An international trade fair will be held in Brno, Czechoslovakia, from 6th September to 20th September, 1959. Over 30 countries will display their products, and the total covered area will be 65,000 square metres. Exhibitors from all parts of the world will show engineering and metallurgical products, raw materials and semi-finished products required by the engineering industry, as well as some consumer goods. Czechoslovakia alone will display some 2,700 items, including products of heavy and precision engineering, rail and road vehicles, machine tools and aircraft. Among the wellknown engineering enterprises in that country which will participate in the exhibition are the Skoda Works of Plzen, the Vitkovice Iron and Steel Works of Klement Gottwald, the Tatra Works of Koprivnice, and the Sigma Works of Lutin.

JOINT-STOCK COMPANIES

WE observe that 705 joint-stock companies were working in Bengal on March 31st, 1898, of which 39 were limited by guarantee, that is possessed no capital paid up. During the year ended 31st March 1899, 23 new companies were registered, of which 21 had a capital of Rs. 45,22,500 and two were limited by guarantee. 236 companies ceased to work, of which 200 represented a paid-up capital of Rs. 37,28,534, and 36 were guarantee companies. On the 31st March 1899, 487 companies were at work with a paid-up capital of Rs. 14,98,43,508, and 5 companies were guarantee. There were very few really new companies registered during the year, but the following is a statement :—

		Rs.
Pabna Model Company Limited (Bank)	...	1,00,000
Sayerbakhda Krisi Fund Sahayya Co. Ltd. (Insurance)	...	5,000
4 Trading Companies	...	54,000
2 Co-operative Businesses	...	2,00,000
1 Cotton Mill ...	...	9,00,000
6 Tea and Indigo Companies	...	12,42,500
5 Coal Companies ...	...	14,35,000
1 Lime Company ...	...	1,00,000

The companies that have ceased to work are 2 Indian banks, 189 Indian insurance companies, 3 trading companies, 2 mills and presses, 24 tea and planting companies (these were mainly the results of amalgamations, etc.), 4 coal companies and 3 manufacturing concerns. We are glad to see that these bogus insurance companies are coming to an end, and no doubt the action of the Government has borne fruit.

Without Prejudice

Lay Lawyer Wins at Lords

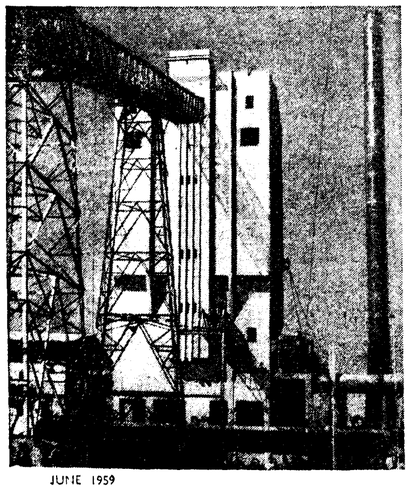
(FROM OUR LEGAL CORRESPONDENT)

THE name "Lieutenant-Colonel Wintle" may ring a bell in the reader's mind, as it did recently in the writer's, as to an incident which happened a couple of years or so ago and which, when reported in the Press, caused a good deal of sardonic amusement mixed with sympathy not only for the gentleman Colonel Wintle assaulted but for the colonel himself. You may remember that Colonel Wintle, a retired regular officer with a distinguished record, called on a somewhat elderly and highly respectable solicitor, secured admission to him by representing himself as a member of the peerage, and then and there "debagged" the lawyer and then set him loose in that state. For this lamentable proceeding, the colonel was prosecuted for assault. In court, he was invited to apologise. If he had done so, he would probably have got off with a substantial fine. But, "Certainly not", he replied with much satisfaction, and, rather than do so, went cheerfully to jail, with, if one remembers aright, the smart sentence of six months' imprisonment.

Now the gallant officer is in the news again in a manner which will enshrine his name in perpetuity in the law reports of his country in a case of importance to doctors, nurses, clergymen and professional people in general, especially lawyers who, while standing in a fiduciary relationship to others, benefit under their wills. It will be a leading case and constitutes a warning to these people who, acting with perfect honesty and propriety, nevertheless may find themselves faced with a strong presumption that they have exercised undue influence over the testator in cases where the professional person himself prepares the will under which he himself benefits. Of course, we all know that when a man makes his will, he must be what the law calls of "sound disposing mind", that is, that he knew what he was doing, had himself instructed it to be done, and approved of it when it was done. A solicitor, say, prepares a will for a wealthy client and under it he, the solicitor, is left £500; or a grateful patient *in extremis* asks his physician to draw up a short codicil to his existing will by which the doctor receives a fairly handsome legacy. We knew that the draftsman of the will should take care—as should, in fact, be done in the case of all wills—that respectable independent witnesses should attest the will, who would be prepared to swear later that the testator knew what he was about.

Obviously, it is idle to argue about a House of Lords decision. It is absolutely final. But what we did not know—and what, apparently, the High Court and later the Court of Appeal did not know in this case—is that the mere fact that the beneficiary lawyer or medical man or nurse or priest prepared the document in itself raises a suspicion against him which may be fatal. Said Viscount Simonds in the House of Lords (the other Law Lords concurring): "The onus is on the solicitor or other person who has prepared a will under which he takes a benefit to remove the suspicion created by that fact." That is a hard saying. It goes further than any other reported judicial dictum on the subject that the writer has hitherto read. It implies that, although a man's solicitor may be his best and life-long friend, if he employs that solicitor to prepare his will which includes a bequest to the solicitor, the law presumes the transaction to be a shady one concerning that particular quest; a shady one, moreover, brought about the lawyer who therefore is himself, by impl tion, responsible for a wrongful act. True i the presumption may be rebutted by evide But the point is that if the validity of the beq is contested after the testator's death, the solic will have to produce that evidence, and it is always easy when a man is no longer alive to so to prove that the man meant what he said w the law presumes that he did not.

But we have not yet summarised the fact this particular case. The testatrix was a l She was elderly and unversed in business. solicitor, a gentleman of standing in his profes was also a trusted personal friend of the lady. instructed him to prepare her will. Under it, major benefit was taken by the solicitor. He drafted the will and later a codicil which had effect of further benefiting him. The docum were duly signed and witnessed and probat them was applied for. The short report in *Notes* is silent on the point but, if we remem rightly, the lady was Colonel Wintle's sister; if are wrong as to this, we apologise to him in adva At any rate, the colonel contested the will. only issue raised in the case and the questions the jury at the trial were whether the testa knew and approved of the contents of the will codicil. The jury found that she did and on t verdict the judge, Bernard J., gave judgment holding the will. This means—and you will the important fact—that when for the first only time in the successive stages of this case, solicitor-legatee had the opportunity of having conduct sifted before 12 of his fellow-countryr the jury found and the judge agreed with t that that conduct was not blameworthy. That the implication of their verdict that the will codicil were valid and in order. But Col Wintle, a determined character if ever there one, was not satisfied. Saying that Barnard J. the jury misdirected, as he claimed, by his lords were wrong, the colonel took the case to the C of Appeal (Hodson, Morris and Sellers L.JJ.). Court of Appeal held that the trial judge and jury were not wrong and upheld the will codicil again.



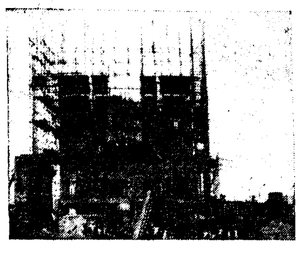
And then followed a development which writer believes to be entirely without preceden the annals of British jurisprudence. It indic that this distinguished military officer might h been a great advocate.

We have all heard the old adage—and a true one it is, generally speaking—that the man acts as his own lawyer has a fool for a client. the same, there are exceptions. There was H tio Bottomley, M.P., proprietor of *John Bull* style) and financial crook *par excellence*, who in and out of the courts all his life and disda all lawyers simply because he knew more law possessed more forensic ability than any of th He was the greatest lay advocate of them all; others come to mind: Noel Pomberton-Billing, for Hertford, an eccentric airman always libel others, defending himself in person and get away with it; R. S. Sievier, owner of the *Pink* and racing sharp; W. T. Stead, puritan editor of *Review of Reviews;* Henry Labouchere, M.P. *Truth*, etcetera. But in the whole history of law courts, the writer believes that there never been a case, till this one, where a litigant, being himself a lawyer, having lost before a ju and a jury of his fellow countrymen in the H Court and having lost again on appeal before Lord Justices in the Court of Appeal, has ta the case on further appeal to the House of L and there, after dispensing with the assistanc his counsel and solicitors, has conducted his ap in person *and won it.*

Colonel Wintle disproved the truth of the ad Acting as his own lawyer, he had neither a for his client nor a fool for his advocate. House of Lords (Viscount Simons, Lords F Tucker, Keith of Avonholm and Birkett) set a the verdict of the jury upholding the will, and judgment of the Court of Appeal upholding jury's verdict. "The onus," said the House of Lo "was on the solicitor or other person who had pared the will under which he took a benefi remove the suspicion created by that fact..... circumstances were such as to impose on the citor or other person as heavy a burden as can be imagined" (Viscount Simons). The facts dem ed "a vigilant and jealous scrutiny by the ju in his summing up" but the summing up fell s of what the law required. "Suspicion create that fact"; "As heavy a burden as can wel imagined." Hard words these. Harder than we have hitherto read on the law of wills. It l as if a solicitor whose client, an old friend, wi to leave him a legacy had better not prepare will himself but would be well advised to send client to some other lawyer of the client's choosing; which to the writer is an eye-ope And the colonel-advocate should go to the Bar.

[*Wintle* v *Nye* 1959). 103. *Solicitors Jou* 220. 78 *Law Notes*, 82.]

A MIGHTY STEELWORKS IS RAPIDLY TAKING SHAPE AT DURGAPUR



Here is an illustration of one of the two 4000-ton coal bunkers completed by Simon-Carves. Coal from this 166 feet high reinforced concrete bunker will be fed to the coke oven batteries for carbonisation.

A Ditcher's Diary

AT LEAST ORDINARY NEWSPAPER READERS WILL BE happy that the long-drawn Kerala affair is at last over and done with. It was getting tiresome. As for the conclusion, none had expected any other: the only thing to be happy about is that nobody is wholly happy. And there is every reason for being unhappy. Although it is possible there are worse governments in India than the communist one in Kerala was, I cannot believe Mr. Namboodiripad was not in fact working towards communism all the time. How otherwise could he be the good communist everyone tells me he is? The opposition hardly had a case. It created chaos, quite unashamedly, then called on the Centre to restore law and order. There is something in the communist charge that the Congress High Command was a party to the defiance of the law in the State; the only extenuating circumstance is political expediency, which is that dissociation from the movement would probably have finished the Congress in Kerala, if not throughout south India, altogether. Mr. Nehru's dilemma was real, and he has perhaps got out of it with the least possible immediate injury to all concerned. He must know, however, that while he has ended a crisis the reasons that caused it all remain. Mrs. Indira Gandhi, who at so young an age was confronted with a problem that would have baffled many of her elders, has reiterated certain salutary principles; these may be forgotten, or be unenforceable, by the time the elections come round. There is a plausible argument that when you are fighting an unscrupulous adversary you had better not be too scrupulous yourself. I would agree if I did not know that jettisoning all principles does not ensure victory: or, when victory comes, it appears to have been bought at too high a price, the price being the objective of your victory itself. For the communists, President's rule may be very much a mixed curse, because their two-year record was unexciting even by bourgeois standards.

THE COMMUNISTS DO NOT SEEM TO BE TOO SURE of themselves either, even in West Bengal. Monday's demonstrations were impressive all right, but hereafter any movement will have to be on an issue other than Kerala—or the other Left parties will contract out of it. There is also a growing realisation among the people that, whatever else demonstrations achieve, food shops do not immediately overflow. It is obvious that the communists are hard up for a cause. I thought it was clever of a contemporary in Calcutta to argue that the Kerala Congress had made a mistake in drawing up a detailed charge-sheet. It would have been far easier to speak of a massive upsurge, of popular discontent; these are not so easily susceptible of ocular proof, and the popular will can be interpreted variously. By the same token, I think the communists of West Bengal are tactically in error in having produced specific charges which can be proved or disproved. If I am told that I am preferring vagueness to precision I would answer that I am. The real motives are known well enough, and few can have taken the charge-sheets seriously. They are decoys, ploys, gambits; the real fight is for power, as the opposition in Kerala made plain. Why the communists have resorted to the same subterfuge as the Congress in Kerala had to may have another explanation. The communists do not at the moment feel strong enough to challenge Dr. Roy, and who am I to say that this is a disaster for West Bengal? Writers' Building is said to be busy drafting a reply to the communist charges, which should not be too difficult a task. More important is the political aspect of the question, and here I have a feeling that perhaps in several States besides West Bengal the old leadership of the Congress is just not agile enough for the communists. In a report on Monday's demonstrations in Calcutta I read of "red flags and black heads". In a Congress procession the latter would almost certainly have been grey or silver white, and I would not call it a silver lining.

THE QUESTION WHETHER OR NOT NEWSPAPERS should be regarded by their owners as just another form of investment, and therefore be expected to yield maximum profits, has already been debated pretty well to a standstill. I think it is more or less agreed by now that they should not be so regarded, especially if they are influential ones, although I personally believe they must always be made to pay their way. The subject has cropped up again, I see, over the sale by Lord Kemsley of the *Sunday Times*, along with the rest of his Press empire. The buyer, Mr. Roy Thomson, already owns about 60 newspapers of various kinds in three different countries, all of which he operates entirely for profit—unlike his fellow Canadian, Lord Beaverbrook, who runs his for personal satisfaction, or even Lord Kemsley, who at least claimed to run the *Sunday Times* as a service to the public. The problem of Mr. Thomson's intentions would not be of such public importance if the *Sunday Times* itself were not a paper enjoying considerable prestige and influence in Britain today. I have just been reading the opinions of Mr. Francis Williams on the subject, in the 25th July issue of the *New Statesman*. He distinguishes three main reasons why a man should buy a newspaper such as the *Sunday Times*, or that other recent acquisition of Mr. Thomson's, the *Scotsman*. These are: the pursuit of power, the desire for prestige and, of course, the wish to make money. In Mr. William's view, Mr. Thomson's motives consist of the second and third of these, and largely because he has plenty of money-making newspapers already, chiefly the second. In fact, he predicts that Mr. Thomson will eventually take his predecessor's vacant chair as editor-in-chief. Until such time as the structure of their ownership makes it impossible for important papers to be bought and sold at all, I suppose this is the lesser evil. It has already been proved that newspapers are not nowadays the vehicles of personal power that they were in the days of Lord Northcliffe, and any attempt to use them as such is apt to rebound on the paper by killing its prestige and influence. When the position is reversed and a prominent individual ties his own reputation to the excellence of a newspaper, then the general effect can be expected to be more in the public interest. It will be interesting to see, should Mr. Thomson decide to do this, just how high he rates himself.

THE PICTURE OF A THIRSTY MR. KHRUSHCHEV being beaten in a race to drink his own whisky by his even thirstier Scottish hosts from whom he had just received a case of it as a gift, is such as to tickle the imagination even if it strains one's credulity. This must be the first time the redoubtable Russian leader has been known to miss a trick; although when it comes to any contest with the Scots involving their own national beverage, he is deserving of the greatest sympathy. It might be a gesture befitting the circumstances if the gift were renewed right away, if not indeed regularly, because the mellowing effects of the occasional peg of whisky, specially when paid for by somebody else, are such as to justify in Mr. Khrushchev's case, and purely as a contribution to international understanding, a generous subsidy from the Foreign Office. When telling this story to Mr. Nixon, Mr. K. is also reported to have remarked about the whisky he had just been offered: ". . . you Americans spoil it—there's more ice than whisky". And this is yet another of the many subjects on which he and I are in complete agreement. When I made my first serious contact with this least enviable aspect of the American way of life in Tokyo some time ago, I carried the scars for many months after and still have the receipted doctors' bills to remind me of them. Why the Americans should be so addicted to this dangerous habit I shall never know. In my humble opinion, spirits are meant to be served at room temperature, even if that is in the hundreds. Only wines and beer can stand cooling without losing their flavour. In American households before today I have even had to turn down brandy with ice in it—ice in brandy is just about as big a contradiction as lighting a fire in an air-conditioned room, except, of course, that it acts the other way round. I once asked a Russian in Moscow whether they ever thought of putting ice in the vodka. I did not catch what he said in reply, but I fancied from the look on his face that I had committed the kind of blunder which in Stalin's day would have landed me in the salt mines. What is more, I could see his point. I would suggest to the Americans, once again as a contribution to international understanding, that when Mr. Khrushchev visits their country they serve him the bourbon without the rocks.

A MOVEMENT IS UNDER WAY IN WASHINGTON, I see, to discontinue the use of the term "underdeveloped countries". It would have to come from Washington. The English language to the Americans, I always feel, is rather like women's fashions. Suddenly a word becomes the vogue, just like a new hemline. For a while it is on everybody's lips and, as with a new style, goes through many stages of development and meaning. Then just as suddenly it is discredited and disappears rapidly before the onslaught of a newcomer. What makes the analogy complete is that while fashions in words and gowns rise and fall, in the background there is a more slowly—though equally continuously—evolving body of words, or mode of dress, which provides the main stream of progress on which the ripples of fashion can ride. Why the Americans? Because the British are more conservative with their language I would say, and because jargon is still considered bad form. But perhaps that is why the development of modern, international English owes more to the Americans than it does to the British. What is to replace "under-developed countries"? Why, "developing" ones, of course. It is a matter of taste; but I suspect *Capital* will continue with "under-developed" for some time yet.

SHAW WALLACE & COMPANY LIMITED

CHAIRMAN, MR. S. M. SMITH'S REVIEW

The Thirteenth Annual General Meeting of the Members of the Shaw Wallace & Company Limited was held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on 3rd August, 1959.

In course of his speech the Chairman, Mr. S. M. Smith, said :—

The Accounts for the year 1958, which I am sure you will have read with considerable interest, reveal that your Company's operations have once again been on a satisfactory scale.

General comments on certain of our activities are as follows :—

FERTILISERS :

General—The year 1958 was one of considerable difficulty because of the restrictions imposed by the Government on imports of Nitrogenous Fertilisers, due to Exchange difficulties which are well-known.

The Organic Section of our business, much of which is based on our Dhanpa undertaking, has been reorganised and it is hoped that there will be further benefits accruing therefrom in the near future.

Superphosphates & Sulphuric Acid—The hopes expressed last year that the operations of the Superphosphate factory in Madras would be on a satisfactory basis proved correct. In this first full year of production output of Acid amounted to 7,396 tons and of Superphosphate to 23,839 tons as compared with 5,770 tons and 15,454 tons respectively in 1957, when operations started in May/June of that year.

The extensions to the factory briefly referred to in my Review last year are now well under way, but it is unlikely that substantially increased production will be obtained in 1959. A full year's production should, however, be obtained from the new plant in 1960 when it is expected that the total output will be raised to 60/70,000 tons of Superphosphates per annum.

Insecticides & Fungicides—Sustained sales efforts resulted in increased turnover in products manufactured by both Sandoz Products Private Limited, and Tata Fison Private Limited. These efforts are being stepped up and it is hoped that even more satisfactory results will be achieved in 1959.

Glue—During 1958 considerable development work was carried out the full benefits of which should start to be seen during the current year.

Calcutta and Madras combined production figures were :—

1958	1957	1956	1955
12495 cwts.	14225 cwts.	11688 cwts.	10615 cwts.

Your Company has acquired a fifty per cent Interest in Glue Products Private Limited of Cambay. Considerable preliminary work is being done, but it is hoped that this investment will give modest returns in due course.

Tea—Except in the Dooars, the Tea Companies in our Agency and Managing Agency had a reasonably successful year and as a result increased income was obtained from this source. 23,982 acres were under cultivation in 1958 and total crop amounted to 311,955 maunds of tea as compared with 24,355 acres and 302,964 maunds of tea in 1957.

For sometime past there have been difficulties over remittances of profit from Pakistan to India for Indian Rupee Companies whose estates are situated in the former country. No solution acceptable to both countries has yet been found.

Negotiations with and representations to both Governments continue, but unfortunately there are at present no indications of even a workable compromise being reached.

Tinplate Company—The Tinplate Company of India Private Limited, an important section of the Steel Industry of this country, and a vital Industrial Unit in the country's economy, has once again been prevented from playing its full part in that economy by causes entirely beyond its control. Owing to insufficient supplies of steel, the Company was obliged to work at 30% below capacity and in consequence there was a sharp fall in production. It is hoped that expansion measures undertaken by Tatas will result in adequate indigenous supplies being available during most of 1959. It is a sad commentary indeed, that the Tinplate Company, whose historic role it has been to serve India as the sole manufacturer of tinplate for 35 years should at this juncture in the Industrial development of this great sub-continent, be forced into such drastic curtailment.

Coal—Comparative figures of raisings and despatches of the three Coal Companies under our Managing Agency are as follows :—

	Raising tons	Despatches tons
1957	17,82,953	16,89 573
1958	18,96,928	18,53,957

The improvement in despatches is particularly noteworthy.

Flour—The two Mills in our Agency again had a successful year, and production and sales of wheat product each exceeded 12,97.000 maunds as compared with 12,34,000 maunds in 1957.

Shipping—Our income from Shipping fell during the year under review and this is a reflection of the general conditions prevailing in world freight markets.

Hides & Skins—As reported last year your Subsidiary Company, Madras Hide & Skin Exporters Private Limited, is now in voluntary liquidation and therefore the accounts for the year ended 31st December, 1958 have not been included in the consolidated Balance Sheet and Profit and Loss account of the Group.

Imports & Agencies—The import restrictions introduced by Government in 1957 to conserve foreign exchange resources remained in force throughout the year 1958 and continued to hamper our activities in this direction.

As Agents in Bombay, Calcutta and parts of South India for a group of producers of first class Steatite, we attained a very useful turnover in 1958. We hope this is only a beginning of more substantial and diversified trading in minerals both in India and for export.

Gunnies—In accordance with decisions previously recorded the volume of trading was sharply reduced in 1958 although the relatively small turnover achieved was reasonably profitable and satisfactory in the circumstances.

Wines & Spirits—We continued to be sole distributors for the products of the Bengal Distilleries Co. Private Limited, manufacturers of the well-known Hayward's Whisky, Brandy, Gin and other items. Sales of these products reached satisfactory levels and made a useful addition to the income derived from our agencies for imported wines and spirits.

You will notice that the accounts of the Bengal Distilleries Co Private Limited for the year ended 31-12-58 are being published with the rest of our accounts. The reason for this is that the Bengal Distilleries Co Private Limited, is deemed to be a subsidiary of your Company as at the 31st December, 1958 by virtue of our right to appoint Directors to the Board of that Company and not because of any financial interest held by us as at that date. A closer form of collaboration with the Bengal Distilleries Co. Private Limited has since been arranged.

Investments—The full details of the Company's investments are provided in the appropriate schedule attached to the accounts. A further Rs. 2 lakhs has been utilised from the 1958 profits to reduce the book value of investments. No addition is however, being made to the Investment Reserve as the present Reserve of Rs. 16 lakhs is deemed to be an adequate cushion against Stock Exchange fluctuations.

In my last Review I mentioned that we had made a substantial investment in Matheson Bosanquet & Co. Private Ltd. and Wallwood Plantations & Agency Private Ltd. I am pleased to say that both these Companies had a successful year in 1958 and reasonable dividends will be paid; these dividends however, will only appear in our 1959 accounts.

We increased our financial stake in Sandoz Products Private Limited with which Company we have always had very close ties. Sandoz Products Private Limited has commenced local manufacture of various pharmaceutical products and has plans for extending these operations in the near future. I am confident that our continued association with this Company will be increasingly valuable in the years to come.

Ceylon—Your Ceylon subsidiary operated under difficulty throughout 1958, as a result of the uncertain conditions that prevailed in the Island. It is our hope and belief that the present phase of political unrest will give way to more settled conditions. We have every confidence in the long term future of the country.

Early in 1959 Shaw Wallace & Hedges Limited acquired a controlling interest in Ceylon Potteries Limited, a Company which manufactures roofing tiles and stoneware pipes. Operations at Ceylon Potteries Limited continue at a satisfactory level and it is expected that this new investment will prove very satisfactory.

Pakistan—Trading was on a similar level as before although there was some reduction at Karach in Shipping income for reasons already mentioned.

General—I expressed the opinion, in my Review last year, that it was desirable to increase our stake in the Industrial development of India. This is still the opinion of your Directors and continuing steps to this end are being taken. Various schemes have been examined and several of them which show promise are still under consideration or in process of implementation.

Your Directors have for some time now been investigating the possibility of manufacturing Bakers' Yeast in India and I am pleased to report that a new Company is in process of formation for this purpose. This Company will be called The Indian Yeast Company Private Limited, and your Company will be majority shareholders. Most of the balance of the shares will be held by the Distillers Company Limited of the United Kingdom, whose collaboration in this venture has been secured. The Distillers Company Limited through their subsidiary, The United Yeast Company Limited, is the foremost manufacturer of Yeast in the United Kingdom and its products have always enjoyed a ready market in India and indeed in the majority of countries in the world.

The various projects and schemes mentioned above which we have in train and under investigation will make heavy demands upon your Company's resources. It is, therefore, of paramount importance that our resources should be conserved to the greatest possible extent, and with this object in view your Directors have placed Rs. 7.50 lakhs to General Reserve and recommend maintaining the Ordinary Dividend at the customary 10% free of tax. I am sure that the shareholders will approve this conservative policy in the long term interests of your Company.

I would like to close this Review with a reference to the Administrative Staff College at Hyderabad. Your Company is an Ordinary Member of the College and two of our Senior Assistants have completed the College course of three months. Your Directors are satisfied that the College provides administrative training of a very high order and it is our intention to continue availing ourselves of the facilities which it provides.

In conclusion our thanks for the encouraging results achieved are due to every member of the staff at Head Office, at our various Branches, and at the factories and depots throughout the country. Their support and loyalty has never been in doubt. Subordinate, clerical, factory and executive elements have all played their part, and their collective efforts have enabled your Company to record steady progress in its affairs.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

THE CALCUTTA MONEY MARKET

CALL RATE HARDENS

Wednesday, 5th August.

THE seasonal downward trend in advances continued last week in the Calcutta money market. Apart from the requirements of the jute mills, which were more or less unchanged, all the main sources of demand, including the sugar industry and requirements against grains and seeds storage, showed further declines. For the major part of the week, the interbank market continued to rule extremely easy. In the last two days, however, the trend has changed and the call rate has moved up steadily from last week's level of ¾ percent to 1¼ percent and even 1½ percent. Lenders have become extremely scarce.

Steady conditions persisted in the exchange market last week. Good business was done in both tea and gunny bills. Remittance was poor. In the face of end-month influences, the pound sterling has lost ground fractionally against the twin dollars and most important Continental currencies.

SILVER WAS STEADY ON BULL SUPPORT AND ADvanced from the previous week's level of Rs. 197 to Rs 197.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 196.87. The London and New York silver prices were shown at 78¼d and 91.375 cents.

In spite of a rise in silver, gold was quiet on lack of demand and the price fell from Rs. 121 to Rs. 120.50. The sovereign at Rs. 78.25 showed a loss of 25nP.

DURING THE WEEK ENDED 31ST JULY, GOVERNMENT of India Treasury bills for Rs. 1,86,76,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 3 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 4th August. The total amount offered was Rs. 4,05,00,000. Tenders at Rs. 99.375 were accepted in full and those at Rs. 99.370 allotted approximately 86 percent. the average rate of acceptance being Rs. 2.519 percent a year. Tenders for Rs. 3 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 10th August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 5th August to 8th August at Rs. 99.386 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 29th July to 1st August amounted to Rs 68,25,000.

DECLINES OF RS. 14.30 CRORES TO RS. 1 666.04 crores in active notes and of Rs. 8.23 crores to Rs. 1,696.85 crores in the total note issue were outstanding features of the return of the Reserve Bank of India for the week ended 31st July, 1959. The currency contraction was covered by reducing rupee securities by Rs. 9.71 crores to Rs. 1,276.13 crores. In the Banking Department, deposits of the Government of India declined by Rs. 4.46 crores to Rs. 60.16 crores and other Government accounts were Rs. 5.58 crores lower at Rs. 22.32 crores. Balances of commercial banks at Rs. 81.10 crores showed a decline of Rs. 8.85 crores. Balances held abroad again fell by Rs. 2.41 crores to Rs. 9.83 crores. Investments declined by Rs. 17.62 crores to Rs. 329.65 crores. Other loans and advances rose from Rs. 65.78 crores to Rs. 66.26 crores, of which there were no advances to scheduled banks against usance bills. Ways and means advances stood at Rs. 22.75 crores against Rs 22.11 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 24th July, 1959, shows a rise of Rs. 4.10 crores to Rs. 544.07 crores in total deposits. Investments in Government securities are up by Rs. 10.99 crores to Rs. 326.49 crores, while other authorised investments remain unchanged at Rs. 10.07 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 5.81 crores to Rs 177.99 crores. Cash and balances are, in consequence, shown at Rs. 35.74 crores or Rs. 4.78 crores less.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 7-8-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
7-8-59	8-11-59	3,00,00	Rs. 2.519%

GROWTH AND EFFICIENCY OF INDIAN INDUSTRY

WAGES INCREASE BUT PRODUCTIVITY FALLS

By S. G. Rao

INDIA has made considerable progress in recent years in her drive for large-scale and rapid industrialisation. The index of industrial production, base 1951 = 100, rose to 139.4 in 1958. The estimated income accruing in the factory establishments has increased from Rs. 550 crores or 6.3 percent of the national income in 1948-49 to Rs 950 crores or 8.4 percent of the national income in 1957-58 at current prices. It is, however, necessary and desirable to review this development in the light of certain important factors which affect it vitally.

It is generally agreed that there is no real economic prosperity without industry. Evidence of rapid industrialisation is, therefore, welcome. But several questions which have a vital bearing on industrial growth and efficiency at once arise. Is industrialisation resulting in sufficient employment? Is industrial productivity increasing? Is output rising with wages and salaries? Is capital getting its due return? And so on. Answers to such questions can only be given by intensive and detailed investigations in each case. It is necessary and important to make them, from the social as well as economic point of view, especially if waste is to be avoided and economy achieved in the process of industrialisation. It is not, however, the object of this brief article to make any such detailed investigation but only to highlight some of these aspects with reference to the recent overall industrial development.

Number of Factories Increases

According to the data available from the *Census of Manufactures*, between 1946 and 1956, the number of registered factories employing 20 or more workers on any working day with power, and engaged in 29 specified industries, increased from 5,013 to 7,778 (55 percent); the total productive capital from Rs. 367 crores to Rs. 969 crores (164 percent); the number of persons (workers and others) from 1,510,000 to 1,850,000 (23 percent); the total wage bill from Rs. 102 crores to Rs. 253 crores (148 percent); the value of output from Rs. 603 crores to Rs. 1,588 crores (163 percent); and the value added by manufacture from Rs. 211 crores to Rs. 457 crores (116 percent). Some of this increase between 1946 and 1956 may be attributed to the larger geographical coverage of the data in the latter year, ignoring the factor of inflation during the period affecting both input and output. Yet, the figures reflect notable industrial progress.

For a real and proper perspective, however, a closer look into the figures will be necessary. The essence of manufacturing activity is an increment in the value of commodities created in the process. It is the difference between what is consumed (input) and what is produced (output), or the "value added by manufacture". It is this value and its relationship to the units of capital and labour employed, wages, salaries, etcetera, paid, and input that really matters more to the industrial progress or productive efficiency than the aggregates of labour and capital employed or of input and output. A rise in the aggregates is not necessarily inconsistent with a fall in the productive efficiency in the industries. These aspects, therefore, deserve special study, particularly at a time when considerable thought, energy, attention and money are being devoted to rapid industrialisation, export promotion and productivity.

Broad Facts of the Growth

The table on this page gives the figures of capital, labour, wages, salaries and benefits; input; output; value added by manufacture; "value added" in terms of capital, persons employed, wage bill and input; and wages, salaries, etcetera, as percentage of the value added (in the aggregate as well as in a few of our major industries) in 1946, 1951 and 1956, at quinquennial intervals.

	1946	1951	1956	Percentage increase or decrease in 1956 over 1946 (+ or −)
1. Productive capital (crores of rupees) ...	366.8	713.0	968.6	+ 164
2. Persons employed (thousands)	1,514	1,633	1,855	+ 23
3. Wages, salaries and benefits (crores of rupees)	101.8	189.2	253.2	+ 148
4. Input (including depreciation) (crores of rupees)	391.5	959.6	1,131.5	+ 189
5. Output (crores of rupees)	662.9	1,306.9	1,538.4	+ 163
6. Value added by manufacture (crores of rupees)				
6 (1) Per unit (one rupee) of productive capital (rupees)	0.58	0.49	0.47	− 19
6 (2) Per person employed (Rs.)	1,396	2,127	2,463	+ 76
6.2 Worker	1,524	2,348	2,766	+ 81
6.2 Other than worker	16,677	22,513	22,477	+ 35
6 (3) Per unit (one rupee) of wages, salaries, etcetera, paid (rupees)	2.08	1.83	1.84	− 11
6.3 Worker	2.58	2.26	2.39	− 7
6.3 Other than worker	12.70	10.82	9.24	− 27
6.3 Money value of benefits and privileges	64.93	96.44	35.22	− 46
6 (4) Per unit (one rupee) of input (rupees)	0.54	0.36	0.40	− 26
7. Wages, salaries and benefits as percentage of the value added by manufacture (percent) ...	48.2	54.5	55.4	+ 15
7.1 Do—Cotton textiles	52.7	60.2	67.9	+ 29
7.2 Do—Jute textiles	43.5	48.6	80.3	+ 85
7.3 Do—Iron and steel	42.8	59.7	37.0	− 14
7.4 Do—Vegetable oils (including edible hydrogenated oils)	25.5	75.0	42.8	+ 68
7.5 Do—Sugar	48.4	41.1	42.5	− 12
7.6 Do—Chemicals	30.0	35.3	32.9	+ 10
7.7 Do—General engineering and electrical engineering	71.2	63.8	56.7	− 20

The broad facts which emerge from the above table are that, between 1946 and 1956,

(i) the productive capital increased by 164 percent whereas employment rose only by 23 percent;

(ii) the value of output rose by 163 percent while that of input went up by 189 percent, resulting in a relatively less rapid increment of 116 percent in the value added by manufacture;

(iii) the wage bill rose by 148 percent, being nearly two and a half times the wage bill of 1946;

(iv) there was a drop of 19 percent in the ratio of the value added to the productive capital employed, the ratios being 0.58 and 0.47, respectively, in 1946 and 1956;

(v) the value added was up by 76 percent a person employed, 81 percent a worker employed and 35 percent a person other than worker, indicating that the contribution to industrial output by persons other than workers has not kept pace with that of the workers;

(vi) the ratio of the value added by manufacture to the wages, salaries, etcetera, paid to the workers and other persons employed showed a general tendency to decline—from 2.58 to 2.39 or by 7 percent in the case of workers, from 12.70 to 9.24 or by 27 percent in the case of persons other than workers, from 2.08 to 1.84 or by 11 percent in the case of all persons employed, and from 64.93 to 35.22 or by 46 percent in terms of the money value of benefits and privileges afforded to the employees;

(vii) the ratio of the value added to the input also fell from 0.54 to 0.40 or by 26 percent, which is indicative of the increasing material and depreciation costs;

(viii) the ratio of wages, salaries, benefits, etcetera, to the value added generally showed a tendency to rise substantially in some of our major industries—from 52.7 percent to 67.9 percent of the value added in the cotton textiles, from 43.5 percent to 80.3 percent in jute textiles, from 25.5 percent to 42.8 percent in vegetable oils (including edible hydrogenated oils), and from 30 percent to 32.9 percent in chemicals. The ratio of wages, salaries, etcetera, to the value added in all the 29 industries increased from 48.2 percent to 55.4 percent. A fall in this ratio was, however, noticeable from 48.4 percent to 42.5 percent in the case of sugar and from 71.2 percent to 56.7 percent in the case of general and electrical engineering among our other major industries. It may also be noted incidentally that this ratio appears generally high in the case of some of India's biggest industries, such as cotton textiles, jute textiles and general and electrical engineering, ranging between 56 percent and 80 percent in 1956.

No Appreciable Rise in Employment

That the increase in employment caused by industrialisation is not appreciable should be a matter of considerable anxiety in a country where the problem of unemployment and under-employment is acute. The declining tendency in the value added in relation to a unit of wages, salaries and benefits paid to employees a unit of capital and a unit of input should be regarded as another disheartening feature. The value added represents the income created in the manufacturing sector. It is this fund which is available for the payment of wages, salaries and benefits to employees, as well as other costs such as advertising, insurance, taxes, etcetera, as also for interest and profits. The percentage of wages, etcetera, in the value added has increased from 48 in 1946 to 55 in 1956. The amount available for other purposes including taxes, interest and profits is, therefore, to that extent reduced. This seems to be the case in some of our most important industries which have since lost much of their foreign markets.

Although it may be risky to generalise on the basis of the above figures, it will be seen that all is not well with our industrial growth. Certain industries must indeed be faring badly. It is, therefore, important to make special studies, find out the specific problems of each such industry and evolve suitable remedies. It is obvious that when an industry becomes a high-cost one, its competitive capacity is impaired. It may continue to thrive in the domestic market, at the expense of the consumer under cover of import control or tariff protection, but will hardly ever be able to capture foreign markets. Any amount of export effort in the circumstances will be of little avail. Short of a rigid control of material and labour costs, wages, salaries and perquisites and industrial profits, and a determined effort to raise productivity and maintain standards, it is likely to be a losing game for Indian industry to capture domestic, and more especially foreign, markets. Enduring prosperity can be built up only on favourable and expanding foreign trade and not on increasing foreign aid, and foreign trade can expand only on the basis of sound and healthy industrial development with falling costs, rising productivity, improving quality and growing variety.

Excellent cutting performance

SAP HACKSAWS

HACKSAW BLADES

Manufactured from high quality steel. They can be used for cutting all types of steel, brass, copper, aluminium, plastics etc.

SMART RECOVERY FOLLOWS T.I.S.C.O. RIGHTS ANNOUNCEMENT

INDIAN IRON DIVIDEND AWAITED

Wednesday Evening.

THE downtrend in share prices was arrested last week by the T.I.S.C.O. directors' explanation to the Bombay Shareholders' Association for the announcement of a lower ordinary dividend for the year ended 31st March, 1959. This was accepted by the shareholders' representatives and sentiment improved immediately. Since then, there has been an all-round recovery in prices culminating in a further advance last evening when it was announced that the Controller of Capital Issues had approved the issue by T.I.S.C.O. of 618,372 ordinary shares of Rs. 75 each, at par, and 375,000 "A" 7½% 2nd Preference shares of Rs. 100 each, subject to tax. Thus, the six-week-old rumour that the Central Government would insist on a premium for the T.I.S.C.O. issue has been set at rest and the market now takes the view that, as far as established companies are concerned, there has been no change in Government policy on equity issues.

Other factors which have assisted the present recovery movement are the improved offtake in the textiles market in Bombay, the reasonable carry-forward charges in the Calcutta Stock Exchange for the last settlement on 31st August, and the proclamation of President's rule in Kerala. Hopes of increased foreign aid have now revived in view of the expected improvement in the climate for investment following the latest political developments. Against this, the possibility of political repercussions in West Bengal cannot be ruled out.

Expectations of an early and satisfactory settlement of financial disputes between India and Pakistan, following the recent talks between the Finance Ministers of the two countries, has provided yet another rainbow on the investment horizon. The present bullish trend in the stock market may now continue for some time, particularly as Indian Irons are full of dividend and an announcement from the company is expected shortly.

Despite the fact that there was a sudden demand for funds towards the close of business yesterday, Government security prices were fairly well maintained and the new State loans, which will be floated on 19th August, are expected to get a good reception.

Preference shares continued to meet with strong enquiry, but sellers were scarce. Some good business, however, was put through in Orient Paper 1st Preference shares at around Rs. 94.

Bank shares continue to be neglected but in railways there was some enquiry for Dehri-Rohtas at around Rs. 16.75.

With the exception of Burrakur, which improved slightly from Rs. 17.25 to Rs. 17.37, coal shares did not participate in the general recovery in most other sections of the market.

Cotton textile shares were firm on reports of better prospects. Shares which were particularly enquired for included Bowreah at Rs. 130, Dunbar at Rs. 175, Elgin Mills at Rs. 14.25, and Kesoram at Rs. 16.12.

In electrics, Calcutta advanced from Rs. 15.06 to Rs. 15.31 and U.P. from Rs. 134 to Rs. 136.

In the engineering group, Indian Iron & Steel fluctuated between Rs. 23.88 and Rs. 24.96 to close at Rs. 24.81. Guest Keens improved to Rs. 39 and there were buyers of Burn & Co., at the higher rate of Rs. 430 x.d. Indian Galvanizing improved from Rs. 20.12 to Rs. 21 and Jessop were better at Rs. 28.75. Textile Machinery recovered from Rs. 23.40 to Rs. 24.30. J. K. Steel moved up from Rs. 14.31 to Rs. 14.87.

In jute, Anglo India were six points better at Rs. 258 and Barnagore rose from Rs. 164 to Rs. 169. Birla put on 50nP to close at Rs. 23 and Howrah recovered from Rs. 23.25 to Rs. 23.75. India were wanted at Rs. 16.25 and Fort Gloster rose by Rs. 10 to Rs. 380. Nuddea advanced from Rs. 59 to Rs. 62 and Union from Rs. 226 to Rs. 235.

In paper, India Paper Pulp were Re. 1 better at Rs. 24.50 and Orient recovered from Rs. 35.60 to Rs. 36.40. Titaghur were wanted at Rs. 43.62 and there were buyers of Sirpur at the higher rate of Rs. 12.81.

Sugar shares were dull and neglected.

Widespread gains were recorded in the miscellaneous section, as will be seen from the following table:

	Opening 30th July, 1959. Rs.	Closing 5th August, 1959. Rs.
Alkali & Chemical	22.44	22.75
Britannia Biscuits	25.75	26.25
Clive Row Investment	10	10.44
Dunlop Rubber	33.37	34
Hindustan Motors	10.94	11.37
Indian Aluminium	21.94	22.50
Indian Cables	31.56	32.37
National Carbon	34.25	34.62
Orissa Cement	16.31	16.62
Rallis India	71.50	75.50

Tea shares failed to participate in the general improvement and prices showed little variation.

In the mining group, Indian Copper moved higher to Rs. 4.16 while most other issues were unchanged at around last week's levels.

Grob Tea

The profit of the Grob Tea Company has amounted to Rs. 6.76 lakhs for the year ended December 1958. Bringing in Rs. 96,613, transferring Rs. 25,000 from excess tax provision and making other adjustments, there is a balance of Rs. 7,61,009. A dividend of 30 percent has been declared, including an interim of 10 percent. Buildings and machinery reserve is allocated Rs. 2 lakhs and hail insurance reserve Rs. 50,000, leaving Rs. 45,191 to be carried forward. The crop increased from 31,676 maunds to 32,205 maunds and the average sale price was Rs. 2.46 a lb. Estimates for 1959 have been made for a crop of 32,200 maunds at a cost of Rs. 45.56 lakhs. At an extraordinary general meeting held in May 1959, each of the "A" ordinary shares of Rs. 10 each was sub-divided into two shares of Rs. 5 each and thereafter the classification of "A" and "B" shares was abolished. The present authorised capital of the company therefore amounts to Rs. 20,00,000, divided into 400,000 ordinary shares of Rs. 5 each.

Tezpore Tea

The Tezpore Tea Company has made a profit of Rs. 6.19 lakhs for the year ended December 1958. Taxation absorbs Rs. 2.58 lakhs. Bringing in Rs. 36,041, there is a balance of Rs. 3,96,547. A dividend of 12½ percent has been paid, against nil. General reserve is allocated Rs. 75,000, leaving a carry-forward of Rs. 40,539. Production amounted to 35,023 maunds. The average sale price rose from Rs. 1.81 to Rs. 1.92 a lb. Estimates for 1959 provide for a crop of 31,000 maunds at a cost of Rs. 42.24 lakhs. The directors state that buyers

The Life of a
BALL BEARING...

...and the material used

The life of a ball bearing depends mainly on the material from which it is made. To ensure the supply of raw material and obtain control over the steel production, SKF acquired Hofors Bruk with its mines and forests, in 1916. Under SKF's management this 300-year-old works has developed into a modern steel works with an annual output exceeding 150,000 tons of steel ingots. The special ball-bearing steel produced at Hofors Bruk has shown itself to be unequalled.

SKF THE RIGHT BEARING IN THE RIGHT PLACE

THE SKF BALL BEARING CO. PRIVATE LTD.
CALCUTTA P.O. BOX 188 • BOMBAY P.O. BOX 71 • MADRAS P.O. BOX 66

have become more discriminating in recent years and the company continues to pursue a policy of trying to raise the standard of its manufacture, "while at the same time effecting economies in expenditure, wherever these can be made without adverse effects on quality."

Sutna Stone

The Sutna Stone and Lime Company has made a profit of Rs. 3.78 lakhs for the year ended December 1958. Providing Rs. 1.80 lakhs for taxation, bringing in Rs. 30,734 and making other adjustments, the balance amounts to Rs. 2,28,815. A dividend of 17½ percent has been paid, leaving a carry-forward of Rs. 30,880. During the year under report, 16,128 ordinary shares of Rs. 10 each were issued at a premium of Rs. 10 a share. With increased demand and a satisfactory wagon position, sales during the first half of 1958 were good, but sales of lime were affected considerably in the latter half of the year due to the free sale of cement. "The position in the current year, though not as bright as that for the same period of last year, is satisfactory."

Jeewanlal

There is a profit of Rs. 3.97 lakhs for Jeewanlal (1929) Ltd during the year ended December 1958, against Rs. 7.23 lakhs. The debit balance is reduced to Rs. 1,69,656, and is carried forward. The dividends have been passed over for the seventh year in succession. In view of the small profit, no provision has been possible in this year also for the reserve for the replacement of fixed assets or for the reserve prescribed by the Controller of Capital Issues in 1951 as a condition precedent to the payment of dividends to shareholders in cash. The report mentions that "as the uncovered position of the past losses and interest charges have been greatly reduced by now, your directors expect to reach shortly a stage whereby they may be enabled to pay some cash dividend to the shareholders in not too distant a future."

Consolidated Tin

At the adjourned extraordinary general meetings held on 29th July to consider the winding up of the Consolidated Tin Mines of Burma Ltd, the chairman, Mr. W. J. C Richards, stated that proposals concerning an offer for the shares were still being considered. The meetings were accordingly adjourned further until 31st August.

Bombay Market

STEEL SHARES LEAD SHARP PRICE RECOVERY

T.I.S.C.O. RIGHTS AT PAR

Wednesday Evening.

THERE was a substantial improvement in the Bombay stock market last week with equity share prices advancing on a broad front due to replacement buying. Prices of steel shares recovered smartly on short-covering induced by a report that the Tata Iron and Steel Company has obtained permission to issue rights ordinary and preference shares at par. It is thought that the money which will be invested on the new shares will give a fairly quick return, considering that the management is keen to remunerate the new share capital at 5 percent. In the cotton mill group, sentiment improved on reports of improved cloth offtake here and abroad.

Tata Steel soared to Rs. 181.75, as did Indian Iron to Rs. 24.88 on support from Lyons Range. It is thought that there will be no difficulty in paing the same ordinary dividend of 10 percent Indian Iron shares for the year ended March 195 Alcock Ashdown recovered to Rs. 257 and Premi Construction were bought at Rs. 369 by knowledgeable quarters. Larsen and Toubro we transacted at Rs. 22 on the prospect of a righ issue. Motor shares were steady. Premier Aut mobile were taken at Rs. 135.75 and Hindust Motor realised Rs. 11.36. Tata Locomotive we bought at Rs. 213.50 on investment account.

Cotton mill shares recovered considerably, a Century were taken at Rs. 569. Bombay Dyei changed hands at Rs. 66.80 and Kohinoor we transacted at Rs. 311. Svadeshi came to hand Rs. 249 and Simplex were dealt in at Rs. 164. India United Ordinary were available at Rs. 8. and Apollo were indicated at Rs. 1.34.

Miscellaneous industrials moved in pattern wi the general trend. In the sugar group, Belap were dealt in at Rs. 318 and Phalton were wante up to Rs. 161. Steamship company shares we about steady, and Scindia Steam were done Rs. 17.92. Great Eastern Shipping were plac at Rs. 21.40. Among mining shares, Shivraj Syndicate were taken at Rs. 84. In the ceme group, Associated Cement were bought at Rs. 1 and Digvijay changed hands at Rs. 156. Bomba Burma recovered to Rs. 947.50 on short-coverin as did National Rayon to Rs. 354.50. Tata Chem cal were placed at Rs. 17.60 and Voltas came hand at Rs. 173.

Turnover in banking and insurance shar shrank considerably, but prices showed lit variation. Central Bank were transacted at I 52 and Bank of India were done at Rs. 117. Ne India Assurance were bought up to Rs. 57 a Vulcan met with demand at Rs. 21.28.

Electricity supply company shares met wi selective support, and Ahmedabad Electric wa bought at Rs. 94.30. Tata Hydro were indicat at Rs. 119.75 and Bombay Suburban were transa ed at Rs. 113.

PRICES RISE ON THE STOCK MARKET

HOLIDAY INFLUENCES RESTRICT TRADING

London, 5th August.

BUSINESS in the stock market was on a reduced scale before and after the holiday week-end, but conditions generally remained very satisfactory and most sections moved to higher levels during the past week. The buying was somewhat selective and there was a certain amount of selling in advance of the ending of the account, but this for the most part was well absorbed. In addition to holiday influences, business was restrained by the prospects of an autumn general election. On the other hand, there were numerous encouraging factors. The most important of these was the news that President Eisenhower and Mr. Khrushchev are to exchange official visits. Others included the advance on Wall Street, which reached new peaks on successive days, the further fall in unemployment in the United Kingdom, the rise in industrial production and the latest encouraging reports of business trends. A notable feature was the revival in oil shares which showed appreciable gains in response to an advance on Wall Street on good quarterly earnings figures. A better tendency developed in the gilt-edged market, but business remained small and prices recorded very little change. In the foreign market, Greek bonds eased during the initial stages, but later rallied in response to renewed speculative buying. Rumanian bonds improved on the prospect of a possible settlement of British claims against Rumania. Industrial equities advanced under a selective demand and finished the account on Tuesday on a very firm note. Interest was centred on stores shares following the increased Debenhams bid for Harrods, but all the shares concerned in the battle for control of Harrods were lower. Steel shares were a particularly good market. Gold shares were firm under the influence of Johannesburg buying. Diamonds also improved, but base metal shares attracted very little attention. There were numerous gains in rubber shares following a rise in the commodity. Tea shares by contrast were quiet and irregular.

The Money Market

Stringent conditions were again apparent in the money market during the past week due to seasonal and end-month factors. Under the stress of demand, 3½ percent was conceded for non-regular money with the general rate being 3¼ percent. In addition, the market also had to pay 3⅜ percent for money created by the authorities. In view of the cash position, the banks were only moderate buyers of bills with October and "hots" dealt in at 3⅜ percent. For the first time for eight weeks, there was a marked change in the Treasury bill rate at the weekly tender. The market put on a bid of £99 2s 6d at which price it secured 23 percent of the bills.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: Under the combined influence of holidays and the election, markets have continued to remain quiet in the past few days although a firmer tendency became apparent last week on the theory that some counters had slipped back too far in the earlier correction. Bright spots continued to appear on special situations, but good industrial results had, with one or two striking exceptions, been discounted in advance. It appears probable that with exceptions of this sort, markets will continue to move narrowly for some time to come while the comparative lack of success is a significant pointer to the note of caution prevalent in the market—a caution investors would do well to share for the time being.

Activity on Wall Street

In a quiet market for foreign bonds, Australians backed away following an early spell of steadiness with a few issues giving up a full point. Serb 7 percents were ahead by over $1 while Denmark 5½ percents and Italians gave up a little ground. Amsterdam 5½ percents were ahead by nearly a point and New Zealand 5½ percents by a minor fraction. Norwegians and the Union of South Africas were mixed, while German Nationals were largely neglected. Chile 3 percents were traded a shade under the $46 level which ruled most of the week. Medium and long-term United States Government obligations fluctuated in limited dealings, but generally finished unchanged to a shade lower. High-grade corporates were mixed and speculative rail lines were mostly unchanged in dull trading. Various convertibles scored good-sized gains in line with the recent forward movement of the security market.

Mixed Trend in Vegetable Oils

After some fluctuation, linseed prices ended on a firm note. Castorseed lacked interest, but Continental demand continued for groundnuts. Copra was easier, but some interest was shown at lower levels. There was a fair amount of enquiry for palm kernels. Linseed oil moved irregularly largely following the trend of the seed with good Continental interest seen at times. Castor oil was quiet and although values eased a little at first, a steadier tone ruled at the finish. Coconut oil was quiet with little price movement at the origin, palm oil values were barely steady and palm kernel descriptions moved lower. Groundnut oil was helped by the improved activity in the nuts.

RUSSIAN POLICY ON GOLD SALES

IMPLICATIONS OF THE SEARCH FOR WESTERN CREDITS

By Thomas Balogh

THE simultaneous release of two important articles in *The Times* and another by Dr. Paul Einzig in *Optima*, which is the official organ of the Anglo-American Corporation of South Africa, the most important and active gold mining house, throws light on an important point which is at the centre of the present interest about the sufficiency of international liquidity. The co-incidental release of these articles cannot be chance since they both contain identical factual material both on the rôle played by gold production in the Russian economy and also on the economic explanation of the behaviour of the Soviet Government.

The facts as they emerge are quite clear. Russian gold production seems to have been running in 1958 between 12 million and 15 million ounces, amounting at present gold prices to between $420 million and $525 million. Apart from the interruption during the war, this seems to have been the order of magnitude of the Russian output for some considerable time. These figures confirm the views I put forward in an earlier memorandum that the Russian gold reserves must be in the neighbourhood of $6,000 or $7,000 million, and thus constitute the second biggest accumulation of gold in the world. The idea that the Russians have refrained from giving gold loans to their satellites in need and asked for credits in their negotiations with western powers because they had no alternative, can, therefore, no longer be maintained. The motivations of the Russians remain a profound mystery which certainly has not been dispelled either by the unknown correspondent of *The Times* or by Dr. Paul Einzig, although Dr. Einzig at one point comes near to the explanation. (Cf. below).

Frightful Sign

The Times articles are a frightful sign (as they seem to come from official sources and to contain extremely interesting material assembled by powerful intelligence services) that the character of the Russian economy and of the challenge it represents to the capitalist economies has in no way been realised. Significant in this matter is the attempt to show that Russia is prevented from using the gold reserves for loans, purchases and for general politico-economic warfare abroad, because of the high mining production cost. It is shown that the average outlay for an ounce of gold in Russia would be $166 an ounce, against the purchase price of $35 an ounce in America. Hence Russia is unable to use her gold for any purpose except pressing payments for essential supplies.

Two things need to be said on this matter. The first and perhaps least important is that the correspondent of *The Times* double-counts the labour cost. He first adds together the wages, and then adds to them the cost of the goods transported to the gold mining area. Unless these goods are additional to the pay of the gold miners, i.e., they are maintained by the Government and, in addition, receive their wages, this is an exceedingly odd mistake to make. This is highly unlikely. But suppose these goods be so supplied, how is the cost figure in terms of dollars arrived at? I do not wish to go into the problem of what the official dollar-rouble exchange rate, on which this calculation was based, really means. The accountancy of the foreign economic relations of the Soviet Union is in the hands of the Ministry for Foreign Trade which can use—as far as any single transaction is concerned—the rate of exchange which it finds most advantageous for the prestige, etcetera, of the country. I do not believe that they are good enough economists to fix their rate of exchange so as to enable them to reap certain monopolistic benefits in their relations with the satellite countries. In their relation with the non-communist world, their internal price level and rate of exchange do not play an operational rôle. The accountancy is performed, as it is even in Yugoslavia, by various funds which take any losses, should such arise, on the basis of the nominal cost-price ratios in Russia. The rate of exchange is a sort of prestige sign signifying nothing.[1]

Important Consideration

The second and vastly more important consideration which arises is the failure of both writers to appreciate what the *cost* of good mining really means. Nothing could be more foolish than the statement made by *The Times*: "As before, they seem likely to spend their 'expensive gold' abroad only for industrial goods, which, put into operation in Russia could repay the losses incurred through this 'loss selling'. Gold could also provide goods which are necessary for the Soviet economy and must be purchased abroad. Thus, the Soviet gold reserves, the heirlooms of Stalin's gold policy, instead of being an asset economically are a burden, condemned to remain in the vaults of the Soviet State Bank as a monument to a highly uneconomic venture. On this basis, it seems clear that Russia will use her gold only for high-priority purchases".

[1] Except a certain exploitation of official visitors including diplomats: as far as tourists are concerned, special concessions are made.

Russia is thus treated as a sort of bankrupt bank which can keep its bankruptcy only hidden from the public by not selling depreciated assets and thus hiding paper losses. This, of course, is ridiculous. The accumulation of gold in the vaults of Moscow merely adds to the "losses", if any, of gold production by forgoing those extremely profitable investments which could otherwise be financed by selling the gold abroad or by using the labour and machinery for other purposes than gold mining at home.

Motives of Russian Policy

In fact, the concentration on gold mining in Russia might be explained by reflecting that any attempt by her to increase her present exports, which are mainly raw materials and semi-manufactures like aluminium, has introduced in the sensitive non-Soviet orbit critical falls in the prices of the goods which were only stopped by the concerted action of the non-Soviet countries to penalise Russian exports and thus come to an agreement with them on their restriction. The case of tin is the latest of these and, apparently, some attempt is now being made with oil. By concentrating on gold, this invidious possibility is obviated. Taking into account such indirect terms of trade losses, the *cost* of obtaining imports by selling *high cost* gold is less than in any other commodity.

One might, of course, ask why do the Russians concentrate on selling raw materials? The most reasonable explanation was given by Mr. Khrushchev to a high-ranking visiting foreign economist. It is that manufactured goods take more skilled labour and, therefore, can be expanded only in so far as the skilled labour supply can be expanded. The bottleneck is technical knowledge which they are trying to eliminate. They are expanding manufacturing as fast as they can. And they still have relatively insufficient supplies for exports.

I suspect that while there must be something in this, the explanation lies very much more in the habits of a bureaucracy which continues in its well-trodden ways when it is not pulled up sharply by outside forces, either of criticism or of markets. While it is just possible that the oil exports they have been indulging in, and especially the lubricating oil exports, represent the selling off of unwanted by-products, the production of which is economically unprofitable but technically inevitable being the consequence of their need to have the maximum quantity of other types of oil, *e.g.*, fuel oil or petrol, I do not myself believe that this is the explanation. Certainly, grain exports cannot be justified on this score. While, therefore, it might be possible to argue that the Russian gold sales are made within the limits which prevent their worsening the country's terms of trade in other commodities, I feel that this is not altogether plausible. I think that Dr. Einzig has come much nearer the explanation of the matter when he quotes a statement in the Russian textbook entitled *Political Economy*:

"'Of course, only a monetary commodity which itself has value can have the function of a measure of value—such as gold', it is stated in Chapter 32. 'In the Soviet Union and the other countries of the socialist camp, gold plays the part of universal equivalent. Soviet currency has a gold content, being tokens of gold. In socialist society, money can only fulfil the functions of a measure of value of commodities by virtue of its connection with gold'."

In Trotsky's collected works, written in exile, there is an essay in which he takes Stalin severely to task for violating this Marxist principle. Unbelievable as it may sound, this meta-economic statement might well be the real reason for the toil of countless workers in incredibly harsh conditions (even though political prisoners are no longer engaged in mining gold).

The Price System

The Russian price system does not seem to permit true comparisons of real cost. The American Intelligence Service recently discovered that agricultural productivity in Russia still has not increased substantially above the pre-communist levels. While one discounts some of this, there is no doubt that the increase in Russian industrial activity was a multiple of that in agriculture. Some people derive solace from this fact as showing a chink in the Russian armour.[2] Nothing can show more clearly than the use of this argument how even intelligent people are being dominated by cold war propaganda considerations into completely mistaking the character of the Russian challenges. The Russian economic threat to western Europe is, of course, not a statistical one. It does not consist of claims of having made so much more gains in the production of this commodity or that than ourselves. It is in the growing capacity to produce industrial products. The less successful the Russians are in agriculture and indeed in gold production, the more menacing is their success in industry, because they will be able in the end to obtain food at greater advantage by selling it much cheaper than Britain can do in exchange for food.

In other words, they will be able to reap great immediate advantages while worsening Britain's terms of exchange. Moreover, as long as productivity in the U.K. is not increasing as fast as in Russia, her advantage in selling industrial products will constantly increase and with it the menace to Britain's future. At present, this advantage is increasing by roughly 5 percent or 6 percent being the difference between the increase in productivity which is 7 percent or 8 percent a year in industry, as against our 2 percent. Far from recommending, as Dr. Einzig does, that we should not extend our credits to Russia because this will enforce their selling gold, we should be gladly giving credit in order to enable them to keep their gold provided we earn substantial rates of return on our loans and thus weaken the capacity of Russia to compete with us. It is the extraordinary rigidity of the Russian bureaucracy rather than their technical failure which has kept the West so far free from grave trouble.

Technical Success

It may be asked what the explanation of their technical success in production is if they are, in fact, so dogmatically rigid. The answer is fairly obvious. It lies in their successfully maintaining an excess demand over supply by cutting prices slightly more than incomes. They produce an inflationary situation which is not permitted to cause a cumulative upward movement but is held rigidly in check by the stability of wages and the absence of all speculative activity. Given this and with their immense investment ratios, success should be almost automatic, as managers can concentrate on solving technical production problems. Whether they apply their "scarce resources" in the best possible way or not is of very little interest. When a system grows 8 percent or 10 percent a year and doubles its output every eight to 12 years or so, cost, even such tremendous cost as is implicit in the story of the sterile gold reserves, really does not count much in the end. In this the automatism of the Soviet system works as well as that of a market economy when it is not trammelled by trade union strength or misdirected by speculative activity. The West German "miracle" has shown what can be accomplished by capitalism if workers are kept in check. The Khrushchev system is not very different. It is the mixed social economy which is handicapped on both ends. It is only a question of time when Russian demand for primary products will come to the aid of the primary producers like India.[3]

[2] A distinguished retired Ambassador, Sir W. Hayter, called the Russian system the rich Government of a poor people.

[3] The West at least should learn from the Russian mistakes and provide, through a reform of the I.M.F. rules, a costless increase in international liquidity.

FAILURES OF STATE TRADING IN FOODGRAINS

PROCUREMENT TARGETS NOT REACHED: STORAGE ACCOMMODATION INADEQUATE

(BY A CORRESPONDENT)

IS State trading in foodgrains, which was announced with a flourish towards the end of 1958, about to be abandoned? The experience acquired by the Central Food Ministry of its working in connection with the *khariff* crop, has not been satisfactory. It is, therefore, inducing second thoughts as to the prospects of success of State trading. Some essential modifications will have to be made in the scheme, especially in the direction of moderating it. Any suggestion that the scheme has failed, and should, therefore, be abandoned, is likely to provoke a vehement protest from the Central Food Ministry. It is not prepared to admit any failure, at least not yet. But it is undeniable that two of the main objectives, namely, the ensuring of a steady level of food prices and the building up of substantial buffer stocks of foodgrains through internal procurement taking advantage of the bumper *khariff* harvest, have not been realised. The foodgrain prices have continued to rise in almost all States, except Madhya Pradesh, after an initial slight decline immediately after the harvest. Purchase operations have fallen markedly short of the targets prescribed. Market arrivals of foodgrains have also been inadequate in spite of the much-advertised bumper crop.

The interim scheme, it is well known, proposed the licensing of wholesale dealers, purchase of foodgrains by them at controlled prices fixed by the Centre, and non-interference with the retail distribution and prices of foodgrains. It was a compromise between allowing the trade to operate freely in the retail sphere and using it as the Government's principal agency for foodgrain purchase on the one hand and monopoly procurement by the Government on the other. With ample stocks thus got together, the Government, it was thought, would be able effectively to control price trends and curb any speculative rise in prices by rushing supplies from its stocks to deficit States or areas where prices tend to soar and by setting up fair price shops and limited rationing in big urban areas where stocks are inadequate. The expectation that with a "record" harvest of foodgrains exceeding the 73-million ton mark, the position was suitable for building up a comfortable reserve of 3 million tons of rice and wheat from internal purchases—two million tons of rice and paddy and about one million tons of wheat—has, unfortunately, been belied. Purchases of rice and paddy on both Central and State Government accounts had not, by the middle of July, exceeded 1.2 million tons and, with utmost effort, may increase by another 200,000 to 300,000 tons during the whole year. Purchases of wheat have been even more disappointing, not exceeding 200,000 tons, including those in a surplus State like Punjab.

Unsatisfactory Position

The position has been unsatisfactory in both surplus and marginally surplus States while it has been definitely depressing in the deficit ones. West Bengal and Bihar are typical of the latter and Andhra Pradesh, Punjab, Madras and Orissa of the former. In West Bengal, actually, the State Government had to beat a hasty retreat from the policy of controlling retail distribution in Calcutta when local purchases fell far short of expectations and prospects of a partial transfer of surplus rice from Orissa and Madhya Pradesh to that State became dim.

Prices of foodgrains, especially of rice, have risen unchecked—a fact which does not exactly square with the statement in the Central Food Ministry's note that "in the States having a large surplus, the implementation of the schemes has not given rise to any major difficulty over internal availability or prices." In a State like Andhra Pradesh, with its relatively large surplus of rice, the distressing feature of high prices even in heavily surplus districts has posed an inexplicable paradox. No wonder, therefore, that the Food Ministry has been having second thoughts about the successful implementation of the interim State trading scheme and that its viewpoint is being more and more veering towards limiting State trading to the surplus States and withdrawing it in the deficit or the marginally surplus ones.

This is evident from a series of issues formulated by the Ministry in a statement presente recently to the Food Committee of Parliamer A fundamental point raised is whether State tra ing should be restricted to surplus States alor and given up in the deficit and marginally surpl States, and whether monopoly procurement shou be undertaken by the Government, with its ine capable implications of regulation of, and contr over, retail distribution and prices? Posed thu the issues point to one logical conclusion, i there can be no half-way house between full co trol and free trade in foodgrains, and that the Go ernment should either go in for the compulsor levy at controlled prices and countrywide ratio ing or that each State should be permitted to ado the policy that best suits its local conditions, t Centre playing the rôle of a helper, whenever State needs assistance in the matter of food su plies to tide over a local emergency or shortag One form which the latter policy can take is t condoning off of each State for procurement pu poses with the Centre keeping a watchful eye prices and supplies in different States. This aut matically involves the abandonment of the zon system and specifically the break-up of the southe rice zone.

Holding the Price Line

Food policy in the current context cannot considered apart from the essential need to ho the price line and ensure supplies, which in turn, is related to the adequacy of market arrival without which prices would behave erratical The line of least resistance can be—and is— blame it on the traders and the producers, a accuse them of withholding stocks and creatir artificial scarcity. The weakness of such a polic is that it is based on a wrong belief that not on a few big landlords and agriculturists, but most the small cultivators, also hoard stocks in antic pation of price increases. But the fact is that t latter have little holding power and sell out th surplus in the first one or two months after t harvest for meeting various pressing obligation Big landlords can and do hold out for some tim and speculators do corner stocks, but the propo tions of the total produce which they can hoard corner for any length of time cannot be very dec sive. The traders may withhold stocks from t market to "defeat" the State trading scheme, whic could deprive them of the large profits they a used to making in the grain trade, and do not lik to function under a number of rules about the wa they should keep stocks, maintain accounts a then to hand over stocks when requisitione by the Government at any time at a controll rate. But the Food Ministry's note itself admi that there is not much hoarding "out of fear th the Government might take over the stocks controlled prices."

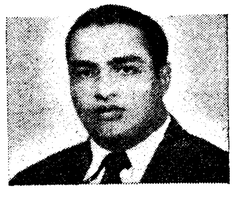
The real factors that have resulted in the pr sent stalemate in State trading may, however, the following: firstly, the controlled prices rice and paddy in a number of States were a nounced late—two months or more after the ha vest—and procrastination proved to be the thi of time. In some of the States, for example Andhra Pradesh, the price fixing was the subje of a prolonged controversy between the Sta Government and the Centre, and when pric were eventually announced, the State Gover ment did not display any particular anxiety enforce them. The delay over the question of ri supplies to Kerala was another factor which inte fered with the purchases of surplus rice in t surplus districts in Andhra and in Tanjore distri in Madras. Secondly, the purchase machinery ha not been set up in many States when the Sta trading scheme was announced; in some States it yet to be set up completely, and in yet others lik Orissa, it is functioning ineffectively. There w obviously too much haste in implementing a rev lutionary decision without providing for the r quisite apparatus to carry it out. But even mo important than these were the hesitations in evol ing a price policy for foodgrains and announcir controlled prices in advance. The announcemer of floor prices for different categories of foodgrai prior to the harvest has a psychological signi cance because it provides a powerful inducemer to producers to raise production and sell whatev they can spare to the Government purchasir machinery. The prolonged uncertainty over co trolled prices even after the wheat harvest resul ed this year in speculation in Punjab, where t strange fact of rising prices simultaneously wi the wheat harvest was witnessed.

Inadequate Buffer Stocks

As one of the primary pre-conditions f successful State trading, namely, the building of buffer stocks in the measure desired failed materialise due to the relatively poor purchas of foodgrains on Government account this ye (which are at least 40 percent shorter than t targets aimed at), it would be wise not to proce with it further unless storage accommodation f at least about 1.5 million to 2 million tons foodgrains is built up and the official purchasi machinery is in a position to gather the harves The situation also calls for no reduction in import Arrivals under the P.L. 480 Agreement with t U.S.A. and the Colombo Plan scheme from Canad are now coming through with greater regulari (at an average of 300,000 tons or more of wheat month); the total arrivals during 1959, up to t end of June, amounted to about 2.1 million ton Rice imports from Burma under the agreemer with that country are also arriving regularly. B with the rapid advent of the lean season, t market offtake is increasing. The Food Ministr is again likely to face a situation of scarcity ar soaring prices during the next few months.

TACK

PERSONAL SALES TRAINING



means more sales at less cost...

Sales managers of large and small companies—marketing every kind of product and service—have found that TACK Sales Training contributes positively to solving their major sales problem: How to increase turnover without raising costs...

whatever the product or service!

Mr. T. R. Shields, Sales Director of Indian Oxygen Limited, says:
"Now that Tack Sales training courses are being held in India I can ensure that all our sales staff receive the benefits of this training and I am convinced that no organisation in India which has a progressive sales policy can afford to miss the opportunity of using Tack sales training now being provided through the British Institutes in Bombay."

Mr. D. K. Desai, Sales Manager of Dumex Private Limited, says:
"...I found the three-day Sales Training Course a refreshing one... Your approach, technique and emphasis on courtesies and human relations are really absorbing. I have no hesitation in saying that your Course would do a world of good both to the young and old, irrespective of the line of merchandise they are in to sell."

★ *Tack Course in Salesmanship and Human Relations — 3 days*

New Delhi

RUSSIA OFFERS CREDIT FOR THIRD PLAN

PAKISTAN TO BUY MORE INDIAN COAL AND CEMENT

(FROM A NEW DELHI CORRESPONDENT)

INDIA'S Commissioner-General for Economic Affairs in Washington, Mr. B. K. Nehru, is likely to visit Moscow shortly to discuss with the Russian Government further details of the Rs. 180-crore aid for India's third plan offered by that country. This initial offer of a fresh credit has been accepted by the Government of India. The offer is the result of the discussions held in Moscow recently between the Russian Government and the Central Minister for Steel, Mines and Fuel, Sardar Swaran Singh, and the Minister for Industry, Mr. Manubhai Shah.

Assistance from Russia to India for her second plan, including the Bhilai credit, totals about Rs. 130 crores. The Swaran Singh delegation, in its talks in Moscow, suggested that a credit of Rs. 250 crores would be the requirement for the third plan. Although Russia has offered Rs. 180 crores now, this is only "initial aid", and more may be expected. While the details of the Russian offer are yet to be negotiated and worked out, it is understood that it may cover schemes for increasing the capacity of the heavy machine-building plant in Ranchi, for doubling the coal-mining equipment plant in Durgapur, for manufacturing precision and mathematical instruments (electronic), and for metallurgical and some engineering industries.

Indo-U.A.R. Payments Agreement

An agreement has been reached on payment arrangements between India and the United Arab Republic. Letters were exchanged on 1st August between Mr. K. R. F. Khilnani, Joint Secretary, Ministry of Commerce and Industry, Government of India, and Mr. T. Labib, Deputy Superintendent of the Central Exchange Control Department of the U.A.R. Government and Mr. Y. S. Abady, Commercial Counsellor in the U.A.R. Embassy in Delhi. It is expected that as a result of the new arrangements, the stalemate in India-U.A.R. trade, which had developed over the last few weeks, would be ended and the tempo of trade between the two countries would increase.

According to the agreement, the proceeds of the Egyptian cotton exports to India will be used for payment for that country's imports of tea and jute goods and such other commodities as may be further agreed to between the two Governments, and also for the repayment of loans. For this purpose, a special account will be opened immediately in Indian rupees with the State Bank of India in the name of the National Bank of Egypt. Funds in this account will be fully used for purchases in India or for payments concerning loans in India. In view of this new account being opened, the Egyptian Pound Realisation Account will be closed and all the rights and liabilities of that account transferred to the new one.

Invoices for cotton will be in Indian rupees and prices will be those ruling in the Alexandria market, after being adjusted according to the discount ruling on the date of contract and converted into Indian rupees according to official rates. As for exports other than tea and jute goods from India under the arrangement, the list of commodities will be settled from time to time by mutual agreement. For the purchase of these commodities from this account, if the Egyptian Government desires to charge any premium for rupees, it will be subject to mutual agreement. The present "H" account will be continued on the same terms as before. The proceeds of Egyptian goods, other than cotton, can be used for the import of such goods, other than tea and gunnies, as may be determined by mutual agreement from time to time for governmental and non-governmental purchases. The Egyptian Government will continue to issue licences to persons or the Government department concerned according to the funds available in the "H" account without delay. For such licences and purchases, no premiums will be chargeable for getting Indian currency permits for imports. The commodities thus covered include pepper, tobacco, electric fans, diesel engines, dry batteries, centrifugal pumps and other engineering items, spare parts for Indian machines, artificial dentures, chemical and pharmaceutical products, mica, coir hair, coir rope, medicines, medical instruments, surgical instruments, sewing machines, sandalwoods chips, tamarind, perfume oil, bicycles, sports goods and turmeric. Goods entering into trade between both the countries will not be re-exported by either country. Egyptian importers, who are given sterling licences valid for import on payment of sterling, will be permitted to use the licences for purchases of goods from India against payment in sterling, provided India offers such goods competitively.

Indo-Pakistani Trade Conference

India will supply increased quantities of coal and cement to Pakistan as a result of the second Indo-Pakistani trade review conference, which concluded in New Delhi on 27th July. The first such conference was held in Karachi in December 1957. Indo-Pakistani trade relations are governed by the trade agreement which came into force on 1st February, 1957, and will remain valid up to 31st January, 1960. It provides for an official review of the working of the agreement every six months. During 1959 [illegible] were 414,000 tons. This was, in the main, in accordance with the quantities mentioned in the agreement. Pakistan has expressed the desire to have additional quantities of coal only by rail. Although India already has transport difficulties, she has agreed to arrange the movement by rail of an *ad hoc* supply of an extra 100,000 tons of coal during the three months August-October 1959. The Coal Commissioners of the two countries will meet to consider the question of simplifying procedures for the movement of the commodity.

Pakistan is also interested in obtaining supplies of Indian cement up to 50,000 tons for East Pakistan, if supplies can be made available by rail at competitive prices. India has agreed that supplies can be so arranged. On the question of Pakistan's failure to import the agreed number of Indian films while India has been issuing licences freely for the import of Pakistani films, the Pakistani delegation has stated that a new procedure is being evolved, as a result of which Indian films will be obtained through the Pakistan High Commission in India. It will also examine the position of re-certifying some of the Indian films which were uncertified recently. As for books, periodicals and newspapers, the Pakistani delegation has said that there is no restriction on their import. There is also no restriction on the import of drugs and medicines from India and the decline in the volume may be due to local manufacture or consumer prejudice. Pakistan has indicated that she would like to take at least 5,000 tons to 7,000 tons of hard and soft wood, over and above the quantities specified for West Pakistan. India, however, has pointed out that Pakistan has not lifted the stipulated quantity as envisaged in the agreement. She has also agreed to see if additional supplies can be arranged. Pakistan has indicated a desire to obtain supplies of boulder stones and Pakur stones on a Government-to-Government basis, and India has agreed to use a State-sponsored agency for arranging the supply of these goods.

As for imports of raw cotton from Pakistan, the Indian delegation explained at the conference that according to the current policy, India allows imports of cotton staple fibre of 1⅛in. and above, and there is no reference to the country of origin. Importers are free to import their requirements from any country of their choice, including Pakistan. The problem of foreign competition and the threat of substitutes in jute was examined and both the delegations were of the view that this posed a serious problem requiring very careful consideration. Pakistan complained that the off-take of raw jute by India had been steadily falling. It was, however, explained by India that the lower offtake was due to the unexpectedly good domestic jute crops. India, however, has promised to consider whether further quantities of jute cuttings could be imported during the currency of the present agreement in excess of the quantity already lifted.

Border Trade

The working of the arrangements for border trade, which has now almost come to a standstill, was reviewed. The Indian delegation pointed out that the border trade arrangements, as contemplated in the agreement, were meant to be free from import-export control, exchange control regulations, Customs duties and other formalities and were mainly meant for helping the inhabitants of the border area within a belt of ten miles on either side, for some of their daily requirements, such as eggs, poultry, fish, and betel leaves. The Pakistani delegation took the position that there were no restrictions on *bona fide* border trade as provided for in the agreement. The anti-smuggling measures taken by the Pakistani Government might, however, have had some undesired effect.

Pakistan indicated at the conclusion of the review that, apart from the commodities mentioned in the schedule to the agreement, she was interested in importing and exporting fresh fruits and betel leaves, and also in exporting a small quantity of newsprint from October 1959, rock salt, eggs, poultry, Chuna Khari pearls and Daincha seeds. Pakistan is interested in the import of a small quantity of tea seeds, and livestock from Bihar. India has said that she will examine the question of expanding trade in these items. Apart from stepping up the exports of the commodities mentioned in the schedules, especially concerning heavy items which have an advantage in view of the proximity of the two countries, India is interested in the movement of larger quantities of her manufactured goods, particularly the products of the newly developed industries, to Pakistan.

I.L.C. Favours Arbitration

The Indian Labour Conference has agreed that there should be greater recourse to mediation and arbitration for the settlement of industrial disputes, and adjudication should be avoided as far as possible. Matters of local interest not having wider repercussions, should, as a general rule, be settled through arbitration. The I.L.C. concluded its seventeenth session in Madras last week. Employers agreed to extend their full co-operation in "developing" this new approach of settlement of disputes through mediation and arbitration. But there should be no compulsion from the Government in this matter, they said. Cases of refusal to have recourse to arbitration even in minor matters should be reported to the implementation and evaluation machinery in the States or at the Centre, as the case may be. A panel of arbitrators will be maintained by the Government in order to help the parties choose suitable arbitrators. The parties, however, will be at liberty to choose arbitrators from outside the panel. The principles and forms enunciated in awards and judicial decisions on important issues relating to industrial relations should be compiled, codified and published and made available for the guidance of arbitrators.

The Government of India will examine afresh how far the provisions of the Indian Arbitration Act can be usefully made applicable to the arbitration procedure laid down in the Industrial Disputes Act. The conference agreed to a proposal to make it obligatory for unions to prescribe a minimum membership fee of 4 annas a month, and it was decided that a statutory provision should be made for this purpose. Registrars of trade unions are to be empowered to inspect accounts, books, membership registers, etcetera, so that they can verify the correctness of annual returns submitted by the unions. The work of registrars should be decentralised to avoid delay in registering unions.

As for the recognition of unions, where there is only one union, the employers might recognise that union, even if it does not fulfil the condition of 15-percent membership or one year's standing. Where there is more than one union and none of them fulfils the membership condition, none will be entitled to recognition.

A union will be entitled to recognition if it has not committed any breach of the code of discipline for one year after claiming such recognition. Failure to observe the code by a union, after it has agreed to abide by it, will entail the withdrawal of recognition normally for a period of one year. In such a case, it will be open to the employer to recognise another union during this period provided it fulfils all the conditions for recognition. On the question of reviving the Labour Appellate Tribunal, it was decided that the matter should be considered in the light of the views expressed by the conference. A committee is to be set up to suggest measures to improve the functioning of works committees.

RISING PRODUCTION AND STABLE WAGES IN MANUFACTURING INDUSTRY

U.K. BODY URGES REDUCTION OF PRICES

(FROM OUR LONDON CORRESPONDENT)

RISING production, more or less stable wages and increasing productivity have been the features of manufacturing industry during the last six months. As a result, costs must have been falling. Unless this reduction is passed on in lower prices, higher industrial profits may well encourage wage claims at the end of the current year. This is the warning given by the National Institute of Economic and Social Research in its latest issue of *Economic Review*. It is very much in line with the thinking of the Cohen Council's two reports, the last of which was published nearly a year ago. Subject to this warning, the authors of the *Review* think that the outlook for stable prices at home remains good," even allowing for the expected rise in railway fares in the autumn. It also takes a favourable view of the balance of payments over the next six months. With exports rising, it expects Britain's own balance to be "still well in surplus." Meanwhile, the rest of the sterling area is also recovering, so that the reserves should continue to rise. "Seasonal factors normally cause some deterioration in the sterling area's payments in the third quarter. There is some chance that the deterioration may not be severe this year," it says. "The usual fall in overseas sterling area exports, especially of wool and cocoa, may be modified by the rising trend in demand. At the same time, U.K. exports to North America, which are much less susceptible to seasonal influences, are an increasing proportion of total sterling area earnings."

Declining Unemployment

The decline in the number of unemployed is continuing, although not as sharply as in June. Figures issued by the U.K. Ministry of Labour show that, on 13th July, there were 395,000 people registered as unemployed—18,000 fewer than in mid-June, and 225,000 fewer than in January, when unemployment was at its peak. Government officials are saying that the decline would have been larger had it not been for the printing dispute, which had probably caused several thousands of printers to register at the employment exchanges. No statistical evidence is available, however, to support this contention. Even so, the fall of 18,000 has been enough to lower the percentage figures for unemployment from 1.9 to 1.8 during the month. The decrease among adults was even larger—23,000. The only group to show an increase is the boys and girls, of whom 5,000 more are now on the registers, partly as a result of the larger number of school-leavers.

The other side of the medal—unfilled vacancies in the Ministry's books—is also brighter. Three weeks ago, there were 29,000 more of these than in mid-June. Provisional figures for average weekly earnings of manual workers were also issued by the Ministry at the same time, a month earlier than usual. They show that in April, the average industrial pay packet contained £11 2s 6d, compared with £10 17s 4d in October, a rise of 1.9 percent. The average earnings for men were £13 2s 11d. In manufacturing industries, the figure for men was £13 11s 9d. The average total of hours worked in industry shows an increase to 46.3 a week, compared with 46.0 in October.

Good Export Figures

While there is wide variation in the output experience of different industries, Britain's main exporters appear to be doing well as far as the latest figures go to show. The country's aircraft industry, for example, sent its export figures soaring to record heights in the first six months of this year. The June figure at £15,103,000, brought the total for the half year to £87,805,000, an increase of 14 percent over the previous six monthly record, for July-December 1958. Sales of aircraft and parts in the first half of the current year were £53,374,000, against £50,228,000 in the first half of 1958. Aero-engines totalled £30,677,000 (£24,195,000). India and West Germany were the biggest buyers. Since the war, the aircraft industry's exports have climbed to £875 million worth, more than half of which was earned in the past three and a half years.

Meanwhile, Britain's office machinery business also continues to set up new records. Export figures for the first half-year at £10,076,000, beat last year's record for the same period by £189,000. Value of accounting machinery shipped rose to £2.9 million from £2.6 million, and duplicators and parts were up to £1,231,000 from £1,093,000. Exports in June were £1,649,000, compared with £1,362,000 in June 1958. Australia was the biggest customer taking £336,000, against £331,000 a year ago. The United States came second with £145,000, against £98,300.

Record E.C.G.D. Business

The Export Credits Guarantee Department, sharing in the export boom, did record business in the second quarter of this year. During the quarter, goods worth £155.2 million were shipped under the protecting umbrella of E.C.G.D. commercial insurance, comfortably beating the previous record of £150.7 million for the first three months of this year. The total represents an increase of 38 percent over the £111.8 million shipped with E.C.G.D. cover in the second quarter of 1958. At the end of June, there were 4,669 short-term policies in force (107 more than at the end of March, and 365 more than a year earlier), while their face value of £631.6 million was £16.3 million up on the quarter and £67 million up on the year. New medium-term business done during the quarter amounted to £34 million, compared with £24 million in the first three months of 1959, and only £7.7 million in the corresponding quarter of last year.

Since many of the shipments covered by the department are made from foreign ports, no direct comparison can be made with the total value (£846 million) of British exports during April, May and June. But it is understood that, as in the first quarter, it covered 18 percent of all exports from Britain. Exporters are making increasing use of the E.C.G.D. Two years ago, only 14 percent of all exports were insured by it.

Machine Tool Orders

The home order-book of the machine tool industry appears to have risen between the end of March, when it was worth £34.95 million, and the end of April, when it stood at £35.03 million. The conclusion is tentative because the Machine Tool Trades Association is not collecting details of new orders on a monthly basis, as hitherto, but quarterly. Figures for "net new orders" are derived from deliveries and the change in outstanding orders. Cancelled orders will be reflected in the quarterly figures. The industry's home deliveries were down on both March and April last year, and this was true also of exports. The export order-book declined from £15.47 million at the end of March to £15.38 million. Both home and export orders were heavily down on 12 months earlier.

T.U.C. Economic Review

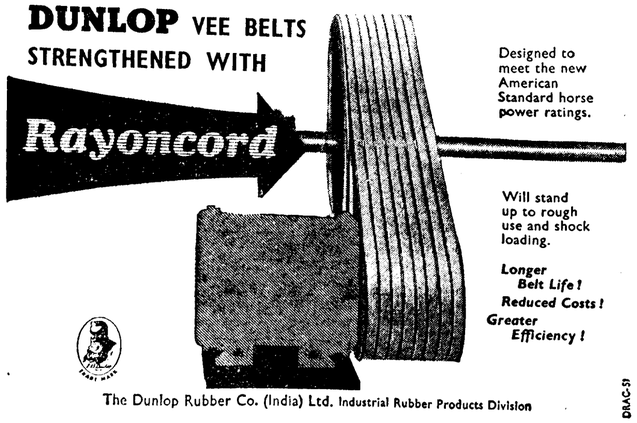
Any Government genuinely and consistently seeking to promote full employment and improve living standards is entitled to demand and get the co-operation of the community, including the trade union movement. That, plus a general confidence in the country's economic future, are the highlights of the 14,000-word report on Britain's economic situation which the General Council of the Trades Union Congress has prepared for presentation to the annual meeting in September. To summarise this is not easy, but among its principal proposals are the following: the Government should undertake an enquiry into British export performance to ascertain where industry is failing to take full advantage of its opportunities. I.C.F. members should, if necessary, be permitted to take discriminatory action against those whose policies are endangering international equilibrium; the Government should endeavour to take collective action with the rest of the sterling area and with the O.E.E.C. to establish a satisfactory form of European economic association, to offset disturbing international pressures. Britain should aim at a current balance of £400 million to £450 million a year at present prices. The Government should act when necessary, to regulate the level and pattern of demand in the economy.

Having taken a fairly optimistic view of economic prospects for 1959 and the immediate future the review goes on to tell the Government that it "must clearly commit Britain to economic expansion by reinforcing its Budgetary measures by others which will both help restore full employment and the rising output and, at the same time help those who are in need. A substantial increase in pensions and unemployment benefits is long overdue. Long-term interest rates are still too high and should be brought down. More investment is needed: in schools, hospitals and slum clearance schemes at home, and in projects which could quickly be put into action in the underdeveloped countries, but which have been gathering dust in pigeonholes while the peoples of Africa and Asia cry out for help." The review finally turns nearer home. Trade unionists should in their own interests, do all they can themselves to improve efficiency, and bring "pressure to bear on managements" to be efficient. Equally, trade unions and the T.U.C. must exert pressure on the Government "to accept its responsibilities in this field."

The Cotton Scheme

There has recently been further important developments in the cotton industry's redundancy schemes. The three orders—for spinning, doubling and weaving—were approved by the House of Lords so that the last of the preliminary formalities was completed. Three "statutory instruments" for the reorganisation of the industry were made by the U.K. Board of Trade under the Cotton Industry Act and they came into force recently. The oldest established of the spinning combines is to offer for scrapping a very substantial proportion of its productive capacity. At the annual meeting of Fine Spinners and Doublers, Limited, the chairman, Mr W. T. Winterbottom, announced that the directors contemplated submitting over 1 million spindles—about one-third of the combine's total under the reorganisation proposals.

Outer Seven Draft Plan



The Stockholm draft plan for a European free trade association of the "Outer Seven" was published recently as a White Paper. One feature is the provision of "defensive measures" in certain circumstances. The seven countries are Austria, Denmark, Norway, Portugal, Sweden, Switzerland and Britain. They will progressively abolish existing tariffs on imported goods originating in the European free trade area. The initial reduction of 20 percent will be made on 1st July, 1960. The process of elimination will be completed not later than 1st January, 1970.

There will be reductions at the rate of 10 percent on 1st January, 1962, 10 percent on 1st July 1963, and 10 percent at the beginning of each year from 1965 to 1970 inclusive. Any member may reduce tariffs more rapidly than this if its economic and financial position permits. If a member's balance of payments deteriorates rapidly, "thereby creating a serious situation," it may take "defensive measures" in accordance with its existing international obligations. "Certain protective measures" are also permissible if there is an appreciable rise in unemployment resulting from a spectacular decrease in internal demand for a domestic product because of imports from other members. Government assistance to industry which distorts or threatens to distort, competition within the area is incompatible with the convention. Another rule is that members, during the transitional period should progressively cease to use public undertakings and commercial State monopolies as an instrument of protection and trade discrimination on grounds of nationality.

The Danish proposal on agriculture is annexed to the draft plan. It provides for import and internal support policies to be adapted so that quantitative restrictions, tariffs, State trading or other Governmental regulations "do not prevent other member countries from maintaining their traditional markets or from obtaining a fair increase in their share of the market." Production subsidies should be subject to "an effective confrontation procedure." Provision should also be made, through agreement between the interested members, for "the gradual reduction of certain specific subsidies of particularly harmful effect to food-exporting member countries."

Report on Monetary Policy

The report of the Radcliffe Committee on monetary policy should be completed shortly. This was disclosed by the Chancellor of the Exchequer in a written parliamentary answer to Mr. Harold Wilson. He added that the report would be published as soon as possible after it had been received.

Jute

MILLS BUY SUBSTANTIAL QUANTITIES OF NEW CROP JUTE

BIG RISE IN SACKING PRICES

AFTER several weeks of idleness, the raw jute markets became active during the past week. Purchases by Calcutta mills were reported to be 250,000 maunds to 300,000 maunds, mainly new crop. Although sellers tried to look reserved, in all cases there was an excess of offers. Delivery dates in the business concluded ranged over a wide period, from August right up to the end of the year. This was probably the main reason why sellers were keen. There seemed to be a certain amount of justification for their reserved attitude, however, as a recent survey of the Indian upcountry markets showed that in all cases rates in the agencies were above the parity of Calcutta quotations. In Dhubri, for instance, offers of jute for August shipment were not available under Rs. 19 a maund for Bottoms last week-end, which comes to about Rs. 23.50 landed in Calcutta. At that stage, general quotations for Dhubri and Assam jute to mills were based on Rs. 23 a maund, and many buyers considered even this too high. Other agencies showed similar disparities, which gave no incentive for sellers to do near delivery business.

The initial imports of new crop jute in upcountry agencies last week were very disappointing. Apart from the heavy moisture content, which is a normal feature at this time of year, the standard of the jute was poor. Experts said that, due to inadequate rain in most of the Assam and north Bengal areas, steeping and retting facilities were poor, and bad retting appeared to be the main complaint. Other districts complained of heavy root, but this was understandable in agencies where the crop had been standing in waterlogged fields. The body of the jute in these instances was reported to be good. In Dhubri and Assam, the recent rains improved the supply of steeping water, and it was expected that this would ensure an improvement in the midland crop, the harvesting of which has now commenced. Conditions in northern Bengal were not particularly favourable last week. Lack of rain retarded the growth of the standing crop which showed no progress and remained at 5½ feet to 6 feet. A shortage of steeping water was holding up harvesting. In all other areas, weather conditions were very favourable, and over the week the shortage of rain was partially made up. River levels, which had been falling over the previous two weeks, started rising again.

China Buys Sacking

There was a vast improvement in the Calcutta heavy goods market last week, due mainly to continued interest from overseas. China was again prominent with enquiries, and B Twills and heavy Cees led the recovery. It is reported that so far China has taken over 80,000 bales of heavy goods, which is a considerable improvement on the comparable figures for previous years. The statistics for other sacking consuming countries also show an improvement which has prompted confidence and optimism in heavy goods, so much so that for the first time in almost a year, B Twills have risen over the Rs. 100 level. Since minimum prices for jute goods were introduced by the I.J.M.A. on 27th February, 1958, the sacking market has had a chequered career. It was nearly a month after the introduction that B Twills eventually attained the minimum price of Rs. 100, and then only momentarily. It was another month (12th April, 1958) before that level was reached again, and in a burst of enthusiasm, the rate rose to a peak of Rs. 104.50 a few days later. In the middle of May, the price dropped below Rs. 100 and remained there until the middle of July. During July and early August 1958, rates fluctuated around the minimum level, and the last quotation in three figures was recorded on 13th August, 1958. From then on, sacking was in the doldrums, with stocks rising due to reduced world demand. The I.J.M.A. eventually abandoned the minimum price scheme, and in February this year a new low level of Rs. 87.85 for B Twills was recorded. Since then, with production rates showing a slight changeover in favour of hessian, sacking prices recorded a slow but steady advance. This was accelerated during the past week, and from Rs. 97.95 on 30th July, B Twills improved to Rs. 101 on 4th August.

During the same period, hessians have had a very different tale to tell. The minimum price for 40in 10oz hessians was fixed at Rs. 39.50 a 100 yards, at which time quotations were 50nP lower. A steady improvement brought a peak of Rs. 44.50 in middle of July 1958, but since then rates have fluctuated around the Rs. 40 level, at which stage they are today. Interest in hessians from overseas has been spasmodic in spite of the rise in U.S. consumption. The buying policy of the U.S.A. for the past year has been on the basis of "little and often", which has the minimum effect on prices. As far as the Argentine is concerned, her policy is governed by internal economic and political conditions, and the availability of foreign exchange. Over the past few weeks, hessian prices have been maintained in sympathy with heavy goods, but the undertone of the market remains confident on hopes of increased U.S. demand in the second half of the year.

Pakistani Exports

It is rumoured that the I.J.M.A. recently decided not to unseal any further looms meantime, and this caused an upsurge of speculative covering activity. Any alteration of the productive capacity may, however, have adverse repercussions on the mills' profits position. The threat of competition from East Pakistan is constant, and may be the decisive factor in production controversies. The latest jute goods export statistics from East Pakistan, for May, are encouraging for the industry in that country. Total exports in that month rose to 15,198 tons, an increase of 8,694 tons over the corresponding month of last year. The largest increase in offtake was by Pakistan's leading buyer, South Africa, whose requirements rose by 3,049 tons to 5,189 tons. Burma also showed a sharp rise of 1,842 tons to 2,187 tons. Australia bought nothing in May 1958 but purchased 863 tons in May 1959. The United States, Belgium, the U.K., the Netherlands and East Africa increased their offtake during May 1959. Total exports from Pakistan for the 11 months, July 1958 to May 1959, amounted to 121,477 tons, made up of 38,667 tons of hessians (32 percent), 82,123 tons of sacking (67.5 percent) and 687 tons of other goods (0.5 percent). Compared with the corresponding period of the previous season, exports increased by 8,161 tons in hessians, 14,753 tons in sacking and 307 tons in other goods.

Exports of jute goods from India during the corresponding 11 months showed a decline of 6,300 tons (compared with an increase of 23,221 tons in Pakistan). Total exports amounted to 756,900 tons, made up of 293,600 tons of hessians (38.8 percent), 421,300 tons of sacking (55.6 percent) and 42,000 tons of other goods(5.6 percent). Over the period, hessian exports were up by 52,900 tons and other goods by 8,100 tons, but sacking exports fell by 67,300 tons.

THE JUTE MARKETS

There was heavy activity in the futures markets during the past week. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 29th July to 4th August, were as follows:

	Hessians 40in. 10oz. August		Sacking B Twills August	Raw Jute Upper Assam September	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos.
Opening	40.40	44.18	98.60	22.90	61.35
Highest	40.86	44.13	101.65	23.12	61.94
Lowest	40.06	43.81	98.05	22.52	60.33
Closing	40.28	44.05	101.35	23.00	61.62

Manufactured Goods: There was very little change in the jute goods market at the opening last Thursday. Overseas buyers showed little interest and speculative activity was small. In sacking, B Twills opened at Rs. 97.95 for ready goods and Rs. 96.50 for forward shipment. Lack of interest depressed hessians, so 40in 10oz recorded Rs. 40.35 and Rs. 39.15 for the near and forward positions, respectively. During the day, there were no genuine enquiries, but sacking witnessed minor fluctuations with a quieter trend. Rates recovered by the evening and Friday's quotations showed little change, although sentiment in hessians was stronger. The trend altered during the day; on reports of business with China to the extent of 10,000 bales of heavy goods, sacking prices soared and by Saturday morning were based on Rs. 99.65. Hessian advanced in sympathy and 10oz opened at Rs. 40.35. Sentiment again improved over the week-end and heavy speculative covering activity forced prices still higher, until on Monday morning B Twill rates rose over the Rs. 100 mark for the first time in nearly 12 months. Continued covering business, and rumours that the I.J.M.A. had decided on a no-change policy as far as production was concerned, caused stable conditions. By Monday morning, ready B Twills stood at Rs. 101. Hessians were neglected and showed minor losses at Rs. 40.50. Thus, while B Twills advanced by Rs. 3.05 during the week, 40in 10oz hessians rose by only 15nP.

On Wednesday morning, sacking was again firm, with hessian weak. Opening quotations were based on the following:

	Ready	August	September	Oct.-Dec.
40in. 8oz.	33.20 (36.18)	33.15 (26.13)	32.95 (25.81)	32.00 (34.88)
40in. 10oz.	40.30 (43.93)	40.50 (44.14)	40.30 (43.93)	40.00 (43.71)
B Twills	101.15	101.65	100.65	99.75
Heavy Cees (Plain)	103.50	103.50	103.25	98.75
A Twills	119.00	119.00	111.00	110.00
Liverpools	111.60	111.30	111.00	110.60
Cornsacks	104.00	104.50	104.25	100.75

Raw Jute: Conditions in the fibre markets showed a marked change as buying interest developed from the start. Small business was reported in both old and new crop jute, but selling pressure caused a slight reduction in rates from an opening of Rs. 23 for new crop Assam. On Friday, mills became interested at the lower level and during the day about 70,000 maunds of new crop jute was purchased. Buying continued on Saturday, when prices showed a tendency to rise. A firmer tendency developed over the week-end. On Monday morning, new crop Assam was quoted at Rs. 23.25, and again about 150,000 maunds of business was done. Sellers were plentiful for all categories, but near delivery offers were limited as prices upcountry were above the parity of Calcutta rates. Interest waned as rates tended to rise, and only limited business was reported on Tuesday. Imports into the Cossipore market improved last week and a total of 610 wagons was reported. This was 60 more than in the previous week. Covering business was prominent in early transactions in Cossipore and good prices were paid for all arrivals.

Business consisted of new crop Assam at Rs. 22.50 to Rs. 23 a maund basis Bottoms for August-September shipment and Rs. 23.50 for September-October shipment. Northern agencies were done at Rs. 22.50 basis Bottoms and Rs. 25 for Middles only. Daissee Tossa passed at Rs. 22.75 for October-November shipment. A small quantity of Jiaganj-Cossimbazar mesta was reported at Rs. 20.50 for October-November shipment. Daissee white came in for some interest and buyers paid Rs. 24 for Middles only. A fair amount of business was done in jungli jute at Rs. 20.50 basis Bottoms, and Rs. 19.25 for B Bottoms, both for September-October shipment.

The only business reported in old crop jute consisted of Assam at Rs. 21.25 and jungli white at Rs. 20 basis Bottoms.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs a maund	Rs. a 100 kilos	Shipment
New Crop:			
Assam	23.25	62.31	Aug.-Sept.
Northern	22.75	60.97	"
Purnea Desal	22.00	58.96	"
Daissee	23.75	63.65	Sept.-Oct.
Assam Tossa	24.00	64.32	"
Northern ex Calcutta	22.50	60.30	"
Mesta:			
Assam-Northern	21.25	56.95	Oct.-Nov.
Desal	21.25	56.95	"
Daissee	21.00	56.28	"
Jungli	20.50	54.94	"
Old Crop:			
Assam	21.75	58.29	August
Northern	21.25	56.95	"

THE PAKISTANI JUTE MARKETS

STEADIER TREND IN FIBRE

(FROM A CORRESPONDENT)

DURING the last week of July, a slightly steadier trend was noticeable in the raw jute market in East Pakistan. This was mainly on account of widespread rain and flood reports in the province. The main feature of the week was the arrival of new crop fibre in reasonable quantities. New crop fetched higher prices, although transactions were rather slow. Dealers are of the opinion that the future rise and fall in business will depend to a great extent on the intensity of floods and their impact on the crop. Although the river levels here have receded, the situation in Assam has worsened considerably; this is likely to aggravate floods in East Pakistan resulting in damage to the jute crop. But any damage to the crop, which is already smaller, will create firmness in the market.

Total exports of raw jute during the season ended 30th June, 1969, were 4,572,858 bales, against 4,394,390 bales during the corresponding period of last year. The Government of Pakistan has decided its jute policy for the season 1959-60. The new crop is expected to amount to 5.8 million bales, and with a carryover of about 900,000 bales from the previous season, the total supply will be around 6.7 million bales. There will, therefore be sufficient jute for local consumption as well as for exports. Nevertheless, with a view to maintaining stability in prices, the Government has decided to retain minimum export prices on long jute on the basis of £90 a ton for Export Firsts c.i.f. U.K. Continent. The minimum export prices on all varieties of cuttings are being abolished with immediate effect to help increase exports.

The export bonus scheme for cuttings expired on 30th June, 1959. The Government has not considered it necessary to extend it further. There is to be no bonus on the export of cuttings with effect from 1st July, 1959. The present rates of export duty on jute and jute cuttings, including cut ropes at Rs. 20 and Rs. 10 a bale, respectively, will remain unchanged.

GUNNY SHIPMENT STATISTICS

The following figures including coastal shipment relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th July, 1959	2,119.7	24,328.4	26,448.1
1st to 25th June, 1959	1,234.9	16,991.0	18,225.9
1st to 25th May, 1959	3,217.2	13,771.1	16,988.3
	Sacking		
1st to 25th July, 1959	22,208.7	201.6	22,410.3
1st to 25th June, 1959	20,251.2	1,462.9	21,714.1
1st to 25th May, 1959	19,977.1	1,145.4	21,122.5

a new life

'Do you not hear the entrance of a new theme?'
Do you not hear the asserting cry of the newborn,
see myriad men rise to work;
to build, to wield the power of the sun?
Fashioning life, making a world that offers a little more:
a little less of the care, a little more of the joy.
Yes, you feel the awakening—
an ancient nation sheds the stagnation of the ages.

TODAY, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for ...
TOMORROW, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products ...

Today and Tomorrow... Hindustan Lever serves the home

Engineering and Transport

ECONOMICS OF U.K. NUCLEAR POWER INDUSTRY

HIGH CAPITAL AND RESEARCH COSTS

"DEVELOPMENTS during the past year have confirmed that there is now an oversupply of uranium which is likely to persist at least until the late 1960s." In these words, in its report for 1958-59, the United Kingdom Atomic Energy Authority reminds us that not even the most modern form of energy is exempt from the general over-supply of fuel. However, there is no present possibility of adding to these excessive quantities of fuel the immense potential energy contained in the world's water. The U.K.A.E.A. report admits that Britain's apparatus for controlled thermonuclear research, Zeta, has not functioned as planned. A new apparatus, Iese (pronounced without the "S"), has been devised to prevent the loss of energy that has unaccountably occurred in Zeta. But even if Iese succeeds where Zeta failed, years must elapse before even a prototype power-unit using energy released by fusion of light atoms can be built.

The more practical task of the nuclear-power industry at present is to reduce the cost of its main product, electricity. Only one more nuclear power station has been brought into operation in Britain since the famous Calder Hall station was opened in 1956, but five more are under construction, and a few additional sites are either chosen or being considered. The total represents a much more ambitious programme than any other country's, but pride in this apparent superiority is now qualified by doubt whether the nuclear power stations are really economic. A few years ago, the authorities were obsessed with the idea that Britain's development would be restricted, in the mid-1960s and after, by a deficiency of power. To ensure a sufficiency of power seemed more important than the cost of providing it. Anyway, it was calculated at that time that electricity would soon be produced as cheaply by nuclear-power stations as by conventional power stations burning coal or oil. The basis of these calculations (which included an allowance for materials for weapons) is now known to have been faulty. And the vast development of the world's oil industry, which has directly produced a surplus of oil and indirectly caused a surplus of coal, makes a future deficiency of power unlikely.

The operating costs of nuclear-power stations are comparatively low, but their capital costs are high, and their overall costs (allowing amortisation over, say, 15 to 20 years) are considerably higher than those of modern conventional power stations. The experts predict that the difference will be eliminated over the next few years, but in the meantime, Britain is indulging in the luxury of a somewhat costly experiment. It is urgently necessary to reduce capital costs of nuclear power, not only for the sake of economy at home, but also in order to convince potential customers abroad that this mode of power is economic. The British nuclear-power industry does not conceal that it expected more interest abroad than has, in fact, materialised. It has necessarily devoted its main effort to big power stations, because they are required at home; but they are not required in many countries abroad, partly because their capital costs are high and also because full advantage cannot be gained from their low operating costs unless they are operated at high load-factors—nearly continuously at nearly full load. "The present type of gas-cooled, graphite-moderated reactor may command a market overseas where large stations are required", says the U.K. Atomic Energy Authority in its report. "Nuclear technology will, however, have to advance considerably before smaller reactors become competitive in normal circumstances."

World Fuel Surplus

It is fortunate for the world in general but unfortunate for the industry in particular that "normal circumstances" are much less favourable to the development of nuclear power than seemed likely a few years ago. The surplus of fuel is, of course, a worldwide phenomenon, and it has naturally dulled somewhat the world's interest in the new mode of power. The industry in Britain (comprising the Government-sponsored and financed Atomic Energy Authority and the many private companies that have involved themselves in nuclear work) is now in a difficult position. It is spending tens of millions of pounds a year on research—on fundamental physics and chemistry, processes, materials and fuels; but its expenditure is not immediately rewarding. Yet a policy of retrenchment would be fatal: the industry must intensify its research in order to devise processes and equipment that will make atomic power cheap.

Possible Structural Changes

Possible changes in the structure of the industry are already being discussed. There are five consortia—groups of companies that can undertake the whole job of building a nuclear-power station—and some of them will evidently have no nuclear work at all when their present commitments are fulfilled. Even these commitments are unprofitable when the cost of research is taken into account. Yet the consortia must continue to invest in research—or abandon the idea of getting contracts in the future. Merely to prepare a tender may cost as much as £200,000, and if three or four groups tender for a contract that can be awarded to only one, hundreds of thousands of pounds' worth of work is wasted. So it is suggested that the number of consortia should be reduced by amalgamations. Yet the industry, however it may be organised (and full credit must be given to both the public and the private sectors of it), is technically the most vigorous and progressive in Britain. There is no reason to doubt that some of the possibilities that it is now investigating (as the Authority's report points out, as many as 400 different types of reactor are theoretically possible!) will develop cheap power for the future. Some decades hence, perhaps, the oil industry will be as much distressed by nuclear energy as the coal industry is now distressed by oil. Later still, perhaps, "conventional" nuclear energy will be replaced by thermonuclear reactions. Obsolescence, as much as research, is the price of progress. But cheap and abundant energy is an indispensable condition for he continuing advance of mankind.

U.S. ELECTRIC INDUSTRY EXECUTIVES TO TOUR RUSSIA

Ten electric industry officials from the United States will complete a tour of Russian electric power systems and equipment manufacturing plants shortly. Last year's visit by such a team was not completed because some members of the group attended the Geneva Atoms for Peace Conference. The inspection trip, part of a technical and cultural exchange programme established by the United States and Russia, is expected to last about two weeks. It is being conducted under the auspices of the U.S. Department of State and is being sponsored by the Edison Electric Institute and the Association of Edison Illuminating Companies, trade associations of United States electric utility companies. It is contemplated that a similar group from Russia will visit power systems and equipment manufacturing plants in the United States next September.

PAN AMERICAN PURSUES ITS CARGO RATE REDUCTION PROGRAMME

As a further step in its programme to affect a drastic reduction in air cargo rates to Europe, to Africa, to the Middle East, to South America, to the Orient and to south-east Asia, Pan American World Airways has ordered 12 special long-range *Lockheed 207* prop-jet air-freighters at a cost, including spares, of $60 million, Mr. Juan T. Trippe, president, has announced. The new 115-ton cargo aircraft will be powered by four General Motors' Allison prop-jet engines each of 6,500 horse-power. Deliveries are scheduled for early 1962. The special *Lockheed 207*, incorporating added range to meet Pan American's specifications, can operate non-stop in either direction across the Atlantic carrying a 35-ton payload. The new prop-jet will have four times the work capacity of the company's largest piston-engine cargo aircraft. "The low ton-mile cost of Pan American's new cargo fleet", Mr. Trippe said, "should permit cutting nearly in half most overseas cargo and mail rates". Its ability to land on runways as short as 400 feet, its efficient loading facilities, its long range and great capacity, combine to make the Pan American prop-jet cargo fleet a great contribution to world commerce. Pending delivery of the *Lockheed 207*, Pan American has arranged for the conversion of many of its passenger-carrying *DC-7Cs* into all-cargo configuration.

INDIA AGAIN BEST CUSTOMER FOR BRITISH AIRCRAFT

India was the leading buyer of British aircraft during the six-month period January-June 1959, according to figures just issued by the Society of British Aircraft Constructors in London. Her total purchases, valued at £9,251,308, were nearly twice those of West Germany, which came next on the list. During January-June, exports of the British aircraft industry totalled a record £87,804,776. This was 14 percent higher than the previous best six-monthly figure (July-December 1958), and represented an annual figure of £175 million, compared with last year's record £154 million.

Other chief buyers for the six-month period were—after India—West Germany, with £5,288,880; Switzerland, over £4,698,000; Argentina, over £4,590,000, and the United States, over £3.5 million. The total value of British aircraft and parts exported in June was £15,102,965, which included yet another aero-engine monthly export record—the third in three months. To this total India contributed £1,270,066. She was third on the list of buyers—after Switzerland and the Netherlands.

WORKING MODEL OF SOLAR-POWERED THERMO-ELECTRIC GENERATOR

Long mission satellites and manned space vehicles of the future will be able to tap a limitless supply of electric energy by means of a solar-powered thermo-electric generator, Westinghouse and Boeing engineers say. Mr. Niles F. Schuh, manager of the Westinghouse space technology engineering department, Lima, Ohio, and Mr. Ralph Tallent, research engineer with the Boeing company, showed a working model of a solar-powered thermo-electric generator and discussed findings that indicate that the system is a practical source of electric power in space. The two announced results of a joint study in a technical paper presented at the summer meeting of the American Institute of Electrical Engineers.

They showed an operable thermo-electric generator which, by itself, weighs 3 lbs and measures 20 inches in length. It is capable of converting the energy of the sun into 2.5 watts of power—enough to operate a radio transmitter broadcasting a strong signal back to earth. "Present day systems possess a number of shortcomings which may preclude their use in long mission time vehicles," their report stated. However, a sun-powered thermo-electric unit shows considerable merit as a source of auxiliary power for space missions that may take months or even years to complete, they said. Requirements for this kin equipment will be very stringent, for weight be at a premium, reliability must be high little or no maintenance and life expectancy be long.

The direct conversion of heat to electr through a static device involves a phenomenc which electric current flows continuously i closed circuit composed of two different meta long as the junctions of the metals are mainta at different temperatures. Messrs Schuh Tallent said that they first had to get heat the sun into the system and then they faced problem of dissipating the waste heat in vacuum environment of space. In order to luate these problems, they designed and bui "bench model" generator which could be e instrumented but did not represent an attem attain the optimum flyable system. The energy must be collected and concentrated mirror-like device similar to a solar furnace, said. This leads to mechanical problems bec the collector must have a large area that wil quire that it be in a collapsed form during ascent of the system through dense air and be extended or erected at space altitude. development generator shown had a reflective minium sheet mounted in a 20 by 50-inch s cylindrical shape to collect the sun's energy concentrate it on the thermo-electric material. the basis of their study programme, the engir concluded that "it appears that a solar-pow thermo-electric generator is feasible and may considerable potential as a secondary power sc for future space vehicles. There are many lems which must be explored but these prob appear solvable with future engineering effor

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) advanced by 0.9 percent to 117.8 during the week ended 18th July, 1959, compared with 116.7 (revised) for the previous week. The index was higher by 1.5 percent and 1.9 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. Higher prices of milk (+17%), bajra in Hissar (+16%), potatoes in Kanpur (+14%), onions (+12%), eggs in Madras (+8%), black pepper in Calcutta (+6%), coffee (+4%), bananas and cardamoms (+3% each), rice and betelnuts (+2% each) and wheat, ghee, mustard oil and salt (+1% each) raised the index for Food Articles by 1.9 percent to 123.0, against 120.7 (revised) for the earlier week. The prices of eggs in Bombay (−8%), black pepper in Madras (−6%), bajra in Jodhpur, potatoes in Mettupalayam and tea for internal consumption (−5% each), cashewnuts, gingelly oil and fish (−3% each), barley, maize and arhar (−2% each) and jowar, musur, groundnut oil, gur and chillies (−1% each), however, moved down. The index for Tobacco remained stationary at the previous week's level of 97.5. The Fuel, Power, Light and Lubricants group index stood unchanged at the earlier week's level of 116.2, in spite of a fall in the price of castor oil (−1%). The prices of raw jute, raw wool, cottonseed, copra and tanning materials (+1% each) showed advances while castorseed (−5%), rapeseed (−2%) and raw silk, groundnuts and bamboos (−1% each) moved down, and the index for Industrial Raw Materials remained stationary at the previous week's revised level of 120.1. The index for Intermediate Products worked out to 108.4, against 108.3 for the earlier week. The prices of copper (+2%), zinc and brass (+1% each) and linseed oil (−1%), showed variations. The index for Finished Products receded by 0.3 percent to 109.2 due to a fall in the prices of handloom cloth (−3%) and general chemicals and oilcakes (−1% each); bricks and tiles (+1%), however, moved up.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base : 1952-53 = 100)

Groups and Sub-Groups	Week Ended 18-7-59	11-7-59	19-7-58
I. Food Articles :	123.0	120.7(R)	119.6

INTERNAL CONSUMPTION OF TEA RISES

PROMOTION CAMPAIGN NEEDS TO BE INTENSIFIED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

ALTHOUGH the Indian producer knows well that the world has more tea than it requires, he is compelled to produce more in order to maintain his economic stability. Due to ever-increasing costs, he is left with no alternative but to produce more so that increased costs may be spread over a larger output. An expanding home market for tea is the only insurance against a crisis. It has, in fact remarkably increased within the past half a century. Consumption has increased to 235 million lbs from only 8 million lbs within this period. This progress has been achieved with sustained market promotional activities of the tea trade and the organisations set up under the Tea Cess Act of 1903 and its successors, including the present Tea Board. But the rapid increase in home demand is creating concern to those who stand for "export at any cost". Their apprehension is whether the growing Indian demand will lead to a decline in exportable surplus.

Baseless Apprehension

Planters think that this fear is baseless. The tea industry in India has shown its remarkable vitality. Since the International Tea Agreement was enforced in 1934, it went through seven lean post-depression years, suffered from shortages of essential supplies during the war and lost 64,000 acres due to the partition of the country. In spite of these, the output went up from 447 million lbs in 1938 to 561 million lbs in 1948 and to 710 million lbs in 1958. During this 20-year period, exports increased by 157 million lbs and internal consumption by 145 million lbs. Exports and home consumption have more or less kept pace with production. It is, therefore, argued that there need not be any anxiety over the rapid expansion of the home market.

