But it too has a term, which Rostow thinks is "a mere generation or two over the horizon" for the Americans and west Europeans. It will be followed by an epoch which Rostow calls, somewhat apocalyptically, "Beyond Consumption". He doesn't say much about that, but if you are still interested I suggest you look at the essay J. M. Keynes wrote in 1930 (it's in his *Essays in Persuasion*) called "Economic Possibilities for Our Grandchildren".



WITNESS, AS MY GENERATION IS, TO SAGITTARIUS'S version of the Wilsonian formula: open disagreements openly reached: I have long been an advocate of secret and quiet diplomacy. It is not for me, therefore, to criticise Mr. Nehru for not having told the Indian people every detail of India-Chinese relations such as they have been since 1954. Where I am less happy is that he might have hidden a part of the truth even from himself, and few things could be more dangerous. Once, however, it became clear to Mr. Nehru that the Chinese had begun to take Indian friendship for granted, that they thought they could do anything and India would passively accept it, he has spoken with the right mixture of restraint and firmness. Every statement of his on the subject, I think, has been statesmanlike; and I have no time at all for the sort of "I-told-you-so" attitude of some western commentators. Even now, I think, the best policy for India is to stand firm on her rights and at the same time avert a conflict with China, for which Peking itself may not be unduly impatient. Meanwhile, it is all to the good that old meanings are being restored to old words such as imperialism, expansionism, friendship, and so on. It had become quite impossible in recent years to discuss such phenomena as imperialism and national rights with the slightest degree of detachment. We were so many abuses to be hurled at parties who faces one did not like. The world is a far more complex place than that, and neither ideology nor skin pigment can dry up all the springs of discord between nation and nation. What, after all, is the lesson of European history? I think it is largely true that there is far more in common between one European nation and another than between two Asian nations. Yet, the former have been fighting among themselves until they are now so weak as to be practically helpless before Mr. Khrushchev and Mr. Eisenhower. In theory, it was possible that the Asian nations might shape their collective destiny more wisely, but it was not something to be assumed. Some people have been inclined to make this grave error, and we should be thankful that awareness of the contrast has perhaps come before irreparable injury.

A FILM DIVISION DOCUMENTARY ON THE BHAKRA dam, which I once remember sitting through, described it as India's "dam of hope". But the time irretrievably wasted in repairing the damage to the hoist chamber; the loss in men, materials and money; and the delay in completing the construction schedule according to plan, have already led many sceptics to say, Ministerial denials notwithstanding, that Bhakra might well prove to be India's "dam of despair". Ever since the initiation of the project, the Control Board has shown abundant faith in local talent, and boasted, in unequivocal terms, that the finished article will be a magnificent monument to the creative endeavour of Indian engineering skill. I do not see anything objectionable in this approach—it is essential to encourage local talent and the national pride in it—but only provided this kind of parochialism is not allowed to go too far. In a country like India, where engineers cannot claim vast experience in the construction of gigantic dams, occasions may well arise when advice from internationally-accepted foreign experts might be necessary because local talent cannot successfully cope with the task. But I noticed in a recent Press report that neither the Central Minister for Irrigation and Power, Hafiz Mohammed Ibrahim, nor Members of Parliament, were enthusiastic about handing over full control of operations to Mr. Harvey Slocum when he told them that although the damage would prove to be a tough job of repair, he could do it if he were given unconditional and complete authority. It seems to me that time was needlessly wasted by the controversial discussions in Parliament and the subsequent meeting of the Control Board to make a decision. It was the Punjab Chief Minister, Mr. Pratap Singh Kairon, who stressed the need for quick repairs to avoid further damage to the power house. He is reported to have brushed aside the fears of the engineers that haste might mean needless expenditure and said: "Wasted time would cost us much more". But instead of urging the experts to come to a unanimous decision expeditiously—which, incidentally, would have saved much public money—the Central Minister for Irrigation and Power was talking of closing the right diversion tunnel of the dam through diving a proposition which Mr. J. B. S. Haldane, who claims to know what he is talking about, has described as impracticable in an article in one of our southern contemporaries.

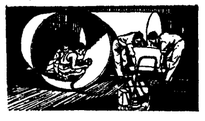
Powai...



... a beehive of industrial activity!

Busy sounds fill the beautiful valley of Powai as L & T factories keep up with the ever-increasing national demand for industrial products.

Established in India many years ago, Larsen & Toubro Limited have developed from one of the country's leading suppliers of imported plant and equipment to manufacturers of machinery. Their range of manufacture extends from electrical switchgear to production of machinery and equipment for the dairy and refrigeration, chemical, pharmaceutical and food processing industries.

This machinery will meet the essential needs of many of our national projects & help save precious foreign exchange.

At Powai, near Bombay, Larsen & Toubro Limited have established a unique manufacturing and servicing organisation that is, today, as always, contributing vitally to the country's industrial development and progress.

PRODUCTS MANUFACTURED

- DAIRY MACHINERY & EQUIPMENT
- REFRIGERATION EQUIPMENT
- SOLVENT EXTRACTION PLANT
- SWITCHGEAR & MOTOR STARTERS
- INDUCED DRAUGHT COOLING TOWERS
- PETROL DISPENSING & METERING PUMPS
- SHEEPFOOT ROLLERS
- BELT CONVEYORS
- STAINLESS STEEL, COPPER & ALUMINIUM EQUIPMENT FOR:

THE CALCUTTA MONEY MARKET

GOOD SUPPLY OF BILLS

Wednesday, 16th September.

ONCE again there is little change to report in the Calcutta money market. The level of advances outstanding has remained more or less stationary during the past week, although slight decreases have taken place in the requirements of the sugar mills and against grains and seeds storage in upcountry areas. The demands of the jute industry are unchanged. Money remains extremely easy in the interbank market despite tax payments, but at the close today there were lenders over at the unchanged call rate of 1½ percent. This position is, however, not expected to continue and tightening is considered likely in the next day or two.

There has been an excellent supply of bills in the exchange market again this week, both against tea and gunny shipments. The reason for this activity appears to be the expectation of a possible rise in the U.K. Bank rate. On the London market the pound is stronger against all important currencies except the Canadian dollar and the Danish krone, but against these the loss has been fractional.

BULLION WAS IDLE AND FLUCTUATIONS WERE narrow. Silver was quoted at Rs. 203.50 for ready delivery, the rate for forward delivery being Rs. 202.50. The London and New York prices were 78½d and 91.375 cents.

Gold was quiet in sympathy with silver and the price fell from Rs. 124 to Rs. 123.50. The sovereign at Rs. 78.50 showed a loss of 25nP.

DURING THE WEEK ENDED 11TH SEPTEMBER, Government of India Treasury bills for Rs. 1,16,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 15th September. The total amount offered was Rs. 2,64,00,000. Tenders at Rs. 99.390 were allotted approximately 76 percent, the average rate of acceptance being Rs. 2.440 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 21st September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 16th September to 19th September at Rs. 99.406 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 9th September to 12th September, amounted to Rs. 1 crore.

A RISE OF Rs. 5.38 CRORES TO Rs. 1,670.29 CRORES in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 11th September, 1959, while the total note issue was fractionally higher by Rs. 5 lakhs to Rs. 1,687.32 crores. Notes held in the Banking Department consequently fell by Rs. 5.33 crores to Rs. 17.03 crores. Deposits of the Government of India declined by Rs. 8.54 crores to Rs. 56.82 crores because of month-end disbursements and other Government accounts were Rs. 3.35 crores lower at Rs. 20.47 crores. Balances held abroad again increased by Rs. 2.02 crores to Rs. 23.25 crores but investments declined by Rs. 3.79 crores to Rs. 279.32 crores. Other loans and advances increased from Rs. 72.97 crores to Rs. 74.16 crores, of which advances to scheduled banks against usance bills amounted to Rs. 10 lakhs (same). Ways and means advances stood at Rs. 19.02 crores (Rs. 16.58 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 4th September, 1959, shows a drop of Rs. 50 lakhs to Rs. 562.41 crores in total deposits. Investments in Government securities are up by Rs. 6.08 crores to Rs. 361.28 crores, while other authorised investments remain unchanged at Rs. 10.27 crores. Advances, including loans, cash credits overdrafts, and bills discounted and purchased, have declined by Rs. 83 lakhs to Rs. 166 crores. Cash and balances are, in consequence, shown at Rs. 23.34 crores or Rs. 13.77 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 4th September, 1959, shows Demand and Time liabilities at Rs. 738.66 crores (Rs. 24.27 crores on account of borrowings from banks) and Rs. 1,095.71 crores (Rs. 25.56 crores), compared with Rs. 750.04 crores (Rs. 25.32 crores) and Rs. 1,088.37 crores (Rs. 26.69 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.39 crores and Rs. 9.63 crores to Rs. 42.04 crores and Rs. 70.09 crores. There is a rise of Rs. 12.04 crores to Rs 747.51 crores in investments. Advances and bills discounted at Rs. 935.07 crores show a drop of Rs 3.01 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.1 percent and 51.0 percent, against 6.7 percent and

SHARP FALL IN COMPANY PROFITS

AN article appearing in the August 1959 issue of the *Reserve Bank of India Bulletin* reviews the finances of 1,001 Indian joint-stock companies during 1957, with comparable data for the previous two years. The companies included in this study comprise approximately three-fourths of the sectors covered, and are common for all the three years, 1955, 1956 and 1957, so that the data are strictly comparable. The present study, as in the case of the earlier studies, does not cover banking, insurance and investment companies, Government companies, companies and associations functioning not for profit and companies limited by guarantee.

The study shows a sharp rise in fixed assets in 1957, the rate of increase in both gross and net fixed assets surpassing the record postwar high reached in the preceding year. The rate of accumulation of inventories, however, recorded a fall, with the result that gross capital formation (i.e., gross fixed assets and inventories) in 1957 did not show any material change from that in the preceding year. However, reflecting the slower rate of increase in industrial output and the slackness witnessed in certain sectors, especially cotton textiles, the rate of increase in sales slowed down and profits before tax recorded a steep fall for the first time since the post-Korean recession in 1952. In spite of this decline in profits, the amount distributed was maintained around the previous year's level, partly by substantial cuts in appropriations to reserves and partly through withdrawal from reserves. In the result, retained profits were sharply reduced being less than half of that in the preceding year. As for the financing of capital formation, external sources, which emerged as the major contributory factor in 1956, continued to dominate.

Rise in Expenses

In 1957, sales (main income) rose from Rs. 1,558 crores to Rs. 1,695 crores or by 8.7 percent, compared with a rise of 11.9 percent during 1956. Of the total rise in sales of Rs. 136 crores, engineering, sugar and jute textiles together accounted for Rs. 60 crores. On the expenditure side, all items other than managing agents' remuneration showed a rise over the previous year, which was, however, of a smaller order, compared with 1956, except notably in "excise duty" and "interest". "Manufacturing expenses" rose by Rs. 74 crores or 7.8 percent to Rs. 1,027 crores, 44 percent of the increase being accounted for by cotton textiles, engineering and jute textiles. "Salaries and wages" went up by Rs. 18 crores to Rs. 276 crores. "Excise duty" at Rs. 84 crores showed a sharp rise of Rs. 25 crores and "interest" a rise of Rs. 7 crores at Rs. 23 crores. Remuneration paid to managing agents declined further to Rs. 8 crores in 1957, compared with Rs. 12 crores in 1956 and Rs. 15 crores in 1955.

The uptrend in profits noticed since 1953 was reversed during 1957. Profits before tax fell sharply by Rs. 24 crores to Rs. 104 crores—a decline of 18.9 percent in contrast to a rise of 9.6 percent in 1956. Profits after tax registered a decline of Rs. 17 crores to Rs. 53 crores. Industry-wise, the cotton textile industry suffered a loss (Rs. 2 crores) in contrast to sizeable profits (Rs. 14 crores) in 1956. Profits were lower in the case of many industries including tea, mineral oils, cement and trading, the fall in these, however, being partially counter-balanced by the improvement recorded, among others, by jute textiles, shipping, electricity, coal, paper and sugar groups. In spite of the sharp fall in profits, the amount distributed as dividend in 1957 was maintained at the previous year's level of Rs 42 crores. This was possible, as mentioned earlier, because either reserves were drawn down or appropriations to reserves were severely pruned. Amounts distributed were lower in the case of tea, cotton textiles and mineral oils, which were, however, virtually offset by increased levels of distribution in jute textiles, iron and steel, engineering, cement, electricity and shipping industries. Retained profits at Rs. 11 crores were less than half of that in 1956.

The profitability of equity capital of the 1,001 companies, as measured by the percentage of profits after tax to net worth, which had declined from 9 percent in 1955 to 8.7 percent in 1956, dropped further to 6.2 percent in 1957. The average rate of dividend on ordinary shares, which had risen from 9.1 percent in 1955 to 9.5 percent in 1956, declined to 8.7 percent in 1957. The ratio of dividends to net worth also declined from 5.2 percent in 1956 to 4.9 percent in 1957.

Capital Formation

Capital formation (gross fixed assets and inventories) at Rs. 225 crores in 1957 was more or less of the same order as in 1956. An estimate of capital formation for the entire private corporate sector (excluding financial companies and private limited companies) would be about Rs. 300 crores, of which gross fixed assets would be of the order of Rs. 232 crores and inventories Rs. 68 crores. For 1956 and 1957 taken together (which may be broadly taken to correspond to the first two years of the second plan), gross capital formation for public limited companies in the private sector may be placed at Rs. 598 crores, Rs. 410 crores in gross fixed assets and Rs. 188 crores in inventories.

Nearly two-fifths or Rs. 68 crores of the gross fixed assets formation was accounted for by the iron and steel industry alone, while iron and steel together with cotton textiles and engineering accounted for over 60 percent of the gross fixed assets formation. The annual rate of expansion in gross and net fixed assets was higher at 16.3 percent and 20.5 percent, respectively, compared with 14.3 percent and 18.1 percent in the preceding year. The annual rate of increase in inventories was, however, appreciably lower at 10 percent, compared with 21.4 percent in 1956.

The main feature in the pattern of financing of total assets formation was the growing dominance of external sources, which accounted for as much as Rs. 170 crores or 72.4 percent of the total funds against 63 percent in 1956. Under external sources, bank credit continued to be the most important source amounting to Rs. 48 crores or 20.5 percent of the total funds. Borrowings through mortgages doubled during 1957 to Rs. 45 crores, accounting for 19.2 percent of total funds, this being due largely to the inclusion under this item of loans amounting to Rs. 37 crores from the World Bank received by certain units of the iron and steel and electricity industries. Internal sources at Rs. 65 crores constituted only 27.6 percent of the total funds, compared with 37 percent in 1956 and 56 percent in 1955, in the case of 750 companies. In all industries, except sugar and coal, the bulk of the finance in 1957 was provided by external sources.

New Issues

New issues of shares and debentures were higher at Rs. 29 crores during 1957, compared with Rs. 24 crores in the preceding year. Of the total new issues in 1957, ordinary shares accounted for 34.7 percent (Rs. 24 crores), preference shares for 11.8 percent (Rs. 3.4 crores) and debentures for 3.5 percent (Rs. 1 crore). Industrywise, as in 1956, the iron and steel industry accounted for over one-third of the total new ordinary shares.

The total gross assets of the 1,001 companies as at the end of the accounting year 1957, aggregated to Rs. 2,322 crores and their net assets to Rs. 1,831 crores. Net fixed assets at Rs. 749 crores constituted 40.9 percent of the total net assets, against 37.9 percent in 1956. Net worth (paid-up capital and free reserves) as a percentage of total liabilities showed a small decline from 49.3 percent to 46.8 percent. Compared with 1956 the liquidity of the assets of the 1,001 companies showed a larger decline in 1957. The percentage of current assets to total net assets dropped from 59.2 to 56.6 and the ratio of current assets to current liabilities declined from 1.40 to 1.31. The principal indicators of the growth of 1,001 companies are shown in the table below.

GROWTH OF THE COMPANY SECTOR

(1,001 Public Limited Companies)

(Amount in crores of rupees)

	1955	1956	1957	Percentage Increase (+) or Decrease (−) of 1956 over 1955	1957 over 1956	1957 over 1955

Stocks and Shares

PRICE DOWNTREND PERSISTS WITH BUSINESS AT LOW EBB

GILTS FIRM: SOME EQUITY FEATURES

Wednesday Evening.

FOR yet another week, narrow price fluctuations were experienced in the Calcutta Stock Exchange, particularly in the case of the speculative issues; investment business was almost at a standstill. At one time prices tended to improve. But the decision yesterday of the Price Increase and Famine Resistance Committee to hold a series of mass and street-corner meetings and to send a deputation from Calcutta and neighbouring districts to the West Bengal Assembly on 21st September, has induced a feeling of caution and prices have sagged. A prominent bull operator was reported to have unloaded about 200,000 shares. These are still floating about in the market and unless they are absorbed and the political situation improves, the present downtrend may continue for some time longer.

Bright spots in an otherwise dull stock market were provided by Equitable Coal, Dunbar Cotton, Bhartia Steel, New Central Jute, National Carbon, Rohtas Industries, India Paper Pulp and Karanpura Development.

Government securities were firm under the influence of easy money conditions, with the exception of the 3% Conversion Loan 1986 which was rather dull at around Rs. 74.15 ex-voucher.

In the banking section, United Bank of India "D" shares were better at Rs. 4.81.

Very little interest was shown in the coal section, the exception being Equitable, which, on investment buying, improved from Rs. 32.37 to Rs. 33.

In cotton textiles, Kesoram after being done up to Rs. 18.62, turned sellers today at Rs. 18.25 while Dunbar spurted from Rs. 192 to Rs. 202.

Electric supply shares were dull and featureless.

In the engineering group, Indian Iron & Steel fluctuated between Rs. 23.56 and Rs. 23.92 to close at Rs. 23.48, which was tonight's settlement rate. Bhartia Steel provided a feature and rose from Rs 15.56 to Rs. 17. Burn & Company were shaded at Rs. 445 as were Textile Machinery at Rs. 23.90.

In the jute section, Birla were steady at Rs. 23.12 and New Central jumped from Rs. 16.50 ex-rights to Rs. 17.87 ex-rights. Samnugger met with special enquiry on reports of good working and were taken up from Rs. 12.12 to Rs. 13.50.

In paper, India Paper Pulp were outstanding with the price moving up from Rs. 25.25 to Rs. 26. Orient were higher at Rs. 38.65, as were Sirpur at Rs. 13.87 and Bengal Paper at Rs. 107.

Sugar shares were neglected and prices showed little or no variation.

In the miscellaneous group, National Carbon were the centre of attraction and the price spurted from Rs. 37.12 to Rs. 39.75; profit-taking today brought the price down to Rs. 39. There was some investment buying of Dunlop Rubber and the price improved to Rs. 34. Britannia Biscuits met with enquiry and were taken at the higher rate of Rs. 27.12. Jardine Henderson met with profit-taking and closed Rs. 2 lower at Rs. 86, while Rohtas Industries, on publication of an excellent report, moved up from Rs 22.37 to Rs. 24.06.

In the mining group, Karanpura Development moved up to Rs. 14.50 while Indian Copper were easier at Rs. 4.02.

Little or no interest was shown in tea shares and prices moved narrowly.

Sone Valley Cement

There is a gross profit of Rs 12.71 lakhs for the Sone Valley Portland Cement Company for the year ended December 1958. Depreciation absorbs Rs. 5.19 lakhs and development rebate reserve Rs. 1.30 lakhs. Bringing in Rs. 18,727, there is a balance of Rs. 4,27,712, of which Rs. 4 lakhs is transferred to general reserve. A balance of Rs. 27,712 is carried forward. The dividend of 6 percent is maintained by transferring Rs. 4 lakhs from reserves. Cement despatches rose from 173,640 tons to 207,010 tons. The directors state that in view of the slackness of demand experienced by the industry, the expansion plans have been kept in abeyance. The element of rehabilitation allowance included in the price of cement by the Tariff Commission last year is inadequate to meet the large expenditure on the plant. Steps are being taken for gradual rehabilitation.

Borrea Coal

The profit of the Borrea Coal Company has increased by Rs. 1.77 lakhs to Rs. 3.25 lakhs for the year ended December 1958. Bringing in Rs. 26,931, there is a balance of Rs. 1,93,549. Statutory development rebate reserve is allocated Rs. 66,120. An ordinary dividend of 7½ percent, including an interim of 5 percent, has been declared. Taxation provision absorbs Rs. 1.45 lakhs and depreciation Rs. 72,707. There is a carry-forward of Rs. 20,179. Raisings increased from 152,270 tons to 171,109 tons and despatches from 151,308 tons to 174,148 tons. The directors state that output improved steadily in accordance with the expansion programme, most of the increase coming from the Aralgoria area. The colliery continued to suffer due to irregular wagon placements and excessive supplies of covered wagons. These factors prevented full use being made of the mechanical screening plant and hampered the prompt and economical loading of wagons.

Megna Jute

The Megna Mills Company has made a profit of Rs. 21.40 lakhs for the year ended March 1959, against Rs. 26 lakhs. Providing Rs. 7.36 lakhs for depreciation and Rs. 11.59 lakhs for taxation, bringing in Rs. 4 lakhs and making other adjustments, there is a balance of Rs. 13,82,577. Development rebate reserve is allocated Rs. 2.84 lakhs. The ordinary dividend has been reduced from Rs. 1.75 to Rs. 1 a share, leaving a carry-forward of Rs. 282,057. The modernisation of the preparing and spinning departments has progressed satisfactorily and the scheme will soon be completed. The company has recently embarked on the manufacture of tufted carpet backing; broad looms are being installed for this purpose and will shortly go into production.

Bishnauth Tea

The Bishnauth Tea Company has earned a profit of Rs. 1.96 lakhs for the year ended December 1958. Bringing in Rs. 3,54,184 and making other adjustments, a balance of Rs. 5,50,293 is carried forward. The dividends have been passed over. The disappointing results are due to the sale of the Dhendai division's teas below the cost of production. The directors have recently disposed

of the Dhendai tea estate for Rs. 9,25,000. The crop increased from 3,635,385 lbs to 3,903,729 lbs, but the average price fell from Rs. 2.58 to Rs. 2.44 a lb. Estimates for 1959 provide for a crop of 3,432,000 lbs at a cost of Rs. 2.07 a lb.

Kalasa Tea

The Kalasa Tea and Produce Company has made a profit of Rs. 2.14 lakhs for the year ended March 1959. Bringing in Rs. 76,650, there is a balance of Rs. 2,90,211. A dividend of 15 percent is paid, leaving a carry-forward of Rs. 67,834. The crop increased from 464,700 lbs to 506,751 lbs, and the average sale price rose from 184.04 cts to 199.30 cts a lb. Estimates for the current year have been made for a crop of 534,300 lbs at a cost of 156.72 cts a lb.

Bombay Market

POLITICAL DOUBTS CHECK PRICE RISE

SENTIMENT MUCH IMPROVED

Tuesday Evening.

THERE was selective buying in the Bombay stock market last week and sentiment appeared to have improved. Increased offtake of cloth helped bullishness, but operators continued to remain cautious because of political developments. The possibility of division of the Bombay State on a linguistic basis, combined with uncertainties concerning Sino-Indian relations, tended to restrain activity.

Tata Steel were quoted at Rs. 160 and Indian Iron were subdued at Rs. 24.60 on weaker advices from Lyons Range. Premier Construction were transacted at Rs. 344 and Tata Locomotive came to hand at Rs. 186. Larsen and Toubro were dealt in at Rs. 22.84 and Mahindra and Mahindra were placed at Rs. 21.88. Motor shares were steady on expectations of increased output during the current year. Hindustan Motor were bought at Rs. 12.72 and Premier Automobile were done at Rs. 130.50.

In the cotton mill group, Bombay Dyeing and Century were prominent on influential support. Bombay Dyeing improved to Rs. 64.60 and Century were transacted at Rs. 566 on talk that the company might issue rights shares in the near future. Svadeshi were taken at Rs. 245 and Kohinoor gained at Rs. 310.50 on replacement buying. Simplex were indicated at Rs. 148 and Tata Mills came to hand at Rs. 45.25. India United Ordinary were freely offered at Rs. 9 and Apollo were sold at Rs. 1.40.

In the miscellaneous group, cement shares were steady and Associated Cement were bought at Rs. 146.25 in the expectation of the same dividend. Digvijay Cement changed hands at Rs. 145. Among sugar shares, Belapur were steady at Rs. 310 and Phalton were transacted at Rs. 160. Maharastra Sugar improved to Rs. 219.50 on prospects of a fresh capital issue. Steamship company shares were subdued, and Scindia Steam were available at Rs. 16.76. Great Eastern Shipping were shaded at Rs. 19.75. Mining shares were neglected, and Shivrajpur Syndicate were available at Rs. 88. Bombay Burmah recovered to Rs. 513.50, as did National Rayon to Rs. 344 on short-covering. Tata Oil met with investment support at Rs. 61.50 and Voltas were wanted up to Rs. 167.25. Tata Chemical were called at Rs. 16.96.

Bank shares were steady and routine business was transacted. Central Bank were quoted at Rs. 49 and Bank of Baroda changed hands at Rs. 103. Fluctuations in insurance shares were narrow and New India Assurance were placed at Rs. 50.50.

In the electricity company group, Tata Hydro were taken at Rs. 117.50 and Ahmedabad Electric were supported at Rs. 92. Bombay Suburban came to hand at Rs. 105.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations (highest for the week, Lowest for the week, Closing Quotations. Quotations of the corresponding Date a Year Ago. The latter named is shown in parentheses and will not be given where such a quotation is not available.]

MARKET RISES ON HOPES OF TORY VICTORY

QUIETER TREND TOWARDS CLOSE

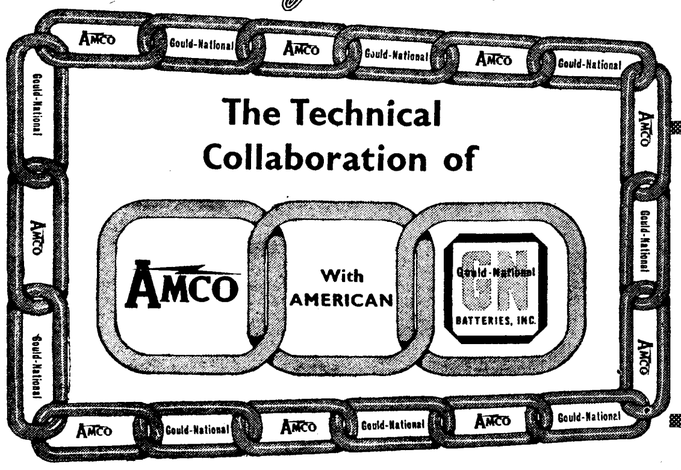
London, 16th September.

THE news that the general election has been fixed for 8th October was greeted with a burst of strength in the stock market after the fall during the preceding few days. But the pace of the rally slowed down later, and generally, the market developed a quieter and irregular appearance. The industrial market was the main beneficiary from the burst of strength which developed. The rally reflected the removal of the uncertainty about the actual date of the election and the confident hopes, based largely on the results of recent public opinion polls, that the Conservatives would be returned to power. The quieter and irregular conditions which developed later were a natural reaction to the election news once the initial sharp adjustments had been made, and there is now a general disposition to await the actual result. The persistent rise in interest rates in the United States and the consequent fall on Wall Street was a restraining influence in London, but the effect was limited. The gilt-edged market enjoyed a steady trend in spite of the rise in U.S. interest rates, and although the modest advance was brought to a halt later, prices were slightly better on balance. In foreign bonds, Greek issues advanced on speculative buying but later reacted on profit-taking. Dollar stocks reflected Wall Street's lower levels. Banking, hire-purchase finance and insurance shares participated in the rally but Canadian bank shares lost ground. Industrials recorded widespread gains under the lead of steels, although prices turned irregular after the week-end. Nevertheless steel shares showed substantial improvements on balance. Gold shares had a quiet week but prices were a shade better, helped by some good dividends from companies operating in the Orange Free State. Diamonds advanced, assisted by the increased interim dividend from de Beers. Base metal shares were quiet but coppers eased following the fall in the price of the metal. Oil shares recorded very little change, apart from British Petroleum, which eased on disappointment over the half-yearly figures. Rubbers tended higher and numerous gains were recorded, but teas were quiet and narrowly irregular.

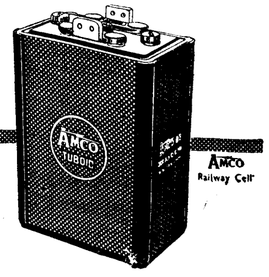
The Money Market

In the money market, the discount houses had a fairly comfortable week in financing a very big intake of new Treasury bills. The supply of credit proved to be adequate, with the authorities only needing to provide a very small amount of assistance, while there was no penal borrowing from the Bank of England. The rate for money, however, remained firm. The general rate for overnight loans was 3⅞ percent, while 3¾ percent was paid for substantial lines. Some October and November maturities were sold at 3 27/64 percent. A certain amount was also done at 3½ percent.

Activity on Wall Street



U.S. Government obligations gave up some additional ground in light dealings during the past week with many issues reaching new all-time lows. The market has been under constant pressure recently due to the generally rising trend in interest rates and an increase in the discount rate. High quality corporates drifted lower. Rail lines and convertibles also eased. Japanese Government issues were soft with two issues falling over a point. Oriental Development 6 percents and Yokohama 6 percents, however, advanced eight and three points, respectively, on single sales. Germans were unchanged to higher with Italians and Norwegians mixed. Greeks were fractionally lower while Amsterdam 5¼ percents and Denmark 5½ percents moved narrowly irregular. Chile 3 percents were a shade higher while 6 percents of 1960 scored gains of nearly eight points on the sale of one bond.



Sharp Rise in Linseed

The sharp advance in linseed restrained business during the past week in the vegetable oils market, and although a reaction subsequently occurred, linseed oil did not improve sufficiently to enable more than a desultory enquiry to develop from crushers. Offers of linseed oil were reservedly made and trading was quiet at the sharply advanced prices. Demand for castor oil was better on both European and American account. The market for castorseed was quieter. Fair business was completed, mainly to Marseilles. Prices took on a steadier tone at the end of the week, and closed higher on balance. Groundnuts were somewhat steadier.

AMCO BATTERIES

AMCO Railway Cell

AMCO Telephone Cell

AMCO Automobile Battery

AMCO Batteries have now entered into a Technical Collaboration Arrangement with Gould-National Batteries Inc. U. S. A. Under this arrangement, **AMCO** will receive complete Technical Know-How for production of all types of Storage Batteries.

Gould-National, the world's largest manufacturers of Automotive Replacement Batteries, have 29 Battery Plants strategically located all over the United States of America and Canada. These Plants produce Batteries for Automobiles, Railways, Telephones, Telegraphs, Aircrafts, Ordnance. Missiles and submarines as well as for other Heavy duty and Industrial purposes. It is noteworthy that Goulds were commissioned to fit the batteries for the World's First Atom-powered Submarine - "Nautilus." Obviously, this Technical Tie-up with an organization of such eminence is a positive guarantee to revolutionise the Scope and Technique of Battery Manufacture and bring **AMCO** in line with the status attained by the Battery Industry in the most advanced countries in the world.

DEFICIT FINANCING LIMIT FOR SECOND PLAN LIKELY TO BE RAISED

NEW ITEMS CONTRIBUTE TO IMPROVED TREND IN EXPORTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Minister for Finance, according to reports, has told the informal consultative committee of Parliament that the limit of Rs. 1,200 crores fixed for deficit financing in the second plan period is likely to be increased. During the first four years of the plan, deficit financing will amount to Rs. 1,122 crores. Giving the justification for raising the limit, the Central Finance Ministry in a note says: "The amount of deficit financing which can be deemed safe depends on a variety of factors, such as the trends in agricultural and industrial production, the extent of utilised capacity in the economy, the balance of payments, trends in private investment and the effectiveness of regulatory devices in the system. The effect of deficit financing during a particular period cannot be considered in isolation, because it depends on the total circumstances prevailing at the time. For instance, during the last three years of the first plan, the total amount of deficit financing was Rs. 286 crores. During the same period, the balance of payments also had an expansionary impact on the economy—the foreign exchange reserves rose by about Rs. 20 crores. In spite of the expansionary impact of deficit financing and the surplus on external transactions, there was a fall in the price level, the index of wholesale prices (1952-53 equals 100) for 1955-56 being 92.5. This was the result of a substantial increase in agricultural production in 1953-54 and 1954-55.

"Deficit financing in the first three years of the second plan, amounting to Rs. 893 crores, was offset to a considerable extent by the drawing down of the foreign exchange reserves. Nevertheless, there has been a rise in prices since the start of the plan. The index of wholesale prices, which was 92.5 in 1955-56, rose to 105.3 in 1957. Part of the rise was in the nature of a recovery from the very low levels of foodgrain prices in May 1955. In 1957-58, the index rose further to 108.4, an increase of nearly 3 percent. The index for 1958-59 was 112.9—a further rise of 4 percent. The index of wholesale prices in the first half of August was around 117 and was about 1½ percent higher when compared with the corresponding period last year. The index of working class consumer prices has also risen during the last three years. The index (1949 equals 100) was 105 in 1956, 111 in 1957 and 116 in 1958.

"Deficit financing is undertaken mainly to reach the levels of outlays required by the plan. These levels are, in turn, related to certain targets of production and employment. Thus, an increase or reduction in deficit financing affects several other economic magnitudes besides prices, and it is on an assessment of all the relevant factors that a judgment on past trends or future possibilities and limits has to be arrived at."

Opposition by Planning Commission

Compare this with what the Planning Commission in its review of plan resources, presented to Parliament earlier, says: "This gap in resources, namely, Rs. 438 crores, cannot obviously be met by deficit financing. Deficit financing at the Centre over the first three years is estimated at Rs. 798 crores. Besides, the aggregate budgetary deficit of the States over these three years is estimated at another Rs. 84 crores. In spite of large drawings on the reserves of sterling balances and the use of the credit extended by the International Monetary Fund, deficit financing on this scale has strained the economy. Prices have risen and the situation this year has been aggravated by the large decrease—of about 6.7 million tons—in food production in 1957-58. The rate of increase in industrial production has also slowed down. The foreign exchange reserves are now about Rs. 180 crores, and it is essential to avoid generation of any inflationary trends which might react adversely on the foreign exchange situation. Resort to deficit financing can, in these circumstances, be only marginal. Not unless food production increases substantially and prices register a distinctly downward trend, can deficit financing on any significant scale be contemplated. In view of these considerations, the limit for deficit financing for the next two years cannot be taken at more than Rs. 100 crores a year. Allowing for deficit financing of this order, the gap in resources at the Centre for these years would work out at Rs. 238 crores."

Mr. Desai Goes Abroad

The Finance Minister left New Delhi on 10th September, on a six-week foreign tour. The main purpose is to attend the Commonwealth Finance Ministers conference in London and the annual meetings of the boards of governors of the World Bank and the International Monetary Fund in Washington. During his tour, Mr. Desai will also visit Switzerland, France and Japan at the invitation of the Governments of those countries. He is expected to return to New Delhi on 22nd October. Mr. Desai arrived in Geneva on 12th September and spent the following three days in Switzerland. He had discussions with the Finance Minister and other members of the Swiss Government and also met bankers and business men. He left for France on 16th September, where he will stay until 18th September. In France, he will meet the Finance Minister, M. Pinay, other members of the French Government and top officials of the Bank of France.

On 19th September, he will arrive in London and stay in the U.K. until 26th September. During this period, he will attend the Commonwealth Finance Ministers conference, and meet Mr. Harold Macmillan, the British Prime Minister, Mr. Heathcoat Amory, Chancellor of the Exchequer, Sir David Eccles, President of the Board of Trade and Lord Home, Secretary of State for Commonwealth Relations. Mr. Desai's other engagements include meetings with the members of the Indian Journalists Association, economic journalists, commentators and other Pressmen, as well as a visit to Cambridge. Leaving London on 27th September, the Finance Minister will arrive in the United States where he will stay until 15th October. Apart from attending the meetings of the World Bank and the Fund, he will have talks with Mr. Eugene Black, president of the Bank, and Mr. P. Jacobsson, managing director of the Fund. The U.S. Government officials whom he is likely to meet include Mr. Herter, U.S. Secretary of State, Mr. Douglas Dillon, Under-Secretary of State, Mr. Anderson, Secretary of the Treasury, and the Secretaries of the Departments of Commerce and Agriculture. He will also meet American bankers and business men. The Finance Minister will address the Far East-America Council, the Council on Foreign Relations, the Overseas Writers Club, the Students Association and a T. V. Press conference. Mr. Desai will leave New York on 10th October for a tour of the mid-west of the U.S.A., where he will visit agricultural areas for two days. On 12th and 13th October, he will be in Los Angeles, where he will visit an aircraft factory. He will spend a day in Seattle and visit the Boeing aircraft factory. The Finance Minister's visit to Japan will last five days, during which he will have meetings with the Prime Minister, Mr. Kishi, the Finance Minister, Mr. Sato, the Foreign Minister, Mr. Fugiyama and another Minister, Mr. Ikeda. He will also visit the Japanese Diet. The Finance Minister will leave Japan for India on 21st October, returning to New Delhi on 22nd October.

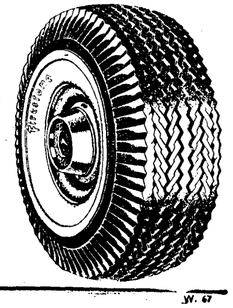
Income Tax Arrears

A review of the tax arrears, which have been outstanding in the books of the Income Tax Department for a long period, has shown that there are several instances where, due to the absence of assets, there is no possibility of recovery. There are also cases in which the available assets are heavily encumbered with prior mortgages or there are legal difficulties in enforcing recovery. A rough estimate of the amount which may ultimately be found to be irrecoverable out of the demand outstanding on 31st March, 1958, is Rs. 47 crores. Before any outstanding demand is written off, the Department, however, will have to be satisfied that no part of it is recoverable.

First Atomic Power Station

It is proposed to locate the first atomic power station with an installed capacity of approximately 250,000 kW somewhere on the coast between Ahmedabad and Bombay, so that it may supply power to the Ahmedabad-Saurashtra and Bombay regions, which will ultimately form part of one grid. The exact location will depend on several physical and technical criteria, and has yet to be determined. The Atomic Energy Commission has assumed a cost of Rs. 1,700 a kW of installed capacity, which means that the cost of the power station itself will be about Rs. 43 crores. The construction will take about four years, but the preparatory work before the beginning of construction will take about one and a half years. It is expected that electric power from the station will be generated towards the middle of 1965. The setting up of other nuclear power stations is being considered.

Russian Experts Invited



A team of four Russian experts has been invited by the Government of India for discussions with the technical officers of the Oil and Natural Gas Commission on the following matters: (i) assessment of the progress made in the oil exploration programme by the Commission and a critical examination of the technical data supplied by the geological and geophysical services and from the various drill sites, both deep and structural; (ii) consideration and appraisal of the difficulties faced by the Commission concerning the supply of equipment and personnel by Russia and for finding out ways and means to get over such difficulties; (iii) consultation on certain immediate technical problems being faced at the drill sites; (iv) advice on the programme for the remaining period of the second five year plan; (v) advice on detailed proposals for the third five year plan which is under preparation. The Government of India will bear the cost of air fares for the experts from Moscow

WORLD CHAMPIONS CHOOSE Firestone ..SO SHOULD YOU

UNDER SECRETARY 21 SEP 1959 PUBLIC DEPARTMENT

Jimmy Bryan, winner of the world-famous 'Indianapolis' 500-mile race, paid a glowing tribute to Firestone tyres, which stood up so well to a speed of 180 miles an hour, subjected to brutal pounding, twisting and grinding on this exacting race track. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

to India and back, the cost of travel in India and daily allowances to meet local expenses.

Letter from Lord Mountbatten

The Prime Minister denied in Parliament that Lord Mountbatten had addressed any communication to the Indian Government on the subject of oil exploration and production, or on any other subject. Several months ago, he said, Lord Mountbatten had written a private letter to him dealing with several personal matters. With this letter, he had enclosed some other letters about oil exploration.

Oil Prospecting in West Bengal

In West Bengal, the Indo-Stanvac petroleum project has completed the drilling of six wells at the following places: Burdwan, Galsi, Jalangi, Debagram, Bolpur and Ranaghat. The seventh well near Memari is in progress and a depth of 12,030 feet was reached on 27th August. The first six wells have proved dry and the seventh one is yet to be tested.

Coalmining Machinery Project Report

The detailed project report for the coalmining machinery plant to be set up by using a portion of the 500-million-rouble credit offered to India by Russia, has been received. The coalmining machinery plant will have a production capacity of 30,000 tons of coalmining machinery and spare parts a year. In addition, the plant will also be capable of producing and supplying to other enterprises in the country about 1,800 tons a year of steel and iron castings, forgings and stampings.

New Cable Concern

A licence has been granted to Messrs W. T. Henley's Telegraph Works Company Ltd. Calcutta, a subsidiary of Messrs W. T. Henley's Telegraph Works Company Ltd. London, U.K., for the establishment of a new industrial undertaking under the name and style of Messrs Henley Cables (India) Ltd. The total capital, which it is proposed to issue, is Rs. 1.1 crores, out of which 60 percent will be held by Messrs W. T. Henley's Telegraph Works Company Ltd, London, and 40 percent by the Industrial Credit and Investment Corporation of India Ltd, and Tatas and their friends and associates. Technical assistance will be given by the U.K. firm, which will provide information on all the manufacturing techniques and design, construction and lay-out of the Indian factory, as well as training facilities and the services of expert personnel. That firm will also act as purchasing agents for plant and equipment in return for payment of out-of-pocket expenses.

Posts and Telegraphs Board Reconstituted

The reconstitution of the Posts and Telegraphs Board was announced last week. It will consist of the Director-General, Posts and Telegraphs, as chairman and six other members, namely, members for Finance, Posts, Administration, Telecommunication Traffic, Maintenance and Operation, Telecommunication Planning, Development and Workshops and Banking and Insurance. The Board will have a secretary of the status of a Deputy Secretary of the Government of India. The existing officers of the Directorate will be appointed *ex officio* appropriate members of the Board, and the present Financial Adviser, Ministry of Finance (Communications), will be the Member for Finance. The Board and the Director-General, Posts and Telegraphs, will exercise all the powers of the Ministry of Communications in administrative matters with the approval, where necessary, of the Minister of Communications. The workshop board will function as a sub-board under the reconstituted body. In policy matters, the approval of the Minister of Communications will be obtained through the Secretary of the Ministry. In financial matters, the Board will exercise all the powers of the Ministry of Communications under the arrangement of internal finance. The Ministry of Finance has also agreed to confer on the Board such enhanced powers as may be needed. In the event of a difference of opinion between the Member for Finance and the majority of the Members of the Board, and where the former wishes the matter to be submitted to the Government for decision, a reference will be made to the Minister of Communications through the Secretary of the Ministry. As for matters covered by internal finance, the decision of the Minister of Communications will be final. But for other matters, if the Finance Member so desires, a reference will be made to the Minister. The Financial Adviser to the Communications Ministry will be relieved of the work relating to the Ministries other than Transport and Communications, to enable him to devote himself adequately to his new responsibilities. He will also be competent to deal with Posts and Telegraphs matters on behalf of the other appropriate wings of the Finance Ministry. The Ministry of Home Affairs has agreed to confer on the Director-General, Posts and Telegraphs, such powers as may be needed for the efficient functioning of the Board.

Locating the Drug Projects

The Drug Projects Location Committee has prepared its report. It was set up to recommend suitable sites for the following: (i) the basic chemicals and intermediates project; (2) the synthetic drugs project; (3) the antibiotics project; (4) the endocrines and glandular products project; (5) the surgical instruments project and (6) the phyto-chemical project.

The committee consisted of the following: (1) Mr. E. P. Moon, Adviser (Planning), Planning Commission, chairman, (2) Dr. A. Nagarajarao, Joint Secretary, Ministry of Commerce and Industry, member, Dr. G. P. Kane, (Alternate) Industrial Adviser (Chemicals) member, (3) Dr. K. Venkataraman, Director, National Chemical Laboratory, C.S.I.R, member, (4) Dr. F. B. Khambatta, Director, Medical Health, Railway Board, member, (5) Mr. K. Vyasulu, Director, Industry, Planning Commission, member-secretary.

The terms of reference were: (1) to make an assessment of the different facilities required for the establishment and operation of each project and examine the availability of these facilities at the various locations considered appropriate; (2) to make recommendations on complementary investments for the creation of the required facilities at the selected sites; (3) to enumerate the different items on which site data are required to be made available for the consultants for the preparation of project reports and suggest arrangements for their collection; and (4) to make a reassessment of the capital and cost estimates with reference to the locations recommended for the various projects. The report is being examined.

Rise in Exports

Exports during the first seven months of the current year totalled Rs. 317.4 crores, compared wih Rs. 304.9 crores during the corresponding period of last year, although exports of tea have declined this year by Rs. 10 crores. This was revealed at a meeting of the informal consultative committee of Parliament for the Central Ministry of Commerce and Industry. Mr. Nityanand Kanungo, Minister for Commerce, who presided, stated that there had been an upward trend in exports during the first half of 1959, and the trends at present showed that the exports were likely to increase further. The increase had been more in the products of the new industries rather than in traditional commodities. This was an encouraging sign, in that it indicated that the export trade was responding well to the steps taken by the Government.

Steel Foundry at Chittaranjan

The draft agreement for technical collaboration in setting up a steel foundry at Chittaranjan to produce steel castings for the railways, has been sent to Messrs F. H. Lloyd and Company for acceptance by the Government of India. Production is expected to begin after the completion of the construction and installation work, which is estimated to take about three years from the date of the signing of the agreement.

Sale of British Concerns

From 1948 up to 31st March, 1959, 94 British concerns in India were sold and Rs. 17.73 crores were transferred to the U.K.

Indian Wool Exports to U.K. Rise

A 30-percent rise in Indian wool exports to the U.K. was recorded during the first six months of this year, raw wool exports aggregating 8.2 million lbs, compared with 6.3 million lbs during the same period of last year. Wool top imports into India however, fell by about 8 percent—5,932,000 lbs compared with 6,402,000 lbs during the first six months of last year.

Turner Morrison

Recent reports about possible changes in the control of Turner Morrison following reported changes in the ownership of its shares, are, it is understood, being viewed with some concern in official circles here. The Government has, it is learnt, already addressed the management of the company drawing its attention to some specific provisions of the Companies Act, which require prior approval of the Central Government for changes in the constitution of managing agency companies or changes in the control or management of other companies. The Government has it is also learnt, warned that if the reported change in the control of this managing agency house is not considered by it to be in the interest of the companies under the latter's management and control, it will be unable to accord its approval to the proposed change. In view of the increasing responsibility of joint-stock companies in the private sector for promoting and furthering the country's development plans, it is felt that it is of paramount importance to ensure continued efficient management of well-run companies by making it difficult for speculators and adventurers to secure control over such companies. Unfortunately, the existing powers of the Central Government to regulate changes in the control of business houses from this point of view are somewhat limited. This matter, it is understood, is engaging the attention of the Government.

(See correspondence on page 393)

Manufacturing Dart-engines in India

The Defence Secretary, Mr. R. F. Sarathy, and the Financial Adviser to the Defence Ministry, Mr S. Jayashanker, have left for London to finalise the agreement with Rolls Royce for establishing in India a Dart-engine manufacturing unit. These negotiations relate to deferred payment terms.

Russian Credit for Third Plan

Details of the Indo-Russian credit agreement are now available. It is for a period of 12 years repayments beginning 12 months after the Russian supplies of plant and equipment are completed. It carries 2½ percent interest. Russia has agreed to accept payments in goods for all past and future credits, including the newly offered credit of 1,500 million roubles for the third five year plan. It has been agreed that Russia will buy commodities such as tea, shoes, hides, and skins and shellac, India ensuring their availability, quality and price parity with other foreign buyers. During the five months ended May this year, Indian exports to Russia improved by Rs. 3.5 crores to Rs. 11.1 crores over the corresponding period of 1958, while imports from Russia declined by Rs. 6.5 crores to Rs. 5.5 crores.

SHARE PRICES RISE ON U.K. ELECTION NEWS

STERLING REMAINS FIRM IN THE FOREIGN EXCHANGE MARKET

(FROM OUR LONDON CORRESPONDENT)

THE uncertainty is over. Polling will take place on 8th October, and already the first shots in the election campaign have been fired. If the Stock Exchange is any sort of guide, one might be forgiven for thinking that the Conservatives are booked for a third term of office. Once Mr. Macmillan had made up his mind, the gloom which had affected the market for a couple of weeks prior to that vanished completely and, in spite of unfavourable developments in Wall Street, both industrial equities and gilt-edged stocks in the London stock market started moving in an upward direction, with the option market (which gives the purchaser the right to buy shares three months hence at present prices) in particular recording the heaviest turnover since it was reopened last year. At the same time, sterling has continued firm in the foreign exchange market, and generally speaking, there has been remarkable confidence in business circles as to the outcome of the election. At present, the odds certainly appear to be in favour of the Conservatives, and their leaders are full of confidence and their electioneering plans are well advanced. But the contest promises to be both keen and bitter, with Labour leaders no less confident of the outcome. The Gallup poll puts the Conservatives slightly ahead now, but the pollsters have been proved wrong before. The City, on the other hand, seldom makes a mistake, and if it made one over the way things are going at present, it would prove costly.

Labour had a fortuitous advantage in the fact that Messrs Gaitskell and Bevan returned from Russia as soon as the announcement was made and were enabled to put across an electioneering Press conference, which was followed by a party political broadcast on T V, the same night, and of course the T.U.C. being in session at Blackpool right now provides a further invaluable platform. The Conservatives, however, have got their election manifesto out while Labour and Liberals will shortly publish theirs.

Poll on Nationalisation

More than half the Labour Party supporters, questioned in an opinion poll conducted recently by Mr. Colin Hurry, a business consultant, on behalf of various industrial concerns, opposed further nationalisation. This fact was announced at the Press conference at which the main results of the survey were disclosed, and it might have something to do with the City's attitude at the moment. Of the 1,948,314 interviewed, 728,528 said that they supported the Labour Party, and 304,054 of these wanted no more State control. More than 160,000 Labour supporters refused to answer this question, or could find no answer. The survey aroused political controversy shortly after it was launched in April 1958. Only 18.6 percent of those interviewed favoured more nationalisation; 63.5 percent opposed. Besides proving that further State control is not wanted, the survey has also shown that as an election issue, it is well down most people's list of priorities. Only 7.5 percent of those interviewed saw it as one of the top three topics in a general election.

Lord Cohen Resigns

Lord Cohen, who has been chairman of the Council on Prices, Productivity and Incomes since it was formed in August 1957, has resigned so that he can devote more time to his legal duties as a Lord of Appeal in Ordinary. The announcement of this from 10, Downing Street, paid tribute to the work he had done and announced also that the work of the Council's staff would continue pending consideration of a successor. The other members appointed with Lord Cohen were Sir Harold Howitt and Sir Dennis Robertson, but the latter resigned last December to give more time to academic studies, and Professor Henry Phelps Brown succeeded him in February. In view of the general election the appointment of a successor to Lord Cohen will undoubtedly be left over, if indeed the Council itself is not dissolved, for there is little doubt that finding anyone else as well qualified to be its chairman will prove rather difficult. Among his special qualifications, Lord Cohen was a former chairman of the Company Law Amendment Committee as well as being the first chairman of the Royal Commission on the Taxation of Profits and Income.

Steel Output and Consumption Up

A further increase in Britain's steel output during August is reported by the Iron and Steel Board. Production was at an annual rate of 17,527,000 tons against 16,654,000 tons in July and 15,558,000 tons in August last year. The average weekly production in August was 337,100 tons. This was an increase of 13 percent over the weekly average of 299,000 tons in August 1958. Both months were affected, to a similar extent, by holidays and the rise in the output reflects the strengthening of demand for a wide range of products, the Board states. Production was still, however, 10 percent below that achieved in August 1957.

The production of pig iron in August was at the rate of 219,600 tons a week, compared with 221,600 tons a week in July and 221,000 tons a week in August last year. In annual production terms, this was 11,418,000 tons in August, 11,521,000 tons in July, and 11,492,000 tons in August 1958. Provisional figures for steel consumption in the second quarter of this year showed an appreciable increase.

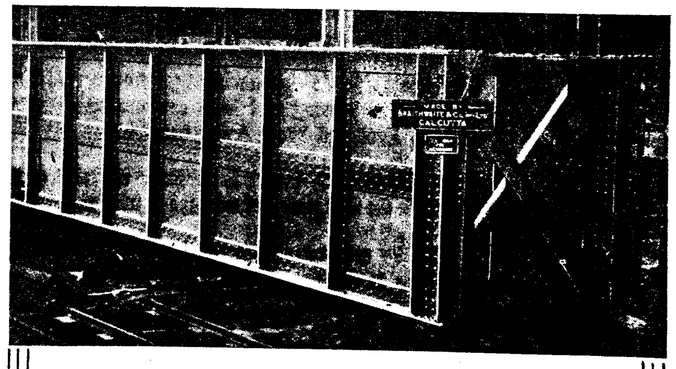
Retail Sales still Booming

By far the largest increase in retail sales in July benefited shops selling radio, electrical and similar durable goods, whose turnover rose by 33½ percent from July 1958, according to U.K. Board of Trade figures. Furniture shops also did well. All retail sales in the month rose by 5 percent against a year earlier, but durable goods shops of all types increased their turnover by 24 percent. Cash sales were only moderately up, most of the new business being done on hire-purchase or other credit terms. Multiple retailers again accounted for most of the increase.

Rayon Stock Movements

The stock movement analysis in the Lancashire man-made fibres industry during the second quarter of this year, just published by the British Man-made Fibres Federation, helps confirm the impression created by the July rayon production figures—a record for that month—that the industry is now well out of the trough of its recent recession. The survey shows a large increase in converters' total deliveries of fabric to both home trade and export in comparison with the first quarter of the year. In spun yarn fabrics, the increase was around 10 percent and for filament yarn textiles it was 15 percent.

Although the converters' offtake of loom-state fabrics went up appreciably, their stocks continued to fall, with the result that stocks of fabrics beyond the converting stage, mainly in the hands of makers-up and retail distributors, rose substantially. Spun fabrics stocks were about 7 million yards higher; filament fabrics showed an increase of 6 million yards. It will be necessary to await later figures to discover just how fast the creased stocks are moving into consumption it is encouraging to note that retail sales second quarter maintained the improvement 4 percent over the 1958 level already record the first three months of the year.



Commonwealth Conference

Although there is no confirmation available from official sources, there are indications that idea of another conference of Commonwealth Prime Ministers is being discussed informally London. Both the Canadians and the Zealanders have informed the British Government that they favour the idea and have indicated a good time might be early in the new year was in June 1957 that the last meeting took Mr. Diefenbaker, Prime Minister of Canada, in Ottawa a few days ago about the value of ing a new Commonwealth conference. Mr. of New Zealand, has subsequently commu Mr. Diefenbaker's remarks and has said that good deal of business has accumulated which needs dealing with.

With the arrival in London of Mr. Casey Australian Minister for External Affairs, and recent visit of Mr. Adjei, the Ghanaian Foreign Minister, it seems that the matter is being at both official and political levels. The obtopics for Commonwealth talks are the Common Market and the Outer Seven Group as they Commonwealth trade, possible joint space research projects, the Eisenhower-Khrushchev talks summit negotiations.

P.E.P. Looks at European Free Trade

British participation in the European free association, the Outer Seven countries, is likely to result in increased exports to Switzerland the Scandinavian countries which will balance loss in exports to the countries of the European Common Market, according to a pamphlet published recently by Political and Economic Planning. The author, Mrs. Miriam Camps, a research associate of Princeton University, sees the decision form the association primarily as an answer the Outer Seven countries of Britain, Austria, Denmark, Norway, Portugal, Sweden and Switzerland to the European Economic Community France, West Germany, Italy and the three Benelux countries. "It seems clear that in most the countries concerned the determining factor was not the prospect of economic advantage, the belief that the formation of the new association would improve materially the chances of accommodation with the Six." The author argues that the association will keep the Outer Seven countries together and thus maximise the bargaining power of those wanting a free trade area

STRONG ACTION NECESSARY TO REDUCE MOISTURE IN JUTE

U.S. BURLAP CONSUMPTION IN AUGUST DISAPPOINTING

IN the past few weeks, the question of moisture in jute has come in for a great deal of discussion. As is usual at this stage of the season, early imports of new crop jute contain heavy moisture. Although mills have accepted the initial arrivals without serious protest in order to assess the quality, they have made it known that excess moisture will not be tolerated in future deliveries. This problem has been troubling the industry for many years. In spite of attempts to stamp it out, it persisted mainly because the mills' jute stocks were not adequate to allow them to take drastic action. Now, however, the position has changed. Their stocks are very healthy and they no longer need to accept jute that does not conform to the recognised standards. The remedy always has been and still is with the mills themselves, and it is up to them to take advantage of their present strength.

In the past, the blame was invariably laid on the *bepari* or the mofussil baler and the grower was said to be innocent. Whether that was true or not, there is ample evidence that over the years the grower has gradually taken advantage of the mills' inability to force the issue. It is now established practice for him to bring his jute to the market without adequately drying it after the retting and washing process has been completed. Only if he intends to store it does the grower dry it thoroughly, but then, before marketing, he again waters what he has stored. The *bepari* adds more water, and the baler, whether he likes it or not, has to buy wet jute or none at all. Thus, at all stages of marketing, water has to be bought by anyone wanting to buy jute. If mills now make a determined stand against the purchase of wet jute, the tendency will be reversed. Before long, the grower will again find that he will not be able to sell jute if it is not dry. One of the mills' objections to the new 4 percent clause in the East India Jute and Hessian Exchange contract was that it would encourage malpractices in watering jute. Although the clause has been accepted under protest, the need to use it may be greatly reduced by strong action now.

U.S. Burlap Consumption

The expected rise in U.S. burlap consumption during the second half of the current year has not yet materialised. Consumption last month was 65 million yards, or 4 million yards lower than in July and the lowest monthly total recorded since November last year. In spite of this, total consumption so far this year, at 587 million yards, is better than any comparative total for the last six years. The one redeeming feature of the U.S. statistics is in the stock figures, which indicate that spot stocks have dropped by 7 million yards to 162 million yards. Thus, even the low consumption has far exceeded imports.

American interest in the Calcutta market has been negligible lately. But in spite of this, stocks of hessian goods lying with member-mills of the I.J.M.A. showed a fall last month—for the first time in six months. At 24,700 tons, they were 1,300 tons less than in the previous month, but the percentage of the total moved up 2.5 percent to 30.5 percent—the highest since January 1958. Sacking stocks showed a substantial fall of 8,300 tons, and dropped 2 percent to 56.5 percent of the whole, while other goods declined to 10,600 tons (13 percent) from 12,700 tons. This is the lowest figure for other goods since November 1957. Total stocks thus fell by 11,700 tons to 81,100 tons, the smallest since December 1957.

Gunny Production

For the first time since January 1958, stocks of manufactures in August were lower than the monthly production total. Last month, gunny production was 86,900 tons, or 2,700 tons less than in the previous month. The output of hessian was 37,600 tons (43.2 percent), of sacking 41,900 tons (48.2 percent) and of other goods 7,400 tons. The main reason for the fall was the reduction of working hours during the month from 209 to 200½. In the last week of the month, production benefited from the increase of 2½ percent in loomage, and it is obvious from the figures that most of this, as expected, was concentrated on sacking. In spite of the reduction in working hours, sacking production showed an increase of 2,000 tons (3.7 percent). Hessian, on the other hand, dropped by 2,900 tons (2 percent) while other goods fell by 1,800 tons (1.7 percent). Because of the increased productive capacity in the last week of August, hourly production increased from 428.6 tons to 433.4 tons.

Raw Jute Consumption

During August, Calcutta mills consumed a total of 481,400 bales of jute, bringing the total for the current season (July-August 1959) to 977,800 bales. During August 1958, consumption was 486,000 bales and the total for July-August 1958 was 994,000 bales. The main reason for the higher consumption last year was that a larger percentage of heavy goods was being produced.

The fibre markets were very quiet during the past week, both upcountry and in Calcutta. Very little business was transacted for the time of year, only 100,000 maunds being reported in Calcutta. Sellers were not offering large quantities, as with the present rates there was a disparity between upcountry prices and general quotations in Calcutta. Furthermore, there was a certain amount of reluctance to deal in north Bengal jute due to the uncertainty of the crop position in that area. Harvesting in most districts stopped due to lack of rain. Reports indicated only small rainfall, which was beneficial for the standing crop but not enough to provide sufficient steeping water. Conditions in Assam remained favourable, with adequate rainfall. The jute-growing districts in West Bengal had a surfeit of rain for almost ten days continuously and work was held up. Farmers did not get an opportunity to dry their jute, so arrivals at the agencies were very small. The wet weather in Calcutta has also held up the transfer of jute to mills, and actual arrivals

it mill gates and jetties were very small. Wagon arrivals in Cossipore were also down.

Model Mill on Show

According to a report on the Scottish Industries Exhibition now being held in Glasgow, a feature which is getting a great deal of attention is a model of what is claimed to be the most up-to-date jute spinning plant in the world. This is a scale reproduction of the Douglasfield mill, and spotlights the rapid advances that have been made in jute technology in recent years.

THE JUTE MARKETS

Activity was restricted in the futures market during the past week. Rates, as given by the East India Jute and Hessian Exchange Limited for the period 9th September to 14th September, were as follows:

	Hessians 40in. 10oz. November	Sacking B Twills November	Raw Jute September	
	Rs. a 100 yds	Rs. a 100 metres	Rs. a 100 bags	Rs. a md	Rs. a 100 kilos
Opening	40.10	43.85	97.40	22.50	61.35
Highest	40.52	44.31	99.90	23.36	63.12
Lowest	40.06	43.81	97.40	22.90	61.50
Closing	40.20	43.96	98.40	23.28	62.37

Manufactured Goods: The market opened on steady note last Thursday following reports that a steamer had been placed to take sacking to China. This prompted bear covering in the speculative market, so B Twills advanced by 50nP to Rs. 101.65 for September shipment. This represented a premium of Rs. 4.50 over the January-March position. There was little interest in hessians at this stage, but 40in. 10oz. moved up by 10nP in sympathy to Rs. 40.45 for the near position and Rs. 39.60 for forward shipment. Overseas buyers showed no interest in the local market. Price movements throughout the day were influenced by speculative activity in the futures market, which succeeded in pushing prices up a further 75nP or Re. 1. Conditions eased on Saturday and much of the previous day's gains were lost. Over the week-end, as a result of selling pressure, prices were marked down considerably and B Twills dropped to Rs. 101.95. Speculation about the unsealing of more looms expressed sentiment. At the close, there was a slight tendency towards a steadier market but prices were virtually unchanged.

Opening quotations on Wednesday morning were as follows:

	Sept.	Oct.	Oct.-Dec.	Jan.-March
40in. 8oz.	33.40 (26.41)	32.95 (25.92)	32.60 (25.53)	31.70 (24.75)
40in. 10oz.	40.45 (44.04)	40.35 (43.98)	40.25 (43.92)	39.60 (43.164)
B Twills	100.90	99.75	98.40	97.00
Heavy Cees				
(Plain)	102.75	99.65	98.35	97.00
A Twills	120.25	119.25	118.00	116.75
Liverpools	112.25	111.00	109.75	108.25
Cornsacks	100.50	100.35	100.00	98.00

Raw Jute: Mills showed very little interest in raw jute, and the small business done was spread over a number of them. Upcountry rates remained above Calcutta parity, so sellers did not offer discounts. Inclement weather in the local districts prevented the movement of jute, and imports in all agencies were small. Mills in general seemed prepared to await some deliveries against existing contracts before entering into new ones, as reports from the agencies recently had been conflicting, especially for the Assam areas. Not enough Northern jute was available yet to form any definite opinion about it, but initial imports inspired favourable comment. Opening quotations last week were based on Rs. 23 for Assam jute, but advanced by 50nP on Friday in sympathy with the gunny market. They fell on Saturday morning and quotations remained at Rs. 23 for the rest of the week. In the absence of business, the indications could be considered nominal. Wagon arrivals in Cossipore dropped to 585 last week. The main reason was the weather, which not only held up the transfer of the jute to railway sidings but also held up rail transport once the goods were loaded.

At the close, the market was unchanged and opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
New Crop:			
Assam	23.00	61.64	Sept.-Oct.
Northern	22.25	59.63	"
Purnea Desal	21.50	57.62	"
Daissee (Selected)	23.75	63.65	"
Assam Tossa	24.00	61.32	"
Northern (ex Calcutta)	22.25	59.63	"
Mesta			
Assam-Northern	21.50	57.62	Oct.-Dec.
Desal	21.50	57.62	"
Daissee	21.25	56.95	"
Jungh	20.75	55.61	"

I.J.M.A. PRODUCTION FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total production of jute goods for August as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	4,119 tons (4,216 metric tons) 1,49.1 lakh yds. (1,28.11 thousand metres) 72.2 lakh Nos.
(b) Sacking	40,865 tons (41,521 metric tons) 9,57.1 lakh yds. (6,75.15 thousand metres) 4,58.9 lakh Nos.
2. Gunny Cloth

(b) Sacking	1,067 tons (1,084 metric tons) 23.1 lakh yds. (21.09 thousand metres)
3. Other Manufactures	7,425 tons (7,544 metric tons)
4. Total Production	
(All kinds)	86,923 tons (86,318 metric tons)

Summary

	(000,000 yds. and 000 metres) August 1959	July 1959	August 1958	(000 tons and metric tons) Aug. 1959	July 1959	Aug. 1958
Hessian	14.21 (13,01.92)	15.19 (13,89.15)	13.27 (12,13.08)	37.6 (38.2)	40.5 (41.1)	35.4 (35.9)
Sacking	9.80 (2,96.24)	9.23 (8,52.85)	10.78 (9,85.49)	41.9 (42.6)	39.9 (40.6)	44.3 (45.0)
Others				7.4 (7.5)	9.2 (9.4)	5.5 (5.6)
			Grand Total	86.9 (88.3)	89.6 (91.1)	85.2 (86.5)
			Hours worked	200.5	209.0	197.5

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.

THE FOREIGN JUTE MARKETS

FIBRE PRICES UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

BUSINESS in the jute trade in Dundee is steady, and spinners and manufacturers are selling sufficient quantities of yarns and cloth to keep them fully employed. A great number of small orders are being placed, mostly for quick delivery. There is evidently the feeling that it is possible for prices to fall rather than to become dearer, as there have lately been reductions in the values of certain grades of raw jute, while Calcutta goods have ruled irregular with an easy tendency. According to reports, there is plenty of raw jute for the requirements of the industry this season. The quality may not be good in some cases, but on the whole, spinners have nothing to complain about and not many arbitrations are being held these days.

Fibre offers are quite freely made at prices which show little change from those quoted recently at £107 for Mill Firsts, £89 for Mill Lightnings, £79 for Mill Hearts and £66 for Grade Hearts, while dark jute is of very little interest at £93 for crack Daissee-2/3 and £86 for Grade, and £106 for Grade Tossa-2/3 and £93 for fours, September-October, c.i.f. U.K. and the Continent. Prices of some of the better grades of jute, such as Dacca Tossa 4 and 5, Crack Hearts and Grade Tossa-2/3 were raised for E.P.C. purposes last week, but this has had no effect on prices in the Dundee market. Spinners are carrying considerable stocks of the fibre, and they are meantime buying only small lots, on spot and afloat as well as for shipment.

In spite of the big drop in stocks of jute goods held by the Indian mills in August, little change has been noticeable in prices. Prices in Dundee have actually fallen a little for 40in. 10oz. hessians at 60s 9d for September, 60s 6d October, 60s 9d for November and also December, with 7½oz. at 47s, 46s 9d, 46s and 45s, respectively, while B Twills are irregular at 153s, 151s, 150s and 149s, same months of shipment, all f.o.b., Calcutta.

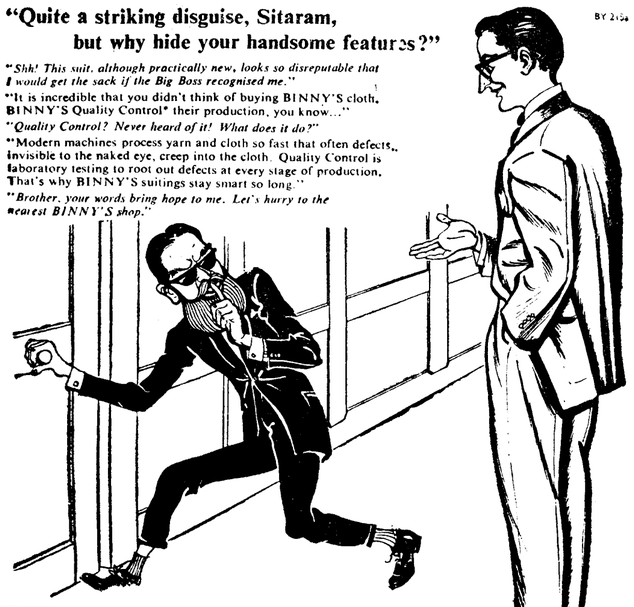
The main difficulty of employers in the jute trade in Dundee now is to secure a sufficient number of workers to keep up production. Complaints are being made of late deliveries, since labour has become scarcer because many new workshops are being erected in the district for other industries.

GUNNY SHIPMENT STATISTICS

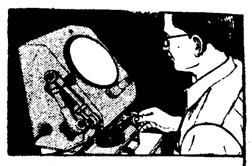
The following figures including coastal shipment relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian (Tons) Bags	(Tons) Cloth	(Tons) Total
1st to 31st August, 1959	3,865.4	33,049.6	36,915.0
1st to 31st July, 1959	3,605.7	46,229.5	49,835.2
1st to 30th June, 1959	1,995.4	31,515.8	33,511.2
	Sacking		
1st to 31st August, 1959	36,091.1	906.1	36,997.2
1st to 31st July, 1959	33,634.7	535.1	34,169.8
1st to 30th June, 1959	28,880.2	1,622.9	30,503.1

"Quite a striking disguise, Sitaram, but why hide your handsome features?"



"Shh! This suit, although practically new, looks so disreputable that I would get the sack if the Big Boss recognised me."



"It is incredible that you didn't think of buying BINNY'S cloth. BINNY'S Quality Control* their production, you know..."

"Quality Control? Never heard of it! What does it do?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S suitings stay smart so long."

"Brother, your words bring hope to me. Let's hurry to the nearest BINNY'S shop."

*This projector magnifies 500 times—reveals every defect lurking in the cotton

The quality of cloth depends to a large extent on the cotton used. Only specially selected cotton goes into BINNY'S fabrics. That's why they last so long.

BINNY

—a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees Rugs - etc etc

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited
Managing Agents: Binny & Co. (Madras) Ltd.

BRITISH TEXTILE REVIEW

CUTTING SURPLUS CAPACITY IN COTTON INDUSTRY

THE U.K. Government's offer of a bonus for a speedy decision to eliminate surplus capacity in the cotton industry was certainly effective. The bonus applied to equipment declared by the end of August as intended for scrap, and it appears that nearly all firms that wished to take advantage of the Government's offer of compensation declared their intentions by that date. First the weavers, then the spinners, then the doublers, put forward enough capacity to make their respective schemes effective, and the result, for the whole industry, exceeded all expectations. The spinners had to offer at least 6 million mule-equivalent spindles, and to the end of August they offered 11,969,386. The minimum for doubling spindles was 400,000, and 492,994 were offered. Weavers had to scrap at least 45,000 looms, and they offered 95,491. The industry has until the end of September (but with no bonus this month) to claim compensation for intended scrapping, and the figures will be moderately augmented—although the knowledge that so much capacity is to be scrapped will make the laggards pause even longer.

The scheme will be particularly drastic in the spinning section. Of its capacity of some 24 million mule-equivalent spindles, it will lose approximately half. The number to be scrapped is, indeed, appreciably more than the number idle at the end of July, not quite 10 million; and the improvement in trade has tended to reduce this number. But the number of doubling spindles idle at that time, about 700,000, exceeds by more than 200,000 the number notified for scrapping, which is a little more than a quarter of capacity, 1,900,000. The weaving section's capacity is some 240,000 looms; so the number offered for scrapping represents about 40 percent; and it is appreciably more than the 70,000 idle at the end of July. A defect of the scheme, perhaps inevitable, was that it could not adapt the pattern of the industry. (A committee might have sat and drawn up a pattern to emerge from a compulsory scheme, but this scheme is voluntary.) In the main, however, the figures suggest that the reduced industry will not be mis-shapen. In relation both to capacity extant and to capacity idle, the spinning and the weaving sections are being reduced approximately in proportion; and if adjustments are to be made the re-equipment scheme, to follow, can take care of them. The doublers, on the other hand, appear to be leaving too much capacity available; it is not long since the Cotton Yarn Doublers Association calculated that as much as 60 percent of this section's capacity was surplus. It is known, however, that some doublers anticipate a decided shift of demand back to their products. Anyway, Lord Rochdale, chairman of the Cotton Board, commented that the scrapping would "effect a realistic elimination of excess capacity", and that those who remained in the industry could proceed to "reorganise and re-equip themselves for the future".

Lightweight Suits

One cannot say categorically that no such scheme will ever be needed in the wool industry; it is, after all, producing less cloth than it produced before the last war, and other countries' capacity for producing wool goods is still expanding. The industry in Britain did not escape the recent recession; indeed, consumption of wool in this country was less last year than in any other year since 1952. However, the recovery in the first half of this year was as rapid as the decline last year. Consumption was reduced from 489 million lbs in 1957 to 452 million lbs in 1958, but it was increased from 229 million lbs in the first half of 1958 to 264 million lbs in the first half of 1959; and, allowing for holidays, the trend has continued in the current quarter. It is interesting to note that one of the outstanding developments in the clothing trade in this phenomenal summer has been a strong increase in demand for lightweight suits, and that—contrary to a widespread belief—the main constituent of these suits is still worsted on a mixture of worsted and mohair; synthetics, even Terylene, have not ousted wool from its predominant position, although mixtures of wool and synthetics, particularly Terylene, are taking an increasing proportion of the total trade in men's suits. The establishment of lightweights in popular favour can be an important factor in the trade—unless the public loses interest in a succession of bad summers. But the organisation of distribution is not ideally suited to this kind of trade. A dozen big tailoring chains transact about four-fifths of the trade in men's suits, and, naturally, the bulk of their trade is done at popular prices, whereas lightweight suits are still, in the main, a luxury product.

Foundation Garments

Many firms in the wool industry are relatively small, and it is not certain that as foreign competition increases they will all be able to prove that they are efficient enough. The general tendency in the textile industry is towards consolidation, and at the same time diversification. A recent example of internal amalgamation is the proposed merging of two big textile firms, Tootal and William Hollins. A recent example of external diversification is the acquisition by Linen Thread of an important engineering firm, Delaney Gallay. Particularly interesting is Courtaulds' acquisition of Gossard, one of the leading foundation-garment firms. This is a natural extension from the group's interests in the underwear trade, and it is an extension into a particularly dynamic market. Intense competition in foundation garments is not a symptom of recession, from which this section of the textile industry has been almost immune. Sales in the U.K. market have approximately doubled in the last ten years, the middle-teens to middle-thirties age-group predominating. Naturally, the cheaper products account for much of the increase—and Gossard's products are mostly in the higher-price range. Advertising plays a much bigger part in the foundation-garment trade than in others; but at least one very big firm, R. and W. H. Symington, relies more on its distributors, principally the Marks and Spencer chain-stores, than on publicity campaigns—a fact that re-emphasises the importance of the link between manufacturers and distributors. As to style, American influence is strong, and a number of American firms that used to export to this country, or grant licences for manufacture here, have now their own British subsidiaries.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: Year ended March 1953=100) receded by 0.4 percent to 116.5 during the week ended 29th August, 1959, compared with 117.0 (revised) for the earlier week. The index was lower by 0.3 percent when compared with the corresponding week of last month but was higher by 0.2 percent than that of a year ago. The monthly average for August 1959 worked out to 117.1, against 116.8 for the previous month and 115.9 for August 1958. Lower prices of potatoes in Mandi and fish (−17% each), oranges (−12%), rice in Kotma (−11%) and in Hailakandi and Saharanpur (−5% each), onions (−6%), jowar and eggs (−5% each) maize, arhar and turmeric (−3% each), barley, masur, milk, gingelly oil, black pepper and salt (−2% each), and ragi, gram, mung, urad, bananas and cardamoms (−1% each) brought down the index for Food Articles by 0.9 percent to 120.1, compared with 121.2 (revised) for the previous week. The prices of potatoes in Kanpur (+18%), rice in Jeypore (+6%), tea (+3%) and ghee, groundnut oil, coconut oil, coffee and betelnuts (+1% each), however, showed advances. The index for Tobacco advanced by 0.6 percent to 97.6 due to a rise in the prices of raw tobacco (+1%). The index for the Fuel, Power, Light and Lubricants group went up by 0.7 percent to 116.2, against 115.4 (revised) for the earlier week as a result of an upward revision of statutory prices of coal produced in Bengal-Bihar coalfields. The prices of lac (+5%), raw wool and raw silk (+2% each) and groundnuts, castorseed and copra (+1% each) showed advances while those of tanning materials —Avaram bark (−5%) and raw cotton and linseed (−1% each) moved down, and the index for Industrial Raw Materials rose by 0.2 percent to 120.0, against 119.8 (revised) for the earlier week. The index for Intermediate Products increased by 0.2 percent to 109.8, compared with 109.6 (revised) for the previous week due to a rise in the prices of cotton yarn (+1%), although the prices of aluminium (−2%) and rayon yarn and lead (−1% each) moved down. The index for Finished Products stood at 109.7, compared with 109.8 for the earlier week. The prices of handloom cloth and jute manufactures (−1% each) and general chemicals and oilcakes (+1% each) showed variations.

POLICE FIRING ON TEA ESTATE WORKERS JUSTIFIED

FINDINGS OF KERALA ENQUIRY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE police firings on communist-led workers of the Munnar tea estates when they were on strike in October last year, were justified by the District Judge, Mr. P. U. Kuriakose, in his report to the Kerala Government, which was released in Trivandrum on 8th September. He was appointed by the former communist Government in November last year to investigate "whether the situation in the Munnar regions required the use of force for the purposes of maintaining law and order and if so whether the resort to firings by the police on the workers on 15th and 20th October was justified". Mr. Kuriakose's finding is that the situation obtained in that region at that time "required the use of force" for maintaining law and order, and the firings were "justified in the circumstances". Nearly 100 witnesses were examined by the commission and it had to wade through massive exhibits filed by the police, trade unions and estate managements.

It may be recalled here that top communist leaders made public allegations that the police had played into the hands of European planters and that the firings were unwarranted. The communist Government then in power not only ordered two enquiries, one judicial and the other official, into the Munnar incidents, but also took victimisation measures against the police officials concerned including a senior Deputy Superintendent of Police and the Inspector-General of Police.

As for the allegation that the police behaved in collusion with the management, the report says that Mrs. Rosamma Punnose, who tendered evidence on behalf of the Devicolam Estate Workers' Union (Communist) which made the allegation, did not produce any evidence to substantiate the allegation, and that such an allegation was unfounded. The report points out the self-contradictory nature of the evidence given by Mrs. Punnose and the then Labour Minister, Mr. T. V. Thomas. While Mrs. Punnose blamed the police, Mr. Thomas had nothing to say against the police for their behaviour during the strike period. He, in fact, certified that they behaved properly. According to the police version, there was much bad blood between the trade unions affiliated to the communist-controlled A.I.T.U.C. and the Congress-led I.N.T.U.C., and that it was the former who was responsible for the unhappy incidents by obstructing the willing workers from going to work and also by attacking the police on several occasions. The Communist-led Devicolam Estate Workers' Union denied the allegations and maintained that the police indiscriminately and wantonly opened fire just to support the managements of the estates where firings took place. The Plantation Labour Union affiliated to the I.N.T.U.C. said that the workers under communist leadership were solely responsible for fomenting trouble and that they had indulged in violent activities. The planters disowned any responsibility for the incidents and held that the communist-led workers were responsible for them.

Violent Acts

The 43-page report says that there was evidence to show that there were violent acts on the part of the rival trade-union members prior to the incidents, and that there were a number of mutual assaults. On one occasion, some workers belonging to the Devicolam Estate Workers' Union had waylaid and assaulted the European manager of the Grahamlands Estate and he was also wrongfully restrained by them. Police officers and constables were stoned by workers on several occasions. Reference also is made to the charge that communist trade union leaders like Mrs. Rosamma Punnose, K. T. K. Thankamani and Ramani made speeches on the eve of the firing inciting people to violence and that they gave assurance to the labourers that the police would not interfere in trade disputes and as such, they should not be afraid. In the opinion of the Commission perhaps these leaders, in spite of the violent speeches, are not to be blamed for the incidents because "a stage had been reached where they themselves found it impossible to control the workers".

The report further says "there were numerous instances of unlawful picketing, obstruction to the transporting of plucked leaves and coolies to the warehouse of Kanan Devan and other companies, besides threatening and obstructing the willing workers attending work." The commission quotes certain passages from the report of the Chief Justice, Mr. Sankaran, on Chandanathope firing to show "care has to be taken not to transgress the legitimate limits by committing offences against the person and property of the employer and his people", when workers resort to strike and picketing in the exercise of their right of collective bargaining against the employer. "Forcible obstruction to the removal of goods is an offence under the penal law of the land and it is the duty of the police to take prompt action to avert such situation and to give redress against such unlawful obstruction," Mr. Justice Sankaran observed in his report.

The commission, therefore, maintains that the police were justified in the use of force for the purpose of maintaining law and order". He further says that according to the Indian Penal Code, "if there is reasonable cause for the apprehension of danger to the person from an attempt or threat to commit the offence, resort of force would be justified." and that "in the context that existed at the time of firing, the situation was such that the firing was justified and it was done in self-defence." It may be recalled that the police came out unscathed from the enquiry conducted by the Second Member, Board of Revenue, Kerala, into their conduct at the time of the strike, also.

Pepper Exports Rise

There was a rather heavy shipment of pepper from India last month. Trade estimates place the export of pepper in August 1959 at 1,800 tons, compared with 573 tons, in the previous month. Communist countries took the major share of it. The Russian offtake is placed at 650 tons, the Czechoslovakian at 350 tons and Poland's at 100 tons. The U.S.A. took 450 tons in August, compared with just 47 tons in July. Total exports for the first ten months of the season (November 1958 to August 1959), amount to 9,100 tons. There was yet another spurt in pepper prices last week. Pepper values jumped from Rs. 750 to Rs. 825 a candy of 6 cwts. on the Cochin market. This is attributed to heavy orders from abroad. Indian shippers have received substantial orders from both the U.S.A and Russia. Forward deals extending up to December are taking place at handsome prices.

CALCUTTA TEA AUCTIONS IN AUGUST

PRICES OF QUALITY GRADES IMPROVE

FIVE sales were held during August, at which a total of 276,926 packages was catalogued. In Sale No. 8, there was a good general demand, especially for teas with quality and good leaf appearance Tippy teas were strong and the best Darjeelings sold well but, where quality showed a decline, both Darjeelings and C.T.C. teas tended easier. In the next sale, the best teas were still in strong demand but there was an easier tendency all round for other sorts except for plain B.P.s and fannings, and "teas for price" which were often dearer. Darjeelings were a comparatively weak feature, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. In the next two sales, the same trend was in evidence. Buyers followed quality closely and, where this showed a decline, prices realised were often considerably below valuations. Plain teas continued firm, particularly plain fannings which were often dearer, while well-made medium B.P.s and fannings showed advances in Sale No. 10. There was a fair demand for whole leaf grades which, however, tended easier. Darjeelings continued to be a weak feature, and there was much less enquiry for tippy teas in Sale No. 10. In the last sale of the month, there was a better tone, and B.P.s and fannings in both plain and medium categories, appreciated in value. Orthodox Assam B.O.P.s were again easier except for the best, but O.Fs. showed only a slight irregular decline. C.T.C. teas were in demand at first but eased later by 20nP to 40nP, and legg-cut Dooars were 6nP to 12nP lower. In both these categories, however, prices were firm for the cheaper sorts. Whole leaf, especially O.Ps. and Darjeelings, were again easier while tippy teas showed some irregularity, with prices mostly in buyers' favour.

Throughout August, the quality of Darjeeling teas showed a steady decline and, by the end of the month, most of the offerings were of an ordinary rains description, with very little flavour. Leaf appearance continued satisfactory, however, and some quite attractive grades were on offer. There was a very useful selection of Assam teas in Sale Nos. 8 and 9, particularly the latter; some bright liquoring orthodox teas with attractive tip were catalogued, including a good quantity of useful C.T.C. grades. Thereafter, there was a slight decline in quality which became more noticeable in the last sale of the month, although quality was of quite a useful standard, and leaf appearance continued satisfactory with some tip still in evidence. Quality of Dooars teas was maintained throughout the month, and leaf appearance showed little change. As a result, the offerings are now about average for the time of year. There was little change to note in Cachar teas. While a number of estates produced teas of good appearance with clean, sweet liquors, there were some plain liquoring teas with stalk and fibre in the leaf.

(Exclusive of zonal excise duty.)

Internal Market

There were 2,031 chests of leaf on offer and these met with a good general demand. Dust offerings amounted to 76,961 chests. Black exportable kinds were in strong demand in the first sale of the month. They declined in price in the next two weeks but were again a strong feature in the last sale. C. T. C. dusts were irregular except for some exportable types; generally, however, prices declined. The better liquoring C.T.C. invoices followed this trend but were fairly well supported in the last sale of the month.

Sale No. 11 „ „ „	1.81	176

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 11 totalled 436,010 chests at an average price of Rs. 2.55, compared with 370,363 chests at an average price of Rs. 2.81 for the same period in the previous season. Internal sales at 3,750 chests of leaf and 145,405 chests of dust (average prices Rs. 1.72 and Rs. 1.99) go against 4,905 chests and 129,406 chests, respectively, (average prices Rs. 1.77 and Rs. 2.03) of the corresponding period of the previous season.

The estimated north-Indian crop to the end of July 1959, was 202.12 million lbs, compared with 199.80 million lbs to the same date of last year. The average figure at this date for the three years, 1956-58, was 199.82 million lbs.

The price of Export quota declined from 2¼nP a lb to 2¼nP a lb in the first week of the month, but again rose to 2¼nP, remaining steady until about the third week when prices increased to 2¾nP. Prices again fell to 2¼nP a lb thereafter and remained steady at that level till the close.

Arrivals (in chests) in Calcutta warehouses during the period 24th July, 1959 to 23rd August, 1959, with the corresponding figures of the previous year in parentheses were: by steamer 488,307 (489,541), by rail 146,306 (130,936) and by air 9,078 (13,951), making a total of 643,691 (634.478) chests. From the beginning of the season 1st April, 1959 to 23rd August, 1959, arrivals have been: by steamer 911,247 (913,604), by rail 306,631 (254,101) and by air 26,437 (45,775), making a total of 1,244,315 (1,213,488) chests.

COCHIN TEA SALES

At Dust Sale X, 300,000 lbs of tea were on offer. There was a strong demand, and prices advanced irregularly by 10nP or 15nP.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

C.T.C. DUSTS FALL

AT Sale No. 14, held on 14th and 16th September, offerings at the Export auction amounted to 59,298 packages. The market opened quietly, but a better tone developed later and a good general demand became apparent. Plain B.P.'s were about steady, but medium B.P.'s were occasionally easier. Clean black Fannings and medium Fannings were strong and generally dearer especially the brighter liquoring medium descriptions. Medium or hadoe B.O.P.'s with tip were a weak feature and there were a number of withdrawals. O.Fgs. showed an easier tendency although some of the brighter liquoring types sold well. There was a slightly better demand for C.T.C. teas. The best types and the cheaper sorts were well supported, although the medium and good medium varieties generally showed a decline of 10nP to 20nP. Legg-cut Dooars teas were well supported. There was a fair demand for whole leaf grades which were, however, a little irregular, clean black Pekoes tending dearer. There was a fair demand for tippy teas, but at easier rates. There was a little more demand for Darjeelings which were again irregular, tending easier.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.91 to 1.98	2.05 to 2.10
Plain B.P.	1.84 to 1.86	1.70 to 1.74
Plain Fannings	2.00 to 2.10	1.78 to 1.86
Medium B.P.	1.94 to 2.04	1.90 to 1.95
Medium Fannings	2.16 to 2.26	2.00 to 2.15
Best Assam C.T.C. B.P.	2.30 to 2.70	2.70 to 3.00
Best Assam C.T.C. Fgs.	2.70 to 3.10	3.10 to 3.30

(Quotations are exclusive of excise duty.)

At the Internal Sale, 22,051 chests of Dust on offer. There was a good general demand, particularly for exportable kinds of orthodox manufacture which were up to 4nP dearer and sometimes more. Legg-cut Dusts also appreciated in price, while Darjeelings, although irregular, generally sold well. Medium C.T.C. Dusts were irregularly easier. At the beginning of the sale, they were about 10nP easier, but as the sale progressed, demand weakened considerably and these descriptions were 15nP to 20nP lower and often difficult of sale. The very best C.T.C. Dusts generally followed this tendency.

Quotations

	1959 Rs.	1958 Rs.
Medium Dooars Dust	1.90 to 2.00	1.74 to 1.76
Medium Assam Dust	1.88 to 1.96	1.76 to 1.78
Medium Assam C.T.C. Dust	2.00 to 2.05	2.15 to 2.35
Best Assam C.T.C. Dust	2.50 to 2.70	2.50 to 3.00

(Quotations are exclusive of excise duty.)

There was a good general demand for the 901 chests of Leaf on offer. The few lines of Green tea on offer, however, sold at slightly easier rates.

FREIGHT RATES BETTER FOR FORWARD POSITIONS

THERE was slight evidence of firmer rates for forward positions in the freight markets. This may well be a seasonal increase. In view of the vast amount of laid-up tonnage, owners, while welcoming the increased rates, show little optimism that the worst days of the slump are over. The unfortunate accident in the river Hooghly, which has caused a serious dislocation in ship movements, has again focussed attention on the almost non-existent salvage equipment of Calcutta port. It is to be hoped that immediate action will be taken to remedy the situation.

SUGAR FIRM

During the week ended 16th September, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 2,000 bags and stocks totalled 40,000 bags. Rates were Rs. 40.12 for ordinary grain and Rs. 42.8 for big grain. The market was firm.

HIDES AND SKINS STEADY

The market in skins continued steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 8th September and 14th September, 1959)

Cowhides: Wet salted (Slaughtered) 2,300 pcs. on the basis of Rs. 7.50 to Rs. 15.50 and Rs. 18.15 to Rs. 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) 46,200 pcs. on the basis of Rs. 380 to Rs. 395, Rs. 445 to Rs. 470 and Rs. 500 to Rs. 525; Wet-Salted (he-killed) on the basis of Rs. 5.50 and (she-killed) on the basis of Rs. 5.25 a piece; Assam-Dinajpur 20,000 pcs. on the basis of Rs. 370 to Rs. 385 and Rs. 450 to Rs. 505; Purneah-Kissenganj 2,100 pcs. on the basis of Rs. 480: Patna-Pakur (Ord.) 8,800 pcs. on the basis of Rs. 390 to Rs. 410 and Rs. 465; Muzafferpore-Patna 500 pcs. on the basis of Rs. 460.

Bazaar Stocks

(14th September, 1959)

Cowhides: Wet salted 111,000 pcs.

Goatskins: Wet salted (Daissee, Kustia, Patna, Killed) 23,300 pcs.; Assam-Dinajpur 25,500 pcs.; Muzafferpore - Patna-Pakur - Purneah-Kissenganj 91,500 pcs.

LINSEED FIRM

Firm conditions have prevailed in the linseed market this week. Seed prices have continued to advance, touching Rs. 24.31 on Friday, but a slight reaction has developed towards the close. Crushers have shown a keen interest. The futures market moved similarly and the highest levels reached were Rs 24.50 for September and Rs 23.62 for May. There has been little activity in the oilcake section with only small local sales around Rs. 14.50. Overseas markets have been quiet. With a sharp advance in the U.K. oil price to £111, shippers have been active, and local business has been done at Rs. 52.50. Later, following quieter Canadian advices, values have declined to £107 10s and local transactions have been reported at Rs. 51.50. Latest quotations are based on: Ready-September Rs. 23.75 a maund, October-November Rs. 24 a maund, September futures Rs. 23.94 a maund and May futures Rs. 23.37 a maund.

SHELLAC QUIET

During the week ended 16th September, the market was quiet. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 101, 99 buyers; 103 to 101 sellers.
Lemon No. 1 Shellac	Rs. 100, 101, 98 buyers; 102, 101 sellers.
Lemon No. 2 Shellac	Rs. 95, 94 buyers; 97, 95, 96 sellers.
F. O. Superfine Shellac	Rs. 88, 87, 88 buyers; 89, 90 sellers.
Standard One Shellac	Rs. 86, 85 buyers; 87, 86, 87 sellers.
TN Pure Shellac	Rs. 78 to 76 buyers; 80, 77, 78 sellers.
Golden Kusmi Seedlac	Rs 105, 100, 105 buyers; 115, 110, 115 sellers.
No. 1 Kusmi Seedlac	Rs 92, 95, 90 buyers; 96, 100, 95 sellers.
No. 2 Kusmi Seedlac	Rs 84 82 buyers; 90, 88, 85 sellers.
Golden Bysaky Seedlac	Rs. 88, 87, 90, 88 buyers; 90, 89, 92, 90 sellers.
One B Bysaky Seedlac	Rs. 84, 83, 81 buyers; 86, 84 83 sellers.
Two B Bysaky Seedlac	Rs 79, 77, buyers; 78 done, 75 buyers; 81 to 77 sellers.
Manbhum Fine Bysaky Seedlac	Rs 81 to 79 buyers; 82 sellers.
Fine Bysaky Seedlac	Rs. 78, 76, 75, buyers; 80 to 78 sellers.
Genuine Bysaky Seedlac	Rs 74 to 72 buyers; 76 to 74 sellers.

Shipments during September until the 10th were 5,329 packages.

THE CHANGING FACE OF INDIA 2

the cart & the carriage

The bullock cart rumbles along a village track, while close at hand a diesel train thunders on gleaming steel rails. This is the sharp contrast of a changing India.

Everywhere the country is awakening to a new age of prosperity. Fostering this renaissance is the Life Insurance Corporation. Every day the Corporation invests a million rupees in the country's economy. This money, collected from premium-payers, helps build, among other things, the roads and railways so vital to our economy.

Just as the Life Insurance Corporation participates in this mighty adventure of construction, so too does each policyholder. He participates today through the premiums which he pays; and he will participate tomorrow in the better standards of living which the country as a whole will enjoy.

AIR DISPLAY AT FARNBOROUGH

RECORD NUMBER OF OVERSEAS VISITORS

THE Society of British Aircraft Constructors' twentieth flying display and exhibition opened on 8th September. A record number of overseas guests—some 8,000 accepted invitations, compared with last year's 7,500—have come to see the display. At the Press preview on the preceding day, there was a full flying programme in blazing sunshine which included new jet and turboprop airliners, new transonic and supersonic trainers, helicopters, feeder-liners, the unique *Hovercraft* "cushion rider" and impressive Royal Navy and Royal Air Force participation.

The guided weapons park has been a centre of attraction, a spectacular last-minute missile exhibition in the exhibition building being a fifth-scale model of the Blue Streak ballistic missile. This is the first time that this weapon has been shown in public. The contents of the exhibition building have proved to be of singular interest, there being a large number of new components, parts and items of equipment. The aero-engines, which are earning a great deal of overseas currency in the export market, have also been the centre of much interest.

The flying display began with a *Scimitar* taking off, followed by R.A.F. *Hunters* and *Jet Provosts*. The *Scimitar* then made a run low over the runway taking photographs—which were available only 20 minutes later—of the airfield. The new *Comet 4B* followed and, on landing, demonstrated the efficiency of reverse-thrust, coming to a halt after a remarkably short run. R.A.F. aircraft held the floor, as it were, for the next 13 minutes. *Victors*, *Vulcans*, *Javelins* and a flypast of Transport Command aircraft preceded an immaculate display of aerobatics by *Hunters* of Treble One squadron, the "Black Arrows," whose display must surely rank as one of the most polished in the world. They used smoke most effectively during their manoeuvres.

Then followed demonstrations by the twin-rotor, turbine *192* helicopter, an *Aiglet*, *Twin Pioneer*, *Beaver* and *Jet Provost*, leading aircraft in their respective fields. Ranald Porteus gave a polished display of aerobatics in the *Aiglet*.

Hovercraft

The eagerly awaited *Hovercraft* moved about, looking like some weird Martian, a foot from the ground. As Lord Brabazon wrote in a letter to *The Times* recently: "Certainly this revolutionary vehicle will fit into many applications. A ferry between Bristol and Cardiff . . . Transportation of cattle from central Australia to the ports . . . Traffic up the great rivers of the world, even river buses on the Thames. There are countless applications." The *Hovercraft* concluded by carrying 20 soldiers, a remarkable performance on 540 horse-power. Then followed four airliners which have much to commend them to the world's operators—*Herald* feeder-liner (Dart engines), *Rotodyne* vertical-take-off airliner (later version to have Tynes and a considerably higher cruising speed), *Vanguard* (Tyne-powered and probably the most economical aircraft of its size and type in the world) and *Argosy* (Darts), a passenger-freighter aircraft already ordered by the R.A.F. as a transport.

Naval Aircraft

The *Gannet* flying radar post and the *NA 39* naval strike aircraft, which demonstrated its remarkably short landing run, were followed by the powerful *Vulcan 2* V-bomber which showed fighter-like agility in spite of its great size. After the latest mark of *Javelin*, the *FAW 9*, the powerful *Sea Vixen* and the diminutive *Gnat* had shown their paces, the *Gnat Trainer*, which made its first flight early in September, was introduced for the first time. Its cheapness and economy of operation will commend this transonic trainer to a number of air forces.

The *Hunter 9* ground attack fighter and *Hunter 66A*, the latest version of the Indian Air Force's two-seater (which demonstrated a spin using smoke), were followed by the *Lightning* and *P. 11* Mach. 2 trainer which showed their ability to turn almost within the aerodrome boundary—no mean performance for aircraft of their size and weight. Weight lifting ability and agility were the keynote of the helicopter "circus", the centre-piece of which was a *Westminster* which lifted a 103 feet "flying bridge" under development for the forces. A *Wessex* lifted a land rover and anti-tank gun, a *Whirlwind* a "Moke" army vehicle and the *Widgeon* four engineers. Meanwhile a *Skeeter* and *P. 531* showed their manoeuvrability. Finally a formation of six Royal Navy *Scimitars* gave a polished display of aerobatics, a "dart" target "snatch" and dropping a simulated "A" bomb. Two aircraft landed and folded their wings while still taxying and a third *Scimitar* landed between them from the other end of the runway.

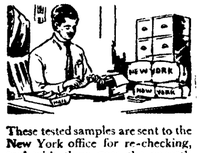
PORTABLE PUMP FILTER

A combination hand pump and filter by means of which pure and wholesome drinking water can be obtained rapidly using natural sources available, has been produced by British Berkefeld Filters Ltd. This device which has a weight, when packed, of only 7 lbs is ideal for service units, survey parties and individual travellers. It consists of a filter candle with a pump housed in its body contained in a plastic cylinder with a detachable foot-stand and rubber hose connectors. It can be supplied in a waterproof bag with straps suitable for saddle or shoulder or in a strong hinged box with shoulder straps.

The double action pump is highly efficient and will provide 15 to 25 gallons of filtered water an hour. It is light and compact requiring little effort to operate. Dismantling and reassembly for maintenance purposes are simple. The filter candle is made of Kieselguhr, a diatomaceous earth of exceptionally high porosity. The water passes through the candle from outside to the inside, leaving all impurities on the external surface. The manufacturers strongly recommend the use of a Sterasyl candle for the portable pump filter. This type of candle is made from Kieselguhr in which is incorporated a quantity of finally divided silver. The bacteria trapped within the pores of the candle are destroyed by the action of the silver ions and the water is made bacteriologically pure. Tests have shown that water which was artifically contaminated with bacteria to a degree such as would never be encountered naturally, was made safe by a single passage through a Sterasyl candle.

A great advantage of this type of filter candle is that it does not require immersion in boiling water for cleaning purposes as does the ordinary Kieselguhr candle. The only attention it requires is washing with a soft brush in clean water when the rate of filtration slows down (no detergent should be used). Its sterilising action remains effective throughout the whole of the life of the candle.

This expert has won the trust of millions in the label *'Sanforized'*



Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for
·SANFORIZED·
REGD TO MR
on the label
and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

CHEMICALS THAT HELP INDUSTRY TO BRING A BETTER FUTURE CLOSER

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS—acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER—Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES—Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES—Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT—Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers

CHEMICALS FOR EVERY INDUSTRY

Monsanto

MONSANTO CHEMICALS (INDIA) PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.

COAL COMPANIES

O. Po. F and Dd indicate Ordinary Preferred Ordinary Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in 'accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SHARE MARKET TRENDS: NOW AND IN PROSPECT

THE present sluggishness in the share markets, although not unusual at this time of year when operators are beginning to plan their Pujah holidays, is nevertheless causing concern. The decline in prices during the past month or so does not appear to be a purely temporary break in the year-old bull phase, as there is little evidence to indicate that the trend will be sharply reversed in the near future. It is now being debated whether the so-called bearish factors—such as the deterioration in Sino-Indian relations, the political developments concerning the division of Bombay State on a linguistic basis, the Leftist agitation in West Bengal, and the purely technical question of over-bought positions—have not been adequately discounted at current prices. So far as the incursions of the Chinese army are concerned, it looks as if the country can prepare for a long-drawn-out border dispute. The implication is that India may be obliged to increase her defence expenditure, and how far this will inflate fiscal levies in future is difficult to foresee at this stage.

The present circumspect behaviour of investors springs from a careful view of dividend prospects. The publication of dividends by a few companies under the Finance Act, 1959, has chilled the optimism which prevailed after the last Central Budget removed the wealth tax on companies. Experience now shows that the changes in corporate taxation have not only given no appreciable tax relief to companies—it is marginal where any relief is discernible at all—but dividend prospects have been considerably undermined by the provision for the deduction of tax at source. Although a few companies have tried to pay the same net dividend to their shareholders as before, the increased gross dividends which must be paid have absorbed a considerable portion of distributable profits. So the prospects of paying increased net dividends in the near future are not good.

The outlook for preference-share dividends has been similarly affected. Where companies are not forced to pay tax-free dividends under their Articles of Association or any other specific undertaking, they are likely in future to pay dividends only after deducting tax. They need not be expected to go on paying dividends tax-free, considering the liability they will be undertaking should they decide to pay the tax out of their own resources. It is possible that some concerns, as with the Budge Budge Jute Company, may try to compensate shareholders by paying a little more than the nominal dividend under certain specified conditions, but even then the compensation may not prove adequate. It therefore seems likely that shareholders will become more discriminating than they have been. Preference shares carrying a legal right to enjoy tax-free dividends have become relatively more attractive. First, tax is uncertain as, judging from current fiscal trends, it could be increased further, so investors feel more secure of their tax liabilities are covered. Secondly, companies are likely to give moderately high fixed dividends, as testified by many recent issues. The trend is understandable considering that in the kind of expanding economy which India should have for many years to come, interest has to be maintained at a fairly high level if inflationary complications are to be avoided.

The attraction of preference shares with tax-free dividends will increase steadily, and discriminating equity shareholders may well argue that their investments must give a return which is on a par with the tax-free dividends on preference shares. Their claim to an even higher return is backed by the risks which are inevitable in equity share investment. Judging from yields, equity shares do not at present give much scope for further improvement. In fact most of them, especially the "blue chip" series, look somewhat over-valued on yield considerations. Dividends on sound equity shares may take much longer to catch up with yields available at present on preference shares—it is doubtful really whether they can ever do so unless taxes are brought down to more realistic levels. Optimists in the market place argue that yield considerations do not by themselves govern the movements of equity shares. They cite the examples of the U.S.A., the U.K., West Germany and many other countries where yields on equity share capital have fallen below those available on fixed-dividend investment and Government bonds. The question, however, is whether conditions in this country provide a suitable climate for a similar movement in equity shares. In foreign countries, equities are being bought as a hedge against inflation. The trend is justified because share prices have moved up in proportion to the decline in the purchasing power of money. But in India, experience has so far been different and there is nothing to indicate that the trend will be reversed. Movements in shares here are artificially governed by irrational official policies. Indian share prices do not move in line with business prosperity, because the working of the corporate sector is severely regulated. Not only is expansion being routed according to plan objectives, irrespective of economic considerations, but earnings of private enterprise are also being held down by numerous fiscal imposts and statutory obligations.

Investment in equity capital abroad has also been encouraged by growth prospects. In India, these have been substantially undermined by increased taxation. If equity holders are prevented by high taxes from sharing in the growing prosperity of their companies, they cannot be expected to go on taking the risks of industrial investment. The fact that new shares, especially rights issues by well-managed companies, are being taken up with avidity, indicates that at present prices most equities are nearly fully valued. Dividends expected on new shares for some years ahead are considered remunerative. The investment attraction of new share capital is all the greater because earnings during the initial period of working enjoy a long spell of tax exemption.

There is, nevertheless, little excuse for taking a gloomy view. What is likely to happen in the near term is that prices of equity shares may not change much. As substantial floating stocks are being held by institutional investors, no great selling pressure is foreseen. But at the same time it is not expected that present prices will attract any big buying. This is probably the reason why the money of the Life Insurance Corporation is being diverted increasingly towards investment in the public sector. Investors, therefore, can look forward to greater stability in share prices if official economic policy becomes more realistic. Most encouraging is the Dhebar Committee Report on the third five year plan, in so far as it omits the usual tirades against private enterprise—although it does contain vague generalisations concerning the regulation of incomes, profits and wages, which could have serious practical implications. As the Report will probably be the basis for discussion at the forthcoming A. I. C. C. meeting, it is to be hoped that capital formation will not be scared further by doctrinaire policies.

THE POLITICS OF PROSPERITY

TO try predicting the results of general elections in the U.K. can be a risky business. The British electorate, as it showed so dramatically in 1945, is capable of the most astonishing changes of loyalty; its preferences rarely obey any recognisable rules; and it is notoriously slow to make its mind up, and so can be radically influenced by even last-minute developments. But when all this has been said, it must be admitted that few British elections during the past 50 years have appeared more predictable than the one scheduled for 8th October. Not only in Britain does the result seem to be a foregone conclusion, but if the present behaviour of the pound on the world's speculative currency markets is anything to go by, it does abroad too. Almost the last doubt has disappeared that the Conservatives will be returned for the third time; that would seem to be the only rational conclusion to draw from the facts, although the dictates of wisdom are that final judgment should be withheld until the actual results have been announced. The British voter is only too aware of the extent of his power, and like any absolute ruler he is sometimes pleased to act capriciously if only to show the politicians, the forecasters and the world at large, exactly who is boss.

The issue on which the electors will be asked to decide is simple enough: Do they want continued prosperity and the freedom to enjoy it, or would they prefer a change under a management which has come to be associated, rightly or wrongly, with shortages, controls and crises? The fact that the rate of economic advance under the two previous Labour Governments was considerably higher than it has been under the Conservatives, is likely to trouble only the statistically minded. The point remains that the British people not only are richer—as they could expect to be considering the time the Conservatives have been in office—but actually feel it, because they are now free and encouraged to enjoy the goods which formerly they were only promised. There is a lesson here for Congress governments in India; prosperity in the long run is all very well, but as John Maynard Keynes once put it: "In the long run we are all dead". This prosperity has, moreover, been accompanied by a halt in the long and debilitating price inflation; the subsequent slow-down in wage rises and period of heavier unemployment are something for which the Conservatives have shown an uncommon gift in avoiding direct responsibility. The long procession of balance-of-payments crises also seems to have ended; or at least been corrected under a Conservative Government by means which do not hit the consumer in the obvious way that import controls do. In other words, as Mr. Macmillan himself so picturesquely put it, the British people "have never had it so good". When all this is added to the grasp which the British Prime Minister has shown of the modern requirements of international diplomacy by public relations, it cannot be denied that the Conservatives have a very good platform indeed. The hopes for peace and a quiet life are proof against the scepticism which any thinking person might be expected to have of the methods Mr. Macmillan has used, and his possible cynicism in the timing of them. It is also, less happily, proof against the disastrous mistakes which were made in Cyprus, are being made in Nyasaland, and have been so successfully lived down over Suez. The passing of Empire is being accompanied, at least among ordinary Britons, by the shedding of Imperial conscience and responsibility. It is in many ways depressing that the exaggerated opinion of Britain's place in the modern world, as exhibited by so many British politicians and intellectuals, should be so completely counterbalanced by an apparent willingness on the part of the man in the street to enjoy what life is at last offering him and to leave the rest of the world for Messrs Khrushchev and Eisenhower to bustle in.

The great danger of a third consecutive Conservative victory is that the devils of complacency and arrogance, which lurk perpetually only half repressed under the Party's outward suavity, will be given too much encouragement. The moderates will have a great deal of trouble keeping their less balanced and intelligent colleagues on the right lines. Let it be said right away that they will probably fail, Conservative human nature being what it is. If they do, the results will be good for neither the Party nor the country. It might be the most salutary thought for the Conservatives to remember that the real reason they are likely to get back is not the excellence of their record or the faith the electorate has in them, but simply the fact that few intelligent and

sensible Britons find themselves at the present time able to vote Labour. There is no point in analysing the difficulties the Labour Party had to face in the post-war period, what with the need for far-reaching economic adjustments and the depredations of a chronically over-valued currency, or the success it can claim in laying the foundations of the welfare State at home and a rational foreign policy abroad. The real trouble with Labour, as its patchy unity suggests, is that it has simply not brought itself to face the needs of the times. The old principles on which the Labour Party was based—social ownership of the means of production, the rights of labour, planning as a cure for unemployment—have no relevance for conditions in modern Britain: any attempt to claim that they have, as in the intention to renationalise the steel and road-transport industries, is more likely to damage the Party than to help it. Labour today is not fit for responsible office. The Party is still going through the great crisis of its life—the need to decide which way it intends to go from here: whether it will shed its working-class socialist past and become the Party of progress through massive investment, welfare through increased production, and prosperity through freedom, or whether it will go on clinging to such nonsense as nationalisation, controls and restrictions. In other words, is it going to cease to be "labour" Party, and become what would in fact be a "liberal" one?

There is no reason to believe that Mr. Gaitskell does not understand completely the dilemma his Party is facing—his recent warning to the Trades Union Congress and his reassurances to foreign holders of sterling, show that. But it is not enough that a leader's thoughts be on the right lines—at least when he is as untried and unrepresentative of the majority of his Party as Mr. Gaitskell—it is necessary that the Party's should be too. It will take at least another election defeat to make Labour face the facts of life. Or it may take just that to persuade its supporters to abandon it altogether as incorrigible and transfer their allegiance to the Party whose thinking is much more flexible and adaptable to life as it is being lived in the second half of the 20th century—the Liberals. Whatever the results of defeat for Labour on the Conservatives and the country, it cannot but be beneficial to the Party itself.

The obvious need for the Labour Party to abandon its socialist past and adopt policies more suited to freedom and prosperity—to what Professor Rostow calls a "high consumption economy"—raises the question why the Liberal Party itself should be such an inconsiderable challenge to either Labour or the Conservatives. The answer is simply that, for all the doubts which the floating voter has about it, the Labour Party can still claim a substantial working-class sentimental following, and will be able to for many years yet. The result is that the floating vote, the factor which makes British democracy possible, is quite likely to be attracted from the Labour Party—although not enough to kill it altogether—and from the Conservatives too—although probably not enough to lose them the election. For the first time since its tragic decline in face of the growing Labour vote, the Liberal Party stands an excellent chance in the next Parliament of holding the balance between the two major parties. If this happens, the consequences for rational government could be very good indeed, although the prospects for the stability of the British Parliamentary system, and its ultimate popularity with the electorate, may not be so favourable. In any case, the prospects are interesting ones. The single possibility which can probably be dismissed altogether, despite its impressive field of 230 candidates, is an outright victory for the Liberal Party. And that is perhaps a pity in an age which is, so far as Britain is concerned, bent on greater freedom, increasing economic prosperity, less internal conflict, and the avoidance of extremes of any political colour.

PROBLEMS FOR "THE SEVEN"

As the plans for a Free Trade Association of "the outer seven" take more formal shape, the opposition of particular interests becomes more vociferous. When negotiations to expand the European Common Market into a European Free Trade Area were in progress, the interests that would be adversely affected were rather subdued. The contrast is curious, because the negotiations for a Free Trade Area were always in difficulty but the negotiations for a Free Trade Association have always gone smoothly. It would be wrong to assume that, while the Governments of "the outer seven" liked the idea of the tariff-free area, the industrialists of these countries mostly disliked it. But certain industries, particularly the paper industry (in Switzerland as well as Britain), are worried because in a smaller tariff-free area than was envisaged last year competition will evidently be keener than was foreseen. The process can be seen most clearly in the paper trade. The Scandinavian paper industry is based on ample supplies of indigenous pulp that can be produced comparatively cheaply. If the whole Free Trade Area had been opened to the Scandinavians, their output would have been widely dispersed. If tariffs are favourable only in the limited area of the Free Trade Association, their output will press more heavily on that area.

The new F.T.A. plan suffers from a basic defect. It includes only one big national market, the British. When tariffs are reduced, the products of the Continental members of the F.T.A. will gravitate towards this market. To Britain, on the other hand, the scheme offers only a collection of relatively small export markets, which are not even geographically coherent. They are not to be despised, but they are obviously no adequate alternative to the big complex of Germany, the Netherlands, Belgium, France and Italy. If only from the viewpoint of self-interest, there is no reason to doubt the sincerity of the British when they say they regard the smaller free-trade plan as a means to renegotiation with "the six". But it is difficult to formulate a long-term policy with a short-term objective in view. If it is considered necessary (as undoubtedly it will be) to grant some protection to some industries, on what assumption should a protective scheme be based? If the Free Trade Association can be merged soon with the Common Market the period of intense competition will be avoided, for the whole area will be opened by the time tariffs are eliminated. But if the two groups remain separate, protection for certain industries will become increasingly necessary.

Staunch believers in free trade do not accept the idea that industries particularly affected by such schemes must necessarily be protected. They can convincingly argue that if no drastic changes result from such schemes, not much benefit can result from them either. But it is, admittedly, difficult when one important market, such as Britain, is opened to the products of a particularly important supplier of goods—say, Swedish paper or Swiss watches. The horological industry is genuinely necessary—as the British authorities found when imports of watches were cut off during the last war; and paper and related products are used for so many purposes that a national paper industry may be thought to be at least desirable. But it is important to distinguish between exceptional cases (especially those mainly affected by the imbalance of the new grouping) and cases where protection is demanded for its own sake. Such difficulties with imports are mostly specific. Difficulties concerning exports are more general. That British exporters are not satisfied with the opportunities offered by the proposed Free Trade Association is evident from their efforts to get round the Common Market's tariff wall by making manufacturing arrangements within the Common Market.

This policy is most noticeable in the motor industry. A number of British firms have recently made arrangements on the Continent—Leyland Motors in Holland, British Motor Corporation and Standard Motor Company in Italy, Rootes Group in Germany and Italy, Wilmot-Breeden in France—for extending either their manufacturing or their representation there. This interest is understandable, for the Economist Intelligence Unit estimated last year—when a combination of the Free Trade Area with the Common Market was still under discussion—that by 1970 the British motor industry would be producing about 1,500,000 cars a year and exporting about a half of them if it could operate within the framework of the F.T.A., but would produce only 1,300,000 and export only a third of them if the Common Market were established without the F.T.A. The motor industry is one of those most affected by this latter arrangement, but there are others—electrical, plastic, even paper—which are strengthening their positions in the Common Market. A general feeling among British industrialists is that no peripheral markets can compensate for loss of the main markets of Continental Europe, and that even in the peripheral markets the new scheme does not offer much advantage because Scandinavian and Swiss tariffs are much lower than the British, and cannot therefore be reduced as much.

This attitude towards the Free Trade Association—unenthusiastic acceptance—is less positive than might be expected in view of the fact that the countries comprising "the outer seven" have recently absorbed about 10 percent of British exports—more than two-thirds of the proportion absorbed by the countries of the Common Market. "The seven", moreover, are countries which have not attempted to establish all industries within their territories, and they are, therefore, essentially more receptive of imports than are, for instance, Germany and France. At least, the trade that Germany gains in the Benelux countries should be counterbalanced by Britain's gains in the F.T.A. But these gains will not result automatically from a moderate reduction in tariffs. British exporters must improve their selling and their after-sales service if they intend to take trade from the Germans.

EXPENSE LIMIT IN INSURANCE

A LARGE part of the *Insurance Year Book, 1958*, is devoted to analysing the effect of the limit on expenses imposed by Section 40C of the Insurance Act (some of the major points in the publication were reviewed in an editorial in last week's *Capital*). Statistical details have been compiled to show the number of groups of companies which have contravened the expense regulations, and which have therefore been "warned" by the Controller of Insurance in terms of the Act. The manhours spent on compilation and analysis must have been many, and probably contributed much to the notorious delay in the publication of the *Year Book*. Yet the analysis has little intrinsic value. The violation of statutory regulations based on an arbitrary device for the measurement of expenses does not in any way prove that the companies are "extravagant"—a term which is unwarrantably used in Rule 17(H) of the Insurance Rules. Nor does it reflect on the solvency of the companies. A number of foreign insurers who have been "warned" by the Controller of Insurance, for instance, have colossal free reserves, far exceeding those of the biggest insurers in India. Yet they have been "warned" with the ultimate threat of "cancellation of registration of the insurer or of taking practical steps for the reconstruction of the insurer concerned or for transferring its business to some other insurers." The inherent injustice of such a method of evaluation is evident. The indictment, in fact, means that the Controller of Insurance is telling the companies how to run their business, which is the last thing on which one would expect reasonable guidance from an official of the Government, however socialistic. But it must be said in defence of the Controller that he is a creature of the statute, so he has to perform the unsavoury duties because the law provides for them and wants them.

The Act empowers the Controller of Insurance to fix the extent of relaxation from the basic limits for any year, in consultation with the executive committee of the General Insurance Council. Under this proviso, he fixed the relaxation for 1951 at 2½ percent of the gross premium written direct in India during that year. For each of the years 1952 to 1954, the relaxation was fixed at 20 percent of the fall in the gross premium written direct in India during the year concerned as compared with the gross premium written direct in India during 1951, subject to a minimum relaxation of 1½ percent and a maximum relaxation of 5 percent of the gross premium written direct in India. The extent of relaxation was reduced for each of the years 1955 to 1957; and fire and miscellaneous business was treated differently from marine business. The relaxation for fire and miscellaneous insurance was similar to that for the years 1952 to 1954, but only 15 percent of the fall in gross premium income was allowed, subject to a minimum of 1 percent and a maximum of 4 percent of the gross premium written direct in India during the particular year. The relaxation for marine insurance was fixed at 1 percent of the gross premium written direct in India during the year.

For long, 1951 was considered the peak year for general insurance in India. An overall relaxation of 2½ percent was granted during that year, presumably because it was thought that higher expenses were justified for enhanced business. Since then, relaxations have always been based on the quantum of the fall in premium income. The expense slabs have been so designed as to take care of diminishing premiums. Additional expenses, organisational or otherwise, have to be incurred for increasing the premium income, for which additional expense allowances are legitimate. The additional allowance for 1951 by these standards was quite justified. It was expected that the same considerations would influence subsequent relaxations by the Controller, but they did not. His steady emphasis on relating relaxations to the fall in premium income has baffled many. A general relaxation, taking into account the fact that prices, wages and running expenses have been rising steadily since 1950, when the Act was brought into force, would be fairer than the present method of granting relaxations based presumably on certain theoretical assumptions.

During 1957, more groups of both Indian and non-Indian insurers contravened Section 40C of the Act than in 1956. Nearly one-third of the groups of insurers who contravened Section 40C during 1956 were given a warning under Subsection (2) of Section 64M. Of the total of 144 groups who transacted business during 1957, only

had complied with Section 40C of the Act roughout the period from 1952 to 1957, while as any as 22 had contravened the provisions four nes or more. Of these 22 groups, as many as 16 ere warned once or more. Considering all classes insurance business together, groups of insurers ho spent less than the basic limits in terms of ile 17E took a decreasing proportion of the total oss premium written direct in India. The proportion of the gross premium income by which the expenses actually incurred exceeded the basic limits, in the case of the groups spending more, steadily decreased from 4.5 percent in 1955 to 3.1 percent in 1957. The aggregate experience of all groups over the period from 1954 to 1957 shows that although the actual expenses were lower than the basic limits, the margin between the two decreased.

Current News and Comment

Alkali Chemical still Expanding

The vigorous expansion which the Alkali and hemical Corporation of India Ltd has undertaken recent years is about to receive fresh impetus. has just announced that it will soon be setting p a Rs. 2-crore organic chemicals plant at Rishra, ear Calcutta. This project, along with the belief at the company's working results for the current ear will show a substantial improvement, is contributing to the firmness of the ordinary shares: uoted around Rs. 23.94, the yield of 3.3 percent hey offer on the basis of the last dividend of percent is a measure of investor confidence in he company's growth prospects. The attractions f the equity shares have steadily increased as he adverse effects of the four-for-one ordinary ights issue made early in 1957 to finance the olythene project have passed. This time, it is earnt that no public issue of shares will be made or the organic chemicals project; Alkali and hemical will finance it from its own resources, nd the foreign exchange element in the cost vill be provided by Imperial Chemical Industries td of Britain.

The organic chemicals plant will manufacture wide range of products, including accelerators, nti-oxidants, retarders and other auxiliaries required by the rubber industry. It is estimated hat its annual capacity will be 2,200 tons. This will make the country self-sufficient in rubber hemicals for a considerable period, and is likely o save about Rs. 1 crore a year in foreign exchange. In view of the substantial expansion planned by the rubber industry in the near future, he new plant will have an important rôle to play n meeting the growing demand for rubber chemicals from the tyre and tube industry, footwear factories, and manufacturers of conveyor belts, V-belts, hose and other industrial rubber products. It will buy raw materials from the National Industrial Development Corporation's intermediates plant when that starts working. Technical assistance and research information for the Alkali and Chemical Corporation's plant is being provided by its advisers, the dyestuffs division of Imperial Chemical Industries.

The Corporation's financial experience during the year ended 30th September, 1958, was fairly satisfactory. It produced and sold more of virtually every item constituting its main interests—chlorine, caustic soda, insecticides, paints and metal pretreatment products. As a result, total sales rose to Rs. 263 lakhs from Rs. 225 lakhs in the previous year. Higher costs unfortunately reduced the net profit a little—by Rs. 65,000 to Rs. 35.63 lakhs. But the dividend of 8 percent was maintained on the sharply increased ordinary capital after transferring back Rs. 11 lakhs from the dividend equalisation reserve. As they await the next report, shareholders will remember that the polythene project did not contribute to the profits for the year ended September 1958, but will presumably do so this year; the plant went into production a few months ago. The scheme to manufacture "Alfloc" powders and briquettes, which are used for water treatment purposes, is being implemented. The capacity of the chlorine and caustic soda plant is also being expanded.

Texmaco Issue Hits Ordinaries

The ordinary shares of the Textile Machinery Corporation Ltd have been sagging around Rs. 23.60 for the past couple of weeks. This is partly because, being on the forward list, they are particularly susceptible to the general trend of the stock market, which has been bearish. But a more important reason is that ordinary shareholders are worried about the company's plan to issue a new series of preference shares. (Fuller details concerning the latter are published on a later page.) The company's paid-up share capital at present totals Rs. 1.90 crores, divided into 1.5 million equity shares of Rs. 10 each (Rs. 1.50 crores), 10,000 5½ percent (tax-free) cumulative preference shares of Rs. 100 each (Rs. 10 lakhs), and 30,000 5½ percent (taxable) cumulative redeemable preference shares of Rs. 100 each (Rs. 30 lakhs). It is now proposed to raise another Rs. 1 crore by issuing 100,000 6¼ percent (tax-free) cumulative redeemable preference shares of Rs. 100 each at par. Subscription lists will be open from 30th September to 20th October. A sum of Rs 50 a share will be payable on application, and the remainder will be called up later. The new preference shares will be redeemable at par on 31st December, 1970. They will be offered first to the existing shareholders on the basis of one new share for every 19 equity shares held, and ten new shares for every 19 preference shares held.

The main merit of the new preference shares is that they offer a satisfactory return: getting 6¼ percent tax-free on a stock which is to be redeemed at par about 11 years hence is likely to attract potential subscribers. The tax-free nature of the dividend will be particularly welcome in view of the provisions of the Finance Act, 1959. But it is arguable that the company is still some way from the stage where the servicing of the new capital will not strain the servicing of the equity. During 1958, its net profit amounted to Rs. 75.91 lakhs, against Rs. 66.24 lakhs in the previous year. A little over half the former sum went as tax provision; of the remainder, Rs. 4.9 lakhs went into the development reserve, Rs. 6 lakhs into the general reserve, and Rs. 24.18 lakhs was distributed as dividends to the various classes of shareholders. The ordinary shareholders received a dividend of 15 percent. Already, even many companies which have no tax-free preference shares in their capital structure are worried whether their earnings will enable them to pay the same amounts in net ordinary dividends as before. Texmaco's dividend liability on tax-free preference shares at present is quite small, but the new issue will increase it sharply. It is, therefore, understandable that the ordinary shareholders should be anxious.

It is stated that the Rs. 1 crore which is to be raised by the issue will be used for the various expansion schemes which the company has undertaken. It is reasonable to expect that profits will increase as the schemes mature, and also that current earnings may be better because the condition of the markets for which Texmaco caters has improved during the past year or two. But shareholders will have noted that a big liability is due to arise in the not-too-distant future: the Rs. 40 lakhs worth of loan capital represented by the 6 percent debentures is due to be repaid at the end of next year. There is no debenture redemption fund as such, but there are reserves totalling around Rs. 51 lakhs. The financial needs arising from the expansion schemes and from the redemption of debentures may dictate the adoption of a more conservative distribution policy.

In the longer run, as the expansion schemes begin to pay off, prospects should improve. A number of the schemes are promising. Texmaco has entered into a technical collaboration agreement with Combustion Engineering Inc. of New York for producing water tube boilers. It is collaborating with Stork Workspoor of Holland in producing sugar machinery with an installed capacity for two complete plants a year. It proposes to take up machine tool manufacture in collaboration with H. W. Ward and Co Ltd of the U.K. Other projects relate to the steel foundry and rerolling mills, diesel locomotives and equipment for hydraulic dams.

Assam Pulp to Raise Capital

Some details are now available about the forthcoming Assam Pulp Mills share issue. The authorised capital of the company is Rs. 5 crores, of which Rs. 3 crores are in the form of ordinary shares of Rs. 10 each and Rs. 2 crores of unclassified shares, also of Rs. 10 each. A substantial proportion of the issue is being taken up by the Assam Government, Balmer Lawrie and Co Ltd and their friends and associates. The project which the issue is meant to finance is reported to be promising. It visualises the setting up of a mill in Assam to produce 30,000 tons of bleached sulphate bamboo pulp a year, with provision for expansion to 90,000 tons. The location is good. Raw material supplies will be abundant and cheap. The supply of coal, lime, water, power and transport are assured. The market for pulp is guaranteed, the immediate demand being estimated at twice the initial capacity of the proposed mill. The India Paper Pulp Company and the Western India Match Company, it is said have indicated their willingness to enter into long-term contracts covering the entire production of the mill.

Jaipur Metals Earns More

Jaipur Metals and Electricals Ltd made a profit of Rs. 9,76,663 in the year ended 31st December, 1958, or Rs. 4 lakhs more than in the previous year. The directors have recommended an ordinary dividend of 6 percent, against 5 percent. Speaking at the annual general meeting in Jaipur on Saturday, Mr. R. H. Kamani, chairman, said that due to difficulties in getting foreign exchange and the restrictions on imports of essential raw materials, the company could not increase its output and turnover to a desired level. Considering this, its working has been satisfactory. (A fuller version of the speech appears elsewhere in this issue of *Capital*.) There was an increase of about 25 percent in the production of house service electric meters. The output of the metals division was maintained almost at the level of the previous year, in spite of the difficulties concerning raw materials. The company has undertaken the manufacture of house service electric meter components. Considerable progress has been made, and the percentage of imported ones has been reduced. The company has entered into a collaboration agreement with the West German firm, Siemens Schukertwerke A.G., for the manufacture of house service electric meters, and hopes to double its production.

Outlook for Indian Copper

In his address from the chair at the annual general meeting of the Indian Copper Corporation Ltd in Calcutta this week, Mr. P. E. G. W. Parish said that copper production during 1958 was seven tons less than the record figure of 7,848 tons achieved in the previous year, although the ore milled was higher at 442,088 tons compared with 440,671 tons in 1957. (A fuller version of the speech appears on another page of this week's *Capital*.) Due to the low price of copper in the world market (it fluctuated between £161 and £200 a ton during the first six months of 1958 and

rose to £261 a ton only in November, to decline again to £220 a ton at the end of December), the company's products have sold at rates rather below those of 1957. "This has naturally affected the working results." Costs, too, have risen due to mining at a deeper level. Total sales were, however, higher at 10,936 tons against 10,301 tons in 1957. The demand for the company's products remains firm, but uncertainty about zinc imports, which is needed as a complementary metal in the manufacture of brass, is causing some anxiety. Prospecting activities continued throughout the year. Although it is too early to judge whether these operations have been successful, it is satisfactory that ore reserves at the end of the year stood at 4,034,174 short tons, compared with 3,850,757 short tons at the end of 1957. Negotiations on the electrolytic copper project have reached an advanced stage, and the Government has been asked to release foreign exchange for it. About £700,000 will be needed to finance the scheme but it is expected that this can be found from the company's own resources. A line of business which showed an appreciable decline in 1953 is kyanite sales. They dropped to 14,696 tons from 18,267 tons in 1957. The price has also had to be reduced slightly in order to compete with synthetic materials produced in consuming countries which threaten the future of kyanite exports.

Orissa Cements: Wrongs in Rights

The ordinary shares of Orissa Cement Ltd have been moving sluggishly around Rs 16.37 for some weeks. The company proposes to raise Rs 75 lakhs by making a rights issue of ordinary shares at par in the ratio of one for every two held. The state of the scrip indicates that shareholders are not particularly pleased about the proposal, and the report for the year ended December 1958 which has just been published offers a number of clues why. The main features of the report are : (1) the company's cement production has risen from 297,000 tons in 1957 to 349,000 tons last year ; (2) but the distributable profit has slumped sharply from Rs 39.45 lakhs to Rs 25.68 lakhs ; (3) yet the ordinary dividend has been maintained at Rs 1.50 a share on the ordinary capital as increased by a previous one-for-two rights issue—a decision which has been made possible only by a drastic transfer from the reserves. The dividend recommendation will take some explaining, just in case any diligent shareholders care to travel as far as Rajgangpur, Orissa, for the annual general meeting next Wednesday. At the moment, it looks merely the child of expediency fathered by the rights issue proposal. For, although the dividend appears to offer the attractive yield of 9.2 percent at the present price of the share, the more important feature from the point of view of the genuine investor is that it is very thinly covered by earnings. Together with the preference dividend, it absorbs Rs 24.3 lakhs out of the distributable profit of Rs 25.68 lakhs, indicating that the company is living beyond its means. The evidence is overwhelming that the rate of distribution is unlikely to be maintained if the capital is again increased. Not only is the dividend liability on the tax-free preference shares liable to rise this year under the Finance Act, 1959 ; it is open to doubt also whether the company's earnings will increase substantially during 1959.

The directors report that the workers went on strike from 21st March, 1959. The strike was "withdrawn unconditionally" with effect from 29th July, 1959. They claim, however, that in spite of this, "the management was able to maintain production of the cement factory and the refractory works at practically the same level as before the strike." This seems to be a rather optimistic conclusion to draw from the monthly production figures quoted for 1959 ; in any case, since the comparative monthly statistics for 1958 are not given, shareholders will need to suspend judgment on the point. Meanwhile, they will wonder what remarkable qualities the management of Orissa Cement has that it is able to produce about the same amounts whether or not there is a strike. There are other features of the company's working which are not quite reassuring. The directors declare that "although the overall working of the cement plant continued to improve during 1958, certain teething troubles, particularly in the Folax Grate Cooler, persisted, with the result that the expected production could not be reached." Eight months after the end of the year, they are able to report no more than that "efforts are being made to overcome these difficulties in consultation with the designers and suppliers of the machinery." They add that the cement grinding capacity is just sufficient for the normal clinker production, and there is no reserve capacity to cope with any accumulation of clinker due to wagon difficulties or other reasons. An increase in the cement grinding capacity is, therefore, being considered. The completion of the basic refractories plant, which was expected to go into production by the end of 1958, was also delayed. It was hampered further by the labour strike, so that it is only now that trials are being made and regular production is expected to start shortly.

That there is an unbalance between the company's subscribed capital (Rs. 1.90 crores) and the net value of its fixed assets (Rs. 5 crores approximately) is clear. It is also clear that the loan liabilities, including the Rs. 1 crore borrowed from the Industrial Finance Corporation, are heavy. This situation, it seems, has arisen because the company, like many others in the cement industry, has expanded too fast. But what shareholders will be mainly concerned about now is whether they will get an adequate return on the new capital they are being asked to subscribe. The evidence, including the cement glut in the country, suggests that that may be doubtful.

Nationalising U.P. Sugar Mills

It is difficult to understand the reasoning underlying the U.P. Government's decision to appoint a committee to report on the question of nationalising the sugar mills in the State. The proposal emanated originally from a P.S.P. leader, Mr. Genda Singh. In a memorandum submitted to the Government, he argued that if only all the 165 sugar mills in U.P. can be nationalised, there will be enough sugar for internal consumption and for export on a large scale. In taking the proposal seriously, to the extent of appointing a committee to report on it, the State Government seems to have exceeded the bounds of discretion. In the first place, sugar is an industry over which control is largely vested in the Centre. Secondly, the Government of India's industrial policy resolution specifically mentions sugar among the industries left to the private sector. Under the circumstances, appointing the committee is a waste of the taxpayer's money. If at all a committee is needed, it should be to find out why, in spite of the alleged expenditure of so much of the cane cess on cane development, the results have been poor. There was some mention of this at the meeting of the Joint Sugar Control Board for U.P. and Bihar which has just concluded in Patna. But the only concrete decision reached by the Board was on the minimum price for sugarcane. It has decided to ask the Government of India to fix the minimum price of sugarcane at Rs. 1.75 for the two States for the year 1959-60. It is interesting to note that even the committee of the Indian Sugar Mills Association has lately veered round to the view that there should be an increase in cane prices—an increase which it has been steadily resisting until recently. In a letter addressed to the Central Ministry of Food and Agriculture, the Secretary of the I.S.M.A., it is reported, has argued that unless the Government decontrols sugar, "the minimum cane price must be raised suitably, with a corresponding increase in the sugar price on this account." The I.S.M.A. adds that in view of the general increase in the price of other agricultural crops, a rise in cane prices should not be opposed. What appears to have been completely ignored in this calculation is the consumer's interest. That sugarcane cultivation even at existing prices is not unprofitable, is clear from the expansion of the area under cane in U.P.

Raw Cotton at the Ceiling

Cotton prices have recorded a spectacular rise since the beginning of this month. The improvement has been more marked in the spot section than in futures. The hedge contract (Moglai fine 25/32in. March) has risen from Rs. 685.50 to Rs. 719, while spot prices have advanced by between Rs. 30 and Rs. 60 a candy. Several varieties, like Pengal Deshi, Vijay, Digvijay, Kalyan and 197/3, have crossed their ceiling by a decisive margin ; others are now very near it. Only a few varieties are available at much below their ceiling rates. There is a virtual scramble for securing cotton, particularly nearby positions, because delays in the movement of the crop are certain. Mills' anxiety to cover their requirements of raw cotton is understandable. The carry-over from the previous season has been smaller. The cloth and yarn markets are buoyant, unsold stocks of cloth with mills being down to a record low for three years. Calculations about the new crop have been badly upset. Excessive rains in Berar, Khandesh and Madhya Pradesh, it is said, have caused serious damage. Few observers expect the crop to exceed 4.8 million bales. India hoped to produce 6.5 million bales by the end of the second plan, but the fourth year is expected to yield no more than 4.8 million bales. This, too, is based on the assumption that weather conditions will not deteriorate further.

Mills are naturally worried about the rise in raw cotton prices. They are planning to ask the Government to take suitable steps to ensure adequate supplies of cotton at reasonable prices. The question will be taken up at the forthcoming meeting of the Cotton Advisory Board in Bombay. But it is wondered what the Government can do. . best, it can enforce controls on distribution, b that can be done only when the crop begins reach the market. It is doubtful whether mil plea for increasing the import quota for cott from 600,000 bales to 1 million bales will be acce ed by the Government, considering the forei exchange shortage. The shortfall in the crop w reduce the exportable surplus of cotton, and t high prices will affect exports not only of ra cotton but also of cloth.

While mills are worried about raw materi supplies, the futures market is worried about t prospect of trading coming to a standstill befo long if the present tempo of the rise is maintaine It was only towards the end of their career th hedge contracts last season rose above the Rs. 7(mark. This time, the new crop contract has alrea risen substantially above that point. But it is t weather which is to blame, and not the speculat Since the hedge contract is still below the marg line of Rs. 750 and the ceiling is at Rs. 820, t forward market's anxiety might seem exaggerate But its experience of dealings with the Forwa Markets Commission has been far from happ Perhaps the Commission has realised by now th the market had better be left alone as long as functions according to the rules laid down.

Cloth: From Surplus to Scarcity

The cotton piecegoods market is in a cheerf mood. The offtake remains good and the price te dency has been firm during the traditionally slac period, so many are now talking of a possible "clo famine" in the not-distant future. Fears of a acute shortage during the busy season are n entirely baseless. Stocks of unsold cloth wi mills have been steadily declining, and the late figure of 178,000 bales is the lowest for over thr years. Unsold stocks were as large as 450,000 bal at the end of 1957 and 330,000 bales at the end 1958. On the basis of a monthly average produ tion of 410 million yards (273,000 bales) this yea the current stocks are equal to less than thr weeks' output. For a country of India's size, the seem too low. Early in 1959, the textile industr was still talking about the crisis arising from surplus of cloth. But now the prospect is of a cris of scarcity. The industry attributed the accumul tion of stocks to two basic factors—high food pric and penal excise duties. The argument ran th when people had to spend more on food, they we left with less money for cloth. The heavy exci duties, it was said, had inflated costs and clot prices, leading to stiff consumer resistance.

Food prices today are higher than a year ag and cloth prices have not declined as a result the relief in excise duties. On the contrary, the are higher than they were at this time last yea The rise in exports also has not been such as bring about a major change in the domestic supp position. The industry's explanation for the sha decline in stocks is that cloth offtake has improve appreciably because the incomes of agriculturis have increased with the bumper crops. There perhaps a measure of truth in this explanation. bu it cannot alone account for the change in the te tile situation from abundance to scarcity. Th truth, probably, is that cloth is once again movin through the trade pipelines which had run dr when the industry was talking about a crisis an vigorously pleading for a cut in excise dutie Confidence has revived with the end of the bargai ing between the industry and the Governmen The wholesale trade, it is said, is carrying muc larger stocks than in the preceding two year Enquiries from retailers do not indicate any spect cular improvement in consumer demand. Onl the market psychology seems to have change Cloth production has not responded to the improv ment in offtake. The output during Januar August 1959 has been 5 million yards less than i the corresponding period of last year. It seem reasonable to expect the industry to raise its pr duction to cope with increased offtake.

Soap Demand Grows

Although soap production and consumptio have risen during the last few years, the growth o population and the additional purchasing powe generated by development expenditure will hel increase them further. A sub-committee of th Soap Panel appointed by the Developmer Council has estimated that the production of soa (toilet and washing combined) in the organise sector will be 144,000 tons in 1961 and 206,000 ton in 1966. The output of the unorganised sector i likely to amount to 233,300 tons and 333,700 ton respectively. Speaking at the annual genera meeting of the Indian Soap and Toiletries Maker Association, which was held recently in Calcutt Mr. B. Maitra, president, said that to manufactur the large quantity of soaps required to meet th domestic demand, the supply of raw materials such as oils, caustic soda, soda ash, salt, rosin an silicate, should be large. He advised manufac turers to use non-edible oils and poorer quality fats as much as possible in order to release the edible and "high period fats" for food purposes. Several factories have been established in India for the manufacture of fatty acids, and soap producers may use them as substitutes for oils. The domestic requirements of essential oils and aromatic chemicals will be large in the future. India is still backward in the manufacture of these products, although the establishment of more coal tar by-product plants and of intermediate and organic chemical industries will increase the supply of basic raw materials. Meanwhile, the Government should exempt natural essential oils from import duty. Referring to the need to increase exports, Mr. Maitra said that although the prospects are not bright due to the high prices of indigenous soaps and import restrictions in foreign countries, manufacturers should export "even at some financial loss" a certain percentage of their output. But as an expanding market is available at home, it is doubtful whether manufacturers will heed Mr. Maitra's advice about exporting at a loss. The advice is in any case not worth taking: dumping is a deplorable type of business opportunism, and Mr. Maitra should know it.

Minerals in the Third Plan

The programme for mineral development in the third five year plan will be more ambitious than in the current one. A higher allocation than the second plan provision of Rs. 85 crores is being considered for it. Professor M. S. Thacker, Secretary to the Central Ministry of Scientific and Cultural Affairs, said in Calcutta recently (while delivering the Sir Thomas Henry Holland Memorial Lecture on mineral exploration and development), that "the nature and magnitude" of the task are being more clearly appreciated. A ten-year programme has been formulated for the detailed mapping of resources. "We have a fair idea of the variety and size of mineral deposits in various parts of the country and efforts are being made to reassess the reserves." Through the recent application of geophysical methods, significant results have been achieved. The activities of the Geological Survey of India and the Indian Bureau of Mines have been expanded. Coal deposits have been discovered in Bankura district, the Ondal area and Kalimpong subdivision of West Bengal. New seams have been found in the Singarauli field in Madhya Pradesh, West Darrangiri coalfield in Assam, Kalakot area in Jammu and Kashmir and in the Jharia and Raniganj fields. Over 32 coal seams have so far been proved by drilling operations in the south Karanpura coalfield and some of the seams are reported to be more than 40 feet thick. New deposits of iron ore have been located in Madhya Pradesh, Andhra Pradesh and Punjab ; of limestone, barytes and Fuller's earth in Andhra Pradesh ; of magnesite in Garhwal and Almora districts of Uttar Pradesh ; and of talc-magnesite rock in Bihar. Pockets of china clay have been found in the Santhal Parganas in Bihar, and of graphite in Kashmir.

Professor Thacker said that the additional production of various minerals to be achieved by 1965, over and above the second plan targets, includes 9.5 million tons of iron ore, 1.5 million tons of manganese ore, 40,000 tons of chromite, 22,000 tons of sillimanite, 70,000 tons of magnesite, 250,000 tons of ilmenite, 8,000 tons of mica, 170,000 tons of phosphate, 100,000 tons of bauxite, 90,000 tons of sulphur and sizeable quantities of zinc, copper and lead. One sector in which greater efforts will have to be made is oil. It is likely that Rs. 85 crores will be allocated for it in the third plan, as against Rs. 30 crores in the second. Exploration is proceeding on a wide scale. All the potentially oil-bearing areas—the sedimentary basins on the fringe of the Gondwana massif of crystalline and sedimentary rocks, covering an area of about 400,000 square miles, and portions of the basins in Cambay, Rajasthan, Punjab, Gangetic Valley and Upper Assam—are being systematically explored. Positive indications of oil and gas have been found in some of these places. The present indigenous production hardly meets 7 percent of the demand, although it will be augmented to some extent by the development of the Nahorkatiya wells. The working fields in Assam are expected to yield about 4 million tons of crude a year by 1965, but the annual demand at that time is expected to be three times this figure or more.

Indo-British Trade Increases

Indo-British trade increased in the first six months of the current year. India's imports from the U.K totalled £82,789,000, compared with £77,708,000 in the same period of 1958. Her exports to that country rose to £61,139,000 from £59,283,000. The trend was maintained in July, when India's exports to the U.K. totalled £10,092,000, as against £9,201,000 in June 1959 and £9,795,000 in July 1958. The item which contributed most to the improvement in India's exports is oilseed cake and meal (excluding husk meal), the total figure for the six-month period having risen to £5,854,000 from £2,400,000 during the first half of 1958. Other items making a noteworthy contribution were leather, leather manufactures and dressed furs, tobacco and tobacco manufactures, cotton yarns and woven fabrics and miscellaneous textile manufactures. Exports of wool and other animal hair and tops, cotton, crude and crude minerals, excluding fuels and miscellaneous animal and vegetable crude materials, also rose. In contrast, tea exports showed a sharp fall of about £6 million ; there were also decreases in metalliferous ores and metal scrap and animal and vegetable oils, fats, greases and derivatives. The U.K.'s exports to India showed a mixed trend. There were increases in electric and other machinery, apparatus and appliances, chemicals, iron and steel and non-ferrous metals, railway vehicles, scientific instruments, photographic and optical goods, watches and clocks. There were decreases in wool and other animal hair and tops, petroleum and petroleum products, paper, paper board and their manufactures, metal products, road vehicles and aircraft. Of the machinery group of exports, boiler and boiler house plant, machine tools (excluding portable power tools), textile machinery, electric cables, wires, strips and insulated strands declined. Items showing marked increases included industrial and works lorries, tractors, mechanical handling equipment, electronic valves, radio, television radar and sound reproducing apparatus.

REGULATING TEA SALES

ONE hears a good deal at the present moment about the desirability of regulating the sales of the Indian tea crop, and in more than one quarter the idea seems prevalent that we are destined to see a speedy rise in prices should the proposal to regulate sales become a *fait accompli*. Granted that the proposal is an excellent one in theory, it is doubtful whether, when put into practice, it will be found to confer on the producers of Indian tea the advantages which its advocates claim for it. In the first place, it must be remembered that the regulating Committee will have to deal not with one or two, but may be with one or two hundred interested parties, all doubtless having very decided views of their own as to the exact manner in which the regulation of sales should be carried out. It is quite conceivable too that these people may really give their adhesion to the scheme while it remains in the form of a proposal, but it is not altogether improbable that when it comes to putting the scheme into effect they will suddenly discover that things are not what they seemed, and will incontinently withdraw their support much in the same way as they have treated the Central Recruiting Agency in quite recent times. Secondly, there is the contingency to be considered of buyers arranging to regulate their purchases so as to coincide with the regulation of sales, assuming that unanimity of sellers is obtained. If this can be carried out successfully, and it is difficult to see why it should not be, it looks as though sellers, so far from gaining anything by regulating sales, will be out of pocket to some extent owing to their tea having to be stored for a longer period than was previously the case. It appears to be open to question, therefore, whether mere regulating of sales will be of much practical benefit to the industry. The root of the present evil is over-production, pure and simple.

They take this opportunity of assuring the public that the management and conduct of their business will continue undisturbed by any rumours of change in the control or management of their present Managing Agents, Messrs. Turner, Morrison & Co. Private Ltd.

Without Prejudice

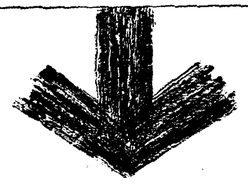
Arbitrator Makes Ex Parte Award

(FROM OUR LEGAL CORRESPONDENT)

HERE *is a question—frankly it is, and is designed to be, a trap question—on arbitration for* the edification, and perchance the instruction, of the non-legal commercial reader. Can an arbitrator lawfully give his award without hearing the evidence of one of the parties and without hearing the evidence of witnesses whom that party wishes to produce and to depose before the arbitrator on his (the party's) behalf? Before you answer this with a prompt and confident negative, you will perhaps bear in mind that there are two kinds of commercial arbitrations. In the first, the agreement for submission definitely provides that the procedure to be followed by the arbitrator shall be that prescribed by the Arbitration Act, 1940, and that the whole arbitration shall be conducted in a manner provided by that statute. That is by far the better of the two methods since the Arbitration Act is one of the fairest and most practical enactments on the Indian statute book. In the second class, the whole procedure is provided for by the parties themselves and is set out by them in the agreement for submission. Parties are free agents, and provided there is nothing contrary to law in what they agree on, they may agree to what they like, however hardly the arrangement may in the end work out on one or other or both of them.

The case we will now discuss falls within the second category. It was an appeal before the Punjab High Court (A.N. Bhandari C.J. and Bishan Narain J.) in Delhi against a judgment of J.L. Kapur J. and the question was whether the latter judge was justified in setting aside an award, as his lordship had done, on the ground that the defendant had not been allowed a reasonable opportunity of being heard before the arbitrator. The facts were that during the course of protracted litigation between them, the parties had agreed to refer the matters in controversy between themselves to arbitration. The submission to arbitration was in the following terms and, with due respect to its draftsman who doubtless drew it on specific instructions, constitutes, it is submitted, an excellent example of how such submissions should not be drawn: "The award of the arbitrator, whether with or without enquiry made within one month from today, shall be final and binding on the parties, and it will not be open to any objection. It would be in the sole discretion of the arbitrator to take evidence or not, to hear any party or not, and to arrive at his decision in any way he likes, even behind the back of both or either of the parties. The fee of the arbitrator, to be fixed by the court, will be borne by the defendants."

We may be permitted to make one observation on anyone who may deem it wise to put his name to a submission to arbitration containing such a clause as this. It indicates a confidence in the arbitrator so touching as to be almost sublime. Unfortunately, in this case the confidence was but temporary. The arbitrator gave his award and the award was made a rule of the High Court.



Kapur J., however, set aside the award on the ground that the arbitrator had denied the defendant a reasonable opportunity of being heard. The plaintiff appealed and the question for the appellate court to determine was whether the learned judge had come to a correct determination in point of law. The defendant's counsel contended that the arbitrator was guilty of misconduct; first, because he proceeded to give his award without hearing the evidence of the witnesses whom the defendant wanted to produce and, secondly, that it was the duty of the arbitrator before taking *ex parte* proceedings against the defendant to give him notice of his intention so to do.

The learned Chief Justice in his judgment proceeded to make a number of observations, some of which in relation to the parts we have respectfully ventured to italicise would seem to be ironical. "An arbitration is an extra-judicial determination of a controversy by one or more unofficial persons chosen by the parties as a domestic tribunal for the purpose of settling the disputed matter submitted to it for decision and award. It provides a summary and inexpensive method of settling disputes and is encouraged by the courts because of its economy, freedom from technicalities and business-like method of resolving differences....." (As for the "summary" nature of these particular proceedings, the arbitrator gave his award on 8th May, 1952, more than six years ago, and as to inexpensiveness, economy, freedom from technicalities and business-like methods, we do not know whether the case will be prolonged by further appeal, but so far counsel and other lawyers have been engaged on both sides and court fees paid in two High Court hearings. The above is, of course, an authoritative and perfectly correct presentment of the whole object of our excellent Arbitration Act. But a glance at the monthly *Law Reports* will show—and we are not alluding to the case now under review, in which the circumstances may have been special—that the object of the Act is, time after time, frustrated by the fact that one or other of the parties to arbitration agreements use the Act not to expedite but to delay. They contest and prolong the arbitration proceedings to the limit and then contest the arbitrator's eventual award in the law courts).

And now for the answer to the question with which this note began. The answer is yes and no. "In the absence of specific provisions to the contrary in the statute or the contract of agreement, the parties to an arbitration proceeding are entitled to a reasonable notice of the time and place of the hearing and have an absolute right to be heard and to present their evidence before the arbitrators. If they are deprived of this right, the court will not hesitate to set aside the award on the ground of misconduct even though there may have been no improper intention. The rule that the parties to an arbitration agreement have a right to be heard is, however, subject to the qualification that, where the agreement of submission provides in clear and unequivocal language that the arbitrator may proceed in the absence of the parties or that he may or may not hear the witnesses or that he may give his award without enquiry, the award will not be invalidated on the ground that the arbitrator had refused to hear evidence. If the arbitrator acts within the scope of his authority conferred upon him by the agreement of the parties and if he keeps himself within the jurisdiction so conferred, his award is as valid and binding as the judgment of a court of law."

In this particular case, the appellate court found that it was "quite clear that the defendant was afforded a reasonable opportunity of being heard", of which he did not avail himself. But that is not the point with which this note is concerned. The point is that he was not entitled to be heard, and when the arbitrator gave him the chance, it was an act of grace, not of compulsion. Moreover, an arbitrator may be a complete fool. He has been chosen by the parties themselves and the question of his intelligence does not arise. His decision will not be set aside provided he acts honestly and fairly, according to such abilities as he may possess. In this particular case, there was "not an iota of evidence to justify the conclusion that the arbitrator misconducted himself in the proceedings." The learned Chief Justice concluded his judgment, with which Bishan Narain J. concurred, as follows: ".....(The) defendant had no right to a hearing at all. As a party to the arbitration agreement, he empowered the arbitrator to take evidence or not, to hear any party or not and to arrive at a decision even at the back of either or both of the parties, and he cannot be allowed to complain if the arbitrator, acting within the scope of his authority, gave an award without affording the parties an opportunity of being heard"—although in fact, as we have seen, the arbitrator did afford such an opportunity. The appeal was allowed, which means that the arbitrator's award was restored.

How to get the most out of your Bank

Do not regard your bank merely as a convenience for depositing and withdrawing money. There are extra services available to you.

When you have a *current account* with State Bank, you can ask that commercial bills and pay or pension bills be collected and credited to your account; you can also instruct the Bank to pay periodically on your behalf house rent, school fees, club subscriptions, insurance premia, etc. and thus save yourself a lot of bother.

A *savings bank account* enables you to earn interest. It permits the facility of withdrawal once a week; at some offices the system of withdrawal by cheque is already in force.

For full particulars of these and many other facilities State Bank provides, please consult or write to the nearest office.

The State Bank with its background of years of sound banking traditions is waiting to solve your problems. Why not have them solved for you?

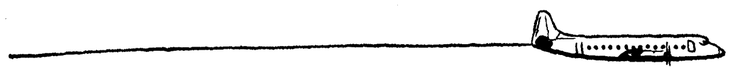
A Ditcher's Diary

WE IN CALCUTTA WERE DEPRIVED OF WITNESSING THE theatrical antics of Mr. Khrushchev on the west coast of the United States, but we may not have missed much. We have our Corporation, which will now have to work hard to match the record set up by the West Bengal Assembly on Monday in the department of chaos, confusion and violence. Many members took off their shoes and hurled them at the other side of the floor. Feet were deducibly cooled in consequence. Not so heads, apparently. It is in the circumstances understandable that a member should have taken delight in explaining how he had found "Nero" eating *rasagollahs* in the control room of Lall Bazar when Calcutta was burning. It would be unfair, however, to conclude that members had no respect whatever for the House. Stung by something a Congress member had said, a Communist Party M.L.A. is reported to have invited him, if he could find the courage, to a meeting outside (shades of Warren Hastings and Philip Francis?). The challenge was accepted but, surely, there is tacit recognition here that there are a few things that should not be done inside the House. That in the event just about everything else was, including a polite exchange of shoes, is in my view behavioural failure, not ideological. Both the Treasury Bench and the Opposition, I found, identified *goondahs* in the other camp, which brings me back to Mr. Khrushchev who repeated that the Hungarian revolution was the work of "hooligans and saboteurs." A Bengali friend is surprised that so much should have been made of shoes, for he seems to remember that a great Bengali stage actor once received a pair from a distinguished member of the audience and hailed the gift as the greatest prize of his acting career. (He had been playing the rôle of a rapacious indigo planter, and so effective was the performance that Vidyasagar could not contain his rage so hurled his slippers.) Be that as it may, if the duty of an elected body is to reflect the opinions and the mood of the people, the West Bengal Assembly probably represented both to the full. And this is what worries me, for I have a horrible feeling that the M.L.A.s behaved and spoke as their respective electorates would. The animosity today has that edge. But let me put the matter in the jargon of my profession. Both the Congress and the communists in the Assembly have a vested interest in keeping the show going, or their occupation would be gone. And, let me remind them, parliamentary democracy is not operating in a sellers' market in Asia today.

WHEN ENRICO FERMI, THE ITALIAN PHYSICIST who discovered the first chain reaction, was discussing with the Americans during the war possible uses for atomic energy, he is reported to have said: "Wouldn't it be grand if it could cure the common cold." And when petroleum was first discovered in the U.S.A. just over a century ago, it was peddled by charlatans, at one dollar a phial, as "Indian health balm" guaranteed to cure rheumatism, croup and cholera. We have since learned that these sources of energy do not cure colds nor coughs nor epidemic diseases, but they have changed our world, in much more important ways. So it is proper that the centenary of Edwin L. Drake's first oil well, which falls this autumn, should be celebrated with some pomp. The giant oil companies are marking the event with rather less enthusiasm than one might expect, perhaps because the Drake story is an unhappy one—the first of many unhappy stories in the history of that ferocious industry. "Crazy Drake", whose momentous exploit in Titusville, Pennsylvania, altered the course of world affairs, got nothing out of his discovery. He drifted from failure to failure, undermined by illness and bitterness, and died poor—having watched John D. Rockefeller amass, thanks to his work, the greatest personal fortune the world had ever known. The study of history should count among its uses the repair of such injustices, and this first centenary should be the occasion for recalling that we owe as much to the man who dug the first oil well as to the man who made the first oil fortune. Another industrial anniversary that falls this month has a happier ending, and I am glad to see that the British iron and steel industry is commemorating it suitably. It will be just 250 years at the end of this month since Abraham Darby made the first successful use of coke in ironmaking, at Coalbrookdale, Shropshire—an innovation that made possible the industrial revolution. The University of Birmingham and the Iron and Steel Institute are arranging the celebration of this event, and the firm of Allied Ironfounders Ltd. have agreed to preserve the original furnace and establish a museum on the site of Darby's experiment at Coalbrookdale. The history of industry contains so many cases like Drake's that one takes special pleasure in the remembrance of Darby's achievement.

ONE THING I SEE BOTH THE U.K. LABOUR AND Conservative Parties have promised, if elected, is a Ministry of Science. I suppose this is natural enough; Mr. Khrushchev has decided that the national prestige symbols of the future are to be *Sputniks* and *Luniks*, so we have all got to fall in line. But while doing so, it is not a bad idea to get some insight into what obsessional nonsense this science business has become. I see Professor Jewkes, the Oxford economist, returned to the theme in his recent address to the British Association at York. Last year, the Professor wrote a book entitled *The Sources of Invention* in which he attacked the prevailing illusion that industrial change is related directly to the amount of large-scale scientific research indulged in. This time he has directed his onslaught at the popular assumption that Britain is short of scientists. As an economic factor whose price is determined by supply and demand, there is no shortage, says Professor Jewkes, because scientists' salaries in the U.K. are no greater than in comparable grades of other occupations. But, he concedes, there may exist an "unmet need"—which is the amount over and above the market need which for some reason is regarded as socially desirable—although it defies accurate assessment, and he himself can find little evidence of it. In comparison with the United States, for example, Britain's science comes out fairly well. If the first degree in Britain is assumed to be the equivalent of the first degree from an American university, then the U.S. is well ahead. But if the first degree in Britain is taken as a second degree in the U.S. (which is nearer the mark) then Britain is leading. From this, Professor Jewkes draws the wholly reasonable conclusion that the two countries have round about the same stock of scientific skill to equivalent population. amount spent on scientific research, as a pro of the national income, is also roughly the although on a population basis the United St of course, far ahead. So, it is clear that a mistakes can be made on this subject if we careful. It was reassuring to find Professor concluding his remarks by pointing out tha way the real purpose of science is not dire increase material wealth—it is to expand knowledge. And it is a good idea to rememl Professor's reflection that, when all that can about science has been said, the great mo forces in world history have always been rel political and social, not scientific.



WITH THE SAFE DISTANCE OF 250 YEARS BE Dr. Johnson and myself, when I have neit watch his noisy eating nor hear his many of the fair sex. I think I rather like the Although a considerable, if little-read, writer as a character, an institution, that Dr. John best remembered today. He would, I imagine treated this as a compliment. He was a tr presentative of his century, the "Age of Reas it is sometimes called. In that remarkable men of letters were a lot more besides the w of a few slim volumes: they were men of the men of affairs, expansive and, if rather co corpulent at times, also encyclopaedic in th tellectual appetites. In their flattery they l on with a trowel, in their abuse they hanc out good and proper. They may have covered bold heads with wigs, but there was little else covered—at least from themselves. Johnson' grapher's diaries make fascinating reading a some ways provide a more revealing picture time than the celebrated life on which, quite takenly, the sage's fame is said to rest. I before me the Everyman's Library two-v edition of Boswell's monumental work. It i cult, and not necessary for the ordinary read read the book through. Enough to turn to an page, and one is sure to find something of int As far as I know, James Agate was the man in recent years who tried to live like Joh In this polite, almost mealy-mouthed, age of it would be a risky venture. For one thing women would not stand for it. And yet, the disappearance of frankness in polemics and versation has certainly come pretty close to of hypocrisy few will consider good for th pression of true opinions. Another thing strikes me about Johnson and his contemporar that they participated in the life of their day. participation, I suggest, is the same thing as today passes for being *engagé* as though it w new invention of the existentialists on the bank of the Seine. Of course it is nothing o sort; it only seems so to British writers be they have so completely withdrawn thems into their shells. If François Mauriac can wr regular column in a political weekly, discussing highly controversial questions of the day, I dc see why lesser writers must consider politics *dig*. But then, writers are often so stupi politics.

THE OTHER DAY A FRIEND SHOWED ME THIS collector's piece from his album of classic heac clangers. It may bring back pleasant recollect for some.

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The formal Prospectus dated 17th September 1959 has been delivered to the Registrar of Companies Calcutta for registration as required under Section 60 of the Companies Act 1956. Copies thereof can be had from the Registered Office of the Company or from the Banks and Brokers named below:

TEXTILE MACHINERY CORPORATION LIMITED

(Incorporated under the Indian Companies Act, 1913).

ISSUE OF

1,00,000 - 6¼% (Free of Income-tax) Cumulative Redeemable Preference Shares of Rs. 100/- each at par

Payable Rs. 50/- per share on application and Rs. 50/- per share by one or more calls as may be made by the Directors by giving three calendar months' notice of each call. Redeemable at par on 31st December, 1970.

SHARE CAPITAL

AUTHORISED: ... ... **Rs. 5,00,00,000/-**

SUBSCRIBED & PAID UP:

15,00,000 — Equity Shares of Rs. 10/- each	... ...	Rs. 1,50,00,000/-
10,000 — 5½% (Free of Tax) Cumulative Pref. Shares of Rs. 100/- each	...	Rs. 10,00,000/-
30,000 — 5½% (Subject to Tax) Cumulative Redeemable Pref. Shares of Rs. 100/- each — (Redeemable at the option of the Company at 3 months' notice)	... ...	Rs. 30,00,000/-
		Rs. 1,90,00,000/-

LOAN CAPITAL:

The Company has 4,000—6% Debentures of the face of Rs. 40 lacs secured against fixed assets. They are redeemable on 31st December, 1960. The company has cash credit arrangements with the State Bank of India, Calcutta, and has also obtained unsecured loans and advances from other banks.

FIXED ASSETS & RESERVES:

The written down value of the fixed assets as on 31st December, 1958 amounts to Rs. 219,34,595/-. As at the said date the Reserves of the Company (including Development Reserve of Rs. 22,90,000/-) amount to Rs. 51,20,855/-.

PROFITS:

Report of the Auditors of the Company shows that the average profit of the Company for the five years 1954 to 1958 inclusive before depreciation and taxation amounts to Rs. 70,18,688/-, and the average net profits (after depreciation and taxation) amount to Rs. 26,20,657/-.

DIVIDEND PAID:

The Company has paid dividends on Equity Shares as under during the last five years:

Year		Rate of Dividend.		
1954	...	Re. 1/-	on	6,00,000 Shares
1955	...	Re. 1/-	on	6,00,000 Shares
1956	...	Rs. 1/25 nP.	on	15,00,000 Shares

OBJECTS OF THE ISSUE:

The proceeds of the issue will be utilised for the expansion of the various activities of the Company such as manufacture of Water Tube Boilers, Sugar Mill Machinery, setting up of a Re-Rolling Mills, etc., etc.

UNDERWRITING:

The entire issue has been underwritten by the Central Bank of India Ltd. for an underwriting commission of 3% (including 1% brokerage).

BROKERAGE:

Brokerage of one per cent will be paid by the underwriters from out of the commission of 3% payable to them, to recognised Bankers and/or Brokers on allotments made in respect of applications from the public bearing their stamps (i.e. on allotments other than those against applications from members of the company and/or their nominees for shares offered to the members).

PROSPECTUS & APPLICATION FORMS:

Copies of the Prospectus on the terms of which alone applications will be considered, and Application forms may be obtained from the Registered Office of the Company or from the following Bankers at their Calcutta Bombay, Delhi and Madras Offices or from the following brokers or from the Underwriters at their important branches.

Bankers:

The State Bank of India,
3, Strand Road, Calcutta.

The Central Bank of India Ltd.,
33, Netaji Subhas Road, Calcutta.

SUBSCRIPTION LIST:

The subscription list will open at the commencement of banking hours on 30th September 1959 and will remain open until the close of banking hours on 20th October, 1959.

TEXTILE MACHINERY CORPORATION LTD.

Belgharia, 21st September, 1959.

INDIAN COPPER CORPORATION LTD.

CHAIRMAN, MR. PATRICK E. G. W. PARISH'S REVIEW

Address delivered by Mr. Patrick E. G. W. Parish, Chairman of Indian Copper Corporation Ltd., at the Annual General Meeting of the Company for the year ended 31st December, 1958 held on the 23rd September, 1959.

Gentlemen,

The Directors' Report and Accounts for the year ended 31st December, 1958 have been in your hands for some time. I welcome this opportunity of giving you some further information and comments on the results of the working of your Company during the year.

General Review

The price at which your Company's products are sold is, naturally, closely in line with the world price of metal, at which price imports of copper into India have, of course, to be purchased. It is, therefore, necessary to consider the trend of world copper prices during last year.

March 1956 saw the peak at £436.10s per ton on the London Metal Exchange, and from then until December 1957 the price gradually fell to under £180. In 1958 the price during the first six months fluctuated between £161 and £200 and then rose gradually to £261 in November, declining to about £220 at the end of December. Since the beginning of this year prices have again risen to over £250 and during the past month or so have been steady at around £230.

A further reduction in price due to world over-production has only been averted recently by strikes in various producing countries. It seems to me that when these strikes are settled it will be necessary for the big producers to curtail production, as they have done in the past; otherwise over-production will inevitably result in a downward trend in prices to unremunerative levels.

So far as India is concerned of course, we produce only a part of the country's total requirements and therefore there is no question of curtailment of output by us. On the contrary, it is our intention to increase production as much as possible within the limits of our capacity.

You will see from the Directors' report that on average all your Company's products have been sold at prices rather below the previous year and this has naturally affected the Company's results.

Working Review

In 1957 copper production was a record at 7,848 tons. This year although the ore milled rose from 440,671 to 442,088 tons, the amount of copper produced was 7 tons less than last year.

Total sales amounted to 10,966 tons as against 10,301 tons last year.

The demand for our products remains firm though one cannot help expressing some anxiety lest, owing to foreign exchange difficulties, import licences for Zinc, which is the complementary metal used for the manufacture of Brass, may not be issued as freely as required.

During the year prospecting was continued throughout our leased area in an endeavour to locate other economic ore bodies to replace those which are rapidly becoming depleted.

It is too early yet to say whether these prospecting operations can be considered successful and more work will have to be done before any final conclusion can be drawn. It is satisfactory, however, that the ore reserves at the end of the year stood at 4,034,174 as against 3,850,757 short tons at the end of 1957.

As regards costs, we are now mining at a deeper level where costs are naturally higher, and it is not possible to foresee any reason to believe that costs in the future can be reduced. On the contrary, they are likely to increase.

I am glad to say that during 1958, on the whole, relations with the workers remained fairly good, and as a result production during the year has been comparatively unaffected by labour disputes.

It cannot be said, however, that the situation is entirely satisfactory, as demands by Unions, of varying hues continue to cause tension, not only to us but to many other industrial concerns on this side of India.

Kyanite

Sales of Kyanite during 1958 amounted to 14,649 tons as compared with 18,267 tons in 1957. The price has had to be reduced slightly in order to compete with synthetic materials produced in consuming countries which threaten the future of Kyanite exports.

It is hoped that sales can be maintained at roughly this level again in the present year and every effort is being made to preserve our present markets and to find new outlets.

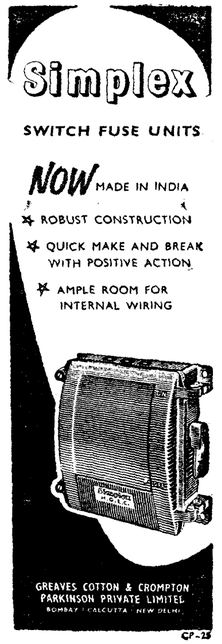
I have no doubt that some of you have read in the newspapers about the suits in regard to your Company's Kyanite leases, which have recently been decreed in favour of the Bihar Government on appeal in the High Court after the original suits had been decreed in the Company's favour.

The position now is that the Company has applied to the Court for leave to appeal to the Supreme Court. I cannot, therefore, say more about this matter at present, except that it is the opinion of our legal advisers that we have a good case.

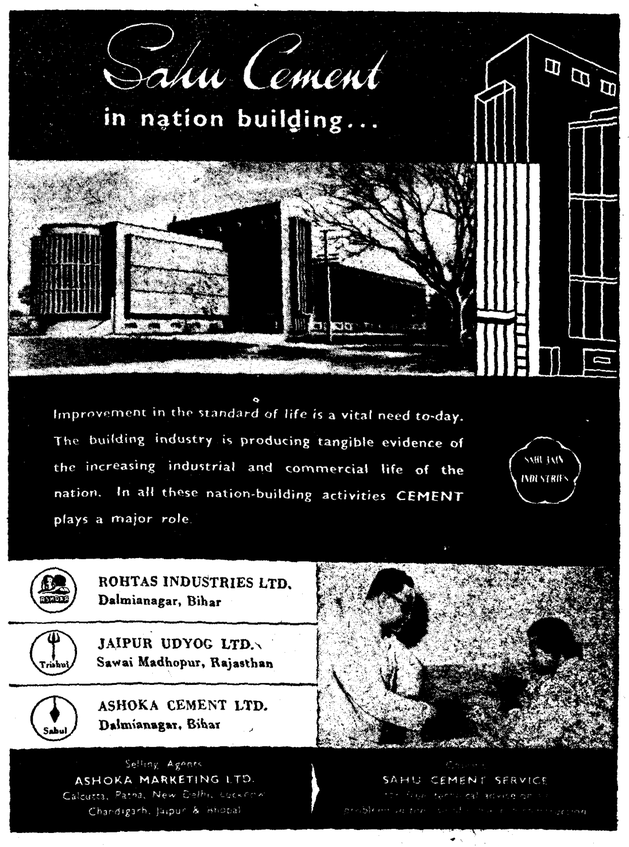
Electrolytic Plant

Last year your Chairman told you that the Company has had under consideration for some time, in consultation with their technical consultants, a project to manufacture Electrolytic copper. Negotiations have reached an advanced stage and application has been made to Government for the release of the necessary foreign exchange. As matters now stand we are waiting for the final approval of Government, on receipt of which the whole project will be put in hand.

A considerable sum of money, amounting to approximately £700,000 will be required to finance this scheme, but it is expected that this can be provided within the Company's own resources.



Accounts



As you will see from the accounts which are before you, the profit for the year, before providing for taxation, depreciation and reserves, amounts to £997,848. Your Directors have decided to place £150,000 to Depreciation and £125,000 to General Reserve. Income Tax and Supertax on profits for the year amount to £439,856.

The Directors recommend that the Dividend of 18% should be maintained involving further taxation on this dividend of £27,426. It is proposed that £71,312 should be carried forward.

I think you will agree that on the whole we have had another satisfactory year and I am sure that I speak for you all in thanking Mr. N. A. B. Hill, the General Manager, and all his staff, for the excellent services they have rendered to the Corporation throughout the year.

"Note: This is not a report of the proceedings at the above Annual General Meeting."

LIFE INSURANCE CORPORATION OF INDIA

CHAIRMAN, MR. P. A. GOPALKRISHNAN, REPORTS BIGGER BUSINESS

Speech delivered by Mr. P. A. Gopalkrishnan, airman, at the 42nd Meeting of the Life Insurance rporation of India held in Bombay on 21st ptember, 1959 on the occasion of completion of ree years of its working.

ntlemen :

I have great pleasure in welcoming you all to the ird anniversary meeting of the Corporation. We e meeting today mainly to consider the draft nual Report and Audited Accounts for 1958. These ve already been circulated to all the Members of e Corporation.

I may briefly summarize here the salient points the Report. New Business in 1958 has increased 9.35 lakhs of policies assuring a sum of Rs. 343.07 ores as compared with 7.95 lakhs of policies suring a sum of Rs. 281.90 crores in 1957. The total siness in force has increased to 62.30 lakhs of icies assuring a sum of Rs. 1,681 crores as compared h 56.83 lakhs of policies assuring a sum of 1,473 crores at the end of 1957. The net lapse io, i.e. the ratio of the sum assured lapsed less sum assured revived in the year 1957 to the an business in force during the year was 6.4%. tistics of lapses for 1958 have been received from Zones except one. The available statistics icate that the lapse ratio in 1958 was of the order 4.5%, showing a significant reduction over the io for 1957. The Life Fund has increased to 447.81 crores from Rs. 410.41 crores in 1957. The ewal expense ratio has fallen from 15.89% in the vious accounting period to 15.46% in 1958. These indicators of the progress made by the Corpora- during the year as well as of the economy ieved in the expenses of management. Tighter igetary control, which has been introduced from 9, will not only enable the Corporation to bring wn the expense ratio within the statutory limit progressively lower it in future years.

New Business

For the first eight months of 1959, the new siness completed amounts to Rs. 148.16 crores resenting an increase of 23.0% over the corresding period of last year. If this rate of progress maintained during the rest of the year, the poration should have no difficulty in realising its get of new business of Rs. 415 crores fixed for the year of its Five-Year Plan.

As you are aware, the Corporation aims at ring a new business of Rs. 1,000 crores in the year of its plan, viz., 1963. This involves further uitment and training of officers and staff, ction and strengthening of the field force, opening ew offices beginning from branch and sub-offices ards, market surveys and publicity and various r organisational improvements without which the will merely remain on paper. All these details e now been worked out and will be presented to for your consideration in the near future.

Meanwhile, whatever possible with the existing nisation is being done to open out rural areas the expansion of our business. 14 branch and ub-offices were opened in different parts of the try in 1958 and one divisional office, 10 branch 3 sub-offices have been opened during the current . Some of these new offices are in remote ers of the country and field officers and agents ched to these offices are now working in cessible places which have hitherto not heard of insurance at all. Besides, rural insurance in nsified form has been undertaken in certain cted Community Development Blocks of Rajasthan Bihar. With the blessing of the State Governts concerned, the Block Development Officers co-operating with the Corporation in this experi- and the rural panchayats, who are working as agents of the Corporation in these areas, utilise the commission received for development purposes in the villages. This experiment has been recently extended to some Community Development Blocks in Andhra Pradesh and Assam and the results of these experiments will be useful in intensifying the insurance programme in the rural areas of the country.

Staff Problems

Most of the major staff problems of the Corporation have already been solved, including the categorisation of senior officers the question of bonus to the clerical, subordinate and supervisory staff and the categorisation of field officers. The conclusion of a five-year agreement regarding bonus with the representatives of the administrative employees was one of the main achievements of the Corporation during the first eight months of this year. Agents who remain on our books without producing any business are gradually being weeded out and new agents with the requisite qualifications are being recruited. The quality of the agency force is thus being continuously improved.

As I have already remarked, in order to cope with the increasing business of the Corporation, an increasing number of trained personnel is necessary. The Corporation has already started 10 training centres which have so far trained 1,500 field officers. Instructors are being sent out to visit the various branches and sub-offices to give short-term training to the agents attached to these offices. Preparations are also being made for opening training centres for administrative personnel, including officers and clerical staff, and these training centres are expected to be started during the next two or three months. With more and more trained staff becoming available, it will be possible for the Corporation to offer better service to its policyholders.

Building Programme

Allied to the programme for the expansion of the Corporation's business is the building programme for the Corporation's offices and staff quarters. Accommodation for our divisional offices is totally inadequate in many of our divisions and, even in divisions where it is at present adequate, it will become inadequate in two or three years. The Corporation has to speed up the construction of buildings with accommodation to meet the needs of expanding business for the next few years. Similarly, the construction of staff quarters has to be speeded up as without proper housing, it would be difficult for the staff to carry on. The Corporation's decision to grant loans to co-operative housing societies of employees at a concessional rate of interest has not produced any good response. For various reasons, employees find it difficult to form co-operative societies. Firstly, they are liable to transfer from place to place. Secondly, those who are serving away from their homes are not interested in owning houses at the places where they work. Thirdly, procedural delays are taking place in the formation of co-operative societies. After taking all these factors into account, I would urge that the Corporation should go ahead with the construction of staff quarters, wherever they are needed, whether co-operative housing societies are formed or not. If and when they are formed, the quarters can be handed over to them on agreed terms. I would like to emphasise the fact that unless our building programme keeps pace with the expansion of our business, our service to the policyholders is bound to suffer.

Investment Activities

Turning to the investment activities of the Corporation, the investment rate of over a million rupees a day was maintained during the year and, in fact, improved upon. Investments are being made in accordance with the Investment policy approved by the Government in August, 1958. On 31st December, 1957 the investments in the Public and Private Sectors were 77.4% and 22.6% respectively. At the end of December, 1958, these percentages were 78.3 and 21.7 respectively. On 31st July this year, these percentages were 78.6 and 21.4 respectively. It is becoming increasingly difficult to make investments other than in Government and approved securities owing to the comparative short supply of sound scrips in the stock markets of the country. With the Corporation's recent decision to revive the grant of loans on the mortgage of properties, it should be possible to offset, to some extent, the shrinkage of investments in the private sector.

You will see from the Report that the rate of interest realised on the mean Life Insurance Fund in 1958, after deduction of income-tax at source and including the refund of tax received during the year, was only 3.52% as compared with 3.74% during the previous accounting period. The reason for this fall is that we have yet to receive a considerable amount by way of refund of tax relating to the year. Taking the anticipated refund into account, the rate of interest earned during the year would very nearly be the same as in the previous accounting period.

First Valuation

Lastly, I would like to say a word about the first valuation completed by the Corporation during the current year. The working out of differential bonuses on the policies issued by the old companies and those issued by the Corporation after the "appointed day" presented innumerable difficulties. It is a matter for satisfaction that the differential bonuses declared and the quantum of the bonus in the different cases were generally welcomed by the policyholders.

Summing up, I may mention that by and large the Corporation's efficiency has improved, most of the major staff problems have been solved and the stage has been set for further consolidation and progress towards realising the targets fixed in the first Five-Year Plan of the Corporation.

N.B. This does not purport to be a record of the proceedings of the above Annual General Meeting.

ELECTION VIEWS DOMINATE STOCK MARKET

INDUSTRIALS BECOME DULL AFTER FIRM START

London, 23rd September.

THE renewed firmness of industrial equities was the main feature of an otherwise quiet stock market prior to the week-end, but industrials turned dull with the rest of the market later. On balance, there was not a great deal of change in prices. The advance prior to the week-end was based largely on election hopes, reflecting a continued stream of public opinion polls indicating that the Conservatives had a comfortable lead in the electoral stakes. Against this background, the persistent fall on Wall Street was ignored, and all other factors were of little consequence. After the week-end, however, the publication of another poll indicating that the Conservatives' lead had been reduced brought generally dull conditions. Further unsettling influences were the persistent decline on Wall Street and the Stock Exchange Council's decision to suspend dealings in shares of the companies associated with the Jasper affair. Weakness had developed in the shares concerned on adverse rumours. Following various statements by interested parties over the week-end, the Council suspended dealings pending clarification of the position of each company. Gilt-edged were very steady and recorded little change on the week, in spite of the trend towards higher interest rates in North America. Foreign issues attracted very little attention, with the exception of Greek Bonds which lost ground on persistent small selling. Golds moved within narrow limits and turned dull after the week-end to record small losses on balance. Base metal shares showed very little change. Oils eased, partly in sympathy with Wall Street. Rubber shares developed a distinctly dull appearance on uncertainty about the course of the commodity price following the news of pending sales by the U.S. and U.K. stockpiles. Teas tended higher and numerous small gains were recorded.

The Money Market

Although there was no great hardship, money remained tight in the money market during the past week. The situation fluctuated from day to day, with easier conditions encountered towards the end of the week. Most of the non-regular money was obtained by borrowers at 3⅞ percent and 3¼ percent. The former rate was paid for loans resulting from a small amount of help rendered by the authorities during the one or two difficult phases. Later in the week, a certain amount of afternoon money was obtainable at cheaper levels ranging down to 2 percent. For the eighth week running, there was virtually no change in the Treasury bill rate at the weekly tender, the latest official average being £3 9s 8.13d percent.

U.S. Discount Rates

The U.S. Federal Reserve Board has approved an increase in the discount rate to 4 percent from 3½ percent for the Philadelphia District Bank. This brings all Federal Reserve banks to the new rate of 4 percent.

U.S. Steel Strike

The U.S. steel strike, now in its eleventh week, has cost an estimated $3,200 million in interrupted wages, sales and tax losses to the Government. Numerous small steel users are feeling the pinch but major consumers have no immediate supply problem yet. Consumers' finished steel inventories have fallen from an all-time high of 26 million tons on the eve of the strike to 17 million tons, which is only about 3 million tons above the minimum working level. As a result, steel buyers are turning to a fast-developing "grey market", and reports of premiums on prices have come in from key industrial areas throughout the country, especially the Middle West.

Linseed Area in Argentine

The area sown to linseed in Argentina in 1959-60 is estimated at 1,080,000 hectares, according to the first official estimate issued by the Argentinian Department of Agriculture. This compares with a revised final estimate of 1,202,100 hectares last season and an average for the past five years of 1,069,700 hectares. The Department attributes this season's decline to climatic conditions.

NAMES AND DATES

The choice for this year's president of the Calcutta Stock Exchange is Mr. C. L. Jhunjhunwala. A stockbroker of long experience, he has been a vice-president of the Exchange for 14 years. Mr. H. C. Chatterjee has been elected vice-president. Those elected to this year's committee of the Exchange include Messrs N. D. Bangur, B. C. Seal, Eric Gregory, J. L. Esplen, Abani Ganguli, Matadin Khaitan, M. L. Pyne, A. V. Sheth, C. L. Haridas, S. Dabriwalla, Bhagirath Murarka, H. P. Dhanuka, Sitaram Daga and C. L. Khandelwal. The Central Government's nominees on the committee are Messrs P. S. Nadkarni and J. S. Raj, both of the Finance Ministry. A third nominee will be chosen later.

Money

THE CALCUTTA MONEY MARKET

CALL RATE RISES

Wednesday, 23rd September.

THERE has been little change in the total level of advances outstanding in the Calcutta money market. Slight increases are reported in the requirements of the jute mills and against grains and seeds storage in upcountry areas. Other sources of demand, such as the sugar and cotton textile industries, show only minor adjustments. Conditions in the interbank market have suddenly tightened and money has been in demand to meet tax payments. The call rate has jumped to 2½ percent, but business is reported up to 2¾ percent.

Once again, there has been a good supply of bills in the exchange market against both tea and gunny shipments. Remittance has been negligible. The pound is slightly stronger on the London money market and fractional gains are reported against the twin dollars and most important Continental currencies.

BULLION WAS QUIET ON PROFIT-TAKING. Both arrivals and offtake declined. Silver fell from the previous week's level of Rs. 203.50 to Rs. 203, quoted today for ready delivery. The rate for forward delivery was Rs. 202. The London and New York prices were quoted at 78¼d and 91.375 cents.

Gold was quiet in sympathy with silver and the price fell from Rs. 123.50 to 123. The sovereign at Rs. 78.75 lost 25nP.

DURING THE WEEK ENDED 18TH SEPTEMBER, Government of India Treasury bills for Rs. 1,39,94,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 22nd September. The total amount offered was Rs. 2,00,00,000. Tenders at Rs. 99.390 were accepted in full, the average rate of acceptance being Rs. 2.440 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 28th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 23rd September to 26th September at Rs. 99.406 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 16th September to 19th September, amounted to Rs. 2,00,00,000.

DECLINES OF Rs. 12.48 CRORES TO Rs. 1,657.81 crores in active notes and of Rs. 8.66 crores to Rs. 1,678.66 crores in the total note issue were the notable features of the return of the Reserve Bank of India for the week ended 18th September, 1959. Notes held in the Banking Department consequently rose by Rs. 3.52 crores to Rs. 20.85 crores. The currency contraction was adjusted by reducing rupee securities in the paper currency reserve by Rs. 9.92 crores to Rs. 1,261.27 crores. Deposits of the Government of India increased by Rs. 7.52 crores to Rs. 64.34 crores, but other Government accounts fell by Rs. 50 lakhs to Rs. 19.97 crores. Balances of commercial banks at Rs. 85.18 crores showed a gain of Rs. 4.41 crores. Balances held abroad by the Bank declined by Rs. 3.22 crores to Rs. 20.03 crores and investments increased by Rs. 8.23 crores to Rs. 287.55 crores. Other loans and advances increased from Rs. 74.16 crores to Rs. 80.85 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.90 crores (Rs. 10 lakhs). Ways and means advances stood at Rs. 16.74 crores against Rs. 19.02 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 11th September, 1959, shows a rise of Rs. 4.68 crores to Rs. 567.09 crores in total deposits. Investments in Government securities are up by Rs. 4.19 crores to Rs. 365.47 crores, while other authorised investments remain unchanged at Rs. 10.27 crores. Advances, including cash credits, overdrafts and bills discounted and purchased, have decreased by Rs. 3.71 crores to Rs. 162.29 crores. Cash and balances are, in consequence, shown at Rs. 30.68 crores or Rs. 7.34 crores higher.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 25-9-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
25-9-59	26-12-59	2,00,00	Rs. 2.440%

JAIPUR METALS AND ELECTRICALS LTD.

CHAIRMAN, MR. R. H. KAMANI'S REVIEW

Speech delivered by Mr. R. H. Kamani, Chairman, at the 15th Annual General Meeting at Jaipur on 19th September, 1959.

Gentlemen,

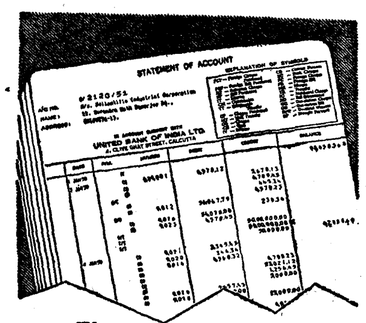
It gives me great pleasure to welcome you on behalf of my Directors and myself to the 15th Annual General Meeting of Messrs. Jaipur Metals & Electricals Ltd.

Before starting my speech, may I request you all to join me in paying our humble and respectful tributes to the late Shri M. G. Purohit who was a Director of the Company and who passed away on 24th April, 1959.

The Directors' Report and Audited Profit & Loss Account and Balance Sheet for the year ended 31st December, 1958 which shows a profit of Rs. 9,76,663/- after taking depreciation. Development rebate, Taxation, Managing Agents' Commission, etc., allows to distribute 6% (against 5% previous year) to ordinary and 6% to preference shares. With your permission, I shall take them as read. There has been, as you would observe, an increase of profit of Rs. 4 lakhs for the year as compared to the profit of last year. This is a remarkable achievement especially in view of the fact that the value of the overall total annual turnover is slightly less. Due to difficulties in Foreign Exchange position and consequent restrictions upon the import of essential raw materials, we could not increase our output and turnover to a desired level.

The working of the Company has been satisfactory during the year under review. There was a marked increase in the production of House Service Electric Meters, which was as much as about 25% higher than the previous year. Production of Metals Division was maintained almost at the level of the previous year, in spite of the difficulties in the way of important raw materials.

Consistent with the Government policy, allocation of Foreign Exchange was based on the Second Five Year Plan giving top priority to the Products required in fulfilment of the same. This had its own impact on the manufacturing industry with very limited Foreign Exchange available for the import of the essential raw materials and with the tax burden added, the industrial output in 1958, on a national scale came to an all-time low for the past five years. In the light of this situation, the progress made by your Company is encouraging and cheering.



Indigenous Components

The Nation is busy shaping the III Five Year Plan and it should cheer you to know that with our progressive outlook we are resorting to more and more indigenous components for our products, which should enable us to look to the future with pride.

The production of House Service Electric Meters components is undertaken progressively. During the year under review, considerable progress has been made in the manufacture of indigenous components and the percentage of imported components has been reduced to the minimum.

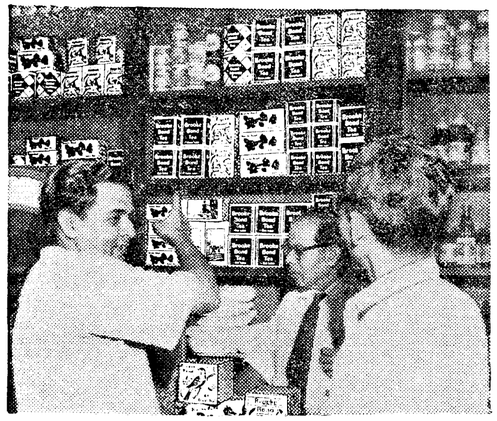
I have the pleasure to state that we have entered into collaboration with Siemens Schukertwerke A.G., the well known House of Electrical Manufacturers in West Germany, for the manufacture of House Service Electric Meters according to their patents and designs. This will be in addition to our present activity and thus it would aim to double the production.

N.B This does not purport to be a record of the proceedings of the above Annual General Meeting.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.



Amongst the Banks in India the UNITED BANK is in the van of mechanization.

"To give you a wide choice, my friend, there are ten different blends of Brooke Bond Tea"

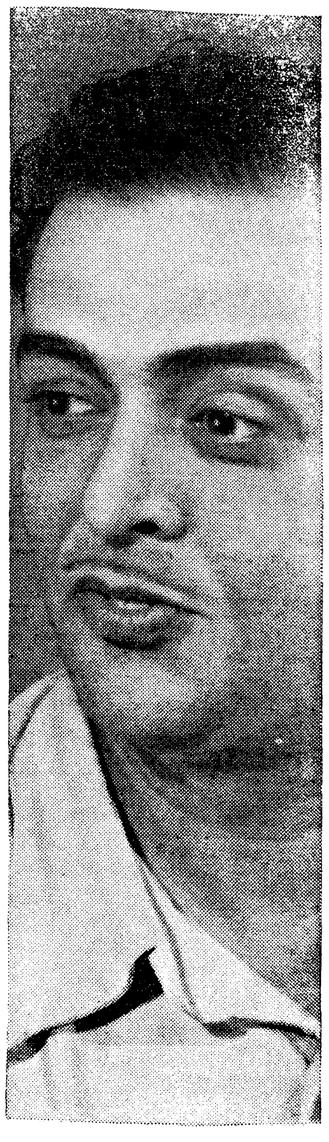
Bhai Sahib and a friend out shopping

Really, Bhai Sahib? I shouldn't have thought it necessary.

You would be surprised, my friend, how much people's tastes can vary. To satisfy everybody—and to suit all pockets—Brooke Bond market as many as ten different blends of tea. Six of them are leaf teas and four are dust.

Dust tea? What an odd name!

So you may well say. But as the name suggests, this tea consists of pieces of leaf so small and light that they are easily blown about like ordinary dust. Actually, dust tea is often quite expensive—sometimes it costs more than leaf tea.



Tell me, Bhai Sahib, what is the difference between dust and leaf teas?

Ha-ha! That's a question the experts would love to take hours over answering! As far as you and I are concerned, though, the chief difference between leaf tea and dust tea is that the latter takes much less time to brew. As soon as boiling water is poured on dust tea it starts infusing and is ready to serve almost immediately. Leaf tea, on the other hand, has to stand for about five minutes before serving and generally gives a rather more delicate flavour than dust.

But why do Brooke Bond produce four grades of dust tea?

Only because their customers are so choosy! Each tea, whether dust or leaf has special characteristics which may satisfy some people but not all. For instance, Brooke Bond's Special Hotel Blend is a hot favourite in hotels and restaurants, whilst Kora and A-1 Dust are household words all over the country. And yet all three are dust teas!

There is no accounting for people's tastes, but Brooke Bond seem to have the right idea in catering for one and all.

Stocks and Shares

UNDER SECTION 3 OF 28 SEP 1959

PRE-PUJA LULL BRINGS QUIETER CONDITIONS ALL ROUND

PRICES MOVE NARROWLY

Wednesday Evening.

THE lull in trading in the Calcutta share market which traditionally precedes the long Puja vacation, appears already to have established itself. The statement by the chairman of the Indian Iron & Steel Company, denying the recent rumours that the company's application for a "rights" issue had been rejected and that Dalhousie Holdings had sold a fair quantity of shares, received a lukewarm reception and Indian Irons fluctuated narrowly around Rs. 23.50. It is now obvious that the stock market is being affected more by political than economic considerations. The ugly scenes witnessed in the West Bengal Assembly last Monday brought a new note of caution into dealings as it was feared the Leftist agitation was likely to continue for a fairly long period yet. Happily, yesterday the West Bengal Assembly quietened down unexpectedly and this helped a small recovery movement with Indian Irons improving to Rs. 23.75.

Jute shares were subdued owing to the reported accumulation of sacking stocks and there were more sellers than buyers. The recent floods in various parts of the country have also given rise to a certain degree of apprehension regarding crop prospects in general. Despite the improved offtake in the cloth market, the steady rise in the price of raw cotton is causing concern to cloth manufacturers. Both the major steel producers, T.I.S.C.O. and I.I.S.C.O., also experienced some labour trouble over the question of bonus to be paid to their workers, but fortunately this has so far proved to be short-lived. Looking further ahead, the present hostile attitude of China towards India may result in a considerable increase in the defence budget next year which, in turn, may be reflected in a further increase in taxation.

Finally, it is anticipated that between now and the end of the year, new issues and rights issues to the extent of approximately Rs. 35 crores may result in sales of existing scrip for the purpose of taking up rights shares and applying for new issues.

It is reliably reported that the Star Paper preference issue has been fully subscribed.

The gilt-edged market has ruled firm throughout, and during the past 48 hours there has been a scramble to buy 3% Conversion Loan 1986 but with little scrip offering, it has not yet been possible to satisfy the enquiry. Meanwhile, the quotation has risen by 40nP.

Preference shares, which have the tax-free clause in the Articles of Association of the respective companies, were keenly sought after, but sellers were scarce. Considering the attractive terms of the offer of 100,000 6½% tax-free cumulative redeemable shares by the Textile Machinery Corporation Ltd., details of which appear elsewhere in this issue of *Capital*, there seems little doubt about the success of the issue, particularly as high-yielding tax-free preference scrip is in short supply.

In the banking section, Punjab National were slightly better at Rs. 21.12 while United Commercial were softer at Rs. 61.75.

Coal shares were somewhat neglected as marginal producers are likely to be adversely affected by the inadequate increase in the price of the commodity. Bengal fluctuated narrowly around Rs. 299 and Raneegunge were easier at Rs. 16.75. East Indian were marked down to Rs. 23.50 and Katras Jherriah were offered at Rs. 70. Contrary to the general trend, Equitable improved further to Rs. 34, on good buying enquiry.

Cotton textile shares were slightly easier, with the exception of Elgin Mills and Kesoram which were steady at Rs. 15.75 and Rs. 18.25. Bowreah were marked down to Rs. 138 and Dunbar receded sharply from Rs. 202 to Rs. 198.

Electric supply shares were dull and featureless with the exception of Calcutta which were taken at the higher rate of Rs. 15.31. Similarly, sugar shares, with the exception of Dyer Meakin Breweries which were better at Rs. 18, suffered from lack of enquiry.

In the engineering group, Indian Iron & Steel shares were at one time depressed down to Rs. 23.20, but bear covering lifted the price today to Rs. 23.75; tonight's closing quotation was Rs. 23.65. Braithwaites were subdued at Rs. 25.75, while Indian Galvanizing were better at Rs. 19.87. There was some enquiry for Indian Standard Wagon at Rs. 86. Other issues were more or less unchanged at around last week's levels.

For the reason given earlier, jute shares evoked little interest and prices, on the whole were slightly lower. Contrary to the general trend, there was some enquiry for Anglo-India, Bally, Barnagore and New Central.

In paper, Bengal were quoted Re. 1 lower at Rs. 106 and India Paper Pulp were shaded at Rs. 25.62 as were Orient Paper at Rs. 38.40. Titaghur changed hands at the lower rate of Rs. 44.25 as did Sirpur at Rs. 13.75.

In the miscellaneous section, Alkali & Chemical were enquired for because of the company's expansion programme and the price rose from Rs. 22 to Rs. 24. Angelo Brothers recovered from Rs. 19.12 to Rs. 19.62. Britannia Biscuits were taken at Rs. 27.25 as were Dunlop Rubber at Rs. 34. Hindustan Lever were better at Rs. 30. Indian Cables met with keen enquiry and recovered from Rs. 30.54 to Rs. 31.62. India Steamship met with selling pressure and were marked back to Rs. 13.50, as were Jardine Henderson from Rs. 85 to Rs. 84. Metal Box were taken at the higher rate of Rs. 42.62. National Carbon met with some profit-taking and closed easier at Rs. 38.50. There was some demand for Orissa Cement at Rs. 16.44.

In the mining group, Indian Copper fluctuated narrowly around Rs. 4.05 while other issues were more or less unchanged at around last quotations. Karanpura Development were better today at Rs. 15.31.

Tea shares were still "off the boil" and, in the absence of support, prices drifted to lower levels.

Hoare Miller

Hoare Miller and Company has increased its profit by Rs. 27,470 to Rs. 4.06 lakhs for the year ended December 1958. The dividend of 5 percent has been maintained. General reserve is allocated Rs. 3 lakhs and taxation provision Rs. 44,641. There is a carry-forward of Rs. 73,254, against Rs. 1,87,554 brought in. The directors state that the manufacturing division has been seriously affected by the reduction in demand resulting from the fall in motor-vehicle production in India. It is hoped that the steps which the Government is now taking will encourage a revival in this industry and that the demand for motor-car seats and spring units will recover to, if not exceed, its former level. Substantial reorganisation and economies

8. **Applications for the loans must be for Rs. 500/- or for a multiple of that sum and will be received at the office of the Chief Accountant, Bombay Municipal Corporation, Municipal Head Office Building, Fort, Bombay.**
9. **Copies of the Notification and Application form may be had at the Office of the Chief Accountant, Bombay Municipal Corporation, Bombay-1.**

Municipal Commissioner's Office,
Bombay, 15th September, 1959.

V. L. Gidwani,
Municipal Commissioner for Greater Bombay.

in the factory have taken place recently and these should result in more profitable working in the future.

Betjan Tea

The profit of the Betjan Tea Company has increased from Rs. 3.38 lakhs to Rs. 4.01 lakhs for the year ended December 1958. The dividend of 15 percent has been maintained. General reserve and plant and building improvement reserve are allocated Rs. 50,000 each. The carry-forward is Rs. 34,304, against Rs. 1,121,913 brought in. The crop increased from 9,574 maunds to 10,802 maunds but the average sale price declined from Rs. 2.61 to Rs. 2.55 a lb. The directors say that in spite of there being a surplus of tea in the world, the prices realised at the auctions throughout 1958 were fairly satisfactory, particularly for quality teas such as are produced by the company. There is, however, scope for improvement, and this can be brought about by equating demand with supply. Vigorous propaganda in India, where the market potential is enormous, together with adequate propaganda overseas, particularly in North America, the United Kingdom and countries of western Europe, would undoubtedly increase consumption —a much better way of reducing the gap between supply and demand than any scheme for the regulation of crop.

India Reinsurance

The profit of the India Reinsurance Corporation Ltd has amounted to Rs. 5.15 lakhs for the year ended December 1958, and a technical loss of Rs. 5.08 lakhs of the previous year has been wiped out. In the fire department, the gross premium amounted to Rs. 1,72,19,131. The net premium was Rs. 56,37,551, against Rs. 35,53,711. Net claims paid and outstanding amounted to Rs. 31,00,197, against Rs. 16,30,184. In the marine department, the gross premium amounted to Rs. 64,89,456. The net premium was Rs. 30,16,742; against Rs. 26,09,489. Net claims paid and outstanding amounted to Rs. 24,47,199, against Rs. 12,77,336. In the miscellaneous department, the gross premium amounted to Rs. 46,85,417. The net premium amounted to Rs. 39,94,141, against Rs. 32,16,546. Net claims paid and outstanding amounted to Rs. 19,73,026, against Rs. 9,29,487.

Rameshwara Jute

The Rameshwara Jute Mills have earned a gross profit of Rs. 79.5 lakhs for the year ended March 1959. Depreciation absorbs Rs. 72,662 and development rebate reserve Rs. 7,652. Bringing in a debit balance of Rs. 7,07,557, there is a credit balance of Rs. 2,706, which is carried forward. The dividends have been passed over. There are arrears of preference dividends amounting to Rs. 3.57 lakhs and arrears of depreciation amount to Rs. 12 lakhs.

India Jute

There is a gross profit of Rs. 19.82 lakhs for the India Jute Company for the year ended March 1959. Adding Rs. 5.44 lakhs received from investments in the Megna Mills Company, there is Rs. 25,25,469. Depreciation absorbs Rs. 5.42 lakhs and taxation Rs. 10.40 lakhs. Bringing in Rs. 84,575 and transferring Rs. 1½ lakhs from contingency suspense, there is Rs. 11,09,600. The ordinary dividend is cut from 12.49 percent to 9.92 percent. Development rebate reserve is allocated Rs. 1.82 lakhs, leaving a carry-forward of Rs. 62,038. On 18th March, 1959, it was decided to close No. 3 mill due to uneconomic working and arrangements are being made to transfer the productive capacity to No. 2 mill. The directors have agreed to sell No. 3 mill. The company has recently purchased a cotton mill, Shree Radheshyam Mills Ltd. which has not been working for some time. Arrangements are being made to manufacture cotton fabrics.

Bombay Market

PRICES IMPROVE AS POLITICAL DOUBTS CLEAR

IRONS RUMOUR DENIAL HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market closed in good form last week. Earlier nervousness caused by uncertainties concerning Sino-Indian relations appeared to have abated considerably. Sentiment improved as soon as it was realised that there was no foundation in the rumour that the Government of India had asked the Indian Iron and Steel Company to sell its shareholding held by the Dalhousie Investment Company instead of issuing rights shares.

Towards the close, replacement buying was evident because of a substantial increase in cloth offtake here and from abroad. This apart, corporate news has been good and it is thought that the outlook in the near term is likely to remain fair.