If home market consumption remains at the present level, the increased production planned under the five year plans might create a serious problem for the industry. It will face difficulties in selling its surplus output in the world market since it is overloaded with supplies. The tea industry in India has, therefore, to develop an internal market for its increased output. This serves to emphasise the necessity for a vigorous propaganda campaign in the internal market.

Internal Market

But the question is how much of India's output can be absorbed by the internal market. According to Mr. E. J. C. Menzies, chairman of the Anamallai Planters Association, a third of the output can safely be marketed in India, without reducing the amount meant for exports. But he sounded a note of warning on the increased tax burden on the industry, for he said : "Government, Centre and States, continue to turn a deaf ear to our pleas for a reduction in the crushing burden of taxation the industry now has to bear. This is in addition to our heavy financial burdens under the Plantation Labour Act and other legislation."

Extra Holidays

Referring to the Madras Industrial and Establishments (National and Festival Holidays) Act, which came into force in April 1959, Mr. Menzies said that, with these extra holidays, the number of working days of estate labour has been further reduced. Regular labourers work no more than 250 days a year, from which has to be reduced leave with wages and festival holidays, numbering some 20 days; this reduces the total to only 230 days. In the case of women, who are employed for harvesting the crop, the number of working days can be reduced still further by 90 days, due to maternity leave, etcetera, so that the average number of working days for women is only 140 days. The legislation further calls upon the management to maintain and submit further returns, although it is unproductive work.

Dismissal of the Kerala Ministry

The industrial community in Kerala will be one of the major beneficiaries due to the dismissal of the communist Government in that State. The state of lawlessness, under which planters and industrialists had been suffering for the past 28 months, has come to an end with the imposition of the President's rule. The mischievous Industrial Relations Bill of the communist Ministry, which was being considered by a select committee of the State Legislature, will now lapse. Furthermore, the Agrarian Relations Bill is now with the President. Since the Government of India entertained several complaints concerning some of the provisions of the Bill, there is every possibility that the President will not give his assent to it and return it for suitable amendments to the new Kerala legislature. Even if it goes to Parliament, which will act as the legislature for Kerala in the meanwhile, planters and other interests affected by the legislation can expect that their reasonable grievances will be redressed. It will be recalled that except the uncompromising communists, all other political parties in the Kerala legislature were in favour of exempting plantations and efficiently managed holdings from the scope of the provision on ceiling and for paying reasonable compensation to lands taken over by the Government.

Books

RURAL CREDIT

All-India Rural Credit Survey. District Monograph Monghyr. Compiled by M. L. Ghosh. (Published by the Reserve Bank of India, Bombay. Price Rs. 6.50, pages 141.)

All-India Rural Credit Survey. District Monograph Hassan. Compiled by T. S. Rao. (Published by the Reserve Bank of India, Bombay. Price Rs. 6.75, pages 148.)

These two interesting monographs, one for Monghyr district in Bihar and the other for Hassan district in Mysore, which have recently been published by the Reserve Bank, give a broad idea of the present state of the rural credit organisation. They describe the main features of the agricultural economy of the districts, some important chapters being devoted to the demand for rural credit. Both monographs also contain a critical evaluation of the rural credit organisations. Data have been collected on the basis of the stratified random sampling method. Since economic conditions in the different parts of a district are not similar, it was necessary to carry out field investigations in many more villages to present a realistic picture of the credit needs of cultivators. In spite of this limitation, the two monographs embody factual details which will help make a correct assessment of the rural credit machinery in the two districts.

COMMODITY SURVEY IN DELHI

Commodity Disposition Survey in Delhi. Compiled by the National Council of Applied Economic Research, New Delhi. (Published by Asia Publishing House, Bombay 1. Price Rs. 7.25, pages 48.)

The fourth in the series of "occasional papers" issued by the National Council of Applied Economic Research, New Delhi, this monograph is a competent survey of economic activity in India's capital. The five product-groups selected for the purpose are textiles, bicycles, fuels, iron and steel and foodgrains. The aims of the survey were to study the locational pattern of business institutions and to determine the present flow of commodities into, out of and within Delhi. Although the scope of the survey was restricted to five commodities and the findings are presented within the compass of a small report, the Council has initiated pioneering efforts which will help town planners in Delhi and elsewhere.

REPORT ON TEA LABOUR

An Enquiry into the Pattern of Living of Tea Plantation Labour. Compiled by the Statistics Branch, Tea Board of India. (Published by the Board, 27 and 29, Brabourne Road, Calcutta 1. Price Rs. 2.50, pages 33.)

The Statistics Branch of the Tea Board undertook a pilot survey in some tea gardens near Dibrugarh in Assam during January-April 1958. The findings have now been published in the form of an interesting report which says that, in spite of improved standards of living, the percentage of literacy among workers is still quite low and needs considerable improvement. Furthermore, an analysis of the pattern of expenditure of workers' families suggests that tea garden workers, including adolescents, are addicted to liquor. This will, no doubt, worry a Government which is devoted to Prohibition. The survey embodies important factual details which will prove useful to future investigators.

INCOME TAX LAW

Elements of Indian Income Tax. By R. N Lakhotia. (Published by Asha Publishing House, Ahmedabad 14. Price Rs. 2.80, pages 160.)

When income tax was first imposed in India in 1860, it was a simple levy. But the Indian Income Tax Act has now become a very intricate piece of legislation through too many amendments. The Finance Acts passed since 1955 have introduced drastic changes in the taxation structure, with considerable variations in the rates. Mr. Lakhotia discusses in his monograph the evolution of income tax law, method of assessment and the appellate procedure in a language which can be understood even by a layman with little or no knowledge of the subject. He has shown the method of computing the total income and the total world income of an assessee in the context of the existing provisions. Although written primarily as a textbook for law and commerce students, it will prove useful to the ordinary taxpayer.

COTTON ANNUAL

Bombay Cotton Annual, 1957-58. Compiled by C M. Parikh (Published by the East India Cotton Association, Ltd, Bombay. Price Rs. 6, pages 323.)

This is an authoritative publication designed to meet the requirements of those connected with the cotton trade. Apart from a comprehensive review of the cotton market during the 1957-58 season, it contains statistical tables on crops, exports, imports, prices, stocks and consumption. Compiled and published under the auspices of the East India Cotton Association, the annual with its rich factual data will prove to be a reliable guide for cotton traders.

SPECIAL NUMBER

The Economic Weekly Special Number. Edited by Sachin Chaudhuri. (Published by Asian New Age Publishers Private Ltd, 104, Apollo Street, Fort, Bombay 1. Price Rs. 2.50, pages 177.)

The latest special number of the *Economic Weekly* contains many articles of topical interest. On political subjects, those discussing the impasse in Kerala and the Swatantra Party are interesting. There are a few intellectual exercises by some of India's well-known economists, such as one on profit maximisation in State enterprises and another on investment allocation in development planning. Readers will consider the articles on co-operative farming as especially interesting in view of the controversy on the subject.

SELECTIVE DEMAND AT TEA EXPORT SALE

AT Sale No. 8, held on 3rd August, offerings at the Export auction amounted to 40,717 chests. The market opened to a strong general demand but towards the close buyers were rather more selective than at the beginning of the sale. Particular attention was paid to teas with bright liquors and those with clean black leaf appearance. Plain broken grades sold at slightly dearer rates while similar Fannings were keenly competed for and were up to 15nP dearer. Any bright liquoring teas of orthodox manufacture received good enquiry and were generally dearer. Poorer B.O.P.s however, tended to be easier with quality. Bright liquoring C.T.C. teas sold well but the plainer descriptions in this category, especially where fibre was present, sold at easier rates. Black well-made whole leaf grades sold readily at about valuations. Darjeeling teas showed an easier tendency: especially where quality was on the decline. there were some withdrawals. Tippy teas again received good support.

Quotations

	1959	1958
	Rs.	Rs.
Clean Black Pekoe	1.96	2.10 to 2.15
Plain B.P.	1.74 to 1.80	1.66 to 1.70
Plain Fannings	1.86 to 1.96	1.78 to 1.82
Medium B.P.	2.00 to 2.10	1.95 to 2.00
Medium Fannings	2.10 to 2.20	2.10 to 2.20
Best Assam C.T.C. B.P.	3.30 to 3.50	3.50 to 3.70
Best Assam C.T.C. Fgs.	3.90 to 4.30	3.80 to 4.10

(Quotations are exclusive of excise duty.)

HIDES AND SKINS STEADY

The hides and skins market was steady during the past week. Stocks were less than in the previous week.

Bazaar Sales

(Between 28th July and 3rd August 1959)

Cowhides: Wet Salted (Ord.) 12,000 pcs. on the basis of Rs. 14.50 to Rs. 16; Wet Salted (Slaughtered) 17,500 pcs. on the basis of Rs. 14.75 to Rs. 26.

Goatskins: Wet Salted (Patna, Daissee, Kustia) 37,800 pcs. on the basis of Rs. 370 to Rs. 390. Rs. 435 to Rs. 455 and Rs. 480 to Rs. 500; Wet Salted (he-killed) on the basis of Rs. 5.25 and (she-killed) on the basis of Rs. 5 a piece; Assam-Dinajpur-Purulia 6,000 pcs. on the basis of Rs. 370 to Rs. 400; Purneah-Kissenganj 9,100 pcs. on the basis of Rs. 400 to Rs. 420; Patna-Pakur (ord.) 9,000 pcs. on the basis of Rs. 365 to Rs. 385.

Bazaar Stocks

(3rd August 1959)

Cowhides: Wet Salted 128,100 pcs.

Goatskins: Wet Salted (Daissee, Patna, Kustia, Killed) 17,500 pcs.; Assam-Dinajpur 48,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 141,500 pcs.

SUGAR EASIER

During the week ended 5th August, sugar sales in the Calcutta market averaged 6,000 bags daily. Arrivals a day were 8,000 bags and stocks totalled 70,000 bags. Rates were Rs. 40.75 for big grain and Rs. 39.25 for small grain. The market was easier.

COMPANY AND PUBLIC NOTICES

THE SOOM TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Soom Tea Co., Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, on the 27th day of August, 1959, at 11-20, in the forenoon for the following purposes:—

AS ORDINARY BUSINESS.

(1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1958, the Balance Sheet as at that date and the Reports of the Directors and Auditors.

(2) To declare a Final Dividend.

(3) To appoint a Director in place of Mr. H. Mackay Tallack who retires by rotation and who being eligible offers himself for re-appointment.

(4) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS.

As Ordinary Resolution:

(5) To consider and if thought fit to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution:—

"That Mr. C. A. Groves be and is hereby re-appointed a Director of the Company."

Notice dated 15/16th July, 1959 of intention to propose Mr. C. A. Groves as a candidate for election to the office of Director at this meeting has been received by the Company from a member wherein it is stated that the Notice is given to comply with the requirements of Section 257 of the Companies Act, 1956.

As Special Resolution:

(6) To consider and if thought fit to pass with or without modification the following resolution which will be proposed as a Special Resolution:—

"That Mr. M. W. D. Oldman be and is hereby re-appointed a Director of the Company."

Special Notice dated 21st July, 1959 of intention to propose the above resolution as a Special Resolution has been received by the Company in which it is stated that the Notice is given as required by Section 261 (1) (c) (2) and (3) read with Section 190 of the Companies Act, 1956 for the reason (1) that Mr. M. W. D. Oldman is a Managing Director and a Member of Carritt Moran & Co., Private Ltd., which acts as Brokers for the sale in Calcutta of the teas produced by the Company and which may be therefore deemed to hold an office of profit under the Company and (2) that the Secretaries (who are deemed to be Managing Agents of the Company, within the meaning of the Companies Act, 1956,) have the right under Article 103 of the Articles of Association of the Company to appoint a Director to the Company.

The Share Transfer Books and Register of Members of the Company will be closed from the 18th August, 1959 to 27th August, 1959, both days inclusive.

By Order of the Board,
THE SOOM TEA CO., LTD.,
WILLIAMSON MAGOR & CO., LTD.,
V. S. VIJI,
Secretary,
Secretaries.

Calcutta, 1st August, 1959.

Note.—(1) A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a Member of the Company.

(2) The dividend, if declared, will be paid to the shareholders whose names appear in the books of the Company on 27th August, 1959 or their mandatees. Applications for Dividend Warrants will not be necessary.

Annexure to the Notice.

THE SOOM TEA COMPANY, LIMITED.

Explanatory Note under Section 173 of the Companies Act, 1956.

(5) Mr. C. A. Groves has been on your Board for some years. During the year under report Mr. Groves went on Home Leave and on his return to India in October, 1958 he was appointed an additional Director. Under Section 260 of the Companies Act Mr. Groves will vacate his office at this Annual General Meeting. Notice under Section 257 of the Act has been received from a Member proposing him as a candidate for re-appointment as a Director. Mr. Groves is eligible for re-appointment.

(6) Mr. M. W. D. Oldman was appointed an additional Director of the Company on 1st July, 1959 and as such will hold office only up to the date of this Annual General Meeting. Special Notice as required under Section 261 of the Companies Act has been received by the Company from a Member specifying his intention to propose the resolution for the re-appointment of Mr. M. W. D. Oldman as a Director of the Company as a Special Resolution. A Special Resolution is required to be passed because of the application of the provision in Section 261 (1) (c) to the proposed appointment.

A Special Resolution has already been adopted by the Company on 28th December, 1956 by which the consent of the Company as provided in Section 314 of the Act has been accorded to Carritt Moran & Co., Private Ltd., acting and continuing to act from 1-4-1956 as Brokers for the sale in Calcutta of the teas produced by this Company.

THE SOORAH JUTE MILLS CO., LTD., CALCUTTA.

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Friday the 28th August, 1959 at 2-00 P.M. as special business to consider and if thought fit to pass with or without modification the following resolutions:

(a) **As a Special Resolution:**

"WHEREAS the East Indian Produce Co. Ltd., an associate of Messrs. Hindusthan Investment Corpn. Ltd., the Managing Agents of the Company, maintain an office in London in the United Kingdom and whereas the said Company carry on business of acting as agents in the U.K. and the Continent for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc. and also have dealings and business connections with parties all over the United Kingdom and the Continent and their operations are on a very large scale and whereas their expenses of maintaining their office, amount approximately to £65,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year, and whereas the said East Indian Produce Co., Ltd., have been acting as such agents for and on behalf of the Company NOW it is hereby resolved that East Indian Produce Co., Ltd., continue to act as agents of the Company for a period of three years from 1st July, 1959 on the following revised terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company:

(i) For purchase of stores etc.—5% of the Invoice price.

(ii) For purchase of machinery—2½% of the Invoice price.

(iii) For employing technical personnel for and on behalf of the Company and for attending to enquiries—expenses incurred by the East Indian Produce Co., Ltd. apportionable to such work in each particular case.

(iv) For rendering any other special service—such remuneration as may be agreed upon between the Directors of the Company and the East Indian Produce Co., Ltd.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will not be done unless such permission is obtained."

(b) **As a Special Resolution:**

"RESOLVED that the Company do hereby approve of the continuing contract or arrangement with Messrs. Birla Brothers Private Ltd., an associate of the Managing Agents, regarding a portion of the premises let out to the Company at 8, India Exchange Place, Calcutta and that such rent be paid therefor inclusive of services and facilities like water, lighting, fans, lift, air-conditioning, etc. which has been or shall hereafter be at any time determined by the Board of Directors of the Company."

(c) **As a Special Resolution:**

"RESOLVED that the Company do hereby give its consent to Messrs. Birla Brothers Private Ltd., an associate of the Managing Agents, rendering services to the Company and undertaking such schemes in association with other concerns of inter-co-ordination or otherwise as are mutually beneficial and in which schemes the Company do intend to participate or has or shall become a contributory and in particular of maintaining the Central Engineering Organisation for rendering technical, engineering and other services, provided that the said associate company charge only proportionate expenses and do not make profit or earn any commission and provided further that record of such schemes is maintained in the Register under Sec. 360 of the Act."

(d) **As an Ordinary Resolution:**

"RESOLVED that subject to the approval of the Central Government in that behalf Messrs. Hindusthan Investment Corporation Ltd., be and are hereby re-appointed the Managing Agents of the Company as and from the 15th August, 1960, for the period, at the remuneration and upon terms and conditions set forth in the draft agreement placed before the Meeting and initialled for the purpose of identification by the Chairman thereof and that the Directors of the Company be and are hereby authorised to enter into an agreement with Messrs. Hindusthan Investment Corporation Ltd., in terms of the said draft subject to any modifications thereof as may be agreed upon between the Directors and Messrs. Hindusthan Investment Corporation Ltd., for the purpose of complying with any modifications required or conditions imposed by the Central Government in granting their consent as aforesaid."

By Order of the Board,
For HINDUSTHAN INVESTMENT CORPORATION LTD.,
R. K. CHHAOCHHARIA,
Managing Director,
Managing Agents.

8, India Exchange Place,
Calcutta,
Dated, 29th July, 1959.

N.B.— (i) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to members of the Company.

MARTIN BURN LIMITED

NOTICE is hereby given that a General Meeting of the Company will be held at its Registered Office, 12, Mission Row, Calcutta, on the 28th day of August, 1959, at 11 a.m. to consider and if thought fit to pass with or without modification the following resolutions:—

1. **As an ordinary resolution:**

That this meeting approves the re-appointment of Mr. Frederick George Liversedge as a Managing Director of the Company with effect from the 1st day of October, 1959 on the terms and conditions contained in an Agreement dated the 19th day of March, 1959 and made between the Company of the one part and Mr. Frederick George Liversedge of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification.

2. **As an ordinary resolution:**

(R) May be redeemed annually at par by drawing after 10th year also the whole issue at 101% on or after 31-3-68.
(S) (Option to repay at par one month's notice) At any time after 1st October 1956.
(T) (Option to repay at par on 6 months notice) after 31-3-65.
(U) (Option to repay on 3 months notice) At any time after 31st December 1960.
(V) May be redeemed at par on 30-6-56 or any subsequent interest date on one month's notice.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

71st YEAR OF ISSUE — CALCUTTA, 13th AUGUST, 1959. — Vol. CXXXXIII No. 3572

SEASONAL PROSPECTS FOR THE POUND STERLING

THE increase during July of £17 million in the sterling area's gold and convertible currencies reserves, is a good omen for the continued health of the pound Accruing during a month which, in past years, has often seen the peak of the seasonal pressure on sterling, it seems to indicate that 1959 is going to be among the few exceptions to the monotonous post-war procession of alternate-year currency crises. Like its predecessor, this year promises to be one of solid benefit for the pound and net gain for the sterling area's reserves. It is probably too early yet to state dogmatically that this will be so, but up to now all the indications are favourable. The phenomenon may have any one of a number of implications. It could, for instance, mean that the pound can now look forward—thanks to the greater willingness under a Conservative Government in the U.K. to let the internal economy take the full force of external strains—to a long period of stability, or at least to one lasting until the next general election. It could signify that the old pattern of seasonal trade no longer holds under current freer world-currency conditions, or that the post-war maladjustments in the U.K. economy, as aggravated by socialism, have at last been completely corrected. But the safest conclusions to draw are the more modest ones that temporary benefit has been derived from the various monetary and fiscal measures introduced in the past two years to stabilise the U.K. economy, that on balance the remaining sterling area countries have been able to correct some of their own more serious economic maladjustments, and that British exports have been gaining more from the terms of trade moving in favour of manufactures than the primary exporting countries of the sterling area have been losing. There is much consolation to be derived even from these.

The state of the sterling area's reserves is a matter of considerable importance to India, not only because this country and Pakistan are probably imposing the heaviest burdens on them at the moment, but because it is hoped in the name of development that they will be able to go on doing so. Last year's improvement helped Britain extend credit to India which might otherwise have been out of the question. If the pound is in for a long period of stability, India can hope to benefit in the form of extended commercial credit, larger Government-to-Government loans, and possibly more private capital imports as well. An appreciating pound, therefore, is to some extent a compensation for a depreciating rupee. But this does not mean that India or any other member of the area is now entitled to abandon internal restraints and draw on the combined reserves, to finance unnecessary deficits on current account. The right to draw—over and above a country's own contribution to the reserves, which in India's case amounted to about £135 million at the end of July—inevitably involves the obligation to correct the internal factors causing or aggravating the deficit. As with other forms of external assistance, India will remain morally bound to ensure that what benefits she derives from the increase in the sterling area's reserves go to financing necessary development expenditures, not compensating for inadequate export efforts.

There have been strong indications throughout the earlier months of the year that the usual seasonal pattern for sterling would be at least as weak as in 1958, and possibly weaker. The pattern itself arises from the fact that the sterling area is a net purchaser of northern hemisphere harvests and a net seller of those from the southern hemisphere. This means that the peak earning period is around February and March, while the period of maximum expenditure is around August and September. The trends have usually begun to establish themselves a few weeks before, and by July it is frequently quite possible to forecast the strength of the seasonal drain. Last year, due to the absence of extraneous factors—such as the nationalisation of the Suez Canal—and the action of the various internal correctives on the British economy, the pattern was weak and the prestige of sterling, apart from anything else, benefited in consequence. This year, with no extraneous factors worth mentioning but with most of the correctives withdrawn and the U.K. economy in the process of re-expansion, the surplus of £17 million was the best for any July on record with the exception of 1953. If a payment of £7 million against bilateral debts left over from the now defunct European Payments Union is taken into account, the true gain was, in fact, £24 million, an even more creditable performance. This follows a gain of £19 million in June; if the trend keeps up, it would seem reasonable to expect further steps towards complete convertibility for the pound by the end of this year—that is, unless a general election in the U.K. intervenes and brings pressure on sterling with it.

Among the other factors which have influenced the strength of the pound in the past few months has been the weakness of the American dollar. This has led to dollar payments being deferred, against the possibility of a dollar devaluation, instead of being accelerated as they usually are, especially when sterling is seasonally weak. This is a point which does not necessarily redound to the credit of sterling, but it is one the importance of which cannot be overlooked during a period when the speculative trend has been towards the dollar and away from the pound in every year since the war. But perhaps the most important point of all in favour of sterling is the confidence of international speculators in the strength of the British economy, the effectiveness of the measures taken to cure its inflation, and the determination to press them as long as necessary. Since the dark days of September 1957, when the pound was nearer to devaluation than it has been at any time since 1949—although lacking the features which justified the move then—the progress towards an inflation-free, market economy has been rapid and sustained. The fate of the pound from now on depends on how long the present pattern, as introduced by the Conservative Government, is retained. The return of a Labour Government at the next election could change the picture for the worse overnight.

The main threats to the new, year-round strength of sterling are a possible renewal of inflation in the U.K. and the imminence of a general election. The two are by no means unconnected. Inflation has become such a habit in Britain since the war, that the present period of comparative stability appears almost unreal. The recent stoppage in the printing industry showed the extent to which trade unions are still prepared to go to force up money wages. The only remedy for this state of affairs, apart from a firmer attitude towards trade union activities, is to increase industrial productivity, and therefore output, at a rate which will send up the real value of wages at least as fast as the trade unions are seeking to push them up in terms of money. And with all its virtues, this is something which the Conservative Government's policy of greater freedom has singularly failed to do. The strength of a country's currency is not necessarily connected directly with the growth of its output and productivity. But in Britain's case, where organised labour has still to learn the truth about money wages, the relationship between the two cannot be overlooked. If the pound is to remain strong, the present modest improvement in output and productivity—the first for nearly three years—will have to be continued and intensified. If a Labour Government is returned at the next election, it appears extremely likely that inflationary pressures will again assert themselves, in which case sterling may sink back into the slough of exchange controls and periodic crises from which the present Government's monetary measures have apparently rescued it, at least for the time being. That is one of the dangers of the impending election. The other is independent of which political party is returned. It is simply due to the fact that speculation is bound to take account of the possibilities of a Labour victory, and exert pressure on the pound accordingly. There is every indication in the present strength of sterling that such pressure can be withstood without too much damage being done. It is to be hoped it will; it would be a pity if the next crisis the pound were to arise from this reason.

The conclusion emerges that while sterling undoubtedly stronger at the present time has been since the war, and that this is a feature for all countries of the sterling area, especially those which, like India, are going to be in chronic deficit during the next few years, there are certain serious threats to this stability which it would be foolish to overlook. The health of the pound depends more on the state of the British economy than it does on any other single factor, including the terms of trade. At the moment all the indications are favourable. But future developments—especially the possibility of the present expansionary programmes dissolving into further inflation and the doubts attending a general election—give ample excuse for caution.

THE BANG AND THE WHIMPER

A FORTNIGHT after the Central intervention in Kerala, it is still difficult correctly to describe the drama enacted in India's smallest State. There were elements of tragedy no doubt; the communists arrested the law-breakers by the thousand, as any Government would, but they have not been given nearly enough credit for the restraint they exercised in not bringing out the Party *militants* on the streets, as they could certainly have done. And this would have led to widespread bloodshed, taking the whole affair to the level of a civil war. Then there were aspects of comedy too. An octogenarian speaking the language of a fanatic, the Vimochana Samara Samithi conducting itself as a war council, the female torch-bearers before collectorates—these are the stuff of which farces can be made. Nor was the play done without the Prince of Denmark: Mr. Nehru hesitated right up to the last moment and "took the sword" most unhappily. The *denouement* was known all along, nothing else was. Who was the hero, who the fool? Did the Fates work? Some of them looked distinctly contrived.

Mr. Nehru's capacity for rationalising is almost unlimited, and he has been speaking of Kerala as though to persuade himself. He is undoubtedly right in saying that the communists foolishly ignored popular sentiment. On the other hand, within the Party there must be critics who felt that their Government was going too slowly. The issues were blurred when the Opposition said it would be content with nothing less than the removal of the communists, which means there were no issues left. The Centre's deliberate playing down of the memorandum to the President (perhaps to avoid similar embarrassment from the other States) also meant that there never were specific and concrete points to debate. The

joint Opposition certainly gave impressive demonstrations of popular discontent, but this generalised feeling is a vague one open to any number of interpretations. The communist Government has not been charged with any definite offence. The explanation had to resort to the passive voice: a situation had arisen, etcetera, etcetera, without saying who created it: and this is the beginning of political hypocrisy. The communists were not entirely guiltless on this score, for when they protested against intervention they were in fact secretly praying for it.

Politics in Kerala, and in almost all States, have long been muddy in the extreme; and the pure white *khadi* was not always uniformly white. The defeat in the last elections brought black despair; and when legislation on education and land reform began to affect the interests that constitute the Congress and other opposition parties in the State, something desperate seemed called for. The satisfaction with which Congressmen in the rest of the country wielded varying degrees of unhampered power could scarcely be the Kerala Congressmen's; and, rightly or wrongly, a feeling seized the entire Opposition that if the communists were not shaken now they would never be removed. This, at least, must have been the theory sold to the Congress High Command which, in consequence, found itself drawn into the vortex almost in spite of itself. The dichotomy between Mr. Nehru the Prime Minister and Mr. Nehru the Congressman made the dilemma excruciatingly difficult for him. That the communists had been correct in most of the things they had done, that they had sought to implement many of the ideas the Congress had been talking about, made the choice even harder.

The unfortunate part of the inconclusive story is that in Kerala it was not a battle between communism and democracy, the conflict many had expected and was perhaps inevitable one day. During most of the unsavoury proceedings, it is the communists who gave the appearance of being more loyal to the Constitution than their opponents. Most of the episode gave some plausibility to Mr. Rajagopalachari's cynical remark that the more honourable thing for the Congress would be to amend the Constitution to make it impossible for any non-Congress party to form a government in any State in India. Such thoughts are, to be sure, farthest from the mind of Mr. Nehru; but one of the lessons of the recent happenings was that, for all his unimpaired popularity and prestige, there are in the country forces now that in certain situations can force his hands. There is something in the communist complaint that Mr. Nehru never condemned the law-breakers of Kerala as he should have done as Prime Minister. No believer in liberalism and democracy need be unhappy that the communists have been removed from power; many of them must wish it had been accomplished differently and with a more obvious exposure of the true nature of communism.

Calm now prevails in Kerala, and for this relief much thanks. But nobody can believe that the quiet will endure, for the conflicts remain. It may well be true that the communists got into power on the crest of popular dissatisfaction with the Congress, but there is not much evidence that this factor is now less important. The Congress and its mixed and dubious allies in the recent struggle have done nothing to endear themselves to the electorate, a reference to which may come about in six months or less. The communists openly claim that if they have lost the support of a hundred school managers they have by the same act gained the support of a thousand teachers. This may be an exaggeration but, once the immediate passions have subsided, it is by no means certain that the communists will be defeated. It is even less certain that the unity of the Vimochana Samara Samithi will survive discussion on any specific and positive issue. Mrs. Indira Gandhi has declared that the verdict of the people will be respected. It is easy to see that not everyone on her side is of the same view.

With political issues left ill-defined, the coming contest will be like the previous one. And, in terms of political clarity, it will make very little difference who wins and who loses.

What should the Congress do? Before an answer can be attempted, it will be necessary to ask: What can the Congress do? Evidence accumulates that the position of the Congress in the country as a whole is weakening faster than many had thought likely even a few weeks ago. In Orissa, Bombay, Andhra, Punjab—and finally even in Uttar Pradesh—the Congress is a house divided. Kerala, hitherto a weak link, can hardly hope to be strongest bastion of the Congress. It is possible to show that the Congress has lost a great deal of its strength simply by making too many compromises, by deviating from principle. Some of its principles are out of date in all conscience, but they have not been discarded boldly and openly —those are the fads every Congressman swears by and nobody believes in. This lays the Congress open to hypocrisy. On the other hand, it has with disadvantage deviated from principle by not being true to itself. A party that speaks of socialism, is accused now of being communist (Swatantra) and then of not believing in socialism (communists and everyone else) invites for itself the worst of all worlds. It should not be impossible to show that socialism has not got the Congress much additional support and that it has lost it much of its traditional strength. Ideological syncretism has robbed the Congress of any programme of its own, with the consequence that, while every powerful group within the Party will perhaps try to use the organisation for the pursuit of its own policies, thus hastening its disintegration, nobody outside will be attracted to it. To this sad confusion of the Congress many have contributed. But, as in so many other spheres, Mr. Nehru is in the forefront.

GIANTS ON THE MOVE

WHEN *Fortune*, the U.S. business magazine, published its latest study of the world's big companies and outlined their experience in the recession, the problem of size in industry was already being actively debated, particularly in Britain. *Fortune* has not settled the question whether big companies are more stable than smaller ones, for it has shown a clear divergence between experience inside and experience outside the United States: big American companies suffered severely in the recession, whereas big non-American companies fared better. That the American recession was particularly severe does not explain the difference, because the biggest American companies suffered worse than the smaller American companies. The world's biggest company (in terms of sales) is American, General Motors. The next in size is British-Dutch, Royal Dutch Shell, which is thus the biggest non-American combine. The next-ranking non-American combine is also British-Dutch, Unilever. A characteristic of these British-Dutch giants is their international ramifications. Although most big American companies (including, of course, General Motors) have important interests abroad, they are more national in character, because the American market itself is so big.

This difference can only partly explain why sales and profits of the biggest American companies were severely reduced last year while sales of the biggest non-American companies were moderately increased and their profits were only slightly reduced. But the disparity in the experience of American and non-American companies is an explanation of American companies' intensified interest in manufacture and trade in foreign countries, particularly Europe. The potential strength of this interest has, perhaps, been underrated. Of the 20 biggest companies in the world, only three—the above-mentioned British-Dutch groups and British Petroleum (which ranks twentieth)—are non-American. Even such giants as the British Imperial Chemical Industries, the Swiss Nestlé, the Dutch Philips Gloeilampenfabrieken, the German Siemens, are exceeded in size by numerous American corporations. Financial strength is not necessarily proportional to size (but it is obvious that 100—or 500—of the biggest American corporations could muster huge resources for investment abroad if they turned their attention from domestic enterprises. And the fall of nearly 18 percent in the profits of the 500 biggest U.S. corporations last year is certainly an inducement to look for more stable conditions elsewhere—although profits in the United States have recovered rapidly this year.

American companies are now showing a decided preference for countries in the European Common Market, but they have not entirely lost interest in the Commonwealth as a region where goods can be manufactured at reasonable cost and can gain access to a wide market on preferential terms. If the European Free Trade Association (the Little Free Trade Area) is established, as seems now almost certain, American companies will have to reconsider the respective merits of the European groupings. Some may feel that Britain is in an advantageous position, being the focus of both the Free Trade Association and the Commonwealth and providing some facilities for access into both. But the appeal of the Common Market is undeniably strong; and there is some attraction in the "outer" countries of the Commonwealth where labour is cheap. American interests that have recently acquired manufacturing interests in aluminium and beryllium in Britain are representative of those corporations that are looking beyond America for more lucrative possibilities of expansion. If they select Britain they do not necessarily reject other territories: they may have programmes for expansion in various parts of the world.

This attention to territories outside America does not, of course, imply loss of faith in the American economy. There is no foreseeable limit to expansion in America; but expansion may be more rapid, and more profitable, elsewhere. British companies foresee long-term growth at home, but they are equally interested in the possibilities of development abroad. Continental European companies have, of course, similar ideas. These tendencies raise various questions. One concerns the effects of dispersal on international finance—whether countries are making adequate allowance for the remittance of profits to foreign companies when these companies' plans are fully operative. Another concerns the oft-debated problem of size —whether a company grows stronger as its size increases. As for remittances, we should always bear in mind that developments undertaken by foreign interests, or acquisition of shares by foreign interests, may later involve big transfers of earnings—a fact which seems obvious but is not always fully appreciated. Size is a problem mainly for the companies concerned; but it does affect the countries that act as hosts to foreign companies, in so far as it affects those companies' efficiency.

The facts published by *Fortune* cannot tell us whether, or how, size and efficiency are related, but they raise some doubts about whether the idea that the biggest companies are the strongest is well founded. Big American companies are mostly bigger than big European companies—and big American companies fared worse in the recession. This comparison may be misleading; but it is difficult to argue round the fact that the smaller American companies (the biggest 500 excluded) suffered last year a reduction of only some 3½ percent in sales, whereas sales of the 50 biggest American companies were reduced by some 8¼ percent. A fall of some 20 percent in profits was, however, common to both groups. Britain's anxiety about the European Common Market concerns not only the increasing difficulty of selling there, because its tariff structure will favour its internal trade, but also the possibility that companies operating in the Common Market, growing bigger as their internal market expands, will be stronger competitors in external markets. The study of European companies' experience seems to confirm that they grow stronger as they grow bigger. Yet the experience of the American giants stands as a warning that size is not always a safeguard. In a recession it may even be an encumbrance.

PILE PAINS AT DURGAPUR

THE furore caused by the discovery of defective piles in the melting shop area of the Durgapur steel plant six months ago has not died down yet. Nor, perhaps, could it have been expected to, considering the importance of the project and its cost to the country. That the furore is partly political in inspiration need not be denied, although that does not detract from the inherent justification underlying it. Cold war rivalries have not proved wholly irrelevant in public criticisms of the progress of India's various steel expansion plans, divided as the latter mainly are between the West Germans in Rourkela, the Americans in Jamshedpur, the Russians in Bhilai and the British in Durgapur. In former years, disparaging if not always substantiated reports were heard about the first three of these projects. But perhaps none of the reports caused as much embarrassment to those in charge as the ones about defective piles at Durgapur have now caused the Indian Steelworks Construction Company.

Since the defects in the bored piles in an area of Durgapur's steel melting shop were discovered, I.S.C.O.N. has tried hard to reassure critics. It began by declaring that the defects would be put right without costing the Government of India anything and without delaying the project. Large-scale investigations have been conducted meanwhile all over the site. These have included the inspection of piles and ground conditions, and also numerous load tests. According to an announcement made by the Minister for Steel, Mines and Fuel, Sardar Swaran Singh, in the Lok Sabha on Monday, "I.S.C.O.N. now states, with complete confidence, that all the foundations of the project containing bored piles will be adequate for the purpose and will comply with every requirement of the contract. As an expression of its confidence, I.S.C.O.N. undertakes to rectify, at its own expense, any damage to the works caused by settlement of foundations containing bored piles for a period of ten years." Sardar Swaran Singh indicated that the completion of the project will not be delayed. It is expected that the first battery of the coke oven will be heated up before the end of this month. I.S.C.O.N. is also "very hopeful" that the blast furnace will be ready for operation on schedule by November, in spite of the additional strain caused by the execution of the remedial measures.

The investigations have been done not only by I.S.C.O.N., but also by the consulting engineers and by a team of five engineers from the Indian Government. It is presumed that the mishap will cost the Government nothing, except perhaps the expenses implicit in the diversion of the services of these five engineers, and perhaps also a little of its reputation. It is interesting to note that the team has recommended certain additional investigations; cynics will look forward eagerly to hearing of the results. Sardar Swaran Singh said that he expects to receive the team's final report after the additional investigations have been completed. The report will be of great interest if it cares to discuss at least two important points in forthright terms. One is whether there was any delay in discovering the defective piles, and whether the delay was due to inadequate or incompetent supervision. The second is whether any of the numerous organisations collaborating in the Durgapur steel project can be held responsible for the defects; and whether the defects can be ascribed merely to incompetence or to other less estimable motives. The second point would be of wider interest in case the organisation originally responsible happens to be doing important work on other projects in India.

Current News and Comment

Indian Iron Pays the Same

The stock market has responded feebly to the news that the ordinary dividend is to be maintained at 10 percent by the Indian Iron and Steel Company for the year ended March 1959. The price of the shares has declined from Rs. 24.82 to Rs. 24.62 since the publication of the decision on Tuesday. Although the dividend itself is encouraging considering that the Tata Iron and Steel Company has been obliged to cut its ordinary dividend substantially for the year ended March 1959, share prices are finding it hard to move up because of technical considerations. It appears that the heavy deliveries which were made at recent settlements are still a drag on the market. There is little prospect of a sharp improvement in the immediate future as long as floating stocks are not fully absorbed. As far as Indian Iron shares are concerned, the prospect is reasonably attractive. At a price of Rs. 24.62, the yield on them works out to 4.1 percent. The scrip have considerable growth prospects. The latest dividend is not being paid on the bonus shares which were issued in February this year by capitalising the share premium account in the proportion of one share for every five held; but it is confidently believed that the company will have no difficulty in maintaining the same ordinary dividend as is being paid at present on the new share capital during the current year. The indications are that earnings are improving steadily as the effects of the expansion scheme have begun to show.

Although fuller details about working are not likely to be published for some time yet, it is thought that Indian Iron's earnings during 1958-59 have been good, taking output and despatch figures as a guide. The management has not drawn up the accounts yet, as it is believed that retention prices of steel and pig iron will be revised soon. There are a number of factors which have recently pushed up the cost of production of steel. It is, therefore, hoped that the Government will increase retention prices so that the companies are fairly compensated for rising costs. The share transfer books of Indian Iron will remain closed from 20th August to 3rd September.

Tobaccos: Davids Up, Goliath Down

The trend in tobacco shares has been mixed for some time. This is understandable, considering that the performance of different companies has varied considerably. Imperial Tobaccos are particularly sluggish because investors are disappointed that the dividend for the year ended March 1959 has been reduced from 7 percent to 6 percent (the latter figure includes the final of 2 percent). It offers a yield of 4.9 percent at Rs. 12.31 a share. Although the profit, after taxation provision, has declined by Rs. 17 lakhs to Rs. 1.15 crores, shareholders may not see much justification for the conservative dividend policy, unless it is warranted by recent trading conditions. Whether the decline in profits is due to increased costs or to a loss of business to competing producers, it is difficult to say until fuller details are available about sales turnover. Judging from the amounts which have been ploughed back into the business, it looks as if the cut in the dividend could have been avoided if the directors had so desired. An amount of Rs. 17.50 lakhs has been transferred to fixed assets and stock replacement reserve and the carry-forward amounts to Rs. 24,64,029. A partly redeeming feature is that an interim dividend of 4 percent, subject to tax, has been declared for the current year, against the first interim of 2 percent, free of tax, in the previous year. As the new interim distribution is subject to tax deduction at source, shareholders are wondering whether they will get the same net amount as before. Some appear to think that they have not been compensated for the loss of the "grossing up" privilege. It is hoped the new interim reflects the directors' anxiety to pay shareholders at least the same net dividend which they were getting until changes were made in company taxation by the Finance Act, 1959.

While Imperial Tobaccos are stagnant, the ordinary shares of the National Tobacco Company have shot up to Rs. 18.12 on the publication of a good report for the year ended December 1958. Sales have increased by Rs. 1.81 crores, compared with the previous year, and profits have improved from Rs. 33.89 lakhs to Rs. 50.49 lakhs, before taxation provision. The ordinary dividend has been increased from 9 percent to 11 percent. At the present price of Rs. 18.12 a share, the yield works out to 6.1 percent. The dividend is over five times covered, but this by itself gives little ground for complacency because the fortunes of the company have so far been rather fickle. Whether the directors' efforts to stabilise the sales turnover at the higher level will succeed over a length of time, remains to be seen. Their enterprise is responsible for the introduction of Regent cigarettes, the first machine-made filter-tipped ones to be manufacturerd in India. They tell shareholders: "Your company is convinced that the advent of filter-tipped cigarettes marks the inception of a significant change in the smoking habits of the public, and feels the necessity of catering to the new trend with a type of cigarette which has increasing acceptance in most countries of the world. Your company is confident that the sales of filter-tipped cigarettes in India will assume far greater importance in future years." It is to be wondered whether there is any reaction to this view among the goliaths of the Imperial Tobacco Company.

Nevertheless, National Tobacco shareholders need to be cautious. The company has been working to its full manufacturing capacity for most of the year under report, so it needs to replace equipment which has become worn out due to excessive wear and tear. The machinery used in cigarette manufacture is precision-built equipment which requires careful use and constant replacement of parts. Excessive usage, such as has taken place in the company's factory, has worn out equipment faster than was originally planned. Furthermore, it is very necessary to keep pace with modern manufacturing techniques, which in the cigarette business are of vital importance and call for frequent changes in equipment that would otherwise soon become obsolete. Consequently, the directors say it is imperative that "we obtain replacements at an early date. The sales surge also necessitates additional equipment as our maximum capacity will fall behind our sales potential in a short while." The large capital expenditure which seems necessary might hold down the distribution to shareholders.

There is not much reason for enthusiasm about the increased ordinary dividend of 20 percent paid by Godfrey Phillips, India, Ltd for the year ended December 1958, against 15 percent in the previous year. The increase of Rs. 6.14 lakhs to Rs. 24.65 lakhs in the profit has been accompanied by a drop in sales. The chairman has declared: "I am in no better position to forecast the future than in previous years. The recent Budget has added further to the excise duties imposed on cigarettes and tobaccos and some price increases have been inevitable. It is too early to forecast how the market will receive these changes. Your board of directors will continue to watch the market with care and to offset, if possible, rising costs and increased taxation by increased efficiency and expanding sales. It would be premature to discuss the possible effect of the changes proposed in the recent Budget in company taxation. One thing seems clear, however—the burden of taxation will not be less."

Textile Shares Looking Up

There has been a fair improvement in cotton textile shares during the past few days. Bombay Dyeing have risen from Rs. 64.50 to Rs. 65, Kohinoor from Rs. 294.50 to Rs. 305.50, and Century from Rs. 533 to Rs. 543 in a fortnight. The rise has taken place partly in sympathy with the general improvement in the stock market since the Tata Iron and Steel Company was given permission to make its rights share issue at par. But the more important reason is that the condition of the cloth trade is now distinctly better, as demand has improved, stocks have declined, and prices are higher. Orders for substantial quantities of cloth have been placed by domestic as well as overseas buyers. Grey goods have been in particular demand and there has been an increase in their prices, although a fair proportion of the business is for forward delivery. Consumer offtake, especially in eastern India, is expected to show its seasonal increase soon, and many orders have been booked by the trade in anticipation. The most notable of the export purchases have been made by the Sudan, but fair business has been done with buyers elsewhere too—in Britain, the United States, Burma, the Far East and East and West Africa. In general, therefore, the undertone of the cloth markets is firm, and investors take this as implying that the profits of the mills will be better during the current year.

For an industry which has suffered much from having to carry very large cloth stocks for more than two years, experience during the first half of 1959 has been encouraging, since stocks have decreased by about 183,000 bales to 390,000 bales. Admittedly, production has also been smaller during this period—2,443 million yards, against 2,452 million yards in the first six months of 1958. But the decline in stocks is due primarily to the increase in the demand for cloth, which in turn might have been helped by the greater rural prosperity accompanying the bumper food harvests this year. It is presumed that since cloth stocks are now equivalent to only about a month's production, the industry will be in a position to make fuller use of its productive capacity. But this will depend greatly on whether raw cotton is available in adequate quantities, at the right time and at reasonable prices. The growth in domestic production of the fibre over the past decade has been impressive; however, India still needs to import substantial quantities of the longer staples. In the past, the industry has often suffered because imports have not been allowed on a large enough scale and because quota announcements have been delayed. It is hoped that matters will improve if the Government accepts the recommendation of the Cotton Textiles Consultative Board that the import quota for raw cotton should be fixed at 600,000 bales a year for the next three years. A closer watch over the speculators in the Bombay cotton futures market may also be necessary. The textile industry some years ago had the advantage that India produced the cheapest cotton in the world, but this is no longer the case.

Looking ahead, cotton textile investors have reason for anxiety in that the Government's attitude on rationalisation, modernisation and labour questions remains adamant and retrogressive. The number of automatic looms it is allowing mills to install, and the strict conditions attaching thereto, are unlikely to bring about a su[redacted] decline in production costs. It is repor[redacted] the Wage Board for the Cotton Textile [redacted] has reached certain tentative conclusions [redacted] if followed up, will increase the burden [redacted] mills. The lesson that cloth has to be produced and sold more cheaply thus remains to be learnt. While investors would be entitled to take full note of the improvement in the cloth markets, it may be unwise for them to ignore the fact that the longer-term influences affecting the mills' financial results—including the new system of corporate taxation introduced by the last Central Budget—may not be working in their favour.

Indian Cloth and the Common Market

The Indian Cotton Mills Federation has drawn attention to the reported proposal of the European Common Market countries to ban the import of cotton textiles from producers who resort to "dumping" and who are guilty of "uncommercial selling or production methods." The list of so-called offenders includes Asian, South American and communist countries. There may be ample moral and economic justification for imposing sanctions against, for instance, a country which uses sweated labour and exploits women and child workers. There may also be ample justification for seeking protection from countries whose export prices bear no relation to the cost of production and whose trading policies are more often than not dictated by political expediency. But to bring these charges against India and to seek to penalise her for the sins of some of her rivals would be unjustified. The whole question is a complicated one and involves issues much wider than the export of textiles, but certain facts emerge clearly. It is well known that Lancashire has bitterly complained against imports into Britain of Indian grey cloth. It is equally well known that the Government of India and Indian mill interests have appreciated the difficulties and have agreed in principle to limit exports to the United Kingdom provided a similar agreement can be secured with Pakistan and Hongkong. Such an attitude is hardly consistent with a mentality of dumping. Neither can India be accused of "uncommercial selling or production methods" since the selling methods are similar to those used in the rest of the free world. The Indian cotton mill industry is in the private sector; export sales are made if they are profitable

and irrespective of political considerations. As for production methods, they are so outmoded in this country that they hinder rather than stimulate exports. The steep fall in Indian textile exports indicates this. There is no evidence of sweated labour. The Indian cotton mill worker is probably among the highest paid in the labour force of this country. His emoluments and working conditions are improving rapidly thanks to legislation and trade union action. Admittedly, there is a big difference between him and his western counterparts, but that does not mean that he is sweated or exploited. His living standards are such as must necessarily be expected in an under-developed country but they are improving. The Common Market countries cannot imply that trade between the industrially-advanced and the poorer countries should be restricted until the latter achieve a status comparable to that of the former. This itself would impede the growth of the under-developed economies. If this argument is carried to its logical conclusion it means that trade between the United States and Europe must also be restricted. The European Common Market countries sell much to India, so curtailing imports from this country will affect their exports too.

Hull and Freight Insurance

India's growing shipping industry is perhaps aware that the Institute of London Underwriters' war and strike clauses for hull and freight have now been revised. The purpose of the revision is to make it clear that the protection afforded by the clauses is restricted to loss or damage resulting from events such as wars, strikes or malicious acts only, and not from "political" actions. Thus, underwriters will continue to insure ships as hitherto against the risks of sinking or damage by bombs, torpedoes, collision with mines and other consequences of hostilities or warlike operations, whether there be a declaration of war or not, including the risks of arrest, seizure, etcetera, by a State or Government at war with another State or Government, whether war was declared or not. But if, for example, a Government suddenly decides to requisition or nationalise ships without any war or hostility going on, just because certain ships happen to be in the ports of that particular country when its Government takes the decision, the new clause exonerates the underwriters from indemnifying the shipowners for such "political" actions of the Government.

The issue came to the fore with the decision of the Indonesian Government, during the revolt in Indonesia in April 1958, to sequestrate under various pretexts 34 Dutch ships found in Indonesian ports. It was only by the co-ordinated efforts of the British insurance market that the Indonesian Government was finally persuaded to restore the sequestrated ships, having been convinced that the owners, being insured with the Lloyd's underwriters and/or British companies for a total of about $36 million, would not have suffered any loss as they would have been fully indemnified by the British underwriters, to whom would have been subrogated the ownership of the vessels. Such seizure is reckoned to be a "political" act, which the Institute's revised war and strike clauses seek to exclude. In the British insurance market, most ships under the British flag are insured against war risks not in the open market but rather in the War Risks Club on the basis of mutuality. The Club carries the risk while normal conditions prevail, but it is firmly understood that should an emergency be declared, shipowners' war risks would immediately be assumed by a State scheme. In other words, the major part of the British insurance market's commitments in the matter of war risks for hull and freight relate to vessels under foreign flags. And it is here that Indian ships should concern themselves with the effect of the revised clauses. Under these, Indian ships which are almost wholly covered by the British market will no longer get protection for the so-called "political" risks. When the new clauses were brought into operation, it was made clear that the British insurance market was free to accept, at its discretion, "political" risks; but if insurance against these risks were to be fixed, such insurance must be the subject of a separate policy. In other words, "political" risks have to be negotiated separately and at a distinct premium. Indian shipowners might well consider whether such cover needs to be negotiated, and, although theoretically a market exists, whether the cover is actually obtainable. The possibility that a large proportion of the tonnage owned by a particular country might at one stroke become the subject of a total loss claim cannot be ruled out, in the context of world events, as being too theoretical. Since the Indonesian action, insurance markets overseas have started an agitation for the exclusion of "political" risks from war risks insurance. The British market has thus received support from other insurance markets abroad for the exclusion of "political" risks. There have been protests and certain markets have hesitated in following the British leadership. Non-British underwriters are at full liberty to operate at their own discretion in war risks insurance. But it is unlikely that they will readily disregard the leadership given by what is the most experienced market for this type of insurance.

Indo-Pakistani Relations Improve

The latest statement of General Ayub Khan, Pakistan's President, at a Press conference in Karachi that Indo-Pakistani relations have taken a turn for the better appears to have some justification. It follows closely the talks between the Finance Ministers of the two countries on outstanding financial issues, which, as Mr. Morarji Desai has testified, were conducted in a spirit of cordiality. If this spirit continues to characterise future talks, solutions to the various problems which have bedevilled relations between the two countries should be easier to find. Better evidence of the improvement is the announcement by Mr. Iliff, vice-president of the World Bank, that a treaty between India and Pakistan on the division of the waters of the Indus river system may be concluded in the first half of 1960. The canal waters dispute has strained Indo-Pakistani relations perhaps as much as the quarrel over Kashmir. India's protest to the Security Council over the construction of the Mangla dam in the Pakistani-occupied Kashmir territory, it is said, is unlikely to prejudice the settlement which has been reached through the good offices of Mr. Iliff and his chief, Mr. Eugene Black. The details of the plan which the World Bank president has been able to evolve to the satisfaction of both sides, and for which he is said to have obtained the promise of considerable international financial aid, are still a closely guarded secret. But it is generally known that the new plan retains the principal features of the 1954 scheme, under which the waters of the three eastern rivers of the Indus basin were allotted to India and those of the three western rivers to Pakistan. The latter did not accept the plan then. But she has now come round, presumably because she realises that India may not be willing to wait indefinitely and may cut off by 1962 the "historic supplies" of water in order to feed the gigantic canal which is being constructed to irrigate the arid areas in Rajasthan and Punjab. Besides, the Bhakra dam is nearing completion, the storage for the Sutlej has already been constructed and the plan for a dam on the Beas river is fairly advanced. The promise of substantial international aid for Pakistan to build the replacement works as well as storage reservoirs appears to be another reason for her to accept the latest World Bank proposals. These, it is estimated, will cost Rs. 470 crores, a vast sum considering the resources of both India and Pakistan, but it is not yet known how the cost will be apportioned between the two countries and what part of it will be borne by the friendly foreign powers who wish to see the decade-old feud between the neighbours ended. The trend of the current talks in London, which it is said, concern these issues, has also been kept secret.

Rising Demand for Petroleum

The expansion of world demand for petroleum products was not interrupted by the recent recession in the United States and the slackening of business activity in western Europe. Before the recession, demand was growing at an average rate of 7 percent a year, although in 1958 it declined to 5½ percent a year. It is forecast that world demand will increase by 6 percent a year in the future, and it is expected to be doubled in the next ten years or so. Speaking at the annual general meeting of the Burmah-Shell Refineries Ltd in Trombay on Monday, Mr. L. D. Mudie, chairman, said that to finance this expansion, the world petroleum industry would have to invest about Rs. 67,000 crores, representing capital expenditure of about Rs. 5,300 crores a year for the next five years, rising to about Rs. 7,300 crores a year, thereafter. (A fuller version of the speech appears elsewhere in this issue of *Capital*.) The finance required for this purpose is far beyond the capacity of the world's capital markets, so the vast proportion of funds needed to meet the growing demand for petroleum products "must continue to be generated" from within the industry. The Indian demand for petroleum products, Mr. Mudie said, has shown a steeper rate of increase than the world demand during the last ten years; since 1948, consumption in the country has risen nearly threefold, to 6 million tons, which represents an average growth of 10.5 percent a year. In 1958 the rate declined to 6.1 percent, but this was due mainly to restrictions, since removed, on kerosene imports. The chairman said that the demand is expected to rise at an annual rate of not less than 7 percent, and that by 1967, India's total consumption of all petroleum products, including refinery fuels, is likely to be about 12 million tons a year.

It will be necessary to find the resources to finance this expansion, Mr. Mudie said. The world petroleum industry's experience is that an investment of Rs. 600 is required to locate and market every extra ton of oil. "On this basis, the investment to meet the growth of Indian demand to 1967 would be in the region of Rs. 360 crores, on the rather hopeful assumption that present-day costs do not rise during the next ten years." A sizeable proportion of the notional figure of Rs. 600 a ton, mentioned above, represents expenditure in the exploration stage: this expenditure is not only heavy but hazardous. Mr. Mudie said that it is quite possible to spend crores of rupees and have, at the end, nothing more to show than a series of dry holes in desert or jungle. He added that successful exploration is only the start; oil found has to be proved, extracted, transported and refined before it can reach the market.

Referring to his own company, the chairman said that it has recently informed the Government of its ability to increase the crude throughput from the existing level of about 2.3 million tons to 2.6 million tons a year. It has also informed the Government "of an active investigation now in hand" to expand the capacity of the refinery to about 4 million tons a year, together with the plant for the manufacture of 50,000 tons or 100,000 tons of H.V.I. lubricating oil basics a year. If this examination leads to firm proposals, they will help save a substantial amount of foreign exchange, Mr. Mudie said. In conjunction with the proposals, the Government has accepted the company's offer to forgo the duty protection on furnace oil, light diesel oil, high-speed diesel oil and bitumen with effect from 1st July, 1959. As for the prospects during the current year, the chairman said that if prices remain stable, and taking into account the duty protection voluntarily relinquished, the company can expect the income from refining for 1959 to be somewhat reduced, compared with the previous year, with a consequent reduction in net profits.

Import Cuts Hit Exports

The zonal conference of the South Indian Chambers of Commerce recently passed a resolution opposing a revision of the electricity tariff because of high industrial costs. It also adopted resolutions urging that a survey of idle capacity in industry be carried out. It gave its attention to the problems of ancillary industries, which are organically related to large-scale industry, in order to help the former undertake the manufacture of components. The recent seminar which was held in Hyderabad on financing small-scale industries emphasised the need for providing liberal credit facilities for their development. Apart from criticising high excise duties and pleading for incentives for capital formation, the conference was of the opinion that the quality of India's exportable commodities should be improved. It also endorsed the view that the stagnation in the export trade is partly the result of import restrictions. The resolution that the conference adopted in this connection noted that India's inability to liberalise her import policy, due to limited foreign exchange resources, has created a prejudice against her in foreign markets. The latter feel that an appropriate balance between imports and exports is not being maintained by India. Apart from importing essential capital equipment, the country should import more consumer goods to maintain the even flow of commerce. Fresh thinking on foreign trade policy should be welcomed, seeing that India's exports have not increased in spite of official efforts.

New Approach to Foreign Capital

The International Chamber of Commerce and others interested in encouraging the flow of foreign capital to under-developed countries have usually concentrated their efforts on drawing up "codes of fair treatment" to be accepted by would-be borrowers. But recently, according to Mr. J. L. S. Steel, chairman of the British National Committee of the International Chamber of Commerce, a new approach has been tried. He told the annual meeting of the Committee that it has become clear that no real progress can be made without some positive co-operation and goodwill on the part of the developing nations. There has to be a two-way approach to the problem which recognises the political and economic aspirations of the country in which investment is sought. This approach, he said, has been stimulated by the new interest taken in the subject by the U.N. since in its last session Malaya and other under-developed countries called for an enquiry to ascertain where (and how much) private foreign investment is needed, and in what form it is likely to be accepted. A few days earlier, this led to a discussion in London between the Committee and Mr. Henry Bloch, Director of the U.N. Bureau of Economic Affairs, of the practical considerations which directly influence private investors in deciding whether to lend abroad. Dr. Bloch is also visiting a number of other west European countries to examine the volume and form of foreign private investment, and the factors which affect its flow.

It is regretted that responsibility for the return of articles and manuscripts not accepted for publication in "Capital," cannot be guaranteed unless they are accompanied by stamped addressed envelopes.

Motor-car Prices and Costs

The committee on motor-cars appointed by the Central Government heard a variety of opinions on the scope for developing the industry during its recent visit to Madras. Mr. S. Anantharamakrishnan, chairman of Simpson and Company, said that the industry in India was started on the wrong lines since arrangements for manufacturing components in ancillary units should have been made first. The cost of production is high because the output is small. There is no prospect of reduced costs in spite of the manufacturers' claim that the motor-cars made in India are cheaper than imported ones. Mr. Anantharamakrishnan urged consumers to pay for the protection of a strategic industry. The general rise in prices has made it impossible to reduce motor-car prices, especially when the industry has to pay more for imported materials and parts. Prices could be reduced if duties on imported components were cut, but this has obviously not been favoured by the authorities. A representative of the trade said that since the demand for small motor-cars is limited, a subsidy will have to be offered to manufacturers to bring down prices. Mr. P. L. Kumar, a director of Amalgamations, said that the growth of the existing units should not be hindered by starting a new unit to manufacture small cars. Another point highlighted in the discussions was that the country's expanding road transport needs regular replacements, and the Central and State Governments, which get Rs. 100 crores a year from taxes on motor transport, should take steps to increase the supply of spare parts. Mr. Jha agreed that there is a need for liberal licensing of essential imports although he urged manufacturers to use the idle capacity in the industry. It is the duty of a protected industry to reduce prices progressively. But in spite of continued tariff protection, motor-vehicle producers have been able neither to reduce costs nor to achieve self-sufficiency in components.

S. T. C. and Camphor Trade

The recent report that the State Trading Corporation has received a further supply of Japanese camphor and is eager to bring down prices, which have soared since September last year, has been ignored by traders in Madras. Merchants in Kerala say that fresh licences of the value of Rs. 3 lakhs have been issued. They point out that even if the Corporation were to get as much as 40,000 lbs through imports, it might not help the consumer much since there is a need for larger supplies. The price ruling in Calcutta and Bombay is about Rs. 12.50 a lb at present. It rose by 2 annas a lb in the wake of the official news that the Corporation has got more camphor to sell. The provision of an *ad hoc* quota has not helped consumers so far, and a regular quota for established importers is urgently needed. Traders feel that normal competition should be restored and dealers assured of regular, if limited, supplies from abroad. The idea that hoarding and profiteering can be stopped if the Corporation enters the import trade has already been disproved by the experience of the last nine months. Licences to traders must, therefore, be made available liberally if the Government really intends to help the consumer.

Small Savings in Madras

Employers in Madras feel that there is a need to make workers conscious of the benefits to be derived from small savings. The payroll savings scheme has been welcomed, and the Payment of Wages Act has been amended to meet their objections. If an employee authorises deductions from wages for the purchase of savings certificates, regular savings can be effected. Many employers in Madras city have commended the scheme to workers. Furthermore, some millowners in Coimbatore have already introduced the scheme to enable workers to buy National Savings Certificates. Several firms in Madras city have been helped by the savings organisation there to form saving groups for the purchase of National Savings Certificates through regular deductions from wages.

RESULTS OF IRRIGATION

THE results obtained by irrigation in Sindh for the year 1897-98 were highly satisfactory, the area of irrigation, the gross revenue and the nett revenue being the highest on record. The return on the capital outlay was 14¾ per cent, or 2¾ per cent higher than the previous year. These results were primarily due to the unusual height and duration of the floods in the Indus which created a plentiful and well-sustained supply of water in all the canals, which was skilfully handled by those in charge of irrigation works. The total area irrigated during the year was 2,806,083 acres. The report was not received by the Government of India until the 10th July, and they express a hope that in future years its value will not be discounted by so great delay in publication. In Burma irrigation works have not been carried out on so extensive a scale as in other parts of India, but there was a considerable increase in the area irrigated under the head of minor works, the total area now brought under irrigation being 319,541 acres. At present over 75 per cent of the gross revenue is devoted to improvement and maintenance, but as the larger improvements are completed the revenue will expand as the irrigated area increases. The only productive irrigation work is the Mandalay Canal which is now in progress at an estimated cost of Rs 32,32,804, and on which Rs 6,65,000 have been expended up to the end of the year. The earthwork on the first 31 miles is reported to be about one-third done, but great difficulty has been experienced owing to the hardness of the soil. Surveys have also been made for four other canals, the Shwebo, Mon, Yeu-u, and Yenatna, and the projects for the first of these is now under the consideration of the Government of India.

Without Prejudice

Breach of Hire-purchase Contract

(FROM OUR LEGAL CORRESPONDENT)

HERE are a couple of cases of interest to those who let out or sell goods on hire-purchase agreements and to those who acquire goods under such agreements. The question often arises as to when the hirer can lawfully say that his interest in the goods has ceased to be that of a mere hirer and become that of an owner and also what is the hirer's position concerning past payments when, say, after payment of all instalments, save the last one, which he is willing and able to pay, the owner terminates the hiring and retakes possession of the goods on account of some breach by the hirer of a condition in the hire-purchase agreement if the agreement contains a clause conferring on the owner the right to terminate the contract and retake possession on such a breach. Can the ex-hirer recover past payments or any of them from the owner?

In this particular case, a Mr. Kelly, under a hire-purchase agreement of a motor-car made between himself and the Lombard Banking Company Limited, agreed to make and did make an initial payment of £182 2s in consideration of the option to purchase given to him by the agreement. The agreement gave Mr. Kelly, the hirer, the option to purchase the motor-car provided he paid the instalments and performed all the covenants. After paying the initial payment and most of the instalments, the hirer being involved in a law suit in an entirely different matter lost the case and had execution levied against him by the successful party. By the terms of the hire-purchase agreement, the levying of execution against the hirer entitled the owners to resume possession of the motor-car. The owners did so resume possession. Mr. Kelly claimed the repayment of the initial payment on the grounds that the consideration for it had wholly failed. Can he succeed?

No, said the Court of Appeal (Lord Denning, Hudson and Ormerod, L.JJ.). The condition for the initial payment (*i.e.*, the option) had been in existence since the signing of the agreement, even though it could not be exercised until certain conditions had been fulfilled. The hirer had got what he had paid for.

[*Kelly* v *Lombard Banking Co. Limited* (1959), 103. *Solicitors Journal*. 34. 78. *Law Notes*. 31.]

Mr. McDougall is a keen yachtsman. He ordered a pleasure yacht to be built by Aeromarine of Emsworth Limited. Payment was to be made by five instalments, of which the first was payable on the signing of the contract. The contract provided that the yacht and all materials, etcetera, purchased by the builders specifically for its construction should become the absolute property of the buyer on payment of the first instalment. Delivery was to be made on 1st May, 1957, but it was stated that this date could not be guaranteed. When offered for trial run in June 1957, the yacht had defects making it unseaworthy; these had not been remedied on re-launching in July 1957, and in September 1957, were still not remedied. Was Mr McDougall entitled to return of the price paid as money paid for a consideration that had wholly failed and damages for the loss of the use of the lot during the 1957 season (for which nominal damages only were claimed)?

Yes, said Diplock J. The contract was not effective to pass the property in the yacht to the buyer on payment of the first instalment since, at that date, its construction had not started and no materials for its construction had been purchased. Even if this view was wrong and the property in the incomplete goods or their components had passed, this did not irrevocably deprive the buyer of the right to reject the goods when completed and divest himself of his property therein. The provision that delivery on 1st May, 1957, was not guaranteed, meant that the yacht must be delivered within a reasonable time of that date. This was a condition of the contract and was broken by failure to remedy the defects and tender for acceptance by September 1957. The buyer was entitled to treat this as rescinding the contract and had done so.

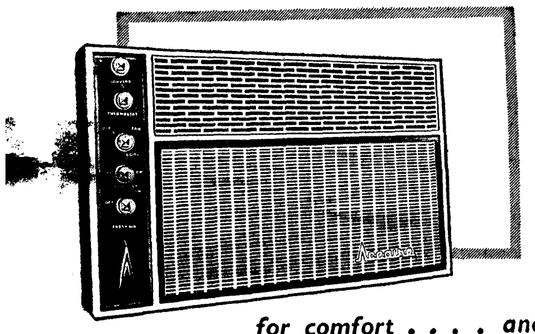
[*McDougall* v *Aeromarine of Emsworth Limited*. 78. *Law Notes* (1959). 11.]

Last week, we discussed the subject of lay advocacy and mentioned the names of several well-known practitioners in that dangerous art. The writer particularly wished to include another name because it was connected with the story of what the late Sir Edward Marshall Hall, K.C.—no mean judge—described as the cleverest spontaneous retort he had ever heard in a court of law. Now, by a curious freak of memory occurring while writing the Scottish name McDougall above, the name of the lay advocate has come back—McDougall—Scot—Scotland—T. W. H. Crosland. That was the man. Mr. T. W H. Crosland was a brilliant English journalist and author whose career was ruined by a savage temper and a bitter pen. He had a strange obsession. It was a virulent hatred of Scotland, Scots and everything Scottish. He could not keep it out of his conversation and even wrote a long book about it which he styled *The Unspeakable Scot*.

Crosland was often in the law courts in civil suits usually for alleged libel, defending himself with great ability. But at last the inevitable happened and Crosland found himself in the dock on a charge of criminal libel of so grave a character that a conviction would involve a long term in jail. And against him was the most dangerous man in England with a gift of savage sarcasm excelling even his own: the great F. E. Smith, afterwards Lord Birkenhead, Lord Chancellor of England. Knowing that F.E. would be out to make him lose his temper, Crosland put over a wonderful act of sweet reasonableness and meek injured innocence. Then he went into the witness box and the great advocate cross-examined him. There followed what the present Lord Birkenhead in his life of his father describes as "a battle of wits in which the honours were about even." Even that is, till F.E.'s very last question. It was a devastating one and Crosland was answering at considerable length. "Cut it short; cut it short," interrupted F.E. impatiently. Crosland quietly replied that he was only anxious that the jury should understand his answer. "The jury can take care of themselves", snapped back F.E. "I daresay they can," Crosland replied, "but I want them to take care of me." The jury did take care of him. They acquitted him.

And talking of famous cross-examinations, can the reader say who were the celebrated counsel and the well-known witness in the following incident? The writer has not got the actual report before him and quotes it from memory. The witness had admitted that he had been present when the incident was said to have occurred but had sworn that he had seen nothing of it.

Counsel: "You were in the passage and you saw nothing of what was going on. Have you a pair of eyes?"



Witness: "Yes, I have a pair of eyes. And that's just it. If they were a pair of patent double million magnifying-light microscopes of extra power, perhaps I might be able to see through a flight of stairs and a deal door; but, being only eyes, you see, my vision is limited." (Answer at the end of this note.)

The fact is that a smart extemporary retort from the witness box by a badgered witness can go a very long way indeed towards winning a case. The odds are so greatly against the witness faced with a carefully prepared question to which he has to give an immediate unprepared reply. That is the sort of thing we mean. The incident occurred during the recent trial of the Costa Brava Wine Company Limited case; it, you will remember, concerned the alleged right to style a wine "champagne", which, it was claimed, was not actually that beverage. We quote from *The Times* report.

Counsel: "The poor man can have his wholesome sparkling wine, but he cannot have champagne because it is always expensive. You want to keep the snob class value of champagne as a rich man's wine. Why cannot he have his poor man's champagne?"

Witness: "You might as well ask why can margarine be called butter so that the poor man can have butter."

Answer to quiz above: The question was asked by pull. Counsel was Mr. Serjeant Buzfuz, Q.C., the witness Sam Weller and the case *Bardell* v. *Pickwick* for breach of promise of marriage.

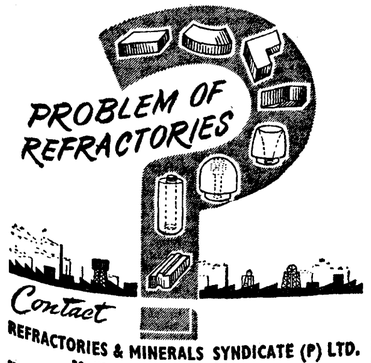
A Ditcher's Diary

THE PRIME MINISTER SPOKE STRONGLY, I THOUGHT—if rather irrelevantly and, in the final analysis, equivocally—on English in the Lok Sabha last Friday. While I share Mr. Frank Anthony's satisfaction up to a point, I do not see that the militant champions of Hindi will change their minds as a result of Mr. Nehru's speech. They may change their tactics though—without forgetting the essentials of their struggle. I am inclined to agree with the Hindi enthusiasts that the language so dear to them has very little hope of becoming dominant unless English is displaced first. Mr. Nehru has exposed the apparent folly of a frontal attack on English; this has only aroused animosity against Hindi in all the non-Hindi regions. He must have noticed, however, that the Hindi enthusiasts have succeeded supremely well in one direction: they have so debased the currency of English in India, by ensuring a deterioration of standards, that others besides Dr. John Matthai have begun to wonder whether it is much use fighting any longer for the kind of English spoken or written in this country today. It could hardly be otherwise. To learn one's own language well is a formidable undertaking; to learn another's as well as Indians once used to was an astonishing performance. And this is what makes the present conflict such a pity. A chain of historical circumstances had put into the educated Indian's hands a magnificent instrument of thought and expression, and now he is told, in the name of nationalism, that he must throw it away and make do with a tool sadly inadequate for most modern purposes. Mr. Nehru again invoked the Constitution in support of Hindi as the official language. Rightly, I think. But if he is serious about retaining English indefinitely he might have pointed out that the Constitution was drawn up in an entirely different climate—nationalism then was more assertive than it need be today—and that the Constitution (a) has several other provisions which the Government has not so far been able to implement, and (b) has already been amended more than once. I suspect that at least some of those Hindi enthusiasts who swear by the Constitution do so not out of their respect for that document but in their hurry to do first what they consider first things: Hindi, Prohibition and so on. Free primary education, national unity, and employment for everyone—these, apparently, can wait.

TO READ MR NIRAD C. CHAUDHURI'S *A Passage to England* (Macmillan, Rs. 10) is to weep again for the state of English in India today. How brilliantly he writes, and he learnt his English only from Bengali teachers. We are not in our most receptive frame of mind at the age of 57, and that is when Mr. Chaudhuri went to England for the first time in his life. But then he was no stranger to that country, whose literature he had imbibed since he was a boy. Many must be the Englishmen who will learn a great deal of their country's history, art and literature from Mr. Chaudhuri's book, as I did. It will be almost embarrassing for Englishmen of my generation to read such praise of their country and countrymen, both of whom they appear to have been brought up to criticise at the slightest provocation. Mr. Chaudhuri has no time for such self-deprecation and understatements. He does indeed find a fault or two in the English today; he thinks they have lost the will to be great. Touching is his faith in Europe, everything European, which he sometimes unfairly compares with India and things Indian. These extreme opinions may not endear him to his patriotic countrymen, but he probably does not care much. These political and polemical *obiter dicta* are, however, a small and incidental part of the book. Its main object is to record the joy of a European visit; and his Europe is for the most part the Europe of art, literature and music. The English country houses fascinated him, and he found Shakespeare still a living entity. He heard music, saw plays, visited museums by the dozen, ate good food and drank good wine. He says quite plainly that Europe without politics is still great. In India, he thinks, there is nothing but politics. The heavy political bias of the Press would appear to indicate that he may be right. It is only the most generous of spirits that can love another country so, and all Englishmen should be grateful to Mr. Chaudhuri. He believes that East is East and West is West—a highly unpopular view at the moment—but, apart from the qualification Kipling added, which is seldom quoted, I think that in the realm of the mind, too, the twain can meet. Mr. Chaudhuri's own book is the product of that perfect communion, which he does not consider possible.



IF THE GOVERNMENT IS SERIOUS ABOUT BRINGING Indian hotels up to international standards, it might well make a start by laying down some rules about tipping. As anybody who travels widely in this country will confirm, the persistent demand for *baksheesh* is becoming an embarrassing nuisance. For once, Calcutta is by no means the worst offender. But elsewhere, especially in Delhi and Madras, the system has degenerated into a complete racket. Some weeks ago I stayed one night in a well-known Madras hotel. It took three men to carry my one bag to the room: when I got there they were lined up with their hands out. The bearer who brought me my tea explained that he was about to go off duty and would not be seeing me in the morning. The two who served me at dinner did exactly the same thing. In fact, each one of the seven or eight table and room bearers who attended me at various times for what was left of the day, all eagerly pointed out that they would not be around when I was due to leave. Even the sweeper who walked in uninvited to wip a duster round the already spotless handbowl, had to apologise that this was going to be his last appearance. By the time I left the hotel next morning I had been approached by fifteen different bearers and three sweepers, to say nothing of the five men who were responsible for getting my one bag the fifty or so yards from the taxi and back. When I vacated the room, there were seven different bodies lined up in the corridor, most of whom I had not even seen before. And to make matters worse, the hotel was liberally plastered with notices that tipping was forbidden. When I complained at the reception desk the bored clerk explained that India was a poor country and that it was difficult to impose discipline of any sort on domestic staff these days. I had the impression it was the first wholly correct piece of information he had imparted that day.

THE ANNUAL GENERAL MEETING OF THE AMERICAN Telephone and Telegraph for this year was attended by 12,000 shareholders: the company had to hire the immense Kingsbridge Armory hall in New York to fit them all in. Last year's shareholders' meeting of General Electric had a roll-up of 4,000, while the Chesapeake and Ohio (a railway company) had 3,700 shareholders along to hear the directors' report. If you have ever attended an Indian company meeting, where shareholders are apt to be outnumbered by company officials, you will grasp the significance of these figures and appreciate the gulf which separates "free enterprise" in the two countries. Admittedly, the U.S. companies can get more shareholders along because they just have more of them. The 12,000 American T. & T. shareholders who went to the annual meeting were a tiny fraction of the 1,600,000 in that company, one of the biggest private enterprises in the world. But that is not the whole story. American company directors used, not so long ago, to be as reluctant to interest shareholders in their own affairs as many Indian directors are today. They would call the annual meeting in out-of-the-way places to discourage "interfering" shareholders, and if one of the latter dared ask a question from the hall he was liable to get a dusty answer. Since then, ideas have changed; the shareholder is no longer regarded as a necessary evil and his active interest in company affairs is seen to be one of the safeguards of the free enterprise system. So now he is being pressed to attend annual meetings, is given free transport to get there and receives a hot-dog to sustain him through the reading of the report. If he is a shareholder in Revlon he might get a beauty product for his wife; if he owns a part of Continental Can he might be given a galvanised garbage bin. The Matson Steamship Line has held a company meeting on a luxury ocean liner; the New York Central Railroad puts on a special train to Albany, so that shareholders can combine business with a day out. Another railroad takes shareholders to a different town each year, so that they can see the communities their company serves; this year it held its meeting in a new marshalling yard in West Virginia of which the directors were justifiably proud. The American Machine and Foundry broadcasts the main parts of the directors' report over the N.B.C. radio network, and now some corporations are considering televising part of their annual meetings into millions of homes. This all sounds very American, I know. In fact, all that is peculiarly American about it is the scale and the lavishness of the directors' efforts to interest shareholders. The principle, that fearless publicity for company affairs is important to free enterprise, has application in other countries too.

I REALISE AS WELL AS ANYONE THAT MOST OF THE talk about "economic democracy" in company management is rubbish. In any b[redacted] tors run the show and the shareh[redacted] it later—and all most of them w[redacted] size of the dividend. From that[redacted] does not seem to matter if ten[redacted] 10,000 attend the annual meetin[redacted] that presses shareholders to come along and meet the directors, that shrinks from no decent publicity methods consistent with good management, shows that it has nothing to hide. And this impresses not only shareholders but outsiders. Free enterprise that practices these methods, even if on a much more modest scale than the giant American corporations, would have less to fear from malevolent anti-capitalist campaigns. Indian business would not have to go very far along these lines before it could honestly reply to such attacks that public knowledge and sanction of its affairs were superior to public control over the "people's" State-run enterprises.

BURMAH-SHELL REFINERIES LTD.

CHAIRMAN MR. L. D. MUDIE REVIEWS OIL INDUSTRY'S ROLE IN INDIA'S ECONOMIC DEVELOPMENT

The following is the full report of the statement made by the Chairman, Mr. L. D. Mudie, at the Sixth Annual General Meeting of the Burmah-Shell Refineries Ltd., held at Trombay on Monday, 10th August 1959.

The Directors' Report and Accounts for the year 1958 are before you and from these documents you will note that the profit for 1958 has dropped by some Rs. 114.2 lacs to Rs. 309.6 lacs as anticipated by the Chairman in his remarks to the Shareholders at the last Annual General Meeting. This decrease is due to the narrowing of the refiner's margin between refined product and crude oil prices and to the increased taxation liability.

A dividend of fifteen nave Paise per rupee (free of Income Tax) was declared and paid in April 1959 on the paid-up Ordinary share capital absorbing Rs. 207.3 lacs leaving a balance of Rs. 102.3 lacs, which, with the balance brought forward from 1957 of Rs. 41.7 lacs, leaves a balance of Rs. 144.0 lacs for further appropriation. From this balance your Board has recommended that Rs 82.0 lacs and Rs. 9.0 lacs be appropriated to General Reserve and Tax Equalisation Reserve respectively, leaving a balance to be carried forward of Rs. 54.0 lacs.

I do not think further remarks are necessary on the detail of our 1958 Accounts which are set out fully in the documents already circulated to you; I should, instead, draw your attention to the mass of comment, read and heard in recent months, on petroleum and its role in India's economic development. I welcome this as indicative of wide and growing public interest and would like to offer a few remarks that may help to set perspectives for the discussion on petroleum. In so doing, it shall be my endeavour to concentrate on points of general agreement and to supplement Indian experience with lessons learnt from the international operations of the petroleum industry.

World Demand

The recession in the United States and the slackening of business activity in Western Europe, slowed down, but did not interrupt the expansion of world demand for petroleum products. Before the recession, world demand had been growing at an average rate of 7% per year; in 1958 the rate of expansion dropped to 5½% per annum. Looking into the future most forecasters predict an annual expansion of 6 per cent in world demand; in other words such demand is expected to double itself in the next ten years or so. It has been calculated that to finance this expansion the Petroleum Industry will need to invest about Rs. 67,000 crores representing capital expenditure in the region of Rs. 5,300 crores per year for the next five years, rising to approximately Rs. 7,300 crores per year, thereafter. That growth, in this magnitude, is continuous and not sudden, is illustrated by the fact that the Industry's gross investment in fixed assets rose from Rs. 11,800 crores at the end of 1946 to Rs. 37,900 crores at the end of 1957.

These are formidable figures and it is obvious that finance, in these magnitudes, is far beyond the capacity of the world's capital markets; the vast proportion of the funds needed to meet the growing demand for petroleum products must continue to be generated from within the Industry. To illustrate this point, I may mention that in 1958 the Royal Dutch/Shell Group of Companies raised £126 m. (Rs. 168 crores) through the mechanism of the largest single capital issue in European history; the money sufficed to cover the capital and exploration expenditure of the same Group, for a period of just about 4 months.

These facts of international experience have particular relevance at this moment in India's progress towards a self-sustaining economy.

Consumption in India

Over the last ten years Indian demand for petroleum products has shown an even steeper rate of climb than the world trend: since 1948, consumption in India has increased nearly threefold to 6 m. tons which represents an average growth of 10.5% per annum. In 1958, the rate fell to 6.1% but this was due principally to restrictions, since removed, on Kerosine imports, imposed to conserve foreign exchange.

As for the future, it is expected that demand will advance at an annual rate not less than 7 per cent and that by 1967 the country's total consumption of all products including refinery fuels is likely to be not far short of 12 m tons per year or just on twice the present level of consumption.

Finance will have to be found to meet this expansion; the Industry's experience, world-wide, indicates that an investment of Rs. 600/- is required to locate and market every extra ton of oil. On this basis, the investment to meet the growth of Indian demand to 1967 would be in the region of Rs. 360 crores, on the rather hopeful assumption that present day costs do not rise during the next ten years.

I may add that of the notional figure of Rs. 600/- per ton, just quoted, a sizeable proportion represents expenditure in this exploration stage. It is now not necessary to demonstrate that expenditure on exploration is not only heavy but hazardous: indeed it is quite possible to spend crores of rupees on the best geological and geophysical advice and have at the end nothing more to show than a series of dry holes in desert or jungle and the advantage of experience, somewhat dearly bought. Indeed, the gambler has, in essence, a better chance than the oil explorer: in the words of a leading journal, "when throwing a dice one is at least sure that the number 6 exists, whereas if no oil is, in fact, present, an unlimited number of 'goes' would never give a win".

Successful exploration, is however, but the start; oil found has to be proved, extracted, transported and refined before it can reach the market. It is not often realised that the development expenditure needed to bring an oilfield into commercial production, though less hazardous, is generally several times as expensive as the original exploration effort.

Production of Crude Oil

The problem can also be examined with the gap between demand and indigenous crude supply as the starting point. India's crude production now amounts to 0.4 m. tons from the Digboi field, to which may be added the 2.5 m. tons expected from the Assam Oil Company's discoveries in Nahorkatiya and Moran. With 1967 demand assessed at 12 m tons and indigenous crude output at 3 m. tons, the gap—which is the measure of fresh investment needs—is seen to be 9 m. tons. The world experience of the Industry indicates a figure around Rs. 270 crores as the investment needed to find and produce this additional quantity; to this must be added, however, a considerable sum to cover additional refining capacity (6.4 million tons) and distribution and marketing facilities (6 million tons).

These figures are impressive but constitute only the beginning of the story. For it must be remembered that, despite the rate at which demand is growing, India's per capita consumption of petroleum products works out at 3.8 gallons per annum against a world average of 70 gallons, and compared with 40 gallons in Japan, 14 in Ceylon, 122 in Latin America, 7 in Indonesia and 600 gallons in the U.S.A.

The same pattern emerges when the field of comparison is widened to include all forms of energy. Here the Indian figure is 0.12 tons per capita/annum against 1.08 tons for Japan and 3.85 tons in Australia.

The inter-relations between the use of energy, levels of productivity and living standards are now generally recognised and the comparisons I have just made point to the enormous scope for development of all forms of commercial energy in India.

Several attempts have been made, to forecast the likely shape of this development and a recent study indicates the following pattern for commercial energy consumption in India.

	Percentage Shares		
	1947	1952	1957
Coal	86	83	80
Hydro-electricity	6	6	6
Petroleum Fuels	8	11	14

Coal remains the major source of commercial energy but its dominance is a declining one. The hydro-electric contribution, relative to other sources of energy, is static over the ten-year period; oil alone shows a steady advance.

Nuclear Power

The prospects from nuclear power are interesting but the consensus of expert opinion seems to be that though this new source will make some contribution during the Third Plan period, its development is a matter of long-term significance.

It is not sufficient to examine petroleum only as a source of energy i.e. power and heat. To assess India's total demand it is necessary to include other petroleum products which are not used to produce energy such as Bitumen for roadmaking, and Lubricating Oils.

The pattern of India's petroleum consumption is dominated by the Middle Distillates (Kerosine, High Speed Diesel Oil, Light Diesel Oil and Aviation Turbine Fuels): the proportion of these to the total is at present about 45% and assuming no external checks on growth rates, the Middle Distillate share is likely to rise to roughly 50% in 1967, or, about 6 million tons.

The Gasoline (Aviation and Motor Spirit) share has, on the other hand been contracting at a rate which suggests that by 1967 it may account for 8% (against 15% at present) of total demand.

The Residuals are likely to hold the same position in the consumption pattern, as at present, in the region of 30%.

To provide the 6 m. tons of Middle Distillates required by the Indian market, entirely from indigenous crude, would call for crude production at the level of 13.3 million tons per annum. The processing of such crude would throw up a surplus of about 3 m. tons in the Gasoline range; the disposal of this surplus through export may prove to be difficult.

Depending on Imports

It is obvious that to depend entirely on imports to cover the enlarging Middle Distillate gap would be to correct the petroleum imbalance by creating an oppressive and continuing strain on India's foreign exchange reserves.

I shall not dwell further on this problem which has, of course, a number of facets; it may be necessary to adjust the present taxes on petroleum products, while technical developments, such as the multi-fuel engine, and the utilisation of petroleum products as raw material for other industrial processes hold promise, and above all, I would stress the proven ability of the international oil industry to meet challenges through world-wide adjustments of demand and supply as well as by internationally orientated research and development.

It would be relevant to mention that your Company has already made a contribution towards resolving the imbalance problem. Between 1956 and 1958 the yield of Gasoline has been reduced from 23% to 16.5% with an expansion of Middle Distillate production from 31.8% to 34.6%—a remarkable achievement bearing in mind the production pattern for which the plant was designed.

Your Company has continued to study this problem and recently informed Government of their ability to increase their Crude throughput from the existing level of approximately 2.3 million tons to 2.6 million tons per annum, thereby providing a further 250,000 tons of Middle Distillates per annum, representing an increase of 30% in Middle Distillates, together with an export market for 25,000 tons of gasoline. Furthermore, this development is estimated to save about Rs. 1.5 crores of foreign exchange in a full year.

Expanding Refinery Capacity

At the same time, your Company have informed Government of an active investigation now in hand to expand Refinery capacity to the level of about 4 million tons per annum, together with plant for the manufacture of 50,000/100,000 tons of HVI Lubricating Oil Basics per annum. If this examination leads to firm proposals, these will most certainly reflect substantial savings in foreign exchange and contribute materially towards resolving the product imbalance problem.

In conjunction with these proposals, Government have been pleased to accept an offer by your Company to forego the existing duty protection on Furnace Oil, Light Diesel Oil, High Speed Diesel Oil and Bitumen, with effect from 1st July 1959. This duty protection, together with the 2 annas duty protection on Gasoline voluntarily surrendered on 1st October 1956, formed part of the Agreement with Government which led to the construction of this Refinery.

As regards the current year it is, of course, impossible to forecast with accuracy the future course of Crude and refined product prices, influenced as these are, by a great variety of factors quite outside the control of the Oil Companies and the scope of accurate prediction. If prices remain roughly in the same relationship as at present, and taking into account the Duty Protection voluntarily relinquished by your Company from the 1st July of this year, we can expect the income from refining for 1959 to be somewhat reduced compared with 1958, with a consequent reduction in net profits.

That we are able, so soon after our Refineries went on stream, to make such offers to the Government of India is due to the foresight, imagination and skill of those who planned our great plant and it gives me particular pleasure to record that efficiency and drive have distinguished the efforts of all employees who have worked in Burmah-Shell Refineries these past years. With them, we look, in confidence, to the future.

INTERBANK FUNDS TIGHTER

Wednesday, 12th August.

THERE has been little change in the seasonal downtrend of advances in the Calcutta money market during the past week. With the exception of accommodation against grains and seeds storage, all the main sources of demand, including the sugar, jute and cotton industries, reduced their requirements. The interbank market has become extremely tight, and during the week the call rate moved up to 2½ percent, with business reported at 2½ percent. Lenders have become fewer.

The exchange market has ruled steady, with moderate quantities of both tea and gunny bills in evidence. Remittance improved and the demand was good. On the London market, the pound lost fractionally against the twin dollars but became firmer against most Continental currencies.

BULLION WAS FIRM LAST WEEK IN THE ABSENCE OF offer. Silver advanced from the previous week's level of Rs. 197.50 to Rs. 198.25, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 197.50. The London and New York silver prices were quoted at 78⅛d and 91.375 cents.

In sympathy with a rise in silver, gold registered a remarkable rise from Rs. 120.25 to Rs. 123.00. The sovereign at Rs. 78.50 showed a gain of 25nP.

DURING THE WEEK ENDED 7TH AUGUST, 1959, Government of India Treasury bills for Rs. 74,40,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 3 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 11th August. The total amount offered was Rs. 3,00,00 000. Tenders at Rs. 99.365 and above were accepted in full, the average rate of acceptance being Rs. 2.530 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 24th August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 12th August to 22nd August at Rs. 99.381 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary.

INCREASES OF RS. 22.87 CRORES TO RS. 1,688.91 crores in active notes and of Rs. 3.38 crores to Rs. 1,700.23 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 7th August, 1959. The currency expansion was covered by increasing rupee securities by Rs. 10.04 crores to Rs. 1,286.17 crores and reducing foreign securities by Rs. 5 crores to Rs. 163.01 crores in the paper currency reserve. Foreign balances held abroad in the Banking Department increased by Rs. 3.61 crores to Rs. 13.44 crores only in spite of a bigger transfer of securities from the Issue Department. Investments in the Banking Department declined by Rs. 10.34 crores to Rs. 319.31 crores, presumably because of a transfer of securities to the Issue Department. Deposits of the Government of India fell by Rs. 6.79 crores to Rs. 53.37 crores, as did other Government accounts by Rs. 9.12 crores to Rs. 13.20 crores. Balances of commercial banks at Rs. 76.60 crores showed a decline of Rs. 4.50 crores. Other loans and advances increased from Rs. 66.26 crores to Rs. 70.07 crores, of which advances to scheduled banks against usance bills amounted to Rs. 50 lakhs (nil). Ways and means advances stood at Rs. 27.40 crores against Rs. 22.75 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 31st July, 1959, shows a rise of Rs. 2.95 crores to Rs. 547.02 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 20.63 crores and Rs. 15 lakhs to Rs. 347.12 crores and Rs. 10.22 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have dropped by Rs. 3.28 crores to Rs. 174.71 crores. Cash and balances are, in consequence, shown at Rs. 27.53 crores or Rs 8.21 crores less.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 14-8-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
14-8-59

PRICES ADVANCE ON THE STOCK MARKET

JULY GOLD RESERVE FIGURES HELP SENTIMENT

London, 11th August.

THE period following the August Bank Holiday, normally a very quiet time, was in fact the best for months in the London Stock Exchange. Prices in equity sections forged strongly ahead in very active conditions to record an all-round, and in many cases, substantial advance. Best levels were held following the sharp setback on Wall Street, the worst for four years, but in spite of this, the major part of the gains was held. The strength of industrials was the outstanding feature of the market. The buoyancy was based primarily on one factor, namely, the news that President Eisenhower and Mr. Khrushchev are to exchange official visits. Other factors contributing to the sharp advance in markets included recent good business news and the highly satisfactory gold reserve figures for end-July. The Cohen Council's report on Britain's economic position also helped sentiment. With interest and activity centred on the equity sections of the market, gilt-edged securities were neglected and prices tended to ease. The announcement of a conversion offer to holders of 3 percent War Loan stocks and the accompanying cash offer had very little effect on the market at first but later long-dated and undated stocks eased further under this influence. Foreign bonds and rails attracted very little attention while dollar stocks were appreciably lower in sympathy with Wall Street. Heavy buying by U.K. investors, coupled with buying of selected issues by the Continent and the United States, brought a substantial advance in industrials. Gold shares improved on selective Johannesburg, and to a lesser extent. London buying while diamonds advanced on Johannesburg support. Coppers tended higher and several lead and zinc shares improved but tins were narrowly irregular. Oil shares met with good enquiry and recorded substantial gains. Rubber shares continued to improve but teas were narrowly irregular.

The Money Market

For most parts of the past week, credit conditions were comparatively comfortable and discount houses were usually able to satisfy the requirements without difficulty, but the position changed in the last day or so of the week when funds were not so readily forthcoming. During the more comfortable period, night money was taken down to 2 percent while there were occasions when balances were left unlent. On Saturday, the position changed and, on Monday, there were some fairly heavy withdrawals of funds which caused market houses to pay up to 3 percent for night money. But after the authorities had given some help, and with a portion of privilege money taken, the situation became more comfortable towards the close. The weekly Treasury bill tender again produced no excitement, the average rate being little changed at £3 9s 9d percent.

Activity on Wall Street

The foreign bonds market witnessed a revival of interest in the issues of communist countries following news of the pending exchange of visits by President Eisenhower and Mr Khrushchev. A number of Polish issues went up by 3 points or more. Elsewhere, German Nationals were higher in very small volume while Italians backed and filled narrowly. Recently, depressed Greek issues attracted improved support, with the 6 percents rising by over a point. Amsterdam 5½ percents moved ahead early in the week but eventually backed away. Australian issues were mixed and those of the Union of South Africa mostly higher. Chile 3 percents eased by a major fraction. U.S. Government obligations gathered renewed strength in the short end of the list. The strength spilled over into intermediate and long-term securities. High grade corporates and speculative rail lines were inactive. Convertibles were mostly lower reflecting the easier trend in stock market values.

Hongkong Gold Featureless

The Hongkong gold market was featureless with prices moving narrowly. For the most part of the past week, the market followed the course of sterling. Trading remained very small with reported deliveries totalling only 10 taels. The carry-over charges were nil. Arrivals at Macao totalled 22,000 ounces. Forward contracts were done at $US 38.01, c.i.f. Macao.

Mixed Trend in Vegetable Oils

Demand for Canadian linseed was restricted on account of the sharp advance in prices. Doubts as to the availability of American supplies, as large as originally expected, and uncertainty as to the extent of Argentine acreages were the energising factors. Castorseed held steady, while groundnuts were quiet with resellers of Nigerian vainly offering September-November shipments at £61½. Linseed oil, after fair trading closed a shade off the best. Castor oil remained quiet and easier. Soft oils remained slow and prices were barely maintained.

OVER-BOUGHT TECHNICAL POSITION RESTRICTS ACTIVITY

INDIAN IRON REPEATS ORDINARY DIVIDEND

Wednesday Evening.

THE eagerly awaited announcement of the Indian Iron ordinary dividend for the year ended 31st March 1959, was made yesterday. The initial market reaction to the directors' recommendation that it be maintained at 10 percent was a 10nP rise in the quotation—for a few minutes —from Rs. 24.90 to Rs. 25. Immediately after, sellers appeared and the shares slipped down to Rs. 24.55. The behaviour of the market during the past week clearly indicates an over-bought position. Most of the prominent bull operators are reported to be already holding fairly large blocks of Irons and their capacity to make further purchases is necessarily limited, even though the shares are now standing at an attractive investment level. Unless, therefore, the market is stripped of some of its speculative fat, no substantial recovery improvement can be expected in the near future, particularly in view of the decision of Leftist parties in West Bengal to defy law and order in the State on and from 20th August 1959.

At a committee meeting of the I.J.M.A. yesterday, it was decided to unseal a further 2½ percent of the industry's looms from 24th August to 2nd January 1960, thus bringing the percentage of the total complement of sealed looms down to 10. It may be recalled that in March last the percentage of sealed looms was reduced from 14 to 12½. Stocks of jute goods also fell last month from 95,400 tons to 92,800 tons, despite an increase in the production in the same month from 82,700 tons to 89,600 tons. All this is heartening news for the investor in jute shares and provides further proof of the industry's improved fortunes.

Government securities were rather quiet this week as institutional investors were busy lightening their portfolios in order to provide funds for taking up the new State loans which will open for subscription on 19th August 1959.

Preference shares continued to meet with investment enquiry but sellers were reluctant to part with their holdings and little business was completed.

With the exception of Punjab National, which met with some enquiry, bank shares were neglected.

Prices of coal shares showed little variation and business was on a disappointing scale.

The improved outlook for the cotton textiles industry was responsible for the enquiry in cotton shares during the past week. Bowreah spurted from Rs. 130 to Rs. 148. Dunbar from Rs. 175 to Rs. 200, Elgins from Rs. 14.62 to Rs. 15.37 and Kesoram from Rs. 16.31 to Rs. 17.

In electrics, there was some enquiry for Calcutta at Rs. 15.37 and U.P. at Rs. 137.

In the engineering group, Burn & Company provided the outstanding feature with the price improving from Rs. 437 to Rs. 465. Most other issues were unchanged. Indian Irons closed today at Rs. 24.74.

For the reason given earlier, there was a revival of interest in jute shares and widespread gains were recorded, as will be seen from the following table:

	Opening 5th August, 1959	Closing 12th August, 1959
	Rs.	Rs.
Agarpara	13	13.69
Bally	216	231
Barnagore	168	175
Birla	23	24.19
Gourepore	415	420
Orient	175	188
Union	235	240
Fort Gloster	380c.d.	365x.d.

In paper, Orient recovered from Rs. 36.40 to Rs. 37.70 and Sirpur advanced from Rs. 12.87 to Rs. 13.62. Titaghur were better at Rs. 44.75.

Sugar shares were dull and featureless.

Among miscellaneous industrials, Britannia Biscuits were firm at Rs. 26.37 and there were buyers of Bengal Flour at the higher rate of Rs. 39. Dunlop Rubber were taken at Rs. 34.37, as were National Carbon at Rs. 35.12. Hindustan Motors were enquired for at Rs. 11.62 and Rallis India at Rs. 76. Metal Box were taken at Rs. 42 while Philips recovered to Rs. 22. Clive Row were marked up from Rs. 10.56 *cum*-dividend of 46nP to Rs. 10.19 ex-dividend.

Outstanding in the tea section was Grob which spurted from Rs. 18 to Rs. 19.87 cd. cr. Most other issues were marked down.

In the mining section, Indian Copper were steady at Rs. 4.14 while other issues were unchanged.

Birla Jute

The Birla Jute Manufacturing Company has made a gross profit of Rs. 74.36 lakhs for the year ended March 1959. Depreciation absorbs Rs. 17.69 lakhs and general reserves Rs. 2½ lakhs. Taxation provision is allocated Rs. 5 lakhs. An ordinary dividend of 10 percent is declared, leaving a carry-forward of Rs. 29,035, against Rs. 24,155 brought in. The directors think that current prospects are good. Loan arrangements have been finalised with the N.I.D.C. for modernisation and orders have been placed for new machinery. The new equipment has already started arriving in the mills and its erection is proceeding satisfactorily. Considerable benefits and economies are expected in mill working and in wages when the entire modernisation scheme is completed by the middle of 1960. The calcium carbide factory worked to full capacity during the year under report. The expansion scheme is well under way and the new furnace is expected to be put into commission from November this year. This will raise the production capacity from 10 tons to 25 tons a day. The erection of the cement plant in Satna has been completed and the kiln was fired on 12th February, 1959. It has not yet been possible to attain full production, but it is hoped that full and regular production will be achieved shortly. The rated capacity of the plant is 750 tons a day.

Standard-Vacuum Oil

The audited accounts of the Standard-Vacuum Oil Company's marketing operations show that in 1958 the company has earned a net profit of Rs. 1.23 crores, after providing Rs. 1.96 crores for income and wealth taxes, Rs. 63.33 lakhs for depreciation and writing off Rs. 25.08 lakhs covering the expenses incurred in the search for oil in West Bengal under the Indo-Stanvac petroleum project. The net profit has resulted from a gross turnover of Rs. 62.15 crores, which includes an inter-company turnover of Rs. 31.54 lakhs. The net profit for 1958 represents a return of 1.98 percent on the total sales turnover (a reduction of 0.12 percent from the previous year), 3.58 percent on the total net assets and 5 percent on capital employed. Sales volume has

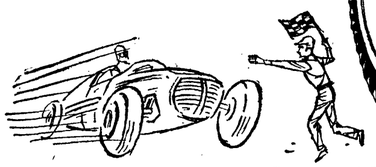
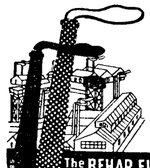
WORLD CHAMPIONS CHOOSE Firestone



..SO SHOULD YOU

because—in the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

Glen Roberts, winner of the Ninth Annual '500' race at Darlington, South Carolina, said that his wonderful performance was mainly due to his Firestone tyres, which had to withstand a track temperature of 121 degrees.



Firestone

increased from 380.4 million Imperial gallons in 1957 to 418.6 million Imperial gallons, representing an increase of 10 percent. While the total operating cost excluding product cost increased, the incidence a unit declined by 7.4 percent. The value of total assets at cost increased by Rs. 74 lakhs, from Rs. 33.76 crores in 1957 to Rs. 34.50 crores in 1958. The total value of inventories in India at cost stood at Rs. 12.16 crores, against Rs. 12.21 crores in the previous year. The value of investments in fixed assets at cost increased by Rs. 64 lakhs and stood at Rs. 13.95 crores at the end of the year under review. The company's operations for the year were a large source of revenue to the Government. The accounts show that Rs. 16.64 crores is mentioned under the heading import duties and excise taxes, including amounts paid to the Standard-Vacuum Refining Company of India Ltd., and Rs. 36.97 lakhs in property and other taxes in addition to income and wealth taxes. The company also collected on behalf of, and paid to, the various State Governments a total of Rs. 2.42 crores in sales taxes.

Tata Steel Output

Tata Industries Private Limited, managing agents of the Tata Iron and Steel Company Limited, reports that the total approximate production of iron and steel at the steel works in Jamshedpur during July 1959 was: pig iron 125,000 tons; steel ingots 121,100 tons; semi-finished steel for sale 41,600 tons; and finished steel 56,900 tons.

Dehri-Rohtas Railway

The Dehri-Rohtas Light Railway Company has earned a profit of Rs 16.22 lakhs for the year ended March 1959, against Rs. 7.13 lakhs. A dividend of 17 percent is declared to absorb Rs. 5.10 lakhs, leaving a carry-forward of Rs. 4,085, compared with Rs. 2,749 brought in. General reserve is allocated Rs. 2½ lakhs. During the year under report, the Rohtas-Pipradih private siding was opened for the carriage of passenger traffic. The volume of goods traffic rose by nearly 180,000 tons.

Bombay Market

HEAVY DELIVERIES SUBDUE SENTIMENT

THE CENTURY SPINNING RIGHTS DECISION CAUSES CONCERN

Wednesday Evening.

THE Bombay stock market was subdued last week, and the payment of the same ordinary dividend of 10 percent by the Indian Iron and Steel Company for the year ended March 1959 has had little effect. Dalal Street appears to be still worried about heavy deliveries which were made recently. The decision of the Government to permit the Century Spinning and Manufacturing Company to issue rights shares at a premium of Rs. 100 a share and the subsequent decision of the directors of the company not to proceed with the issue of rights shares at present, caused a great deal of concern. Operators were also worried about a substantial decline in share prices on the New York Stock Exchange due to fears that the proposed visit of Mr. Khrushchev to the U.S.A. will bring a thaw in the cold war.

Tata Steel declined to Rs. 174.75, as did Indian Iron to Rs. 24.60. Tata Locomotive were sold at Rs. 207.50 and Premier Construction were offered at Rs. 354. Alcock Ashdown were indicated at Rs. 253. Except for Hindustan Motors which were supported at Rs. 11.24 by knowledgeable quarters, motor shares were quiet. Premier Automobile declined to Rs. 131.75.

Cotton mill shares disclosed losses all round, although reports from piecegoods markets were encouraging. Century slumped to Rs. 544 on long liquidation and Bombay Dyeing declined to Rs. 64.80. Kohinoor were sold at Rs. 306 and Simplex came to hand at Rs. 160. Svadeshi were taken at Rs. 244 and Tata Mills were transacted at Rs. 45.75. India United Ordinary were done at Rs. 8.64 and Apollo were freely offered at Rs. 1.30 without attracting support.

Miscellaneous industrials were shaded in line with the general trend. In the cement group, Associated Cement were available at Rs. 150 and Digvijay changed hands at Rs. 153. Among mining shares, Shivrajpur Syndicate were shaded at Rs. 90. In sugar shares, Belapur were steady at Rs. 311 on prospects of increased earnings and Phalton were indicated at Rs. 161.25. Among steamship company shares, Scindia Steam lost at Rs. 17.88 on pressure and Great Eastern Shipping were placed at Rs. 21.40. National Rayon reacted to Rs. 342 and Bombay-Burmah moved down to Rs. 539 on uncertainty about the dividend. Tata Chemical were transacted at Rs. 16.76 and Voltas were bought at Rs. 171.50 on investment account. Ceat Tyre realised Rs. 173.

Routine turnover was transacted in banking and insurance shares and fluctuations were narrow. Bank of India were done at Rs. 114.50 and Bank of Baroda were bought at Rs. 101.50. New India Assurance were quoted at Rs. 58.70.

Selective support was given to electricity supply company shares, and the Tata Hydro-Electric group were prominent. Tata Power changed hands at Rs. 1.233.75 and Ahmedabad Electric were taken at Rs. 94. Bombay Suburban were quoted at Rs. 114.

If you use the TELEPHONE -

you should know about S.T.C.

In many telephone exchanges in this country and overseas S.T.C. equipment is in service, for the telephone and *Standard* grew up side by side. Many of the important developments in this, and other branches of telecommunications, were pioneered by S.T.C. Today it is one of the biggest organisations in the Commonwealth, producing all types of telecommunication systems and equipment. Still the search goes on for more and more advanced communications, for in this field, leadership is *Standard* practice.

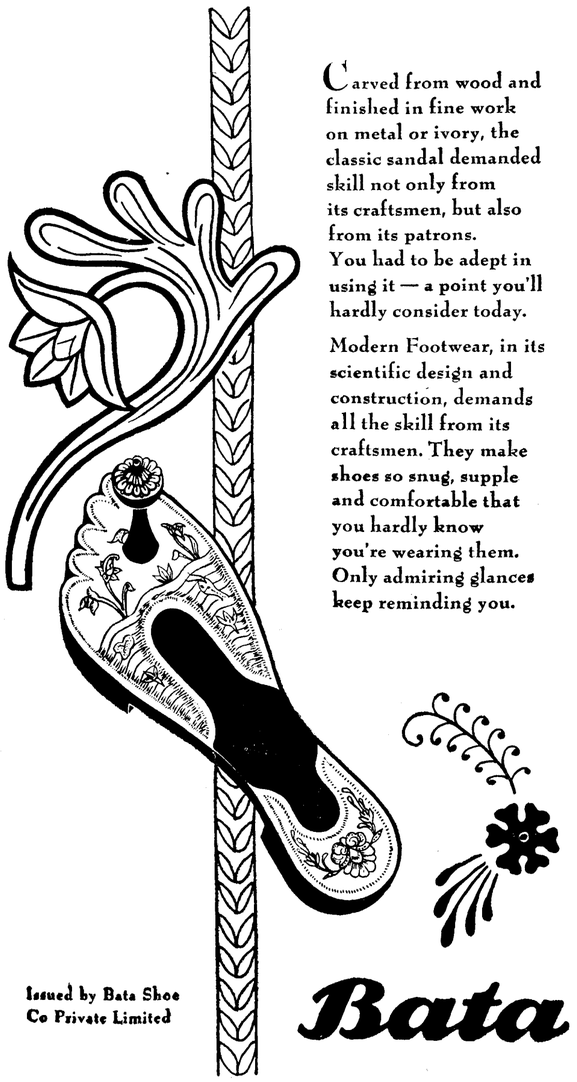
4 PER CENT. KERALA STATE DEVELOPMENT LOAN, 1971

ISSUED AT Rs. 99.00 AND REDEEMABLE ON 19TH AUGUST, 1971.

The Government of Kerala announce the issue of their new loan for Rs. 400 lakhs bearing interest at 4 per cent. Government reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.



The loan will be repaid at par on 19th August, 1971.

THE LOAN WILL OPEN FOR SUBSCRIPTIONS ON 19TH AUGUST, 1959 AND CLOSE ON 25TH AUGUST, 1959 OR EARLIER WITHOUT NOTICE. THE LOAN WILL BEAR INTEREST FROM 19TH AUGUST, 1959.

Subscriptions may be in the form of cash/cheque.

Applications will be received at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, New Delhi and at branches of the State Bank of India and treasuries and sub-treasuries in Kerala State.

Copies of Notification and Application Forms may be obtained at any Receiving Office.

Carved from wood and finished in fine work on metal or ivory, the classic sandal demanded skill not only from its craftsmen, but also from its patrons. You had to be adept in using it — a point you'll hardly consider today.

Modern Footwear, in its scientific design and construction, demands all the skill from its craftsmen. They make shoes so snug, supple and comfortable that you hardly know you're wearing them. Only admiring glances keep reminding you.

New Delhi

NO AGREEMENT ON PARTITION DEBT AT INDO-PAKISTANI TALKS

DEFENCE MINISTRY PLANS TO PRODUCE LIGHT LORRIES AND MOTOR-CYCLES

(FROM A NEW DELHI CORRESPONDENT)

THE Indo-Pakistani financial talks at Ministerial level, held in New Delhi last week, concluded without any agreement on the major issues, but "with a meeting of minds on many points." It is now expected that officials of the two countries will meet to work out the details of the debt claims put forward by both sides, and this will be followed by another Ministerial level conference in Karachi to take "final decisions". After a three-day conference between Mr. Morarji Desai, Finance Minister of India and Mr. M. Shoaib, Finance Minister of Pakistan, a joint *communique* issued visualises an "early and satisfactory settlement" of the financial disputes between India and Pakistan. The conference was preceded by one of officials who examined the various items of debts claimed by both sides. The *communique* said: "The Finance Ministers of India and Pakistan, assisted by officials of the two Governments, met in New Delhi from 31st July to 2nd August, 1959, to discuss various monetary and financial issues outstanding between the two countries. They went over the whole ground, and while there was a meeting of minds on many matters, it was realised that for an overall settlement it was necessary to obtain further details, particularly concerning the partition debt, before the discussions could be carried any further. It was accordingly agreed that the representatives of both the countries should meet and discuss details as often as necessary so as to enable them to obtain an agreed picture before the end of this year. The two Finance Ministers would meet shortly thereafter to take final decisions. The officials took the opportunity of reviewing certain other outstanding matters and it was found possible to clear a number of them. In particular, it was agreed that for persons who migrated from one country to another after 30th June, 1955, but before 30th June, 1959, arrangements should be made either through the respective High Commissioners or through the normal banking channels for the payment of their pensions. It was further agreed that provident fund moneys of such Government servants and employees of local bodies and semi-Government institutions also should be allowed to be transferred likewise. These arrangements would also apply to migrants who belong to the partitioned provinces. There was a full and free exchange of views in a very cordial atmosphere and it is hoped that this will be a prelude to an early and satisfactory settlement between the two countries".

The crux of the dispute is over Pakistan's liability to India concerning the partition debts amounting, according to India, to about Rs. 300 crores. The details required will now be collected by officials of the two countries who will meet for this purpose in New Delhi, Karachi, Calcutta and Dacca. They are expected to obtain an agreed picture before the end of December. The Finance Ministers of the two countries will meet thereafter, probably in Karachi. Of the minor issues cleared up in the talks, the most important is the one relating to the payment of pensions and allied benefits to displaced persons. As a result of the agreement, migrants who left one country for another after 30th June, 1955, but before 30th June, 1959, will be able to get their pensions from the respective High Commissioners or through the normal banking channels. This should benefit a large number of displaced persons from East Bengal who have migrated after 1955. The migrants who came to India before that date are covered by earlier agreements. Although no agreement was reached on major points, official circles emphasise that the talks mark an advance and are a step towards breaking the decade-old Indo-Pakistani financial deadlock.

New Enterprises of Defence Ministry

The Union Defence Ministry, which embarked last year on plans to manufacture tractors and heavy lorries, is now considering schemes to produce light lorries and motor-cycles. While the proposals are still in the embryonic stage, the Defence Minister is already talking in Parliament lobbies of the ability of ordnance factories to produce these goods below the prices quoted by the private sector. Enquiries however show that beyond assembling with imported spare parts prototypes of light lorries and motor-cycles, no understanding or agreement has been reached with any foreign collaborator. It is, however, suggested that as in the case of tractors and heavy lorries, the ordnance factories, with a little additional equipment, will be able to manufacture all the parts required and produce these goods comparatively cheaply. Even the production of small cars, it is suggested, is not beyond the competence of the ordnance factories.

All these, however, raise certain fundamental issues which the Government as a whole is bound to take into account. If the intention is not merely to use the factories for meeting the requirements of the armed forces but also civilian needs, as seems to be the idea, the question arises whether the costing is done by proper methods or whether by omission of certain overheads; the goods produced by the Defence Ministry will undercut those produced by the private sector. The Commerce and Industry Ministry is known to be insisting on an enquiry by independent cost accountants before the goods produced by the Defence factories are placed in the civilian market.

The second issue that arises is why should all these be kept under the Defence Ministry. If the idea is merely to produce cheaper goods, particularly for consumption by the Government, then there can be no objection to the plants being placed under the control of Commerce and Industry or other concerned ministries which run public sector undertakings. The insistence on producing these goods under the control of the Defence Ministry will only raise suspicions of an attempt to extend the boundaries of the Defence "Empire", the affairs of which are already shrouded in mystery and about the financial administration of which there is a great deal of misgiving in the public mind.

Third Plan Target for Shipping

The National Shipping Board, which met here last week-end with Mr. G. L. Mehta in the chair, has approved that the shipping target for the third plan should be fixed at 1.6 million tons, against the second plan target of 900,000 tons. This is expected to involve an outlay of Rs. 143 crores, of which the foreign exchange component will be Rs. 133 crores. To achieve the target, India will have to acquire during the third plan, additional shipping of 728,000 G.R.T., besides an additional 172,000 G.R.T. for replacement purposes. An *ad hoc* committee of the Board under Sir A. Ramaswamy Mudaliar has recommended that of the additional tonnage, 443,000 G.R.T. should be in the public sector and 285,000 G.R.T. in the private sector. The acquisition of tankers and passenger ships, the committee has recommended, should be in the public sector. The target for coastal shipping should be the same as in the second plan, namely, 412,000 G.R.T. The better utilisation of Indian ships for carrying Government overseas cargoes, and to conserve foreign exchange, was stressed by the Board. A committee was set up to take up this question with the State Trading Corporation and other Government departments. The Board felt that the initiation of long-distance passenger services should be encouraged as a matter of policy. Special attention should be paid to building the tanker fleet in view of the fact that the transport of oil accounted for a considerable proportion of the overseas maritime trade. The aim should be to carry the entire coastal traffic and at least half the overseas freight in Indian vessels by the end of the third plan. Foreign exchange for the acquisition of ships should be made available liberally and bilateral barter arrangements may be explored. As for coastal shipping, a committee was set up to discuss with the Railways and other authorities the question of movement of coal and salt by sea.

The committee appointed by the Board for discussions with the State Trading Corporation and other Government departments about the carriage of goods in Indian ships will also discuss with them the recommendation of the *ad hoc* committee on freight rates. The committee has suggested that the Government should direct its departments and State undertakings that freight rates to be allowed to Conference Lines of which India is a member, should be 10 percent above the normal freight rate and 5 percent above the rate for Indian tramp ships. This should continue as long as the international freight market continues at the present uneconomic levels.

Status of Oil Commission

A Bill to convert the Oil and Natural Gas Commission into a statutory body to be run more or less like a commercial concern has been introduced in the Lok Sabha. While the Commission will be autonomous, the Government will have adequate powers to exercise control over the Commission. For certain specified matters, the Commission will have to obtain the previous approval of the Government. The former will submit to the latter an annual statement of its programme and activities and the financial estimates. The accounts will be subject to the audit of the Comptroller and Auditor-General and all these documents will be placed before Parliament every year. The Commission will consist of not less than three members, one of whom will be exclusively in charge of the finances. The main

We always use WHEEL BRAND Industrial glycerine

It's guaranteed to contain 98% glycerol

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine — because it is of an *unvarying* high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

In textiles, dyeing and printing, paints, varnishes and lacquers, plastics, leather, rubber and glass... in these and other industries, WHEEL BRAND GLYCERINE is used, and has been used for *years*.

Remember, PYRAMID BRAND GLYCERIN B.P. also has many uses in the industry as well as medicinal and domestic uses! Write for a *free* leaflet about its various uses in the home to: HINDUSTAN LEVER LTD, P. O. Box No. 409, Bombay 1.