Tata Steel improved to Rs. 161.25, as did Indian Iron to Rs. 23.68 on short-covering combined with fresh bull buying. Among other engineering shares, Premier Construction were bought at Rs. 361 and Tata Locomotive were transacted at Rs. 191. Alcock Ashdown were freely offered at Rs. 252 and there was quiet support in Larsen and Toubro around Rs. 22.92. Influential support helped maintain Hindustan Motor at Rs. 12.72. Premier Automobile changed hands at Rs. 132.

In the cotton mill group, closing prices showed gains on balance. Good corporate news lifted Bombay Dyeing to Rs. 66.80 and Century recovered to Rs. 581 on prospects of a fresh capital issue. Standard Mills enjoyed influential buying at Rs. 622. Kohinoor increased to Rs. 304 on replacement buying and Tata Mills were indicated at Rs. 47.25. Simplex came to hand at Rs. 149, but Apollo were sold down to Rs. 1.28. India United Ordinary were dealt in at Rs. 20.

In the miscellaneous group, cement shares were steady on expectations that the offtake will improve in the near future. Associated Cement were bought at Rs. 147.50 and Digvijay Cement were taken at Rs. 146.25. In sugar shares, Belapur were steady at Rs. 314 and Walchandnagar Industries came to hand at Rs. 328.75. Phalton were placed at Rs. 163. Mining shares were quiet and routine business was transacted. Shivrajpur Syndicate were quiet at Rs. 90.50. Among steamship company shares, Scindia Steam were quoted at Rs. 17.12 and Great Eastern Shipping were available at Rs. 20.52. Bombay Burmah recovered to Rs. 528, but National Rayon were stagnant at Rs. 353 on fears that prices of foreign raw materials might rise. Gwalior Rayon, however, were supported up to Rs. 25 by knowledgeable quarters. Tata Chemical were steady at Rs. 16.76 and Voltas were bought at Rs. 170.

Turnover in banking and insurance shares was restricted and fluctuations were narrow. Bank of Baroda were quoted at Rs. 102.50 and Central Bank realised Rs. 48.50. In the insurance group, New India Assurance were done at Rs. 59.20 and Vulcan came to hand at Rs. 21.52.

There was selective support in electricity supply company shares, and Ahmedabad Electric met with demand at Rs. 96.50. Tata Power were bought at Rs. 1,132.50 and Bombay Suburban were transacted at Rs. 105.25.

THE WEEK'S TRANSACTIONS

F.I.C.C.I. FRAMEWORK FOR THIRD FIVE YEAR PLAN

THE NEED TO FIND RESOURCES FROM STATE ENTERPRISES STRESSED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Federation of Indian Chambers of Commerce and Industry has produced the tentative outline of a third five year plan, suggesting targets, both financial and physical. It is careful to point out that a high volume of capital formation "is not beyond the bounds of possibility if certain conditions of economic policy and administration are satisfied. We must, however, recognise that in the absence of these conditions, it would be unrealistic to think in terms of a large plan, and the country will have to satisfy itself with a lower rate of development."

The Federation has suggested that the total investment in the third plan should be distributed between the public and private sectors in the proportion of 55:45, compared with 61:39 in the second plan. The percentages of investment in the F.I.C.C.I. plan, are as follows:

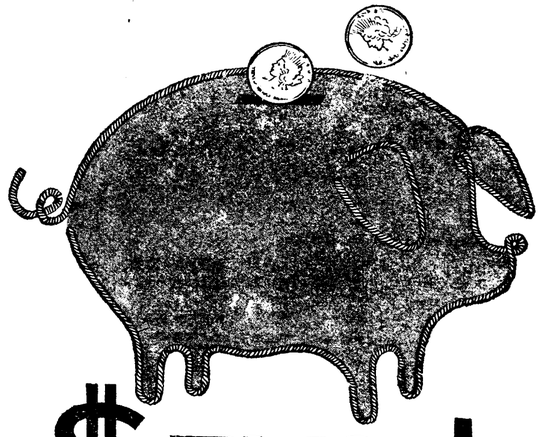
	First plan	Second plan	Third plan
Agriculture and rural development	12	9	12
Irrigation } Power }	16	14.5	4.5 + 11.5
Industries and mining	17	24.5	40
Transport and communications	16	22	11
Social services	32	23	14
Miscellaneous (including stocks)	7	7	7

For the third plan, says the F.I.C.C.I., the methods of financing the public sector will have to be fundamentally readjusted so as to reduce the incidence of taxation and secure compensation for this loss of revenue through the secular increase in the yield as a result of increased economic activity. It will also be necessary to acquire greater yields from the commercial operations of State enterprises. The methods of financing might be generally as follows:

	(Rs. crores) (a)	(b)
Surplus from current revenue	800	900
Surplus from the railways	375	500
Borrowings and small savings	800	900
Other capital receipts	50	175
Profits of other State enterprises	175	375
External earnings and assistance	1,300	1,550
Deficit financing	700	1,100
Total	4,200	5,500

"Two alternative patterns of resources for the public sector are indicated above. Column (a) shows the result of a mobilisation policy which is generally similar to that adopted at present. As a result of heavy taxation, the surplus from current savings may be further increased by another Rs. 100 crores to Rs. 200 crores, but this would be achieved only after great harm is done to the process of retained profits and private savings. However, all the present modes and rates of collecting resources have reached the stage where some serious rethinking on the part of the authorities has to be done, because the level of taxation has begun to impinge on the rest of the economy in such a manner as to hamper capital accumulation and enterprise, and, therefore, development. Column 2(b) presents another picture which assumes a flexible tax policy for attracting resources and a more active conception of the rôle of public enterprises. Under this policy, the rates of taxation on both companies and individuals will be appreciably reduced without detriment, however, to the public exchequer.

Limits of Taxation



"It is suggested that the net yield from taxation to be made available for plan purposes should be only Rs. 800 crores to Rs. 900 crores in the third plan. It is here assumed that the rates of taxation will be reduced so as to encourage saving and capital investment as discussed in the basic approach. It may be reiterated that an unduly high proportion of tax revenue should not be used up either in non-plan or non-developmental expenditure. The surplus from the railways during the second plan is estimated at Rs. 250 crores ; with a considerable increase in traffic and the recent increase in freight and passenger rates, it should not be difficult to get Rs. 375 crores and even Rs. 500 crores over the third plan. The main condition for success is that a greater efficiency of operations is steadily brought about. Similarly, on surpluses from taxation, we have assumed a somewhat low figure for the combined item of market borrowings and small savings. If the organisational effort required for the mobilisation of small savings is forthcoming, the pressure on the loan market because of the Government's borrowing programme can be considerably reduced. It is, in fact, desirable for a healthy development of the money market that it should not be dominated by Government borrowings which at present absorb most of the available funds. The earnings of public sector enterprises will have to be a substantial item of resources for the plan. As it is, there are a wide variety of industrial and other units under the Central and State Governments, and in recent years, Government companies have been prominent in capital issues. The success of these enterprises should be judged by the efficiency of their operations, namely, optimum production at low cost and selling at remunerative prices. Productive enterprises in the public sector must regard profits as an essential function both for judging their own efficiency as also for industrial initiation and expansion in the country. This will mean a considerable change in the outlook and working methods of all public enterprises. If suitable methods and attitudes are adopted, a net yield of Rs. 350 crores to Rs. 375 crores for all public enterprises together can, in fact, be regarded as feasible.

"Total external earnings and assistance are placed at Rs. 1,550 crores. Against the experience of the second five year plan, the estimated accrual of foreign exchange is not unreasonable. But efforts will, however, have to be made in order to set our exports on to a distinctly rising plane so that the minimum (at a higher level in the logic of circumstances) imports of consumer goods as well as certain capital goods and raw materials are financed through these earnings, whatever the situation concerning aids and loans might be from year to year. It must be emphasised that the various changes suggested by us in the basic approach concerning steps to be taken in order to render the economic climate more favourable to private foreign investment are equally applicable to the prospects of securing greater financial accommodation from foreign Governments and the international monetary institutions. We have suggested that deficit financing should be made at the rate of about Rs. 220 crores a year. This rate will not be higher than the average annual deficit financing conducted in the last two years of the second plan. We feel that it should be possible to maintain this rate without incurring the risk of any runaway inflationary situation ; in fact, this deficit financing should be a constructive method to deal with the larger problems of unemployment and under-employment during the third plan. The third plan should also see a considerable increase in the degree of monetisation within the country and, with proper safeguards, the average rate of deficit financing suggested by us should be feasible as well as desirable. Caution will have to be continually exercised while determining the rate and timing of the various doses of deficit financing ; unless the creation of these funds is fairly well correlated with an equivalent degree of use of other resources for production, the danger of inflation will always be present. Nothing is more dangerous to the loss of confidence in economic betterment than the loss of purchasing power of the currency.

Rise in Prices

"The recent rise in prices should serve as an example for the caution which is necessary while creating monetary resources through deficit financing. Unless this creation of resources is directly linked with the purposes of production and capital formation, an unbalance which will affect the entire economy is likely to result. In the opinion of the Federation, the basic reason for such inflationary development is that production in different spheres and the rate at which it is increasing have not kept pace with other monetary and financial factors. Emphasis on adequate and diversified production is the very basis of this approach, and the dangers of deficit financing can only be overcome through other concurrent production—and investment-oriented policies.

"It will be agreed that the pattern of financial supply for the private sector as it obtains at present will hardly be able to sustain its immense needs during the third plan. Not only will it be necessary that the existing institutions take on much greater responsibility, but fiscal policy will also have to be changed so as to enable them to work on their traditional methods of financing by means of retained profits. There has been an encouraging revival of interest and participation in equity issues in the recent past. But this method of acquiring funds is not generally available to the smaller and medium-sized projects. In this field much can be done by the various State Finance Corporations as well as the National Small Industries Corporation. The various terms under which loans are advanced and creditworthiness is

$aved

Rs. 4,00,00,000 worth of foreign exchange!

To-day, electric power is the motivator behind industrial development, increased agricultural output, and the sweetness and light of the home! From whatever source electricity may be obtained, and wherever it may go, in this vast land of ours, you'll find Alind conductors taking this power.

But Alind's contribution reflects itself not merely in the material welfare and progress of the country...it's seen in other ways, too.

For instance, in the last eight years, savings in foreign exchange should have amounted to something like Rs. 4 crores. And with our Hirakud plant now "on stream", and using indigenous metal, these savings bid fair to be as high as Rs. 1·5 crores a year!

Our lines include:

judged will have to be modified so as to fall in step with the needs of an accelerating economy.

Investment in Industry

"The total investment proposed to be made in industry and mining during the third plan is to be of the order of Rs. 4,000 crores, which means almost doubling the percentage of investment under this head, compared with the second plan. If this order of industrial investment is to materialise, the private sector should have to be enabled to invest very nearly Rs 3,000 crores. Undoubtedly, this is a very high figure, and its fulfilment depends on a number of factors and conditions. Looking at the progress in the industrial sector in the second plan, an amount of Rs. 3,000 crores for the private sector will be more than about three times the investment level attained in the second plan, and it may be argued whether such a step-up is feasible. We feel that even in the light of previous experience, the industrial sector should easily be able to absorb this investment. However, it would not be enough merely to decide upon this measure of industrialisation; the necessary conditions and climate for achieving it will have to be created. It is quite obvious that if one were to proceed in one's calculations on the basis of existing policies of taxation as well as the existing modes of finance available to the private sector, it would be unrealistic for it to think in terms of an investment in the region of Rs. 3,000 crores. Under existing conditions, the private sector may not even be able to muster investment resources of even half this amount. In the table below, however, we have presented a tentative hypothesis concerning the manner and the different agencies supplying the bulk of the capital requirements of the industrial sector during the third plan. In this table, the second column indicates the pattern of resources procurement if the necessary changes in the taxation system are immediately made. It is assumed that the taxation of corporate profits is brought to an appreciably lower level than the present one, and correspondingly, downward adjustments in personal taxation are also made so as to enable greater personal savings. We have also proceeded on the assumption that the procedures and policies suggested by us in the basic approach and earlier in this chapter, are put through.

	(Rs. crores) (1)	(2)
New issues	350	500
Retained profits, reserves and other savings	600	1,000
Commercial banks and Refinance Corporation	300	600
Government finance corporations and other institutions	100	175
Investment corporations and unit trusts	10	25
Foreign loans and investments	125	300
Other credits and mortgages	250	400

"The latter set of figures is naturally a very rough indication, but it does assume certain basic changes in the direction and operation of the industrial economy. It will be observed that the rate of acquisition of funds by new issues is expected to be nearly twice that at present."

Objectives and Targets

Discussing objectives and targets of industrial development, the Federation says: "We feel that it would not be very helpful for the ends of industrial development to enforce any rigid or doctrinaire division between the public and private sectors in relation to the scope of industrial development and rights of entry. What should be of importance in taking such decisions concerning the allocation and selection of projects is that an efficient, modern and competitive industrial structure is established within the country. For example, there is no reason why the private sector should be excluded from participating in the development of the iron and steel industry or the exploration and exploitation of mineral fuels if it can produce schemes which are economically viable and indicative of sufficient entrepreneurial promise."

The Federation has made the following allocations for the third five year plan:

INDUSTRIAL DEVELOPMENT DURING THE THIRD PLAN

Industry	Unit	Capacity 1965-66	Investment Rs. crores
1. *Mining and Metallurgical:*			
i. Coal	million tons	90	175
ii. Petroleum (including exploration) ...	"	10	300
iii. *Iron and Steel*			
(a) Ingot steel	"	9	400
(b) Finished steel	"	6.75	
iv. Ferro-manganese	lakh tons	4	15
v. Others, including non-ferrous metals ...	—	—	200
2. *Mechanical and engineering:*			
i. Heavy machinery	—	—	500
ii. Other industrial machinery, including machine tools	—	—	225
iii. Railway rolling stock	—	—	125
iv. Others, including steel fabrication, motor-vehicles and ancillaries, light engineering industries, etcetera.	—	—	200
3. *Electrical and Electronic:* (including transformers, motors, cables and wires, batteries, lamps, fans and radio receivers, etcetera).	—	—	225
4. Chemical and pharmaceutical:			
(1) Heavy and industrial chemicals	—	—	300
(2) Cement	million tons	16	65
(3) Fertilisers	—	—	220
(4) Plastics	—	—	25
(5) Paper and newsprint	—	—	100
(6) Others including drugs and pharmaceuticals ...	—	—	100
5. *Textile Industries:*			
i. Cotton textiles	million yards	9,600	100
ii. Jute textiles	million tons	1.2	20
iii. Woollen textiles	—	—	15
iv. Rayon and staple fibre	million yards (fabrics) / million lbs (rayon and fibre)	700 / 200	60
6. *Food Industries:*			
i. Sugar	million tons	3.25	80
ii. Vanaspati	lakh tons	7.5	15
iii. Others including food preservation, dairy development, etcetera.	—	—	35
7. Other industries, mainly medium and small-scale	—	—	500
		Total	4,000

Congress Approach to Planning

Earlier in the week, the report of the Congress Planning Sub-Committee was publishtd. It says: "In the context of Indian conditions, both from the point of view of rapid industrial growth and realisation of democratic social objectives, our policies will naturally be directed towards the gradual expansion of the public sector. But in a balanced and integrated national plan, there would be scope enough for the private sector also. The range and complexity of the industrial structure in a fast-growing economy are such that full scope exists for the private sector to play its appropriate part in the country's economic progress. Policies for such co-operative working between the public and private sectors have been laid down clearly in the Industrial Policy Resolution of April 1956. The principal means of production, naturally, as explained in the Industrial Policy Resolution, will be socially-owned and operated. Existing private large-scale enterprises will, broadly speaking, continue to remain in the private sector, as any attempt to nationalise them would involve the diversion of public resources for this purpose. It would be far better to use these public resources for new industries and thus add to production. These large-scale units of private enterprises which remain in private hands will be appropriately controlled and regulated. As far as the question of expansion of existing enterprises and of setting up new large-scale enterprises is concerned, the trend in a socialist economy is naturally in favour of minimising the emergence of new large-scale enterprises in the private sector and of preventing monopolies from growing up. The issues involved in these have to be decided necessarily from the point of view of optimum economic and social advancement during the period in view. It is not desirable to lay down rigid rules and each such case must be judged on merits. In any event, it is obvious that all such large-scale enterprises have to be subject to regulation under the law."

Dealing with the question of resources, the report points out that so far attention has been concentrated mostly on the financial techniques required to locate and mop up surpluses as exist in the economy and too little attention has been paid to the question of creating and generating such surpluses through the effective use of the manpower and other non-monetary resources. What is needed is a combination of financial techniques and the effective organisation of physical resources. According to the report, traditional financial techniques rely mainly on increases in taxation with a view to curtailing the purchasing power left with the people so as to restrain their consumption, borrowing from the market and the creation of credit by borrowing from the Reserve Bank. These traditional techniques may not be found sufficient to meet the challenge presented by the third plan. In this connection, it is suggested that the funds be collected for a number of social and other schemes by way of voluntary contributions in cash or kind from the villages which will be benefited by them.

Direct and Indirect Taxation

As for taxation of income and other direct taxes, the view is expressed that there is not much scope for collection of additional funds through them. It is, however, pointed out that the machinery for tax collection and checking evasion has to be strengthened in the first instance, so as to make it possible for the Government to use this instrument of fiscal policy more effectively in future. The report expresses the view that in the third plan, the main reliance will have to be put on commodity taxation (excises, for example). Such taxation will be necessary to check the growth of consumption of commodities whose supply is restricted and for which the country is dependent on imports. The range of commodities and the level of tax must, of course, be selected carefully so that the burden does not fall heavily on those who are not in a position to bear it. The need to raise resources through the profits of public enterprises and State trading has also been emphasised. However, in the case of State trading, the report is against extending its scope in the domestic sphere to commodities other than foodgrains, and it has pointed out that there are many limitations of administration which make it unsuitable for undertaking trading activities on a large scale.

The report has duly emphasised the need for an effective drive to curtail the non-essential current expenditure of Central and State Governments and of effecting economies in current expenditures, both with a view to obtaining additional resources for development as also in order to create a favourable atmosphere for the mobilisation of the savings of the masses. It is pointed out that in recent years, current Government expenditure has increased progressively and has eaten heavily into the normal increases in tax and non-tax revenues with the consequence that there is very little surplus available from current revenues for financing the plan. It is suggested that in making estimates of the cost of projects included in the plan, the utmost care should be taken to eliminate items which are not strictly needed for securing the functional efficiency of the projects. In this connection, the report states that "there is no greater deterrent to public enthusiasm for the plan than the spread of the feeling that people's savings are being drawn to less essential outlays."

Prices, Wages and Profits

The chapter dealing with "other conditions of success" emphasises the need for regulation of prices, wages and profits. In the case of prices, it is observed: "While it is important to ensure adequate supplies of consumer goods to meet such growth in demand as is permitted by the overall requirements of investments, there might still be occasions when because of the failure of crop in one year or similar disturbance, the price level may tend to rise. Such contingencies will have to be adequately met. Speculative tendencies should be controlled by the regulation of forward markets and also by selective control of bank credits. Other devices such as special levies of excise on certain commodities at specific times may also be resorted to."

As for wages, the committee feels that the stage has not yet come when the country could think in terms of a national minimum wage. Such a minimum can be guaranteed only when the productivity is rising sufficiently and the investment plans have reached an advanced stage.

While dealing with the question of regulation of profits, some socialist theories have been pounded. For instance, it is stated that "substantial profits are bound to accrue in the private sector, the bulk of which would really be due not to the special efforts of private enterprise but due to some social causes and the pressures of a developing economy. Again, "in a planned economy there should not be the same measure of risk and uncertainty in private enterprise as prevails in a capitalist economy. It is also important to realise that profits, after making allowance for the cost of production and normal profits and dividends, etcetera, constitute a surplus which is essentially social in character and really belongs to the society as a whole rather than merely to the workers or the shareholder." One wonders whether the authors of the report took realities into their consideration. It needs to be pointed out that in spite of planning for the last so many years, quite a few units in the three premier industries of the country, namely, jute, cotton textiles and tea, are incurring losses. The Government has been appropriating a larger share of the income of these and other industries through excise duties, etcetera, but it has no obligation to meet the losses or a part of them. In the kind of planning which has been adopted in India and of the type visualised by the authors of the report, risk-taking is the primary function of private enterprise, which is to be denied due rewards for it.

Using Russian Credit

Doubling the capacity of the Bhilai steel plant, enlarging the scope of the Ranchi machine-building project and of the coalmining machinery project, expanding the activities of the Natural Gas and Oil Commission, financing of a couple of electrical projects and fertiliser plants, are included in the list of schemes to be financed by the Russian credit of Rs. 180 crores for the third five year plan, the agreement for which was signed in Moscow earlier this month. Earlier, Russia gave credits equivalent to $133 million in the first five year plan and of $125 million in the second five year plan, making a total of $258 million, of which $147.8 million remained unused until 31st March, 1959. As against this, the non-communist bloc made available to India $393 million in loans and $289 million in grants, in addition to $35 million worth of assistance under P.L. 480 during the first five year plan. Of this, India was able to use only $450 million. From 1st April, 1956, to 31st March, 1959, the non-communist bloc has made available to India $1,231 million in loans and $108 million in grants, in addition to $691 million worth of assistance under P.L. 480, making a total of $2,030 million. On 31st March, 1959, $1,090 million worth of foreign assistance remained unused. This included the Russian credit of $147.8 million.

The Russian aid is projectwise. It is more rigid than even the U.S. Export-Import Bank credit which can be used only for purchases from the U.S.A. It will be evident that India has some choice in the case of the U.S. Bank credit, while it has none in the case of Russian credit, which is given in the form of equipment and plant, on the quality and price of which India has no say. Much has been made of the low rate of interest. In the absence of the comparative cost figures, it is not known what price India would have paid for the plant and equipment had it been purchased from non-Russian sources. What India gains in the low rate of interest may be more than counterbalanced by the higher prices charged for the plant and equipment supplied by Russia. Then again, India has been paying the highest salaries to Russian technicians. A great deal has also been made of India's repayment of credit in goods to be purchased by the Russians. It is true that a provision exists in the agreement against Russian re-exports of Indian purchases. It is, however, not known how India would prevent this re-export, if Russia sent the goods to the communist bloc. The bigger question is, what happens if Russia does not buy the goods offered by India? According to reports, there are as many as 60 Russian agents functioning in this country to purchase local merchandise. In a large number of cases, they either do not like the quality of goods or regard their prices as uneconomic. Hides and skins is one of the items listed for export to Russia. Thanks to the cow protection ideology, the tanning industry and export trade in hides and skins have practically been ruined. Useless cows are often let loose and become wild, destroying crops.

New Trade Pattern

A question of some importance is whether the Russian trade will supplement or supplant India's trade with the non-communist bloc. The following comparative figures (in crores of rupees) relating to the export trade with some countries for the first five months are interesting:

Countries	January-May 1959	January-May 1958
(Communist Bloc)		
Russia	11.1	7.6
Czechoslovakia	1.7	1.2
East Germany	1.3	0.4
Poland	0.5	0.6
Hungary	0.3	0.2
Rumania	0.8	0.3
China	0.3	0.5
	16.0	10.8
(Non-communist world)		
U. S. A.	39.9	36.4
Canada	6.4	6.1
United Kingdom	54.0	57.7
West Germany	6.7	6.4
Italy	2.3	2.3
Netherlands	3.3	3.0
Belgium	1.5	1.8
France	3.6	3.4
Switzerland	0.3	0.3
Australia	7.7	8.3
New Zealand	1.8	3.2
Japan	13.5	11.5
	141.0	140.4

Exports during the first five months have been stepped up by Rs. 6 crores to the communist bloc, while they have remained stationary with the non-communist bloc. An analysis, however, shows some disturbing features. Exports to the United Kingdom, Canada, West Germany, Belgium, Australia and New Zealand have declined. Increased exports to the U.S.A. and Japan have restored the equilibrium.

It is suggested that just as India has no choice in the matter of the quality and price of the Russian goods, so also the Russians should be given no choice concerning the price and quality of Indian goods and that they should deal exclusively with the State Trading Corporation. India has already given away this advantage by agreeing to price parity with the non-communist countries for purchases by Russia. Russia, it will be seen, will enjoy the benefits of a free and competitive market, while India will have to deal with the State agency concerned in Russia. After the Russian deal, it will be difficult for India to demand untied loans from the western countries, which could be used by inviting global tenders for purchases.

During the five months ended May, Indian exports to Russia improved by Rs. 3.5 crores to Rs. 11.1 crores over the corresponding period of 1958. Imports from Russia declined by Rs. 6.5 crores to Rs. 5.5 crores.

Russian Offer of Oil Refinery

The Indian Government, it is believed, is re-examining a Russian proposal for an oil refinery in Barauni in Bihar. This follows last week's £135 million credit agreement, under which all repayments will be made in goods 12 months after the Russian supplies of plant and equipment have been completed, and will extend the 12-year repayment period to almost 16 years, carrying 2½ percent interest. The Russians are prepared to supply the most modern refinery equipment, provided India takes over the responsibility for various patents. Presumably, several items in the Russian refinery equipment are under the patent rights of western countries. India will have to examine the extent of liability which their infringement will entail, and whether the Russian credit terms will outweigh this.

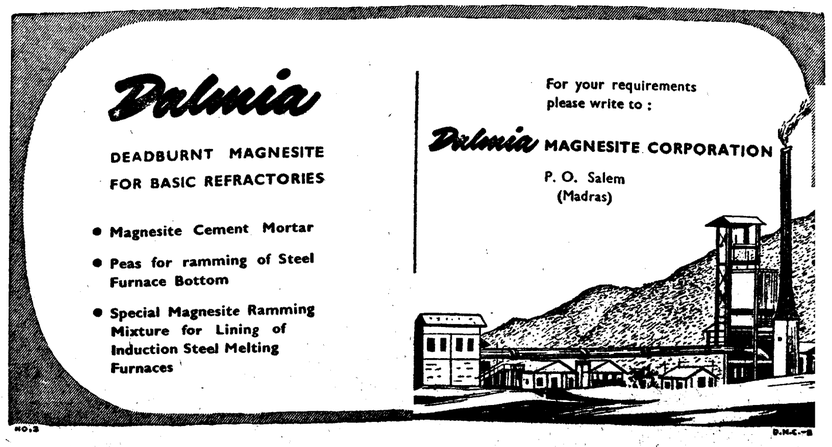
Rise in Exports of Oilseeds and Oils

India's export earnings from oils, oilseeds and oilcakes amounted to more than Rs. 50 crores during 1955. The value of these exports dwindled to Rs. 26 crores in 1956 and to Rs. 15 crores in 1957 and 1958. The main reason for the fall was the inability to allot sufficient quotas for export due to high internal prices, reflecting increased demand for consumption within the country. Although the production of the major oilseeds during these years showed a slight increase, it was obviously not sufficient to cope with the increase in internal consumption. The second five year plan fixed a target of 7.5 million tons for the five major oilseeds. According to present indications, production at the end of the second plan is likely to be about 7.2 million tons only. It should be obvious that the problem of high internal prices will remain during the rest of the second plan period. The demand for vegetable oils in India during the third plan is placed at 11 million tons. It is, however, doubtful whether a target of this magnitude will be practicable. With the best efforts, India cannot hope to produce more than 9 million tons at the end of the third plan period, which will not leave a sufficient surplus for export purposes.

Ore Exports

During 1959-60, the State Trading Corporation has planned to export 3 million tons of iron ore. Contracts for about 3 million tons have already been secured, and provided the foreign buyers take deliveries according to the schedules agreed, there will be no difficulty in realising the target. Apart from the long-term contract for the export of 7.2 million tons of iron ore to be delivered between July 1957 and June 1962, the Corporation has also reached an agreement under which the Japanese mills will be buying 2 million tons of iron ore yearly from 1964 onwards for a period of ten years, in addition to their normal purchases. The Japanese have given an indication that they will be buying another 4 million tons a year from 1964 onwards for a period of ten years. Czechoslovakia has purchased one million tons of iron ore for delivery during 1959. In addition, new markets such as Italy, Hungary and Rumania have been developed.

As for other ores, chrome ore shippers and mineowners have been allotted a quota equal to that allotted in 1958, which in turn, was equal to their 100 percent performance during 1957 plus the unused quota of the previous year. Provision exists for the grant of *ad hoc* quotas in favour of those who are able to secure business in excess of their quotas. Export quotas are given to the State Trading Corporation on an *ad hoc* basis against foreign sales concluded by it. Exports of chrome ore from India during the past few years have been as follows:



Year	(Tons)
1956	42.865
1957	41.164
1958	43.495
1959 up to March	15,854

In the overseas market for chrome ore, India is facing severe competition from the Philippines, Turkey and Rhodesia. Russia is also emerging as a new competitor. The demand from overseas is selective—for high-grade chrome ores only, of which the production in India is limited to about 50,000 tons.

Kyanite quotas to the State Trading Corporation are issued on an *ad hoc* basis against foreign sales concluded by it. Shippers and mineowners have been allotted quotas equal to those given in 1958, which were equal to the best year exports of 1954, 1955 and 1956. In case the individual quota is exhausted, supplementary quotas on an *ad hoc* basis are also allotted against firm commitments. Exports of kyanite from India during the past few years have been:

Year	(Tons)
1956	26,564
1957	24,456
1958	18,538
1959 up to March	5,557

The overseas demand is mainly for Lapsobaru kyanite, the main producers of which are Messrs Indian Copper Corporation, Calcutta, and Messrs Kharswan Minerals, who export their entire production themselves. Even the foreign market for Lapsobaru kyanite is in danger of being lost as a cheaper substitute called mullite, which is a synthetic kyanite, is increasingly being developed in the U.S.A.

London

COMMONWEALTH FINANCE MINISTERS DISCUSS ECONOMIC ISSUES

ROLE OF U.K. IN PROVIDING DEVELOPMENT FINANCE EXAMINED

(FROM OUR LONDON CORRESPONDENT)

THE Finance Ministers of the Commonwealth countries gathered in London for the recent meeting of the Economic Consultative Council. Similar meetings have always preceded the annual conferences of the International Monetary Fund and the World Bank, but this is the first time that the gathering has had formal sanction, something that was granted at the Commonwealth Economic Conference in Montreal last year. There was no lack of material for discussion. The published agenda mentioned the prospects of world trade, the balance of payments of the sterling area, European trade, and something called "development questions." The prospects for world trade have improved so much that the pressure for special measures to raise commodity prices has lessened, but some of the primary producers in the Commonwealth complain that the industrial countries pay too little for their exports. Nothing alarming needed to be said about the balance of payments of the sterling area. But the discussion on European trade showed how far the main Commonwealth countries had moved in wanting a deal with the Common Market. As for "development questions," the amount of capital which Britain can provide without overstraining herself is something of a puzzle. The Radcliffe report suggested that the U.K. should go on investing as much as it could and mentioned a Treasury estimate that in order to do so, Britain needs an annual surplus of £450 million. No doubt Commonwealth Ministers were pleased to note the intention, but they might have asked at whose expense Britain proposes to earn this enormous surplus.

Then the talk moved on to plans for Washington, where the Commonwealth will be faced with a strong demand from the I.M.F. to drop the remaining "transitional" exchange restrictions and to accept the provisions of Article 8 of the Fund under which no discrimination is permitted except in times of stress. In addition, the American pressure for a sharing of burdens in the field of economic aid and development loans would be strongly reflected at the World Bank meeting.

Engineering Output and Exports

The engineering industry plays so important a part in Britain's export trade that it is unfortunate one cannot get more accurate and up-to-date statistics as to how it is faring from month to month. According to the U.K. Board of Trade, production and exports of engineering and electrical goods were substantially higher in the first part of this year than in the same period of 1958. Production in the engineering and electrical goods industries in June is estimated to have been 2 percent more than in June 1958. The increase was smaller than in May, but brought the volume of production in the second quarter to 6 percent more than in the corresponding period of last year. Information so far available for July suggests that production was substantially higher than in July 1958, although affected by the holidays.

Official engineering statistics carry the story only to the end of June, and the index numbers of orders on hand, mainly for capital goods and components, indicate that order-books for both home and export markets ceased shrinking in March but changed little after that. At the end of June, the total value of such orders was about 8½ percent less than a year earlier, but 17 percent lower than two years earlier. The fall in export orders alone was 12 percent and 19 percent, respectively. For about six months now, reports from firms in the heavy engineering industry have indicated a brisk increase in enquiries and a fair expansion of orders. U.K. Board of Trade figures suggest either that this improvement has not been typical of the whole capital goods industry or that managements have been over-confident. A third possibility is that the official statistics on orders are not yet good enough to be a reliable guide in a short run.

Further depressing news comes from the British Engineers Association, which represents mainly heavy engineering. In an analysis of exports of electrical and mechanical products from the 11 principal exporting countries of the world in 1958, the B.E.A. brings out the following points: Since 1957, West Germany has outstripped the United Kingdom as an exporter of machinery and electrical apparatus. In 1958, the exports of West Germany, Benelux, Italy, and Switzerland continued to expand, while those of the United Kingdom, France, and Sweden remained static and those of the United States fell by 13 percent in value. British exports to West Germany rose by 40 percent last year to over £25 million, but to the other five Common Market countries, U.K. exports fell from £102 million in 1957 to £91 million. West German exports to India and South Africa rose sharply, while those from the United Kingdom fell. West Germany exported more than three times as much as Britain to Russia, and both France and Sweden sent more there than the United Kingdom. British exports to the United States and Canada have been satisfactory, but the United Kingdom's largest markets are Australia, India and South Africa.

Trade Gap Reduced

Both imports and exports of the U.K. fell last month, as is normal at this time of year. Since imports were nearly £48 million lower than in July, while exports fell by just over £32 million and re-exports were unchanged, the trade gap was reduced from £55.8 million in July to £40.5 million in August. Total exports in August amounted to £225.4 million, compared with £287.8 million during the previous month. Imports fell from £325.9 million to £305.2 million. Re-exports were £9.3 million, the same as in July. The trade gap for August is close to the average (£39.7 million) for the first eight months of 1959. Exports this year have been running 3 percent higher on average than in the corresponding period of 1958. Average imports have been 5 percent higher. Both have increased significantly since the end of March; average monthly exports in the five months, April-to August, were 5½ percent higher than in the first quarter of 1959, and average monthly imports were up 4½ percent.

British exports to North America in August were valued at £44.4 million, seasonally £7.2 million less than in July. During the eight months from January to August, they were 25 percent higher than in the same period of last year. Exports to the United States alone were no less than 40 percent higher in the first eight months of this year than in the corresponding period of 1958. By contrast, exports to Canada were only 4 percent higher. The setback in August is also mainly due to smaller sales in Canada which dropped by £5.4 million to £14.6 million between July and August. Exports to the United States were £29.8 million—only £1.8 million less than in July.

B.O.A.C.-Air-India Pooling Talks

Plans for pooling British Overseas Airways Corporation flights with those of other operators, to avoid wasteful duplication of services, are being considered. The two overseas airlines immediately concerned are Air-India International and Trans-Canada Air Lines. Discussions between British and Indian civil aviation authorities opened on 19th August, and were concluded last week, the U.K. Ministry of Transport and Civil Aviation has announced. The Ministry said that the talks "took place against the background that the airlines would be meeting again during November to consider possible pooling arrangements." A further inter-Governmental meeting will take place in New Delhi in January 1960.

Mr. G. R. McGregor, President of Trans-Canada Air Lines, said the other day that he was confident discussion with B.O.A.C. would soon reach a satisfactory conclusion on outstanding details. The aim is to avoid extravagant operation of aircraft capacity in excess of that required. Future schedules might ensure that B.O.A.C. and Trans-Canada aircraft did not leave within half an hour of each other. An improvement in overall service should result from the passengers' standpoint. Ultimately, fares might be reduced because of savings in expenses. Discussions with Trans-Canada Air Lines on pooling are still in the exploratory stage.

Stable Price Level

The retail price index for August comes out at 109.3. It has been virtually stable for 18 months with a maximum fluctuation of about ¾ percent either way. This is quite an achievement after years of inflation. It indicates a sound pound and it is of vital importance in every home where the household budget is a weekly problem.

Brevities

Surprisingly good prices are being realised at the Mincing Lane tea auctions. Average price quoted recently was over 5s 3¼d a lb against 4s 2¼d a lb a year ago. Stocks of tea in Britain now amount to 120 million lbs.

Provisional figures of retail sales in August, issued by the U.K. Board of Trade, suggest that conditions were a little quieter than in recent months. The increase in value a year earlier is put at about 4 percent which compares with a 5-percent increase for July and for the second quarter.

In view of the imminence of the election, the U.K. Chancellor of the Exchequer will not be attending the annual meetings of the International Monetary Fund and the International Bank for Reconstruction and Development, which will take place in Washington from 28th September to 2nd October. The delegation will be led by Sir Roger Makins, joint permanent secretary to the U.K. Treasury.

FACING THE FACTS

TO FACE THE FACTS
YOU HAVE TO KNOW THEM.

Buying habits, customs and needs vary from country to country. If you are an exporter or an intending one, it is necessary for you to know the national preferences. Engineering Export Promotion Council knows all the facts worth knowing.

On the spot studies are made by our trade delegations; we participate in foreign trade fairs and exhibitions; we have showrooms and staff at the right places. We will welcome your enquiries and will be glad to introduce you to reliable importers and dealers in foreign countries.

Jute

CLEARER RECLASSIFICATION OF JUTE REQUIRED

VARYING IDEAS ABOUT DISTRICTS, FIBRES AND MARKS CAUSING CONFUSION

YEAR by year, raw jute buyers' and sellers' ideas about districts, fibres and marks seem to change. For instance, some buyers do not consider certain districts to be in the category of, say, Northern jute, whereas others accept the same districts as good Northern. Similar is the case with the nomenclature of other fibre. Botanically, bimli and mesta are not jute at all, but are regarded as such collectively. Daissee and Tossa, although coming from the same seed, are treated as two entirely different categories. Some accept despatches from a certain Daissee centre under the nomenclature of Daissee, but will refuse the same jute if marked Tossa, while others accept it as Daissee-Tossa, and others again as only Tossa. Desal and jungli are other varieties for which no official limits have been set, and much good jute is refused because it carries this stigma.

Since partition, no attempt has been made to reclassify the Indian jute-growing areas, and in many cases this causes confusion. A baler packs for one group of mills under one ticket, but has to change the ticket completely if the same jute is sold to another group. Perhaps it would be timely, now that India has gained self-sufficiency in jute, for the whole structure to be reorganised and details of marks, districts and fibres collated and graded once again on the basis of the I.J.M.A.'s book of marks which was applicable until a few years ago. Admittedly, mills now have a grading system of their own, but it would be beneficial if the experiences of all groups were made available to the industry as a whole. Much more control could be exercised over dubious sellers if they were registered and their mark was in danger of being down-graded due to bad deliveries and any premium paid on it withdrawn. As in the book of marks, the data could be revised quarterly on the basis of the returns submitted by mills. This might prevent sellers from rapidly changing marks and names, as they do now if they happen to be blacklisted.

Reports from Dundee and the Continent indicate that consumers in those centres expect the price of jute to fall in the near future. For this reason, many firms are not accepting orders now but prefer to wait for prices to be reduced by a few pounds a ton, which would enable them to compete more favourably with the substitutes that are gaining ground in the cloth and bag markets. The general consensus of opinion appears to be that with so much jute now available from a number of sources, suppliers must give more attention to the quality of the fibre they export. Reports that early arrivals of new crop jute in Pakistan are none too good have unsettled the trade, especially as with the early crop many shipments are already on their way to overseas parties. A buyers' market now exists, and competition will soon become very keen, with customers weeding out the undesirables. If India is to compete satisfactorily in the export market, more attention and stricter control must be exercised on the quality of the jute passed for shipment.

Dull Trend in Markets

The Calcutta markets were dull during the past week, and no outstanding features were reported. Prices recorded a slow but steady decline, which was more pronounced in sacking. Rates dropped on reports that the steamer allotted earlier to take up the Chinese order had been delayed. Furthermore, it was said that shipping instructions to mills so far this month had been very poor, and the possibility of an increase in stocks had a depressing effect. No fresh business was reported and the general undertone of heavy goods was weak. Although hessians recorded small losses, the sentiment there was much stronger than in sacking. Mills were fairly well sold in that category, so they were not anxious, especially with the general belief that there was a lot to be bought on account of the U.S.A. in spite of the present dullness in that quarter.

Raw jute was dull and very little activity was reported. Total business was again under 100,000 maunds, which, spread over the whole industry, was a very small quantity indeed. Sellers showed greater keenness towards the end of the period when rates were falling but discounts were small. There was an improvement in imports upcountry and prices decreased, but there was no sign of a sharp fall as the weight of the new crop had still to make itself felt.

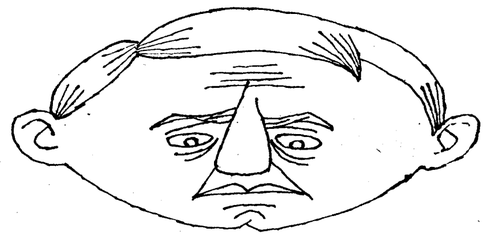
Raw Jute Arrivals

Arrivals of raw jute in Calcutta and mill stations during August 1959 amounted to 310,850 bales, made up of 17,300 bales from Pakistan and 293,550 bales from India. This was a drop of 23,200 bales from the previous month, and 45,050 bales less than during the corresponding month of last year. Compared with July 1959, arrivals from Pakistan increased by 450 bales, but those from India dropped by 23,650 bales. In August 1958, Pakistani arrivals were 30,250 bales, and Indian arrivals 325,650 bales. Total arrivals in the current season, July-August 1959, now stand at 34,150 bales from Pakistan and 610,750 bales from India, making a grand total of 644,900 bales. During the same period of last season, Pakistani arrivals were 83,350 bales and Indian arrivals 597,000 bales, making a total of 680,350 bales.

THE JUTE MARKETS

There was little activity in the futures markets during the past week and prices moved within narrow limits. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 15th September to 22nd September, were as follows:

	Hessians 40in 10oz. November		Sacking B Twills November		Raw Jute September	
	Rs a 100 yds	Rs a 100 metres	Rs a 100 bags	Rs a md	Rs a 100 kilos	
Opening	40.18	43.94	98.25	23.18	62.10	
Highest	40.28	44.05	98.85	23.28	62.37	
Lowest	39.96	43.69	98.00	22.90	61.35	
Closing	40.04	43.78	98.20	22.96	61.51	

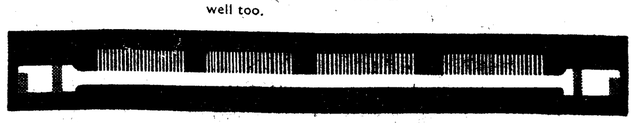


Manufactured Goods: There was a temporary hardening of prices at the opening of the jute goods market last Thursday due to speculative activity in the futures market. Heavy goods prices tended to rise. B Twills advanced by 35nP in the near positions to Rs. 101.25, and by 50nP in the January-March position to Rs. 97.50. But 40in. 10oz. hessians opened unchanged at Rs. 40.40 and Rs. 39.60 for the near and forward positions, respectively. Reports that steamers placed for China had been delayed caused a slump on Friday, and heavy goods lost 85nP in the near positions, but there was little change in other quotations. The market was quiet due to the lack of shipping instructions and small losses were reported in all sections. After the week-end, in the absence of overseas interest or indications from mills, prices again showed a substantial fall in sacking. Hessians followed in sympathy, although losses in this section were nominal. The market was inactive at this stage but further losses were recorded during the day with the undertone tending to become weaker. By Tuesday morning, B Twills had dropped by Rs. 1.65 and hessians by 40nP from the week's opening quotations; dull conditions prevailed.

Opening quotations on Wednesday morning were as follows:

	Sept.	Oct.	Oct.-Dec.	Jan.-March
40in 8oz.	33.45 (36.46)	33.00 (35.97)	32.60 (35.53)	31.65 (34.50)
40in. 10oz.	40.00 (43.69)	40.20 (43.82)	40.15 (43.76)	39.60 (43.16)
B Twills	99.25	99.10	98.40	97.25
Heavy Cees (Plain)	102.25	100.00	98.40	97.00
A Twills	119.25	118.50	117.75	116.50
Liverpools	111.25	110.25	109.50	108.25
Cornsacks	99.40	99.75	99.75	98.25

Raw Jute: Only small business was reported and the fibre markets in general were quiet. Sellers offered more freely due to an improvement in the upcountry markets. Imports rose, especially in the Northern districts, where weather conditions allowed quicker harvesting. Rates dropped until they were practically on par with Calcutta indications. An increase was reported in mill buying in some districts at lower prices, and most counter-bids were met. Quality reports on recent arrivals upcountry showed an improvement and sellers' offers contained a large percentage of Middles. Assam quotations at the beginning of the period were based on Bottoms at Rs. 23 a maund, and remained at this level until after the week-end, when they were reduced by 25nP. Small business was reported below these levels, but mills in general showed little interest. In Cossipore, imports improved and wagon arrivals rose to 840, which was 255 more than during the previous week. All arrivals found ready buyers, and prices were well maintained. The Daissee markets were the only ones which did not fall. Mesta and Daissee rates in the agencies continue to rule about 50nP above the parity of Calcutta indications.



Business was done in Northern jute at Rs. 21.75 to Rs. 22 a maund basis Bottoms, and at Rs. 24.25 for Middles only. Murshidabad white passed at Rs. 21, and selected jungli white at the same price, with other districts in the jungli areas fetching Rs. 20.50. In the latter variety, the whole range of Middles, Bottoms, B Bottoms and X Bottoms was purchased. Desal white was reported at Rs. 21.25. Small lots of Daissee and Tossa were done at between Rs. 22.50 and Rs. 23.25. Indian cuttings were reported at Rs. 95 a bale for ready delivery.

BROKEN—BUT CERTAINLY NOT USELESS

Do you throw away a broken SCREWGRILL FALLER BAR as useless and buy a new one? Well now you need'nt! Because we at LAGAN, have installed a new FALLER BAR repair plant which does a marvellous job of repairing—MACKIE FALLERS—so good in fact, that your once broken FALLER BAR, can be made to look like new and serve as well too.

THE LAGAN JUTE MACHINERY CO. PRIVATE LIMITED
24, Chittaranjan Avenue, Calcutta-12.

At the close, the market was quiet and opening quotations on Wednesday morning were as follows:

Mesta:			
Assam-Northern	21.50	57.62	"
Desal	21.50	57.62	"
Daisee	21.50	57.62	"
Jungle	20.75	55.61	"
	Landed at Mills (Basis Bottoms) Rs. a maund	**Rs. a 100 kilos**	**Shipment**
New Crop:			
Assam	22.75	60.97	Sept.-Oct
Northern	22.50	58.96	"
Purnea Desal	21.50	57.62	"
Daissee Selected	23.75	63.65	"
Assam Tossa	23.75	63.65	"
Northern tex Calcutta)	22.00	58.96	"

THE FOREIGN JUTE MARKETS

PRICES OF IMPORTED CLOTH REDUCED

(From Our Dundee Correspondent)

THE various sections of the Dundee jute market are almost lifeless, and consumers are interested in satisfying only their immediate requirements. There is nothing to indicate that prices might rise, but at the same time, there is little likelihood of their tending lower. In the face of reports that the jute crops in Pakistan and India are doing fairly well and that there will be ample supplies of the fibre, the question of quality has again arisen. It is reported that arrivals from uncountry in Pakistan are not good, mainly due to the lack of steeping water.

Dundee spinners are still holding out, and fibre purchases are restricted. Stocks in the hands of spinners are good, and they can afford to hold off in the hope that values may drop by £1 or £2 a ton, although no one wants this to happen. Consumers of jute goods are not complaining about the quotations. It is the members of the bag trade who grouse about the prices which, they maintain, are much dearer than those made from substitute materials, such as paper.

The prices for the depressed range of imported goods, 40in. 10oz. and 45in. and 36in. hessians, have been reduced recently, the 10oz. from 95s to 92s a 100 yards. This is a blow to Dundee manufacturers who have been trying to compete with the higher terms recently, and sometimes getting business just to keep their looms running. Shipment rates for Calcutta goods, f.o.b., are 61s for 40in. 10oz. hessians, September to December, 47s 3d for 7½oz. September, 46s 9d October, 46s November and 45s 6d December, with B Twills 152s 3d, 151s 9d, 149s and 147s 6d for the respective months of shipment, all f.o.b., Cacutta.

Raw jute rules steady but slightly lower at £106 for Mill Firsts, £89 for Mill Lightnings, £79 for Mill Hearts and £65 for Grade Hearts, with good Daissee-2/3 at £93, and Grade £85, Grade Tossa-2/3 from £105 and fours £93, September-October, c.i.f. U.K.-Continent.

Yarn and cloth prices remain unchanged, and a fairly steady business is being done, but in small lots for quick delivery.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in August was somewhat disappointing, being 2 million yards lower than in the corresponding period of last year. A moderate increase in industrial use was offset by a decline in bag cut-up. U.S. burlap stocks continued to decline, but were 25 million yards above last August. At an estimated 255 million yards, 162 million yards were spots and 93 million yards were afloats. Appearing below are two tables which include the August figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry.

U.S. burlap consumption (as reported to T.B.M.A.) (Million yards)			**U.S. burlap consumption (estimated industry total) (Million yards)**

GAP BETWEEN RUBBER OUTPUT AND DEMAND INCREASING

U.P.A.S.I. STRESSES NEED TO RAISE ACREAGE AND YIELDS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE rubber manufacturing industry consumed 18,529 tons of natural rubber during the first half of the current year, while the indigenous production amounted to only 9,059 tons. The country imported more than 15,000 tons of rubber (natural and synthetic) worth Rs. 7 crores last year to bridge the gap between local production and consumption. More will have to be imported this year due to the enhanced demand from manufacturers. The latter have estimated that they will need 60,000 tons next year, 100,000 tons by 1965 and 150,000 tons by 1970. The problem is whether it will be possible for India to attain self-sufficiency in rubber. The producers think that, given sufficient encouragement, they can produce all the rubber the country needs. In a recent memorandum to the Central Commerce and Industries Ministry, the United Planters Association of Southern India says: "If we can increase our rubber acreage to 500,000 with an average yield of 450 lbs or if in the course of the next seven years we can take steps to see that the average yield an acre is raised to about 750 lbs, we may ensure a supply of 100,000 tons and more. Given the necessary facilities, the possibilities are that the area will exceed 500,000 acres and the average yield will go up to about 600 lbs to 700 lbs an acre in the course of the next ten or 12 years".

Low Average Yield

India had 286,000 acres under rubber cultivation towards the end of last year. It is estimated that the area will go up to 30,000 acres by the end of the current year. The average yield is about 310 lbs an acre, although about 60 percent of the plants give a yield of less than 200 lbs or less an acre. At the same time, there are fields which give a yield of as much as 1,600 lbs an acre.

Progress of Replanting Scheme

Planters say that in spite of the charge of neglect against them, practically all the organised units in the rubber planting industry have been steadily replanting since 1938. They have replanted at a rate slightly over 3 percent a year on their total stand and at over 4½ percent of the over-aged rubber trees. But in the case of small growers, the rate may be lower. The main reason for not achieving a higher rate, planters say, is the low subsidy offered by the Government. As for new planting, the increase was 51 percent during 1952 to 1958 while the actual area brought under rubber cultivation during this period was 105,000 acres. In planting, whether by way of replanting or new planting, the process is necessarily a slow one, and the effect of such improvements will not be felt for a number of years.

True, the rubber planting industry cannot, under prevailing conditions, meet the needs of the manufacturing industry, and greater efforts are necessary to reach the goal of self-sufficiency. Planters, therefore, suggest that the replanting subsidy should be raised to Rs. 1,000 an acre, as in Malaya and Ceylon. Suitable land should also be made available to planters by excluding such lands from the scope of land reforms. Furthermore, the price of rubber should be enhanced.

Controversy on Protection

The question of rubber prices has been referred to the Tariff Commission by the Government of India. At present, there is some controversy on this issue between growers and manufacturers. The Indian Rubber Industries Association, in a recent memorandum submitted to the Central Government, has demanded that the protection given to the planting industry should be withdrawn in order to relieve the burden on the manufacturing industry. The United Planters Association of Southern India has said in a rejoinder that if the figures on Indian and world prices of rubber are collected for the war and postwar years, they might show that the balance of advantages in having a controlled price has been enjoyed by manufacturers. The U.P.A.S.I., in its counter-memorandum to the Central Government, has said: "We are afraid that the history of the so-called protection to the planting industry is being forgotten. The planting community, in the first place, did not ask for protection. During 1929 to 1934, when rubber was practically unsaleable, nobody seems to have come forward to protect the rubber planting industry in India. During the war years, when the import of rubber was out of the question, producers were asked to slaughter tap in order to produce more and more rubber for national needs (incidentally, the manufacturing industry made colossal profits during those years) and were given an assurance that the rubber planting industry would be compensated, encouraged and protected.

"Even after the war, producers asked for the removal of all controls and wanted a free market. But because of the undertaking given during the war years and of rubber being a commodity of strategic importance, the Government decided to develop the rubber industry under its control." Manufacturers have, therefore, been the beneficiaries through protection, and not the growers, the U.P.A.S.I. says.

Engineering and Transport

AIR-INDIA PLAN TO TAP TRAFFIC POTENTIAL

PAYMENT OF FARES IN INSTALMENTS

AIR-INDIA International has announced a new deal for the travelling public: fly to London on Rs. 370.80 only. The "pay later" plan is the first of its kind ever to be introduced in India by Air-India International in collaboration with the Bank of India. It will come into effect from 2nd October, Mahatma Gandhi's birth anniversary. The plan will operate in areas where the Bank of India offices are located: Bombay, Ahmedabad, Amritsar, Bangalore, Baroda, Bhuj (Kutch), Calcutta, Calicut, Coimbatore, Cochin, Delhi, Gandhidham (Kutch), Hyderabad (Deccan), Jamshedpur, Junagadh, Kanpur, Madras, Nagpur, Palanpur, Poona, Rajkot, Sholapur, Surat, Veraval and Visakhapatnam. Simultaneously, it will be introduced in Aden, Dar-es-Salaam, Jinja, Kampala, Mombasa, Nairobi and Singapore. Air-India has plans to introduce the "pay later" plan in Europe in the near future. It operates similar plans in the U.K., Australasia and Greece.

The prospective air passenger, wishing to avail himself of Air-India's "pay later" plan may apply to Air-India International, I.A.T.A. approved travel agencies or direct to the Bank of India for a loan. The travel agents will be entitled to their normal commission on all passages obtained by them under the plan. The passenger will be required by the Bank of India to make a down payment of only 20 percent of the air passage fare. The bank, after making necessary enquiries into the financial status of the passenger, will sanction a loan of not more than 80 percent of the total air passage fare. The cost of one-way Bombay-London tourist class ticket is now Rs. 1,854. Under the plan the passenger is required to make a down payment of only Rs. 370.80, which is 20 percent of the total cost of the air passage fare. The balance of Rs. 1,483.20—80 percent of the fare—will be loaned to the passenger by the Bank of India. The bank will charge 1 percent interest a month on the original amount of the loan granted to the passenger. The loan has to be repaid by the passenger in 15 convenient monthly instalments from the date of the grant of the loan. The applications for loans should be made well in advance to facilitate processing of applications.

The new Air-India plan will not only tap new categories of traffic, but will help bring the benefits of fast, convenient and comfortable air travel within the means of a substantial portion of travelling public in India who are at present not in a position to travel by air. When Air-India goes "jet" in April 1960, the plan will enable the public to take advantage of the luxury of the quieter and faster jet travel. The plan will also help Indian nationals abroad who want to fly between foreign points. The cost of an Air-India ticket will be paid in the currency of the country in which he applies for the loan.

U.K. AIRCRAFT INDUSTRY WANTS MORE EXPORT CREDIT FACILITIES

Sir Aubrey Burke, president of the S.B.A.C., has expressed the view that the display should continue as an annual event. Important overseas visitors have asked the Society not to abandon it since they have got "so much value out of it". Stressing that the 1959 display was, from the potential business point of view, the best so far, Sir Aubrey had a few words to say about export business in general. The industry needed wider export credit facilities to equal those of the competitors, and would like the Government to underwrite aircraft with export potential, giving a starting order so that production could get under way quickly. This had been done in the case of the *748* and *Dart Herald* airliners.

At present, the British aircraft industry could obtain seven years' credit facilities only for sales of certain large aircraft and provided they could prove that similar facilities were available to purchasers of comparable American aircraft. The Government should back, more strongly and more quickly, aircraft which were obviously potential winners in the export field. The president said he thought more civil aircraft orders would come because with military contracts in the United States being reduced, the American industry would find more difficulty in competing with Britain in civil markets. During the display week the following orders were announced: 2 *748s*, with an option on three more, for BKS Air Transport, two more *Britannias* for Canadian Pacific Airlines and a *Viscount 810* for the Tennessee Gas Commission for use as an "executive" aircraft.

The president said that the 1959 display celebrated the jubilee year of the British aircraft industry and he concluded: "I believe that in the year 2009, the president will have a thrilling account to give of the progress made in the second 50 years of aeronautical development which will be every bit as progressive as the first 50 years have been, and I am equally sure that the member companies of the S.B.A.C. will have played as important a part in that development as they have done in the past."

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) declined by 0.3 percent to 116.2 during the week ended 5th September, 1959, against 116.6 (revised) for the earlier week. The index was lower by 0.9 percent and 0.3 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles receded by 0.8 percent to 119.2, compared with 120.2 (revised) for the previous week due to a fall in the prices of rice in Saharanpur (−10%), in Gaya (−7%), in Cuttack, Raipur and Contai (−6% each) and in Jeypore (−5%), oranges (−10%), milk in Calcutta (−6%), jower in Jhansi, gram, arhar in Hapur, urad, gur in Patna and betelnuts (−5% each), maize (−4%), bajra, barley, mung and eggs (−3% each), masur and cashewnuts (−2% each) and wheat, potatoes, onions, mustard oil, coffee and salt (−1% each), although the prices of milk in Bombay (+10%), arhar in Madras (+6%), rice in Vijayawada and Ranchi (+5% each), black pepper (+3%), bananas (+2%) and ghee, gingelly oil, fish, tea for exports, chillies and cardamoms (+1% each) showed advances. The index for Tobacco advanced by 0.3 percent to 97.9 as a result of a slight rise in the prices of raw tobacco. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's level of 116.2. Higher prices of raw skins (+3%), linseed (+2%) and raw jute, raw wool, groundnuts, rapeseed, copra, lac and tanning materials (+1% each) raised the index for Industrial Raw Materials by 0.6 percent to 121.0, against 120.3 (revised) for the earlier week. The index for Intermediate Products advanced by 0.4 percent to 110.2 due to a rise in the prices of cotton yarn, coir yarn and brass (+1% each). The prices of linseed oil, rayon yarn and lead (−1% each), however, moved down. The index for Finished Products stood at 109.6, against 109.7 for the previous week. The prices of general chemicals and oilcakes (−1% each) and bricks and tiles (+1%) showed variations.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to August 1959. As compared with July, the August indices for Food, Clothing, Miscellaneous and Fuel and Lighting remain unchanged at 536, 548, 292 and 282 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 454 points during August 1959.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 15, held on 21st and 23rd September, offerings at the Export auction amounted to 66,970 packages. There was again a good general demand. "Teas for price" and plain brokens were firm to dearer, while plain Fannings were well competed for at rates which showed irregular advances. Medium broken and Fannings grades were well supported, but tended slightly easier except for the brighter liquoring sorts. Any bright liquoring medium Assam B.O.P.s and O.Fgs. received good support and sold well at or a little below previous rates, but the plainer B.O.P.s for which there was only a fair enquiry showed a decline of 20nP to 30nP. There was an improved demand for C.T.C. descriptions which sold readily but, although these were sometimes dearer, prices were irregular and often easier. Non-wither Dooars came to a ready market, but tended slightly easier. Clean black Pekoes were firm, but the better whole leaf grades were generally easier. Darjeelings, although quite well supported, again showed an easier tendency while the demand for tippy teas showed a general decline, with some withdrawals.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.94 to 1.98	2.00 to 2.10
Plain B.P.	1.86 to 1.88	1.70 to 1.74
Plain Fannings	2.01 to 2.14	1.83 to 1.88
Medium B.P.	1.90 to 2.00	1.83 to 1.99
Medium Fannings	2.12 to 2.22	1.98 to 2.10
Best Assam C.T.C. B.P.	2.20 to 2.70	2.70 to 3.10
Best Assam C.T.C. Fgs	2.70 to 3.10	3.00 to 3.40

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings amounted to 22,962 chests. There was a strong general demand, especially for the exportable grainy kinds which were firm to dearer. The plainer liquoring kinds realised prices well above valuations. Legg-cut teas were irregular and sometimes dearer. C.T.C. teas on offer met with more demand than in recent weeks. The stronger liquoring smaller kinds were firm to dearer while the remainder were generally easier.

Quotations

	1959 Rs.
Medium Dooars Dust	1.96 to 2.02
Medium Assam Dust	1.90 to 1.96
Medium Assam C.T.C. Dust	2.00 to 2.15
Best Assam C.T.C. Dust	2.50 to 2.70

(Quotations are exclusive of excise duty.)

The 816 chests of Leaf on offer met with a good general demand at irregular rates.

GRAIN FIXTURES FEATURE FREIGHT MARKETS

THE main feature of the freight markets over the past week has been the fixtures of grain from North Pacific and St. Lawrence to India. In the former trade, 60s was the basic rate paid, an increase of 10s a ton over the last fixture done in July and 62s 6d was paid from the latter direction. Of further interest was the introduction of a clause making Haldia and Calcutta count as one port which represents a saving of 2s 6d a ton over the usual two-port discharge option. Rice was fixed from Burma to Ceylon at the unchanged rate of 30s f.i.o.s. and to the U.K. at 80s f.i.o.s.

HIDES AND SKINS UNCHANGED

The market in skins showed little change. Stocks were higher than in the previous week.

Bazaar Sales

(Between 15th September and 21st September, 1959)

Cowhides : Wet salted (Slaughtered) 27,500 pcs. on the basis of Rs. 8 to Rs. 15 and Rs. 19 to Rs. 28.

Goatskins : Wet salted (Patna, Daissee, Kustia) 66,000 pcs. on the basis of Rs. 410 to Rs. 420, Rs. 445 to Rs. 480 and Rs. 515 to Rs. 530 ; Wet salted (he-killed) on the basis of Rs. 5.25 a piece. Assam-Dinajpur-Kissenganj 8,700 pcs. on the basis of Rs. 390 and Rs. 430 to Rs. 445; Purneah-Kissenganj 20,900 pcs. on the basis of 460 to Rs. 480 and Rs. 485; Patna-Pakur 4,300 pcs. on the basis of Rs. 410 to Rs. 420 and Rs. 435 to Rs. 465 ; Muzafferpore-Patna 1,500 pcs. on the basis of Rs. 470 ; Purneah-Patna (heavy) 3,000 pcs. on the basis of Rs. 550.

Bazaar Stocks

(21st September, 1959)

Cowhides : Wet salted 122,000 pcs.

Goatskins : Wet salted (Patna, Daissee, Kustia, Killed) 17,500 pcs.; Assam-Dinajpur 39,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenganj 110,200 pcs.

SUGAR EASIER

During the week ended 23rd September, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 6,000 bags and stocks totalled 40,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 42.25 to Rs. 42.50 for big grain, Rs. 41.25 to Rs. 41.50 for medium grain and Rs. 40.75 to Rs. 41 for small grain. The market was easier at the close due to heavy arrivals.

COMPANY AND PUBLIC NOTICES

THE MYSORE SPINNING & MANUFACTURING CO. LTD.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that the Sixty-Sixth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Tuesday, the 27th October, 1959 at 4-30 P.M. for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 28th February, 1959.
2. To declare a dividend.
3. To consider appointment as a Director of Mr. S. R. Koppikar who is the Chief Executive Officer of this Company and also an ordinary sitting Director of Messrs. N. Sirur & Co. Pvt. Ltd., the Managing Agents of this Company.
4. To appoint Directors in place of those who retire but are eligible for re-appointment.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To appoint Messrs. B. K. Ramadhyani & Co., Chartered Accountants, Bangalore, as additional Auditors of the Company for doing the local statutory audit of the account books of the Company's Mills at Bangalore, for the current year commencing from 1st March, 1959.

The Transfer Books of the Company will be closed from the 28th day of September, 1959, to the 12th day of October, 1959, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

(The holders of the 4-1/2% Cumulative Preference Shares of the Company have no right to be present or to vote either in person or by proxy in respect of their holdings of such Preference Shares at the above Annual General Meeting).

By Order of the Board,

N. SIRUR & COMPANY PRIVATE LTD.,
Managing Agents,
N. D. SIRUR,
Managing Director.

Bombay, 31st August, 1959.

N.B.—The Dividend when declared will be made payable at the State Bank of India, Bombay, on and after Friday, the 6th November 1959 to those Shareholders whose names stand on the Register of Members on the 28th September, 1959. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

BENARES ELECTRIC LIGHT & POWER COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta-1 on Wednesday, the 21st October, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11 a.m. to consider, and if thought fit, to pass, with or without modification, the following subjoined resolution, namely :—

"That approval be and is hereby accorded to the re-appointment of Martin Burn Limited, as Managing Agents of the Company for a further period of 10 years with effect on and from the 16th August, 1960, on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of indentification signed by the Chairman thereof, and that an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956 be and is hereby directed to be made".

By Order of the Board,

MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary,
Managing Agents.

(x) At par all or any of the Debts on 31st Dec. 1960 or on any subsequent interest date.
(y) Redeemable (a) at 102/-% on 1st Oct. 1974 or in the event of voluntary liquidation of the undertaking being purchased or in the event of the Security becoming enforceable or (b) at 105/-% at any time after 31st March 1953 on 6 months' notice from the Co. (c) also redeemable out of a sinking fund (commencing in 1938) by drawings at 102/-% or purchase at or under 102/-%.
(z) Also redeemable out of a cumulative sinking fund of 1-1.3% per annum commencing on 1943 by purchase at any price less than par or by annual drawing at par.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

THE F.I.C.C.I. WRITES ABOUT THE THIRD PLAN

ALTHOUGH the inauguration of the third five year plan is still a year and a half away, the tempo of discussion on its proper size, priorities and aims has been rising rapidly in recent months. So far, there is little indication that the lessons conveyed by the errors committed in implementing the second plan have been learnt. A vague and platitudinous report on planning policy for the 1961-66 quinquennium has emerged from the ideology-ridden minds of the Planning Sub-committee of the Congress Party. Written under the leadership of Mr. U. N. Dhebar, and claiming to represent the distilled intelligence of many of the country's leading economic thinkers, it bears a remarkable similarity to the woolly idealism of under-graduate essays on the installation of economic utopias. The report has been coolly ratified by the All-India Congress Committee meeting held near Chandigarh this week, without having been examined against the background of practical realities evident in India today. A more down-to-earth contribution on the subject has meanwhile come from the Federation of Indian Chambers of Commerce and Industry, in the form of an 82-page "tentative outline" recommending a new general approach and certain specific targets for the third plan. The most notable feature in it is the Federation's support for a programme visualising a net investment of Rs. 10,000 crores from 1961 to 1966. "This volume of capital formation," it says, "is not beyond the bounds of possibility if certain conditions of economic policy and administration are satisfied." That an outlay of this order would be ambitious, is not denied; the justification for recommending it is found in the fact that the country's needs are immense, and bold measures are necessary if the period of "self-generating growth" is to be reached soon.

Many will consider this investment target too high for an economy as small as India's; but it is debatable whether a suitable alternative can be easily found. When the second plan was being prepared, it was possible, as well as necessary, to assess the resources likely to be available fairly precisely. There were substantial reserves of foreign exchange to fall back on; and the Government had not committed itself so radically, in political terms, to mopping up savings for the support of a gargantuan administration and a growing public sector. Now, however, the situation is radically different; and the main difference is that India has almost no foreign exchange to spare. The external reserves are virtually at their minimum workable level, and even there are bolstered only by periodic doses of foreign aid; exports are stagnating while import liabilities remain high; and the period of heavy commitments in connection with the servicing of recent loans is fast approaching. Since any plan will inevitably involve a fairly substantial expenditure of foreign exchange, it is clear that, if it is to be prepared on the basis of the resources already available, there can be no plan at all. In proposing an investment target of Rs. 10,000 crores, it is important, therefore, that the country should bear this qualification in mind.

The plan will be, primarily, not much more than a statement of hopes; and, secondarily, an indication to potential donors of external capital, whether governmental or private, what India wishes of them. The realisation that this country now stands, willy-nilly, holding the beggar's bowl may be offensive to vanity, but it could be turned to useful account in framing rational economic policies for the future. The precise investment target to be fixed for the third plan will be less important than the quality of the efforts India chooses to make in mobilising the resources that may be available. Eternal controversy is possible on the question whether the programmes for the next quinquennium should cost Rs. 8,000 crores or Rs. 10,000 crores or Rs. 12,000 crores. But the conclusions are likely to be less fruitful than a prompt decision that no effort which is in conformity with the broad aims of economic development will be handicapped or negated, whatever political expediency may demand.

In outlining its proposals for the third plan, the Federation lays welcome emphasis on increasing agricultural production and taking vigorous measures to check the growth of population. Agricultural policies, it says, should be long-term in nature and be directly aimed at raising output. At present, the responsibility for implementing them is not clearly defined at the various levels of the administration. Land reforms have tended to increase the number of uneconomic holdings when mechanisation and large-scale methods of production would have been helpful. There is an urgent need to increase the supply and use of irrigation facilities, fertilisers and better seeds. Special efforts are necessary in the most promising rice and wheat areas, and also to promote the production and consumption of non-cereal foods. The suggestions are familiar and mostly non-controversial, though it has yet to be shown that the Central and State bureaucracies are capable of implementing them. Much more controversial is the Federation's plea that the Government should assure a "minimum reasonable price" to the cultivator. Like the Ford Foundation's team of experts, it seems the Indian business men have rather glibly overlooked the implications, in terms of finance, marketing and storage, of agricultural price support schemes.

In relation to industrial development, the Federation's main argument, apparently, is that the allocations between the public and private sectors should be less rigid. The suggestion deserves to be warmly welcomed, even though the proposed distribution of the total investment (55 percent for the public sector and 45 percent for the private sector) under the third plan may not command unanimous approval. (The allocations originally proposed under the second plan were 61 percent and 39 percent, respectively.) The main feature of recent trends is that the private sector has invariably fulfilled its investment targets well ahead of schedule, whereas the public sector has lagged behind. The experience suggests that it is irrational to stultify the growth of the former in order to build State enterprises with limited experience and efficiency. Greater scope for the private sector inevitably implies a radical reorientation of tax policies and a reduction of bureaucratic restrictions on industrial expansion. The Federation mentions the point briefly, although it might well have offered some specific recommendations. Another interesting point it makes is that the current emphasis on depressing consumption artificially tends to hamper industrial growth: "production has to be maintained by purchasing power and sustained by savings."

Among the most reassuring features of the Federation's report is the emphasis it puts on the need to encourage the inflow of foreign investment. There was a time, not so long ago, when a mixture of jealousy and fear hampered realisation of this fact in the F.I.C.C.I. Now, however, it has declared itself categorically in favour of attracting foreign capital. It points out that capital moves according to the prospects and profitability of business. Far-reaching changes will be necessary if its inflow into India is to be increased. At present, fiscal policies hit hard not only the return on investment but also personal incomes. Licensing procedures for enterprises involving foreign collaboration, royalty terms, etcetera, are far too cumbrous. Double taxation agreements remain to be negotiated with many countries which are expected to invest in India. Periodic denunciations of the private sector by responsible official spokesmen undermine the prospects of getting capital from abroad. The effect of these shortcomings is seen in the extremely low rate of inflow of foreign capital in recent years. The Government has been expressing jubilation over the loans it has obtained from abroad, but has yet to recognise that private risk capital is no less necessary. The latter, in fact, offers two special advantages which will be of major importance in the third plan: it does not have to be repaid as long as the investment climate remains favourable, and it usually brings with it the managerial and technical expertise of which India is very short. The Federation is to be complimented for its realism in highlighting the problem of foreign investment—in a report which, although it errs on the side of optimism in many details, should prove a useful antidote to the socialist fantasies now being nourished under various political banners.

IMPROVING AID PROSPECTS

FOR India, the Commonwealth Finance Ministers' conference seems to have been just about the most successful on record. Before he left London for this year's Fund-Bank meetings in Washington, Mr. Morarji Desai could congratulate himself on having received reasonable satisfaction on three main points: India can rely on further British and Commonwealth aid for the next plan; she need have no worry that her interests will not be considered if Britain is included in any European free trade area; and, at last, it appears likely that a double-taxation agreement between Britain and India will materialise. In Washington, among other things, Mr. Desai will be present at the birth of the new International Development Association, another good omen for this country's hopes of industrialisation. In fact, the prospects for raising the foreign exchange resources for the third plan would seem never to have been brighter than they are at the moment. This is certainly encouraging, although it would be a bad thing if, in the process of self-congratulation, the various warnings concerning the need for sound economic and monetary policies at all times, which India's representatives have undoubtedly been audience to in both London and Washington, went unheeded. The scarcest economic factor in India today is not foreign exchange, nor internal resources, it is still, even after so much bitter experience, nothing more or less than realism.

No firm figure for future aid appears to have been agreed between Mr. Desai and his hosts in London. Circumstances as well as need will eventually determine the total amount. And a fair proportion of any assistance—if this is the right word for it—which Britain will provide, is obviously going to be in the form of private capital. That is one reason to welcome the possibility of a double-taxation agreement, although how much British capital the absence of such a document has already cost India is difficult to say. Considerably more, one would imagine, has been lost through unrealistic policies towards foreign capital generally. The Finance Minister is reported to have said that the climate for British capital in India is good. If by that he means that it is no worse than for any other form of capital, Indian as well as foreign, then it is possible to agree with him. But if his remarks were intended to imply that the climate for private capital as a whole, British, foreign and Indian alike, is as good in this country today as it is in others that are competing for scarce development resources, then it would be interesting to learn on what he bases his opinion. Indeed, when a study is made of India's record over the past few years in the matter of introducing concrete measures to attract both domestic and foreign capital, it is possible to wonder whether the Government is serious about wanting any at all. Now, the wholly ideological proposals for limiting managing agency remuneration have arisen to put fresh doubts into the minds of foreign investors. It is perhaps fortunate for Mr. Desai that two other factors at the present time are helping offset these obvious

ouragements. These are the political one—
. India is under pressure from her communist
ghbour in the north—and the economic one—
: Britain and the sterling area have not been
uch a favourable position for helping anybody
e the war. It is a pity these two factors may
aps have played a greater part in improving
ia's chances in London than has the attraction
articipating in a sound, workmanlike, business
position—the development of the Indian
nomy.

't is to be hoped India's justifiable doubts were
quately set at rest concerning Britain's pro-
ed membership of the "outer seven". This
ject is admitted by Britain to be almost entire-
political in character—although, of course,
ing admirable economic ends—and it seems
rcely fair that Commonwealth members should
er unduly by it. India will have to be prepared
face some adjustments, although bearing in
d the fact that the particular export commo-
most affected is likely to be cotton textiles,
y will probably not be either large or far-
ching. Indeed, the competitive impact on
ia's cotton textile trade from the formation of
"outer seven" is likely to be far less than will
felt when the Lancashire mills complete their
ionalisation programmes and are able to face
eign competition again. India has no inalien-
e right to a guaranteed market for her textiles
Britain. She must at all times be prepared to
end what she has against fair competition
m both foreign and British mills; it is scarcely
sible to claim the kind of protection from com-
ition which the British Government has denied
own industry. At the same time, it would be
fair of Britain as well as damaging to herself
disregard altogether the interests of her Com-
nwealth trading partners. But some changes
st be prepared for, and if it is any consolation
India she can at least bear in mind that it is
likely to be her trade that will be worst hit.

India's long-term interests, as well as those of
other Commonwealth trading partners, are in
ing Britain economically strong, and therefore
e to buy an increasing quantity of their goods.
is advantage is worth some short-term incon-
nience to obtain, and fortunately India appears
have grasped this fact. Britain's membership
a larger trading community, preferably the
mmon Market, has now become something of
necessity if the British economy is to maintain
same rate of economic advance as the other
ntries of western Europe. It is in the interests of all Commonwealth nations that Britain should join one or all of these market associations, always provided the legitimate interests of her partners are borne in mind.

The International Development Association is not necessarily an inevitable outcome of this year's Fund-Bank meetings, but it does seem a very likely one indeed. Too little is known about the project at the moment for comment to be altogether informed, but what is known suggests that it may prove perhaps the most useful addition to world industrial development institutions so far. The main objects of the proposed Association appear to be to provide loans at low rates of interest repayable in local currencies. This repayment feature meets a need which has already been regretted in the case of their respective institutions by both Mr. Eugene Black of the World Bank and Mr. Robert Garner of the International Finance Corporation. From the West's point of view, it will answer one of the main communist challenges. Similarly with the proposal to charge low rates of interest on loans; this too will meet one of the most appealing features of communist aid to under-developed countries. The proposed Association will, therefore, be able to circumvent some of the more serious disadvantages of the lending rules of the World Bank. This is true in another respect also; it will be able to lend money on Government projects, provided, of course, these are worth sponsoring. The main criticism of the proposed institution is that, taking into account the low rates of interest it will be allowed to charge and the kind of projects it is designed to support, it may be tempted to undertake uneconomic propositions simply to satisfy political aims. It is to be hoped this will not be so, and the fact that it is proposed to establish the Association under the general auspices of the World Bank gives firm ground for believing that its affairs will be very soundly run indeed. Political considerations are all very well, but money expended on them is often not only lost by the country or institution which parts with it, but can also be damaging to the country which receives it too easily. It is far better for all concerned that such lending be left to the communists, whose aim is chiefly propaganda and only partly the economic benefit of the country receiving the money. For the West, the best return is the strictly economic benefit which comes from sponsoring a sound business proposition. This, above all, should be the object of the new Association if and when it joins the World Bank and the International Finance Corporation.

'HANGING TRENDS IN LIFE INSURANCE

SIGNIFICANT departure from established practice has been made by the L.I.C. through shifts in emphasis to rural insurance, in con-ist with the orthodox and traditional methods doing life insurance business. This was one of highlights of the address given by Mr. P. A. palakrishnan, chairman, Life Insurance Corpo-ion, at the anniversary (the actual anniversary is on 1st September, 1959) meeting of the Corpo-ion held recently in Bombay. A full version of speech appeared in last week's issue of *Capital*. A probe into the rural sector was from the ginning part of the accepted policy of the L.I.C. e vast rural areas of India were hardly open to e insurance. The slow and steady shift in in-me from the so-called middle classes to the work-g population, and to the small artisans and agri-lturists, has, no doubt, made some contribution this change in emphasis. Rural insurance in tensified form has been undertaken, possibly as pilot project, in certain selected Community evelopment Blocks of Rajasthan and Bihar. ural Panchayats are acting as agents of the Cor-ration in these areas, using commission receiv-for development purposes. The fact that Pan-ayats can be agents for life business, presum-ly licensed by the Controller of Insurance, is no ubt significant. Presumably the technical ques-on of the Panchayats holding licences from the ontroller of Insurance under the Insurance Act—nder the terms of which licences can only be sued to individuals—has been satisfactorily re-lved by the Corporation in consultation with e Controller.

This probe into the rural sector is a significant velopment. The habitual thriftlessness of a tatistically-inclined people may quite conceiv-ly enhance the lapse ratio. Apart from affect-g the business of the Corporation, that would be distinct loss to the rural sector. A revenue count of rural business should be maintained by e Corporation for its own use, and for its own ssessment. The Corporation, under the terms of e Act, has to be run on "business principles". he emotional bias in favour of a form of public rvice should not be allowed to cut across the rthodox business approach. Even if it is assumed that mortality has improved considerably in India, including that in the rural sector, the question whether current premium rates are sufficient as a basis for rural insurance will require to be examined by the Corporation over the years from the valuation results of such rural insurance.

Mr. Gopalakrishnan stated that the major staff problems of the Corporation had already been solved, including the categorisation of senior officers, the question of bonus to the clerical, subordinate and supervisory staff, and the categorisation of field workers. A recent Press notice from the union of Life Insurance Corporation employees, which made further demands on the Corporation, is perhaps just common habit for politically dominated trade unions. Being the sole insurer, the Corporation is in the unhappy position of having to bargain with only one union covering all Corporation employees. The lethal effect of such a state of affairs should be evident, and could have been avoided had there been a number of independent corporations. In the matter of trading, Mr. Gopalakrishnan reported all-round progress. Not only has business increased to Rs. 343.07 crores from Rs. 281.90 crores in 1957, but the lapse ratio (i.e. the ratio of the sum assured lapsed less the sum assured revived) in the year 1957 to the mean business in force during the year, was 6.4 percent in 1957 compared with 4.5 percent as revealed by available statistics for 1958. This shows a reduction on the ratio for 1957. The expense ratio has again fallen from 15.89 percent in the previous accounting period to 15.46 percent in 1958. Although the Corporation has not yet been able to bring the expense ratio within the statutory limits, the Chairman hopes it will be possible to lower the cost ratio progressively in future years.

The Corporation's five year plan visualises annual business rising to Rs. 1,000 crores by 1963. All endeavours are being made by a carefully worked-out, phased, programme to reach the figure by that year. A matter of significant interest is the investment activities of the Corporation. On 31st December, 1957, the investments in the public and private sectors were 77.4 percent and 22.6 percent, respectively. At the end of December 1958, these percentages were respectively 78.3 and 21.7. On 31st July this year, they were 78.6 and 21.4. The steady fall in investments in the private sector is also engaging the attention of the Corporation. Mr. Gopalakrishnan complained that it was becoming increasingly difficult to make investments in the private sector owing to the comparatively limited supply of sound scrip. It is expected that the balance will be partly redressed by the Corporation's decision to revive the grant of loans on property mortgages. The Chairman hopes this will offset, to some extent, the fall in the Corporation's investment in the private sector.

THE SMALL MAN'S MONEY

IN the middle of September, financial troubles intruded violently and inopportunely into Britain's general election campaign. An important "takeover" transaction had to be abandoned because money promised to finance it was not forthcoming. Dealings in the shares of numerous related companies were stopped while the companies' affairs were being investigated. A building society had to suspend withdrawals because it had advanced a startlingly large proportion of its resources to finance transactions undertaken by the same complicated group or its associates. And, for good measure, persons concerned with an entirely different group, which had been liquidated months earlier because it could not repay depositors' money, were arrested and charged with conspiracy to deceive and defraud. This rude intrusion on the political scene was, as already described, inopportune, but only in the political sense. In the financial sense it was well timed, for it ensured that the new Parliament would revise the existing laws, to make the small saver's money safer. So numerous are the bodies to which he may entrust his money that he cannot assess the stability and management of all of them. He may suffer grievous loss of his small capital by entrusting it to a badly-managed—even a dishonest—body; or he may be so suspicious that he rejects opportunities that would benefit him. It is a problem that each country must solve in its own way; a problem common to all countries where the small saver's money has various alternatives for employment.

The small saver must first choose his medium. He may avoid trouble by lending to the Government. Or he may undertake contractual saving by means of an insurance policy, or by buying a house on loaned money and saving to make periodical payments on the loan. Or he may invest through the stock exchange. If he does none of these things (nor simply keeps his money at the bank or under the bed), he must choose (in Britain at least) from a confusing variety of offers to take care of his money and pay interest on it. These offers come from building societies and from various kinds of finance companies. It is particularly in respect of these institutions that Britain's regulations need tightening. In Britain at present, any three people can combine to form a building society, formulate its rules, pay a registration fee of £20, and forthwith solicit deposits from the public. Such facility in getting use of other people's money is absurd. If a society is a member of the Building Societies' Association its activities will be subject to some unofficial supervision; but many small savers are unaware of the distinction between societies that are and those that are not members. The above-mentioned society that had to suspend withdrawals, the State Building Society, is not a member of the Association and has thus been able to use depositors' money for a purpose (financing big deals) other than that (financing purchase of houses) for which it was intended.

The above-mentioned group that could not satisfy depositors' demands and whose principals were arrested exemplifies another defect in the British system, that finance companies are not required to provide satisfactory accounts of their finances. This organisation, the Mias group, was likewise engaged in transactions in property. Tempting profits are obtainable in this kind of business, and, if the rates of interest are high enough, small savers may become inadvertently involved in speculative operations. It must be emphasised that the number of depositors who suffer temporary or permanent losses is a very small proportion of the total, that most of the institutions that engage in these various financial operations are well-managed and financially sound. But the problems of the few raise questions regarding the whole procedure.

The essential fact is that, individually and in the aggregate, small savings are increasing while large savings are diminishing. The small savings are, therefore, an increasing element in the nation's capital. Yet, as the economy expands, the scale of financial operations increases. The system must adapt itself so that individual small savings are combined and made available for big operations. An obvious difficulty, as has been revealed in these recent troubles in Britain, is that big operations may be speculative; whereas small savers cannot afford to speculate. The first essential, therefore, is that any institution that uses small savings shall apply only a small proportion of them to speculative activities.

On this reasoning, it seems that the present system, where a large aggregate of small savings is distributed over a large number of financial institutions, is inappropriate. What the circumstances require is a relatively small number of institutions that are strong enough to operate, for a part of their business, adventurously, and strong enough to ensure, at the same time, that the small saver's money is safe. Individual enterprise, ably and honestly conducted, is to be commended, but few savers are competent to distinguish between that kind of enterprise and the individual enterprise that is less ably, even less honestly, conducted. It may, therefore, be necessary—perhaps regrettably necessary—to restrict the activities of small financial enterprises merely because they are small.

To such a suggestion it may be objected that the biggest financial institutions began on a very small scale, and that if one restricts small institutions now one may kill at birth the financial giants of the future. But the circumstances have changed since those small-scale beginnings; and, in any case, the financial giants of the future could be the small institutions of the present, combined. What is obviously not permissible any longer is a system where a few individuals can collect a useful aggregate of small savers' money and use that money for their own purposes—speculation in property, "takeover" bids, or any kind of speculative investment. Whether the big institutions will provide enough risk capital for new enterprise is another question.

Current News and Comment

Imperial Tobacco Disappoints

The sluggishness of the Imperial Tobacco ordinary shares reflects investors' apathy. Since the scrip were bought by the public five years ago, shareholders have received conservative dividends and there has been no appreciable rise in the price. The shares were sold to the public at Rs. 10.50 each and the present quotation is Rs. 11.56 only. So, in comparison with other high-grade stocks, the performance of Imperial Tobacco has been disappointing. Even considering the need to plough back money into the business, shareholders can hardly appreciate the cut in the dividend for the year ended March 1959. If the expansion scheme has been nearly completed, as Mr. G. H. J. Clarke has pointed out in his address from the chair at the annual general meeting last week (a fuller version of the speech appears elsewhere in this issue of *Capital*), it is wondered whether the company could not have avoided a cut in the dividend.

Mr. Clarke's observations give little reason for optimism. He states: "The company's sales during the five months to August 1959 show an improvement in total volume over the same period last year, but I must tell you that the general trend continues whereby there is a decline in the return to shareholders in relation to volume of sales. I, therefore, cannot anticipate with confidence an improvement in the final results in the coming year. Your board, however, felt justified in declaring an interim dividend of 2½ percent, subject to tax, in respect of the year to 31st March, 1960". The increase in the interim dividend has apparently been made to compensate shareholders for the tax which will be deducted from the dividend under the Finance Act, 1959. There is, therefore, little hope that the net payment to shareholders during the current year will be very different from what they received during the year ended March 1959. This apart, Mr. Clarke points to the increased competition in the industry. The fact that changes in cigarette prices have benefited competitors, cannot be ignored. The impressive improvement in the working results of rival companies has perhaps been noted by Imperial Tobacco.

The company is considering extending the manufacture of spare parts and encouraging the production of fibreboard containers. It is also encouraging the erection of a factory to produce cigarette filters—one rival company is already producing and selling filter-tipped cigarettes. Mr. Clarke says: "Throughout the world, the filter-tipped cigarette is gaining in popularity and there are now some filter-tipped cigarettes on the Indian market. The filters are imported, just as they were when your company first made such cigarettes in this country some years ago. If, as we hope, our plans fructify, our previous experience will enable us to give the Indian consumer a quality cigarette of this type without any appreciable use of foreign exchange."

Indian Aluminium to Expand Again

There has been steady support for Indian Aluminium shares for some time, and investors' confidence is reinforced by the prospect of a further big expansion in the company's activities. It proposes to expand substantially its bauxite, alumina, aluminium ingot, rolling mill and extrusion facilities. When the expansion schemes have been implemented, the annual output capacity of the Hirakud ingot smelter will be doubled to 20,000 tons a year. The production capacity of the alumina plant in Muri, Bihar, will be increased from 18,000 tons to 54,000 tons. The capacity of the rolling mill in Belur, West Bengal, will be expanded from 9,000 tons to 16,500 tons. It is also proposed to install an additional modern extrusion press in Alupuram, Kerala, with the ram pressure of 3,300 tons. The press will be powerful enough to handle an extensive range of medium and strong aluminium alloys, and will be capable of producing heavy and large extrusions.

The cost of the proposed expansion is estimated at about Rs. 11 crores, of which the foreign exchange element will amount to about half. It is reliably learnt that this element will be covered by Aluminium Limited, Canada, which will collaborate fully in the expansion programme. The rupee expenditure will be met partly from the company's own resources, partly from bank loans, and partly by a public issue. The latter might take the form of debentures.

I.F.C. Earns More

The diversification of activity by the Industrial Finance Corporation is helping the flow of capital into industry. Apart from the usual function of lending directly to industry, the Corporation has increased its business by underwriting industrial issues and guaranteeing deferred payments relating to imports. During the year ended June 1959, loan applications sanctioned amounted to Rs. 3.79 crores, against Rs. 7.79 crores in the previous year. Loans disbursed totalled Rs. 7.48 crores, compared with Rs. 8.33 crores. The decline occurred because of restrictions on imports. As permission has now been given to use credits offered by the U.S. Export-Import Bank, business is expected to improve. The Corporation, jointly with two share-broking firms of Bombay, underwrote the issue of 7½ percent tax-free redeemable cumulative preference shares for Rs. 50 lakhs by a new industrial concern set up to manufacture ferro-manganese. As the issue was heavily over-subscribed, it was not called upon to take up any shares. An application from an existing concern engaged in the paper industry for underwriting its issue of 7 percent tax-free redeemable cumulative preference shares for Rs. 50 lakhs was also sanctioned. The I.F.C. received 11 applications from industrial concerns for guaranteeing deferred payments amounting to Rs. 16,50,80,500 relating to machinery and equipment which was to be imported from abroad. It sanctioned two applications, both of which were from existing borrower concerns, for guaranteeing deferred payments amounting to Rs. 35 lakhs.

An encouraging feature is that there have been fewer defaults in repayment. Interest charged on the entire amount of loans advanced by the I.F.C. since its inception amounted to Rs. 7,03,21,599, of which Rs. 6,93,27,814 was actually received. The amount in default, therefore, constitutes 1.4 percent of the total amount due. The total amount of principal due to the Corporation since its inception amounted to Rs. 5,22,76,817, of which Rs. 4,84,35,488 was received. Extension of time was granted to four concerns to repay the instalments aggregating Rs. 10 lakhs. So the amount in default in this case constitutes 5.4 percent of the amount due. The Corporation is charging an interest of 7 percent, with the usual rebate of ½ percent for payments on due dates. As its resources have to be obtained by paying reasonable interest to investors, the Corporation's lending rate appears to conform with market standards.

The gross income has increased from Rs. 1.55 crores to Rs. 2.04 crores. The net profit amounts to Rs. 35.37 lakhs (against Rs. 28.20 lakhs previously), after providing Rs. 37.71 lakhs for taxation. General reserve is allocated Rs. 14.12 lakhs, and Rs. 11.25 lakhs is being used for paying the guaranteed dividend of 2¼ percent on the paid-up capital. A notable point is that the Corporation has increasingly been borrowing money from the market by means of bonds. It has just announced a bond issue of Rs. 5 crores, which is likely to be subscribed without difficulty. As it can now service the loans from its own earnings, market borrowing should help capital formation in the corporate sector.

Cambodia Mill Shares Rise

In the Madras stock market, Cambodia Mill shares have been an outstanding feature, having improved from Rs. 9 to Rs. 14.75 recently. The disappointing working results for 1958 led to the erosion of the company's reserves totalling Rs. 18 lakhs, while labour trouble added to its trading losses. The preference dividend was, therefore, passed and the quotation dropped to Rs. 7.90 at one time. But the shares later attracted outside support and keener trading raised the price to Rs. 10.25. A further rapid improvement has followed since, mainly on the report that a local group is interested in taking over the mill from Peirce Leslie. As a leading west coast firm, which has been in the planting industry for a long time, it is said that Peirce Leslie may relinquish the managing agency of the mill. The fact that changes in the control of two Coimbatore mills, Pankaja and Janardana, have taken place this year, has led market circles to believe that the report might be correct. Calcutta investors, too, have shown keen interest in Cambodia shares, and their steady recovery has brought some colour to a dull market. The rise during the last fortnight has not been interrupted by profit-taking. Dealers recall that Cambodia was a Madras market leader during war years, and the shares had a large following in both Bombay and Calcutta because of the good dividends they paid. Cambodia makes yarn from staple fibre as well as cotton, and the former is considered to be an attraction for the acquisition of the mill by new interests.

A Tyre Factory for Cochin

Plans are now ready for the manufacture of rubber tyres and tubes by a new company in India, and the capital is likely to be issued in the course of the next two months. The

plant will be located in Cochin, Kerala. Its annual capacity will be 250,000 tyres and an equal number of tubes. About 80 percent of the production will be for use by trucks and buses, and 20 percent will be for passenger cars. The cost of the project, including land and buildings, is estimated at Rs. 1.6 crores, of which Rs. 1 crore will be the foreign exchange component. The Dayton Rubber Company of the United States is collaborating in the venture, and the plant is expected to go into production in 1961.

The name of the new company is Premier Tyre Ltd. It will have its registered office in Bombay and Indo-Orient Agencies (Private) Ltd will be its managing agents. The authorised capital of the company is Rs. 4 crores, including Rs. 3 crores in equity capital and Rs. 1 crore in 6½ percent tax-free redeemable cumulative preference shares of Rs. 100 each. The preference shares can be redeemed after ten years at the option of the company at Rs. 102. The issued capital will be Rs. 2 crores, of which Rs. 50 lakhs will be in the form of preference shares. Of the Rs. 1.5 crores of ordinary capital, the Kerala Government is taking Rs. 50 lakhs and another Rs. 50 lakhs will be taken by the directors, promoters and their friends. The remaining Rs. 50 lakhs will be open for public subscription. The amount of preference capital to be offered to the public has not yet been decided. Considering the shortage of tyres and tubes, and the high prices they are fetching in the market, the project seems sound. Demand is steadily growing with the expansion of road transport. The shares of Ceat Tyres, a company which has yet to go into production, are already quoted at the substantial premium of 65 percent, reflecting the outlook for the tyre industry.

New Caustic Soda Plant

The Dhrangadhra Chemical Works' new caustic soda plant, which started trial production early in September, has now gone into commercial production. The plant is located in Sahupuram in Tinnevelly district (south India). It has an initial capacity of 30,000 tons a year, which it is expected will be raised to 55,000 tons soon. Claimed to be the biggest in Asia, the plant is modern and uses the electrolytic process. It has unusually high amperage mercury cells of 60,000 amps, which can be raised to 70,000 amps if required later. Few factories in the world are known to use such high amperage cells, and in Asia the Dhrangadhra Chemical plant is probably the first of this kind. The well-known French firm of Krebs has supplied the machinery and is also the technical consultant. The plant will produce rayon grade caustic soda, which is in great demand. The rated production capacity for caustic soda is 67,185 tons. The Tariff Commission recently estimated the annual demand for it at 124,000 tons, and the figure is expected to rise to 159,000 tons by 1961. The rated capacity, it is expected, will be raised to 148,970 tons. Encouraged by the successful working and the keen demand for the material, the Dhrangadhra Chemical Works has begun negotiations for increasing the capacity of the new plant.

Enfield India Sells More

The Enfield India Limited has made significant progress during the year ended 31st December, 1958. Its production increased by about 50 percent, compared with the previous year. Its sales were nearly Rs. 27 lakhs higher than in 1957. It made substantial additions to its building, plant, machinery and equipment, and the gross block stands at Rs. 39.40 lakhs, against Rs. 22.65 lakhs at the end of the previous accounting period. The profits, too, increased to about Rs. 5 lakhs, against Rs. 1.5 lakhs in the previous year, before providing for depreciation. Speaking at the annual general meeting, which was held recently in Tiruvottiyur, Mr. K. R. Sundaram, chairman, said that production is expected to increase in 1959, and with the larger amount of foreign exchange granted recently, a further rise in output will be achieved in 1960. (A fuller version of the speech appears elsewhere in this week's issue of *Capital*.)

The increased outlay on the manufacture of components and parts, and the difficulties in raising output to full capacity, have led to heavier working expenses. "We have, however, taken care to ensure that the consumer got his motor-cycle at reasonable prices. I am glad to say our prices compare quite favourably with those charged for similar motor-cycles when imported from the U.K.", Mr. Sundaram said. The company's plant capacity is capable of meeting not only India's present needs, but also the likely increase in the demand for motor-cycles for some years to come. A reduction in prices can be achieved only with an increase in output. Furthermore, without full utilisation of the plant capacity and spread of overheads, it will be difficult to establish markets outside India. To make use of its unutilised plant capacity, the chairman said, the company is undertaking general engineering work orders with a view to spreading overheads over a larger total of production.

Enfield India has been able to maintain its progress in raising the indigenous content in its products. It can reasonably hope, Mr. Sundaram said, to complete the phased programme for all components during 1960 according to the original schedule, barring the proprietary items. The inadequate number of ancillary industries has necessitated the installation of additional plant and machinery. For this purpose, an application has been made to the Industrial Finance Corporation for a further loan of Rs. 9 lakhs. At the same time, steps are being taken to promote a number of small-scale ancillary industries which are desirable in the country's interest, "apart from these being in the interest of your company from the long-term point of view," the chairman said.

India's Contribution to I.M.F.

After rising for five weeks in succession from Rs. 174.77 crores to Rs. 186.26 crores, India's foreign balances during the week ended 18th September fell by Rs. 3.22 crores to Rs. 183.04 crores. But the decline need not cause anxiety, because it merely reflects the purchase of the first instalment of gold which the Indian Government is contributing as its increased quota to the International Monetary Fund. India's quota has been raised by $200 million to $600 million, and 25 percent of this has to be paid in gold. Under certain special circumstances, various countries have been allowed to pay their gold quota in five equal instalments. It is reasonable to assume that the first instalment paid by India amounts to $10 million, or Rs. 4.76 crores. Since the foreign balances are down by only Rs. 3.22 crores, it can be said that the accretion to them on other counts has been well maintained. The decline in foreign balance caused by the contributions to the I.M.F. does not affect the country's exchange resources. If anything, it improves the foreign exchange position in that India will be able to make larger withdrawals from the Fund, should the need arise.

The Central Budget for 1959-60 provided for the full payment of the gold quota. That the Government should have decided to pay it in instalments is understandable. The reason is partly the shortage of foreign exchange and partly the desire to lessen the strain on the sterling area's reserves. Payment by instalments does not affect India's ability to draw foreign exchange from the I.M.F.; withdrawals even beyond the gold tranche are allowed on condition that the country undertakes to repurchase its currency within three years. The only argument against not making an outright payment is the possible risk of an upward revision in the official price of gold. But the chances of such a rise have greatly diminished with the recent increase in the resources of the I.M.F., because this increase will help countries in tiding over their temporary balance of payments difficulties.

Jute and Gunny T.S.D. Contracts

Regulated trading in transferable specific delivery contracts for raw jute and gunnies began on 1st June this year under the auspices of the East India Jute and Hessian Exchange Ltd. The prescribed contract forms, although based largely on the I.J.M.A. ones used for a long time previously, contain some additions and alterations in order to adapt them to the changed conditions in the trade. Speaking at the annual general meeting of the Exchange, held in Calcutta on Tuesday, Mr. N. L. Kanoria, chairman, said that the changes introduced in the contract forms have made it possible for shippers to offer some contractual facilities to overseas buyers, which have been greatly appreciated. The new bye-laws, in particular, contain improvements concerning the terms and conditions of pucca delivery orders for jute goods, against the operation of which there had been complaints in the internal market. "It is a matter of satisfaction," Mr. Kanoria said, "that the contract forms and the provisions of the bye-laws have received general support of all sections of the trade and industry and excepting certain points which are bound to arise from time to time, are in smooth operation. Unlike other forward trading commodities, the control extends, for the first time, to regular trading in an important manufactured commodity, namely, jute goods, and this needs great caution in exercising the rules and regulations." The T.S.D.C. trading bye-laws contain a new scheme for the licensing of brokers of raw jute and jute goods; parties which, for technical reasons, cannot become members of the Exchange and also those with small resources can carry on their broking business under the new regulations. As a result, there has been good response from brokers, and the number of licensed brokers at present is 422. Referring to market trends, Mr. Kanoria said that prices in the futures market for raw jute and gunnies have generally been in harmony with those "in the primary market for the same constructions of commodities." The board of directors, he said, keeps a watch on unhealthy trading tendencies and is ready to take steps to discourage them.