WG. 15-X52

functions of the commission will be: (i) to organise and implement programmes for the development of petroleum resources; (ii) to carry out necessary surveys for the exploration of such resources and the drilling and other prospecting operations required for this purpose; (iii) to promote the production of petroleum and its refining and the sale of petroleum and petroleum products produced by it; and (iv) to advise the Government as and when advice is sought.

Expansion of Sugar Industry

The Government has decided to license additional capacity in the sugar industry, it has been officially announced. "The additional capacity will be for the expansion of existing units and for the establishment of new units. This decision has been taken in view of the likely increase in the consumption of sugar during the third plan period and the time required for the establishment of new capacity".

Caustic Soda Plant

The proposal of the Andhra Sugars Ltd to establish a caustic soda plant has been approved by the Government. The firm's proposal to import the necessary plant and machinery from East Germany against rupee payments has also been approved. The plant is to have a capacity of 4 000 tons a year and the expenditure is expected to be about Rs. 60 lakhs, of which Rs. 38 lakhs will be the foreign exchange component. It is expected to go into production by the beginning of the third plan.

India Seeks More U.S. Wheat

The Government of India is presently discussing with the U.S. Government the import of 3 million tons of wheat under P.L.480.

Mechanised Farming

The Government of India has set up a seven-man committee under the chairmanship of Mr. K. R. Damle, Agriculture Secretary, Government of India, to examine the possibilities of establishing mechanised farms in other parts of India on the lines of the Central mechanised farm in Suratgarh, Rajasthan. The committee will consider the economics of operation of State-owned mechanised farms based on the experience obtained at Suratgarh, taking into account factors such as the cost of machinery, development of land, construction of essential buildings and running expenses. The proposals for new State farms will be submitted by the committee within three months from the date it starts functioning. State Governments have already been asked to indicate the availability of blocks of land available for the establishment of large farms. The members of the committee are: Mr. Jogendra Singh M.P., Mr Kanwar Sain, Administrator, Rajasthan Canal, Mr. Nawab Singh, Adviser, Planning Commission, Dr. P. S. Lokanathan, Director-General, National Council of Applied Economic Research, Dr. B. N. Uppal, Agricultural Commissioner to the Government of India and Major-General Mahadeo Singh, general manager of the Central mechanised farm in Suratgarh.

Producing Nuclear Power in India

Nuclear power stations could compete with thermal power stations even near coal-bearing areas at the end of the fifth plan period in 1976, the Atomic Energy Commission has estimated. The commission, which has worked out the economics of an atomic power production plan in a report submitted to the Government, suggests that the determinig factor in favour of the atomic power programme will be the capacity to supply sufficient plutonium for the more advanced and economical types of reactors of the future. In the later stages of the programme, the capital cost of every additional kilowatt of nuclear power is estimated to be much less than the cost of the same power from coal. Even on the present basis of technological advance, the additional capita investment for nuclear power during the nex seven years will be offset by the saving in th following ten years. At that stage, electricit from atomic power may be expected to cost 2.6n a unit, and thus become cheaper than power fron thermal stations at 4nP a unit.

With the return to New Delhi of the Russia negotiating team for talks with the Governmen of India on the setting up of the Barauni oi refinery, the terms and conditions of the propose Russian aid are likely to be finalised by the en of this month. The team had gone to visit th two private sector refineries in Bombay and als the site of the proposed public sector refinery Barauni. Russia has so far offered credit up t 100 million roubles towards the foreign exchang cost of the project. The Government of India ha however, said that this assistance will be adequat only to set up a conventional type refinery an not the comprehensive type it wishes to establis The foreign exchange component of the latter typ may be 50 percent higher. Russia is agreeabl in principle to the setting up of the latter typ refinery and the team is likely to disclose the r vised credit it will offer at the current talks.

Aid to Hotel Industry

The Government of India has accepted th recommendations of the Hotel Standards and Rate Structure Committee and has agreed that, by an large, the hotel industry should be left to privat enterprise and that the Government should ste in only where the private sector is unwilling unable to fill the gap. The Government has als agreed that in order to help the industry, whic plays an important part in the development tourism in the country and in the earning of for ign exchange, all reasonable financial assistance b way of loans should be given to hoteliers both fo starting new establishments as well as fo improving the standards of existing hotels. Th Government has decided to take steps to mak hotels eligible for getting loans from finance co porations established by Acts of Parliament other credit corporations. It is, however, not con sidered feasible at the present stage to create separate fund of Rs. 10 crores directly unde Government control for this purpose. As fo foreign investment, the Government has decide that where there are clear and obvious advantag in permitting foreign collaboration in the settin up of hotels, the Government will permit suc collaboration, provided that foreign capital do not ordinarily exceed 49 percent of the total capit invested in any venture. The Government wi examine each case on its merits.

Defence of the Avro Deal

The Defence Minister, Mr. Krishna Menc silenced critics of the *Avro-748* deal by declarin in the Lok Sabha this week that the Governme is satisfied that it is the best aircraft for the A Force, whose full requirements of transport a craft will be met by the *Avro*. Defending th agreement with the Hawker Siddeley group f the manufacture of the aircraft in Kanpur to place the Air Force *Dakotas*, Mr Menon said th India will pay the licence fee in eight annu instalments, the first of which will be payat only after the aircraft is certified and the Go ernment is satisfied that it will meet the A Force's requirements. There will be no payme if the aircraft failed to satisfy the requiremen No royalty will be payable on the first 100 a craft manufactured. The aircraft will be power by two Rolls-Royce Dart R.D.A. 6 engines, a negotiations for the manufacture of these in Ind are in progress.

The Minister denied that the aircraft is in t drawing stage and said that its production expected early next year. The capital expen ture is placed at Rs. 1 crore. Another advanta of the aircraft is that most of its parts are int changeable with *Viscounts*. The Minister add that the U.S. Lockheed Company had no speci offer for the manufacture of any particular a craft. It made a general offer to design an a craft suitable for India in 90 days, so the Gove ment decided in favour of the *Avro*. Simultan ously, the Indian Airlines Corporation decided place an order for five Dutch *Fokker Friendsh* aircraft during the second five year plan peri and five during the third plan period, in additi to four *Viscounts* during the second plan peric

I.S.C.O.N. Guarantee for Durgapur Works

The Central Minister for Steel, Sardar Swar Singh, making a statement in Parliament sa that in addition to the public announcement th work at Durgapur would be made good with cost to the Government of India and without lay to the project, the Indian Steelworks Co truction Company has now stated that all t foundations of the project containing bored pi will be adequate for the purpose and comply wi every requirement of the contract. "As an pression of its confidence, I.S.C.O.N. undertakes rectify at its own expense any damage to t works caused by the settlement of the foundatic containing bored piles for a period of ten year The Minister added: "I have no doubt that a further remedial measure that may be found be necessary will be taken in terms of this guara tee. I have also reviewed the progress of wo at Durgapur. The first battery of the coke ov is expected to be heated up before the end this month. In spite of the additional strain ca ed by the execution of the remedial measur IS.C.O.N. is very hopeful that the blast furna will be ready for operation by November as p schedule."

London

POUND MAINTAINS STRENGTH IN SPITE OF SEASONAL AND ELECTION INFLUENCES

STERLING AREA GOLD RESERVES RISE

(FROM OUR LONDON CORRESPONDENT)

STERLING'S steadiness at a level well above parity with the U.S. dollar—in spite of the seasonal pull and still more in the face of the coming general election—is remarkable testimony to its underlying strength. The gold reserves of the sterling area rose by £17 million during July, it was announced by the U.K. Treasury. At the end of the month, the reserves of "gold and convertible currency," which consists, in fact, mainly of gold, stood at £1,150 *million*, compared with £1,101 million 12 months ago. In the interval, large repayments of debt have been made and a gold subscription has been paid to the International Monetary Fund. It is unusual for the reserves to improve so much in July, at the height of the tourist season when British travellers stream overseas by the millions and exchange their pounds for foreign currency (dollars now included). The large gain during this normally unfavourable month suggests, therefore, that world trade conditions still favour sterling.

It is particularly pleasing to note that a strong defence is being built up before the next general election when political fears are likely to lead to a heavy withdrawal of funds from Britain. The persistent strength of the pound in and out of season, ever since Bank rate was raised to 7 percent in September 1957, has impressed financial communities abroad much more than is generally realised. That gain in prestige has been added to the good export trend and the recovery in export earnings by the overseas sterling countries.

Employment Improves

In another direction, also, the latest information is most encouraging. The U.K. Ministry of Labour has just stated that the number in civil employment in Great Britain rose during June by 85,000 to 23.02 million, against 23.08 million in June last year. It was the largest increase in any month of June since the figures were first produced in 1952. There were increases in all industries except coalmining, shipbuilding and ship repairing and, to a minor degree, in one or two other trades. The most substantial rises were in manufacturing, particularly food, drink and tobacco, and in distribution and hotels and catering. The normal seasonal increase in civil employment at this time of year is about 9,000. The number of operatives working short-time in manufacturing industries at the end of June was 60,000. This was 22,000 fewer than at the end of May and 127,000 fewer than a year ago.

Hire-purchase Debt Record

Hire-purchase and other instalment debt for durable goods goes on rising at a quickening pace. The U.K. Board of Trade estimates that in June, about £37 million or 5 percent was added to the outstanding debt after deducting repayments. This was the *largest monthly rise on record*: during May, the debt rose by £35 million and, in April, by £27 million. Durable household goods accounted for about a third of the increase in June and motor-vehicles for most of the remainder. This brought the total instalment debt at the end of June up to about £763 million, or roughly £15 a head of the U.K. population. The latest U.S. figure, reported by the Federal Reserve Board, has reached the record level of $35,800 million—the equivalent of about £80 a head of the U.S. population.

Total hire-purchase contracts for motor-vehicles in July were 167,217, against 167,919 in June and 127,708 in July last year. According to *Hire-purchase Information*, new motor-cars accounted for 13,676 contracts and used cars for 76,190. In both cases, the figures are slightly down on June, but show a considerable rise on July last year. New motor-cycles accounted for 21,018 and used machines for 2,864 contracts. Sales of commercial vehicles on hire-purchase picked up: 6,985 contracts for new vehicles were signed in July, against 6,423 in June and 4,948 in July 1958.

In the last 12 months, the total hire-purchase debt rose by some £260 million, or more than 50 percent: as the figures exclude repayments, the actual value of the goods bought on credit in the shops was a great deal higher. It may well account for more than one-third of the durable goods sold to consumers during that period. The stimulus has obviously been sufficient to produce a *moderate boom* in that section of the economy. From there it is at last spreading outwards to other industries.

Third Cohen Committee Report

All these factors will be taken into consideration in the third report of the Cohen Committee on Prices, Productivity and Incomes, due to make its appearance shortly. For two reasons, the report is awaited with unusual interest—will it confirm the Government's belief that its policies have totally changed the economic climate? If so, what will be its reaction to fresh wage claims in the current phase of prosperity? Secondly, will the replacement of Sir Dennis Robertson on the committee by Professor Phelps Brown be responsible for any change in its outlook? Much of the value attaching to the committee's reports—and they are valuable no unbiassed observer will deny—is obviated by the uncompromising opposition with which they have been received by the Trades Union Congress. Nevertheless, they still do a useful job in educating the general public.

Personal Income and Expenditure

During the first quarter of the current year, personal incomes, after tax, were 3 percent higher than in the first quarter of 1958. Spending rose by rather less, so the rate of saving must have increased slightly. Before tax, wages and salaries were 2 percent up. Other income from employment, including employers' contributions to national insurance and to pension funds, increased by 7 percent. National insurance benefits rose by 14 percent, and income from self-employment and from rent, dividends, and interest by 5 percent.

During the quarter, gross trading profits of companies were 3 percent higher than in the corresponding period of 1958. They were still 2 percent lower than in the first quarter of 1957. The figures have been published in the Treasury's estimates for the national income during the first quarter of 1959. They show that capital expenditure fell by 1 percent. Expenditure on houses was 8 percent higher and expenditure on other fixed assets 3 percent lower. Both these comparisons are at constant prices. Stocks in manufacturing industry fell. But this was a combination of a rise of £35 million in stocks of raw materials and of fuel, more than offset by a fall of £70 million in finished goods and work in progress.

Industrial Output Rises

Industrial production fell slightly in May, but probably rose in June to nearly the April level. According to the U.K. Board of Trade, production in the second quarter of this year was between 3 percent and 4 percent higher than in the corresponding period of last year. The Board's index of production (1954 equals 100) is provisionally estimated at 110 for May, compared with 113 in April. Information so far available suggests that the index for June will be 111—112. The corresponding figures for 1958 were: April 104; May 106; and June 107. Adjusted for seasonal variations—principally Easter and Whitsun—the index rose in May from 109 to 110, and for June is probably 109 to 110. In May, the index for mining was 92, against 100 in the same month of last year. For manufacturing the figure was 112, against 107; and for gas, electricity and water 107, against 106.

New Capital Issues

Far from slackening as the holiday season approaches its peak, the new issue market is developing fresh activity. There are many indications that August will be a busy month, during which several substantial industrial financing operations will be carried through. Meantime, the total of new capital issues for July, at £57.5 million, is the highest since February last year. It raises the figure for the first seven months of this year to £301.3 million, against £238.8 million for the corresponding period of 1958. These figures, compiled by the Midland Bank, record the amount of new money raised in Britain (excluding British Government borrowing) by the issue of marketable securities. Among last month's issues we e those for Industrial and Commercial Finance Corporation (£9.9 million), International Computers (£8.2 million), Westminster Bank (£4.4 million), Pye (£4.1 million) and Electric and Musical (£4 million).

Control of Public Expenditure

Lord Plowden is to take charge of the work of examining the control of public expenditure. Mr. Heathcoat Amory, Chancellor of the Exchequer, announced that to help the Government in making its proposed review of the control of public expenditure, he was appointing a small group to carry out a full examination of the whole problem. This will be done in consultation with all the major departments and proposals will be formulated which will then be sent direct to Ministers. Lord Plowden will not be the only member of the group who will come from outside the Government service. Mr. Amory explained that there would be at least two or three others who are not civil servants, and that the remainder of the group would be drawn from senior officials from different departments, including the U.K. Treasury.

The Select Committee on Estimates, after making a study of Treasury control of expenditure, recommended that a small independent committee be set up to report on the Treasury's work of control. The Government rejected the suggestion in favour of an internal enquiry under the direct guidance of the Chancellor of the Exchequer. It was then explained that he would seek outside advice on some aspects of the work.

REASONS FOR RISE IN SUGAR PRICES

PRODUCTION COSTS UP: BIG TRADE PROFITS

By M. N. Mitra

MUCH has* been said in the Press recently about the gradual increase in the retail price f sugar. It is necessary to analyse the reasons or the increase. Generally, two important factors o a large extent determine the price of a manuactured commodity. The first is its cost of produc-ion, and the second is whether the output of the ommodity can satisfy the demand. The question whether the production of sugar in India can now alance the internal consumption will be examin-d first. The following figures of production, conumption and carry-over stocks are significant:

	1957-58 (in 00,000 tons)	1958-59	
Production	19.76	19.94	
Carry-over from the previous season	4.53	3.29	
Total supply available	24.29	22.33	
Less internal offtake	20.69	21.00	(estimated)
	3.60	1.33	
Less for export	0.31	0.19	
Carry-over as on 31st October	3.29	1.14	(estimated as on 31st October, 1959)

Three Generalisations

Three important generalisations can be made rom these figures. The first is that sugar produc-ion in India has declined by 72,000 tons in 1958-59, ompared with the previous season. The current eason's production is also 53,000 tons less than in 956-57. The gradual fall in output has been a arked feature of the industry during the past hree seasons, in spite of the increased productive apacity which has been established by the com-issioning of new sugar mills and by the expan-ion of existing units. In 1958-59 the number of ugar mills working in India was 161, against 158 n 1957-58. What, then, are the reasons for the radual decline in production? The principal fac-or is the diversion of more sugarcane to feed the *handsari* industry, which until very recently njoyed a tax advantage of Rs. 13 a maund over he white sugar produced by the vacuum pan fac-ories. Nevertheless, it is expected that the pro-duction of sugar will rise considerably in the oming 1959-60 season, as more new sugar mills vill go into production and the capacity of some stablished units will be expanded further.

The second point to note from the figures given bove is that, against a carry-over stock of 329,000 ons on 31st October, 1958, the carry-over is ex-ected to be only 114,000 tons on 31st October, 959, which is very low. Both the Government nd the industry have accepted that, to keep down nternal prices, the carry-over at the end of each ugar year should not be permitted to fall below 00,000 tons. The small carry-over of 114,000 tons expected on 31st October, 1959, has naturally reated the impression of a shortage. In addition, he decision of the Central Government to export nother 25,000 tons of sugar this year has contri-uted to fears of scarcity. This has encouraged peculators.

Adequate for Consumption

The third generalisation which can be made hat the production of sugar in 1958-59 along with the carry-over from the previous season, is quite sufficient to meet the internal consumption, which now averages 2 million tons a year. The increase in the retail price of sugar is not, therefore, due to any disparity between production and consump-tion. It is due to the artificial scarcity created by some unscrupulous and speculative traders for profiteering.

Consumers feel that the industry can easily supply sugar at a lower rate by reducing the cost of production. The industry would be glad to provide the commodity as cheaply as possible, after meeting its cost of production and making a reasonable profit. But the following break-up of the cost structure during the 1946-47 and 1957-58 seasons—as worked out by the Government of India—shows that sugar prices have shot up very largely due to the abnormal increase in taxation.

*Mr. Mitra is managing director of the National Sugar Mills Ltd.

Cost A Maund of Sugar

Item	1946-47 Rs. nP.	1957-58 Rs. nP.	Increase (+) or decrease (—) over 1946-47
(i) Sugarcane price, including transport charges	16.62	14.70	+ 16%
(ii) Government taxes—Central excise duty, cane cess and co-operative societies' commission	2.97	13.16	+342%
(iii) Manufacturing charges including salary, wages and packing	3.75	5.55	+ 48%
Export loss	Nil	0.50	
(iv) Overhead charges and gross profit subject to taxation	2.20	2.19	— 0.5%
(v) Total	21.54	36.10	+ 68%
(vi) Less for molasses	0.10	0.10	
(vii) Ex-mill prices	21.44	36.00	

Sugarcane Price and Taxes

An analysis of the cost structure for 1957-58 shows that out of every rupee which the consumer pays for his sugar, 36.5 percent goes for paying the price of sugarcane as fixed by the Central Gov-ernment, 33 percent by way of taxation to the Central and State Governments, and 10 percent by way of transport charges and commission for distribution charges. This leaves a gross margin of 20 percent for the industry, out of which it has to cover the following expenses: (a) all manufac-turing charges; (b) building reserves for the reha-bilitation of plant and machinery; (c) payment of dividend; and (d) paying income tax and corpora-tion tax to the Government.

The analysis of the cost structure shows that the ex-mill price of sugar has jumped from Rs. 21.44 a maund in 1946-47 to Rs. 36 a maund in 1957-58. The increase is due largely to the raising of the sugarcane price and to the phenomenal in-crease in taxation. To the ex-mill price of Rs. 36 a maund may be added the transport charges, and commission to wholesalers and retailers at Rs. 2 a maund on each count. This brings the total retail price to Rs. 40 a maund. Under the existing circumstances, therefore, the consumer should get his sugar at Re. 1 a seer, against the present retail price of Rs. 1-2 a seer. The consumer is suffering heavily because unscrupulous and dishonest trad-ers are making fabulous profits at his cost. The industry is helpless in this matter because its res-ponsibility ceases as soon as releases of sugar are made at ex-mill prices according to the directions of the Central Government.

Controls over Industry

There is an erroneous impression among many that the industry is a free agent. But not long ago, Mr. A. P. Jain, Central Minister for Food and Agriculture, admitted in Parliament that the sugar industry is among the most closely regulated and controlled ones in the country, as will be evident from the following facts: (i) the price of the raw material, sugarcane, is controlled all throughout India; (ii) salaries and wages are regulated by labour legislation and tribunal awards; and (iii) the sugar produced by the industry is at the dis-posal of the Central Government; the quantum and period of monthly releases are determined by the Government.

The industry has to operate with a very rigid cost structure. It does not, therefore, have any scope whatsoever to reduce the cost of production further. Those who want the cost reduced should ask the Government to cut taxes, which have been increased by 342 percent since 1946-47. As stated earlier, releases of sugar from the mills are now regulated by the Central Government. The retail price of sugar is closely linked with the quantum and period of such releases. It comes down when adequate releases are made by the Government at the appropriate time, but once the releases are sold out, there is a tendency for the price to go up until the next release is made. A delay of even a week to release the monthly quota affects the retail price. Once it goes up, it takes time to come down. This is one of the reasons why sugar prices shoot up periodically and suddenly.

Reducing Prices

In my view, the following steps should be taken by the Government immediately to reduce the re-tail price of sugar:

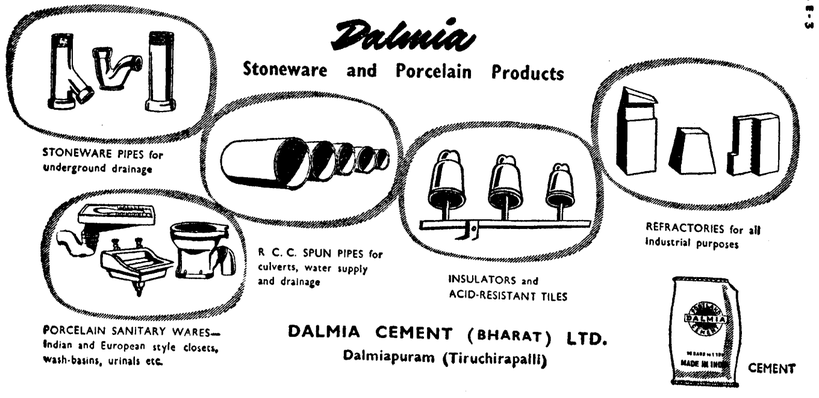
(a) Monthly releases of sugar from the mills should be made in adequate quantities and at the appropriate time.

(b) The released sugar should be sold directly to retailers and big consumers.

(c) Fair-price shops should be opened in all important cities and towns.

(d) Sugar dealers and traders should be licens-ed.

A recent report from Lucknow states that sugar will be available to the consumer from the Govern-ment-controlled fair-price shop at 97nP a seer. Each consumer will be allowed to buy only one seer of sugar a month. Similar steps have been taken by the Bombay Government, and sugar is being sold to the consumer at the officially-fixed price of Rs. 1.02 a seer.



Stopping Exports

Before concluding, it is necessary to make some observations about sugar exports. It is true that sugar is now a big earner of foreign exchange. Foreign exchange of about Rs. 600 is obtained from each ton of sugar exported. In 1956-57 (November-October), India exported 140,000 tons of sugar and thereby earned foreign exchange worth about Rs. 12 crores. In 1958, she exported 50,770 tons. The Central Government has fixed the export quota for 1959 at 100,000 tons, out of which 50,000 tons have already been released. It is to be remembered that this country exports sugar at a loss of Rs. 10 a maund. It has been stated earlier that a minimum carry-over stock of 300,000 tons has to be maintained at the end of each sugar year to keep down internal prices. It has also been mentioned that, at the end of the present sugar year, on 31st October, 1959, the carry-over is expected to amount to only 114,000 tons. From this point of view the Government should consider seriously whether it is advisable to arrange for further exports of sugar unless the industry can build up the minimum carry-over of 300,000 tons. Exports should not be advocated at the cost of a shortage for internal consumption.

I.J.M.A. ANNOUNCES LOOM UNSEALING DECISION

CHINESE ORDER CAUSES SHARP RISE IN SACKING PRICES

THE Indian Jute Mills Association announced on Tuesday that it has recommended that its member-mills unseal a further 2½ percent of their looms with effect from 24th August, 1959, until 2nd January, 1960. This will reduce the sealed complement to 10 percent, against 12½ percent hitherto. The decision was taken by the committee of the Association at its meeting on Tuesday morn-ing, and is expected to increase the monthly output by a little over 1,500 tons. The move was not unexpected in the trade, as for many weeks now there has been a widespread feeling, and indeed in some quarters an agitation, in favour of un-sealing looms. It is generally considered to be a step in the right direction. Since 1½ percent of the looms were sealed on 2nd March and sub-sequently unsealed on 22nd June, the statistical position has shown an encouraging improvement. Furthermore, indications concerning the new crop are favourable, and this must have influenced the decision. The I.J.M.A. has done something new by announcing that production will be increased for a limited period only, that is, from 24th August, 1959, to 2nd January, 1960. It is understood that this has been done in an attempt to curb undue speculation in the new year.

Many in the trade, particularly speculators, had hoped for a larger proportion of looms to be un-sealed, and market reactions were varied. There was a general steadying up of heavy goods prices, but hessians were neglected and moved up only in sympathy. It is expected that most of the increase will be concentrated on sacking, as this category is in good demand and is showing a larger margin of profit than hessians. The last increase was also mainly on the sacking side, as the figures for July, which was the first full month of working after 1½ percent looms were unsealed on 22nd June, show a 1.2 percent increase in sack-ing production and a 0.5 percent fall in hessian production. The latest decision indicates how rapidly the situation changes in the gunny world, as when looms were sealed in March this year, the step was taken in an attempt to stop stocks rising due to an excess of sacking production. It also indicates how flexible the industry is in being able to withstand rapid changes in conditions without any major upheavals.

China Again Buys Sacking

Towards the close, China once more dominated proceedings in the jute goods market. This time, she bought 15,000 bales to 20,000 bales of sacking, mostly for August shipment. There was naturally a squeeze in near delivery goods, as such a large quantity was not readily available. Premiums advanced rapidly in B Twills, which was the fabric in demand, and ready shipment rates jumped up by Rs. 3 during the day to Rs. 105. On Tuesday morning, the difference between ready and forward delivery B Twills was about Rs. 2.50, but by the evening it had increased to nearly Rs. 5. Other fabrics, both sacking and hessian, were neglected, and price movements were purely in sympathy with B Twills. The latest purchase means that so far this year China has taken up nearly 100,000 bales of heavy goods, which is much more than in previous years over the same period. Ready B Twill prices at Rs. 105 a 100 bags on Tuesday evening were the highest since the last week of January 1958.

It is generally thought that the current demand for ready goods will not be easily satisfied, as order-books are already well filled right up to the end of the year. It is expected that buyers will have to take up forward delivery goods to get their requirements, so a certain amount of specul-lative activity has developed in forward shipment. Many feel that the large price gap of Rs. 5 be-tween ready and forward B Twills will be nar-rowed by a rise in forward prices. There is more confidence and optimism in market circles than has been seen for a long time, and the future of the industry seems bright.

Mills Purchase More Jute

Calcutta mills remained active in the fibre market during the past week, and not less than 300,000 maunds was taken up. This was again mainly new crop, as a result of which raw jute rates tended to rise. Mill purchases of new crop jute under contract are still less than in previous years, so sellers have become bullish in spite of the favourable new crop reports from the fields. Reports from observers upcountry about quality are not encouraging. In most agencies, the quality appears to be disappointing in that the fibre has been badly retted. The general shortage of steep-ing water in all Assam and north Bengal areas persists. River levels, which began to rise about ten days ago, have now begun to fall. Many places where steeping was done in former years now have no water at all. For this reason, the harvesting of the midland crop is progressing only slowly, in the hope that the deficiency of rain will be made up in the near future. The only place which does not suffer from a shortage of water is the Daissee area, and here the general condition of the crop is good. Harvesting of Daissee white is progressing rapidly, and the midland crop is well in hand.

Raw Jute Exports

During July 1959, exports of old crop jute from India were 13,297 bales, bringing the total ship-ments of the 1958-59 crop to 53,670 bales. This figure equals about 1 percent of the whole crop, but covers a five-month period as shipments were resumed only from March 1959 after an interval of ten years. An interesting feature of the ship-ments last month was that 7,280 bales, or about 55 percent of the total, were sent to communist countries.

Stocks of Jute Goods

Stocks of jute manufactures held by member-mills of the I.J.M.A. fell again in July. Total stocks were 92,800 tons or 3,100 tons less than in June. Sacking stocks dropped by 3,700 tons to 54,200 tons (58.4 percent), and other goods by 1,700 tons to 12,600 tons (13.6 percent). But hes-sian stocks showed an increase of 2,300 tons to 26,000 tons (38 percent). In July last year, total stocks were 121,900 tons, made up of 89,600 tons of sacking (73.6 percent), 19,900 tons of hessian (16.3 percent) and 12,400 tons of other goods (10.1 percent).

Production of Jute Goods

The production of mills submitting returns to the I.J.M.A. during July 1958 amounted to 89,600 tons for a working period of 209 hours. The in-crease of 6,900 tons over the previous month was due to the unsealing of looms, the full effect of which was felt last month, and also to the rise of 8¼ in working hours. Hessian production rose by 2,700 tons to 40,500 tons (45.2 percent), sacking by 4,100 tons to 39,900 tons (44.5 percent), and other goods by 100 tons to 9,200 tons (10.3 percent). It is obvious that much of the production from the extra looms was concentrated on sacking, as the percentage of sacking increased by 1.2 percent compared with the previous month, while hessian production dropped by 0.5 percent. In July 1958, total production was 89,800 tons, with a 209-hour working month and with the same loomage as in July 1959. Hessian production was 35,300 tons (39.3 percent), sacking 49,000 tons (54.5 percent) and other goods 5,500 tons (6.2 percent).

THE JUTE MARKETS

The futures market recorded rapid changes during the past week, mainly in the sacking sec-tion. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 5th August to 11th August were as follows:

	Hessians 40in. 10oz. August		Sacking B Twills August	Raw Jute Upper Assam September	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos.
Opening	40.26	44.02	101.30	22.98	61.57
Highest	40.52	44.31	104.60	23.34	62.26
Lowest	39.96	43.69	100.75	22.58	60.49
Closing	40.26	44.02	104.45	23.10	61.89

Manufactured Goods: The market was steady at the opening last Thursday due to further re-ports of business with Australia for September delivery cornsacks. Speculative activity was on the increase, and heavy goods opened at Rs. 101.35 for August B Twills and Rs. 97.50 for January-March. Hessians were steady in sympathy, so near delivery 40in 10oz. opened at Rs 40.45 and forward shipment at Rs. 39.25. Profit-taking at the higher levels prevented any substantial gains, however. Prices fell from the peak levels and on Friday were only quoted at slightly above the previous day's opening levels. In the absence of fresh overseas enquiries, quieter conditions pre-vailed for most of the day, with operators pausing, content to wait for the July gunny stock figures. Small gains were registered on Saturday but they were of no great significance. Over the week-end, the market displayed a quieter tendency in the absence of business. Opening quotations on Monday were marked down to Rs. 101.45 for August B Twills, and 40.35 for 40in. 10oz. hessians. Dur-ing the day, sacking tended to rise under the influence of covering in heavy Cees and cornsacks, but hessians ruled quiet, the only movement being in sympathy with sacking. On Tuesday morning, B Twills were quoted at Rs. 101.80 and hessians at Rs. 40.40 for 10oz., but conditions eased early in the day on the news of a further unsealing of looms from 24th August. In the afternoon, there was a marked change on reports of an order from China for 15,000 bales of heavy goods for August and early September shipment. Near goods prices began to soar, and by the close August B Twills stood at Rs. 105—a rise of Rs. 3.20 over the morn-ing's rates. There was little interest in the for-ward section, which showed only small gains.

On Wednesday morning, the firm trend con-tinued, and opening quotations were based on the following:

	Aug.	Sept.	Oct.	Oct.-Dec.
40in. 8oz.	33.50 (36.31)	33.20 (36.18)	32.65 (35.59)	32.25 (35.15)
40in. 10oz.	40.60 (44.25)	40.15 (44.09)	40.30 (43.93)	40.15 (43.76)
B Twills	106.40	104.50	101.75	100.10
Heavy Cees (Plain)	107.25	106.00	102.50	100.25
A Twills	122.50	122.00	121.00	120.00
Liverpools	116.00	115.00	113.00	111.50
Cornsacks	109.50	108.50	106.50	103.00

Raw Jute: Mills took interest in raw jute right from the opening of the past week, and business was reported every day. Sellers were keen and large offers were put up. There was little reduction in rates from the basis of Rs. 23 for Assam jute, although one or two small lots passed at 25nP lower. In general, prices were well maintained as the upcountry markets were firm and above Calcutta parity. Interest developed in mesta and fair business was done in this fibre, but sellers withdrew towards the close as the new mesta crop is expected to be much smaller than in previous years. After the week-end, prices hardened on account of heavy enquiries, especially on Tuesday, when purchases of 100,000 maunds were reported. The rapid rise in the goods mar-ket towards the close affected raw jute. Indica-tions were marked up by 50nP, and sellers were reserved.

The business reported was mainly in new crop jute and consisted of Assam at Rs. 22.75 to Rs. 23.25 basis Bottoms. Tossa was done at Rs. 23 to Rs. 24. Desal white passed at Rs. 21.50 and jungli white at Rs. 20.25. Good business was reported in Daissee white at Rs. 21.50 basis Bottoms and Rs. 24 for Middles only. A fair quantity of Daissee mesta was bought on the basis of Rs. 20.50 for Bottoms.

On Wednesday morning, the market was very firm, and opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
New Crop:			
Assam	23.50	62.98	Aug. Sept.
Northern	23.00	61.64	"
Purnea Desal	22.00	58.96	"
Daissee	24.00	64.32	Sept. Oct.
Assam Tossa	24.50	65.66	"
Northern (ex Calcutta)	23.00	61.64	Aug. Sept.
Mesta:			
Assam-Northern	21.25	56.95	Oct. Nov.
Desal	21.00	56.28	"
Daissee	21.00	56.28	"
Jungli	20.75	55.61	"
Old Crop:			
Assam	22.00	58.96	Aug. Sept.
Northern	21.50	57.62	"

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of jute goods for July as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	4.328 tons (4.397 metric tons)
	1.49 lakh yds. (1,36,35 thousand metres)
	71.9 lakh Nos.
(b) Sacking	38.818 tons (39.441 metric tons)
	9.08.5 lakh yds. (8 30.74 thousand metres)
	4.31.2 lakh Nos.

I.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills Association reports that the total stocks of jute goods at the end of July were as follows:

Description	31st July 1959 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	30th June 1959 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (—) last month Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	31st July 1958 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)
Hessian Cloth and Bag	9.42 (8.61.57)	26.0 (26.4)	8.78 (8.02.68)	23.7 (24.1)	+64 (+58.89)	+2.3 (+2.3)	7.19 (6.57.86)	19.9 (20.2)
Sacking Cloth and Bag	13.01 (11,89,43)	54.2 (55.1)	13.63 (12.64.54)	57.4 (58.3)	—82 (—75.11)	—3.2 (—3.2)	21.39 (19.56.13)	89.6 (91.0)
Others		12.6 (12.8)		14.3 (14.5)		—1.7 (—1.7)		12.4 (12.6)
Grand Total		92.8		95.4		—2.6		121.9
(000 Tons/Metric Tons)		(94.3)		(96 9)		(—2.6)		(123.8)

N.B. These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

Description	Quantity	
2. Gunny Cloth	36.138	tons (36,718 metric tons)
(a) Hessian	13.70.1	lakh yds. (12.52.80 thousand metres)
(b) Sacking	1.107	tons (1.125 metric tons)
	24.2	lakh yds. (22.11 thousand metres)
Other Manufactures	9.243	tons (9 390 metric tons)
Total Production (All kinds)	89 533	tons (91.071 metric tons)

Summary

	(00,000 yds. and 000 metres)			(000 tons and metric tons)		
	July 1959	June 1959	July 1958	July 1959	June 1959	July 1958
Hessian	15.19	14.41	13.26	40.5	37.8	35.3
	(13,89.15)	(13,17.28)	(12,12,72)	(41.1)	(38.3)	(35.9)
Sacking	9.33	8.51	11,82	39.9	35.8	49.0
	(8,52.85)	(7,78,18)	(10,80,41)	(40.6)	(36.4)	(49.7)
Others				9.2	9.1	5.5
				(9.4)	(9.3)	(5.6)
		Grand Total		89.6	82.7	89.8
				(91.1)	(84.0)	(91.2)
		Hours worked		209.0	200.5	209.0

N.B. These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.

GUNNY SHIPMENT STATISTICS

The following figures including coastal shipment relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

Hessian

	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st July, 1959	3,605.7	46,229.5	49,835.2
1st to 30th June, 1959	1,995.4	31,515.8	33 511.2
1st to 31st May, 1959	3,977.2	30,883.8	34,861 0

Sacking

1st to 31st July, 1959	33.634.7	535.1	34,169.8
1st to 30th June, 1959	28,880.2	1,622.9	30,503.1
1st to 31st May, 1959	23,056.3	1,478 4	24,564.7

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) declined by 0.7 percent to 116.8 during the week ended 25th July, 1959, compared with 117.6 (revised) for the previous week. The index was higher by 1.0 percent and 0.9 percent, respectively, when compared with the corresponding week of the earlier month and that of a year ago. The monthly average for July 1959 worked out to 116.8, against 115.6 for June 1959 and 114.7 for July 1958. The index for Food Articles fell by 1.4 percent to 121 0, compared with 122.7 (revised) for the previous week due to a decline in the prices of milk (−19%), rice in Hailkandi (−14%), in Kozhikode (−6%) and in Tihu (−5%), fish (Prawn) in Tirur (−11%), black pepper in Calcutta (−7%), potatoes (−5%), bananas (−4%), betelnuts (−3%) and mung, masur, urad, mustard oil and coffee (−1% each) although the prices of fish (Hilsa) in Calcutta and oranges (+11% each), rice in Ranchi (+10%), in Kanpur (+9%) and in Sainthia and Calcutta (+5% each), wheat in Bahraich and eggs (+7% each), maize, ghee in Khurja and black pepper in Cochin (+5% each), arhar (+4%), gingelly oil and cummin (+3% each), barley and turmeric (+2% each), and jowar, onions, gur, tea and chillies (+1% each) showed advances The index for Tobacco receded by 0.7 percent to 96.8 as a result of a fall in the price of raw tobacco (1%). The index for the Fuel, Power, Light and Lubricants group remained stationary at its previous week's revised level of 115.7. Higher prices of lac (+8%), tanning materials in Salem (+5%), groundnuts (+2%) and raw wool and castorseed (+1% each) raised the index for Industrial Raw Materials by 0.3 percent to 120.5. The prices of tanning materials in Calcutta (−12%) and raw silk and cottonseed (−2% each), however, moved down. The index for Intermediate Products increased by 0.4 percent to 108 8 due to a rise in the prices of linseed oil and zinc (+2% each) and rayon yarn and tin (+1% each); German silver (−2%), however, showed a decline. A rise in the prices of bricks and tiles (+5%) and drugs and medicines (+1%) was almost neutralised by declines in the prices of bicycles (−2%) and oilcakes (−1%), and the index for Finished Products remained unchanged at its previous week's level of 109.2.

BOEING JET AIRCRAFT VISITS CALCUTTA

The first giant *Boeing 707* jetliner to visit India landed at Calcutta on 10th August. The 110-ton jetliner, the fourth to be received by Qantas, Australia's round-the-world jet airline, was flying from Seattle to Sydney *via* San Francisco, New York, London, Rome, Cairo, Karachi, Calcutta, Bangkok, Singapore and Darwin on a crew familiarisation and delivery flight. Previous Qantas *707's* have been flown from Seattle to Sydney *via* San Francisco, Honolulu and Fiji in the remarkable flying time of a little over 15 hours, so that when the 550 miles an hour *Boeing* touches down at Dum Dum, Qantas will be the first airline to introduce the new jet to Asia and on arrival at Sydney will have achieved the distinction of being the first airline to fly jet aircraft around the world. The Qantas *707* remained at Dum Dum for three hours. A second flight is due early in September. Regular Qantas *707* jet operations through India will begin in October, by which time Qantas will be operating three regular-round-the-world flights each week.

CALCUTTA TEA AUCTIONS IN JULY

PRICES RISE TOWARDS CLOSE

FOUR sales were held during July at which a total of 169,638 chests was offered. In the first sale of the month, there was a strong general demand but the trend, except for "teas for price" and bright liquoring descriptions which sold well, was irregular and prices were generally easier. The weakest feature was first flush C.T.C. teas which were neglected. Buyers were again discriminating in the second auction for which there was a fair demand with "teas for price" firm and other kinds easier except for the best liquoring sorts, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. There was a strong and improved demand in the third and fourth sales of the month. Plain brokens were fully firm to dearer, similar fannings meeting with strong competition at enhanced rates. Tippy teas received good enquiry. Useful liquoring C.T.C. and orthodox teas also sold well, the poorer kinds receiving fair support at lower rates. The few Darjeeling teas with attractive flavour sold readily but the more ordinary kinds were irregular and generally sold below valuations.

Leaf appearance of Darjeeling teas was quite useful, and a number of well-made tippy teas were catalogued. Due to unfavourable weather conditions, however, only a few invoices with "fine" flavour were seen and the overall standard of flavour was rather below that of previous years. Leaf appearance of teas from Assam was satisfactory, and there was quite a useful selection of attractive tippy grades. Cup quality showed an improvement and compared favourably with last year's standard. Some useful liquoring invoices of both C.T.C. and orthodox manufacture were seen. The appearance of the dry leaf from Dooars, particularly from western Dooars, was barely average, although some well-made invoices, free from stalk and fibre, were offered. Liquors were on the whole disappointing and below average. The standard of offerings from Cachar was barely average. Some teas were catalogued which were of satisfactory leaf appearance and possessed sweet liquors, but in many instances the lower grades showed some stalk and fibre and liquors were rather plain.

	1959-60 Rs. nP.	1958-59 Rs. nP.
Sale No. 4 Plain B.P.	1.67	1.86
Sale No. 5 „ „	1.69	1.80
Sale No. 6 „ „	1.73	1.72
Sale No. 7 „ „	1.73	1.68

(Exclusive of zonal excise duty)

Internal Market

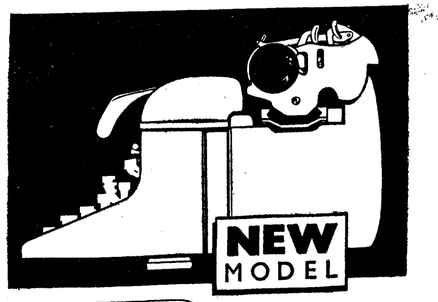
Five internal sales were held in July. A total of 1,274 chests of leaf was on offer, and these met with a fair general demand. There was a total of 73,482 chests of dust on offer, of which 2,636 chests were of old season's manufacture. Prices were irregular in the first sale of the month, but thereafter the demand increased, particularly for grainy exportable orthodox types. The better liquoring C.T.C. invoices met with keen competition but plainer kinds were irregular and received little support. Exportable grainy types were particularly in demand in the last two sales of the month.

Quotations

	1959-60 Rs. nP	1958-59 Rs. nP
Sale No. 3 Clean Plain Dust	1.70	1.79
Sale No. 4 „ „ „	1.70	1.79
Sale No. 5 „ „ „	1.71	1.70
Sale No. 6 „ „ „	1.75	1.65
Sale No. 7 „ „ „	1.81	1.65

(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 7 totalled 235,649 chests at an average price of Rs. 2.94, compared with 187,478 chests at an average price of Rs. 2.96 for the same period in the previous season. Internal sales at 1.564 chests of leaf and 69,983 chests of dust (average prices Rs. 1.69 and Rs. 196) go against 2,208 chests and 57,722 chests, respectively, (average prices Rs. 1.90 and Rs. 2.06) of the corresponding period of the previous season.



The estimated north Indian crop to the end of June 1959 was 113.38 million lbs, compared with 108.62 million lbs to the same date of last year. The average figure at this date for the three years, 1956 to 1958, was 115.47 million lbs.

The price of export quota declined from 3nP to 2¼nP a lb in the first half of the month, recovering slightly to 2¾nP a lb thereafter, and continuing at that price towards the close.

A Press note, issued recently by the Government of Assam, says : "Due to certain difficulties being experienced by tea gardens in Cachar district because of their high cost of production and comparatively low price fetched by tea, the State Government has decided to suspend up to 30th September 1959, the collection of taxes on tea carried by roads or inland waterways for Cachar district only for the quarter ended 30th June, 1959. This suspension of collection will not, however, affect the assessment of the tax as provided under the Act and, therefore, the returns, etcetera, should be submitted by producers and dealers according to the provisions of the Act."

Arrivals (in chests) in Calcutta warehouses during the period 24th June, 1959 to 23rd July, 1959, with the corresponding figures of the previous year in parentheses were : by steamer 253,899 (297,713), by rail 82,855 (70,580) and by air 6,348 (12,007), making a total of 343,102 (380,300) chests. From the beginning of the season 1st April, 1959 to 23rd July, 1959, arrivals have been : by steamer 422,940 (424,063), by rail 160,325 (123,115) and by air 17,859 (31,824), making a total of 660,624 (579,002) chests.

FAILURE OF THE KERALA CONCILIATION BOARD

I.N.T.U.C. MEMBER BLAMED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE communist-led Kerala State Trade Union Council has reported that the Conciliation Board, which was set up by the former communist Government to settle the dispute between plantation workers and their employers, has failed in its task. Justice Mr T. K. Joseph of the Keraia High Court chairman of the Board, has submitted his report to the Government admitting the failure. The Communist union attributes the failure to the "non-co-operative attitude" of the I.N T.U.C. member of the Board. His resignation precipitated a crisis, and the Board could not continue to function.

Mr. B. K. Nair, president of the Kerala unit of the I.N.T.U.C., represented his organisation on the Conciliation Board. He said that he decided to resign when he realised that it could not find a satisfactory solution to the dispute. He joined it with some mental reservations. I.N.T.U.C. leadership always suggested that the question should be referred to adjudication. But the communist Government and its trade union organisation did not agree to this, and eventually decided to form the Conciliation Board. But four months of deliberations convinced the I.N T.U.C. representative that it could not effect a satisfactory settlement. So he decided to resign.

Another Strike Threat

In view of the failure of the Board, the communist Trade Union Council has asked the Government to convene a round-table conference of all parties concerned to examine the chairman's report and to find out a solution to the question of bonus. It has warned the planters that workers will have to resort to another strike if they do not co-operate in settling all outstanding disputes within a month. It has advised the workers to get themselves ready for a prolonged struggle against their employers. It will be recalled that the Trade Union Council was responsible for the strike in the High Ranges in October last.

Non-communist trade unions, on the other hand, will shortly submit a memorandum to the new administration of Kerala listing the demands of workers. They are even prepared to give the new Government some time to consider the demands. The memorandum will contain, according to the joint action council of the non-communist trade unions, such subjects as the plantation workers' bonus for 1957 and 1958, a review of appointments made in Government-owned industries by the communist Government in Kerala and a general increase in wages and bonus of industrial workers in the State. As far as plantation workers are concerned, the non-communist trade unions say that the Committee on the Plantation Industry and the Conciliation Board, which were constituted by the former Government, had not produced any results. They urge, therefore, that the new administration should take up the issues which are pending before the two bodies and settle them by negotiations, preferably at a high-level tripartite conference convened under the Government's auspices.

Lemongrass Oil Prices Rise

Heavy rains in Kerala for the past two months have affected adversely the production of lemongrass oil, and the market is getting only small quantities of oil at present. Exporters have, therefore, to pay higher prices to producers. The current quotation of Rs. 65 a dozen bottles of 16½oz. each is Rs. 10 higher than the prevailing price at the beginning of the season. Now that the peak monsoon period is over, the output is likely to pick up, so arrivals will increase. But production this season will be smaller than that in the previous two seasons in view of the growers' reluctance to increase lemongrass cultiva-

GOVERNMENT OF UTTAR PRADESH

FINANCE DEPARTMENT

Dated Lucknow, July 29, 1959.

PRESS NOTE

4 PER CENT. UTTAR PRADESH STATE DEVELOPMENT LOAN, 1971

The Government of Uttar Pradesh are floating a loan of Rs. 8 crores in order to finance their irrigation works, electricity projects and other State development schemes. The loan will open for subscriptions on 19th August, 1959 and will close on 25th August, 1959 unless closed earlier. The main terms of the loan are that the issue price will be Rs. 99.50 for every Rs. 100 of the loan applied for; the loan will have a currency of 12 years from 19th August, 1959 and will be repaid at par on 19th August, 1971; the loan will carry interest at the rate of 4 per cent. per annum from 19th August, 1959, payable half-yearly on 19th August and 19th February the payments being subject to tax under the Indian Income Tax Act, 1922. Subscriptions for the loan can be made in the form of cash or cheque and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department Notification No. B-5541/X—88-59, dated July 29, 1959, copies of which, along with the application form are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh—

Revenue Position—The revenue receipts and expenditure and the surpluses for the last fourteen years are as follows :

(Figures are in lakhs of Rupees)

	Revenue receipts	Revenue expenditure	Surplus(+)
1945-46	2,995	2,551	+444
1946-47	3,265	3,061	+204
1947-48	3,876	3,771	+105
1948-49	4,920	4,729	+191
1949-50	5,626	5,626	...
1950-51	5,189	5,184	+5
1951-52	5,556	5,550	+6
1952-53	6,483	6,483	...
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,553	8,423	+130
1956-57	8,996	8,984	+12
1957-58	10,493	9,942	+551
1958-59	11,593	11,484	+109

The major portion of the revenue surpluses was put into various reserve funds. During 1949-50 and 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on Development schemes and the gap in those years was covered by withdrawals from the Revenue Reserve Fund.

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1958-59 were 215 lakhs in the U P Road Fund, 16 lakhs in the Hospital Fund, 77 lakhs in the Famine Relief Fund, 1,306 lakhs in the Revenue Reserve Fund, 2,410 lakhs in Zamindari Abolition Fund, 78 lakhs in the Depreciation Reserve Fund—Irrigation, 159 lakhs in the Depreciation Reserve Fund—Government Bus Services, 419 lakhs in the Depreciation Reserve Fund—Electricity, 21 lakhs in the Contingency Reserve Fund—Electricity and 125 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 4,826 lakhs.

Debt Position—On March 31, 1959, the debt of the Uttar Pradesh Government amounted to 21,163 lakhs consisting of 979 lakhs representing the consolidated debt due to the Central Government and 14,852 lakhs taken from that Government for development purposes and 493 lakhs for Relief and Rehabilitation Schemes plus 4,460 lakhs representing the amount of public loans floated by this Government from time to time plus 150 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 183 lakhs from the Reserve Bank of India and 16 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies and 30 lakhs from the Khadi and Village Industries Commission. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds of the face value of Rs. 4,539 lakhs and Rehabilitation Grant Bonds of the value of Rs. 1,764 lakhs, the liability on account of which will be met, by annual instalments, from the extra revenue from Zamindari Abolition over a period of 40 years and 25 years respectively. Sinking Funds have been constituted for all the public loans and the balances at the credit of these funds are invested in Government of India Securities.

Assets of the Government—Against the outstanding debt of 21,163 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tubewells, Cement Factory, Government Bus Services and Electricity Schemes, in which about 19,669 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to Rs. 4,451 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

Foot Notes : (1) The accounts for 1958-59 have not yet been closed finally. The figures for 1958-59 mentioned in the Press Note are based on the March (Final) 1959 Accounts.

(2) Adjustments have yet to be carried out in the accounts in respect of the capital assets relating to the Electricity Schemes transferred to the U.P. Electricity Board recently constituted. The cost of such assets will be deemed as loans advanced by the State Government to the Board.

tion. They have not been getting a remunerative price for their produce. India produced 1,400 tons of this essential oil during the last season. Prices are likely to decline when arrivals in the market increase towards the end of this month. The supply position in the world market, too, might improve with the arrivals of a similar oil from China by about September.

Pepper Prices Advance

There has been a marked improvement in pepper prices. The latest quotation for ungarbled black pepper in the Cochin market is Rs. 750 a candy of 6 cwts., compared with Rs. 650 a candy a month ago. The rise in prices is attributed to substantial orders from abroad, especially from communist countries. Russia bought recently some 600 tons of Indian pepper, and sellers in the Cochin market were active during the past few days to cover their commitments to that country. Czechoslovakia bought another 250 tons, but no confirmation of the report is available from trade sources that China has placed orders for 400 tons. Even if there is a Chinese order, it is not the first time that China is buying Indian pepper, as claimed in the report. Meanwhile, traders expect fresh orders from Russia and some other east European countries in the immediate future. The United States also is likely to place substantial orders. The latest New York quotation of 27½ cents a lb is not in parity with the Indian price which works out to 28¼ cents a lb. In view of the anticipated shortage in the world supply of pepper, well-informed trade circles anticipate good enquiry from foreign buyers.

Decline in Exports

Pepper exports from India during June this year were only 173 tons, against 527 tons in May and 225 tons in June last year. Exports during the first eight months of the season, that is, from November 1958 to June 1959, amounted to 6,727 tons, showing a decline of 2,622 tons, compared with those during the corresponding period of the previous season. India's export earnings from pepper are, therefore, likely to show a further decline this year.

In spite of smaller exports, the supply of pepper in the terminal markets is small. There is no floating stock as such in the markets. According to one estimate, stocks with dealers may not exceed 1,000 tons. The balance, whatever might be its size, is with the growers who are sending only small parcels to the market. But arrivals are slightly better now since prices are attractive.

U.P.A.S.I. Annual Conference

The Central Finance Minister, Mr. Morarji Desai, will inaugurate the annual conference of the United Planters Association of Southern India in Coonoor on 24th August. The U.P.A.S.I. exhibition will remain open from 22nd to 26th August.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for July 1959 :

Upper Assam : Weather generally seasonable but exclusively hot in Tingri ; outturn generally about normal, but poor in Doom Dooma and Tingri ; crop prospects are favourable.

Central Assam : Weather seasonable, but rainfall much above normal in Moran ; outturn about normal ; crop prospects fair to good.

Lower Assam : Weather seasonable ; outturn about normal ; immediate prospects fair to good.

North Cachar : Weather abnormally hot ; rainfall deficient ; outturn good ; prospects favourable ; red spider blight prevalent in some districts.

South Cachar : Weather seasonable ; outturn about normal ; prospects good except in Longai ; red spider blight prevalent in Chutlabheel.

Eastern Dooars : Weather seasonable ; outturn good ; crop prospects fair to good.

Central Dooars : Weather favourable ; outturn good.

Central Dooars : Weather favourable ; outturn good ; immediate prospects fair to good ; helopeltis prevalent in Binnaguri.

Western Dooars : Weather seasonable ; outturn about normal ; good rain has fallen generally and prospects are now brighter.

Darjeeling : Outturn about normal ; weather seasonable ; immediate prospects fair ; holopeltis and blister blight prevalent in some districts.

Terai : Weather seasonable ; prospects fair.

COCHIN TEA SALES

At Dust Sale U, 730,000 lbs of tea were on offer. There was a strong general demand. The market advanced irregularly by 10nP for everything except best liquoring high-growns which were barely steady. Black leaf types were the strongest feature of the sale.

At Sale No. 31, 650,000 lbs of tea were on offer. The market was irregular. Low medium and medium brokens were easier but similar fannings were stronger and dearer, particularly black leaf grades. Limited selection of best liquoring types were steady. Orange pekoes were considerably dearer while flowery pekoes were weak.

Engineering and Transport

INCOME AND EXPENDITURE OF CALCUTTA PORT

ADMINISTRATION REPORT SHOWS SURPLUS

THE total income of Calcutta Port for the financial year 1957-58 amounted to Rs. 12,75,80,916, against the revised estimate of Rs. 12,19,64,170, showing an excess of Rs. 56,16,746, says the administration report of the Commissioners for the year. The excess was mainly due to the increased earnings under income from goods, vessels and railways and the additional traffic of 21,347 tons handled over the revised estimated figure. The other heads which contributed to the excess were: land and buildings, railways, miscellaneous, sale of unserviceable material, interest on deposits, interest on investment of cash surpluses, and special credits.

The total expenditure during the year amounted to Rs. 11,19,52,424, against the revised estimate of Rs. 10,81,87,605, which showed an excess of Rs. 37,64,819. This was mainly due to increases and decreases in the following heads of expenditure: stores, maintenance and repairs, labour, miscellaneous, dredging, workshop, electric light and power, loss on sale and depreciation of securities and investment of cash surpluses, house allowance, compensatory allowance, dearness allowance, medical expenses and unforeseen establishment. There were savings on establishment, municipal taxes, interest and sinking fund charges, police, minor works chargeable to revenue, P.T.O. concession, staff amenities and concession under travel assistance scheme, amounting to a total of Rs. 4,69,559. The net excess of expenditure was thus Rs. 37,64,819.

The result of the year's working was better than what was originally anticipated. The estimated surplus, according to revised estimate, was Rs. 1,37,76,565, but the year actually ended with a surplus of Rs. 1,56,28,492 as follows:

Total income	Rs. 12,75,80,916
Total expenditure	Rs. 11,19,52,424
	Rs. 1,56,28,492

This was due to increased earnings from income from goods, vessels and railways, and the extra income derived from the additional traffic of 21,347 tons handled over the estimated figure. It is proposed to appropriate Rs. 1 crore of the surplus to Capital Account for financing ordinary capital works and second five year plan projects, falling within the Commissioners' sphere of assistance, Rs. 36 lakhs to the Revenue Reserve Fund, Rs. 20 lakhs to the Vessels Replacement Fund and carry forward the balance amounting to Rs. 79,146 to the next financial year.

The year opened with a credit balance of Rs. 1,39,98,955 in the Capital Account. The Commissioners raised during the year a 4½ percent 30-year loan of Rs. 1.24 crores, the proceeds of which were used for repaying the uncancelled debt of Rs. 1,24,29,500 of the 5 percent 1927-57-87 loan of Rs. 1.5 crores. For financing capital works being mainly projects covered by the second five year plan, the Commissioners had to borrow from the Government over and above the sum of Rs. 1 crore, being the contribution from revenue to capital, a sum of Rs. 1.5 crores carrying interest at 5 percent and repayable in 23 equated annual instalments from the eighth year onwards. The interest on this loan is payable from the time the loan was contracted. The expenditure during the year on capital works in progress amounted to Rs. 2,34,38,887. The major items among these are construction of a new suction dredger *Bhagirathi*, purchase of a 200-ton electric crane, development of "B" berth into a general cargo berth and conversion of "C" berth into an oil berth and development of "D" berth into a general cargo berth.

Trade and Traffic

The original budget estimates were framed on the assumption that the total traffic which was likely to pass through the port would be 8,400,000 tons. The actual traffic handled during the year however amounted to 10,156,347 tons. The total tonnage of import cargo discharged at the port during the year was 5,515,768, compared with 4,352,958 during 1956-57. The principal increases were in brick, sand and tiles, cement, grain, iron and steel, lubricating oils, machinery, manure, metals other than iron and steel, oils other than petroleum and lubricating, railway plant and material, salt and timber. The principal items of decreases included asphalt, bitumen, dammer and pitch, betelnuts, fibres, hardware, oilman stores, paper including old newspaper, soda, sulphur, wire and sundries. These give a net increase of 1,162,797 tons. The total tonnage of export cargo shipped from the port during the year was 4,640,579, compared with 4,516,252 during 1956-57. The principal increases were in bunker oil, coal, molasses, ores and sugar. The principal decreases were in bones and bone meal, bunker coal, cotton and cotton waste, grain, gunnies, hides and skins, hemp, iron and steel manufactures, lac, manure, mica, oils other than petroleum, oilcakes, piecegoods, scrap, tea and sundries. There was a net increase of 125,935 tons.

Turnround of Ships

As for the turnround of shipping and the utilisation of transit sheds and warehouses, the average rate of discharge a ship a day in the case of general imports was as follows:

Nationality of vessels	Average discharge in tons 1957-58	1956-57
U.K. Vessels	390	280
U.S.A. Vessels	573	273
Continental Vessels	559	304
Far Eastern Vessels	440	322
Coastal Vessels	474	214
Other Vessels	549	386

In the case of foodgrains, the average rate of discharge a ship a day worked out to 1,403 tons, against 1,184 tons during the previous year. The average rate of loading a ship a day in the case of general exports, excluding coal, was as follows:

Nationality of vessels	Average loading in tons 1957-58	1956-57
U.K. Vessels	353	337
U.S. Vessels	412	344
Continental Vessels	349	260
Far Eastern Vessels	320	314
Coastal Vessels	384	318
Other Vessels	399	343

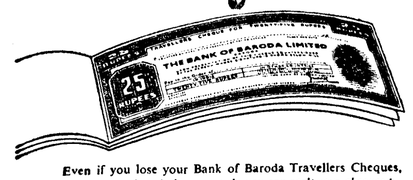
In the case of coal exports, the average rate of loading a ship worked out to 967 tons, against 867 tons during the previous year. The average rate of loading for this year in the case of ore vessels was 1,046 tons, against 547 tons during the previous year. The accommodation available in the transit sheds and yards was fully utilised during the year. Some of the transit sheds and yards particularly those where iron and steel, machinery and locomotives were landed, often remained congested. This was principally due to the slow clearance and the short supply of special type wagons by the railways. The warehouse accommodation available in the docks and Garden Reach jetties was almost fully utilised during the year. Out of 330,000 square feet of warehouse space available at Calcutta jetties, 2,250 square feet remained vacant for the whole year, 6,110 feet for seven months and 2,250 square feet square feet for four months and 8,434 square feet for one month.

Dry Dock and Ship Repair Facilities

The facilities available at the five dry docks were utilised by 254 ships for 1,373 days in the aggregate, the number of vacant days due to lack of demand and the dry docks remaining out of commission for repairs, etcetera, being 262 days and 190 days in the aggregate, respectively. There is a proposal under the second five year plan for improving the dry dock facilities by installing more cranes, arranging for more compressed air supply and augmenting electric supply facilities. This is estimated to cost Rs. 26 lakhs and the work will be taken in hand in the coming financial year.

Development Schemes

Due to the marked changes in the pattern of traffic passing through the port and the congestion that prevailed in the first half of the financial year, the provision made for the purchase of mechanical appliances in the original version of the second five year plan had to be considerably increased to provide for additional equipment like mobile cranes, fork lifts, jitney motors, scammel horses, etcetera. With the visit of the International Bank for Reconstruction and Development mission to this port in October of the year, the prospects of obtaining aid for financing the foreign exchange component of the plan projects brightened and the financial difficulties which hitherto slowed down their execution were resolved. Accordingly, the original version of the second five year plan was revised to provide for certain additional projects. The scope and layout of some of the projects were also considerably enlarged to provide for additional facilities. As a result of these changes, the total outlay on the second five year plan projects rose to Rs. 31.13 crores.



PAN AMERICAN TO OPEN JET SERVICE FROM WEST COAST TO ORIENT AND EUROPE

Pan American World Airways will inaugurate its Jet Clipper service over the Polar route from the west coast of the U.S.A. to London on 26th August, and across the Pacific to the Orient on 5th September, it has been announced by Mr. Robert B. Murrey, Jr. vice-president, Pacific Alaska Division. The new service will introduce for the first time the giant 5,000-mile-run *Boeing* intercontinental jet clippers, biggest and most powerful jet airliners in the world's skies. It will be the first trans-pacific jet service to Hawaii and the Orient, and the first jet service over the Polar route to London, slashing existing travel times almost by half. This is the same type of long-range jet aircraft which has just established a non-stop record, flying New York to Moscow in eight hours and 54 minutes. The huge intercontinental jet clippers will be launched on the Polar route between San Francisco, Los Angeles and London on a twice weekly schedule, and from the California cities to Honolulu and Tokyo on a three-a-week schedule with a fourth schedule being added ten days later. Jet schedules to Australia and service on the Great Circle route between California and the Orient will follow at an early date.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUSTS SUPPORTED WELL

AT Sale No. 9. held on 10th and 12th August, offerings at the Export auction amounted to 59,344 chests. There was a good general demand, especially for plain brokens which were from 2nP to 6nP dearer, while Fannings were again keenly competed for, the poorer sorts being often considerably dearer, although buyers tended to show slightly less interest towards the close. Bright liquoring Dooars and Assam B.O.P.'s and all O.Fgs. met with strong competition but the more ordinary Assam B.O.P.'s received a restricted enquiry and sold at prices which were 10nP to 30nP below last rates. Legg-cut teas met with less demand and there were some withdrawals. There was a fair enquiry for C.T.C. teas and prices, except for a few of the very best, were from 20nP to 30nP below last rates. Leaf grades met with good demand, but were irregular. Darjeelings were a weak feature of the sale and there were some withdrawals. Tippy teas were again well supported.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.00	2.10 to 2.15
Plain B.P.	1.80 to 1.84	1.66 to 1.70
Plain Fannings	1.92 to 1.98	1.84 to 1.88
Medium B.P.	1.98 to 2.06	1.90 to 2.00
Medium O.Fgs	2.10 to 2.20	2.05 to 2.15
Best Assam C.T.C. B.P.	3.10 to 3.40	3.50 to 3.80
Best Assam C.T.C. Fgs.	3.80 to 4.30	3.80 to 4.20

(Quotations are exclusive of excise duty.)

At the Internal Sale, 21,756 chests of Dust were on offer. There was a good general demand. Orthodox descriptions showed a decline in price by up to 10nP while Legg-cut Dooars were also easier. Darjeeling Dusts sold at about last rates and were sometimes dearer. Medium C.T.C. Dusts generally declined by 10 to 15nP and sometimes more, except for a few lines of grainy exportable types and powdery Dusts, which were often dearer. The very best C.T.C. Dusts were generally well supported.

Quotations.

	1959 Rs.	1958 Rs.
Medium Dooars Dust	1.84 to 1.88	1.70 to 1.74
Medium Assam Dust	1.80 to 1.88	1.72 to 1.76
Medium Assam C.T.C. Dust	2.05 to 2.20	2.20 to 2.40
Best Assam C.T.C. Dust	2.80 to 3.00	2.55 to 2.85

(Quotations are exclusive of Excise Duty.)

There were 643 chests of Leaf on offer for which there was a good general demand.

NO IMPROVEMENT IN FREIGHT MARKETS

ACTIVITY in the freight markets after the Bank Holiday recess in London has shown no change. The recent local Press announcement of increased port charges, although not unexpected, has proved to be more severe than was anticipated. Liner operators face increased dues of Rs. 2,500 to Rs. 3,000 a ship plus craneage which will amount to an additional Rs. 5,000 a vessel. For tramp ships carrying foodgrains the extra costs will total Rs. 2,500 and receivers will pay an extra Rs. 4,500 to Rs. 5,000 in craneage charges. The impact on importers and exporters will also be very heavy, rent alone being raised by 50 percent, while ore shipping charges through No. 5 K. G. Dock are raised by Rs. 1.50 a ton.

HIDES AND SKINS UNCHANGED

The hides and skins market showed little change during the past week. Stocks were less than in the previous week.

Bazaar Sales

(Between 4th August and 10th August, 1959)

Cowhides: Wet salted (Ord.) 27,800 pcs. on the basis of Rs. 12 to Rs. 18; Wet salted (Slaughtered) 25,000 pcs on the basis of Rs. 11 to Rs. 14.50 and Rs. 17 to Rs. 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) on the basis of Rs. 375 to Rs. 380, Rs. 440 to Rs. 450 and Rs. 480 to Rs. 500; Wet salted (he-killed) on the basis of Rs. 5.25 and (she-killed) on the basis of Rs. 5 a piece; Assam-Dinajpur 30,700 pcs. on the basis of Rs. 360 to Rs. 415; Purneah-Kissenganj 30,000 pcs. on the basis of Rs. 415 to Rs. 425; Patna (Ord.) 6,200 pcs on the basis of Rs. 380 to Rs. 390; Assam-Patna 10,500 pcs. on the basis of Rs. 400 to Rs. 410.

Bazaar Stocks

(10th August, 1959)

Cowhides: Wet salted 117,000 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 19,000 pcs.; Assam-Dinajpur 47,000 pcs.; Muzafferpore - Patna-Pakur - Purneah-Kissenganj 98,500 pcs.

SUGAR FIRM

During the week ended 12th August sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 2,000 bags and stocks totalled 60,000 bags. Rates were Rs. 41.25 to Rs. 41.50 for big grain and Rs. 39.62 to Rs. 40 for small grain. The market was firm.

COMPANY AND PUBLIC NOTICES

BAGHMARI TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of Baghmari Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 10th September, 1959, at 3-00 P.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr G T. Routledge, the Director retiring by rotation at the Meeting.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr G. T Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr G T. Routledge is an "associate" of the Managing Agents within the meaning of the Act and that therefore he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 1st September, 1959 to 10th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road.
Calcutta, 8th August, 1959.

Note:—Payment of the proposed Dividend, if declared, will be made on or after 21st September, 1959, only to those members whose names are registered in the Books of the Company on 10th September, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE METHONI TEA COMPANY LIMITED.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company No 14, Old Court House Street, Calcutta, on Friday, the 4th day of September 1959, at 3-30 p.m. for the following purposes:—

SUNGMA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of SUNGMA TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 10th September, 1959, at 3-10 P.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act and that therefore he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 1st September, 1959 to 10th September, 1959, both days inclusive.

Managing Agents.

Calcutta, 12th August, 1959.

Note : A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT

The Resolution in item 4 of the above Notice is intended to enlarge the statutory borrowing power of the Board of Directors to enable them to borrow moneys from time to time for the purposes of the Company in excess of the limit prescribed by Section 293(i) (d) of the Companies Act, 1956. To enable the Company to keep in production it is necessary from time to time to borrow money in excess of the limit prescribed by Section 293(i) (d) of the Companies Act and the resolution is intended to cover up such a contingency.

THE INDIAN IRON & STEEL COMPANY LIMITED

AT a Meeting of the Board of Directors of The Indian Iron and Steel Company Limited, held on the 11th August, 1959, the Directors have declared an interim dividend in respect of the year ended 31st March, 1959, of **One Rupee per share** on the Ordinary Share Capital ranking for such dividend (that is to say exclusive of the bonus shares issued in February, 1959) being at the rate of 10% per annum without deduction of Indian Income-tax. This action has been taken in order that shareholders shall not be kept waiting for their dividend in view of the closing of the accounts for the year being delayed pending notification by Government of the revised sales retention prices of steel and pig iron.

The Directors wish to make it clear in this connection that this dividend although termed "interim" will in fact be the final dividend for the year and that no further distribution in respect of the year ended 31st March, 1959 will be recommended for consideration at the Annual General Meeting to be convened in due course.

As already notified, the Ordinary Share Register and the Transfer Books of the Company will be closed from the 20th August, 1959 to the 3rd September, 1959. Payment of this interim dividend will be made on or after the 21st September, 1959, to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 3rd September, 1959, or to their mandatees.

Calcutta-1, 7th August, 1959.

THE IMPERIAL TOBACCO COMPA INDIA LIMITED

At a Meeting of the Directors held on "... 7th August 1959, it was decided to recommend t... the shareholders at the Annual General Meetin... which was fixed to be held on the 25th Septembe... 1959, the payment of a final dividend for the ye... ended 31st March 1959, of 2% (free of Incom... Tax) on the issued Ordinary shares, payable o... the 28th September 1959.

The net profit for the year, after deducting a... charges and expenses of management and provi... ing for taxation, is Rs 1,14,97,610.

Two interim dividends, each of 2% (free ... Income Tax) amounting in total to Rs. 60,64,0... in respect of the year to 31st March 1959, wer... paid on the 27th September 1958 and the 14t... April 1959 respectively.

After paying the final dividend amounting ... Rs. 30,32,000 and allocating Rs. 79,036 to Capit... Reserves, Rs. 5,13,103 to Development Rebat... Reserve and Rs. 17,50,000 to Fixed Asset an... Stock Replacement Reserve, the amount carrie... forward will be Rs. 24,64,029.

The Directors also declared a first interi... dividend of 2½% (subject to Income Tax) i... respect of the year to 31st March 1960, payabl... on the 28th September 1959.

Under the Finance Act, 1959, the system ... grossing of dividends and paying them free ... Income Tax was abolished, and instead Incom... Tax must be deducted at prescribed rates befor... payment of dividends, commencing with dividend... declared in respect of the Company's financi... year ending 31st March 1960. The interi... dividend of 2½% is payable under this new syste... and is therefore taxable.

The final dividend, if approved, and the interi... dividend will be paid to the shareholders whos... names appear on the register on the 25t... September 1959 and dividend warrants in respe... thereof will be despatched to such shareholder... or their mandatees on the 28th September 195... The share transfer books of the Company will b... closed from the 31st August to the 25th Septembe... 1959, both days inclusive, and transfers receive... in order at the registered office of the Compan... up to the 29th August 1959 will be in time to b... passed for the payment of the dividends to th... transferees.

THE JUTE MILLS UNSEAL MORE LOOMS

ON Monday next, the member mills of the Indian Jute Mills Association will unseal 2½ percent of their total loomage, and from then until 2nd January, 1960, will be working with only 10 percent of looms idle. This latest move follows the unsealing of 1½ percent of looms on 22nd June, and means that the industry will be operating on its largest proportional capacity since end-1956. The purpose is obviously to meet a temporary seasonal increase in demand that might otherwise push prices to a level which could damage the industry's competitive position. Any speculation concerning the duration of the move, or whether it is intended as a permanent feature or not, has been forestalled right from the beginning by the decision to fix the re-sealing date in advance. This is a novel feature of the unsealing announcement, although it is one which could well be taken as an example for the future. The present state of world demand for jute goods, subject as it is to more or less predictable seasonal and cyclical fluctuations, requires a considerable degree of flexibility if embarrassing drains and accumulations of stocks are to be avoided. The necessary adjustments in capacity lend themselves too easily to the actions of speculators. The market has suffered severely from these in the past; anything which will help check speculation is, therefore, of service to all respectable members of the trade and industry.

The decision to unseal did not come as a surprise to the Calcutta market. The trend of goods prices has indicated for some time that extra capacity might be needed. The unsealing of 1½ percent of looms on 22nd June, which added a maximum of 2,000 tons to monthly production, probably made no impression at all on the upward surge of market quotations, especially those of sacking. The latest unsealing should contribute at least 3,000 tons a month to the production total, which is at present running at an average of roughly 85,000 tons. This figure of 3,000 tons is based on the assumption that 75 percent of the unsealed looms will be devoted to heavy goods output while the remainder are concentrated on hessian. If, as seems likely considering the higher profit margin on heavy goods at the moment, all the looms are returned to sacking production, the contribution to monthly output will be something over 3,500 tons. This is a fair figure for a marginal increase; when added to that secured by the 1½ percent unsealing, it represents a total addition to seasonal monthly production of approximately 5,000 tons. The market reaction that the unsealing might well have been greater considering the circumstances, does, therefore, appear to over-estimate the improvement in demand prospects. What change for the better has taken place in the statistical position of the industry during the past year or so has largely been due to restrictions on production, not to any spectacular increases in demand for jute goods. A cautious approach to any expansion of capacity would, therefore, appear to be completely justified.

The nature of the improvement in the statistical position is shown in the following figures. At the end of July, the total stocks of jute goods stood at 92,800 tons; this was their lowest since December 1957. On the same date, sacking stocks totalled 54,200 tons, their lowest since February 1958. Hessians, on the other hand, at 26,000 tons, were at their highest level since February 1958, although still below what might be considered a comfortable figure considering the increase in demand usually expected at this time of year, but which has apparently not so far materialised. The fall in total stocks is partly due to curtailed output, partly to increased offtake both at home and for export, and partly to a switch of looms from sacking to hessian production—which may now be in the process of being reversed. Total output of goods fell from a peak of 98,300 tons in January, 1958, to 82,700 tons in June this year. Comparing the first six months of 1959 with the corresponding period of the previous year, offtake of all goods has jumped by 44,300 tons. The larger part of this increase is accounted for by improved demand for hessian. This fabric shows a rise in offtake, comparing performance in the two periods, of 52,500 tons. Sacking offtake has fallen by 32,400 tons, despite the decline in stocks. Offtake of other goods shows an increase of 24,200 tons.

These figures support the view that the improvement in the statistical position, which is a tribute to the degree of flexibility the industry has achieved, is nevertheless no justification for repeating the somewhat precipitate rush to unseal looms which took place about the middle of 1956. There are a number of other facts which also dictate caution. The first is the apparent reluctance of hessian prices to follow those of sacking. At the moment, the production of this particular fabric, compared with sacking, is barely profitable, and threatens to be even less so bearing in mind the recent tendency of raw jute prices to rise. The second is, of course, the raw jute situation. At this particular point in the season, it is not yet possible to predict the size of the crop with any accuracy. The indications are that it will be at least up to last year's in both quality and quantity. But the first deliveries of new crop jute have not been encouraging; quality is poor, thanks to the general shortage of retting and steeping water in the districts. A dry September could alter the crop position materially by restricting the necessary supplies of water and so reducing the marketable supplies of raw jute; this would lead to a rise in prices. The industry is not so prosperous that it could stand a bad crop without serious inroads on the rather more satisfactory earnings position it has been able to build up during the past year. Yet a third uncertainty is the future demand prospects for jute goods, especially sacking, and the growing strength of the Indian mills' chief competitors, the Pakistani mills.

The above analysis of the statistical position for jute goods shows that offtake, although improved, is not such as to support undue optimism about the future—last year was after all one of world recession. There are a number of bright spots in the picture—the demand for heavy goods from communist China, which has done so much to support the market in the past few weeks, is one of them—but otherwise the position is much as might have been expected in a year of normal trading. In hessian, for instance, U.S. consumption in the period July 1958 to May 1959 increased by 38,100 tons over the figure for the period July 1957 to May 1958, entirely due to the recovery in internal trade and industry. Perhaps the most encouraging feature of this performance is that India's share of U.S. burlap imports has shown a tendency to increase throughout the first half of this year. Lately, American buying has been slowing down in response to the feeling that present U.S. stocks are adequate to meet the expected demands upon them; at the end of July, these stocks were standing 42 million yards above their level at the same time last year. Another important market which has increased its offtake of hessian is the U.K., and it appears likely that the improvement here will be maintained for some time yet. The Argentine has been something of a disappointment. The expected seasonal increase in buying by this customer has largely failed to materialise this year; present offtake is on a piecemeal basis and appears to be having little or no effect on the market. In sacking, there has been an increase in buying from Egypt and Burma, as well as communist China. The important Australian market is doing well this year, but the Pakistani mills are enjoying most of the improvement—a reminder to India that competition from this source has increased materially in the past year or so. The outlook for sacking is still uncertain, in spite of the recent rise in prices. Stocks in Calcutta are now down to near manageable proportions, but the vagaries of the market, and the fact that probably the entire increase in capacity will be devoted to heavy goods production, does mean that the fortunes of this fabric could change radically in a remarkably short space of time.

That may be an additional reason why the industry has decided to announce in advance the date for resealing the 2½ percent of looms which are to be returned to production on Monday. Sudden increases in stocks give far too much scope for speculation, and it may not be possible for a resealing decision to be reached before such an increase has taken place. There is, unfortunately, nothing in the present state of world demand for jute goods which suggests that the industry can work permanently with less than 12½ percent of its looms sealed; at times, the position may justify an even higher proportion, as it did earlier this year. The present modest prosperity of the Calcutta mills is not such as could sustain heavy losses caused by too optimistic a prediction of the demand situation—even if it had already compensated for the uneconomic working of previous years, which so far it has not.

THE TWELFTH YEAR

COMMENTATORS in the capital appear to have discerned a "despondent note" in the Prime Minister's Independence Day address at the Red Fort. Once again, Mr. Nehru has correctly represented the country's mood. This reaction is in part inevitable, because no passion endures for ever and collective emotions over past events can scarcely last indefinitely at the same pitch. If a certain sobriety in celebration were all that has come about, there would be little reason to regret it. The President did not speak very cheerfully either, and it is a matter of observation that disillusionment is widespread. Many Indians find it baffling that so many foreign visitors should come to India and be so impressed by achievements since independence, while they themselves are largely unimpressed. Both reactions can be explained. The visitor had probably not expected a great deal, and had perhaps seen, before coming to this country, how much worse off some other newly independent countries were. Admiration is natural. As for Indians, they had no doubt expected too much, for which they had aid and abetment from the leaders of the Congress; and now they probably think less of the countries worse off than India than of those which are better off.

There is a third criterion to apply to India's achievement in twelve years of freedom, which is whether the attainable has been attained. Mr Nehru would not return an unqualified affirmative and it would be grossly unfair to dismiss the last twelve years as unproductive in all respects. People are exasperated when official spokesmen produce the long list of the Government's diffi

culties, but many of these latter are real and not all of them were created by the Government. To take an extreme instance, there was nothing India could do to stop the Tibetan refugees coming here without going cruelly against the humane traditions of this country. While the full effects of India's action in the Tibetan imbroglio are yet to unfold themselves, it should be noted that New Delhi has acted with courage and dignity. Apart from its dealings with Pakistan, this is the first time that India was called upon to *act* in foreign affairs—which is rather different from expressing opinions. And, when the challenge came from China, New Delhi was not lacking in decision. There has since been anxious and nation-wide reappraisal of this country's foreign policy, and the educative process will continue to the benefit of India and perhaps of the world.

If there was only one stress with an external origin, except the foreign exchange crisis (which originates internally), the internal stresses have been many and not much easier to deal with. The internal stability on which India has in the past been congratulated, rightly, is not as secure as it had seemed at one time. Apart from an ugly clash or two in Bihar or Bhopal, the communal situation has been under control, although the Prime Minister once thought it necessary to issue a warning on this subject. It is the political stability which can no longer be taken for granted. The threat of the Swatantra Party may one day affect the Congress—but not the country. As much can hardly be said of the other political opposition facing the Congress and the governments it runs. The inept handling of the crisis in Kerala may have unleashed forces which are only very vaguely calculable at present. As this issue goes to press, West Bengal still does not know how far the current agitation will go. Past experience of chaos makes many understandably nervous. The agitation is over food, which has been a matter of concern for most of the year under review.

It is singularly difficult to discuss the food problem, for mutually exclusive statistics abound, especially at the State level; and at the highest level euphoria and despondency have alternated inexplicably. There is still talk of State trading in foodgrains in the philosophy of which the people are simply not interested. Co-operative farming may or may not lead to totalitarian control of agriculture, but it is not yet clear whether it will lead to any increase in food production. If the Swatantra Party's criticism has made any impression at all on the country, it is because the people are beginning to find out that a socialist ideology is poor diet for nourishment—at least of the body. If this goes home, the Congress might well make one or two other important discoveries. The inadequacy of promises, for instance. The disillusionment spoken of earlier would certainly have been less if the promises had corresponded more to the feasible. Nor is it possible to argue that the tall talk was necessary because of elections. Until recently, the Congress could in fact win elections with lamp posts as candidates. If that is no longer true, one reason may be that the Congress promised things it could not possibly fulfil.

Now is the time to examine afresh the Party which in India, as recently in Uttar Pradesh, has run into serious difficulties in spite of so many initial advantages. There are reasons to think that its mechanical efficiency has improved enormously since independence; and the view is perfectly valid that the answer to the question "Who after Nehru?" is—the Congress. But what sort of a Congress will it be that may succeed Mr. Nehru? Uttar Pradesh shows that dissensions within the Party can be serious. Kerala shows that the Congress by itself is a negligible quantity without the alliances it abhors; and the case of Orissa is not far different. How long will it be before it is the same picture all over India? Sympathy for Mrs. Indira Gandhi is deservedly widespread, but is it possible that she has been making more compromises than can retain the distinctive character of the party she presides over? Is it possible that her association with the so-called "ginger group" is making things worse? That she gets all of the hostility of one side and none of the friendship of the other? Her father sailed more or less the same way. The wind is different now. This would not require such detailed discussion if the fate of the Congress were not so closely linked with that of the country, but it is—for better or worse.

It is a pity that an Independence Day review has to take account of so many factors, some of them rather depressing. Can it be that this too is a sign of maturity? Which new State in Asia could do the sort of stock-taking that India has done this 15th August without risking a revolution? What other country in Asia has retained the democratic way of life to the same extent as India has? And what other newly independent State could speak of its own imperfections with such candour? In this last assessment some of the older European States could be included too, without India being placed in too unfavourable a light.

HIRE-PURCHASE UNDER SCRUTINY

IN the middle of this year British consumers were committed to hire-purchase debts averaging about £15 a head of the population. The total debt outstanding, according to the estimate of the Board of Trade, was £763 million. The corresponding figure for the United States, according to the U.S. Federal Reserve Board, was $35 800 million; which is equivalent to some £80 a head of the U.S. population. This disparity between £15 and £80 might be regarded simply as an indication of social differences, not directly relevant to the present economic situation, if the figures were static. In fact, while both are rising, the British figure is rising much faster than the American. Since control of hire-purchase trading was withdrawn (by stages) in Britain late last year, this form of credit has been expanding at an annual rate of approximately 60 percent. In the United States, the corresponding figure is approximately 15 percent.

Comparison with the United States is relevant in two ways. Financing consumption by instalment-credit is more developed in America than anywhere else, and American figures may therefore be regarded as a measure of the scope for expansion elsewhere. But the relative rates of expansion are important; for instalment-credit is inflationary while it is financing purchases, and relative inflationary tendencies are being closely watched at this stage in the world's economic growth. Conversely, of course, credit is deflationary when it is being repaid. In Britain, the growth of hire-purchase credit worries some people because it may be too rapid, but it worries others because it may suddenly cease. Britain's industrial recovery is based on domestic consumption and exports—mainly on domestic consumption. Hire-purchase credit is only one element in the growth of consumption; others are bank credit, reductions in income-tax and purchase-tax, increases in wage rates and employment. But hire-purchase is an element that is not only important but also possibly unstable. Some consumers must feel that they have committed themselves enough for the present, and if many of them decided simultaneously that they should repay debt before contracting more the boom in consumer trade would quickly lose impetus.

An increase of some £270 million in Britain's hire-purchase debt in a year—between mid-1958 and mid-1959—may not seem very large in itself, but it is a net increase, the amount by which new commitments exceed repayments on old ones; so the volume of trade financed by this means is much larger than the figures show. A rapid reduction in credit-financed trade would certainly be felt by some industries. It is generally recognised that Britain's recession was moderated by, and that Britain's recovery has been promoted and sustained by, the strength of the motor-car industry. This industry has been outstandingly successful in export trade, but it could not maintain its present rate of production, still less increase its production as planned, if its sales at home declined; and at home this industry relies more than any other on hire-purchase financing. In the first few months of the rapid expansion that began last October about two-thirds of the increase in hire-purchase debt was attributable to domestic appliances and television sets, but in recent months about two-thirds of the accelerated increase has been attributable to motor-cars. The Budget reduced purchase-tax on many goods, but the reduction was most noticeable in the case of motor-cars, because they are the most expensive of all ordinary taxed goods; and demand responded accordingly.

However, experience in the United States does not support the idea that credit-financed trade is particularly vulnerable. Both quantitatively and in respect of bad debts, consumer credit was affected surprisingly little by the American recession, and consumers' spending was surprisingly steady during the recession. In Britain, no general recession is in prospect, the proportion of hire-purchase debt to personal incomes is still (by American standards) low (at roughly 4 percent, it is less than half of the corresponding proportion in America, although personal incomes are much lower in Britain), and hire-purchase debt in Britain shows a decided tendency to rise towards—though it will not necessarily reach—the American proportion. It seems, therefore, that a possible excess of consumers' spending is to be feared more than a possible deficiency of consumers' spending in Britain. There is no danger in the present rate of spending, at least while export trade is strong: but if British families try to attain an American standard of living—in respect of motor-cars, refrigerators, and other such goods—within a few years the economy will certainly be over-strained. Personal savings are maintained at an unusually high rate, but the emphasis is on consumption, and it may continue so for years.

The British banks, conservative though they are by tradition, perceived this tendency, perceived that it was a movement of the masses, among whc bank accounts were few, perceived that a large pa of consumer credit would in the future be provid by finance houses. In August last year, when re trictions on banking had been withdrawn, the ban announced in quick succession agreements wi hire-purchase finance houses. When the restr tions had been withdrawn the banks could, course, lend freely to these institutions, and they turn could lend more to consumers. But these ins tutions were rivals in the lending business, and t banks, whose business had been comparative static for many years, wanted to participate in the prosperity. For the finance houses there we obvious advantages in association with a maj bank: not only would they gain readier access finance but also they would gain prestige and strengthen the confidence of potential deposito So the banks were able to obtain big blocks shares in the finance houses on terms by no mea unfavourable to themselves. In the past year th proportional increase in bank advances has be only about half of the proportional increase in hir purchase credit, but, as bank advances were abo four times the total of hire-purchase credit mid-1958, their absolute increase (a substantial pa of it financing consumption) has been much large Operating directly and through the finance house the banks have been the main source of consum credit. They have revitalised themselves as we as the economy.

THE L.I.C. AS AN INVESTOR

ALTHOUGH echoes of the Mundhra scandal ar now only dimly heard, interest is once agai reviving in certain important aspects of the Li Insurance Corporation's investment policy. Th Finance Minister, Mr. Morarji Desai, is to be con plimented on giving the debate some point an direction by declaring categorically that L.I.C funds cannot be reserved wholly for the publ sector; the Government intends to abide by th assurance it gave at the time the life insuranc companies were nationalised that the flow of func into the private sector would be maintained. Th reiteration is welcome for a number of reason Firstly, a Government which breaks its promise does not make a pretty sight; already, man nationalisation measures have transgressed th limits implied by New Delhi's own industria policy resolutions. Secondly, the arguments ac vanced in favour of reserving L.I.C. funds for th public sector have so far been purely politica in nature; no economic justification for the ste has been mentioned. Thirdly, the L.I.C. owes a obligation to its policy-holders to invest the fund in forms which yield the best return, consister with safety; there is no indication that the return it will get from Government projects will com pare favourably with those offered by the bette class private companies. Fourthly, the value c industrial equities as a hedge against inflation i being increasingly realised throughout the worlc since inflation persists in the Indian economy, th L.I.C. has a duty to protect its policy-holders money by not investing too great a proportion o it in fixed-interest stocks, such as gilt-edged. Anc fifthly, whatever the hidden lessons of th Mundhra episode may be, investment in the publi sector is more prone to political and administrativ pressures than investment in the private sector it may have been precisely the existence of such pressures which led to the Mundhra scandal.

It is reassuring to note that relative indepen dence of the L.I.C. in the matter of investmen policy is to be safeguarded. To entrust the invest ment of the Corporation's funds to the Reserv Bank, as some members suggested during a debate in Parliament a few days ago, would be irrational the superior abilities of the central banking insti tution in this field remain to be proved, and in any case the L.I.C. would lose much of the incentive to expand business if the funds it collects pass under the control of another body. Even more irrational would be the association of the State Bank with the investment of L.I.C. funds; the former has been regrettably unenterprising in using the large funds it already has, and in any case the proper investment criteria for a bank are quite different from those for a life insurance organisation.

Yet there are certain aspects of the L.I.C.'s investment operations which call for some serious rethinking. The reported sale of equities by the organisation during the recent boomlet in the stock market has been widely criticised, but unfairly so. The Corporation, like any other investor, needs to maintain considerable flexibility in its investment portfolio if it is to put its money to the best use. If it were only to buy and never to sell, the portfolio would acquire an unnecessary rigidity. In course of time, it may even happen that the L.I.C. would be left with large amounts of stocks and shares which were attractive once but are no longer so. The share operators' objection to the L.I.C. selling any of its holdings is that such sales tend to depress the stock market unduly; and that its over-cautious view of any recovery persuades it to sell shares and nip the recovery move-

ment in the bud, as happened a few weeks ago. But this can hardly be described as an unexpected discovery; the L.I.C.'s dominance over the stock market has long been known, without it ever having been implied that such dominance would show only when it acted as a buyer and not when it acted as a seller. If the share market falls unduly when the L.I.C. sells, operators have largely themselves to blame; they cannot expect the Corporation to be a silent accomplice in bull manipulations, nor can they point an accusing finger at it if they themselves exaggerate the true influence of its sales. Time may enable operators in Lyons Range as well as Dalal Street to take a more sober and less panicky view of the L.I.C.'s investment activities. They are not yet accustomed to the novelty of having a seemingly fickle giant in their midst.

The plea that the L.I.C. should try to bring about a more even regional distribution of its investments has some substance, but needs to be approached cautiously. It is born partly of the complaint that the Corporation, along with a number of the other major financial institutions, has its headquarters in Bombay, and so tends to favour that region to the relative neglect of others. The complaint has had some justifications, at least in the earlier phase of the Corporation's life, although more recently a wider regional spread in its investment operations has been reported. Its affinity to Bombay might well be allowed to decrease further without doing anybody any great harm, but the main point to bear in mind is that quality must be the dominant consideration governing the investments it makes. If lesser centres like Delhi or Madras have suitable scrip to offer, they deserve every support; but if they do not, they should be allowed to suffer for it. This would tend also to improve the quality of the advisory services which brokers and others in the various investment centres offer. The second aspect of the plea for greater regional diversification of the L.I.C.'s investments springs from highly questionable motives. It is based on the complaint that most of the L.I.C.'s money is going to a few States and very little to others. But there is no reason why the Corporation should sink its policyholders' money in providing a prop to the latter class of States, which include many of the industrially backward ones. It is for the entrepreneurs and the Governments of those States to promote projects in which investment is worthwhile, after taking account of the natural, financial and technical resources which are available. The L.I.C. is not a charitable institution; its first duty is to policyholders, not to the laggards flaunting regional jealousies.

Current News and Comment

Cloth Exports Recovering

Mr. Neville Wadia, speaking at the annual general meeting of the Cotton Textiles Export Promotion Council, highlighted the unpleasant fact that India's cloth sales abroad declined by 30 percent last year, compared with the general decrease of only 13.8 percent experienced by the other producing countries of the world. It was perhaps inevitable that India should lose some ground, considering that world trade in textiles dropped from 5,002 million square yards in 1957 to 4,360 million square yards last year, but her loss has been disproportionately large. Among the causes of the decline, Mr. Wadia mentioned the growth of the textile industry in importing countries such as Nigeria, Abyssinia, East Africa and Ceylon, and the increase in production in Pakistan and Hongkong. Another factor, Mr. Wadia said, was the fall in agricultural prices in countries like the Sudan which, in consequence, were forced to restrict imports. But these developments do not explain the disproportionate fall in India's share of the world trade, because the same factors operated against the other exporting countries as well. The real reason may be that world prices of cotton textiles fell by 15 percent and India was unable to meet the competition adequately. The position was further complicated by the fact that for the first time last year, prices of domestic cotton ruled above those quoted for similar growths in other parts of the world.

Mr. Wadia was somewhat optimistic about the future. He referred to the fact that exports during the first half of this year amounted to 309 million yards, against 278 million yards during the last six months of the previous year. He also forecast that shipments during July-December this year would total around 400 million yards. The volume of orders already placed indicates that there has been a revival. This would bring the export total for 1959 to about 700 million yards, against 587 million yards last year. While the recovery is impressive and welcome, there is no reason for complacency. As Mr. Wadia admitted, a good part of it has been made possible by the various export incentives offered by the Government. The growth of the textile industry in consuming countries, to which Mr. Wadia referred, is likely to gain momentum. It is also possible that the reorganisation plans of the Lancashire industry will not only mean a cut in British imports of grey cloth, but also put the United Kingdom in a position to compete more effectively in world markets. Another disquieting factor is that communist China has been able to step up its exports substantially over the past three years or so by under-cutting even Japan and Hongkong by as much as 10 percent. Competition from this source is likely to stiffen as China needs more foreign exchange.

Synthetic Rubber Plant

Now that the U.P. Government has decided to install a plant for producing butadiene, the scheme for manufacturing synthetic rubber, which has been delayed by vacillation over the choice of a site, has been carried a step forward. The final decision to locate the factory in Bareilly is based on an assessment of U.P.'s power alcohol resources. The State can supply enough power alcohol to produce 15,000 tons of butadiene, an intermediary chemical for the production of synthetic rubber. Butane, the other raw material, is harder to obtain, as it is a product of oil refineries. U.P.'s power alcohol production is estimated at 12 million gallons a year at present. The butadiene produced from alcohol is to be polymerised with about 5,000 tons of styrene which, it is expected, will be produced in Rourkela and transported in tank wagons to the factory in U.P. The polymerised product will then have to be processed so as to yield about 20,000 tons of synthetic rubber annually. As butadiene is a gas, it is proposed that the production of synthetic rubber as well as the gas be located as far as possible at the same site. A 1,000-acre area will be acquired about 11 miles from Bareilly, while the newly constructed Bareilly water works will supply 1.5 million gallons to 2 million gallons of water daily. Bareilly is rich in water-bearing strata and bigger water supplies are assured if they are needed. The power requirements of the factory are expected to come from a sub-station near Bareilly. The effluents will be carried away by the Shankha river and discharged in the Ramganga. The average wage in Bareilly is about Rs. 1.50 to Rs. 1.75 a day for unskilled labour and Rs. 3 to Rs. 3.50 a day for skilled labour. These rates compare quite favourably with those in other industrial centres of the State. The factory, which will have an estimated output of 20,000 tons of synthetic rubber, will be erected at a cost of Rs. 10 crores.

Minimum Wages and Piece-rate Workers

Such concepts as "minimum wage" and "fair wage" are naturally elastic; they vary like the terms "subsistence level" and "comfort or decency level." But the liability of an employer to pay a minimum wage has for so long been removed from the realm of legal controversy that particular interest attaches to a judgment of the Allahabad High Court delivered recently in this connection. Allowing a writ petition filed by the British India Corporation, the High Court has held that the State Industrial Tribunal committed an "apparent error" in awarding a minimum basic wage of Rs. 32 a month for the piece-rate workers of the Kanpur Cotton Mills. The Tribunal had held that 76 piece-rate workers of the Mills were not subject to the condition of efficiency or output. In 1946, the U.P. Government appointed a committee to fix the minimum wages of industrial workers in the State. It accepted the committee's proposal for a basic minimum wage of Rs. 30 a month. An important proviso in the decision was that if any industrial worker was drawing more than Rs. 30 in September 1948, he should be allowed a higher wage. The question raised by the petitioner was whether the wage payable to a piece-rate worker, which used to be determined before 1948 on the basis of the quantum of his production, continued to be governed by that condition; or whether, as in the case of others, his wage in future was to be determined by the basic wage he was drawing in 1948, irrespective of the production. The Tribunal had held that a piece-rate worker was no longer subject to the condition of efficiency or production and that he was entitled to a minimum wage corresponding to what he was earning in 1948. Delivering the judgment on the writ petition, Mr. Justice Tandon of the Allahabad High Court held that the Tribunal was wrong in its conclusions. "So far as minimum basic wage is concerned, it has been fixed at Rs 30 a month. Amounts which may be determined by adding the increase provided by Table III do not become minimum basic wage l cause in their very nature they are not minimu basic wage but wages earned at increased rate His lordship also held that before a piece-ra worker can become entitled to a higher wa than Rs. 30, he shall not be relieved from t conditions of his employment or of output a efficiency.

T.E.L.C.O.s Go Ahead

There has been an encouraging increase in t price of the Tata Locomotive and Engineeri Company's ordinary shares from Rs. 185 Rs. 207.25 over the past year. Investors' confiden appears to be justified by the excellent resul the company has produced for the year end March 1959. Providing Rs. 13.25 lakhs for taxati (against Rs. 6.49 lakhs), Rs. 1.13 crores (Rs. 1. crores) for depreciation and Rs. 74.62 lak (Rs. 26.87 lakhs) for development rebate reserv the profit has improved from Rs. 66.08 lakhs Rs. 66.66 lakhs. The bigger allocation to develc ment rebate reserve reflects the substantial capit expenditure incurred during the year to finan expansion. The ordinary dividend has been mai tained at 9 percent. It is covered more than twi and gives a yield of 4.3 percent at Rs. 207.25 share, which is reasonable by present mark standards. Sales turnover has been satisfactor Although it has declined from Rs. 26.94 crores Rs. 26.45 crores, the higher figure of the previo year included a substantial amount relating heavy trucks and other vehicles imported fro Germany. If this special element is excluded, t turnover during the year to March 1959 is high than in 1957-58 and reflects a substantial increa in the output of Tata-Mercedes-Benz vehicles a spare parts, foundry products and welded a fabricated industrial equipment. The output the locomotive and boiler shops was 103 co plete locomotives, and exceeded the previo year's figure by nearly 15 percent. As no agre ment has been reached so far between the compa and the Railway Board on the prices payable the company for its supplies of locomotives a boilers during the two years ended March 19 only the provisional prices received have be taken into account. There is, therefore, a loss this portion of the company's business.

The shares have considerable growth prospec The welding shop has been extended so as undertake a substantial volume of welding a fabrication work. The Government of India h sanctioned a scheme for the manufacture of pu and paper-making machinery in this division wi the collaboration of the well-known Swedish fi of A. Johnson and Company. The project is e pected to make a start before the end of this ye The steel foundry has made considerable progre and the output of castings continues to increa steadily. The alloy iron foundry went into prod tion in October 1958 and has begun to manufactu high-grade alloy iron castings. During the ye under report, the directors sanctioned an extensi of this foundry in order to produce heavy all iron castings, such as rolls for paper-maki machinery. Constructional work for the exte sion has been taken in hand and is making go progress. The progress of the motor-vehicle di sion has been satisfactory. The Government India has sanctioned a scheme for the expansi of output to 12,000 vehicles a year and the mar facture of cabs and bodies for Tata-Mercedes-Be vehicles. Although demand is keen, production being hampered by the shortage of foreign change, the slow growth of ancillary industri and delays and difficulties in obtaining essent raw materials. Considering the excellent perfor ance of the motor-vehicle division, it is time t Government permitted the company to produ medium-priced passenger cars.

Higher Profits for Bengal Chemical

The profits of the Bengal Chemical and Ph maceutical Works Ltd for the year ended 3 March, 1959, after providing for depreciati etcetera, amounted to Rs. 15,85,497, compared w Rs. 9,96,518 in the previous year. The direct have recommended a dividend of 7 percent all classes of ordinary shares, free of income t Although domestic market conditions were di cult, the company was able to record higher sa during the year. Speaking at the annual gene meeting, which was held in Calcutta on Frid Dr. B. N. Ghose, chairman, said that there w as in previous years, a good demand for the cc pany's products, but in some cases output v restricted by the shortage of essential impor basic raw materials. (A fuller version of speech appears elsewhere in this issue of *Capit* Apart from the restrictive import policy, pilfer and thefts in the docks are increasing. The sc tion to this problem is to ensure quick deliv from the docks, which will also reduce the hea demurrage charges. The expansion of Kanpur factory is progressing rapidly and is li ly to be completed in the current year. The al

plant, which is already giving the maximum output, is to be expanded. Since it will require a large quantity of sulphuric acid, Dr. Ghose said that the company will have to put up a bigger sulphuric acid plant. The company's office building, which is at present a three-storeyed one, is to be completed with the addition of four more floors. "It should be understood that for these expansion programmes, it would be necessary that the company's financial resources should be augmented and substantial reserves should be built up. We should at the same time cut down our expenses and expand our sales to increase the profits." Referring to the expansion of the tar distillation plant, the chairman said that the company was facing difficulties in getting crude tar. It is obtaining some supplies from Hindustan Steel but is unable to increase them due to the shortage of tank-wagons.

Hybrid Maize

If the results of the research done at the Vivekanand Laboratory in Almora can be carried to the fields and translated into everyday practice, they can bring a spectacular improvement in the rural economy. Fifty double-cross U.S. hybrid maize strains, it is reported, have so far been tested in the laboratory, and 11 of them have been found to yield 70 percent more than the best U.P. variety. New inbred lines have been isolated and double-crosses bred from such lines have given normal yields of up to 75 maunds an acre. The laboratory has also trained local workers for producing hybrid maize seeds in small units in different regions. The all-India average yield of maize is only 7 maunds or 8 maunds an acre. At present, 8 million acres of land are under the crop in this country. The laboratory also has to its credit some good work in introducing many new varieties of wheat, fibre crops and grasses. With seeds supplied by the laboratory, it has been possible to grow wheat even at an altitude of 12,500 feet on the Indo-Tibetan border. The giant star grass, one of the fodder crops developed at the laboratory, is now being extensively used by the Damodar Valley Corporation for stabilising bunds. A single node of giant star grass, it is claimed, can cover 8,000 square feet in one growing season under optimum conditions. The grass seeds have been distributed throughout India and even exported to countries as far off as Iceland on request. Another grass, Kudju, developed at the laboratory is being used by the D.V.C. for controlling gully erosion.

Gorakhpore Labour Organisation

The Gorakhpore Labour Organisation, which has functioned for over 18 years as the main recruiting agency first for defence projects and then for the collieries, is to be closed down. The decision has been taken at a tripartite meeting of representatives of the Central Government, the U.P. Government and the coal industry. The existing system of recruitment will continue, but the function will be taken over by the employment exchange organisation. Recently, the Central Labour Minister, Mr. G. L. Nanda, told the Lok Sabha that the employment exchange is like a shop, offering a variety of merchandise to the customer to pick and choose from. It is perhaps debatable whether men awaiting jobs and merchandise awaiting buyers stand exactly on the same footing, and it must also be borne in mind that the winding up of the Gorakhpore Labour Organisation will not be painless unless an agreement can be arrived at on a number of incidental problems. For example, it is stated that the hospital in Gorakhpore for the medical check-up of the labour recruits will be wound up by the Government unless the employers wish to take it over. Employers have also been asked to examine the question of abolishing the coalfields recruiting organisation, which is now functioning as the sole agency for indenting colliery labour. They have been asked to consider the question of doing away with all forms of control at present being exercised by the coalfields recruiting organisation. It is reported that the employers' representatives have agreed to communicate their decision to the Centre by September. The coalfields recruiting organisation came into being when, after the end of the war, the Government agreed to meet the labour needs of collieries provided the industry bore the whole cost of the recruitment in Gorakhpore. Whatever decisions are eventually taken, it is to be hoped that the Central Government will abide by the spirit of Mr Nanda's undertaking to use no compulsion but only persuasion when asking employers to do their "shopping" at the employment exchange.

Taming the Cow

During the Rajya Sabha debate on the Bill for the Prevention of Cruelty to Animals, many members complained that vague phrases like "unnecessary suffering and pain" and "unnecessarily cruel manner" would make it difficult to define offences. How hard it is to define cruelty, especially under Indian conditions, has also been illustrated by the dramatic circumstances under which the Central Deputy Minister for Agriculture, Mr. M. V. Krishnappa, has had to order the suspension of "Operation Wild Cow" on the Delhi-U.P. border. The technique of cow-catching by the expert horsemen has been described thus in the daily Press: "A cow is chased around till it is exhausted. One of the horsemen then jumps down and holds it by the tail. Another catches it by the horn. A deft kick fells the cow, which is then tied up. A cart is brought to the spot which is overturned over the cow, which is made fast to it. The cart is then set on wheels and the cow is transported to a special camp where it is tamed before being handed over to a Government-managed *goshala*". To determine the degree of cruelty inherent in these operations is a nice philosophical problem, but the villagers of Sanauth had obviously made up their minds beforehand when they surrounded the car of Mr. Krishnappa. Earlier, they had chased some of the cow-catchers who, it is reported, fled for dear life. If only cruelty had been involved, more humane methods of catching the cow could perhaps have been found. But the Government is also up against the forces of superstition, which are harder to overcome. One of the arguments against cow-catching advanced before Mr. Krishnappa was that crops, half eaten by the cows, grow taller and denser afterwards. If this had been true, large parts of U.P., Punjab and Kashmir would never have had any food problem. On the contrary, they would have suffered the embarrassment of plenty, with an estimated 20,000 to 25,000 wild cattle munching away the crops for the best part of the night and, when opportunity offered, in the daytime too.

Long-distance Bus Services

An application for a licence to operate a long-distance bus service from Madras to Bangalore has recently been filed by the Madras State Transport Department. The move has perhaps been inspired by the U.P. Roadways scheme, although the Madras State Transport Department has run bus services to Tirupati for some years with the Andhra Pradesh Government's approval. Extending inter-State road transport facilities will increase the demand for bigger diesel buses. The demand will increase further if private operators too are allowed to run long-distance services. There has long been a need for express buses charging a little extra by way of fares and freights. They proved useful in Kerala, when the railway link between Ernakulam and Quilon was not available. Tourists and pilgrims from north India who visit the south often use chartered buses. The growth of road transport in the south is due mainly to the good roads which make it possible for vehicles to run at high speeds. Long-distance bus services are also necessary because transport facilities to many centres located far away from railway stations are inadequate. It is possible that the expanding road transport services will compete with new railway extensions, such as the one from Vellore to Conjeevaram, and bring about greater efficiency.

British Insurance Results

A review of the work of the British Insurance Association in 1958-59 was presented by the chairman, Mr. C. F. Trustam, at the annual general meeting in London recently. The Association has a membership of 253 companies. The figures given by members having their head offices in the U.K.—they transact about 80 percent of the total home and overseas business of the British companies—cover the net premiums written in 1958. There is also an analysis of the investments, together with a comparative statement for earlier years. In 1958, the member-companies of the Association showed an increase of £82,779,000 (6.2 percent) to a new record of £1,425,134,000 in total premiums (that is, life and non-life). The average annual increase in the previous five years was £83,378,000 (7.75 percent). The increase in 1958 was thus slightly below average, but it is explained that in the earlier years there was greater inflationary pressure and the "real" increase in 1958 almost certainly exceeded the average. There was an increase of 9.5 percent in 1957 and 11.6 percent in 1956.

It is interesting to note that a larger proportion of the *new* premiums in 1958 came from life (53 percent) than from non-life business (47 percent). Over the previous five years, 58 percent of the new premiums came from non-life and only 42 percent from life business. In 1957, 59 percent came from non-life and 41 percent from life business. Yet, life premiums formed 42 percent and non-life premiums 57.8 percent of the total in 1958, against 41.6 percent and 58.4 percent, respectively, in 1957. The swing in favour of life premiums indicates a greater emphasis on saving and protection of life, although there is no reason to think that the protection of property has suffered. The non-life premiums of the British companies increased by £39,035,000 (5 percent) during 1958 to £823,205,000. The rise was rather less than before, as the gains totalled £241,771,000 (44.6 percent) over the five years 1953-57, representing an average annual increase of 7.7 percent. The 1957 rise was well above the five-year average, being £69,120,000 (9.7 percent). The new premiums in non-life business in 1958 came mainly from accident insurance, and 13 percent came from fire insurance. There was a decrease in marine premiums. The increase in accident premiums probably came largely from motor business and the decrease in marine premiums was related to the recession in trade and shipping. The balance of the premiums in the non-life portfolio followed the same pattern—greater emphasis on accident business, representing the increasing importance of motor and liability business, and less emphasis on fire and marine business.

The investments held by the companies at the end of 1958 totalled £5,527,938,000, an increase of £378,723,000 (7.4 percent) during the year, compared with an increase of £359,188,000 (7.5 percent) in 1957. At the end of 1958, the combined assets of the life and non-life funds were held as follows: 13.6 percent in mortgages; 22.4 percent in British Government and related securities; 3.9 percent in Commonwealth Government, provincial and municipal securities; 21.5 percent in debentures, loan stocks, preference and guaranteed stocks and shares; 18.5 percent in ordinary stocks and shares; 8.9 percent in properties and ground rents; and 6.8 percent in other investments. The bulk of the invested funds, of course, were life funds. The different investment pattern for life and non-life funds illustrates the different conditions governing the two types of business. The most notable feature is that 22.3 percent of the non-life funds were put in the foreign Government securities category, against 0.5 percent of the life funds, although the overseas business of the British companies is not entirely non-life. It is also notable that in non-life business larger cash reserves are necessary than in life business.

Fertiliser Factories for the South

A recent official review of industrial progress in Madras refers to the possibility of establishing a urea factory in Neyveli. Sanction for the project is subject to the availability of foreign exchange. It is also likely that the delay in plans for the extraction of up to 3.5 million tons of lignite a year may necessitate the postponement of the project for some time. Andhra Pradesh, it is reported, may have a fertiliser plant much earlier, for the Government of that State has a special development fund of Rs. 10 crores earmarked for a project in Telengana. The plan to start a fertiliser factory near Kothagudem or Ramagundam has also acquired greater importance since the recent recommendation of some U.S. experts to increase fertiliser output. As more coal will be available from the Singareni field, the chances of starting a big fertiliser factory similar to Sindri in the public sector are considered bright, and it is said that the foundation-stone of the plant might be laid in January. In view of the great industrial possibilities of Neyveli, a factory for electric meters has recently been licensed there. Seshasayees of Trichinopoly are sponsoring the venture, which is expected to cost Rs. 32 lakhs. The factory which it is proposed to establish in Vadalur will supplement the output of meters, the demand for which is likely to rise as the use of electricity in the south spreads. The Madras Government's rural electrification programme, for example, proposes to provide power supply to 5,000 more villages during the next two years; this will not be difficult, since power supply from the Periyar scheme is now available to the Madras grid.

Industrial Progress in Andhra

An indirect reply to the resolutions passed at the zonal conference of the South Indian Chambers of Commerce was given by Mr. G. L. Nanda, Central Minister for Planning, Labour and Employment, in his speech at the recent meeting of the Hindustan Chamber of Commerce. He said that, States should allow the Centre to guide the development of industries in different areas without showing any parochialism. A recent memorandum submitted to the Andhra Pradesh Government says that only 4 percent of India's total capital is invested in that State, and it has received few licences for establishing new industries. Although the State is the leading producer of rice, it has no fertiliser factory. The memorandum notes that although Andhra Pradesh produces 6,315 tons of barytes a year, it still lacks a paint factory. Furthermore, the regulation of industries has not so far helped the development of the State. The memorandum, therefore, asks for a bigger outlay on industry under the third plan and urges the establishment of a big engineering workshop at a cost of Rs. 1.5 crores. But the most interesting point in it relates to a plea for the local manufacture of steel and wire ropes to meet the needs of the Singareni Collieries. A factory costing Rs. 36 lakhs may be able to turn out 10,000 tons to 15,000 tons of ropes for the coal industry. This proposal may receive special consideration from the Central Government since it now has a large interest in the Singareni Collieries.

Flood Control

The Government of India's flood control policies seem to be as unpredictable as the floods themselves. For instance, the welcome increase of Rs. 83 lakhs in U.P.'s flood protection budget this year contrasts strangely with the Centre's rejection of the State's innumerable appeals last year for more funds; in fact, as a result of the refusal, most of the field staff in U.P. was retrenched. The annual toll of floods, of course, is not confined to U.P., but extends to many States including Assam, Bihar and Jammu and Kashmir. In Assam alone, the annual damage to crops from floods is estimated at Rs. 7 a sown acre. The second plan provides Rs. 60 crores for flood control measures, but the fear has been expressed that at the present rate of progress, not more than two-thirds of the sum is likely to be used. Central loans to States for flood protection worked out to only Rs. 8 crores during the first three years of the plan. Early this year, a high-level committee on floods criticised the Central and State Governments for their failure to evolve a master plan for controlling floods. That the failure often brings a colossal waste of public funds is clear from the story of the Banaras Ghats, about which a statement was made in the U.P. Assembly a few days ago. The Minister for P.W.D., Irrigation and Power announced that work on the famous Ghats will be suspended pending a full investigation of the "Nawabi drains" of the city and other corrosive factors. During the past four and a half years, about 16 Ghats have been built or repaired, but all of them have tumbled down almost as fast as they have been built. Ghat building in Banaras is by no means an easy task, as is clear from the history of the Scindia Ghat which took nearly a century to construct. It is believed that Mr. Chintaman Deshmukh, after a visit to Banaras when he was Finance Minister, succeeded in persuading the Central Flood Control Board to sanction Rs. 45 lakhs for rebuilding the Ghats. In a hurry to spend the money, the State Government immediately embarked on the work, with the lamentable results which are now apparent. The "Nawabi drains" built in the days of Moghul rule have been blamed for the fiasco, but an investigation has become difficult because no one knows where precisely these drains are. Indeed, the alarmists seem to have discovered that a large number of buildings on the banks of the Ganga in Banaras are built right on top of the drains.

Industrial Activity

Corrected for seasonal fluctuations, *Capital*'s Index of Industrial Activity showed a rise of 7.53 points during December 1958. There were increases in sugar, jute, yarn, cloth, cement, coal, pig iron, finished steel, paper, tyres, motor-cars, bicycles, electricity and railway ton-miles. Tea showed a drop.

Impact of Automation

In view of the mixed feelings with which automation is received in industry, there will be widespread interest in *The Economic Implications of Automation in Europe*, a dispassionate study just published by the U. N. Economic Commission for Europe. It is written by an Englishman and two Russians. The report draws only general conclusions, and on the whole sticks to familiar ground, but it has some interesting comments on the prospects for automation in under-developed countries. Automation has naturally developed fastest in countries where industries using flow techniques are established, where potential markets are greatest, and where finance is available for large-scale investment. But although the dice are heavily loaded in their favour, it may also pay the more backward countries to concentrate on automation techniques. They have at least one major advantage. Starting an industry from scratch, they can move directly to automated production "without the need to follow religiously in the step-by-step developments more common to those countries whose traditional industries had their origins in the industrial revolution." The abundance of cheap labour may seem to make automation, one of whose major virtues is its economy in labour costs, a waste of money. But the authors point out "that in every rapidly growing economy, the increase in capital investment has been greater than that in employment." In any event, they consider that the costs of automation have perhaps been over-stressed. In the case studies which are a valuable feature of the report, it is shown that a new automated plant is not always a great deal more expensive than a comparable conventional one. Equally important, and perhaps more difficult to overcome, is the problem of training the technicians needed for the machines. An appendix on the formidable training programme for Russian "automation and telemechanisation specialists" suggests how hopelessly inadequate the educational resources of the underdeveloped countries are likely to remain unless help is given from outside.