Paper from Bagasse

Bagasse looks like becoming an important raw material for the manufacture of high-grade writing and printing paper in India. At present, it is mostly wasted by being used as a fuel for the sugar industry, of which it is a by-product. It is claimed that roughly one ton of paper can be made from bagasse at a cost ranging from Rs. 39 to Rs. 78. (About 5.6 tons of mill-wet bagasse yield one ton of paper.) India has a very large supply of sugarcane bagasse. Assuming that 50 million tons of cane is crushed every year by the 160 sugar mills and the hundreds of *gur* and *khandsari* manufacturers, the yield of bagasse pulp at the rate of about 10 percent of the cane crushed would be about 5 million tons. There is thus vast scope for developing the paper industry with bagasse as the raw material. In fact, a few mills already have plans; one in Mysore, the Mandya National Paper Mills, which will shortly go into production with an initial capacity of 35 tons a day, will be manufacturing paper from bagasse. The problem of depithing the mill-wet bagasse has now been overcome with the new process invented by Messrs. Parsons and Whittemore of the U.S.A. It is said that sugar mills can solve their problem of fuel (if bagasse is to be used as a raw material for paper-making) by changing over to modern heat recovery methods. The use of coal, it is pointed out, would not be uneconomical, since one ton of coal is equal in calorific value to three tons of mill-wet bagasse.

Canalising Vegetable Oil Exports

The idea of canalising exports of oilseeds, vegetable oils and oilcakes has been mooted by the State Trading Corporation for quite a long while. It has now prepared the draft outline of a scheme for forming a voluntary association of the trade for export promotion. The scheme visualises the establishment of a central organisation as a registered body with headquarters in Bombay, and subsidiary units at other major ports. All established exporters, crushers and co-operative societies will be eligible to join. The S.T.C. will provide the office and secretariat arrangements of the organisation without any charge. The actual working of the organisation will be supervised by a committee, which will study domestic and foreign prices, approve deals negotiated by members, devise standard contract forms, enforce quality control, and recommend to the Government appropriate and timely measures to enable the country to maintain its position in the world market.

The Corporation maintains that its plan will leave the initiative in the hands of exporters. There will be no curtailment of the quota rights of members; nor will there be any interruption in the relations built by exporters with overseas buyers. Of course, for transactions with countries having State trading and for barter deals, the Corporation will continue to be the principal seller. Bulk orders received directly by the Corporation will be distributed among the members on the basis of 75 percent for established shippers and 25 percent for crushers and newcomers. The formation of such an organisation, it is said, has become necessary with the advent of State trading and other monopolies in many countries which buy substantial quantities of Indian oils and oilcakes, and because of the general desire among these buyers to deal with a large and dependable agency. But the main purpose of a voluntary association is to avoid competition among exporters, to rationalise handling, storage and export arrangements with a view to reducing overheads, and to co-ordinate the activities of the organisation with the facilities offered by the S.T.C. in order to ensure that Indian goods can compete successfully abroad. The objective is laudable and anything that can stimulate exports is welcome. But how the mere formation of a single body will help, is difficult to understand. The trade has already criticised the way the Corporation has been conducting business with the communist bloc. The view is widely shared that the predominantly speculative character of the Indian oilseeds market will wreck any voluntary association of exporters; no shipper will wish to risk the disclosure of business put through on his individual initiative since the futures market is extremely sensitive.

The basic problem facing the oilseeds export trade is to consider why Indian oils have been priced out of world markets. The abolition of export duties has not been of much help. The higher internal prices reflect mainly the precarious balance between demand and supply. The situation has been complicated by the inflationary trends in the economy. Very little can be done when higher prices are due to physical shortages, because the real solution then lies in increasing production. There is, however, scope for increasing the competitive strength of Indian oils by providing adequate facilities for bulk storage in port towns and also equipment for loading oil in tankers. With the deployment of crushing units in upcountry centres, the movement of oil in railway tank wagons becomes essential and quick wagon turn-round at ports has to be ensured. It is here that the S.T.C. and the Government can render valuable assistance. When every possible effort has been made to reduce internal costs, there will remain the question of meeting competition from countries which sell their products in the international markets regardless of internal prices. The Government will need to offer suitable incentives for stimulating exports. The formation of a single body for handling the export trade cannot alone be expected to perform any miracles.

Population and the Poor

Inaugurating the Planning Forum in Delhi recently, Dr. V. K. R. V. Rao, Vice-Chancellor of Delhi University, pointed out that, the planners have gone wrong even in their estimate of the rise in population. The actual growth has been 1.8 percent a year, whereas they expected it to be only 1.4 percent. Attention to "the phenomenal demographic curve" was also drawn by the Development Commissioner of U.P. at the latest meeting of the State Planning Board. He said that the population of Uttar Pradesh rose from 63.2 million in 1951 to 67.8 million in 1956, and is likely to reach the 100-million mark by 1976. According to him, the high rate of growth is due not to a significant rise in the birth rate but to a fall in the death rate. The average expectation of life is 36 years or 37 years, as against 23 years before independence.

Be that as it may, the fact that life is not worth living for large sections of the population in the State, especially in the eastern districts, has been forcefully brought out by the findings of the National Council of Applied Economic Research after an intensive study of Basti. Ninety-three percent of the people in that district live below the proverty line, as they lack even the minimum means of subsistence. The district is one of the most densely populated in India, with an average of 958 a square mile. The commonest diet there, according to the survey, is *gobraha*, which consists of barely, *jowar* or paddy collected from animal excreta and cleaned. "This is not considered repugnant," it is stated, "because it is accepted as something ordained by fate." About the water supply, the report has this to say: "To one who has regard for even the rudiments of hygiene, even the thought of washing in this water would be repugnant. Yet it is this water that is used by the villagers not only for washing, but for drinking and cooking as well." There must be many primitive pockets like Basti scattered throughout the country, and the revelations of the National Council are a challenge not only to the Government but to the conscience of those who may be more fortunately situated. Assisted emigration of the people has been suggested by the Council as a remedy, but considering the extreme conservatism of those who are worst affected, it will not be easy to root them out of their villages even by force. Other, more conventional methods of bringing relief might well be tried.

Jobless Technicians and Engineers

The Chief Minister of Uttar Pradesh, Dr. Sampurnanand, has deplored the "unplanned growth of technical education" in the country which has resulted in the training of more technical hands than are needed. According to him, an unemployed trained technician is in a worse plight than an ordinary graduate. Whereas the graduate can do a variety of jobs, the technician is confined to the occupation for which he has been trained. It is not only technical hands of the overseer class who are without jobs but also highly qualified engineers. A recent report from Delhi stated that the capital has 190 graduate engineers on the register of its employment exchange. Of these, 60 are civil engineers, 47 mechanical engineers and 74 electrical engineers. One of them is doubly qualified in the sense that he has a degree in civil engineering and also one in mechanical engineering. These engineers do not represent sub-standard material because as many as 100 out of the 190 had secured a first class in their final examination. They are reported to be willing to work in any part of the country on modest salaries ranging from Rs. 250 to Rs. 350 a month. One reason mentioned for their inability to get employment is that most of the jobs which are advertised stipulate a minimum of five years' experience, and there are very few industrial concerns in India which offer facilities to a fresh engineer for gaining experience. The Technical Training Committee of the Central Ministry of Commerce and Industry has estimated that, considering the needs of large-scale and small-scale industries, arrangements should be made for training 635,000 skilled and semi-skilled workers. The requirements of engineers at the end of the plan period are estimated at 22,000, as against an estimated supply of 15,000. Considering that the present situation has arisen with a much smaller supply of engineering and technical manpower, the time has come for reassessing the various technical training programmes in order to see whether, as Dr. Sampurnanand says, there has really been an "unplanned growth" of technical education.

A Minister and His Rats

In the Rajya Sabha some time ago, the Central Deputy Minister for Food said that there were six times as many rats as men in this country—2,400 million rats, against 400 million human beings. The Deputy Minister for Food in Uttar Pradesh has now declared that living rats are difficult to count, but his department has killed 192,448 in Ballia district alone, where the rat menace has reportedly become as serious as in Hamelin before the Pied Piper came. Plant protection squads have had to be sent to the district three times in the course of one year. Although the number of casualties has been large, it appears that the rats still have the upper hand. The reason for this, according to the Minister, is the death by poisoning of large numbers of cats, the natural enemies of rats. The insecticides used in anti-malarial and anti-filarial operations infected the cats. In spite of their proverbial nine lives, all of them died, while the rats survived and multiplied without hindrance. Nearly one-third of the crops, it is stated, have been destroyed by them. With the harvesting over, the rats have deserted the fields and come to stay in the barns and homes of the peasantry. Plant protection squads have been barred entry into the premises by the villagers, who fear that the grain will be contaminated by the poison, with consequent danger to themselves. The debate that followed on the habits and morals of field rats and home rats was singularly unfruitful; but it reached the peak of irrelevance and absurdity when the Minister invoked religious sanction for the existence of rats. Rats, he said, have been in existence since time immemorial, and the Hindu God, Ganesh, was supposed to ride one. But this must offer no consolation to the people of Ballia, who have been looking to authority for stern action against the rodents.

Inflation and Production

In his address from the chair at the second quarterly meeting of the central committee of the All-India Manufacturers Organisation in Bangalore recently, Mr. N. D. Sahukar stressed the need for strong measures against inflation, which he said might nullify all the development efforts now being made. He referred to the recent statement of Mr. H. V. R Iengar, Governor of the Reserve Bank, that inflationary trends need to be watched very carefully. Inflation should be brought under control by "a complete re-evaluation of our agricultural, fiscal, monetary and industrial policies," Mr. Sahukar said. The A. I. M.O. supports deficit financing for development, but the point of safety has now been passed, and it would be unwise to continue deficit financing "on the same vast scale" as before. One of the factors which has been responsible for the present inflation is that the money supply has outstripped production. The most salutary corrective, in the circumstances, would be to increase industrial and agricultural output. Medium and small-scale industries occupy an important place in the economy and contribute substantially to production, but they are handicapped by financial and raw material shortages. Various taxes and levies imposed by both the Centre and the States have added to their difficulties. The sales tax on raw and processing materials has affected these industries particularly adversely. The cost of coal and fuel oils, too, has risen. Mr. Sahukar said that the "time has come when small reductions effected by the oil producing companies must be passed on to the consumers."

New Industries for Kumaon

The U.P. Government's Directorate of Industries has prepared a scheme for the manufacture of pine wool from pine needles with a view to taking maximum advantage of the raw materials available in the hill districts of Kumaon. At present, the pine needles are going to waste. The scheme, which has been submitted to the Central Government for approval, aims at establishing one unit in each district for the production of pine wool. The wool thus manufactured will be mixed with raw wool for the preparation of fabrics. It is stated that a cottage worker of Pauri Garhwal recently made a fine jacket from pine wool and presented it to the Prime Minister. Apart from one industrial estate for each of the four hill districts, it is also proposed to establish two factories for turpentine, rosin and soapstone in Almora. These will be run on co-operative lines. An ambitious scheme for intensifying the cultivation of medicinal herbs in the area has also been evolved. The co-operative drug factory in Ranikhet has been making good progress. Government purchases alone from the factory last year amounted to Rs. 2 lakhs. Kumaon district is reputed to be rich in medicinal plants, some of them found at an altitude of 12,000 feet above sea level. The collection of these medicinal herbs already provides part-time employment to an estimated 8,000 people.

BANKING IN INDIA

THE evidence given before the Currency Commission must impress all who have read it through carefully that, whatever scheme is ultimately decided upon, its success, as an economical factor, must depend upon the extension of the English banking system in India. Whether we are to go back to a silver standard or are to have a gold standard with or without a gold currency, we undoubtedly require a more extended one of paper money, and a more economical system than at present of linking up the scattered money markets of this great continent of India. No one who has waded through the vast number of questions and answers published in the two Blue Books can fail to notice how frequently the system of hoarding is referred to, and how subject the principal financial centres in India are to a chronic and violent vacillation in the rate of interest. Many reasons, for the most part straying wide of the mark, have been put forward to account for these alterations of excessive abundance and extreme scarcity. Since the mints were closed we have had more violent fluctuations in the money market than we had before. For the first three years we had extraordinarily cheap money; for the next two, money was so tight in the Presidency towns that even the Presidency banks had occasionally to decline to advance on Government securities; during the present year accommodation has been easily obtainable at moderate rates. Now, although it is true that these fluctuations have been accentuated during the last six years by the change which the closed mints necessarily imposed on the means of financing foreign trade, there are two considerations which, in the excitement of the times, were overlooked, and the cause of pressure was chiefly owing to the fact that they were overlooked and unprovided for. The first is that it is quite impossible to avoid a certain degree of money stringency during years of famine, and that in the Presidency towns the strain must always be great when an abundant harvest succeeds a year of famine. This is nothing new. It has been experienced in India ever since we had foreign trade of any volume, say, at any rate, for the last fifty years. Finance in 1897 and 1898 was more than usually disorganised owing to council bills being reduced and silver, as a financial medium, shut out. There was also the fear of importing gold at the Government rate, because there was no guarantee that, when pressing wants were satisfied, exchange might not again fall to 1s 0⅜d, as it had in 1894. There was no absolute disability to finance by importing gold, but the fear of consequences was prohibitive. The financial pressure did not arise from a scarcity of rupees in local circulation, but from the want of adaptation to the available means of foreign finance.

Without Prejudice

The Puja Bonus

(FROM OUR LEGAL CORRESPONDENT)

THE Durga Puja is a festival of importance throughout India. But in Bengal and to the Bengali, it is *the* festival of the year. It corresponds to the festival of Christmas in the West, and as such involves the Bengali not only in the pleasures of what he looks upon as a national holiday, greeting his friends and the like, but also in heavy personal expenses, for he has to buy new clothing for the members of his family and also to make gifts to them and his relatives and intimates. Nevertheless, it may come as a surprise to the reader in the matter of the Puja bonus, considered as a legal right which it may or may not be, to learn from the latest Supreme Court decision on the subject that the Bengali employed in his native State and claiming Puja bonus appears to be entitled to special consideration not necessarily extended to workmen of other States.

Before we come to that case, let us consider what the word bonus means; and in doing so, the first thing we have to get out of our minds is any idea that in industrial law words mean what they say. They do not. A bonus is not a reward voluntarily given by an appreciative employer for faithful service; it is not given as a stimulus to further endeavour on the part of the workmen. It is not an expression of gratitude, "Well done! thou good and faithful servant", to an old and valued servant on retirement, although it may be all these things. The laziest, shadiest and most inefficient workmen in the firm may be entitled to it, for it has virtually become almost a legal right. *Definitio periculosa est*—to define is a risky business. And we are not going to try to define the word. But it partakes of this: an amount generally based on profits paid by an employer to a workman payable at fixed intervals or seasons and to which the workman, either by fixed or implied contract or by customary usage, is or may be entitled by law. There may be a lesson in our attempt at a quasi-definition. Never let a kindly act become a customary usage. Stop it periodically every two years or so; and invariably in performing the kindly act, expressly stipulate in writing that you do so as an act of grace and that the payment is not to constitute a precedent. Otherwise, the act of benevolence may become a legal right, and will have to be continued. It may have to be continued anyway as we will—getting back to Bengal in particular—now see.

The reader, accustomed to the dignified leisure with which legal proceedings move in this country, will not be surprised to learn that the dispute between the employing company and its workmen related to a claim for bonus by the latter for the year 1953. The case for the workmen was that the company had been paying one month's bonus invariably from 1940 to 1950. In 1951, one month's bonus was paid in October and half a month's further bonus was paid in December. In 1952, one month's bonus was paid. By a letter dated 27th August, 1953, the workmen demanded three months' bonus as Puja bonus. As to the amount, we may say at once that the tribunal rejected the whole claim, and the appellate tribunal awarded one month's bonus. The employers replied that payment in past years had been entirely *ex gratia*, and as there was a loss in 1953, it was not possible to make any *ex gratia* payment that year; that the previous payments had been *ex gratia* without creating any precedent; and that there was neither a term of employment nor any custom which put any obligation on the company to pay any bonus in a year of loss.

And that brought things to a head. The workmen's answer was, in effect, that they were Bengalis in Bengal. This was their Puja and the sole object of the bonus, which had been granted up to that year, was to meet Puja expenses and that, loss or no loss and *ex gratia* or not *ex gratia*, the payment had become customary and a term of their employment and would have to be paid; a so, *via* the tribunal which threw out the claim s ing there was no implied term of employment a no custom, the appellate tribunal which allov the appeal ordering one month's basic wage Puja bonus, the matter came to the Supreme Co

The judgment of the Supreme Court appear the writer to put the Bengali employee in Ber in a special position and one more favourable him than that of "pockets" of Bengalis or ot workmen in other States concerning Puja bo It may more easily become a legal right. Supreme Court (S. P. Sinha, Gajendragadkar Wanchoo JJ.) said ".....Puja is a special fest of particular importance in Bengal, and it has come usual with many firms there to pay t employees bonus to meet special Puja expe .....As far back as 1949, in a dispute between *Bengal Chamber of Commerce and its employ* the industrial tribunal which adjudicated upon dispute observed that Durga Puja was a nati festival in Bengal and it was customary to m presents to near and dear ones and to relative that time. As it was difficult for poorly paid ployees to make savings out of the monthly inc for this purpose, it had, therefore, become tr tional and customary in Bengal for employer make a monetary grant at the time of the Pu The Bengal Chamber of Commerce had not l slow in appreciating this and had been gran bonus equivalent to one month's pay and the bunal had been assured that there was no inten to discontinue it."

A Puja bonus, nevertheless, is not an absc right even in Bengal. A claim to be succes must be one of two kinds. "It is, however, c that Puja bonus, which is usually paid in Ber is of two kinds, namely: (1) where it is paid a implied term of employment.....and (2) when is paid as a customary and traditional payn ....." The Supreme Court rejected this partic claim as far as (1) i.e., implied term of employr was concerned. There could be no such term plied because right from the start the comp whenever it paid the bonus, made it clear tha was "an *ex gratia* payment and would not co tute any precedent for future years....." In face of such notice, year by year, it would no possible to imply a term of employment on basis of an implied agreement, for agreement pc lates a meeting of minds concerning the sut matter of the agreement, and here one party always making it clear that the payment wa *gratia* and that it would not form a precedent future years."

So the claim in so far as it was based or alleged implied term in the contract of emp ment was sunk. But there remained the ques whether the payment in this case was custon and traditional and, therefore, enforceable as s When this question "arises for adjudication, considerations may be somewhat different" their lordships tabulated them. "In such a the tribunal will have to consider: (i) Whether payment has been over an *unbroken* series of y (ii) Whether it has been for a sufficiently period, although the length of the period m depend on the circumstances of each case; evei the period may normally have to be longer to ju an inference of traditional and customary bonus than may be the case with Puja bonus b on an implied term of employment. (iii) The cumstance that the payment depended upon earning of profits would have to be excluded therefore, it would have to be shown that payr was made in years of loss. In dealing with question of custom, the fact that the payment called *ex gratia* by the employer when it was n would, however, make no difference in this ma because the proof of custom depends on the vant factors enumerated by us, and it would be materially affected by unilateral declaratior one party, when the said declarations are in sistent with the course of conduct adopted b (iv) And the payment must have been at a form rate throughout to justify an inference the payment at such and such rate had bec customary and traditional in the particular cern."

Applying the above tests to the particular the Supreme Court found that there had unbroken payments and that the period had sufficiently long to justify an inference of cu mary and traditional bonus; that the condition the payment should have been made in year loss also, to exclude the hypothesis that it was because profits had been made, as also the cc tion that payment should have been at a unif rate had also been satisfied.

The decision of the appellate tribunal orde payment of one month's basic wages as Puja bc based on custom and not on an implied terr contract, was upheld; but "as this question arisen for the first time in this court", their ships ordered the parties to bear their own c

A Ditcher's Diary

THE IMMEDIATE SHOCK OF THE ASSASSINATION OF Ceylon's Prime Minister, Mr. Solomon Bandaranaike, must already have given place to anxious thoughts on the future of political behaviour in the newly-independent countries of Asia and Africa. Come to think of it, only a few countries (and that only in recent decades) have devised a workable and unviolent system of transferring power from one set of hands to another. Why, 40 years after the revolution, Soviet Russia still has exiles and executions before one man is able to establish himself as the supreme ruler; and not only in Asia and Latin America has democracy been discarded after uneasy experiments. The example of Britain and the continuing influence of Mr. Nehru make many Indians forget that a civilised election every five years is not something to be taken for granted. In Ceylon the motive of the murder has not yet been finally established, but the murder of a politician in office is bound to have political consequences, and not in the country of its occurrence alone. It vitiates the atmosphere, and those impatient for power remember anew what man has to strive hard to forget: that there is an easy way to the top, and that is to employ the hand of the assassin for removing opponents and rivals. It is so desperately easy for a man unafraid of death to accomplish it, for security arrangements can rarely be complete. Evil ideas travel fast, and the stablest government is wrong to think that it can never crumble under the impact of the removal of a few dominant personalities. Burma's instance comes easily to mind, and that unfortunate country has never known peace since the Aung San cabinet was sprayed with bullets.

THE BRIEF KHRUSHCHEV-EISENHOWER ENCOUNTER has ended rather better than many had dared hope. Agreement on specific problems was out of the question, although it seems possible that Mr. Eisenhower got some assurances. But neither Mr. Eisenhower nor Mr. Khrushchev is at the age when it is likely they could be converted to each other's views of life and the world. The latter still thinks capitalism will be "buried", and the former is presumably still convinced that communism stinks. But it would be surprising if Mr. Khrushchev (who was advised by, of all people, Mr. Truman, to hold his temper) did not change one or two of his earlier views on the nature and might of America; and Mr. Eisenhower was apparently impressed more than somewhat by the ebullient personality of his guest. When Mr. Macmillan went to Moscow he was painted in the Continental Press as an arch appeaser, forgetting that 1959 is not 1938. Today's appeasement can be accomplished only by Russia or America, and it is in these directions that potential appeasers have to be looked for. I am very glad that Mr. Eisenhower will go to Russia in the spring; conducted with wisdom, such contacts do no harm and are sometimes capable of doing some good. But I thought Sir Winston Churchill's recent warning was not wholly untimely either. As he once put it with characteristic understatement, he has not always been wrong in his prognostications. There should surely be accommodation between the East and the West. There is already a noticeable decrease in the tension artificially created by the Kremlin about ten months ago over Berlin, and may the process continue. There might be something to discuss in Mr. Khrushchev's flamboyant and extravagant disarmament plan. But no country in the West, unless there has been a total loss of memory, can agree to scrap all defence and rely only on Russian promises.

WHEN MR. NEHRU REFERS RATHER CONTEMPTUOUSLY to "erudite and pompous" newspaper articles criticising Government policy, I cannot help but feel a trifle sat-upon. To be frank, it is just possible that some time or other I might have written one of those articles, although I can never concede that it was as erudite as it ought to have been. It is a leader writer's job to question the actions of other people, just as it is a good dog's duty to bark at strangers; in neither case does it imply irreconcilable hostility or a desire to do damage for its own sake. More often than not it is simply an expression of the understandable anxiety shared with the public about the motives and competence of its rulers. But I am sure Mr. Nehru does not need reminding of that, because he has had occasion to use this particular characteristic of the Press quite frequently in the past; and I know that as a democrat he would agree with me that the way to deal with it is to satisfy whatever doubts are expressed, not to deny anybody his right to them. If what the Prime Minister objects to is not so much the expression of doubts as the offering of gratuitous advice, then he has my sympathy. There is nothing worse than to be told by somebody else how best to do one's own job. But this again is a perfectly human characteristic, and Mr. Nehru himself has been known occasionally to offer advice to others. The main thing I suppose is the sincerity of the motive, and here I would say that if Mr. Nehru does not believe that those of leader writers—in their own peculiarly limited way—are not at least as public-spirited as those of his own Ministers, then he would be making a grave mistake. The vision of a hoard of spineless wage-slaves toiling unquestioningly in the service of their greedy, self-seeking, capitalist employers, can be overdone. Besides, although to a socialist the idea might be anathema, some perfectly honest and sincere people actually do go so far as to identify the interests and prosperity of private enterprise with the well-being of the country as a whole.

ELECTRICITY FROM ATOMS HAS THE SAME ABIDING fascination for me as the prospects of interplanetary travel. I remember reading avidly all the news I could find about the U.K.'s first nuclear station at Calder Hall, which was inaugurated by the Queen a few years ago. This was also the first example in the world of atomic energy being put to peaceful uses, so I, along with many others, hailed it as the beginning of a new era in our modern industrial civilisation. Nothing has happened since then to shake my belief in this progress, although the economics of nuclear power production seemed a bit discouraging initially, because of the huge investments needed for putting up and commissioning an atomic power plant. But thanks to keener competition among construction companies, and the rapid advance in technology which an intensive research has made possible, the capital cost has been brought down appreciably. As against £140 a kilowatt of atomic electricity, plus another £30 for subsidiary investment, for the first commercial power stations at Berkeley and Bradwell, the cost has fallen to £120 a kW for Hinckley Point and to £110 for Trawsfynydd. I have no doubt that India—which has already decided to embark on the production of nuclear electricity during the third five year plan, with a chain of three power stations in western India which is comparatively deficient in the conventional fuel resources—has been encouraged by the British example. There is at the moment a great curiosity in this country to know all about atomic power production. So the exhibition which the British Information Services are at present holding at Ranken House is most timely, and I expect it will prove both popular and instructive.

AUTOMATION IS SOMETHING I HAD ALWAYS LOOKED forward to as an opportunity for replacing the lazy, fault-prone, all-too-human brain in the industrial process, by a tireless, infallible electronic one. Human grey matter could then, or so I reasoned, be released for higher, more creative activities. But it seems I am going to have to revise my ideas. For one thing, electronic brains are, apparently, neither tireless nor infallible. In fact, they are just as likely to be *tiresome*, having been found to suffer from the same kind of temperamental disturbances and tensions that lead to breakdowns in human beings. I have just been reading about a new machine, primarily designed to aid cancer research, which can prevent electronic computers from breaking down—in the psychological not the mechanical sense—by enabling them to compose and sing their own music for relaxation. And if you think this is carrying a joke a bit too far, I might say that some examples of this machine-made music were broadcast recently over the B.B.C.'s General Overseas Service. So now, apparently, we have psychiatrists for machines as well. How long, I wonder, before they require the whole range of aspirins, tranquillisers, holidays with a change of air, the lot. The principle of discharging tension through activity is, of course, pure Freud. Machines and human beings would, therefore appear to be fundamentally the same in the way they are susceptible to tensions and frustrations. The only difference, at least the only apparent one, is that the human brain is considerably more complex and has a much larger number of cells. As there is no doubt that this inadequacy on the part of the machine will be corrected in a few years' time, we are obviously going to have a serious problem of machine neurosis on our hands which just teaching a computer to hum quietly away to itself in a corner is not going to solve. When the machines begin to require more complicated and sophisticated methods of relaxation or diversion, we may have seen an end to the era when they will simply be content to serve human beings. By then, on Freud's theories concerning the source of artistic creation and original thought the machines will be in a position to start civilisation of their own, and will no doubt cast a thoughtful eye over the human race when looking for somebody to do their work for them. Then the nightmare of the science fiction writer really will have come true.

CHAIRMAN, MR. G. H. J. CLARKE, DISCUSSES EFFECTS OF HIGHER EXCISE DUTY

Speech by the Chairman, Mr. G. H. J. Clarke, at the Forty-eighth Annual General Meeting of the Company on the 25th September 1959.

Ladies and Gentlemen :

I have much pleasure in welcoming you to this the Forty-eighth Annual General Meeting of the Company.

The Notice convening this meeting, the Report of the Directors and the Accounts have been circulated, and with your approval we shall take them as read. I will now ask the Secretary to read the Report of the Auditors.

Board of Directors

At the end of May 1959, Mr. J. K. Hill retired from the Board. Mr. Hill first joined the Company late in 1926, and his long service ended with nearly four years on the Board. We wish him health and happiness in a well-earned retirement.

Accounts

The Balance Sheet and Accounts have been in your possession now for some time and I hope are largely self-explanatory. However, you may welcome comment on some of the more important items.

On the Assets side of the Balance Sheet, you will see that the value of Fixed Assets less depreciation shows a slight reduction this year. Details are given on pages 16 and 17 of the Report, from which you will see that the net additions to Fixed Assets are only Rs. 33 lakhs. Last year the comparative figure was Rs. 76 lakhs, and although this reduction reflects partly the fact that the Company's modernisation programme is nearly complete, it also high-lights the stringency of import control on capital goods.

During the year, Rs. 40 lakhs of the Company's holding in Government paper matured and this accounts for the reduction in Investments.

The stock of Raw Materials shows an increase of Rs. 67 lakhs. This represents increased stocks of leaf tobacco, a large part being American tobacco purchased under American Public Law 480. Such purchases are paid for in rupees, no foreign exchange being involved.

The reduction in stocks of Manufactured Goods has been brought about by increased use of road transport, the more expeditious delivery enabling us to reduce stock holdings and at the same time ensure that the consumer receives fresh stocks.

On the Liabilities side of the Balance Sheet, you will see that a further sum of Rs. 17½ lakhs has been added to the Fixed Asset and Stock Replacement Reserve. There is a reference to this transfer in the Directors' Report and I would add only that the need to retain in the business sufficient funds to cover the present cost of replacing fixed assets and stocks at today's higher prices is becoming increasingly widely recognised.

Turning now to the Profit and Loss Account, you will see that the value of sales shows an increase over last year of nearly 5%, though the increase in volume was only a little over 1%. You will recall that, in December 1957, Sales Tax on tobacco products was withdrawn and replaced by additional Excise Duties. The effect of this, which applied only to three months of the previous year but to the whole of the year under review, was of course to inflate the value of sales to the extent to which it was possible to pass on this additional taxation to the consumer.

The last items of the Accounts to which I shall make reference are the profit for the year and the rate of dividends—the items with which I know you are most concerned. You will have seen that the profit has dropped from Rs. 132 lakhs to Rs. 115 lakhs. This has been caused mainly by increased costs of Raw Materials and increased Excise Duties. You will all be aware of the continued upward trend of costs, and the materials which we use for making and packing our products are no exception. In certain instances, it was deemed wise to absorb part of the Excise increases rather than risk loss of volume of business by increasing retail prices by the full amount.

Your Board remains firmly of the opinion that dividends should be paid only out of current profits, after setting up adequate reserves. We have, therefore, transferred to Fixed Asset and Stock Replacement Reserve Rs. 17½ lakhs, which we consider no higher than prudence dictates, and recommended the payment of a final dividend of 2%.

Raw Materials

When I addressed you last year, I stressed the fact that the Company relied on Indian resources for most of its leaf tobacco and all its requirements of cigarette paper, printing board and papers, aluminium foil and packet wrappings. We are now going further and are considering extending the manufacture of spare parts and encouraging the manufacture in India of fibreboard containers.

In addition to the commodities I have mentioned, we are also encouraging the erection of a factory in India to produce cigarette filters. Throughout the world, the filter-tipped cigarette is gaining in popularity and there are now some filter-tipped cigarettes on the Indian market. The filters are imported, just as they were when your Company first made such cigarettes in this country some years ago. If, as we hope, our plans fructify, our previous experience will enable us to give the Indian consumer a quality cigarette of this type without any appreciable use of foreign exchange.

Competition

This has been a year of exceptional activity throughout our industry and competition has been intense. Repeated increases in Excise Duties, and consequently in prices, in recent years have to some extent upset the established pattern of consumer preference, not always in favour of your Company's products, and some competitors have benefited thereby. The building up of consumer loyalty to new products is expensive of both time and money but provided no further adverse circumstances supervene, we are confident that your Company will maintain its leading position in the trade.

Exports

Your Company's main contribution to India's balance of payments position has hitherto taken the form of conservation of foreign exchange by th substitution of indigenous for imported raw materials. We are making every effort to find a outlet for exports of tobacco goods and a member o our staff has recently made an extensive tour of Wes Asian countries to this end. Although, in the las two months, we have been able to make som modest export shipments, it would be wrong to raise false hopes. The export of manufactured tobacco goods from one country to another continues t decline throughout the world as one country afte another establishes its own industry and raises tarif walls to protect it, as this country has effectively done, and though we anticipate obtaining a shar of any export business which offers, we canno reasonably expect to obtain from this source either important additional profits or any majo contribution to the country's foreign exchange.

Staff Training

On pages 6 and 7 of our Report, we have reproduced photographs of our residential training centre near Calcutta. This venture is proving o great benefit and during the year under review, 10 members of the staff attended residential courses In addition to these training courses, senior members of our staff have attended sessions at the Administrative Staff College of India at Hyderabad of which the Company is a patron. Where necessary special tours for technical duty abroad are arranged in order that our staff can keep abreast with the latest developments in the industry.

Labour Relations

During the year, the Company has, in co-operation with the Union, experimented at one of its factories with Workers' Participation in Management. It is a little early to draw any conclusions but there are indications that this scheme is creating better understanding between workers and management. As a further step towards promoting mutual understanding, the Company is arranging a number of industrial tours for its workers to enable them to see at first hand some of the developments taking place in this country as a result of the 5-year plans.

The Company's terms and conditions of service for its workpeople are among the best in the country ; the wage scales are scientifically based and the fairness allowance scales are linked to published cost of living indices. Together they provide an adequate level of reward in present day conditions.

Production and employment at all your Company's cigarette factories has been reasonably satisfactory except at Monghyr. The Monghyr operation has been unsatisfactory for a number of years. due largely to the labour force being greater than was justified by the output required for this factory. This position is likely to deteriorate further in the coming year if, as expected, orders for Nepal, which represent an important proportion of Monghyr production, are lost because that country becomes self-sufficient and ceases to be a customer. We are anxious to avoid a complete shut-down and there is still a hope, provided the full co-operation of all is assured, that a future can be given to this factory, albeit a limited one.

Although on occasion there has been some difference of outlook between management and workers, I am certainly not unmindful of the hard work put in by the Company's employees during the year, and once again I should like to thank them for their co-operation.

Taxation

When I addressed you last year, I expressed the hope that further imposts on the tobacco industry would not be forthcoming. The 1959 Budget shattered those hopes by imposing a further burden on the industry in the form of substantially increased Excise Duty. As a result, the Company had to make further changes in its selling prices, this being the fourth change in two years. As I have already indicated, such changes have a disrupting influence on trade and cause a number of smokers to look elsewhere if their favourite brands are placed out of reach of their pockets. This incidence of taxation is probably the greatest single factor which handicaps the private sector at the present time. The general rise in prices of raw materials and services is usually gradual and part of nation-wide tendency affecting all industry alike. Changes in Excise are arbitrary and may affect one section of industry alone. They cannot be foreseen and are therefore the more difficult to deal with when they occur. When this form of taxation constitutes the largest single element in the cost of production, as in the cigarette industry, you will readily understand the magnitude of the difficulties which face the Management when the Government decides to revise the rates of Excise.

These difficulties are further enhanced by the continued and increasing activities of municipalities in raising revenue from tobacco products by octroi and terminal taxes. The effect of these is that either retail prices are forced higher in some places than in others, with a deleterious effect on the flow of trade, or your Company has often to contribute towards these taxes with a consequent immediate reduction of your profits.

In the field of direct taxation, we welcome the removal of Wealth Tax on Companies and Super Tax on excess dividends announced in the last Budget. We also welcome the simplification in the system of dividend taxation, coupled with a revised rate of Income Tax and Super Tax on Companies, but it should be noted that the implied rate of a total tax on Company profits of 45% will not be confirmed until the 1960 Budget is passed, and does not affect the accounts under review.

Prospects

The Company's sales during the five months to August 1959 show an improvement in total volume over the same period last year, but I must tell you that the general trend continues whereby there is a decline in the return to shareholders in relation to volume of sales. I therefore cannot anticipate with confidence an improvement in the final results in the coming year. Your Board, however, felt justified in declaring an interim dividend of 2½%, subject to tax, in respect of the year to 31st March 1960.

A YEAR OF SIGNIFICANT PROGRESS

CHAIRMAN, MR. K. R. SUNDARAM IYER'S REVIEW

Presiding over the Third Annual General Meeting of the Company held on Wednesday, the 23rd September, 1959, at Tiruvottiyur, Madras, Mr. K. R. Sundaram Iyer, Chairman, said :—

Ladies and Gentlemen :

I have great pleasure in extending to you a cordial welcome to this Third Annual General Meeting of the Company. The Directors' Report and the Statements of Account for the year ended 31st December, 1958 have been with you for sometime and with your permission, I shall take them as read.

Results of the Year

You would have seen from the report and accounts before you that the Company has made significant progress in its activities during the year. The production of the Company was higher by about 50% as compared to last year and the sales during the year were higher by nearly Rs. 27 lacs over 1957. You would have noticed also that the Company made substantial additions to its building, plant, machinery and equipments and the gross block stands at Rs. 39.40 lacs against Rs. 22.65 lacs at the end of the previous accounting period. The Company increased its issued capital to Rs. 25 lacs and I am glad to inform you that it stands fully subscribed. We have also fully availed of the loan of Rs. 11 lacs sanctioned by the Industrial Finance Corporation of India.

The profits of the year amounted to nearly Rs. 5 lacs as against Rs. 1.5 lacs for the previous year, before providing for depreciation. A significant portion of the expenditure incurred during the year was of an anticipatory character in the sense that your Company has had to incur and will continue to incur up to 1960 expenditure that will facilitate manufacture of new components in your factory in accordance with the phased programme. I had occasion to give you an indication of this type of expenditure in my last year's speech. Further, owing to acute shortage of foreign exchange, workers, plant and machinery had necessarily to work considerably below capacity as sufficient raw materials could not be fed into the machines. I hope you will consider the performance satisfactory and encouraging at this early stage of the Company's working. In pursuance to the provisions of the Finance Act of 1958, your Directors considered it necessary to transfer to the Development Reserve a sum of Rs. 1,09,926/-. It has, therefore, been possible to recommend only the dividend on the preference shares, carrying forward the balance to the next year's account.

Progress Towards Self-Sufficiency

In industrially advanced countries, the automobile manufacturer is able to obtain a substantial portion of the components from ancillary industries. Though it has been the policy of your Company to obtain from ancillary industries as many items as possible, due to the fact that such industries have not yet developed sufficiently in our country, we have been obliged to undertake the manufacture of a number of components in our own factory which should normally be undertaken by ancillary industries. It is interesting to note that your U.K. Collaborators are not themselves making such components in their own factories.

Inspite of this, you will be glad to hear that your Company has been able to maintain the pace of progress in raising the indigenous content in our products and we can reasonably hope to complete the phased programme of all the components during 1960 according to the original schedule, barring of course the proprietary items. However, the inadequate number of ancillary industries has necessitated the installation of additional plant and machinery. For this purpose, an application has been made to the Industrial Finance Corporation of India for a further loan of Rs. 9 lacs. At the same time, steps are being taken to promote a number of small scale ancillary industries which are desirable in the national interest, apart from these being in the interest of your Company from the long-term point of view.

Rising Trend of Output

Your Company is grateful to the Government of India for allotting to it foreign exchange under quite difficult circumstances, but for which it would not have been possible to achieve the increase in the number of vehicles produced. Even so, the Company's production capacity could not be fully utilised. The increased outlay on the manufacture of components and parts, for the reasons stated earlier, and the difficulty in stepping up output to full capacity have naturally led to heavier working expenses. We have, however, taken care to ensure that the consumer got his motor cycle at reasonable prices. I am glad to say our prices compare quite favourably with those charged for similar motor cycles when imported from U.K. It is hoped that, as a result of the more liberal policy pursued by our Government, it would be possible for us to obtain the required additional foreign exchange which will enable this industry to utilise its production capacity to a greater degree. Our plant capacity is capable of meeting not only the country's present needs but also the likely increase in the demand for motor cycles for some years to come. It is needless to say that a reduction in price to the consumer can be achieved with an increase in our output. Further, without full utilisation of the plant capacity and spread of overheads, it will be difficult to establish markets for our products outside India.

Production during 1959 is expected to increase well over 1958. As a result of the larger exchange granted recently, still further increase in production is bound to be registered during 1960, although it will be below your Company's production capacity.

General Engineering Department's Activities

I mentioned at the last year's Annual General Meeting that the Company has commenced undertaking general engineering work orders to make use of its unutilised plant capacity. Your Selling Agents, The Madras Motors Private Limited, were able to secure good orders, a substantial portion of which was executed during the year. We can expect a steady increase in such orders that will result not only in additional revenues but will assist in spreading the overheads over a larger arena of production—overheads which are now being borne by the main departments.

Sales Promotion and Service After Sales

During the year, apart from organising various other sales promotion activities, your Selling Agents, The Madras Motors Private Limited, continued to bestow their attention in developing further Sales and Service points, whose number has increased by 21 making a total of 91 Sales and Service points all over India. The shareholders will be pleased to note that the important aspect of service-after-sales continued to receive the constant attention of the Company and is being vigorously implemented through the Selling Agents and their dealers and sub-dealers all over the country. Bi-annual training courses are being conducted to train more and more personnel of the dealer and sub-dealer firms. In addition, the Selling Agents have made arrangements to station qualified and trained engineers in the various regions in the country to guide and assist the Service Departments of the dealers and sub-dealers.

Labour Management Co-operation

During the year the Company's relations with its employees continued to be cordial, though I cannot say that there was not occasional cause for anxiety in this regard. But, the basic good-will that has characterised labour-management relations in your Company has, I am glad to inform the shareholders, helped to surmount problems so familiar in context. The management carried on negotia with the employees for settlement of their dem commencing from the later part of 1958 and happy to inform the shareholders that in May, a three-year agreement was reached. It is my sin hope that they would appreciate that the Comp though comparatively young, has agreed to w and salaries that compare favourably with tho longer established industries. This has natu been done with a view to ensure the utmost harr and cordiality in labour-management relations your management think that the expenditure invc is worth it. Apart from the financial benefits, agreement provides for a scheme of joint consulta between labour and management to improve pro tivity and on matters of performance standards, evaluation and employees' grievances. Your Comp is also considering the introduction of an Incer Scheme. I have every hope that the Trade-U movement in your Company will develop on hea and correct lines to the mutual benefit of employees and the Company ; that the employees realise that their prosperity is linked inseparably with the prosperity of the industry, towards w they should contribute their utmost by be productivity and discipline.

The Government of India and the State Gov ment have continued to give their active assist and guidance and I take this opportunity to cor our gratitude to them.

Your U.K. Collaborators, The Enfield C Company Limited, have given us their utmost operation during the year and this has contrib not a little to the success of the programme manufacture. I convey our thanks to the Coll rators.

I take this opportunity to thank the Selling Ag the Dealers and Sub-Dealers all over the country their active co-operation during the year.

The Workmen, Staff and Officers of the Comp have put in a great deal of work which contributed to the satisfactory results I have alre referred to and I take this opportunity of recor our appreciation of the same.

Note : This does not purport to be a record of proceedings of the above Annual Gen Body Meeting.

This is your Heritage

When motoring in the south, you must see the famous Jog Falls, on the borders of Mysore and North Kanara. In a beautiful woodland setting, the falls cascade down the side of a precipitous rock face 960 feet in depth, making a scene of magnificent grandeur. Throughout India there are so many wonderful places to visit, set in a country side that is full of exciting interest to the motorist. And wherever you motor in this vast land, your trip will be more pleasant, and free from car troubles, when you drive on Caltex Petroleum Products.

DULL CONDITIONS IN STOCK MARKET

LATEST OPINION POLLS UPSET SENTIMENT

London, 30th September.

THERE were several adverse influences at work in the stock market during the past week, and these produced generally dull conditions. The Jasper affair was a particularly disturbing factor. The main influence that swayed sentiment, however, is the general election and with the latest public opinion polls showing the Conservatives losing much of their earlier lead in popularity, buyers preferred to hold off, and with some small selling in progress, prices were very sensitive and moved lower, sometimes out of proportion to the volume of business transacted. Wall Street was in a better mood and could go further ahead now that President Eisenhower has intervened in the steel strike, although yesterday's fresh rise in the United States Treasury bill rate will tend to temper any undue enthusiasm. One of the best pieces of company news during the past week was the excellent half-year statement from Imperial Chemical Industries and the surprisingly good dividend. The company's shares made a suitable response although end-account profit-taking pared the gain. Steel shares were very much influenced by the changing views on the outcome of the general election and prices reacted somewhat. There were some fairly sharp falls in property shares under the influence of the Jasper affair, but the long established companies stood up very well. There was very little to assist the gilt-edged market, although a slight fall in last Friday's United Kingdom Treasury bill rate was a helpful factor. The foreign market provided very little interest and rails were quiet, while dollar stocks reflected Wall Street's movements. Gold shares were erratic and eventually drifted lower in the absence of support. Platinum shares made good response to the dividend statements, but coppers were idle. Oil shares moved narrowly, the transport dividend failing to have any effect. Some interest was shown in rubber shares following satisfactory dividend statements and teas held steady. The death of Ceylon's Prime Minister was a restraining influence.

The Money Market

In the money market last week, there was a definite easing of the tight credit conditions which have been such a common phase for quite a considerable period. While there was no definable reason for the improvement in loanable supplies to the market, funds were plentiful and on three days, were in excess of demand and the authorities worked in reverse to mop up the surplus. Naturally, there was an easing of the money rates at which borrowers obtained their requirements, although the top rate of 3¼ percent persisted in early business with the rate drifting as the market satisfied its needs and on one or two days, touched a low of 2 percent and on others finished at 2⅜ percent. There was fairly good demand for bills from the banks and early Decembers and "hots" were done at 3 27/64 percent and at 3½ percent. The latter rate became the established one following Friday's Treasury bill tender when discount houses made a slight change in their bid paying 1d more. The official average rate fell slightly to £3 9s 5.24d percent.

Mixed Trend in Vegetable Oils

Groundnuts were in good demand in the vegetable oils market during the past week. Nigerian groundnuts were more active, particularly for early shipments, in which France was particularly interested. Ugandas experienced a better enquiry. Groundnut oil met with some demand. A good demand for Canadian linseed in the early part of the week was noted and prices registered some advances. Towards the end of the week, however, demand slackened and most gains were lost. There was little change in linseed oil in quiet dealings. Castorseed was also quiet. Castor oil tended to be firm.

Activity on Wall Street

Among foreign bonds, Australians were soft with several issues falling a couple of points or more to new 1959 lows. Other easy spots included Greek 7 percents; Norway 5¼ percents and New Zealand 5½ percents. Germans and Italians were generally unchanged to a shade higher in light dealings. Denmark 5½ percents eased a minor fraction with South Africans unchanged to a little higher and Japanese Governments mixed. Chile 3 percents were slightly lower on the week. United States Government obligations continued their recovery movement, largely reflecting short-covering by dealers. Investment quality corporates pushed ahead while speculative rail lines were narrowly mixed. Convertibles eased initially in sympathy with the stock market but later rallied.

New York Dock Dispute

The Federal Government mediators made strenuous efforts last week to persuade the representatives of the New York waterfront employers and dock workers to agree to a resumption of bargaining meetings. Negotiations were broken off on last Friday and the situation showed signs of deteriorating after the union, the International Longshoremen's Association, ordered cargo checking to be halted for the week-end. The employers' group, the New York Shipping Association, alleged that this was a violation of the present contract, and in retaliation, suspended talks on the new pact. The present contract will expire at midnight today and the union has not yet indicated whether it will continue to work if a new pact is not reached.

NAMES AND DATES

The sixteenth annual general meeting of the Bengal Sugar Merchants Association will be held at 2 p.m. on 3rd October, in the meeting room of the Bharat Chamber of Commerce, State Bank Building (Burrabazar Branch), Calcutta 7.

Books

PRINCIPLES OF PRODUCTIVITY

Principles and Practice of Productivity. By R. G. Gokhale. The Millowners Association, Bombay. (Price Rs. 4.50, pages 92+iv.)

There is hardly any word which, in recent years, has been considered more closely synonymous with a nation's progress than productivity. Very often it is confused with the stress on increasing production. This conception engenders the belief that increased productivity means bigger workloads, and greater speed and intensification of work. Some people, particularly workers, are, therefore, allergic to the word productivity, which indicates the arithmetical ratio between the amount produced and the various resources used in the process of production Productivity will be higher when, for a required amount of production, less resources are required or more production results from the same resources at the lowest possible real cost. Mr. Gokhale argues that an increase in productivity does not necessarily involve the installation of new machinery or greater exertion on the part of labour. Steps like better lay-out of plants, keeping machines in working condition and training workers help raise output, without correspondingly increasing the strain on workers. The present monograph highlights the achievements of other countries in the field of productivity and suggests measures for improving productivity in India's cotton textile industry. There is a good bibliography at the end of the book.

LABOUR LEGISLATION

Industrial Law Digest 1955-57. By N. K. Khare and L. B. Bhide. (Published by N. M. Tripathi Private Ltd, Princess Street, Bombay 2. Price Rs. 15, pages 250.)

A perusal of the book suggests the necessity of having uniform labour legislation throughout the country, especially for resolving industrial disputes. The State laws in Bombay, Madhya Pradesh and Uttar Pradesh, although based on the Industrial Disputes Act, are different from it, with the result that even the decisions of the Supreme Court on disputes under the legislation are not equally applicable to them. The authors have added a third volume to the series *Industrial Law Digest* and have brought up to 1957 the decisions of the Supreme Court, High Courts, the Labour Appellate Tribunal (now abolished) and Industrial Tribunals in various States. Decisions on cases arising out of the Employees' Provident Fund Act, Payment of Wages Act and the Industrial Employment Standing Orders Act, have also been given. Employers, trade unions and courts themselves need, in compact and handy form, a summary of these decisions. This is supplied in the book.

BANKING GUIDE

The Banking Almanac, 1958-59. (Published by Indian Business Publications, G.P.O. Box 548, New Delhi. Price Rs. 25, pages 757.)

Although guides of all kinds seem to be increasing in number, it is surprising that there is a dearth of reliable handbooks on banking. Because of its wide coverage, the *Banking Almanac* has become a dependable reference book on Indian and foreign banks. In its latest edition, the publishers have made some notable additions. The expansion of the section on international banks, in particular, makes it more useful than its predecessors.

SUGAR ANNUAL

The Indian Sugar Industry: 1957-58 Annual. Edited by M. P. Gandhi. (Published by M. P. Gandhi and Co., Nanabhay Mansion, Sir Pherozshah Mehta Road, Fort, Bombay. Price Rs. 6, pages 350.)

The recent furore in the Lok Sabha about sugar prices being too high may give this publication much topical interest. The sugar annual compiled by Mr. Gandhi discusses many issues concerning the sugar industry with useful facts and figures.

STATISTICAL GUIDE

Statistical Outline of India. (Published by Tata Industries Private Ltd, Bombay House, Bombay 1. Pages 61.)

This neat little publication contains basic statistics relating to the Indian economy. Embodying latest data derived from official sources, it will prove useful for reference purposes.

FOUNDRY INDUSTRY

Iron and Steel Review, British Foundry Industry Number, Vol. II, No. 12. (Published by R. N. Dhandharia, 10 Chowringhee Road, Calcutta 13. Price Rs. 6, pages 157.)

The *Iron and Steel Review's* special number on the British foundry exhibition contains a number of informative articles which will help Indian business men in gaining an idea as to what equipment they can import from Britain. It also includes a comparative survey of the progress of the foundry industry in India, with particular reference to the raw material shortage. Profusely illustrated with photographs and containing detailed information, the special number provides rich fare for readers.

Stocks and Shares

MANAGING AGENCY SHARES DROP ON OFFICIAL MOVE TO LIMIT REMUNERATION

GILT-EDGED RISE: L. I. C. BUYING OF STATE LOANS REPORTED

Wednesday Evening.

GILT-EDGED securities stole the limelight in the Calcutta Stock Exchange during the past week, although their closing prices were slightly below the best. The 3% Conversion Loan 1946 was the outstanding feature and improved smartly from an opening price of Rs. 74.30 to Rs. 75.05, which was the highest touched since August 1956. It is believed that at last Friday's L.I.C. Investment Committee meeting, fair quantities of the major 4% State Loans maturing in 1971 were purchased at Rs. 100.10 in most cases. A few new loan issues by semi-Government and public authorities are expected shortly. Considering the comfortable conditions prevailing in the money market, they should be assured of success.

Managing agency shares came under selling pressure and some scrip in this group recorded heavy losses, particularly Jardine Henderson and Martin Burn. This followed the statement by Mr. Lal Bahadur Shastri, Central Minister for Commerce and Industry, at the A.I.C.C. meeting in Nayeen Nagar that the Government would shortly issue an order, under the powers vested in it by the Companies Act, to make regulations fixing on a sliding scale the remuneration of managing agents.

Selected preference shares continued to meet with good enquiry, but sellers were scarce.

In the banking section, United Commercial were unchanged at Rs. 61.50, while United Bank of India "D" shares were slightly better at Rs. 4.87.

Coal shares were neglected and prices were marked down fractionally over a wide front.

In cotton textiles, Dunbar provided the outstanding feature, improving from Rs. 198 to Rs. 204, while Kesoram met with profit-taking and were marked back from Rs. 18.37 to Rs. 18.12. Elgin Mills were steady at Rs. 16.62.

Electric supply shares were dull and featureless, with little business passing.

In the engineering group, Indian Iron fluctuated between Rs. 23.40 and Rs. 23.71 to close at Rs. 23.55, which was tonight's settlement rate. Braithwaites continued to meet with selling pressure and were marked down further to Rs. 24.75. In contrast, Guest, Keen, Williams met with renewed enquiry and recovered from Rs. 38.62 to Rs. 39.12. Indian Galvanizing were asked for at the higher rate of Rs. 20.25 and Jessops were marked up to Rs. 30. G. K. Steel receded to Rs. 13.75, as did Textile Machinery to Rs. 23.70.

In the jute section, Kanknarrah provided the outstanding feature and the price spurted from Rs. 105 to Rs. 116. In contrast, Cheviot were marked back from Rs. 215 to Rs. 202. Most other issues closed slightly below last week's level. National met with interested buying today and rose from Rs. 23 to Rs. 24.

In paper, Orient were depressed at Rs. 37.75, while Sirpur were taken at the higher rate of Rs. 14.50, as were Titaghur at Rs. 45.12.

In sugar, the only feature was Samastipur which improved from Rs. 13.50 to Rs. 13.87.

Among miscellaneous industrials, Alkali and Chemical were softer at Rs. 23.75, while Britannia Biscuits were firm at Rs. 26.37 x.d. Clive Row were in demand at the higher rate of Rs. 10.31 and Dunlop Rubber moved up to Rs. 35 on investment buying. Indian Oxygen were quoted at the higher rate of Rs. 29, while India Steamship were dull at Rs. 13.44. Jardine Henderson and Martin Burn were marked down sharply from Rs. 84 to Rs. 75.50 and Rs. 28.25 to Rs. 26.25, respectively; the former, however, recovered today to Rs. 80. Metal Box were taken at the higher rate of Rs. 2.87, as were National Pipes and Tubes at Rs. 18.12. National Tobacco improved from Rs. 16.62 to Rs. 17.62, while Rallis were marked down by Re. 1 to Rs. 74.50. Rohtas Industries moved up further to Rs. 25.87 and Midnapore Zemindary spurted today from Rs. 21.75 to Rs. 23.

In the mining group, Indian Copper were steady at Rs. 4.11 and Metal Corporation moved up from Rs. 12.62 to Rs. 13.12. Karanpura Development reacted at the close to Rs. 14.62.

In the tea section, Gungaram rose from Rs. 104 to Rs. 115, as did Hantapara from Rs. 111 to Rs. 114. Dezpore were Re. 1 better at Rs. 16.

Dhelakhat Tea

The Dhelakhat Tea Company has earned a profit of Rs. 6.68 lakhs for the year ended December 1958. The dividend has been cut from 25 percent to 20 percent. The carry-forward is Rs. 12,783, against Rs. 30,007 brought in. The crop rose from 8,471 maunds to 8,734 maunds but the average sale price fell from Rs. 2.72 to Rs. 2.61 a lb. Estimates for 1959 provide for a crop of 9,000 maunds at a cost of Rs. 2.13 a lb.

Manbhoom Coal

There is a profit of Rs. 55,313 for the Manbhoom Coal Company for the year ended March 1959. Bringing in Rs. 1,34,222 and making other adjustments, there is a balance of Rs. 1,77,273. The dividend of 5 percent is maintained. General reserve is allocated Rs. 50,000, leaving Rs. 97,273 to be

Karanpura Development

After providing Rs. 2,28,409 for taxation, Rs. 17,000 for wealth tax, Rs. 5,379 for depreciation and transferring a sum of Rs. 3,000 to the statutory development rebate reserve, including the sum of Rs. 1,75,861 brought forward from the previous year, there is an available balance of Rs. 3,14,490 for the Karanpura Development Company for the year ended December 1958. In view of the uncertainty about the future of the com- [illegible] the directors recommend that no dividend be paid from the profits of the year under review. The first half of 1959 has seen the continued notification of acquisition of certain areas in the Karanpura coalfields by the Government of India under the Coal Bearing Areas Acquisition Act. In January and March, the areas held in Sayal "A" and "D" and Chordhara, respectively, were affected. For the Chordhara area, the sub-lessees have managed to obtain an interim injunction in the Calcutta High Court under Article 226 of the Constitution of India, restraining the Government from encroaching on their property, on the plea that the area worked by them does in fact constitute a colliery, and cannot, therefore, be termed an "unworked area" under the Act.

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

carried forward. The directors state that in order to increase the production of selected grade coal, for which there is a great demand, an order for another stowing and crushing plant has been placed with the manufacturers. After the installation of this machinery, it is expected that there will be a considerable improvement in working results. Raisings improved from 125,845 tons to 129,736 tons and despatches from 107,733 tons to 122,017 tons.

Swadeshi Cotton Mills

The profit of the Swadeshi Cotton Mills Company, Ltd (Kanpur) has declined to Rs. 6.47 lakhs for the year ended December 1958, without providing for depreciation. It was Rs. 34 lakhs in 1957, after providing for depreciation. Bringing in Rs. 2,64,971, transferring Rs. 1.75 lakhs to wealth tax and making other adjustments, there is Rs. 8,42,961. The preferred ordinary dividend has been cut from 7½ percent to 4 percent and the ordinary dividend has been passed over. The carry-forward amounts to Rs. 2,961. The Kanpur branch made a profit of Rs. 18.15 lakhs and the profit of the Naini mills amounted to Rs. 3.16 lakhs. The vanaspati factory at Shegaon incurred a loss of Rs. 1.73 lakhs. There was a loss of Rs. 12.04 lakhs in the Pondicherry mills.

Kettlewell Bullen

Kettlewell Bullen and Company has made a profit of Rs. 7.95 lakhs for the year ended December 1958. Bringing in Rs. 2,18,107, there is a balance of Rs. 10,13,510. Taxation absorbs Rs. 3.30 lakhs. General reserve is allocated Rs. 50,000. The ordinary dividend has been increased from Rs. 5 to Rs. 6 a share to absorb Rs. 2,40,000, leaving a carry-forward of Rs. 2,05,001.

Peria Karmalai Tea

The Peria Karmalai Tea and Produce Company has made a profit of Rs. 16.44 lakhs for the year ended March 1959. A dividend of 12½ percent has been paid. Taxation reserve is allocated Rs. 6.70 lakhs, development rebate reserve Rs. 58,731 and general reserve Rs. 2 lakhs. The carry-forward amounts to Rs. 1,46,178, against Rs. 1,12,619 brought in. The tea crop declined from 4,906,154 lbs to 4,874,543 lbs, but the average sale price rose from Rs. 1.69 to Rs. 1.78 a lb. A coffee crop of 10 metric tons was produced. Estimates for the current season have been made for a tea crop of 4.7 million lbs at a cost of 148 cents a lb.

Ananda-Bag Tea

The Ananda-Bag Tea Company has increased its profit from Rs. 78,051 to Rs. 2.94 lakhs for the year ended December 1958. The dividend has been doubled to 10 percent. General reserve is allocated Rs. 25,000, leaving a carry-forward of Rs. 45,005. Production rose from 5,533 maunds to 8,424 maunds but the average sale price fell from Rs. 2.52 to Rs. 2.37 a lb.

Parry Confectionery

Parry Confectionery Ltd has declared a dividend of 20 percent for the year ended March 1959. The profit has amounted to Rs. 7.31 lakhs. Taxation absorbs Rs. 4.09 lakhs. Bringing in Rs. 74,706, the available balance is Rs. 3,96,772. Capital reserve absorbs Rs. 10,000 and general reserve Rs. 1½ lakhs, leaving a carry-forward of Rs. 86,772.

Bombay Market

TEXTILES IMPROVE GENERAL UNDERTONE IN SHARES

STEELS AWAIT RETENTION PRICE NEWS

Wednesday Evening.

THE Bombay stock market showed considerable improvement during the past week and prices, especially of cotton mill shares, improved on a broad front. Reports of increased cloth offtake, combined with prospects of bigger imports of foreign cotton, encouraged a fresh buying spree. Latest reports indicated that mills have been doing fairly well. Good corporate news induced support for selected miscellaneous scrip.

Steel shares, however, were stagnant and operators were inclined to wait until the announcement of an increase in retention prices. Tata Steel were quoted at Rs. 162 and Indian Iron were subdued at Rs. 23.52 on discouraging advices from Calcutta interests. Premier Construction improved to Rs. 358.50 on buying by knowledgeable quarters and Tata Locomotive were steady around Rs. 191.50. Alcock Ashdown were available at Rs. 254.50. Motor shares were quietly steady, and Hindustan Motor were transacted at Rs. 12.44. Premier Automobile were indicated at Rs. 130.50.

There were a number of bright features in the cotton mill group, and Bombay Dyeing increased to Rs. 67.90. Century were bought at Rs. 577.50 and Svadeshi were placed higher at Rs. 260. Standard Mills jumped to Rs. 640 on interested buying and Kohinoor were taken at Rs. 304. India United Ordinary were offered at Rs. 10.12 and Apollo were freely sold down to Rs. 1.30.

Miscellaneous shares moved in line with the general pattern. Among cement shares, Associated Cement were transacted at Rs. 152 and Digvijay changed hands at Rs. 146. Sugar shares were steady, and Belapur were bought at Rs. 326. Maharashtra Sugar improved to Rs. 14 on prospects of a fresh capital issue. Phalton were placed at Rs. 175. Among steamship company shares, Scindia Steam recovered to Rs. 17 on short-covering, but Great Eastern Shipping at Rs. 20.20 showed little change. Mining shares were steady on the belief that the outlook for manganese ore exports has improved. Shivrajpur Syndicate were dealt in at Rs. 89.50. National Rayon improved sharply to Rs. 365 on reports of broadening enquiry for the commodity. Bombay Burmah rallied to Rs. 545 on bear-covering. Tata Chemical were steady at Rs. 17.36 and Voltas were bought at Rs. 175.50 on investment account.

Turnover in banking and insurance shares was limited, but prices showed little change. Bank of India were taken at Rs. 113 and Bank of Baroda were dealt in at Rs. 104. New India Assurance met with scattered interest around Rs. 59.50.

Electricity supply company shares received selective support, and Ahmedabad Electric were bought up to Rs. 96.20. Tata Power changed hands at Rs. 1,132.50 and Bombay Suburban were indicated at Rs. 106.

THE WEEK'S TRANSACTIONS

for the future

Under the furrowed brow, his aging eyes see
his child grow to manhood. He gives his all: care
and protection, knowledge culled from experience.
And prepares him to meet the future.

Soon the youth will learn from life.
Soon will come the struggle to achieve.
Soon he will be part of the striving . . .

The striving and effort for a better world,
A world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for **Tomorrow,** when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow... Hindustan Lever serves the home.

COMMONWEALTH COMMERCIAL TRENDS

EXTERNAL RESERVES OF NEW ZEALAND IMPROVE

(FROM A SPECIAL CORRESPONDENT)

ACCORDING to the *Quarterly Survey* issued in July of the Australia and New Zealand Bank, the recent sharp rise in wool prices has been a particularly heartening influence on New Zealand's economy, although it occurred too late to boost materially receipts from the 1958-59 clip. Prices for dairy produce in the U.K. have remained firm and there has been a more dynamic approach to the development of export markets generally. In addition, the volume of private imports has been well below normal, due to import restrictions and lack of internal demand. The result of these factors has been a marked seasonal improvement in the country's overseas reserves. It is felt that caution must still be exercised in the matter of relaxing present restrictive policies, but there has been a definite change for the better compared with a year ago. This comparison also holds in relation to a more recent period, because business activity was at an abnormally low level in New Zealand as the winter months set in. The first six months of 1959 have borne the full brunt of the measures introduced a year or more ago to tide over the balance of payments crisis; however, some degree of stability has now been reached.

There is, according to the survey, mounting evidence that the private sector will need some stimulus if growth is not to be retarded. But while the recent improvement in overseas reserves will, it thinks, justify some relaxation in present restrictive policies, there is still an obvious need to ensure that internal measures do not stimulate the demand for imports to an extent sufficient to upset the delicate balance which has been achieved.

World Wool Price Rises

The most encouraging aspect of the improvement in world commodity prices was, for Australia, the marked upturn in wool prices in the closing months of the season. This upturn led to an increase in Australian export receipts. These, coupled with the strong inflow of capital which rose to high levels in the financial year just closed, have given considerable support to the country's foreign currency reserves in a year when they had been expected to show a marked decline. On the home front, industrial production expanded during most of the financial year just closed. There was some hesitancy at the close of the calendar year, but output in February began to move upwards again, and the average for the first eight months was some 5 percent higher than for the corresponding period a year earlier. Thus there were important increases in the production of basic commodities, notably iron and steel and building and construction materials.

Capital Expenditure in Australia

Capital expenditure has also been well maintained, investment in factory plant and machinery, according to official surveys, continuing at a relatively high level. Estimated expenditure on plant and machinery for the engineering and transport industries for the first half of 1959, for example, showed significant increases over the first half of 1958. These estimates, considers the survey, augur well for the future, and have been supported by a strong recovery in housing reconstruction in the second half of the financial year. The recent recovery in wool prices and improved conditions in overseas countries which constitute the main markets for Australia's exports, should do much to stimulate business activity.

Development of British Guina

Discussions which took place in London between a delegation from British Guiana and Ministers and officials at the Colonial Office on the outline of a development programme for the Colony during the five years beginning 1st January, 1960, were concluded on 7th August. It was agreed that British Guiana needs a continuing programme of development, not only in the period beginning 1st January, 1960, but over a further five years starting in 1965, if land and other assets are to be available for the ever-increasing labour force, and if such obstacles to future development as inadequate communications are to be overcome. It was, therefore, further agreed that, while the British Guiana Government should examine the possibilities of finding finance for a maximum programme of $135 million (£28 million) in the course of the five years, the finance so far foreseeable would justify the British Guiana Government embarking immediately on a programme of $110 million (£23 million). The new Colonial Development and Welfare allocation of £4 million recently approved for the Colony, together with an unspent balance from the previous allocation, would provide some £4.6 million ($22 million) towards the cost of this programme. In addition, should the need arise, the British Government would be willing at the appropriate time to give approval within the terms of the Colonial Development and Welfare Act 1959 for Exchequer loans up to £4 million ($19.2 million) in the period 1960-62, and to consider possible further loans up to £4 million ($19.2 million) in 1963-64. It was agreed that the two Governments would review the position not later than 1962.

General agreement was reached between the two Governments that within the programme of $110 million, priority must be given to major development schemes which would make maximum contributions to the economy of the Colony, such as drainage and irrigation works. It was further agreed that, in the proposed review, it should be considered whether the current programme could be expanded to include other less urgent schemes. Forecasts of revenue and expenditure would be kept under continuous review as the economy developed, and the possibility of obtaining further loans from outside sources, and of getting more contributions from local revenue, would be investigated.

U.K. Aid for Colonial Development

During July, 91 grants and loans for development in British Overseas territories under the Colonial Development and Welfare Act were made, including 19 for research schemes. The total value was £6,230,817. The main part of the July grants and loans went to Malta, with £2,666,609 of which £2,344,600 was the first Colonial Development and Welfare grant for the new deep-water wharf in Grand Harbour, Valetta. Other sums included £125,000 for tourist publicity and £120,000 for beach improvement. Schemes in East Africa received £2,555,119. These included £1,751,250 for the 1959-1962 road improvement programme in Uganda, and supplementary grants of £210,058 and £166,575 for the Swynnerton plan for African agriculture in Kenya. Northern Nigeria received £341,500 for its health service, and British Honduras £157,685 for forestry development.

Work began on Malta's new deep-water wharf —which is getting the lion's share of the July grants—in December 1958. The wharf is designed to modernise the island's port facilities and to help create suitable conditions for the growth of industry. The scheme is expected to be completed by September 1960, and provides for two quays, the larger of which will accommodate four vessels of 3,500 tons, with a depth of water sufficient for ships of up to 10,000 tons gross. There will also be a silo for storing 12,500 tons of grain—representing three months' food supply—together with the necessary bulk-handling equipment. The whole scheme, estimate to cost some £2½ million, is being financed by capital assistance from the U.K.

Economic Progress in Rhodesia

The economic situation in the Federation of Rhodesia and Nyasaland is discussed in the latest issue of Barclays Bank D.C.O.'s *Overseas Review*. The condition of the Rhodesian economy is at the moment "promising", according to the *Review*. But it adds that the Federation faces difficult problems, and expresses the hope that any solutions which are found will not retard the development of the economy. The *Review* continues that if the standard of living, and particularly that of the African community, is to rise, it is essential that such progress should take place without interruption. The African population can be expected to double in about 30 years; in Southern Rhodesia, it is likely to double in about 25 years. These figures will, therefore, have to be matched by a continuous growth in production. The economy is still, however, according to the *Review*, making remarkable progress, although it has had to "change gear and to move at a slower rate". Inspite of the Government's credit-squeeze, manufacturing output increased by between 30 percent and 35 percent in the period December 1956 to December 1958. This expansion is considered to derive from the high level of investment in the past. Although capital investment diminished in 1958, it still continued at a rate which compares favourably with most other countries. In 1958, investment represented 36 percent of the country's gross national product, much above the comparable figure for the U.K. The *Review* points out that the heavy fall in the price of copper from £436 to £180 a ton between 1956 and 1958, could have had crippling effects.

South African Trade Balance Better

During the first seven months of this year, South Africa had a favourable trade balance with the rest of the world of about £94 million, compared with about £24 million in the same period of 1958. This result was produced mainly by greatly reduced imports and by an improvement in exports. Statistics released by the Commissioner of Customs and Excise show that imports into South Africa in the first seven months of this year were £64½ million lower than in the same period a year ago, while the Union's exports increased by more than £7 million over the figure for 1958. Total gold sales in the first seven months of this year amounted to £139.8 million, compared with £140.9 million a year ago. Materials prescribed under the Atomic Energy Act provided the single largest contribution to the export total. Wool was the next most valuable export, with diamonds third. Some exports, namely, maize, cured fish and mining machinery, registered a drop compared with 1958.

Prospects for New Zealand Exports

Preliminary estimates suggest that New Zealand's income from exports for 1959 will be about £300 million, a figure greatly in excess of previous records. Coupled with a very low level of expenditure on private imports, this will result in a sizeable balance in the overseas trade account. Mr. Nordmeyer, the Minister of Finance, has expressed hopes of a likely surplus on overseas trade account this year of some £65 million, compared with one of £13 million—after overseas borrowing of £44 million—in 1958, and a deficit in 1957 of £32 million.

ew Delhi

REVISION OF LAW ON MANAGING AGENCY TERMS BEING CONSIDERED

TENTATIVE COAL PRODUCTION TARGET FOR THIRD PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

ENQUIRIES about the Central Commerce and Industry Minister, Mr. Lal Bahadur Shastri's nnouncement relating to the tenure and remunera-on of *managing agents* show that the company aw has prescribed a ceiling of 10 percent of profits s their remuneration and ten years as their tenure f office. But, according to Mr. Shastri, it is proosed to revise these as follows: on a profit of ls. 1 crore, the maximum commission permissible or managing agents will be 10 percent of the first ls. 10 lakhs, 9 percent of the second Rs. 10 lakhs, percent of the third Rs. 10 lakhs, 7 percent of the ourth Rs. 10 lakhs, 6 percent of the fifth. Rs. 10 akhs, 5½ percent of the next Rs. 25 lakhs and 5 ercent of the remaining Rs. 25 lakhs. There will e a flat rate of 4 percent of the profits over Rs. 1 rore. The managing agents will ordinarily be sked to renew their contract every five years, xcept in certain specified cases where ten years will be permitted.

Lall Mission to W. Europe

The mission which Mr. K. B. Lall is leading to west European countries and, in particular, to hose in the Common Market, left on 27th September. It is expected to return by 31st October. At the special request of the Italian Government, the mission is leaving India three days earlier than was originally scheduled, as the foreign trade officials of Italy have to go to the United States on 1st October. The Common Market countries are Italy, France, Belgium, Holland, Luxemburg and West Germany. The Lall mission will open its talks in Italy, and will thereafter visit France, Belgium, and West Germany. In addition, it will visit Switzerland, a prominent member of the proposed Free Trade Area, the other members of which will be the United Kingdom, Norway, Sweden, Denmark, Austria and Portugal. Time permitting, the delegation will also visit Spain and Greece.

The Commonwealth Finance Ministers' conference held in London last week was informed that the Free Trade Area will begin functioning from 1st July, 1960, when its seven members will reduce their tariffs by 20 percent. The Common Market countries have already reduced their tariffs by 20 percent. Although the main object of the Lall mission will be to persuade the countries of the two groups to buy more from India, it will also study the impact of their schemes on India's trade—that is, whether their creation will lead to an increase or decrease in India's traditional foreign trade. Its report will, therefore, be awaited with great interest because it will form the basis of India's trade policy with western Europe.

India's balance of trade with the two trade blocs (in lakhs of rupees) is as follows:

	1954	1955	1956	1957	1958
Common Market Countries:					
Italy:					
Imports	22,33	16,65	25,74	30,39	25,57

Balance of trade	—75,30	—72,15	—144,49	—204,66	—143,01

Coal Council Meeting

An assessment of the progress of coal production under the second plan was made by the Coal Council of India here last week. The Council discussed the fieldwise distribution of the provisional target of coal production for the third plan, which was fixed tentatively at 110 million tons for purposes of preparatory work. The report of the Production and Preparatory Committee on the requirements of mining machinery and equipment during the third plan period was considered by the Council. The latter was told that the total production of coal during the second five year plan was now placed at 55 million tons, as against the target of 60 million tons. This is based on the assumption that the additional production from the Singareni Collieries is 1.1 million tons and that from the private sector 10 million tons. The National Coal Development Corporation had placed additional production for new projects in the public sector at 8.10 million tons: 2.10 million tons in Madhya Pradesh and 6 million tons in Bihar. This target, it is expected, will fall short by 4.25 million tons to 3.85 million tons. The target of additional production for the existing collieries was fixed at 2.52 million tons. Here the shortfall may be of the order of 110,000 tons. It will thus be seen that the third plan target of 110 million tons will amount to a doubling of the second plan production. The original idea that all the additional production in the third plan period should be in the public sector may have to be modified. The private sector may also be called upon to make its contribution towards reaching the target of 110 million tons.

According to reports, the railways are planning to introduce diesel locomotives even for the haulage of coal. Whether this plan will be approved by the Government is anybody's guess. First, it will involve considerable expenditure, capital and recurring, in foreign exchange. As the manufacture in India of diesel engines has been left to private enterprise, the decision, if taken, may prove a damper to locomotive manufacture in the public sector, the plan for which has recently been expanded. Meanwhile, a temporary shortage of coal, due to adjustments in consumption, is apprehended. The steel industry, which needs the highest quality of coal, may be particularly affected. With the increased demand for coal for steel-making, the Government has directed the principal coal consumers, such as the railways, to switch over to "second quality" coal. Even so, the position in 1960 may not be very comfortable, although there is unlikely to be an acute shortage of the commodity.

Possible Liabilities for Russian Plant

The Government of India has decided to accept the liabilities for patent rights infringement, if any, in the Russian-supplied plant and equipment for the proposed Barauni refinery. The agreement was signed early this week. Russia has agreed to supply equipment worth more than Rs. 15 crores, repayable in 12 equal instalments. Payments will begin 12 months after the completion of the supply of equipment. The credit will carry 2½ percent interest. The Government has already taken over the liability concerning the patent rights infringement for the dyestuffs and pharmaceutical intermediates project. The agreement for the supply of equipment and plant on credit for it was signed in Moscow last May. Meanwhile, according to reports, borings at the site of the Gauhati refinery have "disclosed the occurrence of peat at depths varying between 15 feet and 30 feet. At some points, the peat layer is 60 feet thick. This will necessitate a certain readjustment of the ground plan." The Gauhati site was selected by the Minister for Oil, Mr. K. D. Malaviya, against the considered advice of the Rumanian experts.

Birla Aluminium Project

Kaiser Aluminium and Birla Brothers have promoted Hindustan Aluminium Corporation Ltd as a joint venture to construct and operate a 20,000-metric-ton aluminium plant in Rihand, Uttar Pradesh. The Corporation represents the largest single U.S. private investment to date in a joint venture with an Indian firm. The capital cost of the project is estimated at approximately $30 million. Hindustan Aluminium Corporation has applied to the U.S. Export-Import Bank for long-term dollar loans totalling $15.75 million. The ordinary shares in Hindustan Aluminium will be held by Kaiser Aluminium, the Birla interests and the Indian public. Kaiser Aluminium's interest will be approximately 27 percent, and the Indian share approximately 73 percent. The preference capital of the Corporation will be issued and subscribed in India.

Expanding State Steel Plant Capacity

The Russians, the German combine of Krupps-Demag and the British consortium, the Indian Steelworks Construction Company, have submitted at the instance of the Government of India, preliminary project reports for the expansion of the three steel plants in the public sector. Bhilai is to double its capacity to 2 million tons, Rourkela by 800,000 tons to 1.8 million tons, and Durgapur by 600,000 tons to 1.6 million tons. The doubling of Bhilai has now become a certainty, thanks to the Russian credit offer of Rs. 180 crores for the third five year plan. Indications are not wanting that credit to expand the other two plants will also be forthcoming from the U.K. and West Germany. It is the Government's avowed intention to undertake expansion through its own agency. It is not clear whether this decision will apply to all the three plants or only to the Rourkela and Durgapur plants put up by West Germany and the British consortium, respectively. As it is, there is some criticism about the Government paying the highest salaries to the Russian technicians and the lowest to the British technicians. While the Russians are praised for advancing credit on a very low rate of interest, the high salaries paid to the Russians are generally not even mentioned. Some rethinking is being done over the size of steel plants. The Japanese, it is pointed out, are able to meet a variety of demands for steel goods from mills having a small capacity of 600,000 tons. There idle capacity is usually small. The proposed fourth steel plant in Bokaro may be of 600,000-ton capacity, capable of being expanded up to 1 million tons.

Industrial Finance Corporation

The gross income of the Industrial Finance Corporation of India, during the year ended 30th June, 1959, rose to Rs. 203.38 lakhs from Rs. 154.91 lakhs in the previous year. The net profit rose to Rs. 35.37 lakhs from Rs. 28.20 lakhs. Loans worth Rs. 3.79 crores were sanctioned to 19 applicants from six industries, bringing the total amount of loans sanctioned to 190 concerns since the inception of the I.F.C. in 1948 to Rs. 66.69 crores. The Corporation liberally sanctioned interim loans aggregating Rs. 4.25 crores during the year under report. The third series of the Corporation's bonds issued in November 1958, which were thrown open to the public for the first time, were "heavily oversubscribed on the opening day, the total amount of subscriptions being over Rs. 8 crores, as against the sum of Rs. 4 crores for which the issue was made." These are the highlights of the eleventh annual report of the Corporation for the year ended 30th June, 1959. During this year, the Corporation repaid Rs. 5 crores to the Central Government, thereby reducing its borrowings from the Government to Rs. 10 crores. A sum of Rs. 3 crores was, however, subsequently drawn from the Central Government, raising the outstanding loans to Rs. 13 crores. These borrowings continued to carry interest at 4½ percent a year.

Development of Ports

The problems of development of port capacity to meet the requirements of overseas and coastal trade in the third five year plan, were discussed by the National Harbour Board at its meeting in Calcutta on 29th and 30th September. It reviewed the progress of the development schemes for the major ports of Calcutta, Bombay, Madras, Cochin, Visakhapatnam and Kandla in the second five year plan. The total cost of these schemes, it is estimated, will be Rs. 98.89 crores, of which Rs. 21.21 crores is to be met from the ports' own resources, Rs. 20.67 crores from the World Bank loan for Calcutta and Madras ports, and Rs. 37.60 crores from Central assistance, leaving a gap of Rs. 19.41 crores between the proposed outlay and resources. Some of the schemes are, therefore, likely to be carried over to the third plan. The meeting also discussed the schemes relating to minor ports for which a total provision of nearly Rs. 5.18 crores has been made under the second plan. The issues raised in the report of the Ship Repair Committee, which recommended the systematic development of ship repair facilities in the country, were also considered by the Board. Other subjects were the development of a subsidiary port to Calcutta at Haldia and hydrographic surveys of major and minor ports. The Board considered the feasibility of setting up a port development fund on the lines of the Central Road Fund for the purpose of financing the development schemes relating to minor ports.

The schemes to be considered for the third five year plan for major ports include the purchase of more dredging equipment, development of a sub-

sidiary port to Calcutta, acquisition of floating craft, development of ship repair facilities, setting up of additional coal and ore yards, procurement of cargo handling equipment and housing schemes. As far as Haldia is concerned, there are two sand banks, namely, Beaumont Cut and Auckland Bar, which even at present permit 30 feet draught for six months a year and 25 feet draught for the rest of the year. Experiments will shortly start with Beaumont Cut. To gain experience, food ships will be unloaded at Haldia this winter, the grain being brought to Calcutta in barges. As far as major ports are concerned, it is now realised that they cannot function economically merely on the export of some ore. The case of Kandla illustrates the point. It largely depends on iron ore exports for its income, which are fast dwindling because of increased railway freight charges to Kandla.

U.S. Aid to India

The following are the details of the U.S. economic and technical assistance to India up to August 1959:

	Dollars (millions)	Rupees (crores)
A. United States Government Programmes:		
1. Technical and Economic Assistance under the Indo-U.S. programme (T.C.M.)	446.0	211.9
(This includes the $20 million loan to the Orissa iron ore project from the Asian Economic Development Fund.)		
2. Agricultural Commodities under Title 1 of P.L. 480	658.2	312.6
(a) Agreement signed on 29th August, 1956 $362.4		
(b) Agreement signed on 24th December, 1958 $ 57.0		
(c) Agreement signed on 26th September, 1958 $238.8		
3. Development Loan Fund	195.9	92.6

Total	1,749.3	830.9

London

COMMONWEALTH CONFERENCE DISCUSSES EUROPEAN TRADING ARRANGEMENTS

ENDING OF DOLLAR DISCRIMINATION URGED

(FROM OUR LONDON CORRESPONDENT)

THE Commonwealth Finance Ministers ended their meetings in London on Saturday, and since these discussions were aimed at exchanging views rather than negotiating firm agreements, quite a large ground was covered within a short space of time. More than one delegate emphasised that the real value of the discussions lay in close consultation. The basis of mutual confidence is expected to prove of great practical value as the Ministers attend the meetings of the World Bank in Washington. The main item on the agenda was consideration of European trading arrangements. The delegates expressed understanding of Britain's policy, which was to join the "Outer Seven" free trade group and to continue to seek an arrangement between this group and the six Common Market countries. At the same time, the Commonwealth Ministers were anxious that the exports of their countries to Europe should not be impaired. Mr. Heathcoat Amory, Chancellor of the Exchequer, undertook to keep them fully informed of developments and assured them that the overall expansion of trade would be the guiding principle behind any agreements that might be made.

A review of the balance of payments prospects for the sterling area led to the conclusion that the outlook was encouraging. Australia, South Africa and Ghana were, in particular, optimistic about their own immediate future. Some Ministers, notably those representing Rhodesia, Pakistan and Ceylon, expressed concern about commodity prices, which were still not strong enough in their opinion. There was also some consideration of possibilities for mobilising resources for Commonwealth economic development, and unanimous agreement that there should be further discussion on the proposed International Development Association.

The Canadian delegation put forward a strong plea for the scrapping of all remaining dollar discriminations. Mr. Amory agreed that this was the ultimate objective, and pointed out that Britain had stated this last year at the Montreal conference. Mr. Fleming, the Canadian Minister of Finance, said that he recognised that there had been moves by Britain towards this goal, but he pressed the point that the ultimate dismantling of all restrictions should and could be hastened. It is understood that the Canadian belief is that in view of the new strength of the economies of Britain and western Europe, and the generally favourable outlook, the ending of dollar discriminations is something that could be brought about in months rather than years.

Recent Trade Trends

Detailed import and export figures for August, just released by the Board of Trade, confirm that the trend of overseas trade is still favourable. In recent months, exports have been running about 6 percent higher but imports only 5 percent above last year's level, allowing for the 1958 dock strike. Holiday influences are the feature of the August figures. Exports fell by £32 million with motor-vehicles exports particularly affected by industrial holidays. Imports declined by £48 million, with foodstuffs showing the normal seasonal contraction.

Exports have been rising since the beginning of April; the monthly rate for the period, April to August, is about 5½ percent above that for the period, January to March. As the U.K. Board of Trade points out, the increase has been mainly in engineering products, where exports have risen by 8 percent, with motor-cars accounting for nearly half of the rise. Between the two periods, shipments of motor-cars rose by no less than 27 percent, although their exports to North America were seasonally down in July and August. In the engineering group, there has been a good increase this year in exports of machinery (other than electric), including aircraft engines, tractors, office machinery, machine tools, mechanical handling equipment, excavating and earth-moving machinery, and mining machinery. There was a decline in exports of textile machinery. Other groups in which exports increased between the first quarter of this year and the more recent period were electrical machinery and appliances and scientific instruments. Exports of iron and steel rose by 11 percent, while exports of wool tops rose by 24 percent in value and 19 percent in quantity. On the import side, there has been a steady increase this year both in basic materials and other industrial materials. Arrivals of many engineering products were also higher. Interesting items are rises of 41 percent in imports of iron and steel (mainly sheets), of 45 percent in aircraft, and of 14 percent in refined petroleum. Altogether imports so far this year have been 5 percent larger than a year earlier and exports 3 percent higher.

The visible trade deficit has been running this year at an average rate of £40 million, and the U.K. Board of Trade states that it shows no tendency to increase further. Britain is now seeing the first effects of the recovery in world commodity prices. In August, import prices rose slightly while export prices remained stable, so the of trade showed a further slight move i Britain. Import prices edged upwards w any corresponding rise in export prices. result, the import prices index in August r 91 percent of the export figure. This mear Britain's terms of trade have deteriorated by 3¼ percent since last April, and are rath favourable now than the average of 1958.

Basic Material Prices Up

The basic materials wholesale price inde equals 100) rose by 0.9 percent, from 101 i to 101.9 in August, states the *Board of Trade nal*. This was caused mainly by increases percent in the price of raw rubber, and 8 p in raw wool. Prices of copper, linseed oil an also increased appreciably. Bacon-factor prices again rose, but they were offset by prices for home-grown grain and refined veg oils. Other items showing a decrease in pri raw cotton, which fell by 0.7 percent, cotton l ground nuts, and palm oil. The wholesale index of home market sales of all manufac products was provisionally unchanged in A

Rising Bank Advances

A fresh rise of nearly £180 million in adv is shown in the latest quarterly analysis ma to August, issued by the British Bankers As tion. The August total of £2,859 million, a r compares with £2,679 million for May. I preceding quarter, the increase reached £21 lion and between November 1958 and Februa this year, there was a rise of £245 million, again the main recipients of heavier lendin banks are "personal and professional" borr whose loans have risen during the quarter b million to £543 million; hire-purchase finance panies where the total is sharply higher at million, against £82 million; retail trade, up £255 million to £268 million; agriculture, £2 lion higher at £301 million; and "other finan £27 million higher at £251 million.

Oil Consumption Rises

The consumption of oil and oil products i United Kingdom in the first six months of this showed an increase of 18.1 percent over the parative period of last year. According to fig issued by the Petroleum Information Burea behalf of the U.K. Petroleum Industry Adv Committee, total consumption in the first ha this year amounted to 17,864,856 tons, which some 2½ million tons more than last year. W this general increase, there are some impor changes in the pattern of use of oil products. oil continues to be used more and more wi and consumption in the first six months of this increased by 36.6 percent. Increased use of oi generating electricity contributes to this. diesel oil which is also used for heating, par larly for domestic central heating installat showed an increase of 4.7 percent.

The market for petrol as a motor fuel is fe the effect of the number of commercial veh which now have diesel engines, and, therefore quire diesel fuel. Deliveries of petrol to com cial users declined by about 4 percent in the half of the year, and total deliveries of stand grade petrols also show a decline. So far this been more than made up for by the increas private motoring and a remarkable increase (under 15 percent) in the demand for premium rols. As diesel engines become more common, total market for petrol in Britain may begi shrink. The diesel engine has also affected market for vaporising oil, particularly for agr tural tractors. The latter using vaporising oil rapidly being replaced by diesel-engined vehi and the demand for this grade of oil decl sharply by 7.6 percent in the first half of the y Paraffin for domestic heating continues to sho rising trend of sales, and recorded an increas 10.4 percent for the half-year. The exceptio summer may affect the figures for the second of the year.

Brevities

Pakistani citizens living in Glasgow have sented three cheques for £3,500 to Lieutenant-G ral Muhammed Yousuf, the Pakistan High C missioner, for the purchase of three mobile disp saries for the Pakistani Government.

There was a slight setback in exports of Brita aircraft industry in August. They totalled £12 million, against £14.5 million in August last y For the first eight months of this year, howe at £111,644 million they were still 8 percent up 1958. Aero-engine sales were £6.14 million August and continue to set up new records e month.

Jute

RAIN HINDERS TRANSPORT OF JUTE TO MILLS

EXCESSIVE MOISTURE IN FIBRE ARRIVALS CAUSING ANXIETY

THE recent inclement weather in Calcutta and its surrounding areas has seriously upset plans for transporting jute to mills. Imports in many agencies have been good, but the problem of drying the fibre is becoming serious. The moisture question has been worrying mills this year, following the increase in the moisture content allowed by the current East India Jute and Hessian Exchange contract, and they are liable to be less tolerant of wet jute. They are entitled under their contracts to get jute not only in a storable condition but in such a condition that it will not suffer a serious loss in weight during storage. The increase in the moisture content to 4 percent before rejection under the present contract is not likely to improve matters. It is generally admitted that the allowance buyers receive for taking jute containing excess moisture does not adequately compensate them for what they lose in weight through having to store damp jute. In a season such as this, when mill stocks of jute are high due to enforced purchases under Government pressure, the period of storage is liable to be greater. Assuming that the Indian mills consume 6 million bales a year, a loss of only 1 percent means a loss equal to 60,000 bales of jute, or at present prices, something over Rs. 55 lakhs in a year, which the mills can ill afford.

From time to time, various methods of checking the practice of tendering damp jute have been suggested. More than once, it has been proposed that it should be made a criminal offence to water jute or to offer wet fibre for sale, in the same manner as it is to adulterate food or add excessive water to milk. Apart from the legal difficulties, however, no approved and fool-proof method has been devised, which would be acceptable to the trade and the prosecuting authorities, of determining with sufficient accuracy the true moisture content of jute. Without this, the possibility of making it a criminal offence falls. It behoves the trade, therefore, to take stock of the position and see if anything can be done to bring about a more satisfactory state of affairs.

I.J.M.A. Delegation to U.S.A. and Canada

A delegation of the Indian Jute Mills Association is to visit the United States and Canada in October. It will consist of the I.J.M.A. chairman, Mr. Kenneth E. Tösh, and vice-chairman, Mr. D. P. Goenka. The main purpose of the visit is to continue the policy of maintaining close contact with jute goods importers and consumers in these countries, to study the present market position in the light of current economic trends, to examine the success of the promotional activities of the I.J.M.A. in North America, and to consider plans for the future form and scope of these activities. The delegation will also review the progress made with the research into new uses for jute goods, particularly in industry, and will make recommendations for further development.

It will make wide contacts with representative burlap organisations, study market conditions at close hand and confer with Indian and U.S. Government commercial representatives on research and promotional activities. Arrangements have been made for visits to important consuming centres on the west coast. In New York, the meeting of the Textile Bag Manufacturers Association will be attended. The delegation will then travel to Montreal to examine the market prospects in Canada. This is to be followed by visits to Chicago and St. Louis. Discussions will also be held with U.S. Government agencies and Indian Government trade representatives on various development projects. On the way home, the delegation will spend some time in the United Kingdom, where discussions are to be held with the U.K. Jute Controller and officials of the Board of Trade on common problems and the prospects for increasing trade with that country. While in the U.K., the delegation will meet representatives of the larger U.K. consumers and of various important overseas consumers with buying agencies in London.

Little Interest in Gunnies

The gunny market during the past week has been devoid of interest. Overseas enquiries for manufactured goods, apart from renewed interest from Egypt, have been meagre. The Egyptian order was reported to be about 12,000 bales, following which prices firmed up considerably. The size of the order, however, did not warrant such large fluctuations as took place. Operators in the speculative market appeared to be buying in anticipation of further business with the same buyer, and also on rumours of a Government tender for sacking. There was profit-taking on the rise, which caused a temporary setback, but continued speculative activity ensured the maintenance of sacking rates. Enquiries for specialities continue to come forward, but many of them never materialise. It is not known whether that is due to the price quoted or for some other reason.

Reports from the jute-growing areas show a general improvement. Arrivals at the receiving centres have increased, but the main difficulty now is drying the jute, most of which is very wet. This is not altogether the fault of the farmer or the middleman, as there has been no prolonged period of sunshine. Arrivals in Sheoraphuli increased over the week-end, when imports totalled over 3,000 maunds. Sellers are reluctant to offer mesta meantime as, according to reports, the quality of mesta under seed in all areas is considerably poorer this season.

Raw Jute Exports

It is reported that exports of raw jute from India in the first half of September 1959 amounted to 8,325 bales. Of this figure, 3,200 bales were sent to China. Exports of raw jute this year, until 15th September, now total 104,393 bales.

Jute Purchases

Once again, the changing pattern of jute buying has been highlighted by reports of malpractices among agents purchasing supplies for certain mill groups. So varied and numerous are the rumours that it is difficult to determine the true state of affairs. The situation, however, is being freely discussed by the trade. Mills will sometimes never know what goes on behind the scenes, even from their accredited agents, many of whom have become rather prosperous in recent years. Perhaps it is for this reason that this year office representatives have been making more trips upcountry to see for themselves than ever before.

THE JUTE MARKETS

There was pronounced activity in sacking in the futures market during the past week and wide fluctuations took place. Hessians ruled firm in sympathy, but price variations were small. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 23rd September to 29th September, were as follows:

	Hessians 40in. 10oz. November		Sacking B Twills November	Raw Jute December	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos
Opening	40.02	43.75	98.30	22.92	61.41
Highest	40.34	44.12	101.35	23.62	63.29
Lowest	39.98	43.71	98.10	22.92	61.41
Closing	40.26	44.04	100.60	23.50	62.96

Manufactured Goods: There was little interest in the jute goods market at the opening last Thursday and price movements were mainly influenced by speculative activity in the futures market. Quotations were based on B Twills at Rs. 99.50 for September shipment, this being a premium of Rs. 2 over the January-March position. Hessians were unchanged in the near positions, 40in. 10oz. being quoted at Rs. 40 for ready shipment. The forward section, however, was weak in the absence of overseas interest, and dropped by 40nP to Rs. 39.20. Prices moved through narrow limits during the day, and similar conditions prevailed at the opening on Friday. Towards the afternoon, however, reports of enquiries from Egypt and rumours of a Government tender caused a sharp rise in sacking prices. Buying interest also developed in the futures market and by Saturday B Twill rates had advanced by 60nP. Hessians were steady in sympathy but no alteration in the quoted rates was reported. Over the week-end, prices advanced rapidly, following confirmation of the business done in hessians, B Twills and Sugar Twills. Opening B Twill quotations on Monday morning were Rs. 100.75, and for 40in. 10oz. hessians Rs. 40.15. Activity in the futures market increased during the day and heavy goods rates soared. Profit-taking at the higher levels caused a slight reaction, but this was soon overcome. On Tuesday morning, B Twills were Rs. 1.10 higher than the previous day's opening. At this stage, the market was completely dominated by speculative activity, which succeeded in pushing up rates a further 75nP during the day. Hessians were steady in sympathy but price movements were less pronounced.

Opening quotations on Wednesday morning were as follows:

	Sept.	Oct.	Oct.-Dec.	Jan.-March
40in. 8oz.	33.85 (36.89)	33.45 (36.46)	33.15 (36.13)	32.10 (34.99)
40in. 10oz.	40.40 (44.04)	40.60 (44.25)	40.55 (44.20)	40.10 (43.71)
B Twills	102.60	102.35	101.50	99.75
Heavy Cees (Plain)	104.75	103.00	101.60	99.75
A Twills	121.50	121.00	120.25	118.75
Liverpools	114.00	113.50	112.75	111.00
Cornsacks	102.25	102.35	102.50	100.75

Raw Jute: Calcutta mills took more interest in the fibre market, and purchases were recorded daily totalling about 200,000 maunds. A wide range of varieties were covered, and sellers increased their offers with the improvement in upcountry imports. Rates opened on the basis of Assam Bottoms at Rs. 22.75, but during the course of the week advanced to Rs. 23. This was more in sympathy with the goods market than the effect of business done, and sellers were not prepared to discount to any great extent. Imports into Cossipore again showed an improvement and wagon arrivals were 975. This was well up to the average of previous years, and resulted in brisk activity among sellers and mill agents. The movement of jute from Cossipore has been hampered by the rainy conditions prevailing over the past few days. The drying out of jute has also been held up for the same reason. Rates upcountry are now on a parity with Calcutta prices.

Business was reported in Assam jute at Rs. 23 and Northern at Rs. 22 to Rs. 22.25. Desal white fetched Rs. 21 to Rs. 21.25 and jungli white Rs. 20 to Rs. 20.50. Selected Murshidabad Tossa passed at Rs. 22.75 to Rs. 23. Small lots of Daissee were done at Rs. 23.50 and Karimpore Tossa at Rs. 23.25 to Rs. 23.50. In the mesta section, Daissee mesta was done at Rs. 21.37 to Rs. 21.50 and Murshidabad mesta at Rs. 21.25.

At the close, the market was steady, and opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
New Crop:			
Assam	23.00	61.64	Oct.-Nov.
Northern	22.75	59.63	,,
Purnea Desal	21.75	58.29	,,
Daissee (selected)	24.25	64.99	,,
Assam Tossa	24.00	65.66	,,
Northern (ex Calcutta)	22.25	59.63	,,
Mesta:			
Assam-Northern	21.75	58.29	,,
Desal	21.75	58.29	,,
Daissee	21.75	58.29	,,
Jungli	21.00	56.28	,,

THE PAKISTANI JUTE MARKETS

QUIET TREND IN FIBRE

(FROM A CORRESPONDENT)

THE raw jute market in Narayanganj recently remained dull in general, displaying a quiet but steady trend. Trading was negligible as buyers chose to stay out. Inter-baler business could not lend support as the transactions were negligible, with the result that for most pucca grades of long jute, prices weakened by Rs. 2 to Rs. 3 a bale but still the local quotations were higher than the overseas equivalents. Loose jute arrivals in Narayanganj are reported to be about 25,000 maunds to 30,000 maunds. The quality of jute is said to be poor. Australia and the United States made some purchases while normal business was done with the U.K. and the Continent. Some interest was lately shown in cuttings on the basis of Rs. 22 a bale for N.C.s. The total of Export Price Control forms registered with the State Bank of Pakistan from 1st July to 31st August, 1959, with comparative figures for the last season were 8,02,776 bales and 9,30,769 bales, respectively.

THE FOREIGN JUTE MARKETS

FIBRE PRICES UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

THE Dundee jute markets are quite featureless at present, and it is the same story every day—raw jute prices unchanged and Calcutta goods varying only slightly from day to day. Prices for the fibre have remained unchanged for so long that buyers and sellers are not looking for any change. There is really nothing to indicate that shippers will change their quotations for some time at least.

Dealers do not think that there will be any shortage of raw jute: there is likely to be a good yield in Pakistan and also in India, probably more than sufficient to meet the requirements of the industry. Dundee spinners are carrying considerable stocks of raw jute and they are well bought for this season, so they have no incentive to purchase further at the moment. Furthermore, the volume of fresh business in jute yarns is small. In the second week of July, manufacturers placed orders for large quantities of jute yarns with spinners because of fears that prices might be raised. There has been no change in prices of yarns, and there are no indications that any will be made, so consumers of yarns are now confining their purchases to small lots for early delivery. Raw jute quotations are lowest yet at £106 for Mill Firsts, £89 for Mill Lightnings, £79 for Mill Hearts and £65 for Grade Hearts, with good marks of Daissee-2/3 from £93 and Grade from £85, and Grade Tossa-2/3 from £104 and fours from £93, all c.i.f., U.K. September-October.

The Calcutta goods market showed little or no change during the past week. Sellers were quoting 60s 6d for 40in. 10oz. hessians for shipment, September to December, and 47s 3d for 7½oz. September, 46s 9d October, 46s 3d November and 45s 6d December, with B Twills at 150s for September and October, 148s 9d November and 147s 9d December, all f.o.b., Calcutta.

Dundee manufacturers are feeling the effects of the reduction recently made in the prices for the "depressed range" of imported hessians on spot in the U.K. They say they cannot compete now and they must refuse any business offered to them in 40in. 10oz. and 36in. and 45in. hessians. The Conservative Government is not popular in Dundee because it has kept the "mark-up" at a low level for imported hessians.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) rose by 0.7 percent to 116.9 during the week ended 12th September, 1959, compared with 116.1 (revised) for the previous week. The index was lower by 0.9 percent when compared with the corresponding week of the previous month but stood at the same level as in the corresponding week of last year. The index for Food Articles advanced by 1.3 percent to 120.4, against 118.8 (revised) for the earlier week due to a rise in the prices of oranges (+11%), salt (+9%), urad in Bombay (+7%), rice in Contai, bajra in Anakapalli and milk (+6% each), maize in Dohad, gram, arhar in Madras, gur in Patna, tea and black pepper (+5% each), jowar, masur, onions, groundnut oil, mustard oil, eggs, turmeric and betelnuts (+2% each) and wheat, ragi, gingelly oil, coconut oil and chillies (+1% each), although the prices of urad in Batala (−9%), rice in Dumka, maize in Khagaria and arhar in Delhi (−5% each), bananas (−4%), fish (−3%), barley and potatoes (−2% each) and cashewnuts (−1%) showed declines. The index for Tobacco fell by 0.2 percent to 97.7 during the week. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's level of 116.2. The prices of groundnuts and linseed (+3% each), and cottonseed and copra (+1% each) showed advances while those of gingellyseed (−3%), tanning materials and lac (−2% each) and raw jute (−1%) moved down and the index for Industrial Raw Materials increased by 0.4 percent to 121.6, against 121.1 (revised) for the earlier week. Higher prices of linseed oil (+3%) and cotton yarn, zinc and brass (+1% each) raised the index for Intermediate Products by 0.6 percent to 111.1, compared with 110.4 (revised) for last week. The prices of rayon yarn and lead (−1% each), however, moved down. The index for Finished Products stood at 109.6, against 109.7 (revised) for the earlier week. The prices of glass (−2%), jute manufactures and bricks and tiles (−1% each) and dyeing materials and oilcakes (−1% each) showed variations.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53 = 100)

Groups and Sub-Groups	Week Ended 12-9-59	5-9-59	13-9-58

Engineering and Transport

FORTIETH ANNIVERSARY OF I.A.T.A.

THE world airline organisation, I.A.T.A. celebrated its fortieth anniversary on 28th August. Six fledging European companies, B.O.A.C.'s ancestors among them, met at The Hague on that date in 1919 to organise what has since become the International Air Transport Association, comprising 90 airlines from many parts of the globe. The 1919 airliner was an 85 miles an hour transport vehicle with a 300-mile range and an 800-lbs payload. It could only work 300 hours a year and in six months of winter did virtually no flying at all. Today's fleets operated by I.A.T.A. members number more than 3,200 aircraft, the largest and newest of which cruise at up to 600 miles an hour, can carry a payload of 40,000 lbs over ranges of 4,500 miles, and can put in 3,000 or more hours in a year, thanks to the technological revolution brought about by the application of jet power to civil air operations. During those 40 years, I.A.T.A. has worked to eliminate barriers of language, law, currency, commercial practice, technology and of economic regulations, and to weld the individual routes of the airlines into a viable worldwide system.

INDIA AGAIN LEADING CUSTOMER FOR BRITISH AIRCRAFT

India once again appears as the leading buyer of British aircraft—in figures just published in London by the Society of British Aircraft Constructors—both for the month of August, and for the eight-month period January-August this year. The total of the British aircraft industry's exports during the period January-August is a record £111,644,249—5 percent up on the total for the same period last year. India, whose purchases of British aircraft and parts totalled £12,413,286, bought nearly twice as much as the next purchaser on the list—Switzerland. Figures were : Switzerland, £6,473,002 ; West Germany, £5,439,051; the United States, £4,194,548 ; and Australia, £3,928,643. During the month of August, total exports of British aircraft and parts were valued at £12,171,098. India was the leading buyer, with a total of £1,416,116, followed by Switzerland (£698,529), the United States (£376,135), and Canada (£127,358).

SALES PROMOTION FOR AVRO 748 IN ASIA

Mr. E. Galitzine, sales manger for A. V. Roe and Company Ltd. (a subsidiary of the Hawker Siddeley Group), will visit India in December in the course of a tour designed to interest airline operators in the *Avro 748* aircraft now being built in the U. K. and due to fly for the first time early next year. Mr. Galitzine will be on a two-month tour which will take him to most South-East Asian and Far Eastern countries.

Indian civil-airline and Service chiefs, who were present at the latest Farnborough air show in Britain, saw a full-scale version of the *Avro 748* fuselage at the stand of the Hawker Siddeley Group. It was trimmed and furnished to the exact specifications planned for the finished aircraft, and included the pilot's cockpit, complete with equipment and instruments and a working galley for the hostess. A 1/10-size scale model showed the 40-passenger internal arrangement, the pilot's cockpit, and baggage compartments. It was complete with rotating propellers, flashing navigation lights, and internal lighting. In designing the *748* as a replacement for the *Dakota*, the designers made use of a survey which showed that 1,600 *DC-3's* were still in airline service. The *748* has been specially provided with pressurisation and air-conditioning, ability to fly above the weather, minimum noise and vibration, faster service, full cabin headroom, and the seating comfort required by airline operators. Within the circular fuselage, headroom is constant at 6ft. 4½in. throughout the length of the passenger cabin.

KHANDELWAL FERRO ALLOYS FACTORY

The directors of Khandelwal Ferro Alloys Ltd report that very considerable progress has been made in the construction of the factory structures and other civil engineering works. Approximately 80 percent of the plant and machinery have already arrived at the site, and the balance is on the way from Norway. It is expected that the installation of the entire plant will be completed by the middle of 1960, when the first furnace will go into production. The second furnace has also been ordered with the Norwegian suppliers with a view to achieving the full target production of 30,000 to 36,000 tons annually.

INDO-FRENCH ECONOMIC AND TECHNICAL CO-OPERATION AGREEMENT RENEWED

The economic and technical co-operation agreement between the French and Indian Governments concluded on 23rd January, 1958, has been renewed for a further period up to 23rd January, 1960. By an exchange of letters, the French Embassy in New Delhi and the Indian Ministry of Finance have confirmed the renewal and the general lines of the agreement. France has undertaken to "facilitate the financing of the manufacture, and of the delivery of, capital goods for which orders are placed by Indian purchasers with the prior approval of the Government of India on French suppliers up to a further amount of 25 billion francs."

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 16, held on 28th and 30th September, Export auction offerings amounted to 64,286 packages. There was a strong general demand for all teas on offer. Plain and medium brokens were 2nP to 6nP dearer and Fannings were fully firm to dearer. The brighter liquoring orthodox Assam B.O.P.'s and O.Fgs. sold readily, the latter descriptions being occasionally dearer, but the plainer sorts often showed an easier tendency. Good liquoring C.T.C. teas were well supported and the best types were often dearer. The more ordinary medium sorts were irregular and sometimes easier, but the poorest types sold well. Legg-cut teas were somewhat irregular, but generally showed a dearer tendency. Medium O.P.'s were irregular and sometimes easier, but the lower priced O.P.'s and Pekoes were strong and often dearer, especially the poorest types. There was better enquiry for tippy teas and Darjeelings which, however, were again slightly easier.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.98 to 2.02	1.95 to 2.00
Plain B.P.	1.88 to 1.92	1.70
Plain Fannings	2.06 to 2.16	1.80 to 1.86
Medium B.P.	1.92 to 2.04	1.75 to 1.85
Medium Fannings	2.12 to 2.24	1.90 to 1.95
Best Assam C.T.C. B.P.	2.30 to 2.75	2.70 to 2.90
Best Assam C.T.C. Fgs.	2.70 to 3.15	2.90 to 3.20

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings totalled 21,863 packages. There was a good general demand. Orthodox Dusts were from 2nP to 4nP easier but towards the end of the sale these types were firm to dearer. Legg-cut descriptions, although irregular, were sometimes dearer while Darjeeling Dusts generally showed an easier tendency. C.T.C. Dusts were irregular and sold at up to 10nP and sometimes 15nP below last rates. The stronger liquoring powdery kinds, however, received good support. The few of the very best teas in this category realised satisfactory prices.

Quotations

	1959 Rs.
Medium Dooars Dust ...	1.94 to 2.00
Medium Assam Dust ...	1.99 to 1.94
Medium Assam C.T.C. Dust ...	2.00 to 2.10
Best Assam C.T.C. Dust ...	2.50 to 2.70

(Quotations are exclusive of excise duty.)

There were 411 chests of Leaf on offer for which there was a good general demand.

GRAIN RATES STEADY IN FREIGHT MARKETS

THE improvement in grain rates mentioned in the last report, was maintained during the past fortnight in the freight markets and fixtures were made from St. Lawrence to India at 63s 6d basis West Coast discharge, while Chinese interests were active both in time and voyage charters. In the former business, preference was shown for large (14,000 tons) modern motorships and two such vessels were taken at 16s 6d a d.w. ton for round trips to Europe with delivery-redelivery Far East. A contract for 60,000 tons of ore from Mormugao to U.S. Gulf, shipment October-February, has been arranged at $(U.S.) 5.75 f.i.o., and a single voyage with iron ore is reported to Louisiana at $(U.S.) 5.35. The wreck in the river has now been cleared and navigation restored to normal. The recent Press statement, attributed to the Minister of Transport, that 26 feet is the maximum draft that is ever likely to be available in the river Hooghly in future, will be received with dismay by shipowners. Only two years ago, drafts of over 27 feet were available and, if the Minister has been accurately reported, the attempts to develop export trade in coal and ore look like being frustrated at the outset.

HIDES AND SKINS FIRM

The market in skins ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 22nd September and 28th September, 1959)

Cowhides : Wet salted (Ord.) 111,600 pcs. on the basis of Rs. 13.50 and Rs. 14 to Rs. 18 ; Wet Salted (Slaughtered) 43,900 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 29.

71st YEAR OF ISSUE — CALCUTTA, 8th OCTOBER, 1959. — Vol. CXXXXIII No. 3580

U.S. CREDIT SQUEEZE: DEAREST MONEY FOR A GENERATION

THE sharp tightening of credit in the U.S.A. which has caused very heavy losses on Wall Street in recent weeks, could have been foreseen months ago. In fact it was forecast by many observers, including this newspaper in the analysis published in March of the "slump-busting techniques" used to beat the 1957-58 recession. It was inevitable that the U.S. economy should pass rapidly from depression to dangerous inflation (necessitating the present phase of brutal restraint) because some of the anti-slump measures used had a delayed action and only really began to make their effects felt when the recession was already cured by other means, notably the "built-in stabilisers". Thus a series of belated reflationary forces came into action when the economy no longer needed them. The normal recovery of confidence that followed the end of the downward phase of the cycle was then magnified by the expansionary prospects opened up by these special measures, and there resulted an excessive and dangerous euphoria—expressed in the Wall Street records set during the summer—which naturally had to be curbed by the current resort to dear money.

That is why the lessons of the 1957-58 recession can only be drawn in full measure now, many months after that recession ended. Perhaps the main one is that American public opinion, misled by alarmist Democrat propaganda, under-estimated the efficacy of the economy's automatic stabilisers. Against the better judgement of the Administration—which was being denounced a year ago as callous and indifferent—Congress was stampeded into taking reflationary measures which in reality played little or no part in the recovery from the recession, but which did succeed in bringing on the subsequent inflation. At this distance in time it is possible to say precisely what were the causes of the unexpectedly smooth recovery from the slump, and consequently to see which measures were unnecessary and, eventually, damaging.

The 1957-58 slump entailed a 4½ percent drop in U.S. production, and was thus somewhat severer than the two previous post-war slumps in 1949 and 1954, both of which saw 2½ percent drops. Before this latest recession began, the U.S. gross national product (G.N.P.) was running at the annual rate of $445,600 million; at the depth of the slump it was 4½ percent lower, i.e., $425,800 million. Total production, therefore, fell by $19,800 million. Since, as Say's law maintains, "production finances consumption", this fall in production might have caused an equivalent fall in consumption. If it had, a snowball effect would have been set going, and the U.S.A.—and the rest of the world—would have had a grave depression on its hands. But it did not. A number of factors—the built-in stabilisers—absorbed most of this $19,800-million production-loss, so that the consumption-loss was very much smaller.

The first of these was company losses. Instead of passing on the production-loss to their workers, as they did during the disastrous 1929-33 depression, American firms absorbed most of it themselves in the shape of lower profits. Company profits before tax fell by $12,500 million, which means that at the lowest point of the recession company expenditures were kept $12,500 million above total wages. Because the tax on company profits is 52 percent, more than half of this $12,500-million loss was in fact borne by the State, which consented to increase its budget deficit when revenues from company taxes declined. So we already have the position that about 60 percent of the $19,800-million production-loss has been absorbed by companies and by the State (roughly half and half), leaving only $7,300 million to be passed on as a reduction in revenues and thus as, potentially, a reduction in consumption.

But it was not passed on, because other stabilisers intervened to absorb part of the residual loss. The most important of these was unemployment pay given to retrenched workers, which totalled $3,000 million. By financing so much extra consumption, this relief brought down the loss in gross revenues from $7,300 million to $4,300 million. At the same time, taxes on personal incomes declined as gross revenues fell: income tax payments were $800 million lower. So the fall in net revenues was limited to $3,500 million. Even so, outlays on consumption did not fall by that amount because Americans drew on their savings; private saving declined by $1,400 million. Thus we are left with a cut in consumption of only $2,100 million—after starting out with a production-loss of $19,800 million! And even that consumption-loss could have been avoided if steps had been taken to discourage saving (the 1930's saw numerous suggestions about anti-saving devices). Throughout the recession Americans were still saving 6.2 percent of their disposable revenues, or $18,800 million; if they had saved only $16,700 million (which is still a large sum), the $2,100-million consumption-loss would have been wiped out. As it was, this consumption-loss represented only between three-quarters and 1 percent of personal consumption.

Now if consumption fell by only $2,100 million while the gross national product fell by $19,800 million, it follows that consumers were consuming much more than was being produced, i.e., they were consuming stocks. Stocks had already fallen to a low level, when industry began increasing wages during the third quarter of 1958. The increased demand thus set up, in the face of depleted stocks, meant that new production had to begin, to satisfy it. Hence the rapid recovery of the American economy in the last months of 1958, when the G.N.P. was back to an annual rate of $453,000 million, against $425,800 million at the depth of the depression and against $445,600 million before the depression began. In other words, the slump had been beaten in much less than a year by the automatic action of the Budget deficit, tax reductions, unemployment benefits and sustained business optimism, without the need for any special anti-cyclical measures undertaken during the slump.

Yet such measures were taken—unnecessarily and unwisely, as it now appears. Congress took steps to increase house-building, and these were so effective that new housing starts rose from 915,000 in February 1958 to 1,430,000 in December 1958. But by December, the recession was as good as over, and the stimulating effect of this housing programme was to be felt throughout 1959. Similarly, Congress increased road-building funds very substantially. But the implementation of a road programme requires the prior resolution of a host of technical and juridical problems, and so the bulk of this expenditure was to be felt in 1959. Next, Congress allocated more money to national defence. But here again there were numerous technical delays, which meant that the extra outlays were occurring in 1959. Finally, Congress—against the judgement of the Administration—slightly reduced tax payments from 1st August, 1958, although as we have seen net revenues were already almost back to the pre-slump level by August.

The upshot was not difficult to foresee. An over-stimulated economy was well set to achieve new records, and the G.N.P. is expected to be running at the annual rate of $480,000 million in the last quarter of this year. This rate of progress is too fast, and the monetary authorities have been obliged to make credit dearer than it has been in the U.S.A. for 29 years. This is not, of course, a grave state of affairs. Since everyone prefers inflation to recession, it may be that only economic purists will complain that the U.S.A. could have managed to get out of the slump without falling immediately into brief inflation. American labour, which saw the unemployment rate fall from 6.1 percent at the start of the year to the "normal" 4 percent at the end of the summer, will not complain; nor will the European nations who built up their reserves when the American inflation caused a heavy trade deficit. But since the American economy is geared to considerable expansion in the years ahead—the G.N.P. is expected to reach $600,000 million in 1966—there are reasons for wanting to see unnecessary ups and downs ironed out as far as is possible, and the ups no less than the downs.

The downs are being controlled by the improved action of the automatic stabilisers. The ups will be better controlled if there is greater public confidence in the efficacy of these stabilisers, so that while they are at work other unnecessary stimulants are not administered in panic.

There is, of course, room for further improvement. Social payments can be designed to make up a greater part of the wages lost by each man; more people can be admitted to the relief system; unemployment pay can be maintained over a longer period; and so on. But it is just as important that more people be convinced of the efficacy of this, and other, stabilisers in limiting the effects of recessions. When business men and trade unions, not only in the U.S.A. but in all countries that trade with the U.S.A, are persuaded that recessions can be handled by structural or "built-in" correctives without resort to panic measures, then the inevitable fluctuations in the onward progress of the U.S. economy will be regarded with greater serenity.

THE GREAT BETRAYAL

MORE than 7,600 words and 3,520 kilometres separate India and China today. It is distressingly clear from India's latest communication to China that the latter has been nibbling away at India's northern frontier for many years past and that *Panch Sheel* has been used only as a cover for activities plainly contrary to the provisions of the 1954 agreement. Mr. Nehru frankly states that, in an effort to maintain friendship with China, he has deliberately concealed many disquieting facts from the Indian people and Parliament; that the gravity of the crisis has been made public only when settlement by secret and amicable negotiation between the two Governments had to be ruled out because of Peking's stubborn unresponsiveness to Indian gestures. The communists have resumed their exasperating silence, and the campaign against India is going through a lull at the moment. But the world knows enough of communist tactics to understand that the silence is as contrived as the previous noise, for public opinion (such as it is) in a communist country, is allowed expression only when it suits those in power.

It is at this date futile to enquire whether India was wise to repose as much trust in Peking as she did. It is possible that five years ago the Chinese attitude would have been softer, if the disputes now raised had then been discussed. It is possible that earlier realisation of Chinese bad faith would have given a very different shape to India's foreign policy. But it is no use going over that ground. Pursuit of friendship is a worthy objective in itself, and it is probably better to have tried and failed than never to have tried at all. The fact that India tried so hard, however, exposes the magnitude of the Chinese betrayal; and some other nations have a great deal to learn from the Indian experience. It is not without significance that Cairo is revising its opinion of China, and others may follow suit. What has to be watched now is that an apparent change in China's attitude does not deceive the unwary again, for there is already some evidence that Mr. Chou

may smile his famous smile once more to beguile Asia and Africa.

The manner in which India has openly declared her special interests and rights in Bhutan and Sikkim has been widely acclaimed. (The Nepal Prime Minister's attitude seems ambiguous, but disillusionment may not be far off.) It must be realised, however, that the Indian commitment is a very big one. The natural barriers between China and India are not as insurmountable as they have hitherto been considered; and if the Himalayas ever become part of China, as Peking insists they shall, the Indian frontier will be all but indefensible. Mr. Nehru has done well to announce that India does not propose to make a gift of this excellent natural defence barrier. But what if the Chinese do not agree, if they hold on to their fanciful maps and seek to translate them into reality?

There is no simple answer, and the consequences of such insistence are indeed terrible to contemplate. But it is wise to remember that Mr. Chou's letter of 8th September contained not the slightest hint of any wish to revise the absurd Chinese claims. It was bellicose from beginning to end, and the accusations against India were couched in a language nations do not use even in communication with hostile countries. Mr. Chou seemed determined to remind New Delhi that China is no longer weak and means to assert what she regards as her rights, that the "imperialist" British could impose many things which India could not—not with today's China. It is remarkable how the true Chinese intentions were concealed behind a series of deliberate evasions. When the two Prime Ministers met amid presumed goodwill, vagueness was wilfully permitted in the sure knowledge on the part of Mr. Chou that a time would come when uncertainties could be cleared up in his own peculiar way. It remains something of a mystery why China has timed it now; it is possible that the timing is not China's but India's, for India brought the affair into the open; but there is little reason to doubt that China signed the 1954 agreement, in which India magnanimously renounced the extra-territorial rights she had inherited from Britain, only as a temporary measure, to be used as a lever later to extract more and more concessions to be called rights.

Once it is accepted that the expansionism inherent in Chinese history will before long affect India, and it is not easy to see how any other interpretation is possible, thought must turn to India's probable answer to the challenge. There is much to be said for not exaggerating the imminence of the threat; Formosa and the offshore islands are to the Chinese more important than the Indian border claims; but the threat is real and should not be gainsaid. It is a long frontier, and the terrain is among the worst in the world. Military operations, to avoid which every effort should be made by diplomacy, will be a nearly impossible undertaking. There are indications that in some of the border areas, in Bhutan in particular, Chinese indoctrination has been in progress for years; and the Chinese may feel that they will not need immediately to show their military strength. It is not difficult to organise a local revolt, and Indian intervention might then be made to look ugly.

It seems obvious that the Chinese can make things extremely uncomfortable for India—even without committing themselves overmuch. If an early outbreak of open conflict between China and India is unlikely, it is almost certain that over a long period to come China will resort to harassing tactics along much of the front, and the utmost resourcefulness will be necessary to find an answer to the elusive threat. It is possible that it will be a protracted rather than concentrated dispute, since the communists believe that time is always on their side. Khrushchev gave vivid expression to this recently in the United States.

But he has been in Peking since, and who would not the world give to know what Khrushchev told M. Mao and Chou on the Indian question, which must have been talked over. Once again, discussion has to descend into the realm of speculation. It is believed in some quarters that Moscow's is no longer the decisive voice in the communist world, that the Kremlin has to treat Peking with respect, if not fear. There is nothing inherently absurd in this; it would be surprising if the two giants did not on occasion look at each other with some misgivings. But, for many years to come, each will have need of the other and neither may afford to fall out—except at the gravest provocation. This is where the otherwise bleak situation offers a gleam of hope, for Russia is seeking a *detente* with the non-communist world and will not easily let China nullify her efforts.

PROBLEMS FOR U.K. PLANNERS

THE economic position which will confront the new British Government is essentially favourable. It is based on a rising trend of exports as economies abroad expand, and a rising trend of production at home, which might have had to be restrained if export trade had stagnated. The experts are, however, disputing again the question whether the pace of recovery is right. Some of them are still concerned with the average rate of advance, but attention has shifted recently to the uneven rate of advance between one sector of activity and another. The debate whether the average rate of advance was fast enough was subdued by the official statistics published at the end of September, which showed that industrial production in August was 7 percent more than a year earlier. Even so, there is room for divergence of opinion. Expansion in Britain has been quite impressive, viewed against the background of the recent recession; but by comparison with the achievements of Continental Europe it seems to some observers inadequate.

The average of the U.K.'s industrial production in the first two-thirds of 1959 is less than 1 percent above the average for the whole year 1957 and less than 2 percent above the average for the whole year 1958. The whole year 1959 will presumably present a better picture: at the recent rate of advance, the index may be as much as 10 percent higher at the end of this year than at the end of last year—which does not, of course, mean that the year's production will be 10 percent more in 1959 than in 1958. It may be that when the whole year can be viewed in perspective Britain's achievement will compare not unfavourably with the Continental countries'. In any case, students of economic policy view these direct comparisons with some caution. The overall advance conceals some recessions in individual industries, particularly coalmining, and even such dynamic industries as motor-car manufacturing have been unable to make their full contribution to the advance because they have been impeded by labour troubles.

The focus of the current discussion is the capital industries. They have made no significant contribution to the economic recovery, and, worse, the capital plans of manufacturing industry in the private sector show that expenditure on plant, machinery, vehicles and buildings—particularly buildings—will be considerably less this year than it was last. Such respected authorities as the National Institute of Economic and Social Research suggest that, if the private sector's capital spending cannot be quickly stimulated, the Government should counter-balance its deficiency by increasing (more than it is planned to increase it already) the public sector's capital spending. Not everyone is convinced, however, that expansion must necessarily be evenly spread. The argument for an expansionist policy, in the general sense, begins with the fact that in most industries there are still some resources unemployed. The London and Cambridge Economic Service and the National Institute of Economic and Social Research have recognised that this spare capacity is capable of increasing output substantially and that its existence restrains demand for new equipment and new buildings.

If industrialists believe that their present capacity is sufficient to satisfy foreseeable needs, why should they plan additional capacity? We must think flexibly on this subject of expansion. If the capital industries are under-employed, they must try to export more. If they cannot increase their sales, either at home or abroad, enough to restore their works to full employment, it is, perhaps, best that they be left in a state of under-employment until the "natural" increase in their customers' orders provides enough work. If the growth of the consumer trades continues (as the National Institute believes it will) the private sector of industry will almost certainly increase its capital investment in 1960 and after. It would be rash in the meantime to adopt a policy of indiscriminate expansion, for the purpose of employing the capital industries' unemployed capacity. In

time is the yardstick...

with which even the instruments of time are ultimately judged, for time leaves its mark on the best of watches, however precisely or delicately built these may be. And such enemies of watches as dust, damp or drying up of oil are sure to raise their heads with the passage of time. Good watches are difficult to obtain today. If you have one, it should be entrusted to the care of experts alone, when required.

We are fully equipped to handle all brands of watches, timepieces and clocks.

ry again to restrict credit and raise Bank rate—or to apply whatever alternative measures the Government considers preferable in the light of the Radcliffe Report. At present, it may be remarked in passing, the National Institute sees no reason why interest-rates in Britain should follow the upward course of interest-rates in America. The immediate task is not to stimulate production but to strengthen the power to compete, so that more goods can be sold abroad and the balance of payments can be strengthened in preparation for a further increase in production. That there is no actual or prospective scarcity of coal, electricity, or steel, as in the damaging boom of 1955, does not mean that expansion of production, as it spreads through the capital industries, will impose no strain.

Earlier this year, British industry seemed to be competing successfully in the world market, and the subsequent trend of export trade has been much better than was generally expected. But Britain has failed to regain the position of second exporter of manufactured goods (first being, of course, the United States) which she lost last year to West Germany; on the contrary, West Germany has increased her advantage. The official U.K. publication *Economic Trends* has lately pointed out that since early-1957 prices of British manufactures have risen more than corresponding German prices (though not more than American). The respective trends have favoured Germany particularly in engineering goods, and it is difficult to believe that a policy of more vigorous expansion at home would be the best solution of the problem of Britain's capital industries if British prices are wrong.

Current News and Comment

Mandya Paper Share Offer

On a later page of this week's *Capital* are published fuller details of an attractive share offer which will soon be made by the Mandya National Paper Mills Ltd of Bangalore. The offer to the public consists of 396,941 equity shares of Rs. 10 each, and 59,987 7 percent tax-free redeemable cumulative preference shares of Rs. 100 each. Both types of shares are being offered at par, and the subscription lists will be open from 12th October to 24th October. The sums payable on application are Rs. 2.50 for each equity share and Rs. 25 for each preference share; further equivalent sums will be payable on allotment. The remaining Rs. 5 for each equity share and Rs. 50 for each preference share will be called up later. The authorised capital of the company is Rs. 4.5 crores, divided into 180,000 7 percent tax-free redeemable cumulative preference shares of Rs. 100 each and 2.7 million equity shares of Rs. 10 each. The amount issued is Rs. 2 crores, divided into 60,000 preference shares and 1.4 million equity shares. Of the issued capital, 1,002,073 equity shares have been subscribed by the promoters, their collaborators (Messrs. Parsons and Whittemore), the directors and their friends. In addition, some of the existing shareholders have applied for 986 equity shares and 13 preference shares. The remaining equity and preference shares will now be offered to the public. The offer of the 59,987 preference shares has been underwritten by the Industrial Credit and Investment Corporation (30,000 shares), the Life Insurance Corporation (15,000 shares) and the Union Bank of India (14,987 shares). The Mysore Government, in addition, has agreed to take up any unsubscribed equity shares up to a value of Rs. 39,79,270. The preference shares are redeemable at par 15 years after allotment.

The Mandya National Paper Mills Ltd was incorporated as a company in November 1957. It plans to set up in Mysore State a mill for manufacturing high-grade printing and writing paper, having an initial production capacity of approximately 35 tons a day. The share issue is intended to contribute to the financing of the project, the cost of which is estimated at Rs. 3.82 crores. Of this sum, Rs. 1.4 crores will be provided by the equity issue and Rs. 60 lakhs by the preference issue, while Rs. 1.82 crores will be covered by the deferred payments arranged with machinery suppliers. A notable feature is that the mill will use sugarcane bagasse as the primary raw material for manufacturing paper; the Mysore Sugar Co. Ltd, Mandya, yields about 100,000 tons of bagasse annually, so adequate supplies of the raw material for the paper mill are expected from there. The Parsons and Whittemore, Lyddon Organisation is collaborating in the project by supplying equipment and technical services, apart from subscribing to Rs. 62,41,500 of the equity capital. As paper is in short supply and the demand for it is rising, the directors expect that there will be a substantial margin of profit on the basis of the normal selling price of paper. The company will enjoy the special benefits allowed to new concerns under the Income Tax Act in relation to development rebate, depreciation and income tax relief. It expects that it will not be liable to pay tax for the first three or four years of its operation. It is hoped that, after providing for depreciation and preference dividends, as well as the deferred payments on machinery, etcetera, Mandya National Paper will be able to pay dividends after the first three years' operation of the plant. The managing agents of the company are Bedi and Co. Management Private Ltd.

Orissa Cement: Plan Targets

The target of 16 million tons set for the cement industry in the second five year plan is unlikely to be realised. The installed capacity in 1958 was only 7 million tons, yet the industry was hard put to it to dispose of its stocks. Production in kilns had to be slowed down and some were even closed. Demand has been rising since the beginning of this year, but not enough to justify a target of 16 million tons by the end of 1960-61. Mr. J. Dalmia has estimated in his chairman's speech at the latest annual general meeting of Orissa Cement Ltd (extracts from which were published in last week's *Capital*) that the installed capacity of the industry by the end of the current plan period is likely to be only 9.95 million tons. A tentative target of 35 million tons for the third five year plan has been proposed. Mr. Dalmia expresses surprise at this and says that "even with reasonable optimism about the increase in cement demand," it is not possible to justify a target which amounts to an increase of 250 percent over the present capacity and an additional investment of about Rs. 250 crores. He suggests that the industry should be fully consulted before the cement plan is finalised; in any case, expansion should be carefully planned to take place in areas where a market potential exists.

Referring to the strike in the company's Rajgangpur works which was illegal and called off unconditionally, Mr. Dalmia says that this is another example of how irresponsible "outside" leadership has been harming industry and labour. The agitation was ostensibly against the system of payment on a piece-rate basis, which directly benefits the worker himself provided he is willing to do a fair day's work. Even the A.I.C.C. Planning Sub-committee has said that wages should be linked to productivity, and all the Central wage boards have been asked to bear this principle in mind while determining fair wages for labour. It has to be recognised that such illegal strikes are a great danger to the prosperity of industry and need to be discouraged, Mr. Dalmia says.

India's First Synthetic Rubber Plant

Fuller details are now available of the Kilachand-Firestone scheme for setting up a synthetic rubber plant in India. The plant, claimed to be the first of its kind in Asia (excepting Japan), will be situated in Bareilly, Uttar Pradesh, and will involve an initial capital expenditure of Rs. 13.5 crores. It will produce 20,000 tons of G.R.S rubbers, lattices and other rubber products annually but the capacity might be raised to 30,000 tons later. Besides this, two more plants—one for 9,000 tons of styrene monomer and the other for 22,500 tons of butadiene—are also to be established. Apart from providing the technical know-how, Firestone will contribute Rs. 3 crores towards the foreign exchange requirement of Rs. 7.5 crores. The balance will come from U.S. banks and London investment houses. A portion of the machinery will be obtained from indigenous sources.

A new company, whose name has not been decided yet, will be formed with an issued equity capital of Rs. 4.5 crores, three-quarters of which will be Indian. The promoters, Kilachand Devchand and Co. Private Ltd, will put in 25 percent, while 50 percent will be offered to the public. The remaining 25 percent will be Firestone's share. A licence has been obtained and the factory is expected to go on stream 30 months from now. The company enjoys several advantages. For example enough alcohol is available from Uttar Pradesh's sugar factories, for which there is not much commercial use at present. Benzine will be available from the several steel works in the country. It is with this in mind that Bareilly has been chosen as the site.

Mr. Tulsidas Kilachand told a Press conference in Bombay on 30th September that, apart from absorbing the unused by-products of the sugar industry, the factory will, to a considerable extent, meet the growing demand for rubber and help save about Rs. 5 crores of foreign exchange annually. The cost of synthetic rubber will depend on the prices charged for alcohol, but it is hoped that the product will be sold at a much lower price than imported rubber.

National Carbon Rights Issue

The National Carbon Company (India) Limited has asked the Controller of Capital Issues to consent to the issue of 800,000 ordinary shares (par value Rs. 10) at Rs. 12.50 a share. Subject to consent being obtained, the shares will be offered in the first instance to the shareholders on the basis of two new shares for every five ordinary shares held. It is proposed to make the issue in the early part of 1960, in which event the new shares will rank for dividends declared out of the company's 1960 earnings, but will not rank for any dividend declared for the 1959 operations. National Carbon has established dollar and sterling credits equivalent to Rs. 1.25 crores to cover the foreign exchange requirements of the polyethylene and chemicals plant now under construction in Trombay. To finance partially this and several other expansion and development schemes, it issued in March 1959 Rs. 1 crore of 15-year 6½ percent debentures. The new capital now to be raised will be used to complete the financing of new undertakings and to repay in part the foreign credits mentioned. The present authorised capital of the company is Rs. 2 crores, consisting of 2.5 million ordinary shares

Rs. 10 each, out of which 2 million shares have been issued and are fully paid-up. Prior to the new issue, it is proposed to hold an extraordinary general meeting of shareholders to increase the authorised capital of the company to Rs. 6 crores by the creation of a further 3.5 million ordinary shares of Rs. 10 each.

Mackinnon, Mackenzies and B.I.S.N.

Mackinnon, Mackenzie and Co. Private Ltd. Calcutta, have ceased to be the managing agents of the British India Steam Navigation Co. Ltd. since 1st October. The management of B.I.S.N. is now under the direct control of its board of directors in London. But Mackinnon, Mackenzies will continue as either operating or port agents of B.I.S.N. throughout the East. In a circular, the B.I.S.N. chairman explains the change against the historical background of the relationship between the two companies. He points out that "the Calcutta and Burmah Steam Navigation Co. Ltd was founded by the late Sir William Mackinnon, then senior partner of Mackinnon, Mackenzie and Co. of Calcutta. The date of registration of this new steamship company was 24th September, 1856. Six years later, expanding business necessitated the enlargement of the fleet and, in keeping with the extended spheres of trading then engaging the young company's attention, the name was changed to that which continues today—the British India Steam Navigation Co. Ltd, originally registered in Scotland on 28th October, 1862, with a capital of £400,000.

"The operations of the Calcutta and Burmah Steam Navigation Company, and subsequently the British India Steam Navigation Co. Ltd, were at the outset concentrated in and around the Indian subcontinent. It was, therefore, essential for the management to be on the spot. This responsibility was undertaken by Mackinnon, Mackenzie and Co. and, subsequently, by their successors, Mackinnon, Mackenzie and Co. Ltd. and Mackinnon, Mackenzie and Co. Private Ltd, which concerns have, between them, been the company's managing agents for over 100 years. However, in the late 1860's, the B. I. Company expanded into the overseas trade to and from the United Kingdom and, while retaining the full management of local services, it became expedient for the managing agents to delegate considerable responsibility to the London agency firm of Gray, Dawes and Co. Ltd in relation to the services which were based on the United Kingdom. Subsequently, against a background of political and economic change throughout the Eastern Hemisphere, the introduction of coastal reservation around the Indian sub-continent and the considerable decrease in trading activities in the Bay of Bengal, the company's operations have spread over a progressively widening area: their character has changed and it has embarked on new ventures.

"The inevitable result is that India has ceased to be the focal centre of the company's activities, and the factors which, in the past, necessitated management from Calcutta, are no longer valid. The directors have therefore decided that, as from 1st October, 1959, Mackinnon, Mackenzie and Co. Private Ltd, Calcutta, will cease to be the managing agents of the B.I.S.N. Co. Ltd, and from that date the management of the company will be under the direct control of the board in London. The decision has been a difficult one in view of the long period during which the Mackinnon organisation has managed the company's operations, the measure of success that the B.I.S.N. Co. Ltd has achieved in its first 100 years being very largely due to the efficient and loyal service which the managing agents have provided for so long. This traditional service will, however, fortunately remain unbroken through their continued representation, either as operating or port agents, throughout the East. This letter is merely to place on record the change in management which takes place as from 1st October. This change will not for the moment result in any alteration in the procedures as advised to agents over the last two years. As the personnel comprising the present board of the B.I.S.N. Company consists entirely of former members of the firms of Mackinnon, Mackenzie and Co. Private Ltd and Gray, Dawes and Co. Ltd, there is in fact no real change in the tradition of the management of the company, but merely in the focal centre of control."

I.F.C. Surveys the Field

The working results of the Industrial Finance Corporation for the year ended June 1959 were reviewed in the Current News and Comment section of last week's Capital. The speech delivered by the chairman at the Corporation's annual general meeting on 26th September (which is published on a later page today) amplifies a number of points noted therein. The chairman points out that the Corporation's bond issues have met with a "very warm response", so more may be made in future years as conditions justify. Although the position concerning rupee resources can now thus be described as comfortable, the shortage of foreign currency funds remains a major difficulty. The I.F.C. asked the World Bank for a loan, but has had no success so far. It has now put forward a scheme to the Indian Government whereby it might participate in using the dollar credits offered by the U.S. Export-Import Bank. The scheme will mean that the I.F.C. will get somewhat smaller margins on its loans, but the chairman hopes it will be accepted.

The Corporation has diversified its activities by starting to underwrite share issues. But a complication is that under the I.F.C. Act, it cannot hold any shares for more than seven years without the prior permission of the Central Government. "This provision, coupled with the fact that we are not authorised, under the I.F.C. Act, to invest directly in the equity or preference capital of any industrial concern, has meant the closing to us of a profitable line of investment for our surplus funds," the chairman says. But "a possible solution to this lies in our being enabled to participate in the equity and preference share capital of approved industrial concerns through direct subscription as well as through the exercise of conversion rights. This matter is being examined by me." Another comparatively new feature is that the I.F.C. has been guaranteeing deferred payments, on behalf of industrial concerns, to foreign manufacturers of capital goods. But no considerable expansion of activity in this direction can be expected in the near future, since the heavy foreign exchange commitments that will soon be maturing have compelled the Government to reduce the number of deferred payments arrangements it sanctions.

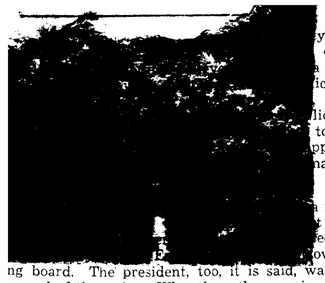
Dalmia Cement Prospects

The working results of the Dalmia Cement (Bharat) Ltd for 1958 were disappointing. But in his chairman's address at the latest annual general meeting last week in Dalmiapuram (a fuller version appears on another page of this week's *Capital*), Mr. V. H. Dalmia said that during the current year production and despatches have improved. The third cement kiln which formed the main part of the company's expansion programme has been "practically" completed, ahead of schedule. The plant installed in Salem for the manufacture of dead burnt magnesite went into production in January this year. Sales of the product have begun and supplies are being made principally to the steel and refractory industries. "Some export has also taken place and efforts are being made to develop an export market with a view to possible expansion of the production by the installation of a second kiln," Mr. Dalmia said. Iron ore, another line of business, is being exported to Japan through the State Trading Corporation. Since December 1958, over 100,000 tons of ore from the company's mines have been shipped to that country and further orders are being executed.

Mr. Dalmia said that the company expects the Government's announcement of the revised exworks price for cement to come at any moment. The increase would, of course, not affect in any way the State Trading Corporation's selling price. In this connection, Mr. Dalmia pointed out that the surplus being earned by the Corporation from the sales of cement is being remitted to the Government; during the year ended 30th June, 1958, it amounted to Rs. 4.10 crores. This money is not being used for the development of national highways, as was once said would be done. Mr. Dalmia suggested that the surplus should be used for subsiding exports of Indian cement for which there was considerable demand overseas.

Growth of General Insurance

General insurance business in India has not been expanding at a rate commensurate with the increase in industrial production and national income. Between 1951 and 1957, the gross business in India of all insurers, Indian and foreign, increased by less than Rs. 4 crores, or by 16 percent only, while industrial production rose by 37 percent and national income by 20 percent. Speaking at the annual general meeting of the General Assurance Society Limited, which was recently held in Calcutta, Mr. B. L. Jalan, chairman, said that an average annual increase of 10 percent in the volume of business is the minimum target the industry must set for itself. (A fuller version of the speech appears on another page in this week's issue of Capital.) The stage has come, he added, when an assessment should be made of the results achieved by the Code of Conduct promulgated by the General Insurance Council. The consensus of opinion is that the same chaotically competitive conditions continue to prevail in the industry as they did before the Code was enforced. "This is a serious question as many marginal insurers are passing through a period of uneasy suspense. How things have deteriorated would be at once evident from a comparison between the rates of marine insurance in 1950 and in 1959. These are also reflected in the consequent [illegible]rioration in the claims experience in m[illegible] business of all companies, big or small." Mr. [illegible] urged that conditions of "wild" competition sl[illegible] give way to mutual co-operation and unders[illegible]ing.



Progress of Reinsurance

The progress of the India Reinsurance C[illegible]ration Ltd continues to be watched with int[illegible] Its balance-sheet covering the year ended D[illegible]ber 1958 has recently been published, and w[illegible] doubt be read carefully by many apart fro[illegible] shareholders. Membership of the Corporati[illegible] composed entirely of general insurance comp[illegible] engaged in direct writing. Its board is thus [illegible]tituted wholly of directors or managers of [illegible] insurers. Such interlocking of interests is n[illegible] ways helpful to a professional, institutional [illegible]surer, whose choice of accounts should non[illegible] be free of influence from direct writing comp[illegible] In business, it should be motivated entirely b[illegible] own interests. This wholesome principle of tr[illegible] in reinsurance does not, however, apply t[illegible] I.R.C., which by its terms of incorporation, [illegible]menced with a compulsory levy of 10 percen[illegible] 5 percent on the direct business of its mem[illegible] companies. The fact that there is little choi[illegible] accepting business and accounts must neces[illegible] affect the financial results of the Corporation [illegible] as the compulsion to reinsure with the I.R.C. ir[illegible]ference to outside agencies on better terms [illegible] to affect the good companies. It has been sugg[illegible] that commencing business on this basis was e[illegible] tial if the I.R.C. was to find a footing in an int[illegible]ly competitive international reinsurance ma[illegible] But it is to be hoped that before long the I[illegible] will be on its own. It might well shed the ob[illegible] tion of a compulsory intake by appropriate cha[illegible] in its articles, and instead freely choose its[illegible] counts and business. Only then will it acl[illegible] happier results and attain the character of a pr[illegible] sional, institutional reinsurer.

The I.R.C.'s latest balance-sheet shows tha[illegible] net premiums totalled Rs. 1,26,48,434 in the [illegible] departments. It has maintained the reserve [illegible] unexpired risks at 40 percent in all departm[illegible] including marine, whereas most of its mem[illegible] companies maintain 50 percent for fire and m[illegible]laneous and 100 percent for marine. Ther[illegible] hardly any justification for maintaining [illegible] 40 percent in marine when the claims rati[illegible] India is much higher. Had the reserves [illegible] maintained at the suggested figures, the wor[illegible] results might have looked different. The I[illegible] is more a manager of reinsurances than an u[illegible] writer, for it has little choice in accepting [illegible] counts. Yet, in its management of reinsura[illegible] it has to exercise considerable prudence and[illegible] derwriting ability. Its loss ratio is 55 percen[illegible] fire and 49.4 percent in miscellaneous insur[illegible] But in marine insurance it is as high as 81.1[illegible] cent. These ratios are higher than the aver[illegible] mentioned in the *Indian Insurance Year B[illegible]* The presumption that the I.R.C. is losing he[illegible] on exchanges outside India is to some extent [illegible] ported by the departmental revenue acc[illegible] figures. The payment of claims outside India [illegible] cluding estimated liability) in the fire departi[illegible] was Rs. 19,27,966, against Rs. 5,73,082 paid in I[illegible] In marine, the payment outside India in 1958 [illegible] negligible, being only Rs. 39,233, against an In[illegible] payment of Rs. 17,13,535. But the premium [illegible] tained on business outside India was [illegible] Rs. 1,99,433, and since the marine losses are [illegible] jected into future years, the estimated liabili[illegible] Rs. 14,39,028 offers an indication about the fu[illegible] of foreign reinsurance exchanges. The miscel[illegible] ous losses are, however, almost entirely Indian [illegible] foreign premiums and losses are negligible.

The Groundnut Oil Margin Enigma

The trade is greatly agitated about the way [illegible] authorities of the Bombay Oilseeds and Oils [illegible] change have handled the Forward Markets C[illegible] mission's order levying a margin on groundnu[illegible] for December delivery. Although the Com[illegible] mission's note was received by the Exchange [illegible] 26th September—at 1 p.m., to be precise—it [illegible] made public only after four days, on 30th Sep[illegible] ber. That the trade should be worried about [illegible] incident is hardly surprising. The margin ha[illegible] important bearing on prices in a highly spe[illegible] tive market. It is understandable that groun[illegible] futures and groundnut oil suffered a big de[illegible] between 28th and 30th September, in spite of [illegible] favourable weather reports and encouraging [illegible] seas advices concerning groundnut oilcakes [illegible] latter were bid up abroad to their highest l[illegible] for a long time). The heavy selling which bro[illegible] down the price of February groundnut [illegible] Rs. 178.50 to Rs. 173.62 and of December oil [illegible] Rs. 19.25 to Rs. 18.31 a quarter within three [illegible] was said to be influential. Since the selling see[illegible] to emanate from knowledgeable quarters, rum[illegible]

[illegible]y on even [illegible] levy [illegible]icy of New [illegible]licens- to the [illegible]ppears [illegible]nargin [illegible] mar- [illegible] was [illegible]ed by [illegible]overn- ng board. The president, too, it is said, was in- ormed of the order. Why, then, the margin order vas not immediately communicated to the market asses understanding. Equally intriguing is the oint why the Forward Markets Commission did ot see to it that its order was immediately com- lied with. A committee of five directors of the Exchange, including the Government nominee, has een appointed to investigate the matter, and its erdict is keenly awaited. But those who are fami- iar with the politics of the Bombay Oilseeds Ex- hange suspect that the enquiry might not prove articularly effective.

Meanwhile, the secretary of the Exchange has een suspended. It is surprising that the governng board should have been content merely with hat. One would have expected the Board to deal with the president himself, since he failed to safeguard the interests of the trade. Indeed, a powerful group in the Board has made the point that the Forward Markets Commission has no jurisdiction over specific non-transferable delivery contracts, because they are governed by the Indian Contracts Act and the Sale of Goods Act. It is argued that if these delivery contracts are covered by the bye-laws of the Exchange, it is merely to facilitate arbitration in case of a dispute. This may be a moot point, but it cannot be made a plea for not communicating the Commission's order to the market. The margin has, in any case, now been enforced. The margin rates are: Rs. 2.01 a quarter when the closing price is Rs. 19 a quarter, and Rs. 6.03 when it is above Rs. 21. During the delivery month, the margin rate will be Rs. 10.50. The margin is payable by every member on the total of the net long position on his own account and the net long position of every client of the member. The Commission has allowed a free limit of 2,500 quarters for the purpose of the margin in the case of such members as may be holding a total long open position not exceeding 4,500 quarters. Purchases made as a hedge against sales abroad will be exempted.

PUJA HOLIDAYS

On account of the Puja holidays, there will be no issue of CAPITAL on 15th October, 1959. The first issue to be published after the holidays will be dated 22nd October, 1959.

New Corporation for Rayon Exports

Reliable reports indicate that a scheme is almost ready for the formation of a new central body—the Rayon Development Corporation—to regulate the export of rayon fabrics and to extend the benefit of export incentives to the interests concerned. The draft outline of the scheme has been prepared by the Art Silk Development Council. The Corporation will have 18 directors, including two Government nominees, six from rayon yarn manufacturers, six from weaving factories, three from exporters and one from rayon yarn traders. It will have an initial capital of Rs. 1.6 lakhs, which will be subscribed by the interests represented by the 16 non-Government directors in proportion to the number of directors from each category. The Corporation will not itself engage in the export trade. This will be left to established exporters of rayon fabrics, who will have to get themselves registered with the Corporation if they are to avail of the export incentive scheme. But the entire imports of rayon yarn, currently worth about Rs. 4 crores a year, will be handled by the Corporation. It will distribute the yarn to actual users, who will have to earn an entitlement for it against exports. The allotment of import quotas on the basis of looms worked will be done away with. Weaving factories can supplement such entitlement with supplies of domestic yarn. The Corporation will take over from the Silk and Rayon Textiles Export Promotion Council part of its functions, and devise a formula whereby exporters can get the price differential between the domestic price of rayon fabrics and the price realised from exports. It is said that the Corporation will impose a levy on imported and domestic yarns provided to actual users; the proceeds of the levy will be used for increasing rayon exports and for making good the loss suffered by exporters whose names are registered with the Corporation. The idea of a levy stems from the huge premiums enjoyed on import licences for rayon yarn.

From a mere three million yards in 1957, exports of rayon fabrics in 1958 jumped to 33 million yards under the stimulus of the incentive scheme. This is a record of which the trade might well have felt proud, but it stands condemned for the dubious practices it adopted to inflate the export figure. Exports have suffered a sizable decline since the Government took serious notice of the unscrupulous methods adopted for pushing sales abroad. The figure for January-August 1959 is only 9.41 million yards. If the record of rayon fabric exports had not been tarnished by malpractices (such as overinvoicing and trafficking in import licences for yarn), the Silk and Rayon Textiles Export Promotion Council could have easily questioned the need for a new body since an organisation for export promotion already existed. But it would be less than fair to blame the Council for the activities of certain exporters, although these have not been few in number. The Council has done useful work in relation to export promotion schemes, registration of exporters, issuing publications, methods of overseas representation, and by providing facilities and assistance to members as well as overseas parties.

Marine Paint Manufacture

The East India Paint and Chemical Works Private Ltd of Calcutta proposes to make marine paints in collaboration with International Paints Ltd, one of the world's leading manufacturers. The managing director of the former company, Mr. B. Banerji, told a Press conference last Saturday that the internal demand for the commodity in India at present is estimated at 200,000 gallons, valued at Rs. 50 lakhs. Foreign shipping companies whose vessels visit Indian ports can use 45,000 gallons, and marine paints worth Rs. 15 lakhs are needed by Indian shipping companies each year. In addition, over Rs. 50 lakhs of marine paints are required by various countries in the Middle East, south Asia and the Far East. A substantial proportion of the requirements are supplied by International Paints at present; thus, under the proposed collaboration scheme, it is stated, India will not only be able to avoid imports but will also be able to export some of the marine paints she produces. Unfortunately, certain important raw materials required for making marine paints are not yet available in this country. East India Paints hopes that a licence for importing these raw materials will be issued, so that the final product can be fully up to world standards of quality. International Paints has offered technical as well as capital participation in the scheme.

Jute Brokers Complain

Speaking at the annual general meeting of the Jute Brokers Association in Calcutta on Saturday, Mr. Bimal Singh Kuthari, president, said that although the East India Jute and Hessian Exchange's bye-laws for licensing brokers for trading under the transferable specific delivery contracts were framed in consultation with different interests, members are experiencing "certain difficulties in trading on these contracts." The difficulties have been brought to the notice of the Exchange, and it is hoped that with the passage of time, they will be solved. When the Exchange introduced the new contracts, the position of brokers became "precarious" as many were unable to pay the admission and annual membership fees. After negotiations, the Association was able to persuade the Exchange to accept its proposal for issuing licences to brokers at a nominal annual licensing fee. Mr. Kuthari said that brokers are still experiencing difficulties in securing business from jute mills. Although the prospects of getting business have not improved much, the committee of the Association has been asking mills to buy raw jute through member-brokers only. It seems Mr. Kuthari has yet to appreciate that mills often buy fibre directly because that way they get it at more competitive rates. Brokers can get the business if they are honest and their prices are lower. Mills have to look, not to the brokers' welfare, but to reducing their own production costs so that they can retain their hold on foreign markets. They cannot be blamed if they sometimes get fibre cheaper through their own buying arrangements.

New Madras Township Proposed

The proposal to create a satellite town near Madras city has met with a mixed reception. The idea for a town with 10,000 new houses may be traced to the Kalyani project near Calcutta. It is argued that the population of Madras city has risen to 1.8 million, and the housing problem has become more acute in postwar years. A survey of the housing needs of Madras made by the Reverend C. W. Ranson before the war showed that a part of the working class was not able to obtain accommodation even in the slu[illegible] new scheme, it is estimated, will cost Rs[illegible] life: and in and it is based on the assumption that [illegible] India Improvement Trust cannot do much to [illegible] the housing shortage, bigger subsidies have to be provided by the civic authorities. No indication is available about the future burden to be imposed on ratepayers for providing essential amenities for people in the township. Meanwhile, it is widely feared that the influx of landless villagers to the city might increase if the satellite town offers employment opportunities for 50,000 people in small industrial establishments. A favourable factor is that bricks, sand and lime may be obtained easily. The chances of getting cement by boat from Andhra Pradesh factories are brighter, although the long haul along the Buckingham Canal might prove to be a deterrent factor.

TEA CULTIVATION IN U.S.A.

WITH reference to the exaggerated statements about tea cultivation in the United States, to which we referred last week, a writer in the "City Press," says: "I wonder what Mincing Lane thinks of the statement that experiments in tea cultivation in the United States have proved a complete success, and that America will in time rival China and Ceylon in its production. I do not know what is to prevent the successful cultivation of tea in the Southern States, but I could not think it likely to be profitable. There is about as much put upon the markets of the world as can be disposed of, and prices rule so low that there seems nothing to gain by further competition. There is, however, another side to the question. From the tea-drinker's point of view the revolution effected by the success of the Indian plantations has not been an unmodified advantage. I have never become reconciled to the flavour of the Indian tea, but have been sufficiently philosophical not to be very much troubled about it. If the American tea should prove to be superior in quality, and delicate in flavour, like the better teas of China and Japan, there may be some chance that its cultivation will pay." It will be seen that it is not from a tender regard for the feelings of India and Ceylon growers that this correspondent has been moved to write. While admitting that the experiments in America are likely to prove profitable, he is not averse to expressing a faint hope that there may be some chance of American tea if the growers can only produce that delicate flavour he loves so well. But even this does not demolish his contention that the cultivation of tea is not likely to pay.

Housing for Workers

(FROM OUR LEGAL CORRESPONDENT)

IN the absence of any specific contractual obligation to supply housing accommodation for his workmen, can an employer be ordered by an industrial court or tribunal to provide or construct quarters for them? A company, let us say, has 1,500 employees. It builds a factory in, and, in the words of one Appellate Tribunal[1], "bursts upon a rural area", a small village where such accommodation as there is is scarce and expensive, so that a workman has to go further afield for quarters and is put to considerable physical fatigue and inconvenience. The tribunal is of opinion that the problem cannot be solved by granting house rent allowance and that the only practical course, therefore, is that the company should either help the workers in building their houses or should itself construct quarters for them. Can a tribunal order the company to provide quarters?

This question has been answered by the Supreme Court in a very informative judgment published last month. The parties to the case were the Patna Electric Supply Company Ltd. and its workmen. The company had been ordered by a tribunal to start the construction of at least 15 quarters by a given date and under specifications laid down. That was on 8th March, 1953. The company appealed to the Labour Appellate Tribunal which, on 31st January, 1956, dismissed the appeal and now, more than six years after the original award, comes the judgment of the Supreme Court on the farther appeal by the company.

The tribunal and the Appellate Tribunal had, in ordering the company to provide housing accommodation for its employees, relied on the fact —and it is undoubtedly a fact—that in appropriate cases industrial adjudication may impose new obligations on an employer in what the industrial court may consider to be the interest of "social justice with the object of securing peace and harmony between the employer and his workmen and full co-operation between them."

"Social justice". "Peace and harmony". Full co-operation". What vague expressions these are; and, writing with real respect, in the light of our practical experience of the present relationship between employers, employees and trade unions, how loaded they seem to be with cynical irony! Nevertheless, it is at least nine years too late in the juridical day to contend that they do not represent perfectly correctly the main basis on which the industrial tribunals are supposed to function. The writer has never forgotten the amazement with which he read the principle laid down virtually abrogating the law of contract under which the tribunals were to administer the Industrial Disputes Act. Said Mukerjee J.—and, as it turned out, with complete soundness—"In settling the disputes between the employers and the workmen, the function of the tribunal is not confined to administration of justice in accordance with law. It can confer rights and privileges on either party which it considers reasonable and proper, although they may not be within the terms of any existing agreement. It has not merely to interpret or to give effect to the contractual rights and obligations of the parties. It can create new rights and obligations between them which it considers essential for keeping industrial peace."[2]

Applying the above observations to this particular case, the tribunal—supported later by the Appellate Tribunal—[illegible] was entitled to "create the new obligation" upon the company to construct a large number of housing quarters which it, the tribunal, "considered essential for keeping industrial peace", and proceeded to order the company to do so. The argument was quite simple. It was this. Housing accommodation was needed. Therefore, the employers must construct it. This would satisfy social justice, would be "in the interests of industrial peace", would "protect legitimate trade union activities" and would "prevent unfair practice or victimisation."[3]

The late Mr. Bumble is often misquoted as having said that "the law is an ass". He did not say so. What the sagacious beadle said was: "If *the law supposes that*, the law is a ass—a idiot.' And the law, even industrial law, does not go quite so far as to suppose what the industrial tribunal and Appellate Tribunal thought it did.

The company obtained special leave to appeal to the Supreme Court, and this is the substance of what the Supreme Court had to say: "There can be no doubt that an industrial tribunal has jurisdiction to make a proper and a reasonable order in any industrial dispute; and in that sense the respondent may be right when it contends that it was within the competence of the tribunals below to entertain its grievance about housing accommodation, and to give it (the workers' union) appropriate relief in that behalf. But assuming that the tribunal had jurisdiction to entertain the dispute, the question still remains whether.....The award under appeal can be justified on general grounds. In our opinion, under the present conditions, the answer to this question has to be in favour of the appellant (the company) and against the respondent.

"Industrial tribunals have consistently taken the view that housing accommodation of industrial labour is the primary responsibility of the State; and there has also been no difference of opinion on the point that in the present economic condition of our industries, it would be inexpedient to impose on the employers the obligation to provide housing accommodation for their employees. Besides, a scheme of wages properly fixed necessarily takes into account house-rent among other relevant facts; and under a proper scheme of dearness allowance, adjustments can be made when necessary from time to time so as to take into account an appreciable rise in the rents which industrial labour may have to pay. That is why usually industrial tribunals do not entertain employees' claims for housing and do not even allow a separate demand for house allowance as such."

And here in fairness to the tribunals in this case, the Supreme Court pointed out that they (the tribunals) would not have come to the conclusion at which they arrived about the grant of the demand for housing accommodation had they not taken an erroneous view of the effect of a scheme sanctioned but in relation to which no action had been taken by the Bihar State Government, with which this note, being concerned only with the nationwide principles, is not concerned.

Their lordships proceeded to add that the problem of housing shortage, as shown by the report of the Planning Commission on the second five year plan, "can be conquered only by sustained and well-planned efforts made by the States and industry together. It is a very big problem and involves the expenditure of a huge amount. Efforts are being made by the Central Government to invite the co-operation of industrial employers to tackle this problem with the progressively increasing financial and other assistance offered by the State Governments. But it is obvious that this problem cannot at present be tackled in isolation by industrial tribunals in dealing with housing demands made by employees in individual cases. In the present economic condition of our industries, it would be inexpedient to impose this additional burden on the employers. Such an imposition may retard the progress of our industrial development and production and thereby prejudicially affect the national economy. Besides, such an imposition on the employers would ultimately be passed by them to the consumers and that may result in an increase in prices which is not desirable from a national point of view.....So far as the present state of our national economy and the general financial condition of our industry are concerned it would be undesirable to think of introducing such an obligation on the employers today."

DURGAPUR

IS GETTING READY

At the Durgapur steelworks at this moment, nearly ten weeks ahead of schedule, the first Simon-Carves coke oven battery is being gradually and carefully heated up to operating temperature.
When this highly skilled process is finished, the coke ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.
Simon-Carves, a leading member of the British consortium ISCON which is building the Durgapur steelworks, are privileged to be the first contractors to put their plant into service – plant which is vital to Durgapur's coming production of another million tons a year of Indian steel.

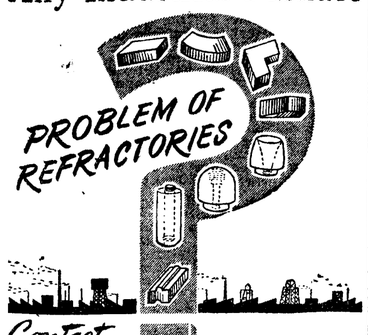
A Ditcher's Diary

MISS ARATI SAHA'S BRILLIANT ACHIEVEMENT IN swimming the English Channel on an obviously nasty day reminded me afresh how the women of India have been distinguishing themselves in an increasing variety of fields where men used to hold undisputed sway. It is not many years since the first Indian girls began to go to school, much to the displeasure of many of their elders, but now there are many women in Indian public life and the number is increasing daily. While the transformation is sometimes given less than its due credit by Indian critics, it often gives the foreigner a whole series of very wrong notions about Indian womanhood. Mr. Nirad Chaudhuri in his recent book said some uncomplimentary things about the "modern" Indian woman. To my sincere regret, I do not know enough of her species to have any firm opinion. But the Vijaya Luxmi Pandits and Arati Sahas are, I believe, exceptions still. So would be a British or American woman who became an Ambassador or swam the Channel; but there is a difference. The distance between the norm and the exception is here greater than in the West; and it is remarkable to contemplate how the two co-exist. This is, of course, another way of saying that India is a large country with a very big population of almost infinite variety. What do we, who meet sophisticated Indian women at cocktail parties, know of the peasant's wife, the worker's sister? When I was being thus modest, an Indian friend surprised me by saying that they are much like workers' and farmers' wives and sisters elsewhere. The difference is the greatest, I think, in the middle classes, which in India produce men of astonishingly *avant garde* in ideas and women rather inhibited. Here in Calcutta at any rate a wide chasm, I suspect, separates the intellectual life of many Bengalis and their personal and social life. I have often wondered whether the many tensions in West Bengal today are not in part ascribable to this dichotomy. I do not know nearly enough to be dogmatic about any of these delicate questions, and I am well aware that some of the best achievements of man—literature, music, art—are the products of tension. Cyril Connolly defined art as the end-product of an obsession, which is a disease that can often be creative. But I have been carried away far from my original subject, which was Miss Saha—full three cheers for her.

THERE WAS ONE ISSUE ON WHICH I AM SURPRISED either side in the U.K. general election asked the voters for their verdict. It is the question whether or not Britain should give up her privileged position in the Atlantic Alliance, modify her traditional commercial ties—both retained at the cost of a growing political and economic isolation from her Continental neighbours—and pursue what I for one consider her true destiny in this world of mammoth scale, that of an influential partner in a united western Europe. I should have thought the occasion of Mr. Khrushchev's visit to the United States would have been an admirable time for fresh thinking on this point; just how much longer will the U.S. go on putting her Atlantic ties before the obvious advantages to her of a strategic understanding with the Soviet Union? And it must be fast becoming clear to the most bigotted Empire loyalist or Commonwealth trading enthusiast that if Britain follows her present policy of putting traditional responsibilities before her interest in western Europe's growing influence and prosperity, she will not only find herself unpopular and isolated politically, but economically impoverished as well. I read the other day that M. Couve de Murville, France's Foreign Minister, has described Britain as one of the three main obstacles to the goal of a united and strong western Europe. There is a good deal of simplification in this attitude, but fundamentally I think he is right and ought not to be so. I have no time for the dream of western European aggrandisement through unity—which often seems to be the background to France's approach. But I do think it would be a good thing to have a "Third Force"—strong in the way neither the Commonwealth with Britain, nor western Europe without, can expect to be in the foreseeable future—holding the balance between the United States and the Soviet Union. It does seem to me that if Britain wants to survive economically, she must be prepared eventually to join a market which is at once geographically convenient, gigantic in size and expanding more rapidly than any other in the world. Such avowedly political gestures as the formation of the "outer seven" are no real substitute for this and could make the situation worse. There is no denying the logic of Britain's responsibilities and aspirations in the Commonwealth, and I would be the last to suggest that she should abandon them. But the time may have arrived when Britain must ask herself whether she is not paying too high a price economically, on the Commonwealth's behalf as well as her own, by cutting herself off from a true western European union. Indeed, the Commonwealth countries themselves may soon be insisting, for the sake of their own trading prospects, that Britain take this quickest and most obvious way to prosperity. As for the political and sentimental ties with the Commonwealth—well, when a widowed mother contracts a new marriage, it does not mean she must sever all connections with her children.



WRITING THIS DIARY HAS ALWAYS BEEN A PLEASURE —health, floods and riots permitting—except when I find myself with an obituary on my hands. And yet this happens all too often, at least if I am to record the passing of everybody of importance in commerce, industry and other fields of life. My reference this week is to the recent untimely demise of Mr. S. K. Sen, chairman of Sen-Raleigh Industries of India Ltd, and it is being made in no way as fulfilment of a customary duty. To me his loss is something of a personal one, because I know him to have been a regular and keen reader of *Capital* and especially this diary. A correspondent has written to say that Mr. Sen enjoyed its "comments and quips" so much that they were frequently the topic of his conversation with friends. When I last met Mr. Sen about a year ago at a dinner party, I was struck by the 70-year-old industrialist's unlimited mental energy and his almost insatiable curiosity to know about things. He told me, with evident pride in his tone, of the rapid growth of the Indian bicycle industry and the part he and the organisation which he so successfully headed, were playing in it. He repeated many of these points in his contribution on the subject which we published in the latest mid-year supplement of *Capital*. Like bicycles, roses were also a particular passion in his life; and in order to raise the best rose garden in India he brought some 400 to 500 plants from Europe, including many rare species. He sought the same foreign assistance for the development of his rapidly growing industrial concern, and it is notable that he died in a West German city while on a business trip there.

MANY HAVE A TOUCHING FAITH IN FAITH AND I DO hope that the Visva Dharma Sammelan (World Religious Conference) will succeed in relieving world tension. I have my doubts though. If history is any guide, religion has accounted for not a few wars in the past: and even today there is a militant sort of religiosity to be seen in many countries which does not remind one of peace. We have all been looking for a unifier, and it is pathetic to see how panaceas, two a *naya paisa*, are doing good business. George Orwell, that unsentimental analyser of popular thoughts, wrote many years ago how international sport actually increases rivalries instead of reducing them. I am inclined to think that it is muddle-headed to imagine that the religions of the world have a great deal in common. Of course they all share some beliefs and some precepts, but there would simply not be so many religions if there were not many and real differences in the philosophy and dogma which underlie them. When religion is an intellectual exercise, or a matter of personal persuasion and behaviour, these differences do no harm. They are in fact respected, or just not discussed, in polite society. Many visitors come back from Europe and the United States with the notion, not wholly true, that those continents are irreligious. But it is rather different in India and some other countries. The deeply spiritual are worthy of respect, but it can hardly be denied that religion still arouses passions in many and leads sometimes to bloody conflict. My views on religion are not at all relevant to my suggestion that it may not be the best unifier in this part of the world; it may in fact create new dissensions or revive old ones. I do not for a moment question the intentions of Mr. Ananthasayanam Ayyangar, who has suggested a code of conduct on the basis of synthesis of all religions; but I find it hard to believe that any code that may be formulated is going to be of much use to anybody. On the other hand it is quite on the cards that spokesmen of various religions will so forcefully argue the superiority of their respective faiths that tension will actually increase. Of this, I suggest, we already have enough and to spare.

EVERY YEAR SEES MORE CARS ON THE ROAD AND more people learning to drive. Madame Janet Tessier du Cros, who frequently contributes a "Letter from Paris" to the "Women's Hour" programme of the British Broadcasting Corporation, reported in a recent broadcast on her progress in learning to drive in the French capital, where she has been taking regular driving lessons on a paying basis, and also attending free classes where mechanics and traffic regulations are taught. It was an exciting experience, she said, and she had been particularly struck by the opening of the booklet about traffic regulations given at the free classes. "It is an example of the French genius for going back to first principles. It is this: 'Every vehicle, whether circulating alone or drawing a tender, must have a driver'."

DALMIA CEMENT (BHARAT) LIMITED

CHAIRMAN, MR. V. H. DALMIA'S REVIEW

Speech of Mr. V. H. Dalmia, Chairman, Board of Directors of Dalmia Cement (Bharat) Ltd., delivered at the Seventh Annual General Meeting of the Company held at Dalmiapuram (Dist. Tiruchirapalli—Madras) on Wednesday, the 30th September, 1959.

Gentlemen,

I welcome you to the Seventh Annual General Meeting of your Company. As evident from the audited accounts for the year 1958, the working results during the last year received a set back and the profit declined compared to the performance in 1957. The reasons for this decline have been explained in the Report of the Directors which along with the accounts, has already been circulated. During the current year, however, there is improved production and despatches in all Departments. I am also glad to inform you that the installation of the third cement kiln is practically complete. Last year I had indicated that the expansion will be completed in early 1960. The commissioning of the new kiln well ahead of the schedule is a matter of great satisfaction and the credit goes to the officers, staff and workers, whose sustained efforts has made this possible.

For several years, we have been making efforts in collaboration with influential business friends in Japan to develop the export of very high grade iron ore from the rich and extensive deposits in your Company's mines in the Bellary-Hospet area. As you are, perhaps, aware the exports of iron ore have since July 1956 been canalized entirely through the State Trading Corporation of India Limited and we have since then endeavoured to the best of our ability to assist the Corporation in such exports. As mentioned in your Directors' Report, over one lakh tons of iron ore from our mines have been shipped since December 1958 to Japan and further orders are in process of execution. I would add that our efforts in this matter have been directed essentially towards a target for a long term arrangement for the additional exports of high grade iron ore over a period of several years and thus towards the furtherence of foreign exchange earnings.

Salem Plant

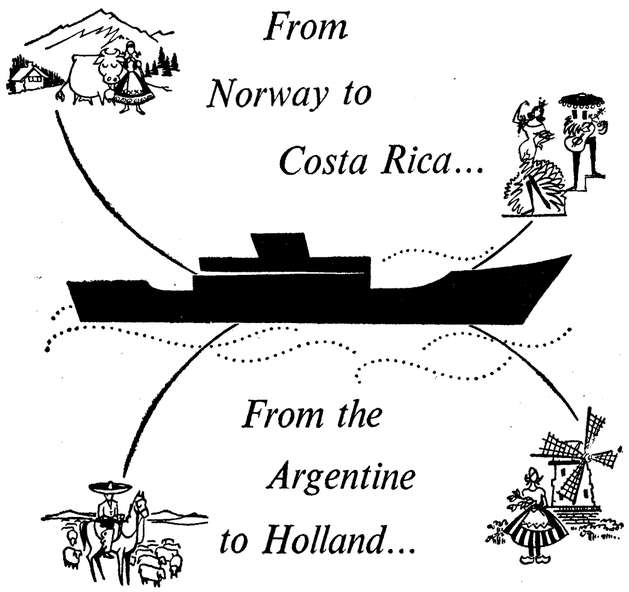
I made a mention last year regarding the plant which was then under installation at Salem for the manufacture of dead burnt magnesite. Your Company has entered this business by becoming a two-third partner in the firm Messrs. Dalmia Magnesite Corporation, which has undertaken this project. Orissa Cement Limited and Dalmia Cement Limited, two of the former partners of this firm have retired from the partnership. I am glad to inform you that the plant went into production in January this year. Sales of dead burnt magnesite have commenced and supplies are being made principally to the steel and refractory industries. Some export has also taken place and efforts are being made to develop an export market with a view to possible expansion of the production by installation of a second kiln.

Price Revision

The announcement about the revision in the ex-Works price of our cement is overdue and is expected any time. The increase will not in any way affect the public selling price of S.T.C. When the new price is notified, we might be required to submit supplementary bills to the S.T.C. for the past period in case, as is likely, the increase is allowed by Government with retrospective effect.

In my speech last year, I had referred to the surpluses which are being earned by the S.T.C. over the sale of cement. The accounts for the year ended 30th June, 1958, show a further surplus of Rs. 4.10 crores, which is reported to have been remitted to the Government of India. These surpluses should be used for the benefit of the cement industry. We were told once that these amounts will be utilised on the development of national highways. Very little appears to have been done in this respect. These monies should be available to subsidise the export of larger quantities of cement, which not only mitigate the problem of surplus production but also earn much needed foreign exchange. There is considerable demand for cement in the neighbouring countries but we have to bring down our export prices if we are to compete in the world market and make a head way. I hope every effort will be made to augment the exports of cement. You will be glad to know that your cement is being regularly exported to Ceylon and has established a distinct reputation for itself in that country.

Income Tax Assessments



There is an important point connected with income tax assessments, to which I would like to refer. Under the Law, as it is at present, the Income-tax Officer while computing the taxable income has wide powers to hold that a particular expenditure was not commercially expedient and to disallow it for the purposes of tax assessment. This power is being exercised in assessments of business incomes, in a very arbitrary manner causing hardships as well as harassment to the tax-payer. Whether a particular expenditure is commercially expedient or not, can be best judged by the person running the business and there should be no question of the income-tax department sitting in judgment over it. The main purpose of the taxing authorities is to check any evasion of taxes and in keeping with this objective, if any expenditure is found to be in the nature of tax evasion, the assessing authority may have the power to question such expenditure. Their authority should be limited to this extent. No expenditure should be disallowed unless the assessing authority clearly comes to the conclusion that the said expenditure is not a bonafide expenditure but a device to evade tax. An amendment of the law is necessary to protect the tax-payer from avoidable harassment and from taking recourse to appeals thus wasting time and money, which can be better utilised in other productive work. Numerous instances have occurred where assessees have been subjected to such harassments and in some cases even double taxation has been resorted to on the same income, once by taxing the amount by disallowing the same in the hands of the payer and at the same time taxing the recipient also on the same amount. This is grossly unfair. Even expenses and arrangements which are accepted by specialised price fixing authorities like the Tariff Commission are disallowed and ignored and the relative amounts added to the income and taxed. Items not forming part of revenue are treated as revenue and taxed. The Finance Minister has recently spoken strongly against harassment of the tax-payer, whether intentional or unintentional. He has also said that where Rules and Regulations are such that they cause harassment to the tax-payer, such Rules should be reconsidered and changed. People do not mind paying the taxes if legitimately assessed and recovered. I hope that the difficulties to which I have referred will be duly considered and the relevant Rule suitably revised.

Labour Troubles

I made a mention at the last annual general meeting about the serious labour troubles in 1957/58 at Dalmiapuram arising from inter-union rivalries. The result has been less production and loss of profits. It is your Company which has suffered most. In 1957, when we entered into a three year agreement with the labour, we agreed to pay three months basic wages as bonus for each of the three years 1957, 1958 and 1959 on the understanding given by the union that industrial peace will be maintained. The workers have been demanding that even though they did not maintain peace, production suffered and the Company was put to heavy loss of profits due to their inter-union conflicts, they should be paid full bonus for 1958. The Company is resisting this demand, which on the face of it is most unfair, and the matter is now pending before the Madras High Court. During the current year, by and large, peaceful conditions have prevailed except for a brief strike in February.

In the end, I wish to thank you for coming and hope that you will continue to take active interest in the affairs of your Company and give us the benefit of your views and suggestion. The accounts and Directors' Report, having been circulated will, with your permission, be taken as read and the meeting will now proceed to transact the business on the agenda.

N.B. The above extract of the speech does not purport to be the report of the proceedings of the Seventh Annual General Meeting of the Company held on the 30th September, 1959.

MAZAGON DOCK *helps improve India's foreign exchange position!*

During the past 5 years, the combined earning and saving of foreign exchange, achieved by Mazagon Dock, amounts to rupees 8 crores!

ship repairs in the port of Bombay means Mazagon Dock (Private) Ltd.

Here in India, this enables Mazagon Dock to help improve India's foreign exchange position. Mazagon Dock *earns* foreign exchange by repairing vessels, owned by foreign shipping concerns...*saves* foreign exchange by providing reliable repair facilities for vessels which would otherwise be repaired in foreign ports.

CAPITAL ISSUE CONSENT

The consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company at Rajgangpur, Orissa. IT MUST BE DISTINCTLY UNDERSTOOD THAT IN GIVING THIS CONSENT THE GOVERNMENT OF INDIA DO NOT TAKE ANY RESPONSIBILITY FOR THE FINANCIAL SOUNDNESS OF ANY SCHEME OR FOR THE CORRECTNESS OF ANY OF THE STATEMENTS MADE OR OPINIONS EXPRESSED WITH REGARD TO THEM.

The Registered Shareholders as on 30-9-1959 can also apply for additional shares on special application form, the allotment of which will be at sole discretion of the Directors out of the unsubscribed shares by Right holders, if any.

The last date for receiving application by the Company's Bankers or by the Registered Office against Right shares is 31st October, 1959. The application for additional shares can be made only to the Registered Office of the Company by 31st October, 1959. Fractional Share certificate application can be made only to the Company upto 16th November, 1959.

The Letters of Right and forms of additional share application along with circular of instruction will be posted to all shareholders in such time so as to reach them by 14th October, 1959 along with Dividend Warrant for the accounting year 1958. If any person does not receive these forms in time he should immediately send a complaint to the Company with a request to send him duplicate forms giving an undertaking that if originals are received one set will be returned to the Company unutilised.

WORKING RESULTS

The Company's working results for the last seven years are given below.

Year.	Gross block including construction in progress at cost.	Cement production.	Refractories production including mortar.	Gross profits before Depreciation, Development Rebate and Managing Agents Commission.	Depreciation & Development rebate provided.	Dividend per ordinary share.

Over 10 years ago, the TISCO Research and Control Laboratory at Jamshedpur, illustrated above, was Shalimar Tar waterproofed and is, today, still waterproof.

Proof enough that Stp bituminous proofing is the best.

Throughout India, crores of rupees worth of Government property, industrial establishments and private homes are protected from dampness of ceilings, walls and floors, from acid and alkali action by Shalimar Tar Stp bituminous based protective materials.

THIS IS ONLY AN ANNOUNCEMENT REGARDING ISSUE OF PROSPECTUS AND NOT A PROSPECTUS

No subscriptions are invited on the basis of this Announcement. Intending subscribers are requested to obtain from the Registered Office of the Company or any one of the Bankers or Brokers referred to hereunder, copies of the Prospectus to which are attached forms of application. A formal Prospectus has been filed with the Registrar of Companies, Bangalore. Some of the particulars contained in the Prospectus are set forth hereunder.

Consent of the Central Government has been obtained to this issue of Capital by an order of which a complete copy is open to Public inspection at the Registered Office of the Company. It must distinctly be understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to it.

A licence has been obtained from the Central Government for the establishment of this new Industrial undertaking of which a complete copy is open to Public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this Licence the Government of India does not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Applications have been made to the Madras Stock Exchange and to the Bombay and Delhi Stock Exchanges for the permission to deal in the whole of the issued Preference and Equity Shares and in due course for an official quotation.

The list for Public Subscription will open at 10-30 a.m., on Monday the 12th day of October 1959, and will close on Saturday the 24th day of October 1959.

THE MANDYA NATIONAL PAPER MILLS LIMITED

BANGALORE

(Incorporated under the Companies Act, 1956)

AUTHORISED CAPITAL:	...	**Rs. 4,50,00,000**
Divided into: 1,80,000 7% Tax-free Redeemable Cumulative Preference Shares of Rs. 100/- each	...	Rs. 1,80,00,000
and		
27,00,000 Equity Shares of Rs. 10/- each	...	Rs. 2,70,00,000
		Rs. 4,50,00,000
ISSUED CAPITAL:	...	**Rs. 2,00,00,000**

THE MANDYA NATIONAL PAPER MILLS LIMITED—*Cont'd.*

OBJECTS

The Company was incorporated on 7th November 1957 to set up in Mysore State a Paper Mill having an initial production capacity of approximately thirty-five tons per day and to carry on the business of manufacture of high grade writing and printing paper. The main objects of the Company are contained in the Company's Memorandum of Association which is open to inspection at the Registered Office of the Company.

PROSPECTS

India's present 'per capita' consumption of paper is less than 2 lbs. as against 384 lbs. in U.S.A., 165 lbs. in U.K., 150 lbs. in Sweden and 46 lbs. in Japan. The Planning Commission has estimated the annual demand for paper and paper-board by the end of the Second Plan at 350,000 tons. Even with the record production of paper and boards of 250,000 tons in 1958, the need for additional production is obvious. The demand for paper is bound to increase still more during the Third and subsequent plan periods.

SITE

The Paper Mill will be located near the Krishnarajasagar Dam (Mysore State). The factory site is adjoining Bangalore-Krishnarajasagar Road and Mysore-Belagula-Mercara main road as well as Mysore-Arsikere railway line.

RAW MATERIAL

High Grade printing and writing papers will be produced using sugarcane bagasse as the primary raw material. Ample quantities of bagasse will be made available for the proposed paper mill by the Mysore Sugar Co., Ltd., Mandya, which yields about one lakh tons of bagasse annually.

PLANT AND MACHINERY

Negotiations have been completed for purchase of first-class, most modern equipment and technical services, from Messrs. Parsons & Whittemore, Lyddon Organisation, New York, London, Paris and their Associates. They have also agreed to supervise the erection and start-up of the Paper Mill and have guaranteed the due performance of the plant. In addition to supplying equipment and technical services, this Organisation has subscribed Rs. 62,41,500 to the Equity Capital, and shares of the face value of this amount have been allotted to them in full.

MANAGING AGENTS

With the consent of the Central Government, the Company appointed Messrs. Bedi & Co. Management Private Ltd., as the Managing Agents for a period of 15 years by a Managing Agency Agreement effective from 24th October 1958.

NOMINATION OF DIRECTORS

The Government of Mysore, and the Mysore Sugar Co. Ltd., are each entitled to nominate a Director on the Board of the Directors by virtue of their holdings in the Share Capital of the Company. The Industrial Finance Corporation of India is also entitled to nominate a Director on the Board of Directors.

INTEREST OF DIRECTORS

Sardar Maluk Singh Bedi and Sardar Anup Singh Bedi and Mr. H. L. Nathan, Vice-President of Messrs. Parsons & Whittemore are also Directors in the Managing Agency Company and as such are interested as a Representative of Messrs. Parsons & Whittemore, who have agreed to supply the necessary plant, machinery and Technical services to the Company.

Save as above, no other Director has any financial or any other interest in the promotion of the Company or in any other property acquired or proposed to be acquired by the Company.

CAPITAL REQUIREMENTS

	Rs.
Land & Buildings etc.	24,90,000
Plant and Machinery (including freight, insurance, customs duty, erection, technical services, etc.)	2,90,62,000
Preliminary and Administrative Expenses up to start of production	14,70,000
Contingencies	14,78,000
Interest on Deferred Payments	37,00,000
Total	3,82,00,000

SOURCE OF FUNDS

The total requirements of Rs. 3,82,00,000 will be met as follows:—

	Rs.
(a) By the issue of Equity Shares	1,40,00,000
(b) By the issue of 7% Tax-free Redeemable Cumulative Preference Shares	60,00,000
(c) Through Deferred Payments arranged with Suppliers of Machinery	1,82,00,000
Total	3,82,00,000

ESTIMATE OF PROFITS

The Directors expect a substantial margin of profit after meeting establishment charges and Managing Agents' Commission on the basis of the normal selling price of paper. The Company will enjoy the special benefits under the Income-tax Act as regards development rebate and depreciation and exemption from income-tax on profit up to 6 per cent on the capital employed for the first five years of the Company's operation. The Company will not be liable to pay tax for the first three or four years of its operation, and that after providing for depreciation and preference dividends as well as deferred payments on machinery, etc. the Company expects to pay dividends after the first three years' operation of the plant. Copies of all the contracts, made with and by the Company, Memorandum and Articles of Association, Government consent for the issue of capital, Government permission for establishment of the Industrial Undertaking, etc., are all open to inspection at the Company's registered office.

UNDERWRITING

The entire Preference Share Issue has been underwritten, the names of the Underwriters and the number of Shares underwritten by them being as stated below :—

	Preference Shares of Rs. 100 each
The Industrial Credit and Investment Corporation of India Limited	30,000
Life Insurance Corporation of India	15,000
The Union Bank of India Limited	14,987
	59,987

The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their obligations.

UNDERWRITING COMMISSION

Underwriting commission at the rate of 2½% of the nominal value of the shares underwritten is payable to the Underwriters, The Industrial Credit and Investment Corporation of India Ltd., the Life Insurance Corporation of India and the Union Bank of India Ltd., respectively, in accordance with the terms and agreement contained in letters dated 22nd September 1959, from the said Underwriters and the Company's acceptance of each of them of the same date.

BROKERAGE

A brokerage at the rate of 15 nP. per Equity Share and Rupee one per Preference Share will be paid on allotments in respect of applications bearing the stamp of a Bank or a member of a Recognised Stock Exchange. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on allotments in respect of applications made or procured by them, provided that the relative forms of application bear their respective stamps.

Messrs. Harbans Singh Mehta & Co., N[redacted] and Messrs. Batlivala & Karani, Bombay[redacted] Managing Brokers of this Issue and will b[redacted] tion entitled to a brokerage of 50 nP. p[redacted] on 59,987 Preference Shares offered [redacted] subscription.

All applications for shares must be made on forms accompanying the Prospectus, copies of which may be obtained from the Registered Office of the Company or from the offices of the Company's brokers, bankers or underwriters. The application form together with the remittance for the amount payable on application must be sent to the Registered Office of the Company at 4/3, Kensington Road, Bangalore-1, or any one of the Bankers of the Company at their Head Office or any of their principal branches.

ORISSA CEMENT LIMITED

P.O. RAJGANGPUR (Dist. Sundergarh, Orissa State)

Managing Agents: **Dalmia Agencies Private Ltd.,**

in all sizes and intricate shapes with different types of
MORTARS
Manufactured in collaboration and under guidance of
Dr. C. OTTO & COMP. G.M.B.H. BOCHUM-DAHLHAUSEN, WEST GERMANY.

Plantation Topics

TALKS ON RUBBER TARGETS FOR THIRD PLAN

SHARP RISE IN DEMAND EXPECTED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE third five year plan working group for rubber, which was set up by the Government of India with representatives of the Ministries concerned, the Planning Commission and rubber growers, is expected to meet in Trivandrum around 15th October. The group was appointed to consider production targets for the rubber planting industry during the third plan period. Similar groups have also been set up for the tea and coffee planting industries. It is stated that in the Perspective Planning Division of the Planning Commission, a section is at present working on plantation crops, so it is clear that there is a new awareness in the Government of India and in the Planning Commission about the importance of the plantation industry. There is large scope for expansion of the industry to meet the internal demand, apart from the possibility of increased exports. Manufacturers of rubber products are estimating the internal demand for rubber to rise to over 150,000 tons within the next ten years. The expansion of tea production and consumption within the country and larger exports during the last 20 years indicate that in the next 20 years, the total requirements of the country will be an output of 1,100 million lbs of tea.

Rapid Expansion

The main aim of planning should be to bring about a rapid expansion of the plantation industry. But the prospects for this have been destroyed by the land reform proposals of the two major plantation States of south India, namely, Kerala and Mysore. All efforts towards the expansion of the industry will be wasted if the provisions concerning plantations in the Kerala and Mysore Land Bills come into force without the required amendments.

An output of 1,939 tons of natural rubber was produced in India during July this year while manufacturers' offtake amounted to 3,450 tons. Production during the first seven months of the year has been placed by the Rubber Board at 10,998 tons and consumption at 21,979 tons. The gap between the two was thus as big as 10,981 tons. In other words, consumption was almost cent percent higher than production. India imported 15,000 tons of rubber (both natural and synthetic) last year, in order to bridge the gulf between local production and consumption. More will have to be imported this year because of the enhanced demand from manufacturers.

Rising Demand

With the connecting of the modernisation and expansion programme in the rubber manufacturing industry, the demand for raw rubber is bound to go up further in future years. The Firestone Tyre Company in Bombay is going ahead with its expansion plans, and its plant is now designed to produce double the previous output, although permission has been given for an increase in capacity of 60 percent only. Furthermore, the Ceat Tyre plant is getting ready and is expected to go into production next year. There are others who are interested in setting up plants in the country. There is a scheme, for example, to set up a Rs. 2-crore tyre factory in Kerala in the private sector. A local industrialist, in co-operation with some financiers in Bombay and with technical collaboration from the United States, is sponsoring the project. The State Government, meanwhile, has agreed to contribute 25 percent of the capital. Some of the existing factories have already expanded their scope of activity and have started manufacturing a variety of new products.

Rise in London Tea Prices

Trade reports indicate the possibility of further rises in the prices of all grades of teas. London has recently recorded handsome advances in prices. It is now getting teas from north India in bulk and the demand for better qualities has risen sharply as traders think that supplies might be smaller than expected. Prices for good quality Indian teas have risen above 11s a lb, a rise of about 1s in two weeks. At this level, prices are about 2s a lb below the levels running at this time last year. The small decline in the average price realised this year, compared with 1958, is attributed to the fact that the north Indian crop, as a whole, has been brought into London much earlier this year.

The latest crop figures indicate that tea production in north India at 302.5 million lbs (April to August 1959) has been 8.3 million lbs higher than last year's output. But this increase has been more than offset by a smaller output in the south which amounted to 83.3 million lbs during January to July, compared with 99 million lbs in the same period of last year.

Recovery in Pepper Prices

On account of the slowing down of the tempo of demand from abroad, black pepper prices in India have eased slightly. The price in Cochin, for ready delivery, has dropped from the peak of Rs. 146 a cwt. to Rs. 137 a cwt. recently. Forward positions also fell in sympathy. But there has recently been a mild recovery. The latest quotation has improved by Rs. 2. A mild renewal of foreign enquiry is reported. Although the United States is reported to have bought about 2,000 tons recently for nearby positions at around 30 cents or 31 cents a lb, it appears that buyers there are now interested in distant positions. They have been able to buy 2,000 tons for December-March shipment at around 28 cents or 28½ cents a lb. Based on the prevailing prices, nearby supplies will cost about 30 cents or 30½ cents. It is said that U.S. buyers are interested in building up distant positions at lower prices taking advantage of the reports of a larger Indian crop; it is now placed at about 27,000 tons, against last season's 23,000 tons.

But the trade is optimistic about the future. It is thought that the United States and the east European countries will have to turn ultimately to India to meet the major share of their requirements because of reduced supplies from Indonesia and Sarawak.

Bonus Dispute in Kerala Plantations

It appears that the dispute between Kerala planters and their employees on the question of bonus will soon go for adjudication. The Chief Secretary of the State convened a conference of the representatives of the parties concerned on 26th September to consider as to what should be done after the failure of the conciliation board set up by the former communist Government. The conference was dissolved without coming to a decision. The workers as well as the planters are pressing the State Government for a speedy solution to this vexed problem. The question of bonus from 1957 onwards has remained unsettled, and no formula for its distribution has yet been evolved. The former communist Government appointed a committee with the retired district judge, Mr. Mammen Tharakan as chairman, and with representatives of both workers and management to recommend a formula. The chairman had to submit a report of his own in the absence of agreement between the representatives of the management and workers on the committee. In that report, he adopted the Supreme Court formula as the basis of his recommendation. The representatives of management subsequently accepted the chairman's recommendation. But the labour representatives turned it down. Mr. Justice Joseph, chairman of the Conciliation Board, has also failed to bring about a settlement. All chances for compromise being lost, the only alternative left to the Government now appears to be to order adjudication.

Revival of Industrial Relations Body Urged

The labour representatives, who walked out of the Kerala Industrial Relations Committee for Plantations declaring that it was useless, are now requesting the new administration of the State to revive it. The Government appears to be favourably disposed towards their request.

COCHIN TEA SALES

At Dust Sale A, 300,000 lbs of tea were on offer. There was a good general demand at prices irregularly 5nP to 10nP lower.

City Cable

STEADY TREND IN STOCK MARKET

STEELS EASIER ON ELECTION POLL RESULTS

London, 6th October.

THE performance of the stock market during the past week was quite remarkable. The Jasper affair had by no means faded from the minds of investors, but the main influence on sentiment was the forthcoming general election. The initial dullness followed a public opinion poll showing a further decline in the Conservatives' popularity. This, however, merely caused buyers to hesitate temporarily, and although there were other polls—including the Gallup Poll last Thursday—confirming this trend, buyers preferred to take an optimistic view and the market made good progress in response to a broadening demand which came both from the general public and the institutions. On balance, gains were fairly widespread but a large part of the earlier rise in steel shares was lost due to profit-taking and following more public opinion polls showing that the Conservative lead over Labour was being reduced. There were some sharp improvements among leading industrials. Ford Motors, although slightly below the best, were several shillings higher on balance, on dividend hopes and a fairly considerable amount of American buying. Property shares returned to favour after their recent shake-out. The main item of company news was the merger between Alliance Assurance and Sun Insurance. This caused a sharp advance among insurance shares generally. Gilt-edged securities generally recorded very little change. In the case of 2½ percent Consols, however, official support was not forthcoming and the price fell sharply. After a period of neglect, there was a revival of interest in gold shares, which advanced in response to some good September profit statements and buying on American account. Rubbers and teas were firm. There was very little to assist oil shares, which were quiet and narrowly irregular.

The Money Market

There was a good deal of uncertainty in the money market during the past week. On one or two occasions, money came out late in the day after the market had paid a high rate for its requirements. Consequently, there were some sharp fluctuations, but the general rate ranged from 3½ percent to 3¼ percent. Supplies of credit were barely sufficient to meet all needs, but only a small amount of official assistance was required and it was unnecessary to seek assistance from the Bank of England at Bank rate terms. There was fair business in December and "hot" bills at 3⅞ percent, but the rate hardened to 3⅞ percent as a result of the upward adjustment in the Treasury bill rate to £3 9s 10.48d percent.

Activity on Wall Street

U.S. Government obligations fluctuated irregularly during the past week. Investment quality corporates moved ahead at first but later fell back. Speculative rail lines were mixed. German nationals and Italians were inclined lower. Among Japanese issues, 6½ percents of 1964 fell over a point, while Chile 3 percents gave up one point. In over-the-counter trading Russian Imperials dipped on a report that Mr. Khrushchev had asserted that the bonds would certainly not be paid off.

Vegetable Oil Market

France has been a more active buyer of U.S. linseed, linseed oil and groundnuts. For Canadian linseed, moderate business was done but a further advance of £1 curtailed trading to a large extent. Occasional demand was noted for Nigerian groundnuts, while castorseed remained a steady but quiet market. Linseed oil price fluctuations were moderate and consumer demand most of the time was uncertain. An easier trend developed towards the close. Demand for Indian castor oil was fair and with reports of a resumption of U.S. buying the market firmed. Groundnut oil witnessed little alteration in prices, with trading quiet.

BEAR COVERING ASSISTS MODERATE RECOVERY IN PRICES

RESTRICTED TURNOVER IN SHORT TRADING WEEK

Tuesday Evening.

THE Calcutta Stock Exchange closed for the long Puja vacation today on a steady note. Trading will be resumed on 19th October. While prices were steadier than in the previous week, the volume of business was smaller due to the Stock Exchange being open for trading for only three days during the period under review. Bear covering assisted the recovery movement which started during the week-end and Indian Irons were at one time done up to Rs. 24.10. Budla charges at the last settlement, both in Calcutta and Bombay, were comparatively lower, indicating a fairly sound technical position.

The main talking points among the market pundits at the moment are the stiffening of India's attitude towards China over the border dispute—as embodied in Mr. Nehru's 7,600-word letter to the Chinese Prime Minister in reply to the latter's communication of 8th September—and the spate of new issues expected to be launched during the next few weeks. Investors will be offered a mixed menu of debentures, preference and ordinary shares, some of which are likely to prove appetising even to the most fastidious. It is thought, therefore, that the present recovery movement may not go very far, as those investors who are short of liquid funds will be compelled to sell some of their existing holdings, which may be standing at a high premium, in order to apply the proceeds to new issues.

The gilt-edged market is expecting a new tap loan of approximately Rs. 50 crores, but despite this, all dated issues have continued to rule firm.

Bank shares were dull and neglected.

In coal, Amalgamated were offered at the lower rate of Rs. 25.50 while Bengal were better at Rs. 302. Pench Valley were marked down sharply from Rs. 24.87 to Rs. 23, following the announcement of a lower dividend. The outstanding feature was Western Bengal which rose from Rs. 6.25 to Rs. 6.87.

In cotton textiles, Dunbar moved up to Rs. 208 as did Kesoram from Rs. 18.25 to Rs. 19.

Very little business was reported in electric supply shares and prices showed no change.

In the engineering group, Indian Iron & Steel fluctuated between Rs. 23.55 and Rs. 24.10 to close tonight at Rs. 24.08. Braithwaites and Burn & Company were offered at Rs. 24.75 and Rs. 445 with few declared buyers. The star feature in this section was Jessop, which spurted from Rs. 30.12 to Rs. 32.62 on rumours of a possible rights issue. Textile Machinery were better at Rs. 24.20 and there were buyers of Indian Galvanizing at Rs. 20.25.

There were a few features in the jute section during the period under review. Shares which met with particular enquiry at higher prices were Bally at Rs. 251, Birla at Rs. 24.75, Howrah at Rs. 23.37, Kanknarrah at Rs. 124, Kinnison at Rs. 197, Barnagore at Rs. 174 and Union at Rs. 235.

Paper shares were steadier, particularly Orient which rose from Rs. 37.95 to Rs. 38.50. India Paper Pulp were marked at Rs. 22.25 ex-rights and there were buyers of Titaghur at Rs. 45.25 and Sirpur at Rs. 14.56.

In the miscellaneous group, Indian Aluminium moved up from Rs. 22 to Rs. 22.87 and there were ready buyers of Dunlop Rubber at Rs. 35. Hindustan Motors were firm at Rs. 13 as were Indian Cables at Rs. 31.94. National Carbon dropped from Rs. 38.37 to Rs. 37.87 following the announcement of a two-for-five rights issue at a premium of Rs. 2.50, subject to Government sanction. Selling pressure in managing agency shares appears to have abated and the recent decline in prices was arrested. Rohtas Industries were firm at Rs. 25.87 as were National Pipes and Tubes at Rs. 19.75. National Insulated Cables were marked at Rs. 31.25 ex-rights.

In the mining group, Indian Copper were steady at Rs. 4.02 ex-dividend, as were Metal Corporation at Rs. 13.37.

Tea shares were slightly better today but very little business was put through.

North-Western Cachar Tea

The profit earned by the North-Western Cachar Tea Company Ltd has increased sharply from Rs. 1.30 lakhs to Rs. 3.69 lakhs for the year ended 31st December, 1958. The dividend has been raised from 15 percent to 20 percent, including an interim of 10 percent. The provision for taxation is allocated Rs. 1.55 lakhs, against Rs. 75,000. Development rebate reserve receives Rs. 21,620 against nil, and dividend equalisation fund gets Rs. 1 lakh. After making other adjustments, there remains a balance of Rs. 40,392, which it is proposed to carry-forward, against Rs. 88,302 brought in. The crop of the Kurkoorie tea estates amounted to 6,178 maunds (4,712 maunds) and that of the Bircrampore tea estates was 4,365 maunds (4,117 maunds). The average sale price of the former estates was Rs. 1.69 (Rs. 1.62) a lb. and that of the latter was Rs. 1.70 (Rs. 1.81) a lb. Estimates for 1959 provide for a crop of 10,500 maunds at an outlay of Rs. 10.50 lakhs.

Central Kurkend Coal

The profit earned by the Central Kurkend Coal Company Ltd has decreased from Rs. 1.34 lakhs to Rs. 6.357 for the year ended 31st December, 1958. The dividend is cut from 7 percent to 5 percent. After various adjustments, a sum of Rs. 214 has been carried forward, against Rs. 8.882 brought in. Raisings fell from 135.467 tons to 89,346 tons as two pits were closed. Despatches declined from 147,391 tons to 85,999 tons.

Rohtas Industries

The working results of Rohtas Industries Ltd for the year ended 31st March, 1959, show a profit of Rs. 1.62 crores. The ordinary dividend is declared at Rs. 1.50 a share. Notable allocations include provision for taxation Rs. 55 lakhs, development rebate reserve Rs. 16.30 lakhs, provision for depreciation Rs. 86.06 lakhs and general reserve No. 1 Rs. 47.27 lakhs. After transferring Rs. 1.50 lakhs from provision for contingencies and making other adjustments, there is a balance of Rs. 3,773 to be carried forward, against Rs. 93,507 brought in. During the year, the capital was increased by Rs. 22,80,000, by issuing 228,000 ordinary shares of Rs. 10 each as fully paid bonus

ELECTRIC WIRES AND CABLES TO BE MADE IN INDIA

by

HENLEY CABLES INDIA LIMITED

Henley's, cable manufacturers for more than 120 years, have been associated with India since 1863 when W. T. Henley, Founder of the Company, laid the 1,615-mile long submarine cable in the Persian Gulf for the Government of India. Henley's organisation in India, instituted over 40 years ago, has continued to play a vital role in this country, supplying and installing Electric Cables, Wires, Accessories and Distribution Equipment.