INDIAN COAL PRODUCTION

A STATEMENT attached to the Administration Report on Indian Railways gives the quantity in tons of coal produced in India for the year 1898 which is as follows:

Bengal	...	3,585,990 Tons
Punjab	...	85,862 ,,
Central Provinces	...	149,709 ,,
Assam	...	200 329 ,,
Central India	...	134,726 ,,
Nizam's Territory	...	394,622 ,,
Baluchistan	...	10,667 ,,
Burma	...	6 975 ,,

giving a total outturn of 4,568,880 tons against 4,063,127 tons in 1897. The outturn from the Bengal Collieries is steadily advancing, being in 1885 only some one million tons; in the year 1898 this had increased to nearly four million tons. In the Central Provinces the outturn varied from year to year, reaching its highest in 1888, when it was 157,768 tons, which figure has never been touched since that year. The outturn from the province of Assam shews a very remarkable progress. In 1855 it was 43.707 tons; this has been steadily increasing year by year until in 1898 the output was 200,329 tons. Still more remarkable progress is shewn by the collieries in the Nizam's Territory: 1887 was the year in which operations were commenced with an outturn of only 3.259 tons, which has doubled and trebled itself year by year, until in 1898 the outturn totals up to 394,622 tons, this being nearly 30,000 tons in advance of the previous year. The Kurhurbaree and Serampore Collieries, which are worked in connection with the East Indian Railway, continue to increase their output the total number of labourers employed being 6,512 and the outturn nearly 10,000 more than in 1897 the average cost on the nett output being only Rs. 1-15-5 per ton.

Without Prejudice

Suit Against the Pseudo Voice

(FROM OUR LEGAL CORRESPONDENT)

THIS is a curious form of libel and passing-off action such as we have not come across before. The suit had not, at the date of the report before us, been disposed of, wherefore nothing in the observations following must be construed as an attempt to prejudge the ultimate issue to be decided by the court. The question is whether the successful imitation on television or radio by one person of the voice of another without that other's permission can be actionable. There are, of course, voices and voices. After reading the report of this case, the writer tested the matter at issue for several nights by listening to and trying to identify various announcers and commentators by their voices. In nine cases out of ten, it was impossible. One found that the voice, over the air, of any one average educated Briton is virtually identical with that of any other. They are indistinguishable. On the other hand, there are exceptions (and now we must tread cautiously for fear of contempt as we are getting to the crux of the case). The gruff aggressive snarl of Sir Winston Churchill, for instance, the slow fascinating Wessex drawl of Mr. John Arlott, the precise, pedantic, super-correct English—and here we are indeed on dangerous ground, for he is the plaintiff—of that famous stage and film actor, Mr. Alistair Sim, are as to each one of them so unique and well known that the life-like imitation of the voice of any one of them, if not acknowledged to be an imitation, might undoubtedly convey the impression that it was the actual character speaking. Is that actionable?

Now the facts were that Messrs H. J. Heinz and Co. Ltd had embarked upon an advertisement programme on commercial television. They were the first defendants. The scheme for this programme, prepared by the second defendant, comprised six short sketches. These sketches included a cartoon of a human figure not resembling Mr. Sim, nor indeed any known person. There was a commentator to the sketches and his voice accompanied them. This gentleman was an actor. He had, in the past, simulated the voice of Mr. Sim. Quite a number of persons who knew Mr. Sim thought that the voice was his voice. They thought also that by permitting—as they wrongly assumed he must have permitted—the use of his voice in this way, he was acting in a manner beneath his standing as an actor; and as an individual, too, for Mr. Sim is a scholar and a former Lord Rector of one of the Scottish universities. Mr. Sim filed a suit for damages for libel and "passing off", that is, for passing off as his voice the voice of some other person. He also claimed an injunction prohibiting the continuance of the alleged offence. The case opens up interesting possibilities. Suppose, for instance, that the cartoon of the human figure was that of the late Mr. Oliver Hardy of Laurel and Hardy fame, portraying the part of Henry the Fifth in an imitation of the voice of Sir Laurence Olivier or Mr. "Schnozzle" Durante as King Lear in a simulation of the golden tones of Sir John Gielgud. Would that be a libel on the two actor knights or otherwise actionable if the voices were genuinely mistaken by the public as theirs?

Well, the writer has a pretty strong opinion as to the answer but will not venture to disclose it as Mr. Sim's case is, as far as one knows, still *sub judice*. It would make a good law moot for debate. Mr. Sim, while the case was pending, applied for an interlocutory injunction to restrain the defendants from broadcasting the commentary until the case was heard. This was refused by the High Court, from whose decision he appealed further to the Court of Appeal (Hodson, Morris and Willmer, L.JJ.). The appeal was dismissed, their lordships holding that the issue to be tried in the libel suit was broadly the same as the issue to be tried in the passing-off suit, that is, whether the voice could reasonably be understood to be the voice of the plaintiff, and, if so, whether the use of it damaged the plaintiff's reputation. As in a libel action, so also in a passing-off action, the court will not prejudge these matters where there is a live issue which must ultimately be decided by a jury; and the application had been, the Court of Appeal held, properly refused in the court below. *Quaere* whether an action for passing-off would lie for the unauthorised imitation of a man's voice.

(*Sim* v *H. J. Heinz and Co. Ltd and another.* 1959. 78. *Law Notes.* 110.)

The above reminds one of the rather analogous case, heard a good many years ago of the late Mr. Dunlop, the famed inventor of the Dunlop tyre. He was in his old age on bad terms with the great company which bears his name. In appearance and attire, Mr. Dunlop was a thick-set, shortish, homely, long-bearded figure, rather carelessly dressed; in fact, a typical working engineer of his day although a well-to-do man withal. He was proud of his comparatively humble origin and ordinary workaday appearance and attire. The company with which, if one remembers rightly, he no longer had any connection, in advertising the Dunlop tyre in the Press throughout Britain and elsewhere, published a full length picture of what was represented to be Mr. Dunlop with the famous tyre.

In doing this, it had not the least intention of giving offence or causing damage to the old gentleman. But the pictures—there were several different ones—depicted him as what he was not; a tall, well set-up, distinguished aristocrat, arrayed as for Ascot, beard neatly trimmed, grey top hat, swallow-tailed coat, spats and cane. Far from being flattered, the veteran was furious. He sued the company for damages. He lost his case. True, the publication of his "portrait" was unauthorised by him. But it could not be said to have damaged his reputation. In fact, it was intended as a compliment, and the law's "ordinary reasonable man" would take it as such. So in Mr. Sim's case, a good deal may turn on what sort of human figure the cartoon portrayed; and also what were the actual words which the voice alleged to be an imitation of that of Mr. Sim actually uttered. We must wait and see.

Here is a case of interest to landlords which may or may not be followed in India. Part of a house having been let furnished at a rent of £2 a week, a rent tribunal reduced the rent to £1 a week in 1955. The tenant left and the landlord relet the premises at £3 a week, having first, at the request of the new tenant, spent £70 on redecoration and improving the furnishing. The landlord, having determined the tenancy two years later, can the tenant recover a sum equal to £2 a week for the period of his tenancy?

Yes, said the Court of Appeal (Lord Evershed, M. R., Ormerod, L.J. and Lloyd-Jacob J.). Once, as for any premises, a rent had been entered on the register pursuant to the Rent Control Act, 1946, that was the rent for those premises, until it was changed by some subsequent determination, or until the period for which the entry was made expired and the effect was not limited to the rent payable during the currency of the particular contract which was the subject of tribunal's determination. (Note: "determination" here means "decision").

DURGAPUR

Those friends thou hast, and their adoption tried,
Grapple them to thy soul with hoops of steel

— SHAKESPEARE

Steel, for more than a generation, has grappled Simon-Carves to Indian industry in ever closer friendship. In many contracts for coke ovens and other steelworks construction at Jamshedpur and Burnpur—and now at Durgapur—Simon-Carves have contributed to India's industrial growth and have been rewarded with many friends and much experience.

The vast enterprise of Durgapur is an outstanding example of Indo-British friendship and co-operation—an enterprise which British engineers, British banks and the British Government have united to help India to bring to reality.

Simon-Carves, as a member of the British consortium ISCON, are proud to be responsible for the coal preparation plant, coke ovens, by-products plant and power station, and for the training of many Indian engineers to build and to operate this great steelworks.

A Ditcher's Diary

WOULD NOT CLAIM TO FOLLOW THE AFFAIRS OF the Congress in Uttar Pradesh very closely, but) such study is required to realise that something 'rious is the matter with it. And the fact that comes so soon after the Kerala agitation must e a source of additional embarrassment to the arty. Dr. Sampurnanand is obviously a good deal ss popular with his own Party men than any emocratic Premier needs to be. Why then is he ill in office? Maybe, he likes it. But it has so been said that some people "higher up" like m; and since I know nothing at all about his pponents, it may be that they would not be any nprovement on Dr. Sampurnanand and his deeted team. There are charges galore, but it ems hard to believe that personal considerations e not more important. The suspicion grows at most of the State Congresses have their ting's men", and these have neglected to retain cal support. Undemocratic, I know; but I have evidence that leaving it all to the local boys ill improve matters. It must sadden Mr. Nehru t a little that this should have happened in his vn State, once the citadel of Congress strength the country. I am wondering whether it may t hold a clue to the galloping decay of the Party. ne U.P. Congress has looked Delhi-ward for erything, and Delhi has taken U.P. for granted; id thus one has corrupted the other in about ual proportions. This is the undoing of all olitical parties and administrations, this taking ings for granted. Not even so unlettered an ectorate as India's will accept such humiliation ing down, and what the Congress has to start orrying about is not only how to win over the ghty odd Congress M.L.A.s in Uttar Pradesh but so the majority of the people in general. It must ve given considerable comfort to the communists at Central intervention is being spoken of in ttar Pradesh too, but more than that is at stake. or all its faults, the Congress Party has been a gnificant factor in the stability this country njoys; and its decay and disintegration can be oked upon with indifference only by those who ve a vested interest in chaos.

IF THERE IS ANY PROSPERITY AROUND, I WOULD BE enthusiastic about distributing it fairly and idely throughout the country as Mr. Nehru apurently is. Since my visits to Delhi and Madras e brief and infrequent, I will give him the bene of the doubt that opulence abounds in those o cities. This should really strengthen the claim am going to put in for poor Calcutta—which rtainly has no prosperity and could do with some ven by Delhi and Madras. Arrive in the city y way you like. The stretch from Dum Dum is e of the dreariest in the world, and the visitor gins to wonder whether he is entering a city or aving one. The squalor around the Kidderpore cks is best left undescribed. The two railway ations have been giving shelter to goodness ows how many refugee families for goodness ows how long. In the middle of the city, where e airlines have their offices, beggars swarm over wcomers like flies on a wound. To my knowdge, no city of comparable size anywhere in the orld wears its poverty so conspicuously as lcutta, and I am still wondering which part it n be that Mr. Nehru saw and I have not yet scovered. It is probably true that once the villges were denuded for the benefit of towns and ties; similar was the experience in all countries newly industrialising themselves. But it is altogether unrealistic to talk today of giving back to the villages what is supposed to have been taken from them. Since independence, in one form and another large investments have been made in the countryside; and the return has been sadly disappointing. If prosperity is to spread all around, I think it has to emanate and radiate from the cities where exists the nucleus of a modern economy. The outlay will have to be many times larger for anything like equal returns in the villages. Food production is certainly important, and everything must be done to increase it. But to carp at the imagined prosperity of the cities is to be on the wrong track. It comes, I suppose, from that incurable nostalgia in the Indian mind which feeds on a wholly illusory and idyllic view of Indian villages. Mr. Nehru, the maker of modern India, should encourage the growth of a truly urban attitude to life—or his industrialisation will ever be on shaky psychological foundations.

AFTER READING THE KERALA GOVERNOR'S REPORT, I am beginning to see why the Indian communists have declared their faith in parliamentary democracy. When all they need is a couple of years in office to be able to get within a short head of establishing themselves permanently, there is little point in going to the trouble of starting a revolution. The conspiracy may have failed in Kerala, at least for the time being, but that is only because there was a democratic government at the Centre. How different it would have been had the communists themselves been in power in New Delhi and the Kerala Government able to rely on their support. It would not have taken two years to establish a "people's democracy", and there would have been no question of un eating an unpopular government no matter what the methods used. I am wondering if the lesson has been learned by the Central Government—the lesson that it is all too easy in India today for an anti-democratic party to perpetuate itself in power once it has contrived to get elected. There are so many opportunities for subversion: the State is too strong in terms of power and too weak in terms of efficiency; democratic institutions have no roots; the judiciary is being corrupted; official nepotism and patronage are becoming established as a tradition; the Constitution has been amended too often and for insufficiently sound reasons; the bureaucracy is overinflated. All these will provide the communists with ideal instruments for perpetuating their power once they have got themselves in the position where there is no Central Government to hold the ring—that is at the Centre itself.

MUCH AS I DOUBT THE EFFECTIVENESS OF THE Dowry Bill, which I see has now been referred to a joint select committee of Parliament, I cannot help but feel that the move, although belated, is an important contribution towards ending this old-fashioned and unpopular custom. I cannot imagine that the legislation by itself will stop the evil—such things have to be backed by solid public opinion. But I can agree with the Central Law Minister, Mr. Asoke Sen, that the Bill does provide the legal machinery for those who want to use it. The main objection to the dowry system is not only that it commercialises marriage, which in any case will always have its more material aspects, but that it degrades the man who demands it and often impoverishes the unfortunate father who has to find it. The custom, I suppose, arose out of the traditional hindu prejudice against having unmarried daughters in the family; the subsequent scramble for suitable husbands led to the more eligible ones being placed at a monetary premium. There does not seem to be much justification for this nowadays when young men are beginning to rate their self-respect in terms of personal achievement and not against what they are able to fetch in the marriage market. Circumstances have changed for the girls too; no longer is the breeding of innumerable children regarded as the highest form of female endeavour, while the harsh economic facts of the modern world are sending an increasing number of them out to find jobs and wider interests as clerks, typists, air hostesses and so on. For them, lifelong spinsterhood may not be altogether a desirable fate, but at least it has become a bearable one. I am told there are still many conservative mothers, even in what might be considered enlightened Indian society, who just do not like the idea of their daughters earning their livings, and that there are even some who, like Jane Austen's Mrs. Bennets in *Pride and Prejudice*, are not above acting foolishly to procure husbands for them. But times are changing—I have heard lately from the lips of quite a number of people who have been visiting Calcutta again after many years, that the thing which strikes them most, apart from the general deterioration, is the speed with which Indian women are emerging from the restrictions and prejudices of the centuries. And perhaps this is the most progressive sign of all.

MANY SEA-TRAVELLERS BETWEEN INDIA AND ENGLAND must have thought, as they passed through the Strait of Gibraltar on a clear day, of the old proposal to link the two continents at that point by a submarine tunnel. When you have Guadalmesi Point in Spain just four miles on your left and Siris Point in Africa just four miles on your right, the idea seems not beyond human achievement. And indeed it is once again under serious consideration. At a time when the Mont Blanc tunnel is already half-built, when the Channel tunnel is being carefully prospected, and when the French are casting about for a means to bring Saharan oil and gas to power-hungry Europe, one would do well not to be too sceptical about the suggestion. An eminent Spanish engineer, the Marquis of Mulhacen, has the designs all ready and they are being studied by the French power authorities. Unfortunately, the notion the traveller gets from a ship of the size of the task is quite mistaken, because the narrowest part of the strait, although only eight miles wide, is impossibly deep—more than 3,000 feet. The Strait of Gibraltar is not the product of a slow erosion, like the English Channel, but of a mighty cataclysm; hence the great depth. But our Spanish Marquis has mapped out a course for the tunnel, from near Tarifa to Tangiers, which would involve 20 miles of undersea work but depths no greater than 1,200 feet. There are transverse galleries in the tin mines of Cornwall as long and as deep as this that have never shown any sign of seepage. The Marquis calculates that a pilot tunnel, big enough to carry a gas or oil pipeline, could be built in two years, and a railway tunnel in five or six. The cost, naturally, has a lot of noughts in it, especially when stated in devalued Spanish pesetas. But the economic point of the tunnel is no longer to link impoverished Spain with poorer Morocco, but to connect prosperous Europe with the Saharan oilfields. In that light, a string of noughts becomes less formidable.

CHAIRMAN, DR. B. N. GHOSE'S REVIEW

Speech of Dr. B. N. Ghose, M.B., F.R.F.P.S. (Glas.), Chairman, Board of Directors, Bengal Chemical & Pharmaceutical Works Ltd. at the Annual General Meeting of the Company held on 14th August, 1959.

Gentlemen,

It is my proud privilege and pleasure to extend to you a hearty welcome on behalf of the Board of Directors to the 59th Annual General Meeting of your Company.

The Directors' Report and Audited Accounts for the year ended 31st March 1959 has been in your hands for some time and with your permission I will take them as read.

The vacancy in the Board of Directors caused by the death of late T. C. Ray has been filled by the co-option of Dr. B. P. Sur whose experience and knowledge will be of help to us. During the year Mr. S. P. Sen who was the Manager and Secretary of the Company retired from his services on 31.10.58. We must acknowledge the valuable services that have been rendered by him to the Company during the tenure of his office. Your Board of Directors have appointed Mr. N. Adhikari who was one of the Asst. Managers as Manager and Ex-Officio Director of the Company.

After the termination of the unhappy strike on the 16.6.58 working on the whole has been satisfactory. Last year I brought to your notice that several cases between the workers and the Company were pending before the Supreme Court or the Tribunal. Of those, the case relating to the demand for increase in D.A. has been decided by the Supreme Court in favour of the workers resulting in increase of expenditure to the extent of Rs. 2 lacs. Other cases have not been disposed of and are still pending before the Tribunal.

Expansion of Kanpur Factory

Expansion of our Kanpur Factory is progressing rapidly and it is expected that it will be completed within this year. Incidentally our branches both at Bombay and Kanpur have given good account of themselves by maintaining high degree of efficiency in production and increase in the volume of sale.

Your Company has been functioning during the year economically and it has been our attempt to reduce our expenses wherever possible so that we can increase our savings.

Domestic market conditions were difficult still the Company was able to record a higher sale during the year. The available working period was 9¾ months only due to strike in the two of our principal factories, viz. Maniktala and Panihati. I am glad to say that still we have been able to make a bigger profit.

Gentlemen, incentives produce the maximum out of an individual. Following this principle your Directors have decided to give the employees a special Bonus equivalent to ¼ of their monthly basic pay as an incentive. This is apart from the bonus which the Directors may declare after the Annual General Meeting. I hope this special bonus will serve its object and it will create an atmosphere for industrial peace and harmony in future. Very often we get demands from labour unions out of all proportions to the profit. I would request the Union leaders to guide the workers in the right direction so that there is increased production and less wastage of raw materials. They should also be educated to be useful citizens of the country and the "code of efficiency and discipline" should be implemented.

In the year under review higher production with lower consumption of raw materials has resulted in an increase in the profit and this has enabled the Board of Directors to recommend to you a higher dividend on all classes of Ordinary Shares and increased transfer to reserves. It is also a known fact that higher dividends will attract capital which we may require for our new schemes. While increasing the percentage of dividend we have also kept in view the fact that our resources have to be conserved for future expansions.

Licensing Policy for Raw Materials

The licensing policy for raw materials has been liberalised to some extent. We appeal to the Authorities to be more liberal particularly in the case of actual "Users" this year. Of course we have been utilising indigenous materials for the manufacture of our products to the maximum.

There has been as in previous year a good demand of our products but in some cases our productions were restricted due to shortage of essential imported basic raw materials. In addition to the very restricted import policy pilferages and thefts in the docks are on the increase and the delay in analysis by the authorities as reported last year has not improved. Our export business has not met with the desired result due to the difficulties mentioned above over and above the difficulty of getting shipping space. Quick delivery from the docks may help in reducing thefts and pilferages. Heavy demurrages have to be paid for the delay in delivery which increase the cost of production. Availability of indigenous raw materials was on the whole satisfactory but there was an all round increase in the cost. Consequently prires of our products have gone up to some extent. Other factors for increase in prices are increase in expenses besides central and other taxes.

I may repeat this year that our transport problem has further improved on account of private road transports. We do not depend on the uncertain despatch position of the railways. I hope the Railway authorities would give necessary attention to their system of working.

Alum Plant

Your Board of Directors have in view certain schemes for expansion. Our Alum Plant is running 24 hours giving maximum output but it is still far short of the demand. We have in our view expansion of the Alum Plant. This will require large quantity of Sulphuric Acid and we will have to put up a bigger Sulphuric Acid Plant. We have also in our mind completion of our office building which is now a 3-storeyed one. We will have to build 4 more floors.

It should be understood that for these expansion programmes it would be necessary that the Company's financial resources should be augmented and substantial reserves should be built up. We should at the same time cut down our expenses and expand our sales to increase the profits.

Gentlemen, expansion projects do not always meet with the desired result as it has to depend upon many external factors. I will cite one instance of such project of our expansion. We being one of the largest coal tar distillers decided to expand our tar distillation plant and spent a large sum of money in view of the fact that the Government planned to construct roads and highways under Five Year Plans. To our surprise our old suppliers of crude tar, two of the well-known Iron and Steel manufacturers, cut short and gradually stopped their supply for reasons best known to themselves. Thereupon we approached the Durgapur Coke Oven authorities who promised to supply us half the quantity of our requirement but they failed. Fortunately we are getting some quantity of crude tar from Hindusthan Steel who in spite of their best efforts are unable to increase their supply due to shortage of tank wagons.

Any forecast about our future project is liable to a big margin of error But generally speaking we look forward to the future which we hope will show substantial progress in spite of innumerable difficulties.

Profit & Loss Account

The profit for the year after providing for depreciation etc. is Rs. 15,85,497.59 as compared with Rs. 9,96,518.90 for the last year. After distribution of profits and usual transfer to various funds Rs. 79,731.72 has been carried forward in the Balance Sheet as undistributed profit. Your Directors have recommended a dividend of 7% on all classes of Ordinary Shares free of income tax Rs 8,10,000/- has been transferred to taxation reserves. Our net block amounts to Rs. 76,96,000/-.

Examination of Profit & Loss A/c and Balance Sheet for the year ending March 1959 will show further that there has been a reduction of expenses under the head Consumption of Raw Materials compared to last year's figure This is due to lower arrived cost of some Raw Materials and other favourable factors. This has been referred to before.

The increase in expenses under Repairs to Plant and Machinery etc. is due to the fact that Machineries remained idle for about 3½ months and had to be thoroughly overhauled before resumption of work.

Repairs to Buildings were also undertaken due to easy availability of cement and other building materials.

The increase under Rates and Taxes is due to the fact that Municipal Corporation rates were increased with retrospective effect and had to be paid during the year.

The increase under the head Miscellaneous Expenses is due to the inclusion of expenses for the publication of numerous Notices appearing in the Press on account of strike.

The increase under Conveyance and Travelling is due to extra expenses for free transport which had to be provided to loyal employees to carry them to the factory during the strike period.

Bad Debts

There has been considerable reduction under this head Attempts are being made to realise debts previously written off. This year's Profit & Loss A/c shows an improvement in this direction.

Balance Sheet—Reserves and Surplus

This shows an increase of more than 3 lacs over last year's figure This is due to transfer of larger amounts to Reserves and higher carry forward balance of Profit & Loss A/c.

Secured Loans

This shows a reduction of 4 lacs over last year's figure because of our repayment of 2½ lacs of loan to I.F.C. in addition to the usual payment of annual instalment of 1½ lacs.

Current Liabilities and Provisions

This shows an increase of about Rs 7 lacs which is principally due to provision of increased taxation and dividends due to higher profits earned.

Thanks Giving

I should finish my statement with an expression of grateful thanks to those officers, staff and workers of the Company who have rendered valuable services. I would also thank my colleagues for their ungrudging help and our customers for their unfailing co-operation without which successful results could not have been achieved.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to Members.

Money

THE CALCUTTA MONEY MARKET

SLIGHT RISE IN ADVANCES

Wednesday, 19th August.

THE level of advances outstanding in the Calcutta money market has risen slightly during the past week. Both the jute and sugar mills show increased requirements, while fresh borrowings have been recorded against grains and seeds storage. Advances to the textile industry remained more or less unchanged. The interbank market has become exceedingly tight during the week, the call rate moving up to 3 percent. At this level, there are a few lenders and it is expected the rate will increase shortly. The reason for the present tightness is demand for money to invest in the State loans which opened for subscriptions today.

The exchange market has remained steady, and there has been a regular supply of tea and gunny bills. Remittance was poor. On the London market, the pound lost fractionally against the twin dollars and most important Continental currencies.

THE SILVER MARKET WAS FIRM DURING THE PAST week due to a bear squeeze. The price rose from Rs. 198.25 to Rs. 201 for ready delivery, and the rate for forward delivery was quoted at Rs. 200. The London and New York silver prices were quoted at 78-3/8d and 91.375 cents.

Gold was quiet on lack of support and the price dropped from Rs. 123 to Rs 122.50 The sovereign at Rs. 78.25 showed a fall of 25nP.

DURING THE WEEK ENDED 14TH AUGUST. 1959, Government of India Treasury bills for Rs. 48,73,75,000 were sold in favour of the Reserve Bank.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills sold from 12th August to 14th August amounted to Rs. 2 crores.

A DROP OF RS. 8.79 CRORES TO RS. 1,680 12 CRORES in active notes is the main feature of the return of the Reserve Bank of India for the week ended 14th August, 1959. The total note issue was Rs. 90 lakhs higher at Rs. 1,701.13 crores. Notes held in the Banking Department consequently rose by Rs. 9.70 crores to Rs. 21.02 crores. Deposits showed an all-round increase. Deposits of the Government rose by Rs. 1.18 crores to Rs. 54.55 crores, as did other Government accounts by Rs. 28.55 crores to Rs. 41.75 crores. Balances of commercial banks at Rs. 95.09 crores showed an increase of Rs. 18.49 crores. Balances held abroad declined by Rs. 1.78 crores to Rs. 11.66 crores. Investments improved by Rs. 44.58 crores to Rs. 363.89 crores. Other loans and advances declined from Rs. 70.07 crores to Rs. 69.20 crores, of which advances to scheduled banks against usance bills amounted to Rs. 40 lakhs (Rs. 50 lakhs). Ways and means advances fell from Rs. 27.40 crores to Rs. 22.05 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 7th August, 1959, shows a drop of Rs. 2.05 crores to Rs. 544.97 crores in total deposits. Investments in Government securities are up by Rs. 82 lakhs to Rs. 347.94 crores, while other authorised investments remain unchanged at Rs. 10.22 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 1.42 crores to Rs. 173.29 crores. Cash and balances are, in consequence, shown at Rs. 22.77 crores or Rs. 4 76 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 7th August, 1959, shows Demand and Time liabilities at Rs. 727 46 crores (Rs. 23.44 crores on account of borrowings from banks) and Rs. 1,082.12 crores (Rs. 27.23 crores), compared with Rs. 734.98 crores (Rs. 24.69 crores) and Rs. 1,081.36 crores (Rs. 28.67 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs 1 lakh and Rs. 2.60 crores to Rs 40.80 crores and Rs. 73.16 crores, respectively. There is a rise of Rs. 39 lakhs to Rs. 714.82 crores in investments. Advances and bills discounted at Rs. 953.68 crores show a drop of Rs. 2.44 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.3 percent and 52.8 percent, against 6.7 percent and 52.6 percent.

PROVISIONAL FIGURES OF INDIA'S FOREIGN TRADE by all routes, that is, sea, air and land, on private and Government accounts during June 1959, according to information available so far in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*: excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: exports Rs. 42.33 crores, re-exports Rs. 1.21 crores, imports Rs. 77.28 crores. The import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. *Treasure*: exports (including re-exports) of currency notes Rs. 10 lakhs, gold nil and current coins (excluding gold coins) negligible: imports of currency notes Rs. 17.72 crores, gold Rs. 7 lakhs, current coins (excluding gold coins), negligible. *Balance of Trade*: subject to the limitation in import figures mentioned above, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 33.81 crores.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 14-8-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
14-8-59	15-11-59	3,00,00	Rs. 2.530%
7-8-59	8-11-59	3,00.00	Rs. 2.519%

NEW RULES FOR ISSUING SHARE CERTIFICATES

USEFULNESS OF MEASURES DOUBTED

(FROM A CORRESPONDENT)

THE Companies (Issue of Share Certificates) Rules, 1959, were brought into force by the Central Government by a notification dated 30th June, 1959, in exercise of the powers conferred by Clause (b) of sub-section (1) of Section 642 of the Companies Act, 1956. While there is a general unanimity of opinion that measures for tightening up the procedure followed by companies in connection with the issue of share certificates are essential in the interests of the investing public as well as of the company itself, serious doubts have arisen as to the effectiveness of the measures now introduced and the feasibility of their application in practice, except at a cost incommensurate with the degree of additional security likely to be achieved. Before proceeding to consider the difficulties likely to be experienced by certain companies in giving effect to the rules, and their effectiveness, it appears necessary to examine the general framework.

Rules 1 and 2 give the short title and certain definitions including a definition for "board", which will be commented on later in this article.

Rule 3 deals with the issue of share certificates in connection with an issue of capital, whether by way of initial capital, or additional capital, in the form of bonus shares or rights shares. The words "and on surrender to the company of its letter making the allotment" occurring in Rules 3(1) (quoted in full later in this article) place this matter beyond doubt. The provisions concerning the nature and number of signatures to be affixed, made in Rule 3(2) and the proviso thereto, are applicable only to issues covered by Rule 3(1), and *not* to those covered by Rule 4.

Rule 4 deals with the issue of a new certificate in lieu of one which is defaced, lost or destroyed. Incidentally, no rules have been made in connection with the issue of new certificates by way of consolidation or sub-division of existing certificates. The signatures required in connection with the sealing and signing of certificates issued under Rule 4 will, in view of what is stated in the preceding paragraph, be in accordance with the articles of association of the company concerned, unaffected by Rule 3(2).

Rules 5 to 7 deal with the form of certificates and the procedure connected with the printing and custody of the forms, blocks, etcetera, the maintenance of registers and permanent records.

Allotment Letter

Reverting to a detailed discussion, Rule 3(1) of the Rules states: "No certificate of title to any share or shares in a company shall be issued except in pursuance of a resolution passed by the board and on surrender to the company of its letter making the allotments." In insisting on the surrender of the allotment letter, the framers appear to have lost sight of the fact that there are occasions when a company in general meeting decides to make a bonus issue, and to that end straight away makes an allotment of shares to existing shareholders according to a definite ratio without issuing any letters of allotment. In such cases, the question of surrendering the allotment letter to the company cannot arise. The Rule as it stands, therefore, requires to be suitably amended to provide for this contingency.

Rule 3(2) reads: "Every such share certificate shall be issued under the seal of the company, which shall be affixed in the presence of two directors and of the secretary or some other person appointed by the Board for the purpose and the two directors and the secretary or the other person shall sign such share certificate.

"Provided that not more than one of the aforesaid two directors shall be a managing or whole-time director or, where the company has a managing agent, a director appointed by the managing agent in pursuance of section 377 of the Act or a director to whom section 261 of the Act applies."

"Board" means, according to the definition given in Rule 2(b):

"The Board of Directors of a company or a Committee thereof consisting of not less than three directors not more than one of whom shall be (i) a managing or whole-time director or, where the company has a managing agent, (ii) the director appointed by the managing agent in pursuance of section 377 of the Act, or (iii) a director to whom section 261 of the Act applies."

In view of the above definition, no committee can be appointed unless at least two directors, (hereinafter referred to as outside directors), neither of whom is a managing or whole-time director, or a director appointed by the managing agents or connected with them *in the manner indicated*, are available for appointment on the committee. This is the actual position in a number of old-established managing agency companies, where all the directors are whole-time or managing directors—as they should be, if the managing agents are to serve faithfully the interests of the companies under their management. In such cases, the resolution authorising the issue of shares must necessarily be passed by the entire Board. New issues, such as those covered by Rule 3(i), however, come about only occasionally and compliance with the requirements of Rule 3(i) should not, therefore, present any difficulty.

Outside Directors

Considerable difficulty has, however, been created by the proviso to Rule 3(2) which requires that the seal of the company shall be affixed in the presence of, and the share certificates signed by, the secretary (or some other person appointed by the Board for this purpose) and two directors, at least one of whom must be an outside director. These difficulties are discussed below:

(a) As stated earlier in this note, there are a number of managing agency companies whose Boards consist entirely of managing directors or whole-time directors. These companies will be unable to issue any share certificates of the type referred to in Rule 3(1) until and unless they enlarge their Board by the inclusion of outside directors.

(b) Apart from the fact that the proviso implies a lack of confidence in the managing or whole-time directors of a company (and also a director appointed by or connected with the managing agents), in as much as such directors must in the matter of signing share certificates be associated with an outside director, the question arises whether such association will in fact, and not in mere theory, operate as an effective check against an unauthorised issue of share certificates. The outside director will normally look to the whole-time or managing director to see that the certificates placed before the former to be sealed and signed, are in order in every way and as, in any case, he (the outside director) is not in a position personally and at all times to supervise the work of the share issue department of the company, he must, in actual practice, content himself by relying on the managing director's signature as the only means of satisfying himself that the share certificate on which he places his signature is wholly in order. To expect from such an outside director anything further than this is to shut one's eyes to the realities, and thus to be lulled into a false sense of security.

Strengthening Existing Laws

The articles of association of some companies provide that share certificates shall be issued by one or two directors, or by one director and the secretary; in others, the officers mentioned are one director and the managing agent. If these provisions are considered inadequate and require to be strengthened, the minimum requirements may be increased to two directors and the secretary (or some other authorised official of the company) where there is no managing agent, or one director and the managing agent—where there is a managing agent. The proviso to Rule 3(2) is redundant, ineffective and unworkable, and should be deleted. The additional security, if any, to be attained by roping in outside directors in the routine of signing share certificates is quite incommensurate with the cost involved in time, money and administrative convenience.

In this connection it has been argued that certain irregular issues of share certificates that were made about a year or two ago could not have been prevented even if the rules now under discussion had been in force at the time. It would be quite unrealistic to controvert the argument. We are familiar with the cliché about locking the stable door after the horse is stolen. Here, however, is a case in which the horse *can* be stolen, with the stable gate *locked*: even when a second or a third lock is used, each interlocked with the first, the aggregate effective security achieved will be no greater than that provided by the first.

Are You a Small-scale Industrialist?

This will interest you

To help small scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

Stocks and Shares

PRICES STEADIER DESPITE RESTRICTED BUSINESS

EIGHT STATE LOANS OVER-SUBSCRIBED

Wednesday Evening.

ON the four days the Calcutta Stock Exchange has been open during the past week business was on a disappointing scale, with little or no investment support. Prices, however, were steadier than in the previous week. But the market still appears to be suffering from a hang-over and unless some of the more prominent bulls decide to lighten their commitments, the technical position may continue vulnerable. The proposed agitation by Leftist parties in West Bengal, which is scheduled to begin tomorrow, is acting as a restraining influence and investors are adopting a wait-and-see policy. If there are no serious disturbances in the city and the Government succeeds in maintaining law and order, *investment support may again be forthcoming.*

The Central Government's decision on the Tariff Commission's recommendations on the selling prices of paper are expected to be made known shortly, and it is for this reason that paper shares were fairly active. Jute shares were comparatively steady as most mills on the river are reported to be earning reasonable profits on simultaneous business. Tea shares were sluggish because the immediate outlook is rather uncertain on account of the proposed wage increases and the possible rise in Calcutta port charges.

Subscriptions for 13 State loans opened today and according to reports received up to the time of writing, the response generally was encouraging. In fact, the Bombay, Rajasthan, Madras, West Bengal, Orissa, Madhya Pradesh, Punjab and Mysore loans were over-subscribed today. Government securities were somewhat quiet as existing issues were being sold earlier in the week for the purpose of applying for the new State loans. Three percent Conversion Loan 1986 closed lower at Rs. 73.55.

Very little business was reported in preference shares but in railways, Dehri Rohtas jumped from Rs. 16.81 to Rs. 17.81.

In the banking section, United Bank of India "D" shares were better at Rs. 5.

There was only one feature in the coal section, namely, Amalgamated which rose by Re. 1 to Rs. 26.62. Other issues were unchanged at around their previous quotations.

In cotton textiles, Elgin improved further from Rs. 15.50 to Rs. 16 and Kesoram hardened to Rs. 17.25 x.d. New Victoria improved from Rs. 1.15 to Rs. 1.25 and Jay Shree from Rs. 10.19 to Rs. 10.31.

Electric supply shares were dull and featureless.

In the engineering group, Indian Iron and Steel fluctuated between Rs. 24.86 and Rs. 25.33 to close at Rs. 25.06 c.d. which was the settlement rate; after hours, the kerb quotation was Rs. 24.30 x.d. Indian Standard Wagon receded from Rs. 92 to Rs. 90.50 while National Iron met with some enquiry and improved from Rs. 8.62 to Rs. 8.75. Textile Machinery were steady at around Rs. 24.25.

Business in jute shares was on a restricted scale but prices were fairly steady and in some cases advanced further, as will be seen from the following table:

	Opening 13.8.59	Closing 19.8.59
	Rs.	Rs.
Agarpara	13.75	14.12
Bally	231	234
Birla	24.19	24.37
Champdany	136	138
Nuddea	62	62.75
Rameshwara	7.87	8

Paper shares met with investment enquiry and most issues recorded gains, as will be seen from the following table:

	Opening 13.8.59	Closing 19.8.59.
	Rs.	Rs.
Bengal	100 x.d.	103 x.d.
India Paper Pulp	24.75	25.25
Orient	38	38.15

Sirpur spurted from Rs. 14 to Rs. 14.75 when it was known that Government sanction for the proposed amalgamation with Sirsilk had not been received; tonight's closing quotation however was slightly lower at Rs. 14.44.

Sugar shares were slightly better, but the volume of business was disappointing. Belsund improved from Rs. 13 to Rs. 13.37, Champaran from Rs. 18.50 to Rs. 19, Dyer Meakin Breweries from Rs. 17.75 to Rs. 18 and S.K.G. from Rs. 10.62 to Rs. 11.31.

Among miscellaneous industrials, Alkali & Chemical were better at Rs. 23.12 as were Angelo Brothers at Rs. 19.25. Britannia Biscuits were taken at Rs. 26.56 and there was a good enquiry for Hindustan Motors with the price improving from Rs. 11.69 to Rs. 12.12. Dunlop Rubber were steady at Rs. 34.50 while Imperial Tobacco were offered at the lower rate of Rs. 11.75. Indian Aluminium were subdued at Rs. 21.94 while India General Navigation were better at Rs. 63. India Steamship were enquired for at Rs. 14.56 and Jardine Henderson were unchanged at Rs. 83, but there were buyers of National Carbon at the higher rate of Rs. 35.37. Rohtas Industries moved up smartly from Rs. 21.56 to Rs. 23.37 on reports of better working. Shaw Wallace were shaded at Rs. 18.37, but there was some enquiry for Sone Valley Cement at Rs. 6.25.

In the mining group, Chrestien Mica Industries were better at Rs. 10.37 while there were sellers of Metal Corporation at Rs. 12.75. Indian Copper were unchanged at around Rs. 4.14.

Very little business was reported in tea shares and prices generally tended to ease.

Bharat Nidhi

The working of Bharat Nidhi Ltd for the year ended 31st December, 1958, shows a profit of Rs. 27,31,666, against Rs. 18,57,047. Provision for taxation absorbs Rs. 16 lakhs, against Rs. 8.9 lakhs. For 1957, the cash dividend on equity shares amounted to 5 percent, but shareholders were given the option to receive the dividend in the form of equity shares of the New Central Jute Mills Co Ltd, valuing the shares at par when they were quoted at Rs. 14 a share. So the dividend in specie worked out to 7 percent tax-free. For 1958, the directors propose to pay a cash dividend of 6 percent, against 5 percent in the previous year. An option has, however, been given to shareholders to take the dividend in the form of equity shares of the Punjab National Bank Ltd. The latter shares are valued at Rs. 12 for the purpose of this distribution, against the present market price of Rs. 22 a share. The dividend in specie works out to 11 percent, tax-free.

Howrah Jute

Commenting on the working of the Howrah Mills Co. Ltd for the year ended 31st March, 1959, the directors say that the more satisfactory results are attributable primarily to the great improvement in the availability of raw jute of the right qualities at prices which enabled the company's manufactures to be disposed of at a profit, but they also re-

CHEMICALS THAT HELP INDUSTRY TO BRING A BETTER FUTURE CLOSER

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS—acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER—Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES—Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES—Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT—Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

fleet a substantial effort to improve manufacturing efficiency and to reduce working costs. The profit has increased by Rs. 8.42 lakhs to Rs. 17.43 lakhs. The ordinary dividend is Re. 1 a share (including an interim of 50nP a share), against nil. Notable allocations include depreciation Rs. 12.34 lakhs (Rs. 14.10 lakhs), wealth tax Rs. 69,500 (Rs. 60,385) and development rebate reserve Rs. 8,008 (nil). General reserve receives Rs. 8 lakhs against Rs. 14.24 lakhs. After other adjustments, there is a balance of Rs. 58,053, which it is proposed to carry forward, as compared with Rs. 32,775 brought in. On account of past losses and depreciation allowances, the company is not liable to income tax and supertax at the present time. Gunny sales declined by Rs. 25 lakhs to Rs. 3.77 crores.

Katras Jherriah Coal

The profit earned by the Katras Jherriah Coal Co. Ltd has fallen by Rs. 2.29 lakhs to Rs. 9.82 lakhs for the year ended 31st January, 1959. The dividend has been maintained at Rs. 6·50 a share, including an interim of Rs. 3 a share. Provision for taxation is allocated Rs. 7 lakhs, against Rs. 7.55 lakhs. Wealth tax is Rs. 11,500 less at Rs. 15,500. Depreciation absorbs Rs 1.03 lakhs (Rs. 1.35 lakhs). After necessary adjustments, there remains a balance of Rs. 1,27,146 to be carried forward, against Rs. 1,68,572 brought in. Raisings amounted to 344,864 tons against 348,035 tons, and despatches totalled 354,154 tons, compared with 368,730 tons. The directors mention that the capacity of the sand-getting and stowing arrangements at the Laikdih Deep colliery has recently been improved, and a small increase in raisings of selected A grade coking coal from this colliery will now be possible. The reserves of coal at the Seebpore colliery are, however, decreasing rapidly and will be exhausted within a few years. In January 1959, permission was received from the Controller of Capital Issues to capitalise Rs. 7.50 lakhs out of reserves. In view of the tax implications, however, the board has decided not to recommend any further action being taken at present.

Bombay Market

PRICES RECOVER ON FRESH BUYING

TECHNICAL POSITION IMPROVES

Wednesday Evening.

THE Bombay stock market was steady last week and share prices recovered on a broad front on replacement buying. Selling pressure abated considerably, but business was done on a restricted scale because of settlement considerations. Lower carry-forward charges during the past week's settlement indicated a healthier technical position. Good corporate news, combined with encouraging advices from the piecegoods markets, helped sentiment.

Tata Steel closed at Rs. 177.75 and Indian Iron were lifted to Rs. 25.15 on strong support from Lyons Range. Tata Locomotive were bought at Rs. 207.50 and Premier Construction were steady at Rs. 357. Alcock Ashdown were transacted at Rs. 256. Motor shares were firm on prospects of increased output. A good report helped improve Hindustan Motors to Rs. 12.12 and Premier Automobile were called at Rs. 139.

There was widespread improvement in the cotton mill group on short-covering. Bombay Dyeing were transacted at Rs. 65.60 and Century were sluggish around Rs. 550 on postponement of the rights share issue. Svadeshi were taken at Rs 248 and Simplex were dealt in at Rs. 164.50. Kohinoor realised Rs. 313. India United Ordinary were done up to Rs. 8.64 and Apollo were offered at Rs. 1.26.

Miscellaneous shares moved in line with the general trend. Among sugars, Belapur were steady at Rs. 319 and Phalton were taken to Rs. 170. In the cement group, Associated Cement made Rs. 149 and Digvijay Cement met with demand at Rs. 151. Among mining shares, Shivrajpur Syndicate were easier at Rs. 91. There was little change in steamship company shares. Scindia Steam were indicated at Rs. 17.92 and Great Eastern Shipping changed hands at Rs. 21.40. National Rayon recovered to Rs 357 on bear-covering and Tata Chemical were supported at Rs. 17.08 Voltas were bought at Rs. 173.

Turnover in banking and insurance shares shrank. Central Bank were quoted at Rs. 50 and Bank of Baroda were bought up to Rs. 101.50 New India Assurance were wanted up to Rs. 61.50 and Vulcan were dealt in at Rs. 21.52.

Electricity supply company shares met with selective support. Tata Power changed hands at Rs. 1.205 and Ahmedabad Electric were taken at Rs. 94. Bombay Suburban were transacted at Rs. 112.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the corresponding Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

You value your car very much

Protect it with Mobiloil

A valuable investment — your car! Naturally you want to keep it in top condition all the time . . . get the best performance out of it.

Speaking of performance — take MOBILOIL. This premium grade motor oil gives your car *full protection*. From cold starts to high-temperature speeds, MOBILOIL maintains a tough, unbroken film between moving engine parts. This separating film cuts down on unnecessary friction, too. Result — *increased power* and *longer engine life!*

Mobiloil

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research

STOCK MARKET RESUMES RIS

INDUSTRIALS AND GILT-EDGED HIGHER

London, 19th Augu

THE effects of the sharp setback on Wall Str did not last long and the stock market in t past week soon resumed its advance to rec further widespread and often substantial gai The pace of the advance was somewhat slow than that prevailing in the previous week, but was clear that such a hot pace could not last definitely. Equity shares and particularly ind trials continued to forge ahead on selective dema stimulated by election hopes, coupled with go business news and general optimism about t economic outlook. Steel shares were again o standing but virtually all groups went ahe Among stores, Harrods ordinary advanced but t preference reacted following an increased bid control by the House of Fraser, the shares of wh also eased. The advance in leading issues, pa cularly after the week-end, reflected a growi shortage of stock in the market. Following t result of the cash portion of the Governmer refinancing activities, the gilt-edged market to a distinct turn for the better and there w modest gains on balance in response to a sm investment demand. Greek issues were inclin easier in foreign bonds, but otherwise there w very little interest with the exception of Mc tenegro 5 percents which were marked higher debt settlement hopes. Insurance shares improv following the unexpected merger proposals tween Royal Exchange and Atlas Assurance wh banking and hire-purchase shares were firm. shares turned irregular after earlier firmne Selective Johannesburg buying of gold sha brought firm conditions prior to the week-end, b some reaction was recorded later mainly unc the influence of the disturbances in Natal. D monds reacted on profit-taking. Coppers present an irregular appearance but other base me shares tended higher. The initial irregularity rubber shares gave way to a firmer trend la and prices closed higher on balance. Tea sha were quietly firm.

The Money Market

By normal standards, the turnover in funds the money market during the past week was the small side at times, and conditions fluctuat somewhat. Generally credit was in short supp and on most days, discount houses were obliged take varying amounts of privilege money and t authorities came forward with the usual assistan in order that books could be balanced. There w however, no necessity for borrowing on Bank r terms. Rates for night money were mostly in t neighbourhood of 3 percent and sometimes up 3¾ percent, but on one occasion, when the supp was more plentiful some loans were arranged down to 2 percent. Business in bills was on moderate scale with the rate of 3⅛ percent p sisting. The weekly Treasury bill tender caus no excitement and the average rate was virtua unchanged at £3 9s 8.13d percent.

Stock Market Prospects

The *Investors' Chronicle* market newslet writes: London gilts remain uninteresting. Indi trials may pause. Financials remain in dema in a firm Kaffir market which looks ready to ch lenge its June highs. Coppers are quietly fi on the higher metal price. Oils are strong follo ing American demand. Wall Street's immedia outlook is uncertain. Buying interest in Lond industrials was renewed by German and oth Continental demand, good business news and t Government's improved electoral prospects. W Wall Street fearing a rundown of the defence p gramme and with the possibility of a swing in t political pendulum, caution is indicated.

Activity on Wall Street

In the foreign section, dealings in the default dollar bonds of communist countries were mu slower than in the previous week. However, few Polish issues added fractions to a point and t inactive Chinese Government Railway 5 percei of 1951 moved up nearly 3 points. Russian I perials were quoted at $44, and $5 was asked the over-the-counter market. Elsewhere, seve Germans were over a point higher with Italia also scoring gains of up to a full point. Denma 5½ percents and Norwegians firmed following ea easiness, with Greeks unchanged to a shade high and Serb 8 percents a point off. In connection w the Greeks, the Foreign Bondholders Protecti Council told Reuter that Greece had not yet ask for any debt settlement negotiations. Amsterd 5¼ percents were a little lower and New Zeala 5½ percents were neglected. Australians and t Union of South Africas showed fractional chang either way with Japanese Government bon steady. Chile 3 percents were traded at or slight above the $46 level. Among United States gove ment obligations, short-term Treasury bonds mov into a higher ground under continued good dema but later backed away from best levels due ma ly to technical factors. Intermediate and lor term Treasury bonds generally followed the tre in short-term issues, with trading largely prof sional. Investment quality corporates eased f lowing early firmness, while speculative rail lir had a slow week. Convertibles regained part an early loss caused by the break on Wall Stre

New Delhi

NO DEVALUATION OF THE INDIAN RUPEE

GOVERNMENT BLAMES TRADE FOR RISING SUGAR PRICES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government has no intention of devaluing the Indian rupee, it is learnt. The recent suggestion that India should devalue her currency in order to step up her exports has been rejected. India has been mobilising her resources to pay for the imports needed for development purposes. Devaluation will make these imports more expensive, and as such, will curb them. The implementation of development projects will thereby be hindered.

Finance Ministers to Meet

During the two-day session of the Congress Working Committee, which will be held in New Delhi on 22nd and 23rd August, the Finance Minister, Mr. Morarji Desai, will be convening a conference of the Chief Ministers and Finance Ministers of the States. Chief Ministers ordinarily attend the meetings of the Congress Working Committee. This will be the first such conference of State Finance Ministers to be held since Mr. T. T. Krishnamachari's first year of office as Central Finance Minister. The topic for discussion will obviously be the raising of additional resources by the States to finance the third five year plan.

Mr. K. B. Lall to Visit Europe

The Director-General of Foreign Trade, Mr. K. B. Lall, will visit the countries belonging to the European Common Market next October to study conditions for importing capital goods and industrial raw materials for the third five year plan. As matters stand, there is a growing unbalance in India's foreign trade with the western countries, particularly West Germany. Her normal export earnings, averaging Rs. 600 crores a year, can barely meet the cost of imports needed to support the present level of the economy. Export promotion measures so far have failed to achieve the desired result. Mr. Lall's appraisal will, therefore, help determine the basic export policy for the third plan.

Mr. Desai to Abandon West German Visit

The Finance Minister, Mr. Morarji Desai, will have to abandon his proposed visit to West Germany, it is learnt. The West German Government has regretfully informed him that due to holidays and other prior engagements, the majority of the people he is interested to meet will be away from West Germany during September, the month of his proposed tour. Mr. Desai, it has been suggested, should visit West Germany on his homeward journey from the World Bank meeting, say, in October. The Indian Finance Minister had planned to visit West Germany and the U.K. on his way to Washington to attend the Bank's meeting in September. He will be accompanied by the Finance Secretary, Mr. A. K. Roy, and the Economic Adviser to the Ministry, Mr. Anjaria. The Commerce Secretary, Mr. Ranganathan, will accompany him to London. Mr. B. K. Nehru, who has been here for consultations, will leave shortly for Moscow to settle the details of the Russian credit offer of Rs. 180 crores for the third five year plan. According to his present plans, Mr Morarji Desai will return to India *via* Japan and Hongkong.

New Sugar Policy

The question of sugar prices was raised in the Lok Sabha last week. The Food Minister, Mr. A. P. Jain, gave figures to show that there were adequate supplies of sugar in the country. He blamed the trade for higher prices. The Government, it will be recalled, was advised against sugar exports. It is true that compared with the original target of 100,000 tons, very little sugar has been exported. But the policy itself was based on the idea of subsidising exports by raising domestic prices. The Indian sugar industry assured the Government that sugar prices would not be increased beyond the level prevailing before the export policy was announced. But prices did rise after the policy was announced. This is borne out by the Food Minister's own statement. "While these control prices were generally effective until April 1959, when the prices started rising, there were reports that most of the factories were charging higher prices, without, of course, revealing them in their books, which would have enabled legal action to be taken. According to the earlier decision, the Government had the power to requisition up to 25 percent of the production of each factory in case of need. In the light of the new situation, it has been decided that in future, the Ministry of Food and Agriculture should have the discretion to take over any higher percentage or the entire production of the factories for direct allotment. It is apparent that no control over the trade, in any commodity, is possible until the dealers are licensed and made subject to the control and supervision of licensing authorities." It may be added that many sugar factories run their own wholesale and even retail shops. This is true of the Delhi area, at any rate.

Manufacture of Radio Receiving Valves

An agreement has been reached with Philips of Holland for the manufacture of radio receiving valves in Bharat Electronics (P) Ltd. The agreement covers the manufacture of a large number of types of receiving valves required not only for the broadcast receiver industry, but also for the special requirements of the communications services and defence equipment. It is expected that when peak production is reached, the country's requirements will be met to a very large extent. Side by side, the capacity of Bharat Electronics (P) Ltd is being increased to the extent necessary for the manufacture of valves. The capacity of the factory will go up by about 33 percent on this account.

Petroleum Consumption in India

Advance estimates of the likely consumption of petroleum products during the third five year plan period have been made. According to them, total annual consumption is likely to be of the order of 7 million tons by the end of the second plan period, and the requirements are likely to increase to 12 million tons, if not more, by the end of the third plan period.

Clinical Thermometers

National Instruments Ltd, Calcutta, a Government of India undertaking, proposes to manufacture clinical thermometers in collaboration with a Japanese firm. The terms of collaboration are under examination by the company and have also been referred to the Government for scrutiny.

Spun Silk Mill in Assam

It is proposed to set up a spun silk mill in Jagi Road in Assam in the public sector under the second five year plan. The Government of Assam has concluded an agreement with a Japanese firm for the import of machinery on a deferred payment basis. The contract has been registered with the State Trading Corporation, and the essentiality certificate and import licence have been obtained. The State Government is also making efforts to procure the items of machinery which are available in the country.

Project Report for Special Steels

The possibility of entrusting the preparation of the detailed project report and subsequent detailed designing of the alloy, tool and special steels plant —services generally provided by consulting engineers—to an Indian firm is being explored. It is hoped that a decision will be taken shortly. The Government has already received offers from British, French and German firms to prepare the project report as well as a detailed design.

Iron Ore Exports to Japan

Some 848,021 tons of iron ore were exported to Japan in the six months ended June 1959. This will be seen from the following statement:

Port	Quantity in tons
Calcutta	234,862
Bombay	8,025
Madras	152,828
Visakhapatnam	24,685
Masulipatnam	64,167
Kakinada	41,282
Karwar	3,209
Mangalore	17,697
Cuddalore	131,357
Redi	86,800
Paradip	14,921
Kandla	68,184
Total	848,021

Woollen Carpet and Drugget Industry

The All-India Handicrafts Board has recently completed a survey of the woollen carpet and drugget industry, which is generally found in a scattered form in the Mirzapore and Bhadohi areas, in Agra, Gwalior, Kashmir, and other places. Two questionnaires were prepared by the Board to cover separately both the small and the organised establishments which form this important cottage industry. Information on the number of looms and their size, production capacity, the number of persons employed, sources of finance, etcetera, was collected. Figures relating to the total consumption of different raw materials like raw wool, hand-spun and mill-spun yarn in the industry were collected. The views of the manufacturers and their suggestions to improve the present structure of the industry were also collected.

Raw Wool Exports to U.K.

India's exports of raw wool to the United Kingdom increased to 6.9 million lbs during January-May 1959, compared with 5.9 million lbs during the corresponding period of last year. Imports of wool tops from the U.K. showed a rise of 238,000 lbs during the same period when India bought 5,358,000 lbs.

India received 364,000 lbs of wool and hair tops during 1958 from Japan, compared with only 38,000 lbs during 1957. Japan has recently emerged as a big exporter of wool tops to this country. The Ludhiana hosiery industry is the chief user.

Offer to Air-India International

The manufacturers of the *Comet-4* jet aircraft have made certain tentative proposals for selling their aircraft to Air-India International, and in return, are willing to purchase some of the latter's *Super-Constellations*. The details of the proposals are yet to be discussed. Air-India has already purchased three *Boeings*, which are due for delivery in early 1960.

Japanese Experts on Small Industries

At the request of the Government of India the Government of Japan has sent a delegation of experts on small industries. It arrived on 4th August and is now visiting different States. It will make its recommendations to the Indian Government about further lines of development of cottage and small industries, with particular reference to: (a) the functioning of the industrial extension service; (b) credit facilities and the agencies that provide such facilities; (c) marketing assistance and other items like workshops, space on rent in industrial estates, supply of machinery on hire-purchase, common facility workshops, etcetera; (d) the rôle of small industries as ancillary to larger factories; (e) the organisation and development of industrial co-operatives; (f) the survey and analysis of the possibilities of development of such industries in different areas; and (g) the methods for the collection and maintenance of statistics.

COHEN REPORT GETS GOOD RECEPTION IN BUSINESS CIRCLES

REDUCTION OF PRICES URGED

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer, Mr. Heathcoat Amory, is entitled to feel that the Cohen report reinforces his own opinions on prices. Since he introduced his Budget last April, he has been stressing the fact that this year presents industry with a good opportunity to reduce prices. The Cohen Council says the same thing, and suggests how this may be done, and in spite of the refusal of the T.U.C. to acknowledge even the existence of the report, it has received a good reception otherwise, especially in business circles. The main theme of the report is that Britain's economy has at present the opportunity to break away from the inflationary spiral. The chance, it is indicated, has been created by the success of the Government's restrictive measures during the economic crisis in 1957 and their gradual lifting. The report points out that prices have been steady for the past year, unemployment is down, production is rising and public investment is expected to go ahead. It declares: "There is now evidence of restored confidence."

If for industries whose productivity increases, some incentive rise in pay and profits is combined with price reduction, there should be room for pay increases in other industries without raising the general price level. Claims for shorter hours generally have the same effect in raising costs as those for higher pay. But, it is added significantly, if productivity increases, more leisure is a natural way of realising part of the gain. Suggestions for preventing a further rise in prices or even lowering them and yet allowing some degree of pay increases are outlined. Two main lines of approach are put forward: (1) Checking the ability of employers to grant pay increases by limiting their power to raise prices to cover them. Suggestions include the control of profits, direct price control and the establishment of a commission to investigate certain types of price increases. (2) Pay and profit decisions should be influenced through some central co-ordinating body or by creating conditions in which the separate decisions will conform with the national interest. Also contemplated is a conference of employers, trade unions, boards of nationalised industries and the Government. This will exchange information and views or reach conclusions about the desirable course of money incomes which could guide those concerned in individual pay negotiations. The Council emphasises that it neither rejects nor advocates the proposals which come from unspecified sources.

Radcliffe Report Due

The report of Lord Radcliffe's Committee on the working of the U.K. monetary and credit system has now been received by the Treasury. The Government's intention is to publish it shortly. This will allow ample opportunity for the expression of public opinion on the committee's proposals before any decision is reached to include them in the next Finance Bill or make them the subject of special legislation. The report is believed to be unanimous. This means it is endorsed by trade union representatives and bankers, economists and industrialists. Set up in April 1957, by Mr. Thorneycroft, the committee held meetings over a period of more than two years and received evidence from practically everybody associated with the subject of its enquiry. Sittings were in private. A full record of the evidence will be annexed to the report.

The committee's report will deal, in detail, with the constitution and activities of the Bank of England, and its relations with the U.K. Treasury. Early in 1958, after the Parker tribunal of enquiry into the alleged Bank rate leakage, the Government asked the committee to construe its terms of reference, as including the position of part-time directors of the Bank. The main issue on this was whether the present arrangement—by which people with interests in other banks and in commercial firms are part-time directors—imposes too great a strain on possibly conflicting loyalties. Other questions which the report is expected to cover include: the effect on the credit system of the growth of hire-purchase finance companies; the relation between Bank rate and the balance of payments; whether the credit squeeze of recent memory frustrated the development of enterprising and well-managed undertakings in the national interest; whether the limitation of bank advances, in accordance with the Government's policy, was, in fact, offset by recourse to other sources of credit.

Sterling Area Trade

The overseas sterling area's trade has only just started recovering from a recession whose severity is not perhaps generally appreciated. Just how bad things were is evident from a perusal of the G.A.T.T. report on international trade which has recently been issued from Geneva. It brings out the fact that the main weight of last year's slump in primary commodity markets fell upon the overseas sterling area whose losses in export earnings between 1957 and 1958 accounted for about two-thirds of the total reduction suffered by non-industrial regions of the world. Export earnings of 50 trading units forming the area fell between the two years by 6.9 percent, or if the Middle East oil countries are excluded, by 11 percent, while the value of imports was only 5.4 percent down, and remained nearly 20 percent above the 1950-56 average. It was fortunate that the sterling area countries were enabled by greatly increased financial aid and loans to maintain their imports well. Their export earnings had been lagging behind the rising import demands from 1955 to 1957, and the gap became very large in 1958. The combined trade deficits of the sterling area overseas nearly doubled between 1955 and 1956, more than doubled again in 1957, and increased further last year to about £600 million. If the surplus oil countries are excluded, the deficit of the rest is shown to have risen in 1958 by 24 percent to roughly £1,000 million. It is remarkable that the sterling currency was able to carry this growing burden and still improve so strongly in value and reserves.

No less than 63 percent of last year's fall in the export earnings of the overseas sterling area was accounted for by wool. The reversal which has taken place in the wool market in 1959—already reflected in the easing of Australian import restrictions—is part of a general recovery in the value and volume of primary commodity exports which are now well under way. As the G.A.T.T. report suggests, stocks of sterling commodities are particularly low in the industrial countries, and the present revival of industrial activity should bring about a significant recovery in the area's export earnings. That, in turn, will improve export opportunities and add to the strength of sterling.

Steel Output Rising

The steel output suffered the usual seasonal drop in July, but the weekly average production remained well above that of July 1958, with 320,300 tons a week, compared with 315,000 tons a week. The Iron and Steel Board, in releasing these figures, states that the incidence of holidays on the output was felt more heavily this year than last. As for the general situation in the steel industry, the Board finds a definite improvement. The consumption of steel in Britain increased further in the second quarter following a slight increase in the first. Deliveries of steel to home users were also higher in the second quarter than in the first, but were still short of those in the same quarter of 1958. This was largely due to the fact that consumers and merchants were still running down their stocks, as they have been doing since April 1958. Deliveries are still below the pre-recession peak in most cases, but there have been some significant increases recently. Exports by producers increased during the second quarter, but were still well below the peak level reached during the corresponding period in 1957.

State Pension Scheme

Draft regulations are published clarifying the Government's retirement pensions scheme and the link with those run by private employers. The National Insurance Act, 1959, under which the new regulations are made, aims to introduce to national insurance a measure of graduated contributions and retirement pensions related to employees' earnings. It is planned to start the collection of graduated contributions in April 1961. A registrar will be appointed who will decide on applications for contracting out. Right of appeal will be allowed in the first instance to an adjudicator "of high legal standing" and still further on points of law to the High Court or Court of Session in Scotland. The Act lays down two principal tests for deciding whether an occupational pension scheme, organised by an employer, should allow him to contract out of the graduated scheme. First, it must provide for life a pension at least equal to the maximum graduated pension which could be earned in the national insurance scheme over the same period, and these equivalent pension rights must be preserved on change of employment—in other words, the rights must be transferable. Secondly, it must be a "recognised superannuation scheme." being financially sound and with its equivalent pension rights properly secured.

The draft regulations, now published, amplify these conditions. It is laid down that the first test will nevertheless be satisfied even though the occupational pension may be terminated or suspended because the pensioner assigns or tries to assign it to a third party, or even though it may be suspended if he is in prison. On the second test, the draft regulations lay down conditions which a trust deed or insurance contract must fulfil if they are to be accepted as the basis for a contracted-out scheme. Foreign trusts and schemes will not normally be acceptable. The regulations also lay down that any employer intending to apply for a contracting-out certificate will be required to give at least one month's notice of this to the employees concerned.

Rising Retail Sales

Retail sales were 5 percent higher in June than in the same month last year. In July, the Board of Trade estimated that the increase had been between 4 and 5 percent. As prices were 1 or 2 percent lower this year than last year, the volume of goods sold went up by more than 5 percent. In the whole of the second quarter, retail sales went up by 5 percent (slightly more in volume because of lower prices) whereas the increase in both February and March—a period of pre-Budget hesitancy—was only 2 percent or 3 percent. Reductions in purchase tax gave a stimulus to buying of durable household goods, sales of which were a quarter higher than last year. Fine weather helped shops selling clothing and footwear.

Bonus for I.C.I. Workers

A profit-sharing bonus of more than £5½ million will go to about 93,000 employees of Imperial Chemical Industries out of the company's earnings of £38½ million for 1958. After tax, this is equal to an average of £44 6s 7d for each worker. Since 1954, when the profit-sharing plan was started, the amount declared each year has been used to buy ordinary £1 shares in the company for the workers. When an employee has 40 or more shares to his credit, they are registered in his name. He is then free to sell them. When the latest bonus will be paid, on 13th October, nearly 8 million shares will be acquired for the workers. In the past, nearly two-thirds of the shares were retained by employees.

The Indus Problem

A "serious" deterioration in relations between India and Pakistan, unless agreement is reached on the Indus river dispute, was forecast by Mr. W. Iliff, vice-president of the International Bank for Reconstruction and Development, in explaining the reasons for the conference now being held in London between representatives of India, Pakistan and the International Bank at which the possibility of a treaty between the two nations is being considered. Pointing out that the cost of the proposals for improved irrigation would be around £350 million, he said that the countries interested in giving financial help included Britain, Australia, Canada, New Zealand, West Germany and the United States. It is hoped that construction will begin early next year.

Air-India International Plans

Flying times between Bombay and London will be cut by more than half next April when Air-India International puts into service its American *Boeing 707* jet airliners. The airline is also making provisional plans for a transatlantic service starting in 1960 or 1961. Mr. B. R. Patel, General Manager of the company, who is in London for talks with officials of B.O.A.C. and Qantas, the Australian airline, said that his company has three *Boeings* on order. The plan is to introduce one *Boeing 707* service a week between Bombay and London, with a flying time of 10 hours and a single stop at Rome.

Burma Ships Jute to Dundee

The first commercial shipment of jute fibre from Burma has arrived in Dundee, and further shipments are on their way. Since 1947, Dundee has been dependent for its supplies on Pakistan and the prospect of an additional source of fibre is welcomed. The Burmese Government is encouraging jute growing under a special programme and, in 1959, it is hoped to export a maximum of 6,000 tons to Dundee and the Continent. Dundee alone uses about 140,000 tons of raw jute a year, so Pakistan will remain the principal supplier.

Symposium on Astronautics

The Commonwealth Spaceflight Symposium will meet at Church House, Westminster, on 27th August, when scientists from Britain, Australia, Canada, India and South Africa will describe their progress in astronautics. The participation of Commonwealth universities in space research will be discussed.

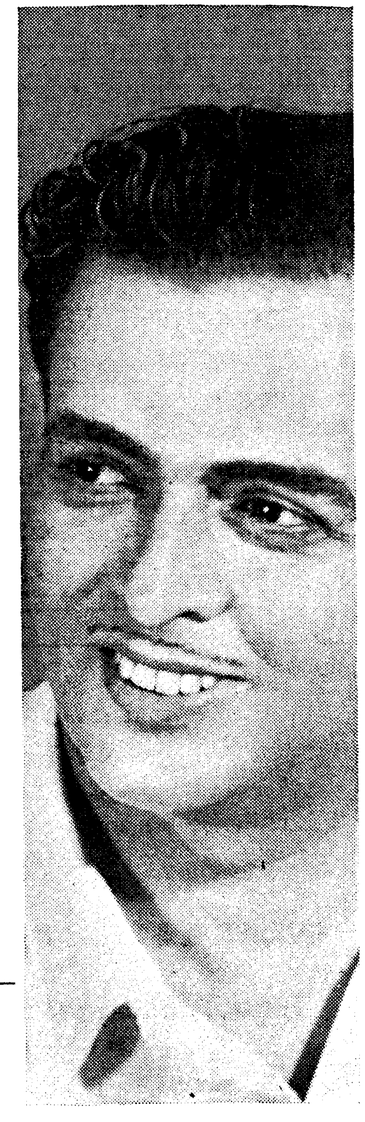
"To bring you the best, my friend, an expert tastes 600 types of tea every day!"

A friend calls on Bhai Sahib

Why, that's an incredibly large number, Bhai Sahib—and are all the types finally used?

No, and that's just the point! For every type of tea that Brooke Bond select, there are many that their expert tea-tasters reject. And out of the selected types they create different combinations called 'blends'. Do you know, an average Brooke Bond blend is made up of some 30 types of tea?



But why mix so many types of tea to get just one blend?

Good question! You see, each type of tea has its own characteristics. One type may have excellent flavour and yet makes a weak liquor, another may have little flavour but gives the right colour. It's very much like the cooking your wife does. The recipe must be perfect in order to get your favourite dish just right!

But tell me, Bhai Sahib, how do Brooke Bond manage to make blends that have the identical strength and flavour all the time?

Ah, that's where the tea-taster plays a vital role. Each tea-taster in Brooke Bond—and there are a number of them—has years of experience that helps him to select the types of tea which will make the exact blend you are looking for. This is one thing a machine can't do, my friend.

I agree, Bhai Sahib, there's no substitute for human skill and experience.

COMMONWEALTH COMMERCIAL TRENDS

U.K. AID FOR COLONIAL DEVELOPMENT

(BY A SPECIAL CORRESPONDENT)

MORE than £140 million will be provided by the United Kingdom for colonial development during the coming five years. This fact was made known by the Secretary of State for the Colonies, Mr. Lennox-Boyd, in the course of a report to the House of Commons on the funds available to his Department for colonial development during that period. The Secretary of State said that the funds available are those provided under the Colonial Development and Welfare Act Amendment Act, 1959, which extends until March 1964. In addition, the Colonial Office provides advances to the Colonial Development Corporation for schemes of economic development in the colonies. Mr. Lennox-Boyd said: "The total amount available for expenditure under Section 1 of the Act is £140.5 million. This comprises £95 million of the new money provided under the Act, and an estimated balance at March this year of £45.5 million unspent from the funds provided under the 1955 Act. Of the total, a sum of over £23.5 million stood committed to approved schemes in June this year. Details of the approved schemes are set out in the returns of schemes presented annually to Parliament in accordance with the Colonial Development and Welfare Act of 1940."

The current return is expected to be published shortly, together with an announcement of allocations to be made under the new Act. Mr. Lennox-Boyd added that Exchequer loans up to a total of £100 million will be available under Section 2 of the Act to meet the external loan requirements of colonial Governments to the extent that those needs cannot be met from the London market or from other sources. Allocations will not, therefore, be made in advance and loans will be approved as and when the need arises during the 1959 to 1964 period. The Colonial Development Corporation has power under the Overseas Resources Development Act to borrow up to £150 million outstanding at any one time, of which up to £130 million may be advanced through the Colonial Office from U.K. Exchequer funds. The Corporation's capital commitments on current schemes were £18 million. The Secretary of State also said that the question of whether further provision would need to be made for colonial development and welfare in the period beyond 31st March, 1964, would be considered nearer the time.

U.K. Assistance for Nigeria

The £15 million loan which the U.K. Government is making to Nigeria will be spent under the current four-year plan by the Federal and regional Governments on general development. The Federal Minister of Finance, Chief Okotie-Eboh, made an announcement in these terms recently at a Press Conference in London after the talks he had with British Ministers at the Colonial Office. He said the details of how the money was to be spent remained to be worked out, but the Federal Government's responsibilities under the development plan included highways, telecommunications, power supplies, ports and harbours, and airfields and railways. Regional governments were mainly concerned with education, medical and health services, agricultural development schemes, and roads other than highways. Chief Okotie-Eboh explained that the current development programmes of the Nigerian Federal and Regional governments provided for a total expenditure of £153 million. By her own efforts and with the aid of a loan from the International Bank and Colonial Development and Welfare grants, Nigeria had reduced the required sum to about £32 million. The British Government loan—compounded of a £3 million Exchequer loan and a £12 million Commonwealth Assistance Loan, on the lines envisaged at the Montreal Trade and Economic Conference of September 1958—would further reduce the gap. Chief Okotie-Eboh added: "This help from the U.K. Government will ensure that Nigeria enters nationhood with the full confidence that her development programmes will be fulfilled and that her economy will remain strong, so that she will be able to play a full part in the expanding economy of the Commonwealth."

Kafue Hydro-electric Scheme

Work on the successor to the giant Kariba dam, the Northern Rhodesian Kafue River hydro-electrical scheme, estimated to cost about £100 million, is likely to start in 1963, according to the Federal Power Board in Salisbury. The Kafue scheme was abandoned by the Board some four years ago in favour of the Kariba scheme, but is now regarded as the logical and economical continuation of Kariba. It was so described by the chairman of the Board, Mr. Duncan Anderson, who said it would be the next big power undertaking. Plans for the Kafue scheme are in three stages. The first is a holding or coffer dam to stem the flow of the river at the Kafue gorge, the second will be a storage dam 240 miles up the river at the Mechi-Teshi gap, where a banana-shape lake will be formed, and the third will be the provision of two tunnels—one of them 8½ miles long—connecting with a total number of three power stations.

Australian Bauxite Reserves

At a symposium on aluminium held during July in Brisbane, it was said that Australia possessed a third of the world's bauxite reserves, which are estimated at some 10,000 million tons. The estimates of Australia's reserves were given in a report on bauxite deposits throughout the world prepared by senior officials of the British Aluminium Company. The chief geologist of the Commonwealth Aluminium Corporation said that bauxite deposits at Weipa, in North Queensland, were among the largest in the world. He estimated they could eventually yield more than 1,000 million tons of ore, and would in due course enable Australia to assume an important rôle in the world's aluminium industry. In addition to the Weipa deposits, there are large deposits in the northern Territory, northern New South Wales, Victoria and Tasmania.

Funds for Wool Research

A grant of nearly £2 million for wool research has been announced by Australia's Minister for Primary Industry, Mr. Adermann. This is the amount remaining unclaimed from the sale of the £73.6 million worth of wool stockpiled during the second World War, and legislation provides for money unclaimed on 1st July, 1959, to be transferred to the Federal Wool Research Fund. Australia is a partner with the United Kingdom, New Zealand and South Africa in the joint organisation set up to ensure that the post-war sale of accumulated stocks does not cause a collapse of prices. Between 1946 and 1950, the joint organisation disposed of 15 million bales of wool, two thirds of it Australian—in such a way that prices were maintained and good profits assured from both stockpile wool and current clips. Australia's share is £73.6 million. All but an unclaimed £1,920,000 has been distributed to producers.

New Zealand has announced that at 30th June, 1959, her sheep population was 46,025,930, an increase of more than 3.5 million on the same date of the previous year. The North Island has 25,047,815 sheep, and the South Island 20,978,115. India imports about 1 million lbs annually of greasy, scoured and slipe wools from New Zealand.

Locana Corporation

An interesting example of Anglo-Canadian co-operation in the investment and development field is the Locana Corporation, whose Canadian head office is in Toronto. The Corporation (first established in 1953) acts for its group of British, South African and European shareholders as a channel for participation in Canadian development. The policy behind its activities has been inspired by the view that sound and successful long-term investment in Canada can in general only be done in partnership with Canadians. And by virtue of its close connections in Canada, it is able to steer British, and other non-Canadian capital, into participation in sound schemes. The Locana Corporation of London, it should be added, is neither the parent nor subsidiary of the Canadian company, but operates in parallel with it within the framework of the group's policy. The purpose of having European, as well as South African, shareholders in the Locana group is, of course, to supplement capital available from British sources for participation in major Canadian developments. Locana is, therefore, a convenient international channel for investment in Canada, but the emphasis within the group is on British and Canadian interests.

The Corporation's interests in Canada are wide and varied. Thus British shareholders now have a very substantial interest in McIntyre Porcupine Mines, and this interest was secured for the United Kingdom by Mr. Norman D'Arcy, the president of Locana Corporation. He was, with Canadian support, able to overcome a determined effort by a group of American shareholders in the company to gain control. McIntyre Porcupine Mines also have a controlling interest in "Ventures Ltd", and the latter company in turn controls, among other mining companies, Falconbridge Nickel Mines, Hoyle Mining Company, and Frobisher. Important developments are being carried out by these companies at Mattagami Lake (zinc) and Opemiska (copper).

Locana's other main interest in Canada at the moment is in Algoma Steel Corporation. In this case also it appeared, not so long ago, that the control of the company would pass into American hands. In order to safeguard the British and Canadian stake in an important Canadian company, the Locana Corporation joined forces with certain Canadian and British interests and, after a struggle, retained control. Other examples of Locana's current activities are the Betrust Investment Corporation, used as a channel for the passage of British investment capital to Canada, and the Anglo-Scandinavian Investment Corporation of Canada, which acts as an investment trust under Canadian management and direction.

A scheme to enable Locana's shareholders to participate more fully in the Canadian mining industry is now taking active shape. A new company, Locana Minerals Corporation, is being incorporated in Toronto, under Dominion charter, with an issued initial capital of about £1 million. The principal parties will be Locana's "mineral" shareholders (*e.g.*, the Anglo-American Corporation of South Africa and Tanganyika Concessions), and its president will be a leading Canadian mining engineer (Mr. Gordon MacDonnell). The new company's first task will be to arrange for the purchase of an operating Canadian mining company; the next (and much later) will be to take part with other Canadian mining companies or syndicates in major schemes which are too large for any one company to undertake alone. A typical example might be development on the scale of the Mattagami Lake.

SACKING REMAINS FIRM ON SPECULATIVE ACTIVITY

MORE ENCOURAGING REPORTS ABOUT THE NEW JUTE CROP

THE Calcutta jute goods market followed a familiar trend during the past week, in that eavy speculative activity took place after the revious week's buying spree by China. Under peculative influences, heavy goods showed erratic uctuations, passing through a range of about s. 3 from the highest to the lowest levels. Foreign uyers sat out of the market, except for some egligible quantities, and speculators took adantage of the uncertain conditions to make their rofits. New high levels were reached in sacking. Twills, on continued demand for ready goods, oared to Rs. 109.50, thus showing a premium of bout Rs. 9 over the January-March shipment hich was completely neglected. The general rend of the market could be gauged from hessian, hich was not affected by speculation to the same xtent as sacking, although prices fluctuated on a naller scale in sympathy.

Loom Unsealing

At present levels, hessian business is not so rofitable as sacking. For this reason, it is geneally expected that when another 2½ percent of looms re opened next Monday, they will almost entirely e concentrated on sacking. Furthermore, many ooms now running on hessian may be switched o sacking to help satisfy current demand. The .S. burlap consumption and stock figures for uly have got a mixed reception. Those who re disappointed at the drop of 12 million yards consumption from the previous month to 69 illion yards seem to have lost sight of the fact hat the June figure was exceptional, and was new high for that particular month. In fact, n only a very few occasions has that figure been ettered over the past ten years in any month. he July 1959 consumption was 1 million yards ore than in July 1958, and brings the total conumption for the current year to 522 million yards, r an average of 74.6 million yards a month. Total onsumption at this stage is higher than for any orresponding period of the past eight years.

If the Indian mills transfer a large portion of heir production to sacking, which seems more han likely, this may raise hessian rates. It is enerally believed that the Argentine still has he major portion of her requirements to cover. his, together with the anticipated increase in .S. demand during the second half of the year, ight cause a squeeze in this category. Overseas uyers will speed up their purchases if they think hat hessian rates are liable to increase further, which case the demand may be difficult to atisfy. This is particularly true of the United tates, where stocks showed a fall of 14 million ards last month to 271 million yards. This is the owest figure since February this year, and reresents only 3½ months' supply at the current verage rate of consumption; only two months f it are spot stocks.

Raw Jute Firm

Raw jute is steadier than it has been for some ime. Much of this can be attributed to the firmness of the goods market, but it is thought that there will be little change in the general situation even without this support, which over the past week has been of a speculative nature. The mills themselves are mainly responsible for the present attitude of sellers, as over the past few weeks they have been keen to buy jute. During the past week, 250,000 maunds to 300,000 maunds changed hands. The impression that manufacturers are not so well off for jute as they appeared to be has been strengthened by the fact that during the past few months mills' purchases have been negligible. There is no shortage of jute, but sellers are inclined to be reserved due to the fact that upcountry prices are still above the parity of Calcutta rates. Furthermore, reports from upcountry agencies continue to indicate that the quality of new crop arrivals is disappointing.

Reports about the jute crop are more encouraging now from all areas except northern Bengal. In most districts, there has been alternate rain and sunshine, river levels are rising and steeping facilities improving. The harvesting of the crop is well in hand and the setback of recent weeks appears to have been overcome. In northern Bengal, however, there has been very little rain and the water shortage is acute. For this reason, harvesting has been suspended in most places and rain is essential.

Raw Jute Arrivals

Total arrivals of raw jute in Calcutta and mill stations during July amounted to 333,450 bales. This was an increase of 27,750 bales over the previous month, and 9,000 bales more than during the corresponding month of last year. Arrivals during July 1959 were made up of 16,250 bales from Pakistan and 317,200 bales from India. Compared with the previous month, arrivals from Pakistan were up by 2,000 bales, and those from India were up by 53,100 bales, and Indian arrivals 271,350 bales.

Fall in French Jute Goods Production

In France, as in Belgium, the jute industry appears to be passing through a difficult period, and the improvement noted last year has now disappeared. According to reports, production during the period January to May 1959 dropped by about 20 percent. Total output of yarn dropped by 7,106 tons to 34,940 tons, and that of cloth dropped by 5,268 tons to 32,733 tons. The decline was reflected in the raw jute import figures for the first quarter of 1959. Compared with the previous year, imports were down by 5,540 tons to only 23,452 tons. It is believed that the main reason for the reduced output is a rapid decline in internal demand for sacks and bags. The decline, in turn, is attributed to the increasing popularity of bulk handling, and the favouring of paper packaging and other substitutes by industry and agriculture.

THE JUTE MARKETS

There was great activity in the futures market during the past week and erratic fluctuations occurred daily. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 12th August to 18th August, were as follows:

	Hessians 40in 10oz. August		Sacking B Twills August	Raw Jute Upper Assam September	
	Rs a 100 yds	Rs a 100 metres	Rs a 100 bags	Rs a md.	Rs a 100 kilos.
Opening	40.44	44.22	104.70	23.24	62.26
Highest	41.19	45.03	109.30	24.30	65.10
Lowest	39.96	43 69	104.70	23.22	62.21
Closing	40.64	44 14	107.00	23.78	63.71

Manufactured Goods: Strong covering in heavy goods continued to be a feature of the sacking market at the opening last Thursday. B Twills opened at Rs. 107 for August and Rs. 99 for January-March shipment. Hessians were neglected and opening quotations were slightly lower at Rs. 40.45 for August 40in. 10oz. and Rs. 39.40 for January-March. Bull demand for ready sacking continued throughout the day, and on Friday rates had advanced by Rs. 1.65. Hessians also moved up in sympathy but there was little or no interest in this section. Saturday was a holiday because of Independence Day and the markets were officially closed. Activity continued throughout the week-end, however, and on Monday morning, in spite of no fresh business with overseas buyers, prices rose to new high levels as operators continued to cover against recent commitments. From an opening of Rs. 109 on Monday morning, B Twills moved up rapidly to Rs. 110, but at the peak levels a reaction developed due to profit-taking. The fall was rapid thereafter, and prices at one stage dropped as low as Rs. 106.80, before opening on Tuesday morning at Rs. 107.85. Meanwhile, hessians were unchanged, and prices moved within narrow limits with a weak tendency. On Tuesday, the jute goods market was closed for the Rakhibandhan festivals. Unofficial exchanges, however,

continued throughout the day, and a mild recovery took place.

On Wednesday morning, opening prices were based on the following:

	Aug.	Sept.	Oct.	Oct.-Dec.
Gun. 8oz.	33.25 (36.24)	23.50 (26.16)	32.25 (35.31)	32.25 (35.31)
Gun. 10oz.	40.75 (44.42)	40.80 (44.47)	40.70 (44.75)	40.90 (44.25)
3 Twills	103.25	166.85	104.75	103.10
Heavy Cees				
(Plain)	109.00	105.75	104.50	103.60
4 Twills	123.00	124.00	123.00	122.00
Liverpools	119.25	118.00	116.00	114.50
Cornsacks	116.25	119.30	107.50	105.60

Raw Jute: The fibre market remained firm at the opening of the past week and buyers were active. On Thursday, over 100,000 maunds of new crop jute was purchased by mills, as a result of which Assam quotations advanced by 50nP to Rs. 24. The improved goods market also helped raw jute, and sellers were inclined to be reserved. In spite of this, a further 150,000 maunds was bought on Friday, mainly by Indian mills, and very firm conditions prevailed. Saturday was a holiday. On Monday, Assam quotations advanced again, and were based on Rs. 24.25. Reports of export sales of about 25,000 bales through the State Trading Corporation helped to promote a steadier feeling, and sellers' offers were reduced accordingly. Towards the close, mills took less interest, but prices showed little alteration as sellers' ideas hardened on reports from all agencies of an increase in prices. On the new basis, there was a disparity of 50nP or Re. 1 in Calcutta, so most sellers looked reserved.

Business during the past week consisted of Assam jute at Rs. 23.50 to Rs. 24.50, and Northern at 50nP below these levels. Desal white was done at Rs. 22 to Rs. 22.50 and jungli white at Rs. 21.50 to Rs. 21.75. In Tossa, selected Murshidabad fetched Rs. 23.50. Daissee was reported at Rs. 24.50, while Daissee white passed at Rs. 22.50. There was not so much interest in mesta, and small lots of Daissee mesta were reported at Rs. 20.75 to Rs. 21.

On Wednesday morning, the market was unchanged, and opening quotations were based on the following:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
New Crop:			
Assam	24.00	64.32	Aug.-Sept.
Northern	23.50	62.98	,,
Purnea Desal	22.50	60.30	,,

Northern	22.00	58.96	,,

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in July reflected a more normal pattern than that earlier this year. Bag cut-up and piecegoods sales returned to a more or less static position, compared with July last year. U.S. burlap stocks turned downwards quite sharply as the result of the inroads made in recent arrivals following heavy buying early this year. Such goods have been selling at a discount from Calcutta shipment prices. At an estimated 271 million yards, 169 million yards were spots and 102 million yards were afloats. Appearing below are two tables which include the July figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES STEADY

(FROM OUR DUNDEE CORRESPONDENT)

OVER the holiday period, a quiet but steady business passed in both yarns and cloth in Dundee. Spinners and manufacturers are pleased with the state of their order-books at present, which will keep them busy over the next two to three months at least. It looks as if the second half of the year will be much better than the first half when there was a considerable amount of curtailment of production.

Spinners are fairly well supplied with raw jute, and few sales have recently been recorded. Prices showed little alteration over the holiday although there was a slight weakness at the opening last week and a general decline of £1 a ton was recorded. Mill Firsts have now come back to £108, Mill Lightnings to £90, Mill Hearts to £80 and Grade Hearts to £66, August-September. These are the lowest quotations, but most sellers are demanding 20s to 40s a ton more, c.i.f. U.K.-Continent. Good marks of Daissee-2/3 are offered at £93 and Grade is more or less nominal at £86, as this quality is not much in demand in Dundee nowadays. The shipment is for September-October, for which Grade Tossa-2/3 is quoted at £107, and fours £94, c.i.f.

Calcutta goods prices gained great strength, especially in sackings during the past week, with an advance of 9s 6d a 100 bags, due to heavy purchases by China. Hessians showed only a slight rise, and prices at present are not much changed from those of three weeks ago at 61s 6d for 40in. 10oz. and 47s 6d for 7½oz., August, 61s 3d and 47s 3d September and 61s October, with B Twills at 161s 6d, 160s and 157s for the respective positions of shipment, all f.o.b., Calcutta. It is reported that order-books of the Indian jute mills are now more or less full for shipment over the remainder of the current year.

It is interesting to note that the ordinary shares of Samnuggur Jute Company have recently been dealt in at 12s 6d. Two months ago, business was transacted at around 5s.

Business in jute yarns and cloth has been very steady and prices are all very firmly maintained.

GUNNY SHIPMENT STATISTICS

The following figures including coastal shipment relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th August, 1959	1,124.8	5,436.5	6,561.3
1st to 5th July, 1959	841.3	11,932.7	12,774.0
1st to 5th June, 1959	809.5	9,411.6	10 221.1
	Sacking		
1st to 5th August, 1959	2,514.5	13.8	2,528.3
1st to 5th July, 1959	2,849.6	78 2	2,927.8
1st to 5th June, 1959	4,570.7	861.9	5,432.6

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IMPROVE TOWARDS CLOSE

AT Sale No. 10, held on 17th and 19th August, there was a good general demand for the 58,615 chests on offer at the Export auction, with buyers following quality closely. Plain brokens and Fannings were fully firm and the latter were sometimes dearer; medium brokens and fannings, however, generally sold at about 6nP below last rates. Bright liquoring orthodox Assams and medium B.O.P.'s were well supported, but prices were easier with quality. The best C.T.C. teas on offer were easier, at times by as much as 50nP while the more ordinary kinds in this category sold 10nP to 20nP below last rates. Fair support was forthcoming for Legg-cut teas but prices for these also were generally easier. Whole leaf grades were well supported at slightly lower rates, while tippy teas had a fairly good sale. Darjeelings, however, were a weak feature of the sale and there were some withdrawals.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.98	2.10 to 2.15
Plain B.P.	1.80 to 1.84	1.70 to 1.74
Plain Fannings	1.91 to 2.04	1.84 to 1.98
Medium B.P.	1.92 to 2.00	1.90 to 2.00
Medium Fannings	2.04 to 2.14	2.05 to 2.15
Best Assam C.T.C. B.P.	2.85 to 3.10	3.30 to 3.60
Best Assam C.T.C. Figs.	3.60 to 4.00	3.60 to 4.00

(Quotations are exclusive of excise duty.)

At the Internal Sale, 22,593 chests of Dust were on offer. There was a good general demand at easier rates but the market was slightly stronger towards the close. Orthodox Dusts were irregular but generally showed a decline in prices by up to 8nP. Legg-cut Dooars Dusts, at the opening, were from 6nP to 8nP easier but strengthened as the sale progressed. The flavoury Darjeeling Dusts sold well but the more ordinary kinds came to an easier market. The C.T.C. Dusts met with an easier market, the medium descriptions being up to about 25nP lower while the very best types were virtually neglected towards the close.

Quotations

	1959 Rs.	1958 Rs.
Medium Dooars Dust	1.83 to 1.84	1.70 to 1.74
Medium Assam Dust	1.76 to 1.82	1.72 to 1.76
Medium Assam C.T.C. Dust	2.01 to 2.15	2.20 to 2.40
Best Assam C.T.C. Dust	2.70 to 2.95	2.60 to 2.80

(Quotations are exclusive of excise duty.)

There were 702 chests of Leaf on offer and these met with a good general demand.

LINSEED RISES

There has been a sharp rise in prices and a very firm undertone has prevailed over the past week. Seeds are available in exceedingly poor quantities with sellers showing little interest and fairly keen enquiries from crushers. This factor, combined with the improved trend in the U.K. linseed cake and oil markets, has caused the present bullish outlook. September futures have advanced to Rs. 24 and May futures have opened with buyers at Rs. 23 but no sellers. Oilcake prices have advanced to Rs. 14.24, but there were no fresh export sales at this level; overseas prices after touching £35 10s reacted slightly to £35 5s. The oil market having advanced to Rs. 50.50 was virtually without sellers, although small business was done earlier by shippers at Rs. 49.50. After an initial advance to £105, U.K. prices have been easier at £103 10s. Latest quotations are as follows: Ready Rs. 24 a maund; August-September Rs. 24 a maund; September futures Rs. 24 a maund and May futures Rs. 23 a maund.

HIDES AND SKINS STEADY

The market was quietly steady and stocks were higher than in the previous week.

Bazaar Sales

(Between 11th August and 17th August 1959)

Cowhides: Wet salted (ord.) 37,100 pcs. on the basis of Rs. 12.75 to Rs. 18.75; Wet salted (slaughtered) 11,200 pcs. on the basis of Rs. 14 to Rs. 18 and Rs. 22 to Rs. 27.

Goatskins: Wet Salted (Patna, Daissee, Kustia) 50,500 pcs. on the basis of Rs. 375 to Rs. 380, Rs. 440 to Rs. 455 and Rs. 480 to Rs. 500; Wet Salted (he-killed) on the basis of Rs. 5.25 and (she-killed) on the basis of Rs. 5 a piece. Assam-Dinajpur 38,300 pcs. on the basis of Rs. 355 to Rs. 415; Patna-Pakur 8,600 pcs. on the basis of Rs. 380 to Rs. 390; Muzafferpore-Patna 2,600 pcs. on the basis of Rs. 420; Muzafferpore (heavy) 1,700 pcs. on the basis of Rs. 480 to Rs. 515.

Bazaar Stocks

(17th August 1959)

Cowhides: Wet Salted 131,500 pcs.

Goatskins: Wet Salted (Patna, Kustia, Daissee, Killed) 39,500 pcs.; Assam Dinajpur 69,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 1,06,000 pcs.

Engineering and Transport

MANUFACTURE OF JUTE MILL MACHINERY

U. K.-AMERICAN COMPANY FORMED

DOUGLAS Fraser and Sons Ltd, Arbroath, and Giddings and Lewis Machine Tool Company of Fond du Lac, Wisconsin, U.S.A., have announced the formation of a new British private company named Giddings and Lewis-Fraser, Ltd, having an authorised capital of £1,516,327. The purpose of this company is to acquire and continue the engineering business of Douglas Fraser and Sons Ltd, and to manufacture Giddings and Lewis horizontal boring, drilling and milling machines. Fraser textile machinery activities will be conducted by the new company, but the other textile manufacturing interests of Fraser will continue to be operated, as in the past, by Douglas Fraser and Sons Ltd. This agreement brings together two very progressive and old-established companies each of which has celebrated its centenary.

The traditional products of the Fraser Engineering Division which will now be manufactured by Giddings and Lewis-Fraser, Ltd. are textile machinery, machine tools, gears and gear reduction units. In the textile field, recent machinery developments by Fraser are revolutionising the techniques for handling, blending and processing mixtures of long jute and cuttings. This work, together with the established Fraser roll forming and winding machinery will be energetically pursued by a textile machinery division of the new company. Although machine tools have been manufactured by Fraser for many years, these have mainly been special-purpose types. With, however, the introduction of copying lathes, and the subsequent demand for centring, a range of standard facing and centring machines was successfully launched in 1954. These have been developed to cover wide variety of operations and are now marketed under the trade name "Endomatics". The machines are of unit construction and the various milling, drilling and other units have been designed to enable them to be offered separately, or as part of special-purpose machine tools. Giddings and Lewis Machine Tool Company is one of the largest of its kind in the United States. Its products include horizontal boring, drilling and milling machines of all types from 3in. to 14in. spindle diameter; vertical boring and turning mills; planers; planer type milling machines; radial drills, etcetera, together with a complete line of boring bars and tooling for use with such machines. The company has also pioneered the development of tape control systems for machine tool automation. The initial demand was for skin milling machines for the aircraft industry, but the systems are now widely applied to the other types of machine tools manufactured.

AIR-INDIA INTERNATIONAL AND CZECH AIRLINE SIGN POOL AGREEMENT

Air-India International and C.S.A. (Ceskoslovenske Aerolinie) signed a revenue pool agreement in Bombay on 13th August, for the operation of scheduled air services between Czechoslovakia and India. The inaugural service of C.S.A. is scheduled to arrive in Bombay on 23rd August. Regular C.S.A. services will begin from Prague on 29th August with *TU-104* jet aircraft on a routing: Prague-Cairo-Bahrein-Bombay. The Czech airline's scheduled services will arrive in Bombay on Sundays and depart on Mondays. Air-India's services between Prague and Bombay (the first service to Prague was inaugurated in 1956) arrive and depart each Wednesday.

U.S. NATIONAL BUREAU OF STANDARDS TO PUBLISH SPECIALIST JOURNAL

The National Bureau of Standards, U.S. Department of Commerce, will soon begin publishing its *Journal of Research* in four separate sections, corresponding to the field of subject matters. It is open to individual subscription. This change is being made to permit more effective dissemination of the Bureau's findings to science and industry. At the same time, the editorial scope of the *Journal* is being broadened to cover the Bureau's technical programme as completely as possible. The *Journal of Research of the National Bureau of Standards* is the basic medium by which the Bureau reports its findings to the scientific community. It contains comprehensive research papers which give complete details of the work, including laboratory data, experimental procedures, and theoretical and mathematical analyses.

As now published, the content of the *Journal* is as broad as the Bureau's scientific programme, embracing most fields of the physical sciences as well as various branches of engineering. The division of the *Journal* into separate sections is an effort to meet more effectively the specialised needs of today's scientists, engineers, and mathematicians. Henceforth the individual reader need subscribe only to those sections which fall within his particular field of interest.

The *Journal* is being divided into the following sections: section A: Physics and Chemistry; section B: Mathematics and Mathematical Physics; section C: Engineering and Instrumentation; section D: Radio Propagation. Section A will cover a broad range of physical and chemical research, with major emphasis on standards of physical measurement, fundamental constants, and properties of matter. It will be issued six times a year, and the annual subscription will cost $4 (75 cents additional for foreign mailing). Section B will present studies and compilations designed mainly for the mathematician and theoretical physicist. It will include topics in mathematical statistics, theory of experiment design, numerical analysis, theoretical physics and chemistry, and logical design and programming of computers. Short numerical tables will also be included from time to time. Section B will be issued quarterly, and the annual subscription cost will be $2.25 (foreign, 50 cents additional). Section C will report results of interest chiefly to the engineer and the applied scientist. This section will include many of the new developments in instrumentation resulting from the Bureau's work in physical measurement, data processing, and development of test methods. It will also cover some of the work in applied mechanics, properties of engineering materials, building research, and cryogenic engineering. Section C will be issued quarterly, and the annual subscription cost will be $2.25 (foreign, 50 cents additional). Section D is to be edited at the Bureau's Boulder (Colo.) Laboratories. It will report research in radio propagation, communications, and upper atmospheric physics. Topics to be covered include propagation in ionized media, scattering by turbulence, effect of irregular terrain on propagation, diffraction and scattering by solid obstacles, propagation through time-varying media, surface waves, and antennas. Section D will be issued six times a year, and the annual subscription cost will be $4 (foreign, 75 cents additional).

U. K. ANNUAL RADIO AND TELEVISION EXHIBITION

Britain's twenty-sixth national radio and television exhibition, providing the world's biggest demonstration of broadcasting techniques, is now taking shape at Earls Court, London. Some 140 exhibitors, including all the leading manufacturers of radio and T.V. receivers in Britain, will take part, occupying over 11 acres of space. The exhibition will begin its ten-day run on 26th August, with a preview for overseas visitors on 25th August. In past years, visitors to this exhibition have averaged 30,000 a day. Last year, overseas visitors numbered 6,000 from 120 territories. Britain, which has equipped television stations, studios and mobile T.V. units throughout the world, is now beginning to export television receivers. Last year, the British radio industry's exports totalled £56.5 million, the United States being the biggest single customer of sound equipment.

GOLDEN RULES FOR SAVING
Open a Savings Bank Account without delay.
Avoid dipping into your savings to pay bills.
Deposit your monthly savings regularly.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Indian Industrial Activity (Base : 1953) has now been brought up to December 1958. Compared with the preceding month, there were increases in sugar 246.65 points, jute 3.12 points, yarn 17.38 points, cloth 15.03 points, cement 21.01 points, coal 15.43 points, pig iron 16.41 points, finished steel 9.38 points, paper 10.90 points, tyres 21.23 points, motor-cars 59.74 points, bicycles 45.00 points, electricity 17.61 points and railway ton-miles 15.24 points, while tea decreased by 93.10 points.

Correlating all the factors, the *Capital* Index of Indian Industrial Activity advanced by 7.53 points during December 1958.

Commodity Markets

BRITISH TEXTILE REVIEW

SCHEME TO CUT PRODUCTIVE CAPACITY TAKES SHAPE

THE Cotton Industry Act received the sanction of the House of Lords late in July, and more than 1,000 firms must decide by the end of September how much spinning, doubling or weaving capacity they will retain. Those whose plans to scrap plants are announced by the end of August will receive a bonus. Naturally, the scrapping cannot be done immediately, but it must be completed by the end of March next. But the whole scheme will be ineffective if the industry's response is inadequate. While, at the outset, few firms were willing, or indeed able, to announce their final plans, it was obvious at an early stage that the scheme would be well supported. There are, in fact, three schemes, covering spinning, doubling, and weaving, and any one of them can become operative without the others. They involve elimination of, at least, 6 million spindles (mule equivalent) in spinning, 400,000 spindles in doubling, and 45,000 looms in weaving.

The industry hopes that these figures will be exceeded, for they do not seem very large in relation to the estimated surplus capacity. Potentially worse than inadequate reduction of capacity is unbalanced reduction of capacity. It is possible, for instance, that a disproportionate number of looms will be scrapped, so that there will be too little weaving capacity to absorb full production of yarns. It may be that the scheme would have worked better if it had been phased : if either the spinning or the weaving plan were concluded first, the other plan could be adapted accordingly.

Many Closures

The fear that the big spinning combines will leave the smaller firms to bear the brunt of consolidation has not been substantiated. Such big and efficient units as Lancashire Cotton Corporation, Fine Spinners and Doublers, Combined English Mills, Crosses and Heatons, Amalgamated Cotton Mills Trust, have announced closures representing, in each case, a considerable potential output. The chairman of Fine Spinners and Doublers, Mr. W. T. Winterbottom, announcing that more than 1 million spindles—about a third of its capacity—would be submitted for scrapping within the scheme pointed out that this reduction was no more drastic than the group's own streamlining policy had envisaged. In this case, and in many others, the scheme affects not so much the scale as the timing of withdrawals : a comparatively slow process will be accelerated. It is now known (the revelation caused some surprise when it emerged during the debate on the proposals) that the Government's intention is not to reduce the industry's output but simply to improve its efficiency. Production will naturally be concentrated on the more productive mills, especially those where shift working is well developed ; and, of course, the purchase of the second stage of the Government's plan, financial aid for re-equipment, is to encourage firms to install more productive machinery.

This second stage, which cannot take clear shape until plans for the first stage are completed, is already arousing misgivings. It is a disturbing thought that some of the plant closed down before the elimination scheme, was, and some included in the scheme is, modern and thoroughly efficient : it is unprofitable because in modern mills labour is well paid. Is it, any way, rational to substitute new equipment for old, with the aid of subsidies, when the essential purpose of the scheme is to help the industry to contract ? As Mr. Winterbottom said, it does no good to anybody to continue to use resources to produce something which consumers are not prepared to buy at fair prices to the producer, and "it is equally futile to try to conceal this by committing further resources which could be more profitably used elsewhere".

Changes in Man-made Fibres

Some of Courtaulds' equipment qualifies for the Government's consolidation scheme : but it was rather with the internal consolidation of the rayon industry that Sir John Hanbury-Williams, chairman, concerned himself in his statement this year. The integration of British Celanese and Harbens in the Courtaulds group involves elimination of surplus capacity on a considerable scale. But Sir John made this significant remark : "Whether, and how much further, we should proceed in our endeavours to equate the capacity of production of the U.K. rayon industry with potential demand is a problem which continually occupies our minds and is not easily solved."

Meanwhile, British Celanese is increasing the output of the new synthetic fibre, polypropylene. As production of the fibre elsewhere (mainly in Italy and the United States) is still on a modest scale, assessment of its potentialities is largely guesswork at present : but it starts with the undoubted advantage that it is made from a polymer already a higher melting-point than polythene, which in general it resembles

New Qualities in Wool Fabrics

The wool industry meets the challenge of the new fibres partly by allying itself with them. In so far as it is directly competing with them, it is mainly concerned with special processes such as the dripdry technique announced recently in Melbourne and the processes which are now available for permanent pleating. The "si-ro-set" method of fixing pleats in all-wool fabrics, developed by the Commonwealth Scientific and Industrial Research Organisation in Australia, has been in use for most of a year and is now familiar to, and appreciated by, the public. For the clothing industry, however, there is an obvious advantage in the newer process evolved by Professor J. B. Speakman of Leeds University (to whom "si-ro-set" also is basically attributable) which has lately been introduced by Marks and Spencer and Proban under the trade-name "Immacula". (Marks and Spencer, the big chain-store distributing organisation, patented the process last year, and manufacturing arrangements have subsequently been made with Proban, owned jointly by Bradford Dyers Association and Allbright and Wilson, the chemical firm, which is noted for its flamer-proofing process for textiles).

"Si-ro-set" is applied to the finished garment ; "Immacula" is applied in the process of finishing the cloth. From the clothier's point of view, the essential difference is that, in the former case, special equipment has to be installed for spraying and in the latter case the cloth is received already treated. Whether the final customer will show a decided preference for either process remains to be seen. In any case, the wool industry has no reason to complain of competition between them : for this is the kind of competition that helps wool compete with synthetic fibres.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) rose by 0.2 percent to 117.1 during the week ended 1st August, 1959, compared with 116.9 (revised) for the previous week. The index was higher by 0.9 percent when compared with the corresponding week of the previous month and that of a year ago. Higher prices of rice in Hailakandi (+15%), in Contai (+9%), in Mercara, Cuttack and Imphal (+7% each) and in Sainthia (+5%), oranges, chillies in Madras and turmeric (+5% each), black pepper (+3%), mung, potatoes, milk, gur and cloves (+2% each) and tea (+1%) raised the index for Food Articles by 0.7 percent to 122.0, against 121.1 (revised) for the earlier week. The prices of rice in Trivandrum (−10%), dalda (−6%), gingelly oil, and chillies (Calcutta) (−5% each), arhar, groundnut oil and cummin (−3% each), maize and meat (−2% each) and gram, urad, ghee, cardamoms and betelnuts (−1% each), however, moved down. The index for Tobacco remained stationary at its previous week's level of 96.8. The index for the Fuel, Power, Light and Lubricants group stood unchanged at the earlier week's level of 115.7 in spite of a fall in the prices of castor oil (−1%). The index for Industrial Raw Materials receded by 1.4 percent to 118.8 due to a fall in the prices of groundnuts (−6%), gingellyseed (−4%), tanning materials (−3%) and raw jute (−2%) although the prices of lac (+6%) and linseed (+1%) showed advances. The index for Intermediate Products stood stationary at the previous week's level of 108.8 in spite of the variations in prices of zinc, copper and lead (−1% each). The prices of general chemicals and oilcakes (+1% each) moved up while drugs and medicines (−1%) showed a decline, and the index for Finished Products remained unchanged at the earlier week's level of 109.2.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53=100)

COMPANY AND PUBLIC NOTICES

THE DIBRUGARH COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Dibrugarh Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 17th September, 1959 at 3-00 P.M. for the following purposes :—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. A. P. Jain, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS.

5. To consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto :—

"That Mr. B. D. Bagrodia be and is hereby appointed a Director of the Company liable to retirement by rotation".

The Share Transfer Books of the Company will be closed from 7th September, 1959 to 17th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 14th August, 1959.

Note :—Payment of the proposed Dividend, if declared, will be made on or after 30th September, 1959, only to those members whose names are registered in the Books of the Company on 17th September, 1959 or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT.

Mr. B. D. Bagrodia was appointed an Additional Director of the Company in February, 1959, and vacates Office at this Annual General Meeting. A Special Notice has been received from a member of the Company notifying his intention to propose a Special Resolution as set out in item 5 of the above Notice. In the said Special Notice, it has been pointed out that Mr. B. D. Bagrodia is an employee of the Managing Agents and that, in view thereof, it will be necessary for the members to pass a Special Resolution, in conformity with Section 261 of the Companies Act, 1956, if they desire to appoint him as a Director of the Company liable to retirement by rotation, since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

INDIAN COPPER CORPORATION LIMITED.

The 3rd August, 1959.

THE CALCUTTA JUTE MANUFACTURING CO., LIMITED

NOTICE is hereby given that the Fifty-third Ordinary General Meeting of the shareholders will be held at the Registered Office of the company, "Stephen House" fourth floor, No. 4 Dalhousie Square East, Calcutta, at 3-00 p.m. on Monday, the 21st September, 1959 for the following purposes :—

AGENDA :

(1) To consider and approve the Audited Accounts of the company for the year ended 31st December, 1958 and to receive the Directors' and Auditors' Reports thereon.

(2) To appoint a director in place of Sri Debi Prasad Poddar retiring by rotation.

And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act 1956 :—

"That Sri Debi Prasad Poddar be and is hereby appointed a Director of the company liable to retirement by rotation"

Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act 1956, has been received by the company wherein it is stated that Sri Debi Prasad Poddar is a partner of Dayaram & Sons, the Managing Agents of the company and accordingly an "Associate" of the Managing Agents within the meaning of the Act and that therefore he can only be appointed by a Special Resolution as a Director liable to retirement.

(3) To appoint auditors and fix their remuneration.

The Share Transfer Books of the company will be closed from 14th to 21st September, 1959, both days inclusive.

By Order of the Board,
DAYARAM & SONS,
Managing Agents.

"Stephen House" fourth floor,
4, Dalhousie Square East,
Calcutta
The 18th August 1959.

Note :—A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a member.

THE GENERAL INVESTMENT & TRUST COMPANY LIMITED.

NOTICE is hereby given to the members of the abovenamed Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Tuesday, the 8th September, 1959, at 11-05 A.M. for the following purposes :—

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1959, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 25th August, 1959 to 8th September, 1959, both days inclusive.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta. 30th July, 1959.

Note :—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself, A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 15th September, 1959, to those shareholders so entitled whose names appear in the Company's books on the 8th September, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

TEA PLANTERS BENEVOLENT INSTITUTION

NOTICE is hereby given that the Annual General Meeting of the Tea Planters Benevolent Institution will be held at the Royal Exchange, 6, Netaji Subhas Road. Calcutta, on Tuesday, 8th September, 1959 at 10-30 a.m.

AMLUCKIE TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of Amluckie Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 17th September, 1959, at 3-10 P.M., for the following purposes :—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. P. Banyard, the Director retiring by rotation.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956 :—

"That Mr. P. Banyard be and is hereby appointed a Director of the Company liable to retirement by rotation."

Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. P. Banyard is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 7th September, 1959 to 17th September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 14th August, 1959.

Note :—Payment of the proposed Dividend, if declared, will be made on or after 30th September, 1959, only to those members whose names are registered in the Books of the Company on 17th September, 1959 or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE INVESTMENT & FINANCE COMPANY LIMITED.

NOTICE is hereby given to the members of the abovenamed Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Tuesday, the 8th September, 1959, at 11-00 A.M. for the following purposes—

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1959, and to receive the Directors' and Auditors' Report thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 25th August, 1959 to 8th September, 1959, both days inclusive.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LIMITED
Secretaries.

Chartered Bank Buildings,
Calcutta, 30th July, 1959.

Note :—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 15th September, 1959 to those shareholders so entitled whose names appear in the Company's books on the 8th September, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

NEW CENTRAL JUTE MILLS CO. LTD.

NOTICE is hereby given that the Company has received consent from the Controller of Capital Issues for increase of capital and issue of right shares at par in the proportion of one ordinary share for every three existing ordinary shares. The Share Transfer Books of the Company for this purpose will remain closed from 1st September to 7th September, 1959 both days inclusive.

For NEW CENTRAL JUTE MILLS CO. LTD.,
For SAHU JAIN LTD.,
A. K. JAIN,
Managing Director,
Managing Agents.

Calcutta,
12th August, 1959.

71st YEAR OF ISSUE — CALCUTTA, 27th AUGUST, 1959. — Vol. CXXXXIII No. 3574

FOOD: PRODUCTION RISES, MINISTER FALLS

THE decision of Mr. A. P. Jain to resign his charge of the Central Food and Agriculture Ministry this week comes as a fitting culmination to the failure of the Government of India's food policies over the past year. The resignation may evoke widespread sympathy for Mr. Jain personally; but it is a welcome attempt to salvage the principle of ministerial responsibility at a time when that principle, both at the Centre and in the States, has often been jettisoned in favour of personal or party opportunism. If any criticism is to be made of the decision, it is that, on the evidence offered by Mr. Jain himself, it has come too late; the Food and Agriculture Minister's delayed expression of old doubts concerning the policies apparently foisted upon him by the Congress Party and the Central Government is no tribute to the sincerity with which he viewed his responsibilities. Before the doubts are condoned, it might be as well to remember that over the past eight months or so, Mr. Jain has been among the most verbose, vigorous and boastful defenders of the policies whose failure he now seeks to explain away. He cannot absolve himself of blame by drawing a neat line of distinction between Central and State obligations concerning food, and by claiming, not wholly convincingly, that the former have been adequately discharged. Nor can he offer administrative deficiencies as an excuse. Both constitute facts which have long been known, and it was Mr. Jain's duty as Minister to see that they were properly taken account of in any scheme in which he may have acquiesced. It is to be noted to the credit of one State Government at least, and one which Mr. Jain has criticised—West Bengal's—that it recognised much earlier than he did the dangers of grandiose plans for State trading in foodgrains, as well as for radical land reforms and co-operative farming. Apparently, the notorious incompetence and lethargy of the administration in this State has not been wholly a disadvantage; at least it has provided a sobering background of reality against which the ambitious pipe-dreams of the Congress Party theoreticians have been rationally judged.

It would be incorrect to suppose that Mr. Jain's failure is essentially personal. That he did not command an influence in the Government of India and in the Congress Party commensurate with the importance of the portfolio he held, is clear. But this factor apart, the main trouble lay in the circumstance that the food policies he was asked to adopt were such as simply could not have been implemented, either by him or by anybody else. The scheme for State trading in foodgrains hatched by the pedlars of new-fangled economic theories in the Congress Party had fatal superficial attractions. The most important lesson of the past few months is that those attractions existed only on paper, and bore no relation to the realities of India's agricultural economy. The main task before Mr. S. K. Patil, the new Food and Agriculture Minister, will now be to drive this lesson home among the politicians who have led Mr. Jain and his starving countrymen to near-disaster.

Because Mr. Jain's resignation is a verdict on the scheme for State trading in foodgrains, it is worth examining the aims and working of the latter a little more closely. The scheme was originally conceived as a magic solution to an old dilemma—how to raise vast new resources for the Government, without generating the serious inflationary pressures which hit the common man promptly by raising the price of his food. In theory, it was visualised that the Government would buy foodgrains from farmers at the procurement prices announced in advance; these prices would be so nicely calculated that they would, on the one hand, be high enough to leave the farmer with a clear incentive to grow more food, and, on the other, be low enough not to be inflationary. The assumption was made that farmers would not be reluctant to, or would be obliged to, pass on all the foodgrains they produced to the official procurement agencies, retaining only what they required for their own consumption. The marketable surpluses having once arrived in the hands of the Government, they would be neatly distributed to the millions of centres where they were required. The price charged to the retail trade and to consumers would be such as to cover transport, handling and storage expenses, and thereafter perhaps yield whatever the Government might be pleased to consider a moderate profit. It was assumed that, in the initial stages at least, there would be no direct price controls at the retail level; but any tendency for prices to rise would be promptly checked by the judicious release of procured and imported stocks, to some extent through the so-called fair-price shops. In the result, it was argued, nearly everybody would be happy. The farmer would be pleased to get a price which gave him an incentive to redouble his efforts, and that in turn would send food production shooting upwards. The consumer would be grateful for being able to buy his requirements at stable, and relatively low, rates, so unrest over inflation would wane. The Government would bask in the political glory of having satisfied both, while retaining in its hands an elastic instrument for raising resources. By lowering procurement prices, the instrument of State trading could be used for taxing farmers surreptitiously, since the Government had dreaded taxing them openly for political reasons. By raising selling prices, the same instrument could be used for increasing profit margins on food in the interests of the Central and State Exchequers. The only element to be hit would be the wholesale trader, but he did not matter because he was the hoarder, the profiteer and the anti-social pig.

So, at least, the argument ran. In actual practice, however, the State trading scheme has belied almost every single hope ever placed in it. In many areas, the procurement prices which have been fixed are officially admitted to have been unrealistic. They could not have been otherwise, considering the ignorance of those fixing them as well as the vast diversity of growing conditions and of land yields. Farmers have declined to sell as much as they could, not only because they have thought the procurement prices far too low, but also because they have learnt from years of experience that better rates can be secured if stocks are held back in a period of inflation. A major contribution to the failure of procurement programmes has been made by State Governments, who have not pursued them resolutely for fear of losing the rural vote. With deficit States exaggerating their requirements and surplus States underestimating the amounts they could spare, the Central Government has found itself in an unenviable quandary. It has tried to release its own stocks, whether procured or imported, more liberally, but prices in the main consumer markets have hardly fallen. The transport and distribution of foodgrains has remained no less inefficient than it ever was. With the trade rather wilier than the Governments which supposedly supervise it, the extra supplies have quietly and regularly been spirited away into private hoards. Thus, the net result of the hitherto limited experiment in State trading is that the farmer is disgruntled to the extent that his stocks have been procured at rates below those he would have got in the open market. The consumer too is disgruntled, for he has had to pay prices reminiscent of famine experience in some areas at a time when Ministers have been boasting from the house-tops about food production having established an all-time high. The only individuals to have gained from the Government's policies have been the hoarders and the profiteers, especially the ones who are reputed to lie safely hidden under the cloaks of a corrupt administration.