Last June a new company, Henley Cables India Limited, was formed in conjunction with the Investment Corporation of India Limited (a Tata concern) for the manufacture of a range of Henley cables in India. They will be distributed by Voltas Limited, whose Electrical Department has for many decades supplied, installed and serviced a wide range of electrical equipment.

ares in the proportion of one ordinary share for ery ten ordinary shares held. Cane crushed, covery and sugar production were higher at 26,602 maunds, 9.84 percent and 410,104 maunds, ainst 3,740,358 maunds, 9.59 percent and 362,238 aunds, respectively, during the preceding season. the four months ended July 1959, paper proiction amounted to 17,672 tons, against 47,130 ns in year ended March 1959. Cement output as 86,515 tons, against 276,157 tons; sugar 21,300 ns, against 383,254 tons; and caustic soda 1,818 ns, against 4,992 tons.

ıdian Iron Production

The production and despatch figures of the dian Iron and Steel Company for September 1959 e published below, the figures for August being ven in brackets.

COSTS AND RETURNS IN INDIAN INDUSTRY

By S. G. Rao

IT is widely felt that industrial costs are increasing and the returns in many cases are not commensurate with the input. The object of this article is to study the trend of material and labour costs in relation to the output and the value added by manufacture in some specified industries for which comprehensive data are available in the annual census of manufactures conducted by the Government under the late Industrial Statistics Act, 1942, from 1946 to 1956. The data relate to factories employing 20 or more workers on any day and using power.

Table 1 below shows the general position relating to the productive capital, the output, the input, the value added, the salaries, wages and benefits paid to the employees, and the ratios of input to output, value added to input, salaries, wages and benefits to the value added, and the value added to the productive capital for all the 29 industries together for which data are available.

TABLE 1

	1946	1948	1950	1952	1954	1956
1. Productive capital (Rs. crores)	366.83	482.19	614.53	729.89	787.76	1,004.54
2. Output (Rs. crores)	602.86	953.65	1,028.01	1,182.96	1,287.55	1,614.29
3. Input (Rs. crores)	391.45	636.31	744.08	867.98	914.63	1,145.55
4. Value added (Rs. crores)	211.41	317.34	283.93	314.98	372.92	468.74
5. Salaries, wages and benefits (Rs. crores)	101.80	165.82	172.17	200.64	218.56	255.80
6. Input-output (percent)	64.93	66.72	72.38	73.37	71.04	70.96
7. Value added : input (percent)	54.00	49.86	38.16	36.29	40.77	40.92
8. Salaries, wages and benefits : value added (percent)	48.15	52.25	60.64	63.70	58.61	54.57
9. Value added : productive capital (percent)	57.63	65.81	46.20	43.15	47.34	46.67

Increase in Productive Capital

It will be seen that the productive capital in all the 29 industries covered by the census of manufactures, has increased from Rs. 367 crores in 1946 to Rs. 1,005 crores in 1956, the output from Rs. 602 crores to Rs. 1,614 crores, the input from Rs. 391 crores to Rs. 1,145 crores, the value added by manufacture from Rs. 211 crores to Rs. 469 crores, and the salaries, wages and benefits from Rs. 102 crores to Rs. 256 crores. These figures no doubt show steady and substantial progress in industrial growth. Yet the subsequent ratios given in the table are bound to induce a mood of caution rather than complacency about this country's industrial development. Thus the ratio of the input to the output, which was 65 percent in 1946, has been on the increase and was 71 percent in 1956. The ratio of the value added to the input has been on the decline and has fallen from 54 percent in 1946 to 41 percent in 1956. The ratio of the salaries, wages and benefits to the value added has been rising; it rose from 48 percent in 1946 to 55 percent in 1956. The ratio of the value added to the productive capital has been on the decline and has fallen from 58 percent in 1946 to 47 percent in 1956. The rises and the falls in the ratios referred to above have occurred mostly since 1950, when certain obvious inflationary tendencies were noticeable in the economy. This is true in the case of most of the industries covered although, from considerations of space, detailed figures for each of them have not been given for the years between 1946 and 1956.

The figures of productive capital, output, input, value added by manufacture, and salaries, wages and benefits in each of the industries covered by the census in 1946 and 1956, show almost steady increases all round, and *prima facie* indicate substantial expansion. In fact, with the exception of a slight fall of Rs. 67 lakhs in the value added by manufacture in the vegetable oils industry (excluding edible hydrogenated oils) as between 1946 and 1956, the figures show appreciable, substantial or even conspicuous increases in the case of many others.

In Table 2 below are shown the ten major industries in order of precedence on the basis of (a) the value of output, (b) the value added by manufacture, and (c) the salaries, wages and benefits paid to the employees in 1956:

Cotton Textile Industry

It will be seen that the cotton textile indus occupied the premier position from any of above-mentioned criteria. The jute textile inc try, however, which occupied the second posit in 1956 from the point of view of output and s ries, wages and benefits, was only fourth in portance from that of the value added by manu ture. The iron and steel industry, which st sixth in output and fourth in salaries, wages benefits, was second in value added by manu ture. The general engineering and electr engineering industry was the third in importa from any of these criteria. The sugar industry fourth in output, fifth in salaries, wages and be fits, and sixth in value added. Among the ot important industries, mention may be made of vegetable oils (excluding edible hydrogenated c

Extra productivity is one of many dividends with

Honeywell

Electronik INSTRUMENTATION

Modern methods of measurement and automatic control can help you raise output by improving operating techniques. The results—economical operation, increased profits, and high product quality.

Whether you're building an entire new plant, bringing your present plant equipment up to date, or just modernizing a single production unit, Honeywell instrumentation can show the way to greater productivity ...more profits for you.

Honeywell, a pioneer in automatic controls, offers the most comprehensive line in the industry, engineered and serviced in India by BLUE STAR. Ask a Blue Star representative to advise you on the profitability of modern instrumentation for your plant.

7 HARE STREET, CALCUTTA 1
Also at BOMBAY, DELHI, MADRAS

industry which, although fifth in the output, was only tenth in the salaries, wages and benefits, and did not figure among the first ten major industries from the point of view of the value added. These facts are not without their significance from the social and economic point of view and are noteworthy as relevant considerations in any rational and planned development of industries, because a good, useful and profitable industry should not only enhance the value of output, but should also simultaneously be in a position to create a net addition to industrial income and to the wage bill. Thus will prosperity be not only produced but also distributed.

It is obvious that a fall in the ratio of input to output would result in a greater net addition to industrial income and is conducive to economic and efficient industrial growth; a rise in it would not be so. This ratio has increased appreciably in most of the industries, indeed substantially in many cases in 1956, compared with 1946. Thus this ratio has registered an increase of 13 points from 60 percent to 73 percent in biscuit-making, 10 points from 66 percent to 76 percent in fruit and vegetable processing, 20 points from 64 percent to 84 percent in starch, 7 points from 88 percent to 95 percent in vegetable oils (excluding edible hydrogenated oils), 9 points from 54 percent to 63 percent in glass and glassware, 7 points from 36 percent to 43 percent in ceramics, 8 points from 56 percent to 64 percent in plywood and tea chests, 7 points from 57 percent to 64 percent in cotton textiles, 21 points from 56 percent to 77 percent in woollen textiles, 13 points from 58 percent to 71 percent in jute textiles, 7 points from 52 percent to 59 percent in chemicals, 15 points from 65 percent to 80 percent in aluminium, copper and brass, 20 points from 44 percent to 64 percent in bicycles and 10 points from 51 percent to 61 percent in electric fans, leaving out smaller rises in some other industries. A fall in this ratio is noticeable only in the case of a few industries, namely, wheat flour, rice milling, edible hydrogenated oils, soap, paper and paperboard, iron and steel and electric lamps. The fall, however, has not been significant except in the case of soap from 79 percent to 70 percent (9 points) and electric lamps from 74 percent to 62 percent (12 points). Thus the picture shown by these figures, on the whole, is one of increasing input relative to the output in most of the important industries.

Value Added by Manufacture

The reflex of this rather disconcerting position is seen in the ratios of the value added to the input. As between 1946 and 1956, there has been a fall of 30 points in this ratio from 67 percent to 37 percent in biscuit-making, 20 points from 52 percent to 32 percent in fruit and vegetable processing, 11 points from 83 percent to 72 percent in distilleries and breweries, 38 points from 56 percent to 18 percent in starch, 9 points from 14 percent to 5 percent in vegetable oils (excluding edible hydrogenated oils), 12 points from 64 percent to 52 percent in cement, 27 points from 85 percent to 58 percent in glass and glassware, 47 points from 180 percent to 133 percent in ceramics, 22 points from 77 percent to 55 percent in plywood and tea chests, 29 points from 131 percent to 102 percent in matches, 20 points from 75 percent to 55 percent in cotton textiles, 49 points from 79 percent to 30 percent in woollen textiles, 31 points from 72 percent to 41 percent in jute textiles, 23 points from 91 percent to 68 percent in chemicals, 29 points from 54 percent to 25 percent in aluminium, copper and brass, 70 points from 128 percent to 58 percent in bicycles, 16 points from 100 percent to 84 percent in sewing machines, 33 points from 98 percent to 65 percent in electric fans and 16 points from 72 percent to 56 percent in general engineering and electrical engineering.

As for the salaries, wages and benefits, which have to come out of the value added by manufacture, the ratios of the former to the latter reveal a substantial rise in the case of some important industries and a similar fall in some others in 1956 over 1946. A significant fall is noticeable in the case of wheat flour from 60 percent to 32 percent (28 points), rice milling from 83 percent to 42 percent (41 points), sugar from 48 percent to 41 percent (7 points), glass and glassware from 82 percent to 76 percent (6 points), plywood and tea chests from 47 percent to 37 percent (10 points), iron and steel from 43 percent to 37 percent (6 points), bicycles from 57 percent to 43 percent (14 points), sewing machines from 100 percent to 68 percent (32 points), electric lamps from 89 percent to 48 percent (41 points), and general engineering and electrical engineering from 71 percent to 54 percent (17 points). On the other hand, there has been an appreciable rise in this ratio in biscuit-making from 27 percent to 40 percent (13 points), fruit and vegetable processing from 36 percent to 43 percent (7 points), distilleries and breweries from 23 percent to 35 percent (12 points), vegetable oils, excluding edible hydrogenated oils from 25 percent to 47 percent (22 points), paints and varnishes from 23 percent to 32 percent (9 points), soap from 23 percent to 33 percent (10 points), ceramics from 56 percent to 69 percent (13 points), matches from 26 percent to 52 percent (26 points), cotton textiles from 53 percent to 68 percent (15 points), woollen textiles from 42 percent to 56 percent (14 points), jute textiles from 43 percent to 75 percent (32 points), and electric fans from 53 percent to 64 percent (11 points).

The Economics of Wages

It need hardly be emphasised that high wages are as uneconomic and undesirable as low wages for efficient industrial growth. As is well known, if wages rule too high relative to output, labour and the industry in general would be uneconomic; if the wages are too low, the output would also tend to fall, and again, the industry would be uneconomic sooner or later. It is obvious, therefore, that an efficient and economic industry would need to ensure fair and economic salaries and wages, neither too high nor too low relative to output. From the ratios of the salaries, wages and benefits to the value added by manufacture, it would appear not improbable that at least some of India's major industries are handicapped from growing on sound and economic lines on account of both the ills referred to. It is necessary, therefore, for all those interested in, and concerned with, the industrial development of the country to pay due regard and attention to this aspect as well and deal with each case as it merits.

Again, the ratio of the value added to the productive capital employed in an industry is as important as the ratio of the value added to the input from the point of the enterprise. The ratio of the value added to the productive capital has registered a significant increase in 1956 over 1946 only in the case of wheat flour from 30 percent to 46 percent (16 points), rice milling from 8 percent to 30 percent (22 points), tanning from 26 percent to 35 percent (9 points), plywood and tea chests from 33 percent to 51 percent (18 points), iron and steel from 51 percent to 59 percent (8 points), sewing machines from 15 percent to 65 percent (50 points) and electric lamps from 28 percent to 44 percent (16 points). On the other hand, this ratio has fallen, rather sharply in many cases—biscuit-making from 116 percent to 42 percent (74 points), starch from 43 percent to 23 percent (20 points), vegetable oils, excluding edible hydrogenated oils from 32 percent to 21 percent (11 points), paints and varnishes from 86 percent to 67 percent (19 points), soap from 49 percent to 40 percent (9 points), cement from 31 percent to 23 percent (8 points), glass and glassware from 63 percent to 39 percent (24 points), ceramics from 73 percent to 47 percent (26 points), paper and paperboard from 61 percent to 39 percent (22 points), matches from 227 percent to 101 percent (126 points), cotton textiles from 74 percent to 60 percent (14 points), woollen textiles from 78 percent to 42 percent (36 points), jute textiles from 74 percent to 50 percent (24 points), chemicals from 58 percent to 38 percent (20 points) and electric fans from 66 percent to 34 percent (32 points).

The above necessarily brief account of India's recent industrial development does not show too rosy a picture. It should provoke earnest thought and attention in the context of the planning and development of the industries. Several factors might have contributed to this result, not the least important of which seems to be the high costs of the industrial materials and of management and labour, aggravated by inflation and the falling rupee, rapidly depreciating, worn out or obsolete plant and equipment, and low productivity arising from inefficiency, inexperience or even a degree of indifference to the economic and social welfare of the community as a whole. The crux of the problem is to tackle these and allied factors on efficient lines.

"Lost your shirt, Parameswar?"

"Don't remind me of shirts! One dozen shirts, made just 6 months ago, returned from the dhobi 'phut'!"

"Your words give me courage, brother. Lead me to the nearest BINNY'S shop."

"Tut, tut! You must have been so busy hunting for fancy cloth that you haven't heard of BINNY'S! BINNY'S Quality Control* their production, you know."

"What is this Quality Control?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S fabrics last so long."

BINNY – a great name in textiles

*Testing the uniformity of cotton fibres

Durability of cloth depends on the strength of the yarn used. This, in turn, depends on the uniformity of the fibre in the cotton. Only specially selected cotton goes into BINNY'S fabrics. That's why BINNY'S cloth lasts so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached and Dyed Drills - Towels - Anticrease Suitings - Tussores - Union Fabrics - Silk Sarees - Rugs - etc etc

RUSSIA TO SUPPLY BARAUNI OIL REFINERY EQUIPMENT ON CREDIT

INDIA TAKES OVER LIABILITY FOR PATENT RIGHTS INFRINGEMENT

(FROM OUR NEW DELHI CORRESPONDENT)

WITH the Central Minister for Oil, Mr. K. D. Malaviya, and the Russian Ambassador to India, M. I. A. Benediktov, watching the ceremony, the agreement for the establishment of an oil refinery in Barauni, Bihar, between the Government of India and Russia was signed here last week. The refinery will be designed to process about 2 million tons of crude oil a year. The Russian Government has extended a credit of 100 million roubles or roughly Rs. 12 crores on its usual terms, namely, 12 years' credit carrying interest at 2.5 percent a year, the repayment to begin 12 months after the receipt of plant and equipment.

The Government of India has accepted full responsibility for any infringement of patent rights. India has taken similar liability concerning the drugs project, the agreement for which was signed in Moscow by the Industry Minister, Mr. Manubhai Shah last summer. Side by side, the report of the one-man committee on revising the law relating to patent rights is under examination here with a view to amending the law at an early date. How far such an amending law can absolve India from international obligations is difficult to say. As matters stand at present, India has undertaken obligations, the financial consequences of which are unknown. *Prima facie*, the Russian insistence that India should take over the responsibility for the patent rights indicates the possibility of there being non-Russian patents, which Russia cannot sell as she is not a signatory to the existing international convention. Judging from the long-range point of view, the so-called bargain over the Barauni refinery may not really be so cheap as it is made out to be at present.

Oil Exploration

As already reported, Rs. 50 crores from the Russian credit towards the third five year plan is being earmarked for oil exploration, the total demand for which is placed at Rs. 199 crores. The Ministry of Oil has already arranged for a saving of Rs. 10 crores a year by price adjustments with the three oil companies. Burmah-Shell has surrendered another Rs. 24 crores over the period ending 1965. The cold war operations against the oil companies now in progress are expected to yield a further Rs. 20 crores a year. With the Russian credit, which can be used for the import of machinery and plant, oil prospecting could be regarded as a self-financing plan. The snag is that if revenue from particular sources is to be earmarked for related projects, there will be no funds available to finance general administration. It is precisely on this ground that the claim of the Ministry of Information and Broadcasting to the import duty on radio receiving sets has been rejected.

It may be added that the President of the World Bank, Mr. Eugene Black, recently advised India to use its recources on projects for which private capital is not available or not forthcoming. Oil was mentioned as a project for which private capital is available and forthcoming. The Parliamentary Estimates Committee in its 22nd report, which was presented to the Lok Sabha about a year and a half ago, recommended that "the co-operation of the private sector may also be obtained in the task of the exploration of oil within the framework of the Industrial Policy Resolution of 30th April, 1956, under which the expansion of the existing privately-owned units or the possibility of the State seeking the co-operation of private enterprise in the establishment of new units, when the national interests so require, is not excluded and the State has to ensure in such cases, either through majority participation in the capital or otherwise, that it has the requisite powers to guide the policy and control the operation of the undertakings."

An American oil consultant in a report to the Government of India, referring to the rapidly increasing oil requirements, has observed that the foreign exchange burden of imported crude oil and refined products will become overwhelming. He has emphasised the need for the mobilisation of technical and financial resources to the fullest extent for the exploration of oil and to develop its production. The requirements of funds as well as of trained personnel and equipment will be large and, therefore, to augment the Government's own effort, private parties should be admitted to the exploration and development of the potential oil resources.

The Federation of Indian Chambers of Commerce and Industry, in a communication addressed to the Ministry of Steel, Mines and Fuel, has urged the Government to examine dispassionately the desirability of giving an opportunity to private parties also to participate in the task of oil exploration. It has been suggested that "the recommendation of the Estimates Committee should be improved upon and the Industrial Policy Resolution modified accordingly. Considering the magnitude of the problem of oil exploration, what is called for is not a restrictive but a liberal approach which will encourage as many parties and agencies as possible to enter the field. It should be possible to negotiate arrangements with foreign private capital that would conform to the broad lines of the established national policy.

"The Government's efforts at present appear to be confined mainly to seeking assistance directly from a certain group of countries. It is felt by the Federation that the Government should not miss the opportunity of obtaining similar assistance from other countries in the matter of exploration as also of setting up oil refineries. Private parties in India should be encouraged to enter the field with the collaboration of foreign entrepreneurs so as to contribute to the speedy development of this crucial sector of the economy."

The well-known Italian firm, E.N.I., the representative of which was in India last winter, made two definite proposals. The firm was prepared to take the entire risk of exploration, provided it was given a share of the profits of oil, if and when it was found. It was prepared to go into partnership with the Government of India on a 50:50 basis. It was also prepared to go into partnership on a 50:50 basis with an Indian undertaking, the Indo-Italian company then going into partnership with the Government also on a 50:50 basis. It will be obvious that the share of E.N.I. would have been further reduced under the second formula. As the Federation has pointed out, the Government has preferred to deal with the communist countries only.

Screening Committee for Machinery Imports

The Government of India has set up a high-powered committee to screen all the requirements of plant and machinery for which orders are to be placed. The committee has been set up largely to place orders on a single country basis without materially affecting the existing practice of calling global tenders. Some explanation of the matter is needed. The credits given by the communist countries are always in the shape of plant, machinery and technical know-how. This system does not call for global tenders. In the second category could be placed the credits given by the U.S. Export-Import Bank or the Japanese Government. Here, although credit has to be used on purchases from the U.S.A. or Japan, as the case may be, the credit is not earmarked for specified purchases to be made from a specified agency. Here again, global tenders are out of the question.

It may be added that global tenders were invited for the Rourkela steel plant; but in actual practice, the orders were placed exclusively with the West German firms. To quote another example, part of the credit from the U.S. Export-Import Bank was earmarked for the purchase of electrical equipment from the U.S.A. It was subsequently found that the Japanese equipment was cheaper. It has, therefore, been decided to use part of the Japanese yen credit for importing electrical equipment. It will thus be seen that the Government is now fully equipped to ascertain comparative prices for particular plant and equipment. Instead of wasting time and money on global tenders, it has been decided to place orders with a country where India can get the best terms for the price, quality and delivery of goods.

The Secretary to the Central Economic Affairs Ministry, Mr. A. K. Roy, will be the chairman of the committee, which includes the Secretaries of the Ministries of Commerce and Industry, Steel, Mines and Fuel, and Irrigation and Power, and the Additional Secretary to the Planning Commission.

Project Report for Special Steel Plant

The Government's decision to entrust an Indian company with the preparation of a detailed project report on a special steel manufacturing plant is being criticised. The Government had originally invited all non-Indian firms including the Usines of France and a British consortium consisting of Campbell Gilford and Martin, Firth Vickers and English Steel to make a preliminary project report. Their reports were considered by a committee consisting or Dr. Nijhawan, Dr. Kalelikar and Dr. Dustoor. After the committee had examined the various reports, the Government of India, instead of selecting one of the foreign firms, took the unprecedented step of entrusting to one of the members of this committee, namely, to Dr. Dustoor, the preparation of the detailed project report. Enquiries show that two of the original foreign firms, namely, the Italian and the French, in addition to some Canadian interests, have now been approached by the Indian company for assistance. Mr. Dustoor has already gone to Canada.

Increasing Manganese Ore Exports

The Government, it is said, is keen to ensure that the country's export policy is so designed that it promotes the maximum co-operation among all categories of shippers, facilitates bulk and long-term contracting, ensures the smooth implementation of contracts, and secures the maximum use of the available rail and port capacity. Keeping these objectives in view, it has, after consultation with the trading and mining interests concerned, been decided that during the current year ended 30th September, 1960, the export of manganese ore will be regulated as follows:

(i) established shippers, mineowners, exporters and the State Trading Corporation will be given an allotment of quota for a quantity equal to the quota for 1957-58;

(ii) firms and parties, whose individual allotments are small, are advised to form co-operatives or limited companies;

(iii) in order to encourage small quota-holders to form themselves into co-operatives or limited companies, it has been decided that where the total of the individual allotments of the firms and parties joining a particular co-operative or company aggregates 25,000 tons, a bonus allotment of 20 percent of the total will be given to the company or the co-operative concerned.

(iv) quota-holders with past performance during the period 1957-58 in more than one sector, will be given movement facilities *pro rata* to their past performance on each sector. In the event of availability of wagons in any particular sector falling short of the total movement quotas, preference will be given to requests from parties having firm sales contracts registered in advance with the Joint Chief Controller of Imports and Exports concerned. In the event of the availability of wagons being in excess of the total of movement quotas in any particular sector, wagons will be allotted freely on demand, made against firm sale contracts.

(v) exports of low-grade manganese ore from Garividi, Srikulam, Bobilli, Salur and Raigada areas will be licensed freely on the production of foreign sales contracts as hitherto, and of manganese ore analysing 40 percent and below from the loading stations of Dohad, Shivrajpur Nathpuri and Pani in Panchmahal in Bombay and Rajasthan States. Performance on these sectors will not qualify for movement facilities on sectors on which the railway capacity available is already fully extended.

(vi) barter transactions or compensation deals will be serviced by the State Trading Corporation on such terms and conditions as may be mutually agreed upon between the Corporation and its business associates, who will be drawn, to the extent practicable, from among exporters and mineowners. Where the business associate's individual movement quota is not sufficient to cover the commitments under barter transactions, the State Trading Corporation will make its movement quota freely available for this purpose.

It has been represented that uncertainties concerning quota policies or export duties make it extremely difficult for buyers and sellers to enter into forward contracts. Further, individual parties may not find it too easy to enter into forward contracts for bulk sales for deliveries extending over a number of years to producers or to big buyers pursuing a common purchase policy. The Government has accordingly directed the State Trading Corporation to co-ordinate its activities with those of experienced exporters and to evolve, in co-operation with them, as its business associates, marketing and production programmes extending over three to five years in an effort to take full advantage of such business opportunities as may present themselves, and to develop enduring relationship with leading users and importers of manganese ore. The Government proposes to give full facilities for the due performance of overseas contracts entered into by the State Trading Corporation or its business associates in pursuance of such co-operative marketing programmes.

Burmese Export of Rice to India

The trade delegation from Burma, which was here last week, has offered to export up to 150,000 tons of rice out of the 1959 crop, over and above the 350,000 tons already contracted for. The delegation has agreed that the payment for the rice will be made in non-convertible Indian rupees and will be used for the purchase of additional goods on a mutually agreed basis. The Indian delegation has agreed, subject to satisfactory arrangements being made to ensure that the exports financed out of the sale proceeds of the additional quantity of rice now offered will in fact constitute a net increase in India's exports to Burma. India will buy up to 150,000 tons of rice of acceptable quality. As for the 1960 crop, there was a firm commitment for the purchase of 350,000 tons of rice. If the total quantity to be purchased by India is increased substantially above 350,000 tons, both the delegations have agreed that further discussions will be held.

Indifferent Quality of Domestic Goods

Elucidating the new import policy, an official spokesman has admitted that due to the foreign exchange crisis, Indian industries have been accorded much greater protection than they would have had otherwise. It has been complained that in the absence of competition, the quality of India-made goods has been going down. The case of cement has been cited to illustrate the point. The Steel Minister, Sardar Swaran Singh, it will be recalled told Parliament during its summer session that some foundations at the Rourkela steelworks had to be re-done because of the sub-standard quality of cement. The price of India-made goods, side by side, has been rising. The spokesman indicated that the whole question is under examination of the Government and it is possible to take some steps to ensure the quality of certain specified

items in general demand by the public and maintain their price-line.

Training for Steel Engineers

According to an official hand-out, 636 engineers out of the 923 sent abroad by Hindustan Steel Ltd. have returned to India after the completion of their training. Of these, 311 trainees were sent to Russia. Their training expenses will be paid by India in 12 annual instalments. Some 299 trainees were sent to the U.S.A. Their training is being financed by the Ford Foundation and T.C.M. About 294 engineers are being trained under the Colombo Plan in the following member-countries:

The U.K.	151
Australia	52
Canada	1
	204

West Germany has undertaken to train 109 Indian engineers.

New Terms for Secretaries and Treasurers

The following sliding scale of remuneration for secretaries and treasurers is proposed: 7½ percent for the first Rs. 10 lakhs of profit, 6¾ percent for the next Rs. 10 lakhs, 6 percent for the third Rs. 10 lakhs, 5¼ percent for the fourth Rs. 10 lakhs, 4½ percent for the fifth Rs. 10 lakhs, 4¼ percent for the next Rs. 25 lakhs, 3¾ percent for the remaining Rs. 25 lakhs and 3 percent for over Rs. 1 crore. As far as their tenure is concerned, it will have to be renewed every five years, after the first ten years are completed.

New Duty for Auditors

Following the demand made in Parliament during the last session, the Government is examining proposals to require auditors to bring to the notice of shareholders whether in their opinion financial transactions of the joint stock companies, the account of which they have been entrusted to audit, are of a sound nature. This is on the basis of the idea that the auditors are "watchdogs" not only of shareholders, but also of the "third party" which has invested its money in particular undertakings and of the general public. Under the scheme, auditors will be directed to audit the accounts of the branches of the company concerned or institute a system of internal audit. Lastly, the same auditor will not be permitted to become the financial adviser to the company whose accounts he audits. It has, however, been represented that the type of report contemplated might sometimes damage the reputation of a company, and even in the general interest this might not be desirable. One suggestion is that such reports could be read out to meetings of shareholders and filed with the Registrar of Joint-Stock Companies. In this manner they may not become public documents. The whole issue is, however, under careful examination and any decision will be taken only after fully ascertaining all shades of opinion.

Adjudication of Bank Dispute

The Central Ministry of Labour is examining a proposal to set up a commission to adjudicate in the bank employees' dispute. Their service conditions are regulated by the Bank Award, which expired on 31st March, 1959. It is, however, still operative. It can be terminated or amended by common agreement of bank employers and employees. The latter gave notice of termination, suggesting certain procedures for its amendment, through mediation or arbitration. The employers have preferred arbitration through a national tribunal. The Labour Ministry, which is generally in favour of arbitration, prefers a commission instead of a national tribunal, on the ground that a commission will save time. It may, however, be added that in the case of coal labour, the Labour Ministry was opposed to a commission. Bank employees are mostly organised under non-Congress trade unions. Recently, Congress trade unions were also organised in this field. The Labour Ministry's initial efforts were to secure the recognition of new trade unions, particularly by the other older trade unions. Bank employers presumably did not wish to get themselves involved in the internal dispute of their employees and preferred the straight course of arbitration. An early decision is expected.

Wage Board for N. Indian Tea Estates

The Government of India is likely to set up a wage board for the tea industry in north India. Such a board has been demanded by labour, and supported by the Governments of West Bengal and Assam. South India will be excluded from the purview of the board on the ground that the south Indian tea industry has already entered into agreements with its labour, and that there is no demand for such a board from labour or the Governments concerned.

Outside Labour in Eastern States

For the second time in recent months, eastern States have raised their objection to "outside" labour force being employed on industrial undertakings within their jurisdictions. The Gorakhpur labour camp which has been supplying labour to the coal industry ever since the days of the second World War is being closed down because workers from eastern U.P. are considered more efficient. The Assam Government has now demanded a ban on the emigration of labour for the tea plantations on the ground that there is already unemployment on the estates. It has demanded the dispersal of such labour as is found to be in excess of the required adult working force for the tea plantations in the State.

London

CITY PREPARES FOR ELECTION DAY

PUBLIC OPINION POLLS SHOW LABOUR CATCHING UP WITH CONSERVATIVES

(FROM OUR LONDON CORRESPONDENT)

THE polling day being imminent, the City is having second thoughts on the election—a process which has been assisted no doubt by the fact that the public opinion polls have shown lately that the Labour Party is catching up with the Conservatives to an extent which promises to justify this correspondent's earlier anticipation that the result will probably prove to be a near thing. The other prediction, that the campaign will be a bitter one, is also proving only too accurate, with the "Jasper affair" adding fuel to the fire on the economic front. On the whole, the economic situation has not figured very largely in the election exchanges. The Conservatives have been content to claim achievement of the double of "full employment and stable prices," while Labour denies these claims, and as far as its own plans are concerned, the party promises a variety of benefits likely in all to cost an immediate outlay of something like £600 million without any serious attempt to draw up a realistic budget to explain where the money is to come from. Both sides have undertaken to do something concerning take-over bids by amending the Companies Acts.

In the past week, a hesitant note was evident both on the London Stock Exchange as well as on the foreign exchange market. There was some hedging on both but it is significant that there was no development in the nature of a crisis. The appearance of the provisional unemployment figures, showing an improvement of 22,000 on August, occasioned an immediate revival of confidence. Nevertheless, brokers are looking ahead and visualising what will happen after the result of the election is known. If Labour wins, for instance, it is anticipated there will be a flight from the pound which may be heavy at the start, although it cannot last long as most foreign funds have gradually been withdrawn over a period of weeks to take advantage of the higher interest rates available in New York. Sales of foreign holdings of British shares will probably be heavy enough to dislocate sections of the market and even lead to the introduction of emergency measures. A temporary slump on the Stock Exchange will be unavoidable, with steel shares as the highlight. This will probably last until the Budget cleared the air.

On the other hand, if the Conservatives are returned to power for another five years, just the opposite might be expected. A huge influx of foreign investment funds will be an immediate outcome, to say nothing of the appearance of substantial amounts of local money put aside for just such an eventuality. A Stock Exchange boom—however much it might be deplored by a Conservative Government—will be almost inevitable; and it might well have to be guarded against by the adoption of drastic steps. The country is poised for a further step forward towards economic well-being, production statistics coming in are almost all favourable, and indeed the only danger is that it could, without control, get out of hand and usher in another spell of inflation. This situation will, of course, be the same whoever wins on 8th October, but the setback, if Labour wins, will take some months to overcome.

The Economic Prospect

A highly optimistic view of the economic prospect for the next few months is expressed in the latest issue of the *Economic Review*, published by the National Institute of Economic and Social Research, which only a few months ago was still sceptical about the country's recovery. The editors now record that production has been rising fast since February, impelled by the rise in consumer spending and in exports and by some increase in stocks which had been running down until the first quarter of this year. "These three types of demand will probably go on rising", they predict. There is scope for a continuing rise in consumption because the increase in incomes, after tax, has now caught up with the rise in spending; and personal savings appear to have been as high in the middle of this year as in that of last year. Exports should go on rising because recovery is well under way in western Europe and in the overseas sterling area.

The editors point out that there is no shortage of capacity in sight as industrial production is still only 6 percent higher than it was four years ago. They note that manufacturers have not yet revised their investment plans upwards and still intend to reduce total investment in manufacturing industry next year. This prospect, if it continues, may require early decisions to raise public investment further after the end of the present Budget year. The decline in investment by private industry may not halt the growth of total demand and output, the *Review* concludes, but it may prejudice the scope for expansion in the more distant future. Britain's external accounts and those of the sterling area, as a whole, are expected to remain favourable, and the writers suggest that there is no reason for Europe to follow the recent rise in American rates.

Cotton Goods Prices and Supplies

The Special Committee of the Cotton Board, appointed under the Cotton Industry Act, 1959, has given consideration to a number of complaints which have appeared recently in the Press concerning prices, supplies and delivery dates in the cotton industry, particularly in so far as they have been attributed to the effects of the cotton spinning doubling, and weaving reorganisation schemes. The Special Committee has also had discussions with representatives of all sections of the industry concerning the matters which have been raised. It is generally accepted that for some time past margins in all sections of the industry have been uneconomic, but it has also been said, on a number of occasions, that prices will have to be raised as a result of the levies payable by firms in the cotton industry which are going to continue in business.

The Special Committee states that it does not consider that the cost of the levies can in itself significantly affect prices; on the basis of the information at present available, it has been calculated that the cost of these levies will amount to less than ¼d a lb of production of yarn, and to under ¼d a yard in the case of woven cloth. It should be emphasised that these are average figures and that in certain cases the cost will be more just as in other cases it will be less. Moreover the figures take no account of the saving in cost which, it is expected, will in due course result from the improved operating efficiency achieved through reorganisation schemes. On 4th September, 1959, the chairman of the U.K. Cotton Board issued a statement to the effect that a high proportion of the machinery to be scrapped under the reorganisation schemes was already out of use in April 1959. The figures set out below give the latest available information concerning the effects of the schemes:

Machinery in use in April 1959	Machinery which will be left after scrapping is completed	Percentage of reduction
16.5 million mule equivalent spindles	13.5 million mule equivalent spindles	18.2
1,015,000 doubling spindles	1,046,000 doubling spindles	—
183,000 looms	153,000 looms	16.4

Included in the 153,000 looms, which will remain after scrapping, are about 45,500 automatic looms. According to the latest figures available to the Special Committee (June 1959), 7,000 of these looms were working three shifts, 20,000 two shifts, at least 2,500 were idle and the rest were working on one shift. It will, therefore, be seen that the reduction in productive capacity of 30,000 looms shown could readily be replaced by additional shift working of automatic looms already installed. Such statistics as are available indicate that only about 1 million mule equivalent spindles are working more than one shift.

Under the circumstances, and after full discussion with representatives of the industry, the Special Committee is satisfied that there should be no undue interference with supplies as a result of the scrapping of machinery on the scale proposed. It will be spread over a period of six months and this should give firms remaining in the industry time to make necessary adjustments to their production programmes.

Imports from India and Pakistan

Ceiling figures for imports or cotton goods from India and Pakistan have been agreed in principle between representatives of the U.K. Cotton Board and leaders of the industries of the two countries. Announcing this fact, the Board said that the agreement, for a period of three years, will come into force on 1st January and is subject to the existence of arrangements for ceiling figures for imports of cotton goods from Hongkong. Its statement says that the ceiling figures are the equivalent of 175 million square yards in the case of imports from India and 38 million square yards in the case of Pakistan. For the first seven months of this year, imports from India totalled 174 million square yards and from Pakistan, 17 million square yards.

A spokesman for the Cotton Spinners and Manufacturers Association said that his organisation welcomed the agreement. "While the figures are high, and, when taken in conjunction with those for Hongkong, mean that a substantial proportion of the home market requirements will be available to Commonwealth suppliers, it is essential at this time that the cotton industry should know where it stands, and the agreements will help it to carry out its reorganisation plans with greater confidence." Sir David Eccles, President of the U.K. Board of Trade, said that with the arrangements already in force for Hongkong, they would assure Lancashire of a period of stability as far as Asian Commonwealth imports were concerned. Production and employment could now be planned ahead with much greater security.

Jute

FLOODS IN GROWING AREAS CAUSE RISE IN JUTE PRICES

TRADE AWAITS SEPTEMBER GUNNIES STOCK FIGURES

DURING the past week, most jute growing districts have had an exceptional amount of unseasonable rain, and reports of heavy flooding are commonplace. There is no reason to suppose, however, that any damage has been done to the crop, because a large percentage of it has already been harvested, and what remains is too far advanced for the floods to have much effect. The worst that can happen is that the fibre may be heavier rooted than usual, due to the plants standing in water for long periods. One of the results of the weather, however, has been a hardening of ideas about jute prices. This may have been due to the possibility of paddy crops being lost in the floods; as jute is a cash crop compared with what is, in many cases, a barter crop, it is only natural that farmers should try to recoup some of their losses. As a result, bullish ideas have again been in evidence in Calcutta markets. Sellers become reserved on the slightest provocation and are quick to snatch at any circumstances which will give them an opportunity to raise their terms—such as the small arrivals in upcountry markets which have been reported recently. That these were due in general to the dislocation of road and rail traffic following the floods is of little consequence to them, but only serves as a means to an end. The trade, having become used to this by now, has paid little heed to the raising of prices, small as this has been, because, in the opinion of most, the rise will be of short duration.

As mentioned in a previous issue, consumers of raw jute outside India, particularly in the U.K., expect a fall in prices. Nobody can doubt there will be an ample supply of raw jute, so there seems to be nothing to warrant higher prices. At one stage during the week under review, however, fibre prices tended to advance rapidly following reports that the State Trading Corporation had called for tenders for a quantity of jute, said to be in the region of about 28,000 bales, for export. It is believed that shipment was to be to a communist country, but there is no confirmation of these reports. Tenders were submitted for the full amount, but the State Trading Corporation subsequently advised sellers that the purchase would be delayed, and asked for ten days' extension on the closing offers. As a result of this, fibre prices fell as rapidly as they had advanced.

Stock Figures Awaited

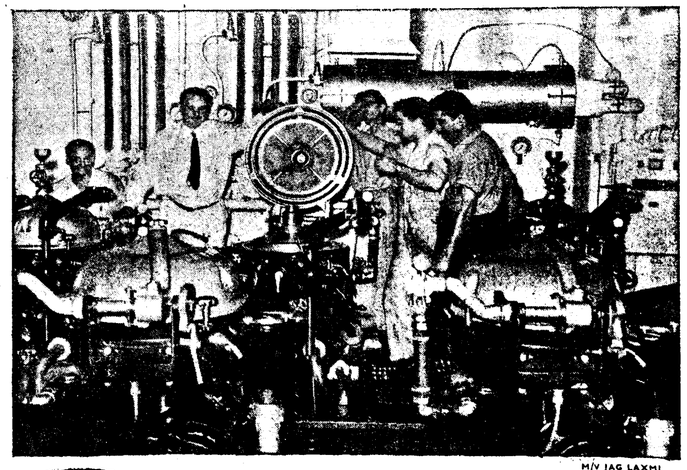
The trade statistics for the month of September are being awaited with more than usual eagerness. September was the first working month to experience in full the recent increase in loomage, and while it may be satisfactory from the point of view of the Indian jute industry to see that the bulk of its additional output is being disposed of, it is small comfort for producers outside India. Thus, the results of these workings may have far-reaching effects. The future depends to a great extent upon the state of American industry and the ability of that country to maintain consumption and increased requirements. Although the figures for the consumption of hessian in America during August showed a considerable fall, and were much lower than anticipated, the cumulative total and monthly average (73.4 million yards) were much higher than for many years. It was mainly on the strength of the expectation of an increase in world demand during the latter part of the year that the Indian industry increased its production, so American consumption during September will also have a special significance for the trade. If, however, the mills in the Association continue their policy of gradually increasing their output and regulating it according to sales and demand, then there is little fear of the trade reverting to the depressed conditions in which it has found itself on so many previous occasions.

Although the trade in raw jute and manufactured goods in Calcutta showed a slight increase last week, operators in each section were depressed at the slowness of current activities. In the goods markets, mills were keen sellers at one stage, and a fair amount of business was concluded. But in jute, buyers appear to be content to purchase only their minimum requirements, and competition is so keen for these orders that there are sellers over against every transaction, and in many instances very low and uneconomical prices have been accepted. On the other hand, some mills are reported to have paid exceptionally high prices, but these transactions are invariably confined to "special marks" or "premium sellers". Meantime, it is purely a buyer's market of which, naturally, mills take full advantage.

Jute Prospects

The prospects of a good crop during the coming season have naturally kept prices down. This is normally one of the busiest marketing periods for the crop—when the producer is forced to sell a large proportion of his holdings for cash requirements at whatever the market price may be. Sales this year have been far below those of any normal previous year, due mainly to the price-support scheme adopted earlier in the year, under which mills were urged to buy and hold in stock between four and five months' consumption. The scheme was a success, and prices were prevented from falling below uneconomic levels. Current prospects are not too bright, however, for those farmers who still have a large proportion of their new crop production on hand. In their case, they may eventually be forced to sell at much lower levels in order to reduce their stocks and obtain working capital. Mills' stocks are in a very healthy position, and in some cases sellers have been asked to delay shipments of jute, or transfer delivery to other mills in the same group with available storage space. In many cases, this shortage of accomodation has been brought about by the conversion of jute godowns to other uses during the period when the mills were existing on a hand-to-mouth basis and stocks were extremely low.

Mesta Shortage



Those Calcutta mills which showed an interest in the purchase of mesta fibre last week encountered a reluctance on the part of sellers even to give indications at this stage. One mill, after enquiring all day for mesta at 25nP below the market quotation, eventually withdrew without having bought any. Reports from the Daissee and Mesta areas indicate that the ratio of mesta to Daissee is practically a reversal of that in previous years; some operators have estimated the entire crop at 25-30 percent of last year. This has been brought about by last year's abundant mesta crop, which reduced mesta rates during last season to about Rs. 16 a maund, giving the farmer no return for his labour. To prevent a similar occurrence this year, sowings were drastically reduced. Consequently, mesta sellers hold very reserved ideas, and current quotations are nominal because most are unwilling to sell, even though rates are only about Re. 1 below Assam levels, as against a Rs. 2 difference at this time last year. The Daissee crop is also understood to be smaller than last season's, but the reduction here is not nearly as great as for mesta.

THE JUTE MARKETS

Activity in the futures markets was brisk last week, and a fair amount of business was transacted. Rates, as given by the East India Jute and Hessian Exchange Ltd., for the period 30th September to 5th October were as follows:

	Hessians 40in 10oz. November		Sacking B Twills November		Raw Jute December	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags		Rs. a md.	Rs. a 100 kilos
Opening	40.44	44.22	100.70		24.56	65.12
Highest	40.86	44.68	102.55		23.85	63.92
Lowest	40.16	43.91	100.25		23.36	62.32
Closing	40.72	44.53	101.90		23.68	63.44

Manufactured Goods: Markets were inclined to be quiet at the opening last week due to the almost complete absence of overseas interest. Price movements were controlled mainly by speculative activity which appeared to be on the increase. Opening quotations on Thursday morning showed little change, and B Twills were quoted at Rs. 102.60 for ready shipment—this being a premium of Rs. 2.85 over the January-March quotations—and 40in. 10oz. at Rs. 40.40 for the near and Rs. 40.10 for forward shipment. The narrowing of the gap between near and forward hessians is mainly the result of speculative covering in anticipation of business, although recently some genuine business was reported in hessians. Markets ruled quiet during the day, and with Friday being an official holiday, prices showed little change. On Saturday small gains and losses were recorded, but the undertone was steadier due to some good sales by mills. Over the week-end this influence was extended to the genuine market and Monday's opening found B Twills at Rs. 102.75 and hessians at Rs. 40.60. During the day, reports of business with Russia coupled with renewed activity in the futures markets resulted in steady conditions, and prices showed a tendency to rise. This was coun-

M/V JAG LAXMI

DE LAVAL **OIL SEPARATORS...Keep oil clean and engines running smoothly**

Even the highest grade of fuel oil contains large quantities of fine dirt, a considerable portion of which is of a very abrasive character and naturally causes excessive wear on fuel pumps and injection nozzles. If the oil contains water, this causes incomplete combustion and accumulation of soot on the exhaust valves.

The centrifugal separator is an ideal instrument for purification of oil as by means of centrifugal force, without affecting the composition of the oil it removes all free water and all impurities bigger than 2-3 microns and which are of such size that they can be harmful for the engines.

Centrifugal separation of oil is as a matter of fact so efficient that it is possible to use boiler oil as fuel for diesel engines if the oil is properly purified in the De Laval Separator, giving a high saving of fuel cost.

For steam turbines which for continuous operation and ultimate life, entirely depend upon the efficiency of the lubricating system, De Laval Turbine Oil Purifier Units will maintain lubricating oil in perpetual first-class condition, so that it can be used indefinitely.

Also in diesel engines a continuous separation of the lubricating oil enables the use of the oil for a very long time without affecting the detergents in the oil and the separator installation is paid off in a very short time.

A complete range of spares for all types of De Laval Units are readily available from stocks in India.

DE LAVAL **Purifiers and Oil Separators**

THE SKF BALL BEARING CO. PRIVATE LTD.

THE DE LAVAL INDUSTRIAL SEPARATOR DIVISION

P. O. BOX 71, BOMBAY 1.

teracted later in the day when many of the reports of business done proved to be without foundation. With the approach of the Puja holidays, activity slackened and rates eased.

Opening quotations on Tuesday morning were as follows:

	October	Oct.-Dec	Jan.-March	April-June
40in. 8oz.	33.35 (36.75)	33.20 (28.18)	32.10 (34.90)	31.95 (34.63)
40in. 10oz.	40.75 (44.42)	40.75 (44.42)	40.10 (43.71)	39.85 (43.74)
B Twills	102.65	102.20	100	99.25
Heavy Cees				
(Plain)	103.20	102.10	100	99.25
A Twills	121.75	120.50	119	118
Liverpools	113.50	113.00	111.25	110.25
Cornsacks	102.75	102.00	101	100

Raw Jute: Although business was recorded daily last week, the quantities involved were small, and the total fell far short of previous seasons. Transport difficulties due to the floods prevented the movement of jute, but mills were not worried about this and gave free extensions of delivery time, because in many cases they were not in a position to store fresh deliveries. Sellers were inclined to be reserved and indicated higher prices, but these were met in only a few instances. Activities by the State Trading Corporation influenced prices towards the week-end, but the rise was only temporary.

Quotations at the opening were based on Assam jute at Rs. 23 a maund, but during the course of the week they advanced to Rs. 23.25. Imports into Cossipore dropped considerably during the five days covered by the report, and wagon arrivals were only 386. This holds no special significance, as rail transport from many areas is seriously disrupted by the floods. Calcutta markets will be closed on 8th, 9th and 10th October for the Puja holidays.

During the week, business was reported in Assam jute at Rs. 23 to Rs. 23.25 basis Bottoms, and Northern at Rs. 22.25 to Rs. 22.50. Small lots of Daissee Tossa were reported at Rs. 23.50, and Assam and Agartalla Tossa at Rs. 23.87. Mesta was also done and prices paid ranged between Rs. 22 and Rs. 22.25 for Daissee mesta, and Rs. 22.25 for Desal mesta. Special selected jungli white was reported at Rs. 21.50.

On Tuesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 ki'os	Shipment
New Crop:			
Assam	23.25	62.31	Oct.-Nov.
Northern	22.50	60.30	"
Purnea Desal	21.75	58.29	"
Daissee (selected)	24.25	64.99	"
Assam Tossa	24.25	64.99	"
Northern (ex Calcutta)	22.25	59.63	"
Mesta:			
Assam-Northern	21.75	58.29	"
Desal	22.25	59.63	"
Daissee	22.25	59.63	"
Jungli	21.25	56.95	"

THE FOREIGN JUTE MARKETS

FIBRE QUIET

(FROM OUR DUNDEE CORRESPONDENT)

THE jute trade in Dundee jogs along quietly but steadily with nothing special happening to dispel the monotony that has existed for some time past. Spinners and manufacturers continue to get sufficient business to absorb production, but they would like to see consumers of yarns and cloth placing orders for delivery some distance ahead. The hand-to-mouth policy of buying seems to be most favoured these days, but there has been so little change over the past 12 months that one would imagine that buyers would have gained confidence to operate for forward despatch had they not placed small orders for early delivery. As far as the home trade is concerned, there is likely to be little business until the general election is over. Meanwhile, there is great speculation as to whether the Conservatives or Labour will win to be in charge of Parliament from 8th October.

Mr. Harold Macmillan has said that all controls would go if the Tories were re-elected, so there might be no Jute Control in the event of a Conservative victory. The Dundee trade is not so "windy" over this as it might be expected to be, since dealers feel that those who wish to use good cloth and bags will continue to ignore imported goods as they have done for some time past. There are numerous buyers of jute cloth and bags who say that Dundee goods are worth the extra money.

Raw jute continues without any change from day to day and Mill Firsts remain at from £106 a ton, Mill Lightnings £89, Mill Hearts £79 and Grade Hearts £65, good marks of Daissee-¾ £93 and Grade £85, Grade Tossa-¾ £104 and fours £93, October-November, c.i.f. U.K. or the Continent. There are some afloat or ex-warehouse parcels available at slightly under the shipment rates which spinners are picking up where they are suitable.

Calcutta goods are irregular, but there is a steady undertone again at 61s 3d for 40in. 10oz. hessians, October, November and December, with 7½oz. at 47s 3d, 46s 6d and 45s 9d and B Twills at 154s 6d, 153s 9d and 153s for the respective months of shipment, all f.o.b., Calcutta.

Prices for Dundee yarns and cloth remain unaltered all round.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953 = 100) advanced by 0.3 percent to 117.4 during the week ended 19th September, 1959, against 117.0 (revised) for the earlier week. The index was lower by 0.9 percent when compared with the corresponding week of the previous month but was higher by 0.9 percent than that of a year ago. Higher prices of onions (+11%), fish, black pepper and turmeric (+4% each), jowar, urad, potatoes, milk, groundnut oil and chillies (+3% each), arhar, mung and coconut oil (+2% each) and rice, gram, masur, cashewnuts, gingelly oil, eggs and cardamoms (+1% each) raised the index for Food Articles by 0.5 percent to 121.0. The prices of oranges (−10%), betelnuts (−9%), coffee (−4%), maize and ragi (−2% each) and bajra, meat and tea (−1% each), however, moved down. The index for Tobacco rose by 0.5 percent to 98.2 due to a rise in the prices of raw tobacco (+1%). The index for the Fuel, Power, Light and Lubricants group stood at 116.1, compared with 116.0 (revised) for the previous week. The prices of castor oil (+1%) showed a rise during the week. The prices of tanning materials (+5%), cottonseed (+4%), copra (+3%), raw hides (+2%) and groundnuts and rapeseed (+1% each) moved up while those of raw hemp and raw wool (−3% each), lac (−2%) and raw jute (−1%) showed declines, and the index for Industrial Raw Materials rose by 0.3 percent to 122.0. The index for Intermediate Products increased by 0.5 percent to 111.7 due to a rise in the prices of zinc (+2%) and cotton yarn (+1%), although the prices of rayon yarn and copper (−1% each) exhibited declines. The index for Finished Products worked out to 109.8, against 109.7 (revised) for the earlier week. The prices of cotton cloth (mills), oilcakes, bricks and tiles (+1% each), general chemicals (−2%) and jute manufactures (−1%) showed variations.

INDEX NUMBERS BY GROUPS AND SUB GROUPS

(Base : 1952-53 = 100)

Engineering and Transport

THE MARVELS OF TOMORROW

U.S. ENGINEERING EXHIBITS AT TRADE FAIR

FOUR engineering "marvels of tomorrow" wi be demonstrated in a Westinghouse electroni "spectacular" at the first Pacific Internationa Trade Fair in Lima, Peru. The performance wi be a feature of the United States exhibit sponsore by the U.S. Department of Commerce. More tha 20 countries will offer displays at the exhibitio The "marvels" represent applications of therm electricity, ultrasonics, micro-wave energy an electroluminescence. They include an electroni oven using microwaves and a Rayescent night ligh using electroluminescence—a new source of ligh

What the manufacturers call "a revolutionar way to cook food" by using microwave energy wi start the show. The electronic oven will bake potato in four minutes, ten times faster than ord nary methods. Cupcakes will be baked in 4 seconds and bacon crisp-cooked in 90 seconds, o the same unit. A commercial ultrasonic washe used to clean metals in industry will show ho the home dishwasher of the future will functio with high-frequency sound waves. A china plat smeared with lipstick that cannot be wiped clea with a damp cloth will emerge spotless in seconc after immersion in the ultrasonic washer. Ultra sonics also will be used to tinplate aluminium i seconds. The plating will be a smooth and eve job, the demonstration will show. The same high frequency sound action will weld two pieces aluminium, a metal difficult to join by any othe technique.

First frost and then heat sufficient to vapouris water will be produced in metal by thermo-ele tricity, a process that creates heat or cold direct when electricity is passed through the junction two materials. This process is used in anothe item being displayed, the bottle cooler-warme which can keep a liquid cool until just before it to be used and then heat it to serving temperatur

By reversing the thermo-electric process, it wi be shown that heat alone can create electricit without conventional turbine or generator equi ment. The heat from a small cigarette lighte applied to a thermo-electric couple will produc enough electricity to register two or three amper on a meter. Enough electricity to activate a electromagnet will be produced by the heat fro an ordinary candle. Thermo-electric devices in tea kettle will be used to operate an electric fa The development of artificial light—from th wooden torch to the Rayescent lamp—will be th final feature of the demonstration. A coffee tab containing an electroluminescent top and sample panel like the ones used in the Rayesce room lighted by electroluminescence also will b displayed.

RECORD RISE IN U.K. AERO-ENGINE EXPORT

"British aero-engines are installed in more tha 50 types of foreign aircraft", declared Sir Aubre Burke, President of the B.S.A.C., at the Flying Di play Dinner early in September. The result these sales has been that British aero-engine man facturers have earned £260,608,353 in overse markets since the war and are currently expor ing spare engines and parts at an annual rate £64½ million—£1,240,000 a week or £177,000 a da —compared with last year's record £49½ millio Indeed, the August 1959 figure exceeded eac annual aero-engine export total from 1946-1950 i clusive and, of the post-war total, more than ha has been earned since January 1957.

The monthly record for aero-engine exports the beginning of 1959 stood at just over £5 millio achieved in November last year. This was th only occasion on which £5 million had been reac ed in any single month. In April 1959, this w exceeded with £5.4 million: in May, the total ro to £5.6 million and in June to £5.65 million. July, £6 million was exceeded for the first tim and in August, a record £6,145,819 was achieve Comparable August figures in 1958, 1957 and 19 were: £4 million, £3.3 million and £2.2 millio

British engines are installed in 55 types foreign aircraft of 14 countries. Bristol-Siddele engines are used in 24 types, Rolls-Royce engin in 20 types, while de Havilland supply powerplan for six types, Blackburn and Alvis for two eac and Napier for one.

The United States has adopted British engin for 19 types, including versions of the 707 ar *DC.8* airliners, a number of naval fighters, a targ drone, two research aircraft and one helicopte France uses British engines in 11 types, Italy five, Canada in four, Sweden in three, Turke Finland, Japan and Australia in two each, Arge tine, the Netherlands, India, Spain and Yugoslav in one each. These figures take no account of Bi tish engines used in British aircraft built und licence abroad.

There are 1,432 gas-turbine airliners on ord or delivered in the world, excluding the Sovi bloc. Of these, 874 or 61 percent have or will ha British engines. All the British, Canadian, Fren and Dutch designed airliners are equipped wi British powerplants as standard fitting while American 707 and *DC.8s* have been, or will b fitted with British Conways.

Calcutta Markets

LINSEED STEADY

THE linseed market remained steady during the past week, and sharp advances were recorded n all sections. Supplies were inadequate for the mproved demand from crushers and business vas done at Rs. 24.75 for ready with sellers indi ating Rs. 25 for forward delivery. Prices in the ilcake section rose sharply to Rs. 15.50 for local delivery with fair trading reported. Overseas prices ose by about 30s to £37 5s with sellers indicating higher levels. September futures terminated at Rs. 24.25 and firm prices were held for May, al hough the volume of business was small. Oil prices gained about Rs. 1.50 and sellers were re served because of the shortage of supplies. Ship pers were buyers at Rs. 53.50 with sellers indi cating Rs. 54. The U.K. price reached £112. Latest quotations are based on : Ready-October Rs. 24.75 a maund, October-November Rs. 25 a maund and May futures Rs. 24 a maund.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 29th September and 5th October, 1959)

Cowhides: Wet salted (Ord.) 8,300 pcs. on the basis of Rs. 12 to Rs. 18; Wet salted (Slaughtered) 7,100 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 29.

Goatskins: Wet salted (Patna, Daissee, Kustia) 62,100 pcs. on the basis of Rs. 410 to Rs. 420, Rs. 455 to Rs. 490 and Rs. 510 to Rs. 530; Wet salted (he-killed) on the basis of Rs. 5.87 and (she-killed) on the basis of Rs. 5.62 a piece; Assam-Dinajpur-Rampurhat-Murshidabad 22,800 pcs. on the basis of Rs. 360 to Rs. 390 and Rs. 410 to Rs. 440; Purneah-Kissenganj 16,500 pcs. on the basis of Rs. 470 to Rs. 490 and Rs. 525; Patna-Pakur (Ord.) 15,000 pcs. on the basis of Rs. 415 and Rs. 440 to Rs. 465.

Bazaar Stocks

(5th October, 1959)

Cowhides: Wet salted 82,400 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 58,000 pcs.; Assam-Dinajpur 23,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 95,300 pcs.

SUGAR FIRM

During the week ended 6th October, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 5,500 bags and stocks totalled 45,000 bags. Rates for ordinary grain were Rs. 41.75 to Rs. 42.25 and for big grain Rs. 43 to Rs. 43.50. The market was firm.

SHELLAC QUIET

During the week ended 5th October, the market was quiet. The range of quotations was as follows :

Standard Pure Buttonlac	Rs. 97, 96 buyers; 98 sellers.
Lemon No. 1 Shellac	Rs. 97, 96 buyers; 98, 97 sellers.
Lemon No. 2 Shellac	Rs. 91 buyers; 93 sellers.
F.O. Superfine Shellac	Rs. 86, 85 buyers; 87, 88 sellers.
Standard One Shellac	Rs. 82 buyers; 85 sellers.
TN Pure Shellac	Rs. 74, 73 buyers; 77, 75 sellers.
Golden Kusmi Seedlac	Rs. 100 sellers.
No. 1 Kusmi Seedlac	Rs. 82 buyers; 83 to 85 sellers.
No. 2 Kusmi Seedlac	Rs. 78 sellers.
Golden Bysaky Seedlac	Rs. 83, 84 buyers; 85 sellers.
One B Bysacky Seedlac	Rs. 80.50, 80 buyers; 81.50, 81 sellers.
Two B Bysacky Seedlac	Rs. 72 buyers; 73.50, 73 sellers.
Manbhum Fine Bysacky Seedlac	Rs. 78 buyers; 80 sellers.
Fine Bysaky Seedlac	Rs. 74, 73 buyers; 75, 74, 75 sellers.
Genuine Bysaky Seedlac	Rs. 68, 67 buyers; 70 sellers.

Shipments during September were 27,960 packages.

For a nominal charge, "Capital's" Statistical Department can provide you with a certificate of share prices.

COMPANY AND PUBLIC NOTICES

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, No. 12, Mission Row, Calcutta, 1 on Friday, the 30th October, 1959, immediately following the termination of the Annual General Meeting to be held on that day at 11-00 a.m. to consider, and if thought fit to pass, with or without modification, the following subjoined resolution, namely :—

"That approval be and is hereby accorded to the re-appointment of Martin Burn Limited, as Managing Agents of the Company for a further period of 10 years with effect on and from the 16th August, 1960, on the terms and conditions contained in the draft agreement submitted to the Meeting and, for the purpose of indentification signed by the Chairman thereof, and that an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act, 1956 be and is hereby directed to be made."

By Order of the Board.
MARTIN BURN LIMITED,
A. G. GIDLEY,

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, The Rt. Hon'ble Lord Sinha of Raipur who has attained the age of 72 years and who retired by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

(7) To appoint a Director in place of Dr. S. C. Law, M.A., Ph.D., who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. S. C. Law, M.A., Ph.D., who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

(8) To elect Mr. L. T. Gholap, I.C.S., a Director of the Company, who retires by rotation and is eligible for re-election.

(9) To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from Thursday the 12th November, 1959 to Friday the 27th November, 1959 both days inclusive.

By Order of the Board,
A. MUKERJI,
Assistant Secretary.
INDIA STEAMSHIP CO., LTD.

Calcutta,
The 30th September, 1959.

The dividend, if sanctioned, will be made payable to those Shareholders whose names stand on the Register of the Company on the 12th November, 1959, and the Dividend Warrants will be posted from 15th December, 1959 onwards.

N.B.—A member entitled to attend and vote is entitled to appoint a Proxy and the Proxy so appointed need not be a member of the Company.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956 :

1.... In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir B. P. Singh Roy, K.C.I.E., has attained the age of 65 years and hence this needs approval by a resolution of the shareholders in respect of which a Special Notice has been received from a Shareholder in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. Sir B. P. Singh Roy joined the Board of Directors of the Company in 1945. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interests of the Company that the Board should avail itself of his valuable advice which is a great asset to the Company, by retaining him as a Director of the Company.

2.... In respect of Item No. 5 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir B. P. Singh Roy, K.C.I.E., as a Director, be made and/or be approved in accordance with the provisions of the Companies Act. The Managing Agents of the Company, Messrs. Lionel Edwards, (Private) Limited, have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir B. P. Singh Roy, K.C.I.E., became a Director of the Company in the year 1945, and has for the last several years been associated as one of the Directors of the Managing Agents, who are entrusted with the management of the affairs of the Company and of which he has been Managing Director since 1st June 1958. As it is in the interests of the Company that it should continue to receive the benefit of his valuable advice and guidance, it is desirable that his appointment as a Director be made and/or approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

3.... In respect of Item No. 6 of the Notice of the Annual General Meeting, The Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment has attained the age of 72 years and hence this needs approval by a resolution of the shareholders in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. The Rt. Hon'ble Lord Sinha of Raipur joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered valuable service to it and it is in the interests of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

4.... In respect of Item No. 7 of the Notice of the Annual General Meeting, Dr. S. C. Law, who retires by rotation and is eligible for re-appointment has attained the age of 67 years and hence this needs approval by a resolution of the Shareholders in respect of which a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such Special Notice from a Member, notifying his intention to move the resolution as set out in the said item. Dr. S. C. Law joined the Board of Directors of the Company in 1944. During the long period of his association with the Company he has rendered valuable service to it and it is in the interests of the Company that it should continue to avail itself of his valuable services and advice by retaining him as a Director of the Company.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a Member.

The Dividend, if declared, will be paid to those shareholders whose names appear in the Register of the Company on 14th November, 1959 or their Mandatees and the Dividend Warrants will be posted from 18th December, 1959 onwards.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

Item No. 3

Sir B. P. Singh Roy, Kt. K.C.I.E., has attained the age of 65 years in January, 1959 and as such he retires by virtue of sub-section (2) of Section 280 of the Companies Act, 1956 and is eligible for re-appointment. His re-appointment needs approval of the shareholders in terms of the provisions of Section 281 of the Companies Act by a Resolution of which a Special Notice has been given. The Company has received such Special Notice from a shareholder notifying his intention to move the Resolution as set out in item No. 3 of the Notice. Sir B. P. Singh Roy, Kt. K.C.I.E., joined the Board of Directors of the Company in October, 1949. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interest of the Company that the Board should avail of his valuable advice which is of great asset to the Company by retaining him as a Director of the Company.

Item No. 4

Mr. S. C. Roy, a Director of the Company who retires by rotation and is eligible for re-appointment, is also a Director of Messrs. Associated Industrial Development Co. (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents. The Managing Agents of the Company, Messrs. Associated Industrial Development Co. (Private) Ltd., have the right to appoint two Directors as Ex-Officio Directors of the Company. Mr. G. K. Khemka is an Ex-Officio Director of the Company appointed by the Managing Agents. Hence the re-appointment of Mr. S. C. Roy needs the approval of the shareholders in terms of the provisions of Section 261 of the Companies Act by a Special Resolution of which a Special Notice has been given. The Company has received such Special Notice—from a shareholder notifying his intention to move the Special Resolution as set out in item No. 4 of the Notice. Mr. S. C. Roy has been a Director of the Company since the year 1951 and for some years past been associated as one of the Directors of the Managing Agents who are entrusted with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice as a member of the Board, it is desirable that he be re-appointed as a Director by a Special Resolution in accordance with the provisions of Section 261 of the Companies Act, 1956.

To all Shareholders :

And in particular to : Mr. R. R. Bhandary, Kaviraj Shiv Nath Rimal, Lt. Genl. Shanker Shum Shere J. B. R., Mrs. Grihya Kumari, Mr. Mahendra Prasad and Mr. Hrishikesh Prasad.

why we advertise

Mr. Dharamsey Khatau, well-known industrialist, Chairman of The Associated Cement Companies and Director of several manufacturing concerns

A POTENT FORCE in the world today—a force which affects the way we live and think, a force of which we can never be entirely unaware, is Advertising. A great power for good, a tremendous educative force, its message and influence are brought to bear on us in many places, in many ways.

My own experience in industry has convinced me that Advertising not only assists the *manufacturer* in the development of his business. It also brings many very real benefits to the consumer—to *you*.

Misunderstandings exist about Advertising. Questions are asked: What service does Advertising perform? What can it actually achieve? Does it bring any benefits to the public, apart from stimulating the sale of goods? Does it improve our standard of living? Does it not *add* to the cost of the things we buy?

We feel the time has come to answer the questions, clear the misunderstandings—and help the public realise the facts about this beneficent force. This is the first of a series of announcements about Advertising which will appear in this paper... a series to which well-known personalities will contribute, telling you how and why Advertising is used in many fields of merchandising.

Good advertising serves *you*

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

†Liquid Assets. * Gross ‡ Includes 10 p.c. for 1954 & 1955.

raw materials as well as a rising demand due to industrialisation. The controversial point is how much the demand will rise. No definite predictions can be made, because much depends on the rate of growth of the economy as a whole, and of the steel-using industries in particular. The Government has estimated that consumption (in terms of finished steel) was 3.5 million tons in 1957, and is running at an annual rate of 4.2 million tons now, although here again no precise calculations of the potential are possible, partly because steel supplies are strictly rationed. The National Council of Applied Economic Research, in an interim report on steel demand, expects that the figure will rise to 6 million tons by 1965-66, while the Government's preliminary studies have inspired a forecast of 7.3 million tons. These estimates compare with the fact that, with the 6 million tons of ingot steel which India expects to produce annually under the present expansion plans, the yield in terms of finished steel will be between 4.5 and 5 million tons. While supporting the plea to raise output further, Sir Jehangir Ghandy therefore emphasises the importance or maintaining a flexible approach to future expansion schemes. The pipe-dream of Mr. T. T. Krishnamachari as Commerce and Industry Minister a few years ago, that annual ingot production would have to be raised to 15 million tons by 1965-66, has fortunately been largely forgotten. But many think that even the more modest target of 10 million ingot tons which the planners now seem to have in mind may prove to be on the high side. Sir Jehangir suggests for the time being a target of 9 million tons of ingots, yielding a little less than 7 million tons of finished steel.

The argument for not expanding steel production capacity too fast is that it will involve an extremely heavy commitment of financial, technical and managerial resources at a time when they are in very short supply. Rather than hurriedly undertake big schemes which strain the economy unnecessarily, it may be wiser to fix more modest targets and ensure a flexibility which will enable them to be raised later, if the trends justify. As Sir Jehangir points out, "If we remember that each million tons of additional steel capacity will mean earmarking as much as Rs. 100 crores to expand an existing plant, or Rs. 200 crores to build one from scratch, the need for a rational scale of priorities between steel and other sectors becomes immediately evident." He argues strongly that a no less important problem now is to take measures to increase the consumption potential and to develop the steel-using industries. A major step towards building the consumption potential would be steadily to reduce the selling price of the commodity. At present, this price is artificially inflated by a surcharge which the Indian producers have to pay; the surcharge, averaging about Rs. 115 a ton, is credited to the price equalisation fund, the money from which is used for subsidising the more expensive foreign steel, so that imported and indigenous steel can both be sold at the same price. As domestic production increases and imports decrease, the justification for continuing the price equalisation fund will diminish and it could ultimately be abolished altogether. Sir Jehangir hopes that it will then become possible to remove the surcharge and end the distinction between selling prices and retention prices. He points out that steel can also be made cheaper by reducing the excise duty. The duty is so injudicious that it has raised the selling price of certain steel products in India beyond the levels prevailing in the United States, Japan and Britain. The operation of the price equalisation fund and the excise duty have already led to the incongruous situation where the official selling price for bars, joists, plates and certain other products in India is higher than the landed, duty-paid cost of the imported equivalents.

The development of secondary, steel-using industries is important because much of the steel coming from the main plants has to be fabricated and processed before it can be of any use. These industries are less capital-intensive than the steel concerns, and their employment potential is greater. In addition, only through their operations can the impact of the bigger steel output be widely and beneficially distributed through the economy. Sir Jehangir doubts whether the engineering industry will be able to use the larger quantities of steel which will be available soon unless it prepares itself to do so as from now. It is important that its growth be given higher priority, especially if imports of capital equipment and machinery are to be reduced in the future.

The broad impression which emerges from Sir Jehangir Ghandy's stimulating address is that the planners' partiality for grandiose schemes threatens to create serious incongruities in the pattern of steel production and demand. Output will have to be increased further during the third plan period, but a certain restraint and flexibility should govern the fixing of targets. The importance of conserving capital resources indicates that expansion should be concentrated on the established units, since this would be much cheaper than setting up entirely new plants. Both Tata Iron and Indian Iron have offered to increase their productive capacity; and the general programme of expansion can be greatly facilitated by rationalising steel pricing policies in such a way that the producers are able to finance their further growth by accumulating the resources themselves. In the conditions now approaching, the rationalisation should not be difficult: the fading away of the price equalisation fund would, on the one hand, help producers meet their heavy financial commitments, and, on the other, make steel cheaper for consumers. Along with expansion, a diversification of output is necessary. This can, to some extent, be undertaken by the steel concerns themselves, but in addition a large increase in the capacity as well as the variety of the steel-using industries has to be arranged. Steel planning cannot be undertaken on the basis that a certain number of expansion schemes have to be framed for producing a certain quantity of steel; more detailed assessments are necessary now in order to ensure that the steel that is produced is available in the quantities and in the forms in which it is required.

MORE DEVELOPMENT CAPITAL

"NO other aspiration dominates my being as much as this: that East and West will find dependable, self-guaranteeing, methods to reduce the vast and essentially wasteful expenditures for armaments, so that much of the saving may be used for world improvement." This noble statement by President Eisenhower, at Abilene, Kansas, in mid-October, was uttered two weeks after the member countries of the World Bank endorsed the American proposal for an International Development Association to provide capital to under-developed countries. The underdeveloped regions of the world may reasonably expect more capital than has been available to them hitherto. More capital should, of course, become available for export as the main capital-forming countries increase their industrial potential and their prosperity. But this favourable development coincides with the troubles of the U.S. dollar; and in the course of the Fund-Bank meetings in Washington, it became clear that assistance to foreign countries would if necessary be subordinated to the defence of the dollar. The U.S. Government is willing to contribute nearly one-third of the International Development Association's initial capital of $1,000 million, but, essentially, the I.D.A. is seen as a means of collecting from other industrialised countries more capital for lending to less-industrialised countries, so relieving the U.S. of a part of the burden that it has borne in the post-war era.

The U.K. undertakes this additional commitment willingly and is prepared to subscribe $140 million to the initial capital of the I.D.A. (compared with $320 million from the U.S.). But it must be emphasised that the U.K.'s balance of payments is not at present strong enough to support external investment on the scale that is envisaged for the 1960s. The Treasury informed the Radcliffe Committee, during the latter's investigation into the U.K.'s monetary position, that a surplus in the external account of approximately £450 million a year would be needed in the 1960s, whereas even in 1958, an exceptionally good year, the surplus was about £100 million less than that figure. There has been some confusion of thought concerning the U.K.'s capital account, and figures published recently in the Treasury's *Bulletin for Industry*—more detailed than any published previously—help to clarify the position. In the seven years 1952-58, the U.K.'s private investment abroad averaged £330 million a year while the inflow of private capital averaged £130 million a year. Nearly all of the net outflow went to the sterling area; for there was only a small counter-balancing inflow from the sterling area, whereas most of the U.K.'s investment outside the sterling area—mainly in Canada—was counter-balanced by inflowing capital—mainly from the U.S.

Private investment is the main component in the U.K.'s capital account, but the U.S.'s capital account is weighted with Governmental operations. The position was outlined at the recent meeting of the Fund by the Secretary of the Treasury, Mr. Robert B. Anderson. Net private investment abroad takes about $2,000 million a year; Government loans and grants amount to some $2,500 million; military aid accounts for a further $3,000 million or so. Some proportion of U.S. Government loans and grants will presumably have to be sacrificed if the troubles of the dollar persist—and with an overall deficit of some $4,500 million a year in the external payments account, it is difficult to believe that the position will correct itself. The I.D.A.'s initial capital of $1,000 million is small in relation to the world's needs, and it might be quite inadequate if a substantial part of the $2,500 million of loans and grants were cut off.

However, the amount of development capital (as it may be loosely termed) available, is only part of the problem: equally important is the distribution of whatever is available. It is generally agreed that the money does not always go where it is most needed. The requirements of the I.D.A. will be less strict than those of the World Bank, and needy countries will therefore have easier access to public funds in future. But the large volume of private investment cannot be directly influenced by such means, and there is no reason to suppose that companies are adopting more venturesome or more philanthropic policies towards projects abroad. The disapproving comment in the International Monetary Fund's latest report that industrial countries have tended "to give far greater weight to the interests of small groups of domestic producers than to the interests either of the large body of primary producers abroad or of consumers at home" seems relevant to this problem. The idea that the less-industrialised countries are willing and anxious to receive any foreign money that may be forthcoming is presumptuous. In fact, the potential recipients are increasingly critical of any attempts to influence their policies with money—even though the purpose of such attempts is simply to provide reasonable security for the money—and they are not convinced that foreign capital that quickly withdraws its equivalent in profits from the country where it is employed, and can continue to do so indefinitely, is a desirable addition to resources.

This question of the potential recipient's will to receive needs careful thought. It is evident that straightforward principles of business are not always applicable—and the Russians are certainly at an advantage in this respect, as they can put business principles aside. Also requiring attention is the manner of helping developing countries—a Swiss account of methods at the German and the Russian-aided steelworks projects in India (published in *Der Monat*) was disturbing to people in the West who thought of western technicians as ambassadors of the West. It may be that the only satisfactory solution of these problems is abundant non-commercial aid, given in the forms most convenient to the recipient. If so, the drastic reduction in military spending that the highest statesmen have in mind is indispensable; for the capital-forming countries are not at present able to undertake substantial additional commitments and at the same time maintain financial equilibrium.

THE NEW GOVERNMENT LOANS

THE second tranche of Central Government loans—3½ percent 1969 for Rs. 25 crores at an issue price of Rs. 99.40 a Rs. 100 and 3¾ percent 1974 for Rs. 20 crores at Rs. 99.65 a Rs. 100—sold a couple of weeks ago to the Reserve Bank for re-sale to the market on tap, is discouraging—if no further borrowing is contemplated this year. There is an opportunity at the present time for siphoning off the excessive money which is floating around. It is thought that unless vigorous steps are taken now to divert money towards productive investment, the economy might produce many unpleasant features. For instance, there is frenzied speculation in the bullion market. The stock markets have begun to show the bubbles of an artificial boom. Prices of shares in new companies, and even in companies which are not yet officially formed, are being quoted at considerable premia. Prices of commodities continue to move up, and inflation could become even more embarrassing if increased output, especially in the agricultural sector, is not obtained during the current season.

As expected, the new loans have had little effect on the gilt-edged market, and security prices continue to move up steadily. So long as the demand exceeds the supply of securities, the trend is unlikely to change. The first Central loan this year was offered some time ago for a modest amount of Rs. 175 crores as the pull of the 1958-59 busy season had not then abated. This consideration apart, opportunities had to be given to the State Governments as well as other official and semi-official institutions to obtain their requirements without much difficulty.

If money conditions are any guide, it looks as if the Central Government cannot stop at borrowing only a further Rs. 45 crores without encouraging inflation. There is evidence that the banking system has adequate resources for meeting the requirements of the coming busy season. During the week ended 9th October the investment portfolio of scheduled banks increased to Rs. 781.99 crores from Rs. 594.64 crores a year ago. During

the 1958-59 busy season (October 1958-April 1959) advances, including bills, of scheduled banks increased by Rs. 189 crores, of which industries aimed Rs. 73 crores and commerce Rs. 102 crores. Judging from a cross-section of industries, there is little scope for any further rise during the comng busy season. For instance, the increased requirements of the iron and steel industry, because of expansion in the private sector, appear to have been reasonably satisfied. The engineering industry will need bigger advances, if steel supplies are increased. As stocks of raw materials and finished products of the cotton mill, jute and cement industries have been considerably reduced, there is little possibility of increased advances. As far as commercial loans are concerned, advances will be restrained by restrictions on credit to foodgrains dealers as well as by uncertain agricultural production because of widespread floods. Restrictions on imports will also continue to keep commercial advances down.

The case for an ambitious borrowing programme is strong. If increased resources are obtained from market borrowing, it will help formulate official fiscal policies on more realistic lines. The expediency of overstraining tax burdens can be avoided to a considerable extent. As the organisational efforts for increasing small savings do not appear to have met with much success, it is necessary that greater attention be given to borrowing. The rising trend in the prices of securities—the index of Central Government loans has increased from 100.4 to 101.5 (1952-53 equals 100) over the past year—springs from a shortage of supplies. Securities in this country do not as yet compete with industrial investment much, so the present shortage is likely to be accentuated unless the demand is satisfied by further supplies. Indications are that investible funds will continue to increase in future. The reduction in industrial dividend yields following increased share prices will divert more insurance money towards securities; the trend began some time ago. With an increase in deposits followed by reduced opportunities for remunerative advances, securities will attract bigger bank money. This apart, provident and other trustee funds will need greater investment. It is important to hold down prices if the growing attraction of securities is not to be undermined. If yields are maintained in line with market standards, funds will not be difficult to obtain. It is, therefore, hoped that New Delhi will soon announce further loans for meeting its requirements.

Current News and Comment

Sirpur Paper Dividend Episode

The shares of the Birla-managed Sirpur Paper Mills Ltd suddenly shot into the limelight recently. After a hectic trading, they first rose from Rs. 14.72 to Rs. 16, then fell to Rs. 14, and steadied later at Rs. 14.52. All this happened within a week—from 8th to 14th October. The sharp rise and the subsequent steep fall were caused by the confusion over the dividend announcement. On 8th October, the Bombay Stock Exchange was informed telegraphically that the directors of the company had recommended an interim dividend of 65nP, subject to tax deduction, on the ordinary shares for the year ended June 1959. This was duly confirmed by a letter received the next day. But three days later followed another letter saying that although the term "interim" was used in the dividend announcement, the directors had no intention of declaring a further dividend for the year ended June 1959. The first announcement lifted the Sirpur Paper shares from Rs. 14.72 to Rs. 16. The subsequent clarification brought them down to Rs. 14. Big fortunes thus changed hands within a few days. Sirpur Paper are an active counter on the market. Fluctuations were wide and the dealings hectic. It is reported that influential quarters were keen sellers soon after the announcement of the interim dividend, while the unwary public bought. When the public rushed in to liquidate on learning that the interim dividend was also the final, the shorts cashed their profits.

The market is indignant about the way the management of the company has handled the dividend news. The management cannot offer the excuse that a number of companies term their final dividend as interim, because while announcing the dividend these companies leave no doubt that the interim is final. The idea in announcing the final dividend as interim is to overcome certain technical and statutory difficulties, such as obtaining the shareholders' consent before making the actual disbursement. If the Stock Exchange is not to become a place for merely buying and selling shares, and if it is to serve as a guardian of the investors' interest, it will have to take up the matter with the management of Sirpur Paper and find out how all this happened. An enquiry will also be necessary to see whether the allegations about heavy influential selling following the interim dividend announcement are justified. The matter is too serious to be overlooked. The directorate of the Stock Exchange would be failing in its duty if it did not seek a full explanation from the Sirpur Paper Mills.

Tractors from Mahindras

Mahindra and Mahindra Ltd of Bombay has received sanction from the Government for manufacturing diesel agricultural tractors in collaboration with David Brown and Company of the U.K. The new company will be known as David Brown-Mahindra Tractors (Private) Ltd. It will have an authorised capital of Rs. 50 lakhs, of which the issued capital will be Rs. 21.4 lakhs. Mahindras will take up 51 percent of the new capital and the rest will go to David Brown. The British firm will provide the technical know-how, and the factory will be located in Bombay. The manufacturing facilities already existing with the Mahindra group of industries will be fully availed of. Some additional plant will be supplied by the foreign firm which, it is said, has agreed to participate in the project without any royalty rights. It has also assigned to the new company exclusively the export markets in Ceylon, Malaya, Burma and Nepal. Mahindra and Mahindra Ltd has applied for a licence to import tractors to implement the initial stages of the new project. According to the phased programme, the company will be able to manufacture up to 66 percent of the components during the next four years. Achieving a higher percentage of indigenous manufacture will depend on the growth of the local ancillary industries. The Government's manufacturing licence will cover a production of 1,250 tractors a year.

Baroda Rayon Issue Soon

The long-awaited capital issue of the Baroda Rayon Corporation will be on the market soon. The capital cost of this Gaekwad-Chinai and Mitsubishi joint venture for a continuous filament rayon plant producing 6¼ tons a day is a little more than Rs. 5 crores. The machinery costs about Rs. 4 crores, the foreign exchange component of which is Rs. 3.33 crores, c.i.f. Indian port. The rest of the machinery will be made here. A major portion of the Japanese machinery is to be obtained under the yen credit agreement. The original idea was that the company should sign a deferred payment agreement with Mitsubishis, but the Government of India, it is said, suggested that it use the yen credit facility. This caused some delay in finalising the scheme, otherwise the issue would have been on the market much earlier. The company has an authorised capital of Rs. 10 crores—Rs. 5 crores in preference shares and Rs. 5 crores in ordinary shares, both of Rs. 100 each. The preference shares will not be issued at present, and of the ordinary capital, only Rs. 3.5 crores are to be issued now. Of this, the directors, promoters and their friends, along with Mitsubishis, have taken up 190,800 shares, leaving 159,200 for the public. The latter are underwritten by the Gaekwad Investment Corporation. Mitsubishis have taken up 26,000 shares.

The factory will be situated in Udhana, near Surat, which is a traditional centre of the silk-weaving industry. Production is expected to start by the end of 1961. Apart from rayon yarn, the company proposes to manufacture 20 tons of sulphuric acid, five tons of carbon di-sulphide and ten tons of sodium sulphate daily. Its managing agents are Gaekwad Chinai and Company. Lists will open soon, and as the shares are already quoted at a premium of Rs. 20, the success of the issue seems assured. This is partly because of the reputation of the House of Chinais in the rayon and art silk field—they have been managing agents of the National Rayon Corporation, a blue chip on the Bombay Stock Exchange—and partly because of the general strength of rayon shares. The silk and woollen group has been in the forefront of the recent rise in share values. While the Reserve Bank's all-India index for variable dividend securities has risen from 144.7 to 153 over the last 12 months, the silk and woollen group has advanced from 435.5 to 683.6. Rayon shares account for most of the rise in this group. Arrangements are being made to get the Baroda Rayon shares listed on the Stock Exchange. Sir Fatesinh Gaekwad is chairman of the company. Others on the board are Mr. Babubhai M. Chinai, Mr. Madanmohan R. Ruia, Mr. C. H. Bhabha, Mr. Rasiklal J. Chinai, Mr. K. K. Sheth, Mr. Bharat Ram, and Mr. Jaykrishna Harivallabhdas.

Truck and Car Wheels

The Central Minister of Commerce and Industry told the Lok Sabha some time ago that as many as 66 schemes involving foreign collaboration in setting up manufacturing units have been approved by the Government of India in the first six months of the current year. The inflow of private foreign capital and know-how which these schemes represent is welcome. As a result of proposals which are now maturing, India may soon have two new units manufacturing rims and wheels for the motor vehicle industry. Dunlops of Britain is collaborating with T. V. Sundaram Iyengar and Sons for setting up a rim and wheel factory which will have an initial capacity of 200,000 truck wheels a year. The company will be known as Wheels India Ltd. Its capital will be subscribed by the two collaborators, Dunlops' contribution being in the form of plant and machinery. The technical aid will be provided by the Dunlop Rim and Wheel Company of Coventry. New Delhi has approved the project in principle and its sanction covering the initial details will be announced soon. The factory will be located in Madras. Guest, Keen, Williams Ltd also has a licence from the Government for the manufacture of wheels for motor-cars and jeeps.

Ancillaries for Motor-vehicles

The Amerind Engineering Company of Bombay has been licensed recently by the Government to manufacture all steering parts, propeller shafts, universal joints, gearboxes for motor-cycles, cylinder systems and pistons for master cylinders and brake cylinders. The company will get the technical collaboration of a U.S. firm in this project. It has obtained import licences for machinery and plant and the factory is expected to start production early in 1960. Further, a Madras business man, Mr. L. L. Narayan, has concluded an agreement with Quinton Hazell of Colwyn Bay (North Wales), a well-known British manufacturer of Q.H.L. steering components, under which Q.H.L. steering and

spension joints will be manufactured under ence in India for supply to motor-vehicle manuacturers and repairers. The new company will have headquarters in Madras and it is reported that ork on the specialised tooling and machinery, hich is also to be supplied by Quinton Hazell, has ready started. It is expected that the Madras orks will start production early in January 1960. gines Valves Ltd of Madras already manufacres inlet and exhaust valves for motor-vehicle gines in collaboration with the Farnborough gineering Company of Britain.

alcutta Tramway Headaches

The accounts of the Calcutta Tramways Co. Ltd flect the difficult conditions under which it had to operate during the past year. As a result a strike declared by its employees from early ugust to late September 1958, the number of assengers carried declined from 402 million in 57 to 366 million last year. Traffic receipts fell om £950,000 to £1,760,000. Furthermore, the nditions existing during the year are reflected the dwindling cash resources of the company: s current assets have fallen from £778,000 to 702,000 and cash and tax reserve certificates, in rticular, from £391,000 to £218,000. Speaking at e annual general meeting in London last week, r. David E. Webb, chairman, said that from the tures, shareholders will appreciate the repeated ferences of the board to the necessity to retain bstantial cash resources in the company. (A ller version of the speech appears elsewhere in is week's issue of *Capital*.) "The fact that the sults are not worse," the chairman said, "is tributable to the first class control in Calcutta er every kind of expenditure. To have suffered six weeks' strike and yet to have traded at a all surplus, draws attention to the resilience the company and the ability of the executive aff to adapt themselves, at times on the shortest ssible notice, from one set of circumstances to nother." But a pruning of expenditure brings in wake a backlog of maintenance, re-equipment d modernisation, and this aspect is at last beming to influence public opinion in Calcutta. e resistance to an increase in fares is now most entirely political, Mr. Webb said.

Tracing the sequence of events during the rike period, the chairman referred to the inease in fares, the company's offer to increase ages of its employees, the refusal of union aders to allow their members to accept higher ages if fares were put up, and eventually a reurn to the old level of fares and wages while an dependent court of enquiry examined the case. hen followed the final act of the Government appointing a tribunal under the Industrial Disutes Act instead of an independent court of nquiry. The tribunal sat until July this year, and e company is now awaiting its award, which is xpected in the near future. For more than a ear, the chairman said, the company has been bjected to all the frustrations of "this Industial Court's Tribunal." During that time, nothing ould be done to improve the position of its emloyees. Its revenue was frozen, and all the many nprovements and modernisations have had to be stponed. "We can only hope that in the very ear future we shall return to more realistic conitions when once more we are in a position to ok after our staff and render a service to the avelling public of Calcutta more in keeping with e great traditions of your company," the chairan said.

uby General Insurance

In his address from the chair at the latest nnual general meeting of the Ruby General surance Company Ltd, held recently in Calcutta, Ir. B. M. Birla said that more attention has been iven to the fire department, which alone showed rise in the net premium income in 1958 over 1957, hile the marine and miscellaneous business suffered a setback. (A fuller version of the speech appears on another page of this week's *Capital*.) The et premium income rose in fire from Rs. 52.01 khs to Rs. 56 40 lakhs in 1958, but declined in arine from Rs. 17.58 lakhs to Rs. 15.72 lakhs and miscellaneous from Rs. 63.22 lakhs to Rs. 59.73 khs. Explaining the circumstances, Mr. Birla aid that the adverse claims experience in the otor and miscellaneous department continued, pecially in the motor-vehicles section. The company is, therefore, pursuing a very cautious underriting policy. It is also trying to develop other ypes of miscellaneous business such as machinery, rection and personal accident insurance. "Attenon should be given to check the incidence of laims. The Government should strictly enforce e traffic regulations, particularly for goods carriers on national highways." Mr. Birla said. The ompany's underwriting policy in the marine busiess has also been conservative. Cargo handling eeds to be improved and pilferages and thefts at the ports and during transit by carriers should be checked. The Tariff Committee of the Insurance Association should now give serious attention to fixing an economic rate structure for marine business, Mr. Birla said.

Oil Demand Pattern Changing

Oil consumption in India during 1958 increased by 6.1 percent over 1957—a rate of growth lower than in previous years. The slowing down was brought about primarily by the restriction on imports. The internal sales of Burmah-Shell in 1958 totalled 2,929,790 tons—an increase of 3.5 percent over the previous year. An attractive pamphlet entitled *Burmah-Shell—Survey of Activities, 1958*, recently published by the company, says that over the decade 1948-58, the demand for petroleum products in India rose from 2.2 million long tons to about 6 million long tons. But the most significant feature in the changing pattern of demand has been the fall in the contribution of motor spirit to the total trade and the rise of high-speed diesel oil.

The consumption of motor spirit varies directly with the number of petrol vehicles and their use. A distinct downward trend in demand for the product, the publication says, has become evident since 1952. The main reason for the setback is the increasing popularity of diesel vehicles now produced by indigenous manufacturing concerns. In 1958, the downward trend in demand for this product continued, the trade declining by 6.1 percent below the previous year. Kerosene is still the largest single petroleum product sold in India, accounting for approximately 30 percent of the total demand. Over the past ten years, its consumption in India has nearly trebled, although the trade in it declined in 1958, for the first time, by a little less than 1 percent below the previous year, due entirely to import restrictions.

Burmah-Shell Refineries Ltd, the pamphlet says, received 96 tankers carrying approximately 2.25 million tons of crude oil. Refined products were despatched by coastal tankers to other ports of India, by pipelines to the company's installations in Bombay and by rail and road upcountry. The railways still continue as the chief means of transport for the company's products. Although the number of tank wagons increased in 1958, their carrying capacity fell short of the industry's peak requirements, with the result that over 130,000 tons of the company's products had to be transported by road, instead of by rail, at lower freights. The pamphlet says that total sales of bitumen increased by approximately 8.8 percent during 1958, compared with the previous year. With the arrival of 30 bulk bitumen rail tank wagons, the product was moved in bulk from the Burmah-Shell Refinery for the first time in this country. The company's bulk bitumen depôt in Shakurbasti, Delhi, was opened in December 1958. Bulk supplies are now despatched regularly to Delhi and Calcutta, and it is hoped that similar arrangements to Madras and certain other stations will follow in the near future.

U.S. Steel Shortages Growing

The First National City Bank of New York, in its monthly letter on U.S. business and economic conditions issued at the beginning of October, declared that the U.S. steel strike is beginning to pinch. Durable goods fabricators, braced for a long strike, had maintained a high rate of operations out of inventories through mid-September. In the latter part of the month, however, reports of lay-offs, shortened work weeks, and shut-downs were more frequent. But in spite of the crippling of one of the nation's chief industries and the spreading impact of steel shortages, the economy has been strong and vigorous. Retail trade is well maintained. Business, counting on renewed growth to new heights after major labour disputes are settled, has stepped up plans for new plant and equipment outlays. Symptomatic of potential overstrain on the nation's productive capacity, and on the savings supply, credit has tightened and interest rates have risen further.

Industrial activity apparently slipped a bit further in September as a result of steel shortages, strikes in non-ferrous metal industries, and the continuing model change-over in the motor-vehicle industry. The latest Federal Reserve index of industrial production (seasonally adjusted, 1947-49 equals 100) declined by four points in August to 149. Including the dip of two points in July, overall production dropped by 4 percent from the record June level. Excluding the primary metal and motor-vehicle industries, however, all other types of manufacturing combined were somewhat higher in July and August than in June. Producers of non-durable goods, operating at record levels in August, are looking optimistically towards the fall season. Steel stocks have lasted longer than many anticipated. The trickle of steel available from mills still operating, together with imports, swaps and special purchases, helped business men fill thin spots in their inventories. With every week that passes, however, supplies are getting smaller and more unbalanced. Even after the strike ends, it will take time to get furnaces repaired and back into production and to restore finished steel shipments to pre-strike levels. Considering the way in which incomes and consumption have been sustained, the main impact of the strike so far has been to work off abnormally high steel stocks and to push demand ahead to a later time. However, should lay-offs because of steel shortages begin to snowball in a wide range of industries, there is the danger of sales losses which will not be recouped.

The executive has been provided by the Taft-Hartley Act with a legal means of dealing with such situations. When, in the opinion of the President, a strike imperils the national health or safety, he may, after receiving a report from a board of enquiry, direct the Attorney-General to obtain a federal injunction suspending the strike for 80 days. (The President has already done this.) If a settlement has not been reached by the end of 60 days, the fact-finding board's report is made public, and the National Labour Relations Board must then take a vote of the workers on management's last offer. If the issues continue unresolved beyond the 80-day period and the strike is resumed, the President may submit recommendations to Congress. Neither party has favoured invoking the Taft-Hartley procedure. The steelworkers union, although resisting an approach which would restore employment and production, has repeatedly called for a Government-appointed fact-finding commission with power to recommend a settlement. Steel management feels that a contract should be reached by the process of free collective bargaining without Government intervention.

Khandsari Licensing in U.P.

Two reasons recently mentioned by Mr. A. M. Thomas, Central Deputy Minister for Food, for the sugar scarcity were a "considerable fall" in the area under sugarcane in U.P., and the diversion of cane from white sugar to gur and *khandsari*. It will, however, be of some comfort to mills that the U.P. Government has now extended the scope of the Khandsari Manufacturers Licensing Order to the whole State, bringing power crushers and *bels* producing gur within its ambit. Under the order, the Government will license the centrifugals with which *khandsari* is made from *gur* or *rab*, and charge a fee of Rs. 100 for power-driven centrifugals. For hand-driven centrifugals, the fee will be Rs. 10. Licences for *khandsari* units will be refused in the reserved and assigned areas of sugar factories. While the enforcement of the order is expected to bring some relief to mills, it is distressing to learn from the report of the Khadi and Village Industries Commission that in spite of the huge amounts spent, the streamlining of the *khandsari* and *gur* industries remains a remote proposition. Four years after the programme was introduced, only 7,000 crushers have been replaced, as against the 250,000 which needed replacement (on a conservative estimate). The Commission has complained of a general lack of funds, which is common to all projects, but it is also evident from the resolutions of the Kakinada conference last August that *khandsari* and *gur* manufacture may not be fully economic without large-scale financial assistance from the Government, including exemption from excise duty for power-driven units. On an average, one acre of land gives a yield of 0.78 ton to 0.91 ton of *gur* or *khandsari*, compared with about 1.30 tons of white sugar. This is the basic difference which has yet to be recognised by the sentimental advocates of the cottage industry sector.

The U.P. Government has also decided to change the method for the payment of cane cess by mills. They will now pay 50 percent of the cess due during the crushing season, and the rest in equal monthly instalments from April. A slab system of fines has been proposed. Besides interest at 6 percent on the amount due, the defaulters are liable to a penalty of 4 percent to 6 percent by way of fine. If the default continues, higher fines will be levied, the Cane Commissioner being authorised to recover all outstanding arrears on 1st October as arrears of land revenue.

Heavy Industries for U.P.

The Heavy Industry Plan Committee of U.P. has recommended the creation of a Heavy Industries Corporation for implementing various projects in the public sector. It says that the size of the industrial plan should correspond to the size of the State's population, and regional disparities in industrial development should be reduced. Setting a target of Rs. 450 crores for investment in heavy and medium industries during the third plan period, the Committee has urged that Rs. 10 crores be earmarked for the U. P. Financial Corporation and that the State Government provide for bank guarantees totalling about Rs. 10 crores for private units. Since no industrialisation is possible without developing power resources, the Committee feels that U.P. should have a broad-based programme for the development of 1,000 megawatts of additional power during the third plan.

Perhaps of greatest interest among the projects contemplated by the Committee is its recommendation for locating no less than six fertiliser plants in the State—two for nitrogenous fertilisers and four for phosphatic fertilisers. Mr. Manubhai Shah, Central Minister for Industries, recently told the Andhra Chamber of Commerce that fertilisers are among the highest priority items, but even so he can only hope that every State will have at least one major fertiliser factory.

Atherton West Mill Restarts

The Atherton West Mill in Kanpur, which was closed in April 1958, has been reopened under Government auspices. U.P.'s Deputy Minister for Industries and Labour, Mr. H. N. Bahuguna, has in a statement paid tribute to the spirit of co-operation shown by both the I.N.T.U.C. and the leftist-dominated Mazdoor Sabha of Kanpur in settling the vexed problem of surplus labour in the mill. Many workers secured alternative employment; as for the rest, it was agreed that the aged and the infirm should automatically retire. When the mill closed, it had 2,500 workers on its payroll, an accumulated stock of 5,859 bales and a large amount of debts. The U. P. Government decided last June to assume control of the unit and run it. A controller and council of management were appointed in July. The decision of the State Government to run the mill was based on the report of an investigation team appointed by the Central Government. When the State Government took over, it incurred liabilities to the extent of nearly Rs. 73 lakhs. The mill was indebted to the State Bank for Rs. 38.5 lakhs and the arrears of wages and lay-off compensation amounted to Rs. 34 lakhs. The investigating team headed by the Textile Commissioner found that the mill could not resume operations without a cash credit of Rs. 79 lakhs, which included the cost of the cotton required for six months, the burden of accumulated stocks for three months, power requirements and wages for two months. When the Government decided to reopen the mill, the Bank advanced Rs. 52.5 lakhs to it against its assets and stocks. The Government itself met the need for liquid funds by advancing a loan of Rs. 30 lakhs at 5 percent interest. According to Mr. Bahuguna, the accumulated stocks have now been totally liquidated. Following the recommendation of the investigating team, the mill has also reverted to the production of fine and medium count cloth, for which it was designed. The introduction of coarser counts by the previous management was held to be an error by the investigators.

Old-age Pensions

Izvestia recently reported the case of one Isak Makarovich Skopnev of Novosibirsk who, in order to acquire the perquisites and honours which go with extreme old age, produced a forged birth certificate which showed him to be 111 years old. Skopnev obviously has many kindred spirits in Uttar Pradesh where, according to a survey conducted by the Labour Department, about 17 percent of the 4,700 persons receiving old-age pensions inflated their age in order to qualify for the pension. A person entitled to receive pension has to be 70 years of age or more. The scheme has been in force in the State for two years now, and it is an unaccustomed tribute to the purchasing power of the rupee which, even according to the Governor of the Reserve Bank has fallen considerably, that 75 percent of those interviewed said that their financial difficulties had completely disappeared with the Rs. 15 a month which is the pension. Over 78 percent of those interviewed thought that their social status rose on becoming pensionaries of the State, while 20 percent thought that it did not make any difference. Only one person—a woman—was convinced that the pension definitely lowered her in the eyes of her neighbours, and she has accordingly declined it with thanks. A suggestion that the amount of the pension be increased from Rs. 15 to Rs. 20 was put forward by about 25 percent, who felt that they still had to sponge on others. At present, the pensions are paid quarterly by money order, and there was a widespread demand that the payment should be made every month. But whether this will be in the interests of the pensionaries is doubtful. Many of them complained that the postman, while delivering the money, was in the habit of levying *baksheesh* ranging from 25nP to Rs. 3.50.

THE JUTE FORECAST

JUTE is the most important item of export in Bengal. The total exports of merchandise and produce last year amounted in value to Rs. 45,95,28,470, of which jute and its manufactures totalled up Rs. 12,73,96,047, or over one-fourth of the whole. Government has always recognised the importance of commerce; indeed, it has been said that England is a nation of shopkeepers. Speaking in the Bengal Council on the 19th of March, 1898, Mr. Herbert Risley, who was then the Secretary to the Government of Bengal, declared that there is no interest in Calcutta that must not stand or fall with the commerce of the town. The Government of India have established a Statistical Department, and recognising that the Director should be on the spot have decided to locate him in Calcutta permanently. The Government of Bengal have a department of Land Records, and one of its most important functions, from a commercial point of view, is to forecast crops generally, especially jute. The final forecast of the jute crop, which is looked forward to with great interest by the commercial community, was formally issued about September 1st, but this date was recently altered to October 1st at the request of the Chamber of Commerce and the Calcutta Jute Balers Association, because it was felt that a final forecast issued on September 1st might be misleading. We see that the head-quarters of the Department of Land Records is located at Darjeeling for about four months in the year, of which September is one; that is, as we understand, the office of the Director remains in Calcutta, and the Director himself takes a holiday at Darjeeling. The draft statistical statements must have been ready in Calcutta by September 24th, for, we observe, from a letter from Mr. P. C. Lyon, to the *Pioneer*, which we extract in another column, that the statistical statements were submitted to him at Darjeeling in proof on the 26th September, and therefore there was no reason on earth, except the absence of Mr. Lyon in Darjeeling, why the final forecast of Government should not have been published on Monday, the 25th September, instead of after office hours on Saturday, 30th September.