Mr. Patil assumes his new responsibilities against a dismal and unpromising background. Yet the broad choices before him are clear, and have already been outlined by Mr. Jain in a valedictory speech in Parliament last week. They are: (1) greatly to extend and stiffen Government controls over foodgrain distribution; or (2) to dismantle most of the controls recently established, and leave it to the past year's bumper harvest (plus imports) to bring prices down. The first has the striking disadvantage that, with the administration as corrupt and inefficient as it is, there is every chance that black-marketing will increase, prices rise and food stocks be held back on an even larger scale than they are now. As wartime experience showed, no system of consumer rationing and dealer licensing can overcome these dangers, unless it is backed by drastic penalties which a democratic society is understandably reluctant to introduce, especially in a period of peace. On the other hand, the second alternative—by itself—is no guarantee either that supplies will increase and prices will fall. But it does at least offer the hope that the myriad hoards, in the cities as well as in the countryside, will be disgorged rapidly if the Government at the same time does what it can to flood the main markets with its own supplies.

THE TROUBLE WITH PRICES

NO matter how many ways there might be of approaching the problem of internal prices, the obviously mistaken one is to under-estimate it. That is why the Governor of the Reserve Bank, Mr. H. V. R. Iengar, is to be congratulated on the commonsense analysis he made of the price problem in his address to the Indian Institute of Bankers in Bombay last week. As the Reserve Bank Governor, the views he permits himself in public on such matters are bound to stress the consolations and reassurances to be found in them. The picture he presented was, therefore, the only one which could have been expected, although that did not detract from its value as a means of putting the problem in its true perspective. The real virtue of it lies in the warnings against complacency and the hints for future monetary and fiscal policy. The figures Mr. Iengar give are no foundation for the anxiety about prices which is at present being expressed, chiefly locally, but also throughout the entire country. Neither do they excuse the current official attitude, which is so apparently indifferent as to amount to complete quiescence, or the light-hearted manner in which preparations for the third five year plan are going ahead without any appreciable deference to the appalling risks of inflation.

The obvious aim of the international comparisons of internal price rises quoted by Mr. Iengar was to quieten some of the recently revived anxiety about the devaluation of the rupee. To point out, for instance, that its purchasing power has declined by 29 percent in the same period that the pound sterling has suffered a loss in value of 46 percent, appears to maintain that, provided the parity between the two currencies was appropriate in the first place, the rupee still has a long way to go before readjustments need be made. This is undoubtedly the correct verdict. It does, however, leave a number of questions to be

answered. The rupee is still quoted at a discount against the pound on the free market: does this mean that current trends are so adverse that favourable as the statistical position might be, it will soon become necessary to readjust the value of rupees if anybody is to hold them at all? Such circumstances present little danger of a run on a currency as closely managed as the rupee, but they could damage India's exports, and the growing number of countries which are prepared to accept rupees in exchange for their own exports, could soon be discouraged. One other question of interest arises as to why India's exports should have fallen so rapidly, even in a period of expanding world trade, if the rupee is not over-valued at its present parity? If the reason for the fall is other than an over-valued currency, then it must be some deep-seated malady of the Indian industrial system which has not yet been diagnosed. An investigation into what exactly is the reason might pay valuable dividends.

The general rise in prices which is taking place at the moment should never be dismissed as simply figures on paper. Mr. Iengar was undoubtedly right in pointing out that wide fluctuations in prices, especially in those of foodstuffs, can also be damaging. Perhaps the main danger of the present situation is that it should become accepted as inevitable. There is no exaggerating the undesirable consequences which can arise when a country falls under the psychological spell of inflation. The first casualty in India would probably be savings. These are already unsatisfactory thanks to excessive taxation and the current ideologically-inspired steps to redistribute wealth. If they decline further, or even become a negative quantity, a valuable method for raising development resources will be lost. Already there is considerable evidence that rising prices are impeding the growth of proper business morality in the country's newly-established industries. It may, superficially, appeal to the business man to operate in an inflationary atmosphere—sales are easier to make, there is no need to oppose wage demands, bribery of officials becomes possible, and profits can still be made even when efficiency is low. There are even consolations for the Government in having a measure of inflation to cushion its own inefficiency and overcome its political inconveniences. But that does not alter the fact that inflation is an unmitigated evil in the long run, and one which has been responsible throughout history for more political unrest, more weak government and more social and business immorality than probably any other single factor. It will be worth a great deal to India to take all possible steps to avoid establishing an atmosphere of perpetual inflation, quite apart from its inevitable effect on the external value of the rupee.

These dangers were implicit in Mr. Iengar's warnings, and those in New Delhi who are determined to use deficit financing whenever it suits their convenience would do well to mark his words. One statement of his, however, almost suggests that he himself is not fully aware of the severity of the consequences and is in fact prepared to look for compensations. What exactly Mr. Iengar meant by pointing out that no hardship from rising prices is caused "to farmers who produce their own food" and that, in fact, farmers of the latter class "benefit by high prices" is not altogether clear. But it would be as well to remember that, firstly, these farmers may also be consumers of other things which require money to buy, and, secondly, their reactions to rising prices, which all too often follow the form of less work, restricted sowings, longer hoarding, and so on, not only harm the community as a whole, but in the long run themselves as well. It is important to get clear right from the beginning that there are no consolations in inflation—none at all.

When discussions are going on about the third five year plan, Mr. Iengar's warnings are timely as well as sensible. The size of the plan, compared with the resources available, inevitably puts a premium on deficit financing. At present it is hoped the use of this expedient can be avoided; but India will be fortunate indeed if it is. A certain amount of money will no doubt have to be created to keep pace with increasing production, but any large amount in excess of this will almost certainly be dangerous. The reliance on indirect taxation and the profits from State enterprise, such as these might be, is also liable to be inflationary. On the other hand, direct taxes are too high already and any further increases—unless these are purely marginal and designed merely to maintain the same proportional levy on incomes—will almost certainly defeat their own purpose. There is no obvious remedy for this dilemma except to rely more on savings, which, it has just been pointed out, will probably be the first to suffer from inflation and the uncertainties to which it gives rise.

One further remedy, and one at which Mr. Iengar appeared to hint, would be to give more scope to private enterprise to produce rapidly the goods which will help mop up spending power and keep prices down. If the third plan follows slavishly the pattern of the second and concentrates the bulk of resources on the kind of expensive investment which takes many years to come to fruition, then the inflationary dangers will remain. The Government would do well to note what Mr. Iengar has said, and if it is tempted to become too impatient about the building of what Professor Rostow has defined as the basis for industrial "take-off", to bear in mind that the achievement of this desirable goal has not always, in every country, necessarily been strictly related in point of time to the beginning of what is today regarded as prosperity.

ADVICE ON MONETARY TECHNIQUE

THE monetary authorities of many countries are considering how, if the need arises, they can control inflation yet allow economic progress to continue. What help can they get from two British reports, both published in August, which both, in their different ways, deal with this subject? The Cohen Council was appointed, in 1957, to review prices, productivity, and incomes; it publishes its findings at intervals, and its latest report is the third. The Radcliffe Committee was appointed, also in 1957, to investigate the working of the monetary system: it reports—like its predecessor, the Macmillan Committee, in 1931—only once, and its report (with volumes of evidence published separately) is not only the bulkiest but also the most important British financial document of this generation. That both these bodies were appointed in 1957 is no casual coincidence. That was the year of grave doubt whether the Government had the moral strength or the practical ability to control inflation. It has since been proved that—at least in favourable circumstances—inflation can be controlled. But it has not been proved that stability is compatible with expansion.

Unhappily, neither the Cohen Council nor the Radcliffe Committee has been able to tell us what are the best methods of control. The Council presented a survey of ideas on regulating wages and prices and did not attempt to select from them. The Committee said simply: "No method, new or old, provides the remedy for all our troubles." The Radcliffe Committee has nonetheless offered much advice on monetary regulation, and, while some of it is concerned with the financial mechanism of Britain in particular, much of it is relevant to the financial problems of the world in general. Specially noteworthy is the Committee's insistence that monetary measures must serve broader purposes. It acknowledges, at least by implication, that financial stability is not the be all and the end-all of economic policy, which itself must be subordinate to social policy. However, there are times when restraint is necessary; and the Committee found no reason to question Britain's special obligations as international banker and provider of capital to the sterling area—obligations which at times make restraint more necessary in Britain than elsewhere. What methods of restraint, then, are most efficacious and appropriate?

The City of London expected, or certainly hoped, that after two years of investigation the Committee would make positive recommendations on the technique of monetary control. In fact, the Committee did not reject outright any of the instruments employed in the 1950s—interest-rates, taxation, control of bank-credit, restriction of hire-purchase, regulation of capital issues. It did, however, at the top of the scale, express a decided preference for interest-rates and, at the bottom of the scale, deplore the arbitrary control of capital issues as applied in Britain until last year. The Committee's ideas on this whole subject may be summarised by saying that interest-rates—both short-term and long-term—should be used more purposefully in "normal" times and that fiscal measures and direct controls should be brought into action in times of "emergency"—actual or threatened. But "those responsible should avoid partisanship in advocating the merits in any one form of control at the expense of another." As to the purpose of monetary policy, it should be designed to control not simply the supply of money but the liquidity of the whole economy.

The Committee had no major criticism of the operation of Bank rate—an instrument which, it recognised, has profound psychological significance, both at home and abroad. But it proposed that the Chancellor of the Exchequer, not (as now) the Court of the Bank of England, should be formally responsible for Bank rate. This recommendation seems to have been misunderstood in some quarters, probably because it has aroused opposition among those traditionalists in London who like to think of the central bank as an institution quite separate from the Treasury and independent of political influence. In fact, the Bank of England does not so operate now, and the ritual of the weekly announcement of Bank rate conceals close consultation with, and approval by, the Chancellor of the Exchequer. The Committee's argument on the long-term rate of interest was somewhat involved. Recognising that the financial institutions require reasonable stability in their holdings of Government stocks, it rejected the idea that the interest-rate weapon should be made more effective "by being used much more violently than hitherto"; but it rejected also the idea that the rate should be determined by "market forces"—"the authorities must have a positive policy on interest-rates". (It should be mentioned that at various times the present Governor of the Bank, Mr. Cameron Cobbold, and the present Chancellor of the Exchequer, Mr. Heathcoat Amory, have said, respectively, that Bank rate and the long-term rate are, basically, governed by "the market".)

So huge is the national debt in modern times that managing it is an important method of monetary regulation. But there are other ways of controlling liquidity. The Committee was evidently not impressed by the new device (as yet untried), "special deposits" by the commercial banks with the Bank of England. It approved the present system of liquidity ratios (liquid assets to deposits) but inclined towards variable ratios—whereas traditionally the British banks' minimum is fixed, at 30 percent. And if the banks' advances have to be controlled, so should be the alternative sources of credit, particularly the funds of the insurance companies and the hire-purchase finance houses. The Committee's recommendations do not imply any fundamental criticism of the financial structure or of the past working of the financial mechanism. But two criticisms are important. In "emergencies" the authorities turn too readily against light engineering (through hire-purchase) and public-sector investment (by administrative decisions). And policies are often mistaken simply because the full facts of the position are not known. It is, indeed, disgraceful that Britain's statistical services—so important to an international financial centre—are inferior to many other countries'.

TOO LITTLE AND TOO LATE

THE decision to increase the price of superior-grade coal by 50nP a ton has aroused little enthusiasm in the industry because the rise does not compensate collieries for the cost increases which have taken place since the Price Revision Committee made its investigation in 1957. Apart from putting a little more money into the hands of the few well-managed collieries which make modest profits, the latest move will not help the industry to achieve the target output of 60 million tons by the end of 1961. The Price Revision Committee's complacent assessment that with the increase now approved collieries will make a profit of Rs. 1.75 a ton, is exaggerated. First, the Committee has calculated costs on the basis of 1957 figures. But these are outdated, considering that the costs of stores, equipment, safety measures, etcetera, have soared since then. Secondly, both costs as well as profit figures have presumably been calculated on an average basis, which is unrealistic considering that mining methods vary from one colliery to another in a hundred different ways. What is missed is that costs do not necessarily depend on management—physical conditions could govern them in a number of instances. Thirdly, the present increase by itself does not compensate even profitable collieries as much as they deserve, because it has been made without any retrospective effect. The increased costs which companies have had to pay from 1957 to date, remain uncompensated. Evidence indicates that most collieries have been obliged to draw heavily upon their reserves in recent years in order to meet increased costs. They have now little money left to finance further expansion.

Assuming that all the revenue from the latest increase is ploughed back into the industry, it will still take a long time to build adequate funds for financing expansion. Experience shows that the improved trend in raisings has slowed down lately partly due to inadequate finance and partly to the lack of proper transport. Output which rose by 4.1 million tons to 43.5 million tons in 1957 increased by only 1.8 million tons to 45.3 million tons in 1958. The mid-1959 output of coal was 23.78 million tons, against the mid-1958 output of 22.60 million tons, an increase of only 1.18 million tons. Were the current rate of production to continue till the end of the year, the coal output in 1959 would be

47.57 million tons, against 45.31 million tons in 1958 —the improvement being a mere 2.26 million tons. Assuming the yearly rate of increase to be 3 million tons, the coal industry can expect to raise at least 54 million tons by the end of 1961. The shortfall in the target would therefore be as much as 6 million tons. About coal despatches, the actual figures show that there is little truth in the railways' claim to be able to move all the coal raised. That the optimum has yet to be achieved is proved by the fact that mid-1959 coal despatches lag behind raisings to the extent of 3.40 million tons.

It is, therefore, clear that nothing has been done to help the industry obtain the development finance it so urgently requires if expansion is not to suffer. The unremunerative working of the industry over a number of years has not only denuded collieries of whatever resources they have had, but has also discouraged investors from placing money in a limping industry. The present price increase is not expected to impress investors; it is thought that such as it is this concession will at best help collieries recover a portion of the increased expenditures they have incurred in the past year or so. Considering the changes in company taxation made by the Indian Finance Act, 1959, shareholders in coal companies will be lucky if they get the same amount of net dividend as before. This is why coal shares continue to stagnate and the latest price announcement has had virtually no effect on them.

An encouraging factor is that henceforth it has been decided to meet the full cost of stowing. This could be of considerable help, because many collieries have gone in for stowing on a large scale and have incurred substantial expenditure. As far as marginal collieries—especially those which produce lower-grade coal—are concerned, their working could be seriously affected by the decision to convert existing prices—without any increase—into ceiling prices. This could encourage uneconomic price competition. It is strange that such competition is being encouraged when controls continue to be imposed on production and distribution.

Whether the Price Revision Committee's recommendation that uneconomic collieries should be subsidised, will remain merely a pipe-dream, is difficult to say considering that any such move could produce a number of complications. If the Committee took nearly two years to produce a report instead of the two months originally intended, there is little hope that a scheme for subsidising collieries can be implemented in practice within the foreseeable future. In fact, no concrete step has so far been taken to amalgamate uneconomic collieries in spite of many official boasts about doing so. This apart, the plan to subsidise is not economically justified. The unprofitable running of State collieries already imposes a great strain on taxpayers. What is needed is to make colliery working remunerative by fixing prices on a realistic basis. A further discouraging factor is that outlying coalfields in Orissa, Madhya Pradesh and Bombay will not enjoy the benefits of the price increase until their coal is graded. Although the Coal Board has long been trying to grade this coal, nothing has yet been done. It is difficult to say when grading will be made and nobody seems prepared to say whether the collieries will get the advantage of the price rise with retrospective effect.

Current News and Comment

Hindustan Motor Doubts

There has been a notable improvement in the prices of motor-vehicle shares during the past month or so; but it looks as if the economic condition of the industry has been ignored for the time being, as often happens in a bull market. The scrip of various companies—good, bad and indifferent—have participated in the increase, and it is not unlikely that before long some investors may find themselves holding unwanted babies. For instance, the price of Hindustan Motor shares has improved from Rs. 10.84 to Rs. 12.31, at which level they look over-valued. At the latter price, the yield works out to only 4.1 percent, which is unattractive by market standards. The value appears to discount the growth prospects for quite a long time ahead. In their report for the year ended 31st March, 1959, the directors point out that a substantial amount of capacity has been idle. The production of motor-cars and trucks has remained disturbed and irregular, as imported components have not been available in time and in adequate quantities. The claim that production during the current year will be higher remains to be substantiated. Considering that the company has much unused capacity in the lines of manufacture for which it already has a licence, there seems little justification for conceding its plea for undertaking a new line of production, especially in the direction of producing small low-priced cars. The report offers no convincing explanation why high prices are being charged for its trucks and motor-cars at present. The claim that the ratio between the ex-factory price "of your company's vehicles to the price charged in their countries of origin has been lower than of any other manufacturer in India" is no consolation to Indian consumers. It looks as if prices can be brought down if the company concentrates on producing more of the models it already makes.

Hindustan Motors' heavy engineering shop for steel fabrication has begun to work. Orders have been received and are being executed. The company has also been allowed by the Government to take up the manufacture of shovels, towed scrapers, dumpers and cranes. Necessary arrangements with foreign collaborators are expected to be made in due course. There is good reason why investors should take a cautious view of the dividend outlook. The recent payment of a maiden ordinary dividend of 5 percent, absorbing Rs. 24.81 lakhs out of a profit of Rs. 34.88 lakhs, was not justified, considering that the initial depreciation and development rebate amounting to Rs. 97 lakhs still remain to be provided for. Shareholders cannot afford to ignore the fact that the payment of a dividend at the present stage virtually amounts to erosion of capital. It is hoped that the proposed amendment of the Companies Act will soon prohibit the payment of any dividend without providing fully for depreciation.

Better Project From T.E.L.C.O.

In his chairman's address at the annual general meeting of the Tata Locomotive and Engineering Co. Ltd. in Bombay, Mr. J. R. D. Tata discusses in forthright terms the prices of trucks and motor-cars in India. (A fuller version of the address appears on a later page.) He states: "It is a fact that the prices of the various vehicles made in this country are higher than they are in their countries of origin. That is inevitable in view of the very much smaller rate of output." This apart, costs are higher because ancillary industries are undeveloped. Bearing these points in mind, the company's project for producing small, low-priced motor-cars is commendable. The motor-vehicle division has reached a stage where diversification could yield major advantages of economy. The company has been permitted to expand the truck and bus chassis capacity to 12,000 a year and arrangements are already being made to implement the scheme. By October this year, it claims, there will be full-fledged manufacture of a first-class commercial vehicle with maximum indigenous content.

T.E.L.C.O. has submitted a project to the Government for manufacturing low-cost passenger cars as this will help overcome the difficulties arising from a relatively high cost of production. Mr. Tata states: "The ultimate final success of such a project must come not from a large margin of profit on a small number of units, but from very modest profits made from a large number of units. That, in fact, is the very essence of all modern industries concerned with the manufacture of articles destined for a mass market and has proved particularly to be the case with the low-priced automobile ever since the days of Henry Ford. A large market can be developed, particularly in a poor country like ours, only if the price of the product is low. Low prices are possible only with low costs which can themselves be achieved only on a large volume of production, which, in turn, requires a large market to sustain it. The proper way to break this vicious circle is to keep prices at the lowest possible level from the very start."

The project is based on an output of 12,000 vehicles a year and will involve a capital expenditure of Rs. 14 crores. The car is expected to sell for Rs. 6,950. Messrs. Daimler-Benz and Messrs. Auto-Union G.m.b.H. of West Germany will collaborate in the project. Mr. Tata states that the car will be of high quality and will meet an increasing demand. It is, therefore, hoped that the committee which is now investigating the possibility of producing low-cost passenger cars will consider the proposal favourably. The locomotive division has offered to undertake the manufacture of diesel locomotives for the Indian railways under an arrangement with the technical associates, Messrs. Krauss Maffei. "Assuming that the conversion from steam to diesel traction in India is a gradual one, we are willing to continue manufacturing steam locomotives beyond the period of the present agreement which expires on 31st May, 1961, if the Railway Board wishes us to do so." The company is also considering a scheme for manufacturing Mercedes-Benz diesel engines for locomotives. It has made considerable progress in preparing for the manufacture of pulp and paper-making machinery in collaboration with the well-known Swedish firm of Messrs. A. Johnsc and Co.

Oilcake Exports Rise

Exports of groundnut oilcakes (expellers an extractions) are likely to reach an all-time h g this year. Against the 1958 total of 211,000 ton shipments until 8th August this year are estimate at 280,000 tons, of which Bombay and Saurashtr ports account for about 230,000 tons. Calcutt Madras, Cochin and Karwar account for the res It is said that fairly large business has been don for forward delivery, the sales outstanding up t end-December being variously estimated at be tween 60,000 tons and 125,000 tons. The directio of trade has not undergone any important chang The U.K., the Continent and the communist blo have all bought oilcakes from India. In 1957, whe the export duty was Rs. 175 a ton on extraction and Rs. 230 a ton on expellers, exports totalle no more than 48,000 tons. The greater competitiv strength since the abolition of the duties towar the end of 1957 seems to be the main reason fo the marked increase in sales abroad in 1958 an this year. The steady reduction in the freight t U.K. and Continental ports, from 200 shillings t 80 shillings a ton, has also helped. For the las few months, however, the freight has been raise to 110 shillings a ton. But as foreign demand i very active, the increase has not affected the temp of exports. It is sometimes argued that export might have risen even if the entire export dut had not been removed, but it is doubtful whethe they would have risen to quite the same extent

On the basis of the average prices paid fo groundnut extractions and expellers in the firs quarter of 1959, exports of groundnut oilcakes up to 8th August may be valued at a little over Rs. 1 crores. This compares with Rs. 6.82 crores in 195 and Rs. 1.42 crores in 1957. Exports of all type of oilcakes fetched Rs. 7.45 crores in 1958 and Rs 2.17 crores in 1957. Total earnings from export of oilcakes, seeds and vegetable oils were Rs. 15 8 crores in 1958 and Rs. 13.89 crores in 1957. Th performance of groundnut oilcakes is extraordinary but other oilcakes have not fared badly either Exports of linseed cakes amounted to 6,115 ton and of cottonseed cakes to 4,869 tons in 1958. Ship ments from Bombay alone up to 8th August totalled around 12,000 tons of linseed cakes and 10,000 tons of cottonseed cakes.

New Ventures: Cameras on the List

New ventures are steadily attracting investors' attention, not merely because they are new but also because they are among the first in the various lines of production to which they belong. J. K. Industries' sodium hydro-sulphite plant in Thana, Bombay, went into production early this month, and is now working to capacity, yielding five tons a day. It uses the recently developed "amalgam process", which avoids the need for the otherwise indispensable zinc. Krebbs have supplied the machinery and the technical know-how. Nanubhai Industries of Bombay has signed an agreement with a U.S. syndicate, consisting of the Financial and Development Fund Inc., Von Kohorn International and Von Kohorn Eastern Corporation, for installing a Rs. 2-crore nylon yarn plant. It is expected to go into production by the beginning of 1961, and when working to capacity, will save Rs. 2 crores of foreign exchange annually. Tatas are joining hands with S.K.F. for manufacturing ball-bearings. A prominent Bombay dealer in the line is also negotiating with Timkens for setting up a ball-bearing plant.

One of the latest contributions to the list is being made by New India Industries, Bombay. This enterprise is at present engaged in the manufacture of textile accessories, but will soon take up the production of cameras and photographic paper in collaboration with Agfa of West Germany. Preparations for the manufacture of cameras are almost complete, and those for photographic paper are unlikely to take long. The project is estimated to cost about Rs. 70 lakhs. Agfa will not be paid any royalty. Its participation will be only in the form of equity capital. It is possible that new ventures have been encouraged by the buoyant mood of the investment market, where even non-dividend-paying scrip seem to be gaining in popularity. But the main explanation seems to be that the drastic import cuts forced by the acute foreign exchange shortage protect domestic enterprises, and the market for their products is expanding with the rapid increase in population.

Mandya Paper Mills

The prolonged discussion over the possibilities of establishing a new paper mill in the south has at last borne fruit, for it has now been decided to establish the Mandya Paper Mills which is expected to issue ordinary shares to the public in September. It is reported that the enterprise has already secured over Rs 1 crore as capital, and the order for its plant was placed ten months ago. Parsons

and Whittemore Incorporated has taken shares worth over Rs. 62.41 lakhs and the managing agents have, in the first instance, provided Rs. 32.58 lakhs. The directors have provided Rs. 5,20,730 so far, and, according to informed reports, the Industrial Credit and Investment Corporation is prepared to take preference shares for Rs. 30 lakhs. The Life Insurance Corporation, too, is prepared to take some preference shares. The new scheme, which is the first big one to mature since the integration of Mysore with Karnataka, is notable because of the collaboration of a U.S. firm with a Mysore concern which is not sponsored by the State Government. The venture, it is said, will use bagasse from the Mysore sugar factory as a raw material. It is felt that the current strength of paper mill shares may persuade investors to support the issue when it is announced in the near future.

Co-operative Farming

Co-operative farming has been a subject of bitter controversy since the Nagpur Congress passed a resolution in favour of introducing it on a countrywide scale. Opinion is divided even in the Congress itself, and the President, Dr. Rajendra Prasad, is among the leaders who are not completely in favour of the idea as conceived at Nagpur. At the same time, there are Congressmen who want nothing less. Mr. Sriman Narayan, member of the Planning Commission, belongs to the latter school. Writing in defence of co-operative farming, he has listed its ten main economic advantages, and says that if these are carefully explained to the Indian peasantry, "they will feel attracted towards co-operative farms out of their own free will." The advantages which Mr. Narayan enumerates are: a more rational use of animal and human labour, a higher degree of capital formation, a wider application of scientific farming techniques, elimination of exploitation by middlemen, growth of local and community leadership, more employment for educated youth, improvement of the poor farmer's creditworthiness, diversification of the rural economy, more leisure for the village people, and, finally, the distribution of the Government's supplies in a more systematic and efficient manner. That co-operative farming offers many advantages in a country like India, where most of the holdings are uneconomic and where the bulk of the peasantry is debt-ridden, with little capacity to improve the land, is admitted. But Mr. Narayan does not answer the important question whether the grower, once he joins a co-operative farm, will have the same incentive to give his best to the land as he did when he cultivated it himself. It has not yet been decided on what basis the income of a co-operative will be distributed among its members. All land is not of the same quality; some portions of the same village or area yield much more than others. Once the produce is pooled, as it will be when the land belonging to a co-operative is cultivated on a joint basis, it will not be easy to find a formula for distribution which will satisfy every member. It has been suggested that co-operative farms should become something like a joint-stock company. All those who join it should be issued shares in proportion to the land they contribute, and receive their dividends accordingly. But this might create more problems than it solves. The farmer will become a mere wage-earner in the employ of the co-operative; he may or may not stand to gain economically, but psychologically he will not adjust himself easily to the new situation. Such ideas have been tried in many parts of the world, and it has generally been found that land productivity has declined. Mr. Narayan says that joining a co-operative will be voluntary, so a farmer will be at liberty to withdraw after a few years if he finds his membership unprofitable. But peasants usually do not like such arrangements; in Bombay and Uttar Pradesh, for instance, in spite of generous official encouragement the number of societies is rising very slowly. It would be interesting to know first how the performance of the societies compares with individual efforts.

Housing Loans from L.I.C.

At a meeting with Mr. P. A. Gopalakrishnan, chairman of the Life Insurance Corporation, Mr. M. L. Shah, president of the Indian Chamber of Commerce, suggested recently that in order to relieve the housing shortage and encourage building activity, the L.I.C. should revive the practice of giving direct loans for house-building and for land development schemes. Mr. Gopalakrishnan stated in reply that the policy for house-building loans is being reconsidered and a decision may be expected soon; meanwhile, the Corporation will consider applications from private parties for building office accommodation in cities like Calcutta, Bombay and Madras. This appears to be a strange answer; giving priority to office accommodation when there is an acute shortage of living accommodation for the middle-class does not look reasonable. The Government, by a notification in the *Gazette Extraordinary* has made it clear that the Corporation can, if it so likes, grant loans on first mortgages on immovable property situated in India. But the Corporation, instead of embarking on this laudable move, is shelving the issue on various pretexts. It is reported that it already has on its hands 400 pending cases of litigation concerning first mortgages granted under the company régime; but 400 is not a large number, and almost 80 percent of the mortgages have by now been resolved. In the circumstances, there is nothing to stop the Corporation from starting a department in each zone to grant house-building loans, as under the company régime. The housing shortage is acute and rents are very high, especially in cities like Calcutta. A bigger housing programme can not only provide employment to many, but also absorb a large amount of the cement which is surplus. It is regrettable that the L.I.C. has not yet been able to formulate a policy for granting individual loans for house-building. An immediate announcement that such loans will be considered would be welcomed, particularly by middle-class policy-holders.

Kalingas Start New Iron Furnace

The Kalinga group of enterprises has reported some notable developments during the past week. The first low-shaft furnace of Kalinga Industries Ltd has gone into production, and has been yielding iron since 21st August. Situated in a valley at Barbil in Keonjhar district, Orissa, and surrounded by hills containing iron deposits, the furnace was constructed in a record time of 18 months. Designed by Fried. Krupp of Essen, West Germany, and employing the Koppenberg-Wenzel process, 50 percent of the plant was manufactured in India under the supervision of Indian engineers. The furnace has a capacity of 120 tons to 150 tons of pig iron a day. The principal raw material for the plant is ore of the size of 10mm. to 40mm., which cannot be used in any large quantity in conventional blast furnaces and cannot be exported. Experiments are going on for using ore fines which are lying in large dumps at pit mouths. Nut coke, which cannot be used in blast furnaces to the extent of more than 5 percent, is used as fuel in the furnace. It has been established elsewhere that the furnace can be operated with poor quality coke or coke made from lignite. In due course, such experiments will be carried out on a commercial scale. It is claimed that such plants have a great future in India and other Asian countries where good quality metallurgical coke is not easily available. Sardar Swaran Singh, Minister for Steel, Mines and Fuel, has indicated that under the Government's policy such furnaces might be erected all over the country for supplying pig iron to foundries. Their advantage, it is stated, is that the production of iron can be decentralised and transport bottlenecks avoided.

Kalinga Tubes Ltd, having launched on an expansion scheme, is intensifying its export efforts. Its factory went into production in April 1955 and the rated capacity is 40,000 tons a year. Before April 1955, all steel tubes and pipes for water and gas distribution had to be imported. Now the company has framed export plans; it expects to earn Rs. 50 lakhs of foreign exchange during the first year and over Rs. 1 crore during the second year. Its mill is equipped with modern machinery and the tubes are manufactured by the high frequency electrical induction welding process, which is suitable for water and gas connections and also for structural fabrication. Under the expansion scheme, the factory will start producing tubes of up to 6in. nominal bore and step drawn poles by the middle of 1960. The target is 100,000 tons of pipes and 300,000 poles a year.

Rehabilitating the Bhotiyas

Mr. Nehru's statement in the Lok Sabha that Indian and Tibetan currencies have been banned in Tibet reflects the deterioration in political relations between India and China in recent months. He has also indicated that, thanks to the squeeze, the value of India's trade with Tibet has dropped to as low as Rs. 2 lakhs or Rs. 3 lakhs, compared with the normal Rs. 10 lakhs or Rs. 15 lakhs a month. The principal victims of China's decision to seal off the Tibetan border have been the Bhotiyas, whose resettlement has become an urgent problem for the U.P. Government. According to a statement made by the U.P. Chief Minister, Dr. Sampurnanand, unless something is done quickly, the Bhotiyas will find it hard to earn a living. In the first five year plan period about Rs. 85 lakhs were spent in the region of Tibet's borders on the Indian side where the Bhotiyas live. Almost the entire sum was spent on building roads. According to Dr. Sampurnanand, Rs. 1 crore has been provided in the second plan for the development of the area. Out of this, Rs. 6 lakhs has been earmarked for animal husbandry, Rs. 1 lakh for fruit cultivation, Rs. 1.5 lakhs for the development of medicinal herbs, Rs. 50,000 for forests, Rs. 50,000 for minor irrigation and Rs. 75,000 for loans and advances to traders. Another Rs. 2.5 lakhs has been set aside for education. The amounts are small, and from the debate which followed the Chief Minister's statement, it appears that the Bhotiyas are undergoing considerable hardship. Central assistance may be needed to bring them relief.

New Madras Branch of Central Bank

In his speech at the opening of a new branch of the Central Bank of India in Madras city, Mr. C. H. Bhabha said that criticism of Indian banks for not giving long-term loans to industry would not force them to depart from the policy they have pursued with advantage over four decades. Whatever might be the merits of "mixed banking", the interests of depositors should always come first. Mr. Bhabha said that although banks have to operate under various restraints, they have provided medium-term finance for industry and have assisted new enterprises to develop in recent years. Reference was made to the increasing business and industrial growth of Madras State by Mr. N. K. Karanjia, who noted that, since 1935, the Central Bank has set up 31 branches there and has followed a business policy which is not motivated by regional or parochial considerations. This might be taken as a reply to the criticism that the big banks from the north skim the business in the south and are able to make greater progress than local institutions although the latter may have the advantage of lower establishment charges. The new branch of the Central Bank is located in Addison's building and offers safe deposit facilities.

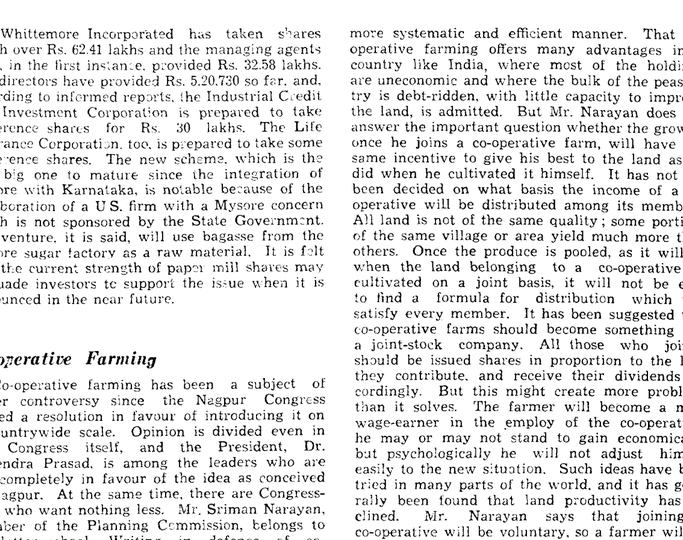
More About Hire-purchase

Hire-purchase is likely to play a larger part in modern living, so its functioning and background deserve to be carefully studied. The Institute of Economic Affairs in January 1958 produced the first comprehensive survey of the subject published in Britain, entitled *Hire-purchase in a Free Society*, and has now issued a second edition. Mr. Ralph Harris and Mr. Arthur Seldon, this time assisted by Mrs. Margot Naylor, have revised their book, adding new chapters where necessary and bringing up-to-date the mass of factual appendices and tables which are perhaps the book's most valuable features, as nowhere else are these to be found together. The authors also make a number of new recommendations. It will be remembered that the first book suggested it was time the commercial banks went in for this form of finance—and in due course that is what happened. Now they suggest that finance companies should make more use of credit bureaux in order to keep bad debts down; that they should not make borrowing terms too easy, since this can leave them with inadequate security; and that they should introduce fines for dilatory payments to shift the cost of payment in arrears from the borrowing public in general on to the shoulders of the offender. They feel that motor-vehicle manufacturers should remove restrictions both on the numbers of registered dealers and on their freedom to engage in price competition. The power of the dealer to demand commission on hire-purchase business would then be reduced. Finally, they suggest that the law has gone too far in protecting the borrower since the courts are extremely unwilling to allow re-possession of goods even when the hire-purchase agreement has been broken without real reason. *Hire-purchase in a Free Society* costs 9s 6d and may be ordered from the Institute at 7 Hobart Place, London S.W.1.

Crease Retention in Wool Textiles

A new finish to give durable creases or pleats to wool cloth was described to members of the wool textile industry in Bradford recently. Sponsored by Marks and Spencers Ltd. the research work has been carried out at Leeds University under Professor J. B. Speakman, the inventor of the process. It has been named the "Immacula" finish, and is being marketed by Proban Ltd, of London and Manchester, which is jointly owned by Albright and Wilson and the Bradford Dyers Association. Mr. Frank Howes, general manager of Proban, said the new finish differs from any known method of giving wool fabrics the properties of crease retention. The finish has to be applied by the cloth finisher, but the chemical change giving crease retention is brought about by a special technique in pressing by the tailor or garment-maker after he has cut and fitted the garment in the normal way. It requires no use of chemicals by the tailor. Mr. Howes said that the finish will stand the stress and strain of normal wear and withstand dry-cleaning, but it is not claimed that it is washable. The process, it is estimated, will add about 2s 3d to the price of a pair of trousers. Professor Speakman said that synthetic fibres have set up new standards of performance in permanent pleating and offered other advantages to the consumer. It is essential for the industry to ensure that wool matches these advantages and the new finish is a first step in that direction.

THE INDIAN SUGAR DUTIES



IN our issue of May the 25th we dealt with a pamphlet written by Babu Prithwis Chunder Roy entitled "The Indian Sugar Duties; a few words against them." On Thursday last, or nearly three months later, the *Amrita Bazar Patrika* had the following curious paragraph:—

"*Capital* severely criticises the brochure of Babu Prithwis Chunder Roy on the sugar question. He, Babu Prithwis Chunder, opposed the Sugar Bill against the unanimous support of his countrymen, and *Capital* notices the fact of his being the Assistant Secretary of the Calcutta Standing Committee of the National Congress. The real fact, however, is that this measure was, of all, opposed by the Congress organ, the Bombay *Champion*, which misled *India*, the Congress organ in England. Naturally, therefore, some leading Congressmen were led to oppose the legislation and one of them was Babu Prithwis Chunder Roy." Are we to understand from the above paragraph that Babu Prithwis Chunder Roy was really in favour of the Sugar Duties but only wrote against them because he thought that the Congress was against them?

SJ. N. BANERJEE, M.A., General Manager.

When introducing the 'Legion of Honour' Napoleon was reported to have said that

MEN ARE LED BY TOYS

But honour and goodwill in business are no toys. They are real, they can make or mar your future and the country's too. It is more so in international trade. Strict quality control, supplies according to approved samples, close adherence to delivery schedules—these are the foundations on which a lasting good name, and good business too, can be built. These conditions must be fulfilled while exporting your goods.

Without Prejudice

The Indian Badli on French Leave

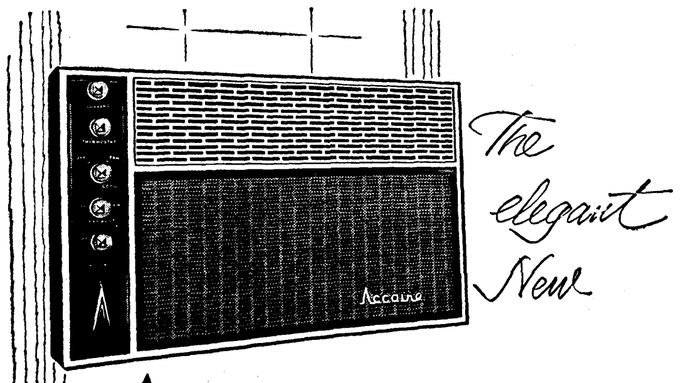
(FROM OUR LEGAL CORRESPONDENT)

RETURNING to Indian cases, we present an industrial dispute concerning the vexed question of absence from work without leave and the punishment appropriate thereto in cases to which legislation on industrial disputes applies. But before doing so, we will, as a refresher course to the commercial reader, consider the general law on the subject apart from statute law; and we might add, with great respect, that it might have been well if the labour court in the case we shall afterwards discuss had done so too.

There can be no doubt that "any breach of an express or implied duty on the part of a servant, unless it be of a trifling nature, affords justification for a dismissal." Thus Mr. Barwell in his and Mr. Kar's monumental work on the law of master and servant. These duties include obedience, fidelity, care, honesty and punctuality, and conduct opposed to the due fulfilment of any of them will entitle the master to dismiss. Note the two words "obedience" and "punctuality". Punctuality means due regard for prescribed hours of labour and includes the notion that absence from the place of work is excusable only if in accordance with the master's permission. Perhaps that is putting it a little too widely; we must qualify it. Illness of the servant, civil commotion or riots, outbreak of infectious disease in or near the place of work, for instance, would absolve the servant, by rendering obedience to his duty impossible or impracticable, from the penalty of dismissal or, for that matter, any lesser punishment.

Nevertheless, speaking generally, absence without leave, unless brought about by circumstances over which the servant has no control, affords a good ground for dismissal, at common law. He has disobeyed the order, implicit in the relationship of master and servant, to be punctual. But, you may ask, suppose a man applies to his employer on incontestably good grounds for leave and his employer, arbitrarily and unreasonably, rejects his plea; say, the man's wife or parent is suddenly taken dangerously ill and he absents himself without leave on that sole account. Is he liable to dismissal for it? That is the point which, in cases to which industrial legislation applies, we are to consider; but by the general law of the land, the man would incur the penalty of dismissal. "Hard," you may say, "very hard and unfair;" to which the only reply is that "hard cases make bad law" and that it is high time the law was altered. Nevertheless, no one seems to have taken the trouble to alter it and it has held the field in this year of grace for precisely 114 years. Ever since the case of *Turner* v *Mason* (1845) (14. M and W 112) in fact. That was an astonishingly cold-hearted and harsh decision and one hopes and believes that, sooner or later, some courageous High Court in India will decline to follow it and brand it as bad law here on the ground that obedience to orders is not synonymous with submission to tyranny.

We have detailed the facts at least twice before in this column, so we will be brief about them. A domestic servant asked leave to absent herself for one night in order to visit her mother who was in a dying condition. Leave was refused. Nevertheless, the servant did absent herself for that one night and, on her return, was summarily dismissed. Her suit for damages for wrongful dismissal failed, Baron Alderson holding that sh had disobeyed a lawful order and the servant moral obligation to her mother was not sufficien to excuse her from performing her legal oblig tion. Said his Victorian lordship: "The gener rule is obedience. The master is the judge of th circumstances under which the servant's servic are required, subject to this, that he is to give on lawful commands. Otherwise lawful comman may yet be properly disobeyed where obedien would lead the servant in good faith to apprehen danger to life or person from the master himse or where, from an infectious disorder raging i the house, the servant might properly feel boun to leave it in order to avoid infection." But n in order to visit a desperately sick parent.[1] An that brings us to the plight of one Arjun Ran chandra of Bombay similar to, but not identic with, that of the disobedient London housemaid 1845. Similar in that Ramchandra absented hin self from work without leave for one day in orde as he claimed, to visit a sick parent, and was di missed for it. Dissimilar in that whereas Mis Turner's case was adjudged under the harsh rigou of the common law, Ramchandra sought his remed for wrongful dismissal under the far more lenien dispensation afforded by the Industrial Dispute Act.



Ramchandra was a *badli* workman employe by India United Mills Ltd, Bombay. It could n be said that he was an ideal *badli*, if any such ther be, for on at least five occasions before that whic induced his employers to dispense with his se vices, he had been found guilty of, and had bee warned for, being absent from work without leav The standing orders of the company, among othe things, provided for the termination of the se vices of any permanent operative on notice payment of wages in lieu of such notice. Th standing orders also provided for various punis ments, including that of dismissal for misconduc Under Standing Order 19(b), the employment a permanent operative might be terminated b payment of 13 days' wages in lieu of notic Whether a *badli* worker, however constantly em ployed, can claim the right to be treated as "permanent operative" or whether he, from th fact that he is a *badli* and has no right to employ ment on any particular day, is liable to be di charged by his employer without notice at an time is a point immaterial, one thinks, to the pr sent case; because an employer is entitled t dismiss a servant without notice, it does n follow that he is obliged to do so. And i Ramchandra's case, the company decided not sum marily to dismiss him, although it contended tha it would have been perfectly entitled to do s but to discharge him as if he were a permaner operative by payment of 13 days' wages in lieu notice. And this the company did.

As a matter of interest to those employed i higher walks of life than that of a *badli*, we ma emphasise the fact that there is all the differenc in the world between discharge and dismissal. I the case of discharge, it is nothing more than termination of service which gives the employe the right to his full provident fund, his gratuit and any other benefits to which he may be entitle Dismissal, on the other hand, implies somethin dishonourable or discreditable and may involv the deprivation of such benefits. To return t Ramchandra, he left the mill while engaged o a shift without taking anyone's permission, becaus as he claimed later, his father was seriousl ill. The company claimed that he should hav applied for permission to leave to his superio officer; and in view of the five previous occasion on which he had been warned but not punishe for absenting himself, terminated his employmen by discharge.

Thereupon the workman's union took the cas to the First Labour Court, Bombay, and asked th judge thereof to set aside the order of discharg This the union did notwithstanding the fact tha it was not even alleged, much less proved, tha the management had acted *mala fide* or that i was actuated by the motive of victimisation o unfair labour practice in discharging Ramchandra His honour ordered reinstatement of the workma with continuity of service and awarded tw months' wages as compensation. It was no enough the labour judge held that there shoul be no *mala fides* on the part of the employer And even if *mala fides* were not alleged, it mus be shown by the mill that there was sufficien evidence on which to base, reasonably, its decisior In other words, as the industrial court put it late on appeal by the employers they had to prove negative, namely, long after the alleged event tha the workman's father had not, in fact, been ill a all. "It cannot be conceded," said the appellat court, "that if an employee gets information tha a relation of his is ill, he has the right to wall out of the mill without getting anybody's leave o permission.....(The management's order of dis charge) cannot be interfered with unless there i *mala fides* or victimisation or unfair labour prac tice, and there is none in this case." The com pany's appeal was allowed and the labour court' order set aside.

[*India United Mills Ltd. Bombay* v *Rashtriy Mill Mazdoor Sangh, Bombay*. 1959. (August) II *L.L.J.* 120.]

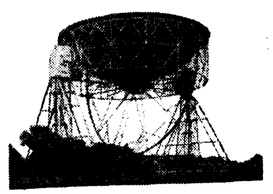
A Ditcher's Diary

WHEN A MAN ASSOCIATED FOR THE GREATER PART OF his life with such movements as non-violence, non-co-operation and finally non-alignment and non-involvement, suddenly claims that he is "a positive individual", a certain amount of surprise and bewilderment is only to be expected. But the contradiction is chiefly verbal. It often happens that our being against something means that we are for something else. To make a positive creed of anti-communism and leave it at that is to invite mental barrenness, and we all know how dangerous that can be, defeating the very object one seeks to achieve. It is right, therefore, that Mr. Nehru should not care to be known as anti-communist: it is simply not a good enough soubriquet for a man with ideals. On the other hand, positive views are bound to lead to a strong antipathy towards the communist doctrine. One cannot, for instance, believe in freedom and liberalism and still see anything good in communism. Much as I admire Mr. Nehru's readiness to try to see something good, I cannot understand his believing that the communist approach is in favour of the underdog. The underdog where? In Algeria, South Africa, India (until recently) and Japan, perhaps—in places that have nothing to do with Russia or China. Certainly not in Russia and China themselves, or in any part of their large and expanding empires. Surely Mr. Nehru has discovered by now that a high percentage of those shot down in Hungary and Tibet were workers and peasants, and it can hardly be unknown to him that the Russian and Chinese peoples are without a tithe of the rights he has himself given the people of India. I come back to the view that thinking habits formed in one's impressionable years are never fully lived down, and Mr. Nehru's sentimental approach to the idea of communism will be shaken but slightly by the horrors of its practice. Nor is he the only man so placed, for I am sure I have persons and ideas in the back of my mind which can never be totally wrong for me. Seeing is not believing, and on this are based some of the most touching relationships in life and literature. Whether this is capable of indefinite extension in politics without risks is another matter.

THE PRIME MINISTER'S ASSURANCES ABOUT THE defence of Sikkim, Bhutan and the frontier regions of N.E.F.A. and Ladakh should at least let China know where she stands with her proposed "Himalayan Federation"—if indeed she has such a scheme. The problem now is how to implement them. Ladakh and N.E.F.A. present few difficulties, they are part of India and that is that. But Sikkim and Bhutan are another matter. As independent States they could certainly be defended against military attack, but might prove extremely difficult to protect if merely subverted. Against this favourite form of communist aggression, external guarantees can be both useless and embarrassing; I am sure that, if asked, President Eisenhower would be glad to give Mr. Nehru the benefit of his own discouraging experience on their general efficacy. What makes matters worse is that the two States are probably ideal subjects for subversion: Their political structures are mediaeval, their economies are undeveloped, their isolation has prevented their accumulating the kind of experience which might enable them to deal with the revolutionary ideas now filtering across even their high thresholds, and, worst of all perhaps, their peoples are of Mongolian racial stock rather than Indo-European. No doubt New Delhi is exercising itself over these problems at this very moment. Rather it than me; how to deal with a Laos, a Vietminh or a Czechoslovakia on your own borders is something which no nation has so far been able to solve satisfactorily. Perhaps the answer lies in a closer relationship between India and these two exposed northern neighbours. But certainly it would seem to involve offering them India's version of political and economic progress as an alternative to China's; it would be a tragedy if this country were to find herself in the dilemma which has so often faced the West since the war of having to back unpopular or unrepresentative governments, and so obstruct the people's legitimate economic aspirations, in order to stop the advance of communism.

IN BRONZE, STONE AND MARBLE JACOB EPSTEIN created a world of his own and peopled it with as many creatures of his imagination as with some of the greatest men of his time. In India, the Tagore and the Nehru are well known, as they should be but I think his Conrad and Einstein are among the best. Sometimes his work was a little too symbolical for most people, and these latter often acted in a way that was both ignorant and arrogant. I have never quite understood why some of us can't take what we like of an artist's work and keep quiet about the rest: I am speaking of the public, of course, for the professional critic has to come forward with an opinion on everything. Those massive Epsteins like "Behold the Man" frighten me mildly, if only because I find the shapes and forms unpleasing to the eye: but in portrait sculpture Epstein was certainly among the greatest of all time. He brought to every face and figure something of his own view of the individual, of the world he and the subject lived in. He was Jewish, and it is said that he invested even Gentile subjects with a certain semitic quality. I wouldn't know. But a note of pessimism is perhaps discernible in most of his work and what other view of life would one expect of a Jew in a period that saw Stalin and Hitler and Belsen and Dachau? It was Sir Charles Petrie, I think, who worked out a chart of civilisation according to the art form every phase chooses for itself. To simplify the whole complex theory, he suggested that when a civilisation is virile and in its most creative phase it goes for the epic and public architecture while in the decay it comes to *malerisch* and the plastic arts such as painting or lyrics. Ours, I fear, is a plastic age with a few exceptions here and there, and Epstein was one of them. His art was for the public view and not for his own sake, and the public in our time is either indifferent to works of art or noisily philistine. It, therefore, happened to Epstein to be ridiculed by many: but his genius was recognised by the expert and towards the end even by the ordinary public. It is remarkable how he was working right to the end, and his had not been an easy life.



WHEN PEOPLE ASK ME WHY *Capital* DOES NOT change its name now that India is avowedly socialist, the answer I always give—apart from reminding them that political fashions are ephemeral whereas a newspaper has to maintain consistency—is that this is the name we have always been known by, that it has served us as well as we hope we have served it, and that if some people are inclined to get emotional about such matters then they are not usually the ones who would be likely to subscribe to us anyway. Apparently the *Manchester Guardian* either does not regard its readers so highly, or has become too interested in increasing its circulation and advertising revenue to care. Except as a measure for economising printer's ink, I can see no virtue at all in the *Guardian's* decision to drop the "Manchester" from its title. If, as the London editor, Mr. Gerard Fay, has told the *Times*, some "potential readers..are deterred by the name 'Manchester'" then I should have thought the answer would have been, so much the worse for them. To say that the change merely "acknowledges an accomplished fact", as an explanatory leading article does, seems to me not only un-British in its insistence on clarity of definition, but to show remarkable ingratitude towards a name which has advertised so well the paper's outlook and policy during the period when, on its own admission, its circulation has almost quadrupled. The point is that the *Guardian* could not have come from anywhere else but Manchester. That city is the source—and in this increasingly dogma-ridden world—the last abode, of the liberalism which has made the paper so sought after in recent years as a vehicle of enlightened opinion. I cannot understand why, if there is an urge in Cross Street to acknowledge accomplished facts, that this is not the accomplished fact acknowledged. I do not see much sense either in the plea that more copies are now sold outside Manchester than inside; using the same argument, such renowned newspapers as the *Christian Science Monitor* and the *New York Times* would have to change their names because in one case the majority of readers are not Christian Scientists and in the other, they live outside New York. It is astonishing that so hard-headed a newspaper as the *Guardian* should have decided there is so much in a name. There is a good deal more in a reputation though. And if the *Guardian* does not continue to express the best up-to-date Manchester brand of liberalism, much as it may deplore the geographical delimitation, I suspect its next quarter-century will not be anything like as prosperous—nor as likely to go to its head—as its last one appears to have been.

THE REAL SUMMIT CONFERENCE HAS ALREADY TAKEN place. It was held, with strong Indian representation, at Chamonix in the French Alps throughout the first half of August. It was the International Conference of Alpinists and, for once, all those dreary cartoonists' jokes about the delegates scaling a snowy peak would have been appropriate, because the 13 national delegations, finding the weather excellent, used a dozen different routes to the top of Mont Blanc. The Indian party, led by Colonel Gyan Singh, director of the Himalayan Mountaineering Institute in Darjeeling, scored a considerable prestige success in the conference room. India is the only country in the world besides France to have a national alpine institute and the mountaineers of Europe, North America and Japan were, I am told, keenly interested to hear how the Darjeeling school is run. They were shown the excellent little film, that many of my readers will have seen, *The Call of the Summits*, about the practical training in climbing given from Darjeeling. And they were evidently impressed, because in the newspaper reports that are appearing as the delegations return home, the success of the Indian attack on Mount Everest, which Colonel Gyan Singh announced at the Chamonix conference, is being taken as a foregone conclusion.

THE DITCHER

achievement depends on reliable steel

More and more industrial energy—to travel faster and over greater distances—the relentlessness of these demands has made technological development a race in which a modern industrial nation cannot afford to be left far behind—a race in which achievement depends on reliable steels, new steels and steels which are stronger especially at elevated temperatures. That is why a large part of United Steel's resources is devoted to research and development.

United Steel, with an annual output of 3 million tons of steel, meets many of the very exacting material needs of today. United Steel Structural Company built the radio telescope at Jodrell Bank (its reflecting bowl, 250 feet in diameter, was fabricated accurately to one eighth of an inch). All steel employed in this remarkable structure was rolled by United Steels.

THE CALCUTTA MONEY MARKET

FURTHER RISE IN CALL RATE

Tuesday, 25th August.

THE past week has seen little change in the level of advances outstanding in the Calcutta money market. The requirements of the jute and sugar mills have both declined fractionally and no appreciable change has been recorded in demand from the cotton industry or against grains and seeds storage. Funds have become tighter in the inter-bank market and the call rate has risen to 3¼ per-cent, with business done up to 3½ percent. The present tightness may, however, be short-lived because signs are not lacking of easier conditions on the way now that the State loans have all been taken up.

There is little change to report from the exchange market, where a regular supply of both tea and gunny bills has continued. Remittance has been fair. On the London market the pound has again lost fractionally against the twin dollars and most important Continental currencies.

BULLION WAS FIRM LAST WEEK ON STRONG BULL support and due to restricted arrivals. Silver advanced on short-covering from Rs. 201 to Rs. 202.25, quoted today for ready delivery. The rate for forward delivery was Rs. 201.25. The London and New York silver prices were 78½d and 91.375 cents.

Gold increased in sympathy with silver from Rs. 122.50 to Rs. 123.50. The sovereign at Rs. 78.50 showed a gain of 25nP.

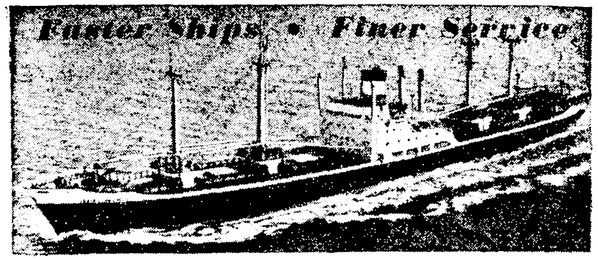
DURING THE WEEK ENDED 21ST AUGUST, GOVERNment of India Treasury bills for Rs. 54.00.00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 25th August. The total amount offered was Rs. 2,00,00,000. Tenders at Rs. 99.370 were accepted in full, the average rate of acceptance being Rs. 2.520 percent a year. Tenders for Rs. 3 crores of 91-day Government of India Treasury bills will be received at all centres up to 11 a.m. on 31st August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 26th August to 29th August at Rs. 99.386 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 17th August to 22nd August amounted to Rs. 36,00,000.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 14th August, 1959, shows a rise of Rs. 11.13 crores to Rs. 556.10 crores in total deposits. Investments in Government securities are up by Rs. 99 lakhs to Rs. 348.93 crores, while other authorised investments remain unchanged at Rs. 10.22 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 3.83 crores to Rs. 169.46 crores. Cash and balances are, in consequence, shown at Rs. 34.58 crores or Rs. 11.81 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 14th August, 1959, shows Demand and Time liabilities at Rs. 739.40 crores (Rs. 24.16 crores on account of borrowings from banks) and Rs. 1,082.95 crores (Rs. 26.74 crores), compared with Rs. 727.46 crores (Rs. 23.44 crores) and Rs. 1,082.12 crores (Rs. 27.23 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 34 lakhs and Rs. 16.21 crores to Rs. 41.14 crores and Rs. 89.37 crores, respectively. There is a drop of Rs. 2.72 crores to Rs. 712.10 crores in investments. Advances and bills discounted at Rs. 946.08 crores show a fall of Rs. 7.60 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are in consequence, shown at 7.2 percent and 51.9 percent, against 6.3 percent and 52.8 percent.



TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 28-8-59.

Issue Date	Maturity Date	Amount (000's Rs)	Average Acceptance Rate
28-8-59	29-11-59	2,00,00	Rs. 2.520%
14-8-59	15-11-59	3,00,00	Rs 2.530%
7-8-59	8-11-59	3,00,00	Rs 2.519%
31-7-59	1-11-59	3,00,00	Rs 2.545%
24-7-59	25-10-59	2,00,00	Rs 2.717%
18-7-59	19-10-59	2,00,00	Rs 2.748%
10-7-59	11-10-59	2,00,00	Rs 2.759%
26-6-59	27-9-59	2,00,00	Rs 2.760%
19-6-59	20-9-59	2,00,00	Rs 2.764%
12-6-59	13-9-59	2,00,00	Rs 2.780%
5-6-59	6-9-59	2,00,00	Rs 2.780%
29-5-59	30-8-59	2,00,00	Rs. 2.790%

(Monthly Maturities 000's omitted)

August 1959	2,00,00
September 1959	8,00,00
October 1959	6,00,00
November 1959	11,00,00
Total	27,00,00

Managing Agents : — LIONEL EDWARDS (PRIVATE) LTD.

Limestone and dolomite from the dusty quarries of Katni, steel and pig iron from the roaring furnaces in Asansol and Jamshedpur, coal from the dark depths of the earth in Bihar . . . each year, from all over this vast land a stream of materials worth about Rs. 3 crores, pours into our shopping bag. Out flows from Texmaco's production lines another stream, a stream of finished *products manufactured* to international standards — sugar, cotton and jute mill machinery, rolling stock, industrial and locomotive boilers, hydraulic dam equipment and other steel structurals. Thus playing its part in the complex pattern of India's developing economy, Texmaco is linked with a multitude of other enterprises, large and small. As Texmaco grows so too the other industries prosper.

QUOTATIONS STEADY BUT TURNOVER RESTRICTED

INCREASE IN COAL PRICES ANNOUNCED

Tuesday Evening.

ALTHOUGH prices of most shares were well maintained and in some cases even improved upon, the volume of investment business in the Calcutta share market last week was somewhat disappointing. Investors now appear to be holding their available funds for the spate of attractive new equity and rights issues—to the extent of Rs. 20 to Rs. 25 crores—expected from September onwards in both the Calcutta and Bombay share markets. That the capital market is in good shape is evident from the outstanding success of the 13 State loans which, in the majority of cases, were heavily over-subscribed, as will be seen from the following figures:

State	Amount asked for (in Rs. crores)	Subscriptions received (in Rs. crores)	Percentage of allotment
Andhra	6.0	11.96	52
Assam	2.5	2.76	100
Bihar	3.0	3.30	100
Bombay	6.0	17.62	37
Kerala	4.0	4.65	94
Madhya Pradesh	3.0	5.13	63
Mysore	5.0	8.88	61
Madras	8.0	11.55	74
Orissa	3.5	4.97	76
Punjab	2.0	2.97	73
Rajasthan	3.5	4.76	80
West Bengal	7.0	9.15	64

The long-delayed announcement regarding the increase in the selling price of coal (50nP a ton on all the grades above grade IIIA in the Bengal-Bihar fields, with corresponding changes in the prices of hard and soft coke) was made yesterday, but the relief granted was considered by the industry to be grossly inadequate. Coal shares met with selling pressure and most issues registered losses.

With the flow-back of funds, Government securities steadied up and most existing loans registered gains. In the case of the recently floated State loans, there were buyers at a premium ranging between 15nP and 50nP over the issue prices.

Preference shares continued to be keenly sought after, but sellers refused to part with their holdings.

In the banking section, United Commercial was better at Rs. 62.75 while Punjab National dropped from Rs. 22 to Rs. 20.75 following the announcement of a lower interim dividend.

For the reason given earlier, coal shares were subdued and prices declined on a broad front, as will be seen from the following table:

	Opening 20th August, 1959	Closing 25th August, 1959
Amalgamated	27	26.62
Bengal	313	310
Equitable	32.25	32
Pench Valley	25.50	25.25
South Karanpura	12.62	12.50
New Beerbhoom	21.25	20.87

With the exception of Kesoram, which improved further to Rs. 17.69, prices of cotton shares showed little variation.

In the electric supply section, Benares moved up smartly from Rs. 14.25 to Rs. 15.

In the engineering group, Indian Iron & Steel fluctuated between Rs. 24.10 ex-dividend and Rs. 24.43 ex-dividend to close at Rs. 24.24. Burn & Company were firm at Rs. 470. Textile Machinery after being done up to Rs. 24.80 turned sellers at the close at Rs. 24.45. Braithwaites were easier at Rs. 27 as were Indian Galvanizing at Rs. 20.37.

Business in jute shares was on a restricted scale, but prices on the whole were well maintained. Shares particularly enquired for included Auckland, Bally, Birla, Dalhousie, Gourepore, New Central and Rameshwara.

In paper, Bengal were quoted one rupee lower at Rs. 106 while Shree Gopal were better at Rs. 18.75. Orient were inquired for at Rs. 38.10 as were India Paper Pulp at Rs. 25.12 and Titaghur at Rs. 44.75.

With the exception of Ramnugger Cane, which improved from Rs. 20.12 to Rs. 21, sugar shares were dull and neglected.

Among miscellaneous issues, Angelo Brothers were wanted at Rs. 19.75 and British India Corporation were taken at the higher rate of Rs. 5.44. Dunlop Rubber were steady at Rs. 34.75 as were Hindustan Motors at Rs. 12.31. Indian Aluminium were unchanged at Rs. 22.12 and Indian Cables were softer at Rs. 32.19. Indian Oxygen met with good enquiry and improved further to Rs. 29. Indo-Burma Petroleum recovered from Rs. 26.50 to Rs. 27.12. India Steamship were unchanged at Rs. 14.50. Jardine Henderson rose from Rs. 83 to Rs. 85. Metal Box were better at Rs. 42.25 and National Carbon were lifted from Rs. 35.75 to Rs. 36.50. Shaw Wallace receded from Rs. 18.37 to Rs. 17.94. Rallis improved today from Rs. 78 to Rs. 79.

The recent increase in the wages of tea garden labour was responsible for the sluggish conditions which prevailed in this section of the market.

In the mining group, Indian Copper were quiet at Rs. 4.10 while Karanpura Development were better at Rs. 14 and Metal Corporation at Rs. 13.25.

Assam Saw

The Assam Saw Mills and Timber Company has incurred a loss of Rs. 2.20 lakhs for the year ended September 1958, after providing Rs. 1.48 lakhs for depreciation. This increases the debit balance to Rs. 7,10,142, which it is proposed to set off against general reserve. The dividends have again been passed over. The directors state that Bird and Co. (Private) Ltd has resigned from the office of the managing agents with effect from 1st February, and the affairs of the company are being managed by them. In the current year, the situation does not appear to be bright. Every possible attempt is being made to reduce expenses. A few modern machines are on order for improving the quality and reducing production costs.

Mettur Industries

In their report for the year ended March 1959, the directors of Mettur Industries Ltd recall that, "at the extraordinary general meeting held on 11th April, 1958, a special dividend of 50 percent, free of income tax, was declared; on behalf of the directors, the chairman explained that this distribution had been recommended as in the circumstances the board was not able to recommend any expansion of the mill. The board has now recommended transferring from the reserves an additional sum of Rs. 9.75 lakhs in order that a further dividend of 25 percent can be paid for the financial year 1958-59. It believes that the very heavy

NSE 7 SEKAI

taxation liability of Rs. 28.9 lakhs should not be reflected in the ordinary dividend, not only in view of the very sound position of the company, but also because there seems to be no justification, at the present time, for maintaining the reserves at a high level. The directors have, therefore, recommended a further transfer from the reserves to the profit and loss account, the main purpose of which is to offset the heavy taxation liability arising from the special dividend payment of 50 percent." The profit has amounted to Rs. 15.12 lakhs, after transferring Rs. 28.90 lakhs to taxation provision, bringing in Rs. 876 and transferring Rs. 9.75 lakhs from reserves. A dividend of 25 percent has been declared. The carry-forward amounts to Rs. 12,406.

Choonabhutti Tea

There is a profit of Rs. 4.63 lakhs for the Choonabhutti Tea Company for the year ended December 1958. Taxation absorbs Rs. 2.15 lakhs. Bringing in Rs. 1,17,584, there is a balance of Rs. 3,65,956. General reserve is allocated Rs. 60,000 and development rebate reserve Rs. 4,420. An ordinary dividend of Rs. 22.50 a share has been paid, leaving a carry-forward of Rs. 1,13,818. The crop declined from 14,951 maunds to 14,667 maunds but the average sale price rose from Rs. 1.91 to Rs. 2.07 a lb. Estimates for 1959 provide for a crop of 14,500 maunds at a cost of Rs. 18.90 lakhs.

Ashok Leyland

Ashok Leyland Ltd has earned a profit of Rs. 28 lakhs for the year ended December 1958. Bringing in Rs. 61,449 and making other adjustments, there is a balance of Rs. 28,63,244. Development rebate reserve is allocated Rs. 8.73 lakhs and taxation provision Rs. 8.09 lakhs. A dividend of 6 percent has been declared, leaving Rs. 27,608 to be carried forward. The implementation of the manufacturing programme was maintained satisfactorily, and at the end of 1958, components representing approximately 45 percent of the c.i.f. value of a complete chassis were being manufactured at the Ennore factory. The authorised capital has been raised to Rs. 3.25 crores, divided into 6,500,000 equity shares of Rs. 5 each; Rs. 2 crores of the capital has already been issued. In order to provide finance for further expansion, action is being taken to issue a further Rs. 1.25 crores.

Reliance Jute

The Reliance Jute Mills Company has made a profit of Rs. 7.48 lakhs for the year ended March 1959. Making various adjustments, the debit balance has decreased to Rs. 38,95,851 and is carried forward. The dividends have again been passed over. The company's quota of current loom hours was sold for a period of six months from 9th September, 1958, and the arrangement has been continued for the six months to 8th September, 1959. The company has leased to the Government of India some of the jute and gunny godowns for the purpose of foodgrains storage. These godowns are being taken over by the Government piecemeal, and when arrangements have been finally concluded, an additional income of Rs. 19,000 a month should accrue. The lease is initially for six months but the directors have reason to believe that the Government will be prepared to consider further renewals for six-monthly periods at a time. The directors are keeping before them the feasibility of resumption of manufacture in the company's own mill. While trading conditions for modernised units in the industry are reasonably favourable at the present time, they consider that, bearing in mind the financial position of the company, a resumption of manufacture on non-modernised machinery would not be justified. They prefer to continue meantime with the present working arrangements whereby loom hours are sold to other mill companies under the managing agency of Jardine Henderson Ltd until the debit balance has been reduced and the capital of the company reconstructed on a basis which will enable a machinery modernisation programme to be embarked upon.

Churulia Coal

The Churulia Coal Company has made a profit of Rs. 20,672 for the year ended December 1958, after providing Rs. 57,162 for taxation, Rs. 1,800 for wealth tax and Rs. 5,000 for general reserve. Bringing in Rs. 10,537, there is a balance of Rs. 31,209. The dividend of 5 percent has been maintained, leaving a carry-forward of Rs. 1,209.

Bombay Market

MARKET TURNS QUIET AT CLOSE

POLITICAL NEWS DEPRESSES SENTIMENT

Tuesday Evening.

THE Bombay stock market closed in a quiet mood this week after enjoying active trading conditions earlier. At the beginning, a fresh buying spree was helped by excellent corporate news and encouraging advices from the cloth markets. Later operators turned cautious because of the political news background.

Tata Steel closed at Rs. 176.50 and Indian Iron were quoted at Rs. 25.10, but Calcutta interests took a fairly bullish view of the latter scrip. Tata Locomotive were bought at Rs. 204.50 on an encouraging speech from the chairman of the company. Premier Construction dipped to Rs. 348 on profit-taking and Alcock Ashdown were offered at Rs. 252.50. Motor shares were steady, and Hindustan Motor were taken at Rs. 12.24. Premier Automobile came to hand at Rs. 132.50.

Cotton mill shares were shaded towards the close on profit-taking. Bombay Dyeing lost at Rs. 63.70 on the payment of a taxable interim dividend of Re. 1 a share. Century were sold at Rs. 556 because of uncertainties about the rights share issue. Having improved considerably during the earlier part of last week on talk of a change in management, Kohinoor were shaded at Rs. 317 on realising. Svadeshi were placed at Rs. 246.50 and Simplex were dealt in at Rs. 159. Apollo were offered at Rs. 1.26 and India United Ordinary were available at Rs. 8.52. Miscellaneous industrials moved in pattern with the general trend. In the cement group, Associated Cement were transacted at Rs. 144.75 and Digvijay Cement were done at Rs. 145.50. Mining shares were quiet, and Shivrajpur Syndicate were available at Rs. 88.50. Sugar shares were steady, and Belapur were bought at Rs. 315. Phalton were transacted at Rs. 164.50. Among steamship company shares, Scindia Steam declined to Rs. 17.72, as did Great Eastern Shipping to Rs. 21.36. National Rayon reacted to Rs. 350.75, but Tata Chemical were steady at Rs. 16.76. Voltas met with demand at Rs. 172. There was a great flutter in Killick Industries and the price of the scrip improved to Rs. 150 in response to reports that a large block of shares held in London have been sold to Indian interests who are already connected with the company in business. Bombay Burmah were quoted at Rs. 528.50 on paying the same interim dividend of 6 percent for the year ended May, 1959.

Turnover in banking and insurance shares was limited and fluctuations were narrow. Bank of India were dealt in at Rs. 114 and Bank of Baroda were taken at Rs. 102.50. New India Assurance were bought at Rs. 60.20.

There was investment support in electricity supply company shares, and Tata power companies met with demand because of good reports. Tata Power were dealt in at Rs. 1,197.50 and Bombay Suburban were indicated at Rs. 112.75. Ahmedabad Electric changed hands at Rs. 93.50.

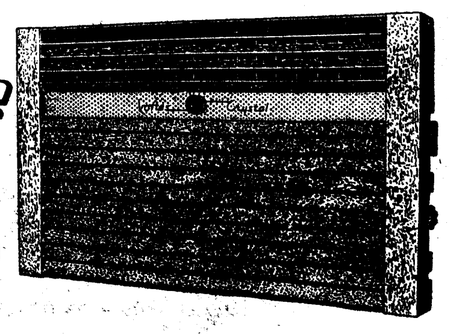
MORE 'CRYSTALS' ARE BOUGHT THAN ANY OTHER ROOM AIR CONDITIONER

It's Crystal Clear

because

1 the 'Crystal' has more than one ton cooling capacity
2 the 'Crystal' has universally adjustable air-flow
3 the 'Crystal' protrudes less than three inches into the room
4 people have confidence in Voltas' unrivalled after-sales service, that never lets them down



Made, sold and serviced by VOLTAS
—the people who know air conditioning best

KEEP COOL WITH A

Crystal trimline

CHEERFUL CONDITIONS ON STOCK MARKET

STEELS AND SHIPPINGS LEAD RISE IN INDUSTRIALS

London, 25th August.

GENERALLY cheerful conditions prtvailed in the stock market during the past week and further widespread and often substantial gains were recorded, particularly among industrials, on renewed and persistent buying. A growing shortage of stock contributed to the scale of the advance in industrials, where good buying was stimulated by a number of favourable factors. These included the already optimistic view of the business outlook, strengthened by the Treasury's *Bulletin for Industry*, which declared that expansion is clearly under way, and existing optimism concerning the outcome of a general election, boosted by the latest public opinion poll which favoured the present Government. Good company news, particularly Unilever's half-yearly statement showing a sharp rise in profits, also helped sentiment. The generally uncertain tendency of Wall Street was largely ignored in London and had little or no effect. Virtually all groups in the industrial market went ahead with steel and shipping shares among the best features. The House of Frasers' victory in the battle for control of Harrods brought a sharp rise in Harrods ordinary and a heavy fall in Harrods preference. House of Fraser shares were also lower. In the foreign bond market, Greek and German issues improved. Banking and insurance shares tended higher while hire-purchase and finance issues were strong. In the gold share market, Free State issues attracted a selective demand under the lead of Free State Geduld which, however, lost some of their initial gain following profit-taking. Other gold shares moved narrowly. Diamonds eased. Coppers were inclined easier but leads and zincs tended higher and tins advanced in response to the result of the Malayan elections. Oil shares moved irregularly and mostly towards lower levels. Rubber shares developed a decidedly better tendency. Tea shares also improved. Gilt-edged securities showed initial firmness, but later reacted and tended to drift lower under small selling following talk of a higher British Bank rate in the not-too-distant future.

The Money Market

Credit conditions in the money market during the past week were rather difficult. The supply of loanable funds from banking sources rarely met market needs in full with the authorities usually making up the deficiencies. The rate for overnight loans held firm at 3½ percent with 3½ percent paid during the most difficult periods, and 3⅝ percent for the money resulting from the interventions of the authorities to overcome the difficult phases. Only on two days, did the rate go below 3½ percent, when late balances were on offer after the market had almost satisfied its need and these were taken down to 2⅝ percent. There was a fair demand for late October and early November maturities and "hot" Treasury bills at 3 13/32 percent. There was no significant change in the Treasury bill rate at the weekly tender, the official average rate being £3 9s 8.39d percent.

U.S. Copper Strike

A spokesman for Phelps Dodge Corporation announced that the mine mill union had also struck at its western facilities. This means that the three leading copper producers, Anaconda, Kennecott and Phelps Dodge, are shut down with about 75 percent of United States domestic copper production lost for an estimated 75,000 tons a month.

Indonesian Monetary Reforms

Monetary reform measures have been announced in Indonesia. All markets in the country have remained closed because of the new measures. The Antara news agency said the Government had decided to abolish the present system of issuing export certificates. Bank accounts over 25,000 rupiahs had been 90 percent frozen and from tomorrow 1,000 and 500 rupiah bank notes would become 100 rupiahs and 50 rupiahs, respectively. The new measures took effect on 24th August. The Information Minister announced that the export certificate system—which was begun in July 1957 to finance Indonesia's imports— would be replaced by the previous procedure of collecting export duties. The 90 percent of savings bank accounts over 25,000 rupiahs that was being frozen would be regarded as a long-term loan to the Government. Exceptions would be made for social organisations and government bodies which could ask to have their savings unfrozen.

lights the nation's offices

THIRD PLAN TARGETS FOR IRON AND STEEL DISCUSSED

PRODUCTION FROM SMALL PLANTS ON AN EXPERIMENTAL BASIS

(FROM OUR NEW DELHI CORRESPONDENT)

THE representatives of the iron and steel industry, both of the public and private sectors, met last week in New Delhi to discuss the likely demand for their products during the third plan period and the ways and means of meeting it. It was explained that studies concerning the third plan are at present proceeding on the basis of a total investment of about Rs. 10,000 crores, including both the public and private sectors, as a kind of working figure. But it is a little too early to indicate the distribution of such investment or its phasing. Schemes in various sectors will have to be planned on certain assumptions and all these will have to be viewed together before any decision can be taken on the distribution of the investment. But about Rs. 6,500 crores will be the order of investment in the State sector taken as a whole.

The character of consumer demand will continue to present greater difficulties in assessment even after the volume and nature of investment is fairly clearly determined. The rate of expansion of the railways during the third plan period might not be very much more than that in the second. The tendency in heavy engineering construction has been towards the use of plates, sheets and high-tensile wire instead of heavy sections. The demand for lighter sections—light structurals, bars and rods—can be expected to increase faster than was envisaged in the second plan. With the advance of industry, the demand for plates, sheets, strips, tubes and pipes will also grow considerably. Taking all these into account a target of about 10 million tons of steel in terms of ingots has been adopted, for planning purposes, to be attained by 1965-66. Judging by the current demand for various products and on an assessment of the demand likely to arise, it is estimated that the demand in 1965 by categories will be somewhat as follows:

	Demand in 1960-61 as assessed in 1955	Current demand in 1958-59	Tentative figures of demand by categories in 1965-66
	(in thousand tons)		
Heavy rails and fish-plates, sleepers and crossing sleepers	485	600	600
Heavy structurals and broad-flanged beams	560	370	550
Medium and light structurals	510	296	550
Rounds and flats	1,140	1,421	2,200
Tinplate	150	140	300
Plates ⅜ in. and upwards	300	361	750
Wires, including wire ropes	105	80	250
Hoops and box strapping	60	37	50
Sheets	650	659	1,200
Strip for tubes	305	200	400
Forging blooms and billets	100	121	200
Wheels, tyres and axles	70	—	80
Deformed bars	30		
Spring steel	30	—	100
Tool and alloy steel, including stainless steel	25		
Rounds for nuts, bolts and screws	—	—	100
	—	—	—
Total	4,500	4,285	7,330
Pig iron			1,500

Demand for Pig Iron

Pig iron is required by foundries for casting railway sleepers, pipes and a variety of components for machinery. The railways estimate that their requirements will be 400,000 tons for sleepers and about 50,000 tons for use in their workshops. The demand for cast iron pipes, including spun pipes, has been growing faster and by the end of the third plan period, it might be about 400,000 tons. The demand for other kinds of castings will be at least 500,000 tons; it may well be 1 million tons. For purposes of planning, it would appear to be reasonable to fix a target of 1.5 million tons of pig iron.

It is proposed to expand the steel works in Rourkela, Bhilai and Durgapur. On preliminary calculations, it would appear that their expansion would increase the capacity for steel-making in the country to about 8.5 million ingot tons. In addition, Bokaro in Bihar is being developed as the site for a new integrated steel works. The size and nature of this plant will be determined after the preliminary investigations, which are now going on, are completed, and a clearer picture emerges of the likely demand for steel, product-wise. While the development of the steel industry must essentially be based on the expansion of the large integrated steel works and the establishment of new large forge-foundry works for which manufacturing capacity is being created in Ranchi, it is proposed to permit some small plants to be put up in areas where there is iron ore but no coking coal, *e.g.*, Rajasthan and Karnatak. If experiments with Neyveli lignite prove successful, it is also proposed to put up a steel plant based on Salem ores and Neyveli lignite. Small steel plants do not represent a totally new development in India. Two small furnaces are about to go into operation—one in Madras and another in Orissa. A low-shaft experimental furnace is already working in Jamshedpur. Similarly, a number of electric furnaces, using scrap, have been in existence and some more have been licensed. These electric furnaces, when ready, will produce about 200,000 tons of steel annually. For purposes of planning, it can be expected that the small plants (including the Neyveli-Salem plant) will together produce about 600,000 tons of steel and about 250,000 tons of pig iron.

Alloy and Special Steels

The target of 10 million tons for steel in the third plan is primarily for ordinary steels produced by conventional processes in large integrated iron and steel works. While the demand for such steels is large and production is generally undertaken in big integrated works, there are other steels usually called "alloy and special steels" which are required in relatively small quantities but in a variety of qualities. They generally have alloying elements other than carbon—namely, nickel, chromium and vanadium—to give special properties to the steel. Because of the small quantities in which they are required and because of the high degree of quality control and finish which goes into the manufacture of these steels, they are not convenient to manufacture in integrated iron and steel works. It is usual to make these steels in electric furnaces and to roll them in special rolling mills.

Some of the steels are produced in small quantities in the ordnance factories and in a few small electric furnaces in the private sector. But the bulk of the demand has so far been met by imports. The import of these steels, which was about 6,000 to 7,000 tons five or six years ago, has been rising and is now about 30,000 tons a year. Judging from the likely tempo of development in the third plan, the demand might grow to over 50,000 tons by 1965. The ordnance factories, which at present manufacture certain grades of special steels, propose to modernise and expand their facilities. It has been agreed that no wasteful capacity should be set up in the country, but there is room both for the expansion of existing facilities and for a new unit for the manufacture of alloy and stainless steels. This new plant will be designed to produce 40,000 tons of ingots a year, which is expected to yield about 25,000 tons of saleable special steel products, with provision for expansion at a later stage to 80,000 tons of ingots. For the manufacture of certain grades of special steels like spring steels, which will not be manufactured by this plant licences have been granted for a few small units to be put up. Depending on the trend of demand for such steels and the availability of suitable raw materials, there might be room for a few more small units.

Although it is not, strictly speaking, a "special steel" product, the production of electrical grade steel sheets has to be given immediate attention. The present demand for electrical sheets is estimated at 18,000 tons of dynamo-grade sheets and 8,000 tons of transformer-grade sheets. The demand by 1965 is likely to be 36,000 tons of dynamo-grade sheets and 15,000 tons of transformer-grade sheets. At present, only the steel works in Jamshedpur produces dynamo-grade sheets, and it has been allowed to expand its capacity to 18,000 tons a year. The problem of developing capacity for 18,000 tons more of dynamo-grade sheets and 15,000 tons of transformer-grade sheets is linked with the likely preference for cold-rolled grain oriented electrical sheets.

Re-rolling Industry

The re-rolling industry is a necessary complement to the main iron and steel industry. It is useful in meeting the demand for special sections, which are different from the standard commercial sections in shape or in composition or both. The demand for these is such that the re-rolling mills can produce them more economically than can the main mills. At this stage of development of the steel industry, care should be taken to see that there is no unco-ordinated or wasteful allocation of resources. With the establishment of three large integrated steel works in the public sector and the expansion of the two existing private works, supplies of the smaller sizes of rounds and bars and similar constructional steel will improve considerably. So will the availability of billets for re-rollers. With an increase in the production of steel and the development of industry in general, there will be an increase in demand for special sections. These factors should help determine the size and location of the re-rolling units. The present capacity of the re-rolling industry is about 700,000 tons on a single shift. It does not appear that there will be need for additional capacity except for certain special products which are at present made by what are called "secondary producers". Such special products are tinplate, wire rods, wire and cold-rolled strips.

At present, there are two units with a capacity of 90,000 tons of tinplate a year. A third unit of 20,000 tons is under construction and is expected to be in operation before the end of the second plan. For the manufacture of wire, there are five units with a total capacity of about 99,000 tons a year. Six more units, primarily for special types of wire, have been licensed for a capacity of 34,700 tons. One of the existing units, the Indian Steel and Wire Products, has been allowed to expand its capacity from 75,000 tons to 160,000 tons of wire rods. For cold-rolled strips, there are at present two units of 6,000 tons and 25,000 tons a year capacity. Three more units with a total capacity of 42,000 tons have been licensed and are under construction. In addition, cold rolled sheets and slit strips will be available from the Rourkela steel plant to the extent of 200,000 tons a year when that plant goes into production in 1961.

Although they are not, strictly speaking, part of the iron and steel industry, two related industries need to be considered along with any target for iron and steel. These are the fabrication industry for structural steelwork and the pipe industry. The present capacity in the country for the fabrication of steelwork is about 176,000 tons a year. Further schemes to the extent of about 125,000 tons have been licensed. It appears that with the new schemes materialising, there will be fairly adequate capacity for the manufacture of light and medium steelwork, but capacity for the manufacture of heavy steelwork, cranes and storage tanks will need to be considerably augmented.

Tubes and Pipes

Until recently, tubes and pipes had been used almost entirely for the conveyance of fluids. But steel tubes are being increasingly used now for a variety of mechanical and structural purposes. The manufacture of spun-cast iron pipes is at present limited to three units, one in Burnpur with a capacity of about 100,000 tons a year, another in Bhadravati with a capacity of about 17,000 tons a year and a third in Calcutta of about 14,400 tons a year. Two more units which have been licensed are still to go into production. Together, they will have a capacity of about 20,000 tons. Steel tubes can be divided, broadly, into three types—ordinary welded tubes, electric resistance weld (E.R.W.) tubes and seamless tubes. The present capacity is a little over 200,000 tons, of which the capacity for E.R.W. tubes is about 25,000 tons and seamless tubes 30,000 tons. These are exclusive of the capacity with a motor-car manufacturer for his own requirements, and with a furniture manufacturer, again for his own requirements. A new unit for the manufacture of pipes for the oil industry, it is proposed, will be put up alongside one of the integrated steel works which can produce 100,000 tons of 20in. pipes.

The Ministry of Iron and Steel is also responsible for the ferro-alloys industry. In this, the most important ferro-alloy which needs planning well ahead, is ferro-manganese. It is used mostly in the manufacture of steel. Although India has large reserves of manganese ore, the primary raw material for the manufacture of ferro-manganese the ore has been mostly exported and processed in the consuming countries. During the year 1958-59, five new units were established and went into production with a total capacity of about 85,000 tons of ferro-manganese a year. Four other units are under construction, and when completed will raise the production of ferro-manganese to nearly 200,000 tons a year. This will be more than the target set for the second plan, namely 160,000 tons.

The representatives of the steel industry expressed their views on (i) the growth in demand for plates, sheets, strips, bars and rods, tinplate, wires, tool and special steel sections and pig iron; (ii) the scope for expansion of the re-rolling industry; (iii) the development of the fabrication industry; (iv) the development of additional capacity for the manufacture of pipes and tubes, wire rods and wire, cold-rolled sheets, cold-rolled strip and tinplate; and (v) the development of additional capacity for the manufacture of ferro-manganese and ferro-silicon. While the establishment of new units for the manufacture of iron and steel will be primarily the responsibility of the State, it is obvious that private industry will have to supplement the effort of the State for balanced development.

Lok Sabha Proceedings

The Lok Sabha last week approved of the taking over of the administration of Kerala by the President, discussed the food situation in the light of the rise in food prices, particularly in West Bengal, and passed the Oil and National Gas Commission Bill. The Finance Minister introduced the Central Excises and Salt (Amendment) Bill.

Threat to Oil Companies

In moving the second reading of the Oil and Natural Gas Commission Bill before a very thin house, only 38 members being present, Mr. K. D. Malaviya proposed an integrated system of functioning under which crude oil production, refining, distribution, and transport will be handled by one or more agencies either under the Commission

or through separate and parallel bodies within the Ministry. As for the price formula, the Minister gave a definite threat to the oil companies. He said: "We have been struggling to modify the prices of petroleum products in our favour. I shall surely admit before the House that undue delay is taking place in the matter. I am disappointed at the results also. Differences between us and the distributing companies are creating some anxiety. I hope, however, that very soon conditions might be created when an amicable settlement might be reached. I do, however, wish to state that it will not be possible for the Government to wait indefinitely in this connection. There are ways and means open to the Government and we only wish that before those steps are considered both of us can come to some sort of an agreement."

This speech was made on the afternoon of 20th August. The Minister certainly had known by then the Government's acceptance of Burmah-Shell's offer to surrender the existing duty protection on all products manufactured in India with effect from 1st July, 1959. In terms of money, this offer will mean that a sum of Rs. 22 crores will now accrue to the Government during the period ended 31st December, 1956. The Central Excises and Salt (Amendment) Bill, which was introduced in the Lok Sabha soon after Mr. Malaviya's Bill was adopted, seeks to implement the offer of Burmah-Shell by raising the excise duties on refined diesel oils and vaporising oil, diesel oil not otherwise specified, and furnace oil to the level of the import duties, as well as to impose an excise duty on bitumen and asphalt equivalent to the import duty. It may be added that Burmah-Shell has made this offer of its own accord. As for the price structure, the oil companies are anxious for a reasonable settlement, but they would prefer the whole issue to be referred to the Tariff Commission for the prices to be fixed in the same way as it is fixed for steel. The Tariff Commission is an independent body, the integrity and impartiality of which are beyond question, and the Government should refer the issue to it.

Mr. Jaipal Singh was able to corner Mr. Malaviya on the question of oil exploration. He enquired why only communist help was taken for it and for refining in the public sector. The Minister had no convincing reply beyond the statement that oil exploration was also being done by the private sector.

Rumania Offers Kerosene

Speaking at a Press conference last week the Rumanian Ambassador reiterated his earlier offer to supply kerosene and diesel oil to the Government and collaborate in the exploitation of natural gas. Rumania, he said, had 1 million tons of kerosene to spare at competitive prices to be paid in Indian rupees. This transaction should be attractive, because it may step up Indian exports to that country, particularly of iron ore. It was explained that in 1958-59, Rumania was able to buy 70 percent of India's groundnut oil surplus at prices higher than those for Nigerian oil. Rumania, it was pointed out, was willing to enter into a long-term deal, oil for iron ore, her import being 500,000 tons of ore a year. As for natural gas, in addition to Mathan gas, Rumania is in a position to use refinery gases to manufacture fertilisers. It was indicated that the Barauni refinery in Bihar, which is due to be set up with Russian collaboration, will produce "fenol" which gasolene is a by-product.

Russian Credit for Third Plan

It seems that the Russians, after offering credit for the third five year plan, have no intention of offering any further help for the second plan. They have, so to speak, shouted the first bid, and it is now for the non-communist bloc to shout as far as the third plan is concerned. Although two zones have been created, each in the charge of a Commissioner-General, for foreign assistance, the Prime Minister, according to lobbies, sent for the Commissioner-General for the western hemisphere, Mr. B. K. Nehru, to come to New Delhi in order to be briefed for settling the terms of the Russian credit, when the Russians announced that, Mr. B. K. Nehru left for Moscow on 25th August, to be followed by the Director-General of Foreign Trade, Mr. K. B. Lall, who left on 26th August. According to newspaper reports, Mr. B. K. Nehru will settle the details of the projects for which this credit will be available. Yet a long list of competing projects has yet to be finalised by a Cabinet sub-committee of three Ministers.

According to another report, the idea is to repay the Russian credit through exports from India, for which purpose Mr. K. B. Lall has gone to Moscow. Notwithstanding all the drum-beating and the appointment of a Deputy Minister, exports from India in the five months ended May were worth about Rs. 224.41 crores, compared with Rs. 258.29 crores during the corresponding period of 1957. During these five months, India's adverse balance of trade amounted to Rs. 119.18 crores, compared with Rs. 109.91 crores during the corresponding period of 1958. It is true that compared with the first four months of 1958, India's balance of trade with Russia was converted from a deficit of Rs. 3.2 crores to a surplus of Rs. 3.9 crores in 1959. But imports from Russia during these four months also declined from Rs. 11 crores to Rs. 4.4 crores. At one stage, Russia was unwilling to indicate the exact amount of aid she might offer towards financing the third plan. The Chinese action in Tibet, Kerala and the general anti-communist feeling in India may explain the reversal of its earlier decision. The non-communist countries have no such plans. They are pledged to see the second plan through and, as an earnest of their goodwill, have made available sums of money urgently needed to ease the balance of payments difficulties of India.

Burdens of Industrialisation

There is a growing feeling here that the economic consequences of the Industry Ministry's policy should be properly appraised. Apart from creating new burdens of industrialisation, it is creating cells of vested interests. The motor-car industry is an example. The weakness of the policy is indicated by the terms of reference of the L. K. Jha committee which has been asked to recommend ways and means of reducing the price of motor-cars. Steam rollers are another case worth mentioning. India needs 400 to 500 steam rollers and three firms have been licensed to manufacture a complete steam roller in seven to ten years. The c.i.f. cost of a steam roller is placed at Rs. 25,000, which is less than the cost of the spare parts which have to be imported to assemble steam rollers. The price of India-made steam rollers is over Rs. 40,000 a piece. The case of razor blades is yet another instance. Ministers, it will be recalled, have been awarding public certificates to India-made blades. A foreign firm was refused a licence on the ground that it will compete with the Indian products. Another instance worth citing is the raw film project. Here non-communist approaches were turned down on the ground that India has already reached an understanding with the East German Government. As the latter has now backed out, negotiations are in progress with a Japanese firm. The case of the watch industry is the latest to be reported. Disregarding the generally accepted principle of the territorial division of labour, the Ministry has been negotiating with Japanese, French, and American firms to start a watch-making industry in India. This is notwithstanding the fact that the watch-making industry has not been an unqualified success anywhere outside Switzerland. The Phoenix Watch Company of Bombay has been licensed to manufacture 350,000 watches a year in collaboration with a French firm. Negotiations for collaboration are also in progress with the watch manufacturers in Italy, the U.S.A., Japan and East Germany. As imports of watches have been banned, the Indian consumer will hereafter be placed at the mercy of Indian watch-makers, who, in the initial stages lasting for years, will be mere assemblers. The Ministry is creating another cell of vested interests of the so-called watch-makers, which will make watches a luxury to be acquired only by the moneyed in the socialist pattern of society. Meanwhile, the smuggling of watches will continue, depriving the Indian Exchequer of its legitimate sources of revenue.

Hungarian Experts

A team of Hungarian experts waited upon the Central Commerce Secretary, Mr. S. Ranganathan, and offered their assistance in the production of bio-gas from the sugarcane waste called bagasse.

Indian Delegation to G.A.T.T. Session

The Central Minister for Commerce, Mr. N. Kanungo, will lead India's delegation to the next session of the G.A.T.T. scheduled to begin in Tokyo from 26th October. The 1958 chairman of the G.A.T.T., Mr. L. K. Jha, will be another Indian delegate. This is the first time when a session of G.A.T.T. will be held outside Geneva and in Japan, against which country certain others continue to invoke Article 35.

Information Centre for Investors

The proposal for the establishment of a centre for assisting potential foreign and Indian investors in the matter of investment opportunities in India and for disseminating information about the relevant conditions and laws, is still under examination. The United States Technical Co-operation Mission in India has shown some interest in setting up such a centre.

U.S. Oil Consultant Reports

The report of the U.S. oil consultant has been received. His main recommendations, which relate to the exploration and production of oil, are as follows: India's oil requirements are so rapidly increasing that the foreign exchange burden of importing crude oil and deficit refined products, will become overwhelming. Therefore, and in view of the extensive areas that are considered promising, technical and financial resources should be mobilised to the fullest extent in the years immediately ahead to explore for oil and, if successful, to develop its production. He recommends that, with careful regard to what its staff and equipment can effectively take on, the fullest resources should be made available to the Oil and Natural Gas Commission. But, in his opinion, the requirements of funds, as well as of trained personnel and equipment, for the total effort needed within these crucial years would be so large that, to augment the Government's own effort, private capital also should be admitted to exploration and, if successful, to the development of the potential oil resources; he expects that it should be possible to negotiate arrangements with foreign private capital that will conform to the broad lines of the established national policy.

West German Aid for Oil Commission

It is proposed to obtain from the West German Government one or two seismic teams together with the necessary equipment offered by it to assist the Oil and Natural Gas Commission in the field of geophysical exploration. The French Institute of Petroleum has also expressed its willingness to assist the Oil and Natural Gas Commission in exploration. Its detailed proposal is awaited.

Neyveli Thermal Station

The Neyveli Lignite Corporation concluded a contract with Messrs Technoexport, Moscow, on 14th March for the preparation and supply of working drawings for the Neyveli thermal power station, at a cost of Rs. 45 lakhs. The supply of the drawings will be completed by the end of 1960. Another contract has been entered into with the same organisation on 6th May, for the supply of plant and machinery for the power station, at a cost of Rs. 12 crores, c.i.f., Madras port. The delivery of the equipment will begin in November, and will be completed in the last quarter of 1961.

Experiments with Small Plants

The Government has announced its general acceptance of the recommendation of the Indian steel delegation to China that the design and construction of a few small blast furnaces and converters be taken in hand as an experimental measure in areas which are likely to be favourable for the location of such plants. It may be mentioned that small iron and steel plants do not represent a totally new development in India.

The detailed project report for the optical and ophthalmic glass plant to be set up in Durgapur in West Bengal by using a portion of the 500-million rouble credit offered by Russia (for which an agreement was entered into between the Governments of India and Russia on 9th November, 1957), was received on 2nd July. It is under examination. The capacity of the optical and ophthalmic glass plant will be 210 tons a year, including 200 tons of ophthalmic and 10 tons of optical glass. The plant will produce 43 different grades of glasses, including 26 different grades of optical glass. The project report is under scrutiny by experts who will discuss this further with their Russian counterparts at an early date.

Sugar Exports

Some 16,029 metric tons of sugar were exported by India during the period January to June 1959, to the following countries:

Countries	Quantity in metric tons
Federation of Malayan States and Singapore	14,230
Aden	300
Yemen	600
Ethiopia	100
Muscat	535
Cambodia	64
Oman	100
Seychelles	100
Total	16,029

Eastern Shipping Corporation

The Eastern Shipping Corporation at present owns eight vessels of 53,159 g.r.t. which are plying in the following trades:

	Number of ships	G.R.T.
India-Australia	3	18,083
India-Far East-Japan	3	17,975
India-East Africa	1	8,522
India-Malaya	1	8,580
Total	8	53,159

In addition, the Eastern Shipping Corporation manages the vessels owned by the Government of India, Ministry of Home Affairs. They are (passenger-*cum*-cargo vessels) M.V. *Nicobar* 2,238 g.r.t., and M.V. *Andamans* 5,934 g.r.t. The following, owned by the *Western Shipping Corporation*, are also managed by it: tanker *Desh Sewak* 7,352 g.r.t.; cargo ships: *Vishva Jyoti* 6,500 g.r.t. (approx.) and *Vishva Prabha* 8,000 g.r.t. (approx.).

The Eastern Shipping Corporation has under construction three vessels at the Hindustan Shipyard totalling about 19,000 g.r.t., which are expected to be delivered during the second plan period. The Corporation may also acquire two second-hand ships of about 11,000 g.r.t. during the remaining part of the current plan period. A capacity of 100,000 g.r.t. is considered to be the optimum tonnage for operation by the Corporation. If the vessels managed are also to be taken into consideration, the target of 100,000 g.r.t. may be said to have been reached. However, the Corporation contemplates further expansion of its tonnage, but because of inadequate foreign exchange facilities and the uncertain prospects in various trade routes in which the Corporation is at present operating its ships, the projected expansion has not materialised. It is, however, hoped that towards the end of the current plan or the beginning of the third plan, the target of 100,000 g.r.t. to be owned by the Eastern Shipping Corporation alone may be attained.

Acquisition of Oil Tankers

The second five year plan provided for the acquisition of oil tankers to the extent of 26,000 g.r.t. In view of the Government's policy to reserve the coastal trade for Indian shipping, first priority was given to the acquisition of tankers on the coast. India already has two tankers on the coast and the third tanker, also intended for the coast, is under construction. These three together will amount to about 23,000 g.r.t. The question of the purchase of overseas tankers is under consideration and it is hoped that their acquisition will materialise in the third plan period.

Evaluating Dairy Schemes

A technical six-member joint F.A.O.-U.N.I.C.E.F. team visited Kanpur, Hyderabad, Vijayawada and Bangalore during April and May this year for evaluating the dairy schemes proposed for these cities. The team recommended: (1) the establishment of a dairy equipped to handle about 1,250 maunds of milk daily in the first phase in each of the four cities; (2) the linking up of the Vijayawada and Hyderabad projects to make available surplus liquid milk of the former to the latter; (3) provision of the equipment for the manufacture of products from surplus milk in each dairy; (4) the distribution of high protein-low fat content under each project to cater for the requirements of low-income consumers; (5) the procurement of milk to be handled by each dairy through rural producers' co-operatives; (6) the creation of a suitable administrative set-up necessary to implement each project; and (7) the training of technical personnel required for each.

A proposal formulated in the light of these recommendations for the Bangalore project is to be considered at the September meetings of the U.N.I.C.E.F. executive board. Proposals for the remaining projects are being formulated and will be submitted for assistance to U.N.I.C.E.F. in due course.

Rourkela Pipe Plant Project

An agreement was concluded on 18th April by Hindustan Steel Ltd with Mannesmann Export G.m.b.H., Dusseldorf, West Germany, for the design, supply, erection and putting into operation of an electric resistance welded pipe plant in Rourkela. The plant will produce pipes with outside diameter ranging from 8¾in. to 20in. The capacity will be between 8,600 tons and 31,000 tons a month, depending on the size and specification of the pipes. According to the agreement, Mannesmann will design, supply, erect and deliver to Hindustan Steel the entire plant in working condition. The plant is estimated to cost about Rs. 4 crores, and is expected to be complet erected by 1st September, 1960.

Steel Imports

The Government has entered into three c tracts with foreign countries for the import steel. The contracts are with Russia, Poland a Hungary; and are for 204,200 tons, 5,800 tons a 5,212 tons, respectively. In addition, the Gove ment is buying steel of a total value of $60 milli from the U.S. Development Loan Fund So 68,194 metric tons of steel have been received to June 1959 from Poland, Hungary and Rus against the above contracts. The first shipme of D.L.F. steel is to arrive this month.

Rayon Grade Pulp Plants

The studies of a Japanese team, which visit India recently, have shown that there is no i mediate possibility for the establishment of ray grade pulp plants in areas other than Assa Mysore and Kerala, based on bamboo as the pr cipal raw material. As Assam offers the larg quantity and best quality of bamboos for this p pose, the Japanese experts are preparing a proj report and are carrying out experiments on ba boos from Assam. The factory in Assam, it expected, will be set up in the public sector.

New Central Food Minister

The Central Communications Minister, Mr K Patil, has been appointed Food and Agricul Minister in place of Mr. A. P. Jain, who h resigned.

Report on Plan Resources

There seems to be an obstinacy to stick to t Rs. 4,500-crore figure as the second plan outl in spite of the obvious inadequacy of resourc This is the impression one gathers from the Pl ning Commission's report on the second plan's sources presented to Parliament on Monday. T Commission says: "The position concerni resources is that on the present expectations, t Centre and the States are likely to provide in t next two years resources of the order of Rs. 1. crores whereas the requirements for reaching t total of Rs. 4,500 crores over the two years amo to Rs. 2,034 crores. There is thus a shortfall Rs 280 crores—Rs. 198 crores at the Centre a Rs. 82 crores in the States. Over the plan peri the aggregate outlay can on this basis be or Rs 4,220 crores. In these estimates, the limit deficit financing has been taken at Rs. 100 cro a year.

The balance of payments deficit over the pl period is expected to be of the order of Rs 2. crores. Roughly half this deficit has been inc red so far. The sterling balances held by t Reserve Bank now stand at about Rs. 180 cror and it is necessary to avoid drawing them do any further. For bridging the estimated fore exchange gap in March-October 1959, exter assistance of $350 million has been promis Further assistance required for the rest of t plan period, placed at $65 million, has yet to secured. Considering the overall resources pc tion, a sizeable cut in the plan outlay, even compared with revised target of Rs. 4,500 cror appears unavoidable.

REPORT OF RADCLIFFE COMMITTEE PUBLISHED

PROMPT ACTION AGAINST INFLATION URGED

(FROM OUR LONDON CORRESPONDENT)

THE Radcliffe Committee's report has made its appearance in the form of a 380-page Blue Book which, although it represents what will undoubtedly be regarded as the accepted handbook on the working of the monetary and credit system, nevertheless has many limitations from the purely practical point of view as to what should be done to ensure the future economic revival of the U.K. The report makes many sensible suggestions, but on the main issues it has secured unanimity from its varied composition at the expense of failing to give clear guidance. The problems are posed, the arguments for and against are presented, but no conclusion as to which course is right is reached. Bank rate changes, it says, should be announced in the name and authority of the Chancellor of the Exchequer. A Standing Committee is proposed to advise the latter on monetary questions with representatives of the U.K. Treasury, Board of Trade and Bank of England. On economic policy, the Committee says that monetary measures alone cannot be relied upon to keep in balance an economy subject to major internal and external strains. But it recommends that there should be standing provision for measures which could have a prompt and direct action to stop "headlong inflation." These will combine limitation of bank advances and control of capital issues and consumer credit, particularly hire-purchase. The Committee thinks that the authorities should work primarily through the structure of interest rates rather than by quantitative restrictions. A singularly potent means of influencing interest rates, it believes, lies in the management of the national debt.

Most of the Committee's recommendations suggest improvements in current techniques and practices, which means that no adequate summary of them all can appear in a reference of this nature. Among the principal recommendations, however, mention may be made of the following: t-time directors of the Bank of England should be retained, but their duties slightly altered; the Bank and most other financial institutions should publish more information of their activities and the former should set up an Economic Intelligence Department with an executive director at its head; local councils should be given loans at current gilt-edged market rates; the establishment of a system of postal transfer of payments; the setting up of an industrial guarantee corporation to facilitate commercial exploitation of technical innovations; the maximum period of Export Credits Guarantee Department cover should not be regarded as unalterable, but longer guarantees should not be used for trade promotion. Much stress is laid in the report on the need for more systematic knowledge of the factors which compose the financial mechanism of the country. The report itself includes many new facts and figures and all this information is to be collected regularly in future and will go a long way towards making economic planning more accurate. Even so, they represent only a few of the many new researches proposed by the Committee.

Expansion under Way

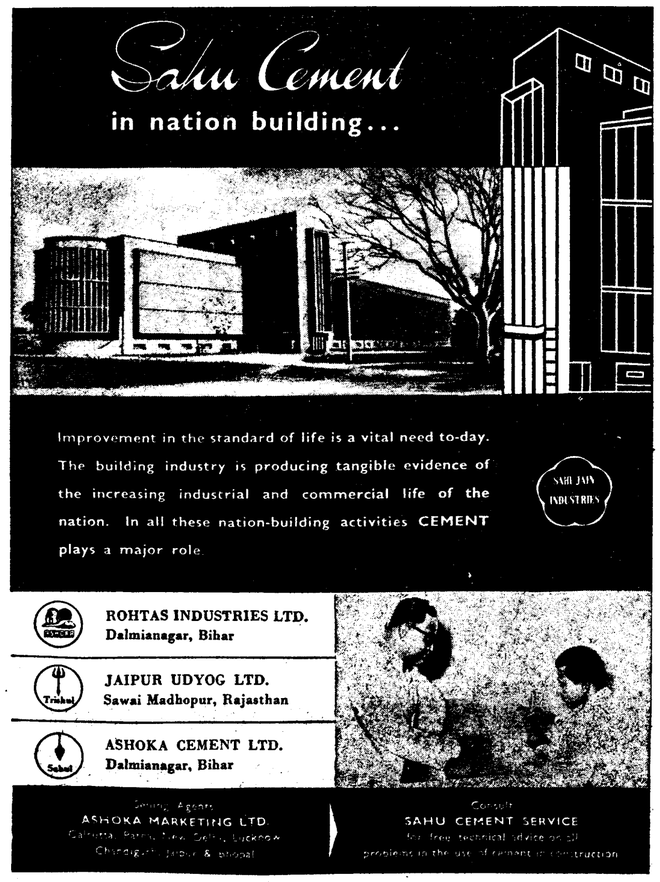
The U.K. Treasury believes that economic expansion is clearly under way. It states this view in its latest *Bulletin for Industry*, which says that expansion is going on against a background of stable prices and a strong external position. It regards the broad base of the increase in output and the marked rise in productivity a man as encouraging signs. Reviewing some of the industrial trends in the first half of this year, the *Bulletin* points out that motor-car production in April reached record levels, and in the second quarter it was 16 percent above a year earlier. The output of commercial vehicles also rose sharply. The output of consumer durables, furniture, and floor coverings seems to be rising as rapidly as in the autumn. For engineering and electrical goods, as a whole, production was substantially higher than a year earlier. Production of a wide range of industrial materials, such as steel, general chemicals, paint, dyestuffs, and detergents, as well as cotton textiles, has been improving.

Higher production this year has been achieved with an employed population slightly lower than a year ago. This shows that there was a marked rise in output a man in the industries covered by the index of production; the gain compared with a year earlier is estimated at about 4 percent. Personal consumption has risen sharply since the first quarter. The expansion in the hire-purchase debt and in bank advances has persisted. Exports picked up strongly in the second quarter with engineering goods leading the way (notably motor-cars, aircraft, and aero-engines). Imports of materials are now beginning to rise fairly sharply, reflecting the upturn in activity, but the *Bulletin* still estimates that "a substantial surplus" will again be earned this year in the balance of payments on current account, although the record surplus of last year may not be repeated.

Summing up, the U.K. Treasury takes the view that the economy is growing and that this expansion is likely to continue as the full effects of the Budget work through. Higher personal consumption has made the main contribution so far. With higher public investment and more private house building, an increase in fixed investment is now likely. Exports are on a rising trend. A great deal turns, however, on the continued maintenance of stable prices. The Treasury says: "Wages have recently been relatively steady; and since productivity has now begun to increase in a number of industries, labour costs a unit of output in these industries must have fallen—a change from earlier years, in which there was a rise in wage rates not matched by a general rise in productivity." The achievements of stable prices; the Treasury comments, will depend on how far the opportunity is taken to make such price reductions as are now possible.

Cost of Living Steady

The official index figure which measures changes in the average level of retail prices, compared with 109 on 14th July, the same figure as at 16th June, according to the U.K. Ministry of Labour. Calculated to one decimal, the July index was 109, compared with 109.3 for June. The index stood at 109 in October last year. It went to 110 in November and stayed at that level until May, when it fell to 109.



July Trade Figures

Exports and imports continued to rise in July, according to the provisional figures issued by the U.K. Board of Trade. The value of exports, at £287.8 million, was higher than in any previous month except in April and May of this year. It was £36 million more than in June and 5½ percent above the monthly average for the first half of the year. The value of imports, at £353 million, was the highest for two years. It was £21 million more than in June and 10 percent above the monthly average for the first half of the year. Re-exports of imported merchandise were slightly down at £9.3 million. The trade gap was £55.9 million, £14 million less than in June, but nearly £19 million more than the monthly average for the first half of the year. This is a sobering thought, for the gap has been behaving very well just recently and may have been giving rise to some complacency.

British exports to North America increased to £51.6 million in July, £6.7 million more than in June and 13 percent above the monthly average for the first half-year. Exports to the United States were £31.6 million in July, 7½ percent above the monthly average for the first half-year. Exports to Canada were valued at £20 million, no less than 23 percent above the six months' average. Shipments to Canada have been at a high level since April, although there was a drop in June. Motor-car sales were responsible for much of the good showing of trade with the United States. In the first six months of this year, exports of British motor-cars to the United States totalled over 150,000 units worth nearly £64 million. This compares with 71,000 in the first half of last year and 156,500 units for the whole of 1958. At the same time, Britain has also increased its lead over West Germany, whose shipments to America in the first half of this year were 103,000 motor-cars, compared with 64,000 in the first half of 1958 and 134,600 for the whole of last year.

Capital Movements

The latest issue of the U.K. Treasury's *Bulletin for Industry* for the first time gives a break-down of the figures of Britain's inward and outward investment. Previously, only the net figures of private British investment abroad were given. During 1952-58, the average net outward private investment was £200 million and the average gross figure £330 million. The inward private investment rate was £130 million a year. Most of the outward £200 million represents capital investments in the sterling area. Outside that area, capital exports, mainly to Canada, have been running at over £100 million a year, but this has been offset by an inflow of private capital of about the same amount, most of which has come from the United States. In the seven years reviewed, British outward private investment totalled about £2,300 million. The inward movement was about £930 million, leaving a net outflow of around £1,400 million, equal to the average quoted of £200 million a year. The *Bulletin* estimates that there are now round about 400 American subsidiaries and Anglo-American firms in British manufacturing industry, employing about 4 percent of the labour force.

Jute

RAW JUTE STEADIER ON PROSPECTS OF CHINESE BUYING

NEW CROP REPORTS REMAIN SATISFACTORY

IN the past few months, the Calcutta jute goods market has frequently been influenced by orders from Far Eastern countries, particularly China. The recent purchases of sacking by Peking have caused considerable comment and speculation. More recently, that country has switched her interest to raw jute; her purchases through the State Trading Corporation for the coming season amounted to 25,000 bales up to last week. Now the S.T.C. has called for further tenders for shipment to China, understood to be for about 25,000 bales. It asked, however, that closing offers be held open for one week; thus, as the time limit does not expire until 29th August, and as September delivery has been called for, sellers, particularly pucca balers, are inclined to be reserved. The transaction is reported to be under a barter agreement, so raw jute is rapidly establishing itself as a useful foreign exchange earner. According to the Jute Balers Association, exports of raw jute from India during the first two weeks of the current month amounted to approximately 18,500 bales. This was the highest shipment in any fortnight since the removal of the ban on the export of raw jute. Of the total shipments in this period, over one-third were sent to communist countries. Total exports of raw jute from India since March 1959 now amount to 72,100 bales, and August shipments are already larger than in the whole of July 1959.

The reason why China is purchasing raw jute is difficult to see. Much of the fibre now being bought from India is undoubtedly at the expense of Pakistan; but unofficially China is considered by many to be the third largest jute-producing country in the world (American statistics give this position to Brazil). At one time, it was thought that China was self-sufficient in jute, but it seems that her manufacturing capacity has been enlarged and her internal demand has increased.

Sacking Eases

During the past week, near delivery sacking in the Calcutta market showed signs of easing. Lack of fresh orders, profit-taking at the higher levels, and the fulfilment of shipping instructions for steamers loading in port, all helped the easier trend in rates. The near position prices still appear inflated. But premiums over forward shipment have now been reduced to just over Rs. 7 in the B Twill category, from Rs. 10 a short time ago; this is liable to be reduced still further when the August settlement has been satisfactorily completed. Meanwhile, hessians have made a quiet recovery. Small overseas enquiries indicated a renewal of interest, and for the first time in several weeks hessian prices moved independently of sacking. There was a rise of about 50nP at one stage, and this was while B Twills had dropped by about Rs. 2. Some of the former rise can also be attributed to the approaching August settlement, but the general undertone in hessian appears to be much more confident than for some time. During the past week, several small tenders for near shipment were ignored by mills, either because order-books were full or because higher prices were expected.

On Monday, the member-mills of the I.J.M.A. increased their production by opening another 2½ percent of their looms. Thus, only 10 percent of the industry's total loomage is now sealed, and this state of affairs will continue until 2nd January, 1960, by when it is expected that the increased demand will be satisfied. The unsealed looms will then be resealed. Most of the increase in production is reported to be on the sacking side, and this has been a bullish factor for hessians.

Crop Reports

There has been very little change in the situation in the jute fields, and reports from most areas continue to be satisfactory. In the northern Bengal districts, however, the shortage of steeping water has tended to become more acute and is hampering harvesting operations. Rain is badly needed, and a certain amount of anxiety is apparent. In Assam, conditions have been favourable and the harvesting of the midland crop has been almost completed. The highland crop is now ready for harvesting. Here also more rain is required, mainly for steeping, as the river levels have started to fall. In western districts, rainfall has been adequate. Steeping and retting tanks are full, and harvesting is well in hand. Similar conditions prevail in the Daissee districts; the crop is healthy and the growth satisfactory. Observers in the receiving centres upcountry indicate that imports are still not up to standard. This is also confirmed by many connected with the trade in Calcutta who have made individual trips and observations. The main complaint concerns quality, especially bad retting. Many new marks and districts have been introduced; until these have been classified and graded, opinions will continue to vary. As usual, at this time of year, the moisture content of all parcels is very large.

Jute Goods Despatches

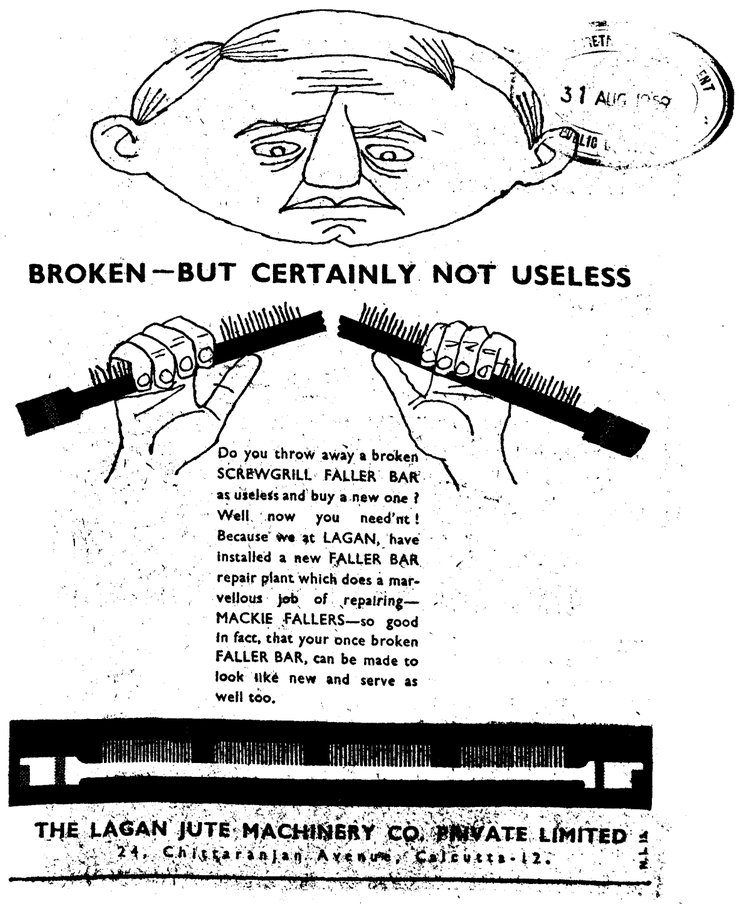
During July, despatches of jute goods from Calcutta mills increased by 4,827 tons to 91,397 tons, but those for internal consumption fell by 1,068 tons to 15,177 tons. Hessian shipments increased by 2,619 tons to 38,134 tons (41.8 percent), and sacking by 3,208 tons to 43,280 tons (47.4 percent). But other goods dropped by 1,000 tons to 9,983 tons (10.8 percent). In July 1958, total despatches were 102,087 tons, consisting of 46,826 tons of hessians (45.8 percent), 47,692 tons of sacking (46.7 percent), and 7,569 tons of other goods (7.5 percent).

Of this figure, despatches for export rose

THE JUTE MARKETS

During the past week, there was one holiday, when the market was officially closed. On the other days, a fair amount of business was transacted, and sacking rates moved over a wide range. Rates, as given by the East India Jute and Hessian Exchange for the period 19th August to 24th August, were as follows:

	Hessians 40in 10oz. August		Sacking B Twills August		Raw Jute Uppei Assam September	
	Rs a 100 yds	Rs a 100 metres	Rs a 100 bags	Rs a md	Rs a 100 kilos	
Opening	40.88	44.70	108.40	23.80	63.76	
Highest	41.24	45.09	108.40	23.84	63.87	
Lowest	40.88	44.70	106.20	23.46	62.85	



Manufactured Goods: Apart from the small demand for near delivery goods, the sacking market opened on a quiet note. Ready B Twills were at Rs. 108.80 but January-March shipment was unchanged at Rs. 99.75. Hessians improved a little, so opening quotations of 40in 10oz. showed a rise of 25nP to Rs. 40.95 for ready shipment and Rs. 40 for January-March shipment. Conditions eased during the day, sacking dropping by about 50nP, but hessians continued to recover and moved up by a further 10nP or 15nP. The main feature over the next few days was the continued steadiness in hessians, which on Monday advanced to Rs. 41.15. Overseas demand was negligible, but local covering against previous contracts, and speculative manipulations with settling day in view, helped hessian. Prices moved independently of sacking, and the general tendency was steady. Sacking, on the other hand, showed no strength, and apart from one or two minor advances, the general movement was in a downward direction. Overseas buyers took no interest. Speculative activity in the futures market dominated sentiment at the close.

Wednesday was a holiday in the Calcutta markets, so Tuesday's closing quotations were as follows:

	August	Sept.	Oct.	Oct.-Nov.
40in. 8oz.	33.15	33.50	33.20	33.00
40in. 10oz.	41.15	41.25	41.20	41.20
B Twills	107.40	106.20	104.05	102.40
Heavy Cees (Plain)	107.75	106.20	104.60	102.10
A Twills	122.25	123.00	122.00	121.00
Liverpools	118.85	117.00	115.00	113.50
Cornsacks	109.00	109.25	106.75	104.50

Raw Jute: Interest was maintained in the fibre market during the past week, and about 150,000 maunds to 200,000 maunds were purchased, mainly by Indian mills. The fluctuations in heavy goods had little effect on raw jute. The latter was influenced mainly by the activities of the State Trading Corporation, and the continued disparity between Calcutta and upcountry rates. Although the disparity had narrowed over the past two weeks, it helped keep prices steady. Imports upcountry were considered to be unsatisfactory, and the steadiness there was reflected in Calcutta markets, where sellers were inclined to be reserved. In spite of this, raw jute rates showed little change, and throughout the week Assam quotations were based on Rs. 23.50 a maund basis Bottoms. Many sellers still had fairly large quantities of old crop jute to dispose of, but mills were showing no interest in this category, as it was mostly jungli jute. Many thought that the mills still had large quantities of jute to purchase, so offers were being held back in the hope of securing higher prices.

Business was reported in Assam jute at Rs. 23.25 to Rs. 23.50 basis Bottoms, and in Middles only at Rs. 26 to Rs. 26.25. Northern agencies were done at Rs. 22.75 basis Bottoms, and Rs. 25.25 to Rs. 25.50 for Middles only. Desal white fetched Rs. 22 to Rs. 22.25 and jungli Rs. 21 to Rs. 21.25. Daissee white passed at Rs. 22. Some business was re-

ported in Daissee-Tossa at Rs. 23.50 to Rs. 23.62, while Daissee mesta was done at Rs. 21.50.

On Tuesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment

THE FOREIGN JUTE MARKETS

FIBRE IMPORTS INCREASE

(FROM OUR DUNDEE CORRESPONDENT)

SPINNERS and manufacturers in Dundee are glad to get a good start again after the holidays, and production has been in full swing since. Business was not brisk during the past week, and some spinners are at present looking for orders. They are those whose yarns are not so good as others, many of the latter now producing excellent quality. The carpet trade is still not buying home produced yarns freely, and it is suspected that the greatly increased imports of jute yarns are going to that industry. For the first six months of the current year, imports of jute yarns into the United Kingdom totalled 32,864 cwts., to the value of £252,501, compared with 14,106 cwts. (£114,471) for the same period in 1958.

Imports of raw jute into the United Kingdom from 1st January to 30th June this year were 467,890 bales, against 330,500 bales during the same period of last year, valued at £7,499,787 and £5,754,151, respectively. Imports of jute fabrics were 476,961 cwts. (£2,898,583) for the period ended 30th June this year, against 353,587 cwts. (£2,175,616) last year, while imports of jute sacks and bags were 208,800 cwts. (£1,023,560) and 175,996 cwts. (£938,326), respectively.

The raw jute market is steady. An occasional seller comes along with an offer of a secured parcel at a low price, but it has hardly any effect on the market, and the lowest rates advance again. Nevertheless, it makes for a good deal of irregularity, but anyone watching the market usually finds prices for the regular decent quality material about unchanged. Mill Firsts are lowest at £108, Mill Lightnings £91, Mill Hearts £80 and Grade Hearts £66, August-September, while Good marks of Daissee-2/3 are quoted at £94 and Grade from £86, Grade Tossa-213 from £108 and Grade Tossa-4 £94 5s to £95, September-October, c.i.f. U.K. and the Continent.

The Calcutta goods market has seen a good deal of irregularity. Prices have not moved far from the recent level of 62s for 40in. 10oz. and 47s 3d for 7½oz., August, 62s and 47s September, and 61s 9d and 47s October, with B Twills at 163s 6d, 161s 6d and 158s 6d for the respective positions of shipment all f.o.b., Calcutta. Values of jute yarns and cloth in Dundee are firmly maintained.

THE PAKISTANI JUTE MARKETS

FIBRE FIRM DESPITE POOR OVERSEAS INTEREST

(FROM A CORRESPONDENT)

THE Narayanganj raw jute market was remarkably firm in spite of the lack of interest from overseas markets during the past fortnight. Sellers were shy of offering superior grade marks. Arrivals averaged 22,000 maunds a day, and quality remained fair. Small business was reported in N C. Cuttings at Rs. 25 to Rs. 27 a maund. Local mills purchased about 100,000 maunds of "B", "C" and Bottoms at Rs. 22, Rs. 19 and Rs. 15 a maund, respectively. The prominent feature of the market was that the local prices remained much higher than the overseas equivalent. As a higher percentage of the crop has not been cut so far, a marked reduction in the prices is not expected unless this has been done. Although the trade as a whole reported a very quiet market with small business, July Export Price Control form registration figures of 433,931 bales for overseas markets and 19,799 bales for India indicate the contrary.

Plantation Topics

PLANTERS URGE AMENDMENT OF KERALA AGRARIAN BILL

MEMORANDUM SUBMITTED TO GOVERNOR

(FROM OUR SOUTH INDIAN CORRESPONDENT)

IN a bid to get some of the objectionable provisions removed from the Kerala Agrarian Relations Bill, which now awaits Presidential assent, the Association of Planters of Kerala recently made a representation to the State Governor. It submitted a memorandum listing the clauses which should be removed and asked for his assistance in this matter. The Association says the impression that plantations are exempted from the scope of the Bill is "totally wrong", for they are not among the excluded categories listed in Clause 57. The definition of plantations is defective: the one given in Clause 2(39) should be amended bearing in mind that "land is as important to the plantation industry as raw material is to manufacturing industry".

The Bill will indirectly promote the fragmentation of present land holdings. It will also prevent the acquisition of extensive holdings in the future. These are the objects aimed at by Sections 59 to 63. Section 59(2) of the Bill is usually cited by its supporters as securing the exclusion of plantations from the ceiling on land. But, in fact, it relates only to existing plantations. Although it might save existing plantations and 20 percent of their present acreages, the limited concession is conditional on owners since they will have to surrender other lands they possess in excess of one-half of the ceiling area. Twenty percent of the present acreage is the maximum extent of permissible expansion. But this too is made quite illusory by the condition that the reserve land should be contiguous to plantations. In practice, therefore, the unplanted area that will be allowed to be retained will be far less than 20 percent of the present acreage.

Tremendous Handicaps

Section 63 of the Bill aims to prevent the acquisition of large holdings in the future. The combined effect of these two sections will prevent the expansion of the existing plantations and will create tremendous handicaps to newcomers. Section 57(2) will authorise the Government to grant special exemptions in the case of land which may be required for the extension of an existing plantation or for the conversion into a new one. This will, in effect, prove to be a system of licensing at the discretion of the Government. It may not, therefore, be of any real assistance to planters. The industry will stagnate in spite of considerable scope for its expansion. The only means of averting this danger, planters feel, is to ensure that land required for the maintenance or expansion of the industry is excluded from the scheme of land reforms.

Joint-stock Plantation Companies

Section 58(3), Explanation II to Section 61 and Section 62(3) of the Bill will have very bad repercussions on joint-stock enterprise in the plantation industry, for they violate their basic principles. If these provisions are implemented, planters say that they will legalise the dismemberment of plantation companies and will affect the reputation of joint-stock plantation enterprises. They will also affect the prospects of plantation scrip on the stock exchange. Large-scale plantation ventures requiring heavy investment, which are made possible only through joint-stock financing, will, therefore, become impossible. In conclusion, the Association's memorandum says: "It is no part of our purpose to oppose agrarian reform in any way. We are concerned with the grave consequences which the Bill holds for the plantation industry, and for the economy of the country, especially in the context of the national plan. No effort to save the industry from disaster will be too much. Neither in its social aspect, nor in its economic aspect, should agrarian reform be allowed to tell upon and cripple an industry which is of immense commercial and strategic value to the nation."

Land Reforms in Madras

The chairman of the Association of Planters of the State of Madras, Mr W C. F Simmonds, expressed satisfaction over the fact that "on a matter which is of all-India nature like land reforms, the Madras Government is cautious and unhurried." He was addressing the annual general meeting of the Association, which was held in Coonoor on 22nd August. Mr Simmonds said that Madras has some 17 million acres under cultivation of which only 200,000 acres are under plantations. They are situated in areas which are far away from the plains and do not, therefore, affect or interfere with rural agriculture. The importance of the industry cannot be overlooked because of its organised nature, its capacity to make the hills yield wealth and its contributions to Government revenues. Above all, it provides employment to a large number of workers.

Commenting on land laws recently introduced in Kerala and Mysore, the chairman said that these Governments had not appreciated the injury they had inflicted on an industry which took shape through the efforts of countless pioneers during the past 100 years. Sixty years ago, Madras had only 5,000 acres under tea and the production was about 1 million lbs. The expansion in tea plantations ceased, for all practical purposes, with the disastrous depression of the 'thirties, and Madras lost about 13,000 acres under tea by the reorganisation of the States in 1956. In spite of all these, the output has increased to 68 million lbs. Similar increases in the production of coffee, cardamom and rubber have taken place. Mr. Simmonds wondered what would have happened if a land law restricting acreages to a fixed ceiling was introduced in 1900. He said that there is scope for expanding rubber cultivation in Kanyakumari district, tea in the Anamallais, Singampatti and Nilgiris, coffee in the Palnis, Nilgiri-Wynaad and Anamallais areas and cardamom in Singampatti and Anamallais.

Heavy Tax Burden

Referring to taxation, the chairman said that the relief given in excise duty did not go far enough. The industry expects a more realistic appraisal of the problems faced by it. It is at present heavily penalised since it has to provide amenities to workers besides paying heavier taxation than other industries. Mr. Simmonds also pleaded for the encouragement of internal propaganda for tea and the abolition of all excise duties on low-grown or common teas. He urged the revision of coffee prices because prices are declining in the export markets.

Growing Absenteeism

Referring to additional festival holidays provided under the new Madras legislation, the chairman felt that this would incease absenteeism still further, apart from raising the cost of production by an average of Rs. 12 an acre. The Plantation Labour Act grants estate workers up to 17 paid holidays besides 14 days of sick leave and for women 84 days of maternity leave with partial compensation for the loss of wages. In a labour-intensive industry like plantations, these various holidays and leave increase absenteeism at the employer's expense. Mr. Simmonds estimated that a minimum of 2 million man-days are being lost every year due to unauthorised absenteeism. This will increase to nearly 6 million man-days out of about 27 million man-days of work due to various statutory amenities including the latest addition of five festival holidays.

Recommendations of Spices Conference

The annual meeting of the Central Spices and Cashewnut Committee of the Indian Council of Agricultural Research was held in Trivandrum last week. It has emphasised the need for enforcement of the Pests Act by the States as an effective antidote for the *katte* disease of cardamom which has reduced the output of this valuable crop in almost all growing areas. Dr. S. M. Sikka, Additional Agricultural Commissioner of the Government of India, presided over the meeting. One of the important recommendations made by the committee was that loan assistance for pepper cultivation should not be confined to new areas but should also be made available to the existing plantations for the purchase of fertilisers and pesticides. It urged the appointment of a special sub-committee for undertaking an enquiry on how best the produce from cashew plantations, which are being developed in forest areas, can be gathered and disposed of in order to use, to the growers' best advantage, not only the nut but also the apple and the cashew shell liquid. It was also recommended that investigations into the causes for the withering and drying up of inflorescences of cashew trees should be intensified. Pilot projects for finding out potential areas for the cultivation of tree spices such as cinnamon, nutmeg and cloves, were also recommended in Mysore, Bombay, Assam, West Bengal and Orissa. The committee examined the progress achieved so far in the production of spices under the second five year plan. It also discussed plans and targets for various spice crops during the third five year plan.

Developing Cashew Cultivation

To the end of June 1959 Kerala spent Rs 1,65,600 from the second plan provision for developing cashew cultivation and 1,536 acres were brought under the crop. The Government's expectation is that the Cashew Development Scheme will register greater progress during the remaining years of the second plan.

Strike in Cashew Processing Factories

There was a four-day strike beginning from 17th August in the 26 cashew processing factories of Musaliar Industries of Quilon. This was brought to a close by the intervention of the State Government. Workers and staff of these factories, numbering about 18,000, went on strike protesting against the threatened closure of these factories by the management on the pretext that rawnuts were not available.

COCHIN TEA SALES

At Dust Sale V, 740,000 lbs of tea were on offer. There was a strong general demand but prices were irregularly 5nP to 10nP lower.

BRITISH AERO-ENGINES AT FLYING DISPLAY

SUBSTANTIAL RISE IN EXPORTS

SINCE the war, Great Britain's aero-engines have earned £250 million in export sales, half of which has been achieved during the past two and a half years. Nearly two-thirds of the turbine-powered airliners in service or on order in the world (outside the communist bloc) have, or will have, British engines. Since the war, 21 agreements covering the licence manufacture of 12 British aero-engines have been signed with ten countries. Many of these engines will be seen at the British flying display and exhibition next month, side by side with the latest models which will help keep export sales at a high level during the next few years.

Rolls-Royce, responsible for the greater part of the U.K.'s aero-engine export trade in recent years, will be well represented at Farnborough. Of the 34 aircraft due to give individual flying demonstrations, 13 will be powered by Rolls-Royce Avons, Conways Darts or Tynes. In addition, the R.A.F.'s *Hunters*, certain transports and all the Royal Navy's aircraft taking part—*Scimitars* and *Sea Vixens*—will be Rolls-Royce powered and there will be three aircraft in the static park powered by the Derby company—*Argosy*, *Hunter* two-seater and *Viscount 810*.

Rolls-Royce announced recently that the Conway, powerplant of versions of the American *DC. 8* and *707* and of the Vickers *VC. 10*, has been cleared at a civil rating of 17,500 lbs (7,938 kilogrammes) guaranteed minimum take-off thrust, an increase of 1,000 lbs (454 kilogrammes) over the previous figure. This new rating has been introduced 12 to 18 months earlier than promised. The company announced at the same time that the overhaul life of the Avon RA. 29 has been raised from 1,000 hours to 1,300 hours and that a life of 1,600 hours has been granted on a trial basis.

Engine for Vanguard

The *Vanguard* airliner, due to fly at the display, is the first aircraft to be fitted with the big Tyne turboprop engine, while the *Argosy* is the latest to have the well-proven Dart. There will be a Conway, Tyne and two RB. 108s on view on the Rolls-Royce stand, also various engine components. There will be six aircraft powered by Bristol Siddeley engines in the flying display and three in the static park—two *Jet Provosts* and a *Britannia 253*. Many of the R.A.F.'s aircraft taking part will have Sapphire, Viper or Olympus powerplants. A particularly interesting engine on show in the exhibition building will be the BE. 58 "fan", the first of a new "family" of Bristol Siddeley ducted-fan engines.

One advanced mark of Olympus has developed 33,000 lbs (14,969 kilogrammes) of thrust (with reheat) which makes it the most powerful aero-engine in the world to be announced. The Olympus Mk. 201 has passed a type test at 17,000 lbs (7,711 kilogrammes) without reheat. The Orpheus 12 will be on public view for the first time. With reheat, this engine develops 8,170 lbs (3,706 kilogrammes) of thrust. The Viper II develops 2,500 lbs (1,134 kilogrammes) of thrust for a weight of 500 lbs (227 kilogrammes). Bristol Siddeley will also be showing a Thor ramjet and Gamma and PR. 23 rocket engines. There will be four de Havilland-powered aircraft in the flying display ranging from the *Aiglet* (*Gipsy Major* of 145 horse-power) to the *NA 39* with two *Gyron Juniors* which, together develop something like nine tons of thrust. A Gnome engine will be fitted to a *P. 531* helicopter in the static aircraft park where there will also be Gipsy-powered *Heron* and *Dove* aircraft and a *Vampire Trainer* (*Goblin* turbojet).

de Havilland Engines

There will be six de Havilland engines in the exhibition building—two Gnome turbine engines for helicopters or fixed-wing aircraft two marks of Gyron Junior, the Double Spectre rocket motor and Gipsy Major 215 piston engine. Alvis will have four aircraft and the *Hovercraft* powered by their engines, and also a *President* in the static park. A *Twin Pioneer* will fly fitted with the new uprated *Leonides* of 640 horse-power, a "square" engine having a bore and stroke of the same size. Two helicopters, a *Whirlwind* and *Widgeon*, and a *Beaver* will complete the Alvis-powered contingent. Alvis will be showing a Leonides Major, the uprated Leonides and a standard Leonides in the exhibition building. Two *Westminsters* the *Wessex*, Bristol *192* and *Rotodyne* will be powered by Napier Elands or Gazelles. The Napier stand will feature an *Eland* power-pack as fitted to the Canadair *540*, a Gazelle, single, double and triple Scorpion rocket motors, components of the Napier boosting system for helicopters and examples of castings for aircraft and engines. There will also be various models of Napier-powered aircraft and exhibits showing the application of the Spraymat de-icing system. The Blackburn A 129, a new turbine engine, will power the *P. 531* helicopter flying in the display. This engine will also be in the exhibition building, with Turmo 600 and various Blackburn auxiliary power units, gas generators and starter trolleys.

New Airliners On Show

The flying display will feature three important new airliners, a fighter and a trainer both of which are capable of exceeding Mach. 2, a vertical take-off

STREET COLLECTION AND DELIVERY SERVICE

The Railway is being brought to your door step! The Street Collection and Delivery Service would be introduced shortly in Calcutta and, thereafter, the railway's authorised agent would deliver goods at and collect them from the entrance of your premises. For the present, the following zones will be served:

- KIDDERPORE
- TOLLYGUNGE
- BALLYGUNGE
- PARK STREET
- BELIAGHATA
- BOWBAZAR
- SHAMBAZAR
- COSSIPORE

FOR DETAILS, ENQUIRE FROM:

LIMITED NUMBER OF COPIES ARE STILL AVAILABLE

THE BANKING ALMANAC 1958-59

Complete Reference Volume on International Banking.

The Almanac is the only complete work of reference published in the East on Indian and International Banking and is an indispensable publication for Banks & Insurance Companies, Importers & Exporters, Manufacturers, Merchants, Stock & Share Brokers, and in fact for all those having dealings with banks.

Summary of Contents.

1. **Bank Branches in India: Contains an alphabetical list of towns and places in India with names and addresses of banks therein.**
2. **Indian Banks: This section contains complete particulars of all Indian Banks as to addresses, directorate, Management, telephone numbers, telegraphic addresses, date of establishment, summary of balance-sheets for the last two years, dividends declared and branches.**
3. **General information: This section contains information and statistics about matters of general banking interest, viz. institutional organizations of banks, Reserve Bank's Returns, Bank failures in India, India currency circulation, Prices of gold and silver in Bombay, World Gold & Silver production, Banks removed from the 2nd Schedule to the Reserve Bank of India Act, Prices (in Bombay) of Government of India Securities, Capital issues sanctioned, etc., Transactions of Post Office Savings Banks, Central and State Govts Loans, Changes in Central Bank discount rates, Members of Clearing Houses and Coins and Notes of the world.**
4. **International Banks Section: This section gives complete particulars of all the principal banks of the world as to addresses, management, date of establishment, telegraphic addresses, telephone and telex numbers, codes used, correspondents, dividends, shares and summary of balance-sheets for last two years.**
5. **Index to Places and Banks: Contains list of all commercial centres throughout the world with names and addresses of the banks therein. There are separate sections for all principal countries, viz. Argentina, Austria, Belgium, Brazil, Canada, Chile, China, Cuba, Cyprus, Czechoslovakia, Egypt, Finland, France, Germany, Greece, Iran, Ireland, Israel, Italy, Japan, Mexico, Netherlands, New Zealand, Norway, Pakistan, Peru, Spain, Sweden, Switzerland, Turkey, U.K., U.S.A., Uruguay, Venezuela and the remaining countries are grouped under "Other Countries."**

Over 800 pages in Demi Octavo Size—full cloth bound cover printed in gilt letters.

Price—Rs. 25/- plus Rs. 2/50 for packing & postage.

INDIAN BUSINESS PUBLICATIONS,
G.P.O. Post Box 548,
8-A/91, W.E.A., New Delhi.

airliner, the latest marks of Great Britain's V-bombers, a wide range of helicopters, a "cushion-rider" and spectacular flying by the Royal Air Force and Royal Navy. Of the new airliners, the *Vanguard* is the largest. This turboprop aircraft is capable of carrying 139 passengers over short and medium stage lengths at fares which could slash existing levels by up to 50 percent. The *Argosy*, also powered by turboprop engines, can be used as a freighter or passenger aircraft, or in mixed passenger-freight configuration. Once again, economy of operation is one of its main features. The *Argosy* has been ordered by Riddle Airlines of the United States.

The *Comet 4B*, of the type due to enter service with British European Airways soon, will also be making its first appearance at the S.B.A.C. show. It is a short-range version of the well-known *Comet 4*, with a longer fuselage, shorter wings and higher cruising speed. A vehicle which will undoubtedly attract a good deal of attention is the *S.R.N 1 Hovercraft*. It is as dependent on the ground—or water—as it is on the air. A piston engine, driving a large fan, ejects air downwards and inwards from the outside part of the undersurface of the craft, thus causing a cushion of air to be built up on which the vehicle sits about a foot (about 30 cm.) above the surface. The *SRN. 1* is a research vehicle, designed to try out a new principle, and plans are already afoot for a very much larger commercial version.

All-Weather Fighter

The *Lightning* all-weather fighter and the *P. 11*, a Mach. 2 two-seater trainer development, will take part in the flying display. Another new trainer present will be the *Gnat Trainer*, a cheap-to-buy, cheap-to-operate, transonic aircraft. In constrast, the Conway-powered *Victor 2* is scheduled to make its first appearance, urged on by some 30 tons of thrust from its four by-pass turbojet engines. Visitors will be able to have another look at the equally potent Olympus-powered *Vulcan 2*.

The Dart-powered *Herald* is to make its first appearance at Farnborough, as are a number of new type variants. The *P. 531* helicopter, seen for the first time last year, will fly with the new Blackburn A 129 engine. Another *P. 531*, fitted with a de Havilland Gnome, will be in the static park. There will be a *Twin Pioneer* with new, uprated Alvis Leonides engines in the flying display, also the latest *Javelin* variant, the *FAW. 9*. Two *Hunters* will take part; the *66A* is the latest version of the two-seater *Hunter* supplied to the Indian Air Force, while the *FR. Mk. 10* is a photographic reconnaissance single seater. The *Rotodyne* vertical take-off airliner will give a demonstration of its remarkable qualities while helicopters present will include —in addition to the *P. 531* already mentioned—the turbine-powered, twin-rotor Bristol *192*, two *Westminister* flying cranes, *Wessex*, two *Whirlwinds*, (naval and civil), a *Widgeon* and a *Skeeter*. The Mark-9 version of the ubiquitous *Canberra* will be among the first to fly on the programme, while one of the highlights should be Ranald Porteous' handling of an *Aiglet Trainer*, to be followed by a *Beaver* of which there are some 1,200 in service in the world, and a *Jet Provost*, the R.A.F.'s *ab initio* trainer. A *Gannet A.E.W. 3*, a flying radar control centre ordered by the Royal Navy, a *Sea Vixen* carrier-borne all-weather fighter and the *NA. 39* naval strike aircraft will represent the fixed-wing naval contingent.

FRENCH AIRLINES TO START ROUND-THE-WORLD SERVICE

One of the results of the negotiations between the French and Americans in Paris will be that the two French aviation companies, Air France and *Transports Aeriens Intercontinentaux* will be able to open a round-the-world service by the spring of 1960. By virtue of this agreement, which will be ratified soon by the French and American Governments, Air France is authorised to operate a new service connecting Paris and Los Angeles, with a call at Montreal. *Transports Aeriens Intercontinentaux* on its part is authorised to operate a service Papeete-Los Angeles *via* Honolulu. In other words, for the first time, passengers will be able to travel round the world on board the aircraft of the French companies, involving a single change of aircraft at Los Angeles. The opening of the two services coincides with the operation of a service to Papeete.

TRAINING IN JET OPERATIONS FOR AIR-INDIA PERSONNEL

An intensive jet training programme for pilots, flight engineers and ground personnel has now begun at Air-India's Engineering School, Santa Cruz, Bombay. Five *Boeing* experts from the Boeing Airplane Company, U.S.A., are already in Bombay instructing A-I.I pilots, flight engineers and ground personnel on fuel systems, landing gears, surface controls and electrical power systems of the *Boeing 707-Intercontinental*, world's fastest and largest long-range jet airliner. Three instructors, Mr. John J Rowland, Mr. Edwin W. Pettitt and Mr. Roy Smith, conduct courses for pilots and flight engineers, while Mr. Harry J. Lindquist and Mr. Raymond Mungiu instruct ground personnel and also act as advisers to the A-I.I. Engineering School. The *707* training at the A-I.I. Engineering School is modelled on training programmes now being conducted by the Boeing Airplane Company in the U.S.A. and Rolls-Royce Company in the U.K.

Calcutta Markets

SELECTIVE BUYING AT TEA EXPORT SALE

GOOD DEMAND FOR DUSTS

AT Sale No. 11, held on 24th and 25th August, there were 56,256 packages on offer at the Export auction. The market opened with a fair demand at slightly irregular rates but eased later, buyers being selective in their purchases. Plain B.P.'s showed little change in price while plain Fannings were occasionally dearer. Medium orthodox B.O.P.'s were irregular and generally showed a decline by 15nP to 20nP, buyers following quality, while brokens and fannings grades in this category showed little change. Fannings being sometimes dearer. C.T.C. teas were 20nP to 40nP easier except for the poorer types which declined by about 10nP, while Legg-cut Dooars teas sold at about 10nP below last rates. Whole leaf grades showed an easier tendency and there were some withdrawals while the demand for Darjeelings was very limited at prices 30nP to 50nP below last rates, with numerous withdrawals. Tippy teas were a much weaker feature than of late.

Quotations	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.92 to 1.94	2.10
Plain B.P.	1.80 to 1.84	1.70 to 1.74
Plain Fannings	1.96 to 2.04	1.84 to 1.90
Medium B.P.	1.94 to 2.04	1.85 to 1.95
Medium Fannings	2.08 to 2.18	2.05 to 2.15
Best Assam C.T.C. B.P.	2.70 to 3.00	3.20 to 3.40
Best Assam C.T.C. Fannings	3.30 to 3.50	3.50 to 3.80

At the Internal Sale, 18,691 chests of Dust were offered, for which there was a good general demand. Bright liquoring medium Assams were in good demand, while black leaf Dusts suitable for export were the strongest feature of the sale and were dearer. The remaining orthodox descriptions came to an irregular market and at the beginning of the sale were up to 6nP easier. However, the demand for these improved as the sale progressed. C.T.C. Dusts were irregular; the more ordinary kinds in this category were up to 10nP easier, while the better kinds sold at prices up to 25nP below last rates. The very best kinds however were fairly well supported. The few lines of Legg-cut teas on offer were generally firm. Darjeelings, however, met with only a limited demand and were easier.

Quotations	1959 Rs.	1958 Rs.
Medium Dooars Dust	1.78 to 1.86	1.72 to 1.74
Medium Assam Dust	1.78 to 1.86	1.74 to 1.76
Medium Assam C.T.C. Dust	2.00 to 2.10	2.20 to 2.40
Best Assam C.T.C. Dust	2.65 to 2.90	2.50 to 2.80

(These quotations are exclusive of excise duty.)

The 419 chests of other grades on offer met with a good general demand.

HIDES AND SKINS FIRM

The market in skins was firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 18th August and 24th August, 1959)

Cowhides: Wet Salted (ord.) 33,200 pcs. on the basis of Rs. 12 to Rs. 18; Wet Salted (Slaughtered) 24,100 pcs. on the basis of Rs. 14.50 to Rs. 17.50 and Rs. 18 to Rs. 27.

Goatskins: Wet Salted (Patna, Daissee, Kustia) 37,000 pcs. on the basis of Rs. 380 to Rs. 390, Rs. 440 to Rs. 460 and Rs. 480 to Rs. 500; Wet Salted (he-killed) on the basis of Rs. 5.37 and (she-killed) on the basis of Rs. 5.12 a piece; Assam-Dinajpur-Maldah 37,900 pcs. on the basis of Rs. 360 and Rs. 425 to Rs. 400; Purneah-Kissenganj 17,700 pcs. on the basis of Rs. 420 to Rs. 445; Patna (ord.) 2,700 pcs. on the basis of Rs. 375 to Rs. 390.

Bazaar Stocks

(24th August, 1959)

Cowhides: Wet Salted 137,000 pcs.

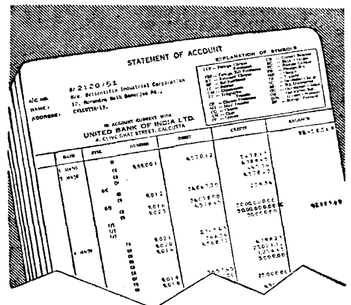
Goatskins: Wet Salted (Patna, Daissee, Kustia, Killed) 36,100 pcs.; Assam-Dinajpur 80,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 85,500 pcs.

LINSEED STEADY

The linseed market was steady last week. Business was rather limited; crushers showed some interest but sellers were reserved. Despatches from the centres were poor. In the options market trading continued on a small scale and both September and May positions registered small losses with buyers hesitant. There was good demand for oilcake, mainly from Calcutta buyers and prices advanced over Rs. 14.50; shippers showed no interest over Rs. 14 due to the decline in overseas prices to £35. The oil market was firm; prices showed little change but sellers were reserved. Shippers re-entered the market and business was done up to Rs. 50.25. Overseas prices advanced to £106. Latest quotations are based on: Ready, Rs. 23.75 a maund, August-September Rs. 23.75 a maund, September futures Rs. 23.84 a maund and May futures Rs. 22.75 a maund.

SUGAR UNCHANGED

During the week ended 25th August, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 3,500 bags and stocks total'ed 50,000 bags. Rates were Rs. 41.25 to Rs. 41.50 for big grain and Rs. 39.87 to Rs. 40.12 for small grain. The market was unchanged.



SHELLAC STEADY

During the week ended 24th August, the tone of the market was inactive at the beginning and steady at the close.

The range of quotations was as follows:

Standard Pure Buttonlac	Rs 93 to 95 buyers; 95 to 98 sellers.
Lemon No. 1 Shellac	Rs. 95 buyers; 96 to 98 sellers.
Lemon No. 2 Shellac	Rs. 88 to 90 buyers; 90 to 92 sellers.
F. O. Superfine Shellac	Rs. 86 to 87 buyers; 88, 89, 88 sellers.
Standard One Shellac	Rs. 84 to 86 buyers; 85, 87 sellers.
T.N. Pure Shellac	Rs. 78, 79, 77 buyers; 80, 78 sellers.
Golden Kusmi Seedlac	Rs. 100 buyers; 105 sellers.
No. 1 Kusmi Sedlac	Rs. 88, 90 buyers; 92, 95 sellers.
No. 2 Kusmi Seedlac	Rs. 82, 88 sellers; 84 buyers.
Golden Bysaky Seedlac	Rs. 89, 90, 88 buyers; 90, 93, 90 sellers.
One B Seedlac	Rs. 84, 83 buyers; 85, 86 sellers.
Two B Seedlac	Rs. 75, 78, 77 buyers; 77, 80 sellers.
Manbhum Fine Seedlac	Rs. 80, 81, 80 buyers; 82, 83, 82 sellers.
Fine Bysaky Seedlac	Rs. 76, 77, 76 buyers; 78 sellers.
Genuine Bysaky Seedlac	Rs. 71, 73, 72 buyers; 73, 74 sellers.

Shipments during August until 20th were 30,293 packages.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the **UNITED BANK** is in the van of mechanization.

Rs. 4,00,00,000 worth of foreign exchange!

To-day, electric power is the motivator behind industrial development, increased agricultural output, and the sweetness and light of the home! From whatever source electricity may be obtained, and wherever it may go, in this vast land of ours, you'll find Alind conductors taking this power.

But Alind's contribution reflects itself not merely in the material welfare and progress of the country...it's seen in other ways, too.

For instance, in the last eight years, savings in foreign exchange should have amounted to something like Rs. 4 crores. And with our Hirakud plant now "on stream", and using indigenous metal, these savings bid fair to be as high as Rs. 1·5 crores a year!

Our lines include:
ALIND ACSR, ALL-ALUMINIUM CONDUCTORS & ACCESSORIES
ALIND ALL-WEATHER, ALIND KER-AL-LITE & ALIND AL-VINYL COVERED ALUMINIUM CONDUCTORS

COMPANY AND PUBLIC NOTICES

LODNA COLLIERY COMPANY (1920), LTD.

NOTICE is hereby given that the Thirty-eighth Annual General Meeting of the Members of Lodna Colliery Company (1920), Limited, will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Thursday, the 17th September, 1959, at 3 p.m. for the following purposes :—

1. To receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors.
2. To consider and declare a dividend in respect of the year ended 31st December, 1958.
3. To appoint a Director in place of Mr L. W. Balcombe who retires in accordance with the provisions of Article 127 of the Company's Articles of Association and is eligible for re-appointment subject to compliance with the provisions of Section 261 of the Companies Act, 1956, and, in this connection if thought fit, to adopt the following Resolution which will be proposed as a Special Resolution :—

   "That Mr L. W Balcombe, a Director and a Manager of Turner, Morrison & Co., Private Limited, the Managing Agents of the Company and, as such Director and Manager, an associate, officer and employee thereof, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation".

   (Special notice has been received by the Company to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956. The reasons which make the resolution necessary as set out in the special notice are (1) Turner, Morrison & Co., Private Limited are the Managing Agents of the Company and Mr. L. W. Balcombe a Director and a Manager of the Managing Agents, is an associate, officer and employee thereof in terms of Section 261 (1) (f) of the Act. (2) the Managing Agents are a private company and, as such managing agents, hold an office or place of profit under the company and Mr. L. W. Balcombe is an officer and employee of the Managing Agents as aforesaid in terms of Section 261 (1) (c) of the Act, and (3) the Managing Agents also being a body corporate, holding the office or place of profit as aforesaid, Mr L. W. Balcombe is an officer and employee thereof in terms of Section 261 (1) (d) of the Act).
4. To appoint Auditors and to fix their remuneration.

As Special Business.

5. To consider, and if thought fit, to pass with or without modification the following resolutions :

   1. (As an ordinary resolution) "The Company do hereby authorise Turner, Morrison & Co., Private Limited, the Managing Agents of the Company to retain any commission earned on any insurance placed by the Company through the Managing Agents with (a) The Scottish Union & National Insurance Company, (b) The Maritime Insurance Company Limited and (c) The Union Insurance Society of Canton Limited of which the Managing Agents are the Principal Agents at Calcutta provided that the rates charged to the Company are not less favourable to the Company than the market rates or are otherwise reasonable".

   2. (As an ordinary resolution) "The Company do hereby authorise Turner, Morrison & Co., Private Limited, the Managing Agents of the Company and any Associate or Associates of the Managing Agents (as defined in subsection (3) of Section 2 of the Companies Act, 1956) respectively to retain any commission or other remuneration earned or to be earned by the Managing Agents or any such Associate as the Managing Agent, Secretaries and Treasurers, Manager, Agent, Secretary or selling or buying agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body or concern with the Company provided the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable".

   3. (As a special resolution) "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956 the Company hereby approves of a Contract being entered into between the Company and its Managing Agents, Turner, Morrison & Co., Private Limited effective from 1st March 1958 and determinable by six months' notice by either party in terms of the draft initialled for identification by the Chairman of the Company in respect of (1) the sale by the Company to the Managing Agents of coal and coke as the Managing Agents may require not exceeding in price Rs. 5,00,000/- in the aggregate in any one year, (2) the sale by the Managing Agents to the Company of stationery and office supplies as the Company may require at cost plus ten per cent thereof not exceeding Rs 10,000/- in the aggregate in any one year (3) the supply of office accommodation by the Managing Agents to the Company at a rate not exceeding Rs. 45/- per 100 sq. ft. per month (4) the supply of suitable residential flats at Calcutta for the Executive Staff of the Company at rents actually charged to the Managing Agents therefor (5) providing tiffin for the clerical staff of the Company at cost and tiffin, teas and drinks for the Executive Staff at a rate not exceeding Rs. 150/- per head per month (6) providing for the Company the use of accounting and air-conditioning machines on hire not exceeding Rs. 10,000/- per annum and (7) rendering to the Company clearing and forwarding services at a rate not exceeding Rs. 150/- per shipment and on terms that the price of each sale or supply of goods or rendering of services specified above shall be paid by the Company to the Managing Agents or by the Managing Agents to the Company as the case may be within one month of each such supply or rendering of service as aforesaid".

   4. (As a special resolution) "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and its Associate, Shalimar Tar Products (1935) Limited effective from 1st March 1958 and determinable by six months' notice by either party, in terms of the draft initialled for identification by the Chairman of the Company in respect of (1) the sale by the Company to the Associate of coal and coke as the Associate may require not exceeding in price Rs. 5,00,000/- in the aggregate in any year and (2) the sale by the Associate to the Company of bitumals, tar and tar-felt, pitch, roofing materials, water-proofing, caulking and weather-proofing materials, flooring compositions and wood and metal preservatives as the Company may require and the rendering of services by way of providing labour and workmen for the use and application thereof, not exceeding in price Rs 50,000/- in the aggregate in any year on terms that the prices for such sale or supply of goods and services shall be fixed at market rates and shall be paid by the Company to the Associate or by the Associate to the Company as the case may be within one month of each such sale or supply".

   5. (As a special resolution) "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and its Associate, The Shalimar Works, Private Limited effective from 1st March, 1958 and determinable by six months' notice by either party in terms of the draft initialled for identification by the Chairman of the Company in respect of (1) the sale by the Company to the Associate of coal and coke as may be required by the Associate not exceeding in price Rs 1,00,000/- in the aggregate in any year and (2) the sale by the Associate to the Company of engineering products, consumable and other stores as the Company may require not exceeding in price Rs 1,00,000/- in the aggregate in any year on terms that the prices for such sale or supply shall be fixed at market rates and shall be paid by the Associate to the Company or by the Company to the Associate as the case may be within one month of each such sale or supply".

   6. (As a special resolution) "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and its Associate, Grahams Trading Company (India) Private Limited effective from 1st March 1958 and determinable by six months' notice by either party, in terms of the draft initialled for identification by the Chairman of the Company, in respect of the purchase by the Company from the Associate of provisions, wines and liquors required by the Company at a price not exceeding Rs 10,000/- in the aggregate in any one year on terms that the prices for such sale of provisions, wines and liquors by the Associate to the Company shall be fixed at market rates and shall be payable by the Company to the Associate within one month of each such sale".

   7. (As a special resolution) "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and its Associate, Smith, Stanistreet & Co., Ltd., effective from 1st March 1958 and determinable by six months' notice by either party, in terms of the draft initialled for identification by the Chairman of the Company in respect of (1) the sale by the Company to the Associate of coal and coke as the Associate may require not exceeding in price Rs. 25,000/- in the aggregate in any year and (2) the sale by the Associate to the Company of drugs, medicines and sundry other pharmaceutical requirements as the Company may require, not exceeding in price Rs 1,00,000/- in the aggregate in any year on terms that the prices for such sale or supply of goods shall be fixed at market rates and shall be paid by the Company to the Associate or by the Associate to the Company as the case may be within one month of each such sale or supply".

Note : (1) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not be a member of the Company, to attend and vote in his stead.

(2) An explanatory note as required under Section 173 of the Companies Act, 1956, has been sent to each shareholder entitled to notice of the meeting.

The Share Transfer Register of the Company will be closed from the 8th September to 17th September, 1959 both days inclusive.

Warrants for the dividend, when declared, will be forwarded in accordance with the registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

For and on behalf of
LODNA COLLIERY COMPANY (1920), LIMITED,
A H HUME,
Director.

Calcutta, 13th August, 1959.

RANICHERRA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of RANICHERRA TEA COMPANY LIMITED, will be held at McLeod House, No 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 21st September, 1959, at 3-00 P.M., for the following purposes :—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956 :—

   "That Mr. G. T Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th September, 1959 to 21st September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

THE HATTIKHIRA TEA COMPANY, LIMITED.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 25th day of September, 1959, at 3-15 P.M., for the following purposes :—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1958.

(2) To declare a dividend.

(3) To elect Directors in place of the retiring Directors. In this connection, Special Notice is hereby given of the intention to move the Special Resolution at the Meeting, that is to say—

   "That Mr. G. Kydd, who retires by rotation be and is hereby appointed a Director of the Company, such appointment to have effect as and from 24th July, 1959".

(4) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 18th September, 1959 to 25th September, 1959, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
I. P. GOENKA,
Managing Director,
Managing Agents.

Calcutta, 25th August, 1959.

Note :—

(i) A Member of the Company entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

(ii) In connection with the business to be transacted under Item 3 of this Notice, please see the undernoted Explanatory Statement.

EXPLANATORY STATEMENT.

In the Special Notice given by the Company to the shareholders, under Item 3 of the annexed notice for the Annual General Meeting, intimation has been given of the intention to move a Special Resolution for the re-appointment to the Board of Directors of Mr. G. Kydd. Special Notice of such intention has also been given to the Company. Under the provisions of Section 261(1)(f) of the Companies Act, 1956, Mr G. Kydd, who is an officer of the Managing Agents of the Company can be appointed to the Board only by Special Resolution. Since he will retire in rotation at the meeting, his re-appointment for compliance with those provisions, will therefore have to be by Special Resolution.

NOTICE is hereby given that the Annual General Meeting of the Members of MARGARET'S HOPE TEA COMPANY, LIMITED, will be held at McLeod House, 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 21st September, 1959, at 3-10 P.M., for the following purposes :—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956 :—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th September, 1959 to 21st September, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO., LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 19th August, 1959.

Note: Payment of the proposed Dividend, if declared, will be made on or after 5th October, 1959, only to those members whose names are registered in the Books of the Company on 21st September, 1959, or to their Mandatees.

No application for warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE BORREA COAL COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE BORREA COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Wednesday, the 30th September, 1959, at 10-50 A.M. for the following purposes :—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1958, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being over 65 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

   To be proposed as an Ordinary Resolution.

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 15th to the 30th September, 1959, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 24th August, 1959.

Note :—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 7th October, 1959, to those Shareholders so entitled whose names appear in the company's books on the 30th September, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT.

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE GROB TEA CO. LTD.

ECONOMIC AID: EFFORTS OF DONORS COMPARED

EVER since the provision of economic assistance to the under-developed countries became a political competition between the various industrial nations and blocs, the experts have been furnishing us with comparative tables which claim to figure precisely the relative efforts being made in this direction by the leading powers. Each set of figures seeks to prove something of political interest, *e.g.* that the U.S.A. does a lot and Russia little, or that Britain's assistance is relatively much higher than the U.S.A.'s, or that France's effort is out of all proportion to the modest West German foreign aid. Beyond doubt, *some* general conclusions can be derived from these studies (we shall attempt to sketch them below) but only after the figures invoked have been submitted to much more careful scrutiny than they usually receive from interested parties. Nothing looks clearer than a comparative table of figures, with countries listed in one column and sums of "aid" expressed in millions of dollars in the next. But nothing can be more misleading if the figures are essentially incomparable, if the basis of comparison is not stated, if different standards are used for each donor, if the evaluation of aid in terms of dollars is arbitrary, etcetera. Such defects appear in almost all the comparisons of economic assistance that we have seen.

This is bound to happen, because the general notion of "aid to under-developed countries" covers a bewildering variety of operations. Some of these are easily measurable; *e.g.* straight government loans or gifts given in money. Others are much less so, *e.g.* the operations of the London capital market that benefit under-developed countries. Others are hardly measurable at all—technical aid, especially when given by private firms, or the re-investment of company profits earned, say, by a British company working in India. Finally, some can be measured in physical terms but less readily in money values: *e.g.* the common Russian practice of providing machinery direct, or exchanging commodities that are priced in terms of an arbitrarily valued rouble.

To call only some of these operations "economic assistance" and to deny that title to others is, of course, to weigh the measures in favour of one nation or another. The whole point of the political struggle that is now being carried on by means of competitive aid offers is that it is a struggle between two sorts of economic systems. And what characterises an economic system, as plainly as any other fact about it, is its special way of providing economic assistance to under-developed countries. For example, the American economic ideology demands that foreign aid be left largely to the private sector, whereas the Russian entails that aid take the form of centralised and spectacular State operations (usually decided upon in principle during an official visit by a Kremlin leader). The British and French methods of providing aid, though differing widely between themselves, would fall somewhere between these two and have this in common that they arise from a modernisation of imperialist connections between the mother country and its colonies. Therefore, if a comparison of the economic assistance programmes of these countries is to be valid, it must take account of every sort of operation that can fairly be called foreign aid —political prepossessions apart. And even then there will be numerous doubtful cases.

AID TO BACKWARD COUNTRIES BY NON-COMMUNIST NATIONS IN 1956-57

(In millions of dollars)

U.S.A.	1,436
France	807
Britain	156
U.N. and World Bank	283
Other Continental countries	39
Various	795

To take an instance, the Committee of Action for the United States of Europe has just issued the above table of economic aid operations in favour of under-developed countries. It took its figures, it says, from the latest reports of the U.N. and of G.A.T.T., and so they are "impartial".

But before we could draw any conclusions from this table, it would have to be rectified by a series of footnotes. For example, it concerns only public aid, granted by Governments, and thus makes the American and British efforts seem small alongside the French programme—because the Anglo-Saxon programme is largely private, the French largely State-managed. Moreover, about $106 million would have to be deducted from the French figure as administrative expenses of colonial services, which is less "economic aid" than "the price of sovereignty". From the World Bank and U.N. contribution, 15 percent would have to be deducted as the contribution of the under-developed countries themselves to these organisations' programmes. If it is a listing by countries that is sought, then the U.N. and World Bank figures would have to be broken down somehow, according to the extent the industrialised nations participated in the international effort (it is well known that the U.S.A. bears the brunt of this effort).

Nothing is harder to calculate in this field than the total of American economic assistance to backward countries, because it takes so many forms and is administered by so many agencies. Thus the document just quoted gave American public aid in 1956-57 as $1,436 million, and it stated elsewhere that all foreign private investment by the countries listed above totalled $1,104 million in that year. Yet the Rockefeller Report submitted to President Eisenhower last year gave American public aid to under-developed countries in 1956-57 as $1,523 million. And it gave U.S. private investment in those regions as $1,711 million, which is far in excess of the U.N. figure for all western investment. Confusion is everywhere possible in the American figures because it is sometimes difficult to distinguish military aid from economic aid, and it is virtually impossible to decide in which of these rubrics one should place "defence support", which is economic aid given for military reasons. Repeated attempts have been made in Washington to centralise and co-ordinate assistance activities (since President Truman announced his Point Four in January 1949 there has been a veritable jungle of initials signifying successive aid programmes and bureaux), but the conflict and overlapping persist—they are indeed part of the American way of doing things. Quite apart from propaganda exaggerations intended to show American superiority over Russia in this field, one might respectfully suggest that nobody in Washington knows for sure just how much the United States is devoting each year to foreign aid for backward countries, even on public account. As for the total value of American private investment and re-investment (which far exceeds the public programme) no guess could pretend to have a margin of error smaller than $100 million for any one year.

The British effort can be somewhat more accurately estimated, because the governmental programme is more important. Indeed, in the first years after the war it predominated, but since 1952 the volume of private investment has been increasing until today British aid is half public, half private. One could place the total at about $600 million a year, devoted almost entirely to backward countries in the Commonwealth, but one could not really pretend to know the exact volume of private investment and ploughed back profits of companies. These appear to be growing each year (apart from the temporary setback due to the recession which hit the operations of British companies in the under-developed areas of the Commonwealth), and they are encouraged by tax exemptions which must also be counted part of the British taxpayers' contribution to foreign aid. In the expenditure Britain undertakes in her 50 remaining colonial territories (in sum they have an area equal to that of the U.S.A., and a population of 72 million) one would have to separate out the costs of sovereignty from that considerable part that contributes to economic expansion. No easier to evaluate is the British Government's outlay on universities and colleges in the colonies, the millions of pounds that go to scientific research in those territories, and the British contribution to the atomic energy programmes of the dominions. But what is really peculiar about Britain's rôle in economic assistance to backward countries is the functioning of the London capital market, an institution that still has no equal anywhere in the world. Not only the independent Commonwealth countries, but the colonial administrations, and public authorities anywhere in the Commonwealth have access to this market, which has found £267 million for these borrowers in the past decade. Moreover, private companies operating in the Commonwealth appeal successfully to this market for £35 or £40 million a year.

Similar uncertainties exist about the value of Russian assistance to under-developed regions. Nothing certain is known of Russian aid to backward parts of the communist bloc; one sees guesses that it is $250 to $275 million a year, but the increase of Chinese demands on Russian aid this year must exceed those figures. Given the nature of totalitarian accounting (no free market, imputed prices, arbitrary currency values), here again one could reasonably suggest that Moscow does not know for sure how much is devoted each year to economic assistance. Outside the communist bloc, the flow of Russian assistance should be easier to follow. Yet one finds estimates in reliable western quarters that vary from $500 million a year to $700 million, or even $940 million. The case of Yugoslavia probably lies at the origin of this variation; in years when Belgrade is not having an ideological dispute with Moscow, the Yugoslavs receive large sums of Russian aid—but Yugoslavia may be counted, or not, a member of the communist zone, and it may be counted, or not, an under-developed country.

Similar difficulties of interpretation could be urged against the impressive French figures for aid to backward regions. To mention only one source of confusion: Algeria is proclaimed a part of metropolitan France when its politics are discussed, but Paris always includes it with overseas under-developed territories when it tots up its annual effort in economic assistance. This is important because Algeria accounts for the largest single part of French assistance to Africa.

But there is no need to press the analysis further. The main point has already emerged. Not that statistics advanced for aid to backward countries are worthless or intentionally misleading. But they are differently calculated in different countries and by different authorities; they all include a certain inevitable amount of guesswork and arbitrary evaluation; they all need to be carefully scrutinised; and we can never assume that figures relating to different countries are comparable. The reader of economic journals and international reports who comes across a tidy table of contributions to economic assistance should be on his guard.

Does this mean that no general conclusions can safely be drawn from such analyses and comparisons? Not at all. The main lines are clear. Far and away the biggest contribution to economic assistance to backward countries is made by the U.S.A. But because the bulk of American aid is

determined by private firms, and much of the rest by the Pentagon, it often flows to countries, and within those countries to activities, which are not always the most deserving—in any sense, political or economic. The second largest supplier of economic assistance to backward countries is France. But here the direction of investment is, by contrast with the American case, excessively subject to "social" considerations. The result is the opposite of American aid, but no better: the over-equipment of the economic infra-structure in Africa without enough investment in industry. Thus the fruits of the great French effort are often disappointing; Africans get more roads and bridges than they can use, while their revenues do not rise.

The third largest purveyor of economic assistance to the backward countries is Britain, and it is probably British aid that can claim to produce the best results. The democratic evolution of the Commonwealth—to which British aid is largely confined—the consultation of local people on their economic desires, the blend of private and public direction of the movement of funds have combined to save British investment plans from the errors of the Americans in Latin America, on the one hand, and of the French in tropical Africa, on the other. Russia appears to come in fourth place and, curiously, her assistance to backward countries outside the communist sphere repeats many of the errors of American assistance. It is directed at superficial, grandiose, quick-return projects and quite avoids the painful work of building up the economic infra-structure, especially agriculture and public utilities. Russian technical assistance is extremely limited, often because of language difficulties, and Russia has made next to no contribution in the very field in which she might have been expected to help the backward countries—global economic planning.

GOOD PERFORMANCE FOR T.I.S.C.O.

THE report of the Tata Iron and Steel Company for the year ended March 1959 is of considerable interest to the stock markets because it removes a number of uncertainties expressed some time ago about the company's working and dividends Considering that the two-million-ton expansion programme was completed during the period covered by the report, and that working was interrupted—as was inevitable at a time when heavy equipment was being installed—the performance is all the more remarkable. Sales increased from Rs. 45.40 crores to Rs. 53.45 crores, and revenues would have been higher but for the fact that output contained a greater proportion of semi-finished products. This apart, earnings were affected by a smaller production in relation to increased overheads on an enlarged block. A strike during the year under review cost the company nearly Rs. 1½ crores, and increased costs have not yet been compensated by a rise in retention prices.

Operating profits not only fell by Rs. 90 lakhs compared with the previous year, but were completely absorbed by interest charges, depreciation, and plant rehabilitation and development rebate reserve. Net interest charges increased by Rs. 1.10 crores and depreciation by Rs. 1.63 crores; but managing agents' commission fell by Rs. 1.07 crores. Payments on the latter item could be inconsiderable on a longer view. The formula for calculating "profits" for the purpose of managing agency commission for the year shows a substantial loss, due primarily to depreciation being charged at income-tax rates as required by the Companies Act—and amounting to Rs. 9 crores, compared with Rs. 5.5 crores in the company's accounts—and to the heavy interest charges. The result is, therefore, that not only is there no managing agency commission payable for the year, but a considerable deficit will have to be carried forward to be adjusted against the profits of future years when arriving at the managing agency commission for those years.

Now that the expansion programme has been completed and initial difficulties mostly overcome, normal production is expected during the current year. This appears to have encouraged the directors to take a generous view of dividends. Reasonable dividends have been paid, although there is a disposable profit of only Rs. 8.47 lakhs, including Rs. 4,49,832 brought in. An ordinary dividend of Rs. 6.80 a share is paid on the increased capital and absorbs Rs. 1.70 crores against Rs. 1.67 crores. At the present price of Rs. 174.25 a share, the yield works out at 3.9 percent. It appears that the dividend recommended on the ordinary shares is in accordance with the principle adopted in previous years. This completely fulfils the assurance given to shareholders in 1956, because the combined dividends to be paid on old and new ordinary shares are such as to maintain the previous dividend of Rs. 10.50 on old ordinary shares and give a return of 5½ percent on the full amount of Rs. 105 for each new share. This price included the premium of Rs. 30 a share now converted into fully-paid bonus shares.

Shareholders would do well to bear in mind the company's financial obligations towards its expansion programme. A total of Rs. 10.99 crores was drawn during the year from the second World Bank loan for payment for capital equipment bought from foreign countries. The total withdrawals from the commencement of the loan account up to 31st March, 1959, amounted to Rs. 47.69 crores, leaving a balance of Rs. 4 crores to be drawn during the year 1959-60. In addition, further borrowing from banks in India amounted to Rs. 12.64 crores, increasing the borrowing from this source, up to 31st March, 1959, to Rs. 23.58 crores. Total borrowings up to 31st March, 1959, including the World Bank loan, therefore, amounted to Rs. 71.26 crores. With the issue of bonus shares during the year under review from the premium received on new ordinary shares issued in 1956, the paid-up share capital on 31st March, 1959, amounted to Rs. 30.72 crores, against a net block of Rs. 124.78 crores. So there is a wide disparity between the paid-up capital and the net block. There is also a heavy load of debt. Including loans from banks in India, the total borrowing may increase to Rs. 78 crores, on which interest charges at an average rate of 5 percent amount to Rs. 3.9 crores a year. The total interest charges payable to the World Bank alone during the loan redemption period of 13 years up to June, 1971, will amount to Rs. 18 crores. It has, therefore, been decided to increase the share capital by the issue of new ordinary shares at par at the rate of one share for five ordinary shares held, and of "A" second preference shares at the rate of one share for two preference or second preference shares held. The new issue will bring in a total of Rs. 8.32 crores which will be used mainly to liquidate a portion of the short-term borrowings made in India. Money is also required to finance the balance of expenditure on the various expansion and capital programmes.

This apart, funding of the debt is needed if the undertaking to the World Bank is to be fulfilled. In terms of the loan agreements with the World Bank the company undertook to maintain, as far as possible, a debt to equity ratio of 50:50 (equity representing the company's share capital, plus reserves, plus the Government's special advance of Rs. 10 crores). This ratio, on 31st March, 1959, worked out to 54:46. If the share capital is increased by Rs. 8.39 crores, and the amount is used to repay a portion of the short-term borrowings, the ratio will become better than 50:50 and will enable the company to satisfy the requirements of the World Bank.

Most of the projects which are being executed by the company's engineering department, such as the new merchant mill and the revamping of the old sheet bar and billet mill, are being phased over a longer period and are expected to be completed by the end of 1960. During the year under report, the Tata Locomotive and Engineering Company Limited made a new issue, at par, of rights shares at the rate of three ordinary shares for five ordinary shares held, on which basis the company was entitled to 63,900 ordinary shares at par. As the acquisition of the rights shares was manifestly in the interest of the company, the directors decided accordingly. It was also decided to dispose of a portion of the existing holding in the Tata Locomotive and Engineering Company Limited, so that inclusive of the rights shares the company's total holding would be restricted to 150,000 shares of the value of Rs. 1.50 crores. The company's holding on 31st March, 1959, amounted to 153,140 shares, because, out of the total number of shares to be disposed of, 3,140 were sold after the end of the year. On the shares sold, the company made a profit of Rs. 15.84 lakhs, which has been transferred to the investment depreciation reserve.

Under an arrangement with the Indian Steel Rolling Mills Limited, Madras, made for the purpose of providing finance required by the latter company for developing its works at Nagapatam, Tata Locomotives acquired debentures of Rs. 5 lakhs issued by Indian Steel Rolling Mills ing interest at 6 percent and maturing not later than 1st April, 1962. Tata Locomotives received 1,667 fully-paid bonus shares from Sankey Electrical Stampings Private Limited and also subscribed to 6,667 rights shares issued by the latter.

COMMODITY PRICES AND PAYMENTS

THE advance of the world's economy after the recession of 1957-58 has assumed impressive proportions, but the advance of commodity prices is still comparatively small. Prices have risen less than most people expected, less than most people—even in commodity-consuming countries—thought desirable. Because, of course, relative prices affect international payments, and the finances of primary producers affect sales of manufacturers' products, this situation is causing some anxiety. It is certainly true that primary-producing economies have lagged behind industrial economies in the recent advance; but they have certainly participated in the advance. The rise in prices, though in most cases moderate, has in itself been sufficient to increase primary producers' incomes considerably. And prices are not the only factor in their earnings: the volume of trade in commodities has increased considerably. One reason—probably the main reason—why commodity prices have not risen very far is that at somewhat higher prices more goods have been offered.

The increase in supplies has come partly from producers and partly from stockholders. It has been partly haphazard and partly planned. The rise in the price of copper in 1958 raised production of copper to the highest level on record in 1959; then the price relapsed and one or two big producers curtailed their outputs. The rise in the price of tin was effected by a restriction scheme, supported by a buffer stock; but when the desired price had been attained restriction on exports was relaxed and some of the stock was sold. When the price of wool recovered, additional supplies were forthcoming from various sources—growers' stocks in Australia, the Wool Commission's holding in South Africa, the Government's stockpile in Britain. Those are a few examples of the means whereby supplies of commodities have increased as prices have risen. Releases from stocks held in consuming countries do not, of course, benefit producing countries, but on the whole the combination of increased trade and higher prices has materially strengthened the primary economies; and, because the primary producers of the sterling area suffered particularly in the recession, the change has particularly strengthened sterling. Whereas last year the improvement in the U.K.'s finances was partly counteracted by the deficits of other sterling countries, this year the U.K. and the others are pulling in the same direction. One welcome result of the improvement in the oversea territories' finances is that markets for British exports which have been difficult are becoming easier.

It may be recalled that the World Economic Survey for 1958, published by the United Nations last May, estimated that the industrial countries' recession of 1957-58 reduced the earnings of the primary-producing countries by some $2,000 million. The report of the General Agreement on Tariffs and Trade, published in August, has since shown that the main weight of the recession in commodities fell on the overseas sterling countries: of the total reduction in export earnings of non-industrial countries in 1958 the sterling countries suffered about two-thirds. These countries did not reduce their imports nearly as much as their earnings were reduced, and their combined net deficit was approximately £600 million. How one commodity can affect the fortunes of the sterling area is demonstrated by the fact that nearly two-thirds of the decline in the overseas sterling countries exports last year is attributable to wool. On the other hand, despite recession in the industrial countries and upheaval in the Middle East, the Middle East oil-producing countries are an important stabilising force. If their net contribution is excluded the deficit of the overseas sterling countries appears not as £600 million but as about £1,000 million. Whatever the effective figure (and it must be remembered that special arrangements for the oil countries allow more freedom to convert than is enjoyed by other members of the sterling area), it is remarkable that the central reserve of the sterling area could increase continuously throughout 1958. It is hardly surprising, in the changed state of commodities, that the reserve increased this year even in July—usually the most difficult month.

A considerable proportion of the primary-producing countries' deficits was covered by loans from the International Bank, by aid from the United States, by withdrawals from balances in London. By such means crisis was averted: indeed, it is doubtful that those not directly involved were aware how serious the position of these countries had become. It is easy to be complacent now

elements in the position that should warn against complacency. Ideally, the primary-producing countries should build substantial reserves so that they will not suffer anxiety, or be forced to resort to expedients, if their earnings decline again. But they cannot build reserves and finance their development at the same time. The loans from the International Bank, which helped them in the last emergency, were intended for long-term development, not for short-term unbalance of payments. As the World Economic Survey pointed out, the less-developed countries need relatively more imports than the more-developed countries and must therefore always tend to run into deficit or resign themselves to a slower rate of progress than the more-developed countries'.

It is, therefore, questionable whether the present relation between prices of commodities and prices of manufactures represents a proper balance between the more and the less developed countries. As the G.A.T.T. report said, any further expansion in the non-industrial countries' imports requires a corresponding expansion in their ability to earn. They cannot export commodities in much larger quantities, if only because they would thereby upset the delicate balance of prices. If all commodity-producing capacity were fully used, nearly all commodities would be in surplus; and the possibility that the huge American stockpiles will be reduced cannot be excluded. Deliberate measures to force up commodity prices are probably impracticable now, even if desired. But it is not too soon to plan stabilisation schemes, whereby surpluses could be absorbed at low prices and released opportunely.

Current News and Comment

Star Paper Preference Offer

The offer of 25,000 7 percent cumulative tax-free third preference shares of Rs. 100 each at par for public subscription by the Star Paper Mills Ltd—details of which are published elsewhere in this issue—might make investors cautious, as the return offered is rather abnormal by present market standards. The company has undertaken heavy financial obligations for its expansion schemes, so it is not clear why it is being so generous. Since paper is a prosperous industry, it is unusual to try and attract support by offering a very big dividend on preference shares. The past sluggishness of the management, in not using share money (including cumulative preference shares) amounting to Rs. 55 lakhs for a considerable time, may have been a factor influencing the present decision.

Out of the new share issue, 45,000 7 percent tax-free preference shares have already been arranged for subscription. But that fact does not denote the soundness of the capital structure. The proportion of preference shares, carrying fixed financial liabilities, is very large. It is difficult to understand why so many 7 percent cumulative preference shares are being issued with an option for shareholders to convert them into ordinary shares after seven years, instead of issuing simple ordinary shares right now. If the management is confident about the future, the company would have been better off with an equity issue. Actually, conversion is a remote possibility; a 7 percent tax-free dividend will be hard to give up, considering that yields on equity shares may be steadily reduced by dividend tax at source as well as by rising company taxation. The dividend on all the preference shares, combined with liabilities on account of loan interest and deferred payments for foreign machinery, makes a formidable bill for the company to pay for some years. The expansion scheme will increase the productive capacity from 6,500 tons to 21,000 tons a year. Its cost is estimated at Rs. 3.30 crores, to which a loan from the Industrial Finance Corporation contributes Rs. 1 crore. If the management's optimistic calculation of profits is realised after expansion has been completed, there should be no difficulty in servicing financial obligations. But the profit is unpredictable considering that the expansion has to be done with imported machinery. It is also optimistic to think that the present spell of prosperity in the industry can be maintained for long at the cost of consumers.

Taxing Preference Dividends

There has been a softer trend in preference shares recently, especially those which do not specify whether the companies will pay dividends tax-free or after deducting tax. Instances have already occurred where some companies which have paid the dividends tax-free so far, have now decided to pay them after deducting tax under the provisions of the Indian Finance Act, 1959 (this measure makes it obligatory for companies to deduct tax from dividends on account of shareholders). Considering that the tax so deducted gives no credit to the companies, the latter will think twice before paying dividends tax-free, as money will then have to be found from their own resources to meet the tax liability.

For instance, the Burrakur Coal Company and the Budge Budge Jute Company have decided to pay dividends during the current year on their 7 percent preference shares after deducting tax. The shareholders are disappointed, as they have been used to getting the dividends tax-free. Whether they can claim the dividends tax-free as a matter of legal right, considering that the companies paid the dividends tax-free in the past, is doubtful. It appears that unless a company is legally bound to pay dividends tax-free by the articles of association or by the memorandum of association or by a specific undertaking given to shareholders, it can pay dividends either tax-free or after deducting tax. In the case of Burrakur Coal and Budge Budge Jute, the dividends were paid tax-free in the past, although there was no legal obligation for the companies to do so, because of the temporary sanction which shareholders gave every year at the annual general meetings. This fact by itself confers no legal right on the shareholders to go on receiving dividends free of tax. So it is clear that companies having no legal obligation to pay tax-free dividends can pay them either tax-free or after deducting tax, as they choose. The fact that they paid tax-free dividends in the past does not bind them to do the same in the future. Investors will thus have to be more discriminating in buying preference shares. If they expect that dividends will be tax-free, they must ascertain beforehand whether the companies are legally bound to pay them in that form by the articles of association or by the memorandum of association or by a specific legal undertaking.

Philips Profits Up, Sales Down

Philips India Ltd, which is now approaching its second anniversary as a public company, has announced an ordinary dividend of 8½ percent for the year ended December 1958. The scrip have been quoting Rs. 22.12 since the announcement, and so offer a yield of 3.8 percent, which is a little less than satisfactory for an equity whose growth prospects look less promising than was once believed. The dividend decision relates to a year when the profit has risen smartly to Rs. 53.56 lakhs, from Rs. 46.4 lakhs in 1957. But a partial clue to the disappointment of shareholders lies in the fact that sales have dropped to Rs. 4.46 crores from Rs. 4.74 crores. Perhaps at the annual general meeting of the shareholders in Calcutta late next week, a clarification will be forthcoming from the chairman and managing director, Mr. P. C. Vink, whether the sales trend remains discouraging. It would not be surprising if it were; even in 1958, when the company was progressively expanding the activities of its new factory in Poona, as well as extending and consolidating its sales organisation, turnover shrank. The main factor affecting the turnover has, of course, been the Government's restrictive import policy; Mr. Vink will presumably be in a position to indicate whether Philips is at all benefiting from the mild liberalisation of the policy, in overall terms, this year.

The directors' report gives the impression that the prospect of getting appreciably bigger dividends in the near future is rather dim. It recalls that an additional dividend for 1957 was declared at a meeting of the company held in December 1958 in order to avoid the penal provisions of Section 23A of the Indian Income Tax Act. At that time, shareholders' attention was drawn "to the fact that payment thereof would affect your company's liquid position, which factor might have to be reckoned with when considering the amount of dividend payable for the year under review. It will also be appreciated that the compulsory reserve for development rebate..... reduces the amount available for distribution." Both these factors have influenced the latest dividend. As for the future, there is some doubt as to whether or not Section 23A of the Income Tax Act (requiring the distribution of a statutory percentage of the total income by way of dividend) is applicable to Philips any longer. The directors intend to discuss the question with the income tax authorities, and meanwhile indicate that "it will be of advantage to your company if the future dividend policy is unhampered by the requirements of Section 23A, as in that case your board will be in a position to give effect to its dividend policy in a manner that will assist financing the company's developmental expend ture out of its own resources, while ensuring th reasonable expectations of the shareholders."

Referring to the expansion plans, the directo report that the new factory in Poona has gone int production in 1958. Tools and metalware con ponents of 150 types have been produced and th assembly of radio sets has been planned to star in Poona during the second half of 1959. Th extension of the factory building in Calcutta ha progressed satisfactorily. It is hoped that th "progressive realisation of the company's loca manufacturing plans will solve the present prob lem of supplies, resulting in a gradual improvemen of our sales in future years." It is the "gradual nature of the improvement forecast, and the finan cial needs of expansion plans (present reserve amount to around Rs. 7.8 lakhs only), that should be salutary reminders for any shareholders stil unable to restrain their optimism.

Shares Share Tea Tears

Unmindful of the ups and downs of the rest o the stock market, tea shares have been drifting bearishly in Calcutta for many weeks now. Over the past month, Grob have dropped from Rs. 18.25 to Rs. 17.81, Hantapara from Rs. 117 to Rs. 113, and Methoni from Rs. 24.50 to Rs. 24. The gardens producing quality teas have fared better than the ones whose output consists overwhelmingly of the commoner grades. The difference is accounted for by the fact that the prospects for the former are still considered to be reasonably satisfactory. There are other scrip which have been rescued, albeit only temporarily, from the general despondency by the announcement of bigger dividends for 1958 than for 1957. But the satisfaction derived therefrom is tempered by the knowledge that the 1957 experience was unusually poor, and its likely repetition in 1959 can hardly be a source of lasting consolation.

The main factor responsible for the sluggishness of the shares is the sluggishness of the commodity market: the world is producing more tea than it can drink. The crop figures so far available from the main exporting countries—India, Pakistan, Ceylon, Indonesia and British East Africa—show that production is running at a lower level this year than in 1958 (609.2 million lbs, against 621.5 million lbs). But the shortfall could hardly have been a bull factor. For one thing, it is too small to make much difference—so small, in fact, that it can be wiped out in a single month by a single producing territory. For another, 1958 itself was probably a year of considerable over-production: the optimists denied this when they saw that last year's crops had been sold off fairly quickly, but forgot that the quicker sales at the primary centres had probably done no more than inflate trade and consumer stocks. The main contribution to the decline in production has been made by south India. Its harvest, until June this year, has totalled 75.9 million lbs (against 91.3 million lbs in the corresponding period of 1958). Output has also fallen in Ceylon (227.8 million lbs, against 232.1 million lbs, until June) and in Indonesia (39.8 million lbs, against 42 million lbs, until May). There has been a small increase in the crops of north India (202.1 million lbs, against 199.8 million lbs, until July) and of Pakistan (22.1 million lbs, against 20.4 million lbs, until July). But the biggest increase has been reported by East Africa (41.5 million lbs, against 35.9 million lbs, until June). The larger supply of tea from the last of these territories, a low-cost producer, is having a disproportionate effect on market sentiment, especially in the commoner grades.

The shares of companies operating gardens in the Dooars and Terai have suffered particularly sharply from the West Bengal Government's decision to raise the minimum daily wages of workers by 2 annas with effect from 1st June, 1959. It is estimated that the annual wage bill will rise by Rs. 12 lakhs as a result. The prospect is dismal, in view of reports that losses were suffered by about 47 percent of the Dooars and 77 percent of the Terai gardens in 1957: and by about 30 percent of the Dooars and 50 percent of the Terai gardens in 1958. The auction results available until last week show that both areas have sold more tea, but at considerably lower prices, than in 1958 at the Export sales. At the Dust sales, prices have been a little better than they were last year, but the quantity sold there is a relatively small proportion of the total teas offered. On this basis, it is argued that if the minimum wages of workers are to be increased, and if present auction trends continue, 70 percent of the gardens in these areas will report losses for 1959. Perhaps worse is yet to come for the Darjeeling gardens. The Government has said that it proposes to revise the minimum wages in their case about a month hence, after the Minimum Wages Committee submits its report. So far, Darjeeling teas have fetched much lower prices than last year at both the Export and the Dust auctions. The move to raise minimum wages is explicable only in political terms. The West Bengal Government apparently thinks that it will help assuage

leftist-instigated unrest among tea garden labour. But, even from the purely political angle, the more important point to consider is that if more gardens become uneconomic, they will have to close down before long, so unemployment will result. The danger is already acute in Dooars, Terai and Darjeeling, as well as in Cachar. The Assam Government, realising it, has given brief and limited relief to Cachar at least in connection with the carriage tax. The West Bengal Government, meanwhile, has chosen to move in the opposite direction by not only refusing to remove the octroi it levies, but also raising production costs through the increase in minimum wages. Tea investors already have little cause to celebrate the auction trends. They will need to be even more discriminating than before in choosing such shares as they may wish to buy.

Bombay Suburban Electric Expanding

There has been a steady improvement in the sales of the Bombay Suburban Electric Supply Ltd over the past three years. An average increase of 18 percent a year has been maintained throughout this period. Mr. P. D. C. R. Clark, chairman, supplying the information to shareholders at the company's latest annual general meeting, said that this figure "is more than double that of the recognised annual increase with electricity supply undertakings in more advanced countries where a greater degree of saturation has been reached." An encouraging feature is the healthy balance between the consumption of energy for various purposes, such as residential lights and fans, residential power, industrial small power and large industrial consumers. This, coupled with the diversity of industries now operating in the company's area of supply, "tends to some degree to protect your undertaking from being exposed to the vicissitudes of business cycles." The area has considerable scope for expanding its power consumption. As the progress of an electricity supply undertaking is usually judged in terms of its sales potential and the actual sales effected, the outlook for Bombay Suburban seems reasonably good.

In order to cope with the increase in demand, the company has plans to develop power supply facilities. Mr. Clark said that this will naturally call for more finance, which will have to be raised by the issue of fresh capital. Whether it will take the form of equities or debentures, has not yet been decided. Mr. Clark pointed out that the incentive for the investor to go in for electricity shares is still insufficient. Under the provisions of the Finance Act, 1959, electricity companies have to face a new problem since future dividends will be subject to deduction of tax at the source at the prescribed rate of 30 percent. The position in general is much more complicated in that these companies come under the dual control of the provisions of the Income Tax Act and the technical and restrictive regulations of the Electricity (Supply) Act, 1948. There is a divergence of views between the authorities and the industry over what constitutes a "fair return" to the investor, but there can be no doubt that the return fixed by law should be "net" and free from income and all other taxes. This position would be seriously undermined if, for purposes of determing "clear profit" under the Electricity (Supply) Act, the tax deducted from dividends at the prescribed rate and payable to the Government under the Finance Act, 1959, is not also permitted as a charge to the consumers. A representation has accordingly been made to the Government asking that the tax deducted from dividend be reckoned as an item of expense in computing the "clear profit."

Cloth in the Third Plan

Serious discussions are going on about what the third plan target for cotton textiles should be. The Indian Cotton Mills Federation, in a note to the Planning Commission, has suggested a figure of 9,600 million yards. Domestic consumption is calculated on the basis of 20.3 yards *per capita*, and exports are put at 800 million yards. With the national income (at 1952-53 prices) rising from Rs. 13,480 crores in 1961 to Rs. 17,260 crores in 1966, the rate of investment going up from 10.7 percent to 13.7 percent, and the population increasing from 409 million to 434 million, it is hoped the *per capita* expenditure will rise from Rs. 295 to Rs. 343—an increase of 16 percent. If the increase in cloth demand equals the increase in consumption expenditure, the *per capita* offtake of cloth will rise from 17.5 yards to 20.3 yards. As an exercise in arithmetic, the accuracy of the Federation's conclusions need not be debated. But many will doubt the validity of the assumptions made in arriving at the final figure of 9,600 million yards. There is little reason to think that the elasticity of demand for cloth is unity. Almost as surprising is the Federation's proposal to fix the export figure at 800 million yards a year, in view of the Government's known insistence on a target of 1,000 million yards. Some might ask whether that is all one of India's leading industries hopes to contribute to the drive for earning foreign exchange. But perhaps a higher estimate would have been too optimistic, especially since Indian cloth is not faring well abroad.

It is interesting to see how the Federation proposes to allocate the estimated increase in production during the third plan among the various sectors. The *ambar charkha* scheme it says, has failed to reach even the second plan target, so it deserves no further attention. Powerlooms are enjoying the best of both worlds—paying little tax and producing all the varieties reserved for the handlooms —which is unfair. It would be enough, therefore, if they are allowed to produce 500 million yards—or 100 million yards more than the second plan target. Then come the handlooms. The Federation inappropriately quotes the Karve Committee report in seeking support for the view that they are economically wasteful, giving employment without making any noticeable addition to net income. It would be well if the handloom sector is allowed to produce all it can by fully utilising its existing equipment, which can yield an additional 400 million yards. This leaves a balance of 1,100 million yards or 1,200 million yards. Economies of production apart, the Federation argues that if this quality is allocated to the mill sector, it would bring the Government an additional revenue of Rs. 24 crores. That would be enough to compensate for any doubtful benefits which might accrue to the economy from the larger employment potential of the handloom sector.

Cotton Market Prospects

With the expiry of the August contract, the 1958-59 cotton season has come to an end. It was a year of fairly wide fluctuations in prices. Yet, surprisingly, the Forward Markets Commission, for the first time in many years, refrained from interfering with the market. If this implies that the Commission has belatedly realised that there is no point in interfering when prices remain well below the ceiling, it is to be welcomed. It is illogical to think that markets can be made to fluctuate to order, as the Commission tried to do in the past. Its encounters with the East India Cotton Association are well-known. In 1958-59, trading in the 1959 hedge contract Moglai fine 23/32in., started on 14th July at Rs. 671.25 a candy. Within two days, the rate rose to Rs. 687.50. Then followed the decline which brought the price down to Rs. 593.25, a record low for many years, on 1st November. The fall in prices was caused by the official forecast of a bumper crop of 5.7 million bales. But the weather soon became unfavourable, crop ideas began to be revised downwards and the final estimate of the harvest was only 4.75 million bales. This happened while the textile situation was steadily improving. Sustained spinner demand pushed the spot prices of many varieties above the ceiling. Good quality cotton fetched fancy premiums. The futures price advanced to Rs. 728 by 21st August, and the hedge contract went off the board at Rs. 705. Tenders issued during the season against the March, May and August contracts totalled 17,350 bales, or nearly 36 percent of the year's crop.

With figures of imports and exports available up to 14th August, it is now possible to make a fairer assessment of the demand-supply position of raw cotton. The season began with a carry-over of 2,045,000 bales of Indian cotton and 156,000 bales of foreign cotton. With the commercial crop finally estimated at 4.75 million bales and imports totalling 475,000 bales (the figure up to 14th August is 450,000 bales), the total supply comes to 6,795,000 bales of Indian cotton and 631,000 bales of foreign cotton. As for distribution, on the basis of the average monthly consumption during the ten months ended June 1959, and making some allowance for the increased cloth production in July, the total offtake by mills can be placed at 4,675,000 bales of Indian cotton and 450,000 bales of foreign cotton. Exports will come to around 360,000 bales (shipments up to 14th August totalled 343,000 bales). This will leave a carry-over of 1.76 million bales of Indian cotton and 181,000 bales of foreign cotton at the end of August.

The prospects for the new crop do not seem to be very encouraging. The weather has not been good everywhere so far, and most producing areas have reported excessive rains. It is too early to estimate the size of the crop but not many observers expect it to exceed 5.1 million bales. As cloth sales continue to improve and New Delhi's export policy is liberal, cotton prices are unlikely to fall to the last season's low levels. The market might, nevertheless, come under the pressure of seasonal influences.

Raw Cotton: An Unrealistic Target

It is reported that the target for cotton production fixed by the National Development Council for the third five year plan is 8 million bales. The Indian Central Cotton Committee, an expert body, recommended a figure of 7.2 million bales because it thought that this was about all the country could hope to produce by 1965-66, considering the progress already achieved, the possibilities of extending facilities, and the unpredictable effects of the weather. But the I.C.C.C. has been presented with a *fait accompli*, for it has had to formulate proposals for achieving the target fixed by the National Development Council. The scheme has been submitted. The total financial outlay is not much—Rs. 5.41 crores, including provision for regional research stations and loans under the cotton extension schemes—because the problem is essentially one of organisation. The provision made was Rs. 3.30 crores for the first plan and Rs. 4.40 crores for the second.

The area under cotton cannot be increased because the need for raising food production is more pressing. Through crop rotation, reclamation of culturable waste land and double-cropping, the output can be expanded, but the scope is naturally limited. Efforts have to be made in other directions. Only 13 percent of the area under cotton now is irrigated and only 68 percent is covered by improved seeds. There is scope for the use of better fertilisers. The incidence of pests and diseases is estimated at between 5 percent and 25 percent. Contour-bunding and improved agricultural practices can also make a useful contribution. The Committee's proposals provide for an increase of 700,000 bales under irrigation, 420,000 bales under fertilisers, 120,000 bales under plant protection, 110,000 bales under improved seeds and 60,000 bales each under contour-bunding and modern agricultural practices. These make a total of 1.47 million bales which, when added to the second plan target of 6.52 million bales, raises the figure for the third plan to 7.99 million bales. The Statewise targets have been fixed as follows (figures in brackets indicate the second plan targets): Bombay 3,294,000 bales (2,934,000 bales), Punjab 1,682,000 bales (1,254,000 bales), Mysore 754,000 bales (670,000 bales), Madhya Pradesh 739,000 bales (563,000 bales), Madras 590,000 bales (450,000 bales), Rajasthan 514,000 bales (294,000 bales), Andhra Pradesh 201,000 bales (165,000 bales), Uttar Pradesh 138,000 bales (110,000 bales), Orissa 50,000 bales (39,000 bales), and others 38,000 bales (34,000 bales).

The Indian Central Cotton Committee has proceeded on the assumption that the second plan target of 6.5 million bales will be achieved. But it would be a miracle if it were. The 1958-59 crop is not expected to exceed 4.75 million bales. The performance in 1957-58 was not much better. The prospects for the 1959-60 crop (the fourth year of the current plan) are not considered promising because the weather has not been uniformly satisfactory so far. It is to be wondered, then, how the crop can suddenly increase to 6.5 million bales in 1960-61. But the Committee cannot be blamed for taking the second plan target for granted; perhaps there was little else it could do when the National Development Council insisted that it must plan for a 1966 target of 8 million bales. It is arguable that there is nothing to be lost in aiming high when no great financial liability is involved. The main danger lies in the disappointment that follows when results fall short of expectations. The National Development Council will need a lot of luck if its hopes are to be realised.

Easier Trend in Raw Wool

Indian raw wool prices have eased in the past few days after having been quite firm in the last week of July and the early part of August. Among Bikaners, best white is quoted in Bombay at Rs. 3.25 a lb, superior white at Rs. 3.12 a lb, superior tinged (pale) at Rs. 2.37 a lb and superior pale yellow at Rs. 2.25 a lb. The easier tendency is attributed to poor enquiries from the United States, the U.K. and the Continent. Business sentiment in the United States, it is stated, has been affected by the steel and copper strikes, while in the U.K. and the Continent the working of the woollen industry has been affected by holidays. Buyers there lifted substantial quantities of Indian wool recently, so prices rose in India although the rates at the Liverpool auctions earlier were unsatisfactory.

Exporters calculate that the United States has been the biggest buyer of Indian wool during the past nine months, lifting a record total of about 40,000 bales. Australia, which took only limited quantities, has started showing greater interest lately. It is reported that she has been buying an average of 500 bales a month since April. Russia took about 3,000 bales of Indian wool and about 10,000 bales of Tibetan wool in July. Unconfirmed reports mention the sale of a further 7,000 bales since then.

The domestic woollen goods industry has been buying moderate quantities, with the result that stocks of old clip wool in Bombay, including goods of poor quality, have been almost cleared. New clip wool has started arriving in small quantities in upcountry centres, but substantial quantities are expected only from late September. Trade circles will not be able to assess the size and quality of the new arrivals until then. Meanwhile it is reported that some shippers have sold fairly large quantities of the new clip material, especially pale yellow and yellow types, for shipment during September, October and November. The ceiling fixed by New Delhi for wool exports during the half-year ended September has already been reached, so no new clip material is likely to be shipped before October.

Durgapur Coke Oven Battery Lit

On 24th August, 1959—nearly ten weeks ahead of schedule—the first of the Durgapur steel plant's three coke oven batteries was formally lit by Mr. K. Sen, director of Hindustan Steel Ltd and general manager of the Durgapur steel project. The batteries are being set up by Simon-Carves Ltd, an associate firm of the British consortium which is engaged in building the Durgapur steel plant. During the next two months, the coke oven battery will be gradually heated to operating temperature under the expert supervision of Simon-Carves, and will then start making coke to enable the first blast furnace to be blown according to schedule. The resident director of I.S.C.O.N., Mr D. J. Bell, said that the first blast furnace is likely to commence operation in the first week of November and produce pig iron by the third week of the same month. Simon-Carves Ltd is responsible for many parts of the steelworks—the coal-handling and blending plant, coke ovens, by-product plant, power-station, and steam and gas distribution mains. These have to be put into service before the steel plant is commissioned. Before a single ton of pig iron can be produced, there must be coal for the coke ovens to make coke for the blast furnace; the by-product plant must be ready to handle the gas stream from the coke ovens; there must be steam from the power-station to drive the blast furnace turbo-blower, and for power and process purposes on the by-product plant; there must also be fuel for power-station boilers. All these plants, therefore, have to be made ready for the official inauguration of the first stage of the entire steelworks.

When the contract with I.S.C.O.N for building the Durgapur steelworks was signed on 30th October, 1956, Simon-Carves Ltd had first to survey its own portions of the site and carry out soil tests to enable the foundations of its plants to be designed in detail. But it was not until April 1957 that actual construction work could begin. In other words, the coke ovens have been made ready for lighting in no more than 28 months, an achievement which has been possible due to the efficient co-operation of other member-companies of I.S.C.O.N. An enormous amount of material has had to be handled for this purpose, much of it from shipping points in Britain. Over 80,000 separate packages, excluding refractory bricks for the construction of ovens, have been received by Simon-Carves alone. An immense amount of material has also been derived from Indian sources. All the structural steelwork of the coke oven plant, for example, has been fabricated on the site itself, and the conveyor belting for more than four miles of coal and coke conveyors has been manufactured in India.

In carrying out its responsibilities at the Durgapur steelworks, Simon-Carves Ltd is operating on familiar ground; it has been building coke ovens in India for just over half a century. Its first coke ovens in India were built in Giridih in 1908 for the East Indian Railway. Since the early 1920's, it has carried out a long series of coke oven contracts for the Indian Iron and Steel Co. Ltd in Burnpur and, since the mid-1930's, it has built and reconstructed the vast majority of coke ovens at the Jamshedpur steelworks of the Tata Iron and Steel Co. Ltd.

Stockpiles after the Cold War

The prospect, still indeed remote, of an end to the cold war as a result of the new Russo-U.S. contacts and a possible summit meeting has already had its effect on some raw material markets. This is not a "peace panic" such as briefly gripped Wall Street in July, for it is not connected with the supposition that lower world tension will reduce activity in the armaments industry and hence in all heavy industry. It is related to the much more specific question of the large stockpiles of certain raw materials built up by the industrialised nations against the danger of prolonged wartime isolation from producing countries. Some of these stockpiles are very large—equal to several years' consumption in the United States—and some are expensive to maintain, since they consist of perishable goods which require constant rotation. Industrial fibres, which cannot be stored indefinitely, are in the latter class. The conviction that the world is safe from major war for a long period would not have to become very profound before the liquidation of these stockpiles is decided upon. It seems likely, for example, that the liquidation of stockpiles would be undertaken well before any sharp and irreversible contraction in the armaments industry, yet it was this latter eventuality that unnerved Wall Street lately. An immense stockpile sufficient to carry the United States through a three- or five-year war constitutes, after all, the most visible and striking symbol of the cold war mentality and its apprehensions. The dispersal of such reserves is inevitable. What worries producers is whether the operation can be carried out without damage to them.

The main cause for concern is the U.S. reserve of heavy fibres, copper, rubber, palm oil and oilseeds. Even before the present improvement in relations with Russia, the U.S. Congress was urging the Administration to reduce its holdings of these materials, and the respective markets had reacted nervously. The only stockpile that has so far been condemned is the reserve of 265 million lbs of copra oil; last year's drought in the Philippines and the subsequent scarcity of palm oil make this an ideal moment to unload this burden painlessly. Some Congressmen would like to see the huge copper stockpile run down, but the minerals lobby, whose influence in Washington is considerable, can be relied upon to avert any precipitate action here. By cutting the relevant budget appropriations—required to keep stocks turning over by balanced sales and purchases—Congress could force the Administration to reduce its reserves of rubber and heavy fibres. But such pressure could not force the U.S. Government into distress sales such as would upset markets. The Administration is legally empowered to exchange U.S. agricultural surpluses for foreign raw materials, and so it can manage its affairs without relying on Congress-voted funds, at least well enough to avoid dumping stocks.

Naturally there are legal provisions dating from the law on strategic reserves, of 1946, governing the method of liquidating stockpiles with a view to avoiding market crises. But producers are not unreasonably afraid that a sharp increase in optimism about the world situation, combined with a determined economy drive in Congress and with current U.S. trading losses, could lead to hasty action that would threaten the earnings of raw material exporters during 1960 or soon afterwards. In fact, the precedents are reassuring. Consider-

when tomorrow comes...

For him a spade is not yet a spade.

The telegraph wires hum a strange tune, the

distant drone of a plane means faraway places, mystery.

And imitating father is a new kind of play.

When tomorrow comes, play will turn to work.

Life will take on a different purpose. A spade

will be a spade, and care will be part of living.

Today's striving and effort is for the world

he will grow into, a world that offers a little more—

a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for . . . Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow... Hindustan Lever serves the home.

able stockpiles can be run down without causing the least disturbance to markets. The United States itself showed this when, from the beginning of last year, the Pentagon, for reasons known only to itself, advised the Government that stockpile policy should be based on the expectation of a three-year war, against the earlier assumption of a five-year war. Since then, some commodity reserves have been reduced without anyone noticing it. More striking is the discreet reduction of the British Government's stockpiles, which is still continuing in the case of tin and wool. The White Paper on Defence issued in February 1956 recommended this de-stocking, and it was carried out throughout 1956 and 1957. When prices slumped in 1957, London ceased selling tin and wool; these sales have just been resumed in view of the firming up of markets. Since the British Government had given proof of its ability to de-stock painlessly and since it accompanied the resumption of sales with an assurance that it would freeze its stockpiles if markets weakened, the accentuation of de-stocking has caused no anxiety. The U.S. stocks are admittedly larger and cover a much wider range, but it seems reasonable to suppose that their liquidation can be managed equally smoothly, when the time comes.

Nuclear Energy Insurance

Dr. W. E. Belser, Director of the Study Centre on Atomic Risks of the Comité European des Assurances, presented a thoughtful review of "Nuclear Energy Insurance" at a conference held recently in Madrid. He pointed out that, among insurers, international collaboration has been started on the basis that the fundamental problems raised by the extended use of atomic energy are identical for all countries. It is, however, appreciated that the risk and its insurance constitute even today a venture into an almost uncharted field. The law of averages is not applicable, and a study of the frequency and extent of damage based on long years of experience is impossible. A considerable measure of uncertainty exists as there is no access to files dealing with national defence and secrets of manufacture. Stability, which is a basic feature of insurance, has not yet been established in the field of nuclear energy. Dr. Belser pointed out that two phenomena are of great importance for the insurer—the point of criticality, and the danger of contamination by radioactive particles in the atmosphere, in water, in the earth and buildings, and so on. The extremely toxic nature of certain elements, and their tendency towards spontaneous combustion, have also to be considered. He indicated that the following conclusions have been reached:

1. The actual risk is more pronounced for the insurance of meterial damage.
2. The probability of injury being caused to third parties will be all the greater when there are people present in the reactor installation at the moment the incident occurs.
3. The probability of injury being caused to third parties outside the reactor is very slight, although the losses could amount to a fantastic sum. Without fearing it, the existence of the catastrophe risk could not be denied, nor could the possibility of human and technical fallibility be excluded.

Considering the financial possibilities and the requirements of the atomic industry, the insurers proposed that the third party liability of the operator be per installation and not per incident. In fact, said Dr. Belser, only a limitation of the third party liability per installation is capable of protecting the energy producers, so that their insurers would be in a position to cover the whole of the third party liability, and even that would be for considerable amounts. But it is quite clear that they would then be unable to run the risk of paying out such amounts several times for the same installation. It is on this basis of a third party liability limited per installation that the European insurance markets have assembled substantial funds with a view to contributing to the development of nuclear energy. There is no doubt that a limitation of third party liability per incident would not only run the risk of undermining the work undertaken by insurers, but would also bring to light with particular emphasis another problem which, if no satisfactory solution is found, could seriously endanger the very principle of the insurance of atomic risks—the problem of reserves. In order to be acceptable to industrialists, the premiums payable for the considerable cover would have to be absurdly low in comparison with the possible size of losses. The possibility of accumulations with other branches of insurance might endanger the financial assets of the insurers undertaking the cover of atomic risks. Therefore, it is indispensable that reserves be set up in the shortest possible time to meet the catastrophe hazard. These reserves, because of the inadequacy of the related premiums, would necessarily have to be set up by substantial deductions from the general income of insurance companies. They could be set up quickly only if they are exempt from taxation, but this demands from the authorities some understanding of which there has so far been little evidence.

The British insurance market has set up a pool with considerable capacity. In the United States, two pools have been set up by the insurance companies: one to cover the insurance of material damage to reactor installations, and the other for third party liability insurance. The mutuals have also formed pools to co-operate with the other two. The cover granted by U.S. insurers is per installation and not per incident. Pools are being set up, or their organisation being studied, in various European countries. Here too the approach is on the basis of limitation of third party liability per installaton and not per incident. Since the insurance market is being organised to cover atomic risks, it seems that the business may have to be dealt with directly by those people who have specialised in the appreciation of the potential danger peculiar to each of the risks. In fact, even reactors of identical type and manufacture appear to be essentially different risks, according to the place where they are constructed, the geographical, meteorological and hydrological conditions, the density of the population, and the number and importance of the industrial enterprises in the vicinity. Only a careful study of the technology of the reactor, and of the safety and protection arrangements, together with a detailed inspection of the site, will enable an estimate to be made; in spite of all the precautions which might be taken, that estimate would still be subject to imponderables as long as there is a lack of experience in this field. Yet the premium would have to be commercially acceptable. It would be impossible to merge the business with other industrial risks, because these would be affected by contamination when claims arose under the insurance covering the reactor; thus insurers would be exposed to extremely serious accumulations. This amounts to saying that insurance would be committed in a field where it could reap no benefit. It is not a quick profit the insurers are trying to make, but rather a contribution to the development of nuclear energy. They have agreed to make these sacrifices so as to play their part and in the hope that in the years to come this activity might become remunerative. It should not be forgotten that the State has a major interest, even a vital interest, in encouraging the operation of the new sources of energy, and that in spite of the organisation set up by the markets, they alone would not be able to cover all the risks; in case of catastrophe, the State would have to intervene.

Russo-U. S. Trade

One of Mr. Khrushchev's most urgent demands on Mr Eisenhower when they meet will concern an increase in trade between Russia and the United States. Mr Mikoyan hammered at the question during his U.S. visit and it was again pertinently brought up by Mr. Khrushchev during the American Exposition in Moscow, in the form of the question: "Why show us all these things if you are not willing to trade them with us?" As long as the Russians accompany their requests for increased trade with impossible demands for credit, the United States will find it easy to resist; Americans do not see why they should finance their rival. But if the credit-begging is dropped and Moscow puts the issue on the level of expanding normal trade relations, the U.S. Government's present adamant refusal to trade will appear rather less defensible, even to many Americans. The new U.S. Under-Secretary for Commerce, Mr Mueller, seemed to have this in mind lately when he set out the "conditions" for an increase in trade. He made no mention of credits, it being taken for granted that the Russians are not going to get any. But he insisted that Moscow would have to clear its lend-lease debts, which, on the American reckoning, come to the tidy sum of $2,500 million. The United States would then trade, but would not sell anything liable to increase Russian military potential; it has been pointed out in the past that this excludes pearl buttons, which can be sewn on soldiers' shirts. Nor would she buy anything from Russia that she could buy from an ally. Finally, apparently clutching for arguments, Mr Mueller said the Russians only wanted to get U.S. machines so that they could copy them. Since Moscow pirates Western books, she would indeed not hesitate to pirate U.S. machines; but she already has numerous possibilities of doing this without trading direct with the United States. There is not a machine America exports which cannot get to Russia by triangular trade. Trade with the Communist bloc now makes up only 0.5 percent of U.S. foreign trade. This is not the result solely of political restrictions, because Russo-U.S. trade was never very extensive.

Case against Electric Companies

Evidence of the questionable manner in which private electricity undertakings are treated by the State is provided by the judgment of the Allahabad High Court quashing the proceedings against four individuals connected with electric supply companies and directing that in 11 other cases summons should be issued to the companies concerned through the resident engineers and not to the resident engineers themselves. The Electricity Inspector to the U.P. Government had instituted complaints against about 15 companies, alleging that they did not comply with the requisitions from consumers for new connections. In some cases, it was also alleged that the voltage was beyond the prescribed limits. Besides the electric companies, in some cases the resident engineers, the chief engineer of Martin Burn and two of their governing directors were also criticised. Applications were moved in the High Court for quashing the criminal proceedings. The applicants said that due to the growing demand for electricity the entire distribution system called for extensive expansion; the money for expansion could not be obtained because of the strict provisions of the Indian Electricity Act, 1948, under which the Government had imposed restrictions that did not exist when the licences were obtained. It was further contended by the applicants that the U.P. Government's failure to appoint the State Electricity Board had seriously prejudiced the licensees as they were unable to borrow from the Board in accordance with the provisions of 1948 Act. The prosecution of the resident engineers, chief engineer and governing directors, it was stated, was bad in law. The High Court has held that most of the points made by the defence should appropriately be raised before the magistrates, but that as far as action against individuals is concerned, it should be quashed. In most of the cases, the High Court observes, although the first part of the prayer requests the magistrates to take cognisance of an offence committed by the company, the last part is that the person to be put on trial after cognisance is the resident engineer. In the four cases in which certain individuals have been impleaded along with the company, the High Court has held that in none of the prayers is there any suggestion that the individuals concerned are responsible for not observing the Act, and there is no justification for putting them on trial.

CALCUTTA LIGHTING

WE understand that the contract for lighting Calcutta by gas will expire next year, and that a Sub-Committee of the Municipal Commissioners has been formed to discuss the matter. Under the present and the proposed Municipal Act, the Commissioners may levy a lighting rate not exceeding two per cent. upon the houses and lands within the town. The maximum rate has now been levied for some time; for the year ended 31st March 1898, it brought in Rs. 3,74,540 and for the year ended 31st March 1899 Rs. 3,87,254. The expenditure, however, has apparently always considerably exceeded the revenue, and this has been met by a contribution from the General Fund, which amounted for the first year under notice to Rs. 97,620, and for the second year to Rs. 82,104. It seems to us that advantage should be taken of the termination of the contract with the Gas Company to bring the expenditure more in line with the revenue, or else that the Legislature should increase the maximum tax, so that the lighting rate should cover the cost of lighting. So far as we can see, there is no authority to debit the General Fund with the expenses of lighting. Section 105 of the Municipal Act states that this Fund shall be debited with all expenditure, other than that debitable to the water supply, lighting or sewage fund. And it seems to us that it is somewhat of a fraud on the General Fund that this large amount should be taken from its revenues to make up the deficit in the lighting rate. Any arrangement that may be made either with the Gas Company or for electric light should only be for a short period: it would be manifestly unwise to saddle the town for an indefinite time. We understand that electric lighting will cost about four times as much as the present gas lighting, and this seems to oust it from the sphere of practical politics for some time to come. It should be possible to make an arrangement with the Gas Company at a considerably reduced cost, and advantage might also be taken to insist upon a supply of gas being available in the day time. There are a number of private houses, shops and factories that would use gas, if it was available in the day time, for gas engines, cooking and various other purposes, and we have no doubt, whatever, that the increased consumption in this respect would compensate the Company for the reduction in its rates. Municipal corporations at home are acquiring gas works, and the Municipal Corporation here might do worse than make an endeavour in this direction. The Gas Company pays a handsome dividend, its contract is at an end, and its acquisition on reasonable terms would certainly be a gain to the community.

A Ditcher's Diary

ALWAYS RELUCTANT TO ATTRIBUTE IGNORANCE OR stupidity to adversaries, I am unable to subscribe to the view that the Chinese do not know what they are doing. They do, even if nobody else does. It is easy to exaggerate the significance of what has been happening around the Himalayas; but I am almost certain that Mr. Nehru's speech in Parliament was informed by considerable understatement. No country has set as much store by Chinese friendship as India, sometimes incurring the displeasure of rich and generous friends, and for that country to be treated now by Peking with unconcealed contempt is a distressing but needed reminder that in international affairs it is dangerous to be too trusting. To "unscrew the inscrutable" Chinese mind is a pastime I gave up long ago, but I simply cannot understand under what calculations China thinks she can do without the one non-communist friend she has got. It seems unlikely that the Soviet Union, the ally on whom China has still to depend for most of her military and industrial requirements, is anxious to have a row with India. Does China think, then, that she can "go it alone" when no other country, not even the United States, thinks so? It is possible that China intends nothing of the sort, that she is merely organising some irritants to remind the world that she exists, that the immediate objectives are to soften up Sikkim and Bhutan and throw a spanner (if possible) in the Khrushchev-Eisenhower talks? Where Chinese thinking has gone wrong, I suppose, is in imagining that just because India has no military alliances with any country she is friendless. India's neutralism may have been inspired by ideology, but behind it I always saw a healthy streak of realism and so never regarded it as one of the eternal verities. By acting as she is doing, China may be precipitating that which she dreads most—active co-operation between India and those countries which view China's 600 million mailed fists with concern. These latter could conceivably include a country called Soviet Russia.

THE BELIEF OF MONETARY AUTHORITIES THAT they can influence people's spending and saving habits by varying the size and denomination of currency notes, is one that I have never seen seriously and scientifically tested. We can all remember the extreme reluctance of our elders, and especially perhaps our mothers, to "break" a £1 or a Rs. 10 note. They honestly felt that even if they spent only a fraction of it, once they converted the remainder into small change it was "as good as gone". This was almost certainly illusion. My own experience is that an identical collection of tin money can go jingling in my pockets for days together (being carefully laid out on the dressing table each night), whereas the "unbroken" notes in a bank account can vanish like the morning dew. When the national currency has lost the greater part of its value, as most have in our generation, mintmasters imagine that by introducing a new monetary unit of higher denomination they can restore the old unwillingness to "break" a note, and thereby encourage saving. The Greeks did this a few years ago, and now the French are going to unbelievable trouble to knock the last two noughts off their franc, for the same purpose. The Italians, whose lira is now worth much less than a naya paisa, are as sceptical as I am about the economic benefits of the operation, and have declined to follow suit. But I am glad to see that they are going to do something about their ridiculous currency notes, which vary in size from the world's smallest to the world's largest; the one-lira note, which one still encounters, looks like a tram ticket, while the 10,000-lira could be mistaken for a road-map. It has been decided this month to reduce these documents to the size of a U.S. dollar; the 500-lira note, like the French 100-franc note, has already been replaced by attractive coins. But even this sensible reform is being opposed by the self-appointed experts on note-breaking psychology. They claim that the new bills will be more easily parted with than the old twice-folded sheets of paper, and thus inflation will be stimulated.

IT IS GOOD TO SEE A U.S. PRESIDENT AGAIN WHO is able to move about the world he determines so much of. And, back in Europe, Mr. Eisenhower must be a little disturbed to discover afresh how complicated the Europeans have made their lives. Neither in Asia nor in America can there be full realisation of just what it means to be a European; even in Britain there is insufficient appreciation of Europe's complexities, mostly legacies of tangled history over many centuries. Countries no bigger than some districts in India or China have been through many wars, or threats of war, and their distrust of moves by bigger nations is only too easily misunderstood. From a distance, they all look almost equally cussed and intransigent—standing in the way of big-hearted gestures by the Big Two to ensure world peace. There is a tendency in too many of us to consider small nations as expendable (not as though we would ever dream of saying so in as many words), to think of their fears and complaints as unworthy of attention in the context of peace and war. This is not a human view, nor one that ensures peace. I do not want to remind anybody of Estonia, Lithuania or Latvia; but there are contemporary instances. I have met few people with any appreciation of the troubles of the Laos Government, of the fears of Turkey or South Korea. All these countries live next door to communist States, who are not always the quietest of neighbours. These small peoples' concern deserves greater sympathy and understanding than it receives; and it is not really necessary to wait for a Tibet or a N.E.F.A. incursion before one understands the difficulties of others. Even in the British Press there is an attempt to blame Bonn and Paris for hindering the Big Two talks. Perhaps they could be more helpful, but their critics should remember that any concessions made by the Big Two will very probably be at their expense. They have a right to be worried and to say so to Mr. Eisenhower.

IT IS NO GOOD MY CLAIMING TO HAVE READ THE Radcliffe Report; indeed, I doubt if I ever shall, although when a summary is available I hope to do justice to that. But from what little I have learned about it, the point which strikes me most is the way the Committee has dealt with the Bank of England. Not only has it administered what Mr. Harold Wincott, writing in the *Investors Chronicle*, describes as "a snub for the Old Lady" by rejecting the "special deposit" scheme instituted soon after Bank rate was increased to 7 percent in September 1957, but it also appears to have suggested new ways of circumscribing the Bank's existing powers and influence. The two more notable of these are that in future Bank rate changes should be announced in the name and on the authority of the Chancellor of the Exchequer, and that a committee be set up with the Bank's representatives outweighed by those of the Treasury and the Board of Trade. "to review and advise the authorities on all matters relating to the co-ordination of monetary policy as a whole". Why the Radcliffe Committee should consider it necessary to recommend the formalisation of procedures which everybody thought existed anyway, can only be explained by the fact that the Old Lady has been getting a bit above herself lately. To the layman, there may be little evidence of this, but that does not mean such an expert body as the Radcliffe Committee has been unable to find any. If it is a fact, then, among other things, this must be yet another example of the failure of nationalisation. One of the excuses the Labour Government made for bringing the Bank under public ownership was that its policies could be more closely controlled. There were grounds for refuting such criticism even then, because for years the Bank had been acting in close co-operation with the Government. Now it would appear that nationalisation has not brought the two noticeably nearer together than they were in 1945. I cannot see any lesson in this for India and I for one would be disappointed if some Finance Minister some day quoted the Committee's findings as excuse for further departmentalising the Reserve Bank. It would be better to remember another of the Radcliffe Committee's recommendations—that the Bank give more statistical information in its report and regular return.

PRESS CONFERENCES CAN BE RISKY AFFAIRS. Handled badly, they are apt to produce results contrary to those intended. The one which Mr. K. M. Munshi addressed here last week on the aims and objectives of the Swatantra Party might have led to some adverse publicity had it not been for the adroit way the questions were parried. Most correspondents there seemed to have a prejudice against this new arrival on the Indian political scene and some of the questions were pretty awkward; one was a personal attack on those who have been charged with organising the Party in West Bengal, and another was the blunt query whether the Swatantra stood for the rule of Mundhras and Dalmias. Time and again attempts were made to draw Mr. Munshi on how the Party felt about Mr. Nehru personally. But he proved too smart for them all. A veteran politician, a skilled diplomat and one of the cleverest lawyers in the country, he has played this sort of game too often to be caught on the wrong foot. I left the conference with the impression that in spite of the desultory questioning, Mr. Munshi had made his points. The Swatantra Party, he maintained, stands for Gandhian democracy and individual freedom, which are threatened by totalitarian tendencies in the Congress; on the economic side, it is for greater scope for individual initiative in industry and family farming in agriculture. I think this is a fair case. India is fast becoming the bureaucrat's paradise *via* the five year plans, and the State-sponsored joint co-operative farming is not going to solve the country's food problem; to believe otherwise is to disregard both facts and experience elsewhere in the world. I am inclined to agree with Mr. Munshi that this latter policy will merely give the village bullies a legalised personal power over the villagers, and I do not think that will contribute greatly to the peasant's own happiness or the productivity of the land.

STAR PAPER MILLS LIMITED. —*Cont'd.*

HISTORY AND BUSINESS

The Company's paper mills are situated at Saharanpur, U.P. One Fourdrinier paper machine with the daily production capacity of 15/16 tons of paper from sabai grass was installed in October, 1938. The renovation of the paper machine and the addition of certain modern equipment in the pulp plant enabled the Company to step up the production from 15/16 tons to 21/22 tons a day in May, 1955. The present annual production of about 6,500 tons consists mainly of writing and printing papers such as (1) White Printing, (2) Creamlaid. (3) Azurelaid. (4) Coloured printing, (5) Covers. (6) Bonds, etc.

DEVELOPMENT AND EXPANSION

It is now proposed to increase the annual output of the mills to about 21,000 tons, by installation of two M.G. paper making machines, one having a daily production capacity of 20/25 tons thin substance paper, the other one of 30/35 tons paper of heavy substance. A licence, No. $\frac{L/21/13/54.}{L/24/(1)\cdot 8}$, dated 1st December, 1954. under the Industries (Development & Regulation) Act, has been granted to the Company. It is proposed to manufacture on the new paper machines M.G. Kraft paper of genuine quality not hitherto manufactured in India. Besides M.G Kraft paper, M.G. Sulphites, Pressings, Manilla Posters and other varieties of M.G. papers will also be manufactured.

RAW MATERIAL

At present paper is manufactured from sabai grass which is obtained from the Western Circle forests of U.P. The manufacture of M.G papers on the new plant will be made from pine wood which is an excellent raw material for the production of the high grade Kraft paper. The Company has been fortunate in obtaining sanction of a long-term lease of twisted pine, available in the Almora and Naini Tal forest divisions of U.P. It is estimated that the cost of twisted pine delivered at the mills will be about Rs. 120 a ton or say Rs. 2/- a cu.ft. which is a comparable price for raw materials in the industry, if yield and quality of pulp made from it, are taken into consideration.

POWER

The normal capacity of the existing steam and power plant is 50,000 lbs. of steam an hour obtained from two boilers at a pressure of 250 lbs a sq. inch, and 2,000 Kw. power obtained from one 2,000 Kw turbine. There is one stand-by boiler with a capacity of 25,000 lbs of steam an hour at the above pressure. There is also a stand-by turbine of 1,200 Kw capacity. The total requirement of power after expansion is expected to be about 5,500 Kw. The existing stand-by turbine of 1,200 Kw. will be modified to suit the increased demand for power and steam. The U.P. Government have agreed to make available to the Company, during the current year, 2,000 Kw. of power from their existing hydro-electric power-station. They will also supply further power later on, when required by the Company.

COST OF EXPANSION SCHEME

The total investment of capital for the implementation of the expansion scheme is estimated at about Rs. 330 lakhs made up as follows:—

1.	Plant and machinery including erection	Rs. 260 lakhs.
2.	Factory buildings and staff & labour quarters ...	Rs. 40 „
3.	Working capital	Rs. 30 „
		Rs. 330 lakhs.

The Industrial Finance Corporation of India, after carefully examining the scheme, sanctioned a loan of Rs 1 crore to the Company. This loan will be available against existing as well as future assets. A Deed of Mortgage has been executed in favour of the Corporation and the Company has so far received the sum of Rs. 30 lakhs from them.

DEFERRED PAYMENT FACILITIES FROM THE MACHINE SUPPLIERS

The total f.o.b. cost of the imported plant and machinery has been estimated at Rs. 185 lakhs out of which machinery worth about Rs. 20 lakhs is being imported from the U.S.A. on cash terms. Machinery for the remaining amount of Rs. 165 lakhs f.o.b. is being imported from the U.K and the Continent under deferred payment terms. The Company has received necessary Government Sanction for the foreign exchange for the import of the entire plant and machinery required for the expansion scheme. Orders for the entire plant and machinery and auxiliary equipments have been placed One of the two machines has been shipped and it is anticipated that this will be installed and started by the end of 1959 The other machine is expected to be shipped by September, 1959 and installed by the middle of 1960. As it will take some more time for the delivery and erection of the Soda recovery plant, full anticipated production from the new plant is expected to be achieved by the end of 1960. By the end of 1960. a total amount of Rs. 60 lakhs will have to be paid to the machine suppliers in the U.K., Sweden and West Germany, which will leave a balance of about Rs. 105 lakhs payable later by the Company to the machine suppliers out of profits earned on the new plant. The total estimated cost of the expansion scheme, assessed at Rs. 330 lakhs will thus be financed as under:—

Deferred payment facility from machine suppliers ...	Rs	105 lakhs.
Loan from the Industrial Finance Corporation of India ...	Rs.	100 „
The Company's finances out of previous issue of share capital	Rs.	55 „
New Issue of share capital ...	Rs.	70 „
	Rs.	330 lakhs

PROFITS AND DIVIDENDS

At present, the average profit per ton of paper is about Rs. 200/- which means an annual profit of about Rs. 13 lakhs on a production of 6,500 tons. After full implementation of the scheme, the average profit per ton of paper is estimated at Rs. 467/-. After allowing Managing Agents as well as Directors' commission, the annual profits on the basis of the said estimate are expected to be about Rs. 87 lakhs which will be sufficient to declare a dividend of 10% on the equity share capital of the Company as well as fixed dividends on the entire Preference share capital.