WORLD-WIDE EXPERIENCE

Nowhere on earth—and nowhere on the sea or in the air for that matter—can you be far from an S.T.C. installation! It's all in a day's work for S.T.C. to be called upon to establish telecommunication systems on a continental or intercontinental scale. Yet for all this experience in handling vast projects, S.T.C. have an unerring eye for detail too. That's why the smallest S.T.C. component is a masterpiece of manufacture... an object lesson in dependability. And remember, all this skill and experience are *yours* to enlist whenever there's a telecommunications problem on the agenda.

hout Prejudice

Dismissing a Go-slow Worker

(FROM OUR LEGAL CORRESPONDENT)

'O-SLOW" is serious misconduct which is insidious in its nature and cannot be enanced. Thus the Supreme Court, in the reported decision on the subject; and, if ay respectfully say so, every employee, employees' union and we ourselves, have been aware of the fact. What is not so ob- is the appropriate punishment for the is misconduct. In this particular case, the llate Tribunal, confirming a decision to the effect by the industrial tribunal, held that the ial punishment was dismissal, and then in gard of its own finding proceeded to refuse ission to the employers to dismiss; where- the latter appealed by special leave to the eme Court.

ne appellant employers, Sasa Musa Sugar ts (Private) Ltd, conducted a sugar factory strict Saran, Bihar. The factory was estab- d in 1932. In June 1942, a trade union was ed in this factory and a year later the trouble ed. The reader will forgive us if we recite facts at some length because they afford an lent illustration of the dislocation which can aused under modern labour conditions and was intended to be the benevolent operation ie Industrial Disputes Act, and also another iple showing how impossible it is for any ir or welfare officer or legal adviser, however theoretically the law and the facts in the may be, to anticipate with any approximation rtainty what an industrial court may decide iem. So we will tell the whole story.

July 1943, trouble arose between the work- and the management resulting in the dis- ge of three office-bearers of the union, includ- one Shams-ud-din who was then the joint tary. That matter was referred to adjudica- and the discharged workmen were ordered to einstated in the beginning of 1944. In Decem- 1944, there was trouble again, and a large ber of workmen were dismissed, including ns-ud-din who had by now become the presi- dent of the union. This dispute was again referred to an industrial tribunal which again ordered reinstatement of the dismissed workmen in August 1947. There was peace for some time after this. But in June 1951, the management again discharged 17 workmen, including Shams-ud-din who was at that time secretary of the union. The trouble continued up to 1951 when an agreement was arrived at between the union and the management as a result of which 12 of the workmen were reinstated, but five including Shams-ud-din were not and their cases were to be referred to adjudication. It appears, however, that another reference between the management and the workmen was already pending since 8th September, 1951, before an industrial tribunal when this agreement was arrived at. Thereafter, the work in the factory proceeded smoothly for some time. But on 1st January, 1952, a notice was issued by the union to the management enlisting as many as 40 demands, and it was threatened that if the demands were not met within seven days, the union would have to advise the workmen to adopt go-slow tactics and call upon them to offer passive resistance with effect from 9th January, 1952, and to take all legitimate means to see that the decision of go-slow was carried out till the demands of the union were fulfilled.

The management contacted the Labour Department and the Sub-Divisional Magistrate, and after ineffectual efforts made by the Deputy Labour Commissioner to induce the union to call off the go-slow tactics until the matter had been looked into by the Conciliation Officer, the Labour Commissioner himself visited the factory on 12th January and advised Shams-ud-din, who was the moving spirit behind all this, to call off the go-slow as it was proposed to start conciliation proceedings on 17th January, 1952. These conciliation proceedings were duly started and agreement was reached on some of the demands. Nevertheless, in spite of the advice of the Labour Commissioner and the Labour Officer, go-slow was again resorted to from 24th January to 31st January. The Labour Commissioner then ordered the Labour Officer to tell the workmen that no further conciliation proceedings would take place until the go-slow was called off. The Labour Officer also informed the management that it could take disciplinary action against the workmen concerned with the permission of the Industrial Tribunal.

The management acted on this intimation. But in doing so, it slipped up rather badly with serious, although as it eventually turned out, not fatal consequences. Under Section 33 of the Industrial Disputes Act, as conciliation proceedings were pending in an industrial dispute, the management could not "discharge or punish, whether by dismissal or otherwise, any workmen concerned in such dispute", save with the express permission in writing of the appropriate authority. After suspending the workmen concerned, it did not hold any enquiry but went straight to the tribunal with an application for permission to dismiss them under Section 33. The men contended before the tribunal that as the applications for permission to dismiss had not been preceded by any enquiry into the misconduct of the workmen, the applications should be rejected; and, further, that the order of suspension itself amounted to "punishment" and having been imposed without permission, Section 33 had been contravened. On the first point, the tribunal held that as it was in possession of all the evidence which could have been forthcoming in an enquiry and no question of any prejudice to workmen arose, it was open to it, on a review of the entire evidence, to decide whether permission to dismiss should be granted or not. On the second point, the tribunal held that the order of suspension was not a measure of punishment but an order pending enquiry by the management and proceedings under Section 33. And then, after finding that the go-slow was deliberate, unjustified, and that it took place while conciliation proceedings were pending, the tribunal executed a complete *volte face* by refusing permission to dismiss and substituting a trifling award of suspension for seven days of 32 men out of those charged with go-slow and imposing no penalty at all on the remaining 16. The management appealed on the ground that while an industrial tribunal could either grant or refuse permission to dismiss on an application for such permission under Section 33, it could not substitute its own judgment about the amount of punishment.

The decision of the Appellate Tribunal was even more confusing than that of the industrial tribunal. After holding that the latter's finding that the workmen had resorted to go-slow was the only finding possible on the evidence and that this "was serious misconduct, normal punishment for which was dismissal", it proceeded to uphold the industrial tribunal's decision to impose a punishment not normal. So the employers went on further appeal to the Supreme Court. Referring to the observations of the Appellate Tribunal, their lordships of the Supreme Court observed: "Having said all this, we should have thought that the Appellate Tribunal would set aside the order of the industrial tribunal and grant permission to the management to dismiss the workmen for what was serious misconduct of an insidious nature which could not be countenanced.....(but) it then dismissed the appeal of the management, thus upholding the order of the industrial tribunal....."

The Supreme Court upheld the management's contention that although the industrial tribunal was entitled to say "yes" or "no" to the application for leave to dismiss, it could not give a qualified answer by substituting, in its discretion, some lesser punishment of its own devising. "We are of opinion", said the Supreme Court, "that on the findings of the industrial tribunal on the three points formulated by it, which have not been upset by the Appellate Tribunal, the only order possible on the applications of the management under Section 33 was to permit it to dismiss the 48 workmen provided there was evidence against them at all". Holding that the decision of the industrial tribunal that there was no evidence against 16 of the workmen was "patently perverse" and that the whole 48 had taken part in the go-slow, the Supreme Court allowed the management's appeal and granted permission to dismiss them all.

But, as we have said, the management had slipped up in not holding an enquiry after suspending the workmen, with the result that the proceedings under Section 33 had to be virtually converted into the enquiry which, normally, the management should have held before applying to the industrial tribunal. The mistake had to be paid for. The management was ordered to pay to the workmen all their wages during the period of suspension up to the date of the award, *i.e.*, 22nd September, 1952.

This case is an excellent example which will doubtless be a source of contentment to both masters and workmen of the expeditious way in which industrial disputes are decided under the Act. From start to finish, this dispute occupied a mere matter of seven years and three months!

For a few nights only
Previous to their departure for Cabul

SPECIAL PATRONS
THE EARL OF BEACONSFIELD, K.G., and WILLIAM JONES ESQ.,
(That is, They would be, if they were in Calcutta.)

GRAND OPENING NIGHT
Saturday, 9th Nov. 1878

In the same year when Mr. Dave Carson was touring the country with his amazing company, the famous The "Three Castles" cigarettes were first introduced.

In 1958, they came out in the flip-top 20's packet, changing their looks with the times. The "Three Castles" are as modern today as they were 80 years ago—and as satisfying.

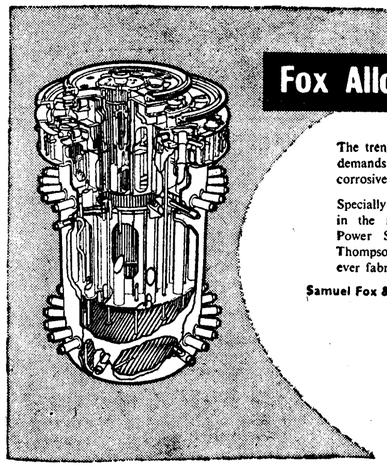
WILLS' The "Three Castles"
famous for over 80 years

Issued by The Imperial Tobacco Company of India Limited.

TC/149

A Ditcher's Diary

ONE REASON I SUSPECT WHY THE U.K. GENERAL election result came as such a surprise was, paradoxically enough, the public opinion polls. These are now seen not only to have been inaccurate, but actually to have misled. When added to the fact that their predictions did affect the campaign—the Conservatives were especially sensitive to what appeared to be changes in voters' preferences—there seems to be a good case for banning them altogether in future elections as being positively mischievous. I have been wondering why they should be like this. It is not the peculiar character of the British elector; I remember how stupidly wrong the polls were in the United States over the election of President Truman. Perhaps, like such devices as subliminal advertising, public opinion polls have the effect of getting people's backs up. I know they would mine. Most democratic voters prefer to make up their minds quietly, without having some anxious statistical investigator with a neurotic finger constantly on their pulse. My first reaction to being pestered in this way would be annoyance, then I should probably indulge in a little gentle leg-pulling just to put the investigator in his place. I would be surprised if this is not in fact what actually happened. Most British electors take their responsibilities rather more seriously than they are ever given credit for, and the floating voter particularly is nowadays well aware of the power he wields. What could be more natural than that he should prefer to make up his mind, and eventually express his choice, in an atmosphere of quiet solemnity as befits such an important decision as which party will guide his destinies for the next five years? Why, I often wonder, should there be so much anxiety to know election results in advance. It can only be one of three reasons: To influence the choice of the uncommitted elector who might not want to see his vote wasted (a dangerous one indeed); to satisfy the curious and make good newspaper copy (only slightly more commendable than the first); or to prove the claim that lies at the back of all scientists' minds, statisticians included, that they are in some way superior to ordinary human beings because they can predict their actions with complete accuracy (the most insidious reason of all). None of these, you may note, has the least relevance to helping the British people choose for themselves a good government. Thank goodness there is no nonsense about public opinion polls at election times in this country yet.



EVEN FOR THOSE OF US WHO LIVED THROUGH it all, it is not always easy vividly to recall those terrible post-war days in Europe. London and Coventry were bad enough, but one had to see the devastation in Germany to realise the full horror of what the war had done. Something more than houses had been wiped out; it was the spirit of Europe, the faith in recovery, which had gone out of the popular mind; and at one time it seemed unlikely that within her Europe had the springs of recovery. They had to come from outside, and the man who brought them was General Marshall. Anti-Americanism makes good "copy", and I would not say that there has not often been good reason to criticise. I have done it myself. But don't let anyone pretend that the Marshall Plan was not the beginning of what western Europe is today. It is facile to say that the Americans devised the Plan to save western Europe from communism. The Communist Parties of France and Italy were indeed formidable at the time; and, other losses apart, if Europe had gone under communism then western Europe would today be like East Germany. But the main inspiration of the aid programme, I believe, was the kinship the Americans naturally feel for Europe. To give this feeling concrete shape and form was needed statesmanship and imagination, and this is where General Marshall came in. With his great experience as Chief of Staff he knew how to organise aid on a gigantic scale and see to it that the help was creatively used. He must have been the happiest of men when Europe was on her feet again and demanding "trade not aid"; that was the vindication of his great act of faith. Europe lives again, but she owes a great deal of it to the man who died on Friday night. He will be remembered long and with gratitude.

WOMEN'S ENTRY INTO HIGH ADVENTURE IS relatively recent. To that extent is the death of Madame Claude Kogan and her colleagues sadder than a similar tragedy would have been with male mountaineers. It will be some time before we know the details of the disaster; but there can be little doubt that the weather was unusually cruel. Blizzards at those heights can be deadly, and none but the bravest—as this all-woman team was—dare them. There was no lack of climbing skill, there is no evidence that planning was faulty. But, alas, Himalayan weather cannot be planned. In the case of Madame Kogan, whose previous mountaineering experience was considerable, the nature of the danger was a matter of personal knowledge, for her husband had perished likewise. The lure of the mountains is something the uninitiated can never fully appreciate, for there are no prizes but that of one's own satisfaction. I think it was Freud who coined the phrase "oceanic feeling" to describe sensations which are not merely physical. I am not sure that the metaphor would not be better with the mountains, for they cast a spell on their lovers of which I know no parallel. Mallory's "Because it is there" is enough reason for risking one's life, and no further explanation is sought by those who feel and understand. It is, of course, quite impossible for anybody to think, and describe, the thoughts of one whose death is imminent and certain. I don't think even Dostoievsky fully succeeded, although he had in fact been before a firing squad. But I believe it quite possible that Madame Kogan and her friend did not regret for a moment that they had taken themselves to a place from where they would not return.

ON WHETHER OR NOT THERE SHOULD BE AN ENQUIRY into the operations of the D.V.C. after the recent flooding of the Damodar, I do not consider myself competent to pass an opinion, although it does seem rather hard to condemn any organisation that has been complaining for years that its present facilities are inadequate to the job it is expected to do. What did impress me during the few days of the Puja holidays I spent at the dam sites was the inadequate advantage that is being taken of some of the opportunities they have to offer. And this again, I believe, is not necessarily the fault of the D.V.C. I am referring to the possibilities of turning the lakes into the playgrounds of Calcutta—a city which, for all that can be said in its favour, is almost as difficult to escape from, and as expensive, as a Bombay police enforcement charge. The Tilaiya and Konar lakes are, in my opinion, among the most picturesque spots in a beautiful State and deserve to be made the most of. I have heard before of the rather vague plans for opening up workers' holiday homes and projects of that kind. But the idea I played with on a quiet evening I spent watching the moon travel across the smooth waters of Tilaiya was a much more ambitious one—for a luxury hotel offering the best of everything and served by a flying boat lift from Calcutta, no less. Before I am laughed to scorn, I should like to recommend the obvious money-making possibilities of providing a luxury holiday—with air-conditioning, facilities for sport both land and water and so on—not necessarily at reasonable rates, within two hours' flying time of Calcutta. The project would not conform too closely with current ideas of how people ought to enjoy themselves in modern India—which is the main reason why I have not suggested the addition of the best money-maker of all, a casino—but it is surely decorous enough to be acceptable bearing in mind its profitability. Perhaps I am a bit ahead of the times; if there is all that money about then why are the hill stations in decline? But sooner or later this city will have to have its playgrounds if it is to be bearable at all. Even under socialism and a welfare State the "perquisitive" classes must have somewhere to deport themselves, as witness Russia's Black Sea coast. What could be better than that their requirements should be catered for—at immense profit to itself—by an organisation with the facilities of the D.V.C?

THE CALCUTTA SCHOOL OF MUSIC'S ANNUAL SERIES of concerts is a cultural event to which I always look forward, as indeed must all lovers of western music in this city. It is not often that we get an opportunity in this country of listening to eminent virtuosos; the concert heard over the radio last Monday evening from New Delhi, by the Vienna Philharmonic Orchestra, was a rare experience. And this is an additional reason why we should feel grateful to the School authorities for the trouble and expense they go to in organising these annual programmes. I am sorry to hear from the honorary general secretary that the School is in serious financial difficulties and that he fears it may be forced to curtail its activities seriously if not close down altogether unless it is able to raise enough funds during the forthcoming season—beginning from 4th November and going on until 17th February. I think those of us who wish to keep western art and culture alive in this city should make our appreciation a little more positive by buying as many tickets as we can afford for ourselves and our friends. I am sure the coming concerts will in themselves be good enough value for our money, quite apart from the satisfaction of supporting a worthy institution which has been doing excellent work in the cause of western culture for the past 36 years. The prospectus I have just received for the forthcoming season includes such well-known names as William Herbert, with whose songs we must all be familiar, especially during the 1957 Elgar Centenary, Ian Wilson, Australia's eminent woodwind soloist, Miss Lili Kraus, whose recordings of the works of Mozart, Beethoven and Bartok need no introducing, Alfredo Campoli, and our own Miss Liesl Stary. The Calcutta Symphony Orchestra will be conducted, as during the past two years, by Mr. Bernard Jacob.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

DIFFICULT OPERATING CONDITIONS

EFFECTIVE CONTROL OVER EXPENDITURE

MR. DAVID WEBB ON COMPANY'S RESILIENCE

The Annual General Meeting of The Calcutta Tramways Company Limited was held on the 14th October, 1959, at 30, Cursitor Street, Chancery Lane, London, E.C. Mr. David E. Webb, F.C.A., chairman of the Company, presiding.

Mr. B. H Clark, representing the secretaries, Messrs Hays, Akers & Hays, read the notice convening the meeting and the report of the auditors.

The Chairman said :—Your Company suffered a great loss in April of this year. Your agent, Claude Blease, while presiding at the annual general meeting of the Calcutta Club in his capacity of president, suffered a heart attack which proved fatal. He had been with the Company 33 years and had been agent since 1949. The decade during which he represented the Company in Calcutta was, without doubt, the most momentous in the history of the Company. Never a year went by without troubles, the magnitude of which would have broken a less stout-hearted man. Right until the end Mr. Blease was immersed in the manifold worries of a tribunal and it was typical of the man that, but for his devotion to your Company, he would have been on leave at the time of his death. He was always a tremendous believer in the happy relationship of Indians and Europeans and his life was reflected in the host of friends he has left behind him. Dum Dum Airport will not seem the same without the bulky, beaming figure of the agent in the foreground. Our deep condolences go out to his family in their great loss.

The Accounts

The accounts presented to you to-day reflect the conditions under which your Company has had to operate during one of the most difficult periods in its history. Much of what occurred you already know from my statement to you last year.

You will recall that we were faced with a strike of our employees from early August until late September and, as a result, the number of passengers carried decreased from 402 million in 1957 to 366 million in 1958. Traffic receipts fell from £1,950,000 in 1957 to £1,760,000 in 1958 and the balance on revenue account from £255,000 to £130,000. After charging London office expenses, development expenses and setting aside £80,000 to renewals and replacements account, there is left a surplus of £17,041 compared with £137,041 last year.

In the revenue appropriation account, Debenture interest has been charged and the shareholders' account credited with £87,457. The deficit of £94,922 has been charged against special reserve in accordance with the terms of our agreement of 1951 with Government.

Turning to the balance-sheet, the conditions existing during the year are reflected in the dwindling of our cash resources : current assets have fallen from £778,000 to £702,000 and cash and tax reserve certificates in particular, from £391,000 to £218,000. From these figures, shareholders will appreciate the repeated references of your board to the necessity to retain substantial cash resources in the Company.

The fact that the results are not worse is attributable to the first class control in Calcutta over every kind of expenditure. To have suffered a six weeks strike and yet to have traded at a small surplus, draws attention to the resilience of the Company and the ability of the executive staff to adapt themselves, at times on the shortest possible notice, from one set of circumstances to another. Of necessity, such a pruning of expenditure brings, in its wake, a backlog of maintenance, re-equipment and modernization, and this aspect is at last beginning to influence public opinion in Calcutta. Certainly we believe that the resistance to an increase of fares is now almost entirely political.

Period of Frustration

Last year, in my statement I traced the sequence of events through the strike period; the increase in fares, the offer of the Company to increase the wages of the men, the refusal of the union leaders to allow their members to accept increased wages as long as the fares were put up, and eventually a return to the old level of fares and wages while an independent Court of Inquiry examined the case. Then the final act of Government in appointing a tribunal under the Industrial Disputes Act instead of an independent Court of Inquiry. This tribunal sat until July of this year and we are now awaiting the award. This should be published in the near future, and when that happens, shareholders will be informed of its contents.

For more than a year the Company has been subject to all the frustrations of this Industrial Court's Tribunal. During that time nothing could be done to improve the position of our employees. Our revenue was frozen and all the many improvements and modernizations which are inherent in an undertaking of this nature have had to be postponed. We can only hope that in the very near future we shall return to more realistic conditions when once more we are in a position to look after our staff and render a service to the travelling public of Calcutta more in keeping with the great traditions of your Company.

New Agent

Our new agent, Mr. Turnbull, has taken over at a difficult time. Your Company was fortunate indeed to have such a man to call upon, and we, as a board, have complete confidence in his ability to represent the Company and handle the diverse situations with which he will be confronted. The executive staff have once more rendered excellent service and the tramway operational staff have shown commendable coolheadedness and sense in the recent riots.

The report and accounts were adopted.

The above statement is published for information and does not purport to be a report of the proceedings of the Annual General Meeting referred to.

JUST OUT

INVESTORS ENCYCLOPAEDIA

1959 EDITION

(TWO PARTS)

CONTAINS :

1. Details about a large number of Joint Stock Companies in India with full particulars about their working for the past few years.
2. Details about various Central and State Government Securities and Loans and Debentures issued by various Quasi-Government institutions like Port Trust, Improvement Trust, Municipal Corporations, Land Mortgage Banks and other public institutions.
3. Details about Income and Supertax, Capital Gains Tax, Wealth Tax, Death Duty, etc.
4. Details of companies functioning in public sector—Names and Addresses of foreign Diplomats in India and our Diplomats abroad and many other useful information.
5. A survey of almost all industries in India with coloured maps showing the location of various industries.

A political map of India (36" × 32") showing the latest political divisions, railways and important towns.

Provided with Thumb Index for easy reference purpose.

RUBY GENERAL INSURANCE COMPANY LIMITED

CHAIRMAN, MR. B. M. BIRLA'S REVIEW

At the Twenty-third Annual General Meeting of the Shareholders of the Ruby General Insurance Co. Ltd., held at 8, India Exchange Place, Calcutta, on Monday the 28th September, 1959, Mr. B. M. Birla, Chairman of the Company, said :—

Gentlemen,

It gives me great pleasure to welcome you to the Twenty-third Annual General Meeting of the Company.

The Report of the Directors and the Audited Accounts for the year 1958 have been with you for some time and with your permission I take them as read.

The following net premium figures reveal the progress of the Company :

	1956 Rupees	1957 Rupees	1958 Rupees
Fire	47,14,000	52,01,000	56,40,000
Misc. Accident	50,89,000	63,22,000	59,73,000
Marine	17,07,000	17,58,000	15,72,000
	1,15,10,000	1,32,81,000	1,31,85,000

Fire Department

More attention has been given to develop the Fire business as this department has been comparatively better. The net premium income has increased from Rs. 52,01,000/- to Rs. 56,40,000/- during the year under review. The Reserves have been increased from Rs. 22,10,476/- to Rs. 25,09,758/-. Damage to property by Fire is a national loss and it is high time that the Insurance Association took necessary steps in co-operation with the Government to educate the public in Fire preventive methods.

Motor and Miscellaneous Departments

Due to continued adverse claims experience in this department, particularly in the Automobile Section, which is a world-wide feature, a very cautious underwriting policy is being followed. Attention should be given to check the incidence of claims. The Government should strictly enforce the traffic regulations, particularly for goods carriers on national highways. With a view to improve the working of this department efforts are being made to develop other types of Miscellaneous Business such as Machinery, Erection and Personal Accident Insurance.

Marine Department

As mentioned in previous years a conservative underwriting policy is being pursued in this department. A large amount of national wastage can be avoided by improving the handling of cargo and checking of pilferage and thefts at the ports and during transit by the carriers. The Tariff Committee of the Insurance Association should give their serious attention to fixing an economic rate structure for Marine Business.

The Overseas Business of your Company is being re-organised on the basis of the experience gained in the past and in view of the political changes in some countries in recent years.

The Code of Conduct in General Insurance Business has been in operation for some years and it is in the interest of the industry that necessary modifications are made in the Code on the basis of the valuable experience gained so far.

The Company has continued its progress which will be evident from the comparative premium figures of last several years. The net premiums and Capital & Funds in 1958 stand at Rs. 1,31,84,824/- and Rs. 1,19,01,476/- as against Rs. 71,80,001/- and Rs. 77,86,222/- in 1953.

Before I conclude, I hope, you will join me in expressing our sincere thanks to the Executives, Staff, Agents, Field-workers and other Representatives both in India and abroad for their close co-operation which enabled the Company to maintain the progress during the year under review. I also convey my thanks to our valued clients whose support has helped the Company to achieve this position.

I now move that the Directors' Report and Audited Accounts and Balance Sheet of the Company for the year ending 31st December, 1958, be approved and adopted.

Thanking you.

Note :—This does not purport to be a record of the proceedings of the above Annual General Meeting.

THE CALCUTTA MONEY MARKET

CALL RATE DECLINES

Wednesday, 21st October.

THERE has been very little change in the level of advance outstandings in the Calcutta money market during the past two weeks. There is still no sign whatever of the busy season developing. The requirements of the jute industry have increased slightly as have those against grains and seed storage. The effect has, however, been counter-balanced by a further fall in demand from the sugar mills. Requirements of the cotton industry are more or less unchanged. There has been a sudden easing of the inter-bank market and the call rate has fallen to 1½ percent, at which level there is reported to be very little demand.

The supply of bills in the exchange market has been restricted on account of the Puja holidays, but a few tea and gunny documents have come to hand. Sterling remittance has been poor, but there has been a big demand for the supply of dollars from one single source. The pound sterling shows fractional loss against twin dollars and some Continental currencies. But against others it has been marked up and the feeling concerning the pound remains bullish.

DUE TO INCREASED DEMAND ON THE APPROACH of the Diwali festival coupled with the lack of supplies, silver has been steady this week. The price has risen from the previous week's level of Rs. 204.37 to Rs. 208.50 for ready delivery and the rate for forward delivery is quoted at Rs. 208.25. The London and New York prices were quoted at 80½d and 91.375 cents.

Gold has been dull and the price is quoted at Rs. 125.25. The sovereign is transacted at Rs. 80.25.

DURING THE WEEK ENDED 16TH OCTOBER, Government of India Treasury bills for Rs. 180.77,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 20th October. The total amount offered was Rs. 3,85,00,000. Tenders at Rs. 99.390 were allotted approximately 45 percent, the average rate of acceptance being Rs. 2.435 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 26th October.

AN INCREASE OF Rs. 5.47 CRORES TO Rs. 1,681.06 crores in active notes was an outstanding feature of the return of the Reserve Bank of India for the week ended 16th October, 1959. The total note issue was Rs. 65 lakhs higher at Rs. 1,697.66 crores. Notes held in the Banking Department consequently rose by Rs. 6.12 crores to Rs. 16.60 crores. In the Banking Department, deposits of the Government of India declined by Rs. 3.10 crores to Rs. 53.01 crores while other Government accounts increased by Rs. 23.65 crores to Rs. 29.93 crores. Balances of commercial banks at Rs. 81 crores showed a rise of Rs. 13.84 crores. Balances held abroad increased by Rs. 7.97 crores to Rs. 22.17 crores. Investments were Rs. 28.59 crores higher at Rs. 246.72 crores. Other loans and advances declined from Rs. 85.99 crores to Rs. 80.87 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1 lakh (Rs. 2.08 crores). Ways and means advances stood at Rs. 18.24 crores, against Rs. 24.81 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 9th October, 1959, shows a drop of Rs. 7.57 crores to Rs. 566.82 crores in total deposits. Investments in Government securities are down by Rs. 5.24 crores to Rs. 382.12 crores, while other authorised investments remain unchanged at Rs. 10.12 crores. Advances, including cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 1.45 crores to Rs. 159 37 crores. Cash and balances are, in consequence, shown at Rs. 21.02 crores or Rs. 13.25 crores less.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 23-10-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

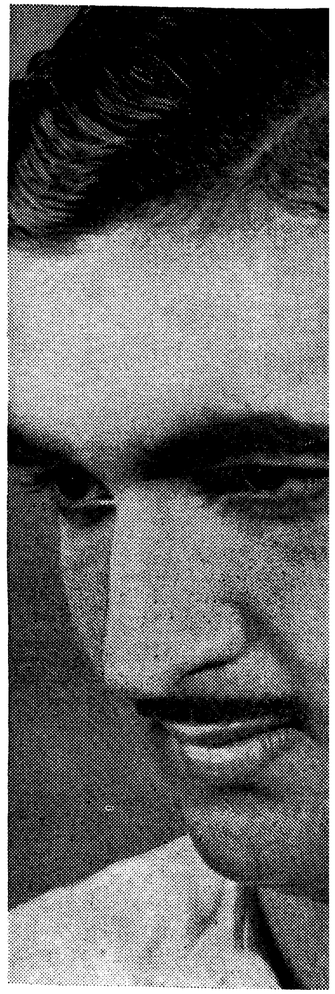
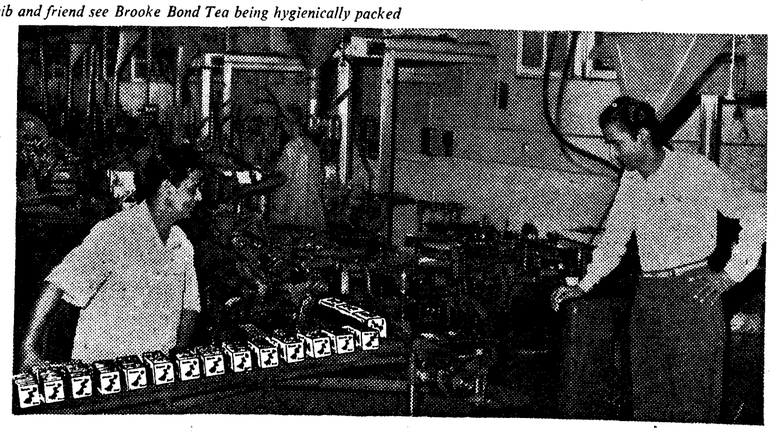
"No flies on Brooke Bond, my friend, or on their teas!"

You really mean, Bhai Sahib, that Brooke Bond produce over 144 crores of packets every year? Seems like a lot of unnecessary expense. Why can't they supply the shops in bulk?



For a number of reasons. The customers' convenience for one. Brooke Bond Tea can be bought, at fixed prices, in 1-lb., ½-lb., ¼-lb., 2 oz. and the popular "2 pice" packets which contain enough to brew three generous cups of tea. This way you are sure of the quantity you are buying.

True, but my shopkeeper could measure it out for me.



In which case, inevitably, the tea would be open to possible contamination. Because you always get Brooke Bond Tea in sealed packets and tins you can be 100% sure of its purity. Also, don't forget that tea is affected by atmospheric conditions and would rapidly deteriorate if it weren't adequately protected. Packets preserve and protect the freshness of tea.

Do you mean to say then that the Brooke Bond Tea I buy is untouched by hand?

I certainly do! In all the five Brooke Bond factories I have visited the tea is packed by automatic machines in spotlessly clean surroundings. This is only one of the many modern methods of production and rigid standards of quality control that Brooke Bond employ, with the object of serving their customers and giving them full value for their money. As leaders of the industry they can do no less!

Bhai Sahib and friend see Brooke Bond Tea being hygienically packed

UNDER SECRETARY 26 OCT 1959 PUBLIC DEPARTMENT

MARKET REOPENS ON MORE CHEERFUL NOTE

GOOD DEMAND FOR BLUE CHIPS

Wednesday Evening.

THE Calcutta Stock Exchange reopened on Monday last, after the long Puja vacation, on a cheerful note. The main factors contributing to the improvement in market sentiment were the optimistic note which underlined the progress of the Indo-Pakistan border talks in New Delhi, the sharp expansion in the money supply during the week ended 9th October, 1959, the first surplus for 11 months recorded in India's foreign trade during August 1959 and the limited investment opportunities which have resulted in large funds chasing few scrip. Bears rushed in to cover their short positions and Indian Irons recorded a steady improvement from Rs. 24.08 before the Stock Exchange closed for the Puja holidays, to Rs. 24.66; tonight, however, the shares closed lower at Rs. 24.38 due to settlement considerations. Speculators appear to have paid little attention to the disappointing production figures of the company for September, as compared with the previous month.

On 8th October, the Government of India decided to create a further issue of 3½% Bonds 1969 for Rs. 25 crores at Rs. 99.40% and of 3½% Loan 1974 for Rs. 20 crores at Rs. 99.65%. Both the issues will be taken up initially by the Reserve Bank of India on its own investment account but will be made available for sale through the usual procedure for the sale of special issues at prices to be ascertained from the Bank. As the new issues were in line with market expectations, prices of existing loans were unaffected and the general state of the gilt-edged market was one of continued strength.

It has been announced by the Metal Box Company of India Ltd that the provisional allotment letters for the issue of its new rights shares will be posted to all members on 1st December 1959 and that the latest time and date upon which acceptance of the offer, together with remittances, must reach the company is 4 p.m. on 31st December 1959. The ordinary share transfer books and register of members will be closed for the purpose of this offer from 23rd November 1959 to 30th November 1959, both days inclusive. The new shares will not qualify for the interim dividend that will be paid in January 1960. They will, however, receive the full ordinary dividend that may be passed by the shareholders at the annual general meeting that will be held in July 1960.

Plans for the launching of the Hindustan Aluminium Corporation Ltd issue are now well under way and details are likely to be made known shortly.

Bank shares met with some selling pressure, but quotations showed little change.

Business in coal shares was on a restricted scale and prices fluctuated narrowly.

In cotton textiles, Dunbar advanced from Rs. 225 to Rs. 229.

Electric supply shares were unchanged, while sugar shares were shaded in the absence of enquiry.

Jute shares suffered from lack of business, although prices were fairly well maintained. The outstanding feature once again was Samnugger which improved further from Rs. 14.25 to Rs. 14.75.

In paper, Sirpur were marked down to Rs. 14.37 following the announcement of a final gross dividend of 65nP. Other issues in this section were practically unchanged.

In the engineering group, the fall in the price of Braithwaites attracted some buyers and the shares improved from Rs. 24.75 to Rs. 26.31. Guest, Keen, Williams were steady at Rs. 40.25 as were Jessops at Rs. 33. Textile Machinery were strong at Rs. 24.65, but J. K. Steel were marked down from Rs. 14 to Rs. 13.69. Indian Standard Wagon rose today from Rs. 86 to Rs. 88.

Among miscellaneous industrials, Aluminium Corporation were in keen demand and the price rose from Rs. 15.75 to Rs. 16.31. Dunlop Rubber were bought on investment account at the higher rate of Rs. 35.50 and Indian Aluminium were taken at Rs. 23.25. Indian Cables were steady at Rs. 32.25 while India Steamship were softer at around Rs. 13.87. National Carbon recovered from Rs. 39.25 to Rs. 40.75 and Rallis were wanted at the higher rate of Rs. 78.

In the mining group, Indian Copper were steady at Rs. 3.97 as were Karanpura Development at Rs. 14.56. Metal Corporation were slightly easier at Rs. 13.25.

Except for a few selected shares like Grob, Bishnauth, Gungaram and Patrakola, little interest was shown in the tea shares.

Cochin Malabar Estates

The Cochin Malabar Estates Ltd has made a profit of Rs. 13.38 lakhs for the year ended February 1959. Bringing in Rs. 29,944 and making other adjustments, there is a balance of Rs. 15,21,904. Taxation reserve is allocated Rs. 7.70 lakhs and general reserve Rs. 3.25 lakhs. An ordinary dividend of 15 percent is paid, including an interim of 5 percent, leaving a carry-forward of Rs. 15,281. A crop of 899,559 kg. was made. Estimates for the current year provide for a crop of 928,731 kg. at a cost of 283.25 cts. a kg.

Mettur Chemical

The profit of the Mettur Chemical and Industrial Corporation Ltd has fallen from Rs. 17.04 lakhs to Rs. 15.07 lakhs for the year ended March 1959. Bringing in Rs. 30,413, there is a balance of Rs. 15,37,568. An ordinary dividend of 8.9 percent is paid, including an interim of 4.4 percent. General reserve is allocated Rs. 60,500, taxation provision Rs. 7.25 lakhs and development rebate Rs. 1.93 lakhs, leaving a carry-forward of Rs. 18,969. The directors state that because of a power cut, and a delay in the receipt of essential parts of the additional rectifier equipment and the arrival of the suppliers' commissioning engineer, the first stage of expansion to increase caustic soda production from 15 tons to 20 tons could not be completed. It was only after the advent of the monsoon in July 1959 that the increased production of 20 tons a day could be achieved. The profitable working of the vegetable oil department has to some extent offset the loss of production in chemicals. The production of vanaspati and refined oil at 2,050 tons exceeded the previous year's figure of 1,746 tons. The Government of India has sanctioned a further expansion of the plant capacity of caustic soda from 20 tons to 40 tons a day. To take advantage of the foreign exchange provided under the U.S. Export-

4¼ PER CENT.

KERALA STATE ELECTRICITY BONDS, 1969

FOR Rs. 200 LAKHS

(Payment of interest and repayment of Principal, Guaranteed by the Government of Kerala)

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act. The bonds will also be eligible for the purpose of advances under Section 17 (4) (a) of the Reserve Bank of India Act 1934.

ISSUE PRICE Rs. 99.50 PER CENT.

REDEEMABLE AT PAR

ON THE 26th OCTOBER, 1969.

Subscriptions will be received in cash or cheques from the 26th October, 1959. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 200 lakhs and in any case not later than the close of business on the 5th November, 1959.

Applications will be received at the offices of the State Bank of India at Bombay, Calcutta, Madras, New Delhi, Trivandrum, Mudurai, Bangalore, Bangalore City, Coimbatore, Nagercoil, Thiruchirappilli, Thirunelveli and at the local branches in Madras City and in Kerala State.

Copies of the Bond Prospectus announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Kerala and at all Division Offices of the Kerala State Electricity Board.

Trivandrum,
12th October, 1959.

G. MADHAVAN,
Chairman,
KERALA STATE ELECTRICITY BOARD.

Import Bank loan programme, it has been decided to order 60 Hooker "S" Cells and related equipment from the United States under this programme. This expansion will raise the existing Hooker "S" Cell capacity of the factory. It is proposed to finance the expansion scheme partly by a loan of Rs. 35 lakhs from the Industrial Finance Corporation of India and partly by an issue of equity share capital of Rs. 19.5 lakhs to existing shareholders, both equity and preference. It is hoped that the scheme will be completed by March 1961.

Aluminium Corporation

The working of the Aluminium Corporation of India Ltd for the year ended March 1959 has been reasonably satisfactory. The ordinary dividend has been raised from 9 percent to 10 percent. The profit has increased by Rs. 12.70 lakhs to Rs. 25.90 lakhs. The taxation provision is shown as Rs. 16.50 lakhs, against Rs. 3 lakhs. Depreciation is Rs. 4 lakhs lower at Rs. 10 lakhs. General reserve absorbs Rs. 1 lakh (Rs. 4 lakhs). Development rebate reserve receives Rs. 14,986 (Rs. 24,435). After other adjustments, an amount of Rs. 52,162 is carried forward, against Rs. 92,284 brought in. Sales amounted to Rs. 1.26 crores, against Rs. 96.25 lakhs, and stocks fell from Rs. 41.50 lakhs to Rs. 35.55 lakhs. The directors state that the industrial uses of aluminium in the country are increasing with the development of the engineering industry. They add that the programme for trebling the metal production capacity of the existing plant, including new facilities for fabrication, etcetera, is well advanced. The Corporation has entered into an agreement with Messrs Aluminium-Industrie-Aktien-Gesellschaft, Switzerland, for technical collaboration.

Macneill and Barry

There is a decline from Rs. 46.40 lakhs to Rs. 44.46 lakhs in the profit of Macneill and Barry Ltd for the year ended March 1959. The ordinary dividend is reduced from 8 percent to 7 percent to absorb Rs. 10½ lakhs. Other notable allocations include taxation provision Rs. 22.75 lakhs against Rs. 22½ lakhs, development rebate reserve Rs. 1.86 lakhs and general reserve Rs. 5 lakhs (same). The carry-forward is Rs. 3,04,264, against Rs. 4,91,489 brought in. The profit has declined because of reduced dividends from the holdings in tea companies and lower income from the insurance agencies. A continued fall in the business available to the harbour boating service has also affected the results and conditions have not improved during the current year. The directors are taking steps to rationalise the company's activities in this sphere. Income from the jute interests has improved, as has that from the light engineering group. Coal remains steady but increased income from this source is very unlikely. The directors report an increase in the scope of the agency business and in the manufacture in India of various products under arrangements with principals overseas. The company's wholly-owned subsidiary, Kilburn and Company Private Ltd, is making considerable progress in this sphere, and it is hoped that the activities on which the two companies have embarked will provide an income to replace that from which the company will inevitably be deprived by new legislation affecting the company's traditional business of management and one of its main sources of income.

Bombay Market

QUIETER CONDITIONS FOLLOW HECTIC PHASE

MOTOR SHARES IMPROVE

Wednesday Evening.

THE Bombay stock market closed in a quiet mood last week after a long spell of hectic activity. Earlier cheerfulness stemmed from excellent corporate news combined with prospects of foreign financial assistance for planned economic development.

Towards the close a technical reaction following an over-bought position brought share prices down. Tata Steels were quoted at Rs. 160.75 and Indian Irons declined to Rs. 24.36 on a spate of adverse rumours. Alcock Ashdown were available at Rs. 262 but Premier Construction were sold at Rs. 377. Tata Locomotives were steady at Rs. 207.50 and Mahindra and Mahindra were bought at Rs. 23.48 on hopes of expansion. There was a flutter in motor shares on the decision of the Government to permit the companies to manufacture diesel locomotives. Premier Automobiles changed hands at Rs. 135 and Hindustan Motors enjoyed influential support around Rs. 14.12.

The cotton mill group was marked by a number of bright features. Century increased sharply to Rs. 610 on talk of expansion. Bombay Dyeing were wanted up to Rs. 68.30 in the expectation that the shares of National Peroxide might be offered to the shareholders. Other notable gains included Kohinoors at Rs. 320, Simplex at Rs. 162, Swadeshi at Rs. 260 and Standard at Rs. 641. Apollo were taken at Rs. 1.32 and India United Ordinary were dealt in at Rs. 11.20.

There were mixed movements in the miscellaneous group. Associated Cement were marked at Rs. 154.50 and Digvijay were transacted at Rs. 146.75. Sugar shares moved both ways. Belapur were shaded at Rs. 333 on profit-taking, but Maharashtra Sugar moved up to Rs. 263. Phalton were called at Rs. 182. Shipping shares were steady and Great Eastern Shipping were available at Rs. 19.84. Scindia Steam declined to Rs. 17.40. Mining shares were steady and Shivrajpur Syndicate were quoted at Rs. 91. Bombay-Burmah reacted to Rs. 561 on realising, but National Rayon increased to Rs. 385 on speculative support. Anil Hardboards improved to Rs. 415. Voltas were placed at Rs. 162.50 and Western India Match were taken at Rs. 226.

Bank and insurance shares were quietly steady. Central Bank were lower at Rs. 44.50 and Bank of India were sold at Rs. 111.75. New India Assurance advanced to Rs. 66.50 on influential buying and British India General were offered at Rs. 14.24. There were minor changes in electricity supply shares. Ahmedabad Electric fell to Rs. 96.10 and Bombay Suburban were placed at Rs. 104.50. Tata Power declined to Rs. 1,132.50.

THE TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place on 19th, 20th and 21st October, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

Progress

is the sum of

KNOW-HOW plus RESOURCES

Regarded with little favour—even for household uses—by the ordinary man-in-the-bazaar less than 20 years ago, aluminium has today become the engineers' favourite light metal. It is now fast replacing other metals and wood in the construction of railway coaches, bus bodies, aircraft and ships.

The wide acceptance that aluminium has come to enjoy as a structural material is largely due to the ceaseless efforts of Indian Aluminium Company, which today accounts for over 90% of the country's total production. Pioneer and leader of the aluminium industry in India, Indian Aluminium Company has continuously sought to promote new applications of this versatile metal and has frequently expanded its production facilities to meet the increased demand thus stimulated.

To do this two-fold job of promotion and expansion Indian Aluminium has been uniquely well-placed. It has drawn fully upon the technical and research facilities of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies. And now, Indian Aluminium stands ready to contribute all its know-how and resources towards achieving India's self-sufficiency in aluminium.

BIG RISE IN STOCK MARKET

BOOM IN STEEL SHARES

London, 21st October.

THE past fortnight, spanning election day, ha been the busiest and one of the most extra ordinary ever experienced on the Stock Exchange Most unusually, the market was strong in th few days preceding the election day on the confi dent hopes of a Government victory in the elec tion. By the time the market opened on Friday after the election, it was clear that the Govern ment would be returned with an increased majo rity and there were unprecedented scenes in th Stock Exchange. There was a rush to deal a soon as the market opened, and within second very large gains had been established in indus trials, particularly steel shares which boome with the removal of the threat of renationalisation Business on this day was on an enormous scal and the level of activity since then has remaine extremely high. On three occasions, the dail total number of bargains officially recorded ha exceeded 30,000 and although conditions hav become quieter, markings have not fallen belov the 24,000 mark. Prior to the general election bargains of 20,000 or more were considered ver high. This enormous business was accompanied b a sharp rise in prices and on the Friday imme diately following the election, Reuter's industria share index rose 19.6 points to 345.8, the bigges daily rise ever recorded. There has since been a fair amount of profit-taking. Nevertheless, th index has gone further ahead to a new peak o 355.6. Although steel shares suffered a setback following the news of a £14 million issue b Stewarts and Lloyds, gains on balance were widespread and substantial. Gilt-edged securitie have steadily advanced on persistent investmen buying and gains extend to over two points. Rub ber and tea shares also showed sharp improve ments in response to buying on yield considera tions. Banking, hire-purchase finance and insurance shares were all substantially higher Gold shares lagged behind at first, and continued t be overshadowed by activity elsewhere. Neverthe less, prices are higher on balance. Base meta shares also went ahead. Oils did not benefit s much as other sections from the election resul but useful gains extending to several shilling were recorded in the leaders.

The Money Market

During the past fortnight, rather stringent con ditions were experienced in the money market The supply of loanable funds from normal sources remained on a very restricted scale and the differ ences between supply and demand were made good by official considerations. Even the disburse ments of the money resulting from the repayments of the outstandings maturing war bonds last Thursday failed to bring about any easiness in the situation and, in fact, a very small amount of penal borrowing was undertaken on that day. As a result of the shortage of funds which prevailed, borrowers regularly paid 3⅛ percent and 3¼ percent for loans with 3⅜ percent, the rate for money created by the authorities. There was a fairly good enquiry for bills over the fortnightly period with the effective rate for January maturities being 3⅜ percent. The Treasury bill rate has declined to £3 8s 4.91d percent.

Activity on Wall Street

Greek issues were a firm spot in the foreign group, with gains of a couple of points. German Nationals were soft with losses of fractions to over one point while Italian Republic 3 percents fell a full point to a new 1959 low. Amsterdam 5¼ percents added two points, but later halved the gain. Denmark 5½ percents were higher by over a point. Norwegians were unchanged to a shade lower and Australians and Polands were mixed. Japanese Governments were higher early, but they did not hold all the advance. Chile 3 percents added a minor fraction on small volume. U.S. Government bonds backed away from recent recovery highs.

Paris Gold Falls

The Paris gold market declined in the past week led by the Napoleon. One factor was that private hoarders increased their sales so as to invest in shares following the brighter position of the Paris Stock Exchange. The market was also depressed by better political prospects, particularly concerning the Algerian problem. Several rallying attempts developed later in the week on professional buying, and the prices of most coins ended the week above their lowest levels.

Rise in Linseed

The probability of reduced supplies of linseed in the coming months has activated the vegetable oils market to an unusual extent, added to which is the adverse weather which continues to interfere with harvesting in Canada. There was little chance of regular business in Canadian linseed during the past week due to the almost continuous rise in prices. Linseed oil advanced in sympathy. Groundnuts remained steady with early positions receiving most interest, pending requirements by some European countries. Groundnut oil met a rather better trade, but marked recoveries in prices were difficult to establish. Castorseed met steady U.K. support. A fairly regular trade was noted in Indian castor oil at steady to firmer rates.

New Delhi

PRIORITIES FOR INDUSTRIAL DEVELOPMENT IN THIRD PLAN SUGGESTED

MAIN EMPHASIS PLACED ON MACHINE-BUILDING

(FROM OUR NEW DELHI CORRESPONDENT)

THE Steering Group for industrial development in the third plan, set up by the Planning Commission, met here last week, and reviewed the progress of its various working groups. The development programme of the private sector was also discussed. Top priorities have been recommended for the following projects: (1) the alloy and tool steel plant, (2) integrated implementation of all phases of the heavy electrical equipment project in Bhopal, (3) execution of the heavy machine-building plant near Ranchi as a full project in one stage rather than in two, and keeping the progress of the heavy foundry-forge in step with it, (4) the heavy structural shop, (5) the heavy plate and vessel works, and (6) the machine tool works.

The main emphasis was on the machine-building programme. It was explained that there was a sizeable gap between production and demand for machinery, and this gap was widening as industrialisation continued. As a five-year period was considered too short for the machine-making programme, it was decided to plan it on a ten-year basis, at the end of which the gap between demand and the availability of India-made machinery should be reduced to the barest minimum. As far as electrical equipment is concerned, the rate of electric power generation in the fourth plan is placed at 2 million kW a year. To meet these requirements, two new heavy electrical equipment projects have been suggested, including one to be financed with Russian aid. Czechoslovakia is regarded a possible source of assistance for the second project.

The committee, it is learned, also considered the need for duplicating the first phase of the heavy electrical project in Bhopal with a view to meeting the increased demand for transformers, switchgears and other stationary equipment. It was felt that the private sector could enter the field with advantage for the manufacture of heavy motors, transformers above 33 kV and 3,000 kVA and switchgears, as also for the manufacture of diesel engines and heavy machine tools. It was also recommended that a plant be set up for the manufacture of high pressure boilers with an annual capacity of 20,000 tons in the public sector.

A production target of Rs. 30 crores a year by 1965-66 has been recommended for machine tools, for which purpose two machine tool works in the public sector are proposed. A control and precision instruments production scheme and another for ball and roller bearings, the latter to be financed with Russian aid, have been recommended.

Target for Steel

The committee, it is believed, has approved of a ten-million ton target for steel in terms of ingots or 7.5 million tons in terms of finished products. Within this overall programme, the production of billets, semis and re-rollers is placed at 1.2 million tons, consisting of the following:

Target already planned in the second five year plan	900,000 tons
Supplies from small electric furnaces	200,000 tons
Supplies from expansion in the public sector	300,000 tons
	1,400,000 tons

Demand for pig iron is now placed at 2 million tons, for meeting which the following suggestions have been made:

1.	Supplies under second five year plan	700,00
2.	Supplies from new small-scale pig iron plants	250,000
3.	Supplies from small pig iron plants already set up	50,000
4.	Supplies from additional blast furnaces in the third plan	1,000,000
		2 million

The Government has decided to use the new Russian aid for doubling the Bhilai steel works' capacity. The installation of an additional 350,000-ton capacity for pig iron within the Russian aid offer is now under discussion here. In the private sector, it is recommended, 250,000 tons a year of pig iron may be produced from small furnaces on the Chinese model, and 200,000 tons a year of billets from small electric furnaces.

Coal Target

The coal traget has been fixed at 110 million tons, or 55 million tons of additional production during the third plan. Of this, 15 million tons, it is proposed, will be allocated to the private sector. The overall investment required is provisionally estimated at Rs. 210 crores, including Rs. 95 crores for plant and machinery. The requirements of metallurgical coal for iron and steel are placed at 22.5 million tons and those for merchant cokeries at 2 million tons.

Oil Price Negotiations

The price negotiations with the three oil companies, it is believed, have taken a hopeful turn. Another meeting with the companies was held here last week, the Secretary to the Central Ministry of Fuel, Mr. S. S. Khera, presiding. A settlement, it is believed, is now in sight. The rules for oil concession will also be published shortly. They will indicate the area and terms on which the private sector will be allowed to come in for oil exploration.

Efforts of Productivity Council

During the last three years, the U.S. Government has granted India $780,000 to finance, among other things, the activities of the National Productivity Council. The Council is an autonomous body, which has produced beautifully printed booklets on very superior paper. Starting with four local councils, in November 1958, India already has 15 such bodies established and registered. Five are at the stage of formal registration. At 27 other places, preliminary steps have been taken for the establishment of councils.

The *modus operandi* is to send out productivity teams. They consist of about ten persons, including the representatives of employers, workers and "specialists". These teams go abroad for six to eight weeks. On their return, they disseminate their observations and experiences to the industry in the form of reports. These reports are intended to become the "Bible" for the industry concerned. That of the Indian productivity team which visited the U.S.A., West Germany and the U.K. is available, from which the following are gleaned:

"Though the early introduction of automation even in America was looked upon with some amount of apprehension, this fear was later allayed with the experiences gained. The American worker by and large today finds increased employment opportunities rather than redundancy as an outcome of higher productivity through automation.

"As punched-card and computer installations are very expensive and since they call for highly specialised maintenance service, they are normally rented out by the manufacturers. In our country at present, the computers have rather a limited scope. In some large and medium-sized plants, where the product is of a simple nature and the variety is small, a simple Kardex control system may be adequate for the purpose. It may be advisable to adopt this kind of system in our country.

"There appeared to be little evidence of large-scale concern in the minds of the workers about redundancy as a consequence of rationalisation, methods of improvement, or incentive plans. However, conversion from piece-rate to time-rate, as a result of mechanisation or automation, created some fear in the minds of the workers and they negotiated with the employers for the fixing of high time-rates.

"In the West, trade union leaders were of the opinion that a greater expansion of production could without doubt be made possible only through increasing the purchasing power of the consumers. Trade unions accept that an improvement in the living standards of the working classes cannot be achieved solely by raising wages, because they may be absorbed in a wave of price increases. Their wage policy, while generally aimed at a more equitable distribution of the national product, does not expect from the economy more than what was achieved by increases in productivity. They believe that, for a wage policy to be really effective, it is necessary to take economic measures to ensure price stability, especially for the unemployed and the unemployable. In other words, western trade unions are not only production-conscious, but they believe it to be their duty, in their own self-interest, to spread the ideas of productivity among the working classes.

"Discipline seemed to be more self-imposed among the employees than the result of rules and fear of punishments. Personnel administrators in some United States industries complain that the incentives tend to multiply employee grievances. They are also critical of plans which are not readily understood by all the employees. Complex plans tend to arouse employees' suspicions about company intentions. Incentive plans which covered only the direct labour did not find much favour with some plant managers, as, according to them, they discriminated against indirect labour operations (maintenance and repair, material handling, inspection), and consequently hindered an overall increase in productivity.

"Cost reduction as a planned and co-ordinated effort is being increasingly pursued in the west European countries and in the United States. Similar programmes in Indian industries may prove fruitful. It is hoped that sufficient active interest will be shown in India in this subject.

"To enlist the co-operation of workers in increasing productivity, we must take note of the present reality in India, namely, the resistance on the part of workers to all forms of modernisation and introduction of any change and the state of unemployment or under-employment. The team recommends that in modernising plants for higher productivity in economically viable units, a clear assurance should be given to labour that there will be no retrenchment as a result of modernisation or rationalisation introduced for the purpose of increasing productivity and that the average earnings of the employees will be protected."

There is nothing in the report which was not known in India before. The main spur to productivity is competition, within the labour ranks and between the industrial units inside and outside a country. Take the case of biscuits, for example. The former Commerce and Industry Minister, Mr. T. T. Krishnamachari, introduced the scheme of token imports to raise the quality of India-made biscuits. Even this extremely limited competition paid dividends.

As far as the productivity drive is concerned, a cold war is on between the Central Ministries of Commerce and Industry and Labour and Employment, the latter apparently insisting that the Productivity Council should have been within its "empire". The Labour Ministry has become a great believer in "codes". Having already evolved a code of discipline, it has now evolved a code of efficiency. The code will have reference to working conditions, amenities, even living conditions, including housing and welfare. Both sides are avoiding modernisation. Meanwhile, more productivity teams are going abroad. The Cabinet Secretariat periodically puts out figures of national income, which provide further incentives not for productivity but for claims for a bigger share in the national income. And, as admitted recently, prices are going up while the quality of goods is going down.

Ford Foundation Team Report

An integrated approach to the recommendations of the Ford Foundation Agricultural Production Team for intensified work, on a pilot project basis in selected areas, it is believed, is now being discussed. It is emphasised that the target of 100 to 110 million tons of foodgrains in the third five year plan period, involving a rate of increase in production of about 8 percent a year, compared with 3 percent at present, calls for a greater concentration of effort than has been the case so far. This integrated approach, it is claimed, should provide for adequate and timely credit to all creditworthy and non-creditworthy farmers, as also improved seeds, fertilisers, insecticides and farm implements, all of which should be made available within bullock-cart distance. A third feature of the programme is the guarantee, where necessary, that any losses suffered in the adoption of scientific measures will be made good. A fourth point relates to the assurance of a reasonable floor price for selected foodgrains, to be announced at least two seasons in advance, with proper marketing facilities, including storage within bullock-cart distance. Lastly, there would have to be adequate extension and other staff for intensified work among farmers. Such staff would have proper authority and freedom of action delegated to them and continuity in the project for a certain number of years.

It is emphasised that for an integrated approach, all these requirements will have to be met simultaneously, and not in piecemeal fashion. If the pilot project is successful, the arrangement could be extended to additional areas. The project is likely to be tried in fairly large areas such as seven districts—four growing rice, two growing wheat and one growing mainly pulses and millets. Initially, it is felt that only one district in each of the seven States may be selected, the main requirements being good soil and an assured water supply, besides the presence of progressive farmers who, given better facilities in supplies, credit, technological improvements, other means of production and know-how, suitable price factors and marketing facilities, would be able to step up yields. A few areas where new irrigation has been introduced may also be selected. As far as possible, in the selected areas there should be fairly well-developed village institutions, particularly co-operatives and *panchayats*, through which the developmental efforts will be directed to reach the individual farmer.

The selected areas should not have problems requiring long-term attention, such as susceptibility to floods, lack of irrigation facilities and acute soil conservation problems. A crop cultivation survey would be necessary before the scheme is started and also after every two seasons. The crops to be selected would be those normally grown during the *rabi* and *kharif* seasons in the selected areas.

Agricultural Credit

As for agricultural credit, loans should be granted on the production plans of almost every family in the selected areas, credit or non-creditworthy, based only on production potential and production plans. It is felt that irrespective of whatever price policies may be formulated for the country as a whole, there should be a decision in advance about the floor prices for specified crops, announced every two seasons ahead of sowing in the selected districts.

The scheme envisages adequate incentives based on increased yields in the selected districts. There would also need to be a provision to ensure

Over 777 Offices and Enlarged Service

Perhaps you would like to know how rapidly the State Bank of India is expanding. On 1st July 1955, when the Imperial Bank of India was reconstituted into the State Bank of India, the Bank had only 243 branches. By August 1959, it had 555 fullfledged branches in urban and semi-urban areas. The rate of growth is now about 100 branches a year. The Bank has also 238 sub-offices.

With a net-work of over 777 offices spread all over the country and many more to follow, the State Bank is particularly suited to handle your remittance and collection business.

Thousands of account holders have benefited by the wide range of services offered by the Bank. You too can take advantage of the Bank's services.

Why not contact the nearest Agent of the Bank to talk things over?

the mobility of field and other staff, so that every farming family is periodically visited by them.

It is understood that although several committees have in the past recommended most of the items included in the scheme, no determined integrated effort has so far been made to try them out together as a "package programme". For a fair trial, the pilot scheme should be tried out for at least five years; suitable staff should be posted in these areas and they should not be moved, even on promotion, for five years, but they would have to be adequately compensated for this.

Subsidiary Port at Haldia

Further details of the subsidiary port at Haldia, near Calcutta, are now available. It is explained that the port of Calcutta, which is situated on the left bank of the river Hooghly about 126 miles from the sea, has to cater to a vast industrialised hinterland with potentialities for further industrialisation and development. With the existing facilities, although the port is in a position to handle about 45 percent of the country's seaborne trade, various restrictions and limitations stand in the way of maintaining and operating the port. These are:

(i) the existence of 14 bars and crossings in the navigable river route which are subject to considerable fluctuations in depths, thus affecting the day-to-day drafts allotted to ships visiting the port. Although a maximum draft of 27 feet was allotted to shipping during 1958, drafts were restricted to less than 26 feet for 355 days, the minimum draft being as low as 18 feet;

(ii) the necessity for ships to take advantage of the two higher rises of tides during the spring tides (days immediately preceding and following full moon and new moon) and the resulting bunching of ships in the port;

(iii) restrictions in the way of using riverside berths and river moorings during bore tides, the intensity and frequency of which are now on the increase, necessitating the berthing of deep draft ships in the docks. As bore tides occur during spring tides with a big tidal range, congestion of shipping is a normal feature in this period;

(iv) sharp bends in the river channels in the upper reaches which impose restrictions on the length of ships which can enter and leave the port;

(v) the limited number of berths available in the anchorages in the upper reaches which restrict the day-to-day movement of shipping; and

(vi) the progressive deterioration of the river Hooghly due to the operation of various factors and the resultant fall in the navigable depths.

A port with such limitations cannot serve an expanding economy adequately. First, the various restrictions and limitations mentioned above result in considerable additional expenditure to the shipping interests using the port and this is reflected on the trade in the shape of high freight rates. Secondly, with the existing berths numbering about 42 (effective), the port can handle about 10 million tons of cargo a year and 2 million tons more if conditions are favourable. There are, however, bound to be short spells of congestion during periods when peak traffic has to be handled, clearance is slow and restrictions, such as bore tides, stand in the way of using the riverside berths and river moorings. This capacity is by no means adequate to cater for the large volume of traffic likely to pass through the port in the immediate and foreseeable future. Two new berths which are now under construction and which will shortly be ready for use will increase port capacity to some extent. Besides, the existing port facilities which are old are also being replaced, improved, modernised and expanded to a moderate extent so as to render them more effective for operational use. Even so, the position is not likely to improve unless more berths are constructed. Thirdly, the various corrective measures which the Commissioners have taken and will be taking in the shape of river training works and expansion of the dredging fleet to facilitate intensified dredging of the navigable channel are not likely to reduce the draft restrictions by any appreciable margin although they will ease the existing conditions to some extent. In this connection, it should be pointed out that the Balari Bar in the estuary is behaving erratically and now controls the draft almost throughout the year. The implementation of measures for the improvement of this bar, which will be based on model experiments now in progress at the Central Water and Power Research Station, Poona, is likely to be very costly and will take a long time. In the meantime, the Commissioners are resorting to intensive dredging in order to bring about an improvement in the navigable depths on this bar.

There are other reasons for building additional berthing capacity in a new port to be constructed in the estuary. The size and length of cargo ships now built no longer conform to the old standards for economic reasons. Such ships are not in a position to visit the port on account of the prevailing draft restrictions, bends in the river and Kidderpore and King George's Dock not being in a position to take ships more than 500 feet and 540 feet in lengths, respectively. The drafts of these modern cargo ships which are greater both in size and length than older ones are in the region of 30 feet. To accommodate such vessels, it will be necessary to site a port in the estuary and build new berths. Such a port will also cater for ships of the intermediary class which now use the ports of Madras and Visakhapatnam for lightening and topping up operations due to poor drafts in the river Hooghly.

It was in the context of the above-mentioned factors that the idea of having a deep water port as an auxiliary to Calcutta emerged. The World Bank technical mission, which came to India in October 1957, suggested that, in view of the industrial development taking place in the hinterland of Calcutta, it was necessary to have a deep draft port in this region in the mouth of the Hooghly. The Government has accepted this recommendation in principle. The intention is that the port should supplement and serve as an auxiliary to Calcutta. In 1958, the services of Mr. F. Posthuma, Deputy Director, Port of Rotterdam, were secured through the U.N.T.A. Board for advising the Government on the selection of a suitable site. Mr. Posthuma came to India on 14th November, 1958, and stayed until 22nd December, 1958. During this period, he visited Calcutta port and various sites in the Hooghly estuary. In his opinion, the most promising site for a subsidiary port in the Calcutta region is north of the Haldia river estuary. He has, however, suggested that before a final decision is taken, certain technical investigations should be undertaken concerning the depths that can be made available over the Auckland Bar and Beaumount's Gut by dredging. He also considered it necessary to collect hydrographic data on waves, currents, tides, etcetera, in the region. In the meanwhile, he has suggested that steps may be taken to use Haldia as an anchorage for lightening and topping up ships.

Arrangements are accordingly being made by the Calcutta Port Commissioners for working Haldia as an anchorage with effect from the next fair weather season beginning from 1st November, 1959. They have also taken on hand the collection of the requisite hydrographic data as advised by Mr. Posthuma. An application has been made to the U.N.T.A. Board for the services of a hydrographic expert and a dredging expert, the former for a study of the hydrographic features of the estuary in connection with the establishment of a subsidiary port and the latter to advise the Calcutta Port Commissioners on the dredging problems of the river Hooghly, including the possibility of deepening the Auckland Bar and Beaumount's Gut by two or four feet through dredging and the methods of dredging most appropriate to those bars. Intimation has recently been received from the United Nations Technical Assistance Board that the recruitment of the experts is under way and it is hoped that they will be in India this year. Their services will be available for one year in the first instance, but if they are not in a position to complete their studies and draw final conclusions from them within that period, it may be necessary for them to stay for some time longer to complete their studies and make firm recommendations to the Government. The proposed port in Haldia, as envisaged above, is intended to handle, in the initial stages, bulk cargo like foodgrains, ore and coal by mechanical means with a few berths for handling deep draft vessels carrying general cargo. On an empirical estimate, the provision of minimum facilities, including land acquisition, will cost about Rs. 12.5 crores.

Particulars of Managing Agents

In order to secure the approval of the Central Government for the first time, the managing agents, managing whole-time directors, secretaries and treasurers will have to furnish the following information relating to the nature of the existing controlling interest in the company:

(1) particulars about existing managing-wholetime director-managing agent-secretaries and treasurers;

(2) Particulars of shareholdings—number of shares held; managing-wholetime director-managing agent-secretaries and treasurers;

(3) particulars about remuneration payable to managing-wholetime director-managing agent-secrearies and treasures;

(4) the nature of services rendered by managing-wholetime director-managing agent-secretaries and treasurers as such for which the remuneration mentioned above is being paid;

(5) particulars of any other remuneration payable to managing-wholetime director-managing agent-secretaries and treasurers whether in their capacity as managing-wholetime director-managing agent-secretaries and treasurers or otherwise;

(6) particulars of the arrangement, if any, entered into by the managing agent-secretaries and treasurers with others for sharing his or their remuneration, with detailed reasons therefor;

(7) particulars of remuneration payable under any arrangements to a relative of a managing-wholetime director during each of the last three years;

(8) amount of expenses reimbursed to managing agent-secretaries and treasurers under Section 354 during each of the last three years;

(9) the amount of earnings by way of commission or otherwise, payable by the company separately to managing agent-secretaries and treasurers or his or their associate under Sections 356, 357 and 358, during each of the last three years;

(10) the amount of commission or other remuneration retained by the managing agent-secretaries and treasurers or his or their associate as buying or selling agents of other concerns under Section 359, during each of the last three years;

(11) the money value of the contracts for sale or purchase of goods or supply of services, entered into by the company with the managing agent-secretaries and treasurers or his or their associate under Section 360 during each of the last three years;

(12) the names of directors and extent of their shareholdings;

(13) particulars of commission, allowances, bonus and fees payable to directors; and

(14) whether the managing-wholetime director suffers from any of the disqualifications mentioned in Section 267 of the Companies Act, 1956.

The following information will have to be furnished on the nature of the proposed controlling interest in the company:

(1) particulars about future managing-wholetime director-managing agent-secretaries and treasurers;

(2) particulars of shareholdings—number of shares held, managing-wholetime director-managing agent-secretaries and treasurers;

(3) particulars about remuneration it is proposed to pay to the managing-wholetime director-managing agent-secretaries and treasurers;

(4) particulars of any other remuneration proposed to be paid to the managing-wholetime director-managing agent-secretaries and treasurers as such for which the remuneration proposed above is to be paid;

(5) particulars of any other remuneration proposed to be paid to the managing-wholetime director-managing agent-secretaries and treasurers;

(6) particulars of the arrangement, if any, entered into or proposed to be entered into by the managing agent-secretaries and treasurers with others for sharing his or their remuneration, with detailed reasons therefor;

(7) estimated amount of remuneration henceforward payable under any arrangements to a relative of a managing-wholetime director;

(8) estimated amount of the earnings expected to be derived from any arrangements, already entered into or proposed to be entered into with the future managing agent-secretaries and treasurers or his or their associate in terms of Sections 356 to 358.

(9) the money value of any contracts for sale or purchase of goods or supply of services already entered into or proposed to be entered into with the future managing agent-secretaries and treasurers or his or their associate as are likely to fall within the purview of Section 360;

(10) future extent of shareholding of the managing-wholetime director-managing agent-secretaries and treasurers:

(11) particulars of commissions, allowances, bonus and fees proposed to be paid to directors; and

(12) whether the managing-wholetime director suffers from any of the disqualifications mentioned in Section 267 of the Companies Act, 1956.

(13) the manner in which the controlling interest of the new managing-wholetime director-managing agent-secretaries and treasurers in the company was acquired.

(a) by transfer of the shareholdings of old managing-wholetime director-managing agent-secretaries and treasurers and/or,

(b) by purchase of shares from the open market.

Whether there is any arrangement by which the managing agents are required to stand guarantee for any loan taken by the company and, if so, whether it has been guaranteed by the managing agents during the last five years, together with the commission paid to them during each year should be given.

Particulars of the long-term or short-term loans granted to the company by the managing agents, together with the interest charged on them during each of the last five years and the amount of the loan at present outstanding.

The nature of the non-managerial services, if any, rendered or proposed to be rendered to the company by the managing agents, together with the payment, if any, made to them in return for such services during the last five years or it is proposed to pay.

The nature of the services provided or rendered by the managing agents for which reimbursement has been or will be claimed under Section 354.

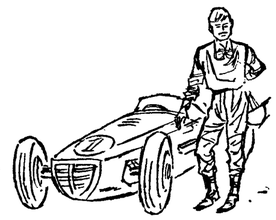
Whether the company has appointed separate selling or buying agents to be remunerated separately by the company or whether such services are rendered by the managing agents themselves.

Whether the managing agency company is a subsidiary of any other company and, if so, the name of such company and the extent of its holdings.

Compensation, if any, payable by the company to the outgoing managing-wholetime director-managing agent-secretaries and treasurers, and whether it is in accordance with the terms of the relevant agreement.

Particulars of other companies managed by the managing-wholetime director-managing agent-secretaries and treasurers.

Tea Industry Wages and Exports

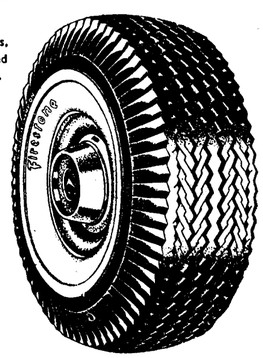


As the Tea Plantation Labour Committee is about to meet shortly, to set up among other things, a wage board for the plantations in north and north-east India, it will be useful to publish the latest figures for its exports. During the six months ended June 1959, the export of Indian tea declined both in quantity and value, compared with the corresponding six months of 1958. The following are the figure (in million lbs and lakhs of rupees), respectively:

	January-June 1958	January-June 1959
Quantity	191	147
Value	47,42	36,71

During the eight months ended August, imports by India's best customer, the U.K., declined from £34,379,000 in 1958 to £28,356,000 in 1959. An impartial appraisal of India's labour policy *vis-à-vis* her export trade, particularly in tea, is urgently called for if the export drive is to have any meaning.

CORRECTION



In the paragraph headed "New Cable Concern" on page 404 of the issue of *Capital* dated 17th September, it was incorrectly stated that a portion of the capital was being held by the Industrial Credit and Investment Corporation of India Ltd. This should have been "The Investment Corporation of India Ltd."

SIGNIFICANCE OF CONSERVATIVE VICTORY IN U.K. GENERAL ELECTION

MR. MACMILLAN ANNOUNCES CABINET RESHUFFLE

(FROM OUR LONDON CORRESPONDENT)

THE general election over, the Conservatives are back in power for a third term with a majority larger than they could have expected in their most sanguine moments, and Mr. Macmillan has reshuffled his Government to give it a new look without seriously altering its composition—holding to the view that the "old firm" has done none too badly so far and can be depended upon to carry on as effectively in the immediate future. The City showed remarkable confidence all the way through, and the Stock Exchange has witnessed a boom such as could never previously have been seen at such a time. The published public opinion polls all went sadly astray with the "don't knows" vitiating all forecasts, but the private polls must have proved more accurate, and more rewarding, for on paper the business world has added millions to the value of its holdings, although there must, in the not so distant future, be a settling down and a shake-out to restore some balance and stability.

Apart from Mr. Macmillan, nine of the 19 Cabinet Ministers retain their old portfolios. Mr. Lennox-Boyd and Mr. Geoffrey Lloyd go out to make room for the inclusion of Mr. Edward Heath and Mr. Ernest Marples, and among the nine remaining, duties have been shuffled to permit promotion well earned, to Mr. Macleod and Mr. Maudling, in addition to the newcomers. As far as the City is concerned, the significant changes are Mr. Maudling's move to the U.K. Board of Trade, Mr. Heath's to the Ministry of Labour, Mr. Marples to the Transport Ministry and Mr. Duncan Sandys to the new appointment of Minister of Aviation with wide powers affecting several branches of industry. Scientific and technological research becomes the special concern of Lord Hailsham. It is not only a young team, but an enthusiastic one, which ought to do well.

Signs and Portents

Generally speaking, the new team takes over very much of a going concern. The cost of living maintains its remarkable steadiness. On 15th September, the official index (January 1956 equals 100) was 108.7, against 109.3 in August and 108.4 in September last year. Since November 1957, the cost of living index has varied between 108 and 110, whereas that for wage rates (with the same base) has moved up from 112 to 117. Normally, September is a very bad month for sterling and might have been expected to be more so than usual with the general election ahead, but the gold reserve actually rose by £13 million to £1,173 million—the highest level since August 1951. The confidence reflected in this stability is based largely on the unexpectedly favourable trend in the balance of payments of the United Kingdom, but this is also supported by a great improvement in the financial situation of the overseas sterling area.

Industrial production continues to expand steadily. The Central Statistical Office index, corrected for seasonal factors, reached 112 in July, and the provisional estimate for August is 113. This allows for an actual drop in the total output which always occurs in the holiday period. But the adjusted figures show that the level of output since April has been running 7 percent higher than last year; and in view of the drop in mining production, manufacturing alone would show an even better figure. Evidence of recovery in the heavier industries is still patchy. Machine tool orders, received in June, were sharply down against May, particularly those from abroad, which fell from £1,608,000 to £745,000. New orders from the home market fell only from £6,166,000 to £5,542,000. As inflow of orders in the first five months of this year had been rather better at home and well maintained for exports, the drop in June may be seasonal.

A more disturbing fact is that British engineering goods prices have risen since the beginning of 1957 by about 5 percent, roughly the same as U.S. prices, while in West Germany the increase has been limited to 1 percent or 2 percent. This is pointed out in a study of manufacturing price trends published in the official *Economic Trends*. The conclusion reached there is that U.K. prices for manufactured goods have since early 1957 moved in line with U.S. prices, while West German prices "may have fallen slightly over the period in relation to those of the other two countries." It appears that the German advantage has been particularly pronounced in the engineering field, and if that is the main reason why Britain's heavy engineering industry is not working at full capacity, then the launching of a policy of "expansion" again may not be relevant. The picture should become clearer in the next month or two.

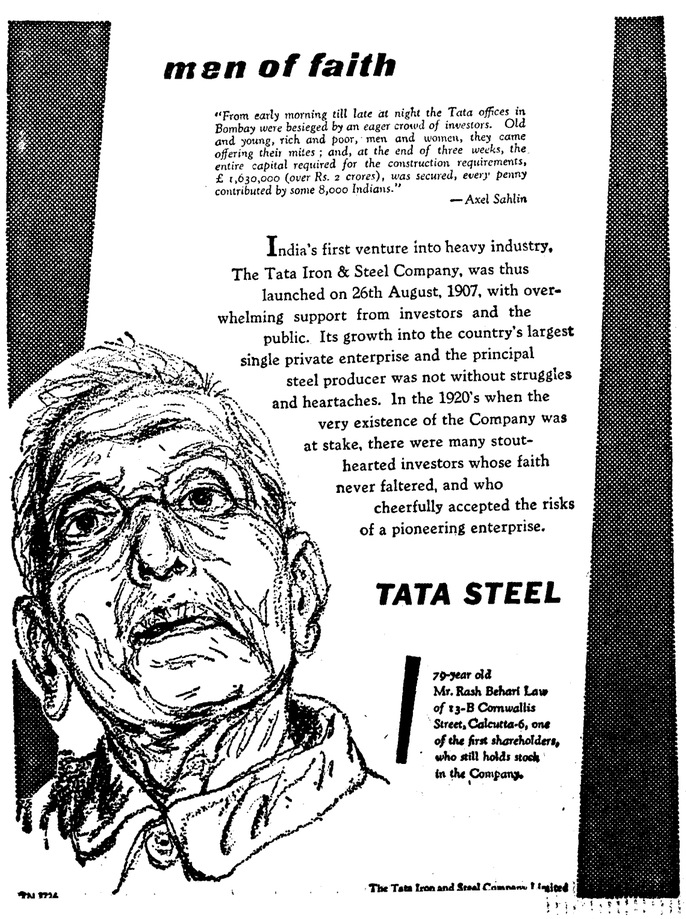
Good Balance of Payments

The strength of sterling becomes less puzzling with the publication of the excellent balance of payments figures for the second quarter of this year. According to the U.K. Treasury, there was a surplus on visible trade of £35 million and a surplus on current transactions as a whole, including invisible earnings, of £107 million. That is the biggest quarterly surplus since the first three months of 1958. The main feature in the capital account for the second quarter was the subscription of £232 million to the International Monetary Fund. The external balance-sheet of Britain at mid-year can be expressed in two figures: reserves grew by £12 million and sterling liabilities to other countries declined by £25 million. The balance between the two has clearly improved.

A warning that this may not continue is available in the September trade returns. There was the usual seasonal fall in exports in September, and as imports recovered from their unusually low August level to about the same figure as the July-August average, the visible trade deficit—the "gap"—rose from £40.4 million to £72.3 million. Provisional estimates, issued by the U.K. Board of Trade, show that total exports in September amounted to £246.7 million—£8.8 million less than in August—and £30 million below the average for July and August together. Imports rose by £25 million to £330.2 million, £1 million above the July-August average. Re-exports were £11.2 million, against £9.3 million in each of the two preceding months. So far this year exports have been running 3 percent higher and imports 5 percent higher than in the corresponding months of 1958. The monthly trade gap, representing the difference between imports c.i.f. and exports f.o.b., has averaged £43.2 million, against an average of £33.6 million between January and September 1958.

Britain's exports to the dollar markets reached £46 million in September. This compares with £44.4 million in August. For the first nine months of this year, sales to North America show a rise of 25 percent over the corresponding period of 1958. Last month exports to the United States were £29.2 million, against £29.8 million in August. But for the January-September period, the export total shows a 39-percent increase. Exports to Canada jumped from £14.6 million in August to £16.7 million in September. On a nine months' comparison, the increase on last year is 6½ percent.

Inchcape Expansion Plans



Hints of expansion, into Australia and elsewhere, are made by Lord Inchcape in his statement with the first accounts from Inchcape and Company, the merchanting and shipping group, whose ordinary shares and loan stock were placed by Baring Bros., a year ago. So far the company's main overseas' interests have been in the Middle East and Far East. In the year ended 31st March last, changes in the group structure brought the four Indian subsidiaries into closer integration. One effect of this re-organisation will be to reduce the amount of overseas tax borne.

Results of the two Indian textile mill companies, one of which operates the largest textile manufacturing unit in India, are expected to be satisfactory in the current year although trading, as at the other Indian subsidiaries, must be affected by import restrictions. Improvements at the Indian engineering works should be reflected in future results, rather than in the current year.

Apart from anxieties caused by the fall in plain tea prices, which must affect the estates under the company's management, the outlook for the British end of the group is expected to be satisfactory. Any further broadening of the already wide interests should be welcomed by shareholders.

Textile Imports from India and Pakistan

Figures given in the last letter for imports from India and Pakistan of cotton manufactured goods were those representing an annual rate based on the first seven months of this year, and included piecegoods for process and re-export. In relation to the figures agreed with India and Pakistan of 175 million square yards and 38 million square yards, respectively, imports from India for retention in the United Kingdom at an annual rate, based on the first seven months of this year, work out at 144 million square yards; and those for Pakistan at 14 million square yards.

Jute

HOLIDAYS RESTRICT GUNNY MARKET ACTIVITY

FLOODS HAMPER RAW JUTE TRANSPORT

BUSINESS in the Calcutta raw jute and goods markets was severely restricted over the past two weeks due to local holidays, when the markets were officially closed. The industry's stock and production statistics for September, which had been eagerly awaited, lost much of their effect through being announced during this period. But they conformed largely with market anticipations. Total stocks of manufactured goods dropped by 2,600 tons, and at 78,600 tons were the lowest since December 1957. Hessian stocks showed a small rise of 700 tons to 25,500 tons, or 32.4 percent of the total. Although this was anticipated, it was disappointing, as at this time of year it is usual for hessian stocks to decline with the seasonal increase in U.S. burlap consumption. In September last year, stocks of hessian dropped by 2,000 tons, and in September 1957 they fell by 4,500 tons.

Sacking stocks showed a drop of 3,100 tons to 42,600 tons last month, being 54.2 percent of the whole. They were also the lowest since December 1957, being nearly half of what they were in September last year, when sacking stocks constituted 73.4 percent of the whole. The trade considers that they are now at more manageable levels, being just under one month's production. It is possible that these stocks would have been much lower, except that shipments to communist China were delayed and there were frequent stoppages, both at mill jetties and alongside steamers, due to the inclement weather. Other goods' stocks showed a small drop of 200 tons to 10,500 tons, which was 13.4 percent of the total.

Production Disappointing

It is satisfactory that stocks of goods fell in September, as that was the first full month during which the industry operated with the extra 2½ percent looms working. There are many in the trade, however, who consider the production resulting from the increased loomage as disappointing. Several factors are blamed for this. Foremost among them is the considerable loss in production due to the forced closure of mills on 3rd September during the leftist agitation in West Bengal over food. This was followed by widespread absenteeism, which continued for some time, resulting in the loss of valuable working hours. September's production, however, compares very favourably with other months. In July, which had the same number of working hours (209) but when 12½ percent of the looms were sealed, total production amounted to 89,600 tons. In September, it was 92,600 tons, or 3,000 tons higher. The extra 2½ percent loomage in September was expected to increase production by a little over 1,500 tons. This leaves a balance of about 1,500 tons, which can be accounted for by the increase in the percentage of sacking goods made in September (from 44.5 to 50.5) covering heavier constructions. Production an hour rose from 428 tons in July to 443 tons in September. The extra loomage would take up 7 tons of this, and the balance is more than can probably be expected from the transfer of looms from sacking to hessian. Thus, although production in September probably could have been higher, the results are more than satisfactory in the light of working conditions. Production was the highest since December 1958.

Over the past two weeks, the jute goods market was quiet. Overseas demand was negligible, and although on occasions mills were anxious to sell, no genuine buyers could be found. A shortage of ready goods between the two holidays caused a temporary rise, but prices fell back as rapidly as they rose once the demand was satisfied. Hessians were idle and price movements were mainly in sympathy with heavy goods. The trade keenly awaited the U.S. stock and consumption figures, but since these were more or less as expected, the effect on the market was slight. U.S. hessian consumption in September showed a substantial rise of 15 million yards over the August figure to 80 million yards, but it will be recalled that at 65 million yards August consumption was the lowest for some considerable time. Shipments to the U.S.A. last month must have been better than was generally thought, because in spite of the increase in consumption the stock figures showed a drop of only 1 million yards to 254 million yards. This was a much better statistical position than last year, when stocks dropped to 220 million yards with a consumption of 76 million yards. The average monthly consumption now stands at 74 million yards, and the total consumption at 668 million yards represents a new high level compared with corresponding periods of previous years. The steel strike in the United States appeared to be having a more than sobering effect on the hessian market, but the trade anticipated improved conditions following President Eisenhower's intervention to end the strike which has been on for over three months.

Demand for Hessian

The recent increase in the I.J.M.A.'s productive capacity was timed to coincide with the seasonal increase in hessian consumption and the anticipated increase in world demand for jute goods in general. U.S. consumption has shown a considerable increase, but the industry's hessian production during September showed a slight decrease in tonnage (100 tons) and a reduction of 1.4 percent in the loomage ratio. For this reason, it appears that in the coming months, if American consumption remains at this high level, and mill output continues to show a preference for sacking goods, a shortage of hessian is inevitable. Meanwhile, an I.J.M.A. delegation is in America, a predominantly hessian-consuming country, with the intention of popularising jute goods and capturing new markets. Admittedly, the demand for sacking at present is high, particularly for near delivery goods, but can the industry satisfy world demand for hessians at the present rate of production?

Opinions about the current jute crop continue to vary widely. Calcutta mills, with the comforting support of full godowns, are convinced that there is plenty of jute to go round, but many sellers are of the opposite opinion and are reserved. In many cases, their views are based on the recent artificial shortages caused by the breakdown in transport in flooded areas, but some think that with a combination of some small flood damage, and the Government's export policy, things may get a little difficult towards the end of the season. One thing is certain, however, that the mesta and Daissee crops will definitely be short, the former in particular. Mesta sellers are very reserved and only very small lots are on offer. Recent arrivals of jute in Calcutta and mills have brought a variety of opinions about quality. This has improved in Assam and Dhubri, where steeping water is now plentiful. The moisture content in many cases is high, but allowances have to be made for the fact that in recent weeks farmers and balers have had little chance to dry their jute. This is liable to persist for some time unless weather conditions improve.

THE JUTE MARKETS

There was a fair amount of activity in the futures markets during the period under review. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 6th October to 19th October, were as follows:

	Hessians 40in. 10oz. November		Sacking B Twills November		Raw Jute December	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos	
Opening	40.56	44.35	102.20	23.96	64.19	
Highest	41.36	45.22	103.70	24.82	66.50	
Lowest	40.54	44.33	100.70	23.84	63.87	
Closing	40.76	44.57	101.20	24.14	64.68	

Manufactured Goods: After the Puja holidays, the goods market opened on a steady note because of some foreign enquiries. B Twills advanced by 50nP to Rs. 103.50 in the near positions, which was Rs. 3.50 above the forward quotations, and 40in. 10oz. hessians improved by 40nP to Rs. 41 for October shipment and Rs. 40.10 for April-June shipment. Sacking, in particular, ruled steady throughout the day, with prices advancing in anticipation of Burmese tenders. By Tuesday morning, B Twills showed a further improvement of 60nP. Hessians recorded nominal gains in sympathy. No actual business was reported, however, so prices fell rapidly late in the day. By Wednesday morning, the previous day's gains had been completely wiped out. Mills appeared to be keen sellers at this stage but no business resulted in the absence of foreign enquiries.

The market was taken over by speculators, and price movements, which were mainly in a downward direction, were influenced by their activities. Although the markets were officially closed on 16th and 17th October for the Luxmi Puja, activity continued and by 19th October B Twill quotations had dropped to Rs. 102.50 in the near positions. Hessians ruled fairly steady at Rs. 40.95 on rumours of overseas enquiries. Towards the close prices again eased due to speculative activity in heavy goods. The forward sections were a little steadier than the ready positions.

Opening quotations on Tuesday morning were as follows:

	Oct.	Nov.	Dec.	Jan.-March
40in. 8oz.	33.75 (36.78)	33.30 (36.30)	33.00 (35.97)	32.50 (35.43)
40in. 10oz.	40.60 (44.26)	40.05 (44.31)	40.00 (44.25)	40.40 (44.04)
B Twills	102.20	101.55	100.25	99.70
Heavy Cees				
(Plain)	102.10	101.55	100.20	99.70
A Twills	121.00	121.00	120.50	119.25
Liverpools	116.00	114.50	113.25	111.50
Cornsacks	102.20	102.20	101.25	100.75

Raw Jute: Although 8th, 9th and 10th October were official holidays, business was done on each of these days at fair market prices, mainly with Indian mills. After the holidays, mills continued to take interest and the market was steady on the basis of Rs. 23.50 for Assam Bottoms. Imports upcountry were good in the areas where transport was not disrupted, but in other areas, road and rail transport was at a standstill. On 13th October prices advanced by 50nP due to buying pressure from mills and their agents, and the market ruled firm up to the holiday which started on 16th October. Once again, small business was transacted over the holiday period, but on a much smaller scale than formerly. Demand slackened and with the commencement of business on 19th October Assam quotations had dropped back to Rs. 23.75. They fell a further 25nP on Tuesday, and the market was quiet. Arrivals in Cossipore were heavy throughout the period, and found ready buyers in mill agents and balers. Towards the close, mills began to lose interest and the undertone weakened.

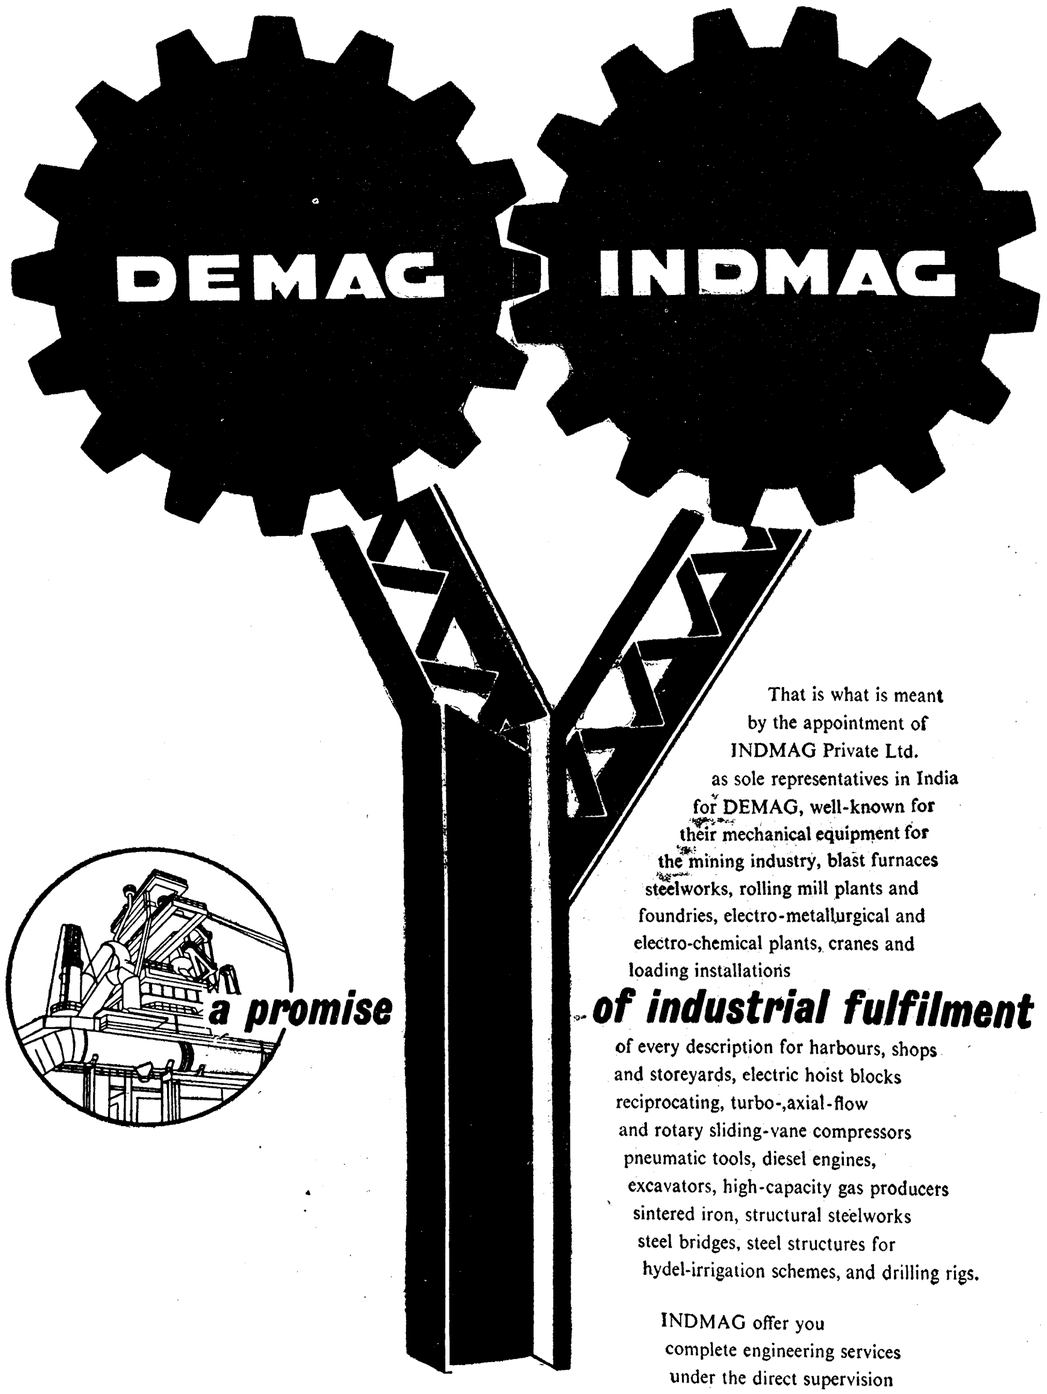
Business concluded consisted of Assam at Rs. 23.75 to Rs. 24 for selected marks and Rs. 23.50 for ordinary marks, and Northern at Rs. 23.

Murshidabad Tossa passed at Rs. 24, and Daissee-Tossa and Daissee at Rs. 24 to Rs. 25. Mesta was in good demand and Desal and Daissee fetched Rs. 22.50. Northern Mesta Rs. 22, and Jungli Rs. 21.25 to Rs. 21.50.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 ki'os	Shipment
New Crop:			
Assam	23.50	62.98	Oct.-Nov.
Northern	23.00	61.64	,,
Purnea Desal	22.00	58.96	,,
Daissee (selected)	24.50	65.66	,,
Assam Tossa	24.50	65.66	,,
Northern (ex-Calcutta)	22.75	60.97	,,
Mesta:			
Assam-Northern	22.00	58.96	,,
Desal	22.50	60.30	,,
Daissee	22.50	60.30	,,
Jungli	21.50	57.62	,,

U.S. BURLAP CONSUMPTION AND STOCKS



U.S. burlap consumption has been better than average in September. Last month it exceeded that of September last year by 4 million yards and was 15 million yards better than during August this year. Bag cut-up in September was about the same as in the corresponding month of last year, the increase being in industrial uses. U.S. burlap stocks did not decline as much as was expected, being only 1 million yards less than at the end of August and were 32 million yards higher than a year ago. At an estimated 254 million yards, 154 million yards were spots and 100 million yards were afloats. Appearing on page 553 are two tables which include the September figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the esti-

I.J.M.A. GUNNY STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports that the total stocks of jute goods at the end of September 1959 were as follows:

Description	30th September, 1959 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	31st August, 1959 Lakh Yds (000 metres)	000 tons (000 Metric Tons)	Increase over (+) or decrease from (—) last month Lakh Yds (000 metres)	000 Tons (000 Metric Tons)	30th September, 1958 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)
Hessian Cloth and Bag	9.21 (9.41.73)	25.5 (25.9)	9.03 (8.25.39)	24.8 (25.2)	+ 18 (+ 16.34)	+ 0.7 (+ 0.7)	6.33 (5.79.14)	17.0 (17.3)
Sacking Cloth and Bag	10.24 (9.36.11)	42.6 (43.3)	10.94 (10.00.34)	45.7 (46.5)	— 70 (— 64.23)	— 3.1 (— 3.2)	18.36 (17.70.08)	80.2 (81.5)
Others		10.5 (10.7)		10.7 (10.8)		— 0.2 (— 0.1)		11.8 (12.0)
Grand Total		78.6		81.2		— 2.6		109.0
(000 Tons Metric Tons)		(79.9)		(82.5)		(— 2.6)		(110.8)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, based on the actual "(detailed) figures," and are more precise.

I.J.M.A. PRODUCTION FIGURES FOR SEPTEMBER

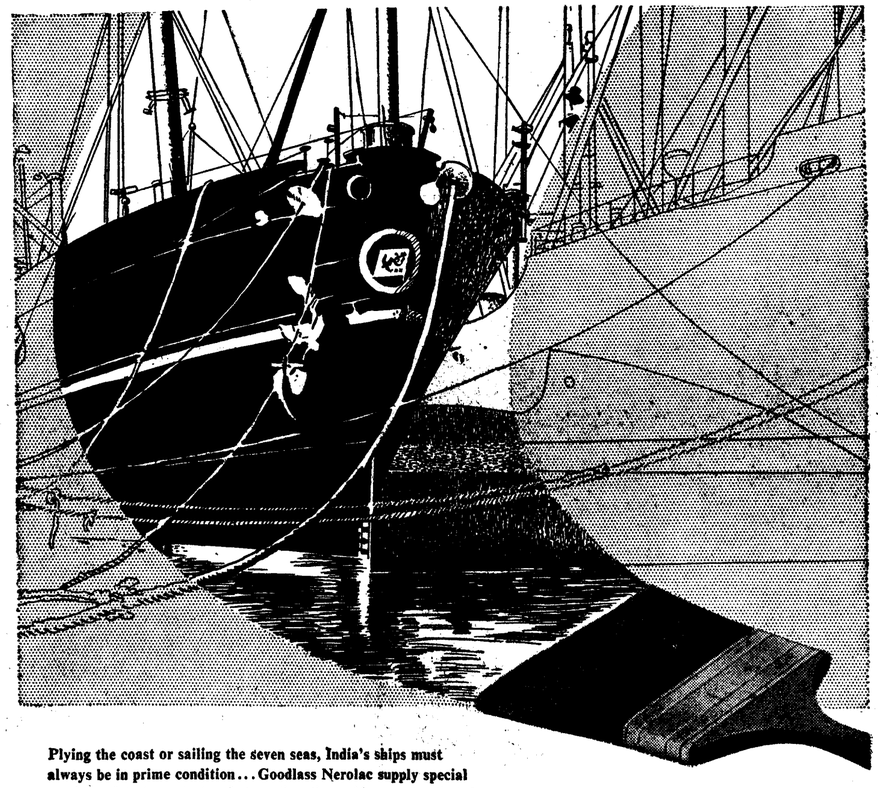
The Indian Jute Mills Association reports the total production of jute goods for September as follows :

Description		Quantity
1. Gunny Bags		
(a) Hessian	4,234 tons	(4,302 metric tons)
	1,38.2 lakh yds.	(1,26,35 thousand metres)
	77.4 lakh Nos.	
(b) Sacking	46,949 tons	(47,702 metric tons)
	10,98.2 lakh yds.	(10,04,19 thousand metres)
	4,91.1 lakh Nos.	
2. Gunny Cloth		
(a) Hessian	33,228 tons	(33,761 metric tons)
	12,61.4 lakh yds.	(11,56,14 thousand metres)
(b) Sacking	1,829 tons	(1,859 metric tons)
	40.3 lakh yds.	(36,82 thousand metres)
3. Other Manufactures	6,330 tons	(6,431 metric tons)
4. Total Production (All kinds)	92,570 tons	(94,055 metric tons)

Summary

	(00,000 yds. and 00 metres) Sept. 1959	Aug. 1959	Sept. 1958	(000 tons and metric tons) Sept. 1959	Aug. 1959	Sept. 1958
Hessian	14,03 (12,82,49)	14,24 (13,01,92)	13,76 (12,58,03)	37.5 (38.1)	37.6 (38.2)	35.9 (36.5)
Sacking	11,38 (10,41,01)	9,80 (8,96,24)	10,99 (10,05,01)	48.8 (49.6)	41.9 (42.6)	45.7 (46.4)
Others				6.3 (6.4)	7.4 (7.5)	5.7 (5.8)
Grand Total				92.6 (94.1)	86.9 (88.3)	87.3 (88.7)
Hours worked				209.0	200.5	209.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.



THE FOREIGN JUTE MARKE

FIBRE PRICES STEADIER

(FROM OUR DUNDEE CORRESPONDENT)

A SLIGHT break in the monotony of th markets these days is welcome. Pakist recently reported a much steadier position sellers quoting higher terms for the better of Tossa. Some types of white jute are not r obtainable at the prices at which they were c only some time ago. Values of Calcutta goo maintaining the higher levels to which they fortnight ago. It was unfortunate that they have fallen in the middle of September fro point of the local manufacturers, as the pric the "depressed range" in 40in. 10oz. and 45i 36in. hessians were reduced by 3s a 100 ya the U.K. This refers only to imported go the U.K., of which the Jute Control is the sc porter. Dealers say that the authorities have raised prices again by now. Local ma turers have difficulty in competing with the ported goods since the mark-up was ch There has been no change in the prices for D hessians in the ordinary makes for 12 mont was on 17th October last year that a chang made in the prices of yarns and cloth.