CAPACITY TO REPAY LOANS

As stated above, the net annual profits after expansion are estimated at about Rs. 87 lakhs, after making provision for depreciation. Taking annual gross profits, before allowing depreciation at Rs 100 lakhs, the tax liability for the first three years, after taking into account Development Rebate, is estimated at Rs 54 lakhs, which leaves a balance of Rs 246 lakhs. The amount of dividend payable on preference shares at the fixed rates of 5%, 6½% and 7% free of income-tax and on equity shares calculated at 10% comes to Rs. 16,50,000/- per year, which means a total sum of Rs. 49,50,000/- for three years. After deducting this amount of dividend, the sum of Rs. 196.5 lakhs remains with the Company as surplus for repaying the loans. This amount will be sufficient to pay off the liability of Rs. 105 lakhs to the foreign machine suppliers. From future profits it will be quite convenient for the Company to make payment of yearly instalments with interest against the loan taken from the I.F.C. which is repayable within 15 years from March, 1962. Even if there is a fall in selling prices to the extent of Rs 100 per ton due to competition, profits earned by the Company after expansion will be sufficient to meet the Company's liabilities to the machine suppliers and to the I.F.C.

LAND AND BUILDINGS

The Company has got sufficient land for the erection of the new plant as well as for the construction of staff and labour quarters The construction of buildings to house the new plant has started. The Preparatory, Machine and Finishing Houses will be completed shortly when installation of the new plant will be started.

AUDITORS' REPORT

The Directors,
Star Paper Mills Limited,
27, Brabourne Road, Calcutta-1.

Dear Sirs,

We have examined the books of Accounts of the Star Paper Mills Limited for 5¼ years ended 31st March 1959 in which for the half-year ended 31st March, 1959 Statement of Accounts of Mills at Saharanpur duly certified by the Mill Manager are included which have been audited by us and report that the profits of the Company are as set out below. The Profits have been arrived at after charging all the expenses of Manufacture, working and Management and after making such adjustments as are in our opinion appropriate.

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS EASY

Wednesday, 2nd September.

ADVANCES outstanding in the Calcutta money market show a slight increase over the past week, but the amount is not large. Most of the increase is accounted for by funds required against grains and seeds storage in upcountry areas. The jute and cotton industries have both reduced their requirements and the seasonal decline in the off-take of the sugar mills continues. Money has eased in the interbank market following the return of funds held in anticipation of the launching of the State loans. The official call rate has declined to 2½ percent, but business has been reported down to 2 percent.

Brisk conditions prevailed in the exchange market during the past week. Good supplies of both tea and gunny bills have come to hand. The reason for this spate of activity appears to be the anticipation of a possible rise in the U.K. Bank rate. Remittance has remained poor. The pound sterling was marked down on the London market against the twin dollars and to a lesser extent against most important Continental currencies.

DURING THE WEEK ENDED 28TH AUGUST, 1959, Government of India Treasury bills for Rs. 45,55,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 3 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 31st August. The total amount offered was Rs. 3,05,00,000. Tenders at Rs. 99.380 were accepted in full, the average rate of acceptance being Rs. 2.519 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at Bangalore, Calcutta, Kanpur, Madras and New Delhi up to the close of business on 7th September and at Bombay and Nagpur on 8th September up to 11 a.m.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 1st September to 5th September at Rs. 99.386 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 26th August to 29th August.

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 21st August, 1959, shows a rise of Rs. 5.60 crores to Rs. 561.70 crores in total deposits. Investments in Government securities are down by Rs. 1.65 crores to Rs 347.28 crores, while other authorised investments are up by Rs 5 lakhs to Rs. 10.27 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have risen by Rs. 3.90 crores to Rs. 173.36 crores. Cash and balances are, in consequence, shown at Rs. 36.81 crores or Rs. 2.23 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 21st August, 1959, shows Demand and Time liabilities at Rs. 739.46 crores (Rs. 19.74 crores on account of borrowings from banks) and Rs. 1,084.75 crores (Rs. 26.02 crores), compared with Rs. 739.40 crores (Rs. 24.16 crores) and Rs. 1,082.95 crores (Rs. 26.74 crores), respectively, in the previous week. Cash has increased by Rs. 1.77 crores to Rs. 42.91 crores, while balances with the Reserve Bank have decreased by Rs. 13.03 crores to Rs. 76.34 crores. There is a rise of Rs. 11.77 crores to Rs. 723.87 crores in investments. Advances and bills discounted at Rs 949.89 crores show an increase of Rs. 3.81 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.5 percent and 52.1 percent, against 7.2 percent and 51.9 percent.

WIDESPREAD GAINS IN INDUSTRIALS

INDIAN TEAS EASE ON N.E.F.A. NEWS

London, 2nd Septembe

THE stock market presented a mixed appeara after another week of active trading. Inte was again centred mainly on industrials wh after recording a modest reaction, resumed th advance to show further widespread gains. modest reaction was due to the rise in inte rates in the United States, which induced talk the possibility of a rise in the British Bank r This brought a sharp setback in gilt-edged temporarily worried the rest of the market. G edged remained uncertain for several days, developed a better tendency when both Bank r and the Treasury bill rate were unchanged. rest of the market soon recovered its equilibri Good business and company news, and confide in the outlook, contributed to the recovery. wh operators were also cheered by the latest pul opinion poll which favoured the present Gove ment. Although industrials turned somew irregular towards the end of the account, most the gains were maintained. Steel and chemi shares were among the best groups, while stc attracted a fair amount of attention. Gains r dominated in dollar stocks. Bankings recove their earlier losses and insurances were genera irregular. Hire-purchase finance shares recor some sharp gains. Golds moved indecisively small losses were in the majority, but diamo recovered their initial falls. Coppers were clined to ease and lead-zincs showed no defir trend, but tin shares were firm. Rubbers fai to establish a decided tendency but the undet was satisfactory. Indian tea shares were mar down modestly in view of the situation in N.E.F.A. area, but there were occasional firm sp in Ceylon issues.

The Money Market

The money market enjoyed a week of reas ably comfortable credit conditions. Supplies loanable funds were expanded by Governm disbursements on behalf of various departme and local authorities, so on most days the mar obtained its requirements without difficulty. Wh 3¼ percent was the usual rate for sizeable su of money, it eased later as money became less demand. On some days, the rate fell to 2⅞ perc or even lower. There was a fairly good offta of bills from the market by the clearing ban with late Octobers, early Novembers and "h Treasury bills done at 3⅛ percent and some a split rate of 3 27/64 percent. The Treasury rate was again virtually unchanged at the wee tender, the average being £3 9s 9.03d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the we ended 26th August shows that the U.S. gold st remained unchanged at $19,600 million. Fore deposits rose by $25 million to $264 million. Fore investments were higher at $4,246 million. T Federal Reserve bought $26 million worth of b but sold $43 million worth of securities held un repurchase agreements, making total holdings Government securities $17 million lower at $26, million. Total discounts and advances were million higher at $557 million, while aggreg excess reserves of member banks fell by $122 n lion. The daily average of excess reserves of me ber banks was $24 million higher at $462 milli while their daily average borrowings fell by million to $940 million. Gold certificates on ha and due from the U.S. Treasury were unchang at $18,371 million. Federal Reserve notes in act circulation were $67 million lower at $27,510 n lion. The daily average of deposit member ban reserve accounts was $76 million lower at $18, million. Commercial, industrial and agricultu loans of New York city banks were $54 mill higher at $9,791 million. Loans to non-banki financial institutions were $28 million lower $1,721 million, and loans to foreign banks w $7 million higher at $412 million.

Hongkong Bullion Quiet

The Hongkong bullion market was steady most of the past week but trading was again v small due to the lack of incentives. Bull merchants said that there was very little inter in gold as a speculative medium since better portunities could be found in local shares as w as American stocks for surplus funds. Carryo charges were nil. Arrivals from Macao w 16,000 ounces. Forward contracts were traded $(H)38.01 c.i.f. Macao. No deliveries w reported.

Economic Paralysis in Indonesia

Economic life in Indonesia remains paraly as confusion over the Government's monet reforms continues. The public and business m are still uncertain about the effects of the decr aimed at wiping out inflation. Business men that they are waiting for detailed Governm explanations and follow-up measures to the ginal decrees. Traders and bankers predict t small firms will go bankrupt if the Governm does not act to overcome the stagnation. Expo have stopped and internal business and the re trade are paralysed. Banks have begun to d with clients and cash cheques but only for sm amounts. Trade in key products like rubber pepper is still dead.

Stocks and Shares

POLITICAL DISTURBANCES BRING PRICES DOWN

UNDERTONE WEAK AT CLEARING

Wednesday Evening.

THE deterioration in the political relations between India and China following Chinese incursions into Indian territory, and the disruption of normal life in the city as a result of Leftist agitation, combined to impart a feeling of nervousness in the Stock Exchange and prices declined on a broad front. Preference shares, particularly so-called tax-free issues, were depressed following the announcement by three companies, Burrakur Coal, Allahabad Bank and Budge Budge Jute, of gross preference dividends which were previously distributed as tax free, thus reflecting the adverse effects of the Indian Finance Act, 1959. It is understood that where it is specifically stated in the Articles of Association of a company that the shareholders will receive a "tax free" dividend, the previous policy will continue. In cases, however, where the word "tax free" is not specifically mentioned, certain companies believe that they are not legally bound to pay the dividends on a tax-free basis. Certain tax-free preference shares have fallen heavily since the announcement of taxable dividends by the three companies referred to above and, as a result, the yield pattern is likely to undergo a considerable change in the coming months.

Preference shareholders who were hitherto receiving tax-free dividends will now be heavily penalised should the management decide to deduct tax at source. In the case of the Budge Budge Jute Company, the management is of the opinion that the preference shareholders should be compensated if possible. Thus a resolution is proposed to be passed by the company to enable shareholders to become entitled to an additional non-cumulative dividend, subject to income tax, at the rate of 1 percent a year for every 1 percent in excess of 7 percent declared as dividend on the ordinary shares in any year, up to 3 percent in one year.

A feeling of nervousness prevailed at the settlement today in view of the proposed general strike in the city, scheduled for tomorrow.

Government securities were firm under the influence of easy money conditions with 3% Conversion Loan 1986 being quoted at the close at Rs. 74.30.

In the banking section, United Commercial met with selling pressure and reacted from Rs. 62.75 to Rs. 61.75. United Bank of India "D" shares dropped to Rs. 4.69, while there was a small recovery in Punjab National, which closed at Rs. 20.75.

Coal shares were subdued as the outlook for marginal producers is not very encouraging owing to narrowing profit margins. Prices declined in most cases as will be seen from the following table:

	Opening 27th August, 1959	Closing 2nd Sept., 1959
	Rs.	Rs.
Bengal	308	303
Burrakur	17.62	16.50
East India	24.25	23.50
Northbrook	21	20.25

Cotton textile shares were subdued with Bowreah being marked back to Rs. 140 and Dunbar to Rs. 190. In contrast, Kesoram were fairly steady at around Rs. 17.87.

Electric supply shares weer dull and featureless.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 24.21 and Rs. 23.37 to close at Rs. 23.42. Braithwaite were marked down from Rs. 27 to Rs. 26.25 and Burn & Co., from Rs. 470 to Rs. 458. Guest, Keen, Williams were depressed at Rs. 38.75 and Textile Machinery receded from Rs. 24.25 to Rs. 23.75. Despite the fairly satisfactory dividend recommendations by the Bird group of companies on Saturday last, details of which are given below, jute shares generally moved down in sympathy with the rest of the market:

Name of company	Divd. for 1958	Divd. for 1959 (Int.)	1959 (Final) Divd. for
Auckland	5%	5%	15%
Dalhousie	Nil	Nil	Nil
Kinnison	5%	5%	5%
Lansdowne	Nil	Nil	Nil
Reliance	Nil	Nil	2%
Northbrook	Nil	Nil	12½%
Union	15%	5%	15%

In paper, Orient were easier at Rs. 38.15 and Sirpur were marked back from Rs. 13.75 to Rs. 13.25. Titaghur were quoted lower at Rs. 44 and India Paper Pulp receded from Rs. 25.25 to Rs 24.75.

In sugar, Belsund dropped to Rs. 12.87, as did Cawnpore to Rs. 13.37 and S.K.G. to Rs. 11.06.

Miscellaneous industrials suffered losses on a wide front as will be seen from the following table:

	Opening 27th August, 1959	Closing 2nd Sept., 1959
	Rs.	Rs.
Alkali & Chemical	23	22.25
Angelo Brothers	19.75	19.25
Dunlop Rubber	34.44	34
Indian Aluminium	21.75	21.37
India Steamship	14.31	14.06
Metal Box	42.25	41.62
National Carbon	37.12	36.50
Rallis India	78.50	77

Very little activity was witnessed in the tea section and prices tended to sag.

In the mining group, Indian Copper were marked down to Rs. 4.07 and Karanpura Development receded from Rs. 14 to Rs. 13.25.

Ramnugger Cane

The Ramnugger Cane and Sugar Company has made a profit of Rs. 5.54 lakhs for the year ended August 1958, after providing Rs. 2.01 lakhs for depreciation and Rs. 19,000 for taxation. An ordinary dividend of 15 percent has been paid, leaving a carry-forward of Rs. 19,826. The total quantity of sugarcane milled was 1,614,999 maunds with an average recovery of 9.40 percent, compared with 2,517,752 maunds. The total included 959,198 maunds from the company's own farms and 655,801 maunds from cultivators. The corresponding figures for the preceding season were 1,129,892 maunds and 1,387,860 maunds, respectively. Although the company was able to save a major portion of the crop in its own farms with its irrigation resources and timely disease-control measures, which involved additional expenditure, the crop was sub-normal, resulting in a loss in the agricultural operations.

Ondal Coal

Providing Rs. 1.55 lakhs for taxation and Rs. 3,650 for wealth tax, the profit of the Ondal Coal Company has amounted to Rs. 50,982 for the year ended December 1958. Bringing in Rs. 41,941, there is a balance of Rs. 92,923. The ordinary dividend of 5 percent has been maintained, leaving Rs. 42,423 to be carried forward. During the year, 180,082 tons of coal were raised and 180,627 tons were despatched by the Karanpura Mining Syndicate. The managing contractor continues to raise and sell coal from the Religara colliery and this arrangement is working satisfactorily.

Bararee Coke

The Bararee Coke Company has made a loss of Rs. 2.93 lakhs for the year ended March 1959, after providing Rs. 35,920 for depreciation and making other adjustments. So a debit balance of Rs. 2,35,349 is carried forward and dividends have been passed over. The company's working has been rendered uneconomic by increased wage costs, coupled with an unavoidable fall in the production of hard coke during the period of reconstruction of the coke oven battery. Continuous efforts have been made throughout the

THE STERLING GENERAL INSURANCE CO., LTD., NEW DELHI.

Premium exceeds Rupees One Crore Twenty Lacs.

The Fifteenth Annual General Meeting of the Sterling General Insurance Company Limited was held on August 31, 1959 when the Accounts of the Company for the year ended December 31 1958 were passed. The following is an extract from the Directors' Report :—

The gross premium booked during the year amounted to Rs 1,20,88,518 (Rs. 1,04,36,280 in 1957) showing an increase of about 15.8%, and the net premium amounted to Rs. 56,50,889 (Rs. 55,01,062 in 1957).

Reserves Exceed Rs. 25 Lacs.

The reserve for unexpired risks at the end of the year amounted to Rs. 25,94,355 against Rs. 25,04,427 at the end of the previous year.

Increase in Profit and Dividend.

After providing for various reserves, writing off bad debts and increasing the reserves against doubtful debts the working of the year resulted in a net profit of Rs. 1,39,838. Adding to this Rs. 4,096 brought forward from the previous year, the total profit came to Rs. 1,43,934 which has been appropriated as follows: Rs. 72,000 as provision for income-tax and Rs. 68,324 as provision for dividend to shareholders. The balance of Rs. 3,610 has been carried forward to next year.

All-round Progress.

The working of the Company during the year under report resulted in all-round progress in business development and financial strength of the Company. The gross premium increased by over Rs. 16 lakhs over the figures of the previous year. The net premium increased however only by Rs. 1,49,827 because of larger re-insurances effected. Paid up Capital increased by over a lac and the Company has been able to declare a dividend to shareholders at 5% free of income-tax on the increased Capital.

Assets Exceed Rs. 89 Lakhs.

The total assets of the Company amounted to Rs. 89,01,253 at the end of the year (Rs. 83,39,646 as at 31st December, 1957).

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

past year to effect economies and to eliminate unproductive expenditure. The continuous fall in hard coke production over the past few years has inevitably had its effect on by-product manufacturing operations. The additional plant employed on these processes is economic provided certain minimum quantities of hard coke are manufactured but in the conditions which have prevailed since 1955, and particularly during the past two years, by-product manufacture has itself proved uneconomic. At the present time, the benzol and sulphate of ammonia plants have been closed down for this reason. Apart from obtaining by-products from the company's own hard coke manufacture, a profitable business previously existed in the distillation of purchased tar. Supplies of crude tar for this purpose have, however, in the past year become more difficult to obtain at economic prices due to increased consumption for burning at the steel works themselves. This, in turn, has affected the company's profits adversely. The future is obviously clouded by many uncertainties. The basic difficulty is the age of the plant and its small output on the basis of today's cost structure. Every effort is being made to restore production to a figure nearer its former level by rebuilding the coke oven battery. But this inevitably takes time and involves the shuting down of ovens in succession, with resultant production losses and consequential effects on by-product output. The management has at present under investigation plans for the commencement of production in other lines which are related to the company's existing business, but no very early results can be expected. Every effort is, therefore, being made to conserve resources pending the completion of the coke oven rebuilding programme.

Baradighi Tea

The Baradighi Tea Company has earned a profit of Rs. 4.24 lakhs for the year ended December 1958. Bringing in Rs. 85,562 and making other adjustments, there is a balance of Rs. 5,16,098. Taxation absorbs Rs. 1.97 lakhs and Rs. 50,000 is transferred to general reserve. A dividend of 15 percent has been paid, leaving a carry-forward of Rs. 67,174. The crop declined from 1,502,480 lbs to 1,492,760 lbs, but the average sale price rose from Rs. 1.91 to Rs. 1.95 a lb. Estimates for 1959 provide for a crop of 1,440,000 lbs at a cost of Rs. 1.59 a lb.

Bombay Market

PRICES TURN QUIET ON POLITICAL NEWS

NEW ISSUE PROSPECTS ALSO DEPRESS SENTIMENT

Wednesday Evening

THIS week's trading in the Bombay stock market has been interspersed with holidays, although share prices slumped on selling pressure induced by the political news background. Easier advices from Lyons Range because of disturbances in West Bengal were discouraging. Towards the close, operators turned hesitant and were inclined to await further developments before extending commitments. This apart, the possibility that a number of new share issues are likely to be made shortly acted as a restraining factor.

Tata Steel declined to Rs. 174.25, as did Indian Iron to Rs. 24.48. Premier Construction were sold down to Rs. 341, but Tata Locomotive met with investment support at Rs. 198. Alcock Ashdown were available at Rs. 247.50. Motor shares were quietly steady, and Hindustan Motor were shaded at Rs. 11.84. Premier Automobile were taken at Rs. 133.

Profit-taking reduced the prices of cotton mill shares. Bombay Dyeing reacted to Rs. 62.70 and Century were available at Rs. 550. Kohinoor met with sustained influential support at Rs. 302 on talk of a change in management. Svadeshi were bought at Rs. 238 on reports of good working. Simplex were placed at Rs. 155 and India United Ordinary were offered at Rs. 8. Apollo changed hands at Rs. 1.26.

Miscellaneous shares lost in sympathy with the general trend but selling pressure abated considerably towards the close. Among sugar shares, Walchandnagar Industries were steady at Rs. 316.25 on prospects of a fresh capital issue. Belapur were taken at Rs. 306 and Phalton were transacted at Rs. 160.50. In the cement group, Associated Cement were dealt in at Rs. 142 and Digvijay Cement were quiet at Rs. 145. Mining shares were quiet because of uncertain trends in metals on world markets. Shivrajpur Syndicate were sold at Rs. 85. Steamship company shares were shaded on balance and Scindia were lowered to Rs. 17.48. Great Eastern Shipping declined to Rs. 20.68. Bombay Burmah fell to Rs. 517 on pressure caused by disappointing dividends. National Rayon reacted to Rs. 341 on profit-taking but Voltas were supported at Rs. 166.50. Tata Chemical were quoted at Rs. 16.52.

Routine turnover was transacted in banking and insurance shares and fluctuations were minor. Central Bank came to hand at Rs. 49.75 and Bank of Baroda were bought at Rs. 104.50. New India Assurance were maintained at Rs 59.

There was selective support in electricity supply company shares, and Bombay Suburban were transacted at Rs. 112.50. Ahmedabad Electric changed hands at Rs. 92.90 and Tata Hydro were indicated at Rs. 47.75.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations Highest for the week Lowest for the week Closing Quotations. Quotations for the corresponding Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

LONDON INSURANCE LETTER

AVIATION UNDERWRITERS IN A QUANDARY

THE most difficult phase in insurance is, naturally enough, the experimental one. For instance, no underwriter can logically calculate the risks involved in nuclear insurance until the world has accumulated more experience of nuclear energy. Aviation insurance is one of the younger branches; but no one can say that aviation is new. Yet the aviation insurance market in London is suffering some of the troubles of a new kind of insurance. It shows also—and this is a worse aspect of the problem—some symptoms of a market in decline. The trouble arises partly from unfortunate claims experience, partly from lack of knowledge of new types of aircraft. Some substantial losses on this business have occurred in recent years, and the market has, therefore, adopted a very cautious attitude towards new jet aircraft. New motor-cars, new ships, can be introduced without disturbing the insurance market, but novelty is more hazardous in aviation—and the new jet aircraft, very big and very fast, are also very costly. So London underwriters agreed last April to increase their premium rates—as much as 40 percent, in some cases, for jet aircraft.

The airlines, with their own troubles, have not shown much sympathy towards the underwriters, and it is a distressing fact that relations between the insurer and insured are no longer amicable. The sharpest reactions are those of British European Airways, which has halved its flight-insurance cover in the market, and is thus operating in effect a 50 percent self-insurance scheme: Qantas, which is not insuring in London its seven *Boeing 707s*; and Trans-Australia, which has withdrawn all its business from the London market.

Self-insurance Pool

London underwriters are in a quandary. The agreement last April was intended to stabilise the market on a reasonably profitable basis: and, with the grim example of the marine market before them, aviation underwriters are reluctant to upset the agreement and begin competitive rate-cutting. Yet they cannot sit by and watch the market shrink because its rates are unacceptable. The trouble is not simply loss of business to foreign centres: such business may be regained later. More serious is the tendency towards self-insurance, for self-insurance may well be permanent. The partial self-insurance of B.E.A. may be an isolated case at the moment; but the insurance sub-committee of the International Air Transport Association has been discussing the possibility of forming a self-insurance pool, and it has been suggested that, as a supplement or an alternative to such a pool, a number of airlines might combine in a self-insurance scheme independent of I.A.T.A.

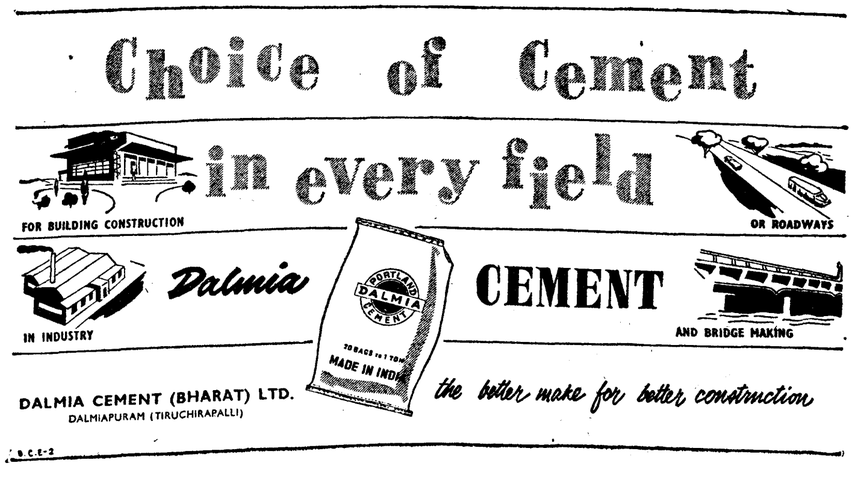
Impartial observers see faults on both sides of this dispute. The airlines cannot reasonably expect the underwriters to bear risks, permanently, at uneconomic rates, although they may argue that if others abroad will cover the risks more cheaply, they are not concerned whether rates are economic or not. The underwriters, on the other hand, have been criticised for a policy that does not clearly distinguish the good operators from the relatively bad ones. Many people feel that an airline, with a consistently good record, should not be required to pay for the losses incurred on inferior lines. This problem of discrimination (let bad risks pay for themselves) has arisen also in other branches of insurance, particularly in motor insurance. It should be considered more seriously.

Export Credit Insurance

Another branch of insurance that has suffered some criticism is export credit insurance. Exporters, including some prominent industrialists, have recently been urging the Export Credits Guarantee Department of the U.K. Board of Trade to extend its facilities so that British heavy capital goods will suffer no disadvantage, in relation to credit, in competition with American or German goods of the same kind. But the decision on such matters rests with the Chancellor of the Exchequer rather than with the administrators of the Department; and Mr. Heathcoat Amory is reluctant to involve Britain in a "credit war". Meanwhile, the Department is actively expanding its business. Britain's export trade has been on a broad upward trend since the beginning of the second quarter of this year, and in that quarter the Department did record business. It had, in fact, achieved a new record in the first quarter of this year, when it covered £150.7 million worth of exports. In the second quarter, the cover was extended to £155.2 million worth, which compares with £111.8 million worth in the same quarter of last year.

The figures are not directly comparable with export totals shown in the monthly trade returns, but there is no doubt that an increasing proportion of British exports is being covered by E.C.G.D. policies. It seems that the proportion has increased from 14 percent to 18 percent over the past two years, although there was, apparently, no increase in the proportion between the first quarter and the second quarter of this year. The risk of default by trade debtors abroad is presumably diminishing as the economic condition of many countries improves.

Dollar Assets Appreciating



As Wall Street rises, so the value of British insurance companies' investments in the United States increases. Not all of these investments are in dynamic stocks, but the connection with Wall Street's boom is strong enough to have enabled that boom to add considerably to the value of investments last year, and further this year, at a time when underwriting experience in the U.S. market has been improving. The capital gain on British insurance companies' U.S. investments last year has been calculated at $116 million, whereas in 1957 the value of these investments depreciated by nearly $36 million; and the underwriting loss last year was a relatively moderate $33 million, compared with $59 million in 1957. Investment in the U.K. is becoming more difficult as the general election looms nearer, but after a brief unsettlement, the London stock market has been steady, though subdued. It is unlikely that insurance companies will invest on a substantial scale until they can review their investment policies in the light of the election results.

DART HERALD APPROVED FOR HEAVIER PAYLOAD

The Handley Page *Dart Herald*, which recently made a demonstration tour of India, has been approved for flying at an all-up weight of 39,000 lbs —an increase of 2,000 lbs over the previous figure. The new all-up weight will boost payloads by as much as 25 percent and will lower operating costs. On a typical stage-length of 500 statute miles, *Dart Heralds* will now carry a payload of 12,000 lbs at a cost of 8.9d a short-ton statute mile, compared with the previous figure of 10,900 lbs at a cost of 10.2d a ton mile. The *Dart Herald* is now being demonstrated in Latin America.

BUSINESS EXECUTIVE GETS HIGHEST U.S. ENGINEERING AWARD

The John Fritz Medal Board of Award has given the top prize of the engineering fraternity to Mr. Gwilym A. Price, chairman of the board of the Westinghouse Electric Corporation. For the first time in the 58-year history of the award the highest honour that U.S engineers can bestow has gone to a man with a non-engineering background, for his vision and his leading part in the development of atomic power. The formal presentation of the gold medal awarded annually for notable scientific or industrial achievement will be made to Mr. Price at the annual meeting of the American Society of Mechanical Engineers in Atlantic City in early December.

Engineering and Transport

MACHINE TOOL MANUFACTURE IN ENGINEERING FIRMS

EXPLORING POSSIBILITIES OF COMMERCIAL PRODUCTION

ENGINEERING firms in India have developed capacity to manufacture special types of machine tools for their own purposes. They have to do this for a variety of reasons: first, the machines built by them are sometimes less costly than those purchased from regular manufacturers, except, of course, when machines of intricate designs are involved. Secondly, these factories often have to build such machines regardless of costs, because the specifications needed may not be available for months from outside sources, while production in the factory is held up. The removal of the bottleneck then becomes more important than the cost of producing the machine. These special departments have been named as shadow machine tool factories, because they happen to have been developed under the "shadow" of another factory. In view of the growing importance of the machine tool industry to the economy of the country, the Engineering Association of India recently he'd a survey of such capacity in its own member firms and the survey showed that a wide variety of these machines are now being produced, broadly classifiable as metal-turning and boring machines, milling, planing and shaping machines, drilling, reaming and tapping machines, plate and sheet metal working machines, polishing and metal finishing machines, forging and power hammers, presses and grinding machines. An interesting and surprising finding is that one factory which has perhaps built the largest number of special purposes machines generally "had saved as much as 100 percent in cost (compared with import prices) by building its own machines, while in a few cases the savings have been as high as 200 percent and 250 percent."

Discussing the prospects of commercial production from these factories, the Association's brochure says that few firms seem to be keenly interested in the proposition, for the diversification of the product would need fresh capital investment and increased overhead charges which no business man would be willing to undertake without being sure of a return within a reasonable time. The Association feels that if a chosen few give the lead, the idea of commercial production of machine tools from these factories may catch on and "a changed outlook may be expected in course of time." But the shadow factories cannot make ready-made goods. An order has to be placed with them first even if it is only for "special purposes" machines. So the Association suggests that import restrictions will give these shadow factories "a chance to show what they can do."

Current Problems

The brochure then goes on to discuss some of the problems which these units are currently facing. Design has been the biggest difficulty for most of them. "In the bigger factories, features of various types of general purposes machines can be studied, copied and incorporated in special machines. Smaller factories may not be able to do this easily, they have necessarily to depend on outside help and guidance." It is, therefore, suggested that a central design organisation as part of the National Productivity Council should be set up to help the factories, especially the smaller ones, with advice and guidance, charging a nominal fee if necessary. The Association also suggests that unit heads such as drilling, milling, grinding, boring, and tapping, as well as hydraulic pumps, electrical control items including switch gears, lead screws, training equipment, turret heads with slides, traverse gear boxes and two-speed machine tool motors should be manufactured by a special plant, for which active assistance of the Government will be necessary. It will also be necessary to import such capital equipment as cannot be indigenously procured. The Association proposes to set up an advisory council of technical experts for the benefit of its own member firms. The experts will advise on: (1) the extent to which factory production can be increased by special purposes machines replacing general purposes machines for particular products, (b) the types and ranges of machines which will be manufactured in shadow factories, (c) improvement in working techniques, and (d) procurement of raw materials and possible substitutes for materials in short supply. The Association is also taking up machine tool manufacture as a subject for special study.

LEIPZIG AUTUMN FAIR

At the Leipzig Autumn Fair 1959, the manufacturing works of East Germany will exhibit a great number of interesting new designs and improvements within a comprehensive show of technical goods. The office-machine industry will show, for instance, its latest results. The programme of this branch of industry comprises practically all equipment required for office work. Particularly important are the newly-developed automatic four-species rapid calculating machines P.E.M. 15 and P.E.M. 18. These machines developed by the V.E.B. Archimedes Rechenmaschinenfabrik Glashütte are provided with a multiplication device operating at a reduced time, an automatic division pre-adjusting device, a carriage return-travel erasing device as well as a completely automatic division arrangement. The Mercedes Büromaschinenwerke Zella-Mehlis will show as a new design, the Elektra-typewriter, model SE 5, which is equipped with a permanent space key, a line switch without carriage return travel, a permanent resetting key and a commutator switch. Among the cameras the newly-developed "EXA II" has a very interesting design. This new single lens reflex camera, turned out by the Ihagee Kamerawerk Dresden, is equipped with a fixed roof prism, a fixed prismatic finder as well as a quick-action film transport lever, which cocks the shutter, transports the film and places the mirror into reflex position. The exposure times can be adjusted from half to 1/250th of a second. The cameras "Altix n" as well as "Altix nb" manufactured by the V.E.B. Kamera- und Kinowerke, Dresden, will be, for the first time, equipped with a direct vision luminous finder. The comprehensive range of camera attachments which was so far on show, will be further completed by new types of lenses, special-type intermediate rings, inverting prisms with exposure meters and colour filters. In the line of cinematographic apparatuses there will be on show a new diascope "Aspectar 500" as well as a slidechanging attachment with a magazine designed for 36 slides. The new designs among radios, developed by the G.D.R. works, include the new set "Der kleine puck", a five-circuit receiver for the medium-wave range, which complies with the wishes of the customers for a lightweight, portable set intended for various purposes. The receiver will be offered by the V.E.B. Funwerk Halle in an elegant cabinet made of plastic material. The exhibition programme in sporting boats, which are primarily produced by the Berlin shipyards, will for the first time include three boats made in the polyester construction. The boats are considered unsinkable due to the application of built-in air tanks.

U.S. FIRM TO SUPPLY NUCLEAR PROPULSION PLANT FOR U.K. SUBMARINE PROJECT

The Westinghouse Electric Corporation of the U.S.A. has announced the formation of a new atomic power organisation for the purpose of procuring a nuclear propulsion plant for the U.K.'s first atomic-powered submarine, the *Dreadnought*. The United States has authorised the transfer to the U. K. of a complete Skipjack-type submarine nuclear propulsion plant, spare parts, design and related classified information. The authority for the transfer is contained in the amended Atomic Energy Act of 1954 and in the Mutual Defence Agreement for Co-operation between the U.S.A. and the U.K. which became effective on 4th August, 1958. As required by the Atomic Energy Act and the agreement, a determination has been made by the President of the United States that the transfer of the plant and the communication of related data to the U.K. would promote and would not constitute an unreasonable risk to the mutual defence and security of the U.S.A. and the U.K. Last March the British Government announced that negotiations had been concluded between Rolls-Royce Limited and Westinghouse and that a complete set of machinery similar to that being installed in the latest U.S. Navy submarines of the Skipjack class would be obtained from Westinghouse. Besides procuring the atomic power plant equipment for this British submarine, the U.S. company will train the personnel of Rolls-Royce and the British Admiralty in the design and construction of this plant so that the U.K. can build its own similar plants in the future. Vickers Armstrong, the British firm building the *Dreadnought* for the U.K., has been authorised by the U.S. Government to obtain information and assistance from the Electric Boat Division, the U.S. shipbuilder which built the Skipjack.

NEW BRITISH FREIGHTER AIRCRAFT TO UNDERGO TROPICAL TESTS

Britain's newest freighter aircraft, the Armstrong Whitworth *650 Argosy*, will soon start extensive overseas tests with tropical trials at Khartoum, Sudan. Later in the year, it will undergo winter trials in Canada. Already one of the most tested aircraft in existence, the *Argosy* is expected to complete its full certification programme—to both British and American standards—by next March. It made its public debut at the recent Paris air show, and the aircraft will be on display at Farnborough this month. A demonstration flight in the *Argosy* showed it to be as comfortable and smooth as any present-day passenger aircraft, writes a London correspondent. Described as the future "work-horse of the air", it is an aircraft which is likely to have a marked effect on the rapidly expanding air-freight business. It offers, say the manufacturers, the prospect of passenger and freight rates comparable with surface transport. In a projected "air-bus" version, carrying 126 passengers, it could operate at as little as 1.2d a passenger-mile.

Arrangements have been made for after-sales service, and the company claims that credit facilities equal to any in the world are available. Fitted with four Rolls-Royce Dart prop-jet engines, the *Argosy* can carry 13.5 short tons (27,000 lbs) of freight or 83 economy-class passengers—or a mixed payload of freight and passengers. Four *Argosies* have already been ordered by an American air freight company (Riddle Airlines Inc.), and a number of the military version are to be ordered by the Royal Air Force. Potential orders from other airlines which have signified their desire to purchase amount to another 40 aircraft—half of them from outside the U.K.

Plantation Topics

RESTRICTING OUTPUT OF INDIAN TEA

U.P.A.S.I. CHAIRMAN OPPOSES SUGGESTION

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE U.P.A.S.I. annual meetings are usually an occasion when the leaders of the largest industry in south India assemble to discuss problems of common interest. This industry buys each year goods and supplies worth about Rs. 40 crores. The U.P.A.S.I conference provides an opportunity for the suppliers and buyers of the goods and services to come into direct contact through the exhibition which is held on these occasions. The 66th U.P.A.S.I. conference, held last week in Coonoor, was in keeping with this tradition. This year, too, the planters were addressed by a senior member of the Central Cabinet, Mr. Morarji Desai.

Mr. M. M. Varghese, U.P.A.S.I. chairman, discussed in detail the plantation industry's many problems. The plantation industry, he said, is in the forefront in the productive effort of this country. More than one quarter of the country's foreign exchange earnings is accounted for by this industry. Yet it requires for its maintenance and production only one in every Rs. 235 spent on imports. Plantations are one of the heavily taxed industries in India. As an agricultural enterprise, it certainly pays the highest tax an acre to the Central and State exchequers. For instance, a tea estate in south India paid Rs. 1,270 an acre in taxes and duties last year. In Mr. Varghese's opinion, the relief in excise and export duties granted last year is "totally inadequate". He has, therefore, pleaded for a thorough examination of the whole position of the fiscal burdens levied on the tea industry now. What is required is not a temporary palliative or an *ad hoc* relief, but one sufficient to strengthen the resources of the industry to face the challenge in India's export markets; as well as the future under the pressure of a developing economy. The chairman has pleaded that the incidence of the tax burden should not be allowed to push the industry to its extinction. The present position is such that if the output is lower or the prices fall in the world market even by a few cents, the Indian tea industry's condition becomes precarious.

World Tea Agreement

South Indian producers do not fully agree with those in the north on the question of restricting production and exports when the market is threatened with oversupply. For India and Ceylon alone to resort to such a measure when there are many other producing countries eager to obtain a foothold in the world market or to enlarge their share in it, will not help them; on the other hand, their competitors would have greater incentives to produce more and dump it on the world market. The answer to this problem is to get together a wider circle of participants in an international agreement than India and Ceylon alone. What producers in India should do until this need for regulation is recognised by other producing countries, is to strive vigorously to uphold their competitive position in the world market. Mr. Varghese has suggested the revival of the International Tea Market Expansion Board. Internal sales promotion must be continued unimpaired by any short-term consideration, he added.

In his speech, the Central Finance Minister assured the planters that the Government would not impose "harassing" taxation on them, and it would always consider their difficulties if the taxes are found to be putting an undue strain on the plantation industry. As for competition in the world tea market, Mr. Desai admitted that it is growing, but the Government, he said, did not want the Indian producers to employ "unfair" methods in overcoming that competition. The maintenance of quality was one of the methods to capture the world market, he added.

The U.P.A.S.I. president maintained that the manufacturers, not the growers, were the beneficiaries of the statutorily controlled price of rubber in India during the period 1939 to 1959. He claimed that the planters discharged their obligation with the rehabilitation allowance granted to them under the protected price scheme. The members of his association have replanted at a rate slightly over 3 percent a year on their total stand and at over 4½ percent on the overaged rubber trees. If a higher rate of replanting has not been achieved, especially by small growers, the main reason is the low replanting subsidy offered by the Government. While Indian growers get a maximum of Rs. 400 for an acre, the subsidy given in Malaya and Ceylon is as high as Rs. 1,000 an acre. If the industry is to meet the full demand for natural rubber by 1980, some 200,000 or more acres should be brought under rubber cultivation. Most of this area has to be found in Kerala, which has suitable lands for rubber from all the way from Malabar to south Travancore.

Referring to coffee, the chairman has said that during the last five years the producers have doubled the crop to 50,000 tons and within the next five years, production may exceed 80,000 tons. Land reform legislation in the southern States of Kerala and Mysore is drafted in such a way that it has become a source of serious threat to the plantation industry. There can be no future for the industry without a continuous process of expansion and improvement.

New Delhi

USING NATURAL GAS FOR INDUSTRY

EXPERT COMMITTEE PREPARING MASTER PLAN

(FROM OUR NEW-DELHI CORRESPONDENT)

REPLYING to questions in the Lok Sabha on oil and gas, the Minister for Oil, Mr. K. D. Malaviya said: "An expert committee has been set up to examine the question of using natural gas, and to prepare a master plan embodying the pattern, size and location of the industries based on it, along with a comparative study of the economics of transport of natural gas and end-products. The programme for using natural gas is to be implemented in two phases. Accordingly, the expert committee has been asked to make separate studies of both. The first phase will be for the use of 30 to 35 m.s.c.f.d. of gas, and the second phase plan will be for using the entire quantity which may be available. The committee has submitted an interim report concerning the first phase. The second phase will be considered in the near future.

"As a result of the negotiations last year, the oil companies made certain *ad hoc* reductions in their selling prices (which were mopped up through additional duties), and also agreed to an examination being made by the Chief Cost Accounts Officer of the Government for the evolution of a new price formula, with retrospective effect from 1st April, 1958. This examination having been completed, discussions are in progress with the oil companies for the finalisation of a new formula on the basis of which prices will be fixed. The report submitted by the Chief Cost Accounts Officer has been placed in the Parliament library."

Cost Accountant Report on New Oil Price Formula

The following is a summary of the Chief Cost Accounts Officer's report: "The new price formula covers only the bulk of refined products and bitumen and not lubricants, greases, etcetera, as no details were furnished by the oil companies. The basis of allocation of charges for certain functions suggested by the oil companies was not agreed to fully. The claim for certain extra differentials was also not accepted as it will be difficult to assess the quantum and keep a correct watch on the recoveries. No uniform incidence of marketing and distribution charges and remuneration is allowed for motor spirit and H.S.D. oil represented auto-fuels, and aviation spirit and aviation turbine fuel representing aero-fuels.

"The unit incidence for each equated gallon of all products in 1956 and 1957 showed increases of 38 percent and 40 percent over 1948, and 42 percent and 44 percent over 1951 for Burmah-Shell; 43 percent and 35 percent over 1948 and 51 percent and 39 percent over 1951 for Caltex; and 36 percent and 35 percent over 1948 and 33 percent and 32 percent over 1951 for I.B.P., respectively. The number of depôts in the upcountry and retail pump outlets increased considerably after 1948 and 1951. The average throughput decreased progressively, thus increasing the incidence of charges.

"Salaries and wages constituted the largest element in the marketing and distribution charges. The emoluments of the higher supervisory and managerial staff formed a significant portion. The incidence of depreciation in 1957 showed an increase of 153 percent over 1942 for Burmah-Shell; 188 percent over 1948 for Stanvac; 142 percent over 1948 for Caltex; and 230 percent over 1948 for I.B.P.

"Abadan is considered as the most economical source of import. The f.o.r. quotations are based on Platts oilgram services. Marine freight is based on A.F.R.A. Only marine insurance is recognised. In case of emergency, if the Government recognises war risk insurance, this will have to be added separately. The Government may consider the possibility of underwriting by Indian insurers, thereby avoiding the outflow of foreign exchange.

Ocean Loss and Conversion Factors

"Ocean loss and conversion factors are based on the past experience of the oil companies. If any petroleum product is not imported in any port, the landed cost at the nearest port of import should apply to the hinterland of the former. Comparison of the marketing and distribution charges is made only among the three major oil companies, namely, Burmah-Shell, Stanvac and Caltex. The turnover of I.B.P. was inclusive of the consignment sales on behalf of Burmah-Shell. W.I.D.C.'s turnover was mainly for one product, namely, kerosene. The turnover for B.O.C. (I.T.) was confined only to the Assam territory.

"The explanations offered by Burmah-Shell for the increases over 1948 were inadequate. In spite of the fact that Burmah-Shell had the largest volume, when compared with the other oil companies, there was no evidence to substantiate that this company ever attempted to economise the marketing expenses. Presumably taking advantage of the position of price leader under the V.S.A. procedure, Burmah-Shell might not have exercised proper control on cost. The marketing and distribution charges of Stanvac were the lowest of the three major companies. Still, a reduction of 20 percent over the 1957 incidence of marketing and distribution charges is capable of achievement from 1958.

"Caltex's explanations were inadequate. It should be capable of effecting a reduction of about Rs. 75 lakhs to Rs. 80 lakhs even in the emoluments of the higher executives, apart from reduction in the other items of charges. The marketing and distribution charges of Stanvac, with a reduction of 20 percent over the 1957 incidence, are considered reasonable for the industry. The marketing and distribution charges fixed in the formula are inclusive of barrel storage allowance, unrecovered railway freight and fixed commission to agents and dealers. Packed-bulk differential for four imperial gallons is determined at Rs. 1.56, based on the tin-plate price of Rs. 1,196 a ton (including transport) and a consumption of 0.1118 ton a 100 containers. The ratio of capital employed to turnover showed an increase over 1948. The ratio of capital employed to turnover in 1957 was 40.82 percent for Burmah-Shell; 27.38 percent for Stanvac; and 32.54 percent for Caltex. The earnings on refining and distribution were 20.85 percent for Burmah-Shell and 17.53 percent for Stanvac on capital employed during 1955-57. The capital employed for Burmah-Shell in 1957 is considered representative and a return at 10 percent is allowed.

Final Price Structure

"The final price structure as from 1st April, 1958, is evolved for (i) ex-main installation; (ii) ex-upcountry; and (iii) ex-airfield. Railway freight has to be added further at the tariff rates based on the most economical route for bulk despatches from the nearest installation. Local duties and taxes are extra. If sales of products, for which no ex-upcountry *depôt* prices are evolved, are effected, separate rates have to be negotiated. The anticipated reduction in prices is estimated at Rs. 1.953 lakhs on an average a year for 1958-59 and 1959-60 for the formula products excluding bitumen (without any adjustment for movements of the c.i.f. elements), based on the prices as on 1st April, 1958. The short recovery in bitumen will be, on an average, about Rs. 28 lakhs a year.

"The oil companies should satisfy the Government that the average recovery towards charges and remuneration an equated gallon of petroleum products, not covered by the formula, should not exceed Rs. 0.2204 (comprising Rs. 0.1423 towards marketing and distribution charges and Rs. 0.0781 towards remuneration). The anticipated reduction is estimated at about Rs. 359 lakhs on an average a year during 1958-59 and 1959-60 on the basis of the 1957 level of charges and profit. The marketing and distribution charges and remuneration fixed should be operative from 1st April, 1958 to 31st March, 1961. The prices for the formula products, as evolved from 1st April, 1958, should be adjusted for (i) movements in the c.i.f. elements apart from reasons outside the control of the company such as changes in duties, wharfage, etcetera; (ii) increase in the level of wages for labour over 1957 brought about through Governmental action; (iii) any variation in tinplate prices over Rs. 1,196 a ton based on Stanvac."

Excise and Salt Act Amended

The Lok Sabha passed the Bill to amend the Central Excise and Salt Act seeking to give effect to the enhanced excise duties on certain petroleum products, following their surrender by Burmah-Shell. Its unilateral action has been criticised by the other two oil companies, namely, Standard Vacuum and Caltex, which had not surrendered the protective clause in their agreements. The Oil Minister, Mr. Malaviya, did not miss the opportunity to mention the two oil companies, adding that there was no justification for continuing the duty protection for them. The Minister further stated that at the time the agreements were entered into with the companies, "the conditions were different." One of those conditions, it will be recalled, was that India was then not considered an attractive proposition by the foreign investor. These three oil companies gave the lead in investment, which induced others to follow. But the reward for it seems to be a mis-representation of their case, as will be evident from the statement of Mr. Sinclair of Standard Vacuum last week. The Minister for Revenue, Mr. B. Gopala Reddy, who piloted the Bill, announced in the House that Caltex had agreed to give up duty protection on motor spirit to the extent of 2 annas a gallon from 1st October, pending the final settlement.

Civil Servant to Study Pipeline Work

The Joint Secretary to the Central Ministry of Mines and Fuel, Mr. K. K. Sahni, is leaving India on 10th September, for an extensive tour which includes Russia, the United Kingdom, the United States and Canada. While in the United States, Mr. Sahni will study the organisation of oil pipelines. According to his present plans, he will motor from New York to Canada. It has not been stated what precisely are the qualifications of Mr. Sahni for undertaking such a study.

Central Pay Commission Reports

The report of the Central Pay Commission was submitted to the Government last week. According to the lobbies, the recommendation of the Commission will involve an addition to the pay bill of Rs. 100 crores a year. Judging from the present financial position of the Government, it appears that the recommended expenditure v have to be financed either by deficit financing by a cut in the provisions for second plan schem If the former course is chosen, that will add inflationary pressures, in which event, of cour there will be a fresh demand for more dearn allowance.

Oil Refinery from Rumania

The supplies to be made by the Governme of Rumania in terms of the agreement conclud with the Government of India for the proposed refinery in Assam will include the following: (atmospheric distillation and gas oil neutralisati units; (2) a sulphur dioxide-kerosene refining un (3) a lead blending unit; (4) a coke producing ur and coke mechanised transport system; ((5) tankfarm pump house; (6) tanks farms; (7) pr duct lines; (8) main loading rack for white ar black products; (9) workshops; (10) laboratory ar sample storage; (11) the fire fighting and fire pr vention system; (12) a steam and powerplant; (1 materials like heat insulations, electric equipmer cables and lines, concrete reinforcing steel, pipin etcetera; (14) maintenance materials to cover or year's requirements like structural steel, roll iron sheets, carbon steel pipes, alloyed steel pipe spare parts, etcetera.

The Government of Rumania will also unde take to design the petroleum refinery and to er sure that the design as well as the machinery an equipment supplied conform to the best and up to-date Rumanian technical standards. The er gineers and technicians deputed to India wi render technical assistance in the constructio work and technical supervision for the erectio of the refinery. In addition, Indian technician will be trained in Rumania in the design, erectio and operation of the refinery as well as in Indi by means of Rumanian technical staff sent fo this purpose. The Rumanian Government wil also assist in putting the refinery into operatio and will guarantee the proper quality, workman ship and performance of the delivered equipmen and the rated capacities for a period of 12 months. The total value of supplies to be made and t services to be rendered by that Government wil cost approximately Rs. 5.2 crores. It has promise to advance credit to this extent for repayment i easy instalments beginning from November 195 to 31st December, 1965.

Heavy Engineering Corporation

The Heavy Engineering Corporation was regis tered under the Companies Act on 31st December 1958, with an authorised capital of Rs. 50 crores of which Rs. 10 crores has been issued and Rs. 90.0 lakhs has been paid up so far. All the shares ir the company are owned by the President of India or his nominees. Its affairs are managed by a board of directors, nominated by the President and consisting of a chairman and eight directors. The present board comprises officials only. The Government intends to strengthen the board further by the appointment of more directors in due course The company has at present three projects for implementation, namely, the heavy machine building and foundry-forge projects in Ranchi and the coalmining machinery project in Durgapur. Besides, the work relating to the optical and opthalmic glass plant in Durgapur has also recently been entrusted to it for the time being. The detailed project reports for the heavy machine building, coalmining machinery and optical and ophthalmic glass plants have since been received from Technoexport of Moscow. The project report for the coalmining machinery plant has since been considered and accepted. The other two project reports are at present under scrutiny. The detailed one on the foundry-forge plant is expected from Technoexport of Czechoslovakia by about the middle of November 1959. Preparatory work is in progress in Ranchi and Durgapur concerning the acquisition of land, levelling and dressing of the plant site, construction of field offices, staff quarters, hostels, godowns, storage houses, supply of water, electricity, etcetera.

Increase in Iron Ore Exports

The State Trading Corporation has taken the following steps to develop the export market for iron ore in European countries. Long-term contracts have been concluded with Czechoslovakia and Poland.

Some 1.4 million tons are to be supplied to the former during 1956-60. Czechoslovakia has now agreed to take 1 million tons during 1959, and is considering proposals to enter into a long-term contract on the basis of an increasing supply from year to year.

Some 550,000 tons are to be supplied during 1956-60 to Poland. Apart from the long-term contracts, the Corporation has sold substantial quantities of iron ore to other European countries including Italy, Yugoslavia, Hungary, Rumania, East and West Germany on a year-to-year basis.

Arrangements on a rupee payment basis have been worked out with east European countries, providing for the import of certain essential items from these countries subject to the condition that they agree to use the rupees so received for purchases in India of commodities including iron ore.

Discussions are in progress for the export of 2 million tons of iron ore annually for a period of 10 to 12 years to Italy and West Germany. Personal contacts have been established with the principal buyers of iron ore either through the delegations sent abroad or through the trade delegations visiting India. In order to reduce the incidence of sea freight, exports to European countries are largely made from the west coast of India. For that purpose, a number of new ports such as Kar-

war, Belikeri, Mangalore, Cochin have been opened up.

Total exports of iron ore from India have increased to 2,390,000 tons during 1958-59, compared with 2,137,000 tons in 1956-57 and 2,120,000 tons in 1957-58. Exports to European countries have increased to 970,000 tons during 1958-59, against 905,000 tons during 1956-57 and 711,000 tons during 1957-58. For supplies during 1959-60 (July-June), the Corporation has already secured contracts from European countries to the extent of about 1,150,000 tons.

Report on Sunderbans

A report entitled "Remarks on the Sunderbans" by Professor P. Jansen, Dr. J. J. Dronkers and Dr. K. F. Valken, was submitted to the Government of West Bengal in April 1959. The Professor's main recommendations are:

(1) The great master plan of building dykes on the sea-face for closing the main rivers is too ambitious for the time being.

(2) Preliminary investigations consisting of tidal gauge observations, current velocity readings, soundings for determining cross-sections and observations on the motion of sand and silt should be undertaken immediately. This will provide the basis for determining future policy on the execution of a reduced master plan for the closure of creeks and rivers.

(3) The closing of the smaller creeks in the Sagor Island and Fraserganj and strengthening the encircling dykes in accordance with the plans drawn up by the Government of West Bengal, should be considered.

Using Haldia as Anchorage

Arrangements are being made by the Calcutta Port Commissioners for working Haldia as an anchorage during the next fair weather season beginning from 1st November, 1959, and for the collection of the hydraulic data as advised by Mr. Posthuma. It is also proposed to obtain through the U.N. Technical Assistance Board this year the services of a hydraulic expert and a dredging expert, the former to study the tidal mechanism of the Hooghly estuary in connection with the location of a subsidiary port and the latter to advise the Port Commissioners on the dredging problems of the Hooghly river including the possibility of deepening the Auckland Bar and Beaumont's Gut by two to four feet by dredging, and the method of dredging most appropriate to those bars.

Ibcon (Private) Limited was appointed by the Bombay Port Trust to investigate the possibility of evolving an incentive payment scheme for mobile crane and tractor operators engaged on "ship work." The firm's report was received by the Bombay Port Trust in May 1959.

Coastal Fleet Expansion Inadequate

There has not been the anticipated expansion of coastal fleet due partly to the lack of foreign exchange for the purchase of ships for the coastal trade and partly to inadequate cargo availability on the coast, it is learned. The question of increasing the frequency of the India-Russia shipping service was considered some time ago and was dropped as it was felt that there was no scope for the employment of additional vessels. The Shipping Development Fund, set up in terms of the provision contained in the Merchant Shipping Act, 1958, is purely a rupee fund constituted mainly for the purpose of granting rupee loans to the Indian shipping companies for the acquisition of ships. The question of finding adequate foreign exchange is outside the scope of the fund.

Ships Calling at Nagapatinam

The ship *Rajula* belongs to the British India Steam Navigation Company and the ship *State of Madras* to the Eastern Shipping Corporation. These ships maintain a regular passenger service between Madras and Malaya, calling at Nagapatinam on the way. On several occasions in the past, during the monsoon season, these two vessels, after having actually called at Nagapatinam, could not lift passengers or cargo. The B.I.S.N. Company proposed to the Eastern Shipping Corporation that both ships should cut out Nagapatinam during the monsoon season. This was not agreed to by the Eastern Shipping Corporation. Representations were also received against this proposal by both the shipping companies, from the Nagapatinam Chamber of Commerce as well as from the Boat Owners Association at Nagapatinam. The position now is that while the ships will continue to call at this port during the monsoon months, it will be left to be decided by the masters of the two vessels whether any particular call should be omitted or not, depending on the prevailing weather conditions.

New Bamboo Paper Pulp Unit for Assam

Balmer Lawrie and Company has been granted a licence for the establishment of a new factory to manufacture 100 tons a day of bamboo paper pulp in Lamsakhang in the Mikir Hills district of Assam. The unit has been named as the Assam Pulp Mill Ltd. The firm contemplates the procurement of plant and machinery to be manufactured by T.E.L.C.O. in collaboration with a Swedish firm. For the balance of the machinery, the grant of an import licence has also been approved. The unit is expected to go into production in 1962. The firm has entered into an agreement with the Government of Assam for the lease of forest areas of north Cachar and Mikir Hills, initially for a period of 20 years, renewable at the company's option for two terms of 20 years each. The agreement stipulated that the company should employ local people as far as possible and offer shares worth Rs. 50 lakhs to the Government and the people of Assam. The company will also supply pulp to the paper machinery units in Assam, but the supplies will be limited to a specific quantity. The agreement can be terminated at six months' notice.

Manufacture of Rubber Chemicals

A proposal from a private firm for the manufacture of rubber chemicals has been approved by the Government, and a licence has been issued for the manufacture of diverse types of organic accelerators, antioxidants and retarders for the rubber industry. It is expected that the firm will go into production by 1961, and that the requirements of the country for these chemicals will be met largely from indigenous production after that.

Refrigerator and Air-conditioner Components

The components imported for the manufacture of domestic refrigerators and room air-conditioners are sealed and open-type compressor units, thermostats, switches, controls and some special hardware like latches and self-tapping screws. The amount of foreign exchange released during the periods October 1958-March 1959 and April-September 1959, for importing components of domestic refrigerators and room air-conditioners is given below :

	October 1958-March 1959 Foreign exchange actually used	April 1959-Sept. 1959 Foreign exchange allocated
Domestic refrigerators	Rs. 14 lakhs	Rs. 15 lakhs
Room air-conditioners	Rs. 40 lakhs	Rs. 42 lakhs

The percentage value of imported components in relation to the ex-factory price of domestic refrigerators and room air-conditioners is as follows: domestic refrigerators 15 percent approximately; room air-conditioners 21 percent approximately. Some schemes have already been approved for the manufacture of sealed compressor units and refrigeration controls, including thermostats. It is expected that with the implementation of the schemes already approved, the industry will be largely independent of imports, and by 1961, about 95 percent of the components will be manufactured indigenously.

Drawings of World Bank Loans

The following is a statement showing the amounts drawn as on 31st July, 1959, from the World Bank against the loans granted, for projects in the public sector under various Ministries:

(In millions of U.S. dollars)

Name of the Ministry	Name of the loan	Total amount of the loan	Amount drawn
The Ministry of Food and Agriculture	Agriculture loan	7.20	7.20
The Ministry of Railways	Railways (1st loan)	32.80	32.80
	Railways (2nd loan)	90.00	90.00
	Railways (3rd loan)	85.00	85.00
	Railways (4th loan)	50.00	
The Ministry of Irrigation and Power	D.V.C. (1st loan)	16.72	16.72
	D.V.C. (2nd loan)	10.50	10.50
	D.V.C. (3rd loan)	25.00	10.49
	Koyna Project loan	25.00	
The Ministry of Transport and Communications	Air-India International	5.60	5.09
	Madras Port loan	14.00	1.01
	Calcutta Port loan	29.00	2.21
	Total	390.82	261.02

The total amount of grants received from the Rockefeller Foundation in India during 1958-59 consisted of the following:

Medical Education and Public Health	$ 665,15
Humanities	$ 213,18
Natural Sciences and Agriculture	$ 864,74
Social Sciences	$ 94,77
Miscellaneous	$ 5,00
Total	$1,842,85

Russian Refinery Offer

Indo-Russian negotiations for setting up a refinery in Barauni in Bihar have run into heavy weather. According to the lobbies, the Russians have offered a second-class refinery, which India is unwilling to accept. The Russian argument seems to be that since their offer is in the nature of a gift—long-term credit at 2½ percent interest—India should accept it without looking the "gift horse" in the mouth. India has refused to accept this position and has insisted on a refinery comparable with the others in India at least. A crucial stage of negotiations has now been reached. If the Russians have no better type of refinery to offer, India may have to look elsewhere for it.

For top grade Industrial Chemicals

'SEE MONSANTO' FIRST...

Monsanto works constantly to develop new, better chemicals – and to improve those chemicals you already use. In every industry, whether it be agriculture – automotive – aviation – ceramics – chemical processing – cosmetics – electrical – foods – insecticides – mining – oil – paint – paper – rubber – soaps and detergents, there is a Monsanto chemical that will help to improve production and quality.

Monsanto Regd.

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.

U.K. FOREIGN TRADE RETURNS SHOW RISE IN EXPORTS

MOTOR-CAR SHIPMENTS SET NEW RECORD

(FROM OUR LONDON CORRESPONDENT)

THE full foreign trade returns for July, made available last week, once again show that the recent rise in exports has been surprisingly widespread. The 5½-percent rise, which July recorded over the average for the first half of the year, was spread over all the principal groups except oil products. Iron and steel exports rose sharply, while those of engineering products, textiles, chemicals, "other manufactures" and foodstuffs all increased by percentages similar to the average rise. July exports of motor-cars set a new record for that month in both number and value—53,561 motor-cars worth £20.8 million were shipped abroad. The rise of 11 percent in shipments to North America was again largely due to the continuing increase in exports of motor-cars, commercial vehicles and whisky. Clothing and footwear have also contributed to the increase compared with the first half of the year. The returns show that exports to western Europe have been going well, particularly those to France. Another trend is the rise in exports to eastern Europe, which in July were 24 percent above the monthly average for the first half-year.

Imports rose even faster than exports, but this was not entirely unexpected in view of the expansion in industry. Imports of industrial materials had been rising substantially in the second quarter, and the further advance in July brought their value to 15 percent above the first half-year rate. The detailed figures show that seasonal increases in imports of timber and iron ore were reinforced by higher arrivals of chemicals, wool and cotton. This was only partly offset by a drop in imports of non-ferrous metals. Imports of finished manufactures also continue a strong upward trend, but here the July rise was almost wholly due to deliveries of ships, which rose from a negligible value in recent months to over £5 million. Petroleum imports were £2 million higher, and meat arrivals rose by £7 million.

The Part Hire-purchase Plays

For anyone with the time to spare, the recently published *1957 Census of Distribution* is a mine of useful information on a number of subjects. The current issue of the *Board of Trade Journal*, for instance, draws upon it to present a most interesting picture of the part which credit plays in the sale of consumer goods in Britain. It shows that hire-purchase and all other forms of consumer credit amounted, at the end of June 1959, to between £17 and £26 a head of the U.K. population, or 5 percent to 8 percent of personal disposable incomes if allowance is made for a part of bank advances used as consumer credit. This falls a long way short of the situation in the United States where, according to the May 1959 return, a roughly corresponding figure would be £92 a head, or 14½ percent of personal disposable incomes. The main difference between the two countries, of course, is that in the U.K., only about 25 percent of new motor-cars are bought on credit against over 60 percent in the United States. "From these comparisons it is clear," says the *Journal*, "that there is considerable scope for a long-term expansion of consumer credit in this country."

Revised estimates, based on the results of the 1957 census, suggest that the hire-purchase and other instalment debt has not been growing recently quite so fast as was previously thought. But as the buying of durable household goods usually reaches a peak in the autumn and income-tax reliefs have added to people's purchasing power since June, a further substantial monthly growth in the debt is expected for most of the rest of the current year. But re-payments take up an increasing proportion of people's spending on hire-purchase, etcetera, and the Board of Trade suggests that "early next year, if not before, the growth in debt is expected to diminish markedly and the level of hire-purchase sales to drop back." Something of the vast mechanism for providing hire-purchase and other consumer credit is shown in the analysis of the census. It appears that in 1957 there were no fewer than 1,501 finance houses, excluding some who were not operating from the registered address last recorded. There were also 3,194 "credit traders" who called weekly on a round of regular customers to take orders and collect instalments. These sold £96 million worth of goods, largely clothing and footwear and soft household goods. Important amounts of consumer credit were also provided by mail order houses and by 721 "check issuing houses" who, in 1957, provided customers with facilities worth £60 million for buying goods from shops. Even so, the bulk of the credit for goods sold by retailers were provided by the retail firms themselves. The finance houses, on the other hand, concentrate mainly on motor-cars. How the habit of credit buying has grown is shown by the increase in the total outstanding debt owed to both household goods shops and finance houses from £448 million at the end of 1957 to £708 million at the end of June 1959—a rise of nearly 60 percent in 18 months.

Cotton Plan

As anticipated, applications to participate in the Government-sponsored plan for the reorganisation of the cotton industry rose sharply as the industry approached 31st August, the date when the offer of a 5-percent bonus payment to early qualifiers ceased to operate. With five weeks still to go during which applications may still be submitted, the minimum targets for the scheme to come into operation in both the weaving and spinning sections—45,000 looms and 5,000,000 spindles, respectively—have been reached, and it is certain that there will be a substantial rise in these figures before the month ends. The response from the doubling section of the industry is still well short of the 400,000 spindles set as the minimum, the last figure released being nearer half this, and it would appear that producers in this section are still hoping that the current revival in activity can be maintained. The number of carding engines for which applications have been received are also regarded as being disappointing, but here also there was an encouraging spurt towards the end and a doubling of the total to 5,589 in the penultimate week. Knowledgeable sources are convinced that before the end of September and the final closing date, all the targets will have been achieved without difficulty.

The rationalisation plan for both the weaving and spinning sections of the industry is now in operation and Manchester has, at long last, been given the eagerly awaited "go ahead" as far as compensation and re-equipment are concerned, safe in the knowledge that the Government will be putting up two-thirds of the expenditure and the industry the remaining one-third. In addition, with so many firms qualifying for the 5-percent compensation bonus through early application, the industry will be particularly well established to achieve the streamlining which the scheme is expected to introduce. These factors, allied to the recent slight improvement in demand for textiles, might well presage a brighter outlook for the immediate future and the first step towards making the industry more efficient and competitive in both home and overseas markets.

Machine Tool Orders Rise

With all indicators pointing to the expansion in industry, the machine tool sector, too, seems at last to be enjoying better demand. Latest figures from the metal working machine tool industry show that new orders received in May were worth £6.2 million, against £4.9 million in April and £4.2 million in May last year. Deliveries also were up at £5.2 million, against £4.9 million the month before and £5 million a year earlier. The export picture is a little more encouraging, although deliveries are still lagging behind last year. New export orders in May were valued at £1.6 million, against £1.4 million in April and £1.1 million in May 1958. Deliveries for export, however, were only £1.3 million, against £1.5 million in April and £1.7 million a year earlier. The export order-book at £15.7 million was £1.3 million less than in May last year. Total orders for the industry at end-May were £36 million, a rise of £1 million on the month but £13.7 million less than in May last year. There is still ample scope for improvement here.

Some indicators of the improving trend in industry are available from other figures recently released. The U.K. Iron and Steel Board, recording an improvement in the production of iron castings in the second quarter of this year, says it indicates that the iron foundry industry has progressed in its recovery from the serious recession of the second half of 1958, much of the recovery being based on the high level of activity in the motor-car industry, although better trade in other industries using iron castings, such as steel, engineering and public works, had played a part. As far as housing and other constructional work is concerned, provisional U.K. Ministry of Works figures for the second quarter put the value of work carried out by contractors at £481 million, which is £33 million more than in the first quarter and £24 million more than in the second quarter of 1958. That this progress is being maintained is implicit in the announcement by the Building Societies Association that the 197 societies it represents made more loans for house purchase in the three months ended 30th June than in any previous quarter, namely, over £94 million.

Aid for Depressed Areas

The Opposition was not greatly impressed with the possibilities of the Distribution of Industry (Industrial Finance) Act, 1958, being capable of making any substantial contribution to the reduction of unemployment in the depressed areas. It is now 13 months since the U.K. Treasury started distributing assistance under the scheme, and it has been disclosed that a total sum of £5 million was offered to 83 undertakings, and, as a result, it was expected that 5,370 jobs would be created thereby. Under the Act, the Treasury is permitted to give assistance to trade or business which, in the opinion of the Board of Trade, is likely to reduce unemployment in a place of high and persistent unemployment. Applications for assistance are made in confidence and no details are published. As South Wales is one of the most persistent pockets of unemployment, it is not surprising that the bulk of aid, amounting to £3.3 million, has gone to Wales. England has drawn £941,700 and Scotland £830,000.

Visitors to Britain

Britain had over 170,720 overseas visitors in June, a 10-percent increase on the same month in the previous year, which brought the total tourist arrivals in the U.K. for the first six months of the year to 544,500, or 8 percent more than in the same period of last year. Seeing that this month marks the real start of the tourist season, it is interesting to take a closer look at the details released by the British Travel and Holidays Association. Of the June visitors, 70,210 were from Europe, a 14-percent rise on June 1958, and 58,190 from the United States, a 9-percent increase. There were increases in the totals from many European countries, compared with last year. The number from Belgium was up 38 percent and from Denmark it was 25 percent higher. There were also more visitors from Italy, Spain, Finland, Portugal, Sweden, France, West Germany and Norway.

Loans for Farmers

The Midland Bank continues to show the way to the clearing banks in the matter of expanding the service which the banks can offer to the community. It is now ready to lend money for up to 20 years to finance the purchase or improvement of farms. Farmers and others, who take advantage of this service, will be required to repay the advance on an annually reducing basis. Though the bank, as with every advance, reserves the right to call in loans on demand, it will not do this unless "it becomes evident that the borrower is not farming successfully and, as a result, the farm is deteriorating." The Midland Bank must have had this idea under consideration for some time, but it would appear that it has been very quick off the mark to give effect to a suggestion of the Radcliffe Committee that "the banks should be ready to offer term-loan facilities within reasonable limits" to farmers and that the latter should have a better understanding of the services the banks offer. The Midland intends, right away, to embark on an advertising campaign designed to tell farmers of five specific ways the bank can help them. In April, the bank—in association with its hire-purchase subsidiary Forward Trust and the International Harvester Company—launched a scheme for farmers to buy machinery through monthly instalments.

Brevities

About £531,250 left Ceylon last year, largely through business men withdrawing their assets because of the Government's Ceylonisation policy, it has been reported. Of this sum, about £312,000 went to India and Pakistan and about £175,500 to Britain.

Mr. R. G. Senanayake, Ceylon's Minister of Trade, spent a couple of days in London on his way to lead a delegation from his country to an inter-parliamentary conference in Warsaw. While in London he discussed with tea importers the non-delivery of tea because of water-front strikes in Ceylon. He anticipated the situation would improve.

An agreement for co-operation between the Scandinavian Airlines System and Thai Airways, the national airline of Siam, has just been concluded. The Scandinavian airline is to be a minority shareholder in a new company to be known as Thai Airways International and will make available *Douglas DC-6* aircraft and technical aid.

CONFUSING ESTIMATES OF PLAN RESOURCES

(BY A SPECIAL CORRESPONDENT)

THE Planning Commission's latest appraisal of the position of resources and outlay for the remaining period of the second plan, has certain curious features. The conclusions in the postscript to this publication—*Plan Resources and Outlay, a Review*—show important differences with those in the original text. It suggests that "if we take the aggregate plan outlay for the first four years (of the plan) at Rs. 3,550 crores, the total outlay for the entire plan period will reach, if not exceed somewhat, the total of Rs. 4,500 crores envisaged by the National Development Council in November 1958". The Commission also considers that the extent of deficit financing estimated originally is likely to be less by Rs. 112 crores in the light of the revised estimates for 1958-59 and taking into account the data concerning the net issue of Treasury bills, the movement of cash balances and the net purchase or sale of securities. At the same time, it concedes that the reduction in Budgetary deficits for 1958-59, which is one cause for the optimistic outlook, can be attributed as much to "a shortfall in plan expenditures" as compared with the revised estimates as "to a reduction in the non-plan expenditure."

The warrant for the somewhat confusing and self-contradictory picture of outlays for 1959-60, and the rest of the plan period, presented in the *Review* is stated to be the outcome of the discussions held with the State Governments a few months ago on the subject, and the assurances given by them about augmenting the resources they will raise both for covering their revenue deficits and for outlays on plan schemes. It has been estimated, on the basis of the data furnished by the States and the material contained in the latest Budgets of the Governments, that the total outlay for the first four years of the plan will be Rs. 3,660 crores. For 1959-60, an outlay of Rs. 1,092 crores has been budgeted for by both the Central and State Governments. "Assuming that in this year again, the actual outlay incurred turns out to be about Rs. 25 to 30 crores lower than the Budget estimates, the aggregate outlay likely to be incurred in 1958-59 and 1959-60 would be about Rs. 2,059 crores. On this basis, it is assumed that the total outlay for the first four years would work out at about Rs. 3,550 crores."

Over-optimistic Assumptions

It will be seen that the Planning Commission's calculations are based on a number of assumptions; but, broadly speaking, they indicate a peculiar proneness to over-estimate recources, even while realising that it may not be possible to reach the estimates, either because of unforeseen developments or because of the State Governments not rising to the occasion and fulfil the assurances given by them. It is quite possible—indeed it is very probable—that the Planning Commission has fallen into the error of drawing a rosy picture of resource prospects in the expectation that targets prescribed—and accepted—will be fully attained. This is evident from the use of the word "expectations" in relation to the resources that the Centre and the States will provide during the next two years. If the outlay of Rs. 4,500 crores for the second plan period is to be achieved, the resources which the Centre and States will have to provide amount to Rs. 2,034 crores, whereas according to current estimates, what they will reasonably be able to provide amounts to Rs. 1,754 crores only. Thus there will be a shortfall of Rs. 280 crores—Rs. 198 crores at the Centre and Rs. 82 crores in the States. Therefore, the aggregate outlay over the plan period cannot be more than Rs. 4,200 crores.

On the whole, this appears to be a more realistic estimate than that of Rs. 4,500 crores which is the figure the National Development Council prescribed in November 1958. The Planning Commission is obviously anxious that the Centre and the States commit themselves to this latter figure. The Commission expects that part of the gap in the projected outlay will be filled by additional taxation to the tune of Rs. 12 crores which the States will impose over the next two years, and additional taxation of Rs. 40 crores which the Centre will levy. The latter figure, admittedly, does not take into account the increases in the emoluments of Government servants which have been recommended by the Pay Commission in its report. In all probability, this amount, too, will have to be found from extra taxation. It has been emphasised that "the outlay on the plan over the five-year period will, on the basis of the resources in sight, have to be limited to Rs. 4,200 to Rs. 4,300 crores".

Misplaced Confidence in States

How and why then does the Planning Commission still stick to the Rs. 4,500-crore outlay in spite of these definite conclusions reached towards the end of last year? The basic question is whether, without aggravating the already active inflationary forces in the country and without levying more exacting burdens on the taxpayer, it will be possible to find the additional Rs. 300 crores necessary to fulfil the original expenditure target. The measures of fresh taxation which the States can undertake or are asked to undertake, are mainly in the agricultural sector, such, for example, as the betterment levy, surcharges on land revenue, upward adjustments of water rates and the tax on agricultural land used for non-agricultural purposes. Among the States which are expected to make a major contribution towards the fulfilment of the Rs. 12-crore additional taxation, are Uttar Pradesh, Bombay, Madhya Pradesh and Andhra Pradesh.

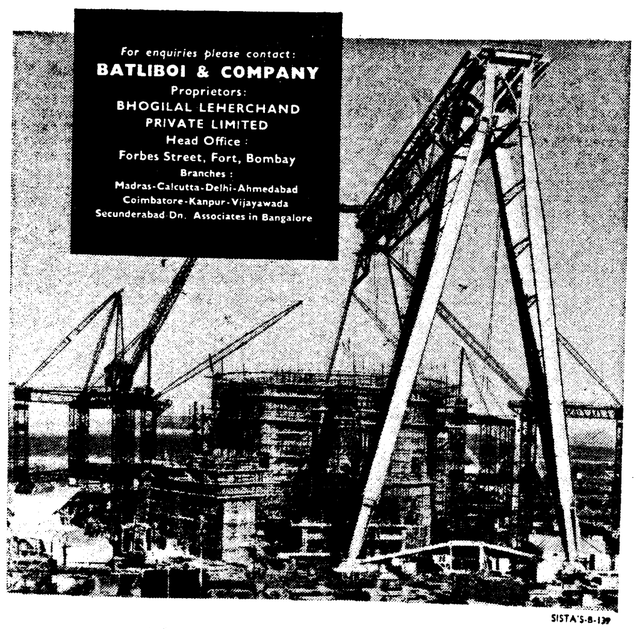
From the previous performance of these States in the matter of imposing additional taxation on land, on the agriculturist, it is not prudent to bank on that source overmuch. Already a silent storm is brewing in political circles against the proposals for increased levies on land, in spite of the fact that the urban sector is bearing a relatively higher burden of both direct and indirect taxation compared with the rural sector. As far as the Centre is concerned, there is increasing realisation that the rate of direct taxation leviable by it has reached the saturation point, while additional excises and indirect taxation will only aggravate the already soaring cost of living index, resulting in greater industrial unrest and demands for higher dearness allowances, bonuses and so on. The *Review* itself repeatedly stresses "a shortfall in the Centre's own resources". However, one factor that justifies the hopeful feeling is that the various State loans have all been fully or even over-subscribed although it only indicates that in a limited sense—the institutional sector represented by semi-official corporations like the Life Insurance Corporation—there are surplus investible funds which can be tapped. Small savings are no doubt looking up and the plan target of Rs. 200 crores from that source should be possible of attainment, if withdrawals are not excessive.

External Resources

The position concerning external resources for the rest of the second plan period is not clear. The *Review* points out that for the next two years, external resources of the order of Rs. 310 crores will be required both for the public and the private sectors for the whole of the major part of which, at the moment, there is no ascertainable or firm coverage. It may be over-optimistic to assume that the Finance Minister's forthcoming visit to foreign countries to explore the prospects of foreign aid will bring in all the assistance needed. The payments position is a difficult one, because, as the *Review* itself admits, trends in that sphere "are necessarily highly sensitive", and it is clear that by the end of the second plan, "the country will have substantial debt liabilities abroad."

In revising the estimates of plan outlays, both the National Development Council and the Planning Commission have ignored their own prescriptions and pre-conditions. The Commission, for instance, underlined in its memorandum to the Council last November that it was necessary to avoid further deficit financing, unless food production increased substantially and food prices were maintained at stable levels. The Council itself decided that in order to achieve this result, State trading should be introduced, that co-operatives should be organised on the basis of the village as the primary unit for increasing agricultural production and for mobilising local manpower and other resources, that construction costs should be economised to save steel and that compulsory savings schemes should be introduced.

Failure of State Trading



Unfortunately, the State trading scheme has run into heavy weather leading to the confession of the ex-Food Minister, Mr. A. P. Jain, that it was decided upon without serious consideration of all its implications; and mainly on account of that, the procurement of foodgrains suffered and food prices have spiralled up instead of declining. The effort to set up co-operative farms has not made much progress so far and the compulsory savings scheme still remains on paper because of the practical difficulties in the way. A new food policy is stated to be in the offing, but in the context of current thinking in the Government of India, it will not be basically different from the existing one, although some modifications are possible in the existing system of food distribution, especially the zonal arrangements.

The need for a realistic appraisal of the present situation is essential if the economy is not to be subject to severe strains in one sector while showing improvement in others. For example, while it may be true that in the heavy industries sector and in the irrigation sector, impressive results have been achieved, there have recently been indications, from more than one source, of serious shortfalls in the employment and rural sectors. Unless the progress is uniform in all sectors, the entire economy cannot contribute to the solution of the problems of national development.

SPECULATIVE ACTIVITY INDUCES EASIER TREND IN GUNNIES

STEEPING WATER SHORTAGE HAMPERS HARVESTING OF NEW CROP

SPECULATION was again prominent in the Calcutta jute goods market during the past week, but prices in general showed a downward tendency. This was due to profit-taking at the higher levels following the cornering of B Twills by bulls for the ready position. Mills, with the situation so uncertain, were completely out of the market in this period, which left the speculators a clear field in which to fight out their settling-day battles. There was an acute shortage of ready goods, not only in the speculative market, but also in the real goods market. Most mills had practically nothing to sell for the ready position, especially in B Twills, and the same was true of deliveries up to the end of the current year. Nor were mills anxious to sell for the January-March 1960 positions, as these showed substantial discounts on even the December rates. For instance, January-March B Twills were Rs. 25 a ton lower, and 40in. 10oz. Rs. 28 a ton lower, than the quotations for the end of the current year. The price gap between ready and forward B Twills showed little change, remaining at a Rs. 5 premium for October-December shipment, and a Rs. 7 premium for January-March indications.

Political activities on India's borders caused a depression in the goods market at one stage. Prices received a setback and transactions virtually ceased. The depression did not last long, but during the period futures rates for B Twills dropped below three figures. Restricted activity brought a slow recovery and overseas buyers did almost negligible business, except for special constructions. Local shippers were active in covering recent orders, which gave rise to rumours that further overseas business had been placed.

Fibre Steady

Raw jute prices remained remarkably steady in contrast to the fluctuating trend of goods. Small reductions were made in indications, but there was little sign of weakness. Offers were not being made in as large quantities as in previous years at this stage, because there was a disparity between Calcutta rates and those upcountry. The disparity was reduced during the past week, but general conditions gave the seller little incentive to do business, unless it was in specialised grades. Imports upcountry were small for the time of year, mainly because harvesting operations in many districts were still held up by the lack of steeping water. Mill purchases were on a restricted scale. According to reports, not much more than 100,000 maunds was taken up. Reports that licences had been issued for the import of a substantial quantity of Pakistani cuttings caused a temporary hardening of rates, but, contrary to expectations, there was no rush to buy cuttings by mills. This was mainly due to the fact that most buyers had already contracted for cuttings earlier, with a conditional clause attached "subject to receipt of import licence." The contract stood automatically cancelled by a certain date if no licences were procured. Small business was done by Indian mills but not enough to cause much alteration in rates.

According to the Indian Jute Mills Association, stocks of raw jute held by member-mills at the end of July 1959 showed a considerable decline, compared with the previous month. Total stocks amounted to 1,492,000 bales, being 186,000 bales less than at the end of June 1959. This fact did not cause the mills any great concern, although throughout August they bought fair quantities of jute. The quantities were in no way comparable to those in previous years during the same period. Mills' stocks were more than sufficient to meet current requirements; in fact, at the present rate of consumption, they were capable of lasting three months, by which time arrivals of new crop jute should be at a peak. So mills were not in a hurry to come into the market, especially as their stocks were 567,000 bales more than at the end of July 1958. This was a little over one month's consumption.

Little Rain in Growing Areas

Reports from the jute-growing areas of Assam continue to emphasise the lack of rain. River levels in all areas of Assam and northern Bengal are falling rapidly, and rain is urgently required. Rain statistics in the jute fields since 1st February compare very unfavourably with last year. In the Dhubri no rain was reported last week, and the total rainfall of 68 inches is 5 inches less than during the corresponding period of last year. Northern Bengal areas are in a worse plight. Last week only 1 or 2 inches of rain were recorded, against 12 or 15 inches during the same week last year. Total rainfall in Siliguri and neighbouring stations decreased by 86 inches to 105 inches, while in Jalpaiguri it decreased by exactly half to only 85 inches. Consequently, harvesting operations have been severely hampered by the lack of steeping water. In the Murshidabad and other Western and Daissee districts, there is no lack of rain; in

that of last year. Conditions are very satisfactory and harvesting well in hand.

THE JUTE MARKETS

Prices in the futures market fluctuated rapidly during the past week, mainly in the sacking section. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 27th August to 1st September, were as follows:

	Hessians 40in. 10oz. November		Sacking B Twills November		Raw Jute September	
	Rs a 100 yds	Rs. a 100 metres	Rs a 100 bags	Rs a md.	Rs a 100 kilos.
Opening	41 10	44.94	102.75	23.08	63.71
Highest	41.12	44.96	102.75	23.80	63.76
Lowest	40.22	43.98	99.60	23.24	62.26
Closing	40.54	44.33	101.25	23.32	62.48

Manufactured Goods: The market was steady at the opening after the holiday last Wednesday and B Twills adavnced by 70nP to Rs. 107.60 in the near positions and Rs. 99.50 for January-March. This was mainly due to speculative activities, as overseas buyers were out of the market. There was no interest in hessians, so quotations were unchanged at Rs. 41.10 and Rs. 40.25 for the near and forward positions, respectively. During the day, prices eased as a result of selling pressure at the higher levels, and by evening, all the gains had been lost. Friday's opening showed a depressed market. In the continued absence of fresh overseas enquiries, and the reluctance of mills to sell for any position, prices suffered a further setback. Reports and rumours about the incursion of Chinese troops across the Indian borders caused markets to slump on Friday. Heavy goods rates dropped by about Rs. 2 during the day, and futures prices reverted to two figures. On Saturday morning, ready B Twills stood at Rs. 105, with 40in. 10oz. hessians trailing at Rs. 40.60. The market remained unchanged over the week-end, but near position B Twills recovered slightly at the opening on Monday due to local shipper covering. Other fabrics and deliveries all showed reduced rates. The market was again easier on Tuesday. In the absence of business, heavy goods prices were reduced by 65nP and hessians by 15nP. As a result of civil disturbances in the Calcutta area on Tuesday, and the rumour that mill labour were being exhorted to strike during the hartal declared for Thursday, prices took an upward trend on Wednesday morning and the previous day's losses were more than made up.

Opening quotations on Wednesday morning were as follows:

	Ready	Sept.	Oct.	Oct.-Dec.
40in. 8oz.	33.55 (36.57)	33.55 (36.57)	32.25 (37.24)	32.60 (35.75)
40in. 10oz.	40.65 (44.31)	40.80 (44.47)	40.80 (44.47)	40.70 (44.36)
B Twills	105.75	105.50	103.00	101.50
Heavy Cees (Plain)	106.50	105.75	103.00	101.25
A Twills	122.00	122.00	121.25	120.50
Liverpools	116.25	115.25	114.25	112.00
Cornsacks	106.75	107.00	105.50	103.50

Raw Jute: The fibre market was mainly quiet during the past week, and the volume of business done by mills against contracts fell to about 100,000 maunds. The activities of the goods market had little influence on raw jute, and prices fell by only 25nP to Rs. 23.25 for Assam Bottoms. Although sellers were keen for business, they were not keen to reduce their rates, as upcountry markets remained firm and above the parity of Calcutta rates. Assam and Northern Bengal offers were reduced due to the hold-up in harvesting operations. In Cossipore, arrivals last week amounted to 520 wagons, which was below the average for the time of year. Mill agents and representatives were buying daily, both in Cossipore and in upcountry agencies, and good pirces were paid. Offers of old crop jute were frequent, but they attracted little interest. Mills were issued with licences for the import of cuttings from Pakistan, but as they already had these licences covered in anticipation, little business was reported. Towards the close, the undertone of the market weakened, and the civil disturbances in the Calcutta area created an air of uncertainty.

Business was reported in Dhubri-Assam at Rs. 23.25 a maund basis Bottoms, and Rs. 28 a maund for Middles, both for September-October shipment. Northern was done at Rs. 22.50 a maund basis Bottoms for the same shipment. Daissee-Tossa passed at Rs. 23.50 a maund basis Bottoms and Murshidabad Tossa at Rs. 23.37 a maund basis Bottoms for October-November. Jungli was transacted at Rs. 20.50 to Rs 21.25. (Rs. 19 for X Bottoms) and Jungli mesta at Rs. 20.75 basis Bottoms for September-October.

At the close, the market was quiet, and opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
New Crop:			
Assam	23.25	62.31	Sept.-Oct.
Northern	22.75	60.97	"
Purnea Desal	22.00	58.96	"
Daissee (Selected)	24.25	64.99	Oct.-Nov.
Assam Tossa	24.25	64.99	"
Northern (ex Calcutta)	22.75	60.97	Sept.-Oct.
Mesta:			
Assam-Northern	21.75	58.29	"
Desal	21.50	57.62	"
Daissee	21.50	57.62	"
Jungli	20.75	55.61	"
Old Crop:			
Assam	21.75	58.29	"
Northern	21.25	56.95	"

THE PAKISTANI JUTE MARKETS

FIBRE STEADY

(FROM A CORRESPONDENT)

THE Pakistani raw jute market displayed a steady trend during the second half of August. Turnover improved considerably to cover previous foreign commitments and this went a long way towards lending support to the market. Continued low arrival also added strength to it. The overseas market was steady and some interest was shown in higher grades. Local mills also showed interest and helped maintain a steady note. Reports of the rising water level created a buoyant sentiment in the market.

Pakistani newspapers recently highlighted the news that Burma has entered the raw jute export market. Buyers abrcad welcomed this development although this is likely to endanger the monopoly of Pakistan in raw jute export trade.

It is felt in certain quarters that the main factor which encouraged some of the competing countries to try hard to be self-sufficient in jute and to export the surplus output is high prices for fibre maintained by Pakistan since the Korean boom. A better policy would have been to allow larger exports at lower prices rather than the reverse of it. A spokesman of the Pakistani Ministry of Commerce recently denied the allegation made by some foreign buyers concerning the restrictions imposed on production and exports of jute from that country. He added that quality of jute was better this year and that supplies were plentiful. Referring to minimum export prices, he said that their purpose was to maintain stability in the world market rather than to take undue advantage of Pakistan's position as the largest supplier of high quality fibre.

The Jute Enquiry Commission with Mr. Zakir Hussain, Governor of East Pakistan, as its chairman, has issued a comprehensive questionnaire with a view to eliciting the views of the trade in particular and the public in general.

THE FOREIGN JUTE MARKETS

EASIER TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE jute market in Dundee was considerably quieter during the past week, and prices were easier. Some sellers were eager to accept 20s less a ton for most grades of the fibre, and there was great anxiety on the part of shippers to sell. They have not booked any business for some time and many must have very little business on their books for the current season.

For Mill Firsts, offers were made at from £107 a ton while Mill Lightnings were quoted lowest at £90, Mill Hearts £79 10s and Grade Hearts £66, September-October. Dark jute also came down but is still of practically no interest at £93 for good marks of Daissee-2/3 and £86 for Grade. Grade Tossa-2/3 was reduced to £106 and fours to £93 without creating any demand for September-October, c.i.f. U.K., Continent. Some shippers are still refusing to lower their terms and up to £109 is demanded for Mill Firsts, £92 for Mill Lightnings, £82 for Mill Hearts and Daissee. Prices of Tossa are up to £2 a ton more than the above quotations.

Spinners in Dundee are just not interested in fibre supplies. They already carry fairly big quantities of jute and, as long as the tendency is not upwards, they are content to wait. An occasional parcel is still being offered in old crop, on spot or afloat, at a bargain price and usually a sale can be effected.

The Calcutta goods market weakened for both hessians and sackings during the past week. Declining prices were not unexpected after the strong advance of a week or two ago. The easier tendency was most noticeable in the forward positions. Hessians were quoted at 61s 9d for 40in. 10oz. and 47s 3d for 7½oz. August, 61s 9d and 47s 6d September, 62s and 47s October, 62s and 48s 9d November and 62s and 48s 3d December, with B Twills at 161s 9d 160s 3d, 157s 6d, 154s 6d and 151s 9d for the respective positions of shipment, all f.o.b., Calcutta. Prices for near shipment are still about 10s higher for B Twills than they were when China started buying two or three weeks ago and the big advance started, but for November and December they are now only slightly dearer. Business in yarns and cloth is at present quiet although prices are firm.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) advanced by 0.6 percent to 117.9 during the week ended 15th August, 1959, compared with 117.2 (revised) for the earlier week. The index was higher by 0.2 percent and 1.7 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles advanced by 0.7 percent to 123.2, compared with 122.4 (revised) for the previous week as a result of an increase in the prices of bananas (+13%), onions (+10%), milk (+8%), potatoes in Delhi (+7%), coffee (+5%), eggs and chillies (+3% each), urad and meat (+2% each) and masur, gingelly oil, gur and tea for exports (+1% each) although the prices of potatoes in Kanpur (−20%), oranges (−12%), wheat in Dnanduka (−7%) and in Bombay (−5%), fish (−5%), maize, gram and arhar (−2% each) and rice, jowar, barley, mung, cashewnuts, mustard oil, tea for international consumption and turmeric (−1% each) recorded declines during the week. The index for Tobacco went up by 1.3 percent to 97.0, compared with 95.8 (revised) for the previous week due to the reappearance of flue-cured red-tied raw tobacco in Guntur at a higher level and a rise in the prices of Motihar medium in Calcutta (+2%). The index for the Fuel, Power, Light and Lubricants group stood at 115.5, compared with 115.6 for the earlier week. Prices of raw wool in Kalimpong (−7%), walnuts in Salem (−5%), and gingellyseed and rapeseed (−1% each) exhibited declines while raw wool in Fazilka (+5%) and raw hides (+1%) showed increases, and the index for Industrial Raw Materials stood at the earlier week's revised level of 118.9. Higher prices of zinc (+3%), cotton yarn (+2%), and coir yarn and tin (+1% each), raised the index for Intermediate Products by 0.8 percent to 109.4; prices of aluminium (−2%) and copper (−1%), however, showed a fall. An advance of 0.8 percent to 110.0, compared with 109.1 (revised) for the earlier week in the index for Finished Products was brought about by increases in the prices of jute manufactures (+4%) and in cotton cloth (mills) and general chemicals (+1% each). The prices of drugs and medicines, oilcakes and glass (−1% each), however, recorded declines.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53 100)

Groups and Sub-Groups	Week Ended 15-8-59	8-8-59	16-8-58

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to July 1959. As compared with June, the July Index for Food shows a rise of 17 points, while those for Clothing, Miscellaneous and Fuel & Lighting remain unchanged at 548, 292 and 282 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 9 points during July 1959.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

Groups	Weights	Group Indices

STRONG GENERAL DEMAND AT TEA EXPORT SALE

AT Sale No. 12, held on 31st August, 62,482 chests were on offer at the Export auction, for which there was a strong general demand. Plain B.P.'s and Fannings were dearer, Fannings and O.Fgs. in this category being particularly strong and often showing an advance of 10nP to 20nP. Medium B.P.s and Fannings also sold readily at generally dearer rates, especially the better liquoring sorts. Orthodox Assam B.O.P.s tended easier, except for the best liquoring kinds, which sold well while O.Fgs. found a ready market at somewhat irregular rates, buyers following quality closely. There was a better enquiry at first for C.T.C. teas, but as the sale progressed, the demand weakened and at the close, most teas in this category were 20nP to 40nP easier. The lower-priced C.T.C. teas, however, were generally well supported at about last rates. Non-wither Dooars were irregular, the cheaper kinds being firm, but the better types were about 6nP to 12nP easier. Whole leaf grades especially the O.P.s, were easier and Darjeelings were again lower, there being some withdrawals. Tippy teas were irregular and generally easier except for a few of the best which sold well.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	1.92 to 1.94	2.05 to 2.10
Plain B.P.	1.82 to 1.86	1.61 to 1.72
Plain Fannings	1.98 to 2.08	1.78 to 1.86
Medium B.P.	1.96 to 2.06	1.85 to 1.95
Medium Fannings	2.10 to 2.20	2.05 to 2.15
Best Assam C.T.C. B.P.	2.60 to 2.90	3.20 to 3.40
Best Assam C.T.C. Fgs	3.10 to 3.50	3.50 to 3.80

(Quotations are exclusive of excise duty.)

CHARTERERS FACE DELAY IN OBTAINING BERTHS

ALTHOUGH there has recently been no change in world freight markets, a number of fixtures of local interest have been made. The *Nadir* was taken for generals to China at £16,500 lump-sum f.i.o. and the *Amstelpark* at £21,000 for similar business. A small cargo of coal was arranged to Colombo at 35s and tonnage is sought for Hongkong and Alexandria. A large modern motorship was fixed for a full cargo of manganese ore Calcutta-U.S.N.H., spot loading, but with the existing congestion in the port, charterers face considerable delay in obtaining a berth. In the second-hand market, local owners are reported to have paid the high price of £71,000 for a 1943 built Park-type steamer with survey due.

HIDES AND SKINS FIRM

The market in skins continued firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 25th August and 31st August, 1959)

Cowhides : Wet Salted (ord.) 23,300 pcs. on the basis of Rs. 13 to Rs. 18; Wet Salted (Slaughtered) 19,200 pcs. on the basis of Rs. 12.50 to Rs. 15.50 and Rs. 17.50 to Rs. 27.

Goatskins : Wet Salted (Patna, Daissee, Kustia) 74,800 pcs. on the basis of Rs. 380 to Rs. 400, Rs. 440 to Rs. 470 and Rs. 500 to Rs. 520; Wet Salted (he-killed) on the basis of Rs. 5.37 and (she-killed) on the basis of Rs. 5.12; Assam-Dinajpur-Maldah-Biratnagore 50,200 pcs. on the basis of Rs. 390 to Rs. 420 and Rs. 445 to Rs. 472.50; Purneah-Kissenganj 16,100 pcs. on the basis of Rs. 440 to Rs. 475; Patna (ord.) 18,000 pcs. on the basis of Rs 380 to Rs. 395; Muzafferpore-Patna (ord.) 2,100 pcs. on the basis of Rs. 455; Muzafferpore-Purneah (heavy) 1,200 pcs. on the basis of Rs. 550 to Rs. 560.

Bazaar Stocks

(31st August, 1959)

Cowhides : Wet Salted 91,800 pcs.

Goatskins : Wet Salted (Patna, Daissee Kustia, Killed) 20,000 pcs.; Assam-Dinajpur 17,000 pcs; Muzafferpore Patna - Pakur-Purnea - Kissenganj 88,500 pcs.

LINSEED UNCHANGED

Linseed prices showed virtually no change during the past week and trading was rather limited. The tone of the market was quietly steady. Arrivals from the centres were poor and ready supplies were scarce locally. Crushers showed a moderate interest, mainly for early delivery. Reports of tension on India's borders caused some bullishness in the options market, but no material gains were recorded and activity remained small on the whole. The oilcake market was firm at Rs. 14.50. Although fair to moderate trading was reported for local consumption, shippers stayed out. In the oil section, activity was negligible. Overseas prices dropped to £103 leaving Indian quotations well above world parity once again. Local demand was exceedingly small. Latest quotations were as follows: ready-September Rs 23.75 a maund. October-November Rs. 24 a maund. September futures Rs. 23.81 a maund and May futures Rs. 22.75 a maund.

COMPANY AND PUBLIC NOTICES

THE NAIHATI JUTE MILLS COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of The Naihati Jute Mills Company Limited will be held at the Registered Office of the Company, 33, Netaji Subhas Road, (Second Floor), Calcutta, on Wednesday the Thirtieth day of September, 1959 at 3 p.m. to consider and, if thought fit, to pass, with or without modification, the following resolution as a Special Resolution :

RESOLVED that the Company doth hereby approve of the appointment of Mr. Bhagat Ram Kakrania, who is a relative of Mr. G. D. Bhagat and Mr. K. C. Bhagat, Directors of the Company, as the Jute Purchasing Officer of the Company on the terms and conditions contained in the draft Agreement placed before the Meeting and initialled by the Chairman for the purpose of identification.

THE NAIHATI JUTE MILLS CO., LTD.,
By Order of the Board,
K. C. BHAGAT,
Director.

33, Netaji Subhas Road (2nd Floor),
Calcutta, 31st August, 1959.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself. A Proxy need not be a member.

EXPLANATORY STATEMENT.

The Company intends to appoint Mr. Bhagat Ram Kakrania as the Jute Purchasing Officer of the Company with effect from 1st October, 1959 at a salary of Rs. 1,250/- per month and on terms that the employment may be terminated by three months' notice by either party. The other terms and conditions of his appointment are that Mr. Kakrania will be entitled to free furnished quarters, use of Motor Car, travelling, hotel and other incidental expenses in connection with the business of the Company and also the benefit of medical aid.

Mr. Kakrania is a relative of Mr. G. D. Bhagat and Mr. K. C. Bhagat, Directors of your Company, being a brother of the wife of the former and a brother of the mother of the latter, and under Section 314 of the Companies Act, 1956, the prior consent of the shareholders of the Company by a special resolution is required for such appointment. Mr. Kakrania has wide experience of jute markets and jute growing centres and his appointment is being made in the beneficial interest of the Company. Your Directors therefore recommend that the special resolution embodied in the accompanying Notice be passed.

The draft Agreement embodying the terms and conditions of Mr. Kakrania's appointment may be inspected at the registered office of the Company during usual business hours on any day including the day of the Meeting.

Except Mr. G. D. Bhagat and Mr. K. C. Bhagat no other Director of your Company is interested in the resolution.

BHATKAWA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of BHATKAWA TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th September, 1959, at 2-40 P.M., for the following purposes :—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956 :—

   "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. G. T. Routledge is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by a Special Resolution as a Director liable to retirement by rotation.
3. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

4. To consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto :—

   "That Mr. A. K. Jalan be and is hereby appointed a Director of the Company liable to retirement by rotation."

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 28th August, 1959.

EXPLANATORY STATEMENT

Mr. A. K. Jalan was appointed an Additional Director of the Company in July, 1959, and vacates Office at this Annual General Meeting. A Special Notice has been received from a member of the Company notifying his intention to propose a Special Resolution as set out in item 4 of the above Notice. In the said Special Notice, it has been pointed out that Mr. A. K. Jalan is an "associate" of the Managing Agents and that, in view thereof, it will be necessary for the members to pass a Special Resolution, in conformity with Section 261 of the Companies Act, 1956, if they desire to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co., Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

BUDGE BUDGE JUTE MILLS CO., LTD.

THE Board of Directors have today declared interim dividends in respect of the year ending 31st October, 1959 of 3½% on the Preference Shares and of Rs. 5/- per share on the Ordinary Shares. The provisions of the Finance Act apply to these dividends and, consequently, tax will require to be deducted therefrom before payment in accordance with that Act. These dividends will be payable to those members whose names are registered in the Books of the Company on 28th September, 1959.

In announcing the above interim dividends the Board of Budge Budge Jute Mills Co., Ltd. has also intimated that resolutions will shortly be placed before the shareholders of the Company for their consideration to provide for the Preference Shareholders to become entitled to an additional non-cumulative dividend, subject to income tax, at the rate of 1% per annum for every 1% in excess of 7% declared as dividend in respect of the Ordinary Shares in any year, up to 3% in a year.

The Register of Members and the Transfer Register of the Company will be closed from the 19th September to the 28th September, 1959, both days inclusive.

By Order of the Board,
BUDGE BUDGE JUTE MILLS COMPANY, LIMITED,
ANDREW YULE & COMPANY, LIMITED,
W. CUMMINGS,
Secretary,
Managing Agents.

Calcutta,
31st August, 1959.

SONE VALLEY PORTLAND CEMENT COMPANY LIMITED.

NOTICE

IS hereby given that the Annual General Meeting of the Shareholders of Sone Valley Portland Cement Company Limited will be held on Wednesday, the 30th September, 1959 at 4-30 P.M. at the Registered Office of the Company at 11, Clive Row, Calcutta to transact the following business :—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1958.
2. To declare a dividend.
3. To elect a Director in place of Shri V. Poddar who retires by rotation, but being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors Messrs. Lovelock & Lewes, Chartered Accountants, being eligible, offer themselves for re-appointment.

The Transfer Books and Register of Members of the Company will remain closed from the 18th September to 30th September, 1959, both days inclusive.

By Order of the Board,
S. L. TAPARIA,
Secretary.

Calcutta,
The 25th August, 1959.

Note : A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on poll instead of himself and such proxy need not be a member of the Company.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE OF MEETING.

NOTICE is hereby given that the Forty-eighth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on Friday, the 25th September, 1959 at 3-30 p.m. for the transaction of the following business :—

To receive and adopt the Accounts for the year ended 31st March, 1959 and the Reports of the Directors and Auditors thereon.

If considered desirable to declare a dividend.

To elect Directors.

To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from the 31st August to the 25th September, 1959, both days inclusive, and transfers received in order at the registered office of the Company by the 29th August, 1959, will be in time to be passed for payment of the dividend, if approved, to the transferees.

The dividend, if approved, will be paid on the 28th September, 1959 to the Shareholders whose names appear on the Company's Register on the 25th September, 1959, or to their mandatees.

By Order of the Board,
B. GRANGER PEARSON,
Assistant Secretary.

7th August, 1959
Virginia House,

DUNCAN BROTHERS & COMPANY, LD.

NOTICE is hereby given that the Annual General Meeting being the Sixtieth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta on Friday, 25th September, 1959 at 10-30 A.M. for the following purposes :—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1958.
2. To declare dividends on the Preference and Ordinary Shares.
3. To elect a Director.
4. To appoint Anditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS.

To consider and, if thought fit, to pass with or without modification the following resolutions, which will be proposed as Ordinary Resolutions :—

5. "That Mr N. C. Lance be and is hereby re-appointed a Director of the Company, whose period of office would be liable to determination by retirement of Directors by rotation".

6. "That subject to the approval of the Central Government being received and with effect from the 1st November, 1959 Mr K. P. Goenka be and is hereby re-appointed a Managing Director of the Company upon the terms and conditions as to remuneration and otherwise to be specified in an agreement to be entered into between the Company and Mr Goenka, a draft whereof has been submitted to this Meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and are hereby authorised to enter into the agreement with Mr Goenka in terms of the said draft".

7. "That subject to the approval of the Central Government being received and with effect from the 1st November, 1959, Mr L. T. Carmichael be and is hereby appointed a Managing Director of the Company upon the terms and conditions as to remuneration and otherwise to be specified in an agreement to be entered into between the Company and Mr Carmichael, a draft whereof has been submitted to this Meeting and for the purposes of identification signed by the Chairman thereof and that accordingly the Directors be and are hereby authorised to enter into the agreement with Mr Carmichael in terms of the said draft"

To consider and, if thought fit, to pass with or without modification the following resolution, which will be proposed as a Special Resolution :—

8. "That consent be and is hereby accorded to the employment of Mr G. P Goenka in the service of the Company from such date and on such terms as may be mutually agreed upon between the Directors and Mr G. P. Goenka".

The Share Transfer books of the Company will be closed from 15th to 25th September, 1959, both days inclusive.

Warrants for dividends when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research

TEA COMPANIES

O. Po. and Dd indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds	Acreage under Tea	Outturn and Average Price per lb realised for crop				Estimate	NAMES	Accounts closed	Mg. Agts. PRECARIOUS BALANCE OF THE INDIAN ECONOMY

AS a guide to the performance and prospects of the Indian economy, the annual Report of the Central Board of Directors of the Reserve Bank of India has few serious rivals. Unlike the Union Government's annual Economic Survey, it is not primarily concerned more with justifying official policies than with informing the general public. Indeed, this year the value of the Report has been somewhat increased by what appears to be a commendable effort to draw the more important conclusions from the facts presented, instead of maintaining the usual apologetic and entirely non-committal attitude towards them. Although the economic picture for the year ended 30th June is somewhat more optimistic than that for the previous twelve months, the future holds many dangers and the need for cautious and realistic policies is never been greater. Among these can be included monetary policy, the policy towards private foreign capital, export promotion and the production of food. That is why the section on "Prospects" is the most interesting one in the Report and why the warnings it gives, both explicit and implied, deserve serious consideration in New Delhi. It is to be hoped this Report has not arrived too late to influence official thinking on the third five year plan, which, as the second leading article on this page establishes, is at present progressing along very dangerous lines indeed.

Perhaps the most thought-provoking aspect of the Report is the way in which it affirms the fact often forgotten in discussions on the third plan—that India is now desperately dependent upon foreign support. There is no justification at all—indeed there ever was—for the Prime Minister's claim, made about a year ago, that if necessary the country would be able to develop using only its own resources. Foreign aid is now completely indispensable, and the larger the next plan, the more dependent it is going to be. The Report draws one of the more obvious conclusions from this fact—that the need to attract foreign private capital so as to limit dependence on foreign governments, is now imperative. There is no need here to reiterate all the well-known arguments for foreign private capital imports as against government-to-government loans; it is quite enough to underline the Report's own recommendations. It has been mentioned here before that one of the more contradictory features of the policy for making India a self-sufficient economy and one independent of outside political influence, is that the economy is now completely at the mercy of foreign assistance chiefly granted for shamelessly political reasons. As the Report insists, the time has certainly arrived when official policies should be shaped to the task of encouraging private foreign capital and, of course, the precious know-how that goes with it.

Apart from the routine warning concerning the need for food production, the Report stresses the reverse side of the inflationary medal, monetary restraint. There is no denying that the Reserve Bank has recently been tackling better the difficult task of monetary management in a developing economy. Its efforts are becoming at once skilful and effective. But such success is not necessarily guaranteed for the future if over-ambitious planning leads to the creation of more money than the Bank can effectively manage. Leaving aside the admittedly important effect of circulation velocity, deficit financing leading to excessive money creation is bound to be inflationary unless production can be increased in direct proportion. It has to be remembered that the instruments at the Bank's disposal for dealing with such inflation are probably inefficient and clumsy compared with those available to central banks in more stable and advanced economies. There is, for example, scarcely any scope at all for the use of Bank rate as a means of fine adjustment. Qualitative controls have proved reasonably effective so far. But these probably cover a smaller proportion of the economy than is generally supposed. There remains considerable scope for the type of extra-banking operation financed out of created money which can be extremely damaging for stability. The Report indicates that the Bank is well aware of the dangers involved in the inflationary situations which appear to be inevitable in the future, and of the limits of its own powers to control them unless backed by monetary policy. Along with the warnings about foreign exchange, this is the most important feature of the Report as far as the planners are concerned. The present position of partly suppressed inflation permits little room for manoeuvre, and even less room for recklessness in fixing spending targets for the next plan.

The Report's emphasis on stability is both characteristic and rational. Up to now, India's development has had the advantage of proceeding under relatively stable conditions. If this advantage is lost, not only will progress be slower, but it might well become impossible altogether in the present economic set-up. The recent rise in bank deposits—unfortunate misdirection of resources though it may be when risk-taking investment is so difficult to obtain in this country—is nevertheless an important factor in the stability of the economy. It is, therefore, difficult to share the Report's satisfaction with the arrangements which the scheduled banks have made for limiting competition for advances. The result of this competition was the emergence of a high rate of return on this particular form of investment holding, and might be taken as a symptom of the fact that interest rates in this country generally are too low. The emphasis in planning so far has tended to be on taxation rather than borrowing. It has been suggested in many authoritative quarters that this emphasis should be changed so as to free the country from the present excessive and damaging burden of taxation. There is much to be said for this point of view, and indeed, at the present time, there is considerable scope for increasing borrowing without raising the entire interest-rate structure. It would ultimately cost the economy much less to pay an extra, say, 2 percent on long-term interest rates than to continue holding back economic development with the present burdensome and unscientific tax system.

The general picture which emerges from the Report is considerably better than the planners deserve. Provided India's friends remain prepared to stand and be counted, there now seems reasonable hope that the second plan will be completed without the economy bursting under its own inflationary pressure. Whether the actual spending targets will be achieved is, of course, another matter. But the economic changes which have taken place during the past few years have left a considerably smaller margin for error. This year's harvest may not be as good as its predecessor; political difficulties on India's borders may involve increased spending on defence; imports may have to be cut further; rising prices may increase the volume of circulation of money. There are, in fact, a large number of shoals through which the economy was only sailed with difficulty last year; there may be more in the next twelve months. The problem of maintaining stability will, therefore, have to be paid considerably more attention in the future than it has been in the past. It is perhaps unfortunate that the Report makes no direct reference in this connection to the health of the rupee, although the implication is not difficult to find.

It is not always realised by the advocates of larger and larger plans how radically the shape of the economy has changed in the past few years, at least since the beginning of the second plan. It has not yet been fully appreciated that with most of the sterling balances already gone and the rupee sustained by large doses of foreign aid, little scope remains for the kind of bad planning and mistaken official policy which led to the foreign exchange crisis two years ago. The warning given in the Report about the overall stability of the economy, and the advice on encouraging private foreign capital and promoting exports, assume an altogether more urgent aspect than they did only three years ago. The rising curve of population increase and the reluctance of food production to follow it, together with the dependence of industrial expansion on foreign exchange, make it essential that a closer watch be kept on prices in future. The evidence of this Report makes clear that India still has a long way to go before the essential "take-off" phase through which she is passing is completed. Until that time, the economy is likely to remain in the state of delicate balance in which it is at present and which, in the twelve months ended June 1959, it was able to shorten by another year. This period seems likely to last at least another 15 or 20 years—that is for the duration of another three or four plans. Throughout that time, exaggerated care will be required to maintain stability in the economy so to continue with the present rate of advance. It is as well to remember that too much haste during this phase may result in a breakdown which could increase its duration by many more years. The Report indicates that the Reserve Bank has grasped this fact and is, so far as it is within its power, shaping its policies accordingly. It now remains for the Government, the planners and to a large extent the general public as well, to appreciate its full implications.

CONGRESS DREAMS UP A PLAN

THE report on the third five year plan prepared by the Planning Sub-committee of the Congress Party is a remarkable document. It promises everything to nearly everybody, without stopping to enquire seriously where the men, money and materials for the multitude of proposals it outlines are to come from. As an exercise in economic fantasy, it sounds hopeful, but is worthless. Perhaps nothing better was to be expected after the flood of pronouncements emanating recently from the chairman of the Sub-committee, Mr. U. N. Dhebar, whose belated introduction to the facts of economic life has apparently not been facilitated by the time he has been able to spare since resigning the chores of the Congress Presidency. The report is testimony to the dangerous irresponsibility now pervading the economic discussions of a large section of the Congress Party; and to the contradictions in methods as well as in aims which are being nurtured under the banner of socialism. There is little recognition of the difficulties into which the second plan has run because of economic priorities having been shuffled around on grounds of political expediency. Mr. Dhebar and his colleagues seem determined to learn nothing from the dangerous mistakes of the past four years, and to let the country continue fritter away its energies on a variety of aims which sound grand but which simply cannot be implemented at the present stage of development. Those who believe that planning implies the framing of a rational list of priorities will find singularly little in the Congress Sub-committee's report to indicate what the third plan priorities should be. Socialist nostrums are served in liberal admixture with economic platitudes; vague generalisations are allowed to take the place of consistent reasoning; bogeys are raised which do not exist; and no more than lip-service is paid to the primary need to raise production and productive efficiency.

The report recommends four main objectives for the third plan. The first is a sizeable increase in the national income in order to raise the standard of living. The second is rapid industrialisation, with particular emphasis on the development of basic and heavy industries. The third is a large expansion of employment opportunities. And the fourth is a reduction of the inequalities

in income and wealth in order to ensure the more equitable distribution of economic power. Taken separately, the theoretical virtues of these objectives need not be debated, but in terms of practical economic policy their inconsistency has long been evident. Colouring the whole report is an ingrained jealousy which calmly assumes that vast hoards of economic resources are lying all over the country simply waiting to be unearthed; and that they can be mobilised merely by putting the squeeze on "monopolistic and windfall incomes," and by attacking the "concentrations of economic power." The plea for a big plan for 1961-66 is not supported by any reasoned discussion about how the development finance is to be raised. There is talk of using the profits of public enterprises, forgetting that these too would be "monopolistic incomes" which the Sub-committee decries elsewhere, and that to inflate those profits artificially would create serious economic distortions. High hopes are placed on the profits from State trading, without bearing in mind that this has already led to a serious crisis in the cement industry and an even more serious crisis in food distribution. The plea is made that banking, insurance and other institutional funds can be diverted into Government borrowing programmes, although the Sub-committee must know that Government loans already get more than adequate support and any further diversion of funds into them can take place only at the expense of the private sector.

The report is generous enough to concede that adequate scope should be left for private enterprise even while the public sector is expanding. This marks a welcome retreat from the absurdity propounded a few months ago, especially at the Congress Planning Seminar in Ootacamund, visualising the steady elimination of the private sector. But the general trend of the report is clearly in favour of hampering the operation of private enterprise, under the guise of preventing exploitation, monopolistic tendencies and the misdirection of resources. There is little recognition of the financial and other difficulties which private entrepreneurs have to face. On the contrary, the devices which have been suggested for the purpose of mobilising resources visualise that the funds normally available to private industry will be taken away more and more for the Government's use. The idea that people need a positive incentive before they will earn, save or invest more seems never to have occurred to the Sub-committee at all. Only that can explain its strange plea for the "regulation" (that is, reduction) of incomes and salaries. Lest Mr. Dhebar and his colleagues are under the illusion that this is an indispensable manifestation of "socialism", they could do worse than note the wide disparities in income even in so-called socialist countries.

TEN YEARS AFTER

IN this month of September ten years ago sterling was devalued. The reduction of the sterling-dollar rate from $4.04 to $2.80 seemed to some observers at the time more drastic than the situation required. At times in the intervening years, there has been some doubt that the pound could be maintained even at $2.80. Now the wheel has turned full circle, and many people believe again that $2.80 sets too low a value on the pound sterling. The weeks before the tenth anniversary of devaluation have been unusually interesting. They are the weeks when, in a normal year, sterling is seasonally weakest; yet the sterling-dollar rate has been nearer to the upper limit of the margin, $2.82, than to the lower limit, $2.78. Two abnormal events occurred in this period: the New York rate for Treasury bills rose above the comparable London rate, and the premium on forward dollars in the London market disappeared.

The long tradition that short-term rates are higher in London than in New York has now been broken, and the consequences of the change are being watched. While the difference between rates in the two centres is only slight, there is not much movement of funds between them. There was no perceptible movement into London for some time before the change; so demand for forward dollars to cover short-term investment in London subsided, likewise the premium on forward dollars. While New York rates are only slightly higher than London rates, there is similarly no movement out of London on a scale big enough to cause anxiety; in any case, a considerable proportion of foreign funds is invested in bonds, or is lent to local authorities, yielding more than is obtainable on Treasury bills. Nonetheless, the appearance of a gap "on the wrong side" does tend to weaken sterling, even though the situation that caused the change is adverse to the dollar. The U.S. Treasury has a formidable financing problem to solve, and it cannot resort to the bond market, because Congress has refused to authorise a rate above 4¼ percent on new bonds, and that rate is unacceptable. Thousands of millions of dollars must therefore be raised in the next few months through the medium of short-term issues, and short-term rates in New York must, therefore, tend to rise further. This method of financing, moreover, makes the monetary system more liquid and therefore more difficult to control. It cannot promote confidence in the dollar, which has already in recent months suffered from a debit balance of payments.

Sterling, by contrast, is supported by a substantial credit balance of payments in the U.K. The balance for 1959, though it will evidently be larger than was foreseen at the beginning of the year, will certainly be smaller than last year's. But, whereas last year the U.K. had to counterbalance a decline in the other sterling countries' reserves, this year these countries' reserves have been rising. That sterling is basically strong on its own account, not merely in relation to a weak dollar, is evident from the fact that it has generally been firm in terms of the European currencies as well as the American. Some seasonal weakening of sterling has, however, occurred. It seemed until recently that the seasonal pattern had become so blurred as to be almost unrecognisable, but it has reappeared, and, though not as obvious as in some years, it has been marked because having been delayed, it has been compressed into a shorter period than usual. There is a basic tendency towards weakness in the pound in the northern hemisphere's autumn, because as a net buyer of the harvest of the northern hemisphere the sterling area has to make large payments round about August and September. Conversely, the sterling area is a net seller of the harvest of the southern hemisphere and consequently receives large payments about February and March. But the pattern has become so familiar that payers, on the one side or the other, are inclined to anticipate the seasonal change in rates, acquiring the needed currency when rates seem relatively favourable. Variations in rates due to seasonal causes are thus reduced, though, as we have seen this year, they are not quite eliminated.

The change that is most noticeable in the last two years of the post-devaluation decade is the absence of criticial forces which though they have generally become effective in the "bad" season, are not essentially seasonal in character. Sterling's last crisis culminated in September 1957, following rumours of realignment of the currencies which seemed to imply devaluation of the pound. In the third quarter of 1956 the Suez crisis broke (and, of course, its effects continued into 1957). In 1955 there was talk of widening the margins round the parities; and Britain's inflationary boom made it seem certain that if the currencies could move more freely sterling would depreciate. Only two years after the devaluation of 1949 the alternation of boom and slump in commodity prices, associated with the Korean war, caused a crisis in the finances of the sterling area and of the currency.

So through most of the decade since devaluation sterling has suffered apparent misfortune. But it has to be admitted that most of the crises were caused as much by defects in the sterling system as by fortuitous events outside it. In particular, rumours of wider margins and of realignment would not have alarmed holders of sterling if the currency had not been weak. The underlying cause of the troubles was inability to subdue inflation. Conversely, the improvement of the last two years has resulted from effective control of inflation in Britain, while in America inflation, temporarily dormant in the recession of 1957-58, has reasserted itself in 1958-59. In world conditions that particularly favoured the dollar any basic under-valuation of sterling in the first years after the devaluation of 1949 would not be easily apparent; but in the more normal conditions of the last years of this decade the intrinsic values of currencies reveal themselves more clearly. If rates were free to find their natural levels (but in Britain the Radcliffe Committee has advised against "floating" rates) sterling might not show that it had been under-valued in terms of other non-dollar currencies, but the U.S. dollar might soon show that the devaluation of non-dollar currencies ten years ago had been excessive.

CHINA'S GROWING NUMBERS

THE communist Government of China carried out a demographic census—the first systematic one ever to be held in that country—in June 1953. The operations took more than a year to complete, and their results were something of a sensation for the world. The population had increased to nearly 600 million by June 1954, from about 542 million in 1949, the year the communists completed their seizure of power. By the end of 1958, the number, it was claimed by Chinese journals, had gone up to about 680 million, or a rise of 138 million in a single decade. The rate of growth went up progressively; it was 2 percent in 1950, 2.1 percent in 1951, 2.3 percent in the two following years, 2.2 percent in 1955 and 1956, 3.4 percent in 1957 and 3.6 percent in 1958. This is partly the result of a declining number of deaths and partly of a fall in infant mortality; the latter used to be very heavy in the pre-communist period, firstly due to poverty and the consequent malnutrition and under-nourishment, and secondly due to the secret killing of female children for a number of social and economic reasons.

All these, of course, are communist claims, and many population experts in the outside world doubt the genuineness of the figures. They point out that statistics, like everything else, have become yet another tool of communist propaganda for achieving political ends; some even say that this is a well calculated move to support a demand for *lebensraum* which the communist régime is bound in the future to make against its neighbours. The occupation of Tibet is cited as proof of this. An internationally known demographer, Dr. S. Chandrasekhar, Director Indian Institute of Population Studies, Madras, who has written a book, *China's Population-Census and Vital Statistics*, after making a tour of China, is not so sceptical of the figures as the critics are. The author is no fellow-traveller and has never concealed his dislike of communism as a totalitarian ideology, but he does not subscribe to the belief that the Chinese Government has given out padded or unreliable figures. "No useful purpose is likely to be served by the People's Government announcing exaggerated figures to the outside world. Even supposing that the total population of China was not 583 million in 1953 but only 483 or 580 million, People's China would still be the most populous country in the world. What is more, all the available evidence as seen in the numerous official publications since 1954, indicate that the Government of the People's Republic is proceeding in all its economic planning on the basis of the 1953 census figures" he says. Dr Chandrasekhar, of course, does criticise the methods used to collect data and the manner in which registration work was literally rushed through by a staff with little experience of the work, in order to complete the operations before the general elections (the census was merely a by-product of the communist effort to hold "general elections" in order to prepare a list of voters of the age group of 18 and over), yet in his opinion such irregularities as there were would by themselves not render the results of the census completely unreliable in view of the other evidence which corroborates them.

The communist Government is by no means in a position adequately to meet the needs of food, shelter, education and health of the vast population in its charge, but it has been able to improve public hygiene and sanitation in a remarkably quick manner, and children especially are much better looked after in China today than they ever were. There has been a steady rise in the number of marriages also. What is more significant is that the communist Government, which once seemed terrified at the problem of numbers and, therefore, started a vigorous campaign for birth control setting target dates for reducing the number of births, has now given it up, apparently prompted by the ghost of Marx and acting under the specious theory that man is primarily a producer and not a consumer. Dr. Chandrasekhar was assured by everybody he met in China that, if anything, the country was under-populated and not the contrary as the outside world believes.

The structure of the Chinese population, as given in the author's book, is indeed interesting. This "massive aggregation of humanity" in the world's third largest country is youthful in its composition. The sex ratio is uneven—the average working out to 107.7 males to 100 females—but among infants and younger age groups (5-9), the ratio is almost equal. In terms of Sundbaerg's theories, the Chinese population could be described as one between "the progressive and the stationary types". The Chinese authorities claim that their population is both youthful and "propitious". Dr. Chandrasekhar's comment is that whether propitious or not, "China's population, if the age record is correct, is certainly a youthful one, like the populations of most Asian countries, and a favourable one for the future growth of China's numbers." The rate of net annual addition for the past three years has been an average of 21.7 million, and that makes China's population a big question mark from the point of view of world security. In spite of there being 34 "nationalities" (ethnic groups), the Chinese have now been disciplined and dragooned into one whole nation, controlled by a ruthless and totalitarian Government which is determined to build for itself a vast military force. It has to bother little about the economics of over-population since it can force the people to take what it gives and do what it asks them to do, which a democracy can attempt only at its peril. The population of China is, therefore, not only a subject for academic study and discussion by social scientists but, as Dr. Chandrasekhar points out, poses "momentous questions of concern to the world's statesmen."

Current News and Comment

The Outlook for Tata Iron

As expected, Mr. J. R. D. Tata, chairman, made a number of interesting observations about the production and dividends of the Tata Iron and Steel Company at its annual general meeting in Bombay a few days ago. (A fuller version of the address appears on a later page.) The remarks should dispel many of the doubts which arose on these points some time ago. The most important fact to note is that during 1958-59, the company's two-million-ton expansion programme has been completed. It is perhaps natural that the additional output resulting from the expansion has not been as large as some expected; the initial difficulties in working new equipment take time to overcome, and that is one reason why production has increased by only 100,000 tons. The rise in output being very small in comparison with the huge capital expenditure of Rs. 100 crores, overhead charges have been exorbitant. Meanwhile, earnings have suffered because of two other factors: (1) there was a strike; and (2) iron ore supplies were hampered by the shortage of transport. Since the proportion of semi-finished products was larger, gross profits have declined; the latter have also been affected by the fact that an increase in retention prices has not yet been announced. It is encouraging that production from the new plant is becoming more normal, although during the current year it may not be as high as was previously expected. The output during the first half of the current year has been lower. But Mr. Tata hopes that the full benefits of higher production will be reflected from 1960-61 onwards.

Considering that there is no disposable profit for 1958-59, the ordinary dividend of Rs. 6.80 a share which is being paid out of past profits looks reasonable. Mr. Tata emphasised that ideas about the dividend having been cut are misconceived. The dividend fulfils the promise given by the management in 1957. He declared: "Shareholders had then asked me what dividend they could expect, on the new ordinary shares issued in 1956-57 for an aggregate amount of Rs. 13½ crores, including premium. I stated clearly then that, barring unforeseen circumstances, it was the intention of the directors, until the new plant was in full operation and additional profits earned therefrom, to pay such dividends as would in effect maintain the previous dividend of Rs. 10.50 on the old shares and give a return of about 5 percent on the new shares, including the premium." The dividend is, in fact, equivalent to maintaining the dividend on the old ordinary shares of Rs. 10.50 and paying 5.54 percent on the new capital including premium, which is ½ percent more than the rate promised in 1957. If a higher dividend had been paid, the Controller of Capital Issues would have insisted upon issuing new shares at a premium instead of at par. As far as the dividend for the current year is concerned, uncertainties have been removed by Mr. Tata's observation that, "barring unforeseen circumstances, it would be the intention of the directors to gross up the dividends so that, after deduction of tax, shareholders would earn approximately the same return as under the present formula, that is, Rs. 10.50 on the old ordinary shares and 5 percent to 5½ percent on all shares issued after April 1956."

Investors are worried that the additional cost of this to the company during the next three or four years, under the provisions of the Finance Act, 1959, will amount to Rs. 1 crore a year, including the loss of income tax recovered on dividends on preference shares which the company used to retain but which it will now have to pay over to the Government.

Coal Shares Drop

The prices of coal shares have declined during the past couple of weeks, Burrakur having fallen from Rs. 17.75 to Rs. 16.75 and Pench Valley from Rs. 26.12 to Rs. 24.94. Investors are disappointed that only a small increase of 50nP a ton has been allowed in the price of the commodity. The rise does not compensate collieries adequately for the increase in costs which has occurred in recent years. It is, therefore, feared that the industry's working will remain unremunerative unless a more realistic price is given to producers. A further increase of at least Rs. 2 a ton is considered necessary. The Government's decision is based on the recommendations of the Coal Price Revision Committee. It is regrettable that after having taken a much longer time than it was expected to, the Committee has produced a report which is not only out-of-date but is based on a number of doubtful assumptions. The report gives the impression that conclusions were first formulated, and then began the search for supporting assumptions. In view of this, it is not surprising that the latter are unrelated to facts. For example, it is hard to understand how the Committee calculated the average cost of production of coal as Rs. 17.90 a ton. To begin with, there can be no "average" cost of production in the industry, since costs depend upon a number of factors which are beyond the control of colliery managers. Apart from the costs imposed by statutory obligations—many of which are unnecessary—expenses on raising coal vary according to physical conditions.

The cost of production, as calculated by the Committee on the basis of various assumptions, is of little relevance. The expenditure on many items, such as stores, equipment and labour amenities, has increased considerably since the investigations were made in 1957. The assessment of depreciation and development rebate is highly unrealistic. It is surprising that the Committee should have assumed a capital cost of Rs. 20 a ton for purposes of expansion, although the State collieries in fact spend Rs. 60 a ton for expansion. Since the price increase is niggardly, efforts to raise output are being discouraged. This is unfortunate as a shortage of coal is developing. Expansion has already slowed down and collieries will have great difficulty in implementing their projects because of the shortage of resources. Any money that the good collieries could plough back into the business has been mopped up by the increased costs of the past few years. New money is difficult to obtain from the market as the working of the industry is uneconomic.

The official decision is particularly harmful for collieries producing inferior coal. They have not only been denied a price increase, but have been handicapped further by the decision to convert the present prices into ceiling prices. The change will encourage uneconomic competition, and a number of marginal collieries may be forced to close down. There is no justification for introducing ceiling prices as long as the many distribution and other irksome controls remain. A larger output of inferior coal is needed if the superior grades are not to be used wastefully. So it is necessary that ceiling prices be converted back into statutory prices. Collieries in Madhya Pradesh, Bombay and Orissa have been unfairly treated, as they will not enjoy the advantage of a price increase until their coal is graded. Grading will take a long time, so they should be given the same price increase of 50nP a ton forthwith. The Committee has taken a realistic view of stowing. As it is necessary both for the conservation of coal and as a safety measure, the decision to subsidise the entire cost of stowing is welcome.

Rydak Tea and Mangaldai

The sluggish movement in the shares of the Rydak Tea Syndicate Ltd around Rs. 31.12 during the past week or so is partly because of a cautious assessment of prospects, especially of Dooars gardens, and partly due to the fact that investors have been scanning the proposal to purchase a new tea estate—the Kopati estate in Darrang district of Assam—from the Behubor Company Ltd for Rs. 28 lakhs. The Kopati estate is owned by the Mangaldai Tea Company Private Ltd, whose capital consists of 75,000 ordinary shares of Rs. 10 each, fully paid up. The garden has 404 acres under tea and 352 acres are lying fallow. A further 259 acres of the property are suitable for clearing and preparation of tea areas. Rydak's existing gardens (at Rydak and Kartick) are situated in the Dooars, and there is little scope for expansion. So the directors think that the purchase of the new estate will help employ resources more profitably. It is proposed to acquire the entire share capital of the Mangaldai Tea Company Private Ltd, and thereafter to take steps to amalgamate the companies, taking into account the liquid assets of Mangaldai amounting to Rs. 12 lakhs. This reduces Rydak's net outlay to Rs. 16 lakhs, which represents the cost of the Kopati estate. Over a period of three years up to 31st December, 1958, the Mangaldai Tea Company Private Ltd has earned a profit of Rs. 4.15 lakhs before taxation. Although it is claimed that the purchase price is extremely advantageous on the basis of expert valuation, it looks as if the valuation has been made on the basis of growth prospects as well as current earnings. Considering the heavier statutory obligations the industry is being asked to shoulder, it remains to be seen whether Rydak's investment will prove remunerative in the long run.

Subject to the consent of the seller, Rydak proposes to pay the purchase price partly by the allotment of fully paid shares in Rydak which are to be issued at a premium of Rs. 20 a share, provided that the total number of shares to be issued will not, in any event, exceed 30,000. If the seller does not agree to this proposal and wants payment in cash, the directors of Rydak propose that the shares of the latter, which would otherwise have been allotted to the seller, will be offered to the shareholders of Rydak at a premium of Rs. 20 a share on a rights basis. Rydak has earned a profit of Rs. 10.04 lakhs during the year ended December 1958 and a dividend of 25 percent has been declared, against 20 percent. At the present price the yield works out to 8 percent. Output increased from 2,091,520 lbs to 2,216,400 lbs. Estimates for 1959 have been made for a crop of 2,074,080 lbs.

Control of Capital Issues

The Central Government's decision to raise the exemption limit laid down in the Capital Issues (Exemption) Order, 1949, from Rs. 5 lakhs to Rs. 10 lakhs is welcome, even though it accepts only partially the suggestions made by the Advisory Committee on Control of Capital Issues. The Committee recommended that the exemption limit be raised to Rs. 15 lakhs. Considering the enormous rise in the value of industrial raw materials, land and machinery, it has become almost impossible even for relatively small industries to make much headway with their plans with Rs 5 lakhs. It is doubtful whether Rs. 10 lakhs now can buy as much as Rs. 5 lakhs did 14 years ago, when the old exemption limit was first fixed. The rise in the Economic Adviser's index for wholesale prices from 244.2 in 1945 to 436.7 in 1958-59 does not fully reflect the increase in capital required for setting up new industries. The Government does not say why it has not accepted the figure suggested by the Advisory Committee. Considering that in 1958 only 13 percent of the total issues were for less than Rs. 25 lakhs, the relaxation does not seem to go very far. But one should perhaps be grateful for small mercies. The Government can argue that since the exemption limit applies to capital raised within 12 months, and small and medium industries are unlikely to need more than Rs. 10 lakhs in any one year, they can now push ahead without having to go through the official routine and various irksome formalities.

While the Government has taken a decision on revising the exemption limit, it has still to make up its mind on certain other recommendations made by the Advisory Committee on Control of Capital

issues. The Committee suggested that the 20 percent residual reserve test need not be rigidly enforced and should be suitably modified where necessary. Another important recommendation related to the issue of bonus shares. The condition that a company should not be allowed to issue bonus shares in a year when it has no assessable income is said to operate harshly. New Delhi will be well advised to accept the expert body's suggestions in view of the pressing need to maintain the morale of the capital market in a developing economy. Another question which has been worrying the capital market lately is the uncertain attitude adopted by the Controller of Capital Issues in sanctioning the terms for the issue of fresh capital by old companies. Many companies have been allowed to issue new shares at par, but in certain cases the Government has insisted on the shares being issued at a premium. Opinions will differ as to whether companies whose shares are quoted at many times their face value should be asked to issue new shares only at a premium. But many feel that the Government should formulate a definite policy on this question. If a premium is to be charged, there should be some basis for determining how big it ought to be. The record of dividends and price movements in the shares of the company over the preceding few years might, perhaps, provide a rough basis for fixing the premiums.

Land Ceilings in U.P.

According to a memorandum appended to the Land Ceilings Bill introduced in the U.P. Legislature, the cost of taking over surplus land will be about Rs. 9.65 crores. This figure is based on the estimate that about 1.6 million acres will be rendered surplus by the imposition of land ceilings, and the acquisition of each surplus acre will cost roughly Rs. 200. The ceiling for land of "fair average quality" is 40 acres for a family of five or less, 48 acres for a family of six, 56 acres for a family of seven, and 64 acres for a family of eight or more. Land of which the circle rate is above Rs. 5 an acre will be treated as of "fair average quality", and a formula is prescribed for calculating the ceiling on land of other than average quality. As for compensation, the Bill fixes it at the value of the land as laid down in the Land Acquisition Act, namely, market value plus 15 percent solatium. Its clauses incorporate the various executive instructions issued from time to time for determining the market value. The compensation is to be paid partly in cash and partly in bonds. It may be recalled that some States suggested to the Law Commission that, as in Britain, the need for giving solatium should be done away with; also, that the market value should be determined on the basis of the use to which the land was being put and not the potential use. The Commission admitted that in Britain, except in cases of acquisition for statutory undertakings like railways and gas companies, the law did not provide for a solatium or for market value on the basis of potential use; but it held that these principles should not be adopted in India as British jurists even had criticised them. The U.P. Bill provides that where the surplus land is more than 15 acres in area, landless *kisans* will be settled on it; if it is less than 15 acres, it will be handed over to a co-operative farming society. About 18 categories of land, including sugarcane farms belonging to factories, are exempt from the ceiling. But mechanised farms are not exempt; here the U.P. Bill makes a questionable departure from the recommendation of the Planning Commission and also the practice followed in certain other States.

Deposit Rate Ceiling Reduced

The revised all-India inter-bank agreement fixing maximum rates of interest on deposits was made effective from 2nd September. The ½ percent cut now enforced brings down the new ceilings to 3½ percent for deposits of three months and over, and 3½ percent for deposits of less than three months, including deposits at seven days' notice. It was in September last that 38 scheduled banks, excluding the State Bank of India, got together and agreed to fix maximum rates of interest on deposits; these were put into effect from October 1958. The purpose of the move at that time was mainly to stop the unhealthy competition for deposits. But the motive for the latest reduction seems to be different; it is to keep down the increase in interest charges resulting from the growth of time deposits. Scheduled banks' deposits are continuing to rise. During the 12 months ended 21st August, 1959, they have increased by Rs. 240.07 crores to Rs. 1,778.45 crores. Demand deposits have remained almost unchanged at Rs. 720 crores, but time liabilities have increased from Rs. 817.75 crores to Rs. 1,058.73 crores. Half the increase in total deposits is accounted for by the State Bank, the rise in its case being Rs. 120 crores. The marked decline in imports on private account has not only affected banks' business but released large funds lying with the trading community. Most of these funds have flowed into time deposits. Of course, the spurt in time deposits is also due very largely to the accumulation of P.L. 480 funds with the State Bank.

It will be interesting to see how much the banks will manage to save by the ½ percent cut in the ceiling on deposit rates. On 21st August, scheduled banks' time deposits totalled Rs. 1,058.73 crores. It is safe to assume that at least 30 percent (which was the position at the end of 1958) of these belonged to the State Bank, which is already paying lower rates of interest. This leaves about Rs. 740 crores. Allowance should be made for the fact that the agreement covers only 38 banks and not all the member banks have been paying the maximum rate of interest. It is estimated that the saving from the cut may not exceed Rs. 1.5 crores. Interest on deposits paid by all the scheduled banks in 1958 amounted to Rs. 34.5 crores. Considering that the scope for reducing establishment charges is limited, even a small saving through lower interest rates will be welcomed by bankers. Whether the cut will hamper the growth of deposits, it is difficult to say. If it does, banks may take the short-sighted view that they have nothing much to worry about because they seem to possess more funds than they can usefully employ outside the gilt-edged market. This is evident from the increase in investments, during the year ended 21st August, 1959, from Rs. 563.82 crores to Rs. 723.87 crores.

Banks' anxiety to reduce their costs is understandable. But the proper method of increasing profits lies in finding new ways of using their funds. They need to reorientate their lending policies and explore the possibilities of term lending. Advances to small-scale industries are still low, but the scope for expanding them should be considerable in a developing economy with a bias in favour of smaller units. The difficulties are admittedly many, but they can be overcome. Banks need to show more initiative and enterprise in evolving suitable techniques for term lending.

Power Supply for Hindustan Aluminium

It is difficult to understand whether political or economic reasons are inspiring the sustained criticism of the U.P. Government's decision to allocate 55,000 kilowatts of electrical energy from the Rihand dam project to the Hindustan Aluminium Corporation. The attack was first made on the ground that after the large allocations to the Corporation and to the railways, there will be little energy left for the tube-wells in the eastern districts of the State. Now the critics have switched their attention to the price at which it is proposed to sell power to the company. Basing their comments on certain Press reports, they maintain that the proposed rate of Rs. 150 a kilowatt will mean a loss of Rs. 1 crore to the Exchequer. Answering the charge, the Chief Minister, Dr. Sampurnanand, has said that the price which is now being negotiated will not cause a loss of even 1nP to the public purse. It is true that the proposed rate is much lower than the Rs. 468 a kilowatt which the Irrigation Department pays the Electricity Department for running the tube-wells. It is also very much lower than the Rs. 958 a kilowatt which the State Government, it is reported, has quoted for the railways. The price which the Madhya Pradesh Electricity Board is negotiating with the Bhilai steel plant authorities is reported to be nearly twice as high as that for the aluminium factory. But the fact remains that the proposed rate for the latter is not so uneconomic when compared with the rates for tube-wells from the Ganga grid (Rs. 155 in the western districts of the State) and from the Sharda project (Rs. 179 in the central districts). If the aluminium factory and the railways had not taken most of the output from Rihand, it might have been possible to correct the unbalance in the eastern districts also. But now that they are there, it is necessary to ensure—as Dr Sampurnanand has said—that they are not driven away. According to him, the Government can reduce the rates for tube-wells at any time, but once the aluminium factory is located elsewhere it will not be possible to bring it back.

Madras Electricity Board to Borrow

The Madras Electricity Board's forthcoming issue of 4½ percent bonds worth Rs. 3 crores is intended to finance the extension of the power supply in rural areas. Institutional investors are expected to support the issue since the Board has a strong financial position. The accounts of the Pykara and Mettur hydel systems show that depreciation and reserve funds have been built up steadily. The 4½ percent bonds which were issued at Rs. 99 last year now quote Rs. 100.55. The latest issue at par may meet with a satisfactory response in view of the remarkable success of the 4 percent State loans which were floated recently. The completion of the Kundah scheme with foreign aid and the revision of the [illegible] tariff from 1st October are favourable factors. Market circles think that the bonds will command attention because they are classed as an approved security. Furthermore, the Board has been earning a fair return on its capital investment. Its assets exceed Rs. 106 crores and it is now capable of supplementing its resources for expansion by independent borrowing on the lines of the Central Electricity Board in Britain. Electricity development should not be hampered by parsimony, and the success of the new issue will help implement an ambitious programme of rural electrification in Madras. Subscription lists for the issue will open on 17th September; the bonds are redeemable at par in September 1971.

U.S. Economy and the Steel Strike

The U.S. steel strike continues and as yet no break is visible. The First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions says that the remarkable ability of the economy to withstand the crippling of one of its key industries has been high-lighted by the record or near-record levels of employment, income and retail sales. Production in most lines, except those directly involved, is still at high levels. From now on, however, as long as the strike continues and as more and more firms exhaust their stockpiles, lay-offs and shut-downs will tend to spread. Business confidence is strong in spite of labour troubles. The feeling is general that once a settlement is reached the economy will surge to new heights. With booming sales and spending power, renewed upward pressures on prices assert themselves. A minor, but perhaps symbolic, advance of 1 percent in the consumer price index has occurred this summer. The pattern set by the steel contract can, of course, have a critical effect on commodity price movements in the months ahead. As steel stocks dwindle and pressure for a settlement mounts, it is earnestly hoped that all parties involved will recall their often-expressed desire for a non-inflationary settlement. In copper, which is strike-bound, as in aluminium and other industries where negotiations are in progress, managements generally are following the strong anti-inflationary stand taken by steel officials and are seeking changes in union working rules to improve productivity as a consideration for increases in wages or other benefits.

The first month or so of the steel strike caused little more than a ripple in the economy outside steel-producing centres. During July, non-farm employment, personal income and retail sales held up better than usual and, on a seasonally adjusted basis, reached peaks beyond any previous experience. Preliminary reports for August show the economy coasting along through the summer slack period at relatively high levels. Consumer buying, as reflected in sales by department stores and new motor car dealers, has been generally well maintained in August. Even in some steel-making centres, sales are up from last year. Overall industrial activity in July was only slightly below the June record. The Federal Reserve index of industrial production (seasonally adjusted 1947-49=100) dipped to 153 from 155 in June, but was still well above any previous July. Between June and July, steel production was cut by more than half, but the index of metal fabricating activity rose by 2 percent and other major durable goods lines also advanced. Production of textiles, apparel and other non-durable goods continued to boom.

These high rates of output reflect sustained consumer demand and business confidence. Among steel-consuming industries, they also reveal what a vast accumulation of steel of all varieties took place before the strike. Even after six weeks' shutdown of the mills, steel warehouses did not report general shortages of any types. Major durable goods producers continue to express confidence that their supplies will last well into September, and many hope, through exchanges or special purchases, to stretch stocks into October. Here and there, however, complaints of steel shortage are being heard. Naturally, the impact of the strike will be felt more broadly the longer it lasts. August business reports are unlikely to be as good as those for July, and September may be off further if a settlement is not achieved soon. Yet the impact of previous steel strikes on industrial production has been neither deep nor lasting. The current strike, however, has already exceeded in length the 1956, 1949 and 1946 steel walk-outs.

Madras Stock Exchange Reports

The Madras Stock Exchange, which has been operating under new rules since it was given statutory recognition, has recently presented its second annual report. This shows that it has earned a handsome profit after providing for taxation. Referring to the recent meeting between the Stock Exchange committee and the L.I.C. investment committee, the report states that the results have been gratifying; this might be by the Exchange. The increase of Rs. 1 lakh in the latter's bank deposit opens up the possibility of acquiring separate premises; dealers say that the Exchange is negotiating for the purchase of a building in George Town. At present, it publishes a daily list and a yearbook, which many investors have found useful. Although membership is still limited, there is a distinct widening of outside interest in Madras shares, especially since forward dealings started.

Third Birthday of L.I.C.

The Life Insurance Corporation celebrated its third birthday on 1st September with the happy feeling that it has almost got over its teething troubles. When life insurance was nationalised on 19th January, 1956, and the Corporation started functioning on 1st September, 1956, many felt that the baby had been prematurely delivered. The integration of 245 separate institutions, widely varying in size, financial strength and administrative efficiency, was a task which could hardly have been completed within a period of eight months. Those who undertook the job lacked experience and foresight. Many thought that two years, if not more, was necessary for completing the integration of such complex and varied institutions. A prolongation of the custodian régime would have given the breathing time and helped establish the administrative apparatus for proceeding with the work of integration. The Corporation's initial troubles were mostly due to the mismanagement and haste in bringing it into being.

During the first year of nationalisation, the Corporation secured new business, Indian and foreign, worth Rs. 171.40 crores. The figure rose to Rs. 287.10 crores in the following year. By the end of July this year, it is reported that the Corporation has already done business worth Rs. 346.69 crores. This is a fair achievement if the immense difficulties it has had to face are remembered. In years to come, it is expected to show better results. A programme has been drawn up to ensure that by the end of 1960 all the business of the former insurers, except that of the major units, is serviced by the Corporation's divisional offices. The major units having considerable business on their books may continue to function for some time more. Foreign business, which was poor in the initial months following nationalisation, is now reported to be making slow and steady progress. The Corporation's five year plan visualises that business will increase to Rs. 1,000 crores annually.

Cotton Exports and Imports

The trade has welcomed the announcement of a 75,000-bale export quota for Bengal Deshi cotton. This will enable the outstanding orders for 25,000 bales placed by Japanese importers to be completed almost immediately, leaving a balance of 50,000 bales. Although Pakistan has reduced her prices for the competing variety, Indian exporters believe that they will be able to sell the entire quantity before the end of the year. The optimism seems to be justified in view of the present overseas demand, but it is pointed out that if the export quota had been announced earlier, further substantial sales would have been negotiated before the price reduction took effect in Pakistan recently. Perhaps no serious harm has been done, but there is some risk in not taking immediate advantage of an export demand whenever it occurs, particularly in the case of a commodity like cotton which is liable to sudden price fluctuations. Once again, a part of the export quota has been reserved for co-operative societies. This is surprising, considering that their past performance has been poor and there is no reason to believe they will fare any better now. The announcement of the cotton import quota, meanwhile, has been welcomed by the industry, but the trade feels disappointed because it has been excluded from its benefits. The latter might perhaps have some justification in pressing its claims, but on balance it appears that the Government's policy in confining the quota to mills only is sound. Cotton imports have been linked with export incentives, so mills will be encouraged to stimulate their textile sales abroad.

Activity in domestic cottons has revived, and the March contract has risen to Rs. 693. The main reason for the increase is that the new season's crop is expected to be somewhat smaller because of adverse weather conditions in Punjab, Berar and Khandesh. With a reduced carry-over, it is thought that a cotton scarcity might occur. But this seems an unduly pessimistic view; imports have now been restored to the normal 600,000 bales, and since there is a definite swing in demand from coarse and medium cloth to fine and superfine counts, long-staple Egyptian cotton will tend to offset the shortage of domestic growths. The rise in the spot market has been helped by mill buying

A CENTRAL BANK FOR INDIA

IN view of the scheme to establish a State Bank in India, with a capital of 15 crores or £15,000,000—we presume on the model of the Bank of England—it may be interesting to give a list of our Indian Banks with their capital, reserve funds and gross profits for the year ended 30th June last. Here it is:—

Name	Capital	Reserves and Rest	Profit
	Rs.	Rs.	Rs.
Bengal	2,00,00,000	98,91,810	26,79,331
Bombay	1,00,00,000	78,50,947	14,95,102
Madras	60,00,000	25,83,966	5,68,647
Allahabad	5,00,000	9,73,900	2,34,900
Alliance	10,00,000	11,68,000	2,26,965
Calcutta	10,00,000	8,03,380	2,40,485
Commercial	40,00,000	12,57,723	2,87,599
Oude	3,00,000	1,99,181	69,439
Punjab	1,78,750	1,47,488	51,804
Upper India	10,00,000	5,02,364	2,12,414
	4,39,78,750	2,53,78,759	60,66,686
	6,93,57,509		8.75 per cent

It will be seen that the total capital, reserve funds, etc., of our purely Indian Banks are under 7 crores of rupees, and that the gross profit made for the year ended 30th June worked out 8.75 per cent. Banking therefore is profitable. In addition to the above Banks we have a number of Exchange Banks, but it is impossible to say how much of their capital is devoted to India. Their total capital and reserves are:—

	£
Agra	624,374
Chartered	1,314,212
Delhi	342,289
Mercantile	594,052
National	806,340
	3,681,267
	$
Hongkong	21,950,000

It will thus be seen that the capital of the proposed State Bank will far exceed the total capital and reserves of all the Indian local and English Exchange Banks. It seems to us that this Bank is too big an order.

How banking helps the

COCONUT OIL INDUSTRY

India ranks second among the coconut growing countries of the world. During the Second Five Year Plan, the Coconut Oil Industry, which is almost exclusively South Indian, has to fulfil a target of 210,000 tons!

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the industry

We at Palai are proud that so many leading coconut oil producers of South India employ the complete banking service we offer.

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office : PALAI, KERALA STATE.
Branches at : Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. *Also at* Delhi & New Delhi.

A LEADING BANK IN SOUTH

Without Prejudice

Editor Commits Contempt of Court

(FROM OUR LEGAL CORRESPONDENT)

"EDITORS of newspapers will do well to have at least a nodding acquaintance with the law of contempt before embarking on editing newspapers. That will help to save themselves and to improve the public standards of a public Press. That it (the committing of the contempt) should be done in this case by a responsible editor of a responsible paper is the more unfortunate. It enhances, and not reduces, the guilt of the contempt." (P. B. Mukerji J.).

"If the letter addressed to the Chief Justice had the effect of obstructing the course of justice, the question that the author of that letter had not the intention of obstructing it, is immaterial in deciding whether he was guilty of contempt. But .....this is a circumstance to be taken into account in awarding the sentence." (S. C. Lahiri J.).

".....That he (the editor) was overwhelmed with sympathy for.....and the sufferings of his family does not provide the slightest justification or extenuation of his conduct." (K. C. Das Gupta J.).

Thus three eminent judges in the case we are to consider, and their lordships' several observations, the first of which came as news to the writer, are instructive. They indicate that: (1) a higher standard of conduct is expected from the editor of a newspaper than from an ordinary educated member of the public; hitherto we had thought they were on the same footing; and (2) good and even praiseworthy intention are of no avail as a defence, although where they exist, the punishment may be lessened on that account. Motives, good or bad, are immaterial.

The punishment for contempt is unpredictable. It may be jail or a fine or both; and the term of imprisonment, which may be indeterminate and not for a fixed period, and the amount of the fine is within the discretion of the court. Punishment may be lenient or drastic in that discretion; and when we remember that, only a few years ago, the editor of a famous London daily was sent to prison for six months without the option of a fine and the directors fined £10,000 for comments in the daily—certainly most reckless and unfair to the accused—on an alleged murderer while his trial was still pending, P. B. Mukerji J.'s advice to editors to have "at least a nodding acquaintance with the law of contempt" seems a typically British under-statement.

And that brings us to the Calcutta case we are to consider. In the High Court, two Rules had been issued by the Chief Justice. By one of these, a well-known and respected editor of a Calcutta daily was directed to attend before the court in person and to show cause, either in person or by an advocate, why he should not be committed or otherwise dealt with for contempt of court committed by addressing and causing to be delivered to the Chief Justice at his private residence a letter and thereby attempting to interfere with the course of justice in a suit pending in the court of Mitter J., and by the other Rule a young gentleman, who later turned out to be 17 years 4 months old, was in like terms directed to show cause, etcetera, for aiding and abetting the editor by delivering, at the private residence of the Chief Justice, a letter from the editor and also for committing contempt himself by verbally asking the Chief Justice to intervene as Chief Justice in the pending suit and to induce Mitter J. to hold up judgment in the case.

Reading the above in cold print, you may think it astonishing and even unthinkable that an experienced, cultured gentleman, such as this editor undoubtedly is, should not know better than to be "guilty" of such conduct. But it is much more common than you may think. We are all apt to assume that a benevolent, even praiseworthy, motive for an action innocently done with no intention whatsoever of committing any offence and no knowledge that it was being committed, is innocuous, especially where the object is not to obstruct the course of justice but to see that justice is done. The writer remembers an incident—and knows of several more like it—where an acquaintance of his in Assam had an old and valued servant, his personal bearer, whom he knew to be scrupulously honest. The servant was charged with theft, and his master wrote to the trying magistrate saying that he knew that the man's character was such that he would be incapable of the dishonest act with which he was charged. Fortunately, someone suggested that it would be unwise to send the letter and he took legal advice on it, which was to the effect that if he delivered the letter, he would be guilty of contempt of court.

To return to the Calcutta editor's case, the Chief Justice was working in his office-room when two young men came to see him and one of them handed over to his lordship a closed envelope containing a letter. This letter was signed by the editor who added, after his signature, the words "Editor, Daily....." The writer drew the attention of the Chief Justice, whom he addressed as "My dear Phani Babu", to the helpless condition of the defendant in the case pending before Mitter J., describing the former as his intimate friend, and after stating that the gentleman was a bedridden patient and that his daughter was laid up with paralysis added: "Quick decision in this case will mean throwing them all in the streets and B.....will at once die of heart failure. Please see that they get time as they are doing their level best to pay up.....The case is pending in the court of the Hon'ble Justice Mitter and I hear judgment is about to be delivered on Tuesday next. Please request the judge to hold up judgment so that the family gets time to move in the matter. It is a question of life and death for B..... Please do all you can to stay proceedings and judgment. I am their guardian and I appeal to you to come to their help."

With every sympathy with the excellent motives of the writer of that letter, by sending it he was indeed asking for trouble. It would have been misguided enough if he had written to his lordship's judicial superior—*primus inter pares*—the Chief Justice of Bengal, asking him to commit himself what we think would have been contempt of court by interfering with another judge in the exercise of his functions. This was altogether too gross a contempt to be purged by the "humble and unqualified apology" which the editor tendered, although the apology did induce the three judges constituting the court to punish the contempt by fine instead of imprisonment.

Said K. C. Das Gupta J. (S. C. Lahri and P. B. Mukerji JJ. concurring in separate judgments): "That such conduct on his (the editor's) part amounts to grave contempt of court cannot be and is not disputed before us. While it is unnecessary and indeed unwise to attempt a definition of what constitutes contempt of court, it is settled law that conduct which interferes or is calculated to interfere with the administration of justice amounts to contempt of court. It is not for the protection of the court but the protection of all litigants before the court, that it is necessary for the court to see that no outside influence is permitted to divert the course of justice. The temple of justice is wide open on the front and any party may come to (it) and either by addressing the court himself or by a duly appointed advocate try to influence the judgment of the court in the manner recognised and permitted by law. But the temple of justice has no opening to the rear, and any person who tries to pierce a back door to the temple of justice is thereby trying to destroy that temple, the proper maintenance of which is necessary for all who live in an organised State. Indeed the folly and wickedness of an attempt to divert the course of justice by writing to the trial judge or by writing to the Chief Justice requesting him to speak to the trial judge in the matter are so patent that I am astonished to see that a person advanced in years as (the editor) is and holding an important and responsible position as the editor of a daily newspaper could think of writing such a letter. The statement in his affidavit that he was overwhelmed by his sympathy for (the defendant) and the sufferings of his family, does not provide the slightest justification or extenuation of his conduct. It is a matter of grave concern to us that anybody, especially anybody holding an important position in life and having experience of life, should think even for a moment that when he is 'overwhelmed' by sympathy for somebody, he can write to the Chief Justice of this court and thereby influence judgment in favour of his friend. It is foolish on the part of any person to attempt such interference. It is wicked because he is thereby trying to defeat justice that might be done to another."

In view of his humble apology, the editor was let off lightly with a fine of Rs. 100 and ordered to pay costs. The youthful abettor, when asked by the Chief Justice on delivery of the letter, "how could you dare to bring to me a letter like this?" had pleaded his sister's paralytic condition, and was fined Rs. 100 without costs.

DURGAPUR

IS GETTING READY

At the Durgapur steelworks at this moment, nearly ten weeks ahead of schedule, the first Simon-Carves coke oven battery is being gradually and carefully heated up to operating temperature.
When this highly skilled process is finished, the coke ovens will be ready to supply coke for the first blast furnace to produce Durgapur's first pig iron.
Simon-Carves, a leading member of the British consortium ISCON which is building the Durgapur steelworks, are privileged to be the first contractors to put their plant into service—plant which is vital to Durgapur's coming production of another million tons a year of Indian steel.

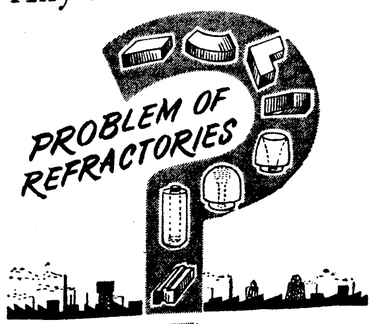
A Ditcher's Diary

MY MODEST CONTRIBUTION TO THE RETURN OF PEACE in Calcutta, I decided, would be that I should not scribble on it while the city was burning. Now that the affair is over, or so let us hope, I find myself unable to congratulate any party either for the trouble or for its ending. An eminent physician's diagnosis of the "disgraceful" conduct of just about everybody—the Government, the Opposition and the passive victims—has commended itself to many, although I do not know that this kind of wholesale distribution of blame, which comes so easily to leader-writers, helps anybody: we are all guilty, so there's no question of punishing anyone. Yet, so many were killed and so many more injured. It is perhaps too much to expect politicians, in or out of office, to think of people in terms of individuals—a woman's son, another's husband or brother—or movements or wars would be impossible to wage. But it is at once a frightening and saddening thought how dehumanised we have all become. We see in the papers that so many have been killed, and we are scarcely moved. In many ways ours is a humane age; the cruelties of the Middle Ages, for instance, are all but unknown outside communist countries today; but death is quicker and the hand of the Reaper is aided by that of the hooligan. The man or men who slit the throat of the policeman in Howrah; is he or are they at peace with themselves, do they eat and sleep exactly as they had been doing before? I have heard that policemen were in some instances aggressive. Are these men now uneasy in the mind? Then those members of the public who saw all this going on around them and felt themselves impotent to do anything about it. Are their consciences troubled? I am afraid I am doing the same thing as the doctor, blaming everybody. There is a difference though. I have raised the question of individual conscience, for I know that the collective conscience has ceased to prick and I know that it is not an administrative problem of law and order at all when so many people are ranged on one side or the other. I would have every citizen of Calcutta and Howrah think that, no matter what he did or did not, he was a participant in the recent riots. It is now for him to punish himself.

LIKE THE ANIMALS' RACE IN *Alice in Wonderland*, political incidents in India these days have developed the habit of ending up by everybody getting prizes, if only consolation ones. The L.I.C. scandal was a good example; now there is this business of General Thimayya's resignation. In his report to the Lok Sabha last week, which he appeared to intend should close the matter, Mr. Nehru distributed prizes all round—the Government, the Defence Minister, the Services. In fact, to everybody concerned except the General himself; he is accused of giving way to a purely temperamental impulse at a most inopportune time for his country. If this is really so, and if as Mr. Nehru says, there never has been any question of political appointments in the Services (something which those who occasionally follow India's affairs in responsible foreign publications will have heard about months ago, together with the suspected motives for them), then I can surely not be alone in wondering why the Prime Minister bothered to persuade General Thimayya to withdraw his resignation. Surely such a man could not be fit to lead his country's army in time of national emergency; and now that he has had a public wigging from the Prime Minister like any schoolboy caught in the jam, how can the General hope to command the respect of his officers? Commanders-in-Chief are not supposed to be *prima donnas*, or to be subject to hallucinations; if General Thimayya has such tendencies then he has missed his vocation and the sooner he is replaced by an emotionally more reliable officer the better. Yet such characteristics are not what we have come to expect of the General from past experience; rather does it seem that like a good soldier he is doing his duty as it has been explained to him by allowing himself to be chastised in public to save some political face or other. And did we not read something about Vice-Admiral Katari and Air Marshal Mukerjee being equally temperamentally inclined? All this is very disturbing, because at a time when India's borders are threatened the morale of the armed forces, like Caesar's wife, must be above suspicion. I should have thought the best way to allay once and for all the widespread anxiety this matter has caused would be to hold an open enquiry, or at least permit a Lok Sabha debate—certainly it is not the method which is becoming all too common these days of condemning the newspaper which first publishes the news. Of course, as we have seen lately, enquiries have their limitations. But something of interest might be revealed; and from the attitude of the communists towards the affairs, one cannot help having suspicions as to what it might be.

WHAT IS CHINA UP TO? A WHOLE WEEK HAS GONE by since I asked this question here, and Mr. Nehru has meanwhile given some further information on the subject, but I am no nearer an answer. I have in the past toyed with the thesis that China might now be passing through an intensely Stalinist phase, and hence the rigours at home and intransigence abroad. I am not sure that an apter parallel would not be that she is going rather through a Napoleonic phase, for it will be remembered that Stalin settled for socialism in one country and bothered as little as possible about the world outside. Not so China, and it is not India alone that is seeing a trifle too much of her. The Chinese hand in Laos is only too obvious, and there have been murmurs in North Korea. The theory that it is internal pressure within which makes Messrs Chou and Mao use tensions abroad as diversions, can perhaps be taken too far; in any case, it assumes a greater degree of sensitivity to discontent within than it is possible to credit the communists with. Or is all China's cussedness to be attributed to the fact that she has not yet been found a seat in the United Nations? She must know that none of her recent activities abroad improve her prospects. Or is China out to embarrass the Soviet Union which is preparing to make some accommodation with the United States? Possibly, but it is not easy to see how continuation of the cold war is to China's advantage. Estrangement between Russia and her existing and potential friends, India and the United States, may conceivably oblige the Soviet Union to lean exclusively on China as the only remaining friend, but the Chinese may be over-estimating their bargaining power with the Russians. After all, there is the precedent of the non-aggression pact with the Nazis; and the Kremlin is capable of unexpected, almost desperate, steps. There is no way of measuring the amount of goodwill China has lost in Asia and Africa in the last few weeks—that party in Cairo was a pointer—and what is China gaining instead? The whole thing is excruciatingly puzzling but, of course, I must appreciate that Mr. Chou may have more important things to do than satisfy my curiosity.

THE READINESS OF EUROPEAN VISITORS TO THIS country to believe the frankly unbelievable about the magic of *sadhus* and the like will never cease to astonish me. The tale about the Indian rope trick, for example, was not carried to every corner of the earth by Indians themselves, but by Europeans—Britons, to be exact—who claimed to have seen it or had it on reliable authority. This sort of mystification is still going on, for I find the following story in the 8th August issue of the perfectly serious, and in fact rather highbrow, Australian journal *The Observer*, published in Sydney. It is signed by one Hugh Atkinson, and I should explain that the point of his article is to poke fun at westerners who come here looking for the "Higher Wisdom". Having mocked these gullible innocents, he calmly adds on his own account:



"I observed in India, at the time of the great Kum Mela, acts that are quite beyond rational explanation. In one instance a recluse demonstrated the apparent power of seeing through solids at discretion. He could recite the contents of a drawer or pocket with almost perfect accuracy. At another time, in the company of a Parsi psychiatrist, I saw a magician hypnotise a subject and stop his pulse. The pulse appeared to die beneath the observer's fingers. The magician then ordered the subject to take his tongue in his teeth and proceeded to cut off the tip with a scalpel. The observers were handed the severed tongue for inspection. After some minutes the severed tongue was re-applied to the butt, the pulse rekindled and the subject woken from his trance. A crooked white scar approximately marked the point of severance, and the tongue was then intact".

Mr. Atkinson, to his credit, has retrospective doubts about this unusual experience. First he calls it a "minor miracle", but he also offers the "explanation" given him by his Parsi psychiatrist, that it was a "controlled hallucination while we ourselves were hypnotised"; though if he literally believes that, I do not see why he opened his tale with the warning that it was "quite beyond rational explanation". Anyhow, this just substitutes one miracle for another. Of course, I am not calling Mr. Atkinson what *he* calls the wisdom-seekers: "a credulous westerner". He has quite plainly had an odd experience which he cannot explain. But so have I—when I read Mr. Atkinson's article.

THE SAME AUSTRALIAN JOURNAL GENEROUSLY TELLS against the Australians a story that reflects on local customs. A new Italian migrant, recruited to the Army, drew a knife in a fight. "The offence was serious enough to warrant parading him in front of Colonel Hindmarsh at Victoria Barracks. The kindly old gentleman used the occasion to deliver a short sermon on the Australian way of life. He pointed out that he saw no objection to a brawl. A man must be able to stand up for himself. But a knife! Tch! Tch! 'Since you're in Australia why don't you fight the Australian way?' 'I'm sorry, sir', was the soldier's reply, 'but I didn't have a bottle handy'."

GOING DUTCH

is indeed a treat!

It's gay, it's light, it's witty. In fact "Going Dutch" is a sparkling comedy show—the Continent's only musical in English running till September 1959—presented by Playhouse International at Bellevue Theatre, Amsterdam.

As reported in the New York Herald Tribune, Paris, "'Going Dutch' is worth going to Holland to see ." And it is so easy for KLM to take you to Amsterdam on your way to almost any major European city—at no extra fare!

Don't just fly..... FLY KLM

THE TATA IRON AND STEEL COMPANY, LIMITED

CHAIRMAN, MR. J. R. D. TATA EXPLAINS DIVIDEND POLICY

The following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Fifty-second Annual General Meeting of the shareholders of The Tata Iron and Steel Company, Limited, on Wednesday, 2nd September, 1959 :—

Ladies and Gentlemen,

It has been customary for me to open my remarks at these meetings with a review and discussion of important economic trends and events with special reference to those which impinge on business and industry in general and our own affairs in particular. I shall this year curtail such remarks to the minimum, as I know that shareholders are specially concerned with the situation and developments within our own Company and would wish me to give them as complete a picture as possible.

Economic Trends

On the international front, the year under review was high-lighted by the spectacular end of the third economic recession in the western world since the war, by the outstanding economic progress made by, most of the countries of Western Europe and, unfortunately, by the developing crisis in many parts of South Asia reflecting growing political or economic chaos, in striking contrast with the situation in Europe.

What do these world-wide trends portend for India ? The troubles in a number of countries in South Asia, which have led in most of them to the emergence of military dictatorships, naturally have for us potentially serious repercussions. They contain a warning of the inevitable consequences of poor or corrupt administration, doctrinaire or unrealistic economic policies and of the resultant dissatisfaction amongst the people.

The political stability of our governmental institutions, with the temporary exception of Kerala, and, even more, the stability of the Indian rupee, have brought prestige to India and confidence in her future throughout the world. In political circles abroad there is goodwill and real appreciation of our needs and of what we are trying to achieve for our people. In financial and business circles there is growing confidence in our ability to withstand disruptive forces and to ensure orderly development along with a dawning realisation of the long-term potentialities of the Indian economy; there are also in Europe and America increasing funds seeking investment abroad and a growing willingness to invest both money and technical and managerial skills in under-developed countries.

To the extent that the buoyant economies and general feeling of optimism in the western world must lead to increased prosperity, world trade and travel, the favourable background to our own situation, which I have just mentioned, should be further improved. With restraint in international affairs in keeping with a genuine policy of neutralism and with realistic economic policies at home, there is much that we could legitimately gain from the present world situation.

In that context the portents would be discouraging if one were to judge only by the views expressed from time to time by the left wing of the ruling party which is also the most vocal, as often happens with minorities, and which, unfortunately, seems to influence the long-term economic thinking of the Government and the Planning Commission.

Doctrinaire Socialism

On the eve of the Third Plan, little seems to have been learnt in these doctrinaire circles from the mistakes of the past or from the post-war economic history of Western Europe and Japan. They still cling to an outmoded nineteenth century conception of socialism; they stubbornly ignore the immense changes which have taken place since then, which have led, on the one hand, to the modern democratic welfare State nurtured by a dynamic form of "people's capitalism" and, on the other, to the totalitarian Socialist State generally under Communist rule. They still believe in ideological solutions for economic problems. For instance, the food problem is to be solved not so much by meeting the down to earth needs of the farmer in water, seeds, fertilisers, credit, storage, marketing facilities and the like, as by the magic wands of land reform, co-operative farming, State trading and bureaucratic intervention; the growth of industrial production is to be achieved not so much by stimulating initiative and rewarding honest and productive work and thus encouraging people to work, save and invest, as by State capitalism and the heavy hand of bureaucracy. According to them the Private Sector, with its wicked profit motive, should be eliminated. Pending that happy day it should be rapidly surpassed by the Public Sector and made more subservient to it. Banks and large-scale industry should be nationalised forthwith; there should be ceilings on holdings and incomes; interest or dividend incomes, being immoral, should be taxed out of existence; only self-employment or employment by or through the State should be permitted; above all, people should not be allowed to exercise individual judgment or initiative; only Government and Government officials really know what is good for them. Therefore the bigger the Government, the more pervasive its controls, the more obedient and docile the people, the happier everyone will be!

In a way, the fact that this sort of thinking has recently been openly and seriously discussed in the higher counsels of the party in the context of the Third Five-Year Plan, is a good thing, for it brings out in the open the present schizophrenia in the Congress Party's economic philosophy and makes thinking people realise fully where they might be led. Already there are signs of a restiveness in the country and in the party itself against extreme leftist doctrines and policies. In this context, the categorical assurance recently given in Parliament that Government had no intention to nationalise the banking system either today or in the foreseeable future is very welcome and I hope that Government will find opportunities to make similar reassuring statements of policy in regard to other sectors of business and industry.

Progress and Setback

To come to our own affairs, the year under review has been one of the most difficult ones in our history. It has been a year of achievement as well as of disappointment. On the credit side we may count the completion and commissioning of the new plant, and the conclusion of a three-year agreement with the Union for a comprehensive revision of the wage structure. On the debit side were the lamentable Communist-led disturbances and strike of May 1958, the delay of about six months in the completion of the plant as compared to the original target, and the low rate of initial production achieved, reflected in the low profits for the year. We have thus made considerable progress and at the same time suffered some setbacks. Although we may deplore the latter, there is no cause for despondency, for the setbacks are temporary while the achievements are of a permanent nature and should soon bring their expected rewards.

New Plant

Although it will have taken us longer than we hoped to get the planned additional output from our new plant, there is no question but that we shall get it. I believe some stories have been circulated to the effect that the new plant built is incapable of producing the rated output although Kaiser Engineers have spent on it far more money than was originally sanctioned. There is no truth in these rumours. It would have been surprising if a project of such magnitude and complexity and carried out with such speed had been wholly free from errors or defects, but the design, lay-out and quality of the new plant as a whole and of all the major units in it are entirely sound. A large iron and steel plant, however carefully designed and built, cannot produce at the maximum rate immediately after its construction and it is the common experience of steel-makers throughout the world that it takes considerable time for all the new facilities included in an integrated plant to be brought into full operation. So far as the capital cost of the plant is concerned, the excess over estimates has been on the whole quite small. Excluding such items as enhanced import duties, increases in the amount of spares purchased by the management and additional items of construction or plant not included in the original scheme, the net excess has been well below 10%.

Paradoxically, we have suffered to some extent from the very maturity and long experience of our organisation. Had we been entirely new to this industry we would have employed a large number of foreign experts and technicians for starting and operating the plant while our men were being trained. For reasons of economy as well as morale we did not do so, except to a very small extent, and our staff have had to learn the hard way to operate new equipment and to adapt themselves to new techniques and new processes. It is, incidentally, interesting to note, and to the credit of Kaiser Engineers, that in the construction of our new plant, which is comparable in size and capacity to that of the Government plants, the number of foreign engineers and technicians employed on the project was only a small fraction of the number employed at Rourkela and Bhilai. Even the construction labour force at Jamshedpur was, at its peak, much smaller than at the other plants.

Initial Operating Difficulties

The difficulties we have had, and still have, in achieving a higher rate of output in the plant, have been largely concerned with the quantity and the quality of the raw materials received at Jamshedpur, with the operation of the ore crushing and screening plant, and with Steel Melting Shop No. 3.

There has been a progressive deterioration in recent times in the quality of both iron ore and coal received at our Works and it is most unfortunate that this trouble should have reached its climax just as the new plant was coming into operation and when we could least afford it.

In the case of coal, the situation has been aggravated by the delay in the installation by Government of a coal washery at Bhojudih earmarked for washing coal destined for Jamshedpur. In consequence we are compelled to use an excessive amount of high-ash coal which adversely affects the quality of iron as well as the rate of output of iron from the blast furnaces.

In the case of iron ore, our operations had been planned on using a certain proportion of ore from our new Joda mine which, mixed with ore from our older mines would have given us the most suitable blend. Unfortunately, the Government railway line to Joda was considerably delayed and is still in the process of consolidation. It suffered heavily during the present monsoon, and could not deliver to Jamshedpur anything like the required tonnage of Joda ore. We therefore had to use larger quantities of ore from the other mines with the result that the composition of the ore mixture has been unsatisfactory and has led to irregular blast furnace operation and low production of iron.

The initial operation of the ore crushing and screening plant has not been satisfactory up to now partly owing to troubles with the plant itself and partly owing to the high moisture content and irregular quality of the ore received during the present monsoon.

To turn to steel making, the new Steel Melting Shop utilizes a scrap/blown metal process which is new to this country. Although the furnaces and Bessemer converters used are not very different from those in S.M.S. No. 2 which give us no trouble at all, the process itself is more complicated and requires greater speed, timing and co-ordination between the various sections of the shop and between the latter and the blast furnaces. These we hope to achieve in the coming months.

Furthermore we are for the first time using fuel oil in open hearth furnaces and lack of experience in the use of this "hotter" fuel has resulted in an abnormally large incidence of furnace breakdowns, and consequently in poor furnace availability and output, apart from considerable added expenditure on repairs which is reflected in the relevant part of the Profit and Loss Account. In order to expedite progress in this plant, we have recently decided to secure from abroad the temporary services of a very senior expert in steel making and also of some furnace operators. With their help and the growing experience of our own men, we hope to get over most of the present difficulties in S.M.S. No. 3 in the reasonably near future. There should also be an appreciable improvement in pig iron output from the next month onwards when we may expect more regular supplies of better blended ores. I must repeat, however, that full production from the blast furnaces and the steel melting shops will always depend on full and regular supplies of suitable ores and reasonably low-ash coals. The latter requirement must await the completion of the delayed Bhojudih coal washery to which I referred earlier.

I am glad to say that, apart from normal minor tuning troubles, the new rolling mills have shown themselves to be sound and will undoubtedly roll all the steel the melting shops can supply to them.

Financial Results

While the difficulties and problems from which the plant has suffered in its initial period of operation are not of a serious or permanent character and will undoubtedly be put right in time, they have, in combination with the delay of about six months in completing the plant, had a serious effect on our Profit and Loss Account as shareholders will have found, possibly to their dismay, from the accounts for the year 1958-59. The reasons for the lack of any distributable profits last year have been set out in the Directors' Report. The basic cause, of course, was that after spending about Rs. 100 crores on the plant, we produced during the year under review only about 100,000 tons more steel than the rated capacity of the old plant. It is obvious that the additional revenues from such a small tonnage could not bear the overhead charges on Rs. 100 crores, in addition to the heavy non-recurring expenditure incurred in bringing the new plant into operation and the losses inflicted by the strike which took place during the year.

It must also be remembered that the gross profit earned per ton during the year was substantially lower than in the preceding years owing to increases in costs which have been only partially compensated by increases in prices and also owing to the composition of the output which consisted of an abnormally high proportion of semi-finished products on which the margin of profit is naturally lower than on fully finished products.

Most of these adverse factors will automatically disappear when the plant operates at full or near full capacity. Only then will we obtain the benefit of lower costs and higher labour productivity resulting from the vast investment we have made in new plant and machinery. The most determined and comprehensive efforts are being made to overcome present difficulties as quickly as possible and we hope that we shall reach an acceptable rate of production by the end of the current financial year. Because of the poor production in the first half of the year, however, the total output for the year must remain substantially short of the original target and the benefits of a higher output can therefore only be expected from 1960-61 onwards.

Current Year Prospects

While we shall, I hope, make substantially more steel, the overheads per ton will probably be almost as heavy as in the past year. For instance, even at the flat rate of 6¼% on gross block which the Board have decided to adopt for depreciation from this year onwards, the charge on this account next year is likely to be in the neighbourhood of nine crores of rupees while interest charges will rise to about three and three quarter crores. The increase in wages under the new agreement with the Union will also swell our costs so long as we do not get the full output.

Much will depend again on the extent to which the Tariff Commission and Government are willing to compensate us for increased costs and on the price scheme they will adopt from 1960 onwards. I am sorry to say in this regard that in the last year or two Government have been somewhat unresponsive to our problems. For instance we have been claiming, unsuccessfully so far, legitimate increases in the price of pig iron due to us under the uniform price scheme adopted by Government. Again although Government had undertaken to increase retention prices to the full extent required to compensate for the increase in excise duty on ingots from Rs. 4 to Rs. 40 per ton from 16th May, 1957, they have chosen to adopt a formula under which we have recovered something less than the extra duty paid, and we have not been able so far to make Government see the justice of our claim.

A number of other items of increase in costs, including the higher cost of power supplied by Government from the D.V.C grid, has been similarly disallowed with the result that we are suffering in the aggregate a loss of revenue under these heads of about Rs 19 per ton.

Government's Attitude Towards Private Sector

I hope that this unsympathetic approach to the legitimate problems and difficulties of our industry does not reflect a hardening attitude on the part of Government towards the Private Sector. While those forming part of this sector may not agree with all the present economic policies of Government, they have repeatedly made it clear that the Private Sector accepts the general objectives of a Welfare State; it favours a reasonable degree of planning and control; it does not ask for or believe in 19th century *laissez-faire*; it condemns corrupt practices and abuses wherever they occur, and particularly in its own ranks. All it wants is to be allowed to contribute to the fullest extent to the industrial development of the country and, in the process, to earn and pay a reasonable return on the monies entrusted to it. It asks no special favour but claims the right to live and serve the country in dignity and in peace and to be afforded some relief from the surfeit of Government controls and interference.

In our own Company we have gone to great lengths to be helpful and co-operative. Not only have we willingly undertaken a crushing load of debt and imposed upon our management and staff a great burden of added responsibility and strain in the construction of our new Works, but we have gone out of our way to co-operate with, and to be helpful to, the Public Sector of the steel industry. Our relations with Hindustan Steel could not be more cordial at all management levels and their spokesmen have been good enough to recognise our helpfulness and co-operation. There is a natural fraternal spirit among steel makers anywhere, and I am happy that our and Hindustan Steel's staff, some of whom, incidentally, have come from our own ranks, are mutually so friendly and co-operative.

Dividends for 1958-1959

I am aware that some shareholders of this Company have felt somewhat aggrieved at this year's dividend and are worried as to the likely dividend next year and in subsequent years on the much enlarged capital. I would like first to put the record straight in regard to the dividend your Directors have recommended. From the sharp reaction in the market when the announcement was made, it is clear that many shareholders either expected an increase in dividend this year or have wrongly interpreted the Directors' decision as a cut in the previous year's dividend. I have not been able to understand how such an impression was created in the minds of shareholders, as I thought I had made the position amply clear at the annual general meeting in 1957 and again last year. Shareholders had then asked me what dividend they could expect on the new Ordinary shares issued in 1956-57 for an aggregate amount of Rs. 13½ crores including premium. I stated clearly then that, barring unforeseen circumstances, it was the intention of the Directors, until the new plant was in full operation and additional profits earned therefrom, to pay such dividends as would in effect maintain the previous dividend of Rs. 10.50 on the old shares and give a return of about 5% on the new shares, including the premium.

Your Directors have more than fully carried out this undertaking during the last two years and the dividend this year is in fact equivalent to maintaining the dividend on the old Ordinary shares of Rs. 10.50 and to paying 5.54% on the new capital including premium, which is ¼% more than the rate promised in 1957. While there has thus been no cut in the dividend, I put it to you that it would have been little short of irresponsible for the Directors to have raised the dividends in one of the worst years of the Company's history when there were no disposable profits and dividends had to be paid out of reserves, when the outlook for the subsequent year was still uncertain, when labour had to bear a heavy cut in their bonus and when the Company had applications pending before Government for the issue of new shares at par and for a review of retention prices.

Dividend Policy

The position was fully explained to a delegation of shareholders sponsored by the Bombay Shareholders' Association at the end of July and I think it is only fair that I should repeat today the statement I made at the time regarding the next year's dividend. I was asked whether shareholders could at least count next year on the same net dividends after deducting the 30% tax under the Finance Act, 1959 or whether the same gross amount would be paid with a resultant cut in the hands of the shareholders. My answer was that, barring unforeseen circumstances, it would be the intention of the Directors to gross up the dividends so that, after deduction of tax, shareholders would earn approximately the same return as under the present formula, that is, Rs. 10.50 on the old Ordinary shares and five to five and a half per cent on all shares issued after April 1956. The additional cost to the Company of such grossing up during the next three or four years under the provisions of the Finance Act, 1959, will amount to about one crore per year, including the loss of income tax recovered on dividends on Preference shares which the Company used to retain but which will now have to be paid over to Government.

I must warn the shareholders that, unless the provisions of the Finance Act, 1959, are amended, the tax burden will be substantially heavier from the current financial year onwards. While the tax on Companies has been reduced under the new system, the total taxes which the Company and the shareholders will pay between them on profits and dividends respectively in a normal year will be substantially higher than under the existing tax system as relief from income tax will no longer be granted to shareholders on their dividends. Furthermore, under the new system, approximately, Rs. 4 crores of tax relief accumulated in reserves built up from past taxed profits will be lost. The Finance Minister, when introducing these tax proposals, stated that it was Government's belief that the new system would not add to the tax burden and promised to review the position next year if it is shown to him that in fact Government would recover substantially higher taxes. I sincerely hope therefore that as a result of the representations made on behalf of industry and commerce, there will be an appropriate adjustment in the tax proposals next year.

Labour

I am glad to be able to report that after the violent happenings of May 1958, which ended in the total failure of the Communist attempt to capture by force the labour movement at Jamshedpur, the labour situation greatly improved during the year and has since remained satisfactory. The great majority of our workers are intelligent and responsible men who did not take long to realise how grossly they had been misled by the Communists. Such doubts as had been created in their minds as to the Company's intention to carry out its undertaking to grant an appreciable increase in wages once the new Plant came into operation, were dramatically set at rest by the comprehensive agreement on a new wage structure, which the Company entered into with the Tata Workers' Union in February of this year. The negotiations in their final stages were assisted by the Labour Commissioner of Bihar acting as Conciliation Officer. We are grateful to him and to the Government of Bihar for their help in the matter.

New Wage Structure

The new wage structure which came into force in April 1959 was the end product of two full years of study and preparation and, finally, of intensive negotiations with the Union. The old wage structure was cumbersome and complicated and suffered from many anomalies. The new structure is a much simplified and streamlined one, reflects a better balance between basic wages and earnings depending on results and has been so devised as to absorb in the next few years, without stress or strain, the gradual changes required under the agreed job evaluation scheme.

Finally, it carries out in full the promise of a substantial increase in total wages and emoluments which we made in an agreement with the Union in January 1956. The new wage structure will bring our employees at Jamshedpur an immediate increase in their emoluments of about Rs. 1.8 crores in the current financial year, rising gradually to about Rs. 2.25 crores in the fifth year. This is equivalent to an increase of nearly 23% at the beginning, rising to 28% in the last year.

While this additional burden on the Company is a heavy one for us to bear at a time when production is low as at present, it will not be an unreasonable one when spread over the larger output of the plant after normal production is established. It affords a just and fair recognition of the co-operation we have received from the workers and the Union in the re-allocation of the existing labour force as between the old and the new units.

The modernisation and expansion of our plant will automatically result in a marked increase in average labour productivity and even though it will have been achieved at a cost of over Rs. 100 crores on which the additional burden of depreciation and interest will be of the order of some Rs. 10 crores a year, it is fair and in keeping with modern practice throughout the world that the workers should share in the fruits of increased productivity, even when achieved through plant improvements.

Bonus

The agreement signed by the Union and ourselves in February this year includes a provision under which a new bonus scheme is to be negotiated to replace the old profit-sharing bonus scheme which expired last year. As such a scheme would necessarily be based on the results of a reasonably normal rate of output, it was also agreed that any payment of bonus this year arising from the operation 1958-59, should be negotiated on an *ad hoc* When some months later, the accounts for that disclosed the fact that there were no disposable p we informed the Tata Workers' Union of the situ and also pointed out that the workers thems had largely contributed to the situation by jo the illegal strike last year which had cost the Com over a crore of rupees.

The Union have on their side claimed, in our wrongly, that the annual bonus should be treat a deferred wage, that the men produced more than in the previous year and that, except fo loss of production due to the strike, they had w hard and under difficult conditions during the and were not responsible for the poor financial re On those grounds the Union has demanded the ment of a bonus comparable to the previous y which is of course unacceptable to us. We hav up to now succeeded in reaching a settlement an matter may have to be referred to arbitratio adjudication.

As regards the new bonus scheme for the three to five years, we are continuing our negotia with the Union. The scheme in force since 1949 based on the distribution of a share of the net p calculated according to a formula which pro for depreciation on the gross block and a retur the issued capital. While this scheme was the cally sound and attractive, it is a fact that it ca a great deal of trouble and argument in its ar interpretation and application. In fact, I do remember a single year in which the bonus paid not made the subject of negotiations.

We feel therefore that any new bonus sc should be based on a simpler formula and one liable to fluctuations due to causes beyond the co of the workers themselves. No final agreement yet been reached and negotiations are still going

I shall end, as in past years, with an expressio thanks to the management and staff of the Comp The members of management and supervisory deserve our special gratitude for their devotion loyalty to the Company during a most trying in which they were subjected to tremendous s and long hours of work, at first in connection wit strike and, later, with the operating difficultie which I have referred earlier. On behalf of shareholders and the Board, I extend our sin thanks to them and also to all employees who worked hard and done their best to increase output of the plant.

Note : This is not a report of the proceedings at above Annual General Meeting.

STOCK MARKET RECOVERS AFTER INITIAL FALL

ELECTION NEWS HELPS RALLY

London, 8th September.

ELECTION news dominated the stock market in the past week. An all-round and substantial fall was recorded before the market rallied at the lower levels and then staged a best rally. The unsettled conditions prevailing during the initial stages reflected the rise in interest rates in the United States, but the certainty was increased by suggestions that the general election might be held at an earlier date than had generally been expected. These suggestions gathered force as the week progressed and by the week-end, it appeared that they were going to be proved correct. While there was rising optimism concerning the outcome, conviction that a general election could be held within a month also brought a good deal of selling, with small holders who showed substantial profits on paper keen to the recent sustained rise deciding to turn some of these into cash. After the week-end when was felt more certain that the election would be held early in October, the market staged a vital recovery on the view that the uncertainty about the actual date of the election had been removed. Apart from the election nerves and rise in U.S. interest rates, the news remained good. Further good company and business news made its appearance while the industrial production and end-August gold reserve figures made a favourable impression. Gilt-edged securities became steadier after an initial fall, but there was little or no recovery in prices. Election talk was responsible for some violent fluctuations in steel shares, while industrials generally were lower on balance. Shares of companies usually favoured by overseas investors recorded a larger than average fall. Oil shares were generally lower, although there was little selective buying. Diamonds receded but platinum shares improved on dividend hopes. Papers were irregular and other base metal shares recorded very little change. Oil shares ended lower partly under Wall Street's influence. Rubber shares lost ground with the rest of the market and recorded numerous declines. Indian tea shares were again lower under the influence of the Indian frontier situation, but subsequently developed a steadier tendency. Ceylon issues generally held fairly steady.

The Money Market

There was a keen demand for credit in the money market during the past week. One of the chief reasons was the bigger intake of Treasury bills by discount houses, and with the banking system none-too-well supplied with money, funds were barely adequate to meet the needs. However, the authorities gave some assistance and there was no penal borrowing throughout the course of the week. Borrowers, on the other hand, had to pay dear for their requirements with 3½ percent usually the more general rate while on Thursday, the incidence of the weekly tax payments made money very short and up to 3¾ percent was readily paid to avoid seeking assistance from the Bank of England. There was only a fair activity in bills with end-Octobers and early-Novembers and "nots" usually done at 3⅝ percent, but there was an insistence by one bank to obtain bills at the split rate of 3 27/64 percent. In spite of the rise in the American bill rate and the weakness of sterling, there was no change of any marked degree in the U.K. Treasury bill rate on Friday last, the official average coming out at £3 9s 9.53d percent.

Hongkong Gold Rises

The bullion market advanced during the past week. This was attributed to the fact that sterling moved lower for most of the week. Trading was very small with no deliveries reported. Carry-over charges were nil. Macao arrivals totalled 33,000 ounces and forward contracts were done at $(U.S.)38.81 c.i.f. Macao.

Vegetable Oils Firm

The Canadian linseed estimate was about as expected, but reports of bad weather resulted in an upward surge of prices in the vegetable oils market last week. Groundnuts continued to be in demand at rising prices and firm conditions were seen for copra and palm kernels. Castorseed continued to be reservedly offered, but lacked interest. Apart from castor oil which eased a little, oils were generally firm with sharp advances in linseed and groundnut oils. China, it was reported, was buying Ceylon coconut oil and prices moved up sharply in Colombo. However, European buyers were not following, and as a result, quotations varied between first-hand shippers and re-sellers. Higher prices were again seen for most oils ex-mill U.K.

THE CALCUTTA MONEY MARKET

CALL RATE FALLS

Wednesday, 9th September.

THERE has been little change in the level of advances outstanding in the Calcutta money market during the past week. The requirements of the sugar mills show some decline, as do those of the jute industry. The total change is, however, very small. Advances against grains and seeds storage in upcountry areas are round about the same. Money is extremely easy in the inter-bank market and borrowers are not to be found even at the reduced call rate of 1½ percent.

There has been a fairly good supply of export documents in the exchange market during the past week. Most of the bills were on account of tea shipments, but some gunny bills were also noted. Remittance was moderate. The pound is weaker against the American dollar and most important Continental currencies, but has gained fractionally against the Canadian dollar. The deterioration appears to be entirely seasonal, and the British Treasury has announced that there is no ground for anxiety.

BULLION WAS STEADY LAST WEEK ON GOOD UP-country demand. Silver advanced from the previous week's level of Rs. 202.25 to Rs. 203.50, quoted today for ready delivery. The rate for forward delivery was Rs. 202.50. The London and New York prices were quoted at 78¼d and 91.625 cents.

Gold increased from Rs. 123.50 to Rs. 124 in sympathy with silver. The sovereign at Rs. 78.62 showed a gain of 12nP.

DURING THE WEEK ENDED 4TH SEPTEMBER, Government of India Treasury bills for Rs. 25,07,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 8th September. The total amount offered was Rs. 2,50,00,000. Tenders at Rs. 99.390 were accepted in full, the average rate of acceptance being Rs. 2.448 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 14th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 9th September to 12th September at Rs. 99.406 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 1st September to 5th September, amounted to Rs. 1,29,00,000.

AN INCREASE OF Rs. 14.70 CRORES TO Rs. 1,664.91 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 4th September, 1959, while the total note issue was Rs. 1.46 crores lower at Rs. 1,687.27 crores. Notes held in the Banking Department consequently declined by Rs. 16.16 crores to Rs. 22.36 crores. Deposits of the Central Government in the Banking Department increased by Rs. 1.87 crores to Rs. 65.36 crores but other Government accounts were Rs. 9.96 crores lower at Rs. 23.82 crores. Balances of commercial banks at Rs. 70.19 crores showed a decline of Rs. 15.84 crores. Balances held abroad improved further by Rs. .97 lakhs to Rs. 21.23 crores. Investments fell by Rs. 17.11 crores to Rs. 283.11 crores. Other loans and advances declined from Rs. 73.52 crores to Rs. 72.97 crores, of which advances to scheduled banks against usance bills amounted to Rs. 10 lakhs (Rs. 14¼ lakhs). Ways and means advances dropped from Rs. 18.31 crores to Rs. 16.58 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 28th August, 1959, shows Demand and Time liabilities at Rs. 750.04 crores (Rs. 25.32 crores on account of borrowings from banks) and Rs. 1,088.37 crores (Rs. 26.69 crores), compared with Rs. 739.46 crores (Rs. 19.74 crores) and Rs. 1,084.75 crores (Rs. 26.02 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 52 lakhs and Rs. 3.38 crores to Rs. 43.43 crores and Rs. 79.72 crores, respectively. There is a rise of Rs. 11.60 crores to Rs. 735.47 crores in investments. Advances and bills discounted at Rs. 938.08 crores show a drop of Rs. 11.81 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.7 percent and 51.0 percent, against 6.5 percent and 52.1 percent.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 28th August, 1959, shows a rise of Rs. 1.21 crores to Rs. 562.91 crores in total deposits. Investments in Government securities are up by Rs. 7.92 crores to Rs. 355.20 crores, while other investments remain unchanged at Rs. 10.27 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have fallen by Rs. 6.53 crores to Rs. 166.83 crores. Cash and balances are, in consequence, shown at Rs. 37.11 crores or Rs. 30 lakhs higher.

AS A RESULT OF CHANGES INTRODUCED BY THE Finance Act, 1959, in relation to company taxation, all payments of advance tax (including income tax) by companies under Section 18A during the current financial year 1959-60 for the assessment year 1960-61 will be wholly accountable under the account head "III corporation tax". At the time of making payment of the instalment of advance tax due on 15th September, 1959 (and subsequent instalments), companies should, therefore, show the correct account head in the challans. The account head to be shown both for income tax and super tax will be : "III. corporation tax—Section 18A collections—ordinary collections." Similarly, the tax (both income tax and super tax) deducted at source from dividends payable to companies, whether interim or final, declared by a company in relation to its accounting year relevant for the assessment year 1960-61, and from the interest on debentures payable to companies on or after 1st April, 1959, will also be accountable under the head "III corporation tax". The persons responsible for the deduction of tax from dividends and interest payable to companies should deposit the tax deducted under the following head : "III corporation tax—deductions from dividends and other income. (a) Income tax and (b) Super tax". In the case of any doubt or difficulty, the Income Tax Officer concerned should be contacted.

TREASURY BILL MATURITIES

LONDON FINANCIAL LETTER

SIGNIFICANCE OF RADCLIFFE REPORT

By Air Mail.

OVERSHADOWING British finance not only this year but for many years is the Radcliffe Committee's report. When it was learned, some weeks before publication, that the report had been approved without qualification by all the nine members of the committee (whereas its predecessor, the Macmillan report, was ringed round with qualifications and dissensions), few people expected any sensational recommendations. The few who still hoped for them were disappointed. It is a curious fact that to many critics, the central recommendation (if a report so diffuse can be said to have such a thing) seems the least important. The proposed standing committee to advise on co-ordination of monetary measures offers no obvious advantages over the present system of informal discussion among Ministers, between Ministers and the Bank of England, between the Bank of England and other institutions in the City. It is almost as though the committee, having despaired of making a coherent pattern of its mass of evidence, was suggesting the appointment of a successor to carry on the task.

It would, however, be quite wrong to imply that the committee had failed to provide guidance on important and controversial matters. The reader who wants answers to such questions as how, in detail, a change in Bank rate affects the economy, will seek in vain. On such matters as the supply of money, the report raises as many questions as it answers. But to many questions which have been debated in recent years, its answers are unequivocal. Should Britain modify her function of international banker? No. Can the economy be controlled by monetary measures alone? No. Should the Bank of England be completely independent? No. Should the price of gold be raised? No. Was the decision to make sterling convertible wise? Yes. Is the system of fixed exchange rates satisfactory? Yes. And so on. There is, additionally, a wealth of information on managing the national debt, on the capital and discount markets, on finance for exports (and insurance thereof) and for housing and for consumer goods, and so on. But there is also a reiterated plea for more information, to be supplied

We always use WHEEL BRAND Industrial glycerine

It's guaranteed to contain 98% glycerol

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine — because it is of an *unvarying* high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

In textiles, dyeing and printing, paints, varnishes and lacquers, plastics, leather, rubber and glass ... in these and other industries, WHEEL BRAND GLYCERINE is used, and has been used for *years*.

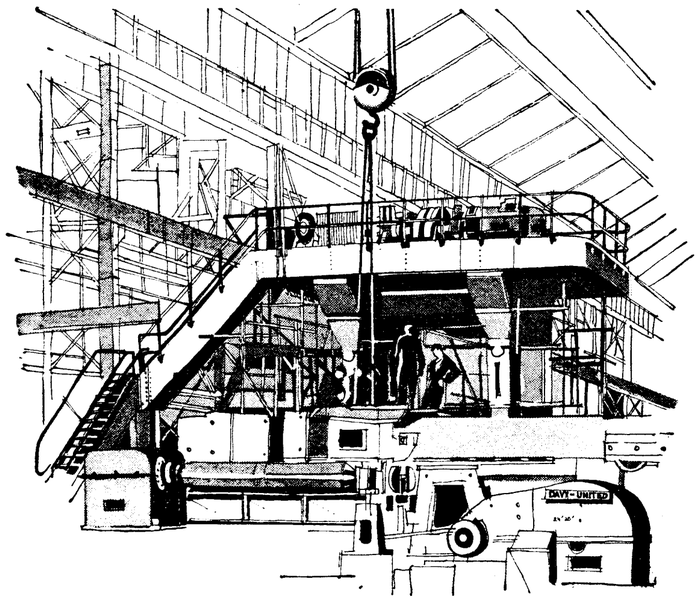
Remember, PYRAMID BRAND GLYCERINE-P. also has many uses in the industry as well as medicinal and domestic uses! Write for a *free* leaflet about its various uses in the home to : HINDUSTAN LEVER LTD, P. O., Box No. 409, Bombay 1.

DISTRIBUTORS: Imperial Chemical Industries (India) Private Limited Bombay • Calcutta • Delhi • Madras

Made by HINDUSTAN LEVER LIMITED, Bombay WG. 15-XS

regularly by financial institutions and industrial companies, to be collected by the authorities—particularly, to be published by the Bank of England.

The Role of the Bank



It is a measure of the difficulty of interpreting the Radcliffe report that to some readers its comments on the Bank of England seem severe while to others it seems to load the Bank with praise. The committee is, in fact, obviously dissatisfied with the statistical services provided by the Bank, and it does not seem convinced that the latter has dispelled that aura of secrecy which created so much political suspicion in the past. But the present constitution of the Bank—including its part-time directors, who figured prominently in the enquiry into the alleged leak of information on the impending rise in Bank rate in 1957—has been fully approved by the committee, and the Bank's handling of the national debt has been highly praised.

The idea that the committee has tried to demote the Bank from its exalted position is erroneous. At least in form, the Bank suffered demotion when it was nationalised in 1946; but it has continued to advise successive Chancellors of the Exchequer, and the committee has confirmed that its advice is entitled to "very great weight". But the plain fact is that the ultimate responsibility for financial decisions involving policy rests not with the Governor or the court of the Bank but with the Chancellor of the Exchequer. The committee's recommendation that changes in Bank rate should be announced by the Chancellor, simply recognises a change which occurred years ago. The Bank is still the expert adviser, but it cannot assert its authority over the Treasury's.

Reducing Prices

The report appeared opportunely when the authorities and the business community were forced to consider the idea that the growth of British business would have to be restrained. Figures for bank credit and hire-purchase transactions have shown a decidedly inflationary trend, and U.K. Board of Trade figures on retail trade point in the same direction. But it is not quite clear what deductions the authorities should draw from the report. The emphasis now is on the trend of prices—a subject with which the Radcliffe Committee was not directly concerned. The National Institute of Economic and Social Research drew attention to the opportunity for reducing prices; the same theme was adopted by the Cohen Council in its third report; then the Treasury's *Bulletin for Industry* took up the refrain. On any suitable occasion, the U.K. Chancellor of the Exchequer has exhorted industrialists and traders to reduce prices.

Marks and Spencer, which initiated a downward movement in retail prices last year, has now announced a further list of reductions, although the cheapening of textile fibres which helped start the movement was reversed months ago. Dunlop Rubber has initiated a general cut in prices of tyres, although the price of rubber has risen this year. But, in general, industrialists and traders have not responded with alacrity to exhortations from high quarters. Experience has proved that a general downward movement of prices must result from economic, not from moral, impulses. With a few notable exceptions, firms will reduce their prices only when compelled to do so. When demand is active, the compulsion is not usually strong, and when primary prices are tending upwards, the desire is usually weak. Yet many sections of British industry are now benefiting from increased productivity. If it is not practicable to reduce prices now, will it ever be practicable to reduce them? The cynics who say that prices can always rise but never fall, may yet be proved right.

Working for
THE NEW INDIA

As one of the thirteen British companies forming ISCON, Davy-United are responsible for all the Rolling Mills, the Wheel and Axle Plant, the Central Engineering Maintenance Shops and the Foundry of the great new Durgapur Steelworks from which will emerge the steel that is to be part of India's industrial future. Durgapur will produce over a million tons a year, enabling the Government of India to reduce considerably the yearly expenditure on foreign steel imports. It will provide the steel and pig iron for new industries and for urgently needed railways, hospitals and schools. And it will create nationwide employment for thousands of people. Davy-United are proud to be undertaking a major part in a project which will help to build a new and flourishing India.

POLITICAL UNCERTAINTIES KEEP STOCK MARKET DEPRESSED

NEW DEBENTURE ISSUE FOR SIMPLEX

Wednesday Evening.

THE decision of the Price Increase and Famine Resistance Committee to begin a third phase of the food agitation movement, and the continued tension in political relations between India and China, have kept the stock market in check during the past week with little or no investment business passing. Funds are also being held back by prospective investors for the spate of new issues which will be coming on the market in the course of the next few weeks. It would now appear, in the light of the above factors, that the stock market may experience a quiet spell until the Puja holidays which start in the Calcutta Stock Exchange from 4th October.

In the absence of sellers, the bond market ruled firm with enquiry concentrated on short and medium-dated issues.

So-called tax-free preference shares were in the doldrums because investors were busy making enquiries from the respective companies whether or not their future dividend receipts will be tax-free or taxable. Several of them have already received a rude shock. It is just possible, however, that on further reflection, companies may alter their Articles of Association as proposed by the Budge-Budge Jute Company, for example—whereby their preference shareholders will be allowed to participate in the profit pool up to a certain point along with the ordinary shareholders.

The subscription list for the Simplex Mills Co. Ltd debenture issue opened at 10-30 a.m. today. The Company is issuing 60,000 6½% (taxable) registered debentures of Rs. 100 each at par. The debentures are redeemable at par at any time after 31st March, 1969, but not later than 31st March, 1974. Considering the fact that certain existing high-calibre debenture issues carrying the same rate of interest are today quoted at an average price of Rs. 109 percent, the new debenture issue seems assured of success.

Bank shares were unchanged and there was little or no business in railway shares.

In the coal section, Bengal were marked down further to Rs. 294 while East Indian were slightly better at Rs. 23.62. There was some enquiry for Equitable at around Rs. 32.37 and Katras Jherriah spurted from Rs. 67.50 x.d. to Rs. 71 ex. dividend. There were buyers of Raneegunge at around Rs. 17.

In cotton textiles, Elgin mills were marked back from Rs. 15.62 to Rs. 15.25 while Kesoram recovered from Rs. 17.75 to Rs. 18.25.

In electrics, U.P. were in demand and the price improved from Rs. 134 to Rs. 137.

In the engineering group, Indian Iron & Steel fluctuated between Rs. 23.40 and Rs. 24.04 to close at Rs. 23.78. Burn & Company were marked down from Rs. 458 to Rs. 448 and there were sellers of Braithwaites at the lower rate of Rs. 26. Indian Standard Wagon were offered at Rs. 79 against a quotation of Rs. 80 a week ago. Jessop & Company were subdued at Rs. 28.56, but Textile Machinery recovered from Rs. 23.60 to Rs. 24.10.

In the jute section, India and Megna were marked down from Rs. 15.56 and Rs. 14.62 to Rs. 15.12 and Rs. 14.12 following the announcement of lower distributions by both companies. Auckland were firm at Rs. 204 because of the increase in the dividend from 15% to 20%. Bally were steady at Rs. 220 x.d. as were Champdany at Rs. 137.

Paper shares were steady and most issues recorded gains. India Paper Pulp moved up from Rs. 24.75 to Rs. 25.25, Orient from Rs 38.15 to Rs. 38.40, Sirpur from Rs. 13.31 to Rs. 13.75 and Titaghur from Rs. 44 to Rs. 44.50.

With the exception of Belsund, which were in demand at Rs. 13.12, sugar shares were dull and neglected.

Among miscellaneous industrials, Angelo Brothers were steady at Rs. 19.37, following reports that China had made some large-scale purchases of shellac during the past few days. Dunlop Rubber were easier at Rs 33.62 while Hindustan Motors were steady at Rs. 12.12 x.d. Indian Aluminium fluctuated narrowly around Rs. 21.25 as did India Steamship around Rs. 14.12. Jardine Henderson advanced further from Rs. 85 to Rs. 88. National Insulated Cables spurted from Rs. 36.50 to Rs. 39.25 following the announcement of a one-for-two "rights" issue of ordinary shares at par. National Carbon were taken at the higher rate of Rs. 37.12. Rohtas Industries recovered from Rs. 21.75 to Rs. 22.37.

In the mining group, Indian Copper were slightly better at Rs. 4.10 while Orissa Minerals were marked back to Rs. 37.75. Karanpura Development rose by one rupee to Rs. 14.25.

Tea shares, on the whole, suffered from lack of interest and prices tended to lower levels.

Caltex Oil Refining

There is a profit of Rs. 1.71 lakhs for the Caltex Oil Refining (India) Ltd for the year ended December 1958 The dividends have been passed over Tax equalisation reserve is allocated Rs. 68.77 lakhs and development rebate reserve Rs. 13.06 lakhs, leaving a carry-forward of Rs. 90,10,412. Implementing the agreement signed with the Government of India about the establishment of the refinery, the company applied to the Controller of Capital Issues in November 1958 for the issue of preference share capital amounting to Rs. 1.5 crores. The consent order is still awaited.

Fort William Jute

The Fort William Jute Company has made a gross profit of Rs. 14.48 lakhs for the year ended March 1959. Bringing in Rs. 1,96,479, there is a balance of Rs. 16,44,816. Depreciation absorbs Rs. 5.30 lakhs and taxation provision Rs 4.13 lakhs. General reserve is allocated Rs. 1 lakh. The ordinary dividend of 15 percent has been maintained, leaving Rs. 1,06,649 to be carried forward. During the period under review, the raw jute position was satisfactory. Interest was shown in burlap by foreign buyers.

Sterling General Insurance

The Sterling General Insurance Company Ltd has made a profit of Rs. 1.40 lakhs for the year ended December 1958. A dividend of 5 percent has been declared. Taxation provision absorbs Rs. 72,000, leaving a carry-forward of Rs. 3,610 against Rs. 4,096 brought in. The assets increased from Rs. 83.40 lakhs in 1957 to Rs. 89.01 lakhs in 1958. The profit of the fire department amounted to Rs. 1.80 lakhs. The marine department earned a profit of Rs. 1.26 lakhs but there was a loss of Rs. 3.33 lakhs in the accident and miscellaneous department.

Straw Products

The gross profit of Straw Products Ltd has amounted to Rs. 11.16 lakhs for the year ended December 1958. Bringing in Rs. 3,211 and transferring Rs. 1 lakh from general reserve, there is Rs. 12,19,486. Depreciation absorbs Rs. 7.87 lakhs. The dividend of 12½ percent has been maintained, leaving a carry-forward of Rs. 4,919. The directors mention that orders for the plant and machinery of the paper mill which is to be established near Rayagada, in Orissa, have already been placed with Messrs. J. M. Voith G.m.b.H., Heidenheim Brenz, West Germany. They are now conducting negotiations for financial arrangements.

Consolidated Tin Mines

At the adjourned extraordinary general meetings held on 31st August to consider the winding up of the Consolidated Tin Mines of Burma Ltd, the chairman, Mr. W. J C. Richards, stated that proposals concerning an offer for the shares were still under consideration. The meetings were accordingly further adjourned.

Britannia Biscuit

The profit of the Britannia Biscuit Company has increased by Rs. 7.08 lakhs to Rs. 30.14 lakhs for the year ended March 1959. Providing Rs. 5.66 lakhs (Rs. 5.98 lakhs) for depreciation, Rs. 16.23 lakhs (Rs. 11.80 lakhs) for taxation and Rs. 55,000 (Rs. 89,943) for wealth tax, there is a balance of Rs. 13,35,604. Bringing in Rs. 2,18,164, there is Rs. 15,53,768. Taxation contingencies absorb Rs. 1 lakh, general reserve Rs. 2½ lakhs (same) and debenture redemption reserve Rs. 3 lakhs. The ordinary dividend has been increased from 12 percent to 14 percent, leaving a carry-forward of Rs. 2,15,949. The directors state that the implementation of the plant replacement and modernisation programme is still severely curtailed by import restrictions. The company has managed to fabricate at its workshops and to obtain from indigenous sources several items of ancillary equipment, but the acquisition of major capital plant remains a serious obstacle for expansion. Efforts to develop export markets continue. In spite of increased foreign competition and extremely unfavourable trading conditions, indents have been secured from overseas, although it has been necessary to establish an unremunerative price structure in order to achieve these results. If the company is to expand its export sales, it is essential that import licences be granted for special plant and machinery which is unobtainable in India. It is also important to allow considerable imports of ingredients and packaging materials, for which no satisfactory substitutes are available locally. Several years ago the company started to make bread at the Delhi factory and the project has proved extremely

Bombay Market

UNDERTONE STEADIER AFTER EARLY UNCERTAINTIES

PRICES IMPROVE IN RENEWED BUYING

Wednesday Evening.

THE Bombay stock market closed steady last week after having remained listless throughout he period under report. Activity was restrained ɔy a number of factors and prices declined on ɔiling pressure. The move to divide the State f Bombay on a linguistic basis created uncertainty. teports of communist China's intrusion into Indian territories, combined with disturbances in Calcutta, called for caution.

Towards the close, selling pressure abated and replacement buying started following news of improved conditions in Calcutta. There is as yet no sign of weakness in the present bull phase as it is thought that corporate earnings continue to be buoyant.

Tata Steel were quoted at Rs. 161 but Indian Iron were sticky around Rs. 24.80 on cautious trading in Lyons Range. Tata Locomotive were dealt in at Rs. 190.50 and Alcock Ashdown were available at Rs. 247. Premier Cnstruction changed hands at Rs. 346. Motor shares were steady on the view that the Government might consider favourably a project for the manufacture of low-cost motor-cars. Hindustan Motor rallied to Rs. 12.60 on influential support and Premier Automobile gained at Rs. 136.

Cotton mill shares recovered considerably at the close on short-covering. Century were prominent at Rs. 555 and Bombay Dyeing improved to Rs. 63.70. Kohinoor were bought at Rs. 303 on prospects of modernisation and renovation. Tata Mills changed hands at Rs. 45.50 and Svadeshi were transacted at Rs. 244. India United Ordinary were freely offered at Rs. 9.12 and Apollo were called at Rs. 1.28.

There were minor gains in the miscellaneous group in sympathy with the general trend. Among cement shares, Associated Cement were steady at Rs. 146.50 on prospects that the dividend would be maintained. Digvijay Cement were dealt in at Rs. 146. Sugar shares were steady, and Belapur realised Rs. 309. Walchandnagar Industries were wanted at Rs. 317.50 in the expectation of a fresh capital issue. Mining shares were idle, and Shivrajpur Syndicate showed little change at Rs. 87.50. Steamship company shares were subdued, and Scindia Steam declined to Rs. 17.24. Great Eastern Shipping were available at the lower price of Rs. 18.96. Bombay Burmah came to hand at Rs. 515 and National Rayon were quoted at Rs. 341. Voltas were bought at Rs. 167.50 and Tata Oil improved to Rs. 64.50 on investment support. Tata Chemical were done at Rs. 16.80.

There was little change in banking shares, and Central Bank were placed at Rs. 50. Bank of India were indicated at Rs. 114. Insurance shares lost on balance, and New India Assurance fell to Rs. 58.70. Vulcan were quoted at Rs. 21.24.

Routine turnover was transacted in electricity supply company shares, and Tata Hydro were taken at Rs. 117.75. Ahmedabad Electric met with demand at Rs. 92.50 and Bombay Suburban were dealt in at Rs. 104.50.

FIRST NUCLEAR-POWERED COMMERCIAL SHIP BUILT BY U.S.A.

Commercial shipping has entered the atomic age with the launching of the world's first nuclear-powered merchant vessel, the U.S. nuclear ship *Savannah*. The traditional bottle of champagne over the *Savannah's* gleaming white bow, was broken by Mrs. Dwight Eisenhower, wife of the President of the U.S. Built at a cost of $41 million the ship is at present undergoing approximately two years of testing before she takes on her first regular cargo and passengers. The *Savannah's* nuclear propulsion system will be able to keep her on the seas for 300,000 miles before she needs a refuelling. This is the equivalent of 12 complete trips around the world at the equator More than a year has been spent getting the 21,840-ton vessel ready for launching. Scores of manufacturers worked closely together in its creation.

SAVED

Rs. 45,000 a year!

A textile mill which was spending Rs. 120,000 a year on baling materials before we undertook our studies is now spending only Rs. 75000 after carrying out our recommendations. Economies are possible in your line of business too.

Books

AFRICAN ECONOMY

An Introduction to the African Economy. By J. C. de Graft Johnson. (Published by Asia Publishing House, Bombay. Price Rs. 7.50, pages 115.)

For many people, Africa is still, often with no justification, the "dark continent". Even if one discounts, as one must, the predictions of some that Africa will occupy a central rôle in world politics in the coming decades, the people of India have more than one reason to be interested in her economy. There is a large Indian population in Africa. India's commercial interests there are not inconsiderable, and are growing. African tea is competing with Indian tea. Africa, including the Union of South Africa, is a potentially large export market for India. So one should thank the Delhi School of Economics for printing the four lectures by Mr. de Graft Johnson on the African economy. His is no pedestrian job—a historical and descriptive survey of a continent with a population of 225 million spread over scores of different governmental agencies, within the compass of a mere five-score pocket-size pages.

The book has four chapters; on population trends and economic development, land tenure and agricultural production, trade and industry, and economic activity and the State. In Africa, there are areas blessed by nature perhaps more bountifully than anywhere else. But these suffer heavily from certain deficiencies. Fully one-half of the continent's total land area is "negative"—its mountainous or arid character prevents settlement and agriculture; about a third of the rest is forest or big bush—least populated and, because of the tsetse fly, etcetera, animal rearing is impossible, thus ruling out animal-drawn ploughs. A mere 6 percent of its total land area is all that the Africans can cultivate. Add to these the acute uncertainty of life and the difficulty of hereditary transmission of skills which 400 years of slave trade and slave raids presented. Of assets, perhaps the most important are the large mineral deposits and the large variety of tropical produce. Even the full exploitation of these is made difficult by debilitating tropical diseases. Africa has vast potentialities of hydro-electric energy. The Inga project of Belgian Congo, the author says, may achieve more than America's Grand Coulee Dam—now the world's largest. But vast sums are required to harness this energy.

Although agriculture is the dominating occupation, as in most under-developed areas, productivity is low for natural and historical reasons. But improvement there holds the key to further industrial and economic advancement. The shortage of trained personnel, including administrative, is almost as great as in India. The author cites the instance of the successful development activities in Ghana. That State has large tax resources, a revenue surplus, and a growing surplus in foreign trade. It would have been useful if the difficulties of some other regions had been included in the study. A plentiful supply of foreign exchange is still rare, especially when large sums have to be remitted annually as debt services, salaries, etcetera. The book would have gained much from a suitable map, and a few selected statistical series, for example, on population, area, foreign trade, governmental revenue and expenditure, and the production of the main articles of export, etcetera, of the major territories.

TAX LAWS

Taxation Handbook. By S. K Lahiri. (Published by New Book Society, Calcutta 13. Price Rs. 12. pages 373.)

A sensibly conceived tax structure and its proper administration are desirable ends of good government, as Adam Smith pointed out nearly 200 years ago, when he propounded his famous canons of taxation. India's tax laws are getting complex, and her jurisprudence is dominated by revenue statutes. So no citizen can remain unconcerned about their operation and administration. The statutes are full of rules which proliferate at an alarming rate. Although they cover a vast area of tax administration, they are not readily available in one place for taxpayers. Mr. Lahiri's book presents within a sizeable volume (1) Income Tax Act, (2) Estate Duty Act, 1953, (3) Wealth Tax Act, 1957, (4) Expenditure Tax Act, 1957, (5) Gift Tax Act, 1958, and the Finance Act, 1959. The publishers should compile case laws as they develop in the course of tax administration and the handbook should be kept up to date through the inclusion of annual supplements.

CENTRAL SALES TAX ACT

The Central Sales Tax Act, 1956. By R. V. Patel. (Published by N. M. Tripathi (Private) Ltd. Bombay 2. Price Rs. 5, pages 165.)

This handy book contains the text of the Central Sales Tax Act, 1956, the Central Rules, the Bombay Rules, and the Central circulars and notifications. Chapters 2, 3 and 4 provide a commentary on the different sections, and the author has cited relevant case laws. Attractively got-up and well-printed, the book will prove to be a good introduction to the Central Sales Tax Act and a handy reference work for sales tax practitioners.

INDIAN CONSTITUTION

Development and Working of the Indian Constitution. By Rajnarain Gupta and R. N. Mathur. (Published by Kitab Mahal, Allahabad 3. Price Rs. 7.50, pages 500.)

In 500 pages, the authors have explained, in clear and simple language, the evolution of the Indian Constitution. Although there is no dearth of books on the subject, most of them either deal exclusively with the legal aspect or ignore it completely. The authors have rectified the defect by dealing with it in a balanced way. They realise that it is rather difficult to pronounce judgment on the success or otherwise of that part of the Constitution which concerns the relationship between the Centre and the States. A book of this nature will, therefore, have to be revised from time to time. The chapter on "Amendments to the Constitution" should follow rather than precede the one on "Salient Features of the New Constitution." Although the book is primarily intended for students of graduate and post-graduate classes in political science, the general reader who is interested in the working of the Constitution will also find it interesting and informative. The select bibliography given at the end of each chapter and the quotations found in the body of the book will make it useful to students and general readers.

RURAL CREDIT

All India Rural Credit Survey, District Monograph Jullunder. Edited by B. S. Mavinkurve. (Published by V. M. Jakhade, Reserve Bank of India, Bombay. Price Rs. 6.50, pages 124.)

The draft of this monograph was originally prepared by Mr. A. N. Vij, former research officer in the Department of Research and Statistics of the Reserve Bank of India. It was later edited for publication by Dr B. S. Mavinkurve. The Reserve Bank has stated that the responsibility for the views expressed in the publication is the author's and not the Bank's. In 1951-52, the Committee of Direction appointed by the Reserve Bank conducted an all-India rural credit survey in 600 villages spread over 75 selected districts. It studied the various types of credit agencies; the survey has been revised, and the present monograph is one such revised publication. It provides some interesting information: 66 percent of the total cropped area in the district was irrigated, and cereal crops covered 36.8 percent of the total cropped area while 27.7 percent was accounted for by fodder crops. The debt a cultivating family increased from Rs. 284 to Rs. 519. In fact, Jullunder is one of the districts in Punjab which was shown a high level of debt side by side with a high average value of assets owned by cultivators. But the most striking feature of the book is that it elaborately discusses credit agencies. It is shown that the Government accounted for 2.5 percent and co-operatives only 9 percent of the total borrowings of cultivators. The latter have been left largely to depend on private agencies for their credit requirements. Commercial bank finance was negligible. The survey has, therefore, emphasised the need for revitalising the channels of institutional credit in the district.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 0.9 percent to 116.9 during the week ended 22nd August, 1959, compared with 118.0 (revised) for the earlier week. The index stood at the same level as in the corresponding week of last month but was higher by 0.8 percent when compared with that of a year ago. The index for Food Articles receded by 1.8 percent to 121.0 due to a fall in the prices of eggs in Bombay (−13%), milk (−12%), chillies in Madras (−5%), urad (−4%), maize, tea and salt (−3% each), potatoes, groundnut oil, meat and gur (−2% each) and rice, wheat, bajra, barley, gram, masur, onions, bananas and ghee (−1% each), although prices of oranges (+10%), fish (+9%), eggs in Calcutta (+8%), arhar in Bombay and chillies in Calcutta (+6% each), betelnuts (+5%), turmeric (+4%), black pepper (+3%) and jowar, cashewnuts and coffee (+1% each) showed advances. The index for Tobacco stood unchanged at the previous week's level of 97.0. The index for the Fuel, Power, Light and Lubricants group remained stationary at the earlier week's level of 115.5. Higher prices of lac (+4%), raw skins (+3%), raw jute (+2%) and raw cotton, linseed, gingellyseed, cottonseed, copra and tanning materials (+1% each) were responsible for raising the index of Industrial Raw Materials by 0.7 percent to 119.9, against 119.1 (revised) for last week. The index for Intermediate Products rose by 0.3 percent to 109.5, compared with 109.2 (revised) for the earlier week as a result of an increase in the prices of aluminium (+2%), zinc and lead (+1% each). The index for Finished Products declined by 0.2 percent to 109.8. The prices of jute manufactures, oilcakes and bricks and tiles (−1% each) and glass (+1%) showed variations during the week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 22-8-59	15-8-59	23-8-58
I. Food Articles:	121.0	123.2	120.2
(a) Cereals	108.4	109.6	114.4
(b) Pulses	91.9	92.8(R)	102.9
(c) Fruits and vegetables	157.0	154.0	126.8
(d) Milk and ghee	111.1	120.0	107.4
(e) Edible oils	125.7	126.6	129.8
(f) Fish, eggs and meat	119.7	118.1(R)	114.2
(g) Sugar and gur	147.5	149.2	136.4
(h) Others	165.3	166.1(R)	153.1
II Liquor and Tobacco:	98.6	98.6	90.7
(a) Tobacco	97.0	97.0	88.8
III Fuel, Power, Light and Lubricants.	115.5	115.5	116.0
IV Industrial Raw Materials:	119.9	119.1(R)	118.9
(a) Fibres	110.5	109.2(R)	110.9
(b) Oilseeds	131.9	131.4	133.9
(c) Minerals	98.2*	98.2*	107.3

GOVERNMENT POLICY ON ESTABLISHING WATCH FACTORIES MAY BE CHANGED

SCHEMES FOR MANUFACTURING CHEAPER PASSENGER CARS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India's policy for the establishment of a watch industry in India, it is expected, will undergo a major change due largely to two basic factors. First, in the hope of providing an India-made watch by the end of the third five year plan, the Government cannot deprive the people of a very essential article. Secondly, the Government's policy would have thrown a large number of people engaged in the watch trade out of employment. These facts, it is learned, were admitted by the Minister of Industry, Mr. Manubhai Shah, who held a conference with members of the Watch Trade Federation in Bombay on 29th July. He, it is reported, stated that watch traders should find some way of manufacturing watches in India or face the risk of closing down their business. The Central Cabinet, apparently, does not share the Minister's view. The Government is also losing revenue because of the large-scale smuggling of watches into India.

The Commerce Secretary, Mr K. B. Lall, who is due to leave for the European Common Market countries early in October, will discuss in Switzerland a scheme to liberalise the imports into India of Swiss watches in exchange for Indian manufactures. A proposal to produce certain categories of cheap watches through Swiss collaboration will also be discussed. Here the British model may be adopted. Under the Anglo-Swiss agreement, Switzerland has undertaken to establish in Britain a watch industry for the manufacture of certain categories of watches within a specified number of years, during which Switzerland will be permitted to send to Britain an agreed number of watches annually.

The Bombay meeting, according to reports, was given a rosy picture. It was stated that the Government would be satisfied if 75 percent of parts were manufactured in India by 1966. The country, it was said, would then be in a position to manufacture even machinery for the watch industry in the Hindustan Machine Tool Factory in Bangalore.

A question was raised why it is proposed to manufacture pin-lever watches in India, when the intention is to produce only quality watches. The reply given, according to reports, is that the manufacture of pin-lever watches is essential for training purposes. In other words, India would manufacture 75 percent of the pin-lever watch, which is a watch for training purposes. It may be added that but for the forthcoming visit of Mr. K. B. Lall to Switzerland, the new policy might have been announced on 1st October.

Enquiry Committee on Motor-cars

The Government has set up an *ad hoc* committee to review the progress of the motor-car industry and the ancillary units. One of the terms of reference is to examine the feasibility of producing a low-cost passenger car within the price range of Rs. 5,000 to Rs. 7,000, and suggest ways and means of manufacturing such a car in the country. In reply to a questionnaire issued by the committee, some parties, it is understood, have submitted proposals for turning out passenger cars within the stipulated price range. Hindustan Motors have offered two models to the committee, one of them being the Baby Hindustan. It will be possible to sell the car to the dealer for Rs. 6,850 plus freight. The British Motor Corporation has brought out the latest version of the Baby Hindustan known as "Mini Minor". It is a two-door car with an engine of comparatively new design. The engine is placed transversely between the wheels, with the result that there is maximum leg space in the front and roomy accommodation at the rear. The price to the dealer will be Rs. 6,350 ex factory and to the customer Rs. 6,850 ex factory. This and other proposals will be taken into consideration by the committee in making its recommendations to the Government. Its report, it is expected, will be submitted in October.

Mission of Mr. K. B. Lall

The European Common Market countries, which Mr. K. B. Lall will visit in the first week of October, are Italy, France and West Germany. He will also go to Switzerland and Greece. These countries have been India's traditional markets for tea, jute manufactures and cotton textiles. They all now have an extremely restrictive policy for these commodities. Exports of cotton piecegoods from India to the Common Market countries declined from 8,914,000 yards in 1957 to 3,464,000 yards in 1958. The decline in value was from Rs. 59,60,000 in 1957 to Rs. 25,09,000 in 1958. It is argued that the policy of the Common Market countries need not necessarily be the policy of each individual member. Moreover, individually, countries such as West Germany (and Switzerland) are anxious to increase their exports to India. The main object of Mr. Lall's mission is to step up India's exports. The Common Market group can step up its trade with India by buying more from this country.

One result of the current import policy is the recent decline in the sterling balances. It will require a great deal of planning to maintain production even at the existing level with restricted imports of raw materials.

Export Promotion Advisers

The Government has decided to appoint export promotion advisers, who will be drawn from commercial circles.

Commonwealth Financial Talks

The Secretary to the Ministry of Commerce and Industry, Mr. S. Ranganathan, will leave for London on 17th September. He will join the Indian Finance Minister in the discussions at the Commonwealth Finance Ministers' conference.

Hard Core of Third Plan

The unfinished or postponed projects of the second five year plan have become the hard core of the third five year plan, it is learned. The Government has sanctioned all necessary steps to complete the projects.

The British consultants, under the Colombo Plan, have prepared preliminary project reports for the vessel plate and structural works. These reports relate to the equipment available in Britain. A team is coming to India to finalise the reports, including in them all such materials as are available in India.

New Foreign Steel Technicians

Hindustan Steel will take in its employment about 80 foreign technical personnel. About half of them are expected to join by the end of October, and the rest by February 1960. Those who will take up duty by October are for the coke ovens, power house, and the first blast furnace. All the foreign technicians for Durgapur are being recruited from the U.K. The Director (Finance) of Hindustan Steel Ltd was deputed to the U.K. for selecting the personnel. The recruitment of 22 technicians has already been finalised. The terms for other technicians are now being settled. All of them will be in Durgapur for short periods only.

Ancillary and Feeder Industries

The Government of India has finalised a scheme for the growth of ancillary and feeder industries in India. Under the scheme, various agencies will approach large-scale units for the purpose of obtaining voluntary agreements from them to purchase their requirements of components and parts from small-scale ancillary units. A number of large manufacturing concerns in the private and public sectors have approved of the scheme in principle, and several ancillary units are in an advanced stage of establishment. Of these feeder units, to give some illustrations, four will be for Sen-Raleigh Industries of India, three for Hindustan Machine Tools, one for Premier Automobiles, one for Messrs Kirloskar Oil Engines, one for the Jay Engineering Works and one for Indian Telephone Industries. A very large number of ancillary and feeder units are already functioning in the country, and many more will be established as a result of this policy.

Indo-Burmese Trade

A protocol to the trade agreement between India and Burma was concluded last year, providing for the export of Rs. 3.95 crores worth of goods against the import of certain Burmese commodities. Under the terms of this protocol, exports worth about Rs. 1.2 crores have already taken place. An agreement for the export of cotton textiles to Burma against the supply of American cotton made available to that country under U.S. Public Law 480, has been concluded. Under this agreement, India has exported cotton textiles worth about Rs. 1 crore. An arrangement has been concluded with the Burmese Government providing for the export of cotton textiles to that country under S.104(d) of P.L. 480, namely, against payment in counterpart fund rupees held by the U.S. Government in India. The State Trading Corporation will be shortly negotiating with a delegation from Burma for the export of Indian prawns.

The recent steps to increase the exports of textiles, coal, fish, and other commodities to Burma and their results are summarised below: (i) under the P.L. 480 agreement, India has exported cotton textiles worth about Rs. 1 crore; (ii) under 104-D programme, India has exported cotton textiles worth about Rs. 1¼ crores; (iii) recently, the Burmese Government suspended the import of prawns from India. A delegation from that country has arrived in India, and the difficulties which have arisen will be discussed with it; (iv) contracts for Rs. 3 crores worth of coal and coke have recently been entered into by an Indian firm with the Union of Burma Purchase Board; (v) the Government of Burma has issued licences for the import of bicycles, linoleum, tinned provisions and toilet requisites; (vi) steps are being taken to finalise the banking arrangements for the financing of trade in the commodities mentioned in the schedules to the Protocol to the 1956 Agreement of Trade and Commerce between the Governments of India and Burma; and (vii) the Burmese Government has imported cotton yarn worth Rs. 92 lakhs approximately.

Printing Ink for Newspapers

In January 1959, the All-India Printing Ink Manufacturers Association, Bombay, urged that there was no justification for the Government's decision to consider applications from newspapers for *ad hoc* licences for rotary and photogravure inks. The Association has been informed of the shortcomings in the quality of the indigenous ink, and has been asked to make all efforts to improve quality in order to enable the newspapers to use larger proportions of indigenous ink and thus eliminate imports.

Foundry-forge Project

A team of Indian engineers is at present in Czechoslovakia for participation in the preparation of the detailed project report for the foundry-forge project. The report, it is expected, will be received by about the middle of November 1959. Preparatory work is in progress concerning the acquisition of land, levelling and dressing of the plant site, construction of field offices, staff quarters, hostel, godowns and storage houses and the building of a dam by the State Government for the supply of water.

Gas Grid from Durgapur

The Government of India has accorded approval for the construction of a gas grid from Durgapur to Calcutta by the Government of West Bengal. The gas grid will be about 120 miles in length. Its cost is estimated at Rs. 3.15 crores. The Yugoslav Government agency has offered to supply pipes against payment in rupees. The rupees will be used according to the provisions of the agreement existing between Intertrade, Yugoslavia, and the State Trading Corporation of India. The Government of West Bengal will continue to supply gas locally to certain projects in Durgapur, and to spare daily 67 million cubic feet of gas of 450 B.T.U. value for transmission to Calcutta.

Central Designs Organisation

It is the Government's intention that a central designs organisation should undertake the planning and designing of future steel plants to be put up in the State sector. With this in view, a nucleus has been created and has been functioning in Rourkela with an Indian chief design engineer and 30 other young design engineers. It is at present engaged in a comparative study of the lay-out and drawings of the three steel plants in Rourkela, Bhilai and Durgapur with a view to planning the expansion of these steel works.

Relaxing Capital Issues Control

The Advisory Committee on the Control of Capital Issues made the following suggestions for the relaxation of control on capital issues: (i) the exemption limit should be raised from Rs. 5 lakhs to Rs. 15 lakhs in 12 months; (ii) a balance of 1:3, as between equity capital plus free reserves on the one hand, and fixed dividend-bearing securities on the other, might be adopted as a healthy requirement; (iii) in considering applications for the issue of bonus shares

(a) the 20 percent residual reserves test should not be rigidly enforced and relaxations should be made wherever necessary;

(b) the test of under-capitalisation should be liberalised to the extent of permitting an increase in capital up to the amount of capital employed by the company; and

(iv) the condition imposed in the consent orders to the issue of bonus shares that the shares will be issued only in a year in which the company has assessable income, operates harshly and it is not for the Capital Issues Control to impose such conditions. The Government has accepted the recommendations of the committee excepting (iv), which is under consideration. The suggestion in (i) has been accepted with the modification that the exemption limit should be raised to Rs. 10 lakhs instead of Rs. 15 lakhs. The necessary notification has been published in the *Gazette of India.*

Suggestions on Rubber Replanting