Prices for raw jute have shown little cha the interval and the present prices, compare those a year ago (in brackets), are £106 (£1 Mill Firsts, £89 (£87) for Mill Lightning (£77) for Mill Hearts and £65 (£63) for Hearts, while good marks of Daissee-2/3 are (£90), Grade Daissee-2/3 £85 (£83), Tossa-2/3 £104 (£101) and Grade Tossa-4 £93 October-November shipment, c.i.f. U.K. Sh of raw jute in Pakistan appear to be determi keep up their prices.

Plying the coast or sailing the seven seas, India's ships must always be in prime condition... Goodlass Nerolac supply special marine paints to protect and strengthen these ships, ensure that they stay seaworthy for years.

Goodlass Nerolac have twenty-five years' manufacturing experience in India, backed by a century of technical and scientific development of methods and products. They manufacture special paints for the shipping industry, special paints for every industrial need.

Ships, bridges, dams, refineries, power plants, factories—all need a different type of protective paint, and Goodlass Nerolac maintain a *free* technical advisory service to study all requirements... supply *special* paints, *specially-formulated,* to meet these requirements.

HOLESALE PRICE INDEX RISES

HE official wholesale price index (base : year ended March 1953 = 100) advanced further by percent to 118.4 during the week ended 3rd tober, compared with 118.0 (revised) for the pre- us week. The index was higher by 2.1 percent d 2.2 percent, respectively, when compared with corresponding week of the earlier month and t of a year ago. Higher prices of jowar in mbatore (+11%) and in Hospet (+7%), fish ilsa) and turmeric, both in Calcutta (+10%, h), tea (+5%), black pepper (+4%), gram, onut oil gur and chillies (+3% each), meat 2%) and bajra, ragi, mung, urad and gingelly (+1% each) raised the index for Food Articles 0.5 percent to 122.5. The prices of wheat in anduka (+9%), fish (Prawn) in Tirur and anas (+6% each), jowar in Hubli (+5%), carda- ms (+4%), maize (+2%) and potatoes, onions, hewnuts, groundnut oil and mustard oil (+1%, h), however, moved down. The index for bacco remained stationary at the earlier week's el of 98.7. The index for the Fuel, Power, ht and Lubricants group stood at 115.2, against .1 for the previous week. The price of cas or (+1%) showed a rise. Groundnuts, linseed and torseed (+1% each) moved up while rapeseed l cottonseed (+2% each) showed declines, and index for Industrial Raw Materials increased 0.2 percent to 123.0 during the week. The index Intermediate Products rose by 0.4 percent to .4 due to an advance in the prices of linseed oil, on yarn and coir yarn (+1% each), although prices of zinc (+2%) and tin and lead (+1%, h) moved down. The index for Finished Pro- cts advanced by 0.2 percent to 110.0 against 109.8 vised) for the earlier week. The prices of oil- es (+2%), jute manufactures, dyeing materials l glass (+1% each) and general chemicals and cks and tiles (+1% each) showed variations.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53 = 100)

Groups and Sub-Groups	Week Ended 3-10-59	26-9-59	4-10-58

KAISER ENGINEERS TEAM ARRIVES

A team of four engineers from the U.S. firm of Kaiser Engineers has arrived in India to start the preliminary work on the aluminium project of the Hindustan Aluminium Corporation Ltd. The team consists of Mr. C. H. Case, project manager, Mr. S. M. Banks, resident engineer and manager, Mr. G. W. Humphrey, construction superintendent and Mr. H. J. Zimmermann, chief designs engineer. They were received by Mr. S. S. Kothari, chief administrative officer of Hindustan Aluminium Corporation. The team will visit sites of supply of bauxite in Lohardaga and Amarkantak, and they will also visit the site of the factory at Rihand Dam for selection of site and determination of water, power and other auxiliary requirements. The team is expected to stay in India for three or four weeks to finalise the preliminaries of the project.

Beginning with only a small machine shop in 1939, NSE expanded rapidly and today it operates three major engineering factories, each engaged in producing vital equipment, covering the gamut of the country's developmental needs. Through engineering skill and technical knowledge garnered over the past two decades, NSE has earned the confidence of the various industries it serves.

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 17, held on 19th and 21st October, 69,769 packages were on offer at the Export auction. There was a strong general demand at steady rates for plain brokens and Fannings. Medium Fannings showed a dearer tendency and the better B.P.s were well competed for at generally dearer rates. Medium B.O.P.s, however, were easier and the weakest feature of the sale, but O.Fgs. were in strong demand and advanced irregularly. The better liquoring C.T.C. teas were keenly sought after and advanced in price, especially B.P.s. Medium sorts were about steady while there was more enquiry for the secondary grades and these were dearer. Non-wither Legg-cut Dooars, although a little irregular, received good support and generally appreciated in price. Whole leaf grades and Darjeelings sold readily although prices tended easier.

Quotations

	1959 Rs.
Clean Black Pekoe	1.98 to 2.02
Plain B.P.	1.88 to 1.92
Plain Fannings	2.06 to 2.16
Medium B.P.	1.94 to 2.08
Medium Fannings	2.16 to 2.28
Best Assam C.T.C. B.P.	2.80 to 2.90
Best Assam C.T.C. Fgs	2.30 to 2.20

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings totalled 23,235 packages. There was a good general demand. Orthodox Dusts were at times 2nP easier while Legg-cut descriptions were firm and sometimes dearer. Darjeeling Dusts were irregular. Medium C.T.C. types continued to be irregular and sometimes easier but there was more demand for this type of tea than in the previous sale, particularly for exportable grainy kinds, which at times appreciated in price. The very best Dusts in this category received fairly good support.

Quotations

	1959 Rs.
Medium Dooars Dust ...	1.94 to 1.98
Medium Assam Dust ...	1.90 to 1.92
Medium Assam C.T.C. Dust ...	2.00 to 2.15
Best Assam C.T.C. Dust ...	2.50 to 2.70

(Quotations are exclusive of excise duty.)

There was a good general demand for the 1,014 packages of Leaf on offer.

FREIGHT MARKETS IMPROVE

OVER the holiday period, the freight markets remained dull, but in the past week a very marked improvement has been noted in grain fixtures from the U.S.A. to the U.K.-Continent, and for the first time in two years, the freight rate from Gulf to the U.K. reached the level of 60s. Shipments of wheat from Australia to India recommenced with fixtures at 53s 9d from West Australia to East Coast and 49s 6d to Bombay. It is difficult to forecast whether the present increase in rates can be maintained since many tankers of large tonnage are now employed in the grain trade. However, with activity more widespread than in many months, owners are hoping that the long-awaited improvement in trading conditions has arrived.

Meantime, the port of Calcutta continues to present problems and drafts forecast for December are so bad that, even on the poor cargoes offering outwards, some liners will have the greatest difficulty in choosing between maintaining regular schedules and sailing with minimum cargoes, or waiting long periods to sail with sufficient cargo to make a call at this port economic. There must be many liner owners now considering the advisability of eliminating Calcutta from their itineraries.

LINSEED FIRM

Price movements have been rather erratic this past week but the undertone has remained firm. There has been a notable increase in the volume of trading. Seeds prices have advanced sharply by Rs. 1.25 touching Rs. 25.25 and Rs. 26.50 for near and forward deliveries. Around these levels about 1,500 tons to 2,000 tons have changed hands; millers have been interested as crushing margins have become more profitable. A slight reaction followed towards the close, with prices 25nP easier. The first transaction for April-May was reported, with 200 tons purchased by a crusher at Rs. 24.75. The cake market has remained very steady and small local sales have been reported at Rs. 17. Shippers have made limited purchases at Rs. 16 with overseas markets rather dull at about £38 10s. A sharp advance of over Rs. 2 a maund has been recorded in the local oil section as a result of the rise in the U.K. price to £120. Shippers have been active locally, and fairly large business has been reported. Latest quotations are as follows: Ready-October Rs. 25.87 a maund, November Rs. 26 a maund and May futures Rs. 24.12 a maund.

INDIA WANTS TERMS OF AIR AGREEMENT WITH AUSTRALIA REVISED

PALAM STILL UNFIT FOR JETS

(FROM OUR NEW DELHI CORRESPONDENT)

THE India-Australia air talks were concluded in New Delhi recently. In the course of these talks, India has made it clear that she is determined to revise the existing air agreement to bring it into line with the air agreements she has with all other countries, under which the right to determine the capacity and frequency of air services is solely vested in India. Ordinarily, in order to terminate an agreement, 12 months' notice is required. By common consent, it has been agreed to maintain the *status quo* until 31st March, 1960, when the existing India-Australia air agreement will automatically terminate. Provision is made to replace the existing agreement by a fresh one by holding another inter-Government discussion by the middle of February 1960. Meanwhile, both sides will take advantage of the Indo-British air talks, scheduled for November, which will centre round a pooling agreement between the two countries.

The Boeing at Palam

Boeing, which will be coming to India soon, appeared for the first time at Palam this month. It was brought in by Pan American in the course of a proving flight to the Far East. As Palam is still unfit for *Boeings*, the Pan American luxury aircraft, "President Special," can be reached by *Viscount* from Calcutta and Karachi. Similar arrangements are being made by Air-India to connect New Delhi with Bombay from where it proposes to operate *Boeings* five times a week to London and once a week to Tokyo.

I.A.C. Third Service to Bombay

The Indian Airlines Corporation proposes to start a third mid-day service to Bombay, three times a week each way from April, it is learned.

B.O.A.C. Jet Flights to Australia

New B.O.A.C. jet services to Australia will start on 1st November, when a *Comet-4* will leave London airport for Sydney. The return service will start with a flight from Sydney on 4th November. The service will be operated five times a week each way, one more service than provided by the *Britannias* which the *Comets* succeed. The outward-bound flight to Sydney from London will take 33 hours and 15 minutes, a saving of over 15 hours, and to Melbourne 35 hours and 40 minutes, a saving of nearly 10½ hours. On the return flights from Sydney, there will be a saving of some 10½ hours, and from Melbourne nearly 10 hours. Among the points served by the services in a week will be Darwin, Djakarta, Singapore, Kuala Lumpur, Bangkok, Rangoon, Calcutta, Colombo, Bombay, Karachi, Bahrein, Teheran, Beirut, Istanbul, Rome, Frankfurt, and Zürich. The services are being provided in partnership with Qantas, the Australian airline, which will operate three services with the *Boeing-707*, making a total of eight jet services a week. *Comet* services to the Far East at the present time number ten—to Tokyo, Hongkong and Singapore—and there are also 14 transatlantic services. In December, two new services to Africa begin, and in January two to South America.

Conversion of Constellations

Air-India International has awarded the Lockheed Aircraft Service a contract for the conversion of three *Super-G Constellations* from the passenger to the convertible cargo-passenger configuration. The aircraft will be used on a new all-cargo service to begin late in 1960 initially, on A.-I.I.'s route from Bombay to London. Air-India plans to begin the 707 jet service on its Bombay-London route in April 1960, and between Bombay and Tokyo next summer. The airline is seeking U.S. approval for extension of its London route to New York and if authority is obtained, will extend the jet service to the U.S.A. in 1961.

B.K.S. Air Transport has ordered two *Avro-748* twin-Dart feeder aircraft and optioned a further three. Delivery is fixed for early 1961 and the British private airline will use the aircraft to replace *DC-3s* on its scheduled passenger and freight services in Britain and to such cities as Basle, Rotterdam and Bergen. Another British private carrier, Skyways, has given Hawker Siddeley a letter of intent of an order for an unspecified number of *Avro-748s*. The British Government has indicated its willingness to buy three to be used, probably, by a B.O.A.C. associate. Hawker Siddeley has an agreement with the Indian Government for the licensed manufacture of the *Avro-748* in India for the Indian Air Force. The first flight of the *Avro-748* is set for February next year and the company hopes for full British and U.S. certification by March 1961. By the end of next year, production models will be delivered to Skyways for flight trials. Depending on orders, up to 20 *748s* could be delivered in 1961. The aircraft carries a full payload of 9,750 lbs over 200 miles, reducing to 4,200 lbs over a maximum range of 1,200 miles. The design cruising speed is 230 kt. at a height of 20,000 feet. With a length of 67 feet and a wing span of 95, the *748* has about the same dimensions as the *DC-3*. It accommodates up to 44 passengers, has a fuel capacity of 1,321 gallons. The price is $476,000; seat mile costs range from 1.75 cents to 2 cents.

Seaboard and Western has applied to the U.S. C.A.B. for permission to lease out a *Constellation* to Air-India International for a weekly London-Bombay service.

Disposing of Piston-powered Aircraft

Estimating that the worldwide displacement of piston-powered aircraft by 1964 will involve about 5,000 aircraft, the U.S.A. is seeking to determine potential overseas buyers for its own surplus pistons and for the turbine-powered replacements for the piston aircraft which will be disposed of abroad. The State Department has asked its diplomatic representatives to cancass in the respective countries to find out the number and kinds of aircraft operated by both commercial airlines and business and private users which will be available for disposal, the airlines' programmes for sale or conversion of surplus aircraft and their plans for acquisition of replacements. On the last point, operators will be asked what country of manufacture they would prefer, and if other than the U.S.A., why.

Several European airlines are considering the disposal of their surplus piston-engine aircraft and the majority anticipate no great difficulty. One major carrier, in fact, believes that the potential demand for airlift worldwide will ensure continued use for many years to come of all efficient piston transport. Disposal plans include transfer of aircraft to associated companies, sales to the military, conversion for cargo carriage and the development of special vacation tours. Some of the airlines expect to retain some of their large pistons—*Super-Constellations* and *DC-7Cs*—in regular service for some years yet, and many will continue to operate twin-engined *Convairs* and some *DC-3s* on local services.

RUBBER TARGET FOR THIRD PLAN DISCUSSED

REPLANTING SUBSIDY MAY BE INCREASED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE production target for rubber for the third plan was considered by the working group, set up by the Government of India, when it met in Trivandrum on 15th October. It felt the imperative need for undertaking new planting and replanting on a large scale to make the country self-sufficient in rubber. A spokesman said that the working group has "almost decided" to recommend new planting in 50,000 acres and replanting of another 50,000 acres with quality seedlings during the third plan period. It might also recommend the enhancement of the replanting subsidy to provide sufficient incentive to growers. It is expected to meet again in New Delhi some time next month to give final touches to the report it would submit to the Planning Commission.

India has at present about 300,000 acres under rubber cultivation and her output is just over 25,000 tons. The domestic consumption exceeded 40,000 tons last year. Manufacturers of rubber products in India say that they will require 60,000 tons in 1960, 100,000 tons by 1965 and 150,000 tons by 1970. Planners are, therefore, confronted with the problem as to how they can meet this steep increase in raw rubber requirements. The synthetic rubber factory, to be set up in U.P., will ensure a supply of 20,000 tons to 30,000 tons of man-made rubber a year. The rest has to be found from the rubber planting industry in south India. It is, therefore, felt that simultaneous efforts at extending the rubber acreage and improving yields from the existing area are necessary to make the country self-sufficient in the commodity.

New Tyre Factory in Kerala

The new rubber tyre factory to be set up in Kerala with the collaboration of a U.S. firm, Dayton Tyre Factory, will go into production by the middle of 1960, according to official sources in Trivandrum. Mr. Rosenberg, representing the American firm and Mr. Desai of the Indo-Orient Agencies of Bombay—the sponsors of the project —were in Kerala recently for selecting the factory site and for carrying on negotiations with the State Government. The latter has agreed to contribute one-fourth of the Rs. 2-crore capital of the project. According to a spokesman of the Kerala Government, an application has already been made for the registration of the company, to be known as Premier Tyre Company. The first meeting of the board of directors will take place in Bombay by the end of this month.

Fall in Plantation Coffee Prices

The Coffee Board has recently reported that prices of Plantation coffee "came down markedly" in the latest pool sale in Coimbatore. While a few lots of Plantation P.B., A, B and triage were sold at Rs. 280, Rs. 270, Rs. 260 and Rs. 250, respectively, a 50 kilos, the majority were sold at prices varying between Rs. 247 and Rs. 195. The average price realised for Plantation A in September was Rs. 296.33 a 50 kilos. Plantation coffee realised the highest price in September this year since October 1952. This spurt in the prices of Plantation varieties, the favourite of a major section of consumers in India, has been a matter of controversy for the past three months or so. A study of the price variations of the different grades of coffee during 1958 and 1959 show that only Plantation coffee was subject to "speculative pressures." Neither Cherry nor Robusta, which between them comprised the larger part of the season's output of 46,273 tons, was affected except to a small extent in August. But the prices of both came down markedly in September.

The Board has explained as to why there has been a sharp rise in the prices of Plantation coffee. As against an estimated receipt of 19,695 tons, only 17,970 tons are now expected to be realised during the 1958-59 season. By the end of May, 8,168 tons of Plantation was sold for export on the basis of earlier anticipations. (The quantity exported out of the last season's crop was 9,595 tons.) Furthermore, 2,652 tons had been sold internally by May this year, with the result that the pool was left with 7,150 tons of Plantation for the home market, against the anticipated 8,875 tons. According to the Coffee Board, it is this shortfall in the stock of Plantation coffee, held in the pool from May onwards, that has exposed it to speculative influences. Under the circumstances, the Board felt that the consumer's interest could be served best by spreading the available stock evenly over a period of months until the new season's Plantation coffee became available for sale. This policy is now being implemented and, as a result, there is already a slight downward trend in prices. The Board thinks that the decline will be more marked as the time for the commencement of the sale of the new season's crop approaches.

Consumer Preference

Plantation is the top quality coffee that enjoys consumer preference both at home and abroad. But the world market is getting more coffee than it requires, and in this situation, it is only on the strength of quality that Indian coffee can meet competition in the world market. If the official policy is to increase exports with a view to earning more and more foreign exchange, India should not be reluctant to offer a larger share of her quality coffee to the export markets. Meanwhile, a more serious effort should be made to popularise inferior grades in the home market.

Russia Purchases Pepper

Pepper prices firmed up from Rs. 137 a cwt. to Rs. 145 a cwt (ready) on the Cochin market on reports of Russian buying although prices fell later. It is stated that Russia has bought about 600 tons from Cochin at around Rs. 150 a cwt., f.o.b. and traders expect that it will take some more at this rate.

Advices from New York continue to be quiet. Although sellers there are quoting 31½ cents a lb, byers' ideas are reported to be around 29 cents to 29½ cents. After having bought about 2,000 tons for December shipment about three weeks ago, New York dealers have not bought more even for distant positions. The traders think that the undertone in the market will continue to be firm for some time in spite of the lack of interest of the United States because of reports concerning further Russian buying.

Coconut Oil Prices Rise

Coconut oil prices have improved considerably with the latest quotation from Alleppey touching Rs. 662.50 a candy of six cwts. A major contributory factor for this rise is the seasonal inadequacy of the indigenous supply.

CALCUTTA TEA AUCTIONS IN SEPTEMBER

GOOD DEMAND FOR CHEAPER GRADES

FOUR sales were held during September, and offerings totalled 256,153 packages. Throughout the month, there was a strong demand at the bottom, and plain brokens and fannings appreciated in value. Medium brokens and fannings also were well supported, particularly P. Fs. and Assam B.O.P.s while O.F.s tended easier with declining quality, as did C.T.C. teas. But the few good liquoring C.T.C.'s sold well, and in the last sale of the month there was a better enquiry for orthodox B.O.P.s and O.Fs., say Messrs Carritt Moran and Co. Private Ltd. in their monthly tea market review. Non-wither legg-cut Dooars were well supported but eased slightly during the month. O.Ps., Darjeelings and tippy grades also tended easier, but in the last sale of the month, there was a better demand for Darjeelings which were dearer, especially those with flavour.

Quality of Darjeeling teas was of an ordinary rains description throughout the month, and very little flavour was discernible, but a number of invoices were quite bright and brisk in cup. Leaf appearance was, on the whole, satisfactory, although some O.Ps. and pekoes became a little rough and loosely twisted. There was a fairly general seasonal decline in the offerings from Assam, but the general standard was very satisfactory for the time of year, and a number of bright liquoring teas, both C.T.C. and orthodox, were seen, Leaf appearance was satisfactory, although here and there some stalk and fibre were noticeable in the lower grades, particularly in the case of secondary C.T.C. grades. Both leaf appearance and cup quality of Dooars teas were well maintained at a very satisfactory standard for the time of year. There was little change to note in the offerings from Cachar, and they were of an average standard.

Sale No. 16 ,, ,,	1.90	1.70

(Exclusive of zonal excise duty)

The Internal Market

The 3,168 chests of leaf on offer met with a good general demand, while the few green teas on offer were well supported at slightly easier rates. Dust offerings amounted to 111,054 chests in the five sales held during the month. Black exportable dusts were a feature of the sales and were in strong demand. C.T.C. dusts continued to be irregular and generally easier. Legg-cut teas remained about firm and were sometimes dearer.

(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 16 totalled 751,318 chests at an average price of Rs 2.45, compared with 670 092 chests at an average price of Rs. 2.64 for the same period in the previous season Internal sales at 6,941 chests of leaf and 255,379 chests of dust (average prices Rs. 1.74 and Rs. 1.99) go against 12 629 chests and 229,249 chests, respectively (average prices Rs. 1.72 and Rs. 2.03) of the corresponding period of the previous season.

The estimated north-Indian crop to the end of August 1959 was 302.54 million lbs, compared with 294.22 million lbs to the same date of last year. The average figure at this date for the three years, 1956 to 1958, was 295.53 million lbs.

The price of Export quota on 1st September was 2¼nP a lb and business throughout the month was transacted between 2¼nP and 2nP a lb. During the month, the price declined slightly and business at the close on 30th September was done at 2nP a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th August, 1959 to 23rd September, 1959 with the corresponding figures of the previous year in parenthesis were : by steamer 519.620 (494.862), by rail 159,055 (124.334) and by air 12,191 (15 996), making a total of 690.866 (635,192) chests. From the beginning of the season 1st April, 1959 to 23rd September, 1959, arrivals have been : by steamer 1,430,577 (1,408 466), by rail 465,686 (378,435) and by air 38.628 (61,771), making a total of 1,935,191 (1,848,672) chests.

COCHIN TEA SALES

At Sale No. 40, 1,250,000 lbs of tea were on offer. There was a good but irregular demand. Low mediums and mediums were 5nP to 10nP dearer while all black leaf fannings were sometimes 25nP dearer.

COMPANY AND PUBLIC NOTICES

UNION JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting of Union Jute Company, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-20 a.m., on Friday, the 20th day of November, 1959, for the following purposes:—

As Special Business.

To consider and, if thought fit, to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely:—

1. Resolved that the Company may borrow money from time to time from its Managing Agents provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents.
2. Resolved that with effect from the first day of March, 1958, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Managing Agents in accordance with the terms of employment with such staff and the Managing Agents and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Managing Agents and their associates Messrs. F. W. Heilgers & Co. (Private) Ltd. for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Managing Agents.

It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business.

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959, and to receive the Directors' and Auditors' Reports thereon.
4. To declare Dividends recommended by the Directors.
5. To appoint Directors in the place of retiring Directors.
6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th November, 1959 to 20th November, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (Private) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 24th September, 1959.

NOTE:—

(a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 27th November, 1959, to those shareholders so entitled whose names appear in the Company's books on the 20th November, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 1 and 2:

The Company may require temporary financial accommodation from time to time and as the Managing Agents of the Company are prepared to lend money to it at a rate of interest lower than the prevailing bank rate, if and when they have surplus funds so to lend, it is proposed to take advantage thereof. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Managing Agents at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Managing Agents constitute a service by them in terms of Section 360 of the Act, and as from the first of March, 1958, such arrangement should be approved by the shareholders by Special Resolution pursuant to the above Section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

With regard to resolution No. 2 which is self-explanatory the Managing Agents of your Company provide the Company with the whole or part time services of their administrative staff and the Company pays the remuneration of such staff in accordance with their terms of employment. There is also an arrangement over a number of years between your Company and other Jute Mill Companies within the organisation of the Managing Agents to maintain a Pool Commission Account to which contribution is made by each such Company based on a percentage of the net profits of each Company and in the event of absence of or inadequacy of profit to make a minimum contribution as may be agreed upon from time to time between the Directors of each Company and the Managing Agents. Commission is distributed to the staff from this Pool Commission Account at the discretion of the Managing Agents and in the event of any balance being left over it is refunded to the Company in proportion to the contribution made by it. The Managing Agents retain no benefit out of this arrangement. The Auditors of your Company consider that inasmuch as such commission is paid through the Managing Agents out of monies contributed by the managed Companies, it constitutes a service by the Managing Agents attracting the provision of Section 360 of the Act and should therefore receive sanction of the shareholders by Special Resolution. Special Resolution No. 2 is therefore placed before the members for consideration and adoption.

Sir Walter Michelmore a Director and member of your Company is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Managing Agents of the Company.

To the extent indicated above the Managing Agents of the Company may be deemed to be interested in the business referred to in the resolutions.

THE NORTHBROOK JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting of The Northbrook Jute Company, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-50 a.m., on Friday, the 20th day of November, 1959, for the following purposes:—

As Special Business:

To consider and, if thought fit, to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely:—

1. Resolved that with effect from the first day of March, 1958, the Company may borrow money from time to time from its Managing Agents provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents.
2. Resolved that with effect from the first day of March, 1958, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Managing Agents in accordance with the terms of employment with such staff and the Managing Agents and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Managing Agents and their associates, Messrs. F. W. Heilgers & Co. (Private) Ltd., for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Managing Agents.

It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business:

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959, and to receive the Directors' and Auditors' Reports thereon.
4. To declare Dividends recommended by the Directors.
5. To appoint Directors in the place of retiring Directors.
6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th November, 1959 to 20th November, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (Private) LIMITED,
Managing Agents.

Calcutta, 24th September, 1959.

Note:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 27th November, 1959, to those Shareholders so entitled whose names appear in the Company's books on the 20th November, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 1 and 2:—

As explained in the Directors' Report your Company has the benefit of financial accommodation afforded to it by its Managing Agents who lend money to the Company from time to time as required by it at a rate of interest which is more favourable than the Company could have obtained from its Bankers. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Managing Agents at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Managing Agents constitute a service by them in terms of Section 360 of the Act, and as from the first of March, 1958, such arrangement should be approved by the shareholders by Special Resolution pursuant to the above Section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

Similarly, with regard to Resolution No. 2, which is self-explanatory, the Managing Agents of your Company provide the Company with the whole or part time services of their administrative staff and the Company pays the remuneration of such staff in accordance with their terms of employment. There is also an arrangement over a number of years between your Company and other Jute Mill Companies within the organisation of the Managing Agents to maintain a Pool Commission Account to which contribution is made by each such company based on a percentage of the net profits of each company and in the event of absence of or inadequacy of profit to make a minimum contribution as may be agreed upon from time to time between the Directors of each company and the Managing Agents. Commission is distributed to the staff from this Pool Commission Account at the discretion of the Managing Agents and in the event of any balance being left over it is refunded to the company in proportion to the contribution made by it. The Managing Agents retain no benefit out of this arrangement. The Auditors of your Company consider that inasmuch as such commission is paid through the Managing Agents out of monies contributed by the managed companies, it constitutes a service by the Managing Agents attracting the provision of Section 360 of the Act and should therefore receive sanction of the shareholders by Special Resolution. Special Resolution No. 2 is therefore placed before the members for consideration and adoption.

Sir Walter Michelmore, a Director and member of your Company, is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Managing Agents of the Company.

To the extent indicated above the Managing Agents of the Company may be deemed to be interested in the business referred to in the resolutions.

THE LAWRENCE JUTE COMPANY, LTD.

NOTICE is hereby given that an Annual General Meeting of The Lawrence Jute Co., Ltd., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11-10 a.m., on Friday, the 20th day of November, 1959, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th November, 1959 to 20th November, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (Private) LIMITED,
Managing Agents.

Calcutta, 24th September, 1959.

Note:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 27th November, 1959, to those Shareholders so entitled whose names appear in the Company's books on the 20th November, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

THE DALHOUSIE JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting of THE DALHOUSIE JUTE COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-10 A.M. on Friday, the 20th day of November, 1959, for the following purposes :—

As Special Business :

To consider and, if thought fit, to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely :—

1. Resolved that with effect from the first day of March, 1958, the Company may borrow money from time to time from its Managing Agents provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. 15,00,000 in the agreegate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents.
2. Resolved that with effect from the first day of March, 1958, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Managing Agents in accordance with the terms of employment with such staff and the Managing Agents and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Managing Agents and their associates, Messrs. F. W. Heilgers & Co. (Private) Ltd., for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Managing Agents.

   It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business :

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959 and to receive the Directors' and Auditors' Reports thereon.
4. To declare Dividend recommended by the Directors.
5. To appoint Directors in place of those retiring, including Khan Bahadur D. E. Avari, M.B.E., who having attained the age of 65 years is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below :

To be proposed as an Ordinary Resolution—

"THAT the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Khan Bahadur D. E. Avari, M.B.E., and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation."

6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th November, 1959 to 20th November, 1959, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,

Managing Agents.

Calcutta, 24th September, 1959.

Note : (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 27th November, 1959 to those shareholders so entitled whose names appear in the Company's books on the 20th November, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 1, 2 and 5 :

As explained in the Directors' Report your Company has the benefit of financial accommodation afforded to it by its Managing Agents who

end money to the Company from time to time as equired by it at a rate of interest which is more avourable than the Company could have obtained rom its Bankers. Section 370 of the Companies ct, 1956, as well as relative clauses in the Articles f Association of your Company empower your ompany to take loans from the Managing Agents t a rate of interest to be agreed upon between hem and the Board. The Auditors of your Comany are of the opinion that granting of loans by he Managing Agents constitute a service by them n terms of Section 360 of the Act, and as from he first of March, 1958 such arrangement should be pproved by the shareholders by Special Resolution pursuant to the above Section. Counsel's pinion on the question is to the contrary but in rder to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the rrangement.

Similarly, with regard to resolution No. 2, which s self explanatory, the Managing Agents of your Company provide the Company with the whole or part time services of their administrative staff and the Company pays the remuneration of such staff in accordance with their terms of employment. There is also an arrangement over a number of years between your Company and other Jute Mill Companies within the organisation of the Managing Agents to maintain a Pool Commission Account to which contribution is made by each such company based on a percentage of the net profits of each company and in the event of absence of or inadequacy of profit to make a minimum contribution as may be agreed upon from time to time between the Directors of each company and the Managing Agents. Commission is distributed to the staff from this Pool Commission Account at the discretion of the Managing Agents and in the event of any balance being left over it is refunded to the company in proportion to the contribution made by it. The Managing Agents retain no benefit out of this arrangement. The Auditors of your Company consider that inasmuch as such commission is paid through the Managing Agents out of monies contributed by the managed companies, it constitutes a service by the Managing Agents attracting the provision of Section 360 of the Act and should therefore receive sanction of the shareholders by Special Resolution. Special Resolution No. 2 is therefore placed before the members for consideration and adoption.

Sir Walter Michelmore, a Director and member of your Company, is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Managing Agents of the Company.

To the extent indicated above the Managing Agents of the Company may be deemed to be interested in the business referred to in the resolutions.

In the special notice given to the Company of the resolution under item No. 5 of the above notice it has been stated that the services of Khan Bahadur D. E. Avari have proved most useful to the Company and as he has considerable administrative experience, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE LANSDOWNE JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting of THE LANSDOWNE JUTE COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta at 11 A.M. on Friday, the 20th day of November, 1959, for the following purposes :—

As Special Business :

To consider and, if thought fit, to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely :—

1. Resolved that the Company may borrow money from time to time from its Managing Agents provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents.
2. Resolved that with effect from the first day of March, 1958, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Managing Agents in accordance with the terms of employment with such staff and the Managing Agents and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Managing Agents and their associates, Messrs. F. W. Heilgers & Co. (Private) Ltd., for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Managing Agents.

   It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business :

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959 and to receive the Directors' and Auditors' Reports thereon.
4. To declare Dividend recommended by the Directors.
5. To appoint Directors in the place of retiring Directors.
6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th November, 1959 to 20th November, 1959, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED.

Managing Agents.

Calcutta, 24th September, 1959.

Note : (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 27th November, 1959 to those shareholders so entitled whose names appear in the Company's books on the 20th November, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 1 and 2 :

The Company may require temporary financial accommodation from time to time and as the Managing Agents of the Company are prepared to lend money to it at a rate of interest lower than the prevailing bank rate, if and when they have surplus funds so to lend, it is proposed to take advantage thereof. Section 370 of the Companies Act, 1956 as well as relative clauses in the Articles of Association of your company empower your company to take loans from the Managing Agents at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Managing Agents constitute a service by them in terms of Section 360 of the Act, and as from the first of March, 1958 such arrangement should be approved by the shareholders by Special Resolution pursuant to the above Section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

With regard to resolution No. 2, which is self explanatory, the Managing Agents of your Company provide the Company with the whole or part time services of their administrative staff and the Company pays the remuneration of such staff in accordance with their terms of employment. There is also an arrangement over a number of years between your Company and other Jute Mill Companies within the organisation of the Managing Agents to maintain a Pool Commission Account to which contribution is made by each such company based on a percentage of the net profits of each company and in the event of absence of or inadequacy of profit to make a minimum contribution as may be agreed upon from time to time between the Directors of each company and the Managing Agents. Commission is distributed to the staff from this Pool Commission Accounts at the discretion of the Managing Agents and in the event of any balance being left over it is refunded to the company in proportion to the contribution made by it. The Managing Agents retain no benefit out of this arrangement. The Auditors of your Company consider that inasmuch as such commission is paid through the Managing Agents out of monies contributed by the managed companies, it constitutes a service by the Managing Agents attracting the provision of Section 360 of the Act and should therefore receive sanction of the shareholders by Special Resolution. Special Resolution No. 2 is therefore placed before the members for consideration and adoption.

Sir Walter Michelmore, a Director and member of your Company is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Managing Agents of the Company.

To the extent indicated above the Managing Agents of the Company may be deemed to be interested in the business referred to in the resolutions.

THE KINNISON JUTE MILLS CO., LTD.

NOTICE is hereby given that an Annual General Meeting of THE KINNISON JUTE MILLS CO. LTD., will be held at the Registered Office of the Company Chartered Bank Buildings, Calcutta, at 10-35 A.M. on Friday the 20th day of November 1959, for the following purposes:

As Special Business:

To consider and, if thought fit, to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely:—

1. Resolved that with effect from the first day of March, 1958, the Company may borrow money from time to time from its Managing Agents, provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents.

2. Resolved that with effect from the first day of March, 1958, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Managing Agents in accordance with the terms of employment with such staff and the Managing Agents and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Managing Agents and their associates, Messrs. Bird & Co. (Private) Ltd. for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Managing Agents.

It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business:

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959 and to receive the Directors' and Auditors' Reports thereon.
4. To declare Dividends recommended by the Directors.
5. To appoint Directors in the place of retiring Directors.
6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th November, 1959 to 20th November, 1959, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 24th September, 1959.

Note: (a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 27th November, 1959 to those shareholders so entitled whose names appear in the Company's books on the 20th November, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

Explanatory Statement

Resolutions Nos. 1 and 2:

As explained in the Directors' Report your Company has the benefit of financial accommodation afforded to it by its Managing Agents who lend money to the Company from time to time as required by it at a rate of interest which is more favourable than the Company could have obtained from its Bankers. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Managing Agents at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Managing Agents constitute a service by them in terms of Section 360 of the Act, and as from the first of March, 1958 such arrangement should be approved by the shareholders by Special Resolution pursuant to the above Section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

Similarly, with regard to resolution No. 2, which is self explanatory, the Managing Agents of your Company provide the Company with the whole or part time services of their administrative staff and the Company pays the remuneration of such staff in accordance with their terms of employment. There is also an arrangement over a number of years between your Company and other Jute Mill Companies within the organisation of the Managing Agents to maintain a Pool Commission Account to which contribution is made by each such company based on a percentage of the net profits of each company and in the event of absence of or inadequacy of profit to make a minimum contribution as may be agreed upon from time to time between the Directors of each company and the Managing Agents. Commission is distributed to the staff from this Pool Commission Account at the discretion of the Managing Agents and in the event of any balance being left over it is refunded to the company in proportion to the contribution made by it. The Managing Agents retain no benefit out of this arrangement. The Auditors of your Company consider that inasmuch as such commission is paid through the Managing Agents out of monies contributed by the managed companies, it constitutes a service by the Managing Agents attracting the provision of Section 360 of the Act and should therefore receive sanction of the shareholders by Special Resolution. Special Resolution No. 2 is therefore placed before the members for consideration and adoption.

Sir Walter Michelmore, a Director and member of your Company is also a Managing Director of Messrs. F. W. Heilgers & Co. (Private) Ltd., the Managing Agents of the Company.

To the extent indicated above the Managing Agents of the Company may be deemed to be interested in the business referred to in the resolutions.

THE AUCKLAND JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting of The Auckland Jute Company, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-00 a.m. on Friday, the 20th day of November, 1959, for the following purposes:—

As Special Business:

To consider and, if thought fit, to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely:—

1. Resolved that with effect from the first day of March, 1958, the Company may borrow money from time to time from its Managing Agents provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents.
2. Resolved that with effect from the first day of March, 1958, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Managing Agents in accordance with the terms of employment with such staff and the Managing Agents and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Managing Agents and their associates, Messrs. JESSOP & COMPANY, LIMITED

NOTICE is hereby given that an EXTRA-ORDINARY GENERAL MEETING of Members of the Company will be held at its Registered Office, 63, Netaji Subhas Road, Calcutta, on Friday the TWENTIETH day of November, 1959, at 11-00 a.m. to consider and, if thought fit, to pass, with or without modification, the following as a Special Resolution:—

THAT the Authorised Capital of the Company be increased, by the creation of 11,00,000 new Ordinary Shares of Rs. 10 each, to Rs. 4,10,00,000, divided as follows:

1,00,000	Cumulative Preference Shares of Rs. 100 each	Rs. 1,00,00,000
31,00,000	Ordinary Shares of Rs. 10 each ...	Rs. 3,10,00,000
		Rs. 4,10,00,000

EXPLANATORY STATEMENT:

1. Equity capital of the Company is Rs. 2 crores, divided into 20,00,000 shares of Rs. 10 each, out of which 10,20,000 shares have been issued. As it is intended to make a further issue of 10,20,000 shares, it has become necessary to increase the authorised capital.

2. The number of authorised shares of Rs. 100 each is 1,00,000, out of which 20,000 shares have been issued as Cumulative Preference Shares. The shareholders' approval is requested to define the unissued 80,000 shares of Rs. 100 each as Cumulative Preference shares.

DATED the Fifteenth day of October, 1959.

By Order of the Board of Management,
D. D. MARKAN,
Secretary.

63, Netaji Subhas Road,
Calcutta.

NOTE: A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself. A Proxy need not be a member of the Company.

THE STANDARD JUTE COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE STANDARD JUTE COMPANY LIMITED., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11-20 a.m. on Friday the 20th day of November, 1959 for the following purposes:—

As a Special business

To consider and if thought fit to pass with or without modification the following resolution which will be proposed as a Special Resolution namely:—

1. Resolved that the Company may lend money from time to time to its holding company, The Kinnison Jute Mills Co. Ltd., as and when required by the borrower, company and provided the company has surplus money available so to lend, bearing interest at the rate of four per cent. per annum but so that the money lent shall not at any time exceed Rs. 20,00,000/- in the aggregate which may be repaid by the borrower company without notice and shall be repaid within three days of demand by the lending company.

As Ordinary Business

2. To consider and approve the Audited accounts of the Company for the year ended 31st March, 1959 and to receive the Directors' and Auditors' Reports thereon.
3. To declare Dividend recommended by the Directors.
4. To appoint a Director in the place of a retiring Director.
5. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed, from 5th November, 1959 to 20th November, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (Private) LIMITED,
Managing Agents.

Calcutta, 24th September, 1959.

NOTE: (a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 27th November, 1959 to those shareholders so entitled whose names appear in the Company's books on the 20th November, 1959 or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolution No. 1

The Standard Jute Co. Ltd., has substantial surplus funds which are at present held on short deposit with its Bankers fetching interest at a rate varying from 3 to 3¾% per annum. It is essential that the money be kept liquid and it is not considered desirable therefore to immobilise the amount by long term investment. Your Directors therefore consider it desirable that the Company should be authorised to lend such money, up to a maximum of Rs. 20,00,000 in the aggregate at any time, to its holding Company, The Kinnison Jute Mills Co. Ltd., bearing interest at the rate of 4% per annum which shall be repayable by the borrower company within three days of demand.

Under Section 370 of the Companies Act, 1956, sanction by Special Resolution is necessary in view of the fact that the Board of Directors of the Company also form the majority of the directors of The Kinnison Jute Mills Co. Ltd. and although this section specifically mentions that loans by a holding company to its subsidiary do not come within the purview of this section, a Special Resolution would be necessary where the lender company is the subsidiary. Resolution No. 1 is therefore placed before the shareholders for their consideration.

JESSOP AND COMPANY LIMITED

NOTICE is hereby given that the Board of Management have sanctioned the payment of an interim dividend for the half year ending 31st October, 1959, on 5% cumulative Preference Shares, free of Income Tax, subject to the provisions of the Finance Act, 1959.

Preference Share Transfer Register will be closed from 26th to 31st October, 1959, both days inclusive.

Dividends will be paid only to the registered Shareholders or their Mandatees.

By Order of the Board,
D. D. MARKAN,
Secretary.

LOST

A Pucca Delivery Order No. 5745 dated 26th March 1959 of Delta Jute Mills for 15 B/s Hess: Cloth 27"-7½oz/40" issued in favour of the Central Bank of India Ltd., 33, Netaji Subhas Road, Calcutta.

TEA COMPANIES

O., Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE CHANGE IN FOREIGN AID PROSPECTS

BEHIND last week's reassuring statements from the Union Finance Minister, Mr. Morarji Desai, about the improved climate for aid to under-developed countries, lay just the least suspicion of genuine doubt and anxiety. Fresh home from the annual Fund-Bank *tamasha*, and from the generous, expansive atmosphere of the United States and western Europe, it would be difficult not to be impressed with the cheerful prospects for the future of foreign assistance. Mr. Desai, after all, is only human, and there is no denying that considerable thinking on this subject is taking place in the West and that a new, increased effort is being planned. What must be worrying the Finance Minister is not so much the desire of western countries to help, as the impending changes in their methods of doing it. The question that will need to be asked in New Delhi during the coming official discussions on the draft of a third five year plan is what effect a volume of assistance increasingly tied to trade with the particular country granting it, will have on India's overall balance of payments, given the size of plan she has in mind. There is no reason to suspect that the adjustments will require to be excessively large, but it would probably be unwise to go ahead as if none is going to be needed at all. The essential fact that India must face in her future planning, irrelevant as it may appear, is that the United States is now running a heavy balance of payments deficit and seems likely to go on doing so for some considerable time.

The first point to get clear in the changed circumstances is that the quantity of assistance on which India can rely is unlikely to diminish. It is still true that the emphasis of the cold war is swinging round to the development of backward countries, and away from the costly piling up of weapons of war. It is also true that the prospects of disarmament encourage the hope that in a few years' time this diversion of resources towards development will be increased, perhaps vastly. What has changed is the manner in which it is likely to become available, especially from the largest provider of all, the United States. The announcement the other day that in future Development Loan Fund resources will be tied to the purchase of American goods was not, in itself, a serious matter. The proportion of total aid India receives from this source is not large, and it will still be available even if the new provisions reduce its effective purchasing power—as they appear likely to—by a possible 30 percent. Nor are loans already sanctioned included in the restriction. It is the trend that is significant, that seems likely to affect all future U.S. aid projects with the possible exception of P.L. 480. And it is this which may have the most unfavourable impact on India's hopes of massive assistance in the third plan. If all aid from this country's largest donor, other than that which comes through P.L. 480, is in future to be reduced in effective purchasing power by anything up to 30 percent, due to the restrictions on its use to the most expensive market, then the present figures of Rs. 2,500 crores for foreign resources in the third plan may have to be revised and over-ambitious hopes for the future suitably modified.

Whatever the impact of the change on India may be, there is no reason whatever for blaming the United States. That country has been by far the largest international aid donor so far, and almost the only one of whose assistance a fair proportion has been in the form of outright gifts. What the United States is doing now is merely bringing its aid schemes more in line with those of India's other benefactors, including the communist countries. The motive behind this change is also blameless: it is simply to protect the U.S. balance of payments which is at present threatened not by an excess of imports over exports—the surplus on current account is running roughly at the amazingly high figure of $3,500 million a year—but by the weight of military aid and economic assistance commitments. It was not to be expected that the U.S. would continue to see its gold reserves drained away by methods of granting foreign assistance which are at the same time helping expand, too easily, the reserves of some of her west European competitors. To blame the United States, therefore, in the way some Indian newspapers appear to be doing, as acting in defiance of both her own interests and those of the developing countries, is both ungrateful and evidence of a deplorable ignorance of the facts.

To exhort the west European allies to greater efforts, as the United States and some of the under-developed countries themselves have been doing, may be equally unrealistic. It is often forgotten, although revealed in a leading article which appeared in the issue of *Capital* dated 3rd September, 1959, that France is probably already spending more money per head of her population on developing under-developed countries than is the United States, while the British effort may, proportionately, be no smaller taking into account the form in which the development capital is being exported. Although the balance-of-payments positions of both France and Britain have improved, neither is even a fraction as healthy as that of the United States, notwithstanding the present steady deterioration. Britain, in particular, is chronically vulnerable due to her position at the centre of an international currency system, the maintenance of which—considering the pitifully small reserves with which the job is done—can be considered every bit as important a contribution to the economies of developing areas as some of the more spectacular outright grants the United States has made. Only West Germany would appear at present to be in a position to extend substantially its contribution to overseas development. With a peculiarly healthy balance-of-payments and currency-reserves position, that country would seem to be excellently placed. But it is ridiculous to expect West Germany completely to take over from the United States as the universal provider, if only because of the difference in the size of the respective economic units and the gap between the standards of living of thei peoples. When assessing the capacity of a countr for dispensing foreign aid, it is important to re member that the burden has to be borne by a popu lation of finite dimensions and limited resources One of the main reasons the United States ha been able to give so much is simply it size and because the growth of its wealth wa stimulated by the war instead of being retarde severely as was the case with France, Britain an West Germany.

The international aid problems of the futur will be mainly two in number: How is develop ment assistance to be increased without puttin too much strain on the balance of payments o either the United States or the economies of west ern Europe, and what adjustments in developmen thinking will be required on the part of the under developed countries if the best use is to be made o it. Both problems are infinitely complicated. Such devices as the International Development Assc ciation are part answer to the first. A feature o aid programmes in the future is likely to be tha an increasing proportion of them will provide fo repayment in local currencies, and this is a tren which ought to be encouraged. It is importan that aid be sensibly distributed throughout thos countries it is likely to benefit most; one of th more disappointing features of both U.S. an French aid is that it tends to be concentrated o particular areas in response to political considera tions, while British private investment is known to favour such countries as Australia rather thar say, India.

The under-developed countries themselves ca help by making things less difficult both economi cally and politically for the donor countries. Th attitude that the more advanced nations owe thei poorer brethren a living has never been particu larly helpful and is ridiculously foolish today The interests of under-developed countries lie i the direct encouragement of international trade the freer flow of international capital resources an in a more generous attitude towards privat foreign investors. The business of granting ai may become more than ever a bilateral one in th future, and under-developed countries might hav to be prepared for drastic changes in their inter national trading patterns. There will also be les scope for playing on the fear of communism as a claim to aid; indeed, if the communist countrie themselves can be persuaded to co-operate wit the capitalist ones in whatever multilateral ai schemes can be afforded, then so much the better

THE LEAP FORWARD REVIEWED

SPEAKING with the grave air of someone announcing a new economic doctrine, Mr. Chou En-lai said before the National Popular Council last April: "An increase in industrial production of more than 20 percent is a *leap forward*, of more than 25 percent a *great leap forward*, and of more than 30 percent an *exceptionally great leap forward*". After digesting this interesting lesson in development economics, one is now entitled to ask what sort of a *leap forward* is an increase in agricultural output which is first advertised as being of the order of 100 percent but is later ruefully admitted to be only 24 percent? One may take pleasure in the Chinese leaders' discomfiture, which is due to their confusing statistics and wishful thinking, but when all the ironical remarks have been made one does well to come back to the figures, which still remain impressive. The accompanying table shows the results achieved by the Chinese economy in 1957, the results that were first claimed to have been achieved in 1958, and the actual results that are now admitted as nearer the truth.

The first thing this table shows is that the Chinese leaders gravely deluded themselves about all the results of the agricultural campaign of 1958, and did not learn—or admit—the truth until late this summer. Paradoxical as it may seem, steel is to be included in the agricultural figures, because of the famous experiment with small village furnaces. Agricultural results were uni formly over-estimated. These errors, whicl sometimes reached ludicrous proportions, as with the cereals crop, were due to inexperience anc enthusiasm in the statistical services, to deliberate "cooking" of the figures at the level of the communes, and to avoidable losses in the harvest ing of crops that were indeed remarkable as they stood in the field, but were carelessly reaped and stored. So much can be learned by comparing the second and third columns of the table.

But if we now turn to comparing the first and third columns, it emerges that when the necessary

	1957 results	1958 estimates	1958 actual
		(Million tons)	
Steel	5.3	11.1	8
Coal	129	270	270
Cereals	185	375	250
Cotton	1.6	3.3	2.1
Soya	10.5	12.5	10.9
Groundnut	2.5	4	2.8
Jute	0.3	0.32	0.31
Tobacco	383	821	580
Refined sugar	0.86	0.90	0.90
		(Million bales)	
Cotton yarn	4.65	6.10	6.10
		(Million meters)	
Cotton cloth		5.7	5.7

adjustments were made the results achieved in 1958 were still notably superior to those of the previous year. Without pretending to know just what sort of *leap forward* they constitute, one can see that, with the exception of jute, the agricultural campaign figures all show respectable advances which India might well envy her neighbour. It is even more interesting to separate the industrial figures from the agricultural ones. Here one sees that, not only do the 1958 results mark a notable progress over 1957, but the estimates announced during the *leap forward* enthusiasm were apparently quite correct, for they have not had to be revised during the ensuing phase of disillusion. Thus the estimates for the production of coal, refined sugar, cotton yarn and cotton textiles were all correct. If one could break down the steel figures into those referring to village production and those referring to the output of modern mills, it would no doubt be found that the latter were not over-estimated either.

The first conclusion one might draw from this is that the much advertised errors of last spring were genuine errors, due to statistical incompetence and faulty collection of figures from the thousands of scattered communes. Where statistics were easily collected and verified, as from the mills and factories of the cities, there was no error. This is evidence against the view that the whole *leap forward* chapter was a propaganda stunt that collapsed under the weight of its own improbability. When communist régimes choose to tell lies about their progress (as the Stalinist régime did for decades), they usually choose to inflate precisely the industrial figures, for it is in this "modern" domain that communism claims its greatest superiority. Hostile comment on the revision of Chinese economic ambitions has often missed this point, that the revision is limited to the agricultural field. The gross value of industrial output last year is still asserted to have attained 117 milliard yuan, which would be a 66 percent increase over 1957. For this year, after first setting the target of 165 milliard yuan, the authorities have brought down their sights to 147 milliard yuan. This 11 percent reduction in the industrial target was no doubt related to the new estimates of agricultural production (raw materials and food), and does not indicate necessarily any special difficulties in the industrial field. And at 147 milliard yuan, industrial output this year would still be 25 percent above last year.

After the fiasco of the 1958 crop figures, one might choose to disbelieve all Chinese statistics, those for industrial output included. Indeed, they always require to be treated with caution, as has been emphasised whenever they have been referred to. But there is expert opinion to the effect that if the industrial figures are being cooked, they are being cooked the other way, towards deliberate under-estimation. Thus the *Economic Review of China, North Korea and Hongkong* wrote lately: "One must not only conclude that China is continuing to develop her industry very rapidly, which is obvious from the most cursory examination of the available figures, but that she is developing it faster than the Chinese authorities themselves are ready to admit". One need not accept that opinion, but it is warning against treating the industrial output reports as wishful thinking of the same sort as the first news of the 1958 harvest.

TRENDS IN U.K. INTEREST RATES

FOREIGN buying of British securities after the U.K. general election was considerable, but not nearly as large as most people in the City of London had expected in the event of a Conservative victory. In due course, foreigners' reluctance to accept the generous yields on British ordinary shares was explained. Dealers in London and New York made calculations of comparative yields and discovered that British shares were not particularly cheap; indeed, that selective investment in North America, Australia, Continental Europe, would yield a larger income than comparable investment in Britain. The whole basis of British yields had been raised overnight when the trend of the election was known, and those "generous yields" were thenceforth an illusion. The rise in share prices that adjusted this anomaly in international finance has changed the perspective of British investors, too. When, on latest dividends, Unilever was yielding about 2 percent, Imperial Chemical Industries about 3 percent, British Motor Corporation about 3½ percent, and so on, the list of Government securities, with many stocks yielding more than 5 percent, was studied with unusual interest. It was argued that the strength of British finances and the stability of British prices were favourable to investment in fixed-income stocks, and that, even though the old idea of a 3 percent norm was irrelevant in modern conditions, a long-term interest-rate of 5 percent was abnormally high.

These ideas began to circulate in Britain about the time when the U.S. Treasury had at last achieved a dramatic success with an issue of fixed-interest notes (the "magic fives")—though only by offering terms much above the market; and in Canada, too, the Treasury had revived the market's interest in bills and bonds by offering attractive rates. In retrospect it could be seen that it was the sharp rise in rates in Britain in the crisis-year 1957 that prepared the market for recovery. Adjustments have been or are being made in most of the world's financial centres, and it may be that a new era of confidence in bonds has begun. The recent rise in interest-rates in Germany must be viewed against this background. The German authorities have had to modify their idea that 5 percent is a "natural" long-term rate for their country and their concession of more favourable terms may be seen as a delayed adjustment comparable with Britain's in 1957. Germany's situation in the third quarter of 1959 is, indeed, essentially similar to Britain's in the third quarter of 1957, with demand exceeding production, particularly in the capital sector, and inflationary pressure building up. The German authorities have raised their Bank rate, as the British authorities did two years earlier. So we have the appearance of German rates, both long and short, rising, while the British long-term rate is declining and north American rates are, perhaps, turning downward.

Some observers in Britain believe that the economic condition of Germany now resembles Britain's economic condition not only as it was in 1957 but also as it will be in 1960. They foresee rises in the London Bank rate next year, as part of a plan to restrain the boom. But the British economy has still considerable resources in reserve: not much unemployed labour but a considerable amount of unemployed capacity which can produce more with little or no additional labour, and in factories that are already fully employed, output can be increased with the aid of new machines. In Britain the boom is still orderly, for the tempo of activity has risen more slowly than in Continental Europe or America, and it is possible to imagine the same orderly progress through 1960. In any case, the authorities may take heed of the Radcliffe Committee's opinion that Bank rate is not the most effective instrument for controlling the economy. It is possible, however, that Bank rate may have to be raised to keep London's money rates in line with other centres'. The outflow of funds from London that many observers expected when New York rates rose did not occur, and the rise in Frankfurt rates is not a direct threat because German short-term funds invested abroad are in New York rather than in London. But London's equilibrium could nonetheless be upset by a rise in rates abroad.

The British authorities are not anxious to increase the gold and currency reserve by receiving short-term capital, whether it be accommodated in Treasury bills or comparable short-term media, or invested in nominally permanent form in ordinary shares. In either case it can too easily flow out if the financial position deteriorates and so can exaggerate a slight turn for the worse. In the present circumstances the authorities will evidently not be embarrassed by any such inflow. Foreign investment in stocks and shares—portfolio investment, as distinct from direct investment in factories and other tangible assets—is not an unmixed blessing, but the tendency of international capital to seek the stocks and shares of developing countries—particularly Australia—rather than those of the fully industrialised countries is probably healthy. It encourages local investors, and, of course, it enables companies to raise new capital on more favourable terms. It is natural that investors in developed countries should look elsewhere when share prices at home have risen far, but if capital is invested in ordinary shares abroad rather than in ordinary shares at home it is not helping to strengthen the bond market at home; nor is it helping the Governments of the developing countries to finance Government-sponsored developments, for it does not strengthen the bond markets abroad either.

The preference for ordinary shares is a world wide phenomenon. It is a sign of prosperity actual or expected; but it is partly explained also by distrust of fixed incomes after two decades of inflation. Distrust of fixed-income stocks has caused financial difficulties in many countries, and economic development will be better balanced if confidence in the bond markets is being restored. But relatively generous terms must be offered to compensate for the lack of "growth" quality, for the economic world is expanding much faster in the post-war than it did in the pre-war era.

EXPANSION OF THE PAPER INDUSTRY

PAPER shares have recently been an attractiv investment for three main reasons. Firstly although the commodity is essential, its suppl remains far short of the demand. Secondly, sinc the industry enjoys an assured and profitabl market, its working in recent years has been ver satisfactory. Thirdly, the growth prospects of mo companies are reassuring, as big expansio schemes have been launched to increase an diversify production. The investment interest i the industry is shown by the fact that the inde of variable yield industrial securities (base 1952-5 equals 100) has increased from 197.3 to 213.1 i the case of paper over the past year. The ris partly reflects the impressive increase in produ tion, which reached a new record of 253,011 ton in 1958, against 210,126 tons in 1957. The installe capacity of the industry is 268,800 tons a year a present; and Mr. H. P. Singhi, in his presidentia address at the annual meeting of the Indian Pape Mills Association in Bombay last Monday, ex pressed confidence that the expected output o 350,000 tons will be achieved by 1960-61. Lookin further ahead, he suggested that the countr should plan for an annual output of 700,000 ton by the end of the third plan period; for this, th installed capacity would have to be increased 900,000 tons.

The evidence thus suggests that the vigorou expansion of the paper industry will have to co tinue. It is important, therefore, that the prop policies be framed now in order to ensure th the expansion is steady and smooth. Mr. Sing recommended concentration on setting up pu and paper plants with a minimum capacity of tons a day, for only such units can work ec nomically. Smaller units, with a daily capaci of five tons or 10 tons, will have to get their pu from outside; since pulp supplies are alread short, he said, the material would have to imported, and that would represent an unnece sary expenditure of foreign exchange. Son might consider the recommendation debatable if more pulp mills are set up, they could produ enough to feed the smaller paper mills. T economies of large- and small-scale manufactu perhaps need to be more closely examined. M Singhi made a better point when he said tha in the interests of expansion, paper mills shou be allowed to earn enough so that they can a cumulate the financial resources they nee Investors have been worried in recent mont about the outcome of the Tariff Commissio enquiry into the fair selling prices of the co modity. The publication of the report has be inordinately delayed; but there will be gene agreement with Mr. Singhi's view that in det mining the industry's costs, "adequate provisi should be made for building up of reserves allowing a fair return on capital employed a making a separate allowance for rehabilitating t plant and machinery in addition to depreciatio The rise in the cost of raw materials and cher cals over the past year will also have to be bor in mind while determining the fair prices.

The paper industry's expansion in the futu is likely to be facilitated by a number of facto Potential raw material supplies, mainly bamb are plentiful, although State Governments sh have to be persuaded into following less sho sighted policies concerning the lease of for areas. They have yet to realise that if long-te leases are given and if royalty rates are not rais steadily, the mills will have a greater interest the conservation and scientific exploitation forest resources. A start is being made with manufacture of the machinery required for pap mills; although self-sufficiency will still be a lo way off, there is hope that a larger amount a a larger variety of such machinery will be ma as steel supplies ease. It seems necessary, ho ever, that the paper trade and industry shou respond to these opportunities by keeping do the price of the commodity to the consumer. T shortage of paper, especially newsprint and less profitable varieties, is acute, having be worsened recently by the severer import restr tions. Many mills have tried to stop paper becoming more expensive by not raising the prices they charge—prices, incidentally, which have been yielding quite satisfactory profits. But a number of other mills, and large sections of the paper trade, have resorted to various malpractices in exploiting the shortage and skinning the consumer. Apart from reforming themselves, these mills could well take more drastic action against their errant distributors. The risk that continued malpractices might invite outside controls cannot be lightly dismissed. The Government too could make a welcome contribution to easing supplies by using less paper, and by conserving the waste-paper derived from its mountainous files for sale to the mills.

Current News and Comment

Bullion Prices Shoot Up

Bullion prices have been soaring to record heights. On 22nd October, gold rose to Rs. 125.62 and silver to Rs. 211.75. Only last April gold crossed the 1950 peak of Rs. 120.50, and now silver too has risen above the previous all-time high of Rs. 207.25 touched in 1951. At that time, it was the Korean war which sent the prices of commodities sky-rocketing, with the result that the value of money fell steeply and bullion seemed to be the only thing worth holding. When the Korean boom was over, bullion prices suffered a sharp decline. In 1952-53, gold touched a low of Rs. 77.31 and silver was sold down to Rs. 141.75. Since then, prices have been moving irregularly upwards.

Various explanations have been offered for the high prices of bullion. Some say that the general inflationary psychology and the falling value of the rupee have increased the demand for it, since it is regarded as a dependable store of value. Others attribute the marked preference for hoarding wealth in the form of bullion to a lack of faith in the Government's economic policy. Wealth tax, gift tax and estate duty, it is thought, have led to a marked increase in "black" money which is being kept in the form of precious metals. ("Black" money is different from black market income, in that it is the amount which has been hidden from the income tax authorities.) Yet others attribute the rise in bullion prices to the steady increase in the incomes of the agricultural community, which still has a strong bias in favour of keeping savings in the form of precious metals. There is a measure of truth in all these explanations, but it is arguable that even normal demand could have produced a strong rise in bullion because of the continued ban on imports. Since sales of Mysore gold were stopped in July 1958, smuggling has been the only source of supply. But smuggling has decreased to a mere trickle with stricter Customs vigilance and with the withdrawal of the ordinary Indian rupee as legal tender from Middle East countries. Silver, which had been arriving in the form of coins (Chinese dollars) from Tibet under certain Indo-Tibetan trade arrangements, has stopped coming since the political upheaval north of the Himalayas. Total imports since May 1956, when these coins were first allowed to be imported, are estimated at between 60,000 bars and 65,000 bars of 2,800 tolas each. That these should have been taken up at steadily rising prices indicates the remarkable absorptive capacity of the market.

According to the information supplied by the Bombay Bullion Association to the Reserve Bank of India, the visible stocks of gold and silver in 1958-59 in Bombay have averaged around 24,000 tolas and 955 bars, respectively. The figures for the last week of August are 44,000 tolas and 400 bars. The all-India figures are estimated at around 60,000 tolas of gold and 3,000 bars of silver. It is interesting to note that deliveries against the gold Asuj contract in Bombay last week totalled 52,500 tolas. This figure has been exceeded only once before, in 1954, when 61,750 tolas were tendered against the Asuj delivery. Bullion prices have remained firm even during the slack season. It is no surprise that they are rising, now that the seasonal demand is expected to pick up. How far bullion prices might rise depends essentially on the importance people attach to gold and silver as a media for holding and hoarding wealth, and the growth of "black" money incomes. With imports banned, fresh supplies limited to routine normal disinvestment by certain sections of the community and offtake steadily rising with the growth of incomes, the unbalance between the demand and supply of bullion is likely to be of a permanent character. In the circumstances, the wisdom of having a forward market in bullion has been seriously doubted. In fact, there seems to be a strong case for licensing even dealings in spot bullion. It is argued that perhaps the only good the futures market in bullion does is to bring revenue to the Government by way of stamp duty.

Better Results from Jute Mills

There has been a considerable rise in the prices of certain jute shares during the past couple of weeks. Howrah, for instance, have risen from Rs. 23.37 to Rs. 25.37, National from Rs. 24 to Rs. 24.50 and New Central from Rs. 19.18 to Rs. 19.94. The recent improvement in the statistical position of the industry has increased investors' confidence. A rise in gunny output followed by a fall in stocks has been an encouraging factor. This apart, modernisation and rationalisation have helped mills reduce costs of production. The bullishness also stems from the publication of a number of satisfactory company reports. The Bird-Heilgers group of companies are among those which have done well during the year ended March 1959. The profit of the Auckland Jute Company has improved from Rs. 6.87 lakhs to Rs. 14.63 lakhs. The ordinary dividend has been increased from 5 percent to 20 percent. This is over two and a half times covered, and at the present price of Rs. 208 a share, the yield works out to 9.6 percent. Among the notable allocations, jute stock reserve gets Rs. 2 lakhs and machinery replacement reserve Rs. 3 lakhs. Gunny sales have increased from Rs. 1.85 crores to Rs. 2.27 crores. The Union Jute Company has made a profit of Rs. 19.2 lakhs, against Rs. 29.53 lakhs. The ordinary dividend has been increased from 15 percent to 20 percent. This is more than twice covered and gives a yield of 8.5 percent at Rs. 235 a share. Allocations include Rs. 2 lakhs to tax contingencies reserve and Rs. 3½ lakhs to general reserve. Gunny sales have declined from Rs. 1.99 crores to Rs. 1.88 crores.

The Lawrence Jute Company has returned to a profit-earning stage. The profit has amounted to Rs. 17.93 lakhs. An ordinary dividend of 2 percent has been declared, against nil, to absorb Rs. 56,000 only, but a considerable sum of money has been ploughed back into the business. Among the important allocations, stores and spares reserve gets Rs. 2 lakhs, tax contingencies reserve Rs. 1.5 lakhs, development rebate reserve Rs. 2.5 lakhs and general reserve Rs. 1 lakh. Gunny sales declined from Rs. 1.49 crores to Rs. 52.80 lakhs. The results for the year show a big improvement over the preceding five years. With the income derived from the sale of loom hours, the hire of machinery, an arrangement with the Lansdowne Jute Co. Ltd for the manufacture of the company's goods and the additional benefits which will be obtained from the lease of the premises, the company should continue to operate at a regular monthly profit. The closure of the mill has been justified, and it is satisfactory that in addition to having cleared the overdraft with the bankers, the debentures have been fully repaid except for Rs. 1.5 lakhs. Since the closure, which took place on 5th May, 1958, the work of scrapping the old machinery has been completed and arrangements have recently been made with the Central Food Ministry to lease the main mill buildings and certain godowns for storing foodgrains. The directors of Union Jute point out that under the terms of sale of the South mill property, payment has been received from the purchaser of the first and second instalments of the balance of the purchase price amounting to Rs. 2.55 lakhs, including interest. This leaves an outstanding balance of Rs. 8 lakhs payable over the next three years, carrying interest at 5 percent a year. An encouraging factor is that Auckland has installed seven 4¼in. sliver spinning frames of 100 spindles each, together with ancillary machinery. There has been a marked improvement in the demand for carpet backing cloth, and wide looms are working on triple shift for meeting the demand.

The improved working of the jute mills has so far been largely due to the fact that fibre prices have remained favourable in relation to gunny prices. Although the trade does not foresee any shortage of raw jute during the current season, it does not look as if full account has been taken of flood damage as well as the prospect of increased exports of fibre. Whether simultaneous business on raw jute and jute manufactures will remain as remunerative as at present, is still to be seen.

New Schemes from Century Mills

The Century Mills shares owe their leading position on the Bombay Stock Exchange to the prosperity of the company's rayon section. The expansion of this section has been proceeding according to schedule, and the directors have several interesting schemes on hand. It may be recalled that the company completed the erection of its rayon plant in record time and went into production with an output of five tons a day. But even before the completion of the first stage in September 1956, the directors decided to step up the production to 12½ tons of rayon yarn. The scheme was completed by March 1958.

Now the company has received sanction for raising its production by another six tons, and on the completion of this project it will be producing around 20 tons of rayon yarn a day. The target of expansion is 50 tons. Among the new schemes are one for tyre yarn and another for nylon yarn. Sanction has been received for tyre yarn but its cost is not yet known. The plant will have a capacity of 6½ tons. The outlook seems to be excellent in view of the growth prospects of the motor-vehicle industry and the shortage of indigenous supplies. The proposed nylon yarn plant will have a daily capacity of two tons and might cost about Rs. 2 crores to Rs. 2½ crores. The Government, it is said, has viewed the scheme with sympathy. The terms and conditions for the supply of machinery are reported to be satisfactory.

The company also has on hand schemes for the manufacture of caustic soda and cellophane paper. There should be no difficulty in the caustic soda scheme materialising soon, provided the company can find a market for the main by-product—chlorine. No definite date can, however, be fixed for the expansion scheme for rayon yarn, because it is linked with a yen credit. It could have been put through soon if the licence was straight, but the present procedure might mean some delay.

Tata Chemical Expanding

The report of the directors of Tata Chemical for the year ended June 1959 should offset the disappointment caused by the bare maintenance of the dividend, for a substantially higher compulsory allocation to development reserve has reduced the distributable surplus by around Rs. 11 lakhs. The company has reported satisfac-

tory production, and schemes for expansion are making progress. The ratio of gross profit to sales works out to around 5 percent, which is not bad for a heavy chemical company. Against fixed assets of Rs. 4.9 crores, the net book value stands at Rs. 3.09 crores and arrears of depreciation amount to Rs. 42 lakhs. The current liabilities of Rs. 1.22 crores are more than matched by current assets of Rs. 1.28 crores. Sundry liabilities total Rs. 67.59 lakhs, against which there is a sum of Rs. 31.28 lakhs on account of sundry debtors and Rs. 8.85 lakhs in cash and bank balances.

The directors propose to issue debentures for Rs. 1 crore, carrying interest at 5 percent and redeemable in 1970-75. This is meant to finance expansion. Shareholders might be puzzled by the proposal for debentures, particularly when there are already debentures totalling Rs. 50 lakhs, besides short-term borrowings of Rs. 1.46 crores. During the year, the company has paid Rs. 7.56 lakhs as interest and the new debentures will mean an additional interest burden of Rs. 5 lakhs a year. But one point which shareholders might bear in mind is that the money will be used for expansion, the benefits of which can conveniently take care of both capital and interest payments. Moreover, the first series of debentures will have been paid off by 1965. The growth prospects of the company seem to be good in view of the expansion contemplated.

Production during the year has been well maintained, except in the case of salt which is down by 37 percent due to natural factors. The output of soda ash is slightly higher and the second kiln blown last May marks the completion of the first major unit in the expansion of the soda ash plant. The production of caustic soda and sodium bicarbonate has remained around the previous levels, but a notable point is the completion of the new caustic evaporator plant. The output of marine products and agro-chemicals is up by 45 percent. The highlights of the balance-sheet figures are: sales of products Rs. 3.41 crores, against Rs. 3.42 crores, but the latter included Rs. 19.33 lakhs on account of soda ash; depreciation Rs. 20 lakhs, against Rs. 17.25 lakhs; tax Rs. 12.51 lakhs, against Rs. 12.42 lakhs; and development reserve Rs. 13.3 lakhs. The net profit was Rs. 18.07 lakhs, against Rs. 10.8 lakhs; and the carry-forward was Rs. 6,792, against Rs. 3,736 brought in.

Plant for Camphor Manufacture

A Rs. 30-lakh plant to manufacture synthetic camphor in India, making the country self-sufficient in the product, is to be established soon. The scheme is well under way, a licence having been received by the Optimum Corporation of Bombay. Camphor India will be the name and style of the manufacturer. Germany will be the foreign collaborator in the scheme and the foreign firm will take up nearly a third of the capital. Dr. L. A. Bhatt will soon visit Germany for the final negotiations. The plant, with an annual capacity of 900 tons, is likely to be located near Bombay. Apart from synthetic camphor, it will also manufacture 60 tons of thymol. It is possible that Assam might also be considered for the site because that is where the company will have to establish its turpentine plant—turpentine being the basic raw material for camphor manufacture. It is said that Assam pines alone can yield the right type of turpentine which has a pinene content of over 70 percent. The plant will be the first of its kind in India. It is expected to go into production in 1961.

Imports of camphor at present are banned. The commodity was on the O.G.L. until March 1956, but thereafter imports were put under a restrictive quota system. During the two years 1956-57 and 1957-58, imports were 916,000 lbs and 913,000 lbs, respectively, but they dwindled to a bare 124,000 lbs in 1958-59. The cost of camphor from the new plant will be about Rs. 3 a lb, against a landed cost of Rs. 6. The current market rate is Rs. 16.

Export Risks Insurance

The work done by the Export Risks Insurance Corporation during the last two years augurs well for the future of the underwriting agency, which is the first of its kind in this country. The managing director, Mr. T. C. Kapur, told a Press conference in Bombay last Thursday that the teething troubles will be over much sooner than the five-year period which is considered usual for an institution of this kind. During the year to September 1959, the Corporation issued 222 policies with a liability of about Rs. 6.5 crores. Insured exporters declared exports of Rs. 10.51 crores, of which "on credit basis" accounted for Rs. 4.8 crores. Premium incomes rose 3½ times to Rs. 1.54 lakhs, from Rs. 43,000 in the previous year. The Corporation's policies are assigned by exporters in favour of the financing bank as an additional security. Against 587 such assignments registered by the Corporation in the previous year, 1,650 assignments were made during the year under review.

The Corporation has enlarged its sphere of operations. During the early period, it covered mainly manufactured items like machinery and engineering goods. But recently tea, mica, textiles and shellac have been included; jute goods are expected to bring in substantial business. Moreover, premium rates have been reduced by 10 percent. With commercial banks co-operating with the Corporation by recognising its policies as a good security and with the new concessions given, it should be possible for the Corporation to achieve a substantial increase in business. Another interesting feature of the Corporation's working is that it has attracted some of the bigger export houses. Hitherto, it had been catering to the needs of small and medium exporters, but the field has been widened recently.

The inclusion of jute goods exporters within the purview of the Corporation's activities marks a major step forward. It is said that jute and jute goods exporters were persuaded to come in after they were given certain concessions which they had asked for. Policies will be issued to cover "only political risks", without rigidly enforcing the rule about the "whole turnover". This is likely to stimulate jute goods exports, thereby helping the Corporation to increase its own usefulness and profitability. It is said that the concessions will be available to exporters of other traditional commodities also.

Madras Scheme for Wagon Manufacture

The scheme drawn up two years ago by Southern Structurals Ltd for the manufacture of railway wagons in Pattabhiram, Madras, has been making fair progress. The company is associated with Gannon Dunkerley the contractors; it expects to produce 40 broad-gauge wagons in October and work up to a target of 70 wagons a month by January next year. The factory was set up with a capital of Rs. 40 lakhs to undertake the fabrication of steel products. The Madras Financial Corporation has offered substantial assistance to the company. It is expected that the latter will undertake the manufacture of cranes following an arrangement for foreign collaboration. Since the Railway Board contemplates a revision of wagon requirements due to increased traffic, it is thought that the new wagon building plant will get plenty of work in the future. The manufacture of metre-gauge wagons by the engineering department of Binny and Company in Meenambakkam has shown the growing interest of engineering concerns in south India. The Simpson group, incidentally, has embarked on a development programme for an output of 12,000 Perkins diesel engines a year.

Sugar: Passing the Buck

Probably taking the cue from the Prime Minister, Mr Nehru, who said in Poona recently that the scarcity of sugar is a sign of growing prosperity, the Central Food and Agriculture Minister, Mr. S. K. Patil, said in Kanpur that the sugar shortage is to be attributed to the rising standards of living of the people and the consequent increase in consumption. He argued this thesis while laying the foundation stone of the National Sugar Institute and also while inaugurating the All-India Sugar Merchants Conference. Mr. Patil said that he is in favour of everyone eating as much sugar as is good for health, but advised consumers not to purchase the commodity after prices have crossed a certain level. Although the consumer is entitled to do so in self-defence, Mr. Patil ought to acknowledge that it is mainly the responsibility of the Government to prevent prices from crossing that level in the first instance. But he excused himself and the Government by saying that the official control machinery is not free from defects, "as everybody could not be expected to have godly virtues." By the same criterion, the sugar distributors whom Mr. Patil criticised and the sugar manufacturers whom the merchants criticised can also excuse themselves of blame. The president of the Sugar Merchants Conference, Mr. Parasram Parumal, said that most mills enter into *benami* transactions with fictitious distributors and contrive to have the sugar sold at black-market prices. The same charge was made by Mr. Mohanlal Saxena, M.P., during the parliamentary debate prior to Mr. A. P. Jain's exit from the Central Food and Agriculture Ministry. His demand for a judicial enquiry on the complaint was turned down by Mr. Jain on the ground that the situation was improving. Mr. Patil at Kanpur too did not say "yes" or "no" to the demand for an enquiry: he merely offered it as his personal opinion that the entire blame for the rise in prices cannot be placed on manufacturers alone. If distributors and the official control machinery also have to share the blame, only an enquiry can determine in what proportions it is to be allocated. According to the statistics quoted the president of the Merchants Conference, the is more than enough sugar. But that only deepe the mystery of rising prices.

Cane Price Raised

At Madras last week and also in Kanpur, M Patil referred to his plan for raising the produ tion of food, including sugar. He said that aims at increasing sugar output in the first ye of the third plan to 2.2 million tons and in t next year to 2.5 million tons, until a target 3.5 million tons has been reached at the end the plan. The main problem is how the increa is to be achieved. The director of the Natior Sugar Institute in Kanpur, Mr. S. N. Gundur has spoken of the impressive contribution ma by technological research to the sugar indust but it appears that, by and large, progress in Inc depends not so much on the factories as on t farms. Some claim that the technical efficien of sugar mills, as judged by the percentages recovery, stands comparison with that of mills other sugar-producing countries. Others strong doubt if this is true. According to the secreta of the Indian Sugar Mills Association, "the reduc overall recovery for Indian factories in 1955 was 85.15 percent, and this compares with Sou Africa's 83.70 percent, Mauritius's 83.90 perce Java's 83.33 percent and the Philippines's 84 percent." From this, it is argued that the only w to increase sugar production is to produce mc cane or the same cane with greater sucrose conte

Mr. Patil referred with disapproval to St Legislatures having placed him in an embarrassi position by supporting the demand for higher ca prices. The demand has been supported by t Joint Sugar Control Board for U.P. and Bihar a paradoxically, even by the committee of the Indi Sugar Mills Association. Accordingly, the Gove ment of India has decided that from 25th Octob 1959, the minimum sugarcane price will be rais from Rs. 1.44 to Rs. 1.62 a maund for delivery the gate of the factory, and from Rs. 1.31 to Rs. 1 a maund for delivery at purchasing centres c nected by rail, for the 1959-60 season's crop. T Government has also decided to grant factories rebate of 50 percent in the basic excise du which at present is Rs. 11.25 a cwt., on all sug produced during the 1959-60 season in excess their average production in the two seasons, 1957 and 1958-59. In the case of factories which we into production only in the 1957-58 season thereafter, or other factories which for spec reasons did not function during 1957-58 and 1958-59, the basis on which the rebate will allowed will be considered on merits. The decisi to increase the cane price is deplorable. It w raise the cost of sugar at a time when it is alrea far too expensive.

Madras Aluminium Project

The Madras Government is trying to speed the framing of the aluminium project in Sal with a view to using the local bauxite resourc A committee of industrialists reported favoura in July on the feasibility of the scheme, noti that cheap power is available in plenty in t area. The State Minister for Industries mis soon tell the Assembly when and where the p ject will be started; it is presumed that Met is likely to be chosen. The Madras Governme it is expected, will take shares in the propos aluminium company, and the Montecatini int ests might also participate in it. The initial idea to start a plant with a production capacity of 10, tons and it is said that the supply of foreign change will not present a difficult problem d to the Italian collaboration. It will be recall that an Italian concern provided assistance fo new viscose rayon mill in Coimbatore.

Sale of Sugar Factory

The announcement by the Visakhapatn Sugars and Refinery Company that it intends sell its factory in Thummapala to the Anakapa Co-operative Society has not caused any surpri The company has not paid a dividend since 19 it originally bought the sugar mill in 1942 fron co-operative undertaking. During the war, operations were satisfactory because its distill made some profits. But for a long period the after, the company was unable to earn pro whereas other concerns, such as Jeypore Sug showed good results due to the growing dema for sugar. Visakhapatnam Sugars has stated t over a number of years, the supply of cane been inadequate and irregular, and the sale existing assets for Rs. 29.01 lakhs will ben shareholders. The co-operative society will g in being able to buy the company's plant a lower price, but Anakapalle is a major centre the jaggery trade, so a steady diversion of c

to the mill must be achieved. The mill is expected to show better results if canegrowers agree to become its shareholders.

Jay Engineering Earns More

The profits, before tax, of Jay Engineering Works Ltd for the year ended 31st March, 1959, amounted to Rs. 44,22,192, against Rs. 38,52,326 during the previous year, while its sales increased to Rs. 5,33,24,107, from Rs. 4,71,60,120. Although the company has had to face stiff competition from Japan and other countries in exporting its sewing machines and fans, the value of its exports increased to Rs. 45,10,776 from Rs. 24,96,270, or a rise of over 80 percent. Speaking at the annual general meeting last week, Sir Shri Ram, chairman, said that the company has been able to produce air circulators of "good quality and performance". (A fuller version of the speech appears elsewhere in this week's issue of *Capital.)* The prototypes for exhaust fans are ready, and will be put on the market early next year, if not during the current year. The production of zig-zag machines could not be taken up, since the staff has been busy "with designing and producing the new type of streamlined machines specially for the American market." The first lot of these machines will be despatched by the end of this month.

The company has brought down the price of its sewing machines from Rs. 220 to Rs. 160 in three stages, but finds it difficult to reduce the price further. The chairman said that the high prices of foodstuffs and other articles of consumption leave very little margin for poor tailors and middleclass housewives (who are the company's biggest customers) to buy sewing machines. Furthermore, sewing machines can be used only if there is cloth to sew. As long as the consumption of cloth was going up, the company's sales of these machines were also rising. "Now that the cloth consumption has become static, so has the sale of machines, and we are finding a little buyers' resistance, which can be well appreciated." A beginning has been made in selling sewing machines on a hire-purchase basis, and this is gradually catching on. Referring to the outlook, Sir Shri Ram said that while every effort is being made to bring down the cost of production without affecting the income of workers on the one hand and the quality of machines on the other, he could not say definitely whether the company would be able to sell all its products, even at the present low price, because there is consumer resistance. If it is compelled to reduce the price further, "it will certainly affect very highly the limited profits that we have made this year," the chairman said.

Exporting More Salt

The State Trading Corporation is said to be keen on increasing India's salt exports. In view of the decline in sales abroad during the last two years, a delegation is being sent to Japan to survey the possibilities. It has long been said that Tuticorin has salt to spare, since the trade with West Bengal has languished. But the growth of unlicensed salt manufacture, which is not subject to the cess, has created difficulties for organised manufacturers. Production in Tuticorin is not affected much by the monsoon, and it is claimed that that Centre alone can ship 300,000 tons of salt a year. The proposed visit of the Indian delegation may help Indian traders to increase exports although fish-curing already ensures large sales at home. The State Trading Corporation, at the coming talks in Tokyo, is also expected to discuss India's trade with Japan in mineral ores. It has been urged that Tuticorin port must be improved before a large trade in bulk cargo can develop. Local interests are, therefore, likely to press for the early development of a major port in that area.

Appointing Managing Agents

On the advice of the Company Law Advisory Commission, the Government of India has decided that the remuneration of managing agents and secretaries and treasurers should ordinarily be fixed according to a sliding scale of commission based on the net profits of the managed companies. Under the Companies Act, 1956, the Government has to satisfy itself that the conditions of the agreement to be entered into between the managed company and the managing agents or secretaries and treasurers are fair and reasonable. While considering applications, therefore, the Government has to determine what would be a fair and reasonable remuneration and tenure within the maxima permissible under the Act in the circumstances of each case. This matter was recently given careful consideration, and the Government has fixed the remuneration and tenure for managing agents or secretaries and treasurers.

The scale of commission for managing agents will be 10 percent on the first Rs. 10 lakhs or fraction thereof, 9 percent on the next Rs. 10 lakhs or fraction thereof, 8 percent on the next Rs. 10 lakhs or fraction thereof, 7 percent on the next Rs. 10 lakhs or fraction thereof, 6 percent on the next Rs. 10 lakhs or fraction thereof, 5½ percent on the next Rs. 25 lakhs or fraction thereof, 5 percent on the next Rs. 25 lakhs or fraction thereof and 4 percent on any sum over Rs. 1 crore. The scale of commission for secretaries and treasurers will be 7½ percent on the first Rs. 10 lakhs or fraction thereof, 6¾ percent on the next Rs. 10 lakhs or fraction thereof, 6 percent on the next Rs. 10 lakhs or fraction thereof, 5¼ percent on the next Rs. 10 lakhs or fraction thereof, 4½ percent on the next Rs. 10 lakhs or fraction thereof, 4⅛ percent on the next Rs. 25 lakhs or fraction thereof, 3¾ percent on the next Rs 25 lakhs or fraction thereof and 3 percent on any sum over Rs. 1 crore. The Government has also decided, on the advice of the Commission, that the term of office should ordinarily be ten years when a company appoints managing agents or secretaries and treasurers for the first time, and five years on reappointment or successive appointments. These decisions have been enforced and the Department of Company Law Administration has already decided as many as 70 applications on this basis.

Under the Companies Act, companies seeking Government approval for the appointment or reappointment of managing directors, managing agents and secretaries and treasurers have to furnish particulars as prescribed in the Company (Central Government's) General Rules and Forms. The Government has now revised the form of application to be filled by companies for such approval, and asked them to furnish additional information containing fuller particulars of the persons or bodies proposed for appointment as managing directors, managing agents, etcetera. Under the revised procedure, companies have to furnish details about the nature of services, managerial or otherwise, rendered or proposed to be rendered by the managing agents and others who are to be appointed. Details of any loans advanced by the managing agents to the company and the interest charged on them are also to be furnished. Companies are required to send to the Registrar of Companies copies of the notice published by them in the newspapers about their applications, along with all the material particulars. Such notices, when concerning changes in the constitution of the managing agents or of the secretaries and treasurers, if issued to members of the agency companies, have to be addressed to the members of the managed companies as well. Persons having any objection to the company's proposal may communicate it in writing to the Central Government within 30 days of the publication of the notice. Companies are also required to forward to the Government seven copies of their applications and of all the documents accompanying it.

U.K. Capital for the Commonwealth

The total flow of capital from the United Kingdom to the sterling Commonwealth has averaged more than £200 million annually in recent years, and to the whole Commonwealth it has been some £240 million a year (excluding payments of special Canadian loans). These facts are given in the October issue of the *Bulletin for Industry*, published last Friday by the Treasury in London. New figures are given in the *Bulletin* for the period from 1954 to the first half of this year, showing that U.K. public investment in the sterling Commonwealth averaged about £88 million a year, which yields a combined total for public and private investment of more than £200 million a year (over 1 percent of the U.K. national income). Britain, the *Bulletin* says, is the only net exporter of capital in the Commonwealth, and funds flow in three main ways. First, there is a great deal of British private investment in all Commonwealth countries. Second, the U.K. Government has made, and is making, grants and loans to Commonwealth Governments. Third, there are U.K. Government repayments of capital, and payments of interest on special loans made to Britain during and after the Second World War (the only Commonwealth country to which this applies is Canada, and the figure has averaged about £20 million a year in recent years).

The *Bulletin* says that perhaps the most significant feature is the tendency for the flow of Government funds to increase. At the Commonwealth Trade and Economic Conference in Montreal in September 1958, the U.K announced a system of Commonwealth assistance loans both for independent Commonwealth countries and for the colonies. The aim of these new loans is to help less developed countries, and those newly becoming independent, which have not had the time to establish their credit as firmly as would be needed to borrow successfully in the London or other world markets. Discussions so far between the U.K. and Commonwealth Government borrowers, says the *Bulletin*, suggest that the arrangements will help to fill a real need. As for Exchequer loans to the colonies, the British Parliament has authorised the approval of loans up to a total of £25 million each year in the period 1959-64, with a maximum of £100 million over the five years as a whole. The Colonial Development and Welfare Acts have also been extended for a further four years and provide an additional £95 million, making £139 million available for the period 1959-64.

World Bank Loans

The World Bank has become a major source of capital for the under-developed countries. Not only has it steadily extended its area of operations over the past few years; the loans are being granted for a wider variety of purposes, although still mostly to build the infra-structure of the borrowing economies. The fourth annual report which the President, Mr. E. Black, submitted to the Board of Governors at their recent meeting in Washington, shows that loans made in the year ended 30th June, 1959, totalled $703 million, compared with an average of $400 million a year advanced from 1954 to 1957. The total of the loans granted in 1957-58 was, however, slightly higher at $711 million. The report concludes that the high levels of lending in the past two years indicate a permanent trend in the Bank's operations. These, together with the inflow of around $5 billion in 1958 of public and private capital from the richer countries to the less developed areas, indicate that the latter have received substantial external assistance. The prospects should be better with the end of the recession in the United States and Western Europe and the increase in the authorised capital of the Bank. The report says: "There are some developments in the world economic scene which point to a more favourable general outlook for the immediate future, the most important being the recovery of the industrial countries from the recession of 1957-58, and the strengthening of demand for primary products which should result. In particular, the substantial improvement of the external financial situation of the countries of western Europe gives hope that they will be able to provide both a growing market for primary products and significant financing for economic growth in the less developed countries." The development process in the poorer countries will be further assisted by the new international arrangements such as the United Nations Special Fund and the European Investment Bank, and also by such projects as the Arab Financial Institution for Economic Development, the Inter-American Development Bank and the International Development Association. The charter for the A.F.I.E.D. was approved last January, that for the Inter-American Bank was approved in April, and the I.D.A. is still the subject of discussions between the United States and other Governments.

Of the year's loans, $354 million, or a little over half, went to Asia. India was the largest single borrowing country, with $135 million for power and railways. Latin America received $136.5 million, Africa $102 million and Europe $102 million. Malaya and the Sudan were among the countries which borrowed for the first time. The pattern of lending showed the usual emphasis on strengthening basic services. Electric power development took first place (it was tansport in the previous year), accounting for $294 million of the total. These power loans will assist in the installation of 2.5 million kilowatts of new generating capacity in 11 member countries, including Austria, Brazil, Ceylon, India, Italy, Japan and Malaya. Transport loans totalled $257.2 million, the bulk

We always use WHEEL BRAND Industrial glycerine

It's guaranteed to contain 98% glycerol

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine — because it is of an *unvarying* high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

In textiles, dyeing and printing, paints, varnishes and lacquers, plastics, leather, rubber and glass... in these and other industries, WHEEL BRAND GLYCERINE is used, and has been used for *years*.

Remember, PYRAMID BRAND GLYCERINE B.P. also has many uses in the industry as well as medicinal and domestic uses! Write for a *free* leaflet about its various uses in the home to: HINDUSTAN LEVER LTD, P. O. Box No. 409, Bombay 1.

DISTRIBUTORS: Imperial Chemical Industries (India) Private Limited

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION AND TEAL

of which went to railway improvement, including $85 million for India. A road loan amounting to $72 million was granted to Iran, the largest the Bank has yet given for this purpose. Industry received $149 million, largely for steel, paper and mining. Three major private steel producers in Japan were granted a loan of $65 million; the chemical pulp and newsprint industry in Finland received a loan of $37 million; and one was granted for the development of the chemical industry in Sicily. The only agricultural project financed directly with a Bank loan was a Costa Rican one to import equipment for farming and light industry.

I.F.C. Invests More

The International Finance Corporation, an affiliate of the World Bank, says in its third annual report that during the year ended 30th June, 1959, it entered into 13 commitments totalling $10.4 million for projects located in ten countries. This brings the total number of commitments since its inception to 22, for projects in 11 countries, involving a sum of $19.8 million. Of the new investments during the year under report, two were in India—one of $850,000 in Kirloskar Oil Engines Ltd, a diesel engine manufacturing company in Poona, and another of $1.5 million in the Republic Forge Company Ltd, a new company formed near Hyderabad to run a steel forging plant. A sum of $750,000 was invested in Adamjee Industries Ltd of Pakistan. Other private concerns in which the Corporation invested its funds include an Australian company manufacturing industrial, motor-vehicle, aircraft and rubber components, a bleached sulphate wood pulp producing concern and a cement manufacturing company in Brazil, a copper mining enterprise and a macaroni producer in Chile, a Colombian company engaged in the production of wood fibreboard and acoustical products, a textile concern in El Salvador, a Guatemalan company producing fine white flour, an Iranian ceramic tile producer and a cement manufacturing concern in Thailand.

Explaining the investment policy, the report says that the Corporation has been created to deal exclusively with private enterprise. It is an investing rather than a lending institution, although under its charter it cannot invest in capital stock or shares. Its investments are not conventional fixed-interest loans; they combine certain features of both debt and equity, thus containing elements of venture capital. They are longer-term loans carrying interest and some right to share in the profits and growth of the business. Such shares may take the form of a right to some income related to earnings, or an option to subscribe to share capital, and frequently a combination of the two. Conversion and option rights cannot be exercised by the I.F.C., but they can be sold to private investors. The Corporation does not have a standard rate of interest—the rate is only one feature of the investment terms, which are matters for negotiation to suit the circumstances of each case. The I.F.C. makes its investments after considering the earning power and it feels that a balanced capital structure is more important than a lien or mortgage on assets. Generally an I.F.C. investment does not exceed $2 million or $3 million, although investments of less than $100,000 are not ordinarily considered. Larger ones are considered in special cases, particularly where its participation helps attract additional private capital. It does not finance more than half the total cost of an enterprise, taking into account the funds already invested.

Smaller Order-books for U.K. Shipyards

The output of U.K. shipyards still shows a declining trend due to the lack of orders on the one hand and the postponement of construction work by shipowners on the other. The industry has taken up the backlog of work since virtually no new orders are being placed with it. Furthermore, shipowners now show a tendency to postpone the building of tonnage until there is a recovery in the freight markets. The latest issue of Lloyd's Register of Shipping, which contains figures on merchant shipbuilding for the third quarter of the current year, shows that steamships and motorships under construction at the end of September this year totalled 292 ships of 2,097,764 gross tons—an increase of 64,019 tons compared with the previous quarter. But the total now under construction is the lowest since June 1957, and "the current increase", Lloyd's Register says, "is due to a low figure of completions rather than a high figure of tonnage commenced." Fluctuations are accepted as part of the general pattern of shipbuilding figures, but a period analysis now will indicate a trend towards lower output. "For some years, the annual tonnage launched has been steady at about 1,400,000 tons. During the past 12 months, completions reached 1,422,000 tons; but launchings fell to 1,313,000 tons, and the tonnage commenced during the same period was only 1,184,000 tons."

From a peak of 7 million gross tons in mid-1957, the order-books of U.K. shipyards have fallen steadily to the present level of 514 ships, aggregating 4,473,000 gross tons. This still represents two to three years' work. But the difficulty is that the business is not evenly spread, and a large number of small and medium-sized shipyards have reached or are within sight of the end of their order-books. With no prospect of receiving fresh orders, they have had to operate at well below their capacity by spreading their construction work over a longer period. Furthermore, Britain continues to be a net importer of new shipping on the basis of tonnage under construction. At the end of September, 368,735 tons were being built abroad for British shipowners. Lloyd's Register states that Japan, Sweden, France, Norway, Canada, Spain, Poland and Finland have registered an increase in tonnage under construction. In terms of tonnage completed during the third quarter of the current year, Japan still occupies first place, followed by West Germany and the U.K.

Street Delivery by Railways

The street delivery and collection scheme was inaugurated in Kanpur last week by the Northern Railway. Under the scheme, if goods are addressed to a particular person and not to oneself, they will be taken to the address given on the package, irrespective of whether the sender desires to avail himself of the home delivery facility. The additional charge and the octroi duty will be collected by the railway agents. For areas within one mile radius of Kanpur, parcels and goods weighing up to one maund will be collected or delivered at a charge of 19nP and 15nP, respectively. The charges go up with the distance, but there is a ceiling of 31nP per maund for packages booked by goods train and 37nP for those booked by passenger train. The scheme will be welcomed, particularly by small industrial and business units. The bigger units in Kanpur have, of course, long enjoyed the benefit of door-to-door collection and delivery. Inaugurating the scheme, the Chief Commercial Superintendent of the Northern Railway, Mr. B. T. Singh, made a rather elaborate reference to the competition offered by road transport. He said that while the railways accept coal, pig iron and such other essential raw materials known as low-class traffic, road operators accept only high-class traffic like cotton and cotton textiles. In other words, he implied that there can be no comparison between the services rendered by the railways and by road transport. In an effort to show that nothing could be further from the mind of the railway administration, he pointed out that the home delivery scheme was in force in Madras even ten years ago when there was no talk at all of competition from road transport. Competition in service, however, is a good thing, and even if the door delivery scheme in Kanpur has been introduced to meet road competition, there is no need to be apologetic about it. The railways still have to ensure that they will move the goods speedily and be less indolent in meeting claims for loss or damage.

Unused Irrigation Facilities

Shahjahanpur in Uttar Pradesh seems to provide a remarkable example of the way in which a district ought not to be "developed". Accordingly, the Planning Commission and the Central Labour Ministry have asked other State Governments to note the lessons yielded by a pilot survey of the district. In Shahjahanpur, it has been noticed that the benefits derived from new irrigation projects remain small. Although 55 tubewells with a total irrigation potential of 25,000 acres have been constructed, the actual irrigated area is only 433 acres. Neither the Agriculture Department nor the Co-operative Department have made any effort to help cultivators use the irrigation potential. The rural electrification programme has not been linked with the programme of industrialisation, and new connections continue to be refused. The industrial programme, or that part of it which could be implemented, has not reduced unemployment much.

While the problem of unemployment is national in its dimensions, almost any district in Uttar Pradesh is a revealing specimen of unused irrigation. A recent newspaper report went so far as to say that instead of the tubewell operator being the most respected man in drought-affected areas, he is actually the most hated. It is not as if in every case the cultivator is reluctant to draw water after paying for it. Very often the tubewell operator deliberately delays supplies until the cultivators go down on their knees before him. Irrigation officials have been accused of ensconcing themselves in luxurious bungalows even before the projects have been commissioned. The average construction cost of a tubewell in U.P. is estimated at Rs. 40,000. Another Rs. 10,000 to Rs. 30,000 is spent on transmission lines, and there is also a large and expensive staff to be maintained. The optimum discharge of water is 30,000 gallons an hour. The overhead costs have clearly proved to be uneconomic, but it is by no means certain that the agitation in favour of smaller tubewells at smaller cost started by Mr. Charan Singh, a former Agriculture Minister, will gather much momentum. It is said that apart from the bureaucrats' bias in favour of bigger projects, irrigation officials have a vested interest in them in view of the bigger promotions they bring.

Large Land Holdings Act

A full bench of the Allahabad High Court has held that the U.P. Large Land Holdings Act of 1937 is *intra vires* of the State Legislature. The Act lays down that a person having a small area of land has to pay a proportionately small amount of tax, but if the same land is held by another person who already owns a vast area of land, the small portion will also be assessed at the higher rate. The Act was challenged on the grounds that the tax is on the capitalised values of the land and that its incidence is so heavy as to be confiscatory. The court has held that the levy under the Act is clearly a tax on holdings and not on annual value, and that the annual value of the land is only a measure of the tax. The judgment says that the principle of progressive taxation, as distinguished from equal taxation, is now accepted everywhere. In the present case, the tax is on land but the scale is a progressive one; it is based not on the principle of equal tax on all persons but on the principle of tax according to the paying capacity of a person. Land tax on a progressive scale has been introduced in countries like Australia.

Holding that the tax is a tax on land and not land revenue, their lordships observe that if the legislature does not think it proper to tax non-agricultural land but only agricultural land, the Act cannot be said to be discriminatory. They are also of the opinion that the State Legislature is fully competent to pass the Act because of entry No. 49 in the State List. There is no other entry in any of the three lists which gives the power to tax land. A glance at the various entries in the three lists shows that the right to impose a tax on land has been allotted to the State Legislature. Since the tax is a tax on land, and not on the annual value or capitalised value of the land, it is within the competence of the State Legislature to pass the Act.

Physical Fitness Tests

A curious reason was given in the Uttar Pradesh Assembly by the Minister for Agriculture to explain why in last November's recruitment to the posts of livestock supervisors matriculates were preferred to degree holders. He said that "sturdy men" were required for the job, and matriculates were found to be more sturdy than graduates. The Opposition contends that unless there is something debilitating about getting a degree, the Minister should have known that a graduate, being closer to the stage of life called "youth", is likely to be a sturdier fellow than the matriculate who is in his teens. However, the Central Education Ministry's decision to institute a scheme for precise and carefully graded "national physical efficiency tests" does not necessarily seem to be the best for combating the debilitating effects of college education. The award of up to three stars for the best physique cannot alone produce fitness among students, who are victims not only of malnutrition but also of an acute dearth of playgrounds. The University Education Commission pointed out how the professional status and pay of physical education personnel have not been put on par with academic instruction, and how in some universities the secretary of the union is called upon to function as director of physical education. During the last 20 years, about 3,000 physical education teachers have been trained in the existing institutes, but very few of them are capable of doing the service required at the university level. The Commission wrote: "A Director of Physical Education at the university level should be equipped with the Ph.D. in Physical Education or should be a Doctor of Medicine with special training." But the danger is that by the time a man gets his M.D. or Ph.D., he may become a physical wreck, if the U.P. Minister's hunch about degree-holders is correct. An alternative suggestion, highly commended by the Commission, is that some of the existing staff should be trained for a dual function—teaching an academic subject and physical education. The arrangement would be economical. Until some such system is evolved, the Central Education Ministry might be well advised to go slow with the manufacture of three star-badges on a mass scale.

"CAPITAL" CHRISTMAS TOY FUND
